public on ethnic, geographical, and historical grounds. They reserve their autonomy and all powers not delegated to the Central Government. The capital is to be Tegucigalpa in Honduras, in a Federal District, which is, however, to be represented in the Congress by one Senator and one Deputy. The Constitution is modelled on that of the United States, with one significant difference. As in its archetype, the legislative, judicial, and executive powers are, as far as possible, kept distinct. The Legislature or Congress consists of a Senate and a Chamber of Deputies, the former elected by the Congresses of the three States, three members from each who must be over 40 years of age; the latter elected by districts, one member per 100,000 population, with an additional member for fractions exceeding 50,000. Every male citizen is an elector at 21, or, if married and able to read and write, at 18, except while performing military service, which apparently is compulsory; every wife or widow is likewise enfranchised at 21, as are all spinsters of 25 who can read and write, and have means of independent support; but after seven years illiterates will no longer vote. For men voting, as in Belgium, is compulsory; for women optional. The Senate is elected for six years, the Chamber for four; one-third of the former and half the latter is renewed biennially, so there is never a general election. The quorum is two-thirds in the Senate and three-fourths in the Chamber; bills imposing taxation must originate in the latter. The Chambers meet each January without being summoned; their normal session is 60 days, but they may be convoked at other times by the Executive. Bills passed by both are sent to the Executive, whose veto may be overridden by a two-thirds majority in each. The Executive power is not concentrated in one person, but, as in Switzerland, is vested in a Council. This consists of six members, chosen by a body appointed by the electorate, and holds office for six years. None of its members can be re-elected to its immediate successor. Each takes some one department of the administration, and is assisted by an under-secretary, and they annually elect one of themselves to be Chief of the State for a year, and he acts in their name. If he commands the army, as Spanish-American Presidents almost always do, he vacates his office as Federal Chief. This provision is made against the military dictatorships characteristic of Spanish-American countries. And the tendency of their Governments to fall into the hands of a small ring of leading families is checked by a proviso that no member of either Chamber shall be a near relative of any member of the Executive Council or of the other House. Finally, in each body, as in Norway, a "suppléant"—may we say, an understudy?—is elected along with every member to attend the debates; and to vote in the absence of his chief. The judicial power is vested in a Supreme Court of seven judges and three "suppléants," elected by the Legislature from a list submitted by the Executive Council; it deals with suits between the State Governments, or between one of them and the Federal Government, keeps them to their constitutional limits, and decides whether Federal statutes are constitutional. The Federal Power deals with foreign relations, national defence, the promotion of public welfare in general and Federal finance. The trade in alcohol and tobacco is reserved to the State Governments, that in weapons and ammunition is a Federal monopoly.

The Constitution is amazingly liberal and humanitarian. It gives manhood and womanhood suffrage, the vote is secret, the death penalty, flogging, and life imprisonment are abolished, as is imprisonment for debt (is this a blow to peonage?), and laws are only retroactive "if the new law favours the delinquent." Elementary education is declared free and compulsory, but is left to the State Governments; all education is secular; freedom of speech, of the Press, of letters and telegrams from censorship, and of public meeting ("without weapons") is guaranteed, so are the eight hours' day and a weekly holiday, and a Council is to be set up to harmonise capital and labour. Property may not be "tied up" except for charitable purposes or to provide free education; monastic communities of any sort are prohibited, as are perpetual vows, but full religious toleration is guaranteed, subject to the requirements of morality and order, and there can be no established Church. (Spanish-American history

offers many examples of statutory religious intolerance.) Technical and agricultural education for the Indians is promised; the reduction of the consumption of alcohol is declared to be a duty of the State Governments, and they are authorised to substitute other sources of revenue. But where are they to find them?

If such provisions seem a counsel of perfection—especially in Central America—those concerning finance inspire more active misgiving. The existing external loans of each State are recognised, but are to be liquidated under Federal supervision. But Honduras has been in default since 1873, Salvador is compounding with her bondholders, Guatemala still owes certain promised arrears of interest, and her earlier record is bad. The loans of these two States are "secured" chiefly on export duties on coffee, but the Constitution prohibits such duties on any native product whatever. And the States are clearly not in a position to raise much by direct taxation. Then—much as under the existing Mexican Constitution—foreign concession-holders are to be on the same footing as natives, and must not ask help from their Legations till legal means of obtaining it are exhausted. Probably interference with existing arrangements may be barred by the provision against retroactive legislation. But that has not stopped the controversy as to the recognition of Mexico. Then, no State may make a contract compromising its sovereignty or independence. Will this bar the "straightening out" of their finances by aid from the United States?

But, if the working of the plan is problematical, the reasons for it are still more so. Its ethnic basis is sound, but the States have little else in common, little reciprocal trade or intercourse; their frontier regions are thinly peopled and mountainous, and previous attempts to restore the original Federation have been unsuccessful. Each has a large substratum of illiterate Indians, a small and turbulent Spanish aristocracy, and a middle class of varying degrees of mixed blood. And why should their Governments make the sacrifice of position and diplomatic representation which those of the small North German States shrank from after Sadowa, till Bismarck forced it on them by a direct appeal to the German people? Is it to avert "penetration" and control by the United States? If so, our sympathies go out to the patriots; but the Constitution seems likely to remain an ideal.

Business Notes.

America and the ter Meulen Scheme.—We are glad to hear from Sir D. Drummond Fraser, the organiser of the International Credits Plan of the League of Nations, who has just returned from a visit to America in that capacity, that he is gratified with the result of his mission. President Harding, Mr Mellon, Secretary to the Treasury, Mr Hoover, and many leading financiers and business men have given him their personal assurance that "everything shall be done to give the plan a fair trial." It only remains now for the necessitous countries requiring extended credit to apply for the issue of bonds.

The Progress of Agriculture.—In his presidential address to the Royal Statistical Society on Tuesday, Sir R. Henry Rew, K.C.B., confined his remarks to Great Britain as being a more homogeneous agricultural unit than the United Kingdom. The total land area was now 56½ million acres, of which about 3½ million acres are situated above the 1,500 feet level. Of the 52½ million acres capable of productive use, about 90 per cent. is so utilised in a greater or less degree. The area of cultivated or farm land is not capable of any material extension, and it is steadily diminished by the insatiable demands of the urban population. The proportion of arable land was 58 per cent. in 1869-78, and is now 48 per cent. The prevalent belief, however, that the output of British agriculture had declined overlooked the fact that the smaller arable area may, if devoted to other crops, produce a greater amount of food than the larger. By substituting potatoes for wheat, for instance, one-fifth the area would

give about as much food. Since 1885-9 the production of corn had decreased by 350,000 tons, while that of potatoes had increased by 775,000 tons. Fruit and vegetables have largely replaced farm crops, while the extension of glass cultivation has resulted in a great increase of output per acre. The statistics do not adequately measure this increase. As regards live stock, comparing the ten years 1869-78 with 1912-21, cattle have increased by nearly 1½ millions, and although sheep have decreased by 5½ millions and pigs by 80,000, if the figures are expressed in terms of cattle, there has been a net gain of about 750,000 beasts. Statistics were quoted which indicated that the average weight of animals slaughtered had increased before the war, though under war conditions it had decreased. There had been a progressive and substantial increase in milk production during the past 50 years, the milking herd having increased by 32 per cent., while the yield per cow had also been greatly increased. In conclusion Sir Henry Rew claimed that an examination of the statistics available points to the conclusion that a larger quantity of food was being produced at the outbreak of war than at any previous period. The food was not the same in kind, but it was greater in quantity. There was a setback in food production during the war, the amount of cereal food being increased, but other kinds of food—meat and milk particularly—were markedly reduced. Whether the pre-war standard of total output had been regained was doubtful, but if not it would be. No doubt the suggestion that British agriculture was holding its own in food production would be stigmatized as unreasonable optimism. He was content to give such facts as are accessible, and they pointed to the conclusion that the output of food had been increased, but he must not be accused of suggesting that it was sufficient or satisfactory. The agricultural land of the country was capable of producing more food, and on a larger proportion of it the output was lamentably deficient. British agriculture ought to produce more food and support more men on the land. The need for both was vital and urgent. If he was not prepared to proclaim the decadence of agriculture, still less was he willing to preach contentment with its present state. What had been done was but the earnest of what may, and should, be done.

The Iron and Steel Position.—The National Federation of Iron and Steel Manufacturers points out that although a settlement of the coal dispute was arrived at at the end of June, by the end of October there were still only 82 blast furnaces in operation, compared with 109 before the stoppage, and 300 in September, 1920. The production of pig-iron in October amounted to 235,500 tons, of which 80,200 tons were hematite, 63,300 tons basic, 74,500 tons foundry, and 13,600 tons forge, with a small quantity of alloys and other qualities; the production of steel ingots and castings amounted to 405,400 tons. The following table compares the production in October with the average monthly production in 1920, and with the production in recent months:—

	Pig Iron.	Steel Ingots and Castings.
	Tons.	Tons.
Average monthly in 1920.....	667,300	754,700
March, 1921	386,000	359,100
April, "	60,300	70,600
May, "	13,600	5,700
June, "	800	2,700
July, "	10,200	117,200
August, "	94,200	434,100
September, "	158,300	429,300
October, "	235,500	405,400

Thus although the output of pig-iron is increasing, it is still below the very low output of March last, and little more than one-third of the average monthly output of 1920. In the case of steel, there has actually been a decrease since August—a decrease which would have been much more marked but for the remarkable recovery in South Wales, where the October production amounted to 133,100 tons, or 86 per cent. of the average monthly production in 1920. Excluding South Wales, production dropped from 369,400 tons to 272,300 tons, or by 26 per cent. between August and October. The present price of typical iron and steel products is considerably less

than half the maximum price ruling towards the end of last year, and in most cases no more than 30 per cent. to 60 per cent. above the average price of 1913. That drastic cuts have not been sufficient to stimulate demand is due to the fact that Continental prices expressed in sterling are even still lower than British. On account of the depreciated exchanges German prices are, of course, extremely low, but fortunately for British industry Germany cannot for the moment guarantee delivery. The vital comparison, therefore, is with France and Belgium, who, even with the addition of transport charges, are able to deliver here below the British price. Towards the reduction in price reduced wages have contributed substantially. As the current *Labour Gazette* shows, the wages of workers in the iron and steel industry have fallen in the first nine months of the year by 27s 6d per week, and have fallen more than those of any other class of worker. Fuel costs have also been reduced. "But still further reductions in cost must be made," adds the Federation, "if we are to compete, and further contributions may still have to be made in lower wages and prices of material. Steel makers are, however, of opinion that in the present abnormal conditions some special reduction in railway rates, which are an important item in costs, is essential. Representatives of the industry, therefore, submitted their views to the railway companies at a meeting which took place last week, and placed the relevant facts and figures before them. The railway companies had already recognised the exceptional position of the industry, and reductions on ore and limestone took place on November 1st. These reductions are, however, unequal and inadequate. Unequal since they afford no help at all to works whose coal has to be brought from a distance, and inadequate since a reduction on these two commodities reduces the transport bill of the industry by no more than 4 per cent. The industry feels that it is now faced with the difficulty which was foreseen when the principle of the standard revenue was put forward in the Railways Bill. At a time when all industries are working at a loss, it is obviously inimical to the country's interest that the railways should attempt to maintain their rates at a high level in order to provide a standard revenue. On the contrary, their policy should be to take the risk of loss in common with other industrial enterprises, and lower rates in the hope that by so doing they will assist to bring back trade to Great Britain."

Bankruptcy in 1920.—The expectation expressed in last year's report that 1920 would see an increase in bankruptcy business has proved to be correct, for the thirty-eighth annual report of the Board of Trade on Bankruptcy (H.C. 236) shows that the total number of cases in England and Wales under Bankruptcy and Deeds of Arrangement Acts in 1920 was 2,016, as compared with 910 in 1919, and 826 in 1918. Liabilities as estimated by debtors were £6,853,300, and assets as estimated by debtors £3,049,000, the estimated loss to creditors being £5,547,700, as compared with £1,971,900 for the previous year. The number of receiving orders under the Bankruptcy Acts increased from 745 in 1919 to 1,565 in 1920, and the estimated loss to creditors from £1,612,900 to £4,048,300. These figures compare with 3,358 and £4,494,400 in 1913. Under the Deeds of Arrangement Acts, the number of deeds was 451 in 1920, and the

estimated loss £1,499,400, as against 165 and £359,000 in 1919, and 2,411 and £1,858,200 in 1913. The failures with the largest aggregate liabilities, and showing the largest increases as compared with 1919, occurred among corn, flour, &c., merchants, with liabilities in 1920 of £293,500, as compared with £35,400 in 1919; directors and promoters of public companies £637,000, against £90,900; and miscellaneous clothing and textile trades £497,100, against £75,900. The chief decreases are shown among commission and general agents, with liabilities of £47,300, against £147,900, and financial agents £4,500, as against £233,200 in 1919. The accounts of Bankruptcy Administration for the year ended March 31st last show total receipts of £127,400, and total expenditure of £181,500, leaving a deficiency of £54,100, which compares with £63,100 for 1919-20 and £51,100 for 1918-19.

Soviet Finance: the Third Stage.—As was noted a fortnight ago in these columns, the Soviet Government has had to compromise with capitalism. Factories are to be leased to foreign or native capitalists, and money is to be reinstated as a medium of exchange, and of payments of wages and of taxation. The current number of the organ of its trade delegation in England explains the new departure as follows:—The first stage of Soviet financial policy consisted in breaking Russian capitalist power by nationalising the banks, annulling debts, prohibiting dealing in stocks and shares, taxing money, and limiting the right to draw it from a bank. The second was the creation of "a new financial apparatus closely dependent on the centralisation of control of production"; money was eliminated by destroying its value, and exchange became simply barter. This was the main object of the over-issue of currency, though incidentally, as the account gravely mentions, it was useful in enabling the Government to purchase goods. In January, 1918, the rouble was 16.3 times below its pre-war value; two years later, 167 times; on April 1st of this year, 32,360 times; so that roughly about 1,300 roubles were then the equivalent of one English penny. Passing over the consequent paralysis of production, the account proceeds to state that on April 21st last a new economic policy was adopted, permitting private trading and free markets as the sole means of rapidly improving the situation. The rouble must be stabilised, and the financial deficit reduced. But "the development of monetary taxes requires time," and the note issues can only be gradually reduced, concurrently with the progress of national production and of that from private enterprise, the latter determining the amount of revenue from taxation. The statement asserts that since August 1st prices in the Moscow free market have been comparatively stable, that between July 15th and September 30th the new railway tariff produced 68,305 million roubles, the new waterways tariff during August and September 22,157 millions; the posts and telegraphs during August, in 31 provinces, 6,090 millions; and that for next year the estimated revenue is 1,500 milliard roubles from direct taxation, and 8,000 milliards from State enterprises and services and indirect taxes, and that municipal finances are recovering. The Government is establishing a State bank in Moscow, with branches in important towns, chiefly to finance the new capitalist enterprises, and also to regulate the circulation. It will act as a State bank—this department being kept separate—and will not issue notes. From other authoritative sources we learn that five-eighths of its capital will be provided by the State, one-fourth by the co-operative societies, and the remainder by private concerns, presumably the leased factories, and that it will transact all ordinary banking business, monopolise the purchase of stocks and shares, keep the Government's accounts, and buy and sell goods. Its capital is 2,000 milliards paper, or 70 million roubles in gold—seven millions sterling. This sum—less than half the paid-up capital of Lloyd's Bank alone—is to suffice for an institution which is to finance the greater part of Russian manufactories, and to some extent the Government. There could be no clearer evidence of the effect of Soviet economics.

Egyptian Cotton Crop Decline.—In the current issue of the *Bulletin of the Imperial Institute*, Mr G. C. Dudgeon, late Consulting Agriculturist to the Government of Egypt, goes rather fully into the causes of the decline in the yield of Egyptian cotton, particularly during the last seven years. The chief causes are:—(1) Decreased soil fertility due to (a) over cultivation of cotton, (b) over-irrigation and lack of drainage, (c) insufficient manures of good quality and use of inferior substitutes; (2) insect pests and resort to inferior varieties of cotton; and (3) agrarian disturbances. Over-cultivation of cotton in the crop rotation is largely due to the fact that the land is held under tenure instead of ownership, but this excessive cultivation would not be really serious if good fertilisers were adequately used. Over-irrigation is much more serious, since, owing to the larger supplies of water available for irrigation, the tendency has been to over-irrigate the cotton lands, with very deplorable results. Good drainage is therefore now most essential, but owing to the war the necessary works were delayed. Decreased fertility is also largely due to insufficient supplies of farm-yard manure and the use of inferior and grossly adulterated artificial fertilisers. Turning to the ravages of insect pests, the terrible boll weevil was first found near Alexandria in 1911, and during the next five years it spread rapidly throughout the country. Drastic legislation was introduced, but the war interfered with the remedial measures, and the chief result was that early maturing varieties of cotton were largely grown, and these gave inferior results, except perhaps the well-known Sakellariadis. There is no need to dwell upon the third main cause—agrarian troubles—for the effect of these must be obvious to all who realise the economic and political conditions in Egypt during recent years. A table is given in the original showing the percentage cotton area, as compared with the whole cultivable area, also the yield per acre, for the years 1894 to 1920 inclusive. The percentage area has increased from 27.9 per cent. in 1915 to 43.1 per cent. in 1920; that is, about the same as it was in 1914, and considerably higher than during the years preceding 1914. But although the area has increased, the yield per acre has declined from 420 lbs—the mean of the eight years before the war—to 330 lbs in 1920. This decline has been continuous since 1915.

Cotton Trade Short Time.—The employers in the Lancashire cotton industry are again considering the question of short time on an organised scale, writes our Manchester correspondent. On Tuesday last there was a meeting in Manchester of the General Committee of the Federation of Master Cotton Spinners' Associations, when the state of trade was discussed. Reports were received from the several districts to the effect that it was impossible to clear the production of the mills, and the prices ruling show a big loss. It was decided to recommend short time working in the mills, using American cotton to the extent of 50 per cent. of production each week until the end of the year. A ballot of the members on this proposal is being taken, and the result of the voting will be announced on Friday next. According to the rules of the Federation, it is necessary for the owners of 80 per cent. of the spindles in any particular section to be in favour of organised short time before any scheme can be put into operation. Although the trade depression is very severe, it is not certain that the necessary majority will be obtained. Some firms have fair contracts on the books, chiefly for export, and certain spinners as a matter of principle do not believe in curtailment of production, as running the mills fewer hours each week means a relative increase in standing charges for each pound of yarn produced. It is not proposed to make any recommendation as to short time in the Egyptian spinning section. The scheme now under consideration affects nearly 40,000,000 spindles out of the 56,000,000 spinning spindles in Lancashire.

Cotton Company Dividends.—A summary of the stock-taking announcements for the quarter ended October of 62 Lancashire cotton companies, prepared by Mr F. W. Versall, of Manchester, shows a big drop in the average dividend compared with the average for the

same concerns for previous quarters. Out of the 62 companies, which are engaged solely in the production of cotton yarn, and have a total paid up ordinary share capital of £6,717,750, 39 have not been able to make any return to the shareholders. The average dividend per company for the three months is 4.78 per cent. per annum, which compares with an average for the July quarter of 5.10 per cent. In April last the average was 7.15 per cent., and in January 19.32 per cent., whilst 12 months ago the average dividend was 36.4 per cent. per annum.

Reparation and Unemployment.—In a statement published in the *Times* of the 17th inst., Sir Henry Strakosch has put forward a scheme by which we should receive reparation payments due to us by Germany in the form of capital goods, i.e., goods which do not compete with our own production of the material in normal demand. He advocates the building by Germany in Great Britain and in the Dominions of large public works, such as electricity works, the electrification of railways, &c. In addition to providing us with reparation in a form which would not interfere with our own trade, it is claimed that this would greatly relieve unemployment, indirectly as well as directly. The proposal is very much on the lines of a suggestion made by Mr F. E. Thrupp in a letter which we published on April 2nd (page 690).

Banking and Foreign Exchange in Venezuela.—In the report on the economic and commercial conditions of Venezuela,* dated September, 1921, it is stated that Venezuelan currency during the past few years has been at a premium as compared with all foreign currencies except the United States dollar. Exchange in London, which is mainly determined by the quotation of sterling in New York, there being no direct transactions, has fluctuated as follows (par 25.25 bolivares to £):—

Year.	Average for Year.	Highest.	Lowest.
	Bs.	Bs.	Bs.
1913	25.50	26.00	25.15
1914	25.80	27.00	25.26
1920	20.20	22.00	17.30
1921*	23.25	26.35	20.50

* First six months.

We are told that "under the Banking Law of June 27, 1918, any bank, whether native or foreign, may, on obtaining permission from the Federal Executive, issue notes up to double of its paid-up capital against gold or securities payable at sight or within 30 days—a third of the amount being in the form of gold coin—or up to three times its paid-up capital, the additional third being guaranteed by gold coin to an equal amount. There are at present only three banks which have availed themselves of the privilege of note issue, namely—The Bank of Venezuela, which on December 31, 1920, had Bs. 23,759,860 in circulation; the Bank of Caracas, with an issue of Bs. 1,875,000; and the Bank of Maracaibo, with an issue of Bs. 800,000. Notes in circulation amount, therefore, to a little over one million sterling. Payment of debt in bank-notes can be refused. (Article 12 of the Banking Law.) In the interior they are not generally current, and payment of debts may be, and often is, required in gold. Gold in circulation is estimated at two and a-half millions, and silver at two millions sterling. The cash reserves at the Bank of Venezuela and agencies on December 31, 1920, amounted to Bs. 87,563,454, and of the Bank of Caracas to Bs. 6,352,453. Foreign banks operating in the country are:—The Royal Bank of Canada, opened in 1915 (branches at Ciudad Bolivar and Maracaibo); the Commercial Bank of Spanish America, opened in 1914 (branch at Puerto Cabello); the National City Bank of New York, opened in 1916 (branches at Maracaibo and Ciudad Bolivar); Banco Mercantil Americano de Caracas, an offshoot of the Mercantile Bank of the Americas, New York, opened in 1917 (branches at Valencia and Puerto Cabello); and the Hollandische Bank, opened in 1920." On June 30, 1921, the note circulation of the Banco de Venezuela had increased to Bs. 26,532,570.

First Mortgage Debenture Issues and Existing Mortgages.—We draw attention in a later column to the question of offering land and property as specific security for a first mortgage debenture issue when subject to an existing first mortgage. It is, of course, a point which must be looked at from many sides, and no doubt in some complicated series of debenture issues it is better to accept the position as found rather than attempt to reconcile the various conflicting interests of different classes of debenture holders by merging all loans into one big issue. But obviously the clear way to deal with a comparatively young and modest undertaking is to pay off the existing mortgage and allow the trustees for debenture holders to hold the title deeds. For it must be remembered that the title deeds will be held by the first mortgage holders, and "first mortgage debenture holders" with no title deeds in possession might have some trouble in certain circumstances if the first mortgage holders were inclined to act in sympathy with the directors of the undertaking. It may be legally correct to describe such issues as first mortgage debentures, but some investors may imagine that such a term implies that there are no prior charges on the property whatever.

Burma Corporation.—Our mining correspondent writes:—The history of this important enterprise bears a close resemblance to that of many industrial undertakings in the recent past—a big expansion programme on the strength of war conditions, followed by a drastic curtailment in view of the financial and other exigencies of the moment. The company, it may be recalled, owns a group of ancient silver-lead mines with smelting and other plant at Bawdwin in Upper Burma. The original undertaking was registered early in 1906. Subsequently the Burma Corporation was formed to provide additional working capital, and was successful in arriving at an advantageous arrangement with the Inland Revenue authorities in regard to excess profits duty. Notwithstanding this, the undertaking was last year transferred to a company registered in Rangoon with a capital of 20,000,000 rupees in 10 rupee shares, whereof 14 were given in exchange for every £1 share of the former English company. Incidentally it may be remarked that in anticipation of these developments the old shares were bid up to over £14. However, no sooner had the distribution of the new shares been made than holders began to realise, and from 15s the price has now fallen to 6s. Those who took this course of selling, or at any rate reducing their interest, were wiser or more fortunate than even they imagined. In September, 1920, the market received a nasty shock in the shape of an offer of the equivalent of £1,000,000 8 per cent. debentures, convertible into shares at par, and ultimately redeemable at 110 per cent. That matters were not proceeding with complete smoothness was indicated by the recent appointment in London of a strong advisory committee. Simultaneously a new manager was appointed to succeed the existing manager on the expiration of his agreement, and arrangements were made for a well-known consulting engineer to visit the property and advise upon the general lines of policy to be followed. The outcome of these various measures is seen in the report now in the hands of the shareholders. The programme of the new company included extensions to the works at the mine, the opening-up of a colliery at Namma, the erection of a large zinc smelter at Jemshadpur, India, in co-operation with the Indian Government and the Tata Steel Company, the installation of a modern smelter at Namtu, and the building of a new branch railway to the latter centre. It is now intimated that in view of financial conditions in general, and of the company in particular, the directors have decided to close up the construction of the zinc works in India, as neither of the other parties are in a position to carry out their engagements; to extend and improve the existing smelter instead of completing the one at Namtu, and to suspend for the time being all further expenditure upon the development of the Namma coalfield. While this restriction necessarily comes as a great disappointment to those who had pinned their faith to "big things," there can be no doubt as to the wisdom of the directors in keeping within the present financial resources of the corporation—for additional

funds could only be raised upon onerous terms. The point is stressed in the statement of the late manager, but was apparently overlooked by Mr J. A. Agnew, whose elaborate technical report of April, 1920, was the basis of the extension programme. Still, even the present programme provides for an annual output of 45,000 tons of lead and 4,500,000 ounces of silver. With regard to the results of the past year, the treatment of a larger quantity of material than in 1919 gave a working profit equivalent to £455,500. Of this, £95,000 was absorbed by depreciation on plant, &c., while the expenses in connection with the issue of debenture stock above referred to totalled £46,800. After providing for interest, taxation, &c., there is a balance of £246,800—which, as the board remark, represents only a small percentage upon the issued capital (over £9,000,000); hence no dividend is recommended. Little change is shown in the ore reserves, work having been hampered by shortage of labour; the tonnage is placed at 4,429,500, value 23.2 ounces silver, 25.3 per cent. lead, and 17.7 per cent. zinc. It is tolerably clear that the hopes of a dividend for 1921, held out at the special meeting of last April, are not likely to be realised. Consequently those who continue to hold their shares will need to exercise much patience.

The Argentine Navigation Company.—The accounts of this company, founded by Baron Nicolas Mihanovich and now controlled by a powerful group of English and Continental shipowning companies, show a heavy loss due to last year's strikes. That in the company's workshops lasted 17 months, that of the crews nearly 13; the services were paralysed, and the loss for the year amounts to £411,168. It is partly met by the transfer of the entire reserve fund, amounting to £150,000, to the profit and loss account, and the debit balance ultimately carried to next year is £259,118. The cumulative preference dividends fell into arrears during the war, but were overtaken and paid to the end of June, 1920; the debentures were entirely paid off in 1915, through the sale of the vessels built out of their proceeds. The insurance fund has been augmented, the company's property in steamers, land, buildings, shipyards, stores, &c., is worth considerably more than its £2,000,000 capital, and we believe that preparations have been made to extend its port facilities at Buenos Ayres whenever the traffic increases sufficiently to warrant such extension. Passenger traffic is said to be recovering; freight traffic is obviously kept low by the depression due to the decreased buying power of Europe, which is felt all over Central and South America; and during the long suspension of the company's services the field has been partly occupied by small barge-owners who have not yet vacated it. Moreover, it takes some time to re-start traffic, and just now it is the slack season. The company has a great field, and no doubt a prosperous future, provided it is not hampered by clumsy efforts to regulate dock labour on the part of the Argentine Government. But for the present its efforts must be directed to restoring its reserve and paying off a banking overdraft exceeding £133,000. Payment even of the preference dividends—which, however, are cumulative—is not likely to be resumed for some time.

Agricultural and General Engineers.—It may be remembered that Agricultural and General Engineers, Limited, was formed in June, 1919, with a view to obtaining controlling interests in various agricultural and other engineering concerns, mostly located in the eastern counties. The annual report and accounts for the year ended March 31, 1921, has just been issued, showing a net profit of £68,731 for the year. Out of this sum the directors have paid the 8 per cent. dividend on £999,900 first preference capital, and the 6 per cent. dividend on the second preference shares. The balance-sheet shows that assets mainly consist of shares in associated companies valued at £2,981,137, while there are also loans to these undertakings amounting to £628,257. Further, the company has guaranteed overdrafts of the associated companies to an amount of £252,000. Total preliminary expenses and commission

are given under assets as £107,867. This item, however, has been reduced to £31,388, although the remaining £76,479 has only been transferred to "cost of shares in associated companies." On a paid-up and issued capital of £3½ millions, profits appear to be somewhat meagre, and it is to be hoped that the associated companies have provided for depreciation in values before declaring dividends. But the point is not made clear in the accounts before us. The £18 per cent. cumulative preference shares are quoted at round about 10s each. At the general meeting yesterday, the suggestion of a shareholder that more details could usefully be given in the published accounts was certainly a reasonable one, which the directors might well adopt.

Oversea Correspondence.

THE UNITED STATES.—REDUCTIONS IN FEDERAL RESERVE BANKS' REDISCOUNT RATES—HEAVY INVESTMENT DEMAND FOR BONDS.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 4.

WHILE a lowering of the Federal reserve rediscount rate at New York and one or two other eastern centres had been expected, the financial community was hardly prepared to witness such a general reduction practically in all sections of the country as was announced this week. Eight of the 12 Federal Reserve banks cut their rate at the same time, and two others took similar action a day or so later. The reductions in some cases amounted to ½ of 1 per cent., and in others to 1 per cent. At New York, Boston, and Philadelphia the rate was lowered from 5 to 4½ per cent.; at St Louis and San Francisco from 5½ to 5 per cent.; at Chicago and Kansas City, from 6 to 5 per cent., and at Richmond, Atlanta, and Dallas, from 6 to 5½ per cent. For the present the rediscount rate in the Cleveland district remains at 5½ per cent., and in the Minneapolis district at 6 per cent. The banks in the two last-named cities will probably lower their rates as soon as conditions in their respective districts warrant such a step. So far as the New York bank is concerned, this week's reduction is the second made this autumn, and the fifth since last May, and it has been widely commented upon that such sweeping reductions have occurred during the autumn, because in normal times before the war open market money rates almost invariably advanced at this time of the year. The Federal Reserve system, however, has not been in existence long enough to test the normal tendency of the official rates during the Fall season. It would be more correct to say that conditions have not been normal in any autumn since the system began to function, or at least since rediscount rates were first established, at about the time when the first Liberty loan was offered. The cuts just announced were undoubtedly made for the purpose of further aiding a revival in trade and industry, although at the same time they reflect the pronounced improvement that has taken place recently in the credit situation in different centres, and the further strengthening of the banking position in such districts, as is reflected in the steady rise in the ratios of reserve to note and deposit liabilities, owing to heavy increases in gold holdings and continued reduction in rediscounts and note circulation. Last week's statement of the New York Federal Reserve Bank, giving its condition on October 26th, furnishes a very striking summary of the marked changes that have occurred since the corresponding date in 1920:—

	1920.	1921.
Total gold held by bank.....	175,996,000 ..	472,571,147
Gold with Federal agent	262,733,000 ..	545,188,678
Total reserves	606,610,000 ..	1,089,244,429
Bills discounted	515,947,000 ..	116,551,857
Bills bought in open market	88,547,000 ..	30,159,938
Total bills on hand.....	1,025,769 ..	281,440,685
Federal reserve notes in actual circulation.....	876,706,000 ..	623,872,668
Ratio of total reserves to deposit and F. R. note liabilities combined ..	39 1 %	82 3 %

The New York Bank's reserve ratio showed a further advance this week to 83.1 per cent., while the ratio for the entire system is now 71 per cent.—the highest since 1917.

The fact that the extent of this week's reductions varies in different localities, and that rates have not been made uniform throughout the country, may be taken as conclusive evidence that the Federal Reserve Board in Washington, which exercises supervision over such matters, has made no change in the policy of basing rediscount rates on the reserve position of the various Federal Reserve banks, rather than on the financial condition of the system as a whole, as has been advocated in some quarters.

The immediate effect of the lower bank rates has been more pronounced in the bond market than in other quarters. Since the reductions were announced, bonds, especially high-grade investment securities, have been unusually strong and active. In fact, the market as a whole has been more buoyant than at any time in the past two years. The buying has been exceptionally heavy in the United States war loan issues, notably the Liberty bonds and Victory notes, as well as in high-grade securities of foreign governments, particularly the United Kingdom, Canada, Denmark, Sweden, and Switzerland, which reached the highest prices of the year. The activity in United Kingdom bonds was ascribed to reinvestment of funds released by the paying off of your 5½ per cent. bonds, which matured here November 1st. Conspicuous advances were also recorded in the market for first-class railroad, industrial, and public utility bonds. The broad and active purchasing of bonds is due to the easier money situation, and to the belief that this week's reductions in rediscount rates foreshadow further relaxation in the open money market. Investors apparently realise that capital, for domestic uses, can no longer command the former high wage, and they are accordingly placing their funds in high-grade bonds which offer comparatively attractive yields. The increased demand for bonds also seems to indicate, as one authority remarks, the willingness of investors to become creditors rather than partners in many enterprises. Thus far the lowering of the bank rates has had no appreciable effect, either upon time money rates or upon commercial paper discounts. Funds for fixed periods still command 5½ to 5½ per cent., and prime business paper is being discounted at 5½ and 5½ per cent. The tendency, however, is downward, and at least a 5 per cent. basis is expected to be reached for both time money and commercial paper before the end of the year. It is noteworthy in this connection that new securities of foreign governments being offered here are still put out at prices affording relatively high yields, as, for example, the \$10,500,000 Republic of Chile external loan, 25-year 8 per cent. sinking fund gold bonds, which are being offered to investors at 99½, and accrued interest to yield approximately 8.11 per cent. if held until maturity. On the other hand, a banking syndicate is about to offer \$5,655,000 first consolidated mortgage 5 per cent. refunding bonds of the Southern Railway Company at 85, to yield 5.90 per cent.—the lowest return offered to investors in new railroad issues since the money market began to relax.

FRANCE.—FINANCE DEBATE—TAXATION RETURNS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 15.

PENDING the return of M. Briand from Washington, it may be taken that the Chambers will attempt little progress with the Budget Bill for 1922. In the meantime, however, the Lower House is displaying exceptional interest in the financial position of the country, and is disposing of a whole series of interpellations as to the measures the Government propose to take to meet the present exceptional circumstances. Thus to-day's sitting has been occupied entirely with a debate on financial questions. An outstanding feature of the discussion was the speech of M. Raiberti, whose text was expressed in the words, "Where are we and in what direction are we going?" M. Raiberti delivered a stinging attack on the

State as trader, whom he accused of having usurped during the war the functions that trade and commerce ought to fulfil in normal times. "The result of this policy," he insisted, amid a remarkable outburst of applause, "has been to show the incapacity of the State to take the place of private initiative, and has cost the country a deficit of 22,000,000,000 francs." The deficit on this account, which amounted to 12,000,000,000 francs on June 30th last year, had been brought down to two milliards for the present year, he pointed out, owing to drastic action by the Chamber, and would be reduced to a single milliard next year.

M. Herriot, who is the leader of the Radical Socialist Party, which ruled France for so many years (until the downfall of M. Caillaux), said subsequently that the policy of economies, postponements, and if need be, loans, which was being followed by the Government had been tried by Necker and failed. He insisted that sooner or later France will be compelled to resort to a tax on capital, which he believed would be both necessary and possible. He admitted that a better yield might be obtained from taxation, as was evident from the fact that while there were only 110,873 persons making returns for income-tax, there were 157,649 owners of touring motorcars in the country; but that would not be sufficient to meet the case. To resort to loans meant to throw the burden on future generations. Inflation of the note issue would be a temporary and ruinous expedient. Indirect taxation he described as an advance made by the poor to the rich. The only resource was a tax on capital, which already existed in Italy, Hungary, and Rumania. To insist on maintaining private wealth in face of the poverty of the State, he insisted, was a dangerous mistake. A tax on capital was not a tax merely on the wealthy, but on the whole nation, and its payment would be a patriotic duty. Criticism on M. Herriot's proposal was postponed till a later sitting.

According to figures given by the Finance Minister, M. Paul Doumer, the situation of the special tax on war profits down to September 30th was as follows:—

	Francs.
Total amount for which assessments issued ..	11,605,509,000
Total amount due to date	9,600,236,000
Total amount actually recovered	6,894,149,100

The Minister of Justice reports that down to September 15th there had been 290 prosecutions started for frauds in connection with the declaration of war profits, of which 50 have resulted in condemnations, seven in acquittals, 14 had been dropped as uncalled for, and seven others had been annulled by death or effluxion of time, leaving 212 still to be dealt with.

The taxation returns for the month of October amount to 1,305,111,000f, the total being some 20 millions less than for the similar period of last year's October returns. The reason for the decline as compared with last year is chiefly in connection with the Customs, and with the tax on the business turnover. This latter tax, while remaining below the budget estimate, shows a return that is more favourable by 10 million francs than that of last month, and the Treasury regards this as a sign that business is slowly beginning to revive. Stamp duties are rather better than the estimates, and customs, though well below the estimated yield, have brought in rather more this month than could have been anticipated, in view of the last three months' returns. The Bourse this week has been irregular. Early it showed signs of extreme weakness, but later strengthened owing to forced purchases. As has been the case for weeks past, the weakness of the situation is the absence of new buyers, and a further cause of weakness is the declining value of the German mark. This factor is so serious that the *Situation Economique et Financière* does not hesitate to suggest that if the Allies wish to be paid by Germany they must extend the principle of the Wiesbaden Agreement. French Rentes remain stationary this week at 53.95. Banks have fluctuated, Banque de Paris varying from 1,185 to 1,210, and finishing at 1,200. Union Parisienne opened at 785, rose to 805, and closed at 797, while Crédit Lyonnais advanced from 1,395 to 1,415, and closed at 1,405. Shareholders in railway transports have realised profits owing to the decision of the Chamber in their favour, and in

consequence P.L.M. has dropped from 770 to 750, Nord to 840 from 851, and Midi to 715 from 723. Shipping has been depressed, Chargeurs Réunis declining from 530 to between 475 and 480, Transatlantique at 244 has dropped 4 points, and Messagères at 217 has lost three points. Electrical undertakings have been little in demand, Thomson having declined from 832 to between 780 and 790. Metallurgical undertakings, as usual, have fluctuated, but all the time with a downward tendency. Chantiers de St Nazaire has fallen from 845 to 800, and Chantiers de la Loire from 905 to 800, and Chantiers de la Gironde from 650 to 570. Mines have remained calm.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—REPARATIONS—INFLATION AND EXCHANGE—BOURSE—PRICE RISE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 14.

THE presence here of the Reparations Commission has caused a good deal of optimistic speculation, for which no precise ground is known. Up to the present, there is no ground for believing that a respite, which is highly necessary, for payment of the first regular instalment on January 15th will be granted. The negotiations with industry for the raising of a loan are not concluded, and of dealings with the foreign financiers now in Berlin nothing definite can be said. The considerable reaction of the foreign exchanges and the great rise in such loans as foreign speculators show interest in have given rise to the belief that something favourable is about to happen; but it should be noted that the mark has fallen so unreasonably far, so out of all proportion to its buying power

at home, that a recovery, according to the precedent of all sharply fluctuating exchanges, might easily occur. Further, heavy foreign buying of German loans as a form of exchange speculation began in February and March, 1920, after the mark had suffered a particularly heavy fall.

The note on "Mark Exchange and Inflation" in the *Economist* of November 12th gives a fact which is usually ignored, both here and abroad, by persons who, seeing only the great net increase in inflation and net fall of the mark over a long period, bring the two things into direct casual relation. Both the exchange and the rate of inflation have fluctuated enormously, but the heavy inflation periods do not at all coincide with the mark exchange drops. From close examination a perverse economist might even argue that inflation is good for an exchange. This year the inflation rate has been about half that of 1920; but in the whole year 1920 the mark fell only from about 50 to 73 to the dollar, whereas this year it fell from 73 to 310. Further, the six months January-June, 1920, saw beyond comparison the greatest inflation; yet in this six months the mark experienced a net rise from 50 to 38, and between the end of January and the end of May, when inflation was at its worst, it actually rose from 104 to 35. This shows that the well-advertised inflation statistics have never frightened the speculative mark interests. According to theory, there is only one other way in which inflation could depress the mark: by so raising the home price level that export would decline, and the foreign payment balance would be injured. But this process has never taken place, because the home price level has been all along, though in varying degrees, below the foreign, and export could not be checked, except in some branches for a few weeks in mid 1920, by the unwillingness of foreigners to pay German prices. In Germany inflation is caused by the mark exchange fall, acting *via* the resultant rise in prices, which price rise increases the State and private demand for credit. That inflation, once it comes, would prevent the home price level, and therefore the foreign exchanges, falling beyond the point of price equilibrium is naturally not disputed.

A concrete and actual instance is the circumstance that since the last mark collapse began State expenditure has been rapidly rising, and that plans are under way to increase taxes beyond the limits of Dr Wirth's not yet passed financial reform. This is due solely to the price rise caused by the mark exchange drop, and as the taxes will not be got in for a long time, an increase in the Floating Debt and in inflation must result. Meantime, further increases in State service charges have been decided on. Postal rates, which were to be increased another 50 per cent., are now to be increased 100 per cent., bringing the letter unit rate to 1 mark, or ten times the pre-war rate. Telephone rates are to be raised 80 per cent., making the minimum charge in Berlin about 1,300 marks a year. The Communications Ministry has recommended a 50 per cent. increase of railway rates and fares from December 1st. While severe on the public, these increases do not represent fully the decline in the buying power of the mark, so that deficits will remain. The Floating Debt on October 31st is reported at 233,102,202,437 marks, of which 217,828,620,300 marks were discounted Treasury Bills. Revenue received during the first six months (ending September 30th) of the current financial year was:—From taxes on property and business, 25,638,765,324 marks, of which 22,588,222,322 marks was from recurring taxes, and the remainder from one-time taxes. The largest items were:—Income-tax, 5,630,936,092 marks (in addition to 1,731,598,067 marks belonging to the financial year 1920); emergency levy, 6,197,981,830

marks; sales tax of 1919, 4,626,689,083 marks; corporation tax (for 1920), 901,198,346 marks; interest and dividends tax, 771,558,271 marks; and war tax on increment of wealth, 2,787,125,851 marks. Customs and taxes on consumption yielded 7,046,714,414 marks, of which 259,957,492 marks was from duties and 1,731,038,305 marks from the gold supplement on duties; coal tax, 2,301,748,941 marks; tobacco, 1,679,358,961 marks; wines, 315,219,721 marks. Receipts from posts and telegraphs and telephones were 3,228,075,495 marks; railways, passenger traffic, 3,268,290,000 marks; goods, 9,469,842,000 marks, or all sources together, 13,171,829,000 marks.

The Reichsbank statement for November 7th shows a relaxation of the credit strain, but an increase of circulation. Private discounts fell from 881,474,000 marks to 755,207,000 marks, discounted Treasury Bills from 98,704,768,000 marks to 95,339,603,000 marks, State deposits from 5,239,628,000 marks to 3,198,749,000 marks, private deposits from 13,063,035,000 marks to 10,661,619,000 marks. Circulation nearly touched 100 milliards, notes increasing from 91,527,679,000 marks to 92,609,995,000 marks, while "Kassenscheine" were 7,197,500,000 marks, a decrease of 118,900,000 marks. The low proportion of private discounts in the bank's assets has been a notable feature since the war. The bourses were again active with, on the whole week, rising prices; but the mark exchange recovery caused the usual reaction, and in general speculators realised or showed reserve, while outsiders continued to buy. To-day stocks were weak, being influenced by the exchange and by rumours of a Reparations moratorium, which might be calculated to send the mark up. The *Frankfurter Zeitung's* index for the 10th, the last bourse day of the week, is 42,358, against 39,654 on the 4th. The rise is partly accounted for by home loans, which went up from 853 to 881. On May 7th the home loans index was 826, and the present figure is the highest for two years. Mortgage bonds have also risen greatly. Federal loans now stand extraordinarily high, while Prussians and Municipals have been relatively neglected. Three per cents., the foreign favourite, are to-day quoted 110, against 89.50 on the last preceding bourse day, around 66 at beginning of the year, and around 60 at beginning of 1920. Prussian Threes are, if one ignores speculative movements which might raise Federal Threes even higher, a better investment, being backed both by Prussia and the Republic, and secured on forests and mines, but they are quoted at only 60.75. They too have had a considerable rise, having been only 50 on October 20th. War Loan is to-day quoted 77.50, 4 per cent. 72.75, 3½ per cent., 66.75, Colonials 4 per cent. 174, and Savings and Premium 80.25. Bourse activity is shown by the increase of receipts from transfer stamp duties from 27.48 millions in September, 1920, to 110.65 millions last September. Many increases of capitalisation are announced—Alfred Nobel and Co. from 25 to 125 million marks, Schultheiss-Patzenhofer (the largest brewery—the two companies lately fused) to 280 millions ordinary and 50 millions preferred shares, North German Lloyd (reported) from 250 to 400 millions, and the Dresdner Bank from 330 to 550 millions. This deal makes the Dresdner Germany's largest bank, whether as regards capital or capital and reserves:—

	Capital.	Reserves.	Both.
Dresdner.....	550	335	885
Deutsche.....	400	450	850
Darmstädter.....	420	200	620
Disconto.....	400	250	650
Barmer Bankverein.....	400	115	515
Commerz und Privat.....	350	137	487
National.....	300	150	450

But the Darmstädter and National Banks, which lately concluded an "Interessengemeinschaft" without formally fusing, have together larger capital and reserves than any single bank.

Prices and the cost of living continue to rise, with, however, sharp fluctuations caused by exchange movements in commodities that are either wholly or partly imported. American cotton (fully middling at Bremen) after reaching a maximum price of 145 marks a kilo (17 marks

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

KENNETH H. ROCKEY, Representative,
Gresham House, Old Broad Street,
London, E.C.2

in April), fell to 117 marks. Hides have risen three or fourfold since their lowest point of the year, ox hides from 6.50 marks in mid-March to 26.10 marks, cowhides 8.95 marks to 26.65 marks, bull hides 7.60 marks to 27.30 marks. Wood and oils have risen particularly rapidly. Rolling-mill products were raised only on October 20th, but are again up from November 10th, as follows, in marks per metric ton, pre-war prices and lowest prices of 1921 (end May) also given:—

	1914.	May, 1921.	Oct. 20.	Nov. 10.
Ingots.....	82.50	1.400	2.435	3.300
Blooms.....	87.50	1.475	2.655	3.600
Billets.....	95	1.550	2.725	3.700
Bars.....	97.99	1.850	3.200	4.500
Wire rods.....	117.50	1.850	3.500	4.900
Plates (thick).....	105	1.800	3.500	5.100

These are guiding, not compulsory maximum, prices. Prices of gas pipes have been raised 20 per cent. Since July 1st the prices of building materials have risen by between 50 and 100 per cent. Cotton yarn per kilo has risen from 39.49 marks at beginning of April to 130.150 marks on November 12th, cotton cloth from 6½-8 marks to 16½-20½ marks, raw silk (organdie) from 770 marks to 4,000 marks, grège 700 marks to 3,750 marks, artificial silk from 220 marks to 500 marks, eggs 1,250 marks to 3,400 marks per 1,000 (wholesale), rangoon beans 1.20 marks to 6.75 marks, rice 4-6 marks to 17½-17½ marks. The production cost of boots has risen in the same time from 125-200 marks to 320-460 marks. The exchange collapse would make the prices of imported goods impossible for most citizens, but very few import orders are being given, and there are stated to be large quantities of coffee and other colonial goods bought at a better mark exchange. The *Frankfurter Zeitung* puts the retail index for 10 foods, native and imported, at 200 on November 1st, against 130 a month before. As indication of the speed with which Germany is moving towards Russian conditions, newspapers report that contracts in dollars are being insisted on between home producers and their customers.

AUSTRALIA.—COMMONWEALTH BUDGET.

(FROM OUR CORRESPONDENT.)

MELBOURNE, October 8.

The Commonwealth Budget for the financial year ending June 30, 1922, shows an estimated deficit of £2,817,108, which will reduce the credit balance brought forward from £6,618,327 at June 30, 1921, to £3,801,219 at June 30th next. A comparison of the estimated Commonwealth revenue and expenditure (excluding payments to the States Governments) with actual figures for the two previous years is as follows:—

	1919-20.	1920-21.	1921-22 (Est.).
Taxation	41,101,730	52,229,493	47,281,000
Other revenue	11,681,372	13,288,115	14,506,350
Gross revenue	52,783,102	65,517,608	61,787,350
Deduct payments to States	6,720,492	6,840,163	7,022,500
Net revenue	46,062,610	58,677,445	54,764,850
Expenditure	43,860,862	57,783,924	57,581,958
Surplus	2,201,748	893,521	..
Deficit	..	..	2,817,108

The reduced estimate of taxation is due to the decline in Customs revenue, which is only estimated at £16,105,000, against the exceptionally high amount of £21,731,210 received in 1920-21 as the result of excessive importations. The expenditure of £57,581,958 includes £18,910,550 for interest on and other Commonwealth debt (excluding interest on loans issued in London on behalf of the States), against £17,246,381 in 1920-21, and £15,366,700 in 1919-20. The only changes proposed in taxation are some modifications of the income-tax to give relief in certain cases. The most important change is that in the case of primary producers the rate of tax will be the rate applicable (according to the graduated scale) to the average taxable income of five years, though the actual income (if any) of each year will be taxed in full at the average rate so arrived at. In connection with double taxation within the Empire, it is proposed to adopt the scheme recommended by the sub-committee of the British Royal Commission, so that where the deduction at present allowed from the United Kingdom tax is insufficient to ensure the payment only of an amount equivalent to the higher of the two taxes, the Commonwealth will grant such further relief as will effect that end.

In addition to expenditure out of revenue, expenditure out of loans will consist of £11,196,000 for war and repatriation purposes, and £5,597,174 for public works. From a statement made before the Budget by the Treasurer, it is expected that the £10,000,000 loan just floated in Australia for the former purpose will be the last required.

The Commonwealth public debt on June 30, 1921, inclusive of £16,750,000 borrowed in London on behalf of the States, amounted to £401,720,024, since increased by the £10,000,000 loan in September.

The Budget has been much criticised, in view of the fact that the estimates for the current year show a deficit of £2,817,108, and the Country party in the House of Representatives threaten an attack on the Government in consequence. As lower prices for Australian products generally have to be anticipated than those ruling in most cases during the last two or three years, the real pressure of the change will only be fully felt during 1922, when criticism of public expenditure is expected to be even more vigorous than at present.

ITALY.—COMMERCIAL TREATY WITH FRANCE—POSTAL AND OTHER SAVINGS BANKS—THE STATE BANK.

(FROM OUR CORRESPONDENT.)

TURIN, November 13.

The notice that the treaty of commerce between Italy and France, dated November 11, 1898, and renewed in 1907, was renounced by our neighbour, took the Italian public by surprise. Some see in this act a symptom of bad political feelings between the two allies, but the Govern-

ment explained that the end of the treaty was a matter of course; that the duties of 1898, based on the older tariff of 1887, were out of date, so that it was in the interest of both parties that a new treaty should be negotiated; that France had declared itself anxious to begin at once negotiations for such a new treaty. But it is rather unfortunate that the new treaty is to be negotiated at a time when Protectionist feelings run high in both countries. French and Italian Protectionists have been successful in constructing devices of high efficiency in making war on foreign imports, so that a very difficult task will be put before negotiators.

The place of France in our international trade may be seen from the following table (in millions of lire):—

	Import from.		Export to.	
	1920.	1921.	1920.	1921.
	Whole Year.	First Six Months.	Whole Year.	First Six Months.
EUROPE.				
Great Britain	2,368.3	1,315.5	884.3	417.6
France	1,333.5	801.6	1,095.3	543.7
Belgium	..	209.4	..	79.8
Switzerland	336.0	191.8	898.1	582.2
Germany	821.5	924.1	380.3	420.0
Austria	464.7	343.7	443.9	428.9
Czechoslovakia	184.0	130.1	75.1	33.2
Jugoslavia	..	194.5	..	244.2
Greece	45.2	18.6	160.5	119.6
Spain	139.6	78.3	139.9	75.5
Egypt	101.7	83.6	235.4	81.4
Tunis	81.3	110.3	50.9	19.2
Tripoli	21.8	14.1	68.4	44.3
Eritrea	..	10.1	..	16.5
British India	744.9	570.8	160.3	54.1
Argentina	1,676.7	727.7	419.1	238.1
Brazil	275.2	328.4	154.4	61.3
United States	4,788.5	5,150.9	655.1	676.8
Other countries	2,487.6	2,251.0	1,983.0	1,145.3
Total	15,870.5	13,454.5	7,804.0	5,281.7

The great increase in the figures from 1920 to 1921 is only an apparent one, as the values for 1920 are calculated on the prices of 1919, while those for 1921 were calculated on the prices of 1920, when the price-level reached a maximum. From France we took 8.4 per cent. of our imports in 1920, and 6 per cent. in the first six months of 1921, and respectively 14 per cent. and 10.3 per cent. of our exports. In 1920 of a total export to France of 1,095 millions lire 316.7 millions were silk and silk manufactures; and it is probable that silk will be a bone of contention between the negotiators.

The economic crisis has made itself felt in banking figures in Italy, only in the shape of a decline in the rate of increase in deposits of savings banks. The two years of greatest monetary inflation, 1919 and 1920, were also the years of greatest increases in the deposits of the savings banks. Unemployment and reductions of wages began to have an effect in 1921, and if it were possible to separate urban and country deposits it would be found that the urban deposits have positively decreased, while country deposits have continued in their expansion, owing to very good agricultural prices.

Postal saving deposits go to swell the budget of our greatest bank—a bank not known to the outside world, and somewhat akin to the Prussian Seehandlung, but without the connections which the Seehandlung has with other banks, and with Exchange activities. Our Cassa Depositi e Prestiti—Public Bank for deposits and loans is a State bank, which receives deposits mainly from Postal Savings Banks, public insurance institutions, individual accounts, and so on.

The principal items of the liabilities side of the last two balance-sheets for the year ended December 31st are compared below:—

	(Million Lire.)	1919.	1920.
Direct deposits		433.8	472.9
Current account of State Treasury		316.8	342.6
" " of the Bank of Italy		20.6	20.0
" " of the Postal Department		16.2	41.4
Miscellaneous accounts		143.9	183.5
Postal savings banks and insurance institutions		5,270.4	7,109.8
Trustee funds		157.7	174.0
Reserve		189.4	535.2

An interesting feature of these figures is the increase in the reserve of the bank, a useful item in these times of depreciation of securities. The bank specialises in loans to State, State institutions, provinces, and munici-

palities. We in Italy have not a market for municipal securities, and only a very few of them are quoted in the public exchanges. Municipalities do not come on the market for supplying themselves with capital, as they can claim the aid of the Cassa Depositi e Prestiti.

The following are the principal assets of the State Bank:—

	(Million Lire.)	1919.	1920.
Public securities (mainly State, but also special municipal securities)		3,917.2	5,791.4
Loans to provinces and municipalities		1,125.2	1,707.3
Loans to State Treasury		671.6	587.5
Current accounts with public authorities		522.3	614.4
Loans to public employees		11.4	22.9

The loans (by purchase of securities and direct loans) to State and municipalities reached in 1920 the huge total of 2,464.3 millions lire. It is a safe conclusion that if the deficit of State and local budget could be compressed within the limit of not over 2,000 millions lire yearly, it would no more be necessary to come on the market with new Exchequer bills or other State securities.

SWITZERLAND.—FOREIGN CREDITS—FEDERAL BUDGET—BANK FAILURE.

(FROM OUR CORRESPONDENT.)

GENEVA, November 14.

THE Société Financière Suisse, formed for the purpose of granting to the Entente Powers sundry credits required during the war, has now redeemed the second half of the face value of its shares, and there is still some profit to be distributed. Thus all credits granted by Switzerland to the Allies during the war are redeemed. As to the so-called coal credits granted to Germany, part of these have been redeemed, but lately some difficulties have arisen. It was stated at the shareholders' meeting of the Basle company formed for the purposes of this credit—all coal importers became compulsory members of this company—that payments still arrive promptly, but obviously the leading German banks are no longer ready to give their signature to three months' bills of the Empire, which are to be deposited. The board asked the authority of the shareholders to accept other securities than signatures of first-class German banks, and though this authority was given, the opinion is held all over Switzerland that the signature of leading German banks means more than that of the Empire, and the shares have considerably depreciated.

The estimated deficit in the Swiss Federal Budget for the year 1922 amounts to somewhat over 100 million Swiss francs. Up to the end of 1922 the total of deficits in the Federal budgets since the beginning of the war will reach one milliard Swiss francs. Of these accumulated deficits at least four-fifths are covered by loans—the floating debt is decreasing. About 350 millions is accounted for by the Federal food importing service and the artificial cheapening of foodstuffs for the lower classes of the population which was maintained up to a year ago, and unemployment has so far cost the Treasury no less than 80 million francs. It must not be forgotten that a considerable part of the war expenses, especially the various forms of social assistance, including cheap dwellings, fall to the share of the various cantonal budgets. The accumulated deficits of the 24 cantonal budgets might amount to another milliard. The assets of the cantons, of course, increased in value during the period of the war, especially lands, forests, buildings, new electric power stations, and reserves of cantonal banks, but the situation of public finance in Switzerland is not regarded by anyone with satisfaction.

In these deficits are not included those of the Federal railways, which have separate accounts, though the State is responsible for all liabilities. It is generally thought that the increased value of the Federal railways, owing to changes in prices, the construction of electric power stations, &c., during the war counterbalances the increase of liabilities arising from losses on exploitation. But if surrounding countries cannot pay in the shape of transit freights the interest even on the pre-war value of the railways, still reckoned in Swiss francs, surely they cannot pay the post-war value, which is much greater. Thus it

is only the Swiss user of the railways who might eventually be able to supply the interest for the increased value of the Swiss Federal railways in the shape of higher rates, which is not to the advantage of Swiss commerce and industry.

The Banque Commerciale de Fribourg, a local bank with a balance-sheet total of 40 million francs, has had to close its doors. The reason, just as in the case of similar stopping of payments at Zurich, is the currency gambling of its customers. The latest losses on German marks were far greater than the value of the cover, and so the bank has to pay for the sins of its customers. The latest fall in the value of the German mark has caused more serious troubles than this, and there may yet be some disagreeable surprises among the ranks of the smaller institutions.

Letters to the Editor.

LORD ASHFIELD'S SCHEME OF UNDERGROUND EXTENSION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The new scheme submitted by Lord Ashfield for the extension of the tube services of London is at present hanging fire owing to the clause in it requiring a monopoly of the omnibus services. But the importance of the scheme, which it was contemplated would not only improve the metropolis, but also diminish unemployment, merits discussion.

Apart from the efficacy of the plan in helping to relieve the acute unemployment prevailing at present, the scheme has a great deal to recommend itself from the point of view of the development of suburban London. That tramways and omnibuses must remain as "auxiliary" to the underground railways requires hardly any demonstration. It must be clear to every intelligent mind that the Underground, under the present conditions of the growth of London, must remain *par excellence* the one effective method, so far known to us, of brightening up the homes of Londoners. The fact of the high speed alone, which it is impossible can be reached by either of the street transport agencies, entitles the underground railways to the most serious consideration. Lord Ashfield in his article in the *Nineteenth Century and After*, issued in May, points out that the present average speed of the underground railways is 18 miles an hour, and by the present non-stop arrangement is raised to 25 miles an hour. If we compare this speed with the average of 9 and 10 miles per hour by a tram and an omnibus respectively, and at the same time remember that the average person does not like to spend more than 30 to 45 minutes for his journey between his home and workplace, there can be no hesitation in setting aside both the latter agencies as effective means in facilitating the spread of the metropolitan population. On the other hand, it is equally true that both the trams and omnibus services cannot be dispensed with. Both will have a place in a general transport scheme if one were devised. They are required to supplement and sometimes to act as feeders to the underground. The case put in this way is simple.

In an ideal scheme for the transport service of London it is incontestable that all the various agencies must act in accord. From the very beginning it was clear to all thinking men that disjointed attempts to provide travelling facilities in London should not be countenanced. As early as 1816 the problem of inter-relation of communications received the attention of a Royal Commission, who distinctly laid down that under no circumstances should the thoroughfares of the metropolis "be surrendered to separate schemes brought forward without reference to each other." Subsequent committees in 1855 and 1863 reaffirmed this opinion in the following words:—"The Committee are of opinion that every such system of internal railway communication for the metropolis should be under one management." The Royal Commission of 1867 record the melancholy fact that fresh schemes were sanctioned without any such consideration, and that the suggestion made remained a dead letter. The subsequent history is not far different. Whatever success the

attempts at the co-ordination of the metropolitan traffic have achieved has been due to the vigilance of the companies to preserve themselves. To-day we have to face the outstanding fact that the whole underground system and all the omnibuses are managed by one company. The process of amalgamation was inevitable, and has redounded to the public benefit. There is hardly any economist of note who will suggest that the result has been harmful to the public, and that competition should be encouraged to obviate the dangers of such a monopoly. Even Mr Beckett, secretary of the Municipal Tramways Association, confesses to "the blighting influence of disastrous competition."

Yet we are told that it is on this ground that the scheme has been abandoned. Lord Ashfield asked for a regulated monopoly of the omnibus service for ten years to come, a monopoly of a kind which, as we shall see, is far different from what it is understood to be in ordinary parlance. We may start with the prefatory premise that the ideal state would, of course, be to have a unity of management for all the three existing transport agencies, in order "to work out a scientific and accurate allocation of duties in the carrying of metropolitan traffic." At present this does not appear feasible in view of the fact that the tramways are owned and run by the L.C.C. Still, I would venture to suggest that the Underground may undertake the working of the tramways on some agreed basis. If the conflict between the Underground and the tramways must remain, that is no reason that a second disturbing element must be introduced.

I venture to inquire what is the good in introducing rival companies on the road? There are two possible grounds on which competition may be supported—(1) the development of transport facilities; (2) low fares.

As for the first, to expect competition to achieve this is to misread history and economic laws. Competitive finance must ultimately react upon the public in the raising of charges or the limitation of further development. If it comes, it will most probably take the form of a rival service on the best roads, and during the hours when the traffic is the thickest. This naturally will reduce the capacity of the existing company to carry on the service at the times and the places where the service is not particularly remunerative. The inevitable result will be the diminution of service to the public, or, as Lord Ashfield put it, the companies will be forced to conserve every effort to meet "piratical attacks" rather than go on with the development of the omnibus service.

As for the second, history is strewn with instances where unremunerative fares have ultimately led to combination amongst the rival companies and the public are then asked to pay for two capital outlays where only one was needed. Low fares under competition are a "myth" so far as its ultimate effect is concerned.

In place of the blind weapon of competition, we must have a more intelligent basis to guide us. Lord Ashfield, in suggesting that a department of the Government be instituted with authority over the company in the matter of both rates and services, has shown that interests are not opposed, but are identical with the public, and is therefore not afraid to submit to public control. A caveat is necessary. "The only principle upon the adoption of which any authority could successfully claim to exercise its powers to the full is the principle of fair compensation." It must underlie every scheme which makes any pretension to reconciling the interests of the public and the owners of the property.—I am, &c.,

London, November 17th, 1921.

REPARATIONS, ALLIED DEBTS, AND EXCHANGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The exchanges are made for man, not man for the exchanges. Mr Alfred E. Leaf is therefore correct in thinking that the transactions he suggests from the shipment of woollens from Berlin to the sale of tea in America will have no effect whatever on the exchange rates of the money of the various countries concerned.

Because of this fact, I have suggested to several firms that they should send goods they cannot sell here to Vienna, where they are wanted, but cannot be imported

in the normal course because of the exchange, sell them there, and buy goods with the proceeds and import them into this country.

It is within my knowledge that a small lot of coffee has recently been sent there without a bill of exchange being drawn against the shipment, and goods are expected back in exchange. This transaction being merely an exchange of goods, and not an exchange of money, will have no effect on the rates of money exchange.

Supposing, however, that the Vienna rate should suddenly fall from the 11,500 krone at which it was quoted on the 10th inst., to the 1,190 krone at which it was quoted on November 10, 1920, I can quite imagine it might pay the firm to sell the right to krone in Vienna for British sterling in London, instead of buying goods, but if others acted in the same way the tendency would be for the Vienna rate to rise again.

Substitute tea in America for coffee in Vienna, and Schneider and Co. of Berlin would be competing with other firms to sell dollar drafts on America. Before the war the tendency would have been for them to receive fewer marks in exchange for the dollars because of the competition to sell dollars, whereas to-day the German Government is an urgent buyer of dollars, so that holders can obtain a high rate for them. Mr Leaf suggests that Messrs Schneider would transfer their credit to their Government, but he does not explain how they would avoid the use of a bill of exchange. Even, however, if they could, the fact would still remain that a rate of exchange between the money of the two countries would have to be arranged, and I therefore do not think Mr Leaf is right in suggesting that the transaction would not "affect the mark demand for dollars in the exchange market."

I also cannot follow his suggestion "that the liability for State debt of this country to the United States has not affected the value of the pound sterling in relation to the American dollar." I admit that the fall from \$4.90-5.00 of July 30, 1914, to \$3.94½-3.94¾ of November 10, 1921, seems trivial compared with the German position, but the attitude of the public towards it does not suggest that it is negligible. Personally I should like to see the rate lower still, as it would tend to force us to buy more from our colonies and elsewhere, and to deter us from buying from the United States, while making it more worth while for them to buy from us.

In considering this question of exchanges, Mr Leaf must remember that Governments do not create credit abroad directly, but leave their nationals to do so, and then purchase the credits as an ordinary exchange transaction as far as the moneys are concerned, but as a one-sided one as far as goods are concerned, because the trade is all outward with no goods coming back in exchange.

Let the public apply this to the payment of reparations by Germany and the repayment of war debt to us by our Allies, and they will perhaps begin to understand why I urge that we ought to refuse to accept such payments.—I am, Sir, your obedient servant,

MARK B. F. MAJOR.

London, E.C. 4, November 15th, 1921.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Leaf seems to overlook that any circumstance which affects the balance of indebtedness must have an influence on the exchange market. Even the wheeling of a barrow-load of bricks over the frontier by way of reparation payment must have its effect, for if the bricks were sold in the ordinary way of trade the Germans would command their value in foreign currency towards meeting their foreign purchases. In the case of Schneider and Co., Mr Leaf assumes that they sell their dollar credit to the German Government and cancel their order for cotton, but in reality the Germans must have cotton, and have to secure more dollars to pay for it.

It is certain that in normal circumstances a country can pay considerable sums in interest on foreign loans without disturbing exchanges or trade. Our position as a creditor country teaches us this. The conditions under which a country can meet such payments seem clear enough: there must be sufficient production for export to pay for neces-

sary imports and the interest as well. Thus, if a country becomes subject to such a burden, it must brace itself for the effort both by increasing production and cutting down consumption. Germany is capable of meeting the burden if she is given time, but her imports are still greater than her exports, and time is needed for her exports to be brought up to the required pitch. If she is pressed too hard her finances will break down before she reaches this point.

The marketing of such a large quantity of manufactured goods is sure to upset many trades in other manufacturing countries, unless special outlets for all this energy are provided. Of course, the receipt of indemnity payments would enable taxation to be reduced, so that the public would gain new buying power equal to the indemnity payments, but this might not be directed towards the trades which suffered from German competition. A painful adjustment would be necessary, which would be repeated when the indemnity payments ceased.

Would not the position be much better if we used the indemnity, and perhaps inter-Allied debts as well, for the purpose of carrying out capital works and the improvement of transit facilities all over the world? I mean that the indemnities should be paid in material for capital works, and that this material, and, if possible, cash as well should be lent by the Allied Governments to enterprises all over the world, which enterprises should pay with securities. Eventually the securities could be sold and the proceeds used to extinguish debt. As these capital works could not be carried out at all if it were not for the indemnities, the process would not interfere with ordinary trade. In this way the indemnities and debts could be made a means of increasing the world's capital wealth immensely.

The payment in kind instead of currency would probably ease the exchange market, and have a big moral effect. This concession and some reduction of the instalments in the next two or three years might be made on condition that the German Government really gets down to balancing the Budget, and stops any further printing of notes.—I am, Sir, your obedient servant, C. CRAIES.

London, E.C. 1, November 17th, 1921.

LAND AND INDUSTRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The spread of the allotment movement during and since the war will have helped many of your readers to appreciate the letter from Mr W. G. Cass, in your issue of the 12th inst., in a way they would not have been able to do before August, 1914.

There is no doubt also that there is a growing appreciation of the serious meaning of the fact that already the nations of the world are beginning to wish to manufacture for themselves. This prompted a recent question, How many people the land of this country can support when these nations do so on a large scale, and will not take our manufactures in exchange for their foodstuffs.

Personally, I have no fear as to the reply if our people should once wake up to the needs of the situation as voiced by Mr Cass. A sound policy of land settlement here at home, making possible a combination of industry and agriculture through a wide extension of homes with houses with land attached, varying from the 10-rod plot up to a few acres in extent on the one hand, and on the other the large extensive farm run commercially on intensive lines, with a large amount of capital at command, will speedily alter the situation.

The foundation of this, as, indeed of the whole national life, is a sound currency system here, under which money will not act on prices. Given this, and economic causes will automatically determine for us and for the nations of the world to what extent we shall be self-supporting with regard to supplying ourselves with the food we need, and how far they will supply us with it in exchange for our services and manufactures.—I am, &c.,

REVIEWS.

"La Vérité sur Notre Situation Financière." Par Georges Lachapelle. (Paris) Roustan. 10 francs.

HERE is an admirably lucid exposition of French financial administration from the beginning of the war until two months ago. Avoiding the obscurities of the Budget, M. Lachapelle arrives at approximately the actual expenditure by taking from the financial statements sent monthly to every Senator and Deputy the figures of the Treasury balance at the beginning of the month and of the borrowings during its course, adding those of the tax revenue, and deducting the balance at its close. During the war the total expenditure was 145,451 million francs, of which only 16 per cent. came from taxes, but ten wealthy Departments were invaded, many officials were mobilised, and France was fighting for her life. Still, the subsequent efforts to increase taxation were inadequate, and after the armistice the reckless expenditure continued, for political reasons, till the elections; "Germany would pay." M. Lachapelle explains very clearly the misconceptions on this head entertained by the framers of the Peace Treaty, and shows how the urgent appeals for economy made by the Budget Commission of the Chamber have been ignored. His own remedy is simple. Let the nation live within its income, suppress unnecessary Ministries, transfer much of the regulation of expenditure to regional Commissions, who will be more careful than the Chambers, and reject not only the plans of currency faddists for unlimited note issues, but grandiose projects of great power stations and Alpine and Pyrenean tunnels, which are speculative at best. His book is of the highest value to all students of French politics and of public finance.

Anuario Financiero y de Sociedades Anónimas de España. Director: D. Daniel Riu y Periquet. Año VI., 1921. Madrid.

AN eminent Italian economist has recently called attention to the progress made by Spain through her neutrality in the war; and, in spite of the checks set up by labour unrest, and the recent disaster in Morocco, there is no doubt that the progress is real. Evidence of it may be found in this valuable work, though the advance seems to have been most marked in the first year of the war. Many new companies have been founded, and some are still very prosperous; the indigenous banks have a total paid-up capital of 780 million pesetas; shipping is represented by 93 companies, with a total paid-up capital of 446 million pesetas, and a bond issue of 74 million pesetas; gas and electric light companies—chiefly the latter—number 485, with an aggregate capital of 1,059 million pesetas; and many newspapers have been established during the war. For them, and for other enterprises, the joint stock company seems to be favoured above other forms of partnership. The work is indispensable to all business firms concerned with Spain.

Annuaire Statistique de la Latvia, 1920. Bureau Statistique de l'Etat. Riga, 1921.

THIS is a creditable beginning of what will prove a useful series of statistical year-books of the Latvian Republic. It is modelled on the corresponding publication of the German and Swiss Governments, and, though chiefly in Lettish, is made intelligible by a French translation of the preface, and of the headings of the tables—where there is room. It has been compiled under difficulties, among them the continuance of fighting after the Armistice, the absence of regular registration of births, deaths, and marriages, and the lack of a proper analysis of the Customs return showing the actual origin of imports and destination of exports, which now pass mainly through Copenhagen, Dantzig, and British and Swedish ports, and are classed accordingly. These defects will be remedied in future issues; meantime the book gives an encouraging particulars of the work done in repairing the ravages of the war. In the 44 towns whose population exceeded 2,000 in 1914, the aggregate number has fallen from over a million to less than 380,000, and of the whole number of buildings in the country 25 per cent. were

wholly or partly destroyed, and the main crops except potatoes have fallen off heavily. Reparation loan grants amount to 20 million roubles, and at the end of last year 8,237 families had been settled on holdings, the majority ranging from 37 to 50 acres each. The fishery statistics are encouraging, and there seems good hope that production may soon surpass its pre-war level.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. November 29. ACCOUNT. November 30.

There can be no doubt that Stock Exchange business begins to look up. The official record of daily bargains is no criterion of the actual volume of transactions, which may be taken as being at least 50 per cent. more than that of a month back. Plenty of money is available for investment in good stocks. The event of the week in the gilt-edged list was the sharp closing of the Port of London subscription-lists to the new 6 per cent. loan. The Port usually manages to score success with its new issues, and the rapid over-subscription of the latest loan adds another testimony to the popularity of these stocks. The Western Australia loan went more slowly, there being several other newcomers on the point of offering stock. Victoria, the Straits Settlements, Gold Coast, and Siam are mentioned as being four of the probable borrowers in the immediate future. In the industrial market, also, several new issues are known to be pending, the amounts in each case being fairly substantial.

Victory Bonds and the Funding Loan stand out with noticeable strength amongst the Government stocks, but the War Loan continues to be steadily absorbed, and the price has revolved round 88 for the greater part of the week. What are called the scrip stocks—that is, the partly-paid securities of Colonial and other issues recently offered to the public—

BARCLAYS BANK

LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch - 168, Fenchurch Street, London, E.C.3.
West End Foreign Branch - 1, Pall Mall East, S.W.1.
Liverpool Foreign Branch - 42, Castle Street, Liverpool.
Manchester Foreign Branch Corner York St. & Fountain St., Manchester.

have given way a little, in consequence of the continual competition. Amongst foreign bonds, the movement in German Threes were as erratic as usual, following, of course, the fluctuation in the mark. French Fives are quoted ex the coupon due last Wednesday. South American bonds are better as a whole. Mexican Government issues have received little attention. Amongst Chinese the disposition is for prices to recover after their recent shake-out. The 8 per cent. issues of both dates are, however, depressed.

The Home Railway market shows no indication of improvement, and, with people taking very little practical interest in stocks, prices have mostly sagged. The Underground group is adversely affected by the forthcoming reduction of fares on the L.C.C. trams, a step which may be followed, on some of its routes, by the London General Omnibus Company. Grand Trunks have further weakened, and a fall of several points occurred in Grand Trunk Pacific debenture stock. The feature amongst foreign railways has been a violent recovery in the price of San Paulo ordinary, which advanced to 105 on permission being granted to the company to raise its rates on January 1 next. Prices in the Argentine railway market moved abruptly, under the influence first of a little buying, then a slight pressure to sell. Mexican railways are better, on the decision of the directors to resume cash payments of interest on the debenture stocks.

The rubber market became almost buoyant at one time, owing to the produce improving to 11½d per lb. The rise lacked staying power, however, and prices gave way from the best. Rubber also reacted. Amongst oil shares, a spasm of weakness seized the leading group on account of the Royal Dutch Company convening a meeting to obtain authority, by alteration of the articles, for payment of dividends in shares instead of cash. After a general shake-out, prices rallied, but the fall affected the list as a whole, and talk of financial trouble abroad caused weakness in the market. The reduction of dividends amongst industrial companies continues. Brunner Mond and Dorman Longs have both reduced their dividends appreciably, and the shares gave way in consequence. Iron, coal and steel shares generally are heavy, in sympathy with a sharp fall in armaments due to the proposals from the Washington Conference in regard to a ten-years' holiday from building battleships. The shipping market, on the other hand, is firmer, owing to the more hopeful character of the recent Board of Trade returns. Some of the best brewery stocks are a little better, the 40 per cent. dividend-and-bonus of Ind, Coope and Co. drawing attention to the list. The textile market is only tolerably steady. Wireless shares have given way a little. Fresh improvements occurred in the insurance group on the figures given in last week's *Economist*. After many months, the banking share market is beginning to move upwards. The strength of gas stocks continues unabated, on the expectation of increased dividends. The Lyons dividend helped the price of the shares, and Harrods partially recovered from their recent depression. Electrical manufacturing issues are also a shade better, following upon the heavy falls that recently occurred in this section.

Notwithstanding further shrinkage in the price of gold, South Africans are distinctly better. It is stated that an agreement has been reached on the point of labour condition on the Rand which will enable the mines to obtain eight hours per diem work from their staffs, of whites and natives alike, as against a present five hours, which is said to be the case at present. Along with Kafirs, De Beers and Rhodesians improved. Elsewhere in the mining markets, Burma Corporations are flat, owing to the issue of a disappointing report. Russo-Asiatics have gone back for want of further support. Mexican mining shares have weakened, in consequence of sales by holders disappointed at the long period of waiting for Mexican "recognition." Base metal shares, as a whole, lean a little to the dull side, on account of financial troubles said to have arisen in connection with speculation in some of the metals.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded....	284,722,936

1915	660,983,076			612,522,633
1914	508,535,090			196,536,980

Series B 5½ per cent. Treasury Bonds, issued at 98 per cent., payable on application. Repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. The first dividend will be paid on April 1, 1922. Principal and interest are chargeable on the Consolidated Fund of the United Kingdom, and interest will be exempt from Corporation Profits Tax. Bonds of this issue will be convertible at the holder's option on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. These bonds may be registered free of cost in the books of the Bank of England or of the Bank of Ireland.

Western Australia.—Issue of £3,000,000 6 per cent. inscribed stock, 1930-1940, at £95 10s per cent. The proceeds of this issue will be used for the redemption of £2,000,000 Treasury bills due January 26, 1922, which were issued mainly for railways, harbours, water supply, and for settling ex-Service men on the land, and about £1,000,000 Local Inscribed stock, due January 1, 1922. This stock, when held by persons not domiciled in Western Australia, is not subject to any taxes of that State. By the terms of "The General Loan and Inscribed Stock Act, 1910," of the Legislature of Western Australia, provision has to be made by the State for a cumulative sinking fund at the rate of ½ per cent. per annum. The accumulated sinking funds invested in the names of trustees in London now amount to about £8,000,000. The revenues of the State of Western Australia alone are liable in respect of this stock, the Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury being neither directly nor indirectly liable for the debt. Subject to the provisions of the Trustee Act, 1893, this stock is a trustee security.

Port of London Authority.—Issue of £2,000,000 Port of London 6 per cent. inscribed stock, 1930-1940, at £96 per cent., repayable at par on July 1, 1940, but the Port of London Authority retain an option of redemption at par on or after July 1, 1930, on giving six months' notice. The stock now offered will rank *pari passu* with the 3½, 4, and 5½ per cent. inscribed stocks and "B" Port stock, already issued. All these stocks, including the above issue now offered, rank for security immediately after £9,379,752 "A" Port stock. The net revenue of this Port Authority for the year ended March 31, 1921, was £2,954,401, and after paying all interest and other charges, £896,044 was carried forward, as against a surplus of £383,347 brought in from the previous year's account. This is a reasonably well-secured issue, and we are not surprised that the issue was quickly oversubscribed in view of the attractive terms offered.

Benson and Hedges (Canada), Limited.—Authorised share capital \$1,500,000, of which \$555,300 has been issued and is fully paid. This is an issue at £94 per cent. of £200,000 8½ per cent. first mortgage debenture stock, being part of an issue of £220,000. It is "repayable" at par on March 31, 1936, or earlier, by means of a sinking fund to be applied in purchase of stock, presumably on the open market, or redemption. The issue is secured by a trust deed in favour of the British Empire Trust Company, Limited, and constitutes a specific mortgage upon property in Canada subject to an existing mortgage. It would be interesting to know the exact degree of security which can be attached to a "specific mortgage" which is subject to first mortgage, and we refer to the matter in a "Business Note." The company was formed under Canadian laws in 1917, and is now about to acquire the business of J. Hirsch and Sons, Limited, another Canadian concern. Profits of the combined companies are given from 1918. Combined surplus assets are stated to be \$1,459,328. Of this sum "trade marks and trade names" figure in assets at \$250,556, while properties are valued at \$350,000 under date of January, 1921, subject to the small mortgage of \$87,500. Stocks work out at \$980,049, but it should be noticed that the dates when these were taken are given as September 30, 1920, and December 24, 1920. Thus for a total borrowing of £220,000 the margin of security here shown is not wide. The issue, however, is guaranteed by Benson and Hedges, Limited, of London, who have agreed with the trustees not to create any charge over their assets without the consent of the trustees, "except in the ordinary course of business." It has already been pointed out in the *Economist* (November 20, 1920, see page 901) that it would be very difficult to lay down a limit as to what extent assets could be charged in the ordinary course of business. It is noteworthy that this prospectus states that "the company had at September 30, 1921, loans in the ordinary way of banking of \$135,000, and, in addition, had borrowed on July 4, 1921, £164,000." These sums, of course, will be repaid out of the proceeds of this issue. Net profits of the London undertaking are given from 1917, but the more important facts about the guarantor company—notably its assets—are significant details lacking from the prospectus. The British Empire Trust Company, Limited, has an agreement with the concern by which the Trust Company will receive "the difference between the issue price of the debenture stock and 82 per cent. of its face value." In other words, out of every £100 of repayable debenture capital issued the company receives £82—the Trust Company taking £12 gross, out of which commissions and all expenses of the issue are paid.

The Pinner Gas Company, Limited.—Issue of £14,550 7 per cent. mortgage debentures, to be repaid on January 1, 1932. The authorised share capital is £92,800, of which, including premiums amounting to £17,183, a total of £65,718 has been issued. The authorised loan capital amounts to £46,400, and of this £18,300 has been issued, exclusive of the present offer. The net revenue of the company for the year ended June 30, 1921, was £4,940, and as the interest on loan capital, including the present offer, requires only £1,990, the present issue may be considered to be well secured. But regard should be paid to the lock-up nature of the investment.

Isis Chemicals and Dyes, Limited.—Authorised capital £30,000, divided into 300,000 shares of 2s each. The company, it is stated, has been formed to acquire secret processes for making certain chemicals in demand in the dye industry. This is an "offer for sale" of 75,000 shares in this company at par. The information given about the company in the circulars before us is exceedingly meagre. There is an estimate of a "50 per cent. dividend." But the venture is such a leap in the dark, considering the uncertainty of the industrial outlook, that we must advise our readers (in the absence of far fuller information) to leave the shares alone.

ACTIVE SECURITIES

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

With regard to the steel works to which he referred last year, he understood that considerable progress had been made in preliminary operations, and that the scheme was maturing satisfactorily. This new enterprise would result in a valuable addition to the traffic of the railway. At Vizagapatam, where they hoped to make

DIVIDEND ANNOUNCEMENTS.

BROOKS AND DOBBY announce an interim dividend of 44d per share, free of tax, together with bonus of 9d per share, also free of tax, bonus to be applied in pay paid up. Unclaimed capital to extent of 9d per share, making shares 16s 6d per share.

LARSEN THURNER—Directors propose final dividend on preference shares at rate of 5s per cent. per annum, less tax, and final dividend on second preference shares at rate of 6s per cent. per annum, less tax. Owing to prevailing economic conditions, directors do not consider it prudent to recommend dividend on ordinary shares.

THE CHANAROLA directors are unable to recommend dividend on ordinary shares. The tea industry they are unable to recommend the payment of the usual half-year's dividend on the preference shares.

(c) The board states that, it having been decided to reduce the wide margin which has hitherto existed between the interim and the final dividend, they have adjusted the first six months' distribution accordingly.

one of the finest harbours in India, they had made progress commensurate with the funds at their disposal. Land had been gazetted, and was in course of acquisition. They had also secured the services of Mr. H. Cartwright Reid, C.B., as chief engineer of the project.

INQUIRY AS TO RAILWAY ADMINISTRATION.

In conclusion, the Chairman referred to the report of the committee appointed by the Secretary of State for India to inquire into the administration and working of Indian railways, and remarked that a Commission to India was not required to tell the world that Indian railways had not been provided with all the capital for extensions or for the equipment of existing lines which was necessary for efficiency. His comment on the report was that by direct omission and by indirect imputation, the admitted and proven starvation of the railways was laid at the door of the Guaranteed Indian Railway Company. Let them join heartily in hoping that the constructive parts of the committee's report might lead to more money being found for the railways to which India was entitled.

Mr. Frederick Schooling seconded the motion for the adoption of the report and accounts, which was carried unanimously.

UNITED RAILWAYS OF THE HAVANA AND REGLA WAREHOUSES, LIMITED.

FINANCIAL AND ECONOMIC CONDITIONS IN CUBA.

The twenty-fourth ordinary general meeting of the United Railways of the Havana and Regla Warehouses, Limited, was held, on the 17th instant, at Winchester House, Old Broad Street, London, Mr. C. J. Cater Scott (chairman of the company) presiding.

The London manager and secretary (Mr. W. J. Maslen) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that during the past year expenditure had become still more intensified, and in addition they had had to face very serious difficulties in Cuba, resulting in an almost complete financial breakdown. So far as the accounts for the year were concerned, he did not think they had very much to complain of. The earnings of the amalgamated companies were certainly very satisfactory. They amounted to £6,329,000, an increase of £453,000 on the previous year, but it was only fair to say that this was due to the increase in tariffs which the Government granted to help them to meet the increased working expenses. The expenses amounted to £4,848,000, an increase of £592,000, bringing up the working expense ratio to 76.59 per cent., an increase of 4.17 per cent. as compared with the previous year. The net receipts were £1,481,000, a decrease of £139,000. He ventured to think that these figures were quite satisfactory, having regard to the fact that the period had been one of exceptional difficulty.

SUGAR INDUSTRY.

They had been face to face in Cuba with a most difficult position with almost unexampled financial conditions. In May, 1920, the country was most prosperous; there were plentiful sugar crops, and prices went as high as 23 cents, as compared with something like 3 cents before the war. This absurd price for sugar could not, of course, have been maintained, and it fell as rapidly as it had risen, with the result that speculators were heavily hit. There being danger of an absolute collapse, the Government decreed a moratorium in October, 1920, their object being to save the banks, which had suffered very severe runs. The moratorium, which lasted in one form or another until June, 1921, was a very great handicap in moving the crop, and it failed to save the Cuban banks, three of the chief of which failed. The new crop opened with 350,000 tons of the old crop still unsold, and it was found impossible to get this out of the way before the new crop came in. The position of planters and of millowners was most unenviable, and it was greatly to their credit that a crop of no less than 3,900,000 tons had been made, that being nearly equal to the previous year's figure. Those two crops were, in fact, a record for the island.

If, as time went on and the crop was being moved, satisfactory sales had been possible, many of the difficult problems which the planters and this company had had to contend with would have disappeared; but, unfortunately, of this crop of 3,900,000 tons at least 1,500,000 tons—some put it at a higher figure—remained unsold, while, if they took the average price realised for what had been sold, it was very doubtful whether it had covered cost. This meant that the business had been unprofitable to the planters, and they had experienced great difficulty in paying the company's freight charges. The result was that, although the traffics were quite good and the earnings quite satisfactory, there were very large sums which had not been collected. The actual earnings would undoubtedly have justified a dividend equal to that of last

year, but the cash position was absolutely different. On June 30th this amounted to £714,000, or less than half of the previous year's figure. Having regard to this fact and to the constantly reduced traffics, together with the general position of uncertainty in Cuba, the directors had felt it right to conserve the company's resources and to recommend a dividend of only 4 per cent., carrying forward £239,000. They regretted this, but felt sure they would have the support of the shareholders.

With regard to the current year's prospects, his own opinion was that the days of bumper traffics had gone for the present, but by this reduction of expenditure to meet the diminution in receipts he hoped the directors might be able to report a not unprofitable result at the end of the year.

Referring to the question of rolling-stock equipment, the Chairman said they had provided a lot of new rolling-stock, which would be much more economical to maintain and would give a very much better service. The question had arisen how this was to be paid for. It had been impossible to think of raising any portion of the money in Cuba in view of the state of that country, and before leaving England they realised that the position here was almost equally bad. They made inquiries in New York, and, although the position there was not so favourable as they might have hoped, it was not impossible. Very lengthy negotiations took place in New York, and eventually they made an arrangement with the Cuban Rolling Stock Company—an American company—and the Commercial Trust Company, by which they purchased the equipment and leased it to this company. In order to provide the cash portion of the payment, they issued notes of the Cuban Rolling Stock Company, secured on the lease to this company, which was the usual form of the American railway purchase and hire system.

The Hon. Arthur O. Crichton seconded the motion, which was carried unanimously, and the dividend recommended was declared.

DALGETY AND CO., LIMITED.

FINANCIAL SITUATION IN NEW ZEALAND AND AUSTRALIA. CURRENT YEAR'S PROSPECTS.

The thirty-seventh annual general meeting of Dalgety and Co., Limited, was held, on the 18th instant, at 16 Finsbury Circus, London.

The secretary (Mr. H. E. Davison) read the notice convening the meeting and the report of the auditors.

The Chairman (the Hon. Edmund W. Parker), in moving the adoption of the report and accounts, said that a year ago the directors had the pleasure of laying before the shareholders a statement of accounts which could not be otherwise than satisfactory, constituting as it did the high-water mark in the yearly earnings of the company during its 36 years' history. The acting-chairman's speech on that occasion, however, included a grave warning that a serious reaction in commercial affairs and a condition of steadily increasing financial stringency had already set in, which pointed to difficult times ahead and to an inevitable reduction in the company's earning power. The state of affairs described became more aggravated as the days went by, and its baneful effects were seen in the records of most commercial institutions which had been made public during the present year.

FALL IN WOOL PRICES.

The fall—or rather the landslide—in the prices of almost all commodities took a direction which seriously affected the principal branch of the company's business. He referred to the collapse which took place in the values of wool—a fall so pronounced in the case of the New Zealand clip as to bring values for some descriptions down to a level below the cost of production. And even then the clip could only be offered slowly and with a scrupulous regard for the capacity of the market to absorb the supplies available. In all probability, something in the nature of a débâcle in the wool market was only averted by wise co-operation between those concerned in handling the 1920-21 clip in Australia, New Zealand, and London, and the British-Australian Wool Realisation Association controlling the enormous stocks carried over from the British Government's purchase of the Australian and New Zealand clips during the war years beginning 1916-17 and ending with 1919-20.

The unprecedented fall in New Zealand wool and the impossibility of turning the clip into money reacted most seriously on values of sheep, cattle, and pastoral securities in that country, and led to a sudden stoppage in the flow of credit, and to a condition of financial stringency for which it was necessary to go back very many years to find a parallel. All the elements calculated to produce a monetary crisis in the Dominion were in existence, and, with the object of averting this, the New Zealand Government proclaimed a moratorium, which protected the local banks and financial institutions from any sudden withdrawal of deposits by their customers.

WARNING TO SHAREHOLDERS.

Dalgety and Co. took no advantage of this moratorium, their

clients being offered all the facilities with regard to their deposits with the company that they possessed before the enactment of the moratorium. At the same time, he thought it only right to warn the shareholders that business in New Zealand was at a very low ebb, and that the prospects of making any profits at all in the Dominion for some time to come appeared to be very problematical. To add to the difficulties of the past year, the extraordinary increase in the imports of merchandise into Australia and New Zealand—which were enormously in excess of the exports from those countries—threw the whole Australasian banking system out of gear, and in some directions, especially as regarded remittances to this side, the machinery almost ceased to function. This abnormal state of affairs caused this company no great inconvenience, but it led to their being called upon to assist many of their clients who were prejudiced by the conditions which had arisen, and they were glad to be able to do so.

ENCOURAGING FEATURES.

Happily there existed, both in Australia and New Zealand, encouraging features which had played an important part in bringing about the somewhat easier conditions which now obtained. He referred to the dairy produce exports from New Zealand, and the wheat and dairy produce exports from Australia. In both countries these largely exceeded the value of the respective wool clips, and, as they were readily saleable at remunerative prices, their help in adjusting the financial position was invaluable. During the last three or four months another favourable factor of considerable importance had come into play in the shape of a material improvement in the value of wool, especially the finer qualities. As this was concurrent with a large increase in the proportion of sales to offerings, it encouraged a brighter outlook for the future, more particularly in Australia. The pastoral, agricultural, and dairying season in Australia and New Zealand could hardly be better at this period of the year. Thus there were other grounds for greater confidence than was justified a few months ago, but it was too early yet for anything more than a very modified degree of optimism, because the situation of the market for frozen meat was extremely unsatisfactory at the present time. Not only had the demand been restricted, owing to the reduced spending power of the masses, but this state of affairs seemed likely to continue. Moreover, prices had fallen to a level which left little or nothing to the stock breeders in Australia and New Zealand after providing for the high scale of treatment charges on their side, the relatively high

rates of freight, and the greatly increased handling charges here, which were a legacy of the war years, when market prices were more in proportion to expenses. This was a very serious matter for the company's pastoralist clients, as it meant not only considerably reduced values for live stock, but a greatly restricted market for their surplus.

Since he last had the pleasure of addressing the shareholders he had, in company with the general manager, visited almost every branch of the company throughout Australia and New Zealand, and it was a source of great satisfaction to them to be able to report that the company's business was based on sound and progressive lines.

LIQUIDATION OF GOVERNMENT WOOL.

A matter of interest to all associated in any way with Australia and New Zealand or with the wool trade was the progress that was being made in the liquidation of the Government stocks of old wool which were unsold on June 30, 1920. These were taken over as from December 31, 1920, by the British-Australian Wool Realisation Association, and at that date the total stock amounted to 2,586,474 bales, including 768,000 bales of New Zealand and a small quantity of Falkland Islands wool. Considering the period of depression through which the wool market had passed during the present year, realisations had been better than might have been expected, and if selling could be maintained at its present rate the New Year would begin with the British-Australian Wool Realisation Association stocks down to about 1,900,000 bales. Out of the surplus funds arising from the sales of this wool a cash distribution of £5,005,000 was made at the end of July last, and was naturally a welcome addition to the incomes of the Australian shareholders, and a further distribution of £5,250,000 was to take place in May next year.

PROFIT AND LOSS ACCOUNT.

Dealing with the profit and loss account, the Chairman said that the gross profits for the year showed a reduction of £268,129. Against this there were the reductions in expenses of £49,273, depreciation of £20,637, and taxation of £51,383. The lower cost of taxation was unfortunately merely the natural result of reduced profits, but it was satisfactory to be able to report under this head that they anticipated making a substantial recovery on account of past payments for excess profits duty. The amount recoverable was sufficient to appreciably affect the revenue for the current year. With regard to the long-standing grievance of double taxation

within the Empire, as to which the British Government were at length induced to make a fair concession, the Australian Commonwealth Government had announced its intention of adopting the scheme of reciprocity recommended by the Sub-Committee of the British Royal Commission on Income-tax for the elimination of double taxation within the Empire. On the other hand, the New Zealand Government, usually the first to respond to claims of Imperial concern, had so far not seen its way to co-operate in this desirable movement.

After making full provision for all bad and doubtful debts and for all contingencies that could possibly be foreseen, there remained a net profit of £140,606, to which had to be added the amount brought forward from last year, £128,505, giving a total of £269,111. The directors recommended the payment of a final dividend of 5s per share, free of English income-tax, making, with the interim dividend, 10 per cent. per annum, the dividend to be payable on and after November 24th, the addition of £50,000 to reserve fund, thereby raising it to £950,000, and of £10,000 to the staff provident fund, leaving £84,111 to be carried forward.

Mr Stephen Fairbairn seconded the resolution, which was carried unanimously.

On the motion of the Chairman, seconded by Sir Lionel Fletcher, C.B.E., the retiring directors (Mr R. E. Bush, Mr S. Fairbairn, and the Hon. Sir Arthur Lawley, G.C.S.I.) were re-elected.

A hearty vote of thanks was accorded to the chairman, directors, the local boards of advice, and the staff for the services rendered to the company during the year.

The Chairman, responding to the vote, said that it might interest shareholders to know what the company had done during the past seven years, beginning with the first year of the war. The company had paid for English and Australasian taxation £1,126,378, in dividends and bonus to shareholders £840,000, had added to reserve fund £400,000, and to the provident fund £70,000, while they had written off premises, plant, and furniture £285,000, and for depreciation of investments £174,489.

The proceedings then terminated.

JAYA PARA RUBBER ESTATES, LIMITED. RUBBER AND COFFEE PROSPECTS.

The tenth annual general meeting of the Jaya Para Rubber Estates, Limited, was held, on the 14th instant, in the Council Room, the Rubber Growers' Association, 38 Eastcheap, London, Mr R. J. Arnold (chairman of the company) presiding.

The secretary (Mr J. J. Sneddon, A.C.I.S.) having read the notice convening the meeting,

The Chairman said that the year 1920 was a very disastrous one for rubber companies, and not less so for those interested in coffee, and he was sorry to say that the company made a loss for the year. Rightly speaking, that loss was really attributable to 1919, and not to 1920, because at the end of 1919 the company had a large amount of produce on hand valued at no less a figure than £57,500. This subsequently fetched only £46,109, and in that amount was included £5,159 for produce, chiefly coffee, which was still on hand on December 31, 1920. Practically the loss—certainly the major portion of the loss—was due to the fall in coffee. Deducting the loss on stocks carried over from 1919, the company actually showed a profit for 1920, in spite of the very adverse factors they had had to contend with. Those adverse factors were the high costs of production and an adverse Dutch exchange.

The stock on hand of both rubber and coffee on December 31st last was taken in at a figure which was more likely to show a surplus than a loss. They were all thankful that the year 1920 was behind, but, as their accounts were somewhat late, he had to tell the shareholders what was to be expected for 1921 and 1922. Happily, they had taken the precaution to sanction their commercial agents' selling a substantial amount of rubber forward for the current year, 1921. On the first sales they cashed the satisfactory price of 2s 3½d per lb for eight tons monthly for the whole of 1921. A further sale of six tons per month for six months at 62 guilders cents had been made in Java by their director, Colonel the Hon. Ed. Coke. This would bring them in about a further £700 per month from July to December. As those sales absorbed less than half their production for the year, they would not do so badly with rubber. From the coffee crop, even if it fell short of the 8,000 piculs—say, to 7,000 piculs—the directors thought they were pretty certain to cash £20,000. He thought they should cash at least £12,000 further for rubber—possibly more. He could not see, therefore, the company's revenue for 1921 being less than £60,000, and, what was of equal importance, he thought that expenditure should show a very substantial reduction. In regard to the year 1922, they estimated only the same crops as for 1921—namely, about 700,000 lbs of rubber and 7,000 piculs of coffee. What could he tell them about the rubber position in 1922? Personally, he was optimistic, not that he expected to see the price back to over 2s per lb, but he thought they would gradually work up to well over 1s per lb, and possibly to 1s 3d or 1s 4d per lb.

The report was unanimously adopted.

KIMBERLEY WATERWORKS COMPANY, LIMITED. AGREEMENT WITH CITY COUNCIL APPROVED.

An extraordinary general meeting of the Kimberley Waterworks Company, Limited, was held, on the 15th instant, at Cannon street Hotel, London, to consider resolutions confirming the sale of the undertaking to the Kimberley City Council, the winding-up of the company, and the appointment of a liquidator.

Mr James Jackson, the chairman, said that it was with very mixed feelings that he approached his task that day, as it was 41 years since he had joined the company, and this was the last time on which he was likely to meet the shareholders. Such facts made for a gloomy atmosphere, but fortunately that was absolutely dispipated by the gratification which he felt at the fact that the negotiations with the Kimberley City Council had resulted so favourably, and also by reason of the fine showing made by the circular accompanying the notice of the meeting. It need be no secret now that during the negotiations with the City Council they had at times been skating on very thin ice. There was a section of the community very ambitious in their schemes, who desired to have works of far larger extent than those of the company, so as to carry out their plans. There was another section that was willing to buy, but only at a scrap-iron price.

The directors knew that their works could not be constructed now at anything like the price they had paid for them, and it was quite possible that they might have asked more and possibly have got more, but the risks were tremendous. For one thing, it had been by no means certain that the city loan would be an unqualified success, and they might have had to take a large portion of the purchase price in bonds, which would not have suited them so well as cash. The directors had used every inducement during the negotiations to make the council, if possible, pay in cash, and the outcome was that the company had received £288,000 in cash. It was an intense relief to them when the matter was finally settled, because they were convinced that a sale now was of much more advantage to the shareholders than it would be to run the risks of the uncertainty of an arbitrary price in 1916, when the council had the right to acquire the property.

Mr Robert Ford seconded the resolution confirming the sale and authorising the payment of compensation to the directors and staff, and it was carried unanimously.

Resolutions were also passed authorising the winding-up of the company, the appointment of a liquidator, and the appointment of the present directors as a consultative committee, without additional remuneration, to assist the liquidator.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—The estimated production of crude oil for October was 9,124 barrels, equal to approximately 1,300 tons, produced from Well No. 7, which was on a ¾-inch choke. Delivery to Trinidad Leaseholds at the rate of 5,000 tons per month having been made in advance up to the first week in December, all the other wells remained shut down during the month.

BRITISH BURMAH PETROLEUM CO.—Total production of crude oil by this company and the Rangoon Oil Co., Limited, for the month of October amounted to 76,413 barrels.

GENERAL PETROLEUM COMPANY OF TRINIDAD, LIMITED.—Oropuche Field.—Production of crude oil for week ending November 12th restricted to 1,500 barrels.

KERN RIVER OILFIELDS OF CALIFORNIA.—Total production during October amounted to 106,792 barrels, or approximately 15,256 tons, including 57,016 barrels from the properties of the St. Helen's Petroleum Co., Limited.

TRINIDAD LEASEHOLDS.—Oil produced during October, 11,900 tons. Oil purchased during October from other companies, 2,250 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, November 9th, amounted to 1,403 tons.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £40,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Nov. 21st-Nov. 26th, were opened on Nov. 18, 1921, and the total amount applied for was £54,365,000. Tenders for Monday to Friday bills at £99 os 3d, about 77.8 per cent., and above in full. Saturday bills at £99 os 6d and above in full. The average rate of discount was £3 17s 8½d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition ¹ Bills.	Tenders at Rates below receive.
	£	£	£ s d		
Oct. 21 (3 months)	60,000,000	84,160,000	8 38	3½	£99 1s 3d (Monday to Friday bills) about 81.5% and above in full. Saturday bills £99 1s 6d and above in full.
Oct. 28 (3 months)	60,000,000	83,445,000	3 14 5-63	3½	£99 1s 1d (Monday to Friday bills) about 80.18% and above in full. Saturday bills £99 1s 4d and above in full.
Nov. 4 (3 months)	60,000,000	87,405,000	3 16 2-6	3½	£99 0s 7d (Monday to Friday bills) about 44.79% and above in full. Saturday bills £99 0s 10d and above in full.
Nov. 11 (3 months)	45,000,000	78,340,000	3 17 0-43	3½	£99 0s 6d (Monday to Friday bills) about 75% and above in full. Saturday bills £99 0s 9d and above in full.
Nov. 18 (3 months)	40,000,000	54,365,000	3 17 8-27	3½	£99 0s 3d (Monday to Friday bills) about 77.8% and above in full. Saturday bills £99 0s 6d and above in full.

The amount to be offered next week will be £45,000,000.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year ends December 31, Except where Stated.	Outputs.			Output Month Oct., 1921.	Increase or Decrease.	Output Ten Months of 1921, Except Where Otherwise Stated in Brackets.	Increase or Decrease.	Dividends paid in Past 5 Complete Years.

Reports and Notices.

The address of the Lagunas Syndicate, Limited, now is Palmerston House, 34 Old Broad street, London, E.C. 2.

GOVERNMENT STOCKS, &c.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the November instalment of the Debt Service in accordance with the arrangement of May 25, 1912.

CITY OF PERAMBUCO (RECIPE) 5 PER CENT. GUARANTEED LOAN.—Messrs Dunn, Fisher, and Co. announce that they have received a cable from the city authorities regarding the coupon due November 1, 1921, of which the following is a translation:—"Coupons certainly will be paid; remittance cable difficult. Will remit by 'Araguaya' November 21st. Bankers will advise you." Notification will be given as soon as the remittance comes to hand.

BANKS.

LONDON JOINT CITY AND MIDLAND BANK.—An impressive ceremony was performed on Armistice Day at the head office of the London Joint City and Midland Bank, Limited, when the Right Hon. R. McKenna, chairman of the board, unveiled the war memorial erected by the directors in honour of 717 officers of the bank who lost their lives in the Great War. No fewer than 5,100 of the clerical and messenger staffs, representing 56 per cent. of the total staff, joined H. M. Forces, and of these 14 per cent.—a very high proportion—laid down their lives.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK.—The report and accounts for year ended June 30, 1921, show a net profit of £267,975, to which is added £94,209 brought forward from previous year, making £362,184 available. Ordinary dividend of 10 per cent., free of income-tax, absorbed £128,807. The sum of £28,837 is added to reserve fund, which will then stand at £1,300,000. The sum of £5,000 is allocated to the E., S., and A. bank officers' guarantee and provident fund, and £42,936 is utilised for the purchase and cancellation of deferred inscribed deposit stock, while £102,604 is carried forward. During the year the businesses of the London Bank of Australia and the Commercial Bank of Tasmania have been acquired.

JUGO GINKO (TOKYO).—Balance-sheet, June 30, 1921:—

RAILWAYS.

BRAZILIAN RAILWAY RATES.—A cable has been received by the San Paulo Railway from their superintendent in Brazil, stating that he has been informed that an increase of rates will be granted, to be put into force from January 1, 1922.

PARAGUAY CENTRAL.—The results of working for the year ended June 30, 1921, with difference as compared with the preceding year were as follows:—

	Year Ended June 30, 1920.	1921.	Difference.
Gross receipts	257,993	232,874	25,119
Working expenses	152,014	133,766	18,248
Net receipts	105,979	99,108	6,871

The balance of net revenue for the year available for meeting the service of the company's debenture stocks is sufficient, after providing for all prior charges, to pay interest at the rate of 4 per cent. on the "D" income debenture stock and to leave a surplus of £448, which has been transferred to the credit of "D" income debenture stockholders to be added to subsequent revenue available for distribution to them. The report states that, "The average gold rate of exchange during the year was 3.019 per cent., as compared with 2.284 per cent. for the preceding year. On June 30, 1921, the rate was 3.386 per cent., and since then has varied considerably, and at present stands at 3.839 per cent."

MEXICAN RAILWAY.—The company announce that, in view of the fact that its scheme of arrangement with its debenture-holders

and the holders of its deferred interest certificates will shortly come to an end, a fresh scheme is being prepared. The proposed scheme, which will be subject to the sanction of the holders of the securities in question and to the approval of the court, will provide, *inter alia*, for the payment of the current interest on the first and second debentures, and for the immediate repayment in cash of 20 per cent. of the deferred interest certificates issued in respect of the interest on the 6 per cent. perpetual debenture stock.

RUBBER.

BANTAM (JAVA).—The report for year ended June 30, 1921, states that the output of rubber for the year amounted to 713,192 lbs, against an original estimate of 992,080 lbs. As from November 1, 1920, the crop was restricted, in accordance with the Rubber Growers' Association Restriction of Output Scheme. The cost of production on the estate was 10.25d per lb, and the "all-in" cost, including depreciation, was 11.06d per lb. The average gross selling price (not including the stock unsold, valued at market price on June 30, 1921) was 11.07d per lb. Owing to the depression in the industry, the directors have taken steps to curtail all expenditure other than that absolutely required for the welfare of the estates. The visiting agent has reported to the board that he is satisfied that the plantations will not in any way suffer in consequence of these economies. The net profit amounted to £2,138, which with £11,758 brought forward makes £13,896 available. A dividend of 5 per cent. is paid, absorbing £5,250, leaving £8,646 to carry forward. Negotiations are still proceeding regarding the most complicated position arising from the company's liability for income-tax in Java, for British income-tax, excess profits duty, and corporation profits tax. Estimating the situation as on June 30, 1921, the directors are of opinion that on balance there should be a credit to profit and loss account increasing the amount of divisible profits for the year, but the credit balance brought forward from previous years will be reduced.

BUKIT TAMBUN.—The net profit for the year ended June 30, 1921, amounts to £2,494, and, including the sum of £2,680 brought forward from last year, the balance to the credit of profit and loss is £5,174. The directors recommend that in view of the present condition of produce markets this sum should be carried forward. The report states that the number of nuts harvested during the year was 2,059,374, against 1,660,633 nuts obtained in the previous year; 400 tons of copra were manufactured, at a cost, f.o.b., of £19 3s per ton, against a corresponding cost of £17 13s per ton last year. The increase in cost was due to the rise in wages of coolies during the first half of the year, the heavier loss on rice, the expenses of passage on leave of the manager, and a few other incidental expenses. The average net price realised, after deducting all sale charges, was £27 15s per ton, against £27 7s per ton last year. The market quotations of the previous year were not maintained, owing to larger stocks of copra becoming available and to a somewhat smaller demand.

GAJANG BESAR.—The report for the year ended June 30, 1921, shows that the rubber harvested amounted to 511,178 lbs. Costs and selling price are as follows:—F.o.b. cost of production, 15.48d; "all-in" cost of production, 17.81d; average gross price realised, 18.07d. Compared with the previous year, the "all-in" cost has been reduced by 2.41d per lb. By the postponement of various improvement works and by the adoption of other measures of economy, the directors anticipate that a still greater reduction in costs will be effected during the current year. The output for the year 1921-1922 is estimated at 525,000 lbs. The balance of the combined companies brought forward from the year 1919-1920 amounted to £2,681; from which has to be deducted the net loss for the year, £2,401; leaving to be carried forward £279.

GLENN RUBBER AND TEA.—The report for year ended June 30, 1921, states that the output of rubber from Glencorse Estate was 106,820 lbs, against 103,130 lbs for 1919-20. The average gross price obtained was 10.83d per lb, against 23.173d per lb in previous year. The "all in" cost for 1920-21, including depreciation on buildings and machinery for that year, assuming that the remittances to the estate has been converted at an exchange of 15.4d to the rupee, amounted to 11.26d per lb, as against 12.77d per lb for 1919-20. Loss on exchange for the year amounted to £856 12s 7d, which is equivalent to 1.93d per lb, as against 6.29d per lb for the previous year. The loss for the year was £2,420, from which is deducted £1,715 brought forward from previous year, leaving a debit balance of £675 to carry to new account.

RINI (JAVA).—The report for year ended January 31, 1921, shows a loss of £2,267, which must be deducted from the amount brought forward from 1920, viz., £5,456, leaving £3,189 to be carried forward. Included in the receipts for the year is the sum of £62 12s 5d received from Rini Development Syndicate, Limited, being one-half share of the profits derived by the syndicate from their sales of coffee. The total amount charged to development account is £3,431 8s 2d, the whole of the London expenses being charged to revenue account. The crop for the year amounted to 120,115 lbs, against an estimate of 120,000 lbs. Restriction has taken place since November, 1920, in accordance with the recommendations of the Rubber Growers' Association. The average gross price realised was 11.53d per lb. The crop harvested for the current year to the end of September is 62,772 lbs. The coffee crop for the year was 67.10 piculs, against an estimate of 300 piculs. The output has been sold at an average gross price of 25.42d per picul. In addition, there was obtained from the syndicate area a harvest of 122.90 piculs, this company being credited with half the profits thereon. The manager estimates the output for the current year at 350 piculs from the company's portion of the estate and 650 piculs from the syndicate area. 137.60 piculs of coca were harvested, which have been disposed of at an average of 30.75 fl per picul. The estimate for coca for the current year is 250 piculs.

SINGAPORE UNITED.—The report for year ended June 30, 1921, shows that the restricted output of dry rubber was 644,958 lbs, as compared with 525,133 lbs in the previous year. Of this output

180,969 lbs has been sold in London at an average gross price of 7.06d per lb, and 463,989 lbs in Singapore at an average gross price of 9.72d per lb. The net price realised of 8.65d per lb compares with 11.39d per lb last year. The output for the first four months of the current year was 182,800 lbs. The total revenue for the year was £23,673, and the revenue expenditure £37,229, showing a loss of £13,556. The amount brought forward was £35,673, from which must be deducted corporation profits tax for 1920, income-tax in respect of 1920-21, and the above-mentioned loss, leaving £18,890 to be carried forward.

† Free of tax.

(a) Including arrears.

(t) This is for half year to June 30, 1920.

cargo of Dan-Bess-Kustendji, on sample, arrived, sold 295 3d to Continent per 400 lbs. Offals steady. Broad bran £9 10s to £9 15s, ordinary ditto £8 10s to £8 15s, middlings £9 10s to £10 15s per ton ex mill, bags included. Oats steady with a fair trade passing. English ranges from 27s to 34s per 336 lbs, free on rail, according to quality. Of imported, Plate f.a.q. 26s 9d, ditto clipped 27s 6d, Chilean tawny 25s to 30s, No. 2 Canada Western 31s, and No. 3 ditto 30s, New Zealand 34s to 35s, all landed per 320 lbs. Oatmeal steady. English all cuts £20, Scottish, also American, £18 10s, English rolled oats £22, and flaked £23 to £24 per ton. Beans: English steady at 44s to 48s, and old 54s

to 60s per 532 lbs. Peas in slow request; English maples 60s to 68s, Duns 50s to 55s per 504 lbs. Japanese marrowfats 39s to 41s, landed, Dutch blue 22s, Tasmanian blue 22s to 25s per cwt, ex wharf. Lentils quiet. No. 1 split 32s to 34s, Egyptian 28s to 29s per 100 lbs. Homeward grain chartering was on a moderate scale and rates easy. From the River Plate 20s paid November and December loading heavy grain, also clipped oats, with 21s 3d unclipped oats, while heavy grain, December early January, done at 21s 3d. New seasons loading, January-February and February-March, fixed at 26s 3d, but values now easier at 23s 9d, January-February, and 23s February-March. United Kingdom-Continent North America quiet, and business chiefly to Italy. Northern Range, December, done at 19½ cents one port, 20½ cents two, and 21½ cents three ports discharge, and 24 cents Greece per 100 lbs. Bombay on dead weight paid 20s, and Dalny beans 35s, with 30s South Australia-Victoria, February, 50s United Kingdom-Continent, option Calcutta 35s, and Bombay-Karachi 36s 3d. Danube grain paid 20s 6d, prompt loading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated November 17th, is as follows:—Pig-iron: There is no immediate prospect of any more blast furnaces going in. Foreign pig-iron still gets what little trade there is, with the exception of some local demand. The fact is, costs, principally coke and transport, are not nearly low enough yet, and no one has the slightest confidence in contracting ahead for pig-iron under present conditions. Prices are as follows:—No. 3 Cleveland G.M.B., 110s per ton; East Coast mixed numbers hematite, 115s to 120s per ton. Manufactured iron and steel: No change in the steel position. There are signs of a freer market and further cutting of prices. Present quotations are:—Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £14; steel rails, £10 10s net. Iron ore: The market is in a moribund state. Prices nominal. Best Bilbao Rubio ore 27s per ton, c.i.f. sellers.

Our Sheffield correspondent writes:—The steel trade still sags, and a steady shrinkage has been in operation for three weeks. Nevertheless, a spirit of optimism is developing, as many business people can see evidence of a partial revival in the near future, although there are no expectations of improvement during the remainder of the year. Trade with Japan, long suspended, is reviving again. The drastic cuts in iron and steel prices enable successful competition with European countries. Moreover, Germany is unable to execute her orders, and deliveries get more and more into arrears. It is reported that Germany has been compelled to buy various raw materials outside the country at enormous prices, owing to her depreciated currency. She may be able to hold her own in aluminium ware, because the ore is produced at home, but as regards manufactures of other metals it is thought that she will soon be off the market. Business in pig-iron and steel billets is on an extremely meagre scale. The motor trade is looking up, and makers are inquiring for steel material such as is produced in Sheffield. Depression is acute in the railway steel branches, as the home companies are buying next to nothing, and overseas work is going to the Continent. This department, however, is certain to improve before long. There is a slump in light rails for collieries and contractors, and prices have dropped to a low level. Orders from the shipbuilders are few in number. Trade is quiet in finished steel products, and makers are cutting prices severely to secure the limited amount of business offering. Cutlery firms have made drastic cuts in selling prices, although costs have not fallen to any considerable extent. Lower wages in this trade in the New Year are said to be inevitable. The cancellation of the contracts for the four battleships would be a serious matter for Sheffield. It was anticipated that this projected work would absorb most of the unemployed men in the New Year, while the contracting firms have spent large sums on plant and fixed up important contracts abroad for supplies of raw materials. The building of a battleship brings work to many firms in Sheffield, in addition to the actual contractors. In spite of the severe weather, the demand for house coal is not expanded as it was expected to do, and many people are still buying from hand to mouth. Best qualities are selling readiest. Inland consumption of steam coal continues on a comparatively small scale, and export business fails to expand so far as South Yorkshire coal is concerned. The inland consumption of blast furnace coke is limited, owing to the many idle plants. [Our correspondent wrote before the announcement of the suspension of warship contracts.]

Our Glasgow correspondent (writing on Thursday) says:—For several years back the steelmakers of England and Scotland have worked under an agreement in which it was provided that each party should keep to its own district, north and south of the Tweed, in doing business—that in effect there should be no competition as between themselves, and that there should be one level of quotations for material, at least that falling into use in shipbuilding and structural engineering. The scheme worked well for producers. But of late, owing mainly to Continental competition and to the trade depression that the country has been passing through, the English makers have become somewhat restive, and have been holding that the competition referred to has not been adequately faced. Various conferences have been held to discuss the situation, and though from time to time prices have been cut into, the reductions have not been remedial, have not, in short, relieved the strain on the position. The old policy of dealing did not meet the changed circumstances; in fact, it fostered inside competition in England, where there have always been a number of steelmakers outside the combine. These firms have for months been underselling those in the national organisation, and have thus managed to pick up a major part of such orders as were going about. Scotch houses were not directly affected to any great extent, and therefore were not prepared to back up their English confrères in meeting the home opposition, which meant a severe break in values. Accordingly what may be called a crucial meeting of makers was held last Saturday, but, as anticipated, it came to nothing. As a result of the failure of parties to agree on a fixed general selling arrangement the hands of the trade have been freed, and throughout the United Kingdom steel producers are now at liberty to transact business wherever it happens to be offering and on such conditions as they can command. On Monday prices were marked off substantially, English terms in Scotland falling fully £2 a ton and Scotch terms by from 20s to 30s a ton. Throughout the week English ship plates have been called £10 10s and angles £10, while Scotch plates have stood at £11 10s and angles at £11. These are home market rates, the export quotations being £6 15s for plates and £9 5s for angles. It is not without interest to note that since the beginning of the year Scotch boiler plates have yielded about £16 a ton, ship plates quite £14 10s, and angles £14. So far as known no trading of consequence in material has been recorded at the new levels. English makers claim that they have effected some

sales. In that case the net price realised must be very poor, not more for home than £9 to £9 10s, for the carriage from the north-east coast to the Clyde district is given as not less than 20s a ton. Outside of these unsettling movements the industrial tone has been the turn more cheerful. At Beardmore's, Parkhead, three smelting furnaces have been relit, on the strength of certain orders having been secured, and it is reported that one or two rolling mills at Mossend are about to be put in operation. On the other hand, proceedings at the Clydebridge Steel Works have been wholly suspended. The Admiralty have placed an important order with the Motherwell Bridge Company, Limited, which with other contracts on hand will help to keep these works running full for months to come. Messrs Alexander Stephen and Sons, Govan, have received instructions to proceed with the building of a large Anchor liner, operations on which were suspended over a year ago, and it is understood that the Fairfield Company will soon be busy on a sister boat. It is felt that the new prices for steel will facilitate trade in the shipyards generally, and so lead to the employment of more men. There is rather more doing in the Scotch pig-iron export market, No. 1 being quoted £6 15s and No. 3 £6 10s. Yesterday black sheet makers lowered their quotations by 20s a ton, and now above ½ gauge is called £12 5s; ½ to 1, £12 15s; 1 to 1½, £13 10s; 1½ to 2, £14; 2 to 2½, £14 10s; 2½ to 3, £15 10s. General finishing and engineering shops are much as they were a week ago, fairly well engaged on from half to three-quarter time. [Our correspondent wrote before the announcement of the suspension of warship contracts.]

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—business has been much quieter during the past week, and the reports of an easier tendency in the Australian wool markets has had the effect of making users still more cautious. Most members of the trade are now waiting for values to be tested at the Colonial wool auctions which reopen in London next week, and many expect wool to be cheaper. Telegraphic advices received from Liverpool to-day indicate that prices at that centre are down about 5 per cent. for good wools and 10 per cent. for average and inferior sorts as compared with the closing rates at the last series in London. In sympathy with this downward movement, topmakers are quoting lower prices for tops, and a really good 64's can now be bought for about 4s spot delivery. For delivery in the first three months of next year quotations are still more attractive, and although business has been done at about 3s 8d, some spinners look forward to being able to buy at 3s 6d. The demand for yarn is less active, and although most firms are busy and have enough orders to keep machinery running to the end of the year, the outlook after that is not very encouraging. The home trade is small and patchy, and the loss of German business is being felt in the export section. Yarn prices do not show much change on the week, but the tendency is certainly in buyers' favour. There is no material change in the piece goods trade.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

Next Tuesday another series of London sales will commence, during which 145,000 bales will be catalogued. The event is being anticipated with more than ordinary interest, largely due to the course of things during the short interval. The selection should be a good average one, and should prove to be quite large enough to meet the requirements of the trade unless something totally unexpected happens. The clamour for larger offerings of merinos has been practically coincident with distinctly lower prices for all classes of wool, and the marked weakness which has developed in Australia will probably be seen in London. The rift in the lute on this side of the equator appeared at Hull, when Continental style merinos depreciated 5 to 7½ per cent., and we shall not be very much surprised if greater weakness is seen in

London than was shown at Liverpool. The outlook for the home trade does not appear to be as good as it was three months ago. German spinners and manufacturers are feeling acutely the demoralised state of finance in their own country, the extreme depreciation in the value of the mark leading to the cancellation of yarn orders placed with spinners in Bradford. Requests for deferred payment of accounts are also forthcoming, due to inability to buy sterling without incurring great loss. No doubt a few German firms are still favourably placed in regard to sterling, and will be in a position to continue purchasing the raw material, but generally speaking, the outlook is overshadowed. Although the majority of fine botany spinners are running full time to the end of the year, they are finding it difficult to secure new business, the sales of botany yarn during the past fortnight having become distinctly less. All this has given rise to a very cautious feeling, and some apprehension is felt regarding the future. These things are mentioned to prevent any undue optimism being entertained with regard to the sale of wool at the next London series. It is too much to expect the same buying spirit as prevailed last series. Many would be glad to see firm, steady prices; but we think the desire of Bradford topmakers for cheaper wool will to some extent be realised.

Those in close touch with the consuming end of the trade are cognisant of another important feature, which is the totally inadequate response on the part of wholesale piece merchants to the higher prices ruling recently for raw materials. The improvement recently experienced has been due almost entirely to export requirements. The utmost difficulty has been experienced in selling pieces, and the fact that the bulk of the looms in the West Riding are still standing is taken as eloquent testimony to the unsatisfactory state of the trade. The improved demand for low and medium crossbreds is largely the result of the popularity of hosiery yarns for home consumption, but in piece goods the blackness continues, and there are still big stocks to get rid of which cost nearly twice as much as they are worth to-day. However, it is possible that with a reasonable decline in wool, topmakers will become free buyers, though it is to be hoped that the decline will not be extensive, owing to the disturbance of confidence among wholesale buyers of fabrics which would follow. If there were no dear stocks of pieces to contend with the position would be quite different, and there would be much less difficulty in negotiating future business. The recent rise in wool has no doubt helped the clearance of some of the old stock, but there seems to be a general desire for a more reasonable basis of values for any new business which is put through.

MANCHESTER, November 17.

Traders in the market have experienced a very unsatisfactory week. Business has been discouraged by the easier movement in prices, and buyers have been more disposed than ever to adopt a waiting policy. There is nervousness as to financial trouble both in this country and in certain outlets abroad. Buying in cloth for India has been practically at a standstill, and local merchants have received very few cables making offers. A falling off has to be recorded in the demand for China. Some fair lines have been booked for Java and Singapore. The Near Eastern outlets remain quieter. Operations in home trade fabrics have been very irregular. More looms are being brought to a standstill in all weaving districts. The possibility of organised short time in the spinning section has not had any effect upon

yarn demand, and in both American and Egyptian qualities very little business has been done, and prices continue to favour buyers.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

A quiet if not actually depressed tone has prevailed in practically all sections, and prices invariably are on a lower level. Only a small business has been in raw linseed oil on either home or export account, and a further loss of 20s on the week has to be recorded, spot ex Hull mill having receded to £25 15s, with only a slight premium of 5s quoted for January-April. Cotton oils are much easier and lower, crude Egyptian having fallen to £33 10 and common edible to £40 ex mill. Soya bean, ground nuts, and rape oils have been but a small trade, and are 20s to 40s down. Palm kernel, coconut, and castor oils are without quotable change. In the oilseed section the feature has been offerings of Indian linseed, which have affected the price of Plate, which is now quoted £15 for spot, while £14 15s has been accepted for November-December loading. Egyptian cottonseed is flat, black offering a £12 afloat and November, and £11 10s December.

The arrivals of oilseeds and oilnuts in the United Kingdom in October aggregated 146,168 tons, against 129,291 tons in October last year, the principal items being linseed (54,656 tons), cottonseed (35,230 tons), soya beans (14,876 tons), and oil nuts and kernel (36,711 tons). The aggregate for the ten months January-October is 1,165,157 tons, comparing with 1,126,395 tons a year ago. The imports of linseed alone are 423,205 tons, which will probably be increased to half a million tons by the end of the year.

The progress in the exports of vegetable oils which marked the months July, August, and September was even more pronounced in October, when the total of unrefined sent abroad was 18,123 tons (including 8,837 tons linseed oil) and refined 1,019 tons, roughly 50 per cent. increase over September, which up to then had been the best month of the year.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The sensational slump in values, which set in in Bermonds-hide market last week, seems to have been arrested. A fall over 2d per lb on heavy ox really demoralised the market, and the trade have been in a state of anxiety ever since. This week

ALEXANDERS DISCOUNT Co., Ltd.

24, LOMBARD STREET, E.C.3

Telephones: 1632 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL SUBSCRIBED - £1,000,000 RESERVE FUND - £270,000
CAPITAL PAID UP - £550,000 RESERVE LIABILITY £450,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

heavy ox made last prices of 8d, and lights 6 1/2d to 8 1/2d, no alterations being recorded. Calf were steady also at the recent reductions, and no alterations worth recording are to be noted. The demand for foreign hides is quiet, although values at source of origin are holding up firmly. Chicago cables the market as steady, with best heavy packers still quoted at 15 1/2 cents.

The sole leather trade has been almost at a standstill, buyers feeling sure leather will drop quickly in view of the fall in hides and the poor demand. Some tanners are already weak holders, and are offering bends at 1d to 2d below recent quotations, with no result. Bends of 14/16 lbs seem wanted the most, and the supply is about equal to the demand. Rough dressing hides are a slow sale, the spurt caused by the Motor Exhibition having quickly died away. Upper leathers are wanted in the cheaper grades, but here again buyers are looking for a fall in values, and are only buying actual requirements.

The boot trade shows a slight improvement, as the wet weather is finding out the rubbish so common of late. Much has been expected of the "guaranteed boot," but I hear one large London retailers' association has thrown cold water on the idea, and have passed a resolution that the time is not opportune to put this long-wanted boot on the market. Why? one wonders.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited.—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 77s 6d to 83s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 18.

There was a moderate amount of business doing this week in some cases, but as regards raw materials, certain irregularity prevailed, while the question of rates of exchange still tends to curtail operations.

SUGAR.—With steady inquiries, both on grocery and manufacturing account, business was on a fair scale, and recent prices were not only fully supported, but in some instances slightly improved upon. Messrs Tate and Lyle quote cubes, 55s 3d to 56s 3d; granulated, 49s 9d to 50s 3d, with business in London quality at 49s 10 1/2d, being 1 1/2d dearer on the week; caster sold 52s 3d to 52s 9d; crushed, 51s 9d; yellow crystals, 44s 9d. Crystallised West India ranges from 38s to 42s 6d; muscovado, 32s to 37s. American granulated, spot, changed hands at 49s; Dutch ditto, 48s 9d. Belgian crystals, 47s 3d; white Java, 47s; white Natal, 44s; Czecho-Slovakian granulated and crystals, November shipment, sellers, 20s 3d; December, 19s 10 1/2d; cubes, December, 24s 3d, f.o.b., Hamburg. Belgian crystals, November-December, sold, 19s 1 1/2d, f.o.b., Antwerp. Dutch granulated, prompt, 21s 6d, f.o.b., Amsterdam. Terminal market steady. December, white, sold, 19s 10 1/2d to 20s 3d; March, 18s 9d to 18s 10 1/2d; May, 18s 9d to 18s 10 1/2d; August, 18s 10 1/2d to 19s. Cuban stocks stand at 1,090,000 tons, against 281,000 same time last year. Liquid glucose, November delivery, 26s 6d, duty paid. Pale American syrup, prompt shipment, sellers, 19s, c.f. and i. terms.

COFFEE.—A generally quiet tone pervaded the market this week, but prices ruled steady, while really attractive qualities are in very small supply. Future delivery market steady. December, sold, 48s; and March, 49s.

COCOA remained in a quiet and featureless condition. Accra F/F, December-February, sellers, 39s 6d, ex quay terms, Liverpool. Some arrived parcels of ditto sold, 46s. Butter quiet but steady, at 1s 10d per lb.

TEA.—Public sales of Indian embraced some 41,900 packages, and the chief feature was the heavy run made upon medium and common qualities, owing to reduced quantities of same now coming to hand, and prices marked an advance of 3d to 4d per lb. The finer kinds sold with fair spirit at about previous quotations to, in some cases, slightly less. 14,700 packages Ceylon also aroused active competition for all qualities up to 1s 5d per lb, but above this figure demand proved quiet, though rates moved on steady lines.

RICE.—With a good deal of reticence on the part of buyers, the market ruled largely nominal. Two stars, Rangoon, spot, 18s 6d. Beans quiet. Rangoon hand-picked, due steamer, sold, 7s 6d. Madagascar butter beans, on spot, new crop, quoted 19s to 21s, as to sample. Japanese peas dull. December-January, steamer, quoted 32s 6d. Chinese white peas, afloat, London, sold, 8s 6d. Bran quiet. Burma, afloat, £6 15s; white Siam sold, £7 per ton, ex ship.

SPICE.—Pepper received moderate support, and fair black Singapore, spot, sold, 3 1/2d; ditto, December-February, steamer, 3 1/2d; Aleppo, spot, quoted, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, 7 1/2d; Muntok, 7 1/2d; ditto, December-February, sold, 7 1/2d to 7 3/4d and 7 1/2d. Zanzibar cloves, spot, sold, 1s 7 1/2d; November-January, steamer, 1s 5d. Pimento, spot, 2 1/2d, sellers. Tapioca dull. Fair flake, spot, sold, 1 1/2d per lb. Fair Penang, seed pearl, spot, 18s 6d; small sago, December-February, 22s; sago flour, January-March, sold, 12s 6d. Desiccated coconut, spot, fine cut, sold, 4s; medium, 4s. Ceylon cinnamon, firsts, 1s 1d; seconds, 1s per lb.

FRUIT.—The market for currants continued firm, and a good steady

inquiry was experienced throughout the week. Pyrgos quoted 50s to 51s; Amalia, 53s to 55s; Patras, 56s to 63s; Vostizza, 80s to 88s. Only moderate transactions were effected in sultanas, but sellers required steady prices. Medium to good quoted 118s to 125s; choice, 145s. In auction, about 128 tons Valencia raisins offered and mostly sold at full prices for the finer qualities, and which are scarce, with undergrades about unaltered from recent level. Quarters, ordinary to fair, sold, 135s to 143s; medium to good, 146s to 155s; fine to choice, 157s to 173s; seedless, 115s to 128s; and some good half-boxes, sold, 130s to 132s. Figs command full rates. Layers range from 108s to 135s; lacouns, 130s to 150s. Almonds firm, but quiet. Dates steady. Siar, spot, 18s; Hallowee, first tide, quoted 40s; and Siar, 28s.

JUTE.—A steady tone prevailed this week, sellers adopting more reserve on spinners showing better disposition to operate, but closed easier. Native first marks assortment, spot, Hamburg, sold, £29 10s; ditto, old crop, substitutes, November-December, Hamburg, £25 10s to £25; Dunkirk, £25 15s; lightning subs, old, November-December, Hamburg, £21 15s to £21; new crop, first grade, November-December, Hamburg, £27 to £26 5s; lightning grade, £22 10s, £22. Calcutta hessians and twills quiet, but held for steady prices. 10 oz hessians, spot, 25s; 8 oz, 20s; B twills, spot, 64s.

HEMP.—Manilla quite neglected and nominal. D grade, October-December, sellers, £51; E, ditto, £48; G, £40; J, £38; K, £36 10s; L, £36; M, £31; streaky one, £44; two, £42; three, £40. New Zealand very dull. High point, fair, spot, £40; fair, £37 and £36 10s and £34 10s for October-December shipment respectively. Italian nominal, and P.C., spot, quoted £53.

SHELLAC.—Market steady. T.N., spot, fair, 345s; December, sold, 340s, 337s 6d, and March, 320s.

SHELLS (M.-O.-P.).—At periodical auctions, white shells ruled slow and prices a shade easier, but there was a good demand for yellow, regarding West Australian, and for which full values were secured. Macassar firm, but slow. Fresh imports of green snail received steady support.

MENTHOL.—Spot, 22s; Japanese peppermint oil, 4s 7 1/2d; aniseed, 2s 2d; Japanese slab camphor, spot, 4s 6d per lb; Japanese wax, spot, 10s 6d cwt.

RUBBER.—There was a moderate business in force this week, but prices exhibited slight irregularity, and weakness with realisations in attendance at times. Standard crepe and sheet, spot, sold, 11 1/2d to 10 1/2d, 11d, and 10 1/2d. December, 11 1/2d to 11 1/2d, 10 1/2d, and 10 1/2d; January-March, 1s to 11 1/2d, 11 1/2d, and 11d; April-June, 1s 0 1/2d to 11 1/2d, and 11 1/2d. Para, fine hard, spot, sellers, 1s 2 1/2d; ball, 8d.

EGG PRODUCTS.—Market generally quiet, but steady. Prime liquid yolk, spot, 110s per cwt, and albumen, spot, 2s 11d.

OILS.—Linseed easier. Spot, net, naked, 26s 3d; November-December, 25s 3d; January-April, 25s 9d; May-August, 26s. Rape dull. Crude, spot, 48s; refined, 53s. Cotton easier. Crude Egyptian, 42s; Bombay, nominal; common edible, 50s. Chinawood: Hankow, spot (barrels), 70s; and shipment, 71s. Coconut easier. Ceylon, spot, 47s; November-December, 42s 6d; Cochin, ditto, 54s. Soya quiet. Oriental, barrels, ditto, 35s 6d. Japan fish quiet. October-November, cases, 21s. Cod quiet. English, spot, 29s to 31s. Groundnut dull. English crushed, naked, spot, 48s; deodorised, barrels, 59s. Turpentine irregular. American, spot, 69s; December, 69s 3d; January-April, 70s. Rosin firm. American, grade B, 16s 6d; F, 16s 9d; G, 17s; K, 18s 6d; WW, 22s; French, F/G, 15s 9d; H, 15s 9d; WW, 18s 6d; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4 1/2d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market quiet and easier, Calcutta, November-December, sold, £16 to £15 10s. Plate, spot, Hull, £14 15s; afloat, sold, £14 15s; November-December, £15 to £14 10s; January-February, nearest, £15. Rapeseed lower. Toria, October-November, sold, £16 5s; real bold Ferozepore quoted £16 5s; brown Cawnpore, £15 15s. Cotton-seed easier. Egyptian black, November, sold, £13 to £11 10s; and white, £12 10s to £11. Bombay, December-January, £8 10s. Gingly easier. Chinese, November-December, Continent, £22 10s. Castor, Bombay, November-December, sold, £15 15s. Ground nuts quiet. Coromandel, machine-dried, November-December, Hull, £20 10s; new crop, December-February, Continent, £18 10s. Chinese decorticated, f.a.q., ditto, Continent, £21 to £21 10s per ton.

METALS.—Tin: The market manifested an easier tendency until last Tuesday, dealings being on a moderate scale, while cash changed hands down to £157 and three months' to £159 5s. A rather fir

£159 10s to £160, settling down at £159 5s, and three months' at £161 to £162, while finally registered at £161 5s. At Friday's session, cash relapsed to £159 5s and three months' to £160 10s. English ingots, £157 to £157 10s. Copper continued dearer last Monday, standard cash being sold at £67 2s 6d and three months' £67 15s to £67 17s 6d. Rates moved in a downward direction until the middle of the week, the market being steady at the decline, with cash registered at £66 10s to £66 12s 6d, three months' £67 10s to £67 15s. The tendency was again lower on Thursday, business being on a moderate scale. Cash eased to £66 2s 6d; early December to £66 10s; and three months' at £67 2s 6d. At Friday's session, prices hardened. Standard cash changed hands at £66 5s; month £66 15s to £66 17s 6d, and three months' £65 5s to £67 7s 6d. Electros, £74 10s to £76 10s; best selected, £67 to £69; strong sheets, £101. Wire bars, £75 10s to £76 10s. Lead rather firmer at £24 5s to £23 15s as to position. Spelter dearer at £25 17s 6d to £27. Antimony: English regulus quoted at £36 to £39. Aluminium: Home, £120; export, £125.

TALLOW.—Messrs Colchesters and Woolner write on November 16th as follows:—The tallow market was quiet during the week, with prices in buyers' favour. There is a remarkably slow demand for the time of year. Shipments of tallow from Australasia during October amounted to 5,600 tons. At auction to-day—casks tallow were offered, and—were sold. Quotations are:—Australian mutton: Fine, 47s; good to fair, 46s to 45s; dull to dark, 43s to 40s; hard, 47s. Australian beef: Fine, 47s; good to fair, 44s to 42s; dull to dark, 40s to 37s; sweet, 48s. Present shipment from Australasia:—Mutton, fair coloured, 48 degs, 44s; and mixed, 43½, c.i.f., London, 42s. The market letter is unchanged. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 25s per cwt. Quotations are:—Town, 38s net cash, naked, ex works. Country: Frail casks, 37s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 39s 6d to 37s 6d. Bone fat: White, none; pale, none; benzine, 29s; melted stuff, 30s, f.o.b.

Thursday's Bank return showed an increase of £5,100 in the gold stock and a reduction of £281,100 in the circulation, so that the reserve was £286,300 higher. Government securities rose by £14½ millions, but Other were reduced by £1¼ millions, and Deposits were thus £13½ millions higher, Other being £18 millions higher, while Public fell by £4½ millions. The circulation of currency notes was reduced by £1,378,700 to £311,687,100, which includes £1,793,700 for notes called in but not yet cancelled. The fiduciary issue is £261,943,300, or £55,611,900 below the maximum.

The following table shows public income and expenditure for the week ended November 19, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	18,140	Supply Services	8,450
		Interest on Debt	1,535
		Sundries	454
		Reduction of Debt	6,959
		Added to Exchequer Balances..	742
	18,140		18,140

These operations reduced the National Debt by the sum of £6,958,692, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 6,940	Bank of England Advances ..	1,750
National Savings Certificates +	300	Depreciation fund	500
		Surrenders of Bonds, &c.	469
		Public Department Advances ..	9,100
		Treasury Bills	1,960
		Sundries	420
	+ 7,240		14,199

Customs and Excise yielded £14,045,000. Property and Income-tax produced £721,000, while £500,000 came in from special miscellaneous receipts. The sales of Treasury bonds, though not quite so heavy as in the past two weeks, amounted to £6,940,000. The net sales of National Savings Certificates were £300,000. Treasury bills sales fell short of the maturities by £1,960,000, and a further reduction took place in Ways and Means advances. Bank of England advances were reduced by £1,750,000, bringing the amount outstanding down to £4,250,000, and advances by Public Departments were reduced by £9,100,000, making the amount outstanding £180,308,000. The net reduction in the floating debt on the week was £12,830,000, making the outstanding floating debt £1,304,745,000.

The total amount at the credit of the Post Office Savings Banks Fund on November 19, 1921, was £342,766,518, against £342,093,393 at the corresponding period of October, 1921. At the corresponding period of 1920 the amount at credit of these Funds was £344,249,993.

FOREIGN EXCHANGES.

The foreign exchange market has been dominated this week mainly by political influences. The chief feature has been the depreciation of the franc, the Paris rate having risen from 55.40 on the 18th to 57.20 yesterday morning, and the Brussels rate from 57.18½ to 60. The explanation would appear to be the growing uncertainty as to Germany's position, combined with uneasiness over the reception of the French case at Washington. As the result it would seem that a lack of confidence in the franc's future is now spreading in France itself, and this feeling has been accentuated by a renewed demand for foreign currencies, owing to the inevitable recent increase in imports, as stocks of most materials are almost depleted. The quotation for futures in Paris is 1 to 4 points per month over spot, in Brussels 5-9 points per month below. Another country which has had a sharp setback is Italy, where the rate has risen from 95.75 to

97.62½, a movement very largely sympathetic with franc. The mark rate has been somewhat irregular, within closer limits than for some weeks past, a rate 1,170 yesterday morning comparing with one of 1,1 on the 18th. As yet no real progress has been made towards clarifying the position created by the reparation payments due next January, and it is doubtful what there is for the rumours of an external loan. As suggested a week ago, the dollar rate has found great difficulty in getting above \$4, and has generally been somewhat below, being yesterday morning 3.99½ as compared with 3.99½ a week ago. While it is probable that for some little time the rate will be influenced by the Washington Conference, a higher quotation can hardly be expected at present on purely economic grounds. The future rate is ½ cents per month over spot, practically the same as a week ago. Among neutral exchanges Amsterdam, for reasons not yet clear, after falling steadily in the earlier part of the week dropped suddenly on Thursday, and yesterday stood at 11.15 as compared with 11.36½ a week ago. The future quotation is 1-2 cents. per month over spot. The same sudden drop has occurred in Swiss francs, which at 21.05 compare with 22.29 a week ago. Except that the mark rate has moved relatively little, the natural assumption would have been renewed purchases on German account. Madrid, after some recovery, ends the week very little down at 29. Portugal is again cheaper at 4½d, as compared with 5½ a week ago. In the Scandinavian group, Christiania has reacted somewhat from its recent recovery, and at 28.12½ is some 40 points higher than a week ago. Stockholm on the other hand, has recovered from 17.10 to 17.04½ while Copenhagen is some 2 points better at 21.62½. Finland, after its recent recovery, has moved up again, from 199 to 208. In Central Europe, Vienna, after some recovery, has moved up again, and the London (Auslandskrone) rate at 13,000 is considerably worse than the 10,500 quoted a week ago. The last available rate for Inlandskronen is 23,600 on the 18th, as compared with the Auslands rate of 10,500 on the same day. Why the Inlands rate should have again risen so far above the Auslands quotation, and why the foreigner should continue to buy Auslandskrone are mysteries still to be explained. Warsaw, after some recovery, has moved up again, but at 13,500 is some 1,500 better than a week ago. Budapest at 3,650 shows little change. Prague is rather worse at 380, and Belgrade, after its sharp fall, is moving up again, and now stands at about 315. For Roumania quotations are still absent, as that country has not yet found a way out of the tangle in which it has got involved through its new exchange regulations. Sofia is a little better at about 700. The Athens rate has now been moved up to 99½, in order to come into conformity with the free market in Smyrna. Constantinople has again moved up sharply to 765. In the East the rupee has weakened again, and yesterday stood at 1s 3½d, as compared with 1s 4½d a week ago. Silver was well maintained during the early part of the week, but then fell away on the cessation of Chinese buying for New Year settlements, and, with India weak, the position is very uncertain. For the present, however, Hongkong and Shanghai rates are unchanged. The yen at 2s 4½d is practically unchanged. In South America Buenos Ayres is very slightly cheaper at 44½d, Montevideo is unchanged, Rio has dropped from 7½d to 7 9-32d on the 24th, while Valparaiso has also gone sharply in our favour to 38.90.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO NOVEMBER 19, 1921.

Total spent	622,936,792	Raised by revenue ..	568,968,277

EVENTS OF THE WEEK.

NOVEMBER 19TH.—Herr Stinnes arrives in London.
NOVEMBER 21ST.—M. Briand defines France's attitude at the Washington Conference. The chairman of Lloyd's at the Insurance Institute of London.
NOVEMBER 22ND.—Afghan Treaty signed at Kabul. Death of Mr H. M. Hyndman. Princess Mary betrothed.
NOVEMBER 23RD.—Annual meeting of Federation of British Industries. Lord Chancellor at the Aldwych Club. Penny 'bus fares to be restored on December 1st. Irish Peace Conference resumed at Downing Street.
NOVEMBER 24TH.—Lord Curzon on Anglo-French relations. Sinn Fein delegates confer with Lord Chancellor and Sir Gordon Hewart. Mr Asquith and Sir Donald Maclean speak at National Liberal Federation at Newcastle. Belfast tramcar bombed.
NOVEMBER 25TH.—Ulster Premier at Downing Street. Present series of Treasury Bonds to end on November 30th.

The Irish outlook and the attitude of Japan and France in international discussions were influences checking Stock Exchange business this week. The feature of the markets, however, is the firmness of gilt-edged stocks in the face of large issues of high-class new capital, past and prospective.

Although there was no general increase in the volume of business, a better tone is reported from the cotton trade. In the wool trade the feature has been the decline in wool values at the London sales, which did not surprise Yorkshire. Top-makers are meeting the changed conditions with lower quotations all round. No improvement is reported from the pig-iron trade, while the steel trade and warship yards were depressed by the suspension of the orders for the four new battleships, from which a large amount of work had been looked forward to. It is, however, significant that there is increasing difficulty in obtaining delivery of iron and steel material from Germany. The consumption of household coal is a trifle brisker. Quotations in the hide markets have reacted a little after their sensational fall. The market for vegetable oils and oilseeds is restless.

REPARATION PROBLEMS.

THERE is in this country a growth of opinion amounting almost to a general agreement that the methods of German reparation payments are in need of revision. The Reparations Commission, on their return from Berlin, stated that Germany can pay the next instalments due in January and February. But even into this statement may be read the implication that after this instalment has been paid the situation will

have to be reconsidered. The memorandum issued by the Federation of British Industries this week exhibits the nervousness of industrialists in this country in regard to the effect of Reparation payments, and their concern will not be diminished by the remarks of our Berlin correspondent printed on a later page. Meanwhile, the visit of Herr Stinnes to London has given rise to a host of rumours, and the general presumption is that his visit is concerned with an attempt to arrive at some new arrangement. If no revision in the existing programme takes place, and Germany has to find the next payments by selling marks, it is fairly obvious that there must be a further collapse of mark exchange. Disconcerting though this prospect is, it is neither logical nor desirable to jump to the conclusion that instalments must therefore be immediately suspended. It is common knowledge that big German industrialists have large holdings of property and of foreign currency abroad. Indeed, all shrewd Germans have for some time past been investing to a considerable extent outside the Fatherland. To give way to panic and a policy of suspension merely through fear of another mark collapse obviously tends to play into the hands of industrialists and the wealthy classes in Germany, in whose power it is to help the German Government out of the crisis to no small extent. Probably what the Reparation Commission had in mind when they said that Germany could pay the next instalment was that they could pay if the industrialists assisted the Government by placing at its disposal the foreign currency and credit that they have accumulated. This is probably true, but it is equally probable that they could not repeat the performance and help the Government over the stile on a second occasion. For if Germany is to pay, the fundamental economic necessity is that she should establish an export surplus of large dimensions. In spite of the trade boom in Germany, the latest available figures of German trade show a large surplus of imports. In May the excess of imports over exports was 928 million marks, in June 977 millions, and in July 1,732 millions.

The events of the last two years have not helped us in any way to answer two questions which go to the heart of the reparations problem. The questions are these. Firstly, how far it is possible, assuming that other countries would permit it, to modify the economic life of Germany in such a way as to divert the applications of capital and labour into channels calculated to produce the necessary increase of certain exports. Secondly, how far it is practicable to suppose that any German Government would be politically strong enough to impose on the population—over and above the heavy post-war burdens which every Government must place on its nationals—an additional burden of taxation representing a substantially greater proportion to total national income than did the whole taxation of Great Britain before the war.

Pending a satisfactory answer to these questions, the Federation of British Industries has this week developed the reparations discussion in a different direction, and in a memorandum has suggested alternative methods and forms of payment. One suggestion is that payments should be made in kind. There is nothing new about this suggestion. France is already experimenting with it as a

result of the Wiesbaden Agreement, and it is difficult to see that this method possesses any advantage for Germany. Payment in kind will not prevent the danger of currency collapse. The Government can only secure commodities for delivery by obtaining internal purchasing power. The only condition on which reparation payments can be made without resultant exchange depreciation is that the funds for payment are raised by taxation. But if the method of payment in kind possesses no visible advantage for Germany, it has at least this advantage for the receiving countries. The recipients do at least know what shape German trade competition is going to take, and can use that knowledge to some extent to forestall and discount it. The second suggestion put forward by the Federation is on the lines of that propounded recently by Sir Henry Strakosch in a letter to the *Times*, namely, that Germany should undertake "capital works" in the Allied countries which would not otherwise be initiated. The Federation also has in mind works of development in backward countries, particularly in Russia and China. The obvious comment upon this suggestion is that our own Government has recently passed a Trade Facilities Act, one object of which is to finance this very type of undertaking so far as this country is concerned in order to provide work for our own unemployed workers. Perhaps the most interesting of the proposals is that Allied industrialists should acquire mortgages on German concerns. We quote from the memorandum:—"We suggest that arrangements might be made by which actual claims on industrial and other enterprises in Germany might be substituted for the present payments between Governments. For instance, all German industrial enterprises might be required to create a special class of first preference shares as a first charge on the business. The holders of real property might at the same time be required to create similar first charges up to a fixed proportion of the value of their property. Similar mortgages or first preference shares should be created and secured on such undertakings as the German railways and canals, shipping lines, &c., and possibly even on the German banks and large commercial undertakings. These securities should then be handed over by the German Government to the Allied Governments, who could dispose of them if they so desired to individuals." Even supposing that German industrialists, seeing in this method a possible avenue to lighter taxation, should overcome their natural objection to granting mortgages to foreigners—this scheme does not avoid foreign payments in the form of mortgage interest. It has, nevertheless, certain advantages. It would make payment depend to some extent on the condition of German trade, it would enable ready money to be found for the French and other Governments, and it would have the supreme merit of converting the reparations question into a business matter between commercial circles in the two countries, instead of a bone of contention between Governments giving rise to the quarterly recurrence of political crises. The difficulties and complications involved in the establishment of any such scheme are obvious enough, but the advantages are sufficient to make the Federation's ideas well worth further study and development. It must not, of course, be supposed that the system of industrial mortgages could cover anything like the whole amount of the reparations bill, or solve the whole problem.

Not the least interesting point about the memorandum is the implication which may justifiably be read into its phraseology—namely, that if innocuous means of payment of the whole reparations amount cannot be found, then the amount must be cut down and limited to a sum which can be obtained without dislocation in the recipient countries. The upshot of the whole discussion is that there are possible ways and means of getting a substantial part of the reparations bill paid, always providing that Germany intends to make an honest attempt to meet her obligations, and not deliberately to flee from present difficulties and to seek a hazardous refuge in a policy of financial collapse. One point on which expert opinion in this country is firm is that any modifications that may be conceded should be conditional upon the establishment in Germany of a Budget balance. On the whole, the Federation's memorandum reflects the opinion of the business community that while some important and

hopeful means of securing the payment of large sums reparation remained to be explored, insistence on letter of the present agreement (should these untold predicaments disappoint present hopes) must not be carried the length of serious dislocation of Allied industry trade.

THE RALLY OF OUR EUROPEAN MARKETS—II

In a previous article we showed that whereas our European customers in 1913 took £239,200,000 worth, or 37.6 per cent. of our total exports of £634,800,000, they far improved their position as markets for our products and manufactures and for our re-exports of foreign and colonial merchandise as to take goods valued at £1,377,200,000 in the period from January, 1919, to September 30, 1921, out of our total exports of £3,116,900,000. The percentage value had risen from 37.6 to 44.2. From the following table it is seen that during the last three months (i.e., from July 1st to September 30th) six of our principal European markets have still further improved their position upon that of the first six months of the year, and that only two countries took a rather smaller percentage of our goods:—

	Germany.	Holland.	France.	Belgium.	Norway.	Denmark.	Italy.	Spain.
From Jan. to Sept., 1921	29.7	5.0	26.2	4.4	38.4	6.4	20.7	3.5
From Jan. to June, 1921	17.3	4.1	16.8	4.0	25.5	6.1	13.5	3.2
Inc. or Dec.	12.4	0.9	9.4	0.4	12.9	0.3	7.2	0.3

The table shows that Germany increased the percentage value of the exports that she took from us by .9 per cent.; that Holland followed suit to the extent of .4 per cent.; that France, Belgium, and Norway increased their percentages by .3, and that Denmark increased hers by .1. Moreover, Italy and Spain only lost .1 per cent. in the value of our total exports purchased by them. In the case of Russia, Sweden, and Switzerland their percentage takings remained the same. So far, therefore, as the latest statistics go, the European markets are better than is commonly supposed. We will now consider how the other great nations of the world and our own Dominions have been purchasing our exports and re-exports since the Armistice allowed us to start on our way to resuming normal trade relations with the rest of the world:—

TABLE SHOWING THE VALUE OF OUR TOTAL EXPORTS TO OUR OVERSEAS DOMINIONS AND COLONIES AND OF THE PERCENTAGE EXPORTS FOR 1913, 1919, 1920, and the FIRST NINE MONTHS OF 1921, and of the COMBINED VALUE FROM JANUARY, 1919, TO SEPTEMBER, 1921.

	Total Exports in 1913.	Total Exports in 1919.	Total Exports in 1920.	Total Exports from Jan. to Sept., 1921.	Total Exports from Jan., 1919, to Sept., 1921.
	£634,800,000.	£963,400,000.	£1,557,200,000.	£596,300,000.	£3,116,900,000.
1. British India	71.7	11.3	71.9	7.5	184.0
2. Australia	37.8	6.0	27.8	2.9	68.3
3. Union South Africa	24.0	3.8	19.9	2.1	51.7
4. Canada	27.3	4.3	18.0	1.5	48.8
5. Egypt	10.0	1.6	20.2	2.1	44.8
6. New Zealand	11.8	1.9	9.9	1.0	28.0
7. British West Africa	7.2	1.1	13.5	1.4	25.4
8. Straits Settlements	6.0	1.0	6.4	0.6	16.9
9. Hong Kong	4.6	0.7	4.8	0.5	13.4
10. Ceylon	4.3	0.7	2.5	0.3	6.6
11. Fed. Malay States	1.4	0.2	1.2	0.1	3.0
12. Mediterranean	2.3	0.4	6.7	0.7	10.5
13. Channel Islands	2.6	0.2	3.1	0.3	4.2
14. African Is.	2.9	0.2	4.3	0.4	9.5
15. American	4.7	0.7	3.9	0.4	10.2
Total	217.6	34.4	214.1	22.2	525.3

In the table we have grouped our total exports to Gibraltar, Malta and Gozo, and Cyprus under the head of Mediterranean. Under the head of African are grouped our exports to Rhodesia and the territories of British South Africa not included in the Union, and those to Mauritius and British East Africa generally. Our exports to Newfoundland, Bermuda, the Bahamas, British Guiana, British Honduras, and the British West India Islands are grouped under the head of American. The outstanding feature of the table is seen in the fact that, although there was a considerable rally in our exports to our chief Dominions during the first nine months of this

ar, and the percentage of our total exports rose to 38.8 compared with 34.4 in 1913, the percentage in 1919 was 32, and caused the percentage for the period from January, 1919, to September 30, 1921, to amount only 31.1. In 1913 the Continent and its colonial possessions took 40.4 per cent. of our total exports, against 44.4 per cent. taken by the British Empire, and in the period from January, 1919, to September, 1921, the Continent and its possessions increased their purchases to 47.6 of our total exports, against a diminished percentage of 31.2 taken by our Imperial Dominions and colonies. India and British West Africa will undoubtedly continue to develop their demand for our goods, and the Union of South Africa will probably soon become as good a customer as Australia now is. But Canada will draw many of her supplies from across the international border. New Zealand is reported to be glutted with our exports. The innumerable larger populations of the Continent of Europe must remain our best customers, and it is plainly to our interest to aid them by all means in our power to recover their financial stability.

TABLE SHOWING OUR TOTAL EXPORTS TO THE COUNTRIES OF AMERICA AND ASIA FOR THE YEARS 1913, 1919, 1920, and the FIRST NINE MONTHS OF 1921.

	Total Exports in 1913.	Total Exports in 1919.	Total Exports in 1920.	Total Exports from Jan. to Sept., 1921.	Total Exports from Jan., 1919, to Sept., 1921.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.	Mln. £.
United States	595.9	9.3	65.5	6.8	131.1
Argentina	23.4	3.7	21.7	2.3	43.8
Brazil	13.0	2.1	11.1	1.1	24.9
Chile	6.4	1.0	4.9	0.5	9.9
Central America and Colombia	3.5	0.6	3.1	0.3	9.8
Panama	3.0	0.5	3.4	0.3	6.1
Uruguay	3.0	0.5	2.0	0.2	7.4
Cuba	2.5	0.4	1.3	0.1	4.6
Mexico	1.6	0.2	1.7	0.1	4.8
Venezuela, Ecuador, and Bolivia	1.6	0.2	2.3	0.2	5.6
China	15.0	2.4	21.1	2.2	44.0
Japan	14.8	2.3	14.7	1.5	28.0
Asia Minor, Persia, Siam, and the Philippines	5.4	0.8	10.1	1.0	19.5
Total	155.8	24.6	166.8	17.0	347.0

In 1913 our total exports to Asiatic Turkey were valued at £5,400,000. They rose to over 10 millions in 1919, and to 19½ millions in 1920. Then war was resumed between Greece and Turkey, with the result that in the first nine months of this year our exports amounted only to £100,000. The devastated area will be a long time in recovering sufficiently to become again a valuable customer for our goods.

The table shows that the United States and Argentina between them took 13 per cent. of our total exports in 1913, 9.1 per cent. in 1919, 11.2 per cent. in 1920, and 11.7 per cent. in the first nine months of the present year, or but little more than the percentage (11.4) taken this year by France and Germany. For the combined period from January, 1919, to September, 1921, the United States and Argentina (which took more than half of our total exports to the countries of America and Asia) purchased 10.6 per cent. of our total exports, compared with a percentage of 16 taken in the same period by France and Germany. In the same period British India and Australia purchased 15.1 per cent. of our total exports. In the next table are set out those countries which in the combined period took at least 2½ per cent. of our total exports:—

	1913.	1919.	1920.	1921.	Jan., 1919, to Sept., 1921.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.	Mln. £.
United States	40.9	6.4	18.3	1.9	175.7
British India	71.7	11.3	71.9	7.5	184.0
Argentina	23.4	3.7	21.7	2.3	43.8
Belgium	20.7	3.3	6.5	0.8	131.1
Holland	20.5	3.2	6.0	0.6	62.1
Australia	37.8	6.0	27.8	2.9	68.3
Germany	60.5	9.5	23.2	2.4	51.1
Union South Africa	24.0	3.8	19.9	2.1	51.7
Italy	18.6	2.4	3.4	0.3	46.3
France	23.4	3.7	21.7	2.3	43.8
China	15.0	2.4	21.1	2.2	44.0
Denmark	6.3	1.0	4.9	0.5	9.9
Canada	27.3	4.3	18.0	1.5	48.8
Sweden	9.2	1.4	2.7	0.1	4.8
Egypt	10.0	1.6	20.2	2.1	44.8
Total	442.4	63.6	702.2	73.1	1,098.5

Of the 15 countries shown in the table seven are European, and they took 34.1 per cent. of our total exports between January, 1919, and September last. British India, Australia, the Union of South Africa, Canada, and Egypt altogether took 23.3 per cent., and the United States, Argentina, and China took 13.3 per cent. The 15 countries are seen to have taken from 68 per cent. in the current year to 73 per cent. in 1919. They stand out pre-eminently as our best customers. But the importance of British India and of Egypt as customers should lead our statesmen to be very wary in dealing with them. We are very near to a wonderful recovery of our world trade under wise and far-seeing statesmanship, but, unhappily, we are equally near to the brink of disaster should our rulers fail to secure peace at home and abroad.

A summary of the tables shows that we have exhaustively analysed the distribution of our exports in the period since the Armistice in comparison with the last complete year before the war:—

	1913.	1919.	1920.	1921.	Jan., 1919, to Sept., 1921.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.	Mln. £.
Total exports to Europe	239.2	37.6	548.8	57.0	625.8
European	18.2	2.8	30.1	3.0	62.7
Colonies	217.6	34.4	214.1	22.2	33.8
British Empire	155.8	24.6	166.8	17.0	347.0
America & Asia	630.8	99.4	959.8	99.2	1,550.8
Total	1,025.8	167.4	1,615.4	178.2	2,229.4

In 1913 our total exports amounted to £634,800,000; our table shows that only £4,000,000 are not dealt with. In 1919, of £903,400,000 we have dealt with £959,800,000. In 1920 we dealt with £1,550,800,000 out of £1,557,200,000. The percentage of 100 is due to our only working out the results to one point of decimals. In 1921 our analysis deals with 98.9 of our total exports, and for the whole period with 99.4 per cent.

LLOYD'S.

A hall filled to overflowing, with clerks and officials of tariff insurance offices—the chair taken by Sir Arthur Worley, of the Railway Passengers Company—all the prominent seats occupied by magnates of the fire insurance world—the vote of thanks to the lecturer seconded by the chairman of the Fire Offices Committee—the lecture itself arranged by the Insurance Institute of London—could there be a gathering more orthodox, more sure of salvation, more certainly in the apostolic line of the true insurance faith? And the lecturer, for whose sake this remarkable meeting was brought together—no other than the chairman of Lloyd's—expounding the strength, the security, the advantages of Lloyd's as an insurance market. It is as though Athanasius had presided over a congregation in which the leader of the Arians explained the strong points of his heresy to a packed audience of applauding Christians.

Whether or not this very remarkable function, which took place this week, has a special significance, and indicates the approaching end of a long feud between the fire tariffs and Lloyd's underwriters, we do not know. There was a passage towards the end of Mr Boulton's lecture which rather suggested the possibility of an arrangement to eliminate over-zealous competition, and it may be that some kind of compromise is in the air; but it is difficult to see how, so long as Lloyd's remains a free market of individual underwriters, a general formal agreement between the two competitors is to be achieved. With the marine departments of the great insurance offices, Lloyd's, though working in the same field, certainly can co-operate on a footing of very friendly rivalry; but the companies have organised themselves for fire business and for marine business on totally different lines, and a happy understanding that works well in one branch would not necessarily be feasible in the other. But, anyhow, it is not a bad sign that this friendly meeting, which would have been unthinkable ten years ago, is an accomplished fact to-day.

The meeting, so remarkable in itself, fortunately evoked from the chairman of Lloyd's a lecture of very remarkable brilliance and power. In less than an hour he sketched out the history of English insurance, and the part played by Lloyd's underwriters in its development,

recorded the ups and downs of underwriters' prosperity, the origin and the death of the famous insurance monopoly, which lasted from 1720 to 1824, the transition from the little market in Edward Lloyd's coffee house to the great corporation whose members in a year of peace had an aggregate premium income of £30,000,000, a figure said to be larger than that of any other insurance institution in the world.

When one considers the method in which Lloyd's underwriters transact their business, it appears an extraordinary fact that, in the face of the competition they have to meet, without advertising, without branch offices, without agents to bring them business from abroad, they can not merely hold their ground, but increase year by year their premium income and their general prosperity. An insurance company has a big office and a big staff in London, Liverpool, and most of the large provincial cities. It has agents in every town and village in England to feed it with premiums, and agents and offices in practically every country of the world to gather in the tribute levied from the foreigner to the skill, strength, and experience of the British insurance market. A Lloyd's underwriter's business premises are a seat at a cramped box in a noisy room at the Royal Exchange, and perhaps one small room at the top of a dark staircase in a dingy house in a back street of the City. His staff is composed of a deputy and two or three clerks to keep his books. He has no agents; if he wanted to advertise he would not be allowed to; he never comes into touch with the general public, and never asks the public for business. He simply sits at his seat in the Royal Exchange, with pen and ink in front of him, and waits for the broker to come along with his slips. He is Elijah waiting to be fed by the ravens, and the ravens from all quarters of the globe feed him to the extent of £30,000,000 a year.

How is this feat accomplished? Mr Boulton, in his lecture, indicated some of the factors that have contributed to the success of this great experiment. The name Lloyd's has in the course of centuries gathered round it a prestige and goodwill which (whether they recognise it or not) is out and away the greatest asset of Lloyd's underwriters to-day. The name Lloyd—as Mr Boulton justly claimed—is more often on the lips of business men than any other. It has been borrowed by foreign insurance companies and foreign steamship companies, who at their baptism give the go-by to their native tongue, and elect to call themselves after the keeper of a seventeenth century London coffee-house. So familiar, indeed, is the name to foreigners that many of them talk of the whole English marine insurance market as Lloyd's, and assume—sometimes to their own embarrassment—that when they send an order to a London broker they are bound to get a policy signed by Lloyd's underwriters. Mr Boulton attributed this high prestige to four causes:—

1. That a Lloyd's policy is first-class security.
2. That a reputation has been gained for prompt, just, and liberal settlement of all straightforward claims.
3. That the market is readily adaptable to new risks and the changing needs and conditions of business.
4. That Lloyd's is the centre of the finest shipping news service that the world has ever possessed, and is connected by tradition and by name with the great institution known as Lloyd's Registry.

In the matter of security, Mr Boulton's claim is well justified. It is no longer possible, even in these difficult times, to cast serious doubts on the security of a Lloyd's policy. By the system of deposits and the strict inquiries made into the position of every underwriting member before his election, by the stringent yearly audit to which all underwriters must submit their books, by the elaborate precautions for keeping all premiums in trust and preventing a premature distribution of profits, the Committee of Lloyd's has safeguarded the position of policy-holders with such success that even if a member were insolvent outside his underwriting business, his liabilities as a member of Lloyd's would still be met in full.

"It can justly be said," claimed Mr Boulton, "that Lloyd's has solved the problem of combining individual energy, enterprise, and initiative with the collective security of a corporate body." So far as security and financial strength is concerned, that claim is perfectly sound. But we are inclined to doubt whether Lloyd's

has yet solved the problem of combining with individual freedom—which is the life-blood of Lloyd's—that central control over individuals which tends to grow stronger every year. As the organisation has grown, and the sphere of underwriters' activity has widened, new methods have been adopted, which cannot but impair the freedom of individual action, the elasticity and give-and-take which should be the great distinguishing feature of Lloyd's underwriting. New situations obviously demand new methods, and the machinery which worked well enough in 1900 may be obsolete in 1921; but there is, we think, a danger of centralising management and tightening control so much that the initiative and energy of the individual will be lost in the efficiency of the machine.

The system of individual underwriting, both in marine and non-marine insurance, has proved itself to have many outstanding advantages, and those advantages Lloyd's need never sacrifice. But it has its limitations, too, for there are certain kinds of insurance to which it is not adapted, and are best left to the great insurance companies. There is room in the market both for Lloyd's and for the big offices, and there is no reason why they should not both work together in friendly competition, if only they will recognise each other's special suitability for different kinds of business. There is perhaps a danger that Lloyd's underwriters, travelling too widely from their old paths, and endeavouring to carry competition too far, may over-organise themselves, and lose something of that freedom and give-and-take which is their special contribution to the business of the world's insurance.

LABOUR AND LEISURE.

(BY OUR LABOUR CORRESPONDENT.)

As a result of the mass of unemployment which has accompanied the trade depression, efforts have been made to use the opportunity presented by the diminished economic power of Labour to reduce wages and increase hours of employment. At first the attack was made directly on wages, but now attempts are being made to lengthen the working day. Times have changed since Parliament, notwithstanding the reverence given to the principle of *laissez-faire*, was driven to impose legislative restrictions on the hours of labour of children and young persons. Yet until the last few years there had been very little reduction in hours of labour for a generation.

It is true that the eight-hour day had for long been a plank in the Labour programme; but until the recent reductions in working hours, hours of labour were, speaking generally, much what they were when the present generation first went to work, except in the case of the coal-miners. The hours of employment of a very large number of workpeople were regulated, directly or indirectly, by Statute. The Factory and Workshop Acts, the Shop Acts, and the Mines Acts all dealt *inter alia* with working hours. But, apart from the miners, the law regulated the hours of employment only of women, young persons and children. As, however, in many processes, men could not work without women and juveniles, the limitation of the hours of labour of the latter had the effect of restricting the hours of labour of a considerable number of men. Before the war there was no relation between the hours of labour and either the character of the work performed or the need of the workers. There was an eight-hour day for the coal-miners. Workers in non-textile factories, who were protected by the law, might work 60 hours a week and textile operatives 55½ hours per week—a difference due to a historical accident. Under the Shops Act the hours of employment, inclusive of meal-times, might be 70 per week.

In the years before the war hours of labour were not a prominent feature of Labour agitation. The period was one of steadily rising prices, and the energies of the trade unions were devoted to maintaining the standard of life of their members. Moreover, though the leaders were anxious to secure greater leisure for the workers, the first consideration of organised Labour was the establishment of wage rates which would yield a reasonable standard of life. Something was done, however, by the insistence of the trade unions upon higher

rates of pay for overtime. The reasons for demanding increased pay for additional labour are two: in the first place, it is intended as a deterrent, and, secondly, it is urged that overtime makes greater calls upon the vitality of the worker, and should, therefore, be remunerated on a higher scale. Since the war, it is interesting to record, many unions have preferred a reduction of hours to a further increase in money wages.

In many industries where the hours of labour of women, young persons and children are directly regulated by law, the law has become obsolete owing to the application of voluntary agreements establishing a shorter working day. In many manufacturing industries an approach has been made towards the eight-hour day, and in some trades it has been secured. The railway men and certain sections of the transport workers have won the eight-hour day, though it has in some cases often meant additional overtime. The agricultural workers obtained a limitation of hours through the operation of the Agricultural Wages Board.

Now, however, efforts are being made to lengthen the working day. No doubt in some trades the employers will meet with success in their new policy, but it is certain that the employers' move will meet with stubborn resistance from the unions; and it is not unlikely that in some industries it may result in stoppages, notwithstanding the prevalence of unemployment. There has been a realisation of the freedom which greater leisure gives. In the Isle of Wight, for example, whilst the agricultural workers have consented to a reduction of wages to 38s per week, they refuse to agree to an increase of working hours. No doubt, also, the movement for an annual holiday with pay will for the time being be stayed. The recommendation of the Adult Education Committee of the Ministry of Reconstruction, in its interim report on "Industrial and Social Conditions in relation to Adult Education," that there should be established a statutory annual fortnight's holiday with pay, was hailed with satisfaction in Labour circles. In the North of England an annual stoppage of a week has long been an established custom in many trades, and in many areas, but as no work was done there were no wages. In some parts of the country, it is true to say that, except for the Bank holidays, there are no holidays, and there are hundreds of thousands of workers whose only "holidays" are periods of enforced unemployment.

Under the Factory Workshop Acts, holidays amounting to six days per annum must be granted on the usual public holidays, or days in lieu thereof, to all females, and to all workers under 18 years of age employed in factories and workshops. The Shops Act gives a weekly half-holiday to those who come within its scope. Here and there in industry agreements have been made under which these statutory holidays are paid for, and in some cases additional holidays are given with pay. It is not unlikely that efforts will be made to withdraw these concessions, and in any case it is fairly certain that for some time at least employers will be unwilling to enter into agreements under which annual holidays with pay be allowed to workpeople.

The Labour movement now attaches considerable importance to leisure. It is, of course, often contended that shorter hours and holidays would merely give the worker more time to spend in the public-house. Mr. G. K. Chesterton could supply an effective answer to this charge, both on grounds of the social value of the public-house and on the morality of ordering other people's lives for their own good. But it is obvious that the right use of leisure will not be learnt by those who have never enjoyed reasonable leisure. Moreover, it is to be remembered that an ever-increasing number of workpeople are taking an active part in local government and in other forms of public work, whilst the affairs of trade unions, co-operative societies, friendly societies, adult schools, and what not absorb a good deal of the leisure time of the workers associated with them. Nor should it be forgotten that year by year a larger number of workpeople are being drawn into the Workers' Educational Association and other educational movements.

There is, from the point of view of industrial efficiency, a good deal to be said for shorter hours of labour. If it were true that a shorter working day would inevitably

mean diminished production, it would be a strong argument against a further reduction of hours, though it would not necessarily be a final argument. But it is not universally true that shorter hours mean smaller production. The researches which have already been made into the question of industrial fatigue in relation to output go to show that very often a reduction of hours of labour may be followed by increased production. The whole problem of hours of employment needs full investigation. The theory has recently been advanced that regular hours of labour and steady work are not favourable to the largest production, and that better results may possibly be secured by spurts of intense activity. Further, the question is not merely one of the right number of hours of labour per day; it is also a question of the best number of hours per week and per year. It may be that the "optimum production" will be secured by a five-day week instead of a five and a-half day week, or by a long week-end holiday each month, or by a solid month's holiday per year. In other words, so far as the amount of time spent in wage-earning employment is concerned, the problem of production is one of the best distribution of working hours, and at present we are in utter ignorance of the proper solution.

One thing, however, is certain. Hours of labour in industry have been excessive, whether we regard the question from the point of view of industrial efficiency or leisure, and it is a pity that attempts are now being made to revert to earlier standards and practices without any consideration of the final results of such a policy. It ought to be possible to reconcile the claims of the community to a higher standard of life, and the claims of the worker to reasonable leisure by a distribution of working hours, which will yield the former through greater production, and make possible the latter by a reduction in the hours of labour.

LATIN-AMERICAN NOTES.

(BY A CORRESPONDENT.)

COLOMBIA.—The present month of November is not unlikely to prove of vital importance to the financial interests of Colombia. It will be known definitely what sort of coffee crop will be obtainable, and there should also be forthcoming this month the first instalment, amounting to \$5,000,000, of the total compensation payment of \$25,000,000 due from the United States in connection with the loss to Colombia of its pet province of Panama in 1903. When the American Senate ratified last May the Colombian Treaty, it was stated that the sum of \$5,000,000 was to be paid over annually, the first payment being due six months after signature of the agreement. Should there be any delay, it will make all the difference to Colombia, whose treasury at the present time is much depleted, while there is the prospect of a still heavier deficit occurring upon the Budget. The past 12 months have proved exceptionally trying for the country, but, fortunately, it is possessed at the same time of a Government composed of statesmen both capable and patriotic men. The unfavourable economic situation has been further accentuated by a general non-observance of the Presidential decree against the exportation of gold coin or the melting of it into bars. Large amounts of the precious metal have been leaving the country for months past; and, appreciating at length that there was little chance of the exportation being controlled entirely, the Government recently considerably modified its original decree. It is now merely necessary to obtain a permit from the Mint to ship the metal abroad. As to the general conditions of trade in Colombia, the latest reports to hand are not very encouraging. A movement is at last taking place in regard to the long pent-up accumulations of merchandise at the ports of Barranquilla and Cartagena, arising from an over-ordering of goods from the United States and Europe, which arrived at the worst time of the financial crisis, with the result that the con-

signees were unable or unwilling to pay for them. Until these have been claimed and cleared, there can be no permanent or sound revival in the trade of the country.

BRAZIL.—Earnest efforts are being made to revive British trade in Brazil, where, on account of the exchange and after-war conditions, there has been a serious decline in our commerce. Another important factor has been the coal strike in England, for dear coal since the war has had far more to do with the prohibitive prices of British goods going to South America than has the abundance of paper-money. Cheap iron and steel and cheap transport are absolute essentials for an exporting country, and hardly less so for a vast State like Brazil; without them it would be folly to expect any revival in the present condition of affairs. An opportunity to assist the movement now inaugurated by those in Brazil will be afforded in connection with the great Exhibition to be held in Rio de Janeiro next September. Already merchants and manufacturers are being circularised, and pledges of active co-operation invited. It is somewhat discouraging to learn that the response, so far, has not been what might have been looked for. On the other hand, it is comprehensible that owners of factories should wish to see their way clear at home before committing themselves to large outlays abroad. Allowing for all the transport facilities that are promised, and the assistance tendered to those who will support the Rio Exposition of 1922, there must be entailed a very heavy expenditure by those who decide to participate. It may be taken for granted that be the position in Germany never so bad there will be numerous Teutonic exhibitors, while it is understood that promises of active co-operation have been received to date from Swiss, French, Belgian, and United States exhibitors, so that for the United Kingdom to be unrepresented would prove a great disaster.

CUBA.—The visit of the Cuban Mission to this country should serve to bring about the much-desired rehabilitation of British trade with the rich and well-ordered West Indian Republic at a time when it threatens to become almost negligible. After a period of depression consequent upon an unhealthy speculative fever, Cuba is fast regaining its usual prosperity. The head of the Commission, General Menocal, until a few months ago President of Cuba, sees "great possibilities" for the furtherance of trade between his country and this, possibilities which have been frequently pointed out in these columns. In the *Economist* of August 28, 1920, the position of British trade, then seriously menaced by the impending increase of the duty in connection with the tobacco trade, was discussed. It was stated that "the new duty will cripple the home trade to a considerable degree, necessitating the employment of so much capital for the payment of duty that importers will be compelled to reduce their stocks, and thereby forfeit their chance of securing the future export trade." The justice of this contention has been abundantly proved. Mr Chamberlain admitted this in his speech at a dinner given in the Strangers' Room at the House of Commons, on the 10th instant. He confessed to "the mistaken policy of putting on the extra tax," referring to the same as "a dark chapter in his career." The relief of the duty has resulted, in five months, in an increase in the sale of Havana cigars by no less than 11½ millions. It is to be regretted that General Menocal did not indicate by what means our trade with the island is to be increased in view of the heavy discriminating rebates in favour of the United States against which we have to contend. It is true that there is a substantial demand for British-made textiles, both cotton and woollens, as well as agricultural machinery, but in many other classes of exports we are handicapped by the preferential tariffs enjoyed by American shippers. The recent depression in Cuba has been felt in the United States, however, notwithstanding their favoured position, imports from the island having declined during the 12 months ending last June from a value of \$645,571,828 to \$420,399,940; but their exports to Cuba from a value of \$395,790,649, in 1920, rose to \$403,285,861 in 1921, the total decline of trade for that period being \$217,656,676, i.e., from \$1,041,362,477 in 1920 to \$823,685,801 in 1921.

Business Notes.

Employment in October.—Employment conditions did not improve in October. Any change that can be traced from official statistics was for the worse. According to the *Labour Gazette* the percentage unemployed among members of trade unions from which returns are received was 15.6 at the end of October compared with 14.8 at the end of September. How this percentage has moved month by month in recent years is shown by the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

End of—	1913.	1916.	1917.	1918.	1919.	1920.	1921.

* Excluding coal miners. † Revised figure.

The percentage unemployed among workpeople insured under the Unemployment Insurance Act was 12.8 on October 28th, as compared with 12.2 on September 30th; the figures on which these percentages are based are exclusive of those persons who had removed their unemployment books after exhaustion of benefit. On November 4th the second special benefit period commenced, and persons who had exhausted benefit were able to make fresh claims, and the percentage at that date was 14.5. In addition to those unemployed, 152,000 males and 100,000 females were registered on October 28th as working systematic short time in such a manner as to entitle them to benefit under the Unemployment Insurance Act. At September 30th the corresponding figures were 177,000 males and 145,000 females. In the coal mining industry the rates of wages for October, which were based on the proceeds of the industry in August, were adjusted in each district to percentage advances over standard rates. In Northumberland, Durham, Yorkshire, and the East Midlands and Lancashire the adjustment resulted in increases to the higher paid workers and reductions in the case of the lower paid workers, whilst in other districts all classes of workers sustained decreases. The principal groups of workpeople, other than coal miners, affected by reductions in October included blast furnace workers in most districts except Cleveland (where there was a small increase), iron puddlers and iron and steel millmen in the Midlands, various classes of pieceworkers in shipyards, makers of light castings, hosiery workers in the Midlands, textile dyers, bleachers, &c., in Yorkshire, Lancashire, and Scotland, and workpeople in the heavy chemical and soap and candle trades. Since the beginning of 1921 changes in rates of wages reported to the Labour Ministry have resulted in a net reduction of over £4,370,000 weekly wages of nearly 6,800,000 workpeople, an increase of over £23,000 in the wages of nearly 1,000 workpeople.

Cost of Living.—According to the official calculations of the Labour Ministry, published in the *Labour Gazette*, the average level of retail prices (including food, rent, clothing, fuel, light, and miscellaneous items) was on November 1st about 103 per cent. above the level of July, 1914. This compares with 110 per cent. a month before. The November 1st figure is the lowest recorded since July, 1918—four months before the end of the war. High water mark was reached just a year ago at 176 per cent. The fall since then is traced in the following table:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.

1920.	1st	Per Cent.	1921.	1st	Per Cent.
January ..	125		January ..	165	
February ..	130		February ..	151	
March	130		March	141	
April	132		April	133	
May	141		May	128	
June	150		June	119	
July	152		July	119	
August	155		August 2nd ..	122	
September ..	161		September 1st ..	120	
October	164		October	110	
November ..	176		November ..	103	
December ..	169				

The decline in October is attributed mainly to reductions in food prices. Most principal items of food, including meat, bacon, flour, bread, butter, cheese, potatoes, sugar and margarine, fell in price during October.

Railway Borrowing.—The *Gazette* notice of a Bill to be introduced into Parliament by the London, Brighton and South Coast Railway Company contains three points of interest to the City. The company seeks power (1) to issue debentures exceeding in amount the traditional limit of one-quarter of the total capital; (2) to provide that the new debentures may be redeemable and not permanent; (3) to provide that the new debentures shall rank *pari passu* with existing debentures. As to (1), there can clearly be no objection. The present restriction, which is owing to the forceful and obstinate personality of Lord Redesdale, who was Chairman of Committees in the House of Lords half a century ago, has long been obsolete. The railways in America, where conditions are much more stable than here, have long regarded it as a counsel of perfection to raise only half their capital by bonded debt. The restriction to one-quarter here only adds to the revenue charges which traders and passengers have to meet without any corresponding advantages to anybody. As to (2), no argument is needed. There are several precedents already from other companies, and there is no objection in principle. Point (3) may possibly raise more question. Theoretically, no doubt, the security for a first charge of £1,000,000 on a property worth £20,000,000 is impaired if a second million is permitted to rank equally with it. But in the case of a great English railway the impairment of the security can hardly be more than theoretical; and as a set-off against this, the holders of the first charge gain at least some advantage in that their stock is larger, and therefore more marketable, and bought and sold at closer prices. Notices that further stock may be issued in the future to rank with stock now authorised are frequently contained in Railway Acts. But when a railway company later on seeks authority to issue new stock with this rank, holders of the existing stocks not infrequently oppose the proposal, and sometimes successfully, for the reasons we have given. We doubt whether their opposition is justifiable. Clearly, in the interest of business as a whole, what is desirable at this moment is that English railways should obtain without difficulty what new capital they need, and obtain it as cheaply as possible.

Railways and Road Transport.—Notice was also given in Tuesday's *London Gazette* that application is to be made to Parliament in the ensuing session by the London and North-Western, the Midland, and the Lancashire and Yorkshire Railway Companies and other companies constituting the North-Western Midland group for an Act to empower the companies "to provide, own, work, and use omnibuses, motor cars, and other road vehicles to be worked by electrical, mechanical, animal, and other power for the conveyance of passengers, passengers' luggage, parcels, animals, and goods," a privilege which, it may be recalled, was not granted under the recently passed Railways Act. The proposed Bill also contains a clause "to vary and extinguish all existing rights and privileges which might in any way interfere with the objects of the intended Act and to confer other rights and privileges."

Railway Statistics.—The Railway Statistics for August, published by the Ministry of Transport, show that, although the volume of passenger and freight traffic was greater than in July, it was much less than in the corre-

sponding month of 1920. The total number of passenger journeys (excluding season ticket holders) was 115,128,469, a decrease of 30,656,575, or 21.03 per cent. compared with August, 1920; the reduction in workmen's journeys amounted to 15,669,470, or 38.09 per cent. There was considerable expansion of excursion traffic, and the number of journeys increased from 484,675 to 5,634,943. There was also an increase of 929,145 journeys at other reduced fares. While the average receipt per journey from all descriptions of passengers, except season ticket-holders, increased from 16.64d to 19.98d, the falling off in traffic caused a reduction of 5.18 per cent. in the total passenger receipts. The passenger train miles run were 765,413 more than in August, 1920, an increase of 3.86 per cent. The decrease in coal and coke was much less than in any previous month this year, but the total tonnage of freight traffic conveyed in August, 1921, showed a decline of 4,140,127 tons, or 15.28 per cent., compared with August, 1920, and the ton-miles worked of 16.86 per cent. Freight train mileage was reduced by 10.77 per cent. The average wagon and train loads were 5.30 tons and 123.30 tons respectively, compared with 5.38 tons and 132.35 tons in August, 1920, whilst the net ton-miles worked per engine hour were 423, as against 433 in the corresponding period of last year.

North British Dividends.—The directors of the North British Railway announce that they can declare no interim dividends for the current year, the appeal of the Ministry of Transport against the unanimous judgment of the Railway and Canal Commissioners ordering the payment by the Government of £430,000 of the company's compensation claim having proved successful. The directors add that the decision of the Court of Session in no way affects the company's right to recover this sum of £430,000 as part of their expenditure on the maintenance of their rolling stock in the ultimate settlement of the compensation due to the company. As the period of control ended on August 15th last, the time has now come for making up the final accounts of the company against the Government. These accounts, failing agreement, will be settled by the Railway and Canal Commission, whose jurisdiction for this purpose has been affirmed by the Court of Session and has not been disputed. In addition to the £430,000 withheld from the claim for December, 1920, the Ministry have deducted further sums, amounting to £690,000, from the company's subsequent monthly claims during the period from January 1st to August 15th. "The directors will lose no time in submitting the company's final claim to the Government, and, if need be, to the arbitration of the Railway and Canal Commission. They are hopeful that the matter will be concluded early next year."

Coal Output.—The production of coal in the mines of Great Britain for the week ended November 12th amounted to 4,372,500 tons, which compares with 4,182,400 tons in the previous week and 4,775,600 tons a year ago. It is, it may be mentioned, the highest figure since the week ended August 13th last, when the output was 4,536,600 tons. An increase as compared with the previous week was shown in all districts, the largest being recorded for Scotland.

Stock Exchange Settlements.—All the Stock Exchanges in the kingdom are anxiously watching the action of the London Stock Exchange in regard to reinstitution of fortnightly settlements, and restoration of conditions that shall approximate to those which prevailed at the end of July, 1914. Consequently, lively attention is aroused by every effort made in London to secure early reversion to the conditions of Stock Exchange business, under which, it is claimed, brokers and jobbers prospered in a manner which it is impossible to expect them to do with things as they are now. The Committee of the London Stock Exchange, writes a Stock Exchange correspondent, recently called for a return to be made by their members of all loans and stocks, open at the present time, which were left as a legacy from the end-July 1914 commitments. Another return is to be sent in next January. The figures, however, do not include the whole list of stocks and shares open, but only those which were dealt with by the Stock Exchange Clearing House, and accordingly are of little more than academic interest, inasmuch as they leave out perhaps half the amount of stock open in securities other than those dealt with by the Clearing House. The object of the Treasury and the Stock Exchange Committee in requiring a return which is so necessarily incomplete is not obvious at first sight. This return, however, has been duly made. The figures are not published. The Committee have issued a statement to the effect that the position is satisfactory, while they express a pious hope that efforts will be directed to reducing the amount before the next returns are sent in by the end of January, 1922. Although the official notice is so politely colourless, there is a persistent report, in the Stock Exchange, that the actual amount of stock now open in respect of the 1914 accounts amounts to something between 2 and 2½ million pounds. If this report is correct—as it is quite likely to be—the Committee are justified in describing the situation as being a satisfactory one. Apparently, no efforts are to be made to bring to bear any pressure upon the Treasury for the latter to release its regulation that all bargains must be done for cash, and, this being the case, a number of petitions are being signed in the Stock Exchange urging the Committee to be prepared with a programme for reinstitution of fortnightly settlements, re-establishment of a clearing house, and reconsideration of questions surrounding special settlements as soon as the temporary regulations in respect of cash dealings are removed. This petition is in response to the invitation of the Stock Exchange Committee that members shall put forward their suggestions for the conduct of business after the Treasury has released the House from war conditions. In taking such a step as to invite the members to contribute their views upon the subject, the Committee are evidently fired with the desire to permit members to ventilate their opinions upon a subject around which there is lively controversy and a clash of many opinions. The outsider might well have supposed that the Committee themselves would have formulated a scheme, and then asked for their fellow-members' criticisms, instead of endeavouring to get the latter first, and to bring forward their own proposals later on. They have promised to put before the House a complete statement of their intentions by next March, and having regard to the present slackness in business, the amount of spare time at most members' disposal, and the personal opinions involved, it is safe to conclude that the Stock Exchange Committee will have plenty to do during the next three months. To the outsider the paramount consideration rests in the fact that borrowers of money and bulls of stock have a maximum time of twelve months, from the date of peace, in which to settle their commitments, and until these are cleared up it would appear a matter of great difficulty to evolve any scheme which shall have the desired effect of re-establishing periodical settlements, with all the risks attaching thereto, until such time as the whole of the pre-war liabilities are fully discharged. Elimination of the risks is aimed at by a second Stock Exchange petition, which advocates contangoes on margins (from clients), following the New York Stock Exchange practice. This plan would maintain the system of cash dealings, as at present in force, but would give clients the right of contangoing stock upon a margin, presumably of cash or collateral security, being provided.

China at the Conference.—The discussion of the Far Eastern problem at Washington unfortunately takes place during an intensification of the political and financial difficulties of the Chinese Republic. The Peking Government is repudiated by its rival at Canton, and a third authority may soon arise in Central China; several provinces are virtually independent of all three; large areas are ravaged by bandits, or exhausted by the demands of troops under leaders fighting each for himself, or suffering from the effects of recent drought, pestilence, and famine; and the terms offered by Japan for withdrawal from Shantung have aggravated the friction between the Governments at Peking and at Tokyo. A banking crisis at Peking has been averted for the moment, but the Government in that city, the only authority which the Powers can deal with, has no security which can be pledged in return for foreign financial aid. It depends at present on the surpluses from the revenues collected by the Imperial Customs Service, the salt duty, also under foreign supervision, and the railway receipts; but, according to the *Times* Peking correspondent, the two former are about to be pledged for ten years as security for a new internal loan, and the railway revenues, after paying the bondholders, will have to be spent on equipment and repairs. Something may be obtained from wine and tobacco, but the collection of these revenues is still unorganised, and the Peking Government seeks leave to raise the Customs tariff (already increased in 1918 to an average of 5 per cent. *ad valorem*) to an average of 12½ per cent., and to pledge the increased revenues as security for a new External Loan. The figures of the foreign trade and the Customs revenue are exceptionally high, partly, however, through the rise in prices and in the tariff; and China, like other raw material countries, is suffering from the inability of Europe to buy. The Powers represented at the Conference have formally agreed in principle to respect her sovereignty and territorial integrity, to enable her to establish and maintain an effective government, to secure "the open door" for foreign commerce, and not to seek special privileges for any one of themselves; and the Consortium will provide a loan on adequate financial security, and on condition that the revenues assigned for its service are under proper supervision and control. But the Nationalists, and even the Chinese delegates at the Conference, avowedly resent foreign control of any kind. Moreover, there is considerable misgiving in America as to the implications of the Anglo-Japanese Alliance, the exact text of which is unknown. But it is to be brought into harmony, as was officially declared last year, with the letter of the League of Nations Covenant; it was formed in 1902 avowedly to protect China's territorial integrity and independence; Germany and Russia, who were then the danger, are now powerless; it becomes operative only if one member is at war with two Powers at once; and it is unthinkable that Great Britain could join Japan in a war with the United States. The alliance seems, therefore, to be obsolete. Possibly it may be absorbed in a wider pact, including the Powers represented at the Conference. Eventually some way will doubtless be found of helping China out of her difficulties; but, as the first step, she must get nearer to internal peace.

Japanese Trade and Finance.—Cabled advices from Tokyo state that owing to delay in the return of end-of-the-month money the money market was somewhat tight at the beginning of November. But, with Exchequer Bills paid off on the 9th inst., and the demand for money by the exchange banks falling off, the market eased considerably towards the middle of the month. In view of the approach of the end of the year, bankers are adopting a very cautious attitude. After the death of the Minister, the stock markets were quiet, but the subsequent settlement of the political situation increased confidence. The second estimate of Japan's rice crop is 54,000,000 koku, or 6 per cent. less than the first, and the quotation for futures jumped to 43 yen, whereas spot price was 39.60 yen on November 15th. Silk yarns are firm, on good inquiries, but cotton yarns are weak, and spinners are going on short time. The continued large unfavourable trade balance is attracting much attention. On November 15th the note issue of the Bank of Japan

was 1,112,000,000 yen, as compared with 1,034,000,000 yen a year ago, while discounts and advances were 8,000,000 yen, against 165,000,000 yen.

British Empire Cotton Growing.—Our Manchester correspondent writes:—According to some particulars published this week, a hitch appears to have occurred in the arrangements for financing the work of the British Cotton-Growing Corporation. Early last year the report of the Government Committee on Empire Cotton Growing was issued, and valuable recommendations were made for the purpose of increasing the cultivation of cotton in various parts of the British Empire. With regard to finance, it was suggested that a grant should be made by the Government, and money also raised from the trade itself. Ultimately the Government decided to make a grant of about £1,000,000, on condition that users of raw cotton in this country would consent to a levy of 6d a bale upon all raw cotton imported into the country. The principle of the levy has been agreed to by over 80 per cent. of spinners, who, of course, are chiefly in Lancashire. The proposal was made that the levy should be collected by the Liverpool and Manchester Cotton Association, but a difficulty has arisen in the fact that when the Liverpool Cotton Association took legal opinion as to the necessary alteration in their by-laws they were advised that to make such a change would not come within their memorandum of association, and would, therefore, be invalid. Legal opinion also stated that if the members agreed to alter the memorandum of association, and passed such a by-law, it would not be legally enforceable. The directors of the Liverpool Cotton Association have expressed their disappointment that so difficult a position has arisen, and have promised their cordial co-operation and help if any other scheme is evolved for furthering the object of Empire cotton growing. Many members of the council of the British Cotton Growing Corporation state that voluntary subscriptions would not prove satisfactory as a basis for the levy, and that it can only be made equitable if it is compulsory on all spinners. In the circumstances, it has been decided to approach the Federation of Master Cotton Spinners' Associations, the Cotton Spinners' and Manufacturers' Associations, and spinners who are not members of either body, informing them of the difficulty which has arisen, and asking them to obtain definite expressions of opinion as to their willingness to support legislative action to make the levy compulsory and universal. It is feared that owing to the difficulties met with there will be considerable delay in developing the work of the corporation, and it is understood that the grant of the Government will not be paid until a definite decision has been reached by spinners as to the payment of the levy by all cotton users in this country.

Burberry's Losses and Reconstruction.—In the year ended March 31, 1920, the first year of their trading as a public limited company, Burberry's, Limited, earned a net profit (subject to E.P.D.) of £378,228. The report just issued for the year ended March 31, 1921, records a net loss of £485,634. The reports states that "The year under review has been one of great anxiety for the directors, owing to the sudden and unprecedented fall in the prices of textile fabrics, and the heavy commitments which this company has outstanding for future delivery." This appears to be another of the numerous cases where the unavoidable difficulties of the period were aggravated by the failure to foresee the approach of collapse of the after-war boom. In the balance-sheet the directors have written down stocks, "both on hand and to be delivered," to market value as at March 31, 1921, and they have since decided to make a further provision of £100,000, "which will be sufficient to cover any decline which may have occurred since that date." From the analysis of the balance-sheet, which appears in a later column of this issue, it will be seen that at March 31st last stocks, after being written down, were still over £200,000 higher than a year previously, a fact which reveals the intensity of the directors' forward purchasing policy at a very unfortunate moment. The result of the writing down will be that, after utilising all reserves and accumulated

profits, a deficiency of approximately £350,000 will be shown. Capital reconstruction is, therefore, proposed. The report says: "The deficiency will have to be written off the share capital in order to place the company again in the position to pay dividends, and, subject to the consent of the Court being obtained, the vendors have agreed to surrender the necessary capital, and the other shareholders will, therefore, not be asked to face a loss in this connection." The present capital is £2,000,000, consisting of £1,000,000 7½ per cent. cumulative participating preference shares and £1,000,000 ordinary shares. Under the proposed reorganisation, the capital will be £1,650,000, consisting of £1,000,000 7½ per cent. cumulative participating preference shares, 300,000 10 per cent. "A" ordinary shares of £1 each, and 350,000 10 per cent. "B" ordinary shares of £1 each. The details of the scheme appear to be considerate to the shareholding public, but whether it will suffice without the raising of fresh funds time will show. A perusal of the balance-sheet suggests that a period of patience will be required, and when prosperity returns attention will presumably be paid to writing down goodwill, which stands at the large figure of £465,533.

Aerated Bread.—Some decline in net profits is disclosed in the report of the Aerated Bread Company for the year ended October 1, 1921, but, taking all things into consideration, shareholders have not much cause for complaint. Three years ago the company amalgamated with Buszard's, and since that time results have been more satisfactory, as may be seen from the table below, which sets out the figures since 1907:—

September.	Gross Profit.	Expenses.	Net Profit.	Depreciation, &c.	Div.	Rate.	Carried Forward.
1907-8.....	£ 276,253	£ 220,366	£ 55,886	£ 5,000	£ 50,409	22½	£ 17,375
1908-9.....	276,101	224,922	51,179	5,000	50,167	22½	17,458
1909-10.....	281,852	233,348	48,504	5,000	45,425	25	13,567
1910-11.....	283,695	236,203	46,492	5,000	40,883	22½	14,176
1911-12.....	284,319	227,801	56,518	5,239	45,424	25	17,031
1912-13.....	308,114	234,091	77,023	8,000	54,791	27½	31,265
1913-14.....	315,476	240,350	75,126	28,000	49,846	27½	28,543
1914-15.....	286,019	253,146	36,003	8,000	29,948	17½	26,598
1915-16.....	299,434	282,344	17,080	11,764	7,959	5	23,356
1916-17.....	299,199	303,682	(7,483)	8,000			1,271
1917-18.....	419,112	322,666	96,546	59,000	28,135	15	10,682
1918-19.....	587,456	435,506	151,950	62,000	80,500	30	20,132
1919-20.....	685,831	520,274	165,557	57,882	113,050	25	14,757
1920-21.....	728,376	584,381	145,995	40,001	105,777	15	14,150

* Includes special bonus to employees.

Gross profits, it will be seen, showed a further increase, and the report states that turnover has again expanded. But there was a larger increase in expenses, the ratio to receipts rising from 76 to 80 per cent. Depreciation fund gets £6,000, as against £20,000 a year ago, while £34,000 is reserved for income-tax and corporation tax, as compared with £22,500 last year. The dividend, which is reduced to 15 per cent., absorbs nearly as much as last year's distribution, owing to an increase in capital. The purchase of a site at Victoria was completed during the year, and a separate company, Wilton Road Properties, Limited (with the same board as the A.B.C. Company), has been registered with a capital of £210,000, of which the Aerated Bread Company has taken £70,000. An item, Wilton Road Properties, Limited, appearing in the balance-sheet at £135,400, represents a loan to that company secured by second charge on the property, and has been obtained from the bank. The only reserve figuring in the balance-sheet is the depreciation account of £24,000, while the property item stands at £801,900, additions during the year having been £72,300.

India Rubber, Gutta Percha's Results.—The report and accounts have been issued of the India Rubber, Gutta Percha and Telegraph Works Company, Limited, for eleven months ending August 31, 1921. These show that, after making provision for doubtful debts and excess profits duty, a net loss of £445,461 was made. The report, in stating these losses, points out that "a very large proportion is due to depreciation in the value of stock as at August 31, 1921, compared with September 30, 1920," while the remainder of the loss "is the result of the disastrous effects of the coal strike, the shorter hours of work, labour difficulties, the unsettled state of markets, and the great reduction of turnover due to the

competition of dumped foreign goods and surplus stocks arising out of worldwide overproduction." In the table shown below a record of the undertaking is set out for a number of years, which shows that the company prospered not only during the war and part of the post-war period, but in pre-war times. It is true that profits fell from £176,855 in 1913 to £101,944 in 1914, but by 1915 the position had been recovered:—

September 30.	1913.	1914.	1915.	1918.	1919.	1920.	1921.*

Ord. dividend	(7½%)	(5%)	(10%)	(10%)	(10%)	(10%)	(2½%)
Carry forward	7,455	1,033	18,938	90,955	100,368	142,418	35,498

* To August 31.

To cover the loss the directors have withdrawn £350,000 from reserve, leaving this fund at £215,722, and after the profit and loss account has been adjusted, on account of preference dividend payments, £35,498 is carried forward to next year's accounts. It would be interesting to know the exact amount written off for depreciation. Stock-in-trade shows a reduction of £262,490 when compared with the figures in last year's balance-sheet, but shares in other companies, concerning which the basis of valuation is not mentioned, whether at cost or market value, are valued at £100,603, only a few pounds more than the previous year's figures. It may be pointed out that competition of dumped foreign goods was generally reported to have existed in 1913, when the company apparently fared quite well, and, moreover, adverse exchanges did not affect its profits in 1920. It is to be hoped, however, that once the industrial outlook has cleared, this old-established concern will speedily return to its well-deserved pre-war prosperity.

Slubbers' Loss.—The statement of results for the half-year ended September 30th last, issued by the directors of the British Cotton and Wool Dyers' Association, shows a profit of £4,629 for the period, from which has to be deducted £25,631, which includes debenture interest, fees, and an allocation of £12,500 to depreciation. A balance of £21,599 was brought forward from the previous accounts, and there thus remains a credit balance of £597. It is stated that stocks have been written down to values ruling at September 30th. For the year ended March 31st last there was a net profit of over £123,000, and in the previous year it was over £186,000, while for the past four years a dividend of 10 per cent. has been paid on the ordinary shares.

The Two Gold Fields.—Our mining correspondent writes:—About the middle of 1919 rumours as to an impending reconstruction of the Consolidated Gold Fields of South Africa were current. They found their justification in a scheme for the sale of the assets to a new company, the purchase consideration being paid in shares. Rather to the surprise of most people concerned, the old company continued in existence as a holding concern. Thus there are two sets of accounts—a circumstance which has led to some confusion. The change was made owing to the fact that "the objects of the company as set out in its memorandum were unusually limited, and did not afford adequate scope for the remunerative employment of the company's capital." In 1919, of course, industrial undertakings in many parts of the world were enjoying a high degree of prosperity, and the acquisition of interests in a number of such no doubt appeared extremely good business. Substantial participations were secured in engineering, produce, and other enterprises in South Africa, as well as in oils, &c. Unfortunately for the shareholders, the company in this respect—as in taking up ground on the Rand many years ago—was just a little late. In the conditions of restricted trade which have

since prevailed, "little progress has been made by the South African enterprises above referred to, but the directors believe that the foundation for profitable future business is being laid." Meantime, the company is faced with further depreciation in the Rand old-stagers, in which it remains heavily committed; and the decline in market value of these and other descriptions not only wipes out the whole of the past year's profits, but leaves a debit balance of £111,200 to be carried forward. This is the position as regards the operating subsidiary, the New Consolidated Gold Fields. The holding company, having no income save a small sum as interest on loans, is under the necessity of paying the dividend on its two issues of preference shares—absorbing £109,000—out of the balance brought over from 1919-20, leaving £57,300 in hand. Consequently, unless the course of affairs is better in the current year than it was in 1920-21, the dividend on at any rate the second preference shares may have to be deferred—it is, however, cumulative. A strong financial position is disclosed by the balance-sheet of the New Gold Fields Company. The gilt-edged securities held at the end of June, 1920, have been sold, and a substantial portion of the proceeds is on hand in the shape of cash or short loans. These two items show a surplus of £357,900 over the creditors, and then there are cash advances and mortgages to the tune of £295,300. Why the company's holdings of War Bonds and the like should have been cleared out is a little difficult to understand. Sales could easily have been effected in the event of the money being wanted for the financing of fresh enterprises. It is true that the contingent liabilities are exceedingly heavy. In any case, the policy followed has proved most unfortunate: gilt-edged securities have recently enjoyed a substantial appreciation, whereas Mexican Eagles—of which more have been bought—and Steaua Romana—of which 16,000 were acquired—have fallen in value. A favourable account is given as to the progress of the American undertakings in which the company is interested—apart from the Trona Corporation, which suspended production in April owing to the decline in the demand for potash. Local criticism of the management of the last-named undertaking, it may be mentioned, is of a particularly drastic character.

Wages and Hours on the Rand.—In a "Note" a fortnight ago the view was expressed that the white miners in the Transvaal would have perforce to submit either to a drastic cut in wages or to an extension of the use of coloured labour. News since to hand, writes our mining correspondent, indicates that they have chosen the latter alternative. The unions have agreed to a compromise which will enable something like the full eight hours' work per day to be obtained from the natives, in place of only about five effective hours under past conditions; in addition, greater freedom in the employment of experienced Kaffirs has apparently been agreed to. All sorts of calculations were indulged in as to what the new regulations will represent in the way of savings per ton of ore crushed, some rather wild conclusions being arrived at. For example, a daily contemporary fathered the suggestion that an economy of 20 to 25 per cent. in costs should result. Seeing that, according to the calculations of a well-known engineer, native labour accounted for no more than 4s 6d out of a total average of 25s 11d for 1920, it is palpable that even the entire elimination of the native labour item would not save 20 per cent. of the expense. On the basis of a 40 per cent. increase in efficiency, the direct gain under this heading may be reckoned at about 1s 4d per ton milled. This, however, is not the whole of the story. There would also be a saving in supervision and other charges, making a total of possibly 10 per cent. The question of costs, being a vital or the mining industry, is dealt with at some length in a report of the manager of the New Consolidated Gold Fields, whose affairs are elsewhere discussed. An interesting tabulation contrasts the charges for certain lines of stores at date of writing and at the corresponding periods of 1920 and 1914. In the majority of items an appreciable reduction is shown by the latest rates as compared with those of 1920, although some are still more than double the 1914 figure. Two striking exceptions are furnished by cyanide and mealies. The first-named product is dearer even than last year; the latter—

used on a large scale to make a sort of porridge for the natives—costs now only 12s per bag, as against 22s 10d in 1920 and 10s in 1914. So far the fall in prices has been not slightly reflected in costs, owing to the fact that the mines are, for the most part, still using up stores purchased at a higher level. Nevertheless, the benefits will be felt, and in an increasing degree as time goes on, seeing that further reductions in charges may be looked for. Fresh light on the remuneration of the white workers is contained in a publication of the South African Mines Department, just to hand, which sets out the wages paid in nearly 150 classified occupations. It shows, for example, that the chief mechanical engineers on the gold mines get nearly £1,200 per annum; and on the Transvaal diamond mines £1,700; while the foremen average £640 and £720 respectively. Shaft-sinkers on contract receive as much as 48s per shift, and machine stoppers 49s 10d. Surface workers of various kinds average about 30s per shift. Even when allowance is made for the high cost of living, these rates are distinctly on the liberal side. That the leaders of the gold industry are by no means satisfied even with the present position of affairs may be judged from the rather disappointing tenour of Professor Lawn's speech at the meeting of the Johannesburg Consolidated Investment Company last Wednesday.

At a meeting of the Institute of Actuaries on Monday next, 28th inst., at 5 p.m., at the Hall of the Institute, Staple Inn, a paper will be read "On the Relation Between the Course of Wholesale Prices of Commodities and the Market Value of Various Classes of Securities," by Mr S. J. Perry, F.I.A.

Oversea Correspondence.

UNITED STATES.—CORN CROP—COMMODITY PRICES—RAILWAY WAGES.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 14.

THE Government's latest estimate of the corn crop is 3,152,000,000 bushels, representing a decrease of 80,000,000 bushels from that of last year. The production of seven surplus States is placed at 1,554,000,000 bushels, or 152,000,000 less than last year. Farm reserves are of record proportions—namely, 281,000,000 bushels—which, together with the new crop, indicate a total supply of 3,454,000,000 bushels, or 71,000,000 larger than a year ago. Weather has been favourable for husking and cribbing, with the result that the greater part of the work has been finished. Latest reports from the winter-wheat sections are to the effect that dry weather has retarded ploughing, planting, and germination; present indications point to a slight decrease from last year.

Some further advance occurred in October in the general level of commodity prices. *Bradstreet's* index number at November 1st \$11.3514, marks a gain of 1.4 per cent. over that of October 1st, and of 7 per cent. from the low point touched on June 1st, but shows a decrease of 20.7 per cent. from November 1st of last year, of 43 per cent. from November 1, 1919, and of 40 per cent. from November 1, 1918, just before the Armistice. As compared with November 1, 1915, however, the index number is 8.6 per cent. higher, while the rise from August 1, 1914, is 30.3 per cent. Eight groups of commodities advanced during October, three declined, and two remained unchanged, but the only really sharp upturns were in provisions and textiles. Breadstuffs showed the only important decline. In all, 32 products out of 106 advanced, 27 declined, and 47 remained unchanged. The principal items in the food groups that advanced were live sheep and hogs and their products, mutton, and market pigs, butter, eggs, tea and coffee. Other lines which advanced were wool, several makes of cotton goods, crude and refined petroleum, olive oil, yellow pine, rosin, turpentine, and rubber.

In line with their policy, previously announced, Eastern railroad managements are sending notices to the various

classes of employees, calling for conferences to consider readjustments in wages and working conditions. A cut of 10 per cent. in wages is proposed. The carriers are seeking also to revise rules and working agreements, which each railroad has negotiated individually with its train-service employees, in order to bring about greater economies in operating costs. There are some 140 different items in the rules and conditions to be considered for that class of workers, and under existing contracts the carriers can make a change only after giving 30 days' notice. The conferences called for have no connection with the "national agreements" made during the war, which with some exceptions are still in force. The trainmen have never been parties to those agreements, which are to be revised by the Railroad Labour Board. Should the conferences fail to result in an acceptance of the wage reductions, the matter will then be submitted to the Labour Board for settlement, a development that now seems likely. It is thought that the Board will be able to take up the wage reduction cases, which will be filed as soon as the outcome of the conferences is definitely known, about two months hence.

FRANCE.—FRANCE AND WASHINGTON—THE TELEPHONE SERVICE—TRADE RETURNS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 22.

A SERIES of interpellations on the financial situation is still in progress in the Chamber, and is having a good effect in clearing the air before the discussion of the Budget Bill (which is expected to begin within the next few days) and before the return of M. Briand from America. With the Premier's return the real business of the session will be resumed, and in this the financial situation will assume an extremely prominent place. So far as French opinion is concerned, no great hopes are placed on there being any practical outcome from the Washington Conference. Unless Germany is much more effectively prevented from preparing to start another war, it is felt here, it will be impossible for this country to reduce her heavy military burden lower than at present. M. Briand has made the situation of France clear in his speech at Washington, and to that extent the gathering is satisfactory to people here. Beyond that it is felt, as may be gathered even from the non-partisan and purely financial journals, that only one of two results—and both unfavourable to this country—can be expected from the response to the American President's effort. Either the conference will not result in bringing about the disarmament asked for, in which case a fresh disappointment and apprehension as to the intentions of the nations who refuse to reduce their fleets will result in a new acceleration of armaments and renewed unsettlement in international relations; or it will have the effect, if Mr Harding's proposals are accepted, of throwing on the world's markets an enormous stock of iron, steel and other products, which, combined with the disturbance in the labour world due to the sudden shutting down of so many dockyards for a period of ten years, will make the world's economic situation very little better, if at all, than it is at present.

It is somewhat significant that a Bill, backed by the names of no fewer than 296 deputies, has been introduced to the Chamber (and referred for consideration to the Committee on Public Works), with the object of placing the French telephone system in the hands of a private company. The proposal is due not only to the chaotic condition into which the telephone system has fallen in this country, but also to the inability of the State, as is admitted on all sides, to find sufficient money, under present circumstances, to place the undertaking on a satisfactory basis. The French telephones, it may be remembered, were operated for some ten years under private control, and were then taken over by the State (as in England). The initiative in the present movement has been taken by M. Louis Deschamps, who was himself Under-Secretary for Posts, Telegraphs and Telephones in M. Clemenceau's Cabinet, and who has a thoroughly expert knowledge of the problem. Seeing that there was

a deficit on the working of the system of 6,000,000 in 1917, which rose to 60,000,000 in 1919, and last year to about 200,000,000, the framers of the Bill regard it as impossible for the State to replace the system on its feet. The Bill proposes that the whole system shall be handed over to a private company, with the obligations that the plant shall be completely renewed, the existing material being taken over at its present value; and that the State and the personnel shall participate in future profits.

The trade returns for the first ten months of the year show a marked decline in imports, accompanied by a very much smaller decrease in exports. Indeed, imports and exports nearly balance, as may be seen from the table below:—

(In Millions of Francs.)				
	First Ten Months of			
IMPORTS.	1920.	1921.	Inc. or Dec.	
Foodstuffs	10,221 ..	4,887 ..	—	5,334
Raw materials	20,734 ..	9,095 ..	—	11,639
Manufactured goods	10,823 ..	4,078 ..	—	6,745
Totals.....	41,779 ..	18,060 ..	—	23,718
EXPORTS.				
Foodstuffs	2,083 ..	1,516 ..	—	567
Raw materials	5,072 ..	4,530 ..	—	542
Manufactured goods	14,597 ..	10,624 ..	—	3,973
Postal parcels	911 ..	952 ..	+	41
Totals.....	22,664 ..	17,622 ..	—	5,042

It should be explained that the values for 1920 are based on the scale fixed by the Permanent Commission for that year, while those for the current year are based (in view of the general fall in prices since 1920) on the scale used during 1919. Still more striking change in the whole situation of French foreign trade is shown by comparative figures for the first ten months of 1921, 1920, and 1913 respectively, which give not only the value but also the weights of the goods exported or imported:—

First Ten Months of						
		1913.		1920.		1921.
		Value in Millions of Frs.	Weight in Metric Tons.	Value in Millions of Frs.	Weight in Metric Tons.	Value in Millions of Frs.
Imports	6,832	36,426,434	41,779	40,656,754	18,060	27,615,983
Exports	5,638	17,846,271	22,664	10,228,782	17,622	11,929,289

The Civil Tribunal of the Seine has just given an important judgment in an action brought by a number of stockholders in the Banco el Hogar Argentino, which may have its repercussion in other countries. The bonds in question were issued simultaneously in the Argentine and in Paris, and were inscribed as having a value for redemption purposes of 100 pesos gold in the Argentine or 100 francs in France. The bank concerned claimed that it had a right to redeem such bonds exclusively in Paris and in francs, hence the reason for the action entered by the French holders. The Court held that the Banco el Hogar Argentino had no right to vary the terms of issue, which left it at the option of the bondholder to redeem his bond either in pesos or in francs, and gave judgment against the bank, which has been ordered to pay the amounts claimed by the plaintiffs, with interest and costs. The bank is also ordered to re-establish in both countries, as set forth at the time of issue, the method of redemption then provided for, and nominal damages of a franc are awarded to each plaintiff. The various banks through which the bonds were issued are exonerated from responsibility.

The Bourse has again proved exceptionally weak, and prices closed lower, as a rule, all along the line. The effect of Mr Hughes' disarmament proposals has been to add another reason for depressing prices, owing to the nervousness felt here that the reduction of the world's naval forces may have distinctly detrimental influences on industrial undertakings. Another bear factor during the week was M. Herriot's proposal in the Chamber in favour of a tax on capital as a means of meeting existing difficulties in the national finances. The outstanding cause of the all-round weakness of the Paris Bourse, however, is still the same as it has been for months past; buyers persistently refuse either to invest or to speculate while the outlook is still so unsettled, and particularly when so many new and important pending capital issues are being

talked about. That there is plenty of money available for investment has again been proved by the success of the latest Crédit National Loan of 3,000,000,000 francs, at 6,000,000 6 per cent. bonds of 500 francs each, issued at 498.50 francs. It is officially announced that the whole of the issue has been taken up by the public, and that the demand for the bonds exceeded the total amount offered both in Paris and in the country. The inference drawn from these facts here is that, whatever opinions may be held abroad as to the financial position of France, the French people are still quite prepared to place their confidence and their savings in securities issued against the guarantee of the State.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—REPARATIONS—FINANCES—EXCHANGE AND BOURSE—PRICES—COAL OUTPUT.

(FROM OUR CORRESPONDENT.)

BERLIN, November 21.

THE visit of the Reparations Commission has terminated without any result beyond bringing out the fact, long known to more careful investigators than the Commission, that the making of further gold payments by Germany under the May ultimatum plan is entirely impossible unless a foreign gold loan or credit is first concluded, in which case not Germany but the foreign lender will be the real payer, and the trouble will be postponed, not solved. The Commission naturally could not admit that the 15th payment, the first regular fixed instalment of the ultimatum settlement, is impossible; and its attitude was to insist that the payment could and must be made, and to proclaim that German industry could give security for the necessary gold credit. The Commission, that is, approved of, without adding anything to, Germany's own plan. The Cabinet in a parting note declares that the provision of money for the recurring annuities by way of credit was not the sense of the May settlement, but adds that it is willing to try the credit way in order to give a

proof of goodwill. The impracticability of the whole reparations settlement is sufficiently shown by this. The reparations are a recurring and practically perpetual charge, and if payable at all they must be paid out of income. The May ultimatum settlement implicitly recognised this by professing to make part of the payments conditional upon Germany's prosperity—that was the ostensible meaning of the 26 per cent. on exports. This device merely had the effect of throwing dust in the eyes of the less critical part of the European public, which was led to believe that in some genuine way the weight of reparations was to be measured in proportion to Germany's ability to bear it. The device never deceived inquiring minds, which understood that Germany's absolute exports are no measure at all of her prosperity or of her ability to pay; with half her present exports she might be, were her foreign payment balance (independent of reparations) more favourable, much better able to pay than she might be with double her present export. The only reliable index based on foreign trade would be the relations, in value, of exports to imports, and even that would have to be qualified, as Germany's foreign payment balance is determined partly by other factors than trade. The system of throwing dust has, as usual, failed. The Reparations Commission, though proclaiming that Germany can and must pay 500,000,000 gold marks on January 15th, has not been able to point out any way in which she can pay—except, that is, the foreign credit device, which is Germany's own invention, which is not certainly practicable, and which at best leaves open the question of repayment of the foreign lender. In other words, the Commission was not in a position to say: If we were you, we could and would pay in the following way.

Were the Commission, or some other authority, tomorrow put in absolute control of Germany, it could devise no means of payment. The continual selling of marks abroad is impracticable, because at present exchange 500,000,000 gold marks is over 30,000,000,000 paper marks; and if the mark selling operation were entered on the present exchange would give way to a much worse one long before the half a milliard gold were raised. The application of high exchange currencies received for exports is also impracticable, as the diversion of these to reparations means a correspondingly increased selling of marks for foreign food and raw materials. The credit system, even if the credits develop into long-term loans, will not avail, because it involves a corresponding loss of income from the pledged properties, so that the payment of each instalment would make more difficult the payment of the next. If, as is probable, the failure of the ultimatum reparations plan, which from the first bore the stamp of a headstrong and demonstrative measure, is to be formally recognised in the coming year, it is not only a German but also a French interest that the recognition should come speedily. At least, then there will be speedy proof of the impracticability of the threatened French plans for solution by means of invasions, seizures, and other violent acts. Meantime, reparations has developed into a Humbert Safe affair, in which the imposture is kept up not by the owners of the safe, who truthfully proclaim that there is nothing inside, but by the claimants to the contents, who persist that there is.

Before the discussion of the Third Supplementary Estimates for 1921 the Reichsrat got a new official summary of the financial situation. This time the deficit of 1921 is put at 161.6 milliard marks. Reparations, which in the summer were estimated at, at most, 50 milliards, now appear at 112.2 milliards, of which 95.1 milliards is in ordinary and 17.1 milliards in extraordinary expenditure. The rate of mark exchange underlying this increase is not stated; the Government merely adds that a further mark decline means a further increase. The railways and posts deficit is now put at 20 milliards, the occupation costs 5.8 milliards, Inter-allied Commissions 1.2 milliards, the Reparations Commission alone swallowing up the vast sum of 800,000,000 marks. In 1922, when the full burden of reparations is felt, the reparations cost, on the same unstated exchange basis as the above, is reported to the Reichsrat at 234,200,000,000 marks. The new taxes now before the Legislature in the shape of bills will yield 42 milliards, so that even the deficit on the ordinary Budget will not be covered. In a statement to the Reich-

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

stag the whole yield from taxation of all kinds in 1922 is put at 95 milliard marks, or 1,583 marks 80 pf a head. The largest estimated yields are: Sales tax 24 milliards, income-tax 23 milliards, corporation tax 4 milliards, Customs 4.7 milliards, coal tax 10.15 milliards, all six Increment of Wealth taxes, 3 milliards, tobacco 3.5 milliards, beer 1 milliard, dividends and interest tax 1.530 millions, emergency levy 8 milliards, tax on capital transactions (Bourse and other stamp duties) 2.3 milliards, railway transport tax 2.6 milliards, export duties 700 millions, estate and succession duty 700 millions, land purchase tax 550 millions.

The mark depreciation is making itself felt in every domain of State and private life. From November 23rd the supplement to Customs duties paid in paper marks is raised from 1,900 to 3,900 per cent., so that the paper mark duty is 40 times the nominal. An official statement puts the rise in railway expenses, as compared with 1913, as follows:—Coal 26 times higher, rails 20 times, bar-iron 30 times, petroleum 24 times, wood 14 times, locomotives and freight cars 17 times, wages of regular officials 8 times, of non-official employees 10 times. The Reichsbank statement for November 15th reflects the price-rise in an enormous demand for credit, and a big increase in circulation. Private discounts increased from 755,207,000 marks to 1,323,994,000 marks, discounted Treasury bills from 95,339,603,000 marks to 103,725,700,000 marks, and note circulation from 92,609,995,000 marks to 95,186,123,000 marks. Kassenscheine in circulation dropped to 7,097,000,000 marks. On the 17th the Bourse suffered a sharp reaction, this in connection with the mark's firmness, and with various unconfirmed rumours of a reasonable handling of the Reparations question. Many leading stocks fell 200 per cent. on their nominal value, some considerably more; so that the Bourse index (*Frankfurter Zeitung's*) for the 17th shows (for the first time in many weeks) a sharp drop—from 42,358 to 38,413 for dividend payers and fixed-interest papers combined. Dividend payers fell from 39,234 to 35,432, and foreign bonds (which are purely exchange papers) from 2,243 to 2,073, while home loans rose from 881 to 908. The bond-buying movement continued during the week, and in general loans were to-day firm; but on the week Federal 3 per cent. declined from 110 to 97. To-day's other loan quotations are:—War Loan 77.50, 4 per cent. 78, 3½ 71.10, Savings and Premium 83.50. The Bourse to-day, with the mark exchange slightly bettered, was quiet but well maintained; mining, including Silesian, and machine papers being firm, textiles very firm, anilines with the exception of Badische rapidly rising, potash quiet, shipping inactive. Industrial quotations, despite a better outlook on the mark exchange, are kept firm by further increases of capitalisation and by increases in (paper-mark) profits and dividend rates. The Allgemeine Elektrizitäts-Gesellschaft announces a capital increase from 850 to 1,100 million marks. This company is the largest capitalised single concern in Germany. The Schultheiss-Patzenhofer beer trust and the "Explosives Concern" (Nobel) also announce increases of capital. The Mannesmann Tubes Company reports for 1920-21 gross profits of 221 million marks, against 104 million marks in the preceding year.

Prices other than those of imports which follow the exchanges, and have, therefore, gone back somewhat, continue to rise; but there is no sign of the general German price level soon reaching the foreign at the present

low mark exchange. The Berlin *Boersen-Zeitung* calculates that already in October, when the mark stood considerably higher than now, English goods were in German marks 52 times dearer than in 1914, whereas German goods were only about 19-20 times dearer. Since then the disparity has much increased. Coal, brown coal, and briquet prices have been raised all round. The best bituminous Ruhr coal, which has cost 253.90 (average) per ton since August, will from December 1st cost 405 marks. The main cause of this increase is the rise in cost of materials. Prices of home wood have of late risen very rapidly. The coal output on the Ruhr in October was 8,047,353 metric tons in working 26 days, or 309,514 tons per working day, as against 7,853,871 tons, or 302,072 tons per working day in September; 8,174,606 tons, or 340,609 tons per working day in February (under the since abandoned three extra half-shifts arrangement); and 9,895,090 tons, or 366,484 tons per working day in October, 1913.

CANADA.—TARIFFS AND TRADE—BUSINESS CONDITIONS—PUBLIC FINANCE—RAILWAY IMPROVEMENT.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 11.

FOUR months' experience of the United States "emergency" tariff has sufficed to show how serious a matter it is for Canada. During the June to September 30th period the value of exports affected by it was \$10,070,000, as compared with \$33,546,000 for the same period last year. This ratio of decrease—no less than 66 per cent.—was considerably greater during September, when it went to over 70 per cent. In September of this year the value of these exports was \$2,934,000; in the same month last year it was \$11,133,000. The greater rate of decrease during the latter month was due to the falling off of grain exports, especially wheat. As these were much heavier during October, November, and December than they were in any preceding months, it is certain that the decrease in exports to the United States will be even more marked than it has been. At the same time, the value of imports from the United States has fallen off to an even greater extent than have exports thereto. During September the value of such imports was \$41,402,000, as compared with \$81,166,000 for the same month last year. It was also \$24,000,000 below the value for September, 1919. And the same was true of the other months of the June to September period. To some extent this is explained on the ground that ability to buy is conditioned on ability to sell. Certainly, Canada cannot take goods from the Republic to anything like the extent that she has done in the past, if she is to be prevented from selling over there her principal products. But it is also quite probable that imports from the United States have been affected during the last four or five months by the new Customs regulations, which provide that goods shall be valued according to the rate of exchange. This means that when the premium on American funds is 10 per cent., the collections are made on a basis of a value of \$110. As can readily be understood, this is quite an appreciable additional protection, and one is inclined to think that it is operating effectually.

A glance at the imports from the United Kingdom and other countries is, however, sufficient to demonstrate that the decline in imports is due chiefly to the decrease in purchasing power. During September the value of imports from the United Kingdom was \$9,135,000; during the same month last year it was \$19,646,000. From other countries, leaving out the United States, the value was \$9,000,000, as compared with \$15,000,000 in September, 1920. Due allowance must, of course, be made for the decline in prices. Further evidence of the decline in purchasing power is to be found in the decrease in savings, which last month, for example, declined to the extent of \$16,000,000. These returns are for chartered banks; those for the Government savings banks would slightly increase the decline.

It would be a mistake to infer from this that business conditions are rather serious, for they are not. These figures merely show that Canada is affected by untoward

influences that are world-wide in their operations. As a matter of fact, those who through travel are familiar with conditions on both sides of the boundary line are not slow to say that business seems to be better in Canada than it is in the United States. Business undoubtedly had improved during the last two months. Much of this, doubtless, is to be attributed to seasonal factors, chiefly the marketing of the large grain crops in the West. While the bumper wheat crop that some expected early in the year has not materialised, still it has been surprisingly good, the 300,000,000 bushels of wheat being the second largest crop in the history of the country. In the southern portions of the three prairie provinces the yield has been of a very disappointing nature; but in the northern districts it was very heavy.

As can readily be imagined, this has had a wonderful effect on industrial and commercial operations. For one thing, it created a strong demand for harvest hands. Then, again, it provided an immense amount of traffic for the railways that badly needed it. The net result is that a very large amount of cash has been put in circulation. Of course, the net return to the farmers has been low, for they have had to sell their grain on a rapidly falling market; moreover, the cost of many of the things they have to buy is still high. In general, business is good or bad in proportion as the farmers have money to spend. They have not had it for luxuries and other things that are in a near approach to that class, but they have had it for the necessities.

But there is another factor operating strongly to keep the wheels of industry moving—namely, the steady inflow of money from the United States. The sales of Canadian bonds in that country have not been as large so far this year as they were last; still, they have exceeded \$160,000,000, or nearly \$20 per capita. In addition there is the steady stream of money coming in with immigrants, which must run well up into the millions. But of even more importance is the amount of money that is being left by American tourists, who are visiting Canada in much larger numbers than ever before. It is difficult to secure accurate figures on this matter, but the Hon. Mr. Perron, Minister of Roads for Quebec, stated recently that these tourists would leave \$35,000,000 in that province this year. As Quebec is only one of the nine provinces, one is warranted in concluding that, if this estimate is correct, then as much more will be left in the other portions of the Dominion. It is estimated that the tourists drawn to the national parks in Alberta and British Columbia alone leave \$20,000,000 a year. Add to these figures the very large amount left in Ontario, and it is readily seen how important a factor this revenue from tourists is. And it is now coming all the year round. In so far as Quebec and British Columbia are concerned, this is perhaps partially due to the freedom permitted in the use of intoxicants, the splendid hotels of these provinces being full during the fall and winter. Montreal is putting up a palatial hotel to cost \$8,000,000.

Canada, however, has big problems, and though they may not seem to be heavy in comparison with those of the countries of Europe, still as they will be considered in the light of those of the United States, undeniably the burden of expenditure and taxation is very heavy. The compensation is that the greater part of it was incurred through participation in such a splendid cause as that of the Allies in the Great War. This burden has been made much heavier by the hostile tariff legislation in the United States; for while it is easy to say that other markets may be secured, still the fact remains that the rate of exchange and the general impoverishment of Europe has deprived Canada of several valuable markets that, under other conditions, would be available.

It is quite possible that the resulting dissatisfaction may lead to changes in fiscal policy that are necessary if the country is to prosper as it should. So one finds to-day in the rural communities an almost solid body of support in favour of freer trade relations with the United States, and it is this that gives the Agrarian, or Progressive, movement its strength. The demand is not so much for a low tariff as for a reciprocal trade arrangement with the United States, such as was negotiated in 1911. It is realised as never before that markets for the natural pro-

ducts of the country must be had, and the loss of the American market, from which the farmers have derived much benefit during the last five or six years, has driven them home.

The national revenue also constitutes quite a problem. The Customs collections this year will probably be 70,000,000 below those for 1920-21, of itself a serious matter. As yet this loss has not been much felt, for the income-tax, which, for the most part, did not come in until the end of the last fiscal period, has this year been almost all collected. So the latter part of the fiscal year is the one that will cause the most concern. Another problem is presented in the funding of the war loans. As yet no provision has been made for their retirement.

Next year the first of these, for \$190,000,000, falls due, so that with this and other capital charges it is probable that over \$300,000,000 will have to be raised by way of loan. It has been reported that this would be put out in the United States, but there has been nothing to warrant such a statement. As much of the money as possible will be raised at home. The railways have been doing much better during recent months. In this improvement the C.P.R. has taken the lead, due to its superior organisation. In September the gross earnings were \$19,494,761, the expenditure being \$15,174,632. As compared with the returns for the same month last year, the gross earnings show a decrease of \$514,525, but the expenditure shows a much larger decrease, namely, \$925,920. For the nine months ending September the net earnings were \$21,900,671, an increase of \$2,743,531 over those for the same period last year. The Government lines also report an improvement, their excess of revenue over operating expenditure for August having been \$40,000, while for September it was \$500,000. While the trade situation is so uncertain as to give rise to some concern, still, on the whole, Canadian financial, industrial, and business leaders generally are quite confident, the number of new industrial issues being put out indicating confidence in the future, and a belief that the turning-point in business is near at hand, if it has not already been passed.

JAPAN.—NINE MONTHS' TRADE—UNFAVOURABLE BALANCE.

(FROM OUR CORRESPONDENT.)

TOKYO, September 10.

THE steady decline which Japan's foreign trade has registered since the war still continues; and the turnover for the past nine months shows a drop of over 46 per cent. in exports and some 43 per cent. in imports. This tendency was particularly noticeable in September, when exports fell to 95,487,000 yen, as compared with 154,075,000 yen for the same month last year; while imports represented 127,878,000 yen, as against 117,361,000 yen for September last year. As a rule, the balance of trade tends to favour Japan during the last six months of the year, but this year is obviously an exception to the rule, as the decline was more marked in the later months. The total value of exports for the nine months amounted to 873,525,000 yen, while the imports for the period were valued at 1,169,097,000 yen, making a total turnover of 2,042,622,000 yen, a decline of some 43.8 per cent. on the total for the same term of last year, leaving an adverse balance of 295,572,000 yen. This is a decline of 24.8 per cent. on the adverse balance of last year. Each of the nine months showed a decline, with the exception of August and September, when there was a slight gain on totals. The decrease was therefore quite general.

In trade with Asia there was a decline of 42 per cent. in exports, and 48 per cent. in imports, while trade with Europe witnessed a fall of 80 per cent. in exports and 14 per cent. in imports. As to North America, exports fell off to the extent of 38 per cent. and imports 45 per cent. Trade with Africa experienced a decrease of 82 per cent. in exports and 87 per cent. in imports. With South America trade declined 89 per cent. in exports and 92 per cent. in imports. The general decline in trade with other countries was to the extent of 68 per cent. in exports and 55 per cent. in imports. A further analysis of the situation indicates that the only increase in exports was in shipments to Germany, trade with all other countries

having fallen off, though in the import trade the only exception to the general decline in import trade was with the Straits Settlements, Germany, Asiatic Russia, Siam, Russia, Switzerland, Canada, Portugal, Mexico, and Peru. Of the 28 principal commodities on the export list, only copper and beer registered any considerable gains, the most important declines being in cotton cloth, raw silk, silk fabrics, cotton yarns, cotton hosiery, refined sugar, braids, matches, toys, glass and glassware, waste silk, and tea. The cause of so general a decline in Japan's foreign trade is ascribed to the very general reaction in world trade since the close of the war, leading to comprehensive depression in most lines.

POLAND.—FOREIGN TRADE—FINANCES—EXCHANGES—CUSTOMS UNION WITH DANZIG.

(FROM OUR CORRESPONDENT.)

WARSAW, November 16.

FOREIGN trade statistics, recently published, show that during the first six months of this year much progress has been accomplished as compared with last year. The movement of imports and exports was as follows:—

(In Tons, 000's omitted.)

	Imports.	Exports.	Excess of Imports.
First half-year, 1920	1,908 ..	208 ..	1,700
Second half-year, 1920	1,622 ..	411 ..	1,211
First half-year, 1921	2,470 ..	878 ..	1,592

Exports increased more rapidly than imports, so that the trade balance is not in the same degree unfavourable as a year ago. The principal article of import is Silesian coal. If we deduct the quantities which have been imported from Upper Silesia, we obtain a much less unfavourable balance, as shown below:—

(In Tons, 000's omitted.)

	Imports (without Silesian Coal).	Exports.	Excess of Imports.
First half-year, 1920	450 ..	208 ..	242
Second half-year, 1920	471 ..	411 ..	60
First half-year, 1921	903 ..	878 ..	25

From this table it may be inferred that after the incorporation of the Upper Silesian coalfields the Polish visible balance of trade will lose its adverse character. Unfortunately, no figures giving the value of foreign trade are available, so no monetary estimate of the balance is possible.

The principal articles of export were rock oil, oil products, lubricants, timber, potatoes, alcohol, cement, and sugar. The export of oil and oil products has declined considerably during the first six months of this year. While during the first quarter 45,400 tons of unrefined oil were exported, only 11,500 tons were sold abroad during the second quarter. The exports of oil products declined during the same period from 45,400 to 39,100 tons. This decrease is due in the first instance to the crisis through which Western Europe is passing. The export of timber and alcohol has not been affected by this trade depression. The respective figures for the first two quarters of this year are 127,800 and 145,800 tons for timber and 4,500 and 7,000 tons for alcohol. During the first six months of this year 27,400 tons of sugar have been exported, nearly 12,000 tons more than during the whole previous year.

The revenues of the Treasury are covering only a very small percentage of the expenditure, as shown below:—

(Million Marks.)

	Revenues of the Treasury.	Expenditure of the Treasury.	Percentage of Revenues to Expenditure.
January, 1921	896 ..	6,896 ..	13.0
February, 1921	1,396 ..	12,896 ..	10.8
March, 1921	1,899 ..	18,399 ..	10.3
April, 1921	2,438 ..	15,438 ..	15.1
May, 1921	2,620 ..	13,620 ..	19.2
June, 1921	3,108 ..	16,108 ..	19.3

Though the revenue increased from 896 in January to 3,108 millions in June, it was only sufficient for covering a small percentage of the expenditure. Certainly, some amelioration in this respect is visible. While in January 13 per cent. of the expenditure was covered by taxes, in June the percentage had increased to 19.3 per cent. But, nevertheless, for the remaining 80.7 per cent.

the Government was obliged to resort to the use of the printing press.

It is clear that under such conditions the rise of the Polish mark which took place in the second half of October and in the beginning of November could not last. The movements of the foreign exchanges during the last fortnight were irregular and spasmodic:—

		English £.	American Dollar.	French Franc.	German Mark.	Austrian Krone.
October 31.....		13,000	3,125	220	18.5	81.0
November 2.....		12,450	3,000	210	17.5	78.0
" 4.....		11,400	2,925	205	13.5	66.5
" 7.....		10,200	2,600	190	10.0	47.0
" 10.....		13,150	3,200	240	14.0	62.0
" 12.....		16,100	4,040	275	14.6	65.0
" 15.....		14,500	3,680	235	15.5	64.0

On October 24th an agreement between Poland and Danzig was signed in Warsaw. The treaty is composed of 244 articles. The most important stipulation of the treaty is the abolition on January 1, 1922, of the Customs frontier which divides Poland and the Free State. In Danzig, beginning with that date, the Polish Customs tariff will be in force. The administration of the Customs will be, however, in the hands of officials nominated by the Free State under the control of Polish inspectors. From April 1st the economic barrier will also be abolished, so that the exchange of goods between Danzig and Poland will be completely free.

Letters to the Editor.

INTER-ALLIED DEBTS AND IRELAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—During the past fortnight I have discussed the question of England's debt to America with many British economists and public men in various walks of life, and I find an utter failure to understand the American attitude on this most vital question. As an American who desires nothing more than to see cordial relations maintained between our two countries, I venture a few facts to make the viewpoint of my countrymen clear to Englishmen.

Many Englishmen have said to me that they have reason to believe that American bankers appreciate the need for a prompt refunding of the British debt to America, if not, indeed, a cancellation of the entire debt in the interest of stability of international exchange, European credit, and the revival of international trade. And they are puzzled that the official attitude of the United States Government seems to run counter to this opinion of America's business and financial leaders. They conclude that the mass of the American people are "shrewd Yankees" bent on getting the last pound of flesh, and selfishly insistent upon full payment of the foreign obligations because of this selfishness. Of course, nothing could be further from the truth. If Englishmen will remember that America cancelled the Boxer indemnity due from China from motives of pure idealism and altruism, they will see how false is the imputation of selfishness to my countrymen.

What, then, stands in the way of the funding of the British debt to America? Chiefly the Irish question. You are accustomed to consider the Irish question as one that primarily concerns Great Britain and Ireland. I assure you that nothing is further from the truth. The Irish question is also an American question to a much vaster extent than you realise here, and to a greater extent than many Americans themselves desire. But, whether we like it or not, there are in America more than ten million persons either born in Ireland or directly descended from pure Irish stock. And if you realise that the Irish in Ireland will not forget the history of their unfortunate country, pray remember also that the Irish in America are also good at remembering. And they are good at organising and politics, too. The Irish movement in America is extremely well organised—better organised, I think, than either the average Englishman or American imagines. This organised Irish vote, probably several millions strong—since women actually vote in America—

went solidly for Harding and the Republican party at the last election. It had not a little to do with Harding's vast majority of seven million votes, and indeed might easily have been responsible for this majority. The Irish were bitterly disappointed in Woodrow Wilson's failure to listen to the claims of their country at Paris.

Shortly after President Harding took office, the official spokesmen for the Administration in the Senate and the leaders of his party announced that the special session of Congress would pass three measures before the summer was over—the Refunding Bill, the new Tariff Bill, and a new Tax Bill. Congress was called into special session early in the year for these purposes. Notwithstanding a majority of more than a hundred in the House of Representatives and of a goodly one-third in the Senate, the Congress met all summer and failed to do any one of these three things. So complete was the breakdown of the Administration's programme that, had it occurred here, the Government would have been forced to resign. As a journalist and economist intensely interested in these matters, I was in Washington during almost the entire special session of Congress, and in a position to know what took place behind the closed doors where policies are determined. It was the Irish who frustrated the Administration's programme. The minute the Refunding Bill was put on its passage by reference to a committee of the Senate, literally tens of thousands of telegrams began to pour into Washington from every part of the United States protesting against the measure. Most of them were from Irish or inspired by Irish. Their burden was, "If Great Britain has money to send troops into Ireland to kill women and children and to wage a war for Imperialism, she has money to pay her debts to America." Many of these were from American citizens of Irish extraction whose near relatives were victims of the war in Ireland.

Now, it is all very well for our Admiral Sims to speak of this vote as the "jackass vote," and to declare that members of Congress who are influenced by the Irish in their constituencies are cowards. (This statement, by the way, aroused intense indignation in America, and especially in Congress, and did more to separate America and England than tons of Irish propaganda could have done.) But the fact remains that the entire membership of the House of Representatives is elected every two years and one-third of the Senate. And the elections are next year. Anyone who knows anything about politics or politicians knows that for a member of either House of the American Congress deliberately to offend a large part of his constituency is to commit political suicide. And I think that, even in England, politicians are not much given to this form of hari kari. When you reflect that in Massachusetts, for instance, the American Association for the Recognition of the Irish Republic has upwards of a hundred thousand dues-paying members, it is no wonder that Senator Lodge of that State will go slowly before he would deliberately offend this large vote. Not to do so would be the act of a "jackass." And so the Refunding Bill was quietly shelved by being buried in committee. I believe you take care of troublesome legislation that way here in England. The plain truth of the matter is that America does not even dare discuss the refunding of the British debt so long as the Irish question remains unsettled. To do so would open up a fierce discussion of the Irish question and unloose passions and feelings that would do much to destroy the friendly relationships between our two countries.

And you must not think that only the Irish in America are interested in the Irish question from this standpoint, although the Irish interest is large enough and intense enough to stop any action. America is not resting on a bed of roses. There are 5,000,000 unemployed in America and the farmers in many parts of the country are in distress. In Iowa, for instance, farmers are actually burning corn in their furnaces for fuel because it is cheaper to do this than to sell it at the low figure it will bring in the market and buy coal at the high figure demanded for coal. In many parts of the South farmers have actually been forced to dispose of their working animals in order to get money on which to live. And they are very bitter. And so, when they are told that to remit the British debt would be to permit England to

continue a war in Ireland with American money, they join the chorus against remission of the debt. They know little or nothing about the Irish question, although I really believe America has had more information about Ireland than you have had here in England. There was a time when America was inclined to take the view that England was right in suppressing a rebellion in Ireland, just as we suppressed one in America in 1865. When Lloyd George made his speech, somewhere in Wales I believe, in which he said that soldiers could not be blamed for excesses when their comrades were shot at from ambush by men in civilian clothing, this struck a responsive chord in America, because all Americans have a passion for fair-play above everything else. This speech of your Premier was cabled in full to American newspapers, and our great journals gave most of their front page to it. Of course, we knew that our Revolutionary soldiers at Lexington had no uniforms and fired from ambush as "embattled farmers" whose shots were "heard round the world," but our Revolutionary Army got into uniform as quickly as it could. And we all quite agreed with Lloyd George that the Irish soldiers ought to wear uniforms. Then we were shocked to learn that England would not permit the Irish Army to wear uniforms, and made the wearing of a uniform an offence, and your great opportunity was lost.

We Americans like to think directly and logically as much as we can, and we were unable to understand how England could complain of guerilla warfare when she herself had chosen to drive the Irish rebellion underground. And so the Irish propaganda gained vast support from all America, even from Americans of pure English blood. And now that a High Court in Ireland has declared that a state of war exists in Ireland, and the British Government has actually recognised the Irish rebellion as a war by the present negotiations, there can never be any hope that a resumption of the war in Ireland will be thought of in America in any other way except as a war against another nation. And, believe me, America will not willingly furnish any money for such a war, directly or indirectly. We all thought we were fighting a war to end war, and we are tired of wars anywhere.

I think the English people ought to realise that most Americans desire a settlement of the Irish question as passionately as do the English themselves, or even more so. We are getting just a little tired of the Irish question ourselves. And until it is settled America will not, in my judgment, even discuss with Great Britain the refunding of the foreign debt. It is the one big question that stands between our two countries, financially and from a standpoint of better trade relations.

For example, I wonder if you realise how effectual has been the anti-British trade boycott in America, started and fostered by the Irish? I have no figures available here, but I happen to know that a large toilet goods house found it worth while to spend a vast sum of money advertising all over America that they were not an English company. They had been included in the list of firms to be boycotted by Irish sympathisers in America. From the amount of money expended on this advertising campaign they must have lost a vast amount of business. And the longer this boycott goes on the more will substitutes for English-made goods have rooted themselves in trade channels and the greater the difficulty in regaining the trade after the boycott is over.

I have tried to indicate in this letter the feeling and viewpoint of business America. I have avoided any discussion of the merits of the Irish question. The point is that this situation exists, regardless of the merits of the question altogether. I am in a position to know the feeling of America, because as a journalist I have travelled the entire country and given special study to the question of international finance and trade. It is a shame that our countries are being kept apart by the Irish question, but we ought to have sense enough to recognise that they are.

The settlement of this question will mean more to bring us together from a standpoint of finance and trade than anything else that could possibly happen, and if it is not settled I am sure we shall be permanently kept apart. I think England ought to realise that more fully than she does.—Yours sincerely,

SAM EVANS.

London, November 21st, 1921.

COAL WAGES AND PROFITS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The perusal of the interesting article, "The Future of Coal," in your last issue, led me to apply a little elementary algebra to the terms of the wages settlement described therein. The result is that the miners' share is equivalent to 83 per cent. of the gross receipts, diminished by 83 per cent. of the cost other than wages, and increased by 2.89 per cent. of the total standard wages. So that the settlement is for all practical purposes a profit-sharing scheme, the respective shares of owners and miners being 17 and 83 per cent. Standard wages affect the result very little, and they would not have affected it at all if standard profit had been taken (as it logically should have been) at $\frac{1}{10}$ of standard wages, and not at $\frac{1}{100}$ of the same figure. The result is (to my mind) somewhat surprising.

May I also ask your contributor whether any depreciations of capital cost are charged to cost other than wages, and, if so, on what agreed basis, if any?—Yours, &c.,
London, November 22nd, 1921. B.

REVIEWS.

"The Hague Rules, 1921, Explained." By Sanford D. Coe, Solicitor. (London) Effingham Wilson. 2s 6d net.
"The Hague Rules, 1921, Discussed from the Business Side by One Who was There." By L. C. Harris. (London) Effingham Wilson. 2s net.

MUCH discussion has been roused in commercial circles by the proposals which took shape at the recent conference of the International Law Association at the Hague for modifying and standardising the clauses in bills of lading so far as they relate to the risks to be assumed by sea carriers. On the analogy of the York-Antwerp Rules of General Average, it is proposed to call the code of clauses to be incorporated by reference, "The Hague Rules, 1921." Both these booklets deal with the matter at first hand—that is, the writers were present at the Hague conference. In each case the text of the rules, which it is proposed should be adopted as from January 31st next, is given, accompanied by an explanatory statement. Mr Harris, looking at the question from a business standpoint, expresses some disappointment that merchants have not all welcomed the outcome of their own proposals. The tendency of late has been, however, as pointed out in an article in the *Economist* last week, for criticism to subside, and the indications are that the rules will be adopted in actual business. They do not improve the present conditions so far as ship-owners are concerned, but Mr Harris strongly recommends shipowners to apply the rules in practice, because they will put an end to shippers' grievances, rectify the unreasonable application of the law as to unseaworthiness, allow reasonable terms as to deviation, and prevent embarrassment from varieties of legislation in different countries. Mr Cole's booklet contains a more detailed account of the steps which led to the formulation of the rules, and fuller explanations of their provisions. Though intended for the use of commercial men, it examines the legal rather than the purely business aspect. The bill of lading is the basis of overseas trade. It is a legal document, with the terms of which bankers and underwriters are concerned, as well as shippers and shipowners. Both these small works deal with their subject in a practical way, and should appeal to a very considerable number of interested readers.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
November 29.ACCOUNT.
November 30.

The course of Stock Exchange business has been somewhat
 interrupted by what was regarded as the increased gravity of
 the Irish situation, and the reported disagreement of the
 Japanese with the Disarmament proposals at the Washington
 Conference. Various industrial companies have published
 reports showing heavy losses on the year. Sir Robert Horne,
 in his speech on Wednesday night, took a fairly cheerful
 view of the outlook, and various trade indications are held to
 point to the fact of industry having reached the bottom of
 the slump, and being now turned towards a more prosperous
 path. Various new issues of substantial amount are declared
 to be close at hand, and the unexpected appearance of six
 million pounds Union of South Africa 6 per cent. stock
 threw something of a damper upon the partly-paid scrip stocks
 in the Consol market.

The War Loan holds very closely to 88, anticipation looking
 for the usual reinvestment of interest-money on the stock
 which will be released next Thursday. Steady demand con-
 tinues for Funding Loan and Victory Bonds, while National
 War Bonds and other short-dated securities are moving within
 narrow limits. There is something of a shortage of stock
 amongst certain of the older Colonials, and this is reflected
 in half-a-dozen improvements during the past two or three
 days, but the scrip stocks which have not yet found permanent
 homes for their full amounts are inclined to dwindle, and a
 few of them stand at discounts ranging from $\frac{1}{2}$ to 1 per cent.
 But the Port of London scrip has risen to 2 premium.

German bonds have given way, and a number of declines
 occurred in Russian Government and Russian railway bonds.
 French Fives and Fours were lowered, on the further de-
 preciation in the franc. Chinese bonds have been disposed to
 move up, though each advance brought out a certain amount
 of stock. Other issues in the foreign market keep fairly
 steady.

The Home Railway market is uncertain. The Brighton Com-
 pany is applying for powers to enable it to raise fresh money,
 and it is expected that other railways will follow a similar
 course before long. This may mean the placing of new capital
 in front of existing securities. The market is hoping, rather
 than expecting, that the dividends of six months ago will be
 repeated in respect of the current half-year; it is candidly
 acknowledged that estimates are impossible to form with any
 approach to accuracy. Grand Trunks have recovered a trifle
 after their acute flatness, and Mexican rails advanced a little
 in company with the sharp rises in Mexican Government
 bonds due to American purchases. The Argentine Railway
 market is quiet. Brazilians have further strengthened, owing
 to the permission accorded to the San Paulo Company to
 raise its rates on New Year's Day.

Rubber shares continue to attract a good deal of attention,

business being of the spasmodic order and centring upon the
 shares in a few companies, Anglo-Dutch being the most
 popular. The Rubber Growers' Association and the Rubber
 Shareholders' Association held a joint meeting of delegates
 this week, and cordiality has been established between two
 bodies that, it was feared, might come into conflict with one
 another over points of details. The price of the produce re-
 mains a little under 1s per lb. The oil market is looking
 forward with no little anxiety to the meeting of the Royal
 Dutch Company next Wednesday, whereat the directors will
 seek powers to alter the articles of association in such manner
 as will permit payment of dividends to be in scrip as well
 as in cash. The possibility of other oil companies adopting
 the same plan is exercising the minds of a good many proprie-
 tors, and the market, with fitful movements, continues to be
 somewhat wild. Imperial Continental Gas, after being up to
 155, fell back 15 points, on disappointment with the written
 offer of the German Government to pay the company
 £1,600,000 in respect of its German claims. The Shipping
 market is inclined to be heavy, with Cunards and some of
 the other lower-priced shares easier on the week. Dunlops
 have fluctuated in anticipation of the forthcoming report, which
 is expected to be a bad one, but which, according to advance
 rumours, will show that there is no necessity for share-
 holders to put up more money at present. Duff Developments
 are better, on the result of the arbitration between the
 company and the Government of Kelantan being satisfactory
 to the former. India Rubber shares fell to 11s on the report
 showing a loss of over £400,000 for the year, but buyers were
 not very successful in picking up shares at the bottom price.
 The disastrous report of Burberys led to weakness in the
 shares. The Wireless group is easier, and cable stocks have
 also given way to a slight extent. In the Brewery market,
 Allsopps rose sharply, and were the outstanding feature of
 strength in this department. Iron, Coal and Steel shares are
 lower for choice, though the Armament group is tolerably
 steady. There is little interest being taken in Hotel and Cater-
 ing issues. Sudan Plantations gave way on the issue of the
 report.

The price of gold has been falling again, owing to the
 rise of the pound sterling as compared with the dollar, and
 Kaffirs were at one time during the week in a very depressed
 condition, from which, however, they recovered a shade on
 support from the Cape. There is still labour trouble on the
 Crown Mines property, and the meeting of the Johannesburg
 Consolidated Investment Company evoked a cautious speech
 from the chairman. A slump in De Beers followed the
 announcement that the company may have to curtail opera-
 tions owing to the unsatisfactory state of the diamond trade.
 The price of lead has been rising, which proved helpful to Rhode-
 sia Broken Hills, and to some of the other companies concerned
 with this metal. Mexican Mining shares are also a trifle
 better, in sympathy with the advances established in other
 Mexican bonds and stocks. Tin shares, however, continue
 on the down grade. Russians are better, because of the
 announcement that labour is to be freed in Russia. Indian
 Mining shares show irregular movements of a few pence.

NEW ISSUES.

The new issues of the week and the current year and date of
 opening of the lists have been as follows:—

Series B 5½ per cent. Treasury Bonds, issued at 98 per cent., payable on application. Repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. The first dividend will be paid on April 1, 1922. Principal and interest are chargeable on the Consolidated Fund of the United Kingdom, and interest will be exempt from Corporation Profits Tax. Bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. These bonds may be registered free of cost in the books of the Bank of England or of the Bank of Ireland. The receipt of applications for bonds of the present issue will terminate on the 30th instant, and a new issue will be offered on Thursday, December 1st.

Union of South Africa 6 per Cent. Stock, 1930-1940.—Issue of £6,000,000, of which £750,000 will be allotted to the Public Debt Commissioners of the Union of South Africa. This loan is issued at £96 10s per cent., and is repayable in London at par on November 1, 1940, but the Government of South Africa has the option to redeem at par on or after November 1, 1930, on giving three months' notice. The proceeds of the issue will be used for the redemption of £3,000,000 Treasury bills due December 1, 1921, and £2,000,000 due February 8, 1922, and for public works. Union of South Africa debentures and stock issued and payable in London, the property of persons not domiciled in the Union of South Africa, are not subject to any taxes of the Union of South Africa. The prospectus states that "the accumulated sinking funds (for the redemption of debt) amounted at March 31, 1921, to £10,694,000; in addition, debt has been extinguished to the extent of over £15,000,000." It is pointed out that "the revenues of the Government of the Union of South Africa alone are liable in respect of this stock and the dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for this loan." A trustee security, attractive in its class.

The British Thomson-Houston Company, Limited.—Authorised capital £4,000,000, of which £3,500,000 has been issued and fully paid. There is also in existence £152,295 of 4½ per cent. first mortgage debenture stock. This is an issue of £1,500,000 (part of an authorised amount of £3,000,000) 7 per cent. mortgage debenture stock at 92½ per cent., to be repaid at par on or before May 1, 1962, either by drawings or purchase in the open market. The company reserves the right to redeem the stock at 102½ on giving six months' notice at any interest date between November, 1931, and May, 1941. The stock will be secured by a trust deed, and, subject to a first specific charge on certain specific property, for securing the £152,295 first mortgage debenture stock, will rank as "a first specific charge on the company's property and plant." The present company was formed in 1896, and manufactures electrical machinery on a large scale. Profits are given from 1915, which, of course, mainly represents the boom period. In 1920 £2,326,500 ordinary and preference shares were issued in payment of cash advances and credits to the company; £249,996 of the reserve was also capitalised and distributed to shareholders. Dividend payments have been erratic. Surplus assets available for the security of these debentures, including net proceeds of the present issue, amount to £5,101,410. This includes "patents, licences, and goodwill" at £222,853, and investments at £331,605, but it is not shown how the latter item has been valued, whether at cost or market price. The issue has been underwritten for a commission of 4½ per cent., which includes 2½ per cent. commission to sub-underwriters, ½ per cent. over-riding commission, ½ per cent. on stock taken firm, &c. This is a reasonable offer, subject to industrial risks, and was quickly subscribed.

The Herts and Essex Waterworks Company, Limited.—Issue at par of £12,000 7 per cent. mortgage debentures, to be redeemed at par on January 1, 1932. The authorised share capital of the company is £109,000, of which £68,940 has been issued, while the total authorised loan capital is £54,500, of which, excluding the present offer, £20,700 has been issued. The net revenue of the company for the year ended June 30, 1921, was £4,218, and as the interest on loan capital, including the present issue, will require £1,668, these debentures may be said to be reasonably well secured. But regard should be paid to the narrow market for the disposal of this security.

Barranquilla Railway and Pier Company, Limited.—An issue of £50,000 (part of an authorised issue of £100,000) 8 per cent. second mortgage debenture stock is offered to shareholders and debenture stockholders at 90 per cent. The stock will be secured by a trust deed, and will constitute a

floating charge on the undertaking, subject to the existing 6 per cent. first debenture stock of £100,000. The stock will be repayable by means of a 2 per cent. cumulative sinking fund, which will be applied in redemption of stock, either by annual drawings at par, or by purchase at or below par. Any stock remaining unredeemed on December 31, 1932, will be paid off on that date at par. It is doubtful if the offer will arouse much enthusiasm, but shareholders may be disposed to finance their own concern.

Great Boulder Proprietary Gold Mines, Limited.—In a circular dated November 14th Sir G. P. Doolette, the chairman of the company, stated: "The Public Trustee has approximately 65,000 shares in the company, formerly belonging to ex-enemy shareholders, unsold, and the desirability of purchasing these in the interests of the company was under consideration, but the company was advised that by law it is not permitted to purchase its own shares, whereupon I, in my private capacity, obtained an option on these shares at 4s 6d per share, with a view of offering the great bulk of them to the English shareholders in the company at 4s 9d per share (plus stamp duty and transfer fee), the difference of 3d representing the costs attending the carrying through of the transaction; 15,000 of the shares have already been disposed of, and there remains approximately 50,000 shares, which I have decided to offer to the shareholders on the terms stated."

Consolidated Gas Company of New York.—Issue of \$20,000,000 one-year 7 per cent. notes.—The London office of the National City Company has received a cable advice stating that an issue of \$20,000,000 one-year 7 per cent. notes of the Consolidated Gas Company of New York at 100½ and interest has been offered for sale in New York. The proceeds of this issue will be used to pay off the maturing Consolidated Gas Company one-year secured 8 per cent. notes due December 1, 1921.

Pacific Gas and Electric.—The London office of the National City Company announces that its New York office and associated bankers offered in New York \$10,000,000 Pacific Gas and Electric Company first and refunding mortgage 6 per cent. bonds, due December, 1941, at 98½, to yield 6 1-5 per cent. The gross earnings of the company for 1920 were \$34,586,508, and its net earnings \$11,782,023, while the surplus after payment of all charges amounted to \$6,608,314. For the first eight months of 1921 the surplus after payment of all charges is \$5,567,785. We are informed that this issue has been oversubscribed.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

BROKEN HILL PROPRIETARY COMPANY, LIMITED.—Report for four weeks ending November 9, 1921:—Coke produced 28,410 tons; No. 1 blast furnace produced 7,590 tons; No. 2 blast furnace produced 12,554 tons; No. 3 blast furnace produced 12,392 tons; open hearth production record for period, 61,256 tons, blooming mill produced 24,704 tons; all mill produced 11,154 tons; 18-in mill produced 10,260 tons; 12-in mill produced 2,410 tons; 8-in mill produced 1,537 tons; rod mill produced 4,300 tons. Broken Hill: Ore dressing mill produced 254 tons lead concentrates and 3,111 tons slimes; zinc separate in plant produced 2,828 tons; slimes flotation plant produced 1,048 tons lead concentrates and 2,970 tons zinc concentrates.

BURMA CORPORATION.—Bawdwin Mines:—Cable: "540 ft level, north drive, 174 ft east, from 25 ft to 35 ft, 6 ozs silver, 8 per cent. lead, 6 per cent. zinc; from 35 ft to 55 ft, 16 ozs silver, 18 per cent. lead, 22 per cent. zinc.

MOUNT LYELL.—From October 20th to November 15th, inclusive, ore treated by flotation plant, 6,537 tons; concentrates produced by flotation plant, 1,731 tons. A total quantity of 10,000 tons of ore was smelted, being 6,330 tons from the Mount Lyell mine and 3,670 tons from the North Mount Lyell mine, also 1,141 tons concentrates. The concentrates produced during the same period 538 tons of blister copper, containing copper 534 tons, silver 15,345 ozs, gold 386 ozs. Furnace in blast 669 hours.

OIL OUTPUTS.

UNITED OIL AND REFINERY COMPANY, LIMITED.—Throughput of refinery for October, 20,605 barrels.

GENERAL PETROLEUM COMPANY OF TRINIDAD, LIMITED.—The following cable information has been received from Trinidad:—"Oropuche Field"—Production for week ended November 19th restricted to 1,750 barrels, owing to continued lack of piping facilities."

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, November 16, 1921, amounted to 1,178 tons.

GENISAH OIL REFS., LIMITED.—Progress of No. 1 well—Depth, 650 feet; formation, limestone and shale.

The year covered by these accounts has been one of exceptional difficulty, and even of anxiety, to all carrying on the business of banking, and banking in Australia has been no exception. Indeed, Australian banking has had its full share of the difficulties and troubles which have been the inevitable aftermath of the Great War. The pastoral industry, so vital to the welfare of Australia, suffered heavily from the fall in prices, and serious diminution in sales of wool, live-stock, hides, skins, and tallow, and from severe depression in the frozen meat trade, while the mining industry has been almost at a standstill for some time.

AUSTRALIAN EXCHANGES.

An important adverse feature, however, from a banking point of view has been the condition of the Australian exchanges, which threw an unusually heavy burden on the banks, and was a cause of serious inconvenience to Australian shippers in London and to those in Australia desiring to remit to this side. Speaking generally, the trading houses have from prosperous times accumulated reserves, and are now facing their losses and pushing on realisation at reduced prices. Shipments of wool, wheat, butter, and other products have not only gradually afforded the means of remittance to this side, but by putting the Australian producers in funds have enabled them to come in as buyers, and have so expedited the reduction of these congested stocks of imported goods, and this is steadily bringing down our advances. While we regret the inconvenience caused, we cannot but recognise that this exchange imbroglio has proved a blessing in disguise to Australia, in so far that but for the barrier it interposed the congestion caused by excess of imports would have been much greater, and many serious failures would probably have been inevitable, which by the timely action of the banks were happily averted.

OUTLOOK FOR CURRENT YEAR.

The outlook generally for the current year is hopeful, and wool is at present the most encouraging feature. You are all no doubt aware on what evils days this great leading Australian industry fell towards the end of last, and in the early months of the present, year.

The large quantity of Australian and New Zealand wool in hand and in sight towards the end of last year, amounting to over 4,700,000 bales, when contrasted with the quantity of the clips of an ordinary year of Australia and New Zealand combined of, say, 2,500,000 bales, would, even in a period of normal consumption, have presented a serious problem in the financing and marketing of the product. The war, however, had so exhausted their wealth that something like half of the nations of the world were practically temporarily out of the market from inability to buy, and the disordered state of the international exchanges still further complicated the situation. Wool prices, which in the short-lived boom which followed the signing of the Armistice had risen to unprecedented heights, had begun to drop, and from the closing months of 1920 till April of this year were on a more or less rapidly descending curve.

By the incorporation of the British Australian Wool Realisation Company, with a capital of £22,000,000, in the beginning of the present year, about 2,600,000 bales of carried-over wool were transferred from the control of a Government Department into the hands of a joint-stock company. The complete collapse of the post-Armistice boom resulted in a great congestion of undelivered manufactured goods in Yorkshire, causing cessation of orders for fresh supplies and diminution almost to stoppage of orders for tops and yarns. Demand for wool continued to shrink and prices to fall, and in April last things looked very black. A little later, however, buying on a substantial scale from the Continent, and also from Japan, and to some extent from America, raised prices, and since then the upward movement, with the exception of some reaction in July, has gone steadily forward. In the sales of more recent months increased buying from Yorkshire has been a prominent feature. Since April prices have advanced approximately 35 per cent., and a large quantity of wool here and in Australia has been sold. Notwithstanding some decline at the opening yesterday of the November-December sales here, the outlook for wool has greatly changed for the better. Australia is principally interested in merino wools, and of merino there now seems to be little, if any, excess supply in the world to-day. There is difference of opinion as to the improvement lasting, and some fear reaction. Though it is never wise to be too confident as to the future, my own opinion is that there is a genuine trade revival behind the present improvement, and that with possibly occasional temporary reactions it is likely to be maintained, if not increased. The present season in Australia is a good one, and the 1921-22 clip promises well, both as to quantity and quality, the estimated total Australian clip being about 1,850,000 bales. The prospects are that the value of the shipments of wool for the current year will exceed the figure of over £33,700,000 reached last year, which included £2,000,000 for tops. A good wool clip and a strong, steady market mean much to Australia.

WHEAT AND FLOUR.

The exports of wheat and flour during the last two years, i quantity and value, were:—

To June 30, 1920, 99,600,000 bushels; value, £31,400,000.

To June 30, 1921, 84,300,000 bushels; value, £39,400,000.

The preliminary estimates of the Australian wheat crop for the current year give a total of about 139 million bushels, equal to the crop of last year, and the amount available for export is likely to be about 100,000,000 bushels. The price, however, for wheat has declined, the average price last year being over 8s 11½d. as against probably well under 5s for this year. The value, however, of the export of wheat during the current year must be very substantial.

Butter exports during the past year reached the high figure of just over £11,000,000, and the fine season enjoyed so far promises well for the current year, though it must be remembered that last year the total value was greatly helped by the high price paid by the British Government for this product.

The frozen meat trade is, I regret to say, at present in the depths of depression. Demand is poor and prices low, and there are large unsold stocks still in this country. Freight from Australia has been almost prohibitive, the chief reason for which, in addition to the high level of costs, is, I understand, that so many vessels, from scarcity of outward cargo, have to go out to a large extent in ballast, the return freight having in consequence to meet the cost of both trips. A reduction of 10 per cent. in freights has recently been announced. The loss for the time of our markets in the Continent of Europe and the competition from the Argentine are also serious adverse influences at present.

METALS.

Metals, which form so important a factor in the industry and commerce of Australia, are experiencing very trying times. During the war the output of metals in all the great producing countries was stimulated to the utmost, and the costs of production rose to record levels. On the cessation of hostilities the munitions demand, of course, disappeared, and ordinary industrial and commercial demand revived but slowly. Stocks were abnormally large, and in addition there was an enormous quantity of war scrap metal. The natural result was a heavy and continuous fall in prices, till the selling price fell much below the costs of production. In America—the largest copper producer in the world—by partial suspension of some and the total closing down of other mines, the output has been reduced to about one-third of normal. In Australia to-day only two copper mines—Mount Lyell in Tasmania, and Wallaroo and Moonta in South Australia—are working, the rest, including the important Mount Morgan Mine in Queensland, are closed down. A somewhat similar state of affairs prevails in the case of the lead, zinc, and silver mines of Broken Hill, where only one mine, I believe, the Central, is at present working full capacity. The economic effects of the situation thus created, with the lamentable resulting unemployment, will no doubt gradually bring about a more workable relation between production costs and selling prices.

In Australia, as here, the high costs of production synchronising with falling prices for the products in the markets of the world are blocking for the time real recovery. I hope I have not unduly wearied you with this presentment of the mere outline of the conditions affecting Australian overseas trade in the past and the current year, conditions, a due appreciation of which is so necessary to the successful and profitable conduct of our own business.

For the convenience of our shareholders resident in Australia, we have during the past year opened at our chief office in Melbourne an Australian share register.

Mr John Paterson (deputy-chairman) seconded the motion. Sir Frederick W. Young, M.P., referring to his recent visit to Australia, said that the balance-sheet indicated that the bank had come through the difficult period which it covered in a manner which must be gratifying to all the shareholders, and that they could face the still very disturbed condition of affairs throughout the world with quiet and prudent confidence. During his visit he had been able to initiate the negotiations leading to the purchase of the Commercial Bank of Tasmania. The prospects of that island were very hopeful, and they should reap a full share of the prosperity to be expected as its industrial possibilities were developed. His visit fully confirmed the view that the amalgamation with the London bank was particularly happy, inasmuch as outside the chief offices there was practically no overlapping. They were fortunate in their Australian staff, and he doubted if any financial institution could be so happily placed in its two head executive officers as they were, while their branch managers were second to none. The bank, its staff, and its customers were a happy family, and he was gratified at being able to report to that effect.

The resolution was carried unanimously.

The retiring directors were re-elected, auditors were appointed, and cordial votes of thanks were passed to the chairman, directors, officials, and staff.

At the termination of the proceedings the deputy-chairman unveiled a portrait of Mr C. J. Hegan, the former chairman, and, in a brief speech of acknowledgment, Mr Hegan expressed confidence in the future of the bank.

SUDAN PLANTATIONS SYNDICATE, LIMITED.

CAPITAL TO BE INCREASED SHORTLY.

CHAIRMAN'S IMPRESSIONS OF SUDAN'S POTENTIAL WEALTH.

IMPORTANCE OF COMPLETING BLUE NILE DAM.

Mr The fourteenth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London, Mr F. Eckstein (the chairman of the company) presiding.

The acting-secretary (Mr L. Bluen) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—In addressing you last year I ventured to sound a note of warning regarding our prospects for the coming year, and I asked you not to blame your board if our text balance-sheet was not quite so brilliant as that which I then had the good fortune to present to you. The reason why I made this statement was obvious, inasmuch as cotton prices were then unjustifiably high, and, unfortunately, events during this year proved my warning to be only too true. Not only did the market for cotton come down with a run, owing to stagnation of trade in Lancashire, but we also suffered from considerable mishaps with our crops, to which I will refer later on.

THE ACCOUNTS.

As usual, I will deal first with our accounts, which are before you. The first four items on the debtor side of the balance-sheet—viz., share capital, reserves, and share premium account—are practically unchanged. Creditors are considerably less than last year, and so is our profit. On the credit side you will find under general development a large increase, something like £120,000 for Gezira and the new Hag Abdulla pumping station, all due to new work.

Further, buildings and furniture show an increase of £34,000, canalisation Gezira areas of £12,600, and agricultural implements and plant of £17,000, and there is a new item: light railways, £21,000. Cotton and other stocks figure at £335,000, and to this I shall refer more fully later on.

Our securities and cash assets are naturally less than last year, the above-mentioned sums having been spent on the Gezira development scheme. Still, our financial position is sound, but we shall in all probability soon require further funds, and it is our intention to issue fairly soon a further 150,000 shares, and, as before, to offer these to you at a moderate premium. The profit and loss account needs no explanation, but, subject to your approval, we have again set aside a bonus for our staff and £2,500 as an addition to our staff provident fund. Both these items I recommend warmly to your acceptance.

DIVIDEND.

From the directors' report you will have noticed that we are proposing to distribute a slightly higher dividend than we had actually earned up to the close of our books. Your board has no hesitation in recommending this proposal to you in view of our very considerable carry forward. This is all I think I need say under this heading, but the point I wish to emphasise is cotton unsold at the date of closing our books—viz., June 30, 1921.

COTTON CROP.

The amount of cotton we have and had to deal with is the largest so far in our history. As not a single bale of our cotton had been sold at the time we had to close our books, we stocked it in our balance-sheet partly at cost prices and partly at the valuation we then had from our brokers. During the last few weeks we have, however, disposed of our entire Zeidab crop, as well as of a fair quantity of both the Tayiba and Barakat crops. In the sale of the Tokar cotton we are only making slow headway. The reason why we had to deal this year with so comparatively large an amount of cotton is that during my stay in the Sudan in the early part of this year I arranged to buy a good deal of the Tokar crop on joint account with the Sudan Government. I did this because I wished to help the Government to dispose of this crop, for which at that time there were not many buyers in the Sudan, and so to encourage the natives to continue growing cotton. As far as I can judge to-day, this transaction will give the two parties a fair return on their outlay and for the work done.

SITUATION AT ZEIDAB, TAYIBA, BARAKAT AND HOSH.

Turning now to our own stations at Zeidab, the crop promised to be excellent when I addressed you last year, and picking started at an unusually early date; but shortly after we suffered from a bad attack of boll-worm, to the great detriment of the yield. The Sudan Government sent Captain Bedford, one of their entomologists, to study and to report on this plague, and we hope that the careful research he made may bear fruit in the future. This

season we have 3,300 feddans under cotton, and my reports are that up to date we have picked something like 6,000 kantars, and that the quality is above the average and satisfactory. Our total yield last year from our own tenants and our water tenants was 6,876 kantars; this year we expect a considerable increase.

At Tayiba we experienced quite abnormal rains, which necessitated repeated re-sowing. This made the cotton late, which always means an unsatisfactory crop. The yield was 5,117 kantars from 1,700 feddans. This year we have planted 1,698 feddans, and we hear that our present crop is looking well, with the exception of a small area which is rather late.

At Barakat we should have had a very fine crop indeed, but during the later stages an unfortunate breakdown in the pumping station—the bursting of a boiler—caused a serious shortage of water just when the plants most needed it. So here, again, we had to be satisfied with middling results—viz., 6,704 kantars from 2,011 feddans. For this year we have planted cotton on 2,100 feddans, and our latest news is very satisfactory.

At our Hag Abdulla pumping station the work has progressed rapidly, and we have given our new cotton station the name of Hosh. The completion of the installation of the pumps and engines on this station in readiness for the present season was from first to last a race against time in circumstances of great difficulty. You will be pleased to hear that we have now 6,040 feddans under cotton, which is really record work, and reflects the greatest credit on our resident staff. The latest reports we have of this new crop are likewise good.

To sum up, all the four stations are showing up very well, but it is a little too early to form definite estimates.

BLUE NILE DAM.

Having dealt with our present stations, I feel sure you wish me to say something about the progress of the larger scheme, to which we are wedded through our agreement with the Sudan Government, and I think this is all the more necessary as there are, so I am told, all kinds of sinister rumours floating about. Gentlemen, the truth is that the Blue Nile Dam, which is to bring the water to the Gezira Plain, and which is being constructed by the Sudan Government, is costing more—in fact, a good deal more—money than the original estimates provided for, the chief cause being largely increased costs of material and higher wages, all due to the late war.

The Sudan Government has to raise more money, and naturally looks to the British Government for help in this respect in some form or another, and negotiations are going on in this sense between the two Governments. Meanwhile, within the limits of the money at present available, the work of the dam is proceeding, and we hope that by next year considerable progress will have been made. Some millions have already been spent upon this dam, and in my humble opinion it is unthinkable that its completion should be interrupted and delayed.

We, on our part, are steadily pushing on with the work before us, and you will be interested to hear that, quite apart from the areas at Barakat and Tayiba, we have developed on the Gezira Plain a further 60,000 acres, and out of these 12,000 acres are fully canalised. In addition to this, we have completed practically all the buildings required for the headquarters staff and a number of houses on the land at a cost of about £56,000. Besides this, we have in the Sudan something like £50,000 worth of stores and building materials, which are available for further extension of our operations.

All this will show you that our faith in our undertaking is as great as ever, and I am confident that our forward policy will bear corresponding fruit in time, and give you entire satisfaction.

SUDAN'S POTENTIALITIES.

My colleague, Brigadier-General Asquith, paid a visit to the Sudan in the latter part of last year, and made a thorough inspection of our various interests, and I spent several months there early this year. I came away more impressed than ever with the great potentialities of the Sudan and with the unmistakable and keen desire on the part of the Sudan Government to develop the country to its fullest extent in the best manner possible.

Amongst the countries where the British flag flies none ranks higher than the Sudan in its potentialities of wealth, in its record for efficient and economical administration, or as a field for the production of a high-class cotton. It appears to me

to be the duty of the British Government to help the Sudan—a comparatively new country—to make itself self-supporting, and this can only be done by stimulating the production of cotton. You have there the right soil, a suitable climate, and a population which is purely agricultural, and is quite ready and able to do the work under proper supervision.

In all our experience there we have had good and middling crops, but we never had an absolute failure. Further, the population is growing at a rapid pace, as I have convinced myself during my journeyings through the Sudan this year.

Syndicate's Relations with the Government.

May I just say, too, that the relationship of your syndicate with the Government in Khartoum and its officials in the provinces is all that can be desired. Likewise, our relationship with our native tenants could not be better; they know they get absolutely fair, straightforward, and sympathetic treatment, and they consequently trust us. I cannot illustrate this better than by telling you that when we wanted tenants for the new Hag Abdulla area, we had applications from more than double the number we required.

Our staff, on whose efficiency we naturally depend a good deal, is perfectly loyal and devoted to its duties. It is invidious to mention names when all are efficient and do their work well, but I would like to give a special word of praise to Mr Horne, our resident engineer at Hag Abdulla, for excellent work done under considerable difficulties.

Our managing director, Mr MacIntyre, is at his post in the Sudan, and continues to render us the greatest possible help and assistance. I now move: "That the report of the directors and statement of accounts to June 30, 1921, now laid before the meeting, be and that the same are hereby received and adopted."

BRIGADIER-GENERAL ASQUITH'S SPEECH.

Brigadier-General Arthur M. Asquith, D.S.O.: Gentlemen,—Our chairman has dealt clearly with the various aspects of the reports and accounts which are submitted for your approval.

In seconding this resolution, I propose to confine myself to certain parts of the ground which he has already covered.

I served in the Sudan as a civil servant for five years, and am consequently conversant with the language, the natives, and the officials.

Returning last year after nine years' absence, I visited the company's plantations and the Blue Nile dam with a fresh eye, and I came away confirmed in my belief in the potentialities of the Gezira as a field for the production of high-class cotton, and in the efficiency and economy with which your interests there are administered.

With regard to the potentialities of the Gezira Plain and the first 300,000 acres to be irrigated, you must imagine a plain 80 miles long by 20 or so broad—a strip of a plain of much greater extent—as flat and for most of the year as bare of vegetation as this table. The Blue Nile bounds it, and the railway runs through it for the whole of its length. It is composed of black and reddish-black earth, yards deep.

Going south from Khartoum in the train, you come first to Tayiba; next, 15 miles or so further south, to Barakat; then, 30 to 40 miles further south again, to Hag Abdulla, or Hosh as it is now called. It is a very remarkable sight in this arid plain to come across the fresh green extensions of your plantations—an actual case of the "desert blossoming like the rose." Each of these plantations, spaced out over the area to be irrigated from the dam when it is finished, forms a nucleus round which families of lives have grown up, or are growing up, with a knowledge of cotton and how to grow it. Your English staff who inspect and perintend and help them deservedly enjoy their full confidence in ours. Without these nuclei of trained cultivators and of trained British staff it would be impossible to keep pace with the strides in the extension of areas under cotton which should follow upon the heels of the completion of the dam, and this was a factor uppermost in your directors' minds when they decided on the installation of the big new pumping plant at Hosh.

REASONS FOR BRITISH GOVERNMENT'S HELP.

Our chairman has told you that the Sudan Government are negotiating for the further funds which they require to complete the dam, and with him I consider it quite unthinkable that the British Government should fail to help them.

You will remember that the British Government guaranteed the interest upon the previous loan of £6,000,000, the greater part of which was earmarked for this dam. There seems to me to be compelling reasons why the British Government should continue to help in this matter to the utmost of their power. If they do, I am convinced they will never have to act up to their previous guarantee. If they do not, they very probably will have to act up to that guarantee at the expense of the taxpayer.

But in addition to this financial aspect, there are political considerations which should weigh overwhelmingly, even if the

dam in itself would not, as we firmly believe that it will, pay its way and show a profit.

We hear much in these days of the desirability of developing in other countries such industries as are complementary to and not competitive with those of Great Britain. Here we have a perfect instance in a country where our flag flies of a complementary industry—a means of feeding the mills of Lancashire, which in turn will sell to the Sudan increasing quantities of their finished products. We hear also of unemployment here and of money spent, largely unproductively, in relief of it. Any interruption with work on this dam means more unemployment and cancellation or postponement of contracts for sluices, ginning machinery, ploughing engines, light railway material and all sorts of engineering stores.

COMPLETION OF DAM OF VITAL IMPORTANCE.

So much for the home political aspects; but to those of us who have spent some of the best years of our lives in the Sudan there is a final and vital reason for unfaltering pursuance of our task.

In the East there must be no chopping and changing of policies. The Sudan costs the British taxpayer nothing, or next to nothing. It is inhabited by tribes of warlike traditions, and probably never in its history before has it enjoyed over 20 years of continuous peace. This country, more populous and of greater extent than Mesopotamia, the Sudan Government rules with perhaps 150 British officials and one battalion of British infantry. It is a supreme instance of good will and of mutual confidence which has been built up by 20 years of conscientious and unadvertising administration. The native has learnt that he can always depend upon this sprinkling of British officials to give patient and disinterested consideration to all his grievances, and never to go back upon promises once made. They have been led by the Sudan Government to count upon the completion of the dam. Its completion spells for them prosperity and insurance against starvation, and they have not been free from famines in the past. Any interruption of the work now might be construed by them as a breach of faith, due either to the weakness of this country or to the sacrifice of Sudanese interests to ill-informed extremist clamour in Egypt. In short, our position in the Sudan is based primarily upon the natives' confidence in our keeping faith with them, and this confidence, built up for over 20 years, must not be lightly risked.

PEACEFUL RELATIONS WITH SUDAN.

There is just one further remark I should like to make. We have all read with regret in the papers that the recent negotiations between the delegation of Adly Pasha and the Foreign Office in regard to Egyptian affairs have broken down. People in this country are apt to confuse Egypt with the Sudan, forgetting that from Cairo to Khartoum is a four days' journey, and that the Sudan has in Port Sudan an independent outlet to the sea. We must not forget that the public opinion and politics of the Sudan are entirely distinct from those of Egypt. Let us hope that there may be no serious troubles in Egypt, but let us also remember that in 1919 the grave trouble in Egypt caused no ripple or reflection on the surface of Sudanese peace.

The motion was carried unanimously, and a dividend at the rate of 15 per cent., less income-tax, was declared.

The retiring directors (Mr D. M. Hannay and Mr F. Eckstein) were re-elected, Messrs Cooper Brothers and Co. were reappointed auditors, and a vote of thanks to the chairman concluded the proceedings.

LONDON NITRATE COMPANY, LIMITED.

LAST YEAR'S DEPRESSING EXPERIENCE.

OUTLOOK IN THE NITRATE MARKET.

The annual meeting of shareholders of the London Nitrate Company was held on Thursday, November 24th, at Liverpool. Mr Frank Tobin, chairman of directors, presided, and was supported by Colonel Sir James P. Reynolds, Mr W. H. Hasler, and Mr E. B. Orme.

The Chairman, in proposing the adoption of the report and the confirmation of a dividend of 1s 6d per share, said no industry in the world was subject to quicker changes from prosperity to adversity than the nitrate industry, and they in all their experience had never known a period such as the past 12 months. It appeared worse because it succeeded a period of great prosperity. Their own balance-sheet showed a trading profit of over £100,000, which was the biggest thing the company had ever done, and that sum was actually made in less than six months. They had hopes at one time of an even larger profit, as prices were abnormally high at the time when they concluded contracts which ran well into this year, and they thought they would be able to show a profit of £135,000. However, the railway company which conveyed the nitrate to the coast from the Santa Laura oficina proved totally incapable of dealing with the quantities we had contracted to deliver, and the delivery of which would have meant a very large profit to the company. All the pressure we exercised on the railway company was unavailing, and in an endeavour to supply our needs we opened the Puntunchara oficina, which succeeded in supplying 163,000 quintals of the deficiency of 251,000 quintals, and in the end they had to obtain the deficiency to fulfil their contracts from another nitrate company. This represented considerable loss of profit, as also did the production from the Puntunchara oficina, which had to be got ready hurriedly at greater cost than would otherwise have been experienced. Altogether it represented a loss of £35,000 profit, which, under ordinary circumstances, they would have acquired. In spite of all, they possessed the biggest paying nitrate property.

The year's profit had been very much cut into in other ways, income-tax and corporation profits' tax swallowing up £14,800, while £10,164 had been paid in bank interest on advances. The latter item, however, would show a sensible diminution in the current year, as the bank advances were repaid two days from the end of the official year. The Santa Laura oficina, of which they had had such high hopes, had now conclusively proved to be a super-producer of nitrate, and for many years he anticipated that its output would be produced at a cheaper rate than that of any other.

MR HASLER ON TRADE OF THE PAST YEAR.

Mr W. H. Hasler, supplementing the remarks of the chairman as to the trade of the past year, said the cost of operating the Santa Laura oficina was likely to be small for some considerable time to come. It was being developed, too, with an eye to the future, and they ought to get extremely good results from it for many years to come. The anticipated consumption of nitrate in the past season was two and a-half million tons, but the sales actually realised one and a-half million, the surplus remaining in the hands of buyers who had bought from the association at high figures in anticipation of a boom in nitrate consumption. About September, 1920, the whole position changed, and it became apparent that unless something was done to help the holders of nitrate to meet the situation there would be a débâcle, and the bottom would be knocked out of the whole business, requiring many years to get over the trouble. A decision was arrived at to fix

a minimum selling price for the association, not in the hope of making new sales, but in the hope of establishing a background to the market, and giving holders a chance of realising without too tremendous a loss.

They managed to do that, but unfortunately they did not manage to expand consumption, which fell away, and this stock of about one million tons was left in the hands of the holders. This had been hanging over the market ever since. Holders claimed that the agreement of 14s selling price should extend to March next year, and there was an absolute deadlock. After long and delicate negotiations, in which the Chilean Government intervened, on the 27th of last month an agreement was arrived at between the producers of nitrate and the holders, the latter being chiefly in the consuming markets of Europe. One of the main points was that producers should contribute something to the holders' losses, and they, in turn, should lower the price of nitrate in the consuming markets, as, until present stocks are moved, new supplies cannot come forward.

BENEFICIAL RESULTS OF THE NEW AGREEMENT.

Almost an immediate result was an improved situation, as a demand for nitrate sprang up, and 180,000 tons of nitrate passed into the hands of dealers—a very good start. There had not yet been any new sales by the association, but he believed they would come along in due course. One of the objects of the association all along had been to limit, if not to stop, speculation, which had, to some extent, been successful, and there was no reason at all now why people should buy a long way in advance. There was a fixed price, people knew what the association were going to do, stocks could be got forward from Chili in six weeks now compared with three or more months formerly, and they must not look for forward deliveries on the scale that had operated hitherto. As far as he could see the outlook was satisfactory, and certainly the market for nitrogenous fertilisers of all kinds was exceedingly firm. Sulphate of ammonia was not going to be in over-abundant supply, and they could look forward to seeing these stocks in the merchants' hands which had blocked the way, being moved, and greater freedom and movement in the trade within quite a limited time.

SIR JAMES REYNOLDS ON THE PROSPECTS OF THE INDUSTRY.

Sir James Reynolds, seconding the chairman's motion, congratulated Mr Tobin on his recovery from the serious accident which befel him some months ago, and expressed pleasure in seeing him in his accustomed place at that meeting. Only people conversant with the nitrate industry could realise what a terrible period they had passed through. There had been a danger of everything being brought to a standstill, and of cut-throat competition and ruin, but by patience and tact the fabric of the industry had been maintained. Probably the nitrate industry was the only one which had gone through this crisis and yet retained some of its profit. He predicted greater activity in the sale of fertilisers. The American cotton crop had shrunk to half, mainly because of the non-use of fertilisers last year, and the beet crops of Germany and France had shown an enormous falling-off for the same reason. In America there would be a propaganda to develop consumption, and in Europe the provision of credits would no doubt stimulate those countries which needed it to the purchase of larger quantities of nitrate. The immediate future would be one of small profits, and in this connection the valuable properties of the London Nitrate Company would enable them to reap a great advantage.

The motion was carried, and Sir James Reynolds was unanimously re-elected a director of the company.

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

JOSHUA HOYLE AND SONS, LIMITED.

AN ANXIOUS AND DIFFICULT YEAR.

The ordinary general meeting of Joshua Hoyle and Sons, Limited, was held at the registered office of the company, India Mill, Bacup, on the 24th instant, Lieut.-Colonel J. Craven Hoyle, T.D., D.L., the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said: Several forces had been operating which had been antagonistic to a steady and constant flow of business. The unsatisfactory state of the foreign exchanges, and in their own particular trade the serious fall in the price of cotton, and the violent fluctuations, with the uncertainty as regarded the future course of prices, undermined the confidence of the buyers of the whole world.

The points he had mentioned affected the export trade, but they had had their effect too, to a very serious degree, on the home trade of this country.

With regard to the company's recent issue of £1,500,000 debentures, the directors had decided upon that step after careful and serious consideration, and they were of opinion that the issue was made on most favourable terms. The effect had been to place the financial affairs of the company on a very substantial basis. Up to the present time there had been somewhat heavy charges for interest on bank overdrafts and loans, which in future would be paid as interest on the debentures.

The purchase of Ross Mill, Bacup, would further help the firm in the production of their several specialities by enabling them to supply their manufacturing concerns with the special yarns their products, required. The board's policy had been shown to be sound, and they had still been able to recommend the payment of a final dividend of one shilling per share, free of tax, equal to 12½ per cent. for the whole year.

A scheme was now under consideration for the grouping of the various concerns they had acquired, and the result would be a reduction in the cost of management, and what would naturally follow, a reduction in the cost of production.

There had been no further allocation to the reserve and renewal fund, which stood at £360,000. The abnormal circumstances of the year had been met out of revenue, and they were carrying forward the whole of the profit balance after payment of the dividends.

They were passing through abnormal times, but their organisation was not a mushroom organisation. It was a firm which was established on the strongest foundations, of reputation and of history. The firms they had acquired were of equal standing with the parent company, and when things got normal again they would show the wisdom of what the directors had done.

Sir William E. Berry, Bart., seconded the motion, which was carried unanimously.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Nov. 28th-Dec. 3rd, were opened on Nov. 25, 1921, and the total amount applied for was £78,155,000. Tenders for Wednesday to Saturday bills at £99 is 7d, about 27 per cent., and above in full. Tenders for Monday bills at £99 is 3d and Tuesday bills at £99 is 5d and above in full. The average rate of discount was £3 14s 2½d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition of Bills.	Tenders at Rates below receive.
	£	£	£ s d		
Oct. 28 (3 months)	60,000,000	83,445,000	3 14 5-63	3½	£99 is 1d (Monday to Friday bills), about 80-18%, and above in full. Saturday bills £99 is 4d, and above in full.
Nov. 4 (3 months)	60,000,000	87,405,000	3 16 2-6	3½	£99 is 7d (Monday to Friday bills), about 44-79%, and above in full. Saturday bills £99 is 10d, and above in full.
Nov. 11 (3 months)	45,000,000	78,340,000	3 17 0-43	3½	£99 is 6d (Monday to Friday bills), about 75%, and above in full. Saturday bills £99 is 9d, and above in full.
Nov. 18 (3 months)	40,000,000	54,365,000	3 17 8-27	3½	£99 is 3d (Monday to Friday bills), about 77%, and above in full. Saturday bills £99 is 6d, and above in full.
Nov. 25 (3 months)	45,000,000	78,155,000	3 14 2-15	3½	£99 is 3d (Monday to Friday bills), about 27%, and above in full.

The amount to be offered next week will be £50,000,000.

Belgium.....	356	Bombay, via other ports.....	16,100
Total values of import of gold.....	677,068	Total declared value of exports registered in the week.....	713,228

Messrs Samuel Montagu and Co. write on November 24 as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,610,000, as compared with £126,605,635 last week.

A fair amount of gold came on offer, and was taken for New York. It is reported that gold to the value of \$8,826,000 has arrived in New York—\$3,891,000 from London, \$4,300,000 from Sweden, and \$635,000 from France. The German Minister of Finance has issued an order, to take effect on November 3rd, increasing from 1,900 to 3,900 per cent. the premium, or "agio," which is leviable when the "gold" duties of the Customs Tariff are paid in paper currency. The following are the net Indian gold and silver trade movements from March to September inclusive (in lacs of rupees):—

	Gold.	Silver.
	Net Exports.	Net Imports.
March, 1921	4.80	2.98
April, "	2.57	1.65
May, "	56	1.37
June, "	2.27	94
July, "	1.86	61
August, "	3.73	91
September, "	1.60	96

CURRENCY.

Now that so many countries are desirous of placing their currency upon—or restoring it to—a gold basis, steps taken with this end in view are worth recording for the sake of comparison, and as a guide to future operations of a like character. A Press despatch from San Salvador stated some months ago that a contract providing for the establishment of a bank for the issuance of currency has been approved by the Salvadorean Congress. The institution, which is sponsored by American capital, was to be established within 90 days, and to have a paid-up capital of \$1,000,000, which may be increased to \$10,000,000. The concession will run for 50 years. Before the bank begins to operate it will import from the United States coined gold to the amount of \$5,000,000. Authorisation is given to the bank to issue paper money to an amount double that of the paid-up capital. It is believed there that the transaction will give Salvador a stable monetary system. The Times of the 12th inst. stated that the Government of the Baltic State of Lithuania had approached a London group asking its assistance to establish a State bank with a capital of £1,000,000, the Government, the public and local banks, and the British group each to provide one-third of the capital. The Bank is intended to be the State bank, and issue a new currency based on gold. At the present time grave inconvenience is caused by the currency being depreciated paper marks. Provision appears to have been made for about £3,000,000 gold reserve funds. It is suggested that a better plan would be to base the currency upon sterling funds held in London.

SILVER.

A fairly steady demand for silver on China account for prompt shipment carried the cash price to 39½d, and the two months to 38½d on the 10th inst., and held them at these figures on the 21st. The next day was the last on which shipment could be made on the s.s. "Egypt," timed to arrive in comfortable time for the Chinese New Year, which falls on January 28th next. On the 22nd inst. support was suddenly withdrawn, and a sharp fall ensued to 38d and 37½d for cash and two months' delivery respectively. The fall would not have been so sharp had the market had some premonition. Some easiness of prices was only to be expected when shipment from this country became later than convenient for the annual squaring up of debts in China. Some bear operators kept short on this account, and were quite ready to take a reasonable profit. The market, therefore, rallied ½d at once, encouraged by some China demand for forward delivery. The improvement, however, was not maintained. Obscure as the outlook is—and prone to the interposition of fresh factors—caution ought to be the *mot d'ordre*, for the absence of Indian purchases renders the market rather a one-horse affair. On the other hand, China's inquiry for silver may, in certain circumstances, prove a somewhat powerful influence in the market.

INDIAN CURRENCY RETURNS.

No coinage of rupees was reported during the week ending 15th inst. The stock in Shanghai on the 19th inst. consisted of about 28,800,000 ounces in sycee, 24,000,000 dollars, and 2,650 silver bars, as compared with about 25,300,000 ounces in sycee, 24,000,000 dollars, and 1,490 silver bars on the 12th inst. The Shanghai exchange is quoted at 3s 9d the tael.

GOLD AND SILVER PRICES.

NOTICES.

The London Joint City and Midland Bank announce the opening of new branches at 63 and 64 High street, King's Lynn, Norfolk, and Molesworth street, Wadebridge, Cornwall, under the management of Mr M. C. Cammille and Mr J. I. Clement respectively. The Canton office at 213 Cowbridge road, Cardiff, has been made a full branch, under the management of Mr Ivor Thomas.

Barclays Bank, Limited, announce that they will open on Tuesday next, November 29th, a new branch at Market place and 20 Minister street, Salisbury, under the management of Mr O. V. Hill.

The London County Westminster and Parr's Bank announce the opening of a new branch at 87 Grey street, Newcastle-on-Tyne, under the management of Mr J. C. Knowles.

Mr P. Garelli, sub-manager of the branch at Zagreb of the Banque Franco-Serbe, has now been appointed manager of the London office, and Mr F. E. J. Pow, previously manager of the foreign exchange department of the Société Générale, London, has been appointed assistant manager.

Branches of the Merchants' Bank of Canada have been opened at Hamilton, Ont., corner of York and Locke streets; Vancouver, B.C., corner of 12th Avenue and Granville street.

The Bank of British West Africa, Limited, announce the opening of a branch at Melilla, Morocco.

The London office of the Union Bank of Canada announces that an agency of the bank has been opened at Winnipeg Agricultural College under the supervision of the Portage and Garry Branch, Winnipeg.

Reports and Notices.

The directors of the Great Western of Brazil Railway Company, Limited, announce that they have received cable advice from Rio de Janeiro that the Government has postponed until January 1st next the application of the increase in tariffs which should have taken effect on the 12th inst., as notified recently to the shareholders by circular.

A district office of the Liverpool and London and Globe Insurance Company, Limited, has been opened at 2 George street, Croydon, Surrey, under the supervision of Mr T. C. E. Dodds.

The honour of the Freedom of the City of London has been conferred upon Mr Herbert Osborn Lewis, secretary of the West-end branch (London) of the Northern Assurance Company, Limited.

Sir Charles Eves, F.C.A., has been appointed receiver on behalf of the first mortgage debenture holders of the Frank Jones Brewing Company, Limited.

Messrs W. Elles-Hill and Co., chartered accountants, recently of Metron Chambers, 244 High Holborn, W.C. 1, have now removed to 17 Throgmorton avenue, E.C. 2, where their telephone number is London Wall 4033.

Messrs J. and A. Scrimgeour notify that on and after the 21st inst. their offices will be removed to 6 Austinfriars, E.C. 2.

Mr W. P. Sheppard has resigned his directorship of Tariff Reinsurances, Limited.

The directors of Tariff Reinsurances, Limited, state that that company has taken over the management of the fire and accident business of the General Reinsurance Company, but not the marine business.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4d, being the moiety of the eighth fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1921.

RAILWAYS.

MISSOURI, KANSAS, AND TEXAS RAILWAY.—Particulars of the plan of reorganisation of the Missouri, Kansas, and Texas Railway, completed by the reorganisation managers, Messrs J. W. Seligman and Co. and Messrs Hallgarten and Co., and accepted by the directors of the 18 committees representing securities dealt with under the scheme, are now available.

BANKS.

BANQUE BELGE POUR L'ETRANGER, SOCIETE ANONYME.—The report and accounts for the year ended June 30, 1921, shows the following result:—Balance brought forward on July 1, 1920, £7,857; add gross profit of the business year, £955,837—total, £963,694; deduct working expenses, &c., £568,356, which leaves a balance of £395,338, which is appropriated as follows:—Statutory reserve, £19,374; special reserve, £140,000; provision for taxes, £8,000; directors' fees (rantièmes), £17,104; dividend at the rate of 9 per cent., £202,500; carried forward, £8,360. The following is a comparative table of balance-sheets (sterling equivalents taken at 25 frs to the £):—

	1919.	1920.	1921.

* Includes £2,179,108 head office war period acceptances, now liquidated.

COMMONWEALTH BANK OF AUSTRALIA.—The balance-sheet just received for the half-year ended June 30, 1921, shows that the total assets are now £140,573,808, as against £134,960,569 at December, 1920, and £63,679,412 at June, 1920, prior to the inclusion of the figures of the note issue department. The management of the whole of Australia's note issue it will be recalled, was assumed a year ago by the Commonwealth Bank, to which the relative assets of 59 million pounds sterling were transferred by the Commonwealth Treasury, including gold coin and bullion, £23,714,983; debentures and other securities, £26,115,356. Deposits in the general banking department have increased during the half-year from £27,153,311 to £34,515,485, while savings bank deposits stand at £36,190,390, as compared with £35,306,956 six months previously. Money at call and short notice in London now stands at £8,096,000, as against £4,160,000 in December, 1920, the amounts represented by coin, bullion and cash balances being now £5,371,140, while investments aggregate £34,233,516. The greater activity in the Australian exchange position is indicated by the increase in bills receivable in London to £7,174,175, as against £1,319,804 a year previously. During the same period bills discounted, loans, &c., have increased to £18,657,922, from £13,194,693. The profits for the half-year are £403,041, as against £292,219 six months previously and £392,604 in June, 1920. During the nine years of its existence, the Commonwealth Bank, which is owned and guaranteed by the Australian Commonwealth Government, has accumulated profits amounting to £3,451,365, which are held at credit of reserve funds.

YOKOHAMA SPECIE BANK.—The gross profits for the half-year ended June 30, 1921, including yen 4,652,374 brought forward from last account, amount to yen 104,982,251, from which the sum of yen 90,227,314 has been deducted for interests, taxes, current expenses, rebate on bills current, bad and doubtful debts, bonus for directors and auditors, &c., leaving a balance of yen 14,754,936 for appropriation. The directors propose that yen 4,000,000 be added to the reserve fund, and recommend a dividend at the rate of 12 per cent. per annum, which will absorb yen 6,000,000. The balance, yen 4,754,936, will be carried forward to the credit of next account.

RUBBER.

ABOYNE-CLYDE (CEYLON).—The report for the year ended June 30, 1921, shows a loss of £16,965. Deducting £2,053 brought forward, there remains a debit balance of £14,912 to carry forward. The report states that the rubber harvested during the year amounted to 463,673 lbs. The original estimate was for 540,000 lbs, but was cut down by 25 per cent. from November 1, 1920, in accordance with the agreement with the Rubber Growers' Association. Of the quantity 377,439 lbs were sold to June 30th last, and the balance of 86,234 lbs has been sold since that date. The rubber sold in London amounted to 230,111 lbs, at an average price of 1s 0.32d per lb, as compared with 25 2.54d per lb for the previous season. The rubber sold in Colombo amounted to 233,562 lbs, at an average price of 7 11d per lb. The cost of production, inclusive of all expenditure and handling and selling charges, except debenture interest, income-tax, and depreciation, was 11.50d per lb, as compared with 1s 5.80d per lb for 1920. For the year 1919-20 the average rate of exchange was 2s 2.4d, while for the year under review the average rate was 1s 8.7d.

LANGKAPORERA (SUMATRA).—The output of rubber for the year ended June 30, 1921, amounted to 259,568 lbs, against an original estimate of 380,293 lbs. From November 1, 1920, the crop was restricted in accordance with the Rubber Growers' Association scheme. The cost of production on the estate was 1s 1.23d per lb, and the "all in" cost, including depreciation, was 1s 7.09d per lb. The average gross selling price (not including the stock unsold, valued at market price on June 30, 1921) was 1s 1.4d per lb. Tapping has improved greatly, and diseases, which are being carefully watched, are inconsiderable. The output of coffee was 1,544 piculs, against an estimate of 1,650 piculs. The coffee trees have been affected by the coffee borer, which accounts for the shortage of the crop and the poorness of the quality. The labour position is still difficult, but the health of the coolies is good. The accounts show a loss for the year of £10,388, from which must be deducted net balance of £8,463 brought forward, leaving a debit balance of £1,925 to go forward.

MORIB.—The eleventh annual report shows a net loss for year of £1,706, from which is deducted £1,052 brought in, making a debit balance of £654 to go forward. The number of coconuts harvested was 1,027,607. 238 tons of copra were manufactured during the year. The average net price realised for copra was £29 12s per ton. The rubber crop for the year was 112,410 lbs. The number of trees tapped was 33,845. The cost of production was 8.9d per lb. The average net sale price, including the estimated value of the unsold portion of the stock, was 6.4d per lb.

SENGAT.—The eleventh report for year ended June 30, 1921, shows a loss on working of £1,704, from which is deducted £1,184 brought in, making a debit balance of £520 to go forward. The company is putting in a claim for refund of excess profits duty, amounting to approximately £13,000. The crop of dry rubber secured during the season was restricted, in agreement with the Rubber Growers' Association, and amounted to 527,000 lbs, of which 487,488 lbs were sold on the London market, and 39,512 lbs in Singapore, and realised 10.93d per lb. Owing to reduced crop and heavy loss on rice supplied to the coolies, expenditure was high during the early part of the year, but this has been drastically cut down, and cost of production is now on a very moderate basis.

SINGAPORE PARA.—The twelfth annual report to June 30, 1921, reveals a loss on working of £2,440. The balance brought forward from last year was £9,566, making £7,126 to carry forward. The actual output during the year was 455,234 lbs. The "all in" cost amounted to 1s 3.84d per lb, and the average selling price for rubber actually realised was 1s 0.40d. The loss on rice during the year was £1,861 (equal to 1d per lb of rubber output), but the market is now nearly normal, and little loss is anticipated during the current year.

MISCELLANEOUS.

ANSELLS BREWERY.—The report and accounts for the year ended September 30, 1921, show a net profit for the year of £116,934, which with £71,596 brought forward, makes £188,530 available. The ordinary dividend for the year is 10 per cent., free of income-tax. The sum of £30,000 is placed to reserve, and £70,280 is carried forward.

DENNIS BROTHERS.—The report for year ended September 30, 1921, shows a profit of £73,449, to which is added £15,226, making £88,675 available. Reserve is increased by £5,000. Dividend and bonus of 10 per cent. absorbs £65,107, leaving £18,568 to go forward.

EASTERN EXTENSION, AUSTRALASIA, AND CHINA TELEGRAPH.—The report for the year 1920 shows that gross revenue amounted to £2,514,825, from which is deducted ordinary expenditure £744,931, and £451,307 for maintenance of cables and special expenses leaving £1,318,584. After providing £666,138 for excess profits duty, corporation tax, and income-tax payable in England, debenture interest £30,096, expenses on new capital issue £5,451, there remains a balance of £616,898, to which is added £232,440 brought forward, making £849,338 available. The sum of £450,000 has been added to reserve fund. Dividend of 10 per cent., free of income-tax, absorbed £318,559. The balance of £80,779 is carried forward.

EASTERN TELEGRAPH.—The report for 1920 shows that revenue amounted to £4,381,856. From this is deducted £1,629,057 for the ordinary expense, and £1,359,726 for other expenditure, leaving a balance of £1,393,073. Income-tax, corporation profits tax, and excess profits duty payable in England, interest on debenture stock, and dividends on preference stock absorbed £474,015, leaving £919,058, to which is added £416,082 brought forward, making £1,335,140 available. The sum of £500,000 is placed to general reserve fund, and £100,000 to the maintenance ships fund. A dividend of 10 per cent., free of income-tax, for the year on the ordinary shares absorbed £400,000. There has also been paid a dividend, free of income-tax, on the new ordinary shares amounting to £18,662. The sum of £316,479 is carried to next account.

HUMBER, LIMITED.—The net profit for year ended August 31, 1921, after making due provision for excess profits duty, corporation profits tax, income-tax, directors' remuneration, &c., amounts to the sum of £103,999, to which has to be added the net amount shown on the balance-sheet brought forward from 1920, £94,429, giving a total available balance of £198,428, which the directors recommend should be dealt with in the following way:—To add to the buildings reserve fund, £20,000; to add to the general reserve fund £40,000; to place to a taxation reserve fund, £10,000; to pay a dividend of 6 per cent. on the preference shares for the year ended August 31, 1921, £19,890; to pay a dividend of 10 per cent. on the ordinary shares, £29,288; to carry forward, £79,250. The directors state that they are pleased to be able again to congratulate the shareholders upon the result of the years' working, more especially in view of the fact that export trade has dwindled to a minimum, in consequence of the rates of exchange and excessive duty in almost every foreign country. It will be remembered that reference was made in the last report to the serious fire, which destroyed a large portion of the b-d-v building and other shops. These buildings have now been rebuilt upon a larger scale, and are more efficiently arranged. The directors are glad to state that the reputation of the company's productions is still on the increase, and the company's two models having thoroughly established themselves in the favour of the public. The cycle and motor cycle departments

The complex design and the technical ingenuity of the modern Strong Room is silent testimony to the high development of those powers of violence which, through past generations, man has learned to wield in the effort to attain his ends.

Planning the Strong Room

WE shall be pleased to consult with Bankers and their Architects contemplating the design of Strong Rooms, Safe Deposit installations, and all classes of security work.

For 63 years we have confined ourselves entirely to work of the highest standard, and as a policy have incorporated every advancement made by science in the construction, irrespective of cost, and offer our services to those who really desire the best.

Wide experience has given us useful data and memoranda which is always at the disposal of the Architect, and we shall be pleased to prepare plans and specifications free of charge and without obligation of any sort.

THE CHATWOOD STRONG ROOM

The Chatwood Safe Book.

Post a card to-day for a complimentary copy of The Chatwood Safe Book, which contains full details of the various models.

WESTERN TELEGRAPH.—The revenue for the year ended June 30, 1921, amounted to £2,073,498, and the working expenses to £1,024,445. After providing £32,747 for debenture stock interest and £306,536 for income-tax, excess profits duty, and corporation profits tax, there remains a balance of £709,790; to this is added the sum of £149,410 brought forward from June 30, 1920, making a total of £859,200. The directors have transferred £350,000 to the general reserve fund, £50,000 to the maintenance ships reserve fund and £50,000 to the land and buildings depreciation fund. Further expenses of issue of new capital amounted to £1,336. Four dividends of 2½ per cent. each have been paid, amounting to £259,005, making a distribution of 10 per cent. free of income-tax, for the year ended June 30, 1921, and a dividend of 4½ per cent. free of income-tax, has been paid on 96,102 new shares, in accordance with the conditions of allotment, which amounted to £19,220, thus leaving a balance of £128,738 to go forward to the next account.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Seasonable weather continues to prevail over the United Kingdom, and the recent cold snap will tend to harden the young wheat plant, which presents a healthy appearance in early districts. Sowings are not yet completed, but reports to hand indicate a fairly large area under cultivation, though it is doubtful if same reach last year's figures. Firm conditions governed the market during the period under review, with steady trading in force. Native wheat sells steadily at 49s to 52s for suitable milling samples, with inferior lots at 40s to 45s per 504 lbs, free on rail. Imported descriptions ruled firmer, while in moderate request. No. 1 Northern Manitoba, 57s 6d; No. 2 hard winter, 53s 6d, both ex ship, 480 lbs, and Australian, ex store, 53s landed per 496 lbs. More activity was noticeable with regard to forward positions, and a generally firm tone ensued. Cargoes of No. 1 Northern Manitoba arrived out to load sold 50s 6d; Australian, old crop afloat, 48s; and Baril, 62½ lbs, just sailed, at 48s per 480 lbs. Visible supplies in North America show a slight falling off, also quantities afloat, but port stocks here are on a fairly liberal scale. Crop prospects continue satisfactory in most exporting countries, apart from some complaints of excessive heat in Australia, which is adversely affecting late-sown wheat. Flour trade continues very quiet, though there is a slight improvement in demand for home milled, prices showing a decline generally of 2s per sack. London straight run quoted 49s to 50s, town households 47s, patents 52s. All English straights 43s per sack delivered. Country straight run 38s to 40s, free on rail, London. Of imported, Canadian export patents quoted 48s, straight 44s, Kansas patents 45s, and Australian 42s per 280 lbs, ex store. Forward business remains more or less at a standstill. Kansas top patents, December seaboard sellers, 43s; Canadian patents 42s, and Australian, January-February, 36s per 280 lbs, c.i.f. Offials firm, and sparingly offered. Broad bran, 19s 10s to 110; ordinary ditto 109, middlings 110 10s to 111 per ton, ex mill. Plate pollards 117 10s, ditto fancy middlings 111 10s per ton, ex ship. Barley quietly steady. English malting quoted 45s to 70s, grinding sorts 38s to 44s, free on rail. Of imported, Californian 38s to 55s, as to quality, all per 48 lbs. No. 3 Canada Western, ex ship, 34s; No. 4 ditto, landed, 34s 6d; Canada feed, landed, 31s 6d; American feed, 30s; ex quay, all per 400 lbs. Forward business included cargoes of Dan-Bess-Kustendji arrived sold 28s 9d; and ditto, on passage, at 29s 3d per 400 lbs. Parcels dull. Maize more firmly held, with a better demand. Yellow, La Plata, 35s; African quoted 35s 6d; and white flat African at 35s, all landed. In the forward market holders required firm to rather dearer prices, but only moderate sales resulted, including cargo of No. 1 and/or No. 2 white flat Rhodesian, afloat, at 30s 6d per 480 lbs. A good business transpired in white African maize meal, November-December, at 17 12s 6d, London and Southampton, and yellow ditto to Glasgow, November-December, at 17 13s 9d. Oats fully steady to rather dearer, with improved inquiries. English ranges from 31s to 37s 6d, free on rail, per 336 lbs. Of imported, Plate quoted 27s 3d to 27s 9d; Canada Western, 31s 6d to 32s 6d; Chilean tawny, 28s to 29s; and New Zealand 34s to 35s per 320 lbs, all landed terms. English beans met with rather more attention. Springs quoted 54s to 57s, and winters 47s to 50s per 532 lbs. Peas in slow request. English Maples 60s to 65s; Duns 50s to 54s per 504 lbs, free on rail. Oatmeal firm, with a good demand for all descriptions. English, all cuts, 19s to 20s; ordinary Scottish, 19 10s; American, 18 10s; English rolled oats 121 to 122; flaked oats 123 to 124, all per ton. Homeward grain chartering was on a moderate scale, but late rates generally maintained, especially for early loading. From the River Plate prompt steamers up river prompt, and December done 20s, heavy grain; and January-February, 22s 6d to 23s 9d, with option of oats and linseed at proportionately increased rates to U.K./Continent. American Northern Range ports to U.K., early December, paid 4s; and Marseilles 5s 6d per qr, with 14½ cents per 100 lbs to Antwerp/Rotterdam. India fixed at 20s dead weight, November-December, and Dalny beans to U.K./Continent at 21s, with Scandinavian options. Australia steady, quiet, with fixtures at 22s 6d, basis South Australia or Victoria to U.K./Continent, December, and 50s, January-February, with Indian options. South African maize quotes 22s 6d prompt, while Danube done at 19s 6d to 20s prompt to U.K./Continent.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated November 24th, is as follows:—Pig-iron: There is no further development in the situation. The market is flat, and until makers get further relief in transport and fuel costs they are unable to sell at competitive prices. Hematite pig-iron is relatively very cheap, as East Coast mixed numbers can be bought at 110s, the same price as No. 3 Cleveland G.M.B. Manufactured iron and steel: The stoppage of naval armament orders is an adverse factor, and affects Clyde and Sheffield steel works particularly. Orders for steel are very scarce. Steel ship plates, home, 110 10s; steel ship angles, home, 110; iron bars, home, 112 10s; steel rails, home, 110 net. Iron ore: Beyond an occasional small deal in imported ore, there is nothing doing either for prompt or forward delivery. Best Bilbao Rubio ore 27s per ton nominally.

Our Sheffield correspondent writes:—The official intimation of cancellation of contracts for four super-Dreadnoughts acted like a wet blanket upon the spirits of the steel trade generally, since the work would have brought much valuable business to many firms in Sheffield outside the actual contractors, and sensibly diminished the local unemployment roll. The preparation of armour-making plants has now been stopped. Large quantities of Swedish pig-iron and ferro-chrome were imported for use in the manufacture of armour and guns before the decision not to proceed with the building of the ships. The outlook for some branches of iron and steel is better, and with Continental material practically out of the market the home demand should necessitate the re-lighting of some of the many blast furnaces and steel furnaces. Prices are now very low, most of them less than half those obtaining a year ago, while some have dropped by two-thirds. Things have never been so bad in the departments producing railway tyres, axles, and springs for a long period. The plants are not working a third of their capacity. The home railway companies have not yet departed from their policy of buying from hand to mouth, while South America, Sheffield's largest customer in the past, is obtaining the bulk of her requirements from Germany and Belgium. It is significant that increasing difficulties are being experienced in getting deliveries of any iron and steel material from Germany. All the steel foundries are quiet, and there is no mitigation of stagnation in tool steel. Foreign trade in tools, steel, files, and cutlery is extremely bad, and no revival this year is now possible. The demand for house coal is improving, and as consumers have little in stock dealers should soon be busy. The London demand is growing strong. Manufacturing coal is quiet, with no interest in forward supplies. Slacks are a steady market. Blast furnace coke production is going out of hand freely, and with the projected starting of more furnaces the trade should increase.

Our Glasgow correspondent (writing on Thursday) says:—The suspension by the Admiralty last week-end of all preparatory work on the four war-vessels placed only a few weeks before has completely demoralised the industrial position on the Clyde. There are still some people in the shipbuilding and steel trades who cling to the hope that a couple of the new vessels will yet be built, and labour influences are beginning to advocate that instead of sacrificing the four new boats, a way out of the difficulty and of the position created can be advantageously secured by scrapping four obsolete vessels and filling up the blanks with super-Hoods. Meanwhile, no fresh feature has shown itself in shipbuilding relations. No new contracts have been given out, but a good deal of progress continues to be registered in the fitting-out of "suspended" steamers. But even in that line builders are not pushing operations, for the declared reason that they look for further breaks in prices of material, chiefly because of the dispute in force between English and Scotch makers as to quotations. The latter are this week naming 110 10s a ton for ship plates and 110 for angles, and it was reported on 'Change yesterday that North-East Coast makers had sold some lots of plates here at as low as 109 15s a ton, and angles at 109 5s delivered. With 18s a ton for charges, the net sum realised works out at near 108 13s for plates. Scotch makers state that they are not disposed to follow the downward trek, either in heavy or light material, for, no matter what the figure named, buyers treat themselves to dribbles. In the home market it is felt that consumers have no bookings of consequence to work on. But there are still firmish indications cropping up in the export market, and experienced producers are satisfied that if they could only assume a slightly harder tone a good bit of accumulated work would come to light. Encouraging hopes of a better steel position is taken from the private reports from Germany and Belgium as to the position of trade influences there. German iron and steel makers are practically out of this market for a variety of products, and Belgium is holding off from commitments in a way that has not been seen for months. Of Scotch pig-iron only some 300 tons were shipped last week. In the home position quotations have been reduced 2s 6d a ton at 106 10s for

No. 1 and 106 5s for No. 3. Scotch hematite is offering at 106 10s, with no takers, East Coast terms being fractionally easier. Bar iron prices were cut by 30s a ton in the beginning of the week, so that the basic rate for crown bars is 112 10s, bringing the net drop for the year up to 115 a ton. Black sheets f.o.b. Glasgow, at which some export transactions have been effected, compare with 109 10s quoted for Belgian sheets f.o.b. Antwerp. Again Scotch bars are given as 111 10s for export, against 108 4s per ton Antwerp. And yet it is the export market which is the anchor of the hope that is largely held in industrial circles of the coming recovery in trade, and to which the Chancellor of the Exchequer pledges himself. An important element of strength—one on which a deal of stress during this otherwise drab business week has been laid—is the declared fact, gathered of current experiences, that consumers at home and abroad are unusually bare of all descriptions of material stocks, and that every day is bringing us nearer the juncture when these must be enlarged and replenished—and, therefore, the turning point in volume of trade passing. Coals plentiful for home purposes, and easier in tendency.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

There has come in the Cumberland and North Lancashire hematite pig-iron market the pause in business which even in the briskest times is due as the end of the year draws near, and any hopes that were entertained that production in the closing months might approximate to that being secured before the coal stoppage began in the spring have been extinguished. Makers in reducing ordinary iron to 106 per ton have made the utmost concession that can be expected in existing circumstances. That there will be a further fall in prices is certain, but it will not be due until costs drop also, and meantime users are apparently minded to wait for the lower prices. At all events, they are content to buy only such iron as they need to keep them going from one week-end to another, and this hand-to-mouth business is of such small extent that one of the furnaces has been damped down this week. No more than seven furnaces remain in full blast, and four of these are on ordinary iron for consumption at the steelworks at Workington and Barrow. The requirements of low phosphorus iron, it may be gathered, are inconsiderable. South Wales has for the time being ceased to be a user; Scotland is taking very little, and the greater proportion of the make is going to the midlands. The outlook in the steel trade here is a shade brighter. Orders for railway material are now more numerous, and it is stated confidently that Workington will be able to keep the mills rolling rails, fish-plates, sleepers, and tube steel until Christmas, and probably longer. Nothing is doing in the iron ore industry, and few mines except those raising low phosphoric ores for the furnaces on special iron are working.

The coal trade has been made brisker by an increase in the demand for household consumption. Owners are meeting the severe competition from Scotland in the Irish market, and are now "cutting" among themselves. The result is that a good deal of the lost ground has been recovered, and four of the collieries are working full time. Other collieries, however, have difficulty in getting in more than three or four days a week. There is no outlet for the smalls on account of so few coke ovens being in operation. The coking plants, of course, are idle to a large extent because of so few furnaces being on ordinary iron, for which the local coke can be used. Continental business is practically non-existent.

BY-PRODUCTS TRADE.

The position in the by-products trade does not get any better. Pitch has developed on the side of weakness, and the price is now down to between 45s and 50s per ton. Naphthol is much more plentiful, and the price has fallen to 2s 7d to 2s 9d per gallon. Naphthalene crudes are worth from 15s to 18s per ton, and refined from 15s to 18s per ton. Cresylic acid has fallen to 2s 2d per gallon for pale 97-99 per cent., and dark 95-97 per cent. is worth 2s per gallon. Carbollic acid continues its downward course, and makes 1s 5d per gallon for crude and 4½d per lb for crystals. Creosote is weaker at 7d per lb; 90 per cent. benzol is firm at 2s 9d, and pure benzol is scarce at 3s 8d. Business in intermediate products has continued quiet, although there has been fair export enquiry for some of the leading products. The position of sulphate of ammonia is unchanged. The demand remains satisfactory, and prices are maintained at 15 8s for neutral and 14 3s for ordinary quality, both for December deliveries.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The decline in wool values at the London auctions has occasioned no surprise in Yorkshire, but at the same time it has had the effect of holding up business to a considerable extent, as prospective buyers are not willing to commit themselves until they feel reasonably sure that there is to be no further depreciation. Unfortunately, increased offerings of merinos came just at the time when the fall in the German mark made it practically impossible for German firms to continue buying on a big scale, and apparently the home demand is not sufficient to absorb any increased offerings. In the circumstances, the directors of B.A.W.R.A. have curtailed the series by one day, and the Liverpool sale, which was to have been held next month, has been cancelled. This is obviously an attempt to bolster up the market, but it

remains to be seen how far it will prove successful. In the meantime topmakers are meeting the changed conditions with lower quotations all round, and it is now possible to buy a good warp 64's at about 3s 8d spot delivery. For delivery in the first quarter of next year some firms are quoting as low as 3s 6d, but wool will have to be still cheaper than it is to-day if tops are to be made at that figure and show a profit. There is not enough business passing to test values properly, and quotations must be considered more or less nominal, though there is a growing feeling that business would expand if values could be stabilised on a basis of about 3s 6d. There is less inquiry for yarn, and although most firms have enough work in hand to run machinery to the end of the year, the outlook after that is rather gloomy. Prices of yarns are again easier and in buyers' favour for practically all sorts. There is very little change in the piece goods trade, though some Huddersfield mills are better employed.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

When the last series of Colonial wool sales closed in October, merinos were firm, but crossbreds showed some signs of irregularity. Since then, however, a certain amount of weakness has developed in the raw material markets, and this has tended to shake confidence and cause a general slackening of business. Cabled reports from Australia revealed a decline in values, and the sales at Hull and Liverpool, which have been held since the last series in London, also showed a slackening of interest and a lower range of prices. In view of this hesitation on the part of buyers, the current series in Coleman Street Wool Exchange excited more than ordinary interest, and the results of the opening day were eagerly awaited in the consuming centres.

Judging from the first day's sale, the course of trade is very much on the lines expected. Both home and Continental buyers were well represented, and the former again made practically all the running. France and Germany gave some assistance, but it is obvious that German buyers are greatly crippled on account of the adverse exchange, and while the mark remains in such a demoralised state it is not reasonable to expect that much support will be forthcoming from Germany. It should be noted that the offerings were not of a very attractive character, and in merinos the new clip was generally faulty and lacking in fineness. Generally speaking, average and faulty merinos, both greasy and scoured, showed a decline of about 10 per cent. compared with the closing rates in October. The finer grades of crossbreds met with a good demand, but here, also, the prices realised were from 5 to 7½ per cent. down, while medium and coarse qualities suffered a full 10 per cent. decline. Slipes and scoureds met an irregular demand, and although short slipes were practically unchanged compared with the last sales' closing prices, full-length slipes declined fully 10 per cent. A similar decline was recorded in Puntas, but the offerings were mainly of the shabbier and wastier sorts.

It remains to be seen whether values can be maintained on the new level, but it is manifest that if any further weakening occurs it will have a bad effect on business in Yorkshire. Home trade requirements are not large, and unless buyers can be assured that prices are to remain reasonably steady, they will naturally hold off and wait for the market to become stabilised. In the meantime the fall in wool values has been largely discounted by topmakers, most of whom reduced their quotations after the Liverpool sale. Prices of spot merino tops are still well maintained, owing to the scarcity of lots for immediate delivery, but it is possible to book forward contracts at much more favourable prices than those recently quoted.

The Australian Premier (Mr Hughes) made it very clear recently that he would not sanction the continuance of the export regulations on wool. He told a deputation that he would grant an extension of a fortnight, but that as conditions to-day were so entirely different from those which prevailed when the Government imposed the regulations, he would not agree to a further extension. The time limit expired on Tuesday, and according to cabled information the Federal Government have declined to renew

Continued from page 961.

alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.
"Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 25.

A generally quiet tone pervaded the markets throughout the week, particularly with regard to raw materials, and prices almost without exception were inclined to favour the buyer.

SUGAR.—All spot parcels of refined received fair attention, but prices eased. There was not much interest shown in forward positions. Raw descriptions experienced a slow sale. Messrs Tate and Lyle quote cubes, 54s 3d to 55s 3d; caster, 51s 3d to 51s 9d; crushed, 50s 9d; pieces, 36s to 44s; granulated, 48s 9d to 49s 3d, London; also No. 2 granulated, January-March, sold, 47s 3d. Yellow crystals, spot, 43s 3d. Crystallised West India sold from 38s to 41s, as to sample; muscovado quoted 32s to 35s. American granulated, spot, 43s 3d; ditto, January-March, 20s 3d, c.f. and i., U.K. Dutch granulated, spot, 48s 6d; ditto, prompt shipment, 21s 6d; cubes, 26s 6d, f.o.b., Amsterdam. White Java, spot, 46s 6d; ditto, November-December, 19s 6d, c.f. and i., London. Belgian crystals, November-December, 19s 6d, f.o.b., Antwerp. Cuban centrifugal basis, 96 per cent., December-January, sold, 14s, c.f. and i., U.K. Cuban stocks stand at 1,055,000 tons, against 265,000 same time last year. Liquid glucose, November delivery, duty paid, sellers, 26s 6d.

COFFEE.—A steady tone prevailed with regard to spot parcels, and a fair inquiry was experienced for all the finer qualities, and which are scarce. Good bold, new crop, Costa Rica, sold, 14s; peas, 15s. Future delivery market ruled weaker. December, sold, 47s to 46s 6d; March, 48s to 47s 9d; and May, 48s 3d to 48s.

COCOA.—Only a small business was carried through at about late rates.

TEA.—Some 75,700 packages Indian were offered in auction this week, and while all medium and common descriptions sold readily at full to dearer rates good and fine disclosed some irregularity, and recent prices were not maintained in several instances. 14,000 packages Ceylon aroused active support at full to dearer prices, all undergrades showing the greater appreciation.

RICE.—Market steady, but only a moderate volume of business was effected. Two stars Rangoon, spot, sold, 18s 6d. No. 1 garden Siam, afloat, quoted 19s. Beans steady. Rangoon hand-picked, afloat, sold, 7s 9d. Japanese green peas, October-December steamer, sellers, 33s.

SPICE.—Pepper market, after being weaker, assumed a steadier tone. Fair black Singapore, spot, sold, 33d; December-February steamer, 33d to 35d; Aleppy, spot, quoted 4d; Tellicherry, 43d; white Singapore, 74d; Muntok, 74d; ditto December-February, sold, 74d to 76d. Zanzibar cloves, spot, 1s 74d; November-January steamer, 1s 44d. Pimento, spot, sold, 28d. Flake tapioca, fair quality spot, sellers, 13d lb. Fair Penang, seed pearl, spot, 18s; small sago, 26s; sago flour, January-March, 12s 74d. Desiccated coconut, fine cut, spot, 41s 6d; medium, 42s 6d. Ginger steady, but generally quiet.

FRUIT.—A moderate inquiry ensued for currants, and firm features governed the market. Pyrgos, sold, 57s; Amalia, 58s to 62s; Gulph, 68s to 75s; and Vostizza, 80s to 88s. Valencia raisins very firm. Half-boxes quoted 136s to 138s; quarters, 150s to 172s. Sultanias steady. Smyrna, medium to good, 117s to 125s; choice, up to 145s. Dates steady. Hallowee, first tide, quoted 40s; and Siar, 28s.

JUTE.—A quiet and easier tone prevailed during the greater part of the week. Native first marks, old crop, assortment, substitutes, November-December, Hamburg, sellers, 24; new first grades ditto, 24; new lightning grade, 20; heart sold at 16, November-December and December-January, Hamburg, Daisee, No. 2 new crop, December-January, Dundee, sold, 24 10s. Hessians dull. 10 oz, spot, 24s; 8 oz, 21s; B twills, November-January, 60s.

HEMP.—Manilla generally slow, and prices barely steady. D grade, October-December, sellers, 51; E, 48; G, 40; J, 38; K, 36; L, 35 10s; M, 31; streaky, one, 44; two, 42; three, 40. New Zealand very slow, and fair, October-December, quoted 34. Italian nominal, and P.C., spot, quoted 53.

SHELLAC.—Market quiet. T.N., spot, 345s; December, 335s to 325s paid; March, 315s to 310s, 312s 6d.

COPRA.—Market steadier this week, as sellers adopted more reserve, and a moderate demand prevailed. F.M.S. Straits, October-December, Rotterdam, sold, 26 to 26 5s; November-January, 26 5s to 26 15s and 26 5s; December-February, 26 10s to 26 17s 6d and 26 7s 6d. Ceylon, October-December, London, quoted 28; South Sea Islands, ditto, 25; and Cebu, to Hamburg, 25 5s. Palm kernels steady, quiet. Afloat parcels, also November-January, Liverpool, sold, 17 15s to 18s.

RUBBER.—Market generally quiet, and standard crepe and sheet spot sold, 11d to 10 3/4d and 10 3/4d; December, 11d to 11 1/4d; January-March, 11 1/4d to 11 3/4d; and April-June, 1s 0 1/2 to 1s. Fine hard Para, spot, 1s 2 3/4d; soft fine, 1s 2d; and ball, 8d.

EGG PRODUCTS in quiet request. Liquid yolk of prime quality

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

spot, sold, 110s; albumen, at 2s 11d. Native dried whole egg, spot, quoted 2 1/4d; spray, 5 1/4d.

MENTHOL.—Spot, 22s. Japanese peppermint oil, spot, 4s 7 1/2d; aniseed, 2s 2d. Japanese slab camphor, spot, 4s 5 1/2d per lb. Japanese wax, spot, 100s per cwt.

ISINGLASS.—At periodical auctions a fair quantity offered met with fair support, though prices disclosed some irregularity. Brazilian lump advanced 3d to 6d per lb; tongue, 6d to 1s; honeycomb steady. West India lump, 3d dearer. Best Saigon tended against the seller, but undergrades went off firmly. Indian leaf steady, with tongue and purse dearer. Penang qualities in small supply sold at high rates.

OILS.—Linseed firmer. Spot, net, naked, 27s 6d; November-December, 26s 6d; January-April, 26s 9d; May-August, 27s 3d. Rape dull. Crude, spot, 48s; refined, 53s. Cotton easier. Crude Egyptian, 34s; Bombay, nominal; common edible, 43s. Chinawood: Hankow, spot (barrels), 69s; and shipment, 70s to 72s 6d. Coconut easier. Ceylon, spot, 47s; November-December, 42s; Cochin, ditto, 47s to 48s. Soya quiet. Oriental, barrels, ditto, 35s 6d. Japan fish quiet. October-November, cases, 21s. Cod quiet. English, spot, 29s to 31s. Groundnut easy. English crushed, naked, spot, 48s; deodorised, barrels, 59s. Turpentine irregular. American, spot, 69s 9d; December 69s 9d; January-April, 70s 6d. Rosin firm. American, grade B 16s 6d; F., 16s 9d; G., 17s; K., 18s 6d; WW, 22s; French, F/G, 15s 9d; H., 15s 9d; WW, 18s 6d; extra pale, nominal. Petroleum quiet. American standard white, 1s 4 1/2d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market quiet but firmer. Calcutta, November-December, sold, 16 to 16 1/2s. Plate, spot, Hull, quoted, 16 1/2s; afloat, 15 1/2s to 16 2s 6d; November-December, 16; January-February, 15 1/2s. Rapeseed firmer. Toria, November-December, sold, 17 1/2s; real bold Ferozepore quoted 17 1/2s; brown Cawnpore, 16 1/2s. Cotton-seed unsettled. Egyptian black, November, 11 1/2s; and white, 11 1/2s. Bombay, December-January, 18 1/2s. Gingly steady. Chinese, November-December, Continent, 22 1/2s to 23. Castor, Bombay, November-December, 15 1/2s. Ground nuts steadier. Coromandel, machine-dried, November-December, Hull, 22; new crop, December-February, Continent, 21 1/2s to 22.

22. Chinese decorticated, f.a.q., ditto, Continent, 21 1/2s to 22 1/2s per ton.

METALS.—Tin continued active and firmer until last Tuesday, price fluctuating to 161 1/2s and three months to 163 1/2s. Prices declined during the middle of the week on selling desire, offers being well absorbed, while these dates moved down to 160 1/2s and 162 1/2s respectively, improving since to 163 1/2s. Dealings were on a limited scale at Thursday's market, while cash realised 160 1/2s to 161 1/2s and finally at 160 1/2s, end of December 161 1/2s to 161 1/2s, three months' 162 1/2s to 162 1/2s. At Friday's session the tendency was firmer, dealings being active. Cash sold at 161 1/2s to 162 1/2s, middle of December 162, and three months' 163 to 163 1/2s. English ingots, 159 1/2s to 160. Copper manifested a rather steadier tone until last Wednesday, standard cash reaching 66 1/2s 6d, three months' 68. At Thursday's market cash changed hands at 66 1/2s, and three months' 67 1/2s 6d to 67 1/2s. At Friday's session cash changed hands at 66 1/2s, late January 67 1/2s, and three months' up to 67 1/2s 6d. Electros 75 1/2s to 77, best selected 67 1/2s to 69 1/2s, strong sheets 101, wire bars 76 1/2s to 77. Lead firmer at 25 1/2s to 26 1/2s, as to position. Spelter firm at 26 1/2s to 26 1/2s. Antimony: English regulus, 36 to 39. Aluminium: Home trade quoted at 120; export, 125.

NEW ZEALAND

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water. An Ideal Country for the Farmer, the yield of grain and percentage of lambs being phenomenally high. New Zealand, a country as large as the United Kingdom, with a population slightly over one million, exports annually products up to the value of Thirty Millions Sterling.

NEW ZEALAND IS RICH IN COAL, IRON, TIMBER, GUM, GOLD AND SILVER.
Total yield of minerals, over One Hundred and Thirty Million pounds.

The Government has advanced over Twenty-One-and-a-Half Million Pounds to Farmers and Workers, at a low rate of interest, for improvements and buildings, and is empowered under the new "Housing Act" to set apart Crown Lands and make advances up to One-and-a-quarter Million Pounds annually for the same purpose. Railways (3,000 miles), Telegraphs and Telephones (216,742 miles of wire) are State owned and operated.

To those desirous of making a home in the new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw, Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

THE MONEY MARKET.

WHILE the turnover of money during the week was large, the market had already prepared for the demands which were made on it at the end of November. So 4 per cent. was the highest rate paid for money (except for a trifle borrowed from the Bank on Monday), and when the dividend was paid on the War Loan on December 1st, the effect of this and other Government disbursements was immediately felt. Thus the discount rate fell below 3½ per cent., and the margin between money and bills became

again very small. In some quarters an increase in the supply of bills was reported, but this experience was not general.

	Dec. 2, 1921.	Nov. 25, 1921.	Nov. 18, 1921.	Nov. 11, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

Thursday's Bank return showed an addition of £4,000 to the gold stock and an increase of £1,807,000 in the circulation, making the reserve £1,803,000 lower. Government securities rose by £7,123,700, but other securities fell by £837,200. Deposits were thus £4,475,800 higher, other being increased by £6,327,600, while Public fell by £1,851,900. The circulation of currency notes was increased by £941,200 to £312,628,300, which includes £1,788,500 for notes called in but not yet cancelled. The fiduciary issue is £262,889,800, or £54,665,400 below the maximum.

The following table shows public income and expenditure for the week ended November 26, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	15,099	Supply Services	9,982
		Interest on Debt	1,730
		Sundries	325
		Reduction of Debt	2,417
		Added to Exchequer Balances ..	445
	15,099		15,099

These operations reduced the National Debt by the sum of £2,417,220, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 3,720	Depreciation fund	- 500
National Savings Certificates ..	+ 250	Surrenders of Bonds, &c.	- 676
Bank of England Advances ..	+ 4,000	Treasury Bills	- 12,871
Public Department Advances ..	+ 4,100	Unemployment Insurance ..	- 370
Sundries	+ 80	Exchequer Bonds repaid	- 150
	+ 12,150		- 14,567

The chief contributions to revenue were Customs and Excise £5,943,000, Estate duties £1,731,000, and Special receipts £4,124,918. The sales of Treasury bonds again showed a falling off, amounting to £3,720,000. The net sales of National Savings Certificates were £250,000. Treasury bill maturities exceeded the sales by £12,871,000, the total outstanding now amounting to £1,107,532,000. The total of Ways and Means advances was increased by £8,100,000, making £192,658,000 outstanding. Of this total £8,250,000 has been advanced by the Bank of England, being an increase of £4,000,000 on the week. The total Floating Debt now is £1,300,190,000, a reduction of £4,555,000 on the week.

FOREIGN EXCHANGES.

In the exchange market the week has been one of the most difficult of the year. On Sunday last appeared the first newspaper reports that the British Government were seriously considering a modification in German reparation payments. At first the effect was small, as the mark fell only from 1,172½ on Saturday to 1,104½ on Monday. By Wednesday, however, the reports of discussions between the Treasury and Dr Rathenau had given rise to rumours of all kinds, and the rate fell to 967½. On Thursday rates were in complete confusion, a confusion much accentuated by the virtual breakdown, owing to bad weather, of communications with France and other parts of the Continent, with the result that there was a quite abnormal disparity between the rates quoted in different centres. At one time it was almost impossible to find buyers for marks, the rate dropping to 710 or below. At another it went up again to 800, and then ended the day at 725. Prices from New York came over, if anything, still lower, but yesterday morning there was a reaction, bringing back the rate to 830. The whole position is obscure. It would seem certain that some form of discussion is in progress, but nothing definite is known either of the nature of the

proposals or their chances of adoption. On the one hand, a moratorium for reparation payments over a certain number of years is talked of; on the other, the raising of a loan in this country, and perhaps in America, to enable Germany to pay the January instalment of reparation. It would have been thought that there is nothing whatever to be said for this second alternative. Either Germany can pay or she cannot. If not, it would seem, to say the least, inadvisable that a further advance should be made by this country to our Allies, either from Government or private funds, under the cloak of an advance to Germany for reparation payments. It would have been thought unnecessary to discuss this point had it not appeared that this unsatisfactory proposal is being ventilated in a good many quarters. The effect on the franc of these alarms and excursions has been almost equally marked. The Paris rate, which a week ago was 57.40, went as high as 57.57½ on the 29th, dropped suddenly on the following day, in sympathy with the mark, to 56.95, and on Thursday ended at 55.75, after being considerably lower. Indeed, in the evening the New York parity showed the rate well below 55. Yesterday morning, however, there was a reaction here also, and the rate was again up to 55.90. The Brussels rate has shown similar fluctuations, moving from 60.50 on November 25th, to 57.75 yesterday morning. The future rates in Paris were 3 to 5 centimes per month over spot, in Brussels 4 to 7 centimes below. Opinion in Paris was at first decidedly suspicious of the reported discussions, and hostile to any change in reparation arrangements. Reflection, however, would seem to have suggested that France would hardly lose, and would probably gain, by an arrangement which allowed Germany to concentrate on deliveries under the Rathenau agreement, by freeing her for the time from other obligations. Should, in addition, an advance be made to Germany for the next payments, France would gain still more, if, as might be supposed, Belgium could be persuaded to postpone in part its right of priority. Excitement over the mark has to some extent diverted attention from the almost equally rapid movement of the dollar, which from 3.99½ on the 25th, after falling away at the beginning of the week to rather over 3.98½, rose to 4.00½ on the 30th to 4.04½ on December 1st, and yesterday morning stood at 4.03½, after being 4.07. Recent reports from the Washington Conference can hardly be taken as a bull point, and the main cause of the movement must be put down to optimism as to European conditions in view of the possibility of a settlement of the reparation question. The quotation for futures remains practically unchanged at ½ cents per month over spot. With regard to other exchanges, the lira has moved in sympathy with the franc and mark, and at 95 shows an improvement on the week of over 3 lire. Neutral exchanges on the whole have, as was to be expected, gone in our favour, Switzerland moving up from 20.97½ to 21.09½, Holland from 11.15½ to 11.30, Spain from 28.77½ to 28.82½, after being up to 28.90. The Northern exchanges, after moving irregularly, are:—Stockholm and Christiania almost unchanged at 16.98 and 28.10 respectively, and Copenhagen very slightly higher at 21.70. Helsingfors, however, after its recent recovery, is depreciating again more rapidly from 209 to 237. In Central Europe, Vienna (Auslandskrone), after being up to 14,500, showed some recovery to 11,000, but the reports of riots there are likely to produce fresh depreciation. The rate for Inlandskrone on the 28th was 29,000, as compared with an Auslandskrone rate of 14,500 on the same day, an extraordinary increase in the difference between the two rates for which an explanation has still not been received. Warsaw also is rather better at 12,000, while Budapest, Belgrade, and Prague also show slight improvements. For Roumania quotations are still unavailable, and no real alleviation has yet been received from the extremely ill-advised regulations recently imposed. In the East, the Calcutta rate at 1s 4d is slightly higher, while Japan is cheaper at 2s 4½d, as compared with 2s 4½d a week ago. The silver market has been again very dull. China has been both buying and selling in restricted amounts, the Continent has been selling, and the Indian market

is for the time being dead. After some irregularities the price on December 1st was 37½d, the same as the preceding week. Shanghai and Hong Kong, however, are both rather firmer at 2s 8d and 3s 10d respectively, after being rather higher. In South America, Buenos Ayres is more than a penny cheaper at 43½d, Valparaiso has appreciated from 38.70 to 37.70, while Montevideo, at 40½d, is practically unchanged; Rio is slightly dearer at 80.

A SUMMARY OF NATIONAL FINANCE.			
FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO NOVEMBER 26, 1921.			
Total spent	£ 635,173,842	Raised by revenue ..	£ 584,067,194
Inc. in balances	1,266,546	Net borrowings	52,373,194
Total	636,440,388	Total	636,440,388

ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure ..	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

NOVEMBER 26TH.—Lord Chancellor at Tunbridge Wells. London Omnibus men decide against strike.

NOVEMBER 28TH.—Dr Rathenau and Dr Simon visit London.

NOVEMBER 29TH.—Sir James Craig's statement in Northern Irish Parliament. Dr Rathenau's interview with Sir Robert Horne. Mr Churchill speaks at dinner of British Overseas Banks Association.

NOVEMBER 30TH.—Sir John Bradbury returns to Paris. Sir Henry Lambert succeeds Sir W. H. Mercer as Senior Crown Agent for Colonies.

DECEMBER 1ST.—Panic on Berlin Bourse. Sharp rise in the mark. Riots in Vienna.

The terms of the new issue of Treasury Bonds were well received in the Stock Exchange, and strengthened prices in the Consol market, which also derived some benefit towards the end of the week from the disbursement of War Loan interest. German stocks rose sharply on the improvement in the mark.

Business remains restricted in the cotton markets, for although there is evidence of depletion of stocks in some quarters, buyers are very cautious in view of the uncertainties of the outlook. In the wool trade there is little change to report. A reduction of 10s per ton has been

made in the price of Cleveland pig iron; but although these are held to be signs pointing to future improvement, little satisfactory development is noted this week in leading branches of the iron and steel industry. Coal output is improving, but demand for steam coal is slack in anticipation of lower prices, and the demand for house coal (except the best qualities) is only moderate. Prices in the hide markets are recovering, and the wet weather has helped the boot and shoe trade. In the market for vegetable oils and oilseeds a rather better tone has developed. No new features are reported in the Belfast linen trade.

Details of movements and news in the principal markets from special correspondents appear on later pages of this issue.

THE ROAD TO SANITY.

ONCE again this week developments in the two paramount problems of the day—the International question and the Irish question—have completely overshadowed in importance the sum total of other current news and events. The crisis in the Irish negotiations has arrived. Ulster has definitely rejected the proposals of the Imperial Government, and Sir James Craig, the Ulster Premier, stated in the Northern Parliament on Tuesday that "by Tuesday next either negotiations will have broken down or the Prime Minister will send me new proposals for consideration by the Cabinet. In the meantime, the rights of Ulster will be in no way sacrificed or compromised." Fortunately, the first assumption that this uncompromising statement meant the break-up of Irish negotiations within a week has been tempered by the action of Mr Lloyd George in putting new proposals for peace before the Sinn Fein delegates. This new move resuscitates the spark of life in the Irish Conference, and so long as there is life there is hope. A profoundly disquieting feature in the situation is the belief expressed by Sir James Craig as to the measure of support in Great Britain for an intransigent attitude on the part of Ulster. We believe Sir James Craig's estimate in this matter to be almost as erroneous as would be the belief that English opinion supports the extreme Sinn Fein attitude on the matter of allegiance. The country at large, and most of those whom Sir James describes as "all those who are worth having on our side," desire above all things Irish peace, and whatever their predilections and prejudices, frankly realise that peace can only be achieved by a temper of accommodation and a policy which admits the possibility of giving as well as of taking. Contemplation of the alternative to Irish peace should in itself be sufficient to convince patriots of every shade of political opinion of the supreme duty of exploring with unruffled persistence every avenue by which reconciliation might be reached. Nor can we afford to overlook the fact that, although in one sense of the word Irish peace or war may be a domestic question, yet it is one that has the gravest repercussions upon International problems. To the attention of those who have any doubt upon this point we commend the letter appearing in our last issue, in which Mr Evans reveals the Irish deadlock as the primary obstacle to financial co-operation between this country and the United States.

American co-operation is essential to the solution of the problems of international finance, and if the failure to reach a solution of the Irish problem is one obstacle to co-operation, another not less formidable is created by the attitude of France upon disarmament and reparation. Our Allies across the Channel may rest assured that this country has not forgotten their sufferings and sacrifices during the European war, nor is there any inclination to withhold the genuine sympathy to which France is entitled on account both of her geographical and of her budgetary position. Prosperous regions of France have been devastated, and the gravity of the financial position which the war has left behind is common knowledge. For several weeks past our Paris correspondent has described the great efforts which are being made to reduce the estimated deficit in the coming budget. It is not surprising, perhaps, that in such circumstances France should cling as long as possible to the hope of exacting from her defeated devastator the uttermost farthing, in order to recoup her losses and rebuild her financial position. Briefly, France sees in the exaction of the full indemnity the only hope of financial salvation, and can see in disarmament only the surrender of indispensable safeguards against German default or defiance. She sees, moreover, that the Treaty of Versailles has failed to produce political security. In spite of the diplomatic irritations of the moment, aggravated as they are by French policy in the Near East, and the crude asperity of Lord Curzon's recent phraseology, this attitude of mind should at least command sympathetic understanding in this country, if it cannot be shared. No one in this country wishes to pursue any policy that would not conduce to the physical security and financial recovery of France. But views differ as to the road by which that goal can be reached.

Since the wild electioneering days of 1918, enlightened opinion in this country has been engaged on what Mr Churchill describes as "a steady, remorseless march towards financial sanity." That march has been accelerated by the world-wide depression of trade and the ever-increasing chaos of the foreign exchanges, and if it has taken us three years to come down, from the politician's vision, to practical reality in matters of international finance, we need hardly be surprised that France, with the war shock still affecting the national mind, should lag somewhat behind us in the return to recognition of relentless economic law. It is now clearly realised in this country that the attempt to exact the full reparations bill according to the present system of gold payments cannot but force Germany into a financial position that will react to the gravest detriment of Allied countries. If abatements, delays, and changes of method find favour here, they are not promoted by disregard of French needs, or tenderness for Germany, but by deliberate conviction that modifications and changes are essential in the interests of the Allied countries themselves, particularly France. If you are expecting golden eggs from a goose, it is not a business proposition to pursue the intensive system so vigorously that after a short period of concentrated laying the bird will become unproductive for the remainder of its existence. Excessive pressure for the payment by present methods of approaching instalments is obviously short-sighted if it has the effect of turning the remainder of the reparations bill into a bad debt. Experts in this country are convinced that if practical courses are pursued, Germany can pay a substantial amount. But the matter is obviously an intricate one, essentially demanding long views and the willingness for accommodation and adjustment in accordance with economic wisdom and possibility. It is on such grounds, and on such grounds alone, that such plans as a temporary moratorium or a modification on certain stringent conditions are being actively discussed in official as well as in financial circles. Unless France is prepared to co-operate with Great Britain in seeking solution along purely business lines, no solution in the best interests of France as well as of ourselves seems possible. If in this country it is believed that the path to international security of financial rehabilitation lies through disarmament and international agreement on the whole financial problem, including that of German reparations, France should realise that vague and faulty though

present suggestions may be, they are at least aimed genuinely at the common benefit of all, and depend for success on her practical co-operation. Co-operation with France is as essential as co-operation with the United States, and it should not be beyond the understanding of our Allies that British views on financial and economic expediency may not be wider of the mark than theirs. The reparations problem demands from French statesmen the breadth of view and the fund of courage and common-sense which the Irish problem demands of British statesmen. Both problems are urgent enough in themselves; but the urgency of both is immeasurably enhanced by the truth that measures for the settlement of both are steps essentially precedent to the wider settlement of predominant world problems.

Mr Vanderlip has this week suggested that the United States should surrender her claims on her debtors to "humanity." Such a degree of idealism may be undesirable as well as impracticable. But, in any case, American opinion, quite naturally, is not ripe for financial quixotism so long as Europe fails to give to the world convincing proof of a genuine attempt to heal her own political and financial sores. Mr Stanley Baldwin, in a speech at the end of last week, dwelt upon signs of recovery in the trade situation, and Mr Stanley Machin, president of the London Chamber of Commerce, has corroborated his views. But it cannot be too often remembered that the wheels of international commerce cannot be set in normal and steady motion until the causes of the present insecurity and the frequent currency fluctuations are removed. Experts, after prolonged exercise in diagnosis, are at last concentrating upon prescription, and we hope and believe that we are on the eve of concerted effort in the direction of practical solution.

THE RISING WALL OF TARIFFS.

JUST at a time when the world, if it is to recover from the waste and disorganisation of war, should seek after the development of industry and the free exchange of commodities, the nations of which it is composed are doing their utmost to arrest development and to prevent exchange. The war of arms is turning into a war of tariffs. The nations are behaving as if to trade with them were the worst of injuries; they are raising walls of tariffs to keep trade away. All want to sell to export, but none, it would appear, want to buy, to import. How one can export without being paid for one's goods by imports no one stops to inquire. That feverish confusion of mind which is a symptom of diseased nationalism impels them all, or nearly all, to strive after an economic self-containment, which, if it were possible, would result in economic death.

We have been at some trouble to collect particulars of the principal tariff walls which are being now built. The more one studies and collates the weekly stream of tariff notices issued by the Board of Trade—and published in its official journal—the more bewildered one becomes. It is as if the world had gone economically mad. And unlike an ordinary attack of lunacy, which is not infectious, the disease of tariff building rages round the globe like a pestilence. From one nation it passes to another, until even sober citadels of common-sense in trade, like Belgium and the United Kingdom, become infected. At present the Dutch seem to be the one people in Europe who can show a clean bill of health.

France has a system by which the specific rates of duty per kilo, or per 100 kilos, of 1913 are multiplied by "co-efficients." There was a general revision in June last under which these co-efficients were nearly all advanced, and there is going to be a further revision in the coming winter. These co-efficients of increase run as high as ten, though usually they range between three and five. There are two tariffs—the "general" and the "minimum." The United Kingdom enjoys the benefit of the "minimum" tariff, though the Empire has to submit to the higher, "general" tariff. The co-efficients are applicable to both tariffs. The general idea of these multipliers or co-efficients is that they should move upwards with prices, but they have in practice outstripped prices. The general

effect upon our trade with France has been bad, though we, as has been mentioned, are on the most favoured minimum scale. Belgium also goes in for co-efficients of increase, and is about to make an all-round revision. So far Belgium has kept tolerably sane, and the revisions in June of last year and of April in this year still leave their tariff low, as judged by post-war standards. The Swiss tariff, which used to be quite moderate, was revised in June last, and a large number of the duties were doubled and even trebled. A new Customs law is to be introduced in the spring. Switzerland has not, so far, treated the United Kingdom badly, her chief purpose in the revision of tariffs being to stop goods coming from the countries with depreciated exchanges.

One of the worst of the tariff disease patients is Spain. There was a partial revision on protectionist lines in November, 1920, under which duties were increased by percentages from 50 to 400. It was a tariff by Royal Order, of which the legality was questioned in Spain. Then in May last comes a "provisional" tariff, which reduced some of the November duties, but imposed others on goods which had previously escaped. A draft revised tariff was published "for observations" in July, which in its completed form will be enforced early next year. In addition to the increased duties, there is now a sur-tax or "agio" imposed to bring the duties up to their gold equivalents. This "agio," which is revised every month, is based on the relation between fine gold in London and the pound sterling in Madrid. Spain has a first, or lower, column tariff, and a second, or higher, column. We and most parts of the Empire (except Australia) pay the lower rates.

Italy is another country which last June produced a new General Customs Tariff. Provision was made for the increase in the basic rates by "co-efficients," the idea being to bring rates up to a level which would compensate for the higher costs of production in Italy in comparison with those of other industrial countries. There is, however, a great deal of crude protection about the tariff which is immensely voluminous and complicated. Like those of most other European countries, the Italian duties are reckoned in gold, and there is a sur-tax or agio, as in Spain. The value of the lira in New York is the basis of the agio, and fortnightly revisions are made by the Minister of Finance.

Now we come to the United States, where the disease has broken out in a form which reveals unusual symptoms. The idea there has been not only to raise the *ad valorem* rates of duty, but to introduce an altogether new measure of value. Just as during the war we learned that there was such a thing as "German" truth distinguishable from ordinary truth, so there is to be in future at the ports of the United States an "American" value distinct from ordinary value (cost, insurance, and freight). The Tariff Bill has passed the House of Representatives, and is being critically reviewed by the Senate. The Senate Committee, while retaining the principle of an "American value," upon which duties will be charged, has made efforts to produce a definition which the Customs officers and appraisers will be able to work without blocking entirely the flow of imports. Also, the Senate Committee has shown a willingness to reduce the rates of the House Bill, and has accorded to a deputation from the Sheffield Chamber of Commerce the unprecedented courtesy of an open hearing. It is possible that the final Act will be less savagely protective and more workable in practice than the House Bill, of which the text was published in this country by the Board of Trade in August. The Senate Committee has revealed a surer sense of realities than the Committee of the House, and has at least appeared to inquire how the United States can sell oil and wheat and copper and manufactured goods and be paid the immense debts owing to them, if they close by tariffs the only avenues of payment.

Several parts of the British Empire are revising, or have revised, their tariffs, generally in an upward direction. India's new tariff came into force on March 1st last. Since then a fiscal commission has been appointed to consider, among other things, the policy of adopting Imperial Preference. Australia's new Customs Tariff dates from March, 1920, since when several amendments have been made by the House of Representatives. Canada

revised its tariff by Customs Resolutions in May last, and a complete new tariff is to be drafted by the Parliament elected this month. Newfoundland in August amended its tariff, and started upon the slippery slope of "anti-dumping" legislation. South Africa passed Customs Amendment Acts both last year and this year, and is about to investigate the question of preparing a new Customs Tariff for the Union. New Zealand's tariff is at this moment in the melting pot of discussion; the preference to the United Kingdom is being extended.

The first thing a newly constituted State appears to think of is how best it may hinder trade with its neighbours. Esthonia, Latvia, and Lithuania, those Baltic fragments split off from what once was Russia, have all set up new tariffs in the course of the past year. Roumania's latest effort in tariff revision dates from July last, as does that of the Jugo-Slav kingdom. Even the northern European countries, once comparatively sane, are going the same way. Sweden has this year increased its duties against so-called "luxury" articles of commerce, Denmark has a Bill in preparation, and Finland reveals a desire not to be left behind. In South America the same restless spirit is seen to be at work. A new Peruvian tariff is expected at the beginning of next month, Bolivia enforced a new tariff as from the middle of last year, and Chile made a partial revision, on "luxury" articles, last February. In Japan there were partial revisions in August of 1920, and in June last.

We do not claim that the rapid survey given in this article is exhaustive. To deal thoroughly with the subject would occupy many pages of the *Economist*. Our purpose has been to show that trade between nations already disorganised by the effects of war is being systematically made more difficult of recovery by the spread of a poisonous tariff fever throughout the world. The delusion that protective tariffs "safeguard" trade is one of the most persistent and dangerous of economic delusions, the more dangerous because superficially so plausible. Politicians everywhere, when confronted by depressed trade and unemployment, always fly to tariffs as to drugs, and refuse to realise that just as the human body pays in wasted vitality for drugs taken, so do "protected" peoples pay in lost efficiency for the tariffs imposed upon them.

THE RAILWAY RETURNS FOR 1920.

THE railway returns for 1920 have just been issued. Their volume, in consequence of the inclusion of the new statistics introduced by the Ministry of Transport, has, as compared with 1913, nearly doubled. But the price, in consequence of the decision to charge at commercial rates for Government publications, has increased sixfold. The cost is now 10s. We doubt the wisdom of the decision. It would be public money well spent if, at the cost of a few pounds out of pocket for paper and printing, the facts contained in these returns were brought home to the traders and manufacturers of the country. They are sufficiently remarkable to arrest attention.

The railway earnings proper—apart, that is, from steamers, docks, hotels, &c.—were in 1913 £125,000,000, and in 1920, £248,000,000, all but double. What were the services that they rendered to the public in return for these charges? Broadly, they carried the same quantity of merchandise, of minerals, and of livestock. On the other hand, they carried 600,000,000 more passengers, an increase of about 35 per cent.; but 45,000,000 fewer tons of coal, a decrease of about 20 per cent. But to carry the extra passengers, who were largely for short distances on electric railways, the companies ran nearly 20 per cent. fewer train-miles, so their work was not increased, while the reduction in the volume of coal must have implied a considerable reduction in train-mileage, though the published figures do not tell us its amount.

We may safely say, then, that the additional money extracted from the public was charged, not because more work was done, but wholly because the cost of doing it had so inordinately increased. So great was this increase that, while the receipts of 1913, after paying working expenses, left a net revenue of £52,000,000, those of 1920 left a net revenue of only £6,750,000. And to make up

the guaranteed net income of the companies the taxpayers had to provide a subsidy of £43,000,000.

The average charge made to the public per ton-mile in 1913 was not ascertained statistically, but by calculating backwards we can estimate it roughly at .88d per ton-mile. In 1920, during which year the increased rates and fares now charged had only partially come into force, the average rate was 1.673d, almost double. For 1921 it will be, according to the indications given by the current monthly returns, well over 2d. It is safe to say that British trade cannot, and will not, permanently stand rates on this level. Some traffic will simply disappear, a larger amount will be diverted to the roads. The corresponding rate which our competitors in America, where the average charge has risen 80 per cent., have to pay is not more than two-thirds of a penny, less than one-third of our rate. It is true that the American haul is more than four times as long as ours, and, on the face of it, it looks, therefore, as though the average charge the trader has to pay must be greater and not less than that which falls upon his British rival. But it must not be forgotten that, whereas the vast bulk of American business is self-contained, in other words, has to bear the cost of internal transport only, a very large proportion of British traffic has to pay not only British railway rates, but the cost of sea freight, with foreign railway charges in addition.

What the financial results will be for the current year and beyond we are not yet in a position to venture to guess. The published accounts show that for the eight months of the current year, before Government control ended on August 15th, there was a net loss on working of some £22,000,000, but this, of course, includes the three months of the coal strike. Since the companies resumed control no figures whatever have been published, and we are even told that the Clearing House, whose methods surely need speeding up, has not yet reported to the respective companies themselves the traffic divisions for the month of September. We may probably assume that the results of the last 4½ months of 1921 will differ widely between different companies, but that, as a whole, the companies will fall a good deal short of earning their pre-war net income.

We reach, then, this serious conclusion, that, though the rates, and we may add the passenger fares also, are higher than the public will or can permanently pay, they are even now not high enough to yield a reasonable return on the actual cost, still less on the replacement cost of the railways which the shareholders have provided for the public use. What is to be done about it? Wages have come down, and will come down further next January. But then they will very nearly have reached the basic standard. Coal, which cost £26,000,000 last year, will no doubt fall heavily; and the same in less degree may be said of materials, which cost roughly £29,000,000.

It would be sanguine to assume that these economies will do more than produce for the companies their pre-war net income, or, to use the phrase of the new Railways Act, their standard rate of return. Whence, then, are to come the resources to enable them to make the reductions in rates and fares which the public must have? Statistics published for the first time this year, at least suggest a line of approach. We know now for the first time the vital figures of railway operation. We know that the average net train-load is 130 tons. So far as railway working conditions are concerned, there is no reason why it should not be double. We know that the average net load of a loaded wagon is less than 5½ tons. Making all possible allowances for light merchandise, it clearly might be half as much again. We know, further, that, though the average speed of a freight train in motion is certainly not less than 15 miles an hour, these trains are subject to such delay, and the amount of shunting they involve is so enormous, that every three miles and a fraction that a freight train is moved implies the employment of an engine for an hour. And at present figures an hour's work of an engine costs something like 18s.

It is from an appreciation of the meaning of these figures that the economies of the future have to be derived. Of course, we shall be told that the thing is impossible. It is not. The American train load to-day is about 675 tons—more than five times ours. No reasoning person can suppose that under English conditions we can reach

the American figure. But when we observe that 30 years ago the American load was only 175 tons, we may ask whether a proportionate improvement is not possible here. Twenty years ago Sir George Paish estimated, from such figures as were then available, the average train-load on typical English railways at about one-half the present figure. It is to the credit of the companies that they have doubled it in the interval. It is now up to them to double it again; and the same may be said of better wagon loads and of reduction of shunting.

But it must be recognised that these economies, with their natural consequence of reduced freight rates, cannot be secured by the railway companies without the co-operation of their customers. Railways, like other traders, have to sell what their customers demand; and the English customer demands that his traffic shall be accepted in miscellaneous retail lots, despatched immediately, and carried at a high speed. The inevitable result is bad wagon loads, bad train loads, much unnecessary shunting, many unnecessary trains, a consequent congestion of lines, and then heavy capital expenditure to relieve the pressure. If the trading public will get into their heads what these railway statistics mean, and if the great traders' organisations, the Federation of British Industries, the Associated Chambers of Commerce, and so forth, will appoint a joint committee to meet the railway companies, and go seriously to work to see how economies can be effected, these returns will have justified many fold their cost of production. If only traders can be brought to understand that they have often spent a sovereign to secure extra service which is not worth to them more than 5s, we shall soon see a change in railway methods; and it is only by a radical change in methods that radical economies can be effected.

We will just add two suggestions. The Ministry of Transport published as long ago as last April, in a preliminary return of eight pages, subject to future correction, the main figures which are now issued finally in November. The form was a very useful one; and we suggest that, for those who do not need the full return, it might be republished each year in final shape. Further, these returns are now much fuller than before. Since the establishment of the Ministry of Transport they have been compiled and edited by experts, and not as heretofore by non-railway men. Next year the railway companies will be responsible for their own results. We suggest that, if the introductory report were amplified, results commented on, possibly even scales of apparent merit from top to bottom drawn up, this would be not only of great value to the railway profession, but of public interest and in the public interest.

OUR INDEX NUMBER.

A FURTHER decline in wholesale prices of commodities is recorded in our Index Number as at the end of November, the total dropping by 130 points to 4458. As will be seen from the table below, each of the five groups has contributed to the downward movement, but the most pronounced decrease has occurred in textiles:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.

Movements in the cereals and meat group have been irregular. Foreign wheat is lower, while home-grown wheat is a little higher. Flour shows a further substantial decline, while oats have risen. Beef and mutton are a shade lower, but there was a sharp increase in pork. Among subsidiary foodstuffs, coffee, sugar, and butter have fallen a little. All quotations in the textile group, with the exception of silk, show a decline. Cotton prices have not yet receded to the end of August level, but wool quotations, after their temporary advance in October, have subsided to the figure in force at the end of September. The rise in silk prices, which has been going on for several months past, has continued, but flax and hemp are unchanged, while jute is again lower.

In the minerals section a slight increase in each of the minor metals is more than counterbalanced by a further cut in iron and steel prices. Steel rails have been reduced to £10 per ton, which compares with less than £6 at the end of July, 1914, while iron bars are quoted at £12 10s, as against £7 at the outbreak of war. Coal prices are again a little lower. In the miscellaneous section there were practically no changes beyond slight declines in timber and oil and oilseeds.

How present levels compare with those of recent months and July, 1914, may be seen from the table below, in which the indices at the outbreak of war are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914....	100	100	100	100	100	100
Dec., 1914....	124	117	82	103	124	109
June, 1918....	220	220	294	186	250	238
Dec., 1918....	226	222	293	186	241	236
June, 1919....	231	227	284	202	247	241
Dec., 1919....	249	250	396	247	263	287
March, 1920....	261	260	484	269	309	325
June, 1920....	261	263	415	278	281	305
Dec., 1920....	233	229	209	261	230	231
March, 1921....	209	206	167	216	203	198
June, 1921....	203	188	158	210	185	188
Sept., 1921....	193	195	204	189	178	192
Oct., 1921....	166	194	190	176	173	178
Nov., 1921....	165	190	181	167	170	174

Primary foodstuffs thus show the nearest approximation to pre-war level, while minerals are nearly as low. Subsidiary foodstuffs and textiles, on the other hand, are well above the average.

THE CONSOLIDATION OF TRADE UNIONISM.

(BY A LABOUR CORRESPONDENT.)

ONE of the chief features of recent trade union history has been the movement towards federation and amalgamation. It is true that the process has proceeded further amongst, say, the banks or in the soap industry, but it is nevertheless a movement of considerable importance. The

reasons for the consolidation of trade unions, whether by federation or complete amalgamation, are to be found in the desire for greater solidarity on the part of those with common interests, and the complexity of modern industry. Before the war it used to be said in criticism of the British trade union movement that it was badly organised, that in Germany there were 60 or 70 powerful unions, but that in this country the trade union forces were divided amongst 1,100 bodies. This is still true to-day, but it gives a quite erroneous impression of the present position of trade unionism. There are several hundreds of small local societies, often of old standing, which are either composed of skilled craftsmen employed in industries which have not suffered great economic changes, or which exist to serve the need of workpeople in localised industries. The Gold Beaters' Trade Society or the Razor Blade Forgers' Protection Society have but a handful of members, but the existence of these tiny unions is not a real source of weakness to trade unionism, though, on the other hand, it is not a source of strength. The Ministry of Labour has for some years published statistics relating to the hundred chief unions, who among them represent at the present time probably five-sixths of the trade unionists in the country.

To form a picture of the British trade union movement one must think of a core of large organisations surrounded by a welter of small bodies, some of which are from time to time absorbed into the larger societies, and of the appearance from time to time of new unions established to cater for workers amongst whom there has previously been but little organisation. The last few years, for example, have seen the rise of unions of scientific workers, engineering and shipbuilding draughtsmen, church mission keepers and ticket writers—to give widely different illustrations! The modern history of trade unionism is a history of rapidly increasing membership, and of the growing importance of the "core" resulting from consolidation.

Federation is the method by which unions with certain common interests combine for the purpose of protecting those common interests without losing their individual identities. The Engineering and Shipbuilding Trades' Federation, for example, consists of a number of independent unions, catering for workers in these allied industries. The National Federation of General Workers is perhaps the largest federation in the country at the present time, including as it does practically all the general labour unions. The National Federation of Building Trades' Operatives is another important organisation. The National Association of Unions in Textile Trade, which was founded during the war, consists of 38 unions (some of them local bodies) in the woollen and worsted industry. Another recently established body is a federation of scientific, administrative, and similar workers.

Federation is a relatively simple process. Amalgamation, on the other hand, is by no means easy to achieve, though less difficult than it used to be. Under the Trade Union Act of 1876 it was necessary for a registered trade union to obtain a two-thirds majority of all the members on a vote for amalgamation before steps could be taken to merge two unions. The effect was to hamper the amalgamation of unions, as it was almost impossible to secure so large a majority. In 1917, however, new legislation was passed enabling unions to effect amalgamation if they obtained a majority of 20 per cent. in favour, on a poll of at least half of all the members. Even with this modification of the law amalgamations have been held up because of an insufficient majority. But this is not the only difficulty in the way of amalgamations. The amounts of the contributions, the character, amount, and variety of the benefits, and the total financial resources vary considerably from union to union, and these considerations have often created difficulties, whilst the vested interests of officials have occasionally stood in the way of the absorption of one union by another.

Nevertheless, substantial progress has been made. The movement has been partly in the direction of combining

local unions in the same trade or competing organisations in the same trade. But it has also consciously striven to establish "industrial unions" as distinct from craft or occupational unions. The United Garment Workers is a recent amalgamation of several sectional and local bodies. The National Union of Railwaymen, which was established in 1913 as an amalgamation of the Amalgamated Society of Railway Servants and two smaller unions, was an attempt to establish an industrial union catering for all railway workers. There are, however, still two important independent unions for special grades of railway employees—the engineers and firemen and the railway clerks.

One of the most important amalgamations effected recently was the establishment of the Amalgamated Engineering Union (which included the Amalgamated Society of Engineers and several other craft unions of engineering workers), with a membership of 400,000 workers. Last year the Amalgamated Society of Carpenters, Cabinet Makers and Joiners—itsself an amalgamation—and the General Union of Carpenters and Joiners formed the Amalgamated Society of Woodworkers. Two years ago the National Union of Vehicle Builders took the place of four unions, whilst about the same time three unions combined to form the Union of Post Office Workers, in which, subsequently, six further organisations of post office employees were absorbed. The United Vehicle Workers' Union has taken the place of several societies. Amongst the unions of general workers the same process has gone on. The Gasworkers' and General Labourers' Union formed the nucleus of an organisation now known as the National Union of General Workers, to which several general labourers' societies have become attached. Last year the National Federation of Women Workers lost its separate identity in the National Union.

Other instances could be given to show how widespread is the tendency towards combination in the trade union movement. It is clear, however, from the examples given, that the trade union movement is working towards the substitution of national for local organisations, and of industrial for craft unions. But the change is by no means yet complete, nor indeed is it likely to become so. As a matter of fact, the problem of the future organisation of trade unionism is not a simple one. General labourers have their own organisations, to which the majority belong. Others, however, are enrolled in unions concerned with the industry in which they are employed. In a sense their fortunes are bound up with the industry in which they are working, but in another sense their interests are those of all other general labourers. Similarly, there is a National Union of Clerks. It is clear that the salary of a clerk and the conditions of his employment do not depend upon whether he is employed in woollen mill or by an engineering firm, yet he cannot altogether dissociate himself from the fortunes of the woollen or engineering industry as the case may be. Again, there are a considerable number of engineers who are employed on engineers' work outside the engineering industry, and who, therefore, have a double interest. In general terms we may say that trade unionism is feeling its way to a dual organisation which will allow for double interests. That is to say, there will be both vertical and horizontal combinations; there will be organisation by industry for the protection of industrial interests, and organisation by occupation for the protection of occupational interests. But it will be some time before such a level of organisation is attained, for the trade union movement has its conservative side, and it has in its midst unions who naturally cannot completely escape from the traditions of earlier days.

Business Notes.

Government Investments.—A White Paper (No. 250 price 2d) has been issued giving a list of Government investments in registered companies. The list of total amounts invested in various concerns, with the dates at which investments in each case were made, reads as follows:—

Name of Company.	Amounts Invested on Sept. 30, 1921.	Dates When Investments Were Made.
British Dyestuffs Corporation, Limited..	1,700,001 ..	1919
Turkish Petroleum Co.	40,000 ..	1919
British America Nickel Corporation (of Canada)	629,618 ..	1916 to 1921
Munster Flax Development Co.	33,000 ..	1920 & 1921
Chepstow Water Co.	330 ..	1918
Monmouth Shipbuilding Co.	490,000 ..	1920
The Standard Shipbuilding and Engineering Co., Messrs. Edward Finch and Co. (1916), The Chepstow Property Co.	656,250 ..	1918
Suez Canal Co.	4,050,000 ..	1875
Cunard Steamship Co.	2,600,020 ..	1904-1907
Anglo-Persian Oil Co.	5,200,000 ..	1914 to 1920
Home Grown Sugar, Limited	375,000 ..	1920 & 1921
Flax Cultivation, Limited	331,000 ..	1919 & 1920
Wessex Flax Factories, Limited	36,000 ..	1919 & 1920
British Cellulose and Chemical Manufacturing Co., Limited.	1,450,000 ..	1920
Commercial Bank of Siberia.	1,198,371 ..	1918

It is stated that the return "does not include advances in connection with contracts secured on short-term mortgages or debentures. Before the war the holdings of Suez Canal shares and Cunard debentures represented the total direct Government interest in registered companies. The list is now a long one, and some of the ventures have been decidedly unsuccessful. The return would have been more interesting if it had included an estimate of the present value of the holdings. A noticeable change from the list published a year or so ago is that a holding of £325,000 in debentures of British Farina Mills, Limited, has disappeared. The principal holdings of ordinary or preferred ordinary shares are 850,000 preferred ordinary shares in British Dyestuffs, £5,000,000 of ordinary shares in Anglo-Persian Oil, £250,000 in ordinary shares of Home-Grown Sugar, and £1,198,371 in ordinary shares of the Commercial Bank of Siberia. References by the Committee of Public Accounts to this last-named investment were given in the *Economist* of August 21, 1920.

Allocation of Railway Compensation.—According to the *Railway Gazette*, £23,610,437 out of the forthcoming Government compensation payment is to be distributed among 76 companies and committees. The allocations are stated to include the following:—

Company.	£
Caledonian.....	1,126,618
Glasgow and South-Western.....	403,638
Great Central	891,637
Great Eastern	1,065,595
Great Northern	1,042,161
Great Western	2,916,546
Lancashire and Yorkshire.....	1,277,687
London and North-Western	3,065,088
London and South-Western	1,046,161
London, Brighton, and South Coast	720,971
Metropolitan	185,383
Midland	2,911,286
North British	1,192,988
North-Eastern	2,262,446
North Staffordshire	223,473
South-Eastern and Chatham Managing Committee	1,031,071

These figures will be studied with interest in view of the approach of the dividend season.

Treasury and Borrowed Securities.—We are informed that the Treasury has decided to exercise the option, under Clause 3 of Scheme B for the Regulation of Foreign Exchanges, of returning the following securities on March 1, 1922, from which date the additional allowance will cease:—Argentine Government Four per Cent. Railway Guaranteed Rescission bonds, 1897-9. Argentine Government Four per Cent. loan, 1908. Chilean Government Five per Cent. loan, 1892. Chilean Government Five per Cent. loan, 1905. Chilean Government Five per Cent. loan, 1909. Chilean Government Five per Cent. loan, 1910. Chicago Great Western Railway Four per Cent. First Mortgage bonds, 1959. Southern Pacific Company Four per Cent. Twenty-Year Conversion bonds, 1929.

The Financial Position of Turkey.—Sir Adam Block's report for 1919-20, published last Monday, is a warning to the bondholders to defer their hopes of further payments, even on account of the arrears on the Unified Debt. The figures of the gross and net receipts for the year are the highest on record—£711,782,953 and £77,766,838, an increase respectively over 1918-19 of £74,952,648 or 72.51 per cent., and £2,975,832, or 61.19 per cent.; but they are, of course, in greatly depreciated currency, and the actual increase is due to a trade revival after the armistice, since checked by events in Anatolia and Southern Russia, whence a commercial crisis may arise at Constantinople. While Greece and Turkey remain at war, and for some time afterwards, there is little prospect of recovery. The current year will show a heavy decline, and the yield of the assigned revenues has been decreased by the veto of the Allies on an increase of the spirit duty, and by the hindrances to the collection of taxes from foreigners, or those under foreign protection, resulting from the Allied control of Constantinople. But the salt tax has been tripled and the revenue augmented, the taxes on silk and fisheries, and the stamp duties, are to be reorganised, the returns from the tobacco monopoly are larger, and the surplus of the tobacco tithe has been pledged to the Debt Council. As to the Unified coupons in arrear, on which a payment of 1s 3d per coupon was made in January, the sums in hand on July 31st (including this payment) in London, Paris, Rome, and Constantinople amounted, at the then rate of exchange, to £2,943,429 sterling, and those deposited in German and Austrian banks were equivalent, at the pre-war rate of exchange, to £8,312,703 sterling, but at the rate of September 1st to only £513,006. Steps have been taken to obtain payment of these deposits at the pre-war rate, and if they succeed, the whole of the arrears can be paid; but we believe that it will be about a year before the question can be decided. Sir Adam Block explains how Turkey is paying its way at present—chiefly by good luck; but he urges the necessity of a reduction of official personnel and of the establishment of a financial council such as that provided by the Treaty of Sèvres, after which event Turkey should be accorded a greater fiscal freedom; otherwise, he maintains, it cannot take its fair share in production. Until the Treaty is ratified, he declares, the assigned revenues cannot be expected permanently to improve. Whether it will ever be ratified as it now stands is obviously doubtful; at present the ownership of large areas in the Turkish Empire is undetermined, and we believe the Debt Council still awaits accounts of the assigned revenues in Mesopotamia and Syria. The Angora Government has intercepted those from Anatolia, but gives receipts for them; and there is no sign of a resumption of the apportionment of the Debt amongst the countries to which Turkish territory has passed. For the later loans the prospect is remote, and such sums as are available for their service could only be remitted at a heavy loss on the exchange.

"Received for Shipment" Bills of Lading.—For a year or more there has been discussion, involving shippers, shipowners and bankers, on questions arising owing to the substitution in some instances of the phrase "received for shipment" in place of the word "shipped" in bills of lading. These questions are now, it is understood, being examined by the British Bankers' Association with a view to practical means being devised of overcoming the difficulties which have resulted from the introduction of the modified form of shipping document in certain trades where its use has not hitherto been customary. In Transatlantic shipping business the form is by no means new, writes a correspondent. Used in conjunction with certain established arrangements, it meets the requirements of trade and is accepted by bankers. Difficulties have arisen in Far Eastern trade. Last year the Eastern Exchange Banks took up the attitude that they could not regard a "received for shipment" bill of lading as effective. They required a document definitely certifying shipment. The objection thus raised interfered with the use of the modified form which had been introduced for the convenience of shippers, it being frequently impracticable to issue a "shipped" bill in time for the docu-

ment to arrive at the same time as the goods. The question whether the "for shipment" form is legally a bill of lading was dealt with in a judgment of the Privy Council in an Australian appeal at the end of last year. Though often referred to since as laying down that a "received for shipment" bill of lading is legally a bill of lading for all purposes, the decision of the Privy Council did not go to that extent. Though that view was indicated in the judgment, the broad point was not actually involved in the case. The Court of Appeal, however, decided subsequently that certain "received for shipment" bills of lading were a compliance with a c.i.f. contract, but a couple of days later Mr Justice McCardie took the contrary view in *Diamond Alkali Export Company v. Bourgeois*, his attention apparently not being called to the Court of Appeal decision just given. Under a contract for the sale of goods to be shipped from American seaboard c.i.f. Gothenburg the sellers tendered a document, purporting to be a bill of lading, which acknowledged receipt of the goods to be transported by a named steamer, or, failing shipment by that steamer, by a following steamer. The buyers, said Mr Justice McCardie, were entitled to reject on the ground that a proper document had not been tendered by the sellers in conformity with the contract. This last decision apparently caused bankers to look altogether askance at the new form when carrying out instructions in connection with a c.i.f. contract, and, an appeal which had been entered having recently been withdrawn, the legal question remains clouded with doubt. The subject came up at the conference of the International Law Association at the Hague in September, and a resolution was then adopted recognising that the use of the "for shipment" form has become, in many cases, a necessity of commerce, and suggesting that the interests concerned should co-operate to remove difficulties. That is what is being done. Under modern conditions it may be impracticable, if a liner calls for part cargo at several ports, and makes a stay of only a few hours, to issue, lodge with the bank, and send forward "shipped" bills by the same steamer, except by delaying departure, which is not a workable plan. The problem, therefore, is not easy of solution. Bankers, however, clearly wish to facilitate their customers' business. Shipowners doubtless have the same desire, and the question is mainly one of settling a form of shipping document guaranteeing actual shipment within a limited time, or in some other way establishing arrangements which will provide a document acceptable under c.i.f. contracts by buyers and their bankers.

Housing Costs.—According to the report issued by the National Housing and Town Planning Council, estimates for cottage building are steadily reaching more reasonable and satisfactory levels. It is now possible to hope that before the end of 1922 the cost of the cottage with three bedrooms, parlour, living-room, scullery and bath, built on land planned with 12 houses to the acre, and with simple roads of an economical kind, will not exceed £600. But this all-in price will not be reached without a further fall in the values of building material. Timber has already fallen heavily. The report points out that:—"In the case of most fittings, the scarcity of last year has completely disappeared, and two prices are now asked in the market—viz., the standard price and a price which is clearly a competitive one. The prices charged for bricks are still far too high. It is believed that the books

of not a few brick-making firms would, if examined, show that the net profit gained per 1,000 bricks is equal to two-thirds of the total cost per 1,000 delivered by rail before the war." It is interesting to observe that: "So much criticism of operatives in the building trade has been expressed that it is a pleasant duty to record the fact that the view generally held by fair-minded and considerate employers—whose considered opinions possess a thousand times greater weight than the sweeping generalisations of arm-chair critics—is to the effect that war-weariness is giving place to steady and sustained effort. Each week sees an increase in the efficiency of production, rates of wages are now governed by agreements—entered into by the Federation of Building Trades Employers and the Federation of Building Trades Operatives respectively—which provide that wages shall follow the cost of living."

Indian Securities.—The visit of H.R.H. the Prince of Wales to India, writes a Stock Exchange correspondent, has had some effect in calming the slight nervousness which was beginning to arise in the minds of holders of Indian Government securities. Quotations of stocks and shares are standing a little above the recent lowest to which they fell, but the improvement is slender up to the present, and Indian Government stocks compare well in the matter of yield with others in the trustee list. The four principal loans are as follows:

Stock.	Divs. Due.	Redemption.	Price.	Yield.	Yield with Redemption.
India 2½%	5 J.A.J.O.	1926/after	41	£ s d	£ s d
Do 3%	5 J.A.J.O.	1948/after	48½	6 1 6	..
Do 3½%	5 J.A.J.O.	1931/after	56½	6 4 0	..
Do 7% conv. bds.	5 A. 5 O.	1926-31	103½	6 16 0	6 12 6

India Sevens are available for trustees, in spite of the fact of the price being over par. The other stocks are regarded as being at present in the lists of practically irredeemable loans. It is in the railway stocks where improvement has been more marked of late. Not long ago trustees could have obtained over 9 per cent. in this list, and to-day the yields run up to 8 per cent. on the money from securities available for strict trusts. The following are included in this group. Particulars are added of the dividends for two half-years in those cases where the amounts are liable to fluctuation:—

Description.	Divs. due.	Price.	Yield.
Madras and Mahratta 3½% guar. stock and share of surplus (div. £3, July 1, 1921; £4, Jan., 1922; and 12s 9d refund for income-tax)	J. & J.	89	8 2 6
Burma Railway 2½% guar. stock and share of surplus, free of stamp (£3 10s, July 1, 1921; £3 10s, Jan. 1, 1922)	J. & J.	98	7 7 6
Bengal-Nagpur 3½% guar. plus share (£3, Jan. 1, 1922; £3, July 1, 1921)	J. & J.	87	7 0 0
East Indian "B" Annuities (£22 4s 6d in 1953)	A. & O.	14½	6 19 0
E. Bengal "B" Annuities (£24 7s 6d in 1957)	A. & O.	14½	6 16 1
Gt. Indian Peninsula 4% irred. deb. stk. 4 Feb.	J. & J.	61½	6 13 6
East Indian 3% deb. stock (red. on and after 1929)	May, Aug., Nov.	47½	6 6 0

The ordinary shares of the Indian railways pay substantially more. For instance, Barsi Light Railway £10 shares at 9½ and West of India Portuguese 4 per cent. guaranteed stock at 47 yield 12½ and 12 per cent. respectively. The latter is in receipt of 5½ per cent. dividends at present. Rohilkund and Kumaon ordinary and Southern Punjab ordinary, at 96 and 143 respectively, offer 10½ per cent., while the yield on Bengal North-West ordinary stock at 111½ is practically 10 per cent. on the money, taking into account the accrued dividend due next February. None of these ordinary stocks are available for the average trust account.

Rubber Output Restrictions.—The Rubber Growers Association has addressed to all producers of plantation rubber a plea for the continuance during the next six months of the restriction of output assented to by many

producers in the year now drawing to a close. Those who did not assent to restriction before are now invited to come into the agreement. The circular issued by the Association reads as follows:—"Notwithstanding the restriction of rubber production (both voluntary and involuntary) which has been effected during the past 12 months, reducing the output to about two-thirds of normal, the plantation rubber industry is still confronted with the fact that the consumption of rubber throughout the world is not proceeding at a rate which would justify a resumption of normal production. In the past few weeks there has been a small but welcome rise in the price of the commodity, due primarily to the restriction referred to, but the stocks in warehouses in London at November 19, 1921, were 70,259 tons, against 45,550 tons at November 30, 1920, and are only 3,000 tons less than the highest figure recorded during the year. If a full crop were produced during the next 12 months, and if consumption continues only at the rate which it has averaged during the last three years, it is estimated that the surplus of rubber would be largely increased, with most disastrous results. In these circumstances the Council of this Association strongly urge all producers who assented to the previous voluntary restriction scheme, which would otherwise terminate at December 31 next, to continue restriction by undertaking not to produce more rubber during the first six months of 1922 than they produced during the corresponding period of 1921, or alternatively than 75 per cent. of their output during the corresponding period of 1920. Producers who did not join the previous scheme are urged to undertake during the first six months of 1922 to restrict their output of rubber by 25 per cent. of the amount produced during the corresponding period of 1921, or alternatively of 1920."

Cotton Trade and Short Time.—Our Manchester correspondent writes:—"The proposal that organised short time should be adopted in the American spinning section of the Lancashire cotton trade has not been carried. A fortnight ago it was decided to take a ballot on this question, the suggestion being that until the end of the year spinners should limit their output to 50 per cent. On the votes being counted, however, it was found that the necessary majority of 80 per cent. had not been obtained, so the scheme fell to the ground, and the Masters' Federation has decided not to take any further action. Despite this decision, curtailment of production in an irregular way is being resorted to on a large scale, and it is estimated that the output at the moment in Lancashire is not more than 60 per cent. of the full capacity of the machinery. Prices for cotton mill shares continue to weaken, and certain companies are reported to be feeling the financial stringency rather severely. It is quite impossible at the moment to buy cotton and produce yarn at a profit."

Cotton Growing in Nigeria.—Although some difficulty is being experienced in financing the British Empire Cotton Growing Corporation, the Executive Council is already doing useful work. Early this year it was decided that Sir Hector Duff should go out to Nigeria and make an extensive tour in order to prepare a report on the possibilities of cotton growing in that area. He sailed last February and returned in July, and a valuable report has been published this week. The population of Nigeria is over 16,000,000, and the country covers an area of nearly 336,000 square miles. The relative density of population varies enormously. In the opinion of Sir Hector Duff, Nigeria is in many respects a peculiarly promising region for cotton growing, possessing, as it does, a sympathetic Government, intelligent native chiefs, peaceable internal conditions, and seaports within a comparatively short distance of Great Britain. It is very important, however, that the quality of the cotton produced should be improved. It is necessary that the cost of transport should be reduced, but the necessary step is so to improve the quality and value of the cotton itself that it can bear heavier charges than now. One of the worst faults in the present system of marketing Nigerian cotton is the absence of any adequate safeguard against

the passing of cotton which has been adulterated, and worst still, lumping together of all cotton, good, bad, and indifferent, and the fact that the worst class is paid for at precisely the same rate as the best. The only way to stop this sort of thing is by grading at the markets. All the facts seem to point to it being possible to cultivate cotton in Nigeria on a large scale without any pronounced economic struggle between this crop and the other chief products of the colony and the protectorate.

J. and P. Coats.—The profits of J. and P. Coats, Limited, for the year ended June 30th last have dropped to the lowest figure recorded for many years. The total amounted to £2,072,400 as compared with £4,164,900 for the previous year, the figure being struck after carrying £36,400 to depreciation "and allowing for estimated reclamation of excess profits duty." A balance of £903,100 was brought forward from the previous accounts, and this is supplemented by £250,000 withdrawn from dividend reserve fund. A comparison of results since 1906 is given below:—

Year ended June 30.	Net Profit After Depreciation, &c.	Interest.	Dividends and Bonus.	Pension, Insurance Fund, &c.	To Reserve, &c.
1906	£ 2,974,088	£ 36,642	£ 1,972,821	£ 294,629	£ 450,000
1907	3,056,125	19,680	2,206,642	175,963	500,000
1908	2,701,697	19,394	2,193,403	6,588	500,000
1909	2,917,667	19,399	2,427,402	32,522	500,000
1910	3,171,464	19,278	2,448,908	25,000	675,000
1911	3,102,952	19,096	2,453,808	42,500	525,000
1912	2,794,012	..	2,449,183	26,440	500,000
1913	2,903,239	..	2,449,183	..	500,000
1914	2,634,388	..	2,225,803	..	..
1915	2,598,966	..	2,208,347	..	30,000
1916	3,387,395	..	2,210,016	..	100,000
1917	3,360,950	..	2,294,131	..	2,000,000
1918	3,171,796	..	2,289,732	100,000	..
1919	3,995,149	..	2,850,638	400,000	750,000
1920	4,164,894	..	3,161,214	150,000	450,000
1921	2,072,449	..	2,911,263	..	Dr 250,000

The ordinary shares receive a distribution of 17½ per cent., the same as last year, the amount required being £2,581,300, and £314,200, or £588,800 less than was brought in, is carried forward. Some important changes are shown in the balance-sheet. Creditors have fallen by £4,095,100 to £2,463,600, while debtors are £2,522,700 lower, and cash has been reduced by £1,136,800 to the strikingly low figure of £57,000. Investments and advances to subsidiary companies show decreases of £1,273,000 and £91,900 respectively, while the property item, which includes investments in subsidiary companies, stands £1,811,600 higher at £13,765,700. The auditors' report draws attention to the fact that "certain assets whose value has been largely affected by war and subsequent conditions remain at book values. Against probable loss on these, however, the war contingencies fund has been established," which stands at £3,000,000.

P. and O. Results.—The "net result," after providing for depreciation, of the working of the Peninsular and Oriental Steam Navigation Company for the year ended September 30th last is £623,500, or nearly £87,000 less than it was a year ago. What actually has occurred it is impossible to say, for the amount deducted for depreciation is not stated, but it is mentioned that £500,000 has been added to the insurance fund. It may have differed considerably from those of previous years, and a comparison of results is therefore vitiated. We set out below, however, the published figures for a number of years past:—

	1914-15.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Net revenue ..	£ 494,160	£ 862,456	£ 882,360	£ 1,614,585	£ ..	£ ..
Reserves, &c. ..	..	100,000	100,000	1,000,000	..	..
"Net result" Brought forward.	494,160	762,456	782,360	614,585	710,430	623,531
	68,703	85,329	92,712	91,727	115,230	111,939
Deb. interest ..	562,863	847,785	875,072	706,312	825,660	735,470
Preferred div. ..	63,000	57,143	55,644	55,055	53,054	52,065
Deferred div. ..	152,000	152,000	152,000	152,000	152,000	152,000
	269,681	545,930	575,701	384,027	508,668	431,100
(15%) (18%) (18%) (12%) (15%) (12%)						
Carried forward.	78,182	92,712	91,727	115,230	111,938	100,305

The dividend on the deferred stock, the paid-up amount of which has been increased by £201,400 during the year, is maintained at 12 per cent., free of income-tax, but the bonus of 3 per cent. paid last year is not repeated, while £10,600 less is carried forward. The increase in the amount of deferred stock was due to the bonus distribution of this amount of stock at the end of the previous year, on the strength of the appreciation in value of holdings in subsidiary companies. The balance-sheet is as uninformative as ever, the precedent established in 1916 of condensing all the items of the credit side into one amount being once again followed. While there may perhaps have been some slender justification for withholding information in war time, shareholders may surely expect something more explicit now. The list of the fleet shows a slight decrease in tonnage, namely, from 566,511 tons to 565,681 tons, while the fleet of the British India Company has fallen from 912,985 tons to 905,124 tons. In their report the directors state that during the first six months of the year the steamers were able to earn more than the expenses, but that in the second half this has not been the case. Recent voyages are said to have resulted in "serious losses."

Castner-Kellner Alkali.—The report of the Castner-Kellner Alkali Company, Limited for the year ended September 30th last shows a substantial decline in the net profits to the smallest figure recorded since 1909. The table below shows the fluctuations in profits for a number of years past:—

	Profit.	Debt Interest, &c.	Renewal and Depreciation.	Reserve and Carry Forward.	Dividend.
1905	£ 52,358	£ 10,153	£ 23,205	£ 1,000	£ 18,000
1909	134,154	9,313	35,000	26,841	63,000
1910	164,554	8,986	32,500	44,318	78,750
1911	178,853	8,789	32,500	47,564	90,000
1912	177,063	8,682	32,500	45,880	90,000
1913	172,348	8,372	32,500	29,382	106,094
1914	174,150	8,275	32,500	21,917	116,458
1915	260,805	8,056	50,000	52,749	150,000
1916	262,208	7,706	50,000	23,252	181,250
1917	263,322	7,648	50,000	45,078	200,000
1918	261,339	7,598	50,000	48,819	200,000
1919	190,655	7,598	50,000	51,876	200,000
1920	283,854	7,598	60,000	48,132	220,000
1921	153,086	7,512	50,000	13,706	130,000

The depreciation reserve is again credited with £50,000, but the dividend is reduced from 22 to 13 per cent., while £34,400 less is carried forward. The balance-sheet shows a loan from bankers for £65,000 as a new item, while creditors have been reduced by £61,000. The cash item is £66,400 lower and debtors have been reduced by £159,700, but stocks are £21,600 higher, and the property item is £140,300 higher. The report gives no explanation of the drop in profits, which is doubtless to be ascribed to a considerable extent to the reaction in prices. An analysis of the balance-sheet will be found in the usual column.

Co-operative Insurance Society.—The Co-operative Insurance Society (C.I.S.) was first formed in 1867 to undertake the insurances of co-operative societies, and it very soon launched its collective life assurance scheme, under which the members of nearly 900 societies are insured at a total working expense which is said not to exceed 5 per cent. of the premiums. In the recently issued actuary's report dealing with the quinquennial valuation for the period 1915-1920, it is shown that there is a surplus in the ordinary section of £42,178, in the special section £6,374, and in the industrial section £1,903; and it is recommended that, after carrying forward a sum of £4,546 from the surplus in the ordinary section and £2,088 from the special section, a balance of £41,918 be apportioned to the policy-holders entitled to share. This yields a bonus equivalent to £1 per cent. on the sum assured for each full year's premium paid during the past ten years for holders of assurances with immediate participation in profits, and a bonus of 11s to 15s per cent. to holders with deferred participation. Progress during the five years under review has been favourable, under the circumstances. The life premiums received during

1915 amounted to only £187,204, but in 1920 they had increased to £1,065,669. At the end of 1920 there were 43,621 assurances in the ordinary life section, 95,453 in the special section, and 326,042 in the industrial section—exclusive of the collective scheme. The progress made has been greatest in the industrial section, which has increased its premiums from £5,118 in 1915 to £209,495 in 1920. This is largely due to the vigorous efforts made to push the business during the last three years, during which time more than 700 whole-time agencies have been established, and 130 district offices opened. In 1914 the C.I.S. was taken over by the two Co-operative Wholesale Societies (English and Scottish), and in 1920 its premium income, exclusive of collective, amounted to £800,000, and its invested funds to £1,330,000.

De Beers Diamond.—Within the past two years, writes our mining correspondent, the holders of deferred shares in that great diamond consolidation, the De Beers, have passed from opulence to poverty so far as their interest in this particular undertaking is concerned. Under the circumstances of a demand arising out of an artificial war and immediately post-war prosperity, in conjunction with a skilful control of the market, the price of the stones rose to such a degree that in respect of the year to June 30, 1920, the directors of the De Beers company were able to pay on the £2 10s deferred shares dividends totalling £3 apiece, besides making special appropriations on a most liberal scale. From the market standpoint the outlook appeared to be assured by the arrangement entered into on the part of the four leading producers (including the South-West Africa amalgamation). But even the most comprehensive marketing organisation is of little avail if the power to purchase be lacking, and in the present case the effect of hard times has been accentuated by the realisation of gems stolen from their unfortunate possessors by the present masters of Russia. In the autumn of 1920 a distinct lull in the demand for diamonds became apparent, and was followed by a measure of retrenchment on the part of the De Beers and other companies. The announcement has just been made that the revival of a few weeks ago proved to be merely a flicker in anticipation of the Christmas trade, and at the end of the year further large discharges of both white and native workers are to be made by the big Kimberley undertaking. There would consequently seem little prospect of resumption of dividends on the deferred shares in the near future, while the due payment of the preference interest in respect of the current half-year would appear to be more than a little doubtful—especially when the developments just referred to are read in conjunction with the results of the past year. Below is set out an analysis of the profit and loss statements for each of the past three financial periods ended June 30th:—

	1918-19.	1919-20.	1920-21.
	£	£	£
Diamond account	5,849,553	6,761,840	2,300,581
Interest, &c.	408,205	236,060	659,448
Brought in	788,332	889,029	*1,602,307
Total	7,046,090	7,886,929	4,562,337
Mining expenditure	1,094,694	1,991,258	1,976,053
Other expenditure and charges	1,241,188	741,976	735,454
Total	2,335,882	2,733,234	2,711,507
Net profit and balance	4,710,208	5,153,695	1,830,830
Taxation	382,380	439,550	6,593
To reserves	698,799	382,070	119,505
Dividends	2,740,000	3,740,000	1,240,000
Carried forward	889,029	592,075	464,732

* Including £1,010,232 from general fund.

It will be seen that the income from sales of stones last year was not much more than one-third the 1919-20 amount, and that save for the transfer of over £1,000,000 from the general fund, not only would there have been no dividend on the deferred, but even the full rate on the preference shares could not have been met. An interim distribution of 10s per share was declared on the deferred in December last, but there was no final dividend. For 1918-19 a total of 40s per share was paid, and for 1919-20, as already mentioned, 60s. The latest balance-sheet

shows the general fund reduced to £700,000, while the further comparatively small addition to the "Reserve for Stabilisation of the Diamond Trade" raised that entry to £2,476,900. Against the reserve and debenture redemption funds there were investments to the tune of £6,092,600, whereof nearly one-half was represented by interests in other diamond concerns and the like—consequently a fixed asset. During the past year the company transferred its explosives and fertiliser factories to the Cape Explosives Works, which on June 30th owed the parent £843,000—a sum doubtless since repaid out of the proceeds of the recent successful issue of £1,250,000 debenture stock, interest and principal guaranteed by the De Beers Company. From the high-water mark of about 33, touched both in 1919 and 1920, the price of the deferred shares has sagged away until a further small decline following the issue of the report carried it under 9. He would be a bold man who would venture to predict the early course of the market, although better times will doubtless reward those who have the patience to wait.

A Batch of Tin Producers.—The effect of the heavy fall in the price of tin is strikingly exemplified in the annual statements of a number of producing concerns recently issued. The more important—the Pahang Consolidated—owns a large area in the Malay Peninsula, containing both alluvial and lode deposits; a rubber plantation formerly operated was not so very long ago transferred to the Kuala Reman Estates for 1,400,000 shares of 5s each. The capital of the Pahang comprises 100,000 participating preference £1 shares and 1,500,000 ordinary 5s shares. Upon the latter 20 per cent. was paid in respect of the year ended July 31, 1920, this carrying the maximum addition of 8 per cent. (making 15 per cent. in all) upon the preference shares. For 1918-19 the rates were 15 per cent. and 12 per cent. respectively. Last year's net earnings little more than covered the fixed 7 per cent. on the preference shares, the £10,000 which the directors considered it advisable to write off the stores in hand virtually coming out of the carry forward. An analysis of the results of the past three financial periods is given below:—

	1918-19.	1919-20.	1920-21.
	£	£	£
Gross receipts	305,481	471,887	317,535
Net profit	61,086	156,021	4,970
Depreciation, &c.	16,000	76,000	10,000
Dividends	68,250	90,000	7,000
Brought forward	34,321	*32,416	22,437
Carried forward	11,156	22,437	10,407
Black tin produced	2,030	2,359	2,412
Percentage per ton of ore	0.76	1.23	1.42

* Including excess profits duty recovered.

The heavy special appropriations of 1919-20 included £20,000 towards the cost of a new pumping plant, and £30,000 as provision for excess profits duty. A claim for repayment now arises under the latter heading. From the output statistics a marked improvement in the grade of the ore treated will be observed. No material change has occurred in the mining position, and as the ore reserve estimate of approximately 680,000 tons is subject to the price of tin being over £250 per ton, it cannot be taken very seriously at the moment. The Bisichi—a Nigerian company which during the period covered by the latest report absorbed several neighbouring concerns—during 1920 made a small loss; but development, especially on one of the newly acquired areas, was attended with very encouraging results. At the meeting held this week the chairman was able to announce that the Nigerian Chamber of Mines had been successful in securing a cut equivalent to 25 per cent. in smelting charges, and that "very substantial reductions" in the heavy railway rates on tin might shortly be expected. The chief feature of the report of the Ida H, another Nigerian, consists in the intimation as to the diversion of the company's activities to other fields. The Berenguela Tin Mines, which operates in Bolivia, for the year ended June 30, 1919, paid 15 per cent., and in respect of 1919-20 a total of 25 per cent. Last year's accounts show a net loss of £11,000; this will give ground for a claim against the Inland Revenue authorities. There is no information as to the mining position. The Rooiberg Minerals Develop-

ment (South Africa) in 1920-21 made a small loss. In respect of the preceding year 5 per cent. was paid. The prospects of tin-producing companies have, of course, been improved by the recent rally in the price of the metal.

The Garden Cities and Town Planning Association announce that a lecture on Milan and Other Italian Cities will be delivered on Thursday, December 8th, at 5.30 p.m., at King's College, Strand, by Halsey Ricardo, Esq., F.R.I.B.A. The chair will be taken by his Excellency the Noble Cavalier Giacomo de Martino (Italian Ambassador in London). Tickets may be obtained from the secretary, Garden Cities and Town Planning Association, 3 Gray's inn place, W.C. 1.

Obersea Correspondence.

UNITED STATES.—JUDGE GARY ON THE OUTLOOK —RAILWAY RATES REDUCED—SEPTEMBER EARNINGS—OCTOBER TRADE—NEW ISSUES.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 18.

JUDGE GARY, chairman of the United States Steel Corporation, is one of the most conservative of our "captains of industry," and one whose opinions carry great weight. He seldom makes predictions, but in his address yesterday at the annual meeting of the American Iron and Steel Institute he expressed decidedly optimistic views regarding the future, declaring, among other things, that great prosperity was near. Referring to the disarmament Conference at Washington, he urged that the Conference should not only agree on a limitation of armament, but should enter into "a final treaty which would prevent future wars"; he advocated an international understanding for the discussion of controversies between nations before resorting to arms. He predicted success for the Conference, which, in his opinion, would reduce the burden of taxation and cause a return to normal living conditions. Even a 50 per cent. cut in expenditures for war preparations, he said, would be a "prodigious saving." He doubted that there would be any decrease in steel production owing to a limitation of armament; if any, it would be small. On the other hand, world peace would "mark an epoch of the greatest business prosperity, as well as the largest measure of happiness, that the world has ever witnessed." Judge Gary said he was very hopeful about business and industry. Conditions throughout this country, he declared, have been growing better during the last six months, and the volume of business in the steel industry has more than doubled in the past 90 days. All in all, he looks for "a return to large prosperity in the comparatively near future."

This week's announcement that railroad executives had decided to make an immediate reduction of 10 per cent. in railroad freight rates on all agricultural products was quite unexpected. It had been thought that further cuts in freight rates would not be made until operating expenses, especially wages, had been reduced, because the carriers are not in a financial position to sacrifice any of their revenue. The action just taken, however, is regarded as a wise and at the same time strategic move. Ever since the period of Federal control the railroads have been struggling to get away from the standardisation of rates and wages, forced upon them during the war, and the present reduction is in line with such efforts. Furthermore, while wages have not been lowered to the extent that the carriers wish, they evidently feel sure that in due course the existing wage scale will be revised downward. At any rate, they have put the responsibility for keeping the latest freight rate reduction in force, and for granting relief from the present abnormally high wages paid to railway workers, squarely up to the Railroad Labour Board. The cut in freight tariffs on farm products, which is the first country-wide reduction since the railroads were returned to private ownership, will continue in effect for six months; during that period it is expected that the Labour Board will readjust wages as well as revise rules

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

KENNETH H. ROCKEY, Representative,
Gresham House, Old Broad Street,
London, E.C. 2

and working conditions, which are quite as onerous, from the railroads' standpoint, as are the present high payrolls. If such relief is not granted, freight rates, at the end of that period, will be restored to their former levels—those that have prevailed to date. The lower rates will be effective throughout the country, except on traffic moving wholly within New England; many of the carriers in the latter territory are too weak to stand any reduction. It is evident that, unless there should be some revival in business, the entire immediate loss involved in the reduction would be taken from the net earnings of the carriers. It is estimated that the cut means an annual saving to shippers of approximately \$55,000,000—the amount depending, of course, upon the volume of traffic. Chairman Cuyler, of the Association of Railway Executives, explains that in making this cut "the railroads are relying upon the public for effective aid in bringing about the necessary reduction in labour and other costs of transportation, and are hoping for the co-operation of labour itself to that end. They have taken the first step in relieving existing business depression, and have given an earnest of their fixed purpose to reduce rates, and to relieve at the earliest practicable moment the transportation burden upon the public." The voluntary action on the part of the railroads has relieved the Inter-State Commerce Commission from an embarrassing position. At present the Commission really has no right, or at least would not be justified, it is pointed out, in ordering rate reductions on any commodity in any territory, because no railroad in the country has earned anything like the 6 per cent. annual return on the value of its property investment or contemplated (though not guaranteed) by the Transportation Act. The Commerce Commission granted an increase in rates over a year ago in the expectation that such increase would enable the roads to earn 6 per cent. The recent pressure upon the Commission to reduce those rates, therefore, placed it in an awkward position. As a matter of fact, the railroads themselves have from time to time substantially reduced freight rates from the levels established by the Commission in the summer of 1920. It

is estimated that such cuts in the aggregate involve a loss of revenue at the rate of \$175,000,000 to \$200,000,000 annually, exclusive of the reduction just announced. In this connection it is interesting to note that for the year ended August 31st—the first full year of operations under the increased rates granted by the Commerce Commission, and also the first full year since the termination of the Government guarantee period—the total net operating income of this country's railroads was equivalent to an annual return of only 2.9 per cent. on their property valuation as tentatively fixed by the Commission. In September of this year, complete returns from all but one small road show that operating revenues amounted to \$497,654,000, or 19.6 per cent. less than in the corresponding month of 1920, while operating expenses of \$377,106,000 were 26 per cent. less. Net operating income in September was \$87,174,000, or 9.4 per cent. greater than in the same month a year ago, but \$26,209,000 short of the amount expected to be earned under the rates fixed by the Interstate Commerce Commission. The September net operating income was equivalent to an annual return of 4.6 per cent. on the value of the property investment.

October's foreign trade returns are not favourable from the standpoint of values. While they show slight gains over September in both imports and exports, they are below those of August, and much smaller than in October of last year. Considering the year's decline in prices, however, the showing for last month is somewhat better. The volume of exports, in quantities, were fairly large, some commodities, such as raw cotton, showing a heavy gain in volume with an actual loss in value. Furthermore, while exports were still much larger than imports, the excess was only about one-third that of a year ago, a fact that has probably been responsible to a considerable degree for the recent strength in foreign exchange rates. October's exports totalled \$346,000,000, representing a gain of more than 6 per cent. over September and about the same gain over July, but a decrease to about the same extent from August. Imports for October were \$183,000,000, an increase of approximately 2 per cent. over September and July, but a decrease of 5.6 per cent. from August. Compared with October a year ago, exports were 53 per cent. and imports 45 per cent. smaller. Last month both cotton consumption and cotton exports increased. Consumption by our mills of 494,745 bales was the largest recorded since July, 1920, and represented an increase of 2 per cent. over that of September and of 23 per cent. as compared with October, 1920. Exports of domestic cotton, including linters, totalled 874,510 bales, the heaviest monthly shipment since January, 1920; they were 67 per cent. larger than in September, and 50 per cent. greater than in October a year ago. With respect to cotton mill operations, 586,000 more spindles were active in October than in the corresponding month of 1920.

In financial markets an outstanding feature is the large number of offerings of new bond issues by industrial corporations, States, and municipalities, which are taking advantage of the heavy investment demand. This week's offering of \$50,000,000 refunding mortgage 20-year 6 per cent. bonds of the New York Telephone Company was one of the most successful of recent flotations. The subscription books were opened on Tuesday and immediately closed, the total subscriptions received having been ten times the amount of the offering. As invariably happens when an exceptionally attractive offering is made, many of the applications were probably padded, but it is estimated that the total of subscriptions for amounts actually wanted by applicants reached approximately \$250,000,000, or five times the amount offered. The bonds, therefore, will have to be allotted. The new issue was offered at 97, with an interest yield of 6.26 per cent. to investors.

Among the foreign offerings this week was an issue of \$10,000,000 State of Rio Grand do Sul of the United States of Brazil 25-year 8 per cent. sinking fund gold bonds, which were priced to subscribers at 99½, and offered a yield of 8.10 per cent. on repayment at or before maturity at 105 and accrued interest. The Province of Saskatchewan has just sold here two issues, one of \$3,000,000 25-year 5½ per cent. bonds, payable in New

York and Canada, at about 95½, which approximates a 5½ per cent. basis; the other issue of \$1,500,000 25-year 6 per cent. bonds of the same province was sold to New York bankers at 99.58. While the offering price to investors has not been announced, it is considered likely that the last-named issue will be distributed at a figure to yield above 6 per cent. The prices mark new high records for this year, since former Canadian issues have been placed mostly on a 5½ to 5½ per cent. basis.

FRANCE.—THE RUMOURED MORATORIUM AND THE WIESBADEN AGREEMENT—BUDGET DEBATE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 29.

THE announcement from London that Mr Lloyd George contemplates proposing that negotiations shall be opened with a view to granting Germany a moratorium of two years' duration, in respect of her reparation payments, in order that she may have time to put her financial house in order, has caused, as might have been expected, little short of consternation here. Quite apart from the fact that such an arrangement would render it impossible for this country to obtain the cash of which it is so badly in need to repair the loss caused by the war, it is feared that the effect of a moratorium would be to annul the Wiesbaden agreements on which so much faith has been placed here. If Germany is released for two years from making payments in cash, it is asked here, that she would agree to make payments in kind that would be at least equivalent to France's share in the reparation debt? Germany's principal obligation, as matters stand, is represented by the ultimatum served on her after the London conference. If that falls to the ground, the Wiesbaden agreements would apparently also become void as a matter of course. News of the step contemplated by the British Government reached here only to-day, through the medium of a semi-official statement sent out by Reuters, but already the effect has been to cause public opinion to reflect on what the possible consequences may be if, as a result of a German moratorium, the purchasing power of the franc may be sent down to the level of the mark.

The unexpected nature of the announcement may be gauged from the fact that practically every speaker in the long discussion in the Chamber on French financial policy which ended on Thursday last pinned his faith to the belief that Germany can and must fulfil its obligations in regard to reparations. This, indeed, was the keynote of the order of the day with which the debate closed, which began as follows:—"The Chamber, confident that the Government will (1) watch over the strict execution of her engagements by Germany, and take all the necessary steps for the preservation of pledges existing for the debt owing to France," &c. The motion also called on the Government (2) not to impose any new taxation before ensuring the maximum yield from that already in operation; (3) to avoid all steps tending to the increase in the fiduciary circulation; (4) to limit public expenditure to the strictly necessary minimum, and to bring about as soon as possible organic reforms for the purpose of ensuring indispensable economies; (5) to reduce the number of public officials progressively to that of 1914; and, finally (6), to take all necessary measures to encourage the economic development of France and her colonies in a régime of liberty, and to bring about as rapidly as possible, wherever the interest of the country permits, the transformation or the reorganisation of the State monopolies. Socialist speakers insisted that the financial difficulties of the country were independent of whether Germany did or did not fulfil her engagements, one speaker insisting that in the most favourable circumstances France will have to expend, before 1930, on account of reparations and pensions, 50,000,000,000 or 60,000,000,000 francs more than she will receive in any case from indemnity payments.

The Chamber has this week begun its discussion of the Budget for 1922, and sat specially on Monday for the purpose. To-day, to-morrow, Thursday afternoon, and Friday morning are also being devoted to the subject, with the ever-cherished hope that the Bill may be disposed

of by both Houses before the end of the current year, and thus the vicious practice of *douzîèmes provisoires*, or monthly Votes on Account, may at last be avoided. The Budget for the Department of Public Health was disposed of in record time yesterday, and to-day those for the Departments of Commerce, the Interior and Justice were also voted. To-morrow that for the Department of Public Works will be attacked, after the morning sitting has been devoted to the thorny question of how the financial situation that has arisen between landlords and tenants, in regard to the non-payment of rent during the war and since, shall be equitably settled.

The Bourse, for the reasons mentioned last week, has again been consistently depressed, and there is little belief in any improvement of any real value until some definite steps of an international character have been taken to pull the world out of the chaos into which it has fallen. A quite important factor in the present situation is expectation that there will be numerous series of important issues of new capital, at high interest rates, as soon as the moment appears favourable. The need for these new issues is still pressing, notwithstanding the present depression, and they must under any circumstances be carried out before long, but for the moment everything is in a state of suspense. One important issue, which is designed for the benefit of the metallurgical industry in the devastated area, is regarded as likely to materialise before Christmas. It is regarded as improbable, however, that what are described as the big issues, which will represent milliards of new capital, will be made before well into the new year. These new issues, when they come, will find the Bourse in a much healthier condition than it was a year or so ago, and they are expected—if they do not provoke too large an offering of old descriptions, for the purpose of releasing money for investment in the new and better paying scrip—to bring about a much better state of things than the market has experienced for a long while.

In spite of the general depression, French Three per Cents. have been marked up on the week from 53.75 to 54.70, and Argentines, Brazilians, Chinese, Egyptians, Japanese and other foreigners have all also taken turns for the better. Banks, on the contrary, showed an all-round drop. Railways continued irregular. In the electricity group, Thomsons were put up from 738 to 770. Sugars showed appreciable improvement, while among Oil descriptions Royal Dutch and Mexican Eagles both improved on the approach of the coming distribution of dividends. De Beers, a third favourite counter here, fell off from 592 to 527 on the reported serious depression in the diamond industry.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—REPARATIONS—CURRENCY—EXCHANGE AND BOURSE—PROFITS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 29.

THE past week witnessed uncertainty in business and financial spheres, with a vague, optimistic feeling based merely on the belief that something is being done or at least discussed to relieve the impasse as regards reparations. The missions of Herr Stinnes and Dr Rathenau, and the trip to London of the British Ambassador, Lord d'Abernon, have, though nothing definite has transpired, strengthened this feeling; and the Bourse and exchange markets reflected the sentiment, the mark exchange showing a slight improvement, and the Bourse, as always when expecting good news, being timid. A cable from London reports that a moratorium as regards reparations has been favourably proposed; confirmation of this news, even if the advice is not destined to be taken, would probably have a decisive, at least temporary, effect on exchange, stocks, and state of industry. The reported condition for a moratorium, that Germany should cease inflation, would not be easy to fulfil. German inflation is not carried on for amusement. When the estimates for 1921-22 were submitted last spring, it seemed that, reparations apart, equilibrium could have been maintained, and with that the increase of the floating debt, expressed in inflation, might have ceased; but there is no such possibility to-day, because the mark exchange collapse has created a new values-level which is altogether to the disadvantage of the Government. If a moratorium is necessary, it should have been granted simultaneously with the acceptance of the May Reparations Ultimatum—in other words, the ultimatum should not have been presented. Further inflation for mere sake of paying reparations instalments is not likely, because it seems that Germany will default rather than attempt the wild enterprise of raising even one instalment by selling paper marks. But further inflation for home deficit covering is inevitable. It is impossible to impose and collect new taxes at the rapid pace set by the growth of deficits. A command to Germany to cease printing paper money resembles the command to pay gold; both commands are reasonable only if they are accompanied by a practicable exposition of the manner of their fulfilment. The last two Reichsbank reports show, for reasons only indirectly connected with reparations, but directly connected with the new price-level, very large increases of the currency in circulation; and the last Finance Ministry report on Debt shows that in the first ten days of November the floating debt increased by 4,090,200,000 marks. That is bound to continue unless the mark exchange is greatly improved by returning confidence, so bringing a fall in prices and in general expenditure.

The report of the Federation of British Industries has made a great stir, being commented on as a British plan to exploit and enslave Germany. Some of the federation's proposals deserve comment in detail, which will be given next week. The Government has again raised railway fares, this time by an average of 80 per cent., making them between 8½ and 9½ times those which prevailed at date of the armistice. The currency depreciation continues to disturb business generally, while fostering industry. Manufacturers are demanding payment in dollars from home buyers. This system has been officially condemned; it would have further bad results for the mark

exchange. In the Reichstag the proposal has been made to put taxes on a gold-mark basis; but the Ministry of Finance has declared this to be impracticable. The Federal Supreme Court has decided that Germany is not obliged to redeem the "Kries Notes" (so called from the name of the signatory), issued in Poland by Loan Bureaux, established by Germany during the occupation. About 900 millions of these are in circulation. The Court held that Germany guaranteed the notes to the Loan Bureaux, but not to the individual holders; and the Loan Bureaux, now Polish, are redeeming them in Polish marks. Large numbers of the notes are held by Germans; and there has been heavy speculation based on an earlier contrary decision by a lower Court. After the final decision the quotation of the notes fell from 46 to 10. The Reichsbank report for November 23rd shows a decline, usual in the third week of the month, in the pressure for credit. Private discounts fell by 214,669,000 marks to 1,109,325,000 marks, Treasury bills by 3,173,509,000 marks to 100,532,191,000 marks, State deposits by 2,877,260,000 marks to 3,891,014,000 marks, and private deposits by 3,051,182,000 marks to 11,549,663,000 marks; but note circulation increased by 1,277,772,000 marks to 96,463,895,000 marks. Kassenschein circulation was 7,077,200,000 marks, showing a decline of 19,800,000 marks.

The Reichswirtschafts Ministry issues a warning of an impending collapse of the industrial boom. Predicting a return of stagnation and unemployment, the Ministry has advised local authorities to keep back their orders for this rainy day. The prediction is based on the fact that the similar "catastrophe boom" of winter 1919-20 ended in the stagnation and unemployment of summer 1920. It practically amounts to a declaration that the mark exchange is about to recover; as such a recovery in the spring of 1920 was the sole cause of the manufacturing slump. The mark cannot possibly have stabilised itself permanently at the present level, and if there is a further fall the industrial boom will certainly continue. Whether the Government has any certain grounds for its—implied—forecast of a mark recovery is not stated. Commercial journals, discussing the connection between had money and good trade, print biting contrasts of conditions in Germany, where unemployment is practically unknown, and those in Ally countries—the *Essen Bergwerks Zeitung* affirms that "the emaciated paper mark is avenging itself on the fat pound and the absurdly fat dollar." So far there is no sign of the predicted stagnation; the shortage of iron, steel, and finished goods is more marked than ever, and the only factor that prevents industrial activity going even further is the growing scarcity of fuel. The pig-iron supply is insufficient, but numerous blown-out blast furnaces, for which ore, labour, and orders are available, cannot be fired owing to lack of coke, and many industries, notably the Hagen district small iron branch, are using, and are able to afford, expensive English coal, which ought to have been used in English factories. This contrast is all the more marked because the very best Ruby coal now costs only about 400 marks, or 7s a metric ton; but the fact that the German manufacturer has to pay 1,100 marks for every £'s worth of English coal counts to him as nothing, owing to his abundance of orders and his ability to charge any price for his goods. That English industrial coal can be used profitably in Westphalia and not in England is a good illustration of the Essen doctrine that "the emaciated paper mark is avenging itself on the fat pound."

The Bourse is unsettled. The net movement last week was upward. The *Frankfurter Zeitung's* index for the 24th shows 41,996, against 38,413 on the 17th. The home loan group again rose from 908 to 925, which means a rise of nearly 100 points since July 17th (then 826). This is partly due to foreign buying, but also Germans who sell out of stocks through fear of a mark exchange recovery, put the released money into loans and bonds in the knowledge that such recovery means a restoration of the gold value of fixed-interest securities. The buying so caused in turn sends up the nominal quotations of the bonds. Municipal bonds, which foreigners, in particular Americans, buy whenever mark recoveries are expected, have of late been extremely firm. Prices of leading 4 per cent. municipals have moved as follows:—

	Sept. 12.	Nov. 24.
Berlin	89	96.50
Cologne	92.75	102
Dresden	79.50	93
Frankfurt/Main	95	106
Hamburg 3½ Staatsrente	67	78

Quotations for yesterday of Federal loans were:—War Loan, 77.50; Four per Cent., 77.75; Three and a-half per Cent., 70; Three per Cent., 93.50; Savings and Premium, 84. Of late Loans have become "exchange securities" in that they are subject to sharp fluctuations, Three per Cent., though still 50 per cent. higher than at beginning of the year, having dropped about 16 points in the last fortnight. The Bourse yesterday was weak, on expectation of good news as regards Reparations. Professional speculators are said to be still realising. The profits—in paper marks—of industrial companies continue to be large. The report for 1920-21 of the General Electricity Company shows gross profits of 247,913,000 marks, against 80,205,000 marks in the preceding year; Mannesmann, 221,717,000 marks, against 104,228,356 marks; Harpener (net), 20,157,000 marks, against 11,690,548 marks; Rhenish-Westphalian Electricity, 100,674,824 marks, against 50,292,967 marks. The last-mentioned concern's prosperity is being advertised, rightly or wrongly, as proof of the superiority of private over municipal management; the company is a giant "mixed concern," founded by Herr Stinnes, in collaboration with numerous Westphalian cities, and though it covers a greater area, it is similar in character to ordinary municipal electrical works. But whereas purely municipal concerns are at present mostly showing large deficits, private management on the Stinnes system shows a great surplus. The foreign trade report for August and September shows:—

	Imports, in Million Marks.		Exports, in Million Marks.	
	Aug.	Sept.	Aug.	Sept.
Food	7,213	7,132	426	546
Minerals, mineral oils, &c.	474	1,419	414	524
Fats and oils	9	23	16	17

Earthenware	6	11	147	162
Glass	13	12	160	168
Precious metals and wares	35	24	47	69
Base metals and wares	390	527	1,522	1,568
Machines, vehicles	13	37	1,071	1,002
Firearms, clocks, toys, &c.	7	9	247	266
Miscellaneous	2	..	9	15
Total	9,418	10,668	6,684	7,519

Coal prices have been raised by between 40 and 50 per cent., best Ruhr from 253.90 per metric ton to 405 marks. The coal output in October showed an increase. The Pig-Iron Syndicate and the "Eisenwirtschaftsbund" will meet this week to decide on prices, and it is probable that rates for pig-iron, steel and rolling mill products will be again raised.

THE FINANCIAL SITUATION IN GREECE.

(FROM OUR CORRESPONDENT.)

ATHENS, November 20.

The Greek debt has continued to increase as a result of the prolongation of the war. It now amounts to 5,400 million drachmæ in round figures. The increase since September, 1912—the last month of peace in the Balkans—is shown in the following table:—

	(In Millions of Drachmæ.)	September 30, 1912.	November, 1921.
Funded debt—			
Loans in gold		840.1	1,227
Internal loans in drachmæ		105.4	578
Advances of the Allies		..	1,070
Floating debt in drachmæ		95.4	2,525
Total		1,040.9	5,400

Out of the amount of 1,070 dr millions, representing the advances of the Allies to the Greek Government during the European War, there have been actually paid to the Government only 342,000,000 dr; consequently, the balance of 728,000,000 dr represents a future external liability of the kingdom. There is, on the other hand, the cost of war material furnished to the Greek Government by the Allies during the war. It is yet not known what will this item amount to. Assuming, however, that it will be, roughly, equal to the non-utilised part of the allied credits, and admitting, further, that this item will not be finally cancelled, we can safely take the sum of 1,070 million drachmæ as approximately representing the actual foreign debt of Greece. Some outstanding items should also be mentioned, arising chiefly out of recent purchases for the needs of the army, which would raise the debt to between 5,500 and 5,700 million drachmæ. The service of the whole debt for the year 1921 will require a sum of 258 million drachmæ. As regards the expenditure, other than for service of the debt, and the revenue of the State for the year, no figures are available since, owing to the war, the House is closed, and no budget has been deposited. In the budget for the financial year 1920-1921, revenue, ordinary and extraordinary together, was estimated at 170,000,000 dr, and expenditure, ordinary and extraordinary alike, at 2,150,000,000 dr, leaving thus a deficit of 980 million drachmæ to be covered by loans. Considering the gradual increase of the yield of the taxes for many years past, and the raising of the income-tax in 1920, the ordinary revenue of the current year may be expected to increase. As regards the revenues assigned for the service of the debt—old and new—which are controlled by the International Financial Commission, the results of the first eight months of the year are satisfactory, showing an increase over those for the corresponding period of last year of 6,735,000 dr. Moreover, receipts from Custom duties are expected to increase considerably, pursuant to the new measure regarding the assessment and collection of Customs. In fact, gross receipts for September and October of the port of Piræus show an increase over those for the same months of 1920 as follows:—

	1920.	1921.	Increase.
September (receipts in gold taken at par)	Dr. 6,431,419	Dr. 11,216,578	Dr. 4,785,159
October " " "	6,754,337	10,927,688	4,173,351

The receipts of the remaining Custom houses must show similar increases. Income-tax, on the other hand, should regularly show an increase in yield during the current year. It is not known, however, how far the tax commissioners have pushed their efforts towards that effect, and if the state of war has not caused a relaxation in the pursuit on their part of the maximum yield of the tax. The yield of indirect taxes—other than Custom duties—which constitute the most important item of taxation, must have increased again during this period, the consuming capacity of the community having also increased.

During the last two years the Treasury has been meeting its needs with the ordinary revenue, some new taxes or increases of old taxes, with the proceeds of an internal lottery loan issued in the first half-year of 1920, and (in the impossibility of contracting an external loan, owing to the international situation) by short-term internal borrowings, chiefly from the National Bank of Greece. This, of course, cannot go on indefinitely, and the Minister of Finance will soon have to face the problem of taking more radical measures to raise the revenue. In this connection, it should be observed that taxation has been little resorted to here since 1914 for the purpose of creating the necessary revenue to meet the increasing needs of the Treasury for the civil service and the carrying out of the war. War profits and property have been slightly and inadequately taxed; luxuries have been insufficiently taxed or not at all; income-tax is not strictly enforced, and the rates are comparatively low, the highest being 10 per cent. on income from buildings, real estate, and investments, while the sur-tax, which is imposed on the total income from all sources, is charged on yearly incomes of 14,000 dr and upwards, beginning at the rate of 5 per

cent., and increasing gradually and slowly up to 25 per cent. only on incomes of 614,000 dr and upwards. Moreover, no consumption or sales or turnover tax has been imposed, entertainments generally being slightly taxed, if at all. Commercial profits are taxed at the rate of 8 per cent., and wages at 1 per cent. only. Yet traders of every kind and magnitude, wholesale and retail alike, have been piling up fortunes for many years, and manual workers collecting weekly wages by far superior to what the highest officials and men of letters earn. No signs of crisis or unemployment having as yet appeared, and the tax collector not importuning them, both these two classes are spending money lavishly, and becoming, at the same time, more and more exacting to the community.

It appears from what precedes, that the financial situation in Greece, difficult though it is, is far from being alarming, as some French papers have recently been willing to present it. The Government has, of course, many problems to solve and many difficulties to overcome, which are the inheritance of the war, still continued in the Near East not by the fault of Greece. But in this Greece is not an exception. Greece, despite the cash difficulties which the continuation of the state of war creates for her, is still much better off financially than many other States enjoying the "blessings" of peace since the armistice. Indeed, a few figures suffice to give an idea of the comparatively healthy situation of Greek finances:—

PUBLIC DEBT PER HEAD OF POPULATION.*

Greece	Dr. 770	Belgium	Francs 4,000
Great Britain	Francs 4,200	Italy	Lire 2,800
France	Francs 7,000		

TAXATION (INDIRECT AND DIRECT) PER HEAD OF POPULATION.

	£ s d		£ s d
Greece	3 6 2	France	20 6 5
Belgium	9 19 2	Great Britain	22 0 0
Italy	11 8 8		

CIRCULATION PER HEAD OF POPULATION.*

	£ s d		£ s d
U.S. of America	8 0 0	France	36 0 0
Great Britain	10 0 0	Germany	100 0 0
Greece	13 12 0	Roumania	38 0 0

* November, 1921, for Greece and latest available returns for the other States.

† Total circulation Dr. 2,050,820,776.

Thus, a quick return to peaceful conditions in the Near East will find Greece less burdened than the majority of the ex-belligerent European countries, with less inflated currency, and with the taxable capacity of its people nearly full. Moreover, during the last ten years, in spite of a permanent state of war and political troubles, the country has displayed economic strength and progress.

ITALY.—FOREIGN TRADE STATISTICS—STATE RAILWAYS DEFICIT.

(FROM OUR CORRESPONDENT.)

ROME, November 26.

OUR import and export statistics have been always belated, owing to the method employed in calculating values of goods imported (c.i.f.) and exported (f.o.b.). In 1920, for instance, the methods of compilation varied three times; in the first months of the year the values used were those for 1918; in the intermediate months those for 1919; and in the last month those for 1920. The variation was due to the fact that values were not those declared by exporters and importers, but average values

fixed by a departmental committee. As the committee meet only once every year, and sometimes very late in the year for the sake of fixing values for the previous year, it happened that figures changed twice or three times in the year, to the amazement of practical men and students in search of exact evidence on the balance of international trade and of reasons for falling or rising foreign exchanges. How great variations may be, may be seen from the following table:—

	(In Millions of Lire.)		
	1919.	1920.	1920.
	On the basis of the values for 1919.	On the basis of the values for 1919.	On the basis of the values for 1920.
Imports.....	16,623	15,862	26,853
Exports.....	6,066	7,804	11,757
Excess of imports over export	10,557	8,058	15,096

The imports have increased by 10,230 millions, although the quantities are lower. The exports have increased by 5,691, in millions lire, of which 3,953 millions are due to prices, and 1,738 to quantities. Last year was perhaps the worst in the annals of our international trade; wheat cost us 2,542 millions lire more than in the preceding year; coal, 1,668 million more; cotton, 1,162 million; wool, 524. On the export side we got 841 millions more from hemp, but the balance was sadly against us.

While in the first six months of 1921 the old method of official belated values was continued, July has seen a revolution in our trade statistics. Values will be from July 1, 1921, calculated on the basis of declaration made by importers and exporters. A committee will check those values at the end of the year; but values will now be "effective" values. The effect of the change on the statistics was instantaneous (in millions of lire):—

	Imports.	Exports.	Excess of Imports over Exports.
January, 1921.....	1,939.0	772.9	1,166.7
February ".....	2,196.7	870.4	1,326.3
March ".....	2,498.3	871.4	1,626.9
April ".....	2,234.1	901.7	1,332.4
May ".....	1,987.9	696.5	1,291.4
June ".....	2,598.4	1,168.9	1,429.5
July ".....	556.4	441.1	115.3
August ".....	985.9	548.4	437.5
	14,996.9	6,271.2	8,725.7
Jan. to Aug., 1920....	17,870	7,575.8	10,294.8

From the table it appears that the official method of calculating values unduly increased the excess of imports against exports. For the first six months of the year, when values were calculated on the 1920 basis, a tremendous deficit had crept into our statistics, to the dismay of economists.

The deficit of the State Railways in 1920-1921 was 1,045.5 millions lire, which is the difference between 3,278 millions revenue and 4,323.5 expenditure. In the current year the deficit is decreasing: in July and August expenditure was 576, against 473.8 millions lire revenue. If things continue at the same pace, the year will close with a deficit of about 600 million lire. An ominous sign is on the revenue side, the real traffic receipts being only at the rate of 2,500 millions lire yearly, against 2,700 last year. The economic crisis, notwithstanding the rise in transport prices, is thus producing its evil effects on the railway budget.

SWITZERLAND.—THE NESTLE COMPANY.

(BY OUR CORRESPONDENT.)

GENEVA, November 28.

THE attention of the Swiss stock markets has been concentrated during the week on the shares of the Nestlé concern. In June, when the last annual report was published, the balance-sheet did not meet with general approval. At a time when the prices of tinned milk products, and especially sugar, had a downward tendency, namely, in December last, the company had stocks of goods worth practically the share capital, whereas in 1917, when there was a quickly rising tendency in prices, the stocks were only worth 70 per cent. of the share capital. During the period the price of wheat had doubled. Everybody knew that the Nestlé had become very powerful during the war as municipalities have the world market in condensed

milk. The combine with leading American and Australian condensed milk companies, factories in England, her colonies, Scandinavia, and so on, were regarded as signifying the complete control of the international market in condensed milk. Therefore, in spite of the rather unfavourable figures of the last balance-sheet, the shares were, at the time of the shareholders' meeting, quoted at 600 Swiss francs, that is to say, 50 per cent. above par. The issue of two million pounds English preference shares was criticised in this country, but it was not the increase in capital which was the object of criticism, but merely the neglect of the Swiss market. The critics pointed out that Nestlé would have been in a position to find the money in Switzerland, and that it was not necessary for it to apply for it abroad. At the shareholders' meeting the chairman declared that the stocks at the end of December were already sold at favourable prices, but he did not mention whether the sales were made on credit terms or not. A few weeks ago the Nestlé shares began to drop, and they are now quoted at 37 per cent. below par. There are many reasons for this drop. No doubt the standstill of nearly all Swiss factories influences most shareholders. Another factor of not less importance is that in countries with good currency the consumption of condensed milk is on the decrease. The difficulties of getting oilcake and other condensed food for cattle have been overcome with the end of the shipping scarcity, and Switzerland, for example, is now full of cheese ready for export, but finding no buyers abroad. This is evidence that the manufacture of cheese and butter is decreasing, so that offers of fresh milk to industrial centres are everywhere increasing. There is, of course, still a shortage of fresh milk in the countries of bad currencies, where agriculture is boycotting the towns. But the consumers of Russia cannot offer to buy Nestlé's condensed milk. Under such conditions, the economic value of the carefully constructed international monopoly of the Nestlé Anglo-Swiss Condensed Milk Company becomes, to a certain extent, a "non-valeur." The economic value of a monopoly is nothing should the consumer find ways and means to do without the commodity in question. Under such conditions one may suppose that the dealers in all countries who purchased, according to the declaration of the chairman at the shareholders' meeting, the enormous stocks Nestlé's held at the end of 1920 are possibly not in a position to sell them, so that the assets of Nestlé with their customers in all countries must quickly depreciate. It must be underlined that the Swiss chocolate company of Peter Cailler, Kohler, the sales organisation of which, especially in England, is identical with that of Nestlé, is not hit by these events. The Swiss chocolate industry, 50 per cent. of the production of which is controlled by the above-mentioned concern, rather suffered from the war, and did not profit by the shortage of commodities ruling in the years 1917-18-19. Therefore their sales have not such scope for falling.

NORWAY.—TRADE, FINANCE, AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, November 16.

THE exceptional drought is continuing, and helps to augment the host of unemployed workpeople, now estimated at 100,000. There seems, however, to be a somewhat better tone in some branches of trade. Pulp and paper mills find that they do rather more business, which is also the case with the saw-mills.

A Government loan was arranged last fall for 200 million kroner, with a number of banks, &c. Part of this loan was raised to cover deficits from State transactions due to the war, and was to be repaid in eight years—was subscribed, and 20 millions were offered for public subscription. The lists were open only for a few days, but a much larger amount, no doubt, would have been taken up. The exchange problem is still troubling the minds of the trading community. After having fallen very substantially last week, the krone this week has again appreciated, and it has in both movements been followed by dollars, Swedish and Danish kroner. Marks in this country, as in other countries,

have come down so much that for some days it looked as if the value would be nil. Norwegian, Swedish, and Danish chiefs of National Banks have had a conference in Stockholm to deal with various subjects—notably the stabilisation of exchanges. They have issued a joint communiqué, in which, among other things, they repudiate official meddling with the exchanges, as matters now stand, and fall back upon the usual panacea—increased production and thrift.

SWEDEN.—BANKING LOSSES—RENTS—TRADE AGREEMENT WITH RUSSIA—TIMBER.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 26.

THE financial world has been startled by some serious frauds committed by banking officials, one of which has inflicted a loss of over 2½ millions kroner to the Jämtlands Folkbank, of Östersund. To make the matter worse this bank has suffered a loss during the past year of 3.3 million kr., making a total loss of 5.8 million kr. The trading losses have been caused through the depression in the timber trade, in which the bank has been interested. The Jämtlands Folkbank is a fairly small bank, and its total funds, including the calculated year's profit and reserves, amount to in all 9.5 million kr. It is estimated that all reserves have gone, whereas the capital is intact.

Ever since the last years of the war there has been in operation in this country a law prohibiting unreasonable increases in rents. The question whether this law, which runs up to October 1, 1923, should still remain is now being discussed, and it is claimed that this law smothered private initiative in house-building. The housing question in Sweden is still unsatisfactory although better than it was, but rents are still high and flats scarce. For the business community an improvement has set in, inasmuch as office accommodation is now easier to obtain at lower rents, the legislation referring only to private flats.

Sweden is at present negotiating with the Soviet for a new trade agreement, and although nothing official has so far transpired regarding the result of these negotiations it has leaked out that the Soviet has suggested the combination of a new treaty with extended credit. In view of the previous experiences which Swedish business men have had in their dealings with Bolshevik Russia it is easy to understand that such a proposal has by no means been favourably received, and to judge from that section of the Press which serves as organ of the Government there is no support of a trade agreement as proposed by Litvinov.

A large transaction is reported in the timber trade covering 5 million kr worth of timber, which is said to have been bought by a consortium of Swedish saw-mills from Finnish exporters. Up to the time of writing it is not quite clear whether this deal is to be regarded more as a credit transaction connected with some scheme for a closer co-operation between Swedish and Finnish exporters next season. During the past year the co-operation has not been strong enough, with the result that the Swedes and Finns have competed with each other to the detriment of both parties.

Letters to the Editor.

REPARATION PROBLEMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your article on Reparation Problems is timely. Reparation has probably led to more economic thinking than ever before.

The methods of payment being tried, and most of those suggested, either lead nowhere or seem to promise such dislocation of the receivers' businesses that payment is not worth taking. From this conclusion the mind naturally recoils. It seems so natural in taking a payment or a gift from a man (or a nation) that you are to get something, that to be told it is only a Pandora's box is paralysing. Even hope seems to have escaped from it. Might it be that Pandora's box itself, like other ancient

allegories (perhaps like that of the Flood), told a story under this guise that could not be told in plain language? Had the ancients, in public or in private life, tried this same reparation business in some form or other, and had it been found that the recoil did more harm to the receiver than to the giver? Was it found, in fact, that magnanimity and generosity and forgiveness leading to friendship and regard are more to be desired and of more real practical value than any number of fines or exactions or reparations?

The direct payments by Germany, which can only be made in the long run in the products of their industry, are now generally regarded as two edged. While they impoverish Germany, they at the same time debilitate and impoverish us by demoralising our industries and by putting our people out of employment. Will any other means of reparation have any other effect? The most likely would seem to be the appropriation of German investments abroad, and especially in those countries which export raw material, especially such as cotton, jute, rice, coffee, &c., which do not compete with our own home products, such as wheat or wool. This might lead—especially if such products could be stipulated for—to some advantage to the trades that use these, and thereby to the country. In so far as it led to increased imports at cheaper prices of such articles as wheat or wool—home products—while this would be of advantage to the general population, it would proportionately hurt the agricultural industries. In any case, it could only be a partial payment of the debt, but it might be deemed sufficient.

It has perhaps not been very generally or sufficiently remarked that improvements of trade, of wages, and of profits in this country have been far more dependent on developments in foreign countries than on either labour organisations or capital organisations in this country. As foreign countries developed they demanded our produce, and they demanded labour to help them to carry on their own development. As these left this country more demand for goods increased the price of these and gave more employment to labour, while at the same time the emigration of labour left less competition among the labourers themselves and helped them to get higher remuneration. If we bear this in mind, we shall see that our future prosperity will depend on our ability to help foreign countries, both financially and with man power. If these foreign producing countries cannot sell their produce in their old Continental markets, we, too, shall suffer in their suffering. Generosity, magnanimity, good will, therefore, remain as the great civilisers and peacemakers. —Your willing servant, FRANCIS WEBSTER.

Arbroath, November 29th, 1921.

REPARATIONS, ALLIED DEBTS AND EXCHANGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am grateful to Mr Mark B. F. Major and Mr Craies for their efforts to guide me to economic truth. My difficulty is that one would lead me to the right whilst the other draws me to the left. Indeed, they differ so much, that I was hopeful your issue of November 26th might contain their letters of mutual criticism. In my contribution of November 7th the question I put was, "The whole of a country's foreign trade financed through exchange, and, if not, what other methods are used?" I gave an illustration intended to suggest another method, which, if correct, would prove that the whole of a country's foreign trade is not financed through exchange, and I then proceeded to show the manner, as I conceived it, in which a reparation would be effected, also without touching exchange. On November 11th Mr O. R. Hobson, financial editor of the *Manchester Guardian*, delivered an address to the members of the Manchester and District Bankers' Institute, in the course of which he said, "A considerably smaller portion of the world's trade was now financed by bill of exchange. A larger proportion probably was financed by *pay and After* without the drawing of bills, while *American and Co., Ltd.* taken a good deal of our accepting business."

If such a sudden approach to the problem occurred as Mr Major suggests, then, 1921. (London) Leno would, of course, benefit like all Parr's Bank, Limited. exchange profit would be!

other person. If Mr Major cannot follow my argument he may superimpose his own hypothesis, but it does not follow that his conclusion demolishes my case. I never allowed Schneider and Co. a dollar draft, so his conclusion on that point does not apply. Their dollar credit would be transferred to the United States Treasury by instructions cabled, or mailed, or both. On March 4th last the parities of the dollar and mark to our paper pound were 3.90 and 2.40 respectively; to-day they are 3.99 and 1.125. Our pound has, therefore, appreciated 10 cents and 885 marks, in spite of the fact that we have a heavy liability to the American Government. Since also Germany has a heavy liability for reparations to the victorious Powers, I asked why, if this be the reason for the severe depreciation of the mark, a similar effect has not been produced on our pound. Quite a simple question. I wonder if Mr Major has realised that in his penultimate paragraph he has granted me the whole of my case. The dollar of Schneider and Co. was created by a German national. If the American Government accepted Mr Major's view they would decline to receive these devastating indemnities from us. I only wish they would.

Now, Mr Craies disagrees with Mr Major on every point except one. They are both under the popular impression that the exchanges govern trade. I think that trade governs the exchanges—a very different thing. If I saw a long goods train I do not think I should exclaim, "What a number of trucks it takes to push that engine." He also thinks we are still a creditor country. I am not so sure, but I think the problem of the investment of the indemnities and Allied debts due to us might be postponed until we have paid off our debts to the American Government and to our stock and bond holders. Until we have wiped off the whole of our National Debt we shall have nothing to invest.

After careful study of both letters and some reflection, my conclusion is that the whole of a country's foreign trade is not financed through exchange, but that some proportion goes by way of direct and indirect credits, and, moreover (this is the object of my initiating this correspondence), that the export of commodities in satisfaction of reparations or inter-Allied indebtedness does not touch the exchange market at all. Exchange implies the transposition of two or more substances; in this case, exported and imported commodities. The payment of an indemnity or reparation is an export solely. There is in the case of Germany no external demand for marks on account of this transaction, and there is consequently no exchange. A penknife is not the same thing as a pair of scissors. Will any statesman, professor, financial magnate, or editor honour me by a contradiction?—Yours, &c.,

ALFRED E. LEAF.

Manchester, November 26th, 1921.

EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In a letter published last week, Mr Mark B. F. Major outlines a scheme for getting round the violent fluctuations in the exchanges. His contention appears to be that, whilst no sane man would exchange goods for Austrian paper, he could, however, safeguard himself by exchanging goods for goods. Mr Major then suggests that reimbursement of the original outlay on the export goods should be obtained by bringing home the "barter goods," exchanging them here for English money, and thus closing the deal.

This scheme would be practicable if either of two conditions existed.

The first of these conditions is that there should be no lapse of time, and the second is that English money should itself not fluctuate violently. If by some magic form of transport export goods which had been purchased in the morning for sterling could be carried to Vienna, and bartered there for company goods by noon, and the "barter" goods of capital, brought back here and sold for sterling in the afternoon, the probability is that our merchant would suffer a loss of 10 per cent. of the very much risk. But, unfortunately, the market had moved so quickly, and it is now too late to be extricated from the operation. It is as if a municipal had the water supply cut off for the purchase price of

the original consignment, will actually have a lower purchasing power, owing to the fluctuations in sterling itself. How, then, can one avoid the gamble? The magic transport of goods is out of the question; therefore, the first condition cannot be brought to pass. It remains, therefore, that we should concentrate on the second condition—namely, the return to a sound currency in this country.

By Mr Major's scheme business is possible between two countries, one of which has a sound currency and the other an unsound one, but between two countries which both have unsound currencies no safe business at all is possible.—I am, &c.,

20 Bracken gardens, Barnes, S.W. 13,
November 19th, 1921.

W. J. COOK.

CHINA AT THE CONFERENCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to your article of last week on "China at the Conference," may I point out that, as so much is now being said about the decadence of China and about the unrest and its effect on trade, the following figures, which are official, may be of interest:—

	Tls.
1914—Imports	557,109,048
—Exports	345,280,874
1920—Imports	762,250,230
—Exports	541,631,300

I wish our returns were as good.

For the information of your readers I might mention that the tael is now 4s; it was 3s before the war.

There is one other little correction I would like to make. It is true that the Customs tariff was in 1918 increased to an average of 5 per cent. *ad valorem* on existing values, but a period of three years was fixed before this could come into operation, and it is not in operation now. Under the circumstances it is perhaps not surprising that the Chinese are still rather anxious, since the money at their disposal to carry on the Administration is quite inadequate.

I would also like to endorse very warmly your views with regard to the hostility of the Chinese, as a whole, to any extension of foreign control, and if the consortium is to be of any value it must be more judiciously handled than it is now.—Yours faithfully,

CHARLES WATNEY,

London Correspondent to the *North China Herald*.
December 1st, 1921.

BENSON AND HEDGES (CANADA), LIMITED.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your note on the Benson and Hedges (Canada), Limited, new issue, in the *Economist* of November 19th, you say, "The more important facts about the guarantor company—notably its assets—are significant details lacking from the prospectus."

The prospectus states that the guarantor company holds almost all the preference and ordinary share capital of Benson and Hedges, New York, to a nominal value of \$295,100, and that these shares are all specifically pledged in the trust deed in favour of the debenture holders.

It also states that the net profits of the guarantor company, excluding its dividends from the Canadian company, have in the last four years varied between £16,602 and £20,931. These are surely "the more important facts about the guarantor," and I do not think that a valuation of the stocks and other assets owned by the guarantor company would add much to the information.

The main facts are that the net surplus assets of the Canadian company, together with the nominal value of the shares in the New York company, all specifically pledged, cover the issue twice over, apart from other assets of the guarantor company, and the profits of the issuing and guaranteeing companies averaged for the past four years a sum sufficient to cover both the interest and the redemption (1924-36) twice over. The sales of the Canadian company alone for the year 1920 amounted to a value of practically £400,000, or twice the amount of the present debenture issue, and altogether it seems to me that the prospectus sets out all that is sufficient to make

clear that, subject to ordinary trade risks, the issue is a very fair one of its class.—I am, &c.,

AN UNDERWRITER OF THE ISSUE.

[We gladly print our correspondent's letter, but see no reason for modifying our criticisms on the prospectus.—Ed. *Economist*.]

COAL PROFITS AND WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent "B" asks "whether any depreciations of capital costs are charged to costs other than wages" in the new coal agreement. Yes. The agreement is extraordinarily detailed. It does not seem that any conceivable point has been overlooked. Briefly, the principles laid down by the Inland Revenue authorities are accepted for calculating costs of repairs and renewals, depreciation, &c. Expenditure in exploring ground, sinking shafts, or otherwise preparing for mining, is chargeable to capital account, but the cost of following coal through a fault in a seam already opened out is chargeable to revenue.—Respectfully yours,

THE WRITER OF THE ARTICLE.

Books and Publications.

REVIEWS.

"The Sudan in Evolution." By Percy F. Martin, F.R.C.S. (London) Constable and Co., Limited. 1921. Price 42s.

The author is admirably qualified by his previous travels in other developing countries for his self-imposed but evidently congenial task of writing this "study of the economic, financial, and administrative conditions of the Anglo-Egyptian Sudan," and it may be stated at once that, on the whole, he has done his work well. There is a mass of detail on all the varied aspects that go to make up the life of a people. At a time when the relations of Great Britain to her subject races are being called in question on every hand, it is well to possess this balance-sheet of results achieved in the Sudan, where our record is of the best. The dominant notes of British rule there are justice and common sense—the Cromer tradition of benevolent autocracy, continued in the best spirit, to which Mr Martin bears enthusiastic but not indiscriminate witness. And yet, with all its merits, the book is unfortunately marred by many blemishes. Thus on page 306 it is stated that definite plans (for the irrigation of the country to the south of Khartoum) were put forward and referred by the Sudan Government to the Public Works Ministry in Cairo, whereas on page 325 the credit for the project is given to the Egyptian authorities. The *Bahr-el Ghazal* (page 8) does not "come out of the Abyssinian hills," and does not "bring down millions upon millions of tons of valuable fertilising earth." The account of the climate, which is the key to Sudan economics of to-day, leaves much to be desired, and consequently on pages 118 and 119 the importance of rainfall for Sudanese agriculture is misunderstood. The financial relationship between Egypt and the Sudan in respect of the payment for the Egyptian Army is incorrectly summarised, and, indeed, is inconsistent with the table given on page 110; £172,000 is said to have appeared on both sides of the Budget as representing a contribution from Egypt to the Sudan receipts, and also a repayment to Egypt for the maintenance of her army in the Sudan. If this sum is deducted from both sides of the Budget, as suggested, the Sudan remains still the debtor of Egypt for the gratuitous services of the Egyptian Army there. But, in fact, this charge of a portion of the cost of the Egyptian Army to the Sudan Budget is the merest camouflage. The bulk of the Egyptian forces, which in 1912, for example, cost Egypt £950,000, is employed in the Sudan, and yet the Sudan contributed in that year only £172,000, or 18 per cent. of the whole. Again, the book contains much extraneous matter. Nearly eight pages (318 to 325), for example, treating of drainage in the Egyptian Delta, have no connection whatever with the Sudan, while the four pages of description of Anglo-Indian arrogance with

which the nineteenth chapter opens, though they add much to the raciness of the narrative, add nothing to its relevance. Perhaps in a second edition Mr Percy Martin will eliminate the blemishes. With all its faults, the book is one which deserved to be written and deserves to be read. The book will form an indispensable *vade-mecum* for the visitor to the Sudan, be he temporary tourist or more permanent administrator. It must be read, also, by all who would do business in this vast land, "half the size of undivided Russia and almost as big as Argentina." It contains a preface by Sir Reginald Wingate, than whom no man has done more for the Sudan. There is a fair index and an excellent map by the Geographical Section of the General Staff.

"The Principles of the Law of Sale of Goods." By Henry Aitken, K.C. (Edinburgh) E. and S. Livingstone, 1921. 10s 6d net. In Scotland advocates will remind you that their arguments embrace a wider field than do those of their brethren of the English bar. The citation of English cases is more common in Scotland than the reverse process in England. So this book explains both the Scottish and the English law. The Act of 1893, which codified the law of sale of goods, applies to both countries, containing alternative provisions on points where the legal rules of the two countries differ, but an English book on the subject will very often be found to confine itself almost entirely to the English view. Herein the present work has an advantage. It is intended mainly for business men and University students, but it cites authorities, and as an outline may very well serve the practising lawyer. The language is good and fairly simple, though the addition of a glossary of technical terms would possibly have been welcomed by beginners. The volume is the first of a new educational series, which is to include works on art, education, commerce and industry, forestry and agriculture.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 14.	December 15.

The Government's offer of a fresh set of 5½ per cent. Treasury Bonds at 99 has had the effect of strengthening the prices in the Consol market, for the first and second series were offered at 97 and 98 respectively, though both of these appeared before the Bank Rate fell to 5 per cent. The Union of South Africa six million pounds loan resulted in the underwriters being left with 83 per cent. of their obligation, but the quotation, after opening at ¾ discount, rose to within a small fraction of the issue price. Distribution of the 5 per cent. War Loan interest, on Thursday, helped to stiffen the market for gilt-edged stocks, and although several new borrowers are known to be contemplating an immediate offer of stocks, it is generally supposed that no very substantial amounts will be forthcoming on this side of the New Year. Most of the recently-issued scrip-stocks have advanced in price during the past few days.

The possibility of a postponement, or modification, of reparation payments from Germany caused a sharp recovery in the value of the mark, and consequently in German Government bonds. Prussians, of course, rallied in sympathy. French bonds are also better, which is held to be a little curious in the circumstances. Chinese issues, after being sold fairly heavily, rallied upon developments at the Washington Conference. Japanese, and other dollar bonds, have been rising. Canadian Pacifics, for instance, have gained about five points during the week, the death of Lord Mount Stephen not affecting the shares. Substantial rises in Salvador bonds occurred on announcement that a meeting of bondholders will be held next week to discuss the situation. Various other Central and South American issues are firmer.

The Home Railway market is far from enthusiastic over the prospects of the dividends to be declared next month. On some of the deferred stocks, it is already agreed that the chances of a dividend are none too bright in respect of 1921. At the same time, the situation holds so many elements of uncertainty that people are afraid to sell, thinking that, should there be any unexpectedly favourable change in the situation, the rises would be extremely rapid. Grand Trunks are again a little better, and Mexican Railway stocks advanced on more encouraging advices which have arrived with regard to the gradual settlement of the country. In this improvement, Mexican Utilities have participated. Argentine Railways are moving narrowly and erratically. The sharp rise in Leopoldinas brought in a few sellers, and the price eased off from the best, although San Paulo managed to hold its improvement firmly.

Rubber is a little better, in spite of the statistical position having nominally worsened. Business in the rubber share market is quiet. Amongst oil shares, the feature of the week has been the meeting of the Royal Dutch Company in Amsterdam on Wednesday, at which powers were sought to allow of dividends being paid in scrip or cash. The chairman gave an interesting account of the company's position, and shares of the group, with Mexican Eagles leading, have been decidedly better on the week. The strength of the insurance market continues. There has also been a little buying of some of the London banking shares. Textiles were not much affected by the drop in profits shown by the Coats' report. Courtaulds have been rather more active than usual, showing an upward tendency. A sharp drop in tobacco shares has been attributed to American selling, but the fall brought in buyers, and there was a prompt recovery. The Shipping market remains under the influence of the recent P. and O. report, which was held to be disappointing. British Gas stocks are good, various of the suburban companies' issues being advanced, but Imperial Continental dwindled a few points after its late substantial advance. The Iron and Steel market is dull, with movements almost negligible; in armaments the tendency is hesitating. The stores group remains steady. Crosbie and Blackwell shares gave way; Peek Frean preference improved a trifle on the proposal to amalgamate the company with Huntley and Palmers. In the brewery section, Allsops went ahead briskly; otherwise the market is without feature. Cable stocks are inclined to be heavy, on account of the falling-off in profits shown by the Eastern companies in the year recently ended. In the wireless group, Marconis dropped for want of interest. Newcastle Electric second debenture rose 7 on the talk of the interest rate being raised 1 per cent.

The Kafir Circus is overshadowed by the labour trouble on the Crown Mines property, and by the way in which the price of gold has drooped in consequence of the American exchange. Chartered are a little better, giving Rhodesians a firmer tone, and De Beers, after flatness on the issue of the report, rallied from the worst. A little interest has revived in tin shares, West Africans—gold and tin alike—being slightly harder. Rio Tintos improved with other Paris favourites, but the mining sections, as a whole, exhibit no real activity.

5½ per Cent. Treasury Bonds.—Repayable at par on May 15, 1930. Interest payable half-yearly on May 15th and November 15th. Price of issue fixed by H.M. Treasury at £99 per cent., payable on application. The Governor and company of the Bank of England are authorised by the Lords Commissioners of his Majesty's Treasury to receive, until further notice, applications for these bonds. Principal and interest are chargeable on the Consolidated Fund of the United Kingdom, while interest will be exempt from corporation profits tax. The bonds will be issued in denominations of £50, £100, £200, £500, £1,000 and £5,000, and the interest thereon will be payable half-yearly by coupon. The first dividend will be payable on May 15th, 1922, and will represent interest to that date from the date on which the relative application was lodged and payment made for the bond. Bonds of this issue may be registered free of cost in the books of the Bank of England or of the Bank of Ireland, as (1) "transferable in the Bank transfer books," or (2) "transferable by deed." Allotments may be obtained in registered form or in bonds to bearer at the option of the applicant.

Midland Counties Electric Supply Company, Limited.—Authorised capital £1,000,000, of which £750,000 has been issued. There is also an authorised issue of 5 per cent. first mortgage debenture stock, of which £343,850 is outstanding, in addition to which there are outstanding £200,000 8 per cent. notes issued in 1921, but it is intended to redeem these out of the proceeds of the present issue. This is an offer for sale of £400,000 7½ per cent. mortgage debenture stock at 96 per cent. The stock now offered forms part of a total issue of £500,000 7½ per cent. mortgage debenture stock, which will be repaid on or before December 31, 1946, by the operation of a cumulative sinking fund to be utilised either in redeeming by annual drawings at 102, or purchase in the open market. It is secured by a trust deed "upon the whole of the debenture bond and share capital," and a floating charge upon other assets of certain companies. The parent company was formed in 1912, and its revenue is derived from ownership of share and loan capital in certain electric power companies operating in Leicestershire, Warwickshire, Derbyshire and Nottinghamshire, &c. These controlled companies have expended capital to an extent of £1,571,490, of which £815,434 has been spent by those companies whose loan and share capital, amounting to this sum, is now pledged as security for this debenture stock. This share and loan capital is divided into £187,500 of debentures and £627,934 of shares. If the market value of these securities can be safely assumed as the face value the issue is fairly well secured. Without this information, however, the

value of the security is somewhat elusive. These pledging companies covenant not to create any further charges without the consent of the trustees. Further, the trust deed provides that aggregate trading and other liabilities shall not exceed the total sum of £50,000, "apart, of course, from liabilities which may be incurred by them from time to time to this company." The agreement not to create ordinary trading liabilities beyond a total of £50,000 is an interesting sign of the trend of modern company finance, but the fact that they can incur liabilities to the parent company for an unknown amount somewhat modifies the provision. Profits are given from 1915. The price paid by the present vendors for the stock is £92 per cent., the company bearing all expenses, but the vendors pay an underwriting commission of 2½ per cent. and an overriding commission of ½ per cent. Investors who feel satisfied with regard to the points we have raised may be attracted by the issue.

African Canning and Packing Corporation, Limited.—Capital £546,775 in ordinary shares of £1 each, of which 407,591 ordinary shares will be allotted in payment of the purchase price of various properties, 39,184 shares will be held in reserve, and 100,000 ordinary shares are now offered for sale at par. This is a company incorporated in June, 1921, in the Cape Province of the Union of South Africa under the laws of that province. It was formed to acquire a packing-house factory at Port Elizabeth and certain land for growing pineapples. The first vendors, the African Canning and Packing Company, Limited, will have allocated to them 50,000 shares in payment, the second vendors, the African Realty Trust, Limited, will have 164,000 shares allocated, and 105,816 shares will be issued in payment to various small holders. According to the balance-sheet issued, net surplus assets, against the issue of 407,591 £1 shares, amount to £410,919. But these figures are too vague for the conservative investor without more information as to the basis of valuation. Landed property and buildings at £288,849 would be an item more acceptable if accompanied by an independent valuation, and the same remark applies to live stock, plant, &c., at £60,467, and stock and stores at £92,536. This, we gather, is a speculative proposition to grow, can and market pineapples, and is yet in its experimental stages. Estimated profits are dependent upon the goodwill of the elements, assuming that the company is controlled efficiently. Investors should consider these details, and pay full attention to the speculative risks attached.

The African Oil Corporation, Limited.—Registered under the laws of the Orange Free State at Bloemfontein on August 18, 1919. Authorised capital, £700,000. Registered capital, £135,000, of which there has been issued and fully paid up £118,500 in 237,000 shares of 10s each. The registered capital was originally £100,000, divided into 200,000 shares of 10s each. This has since been increased to £135,000, £118,500 being issued, of which 150,000 shares were issued as fully paid to the vendors, and 87,000 for cash at par. No underwriting or other commission was paid. The purchase consideration paid to the vendor for prospecting and option contract over certain claims was £1,200 in cash and allotment of 110,000 fully-paid shares, and an option to acquire at par within three years of the date of the registration of the company shares to the nominal value of £139,000, out of which 75,000 shares of 10s each (equal £37,500) have been called up. Additional assets were acquired on December 5, 1919, for which £500 cash and 40,000 fully-paid shares were paid. In the terms of the leases to be entered into, the company can mine oil shale and coal, subject to the payment of a royalty of 6d per ton in respect of oil shale, and 2d per ton in respect of coal, the minimum rental payable under each lease being £1,000 per annum. The borrowing powers conferred on the directors are unlimited, but up to the present no money has been raised. These details are for public information only, and are published in order to comply with the requirements of the committee of the Stock Exchange. These shares will no doubt be only held at present by those who have more knowledge than that vouchsafed in the advertisement.

The Telephone Manufacturing Company (1920), Limited.—Authorised capital £1,000,000, in ordinary shares of £1 each, of which 410,000 have been issued. This is an issue at £96 per cent. of £300,000 guaranteed 8 per cent. cumulative income bonds, repayable at £102 per cent. "in or before 1935." The bonds will be secured by a trust deed, and will constitute a first fixed charge on the shares of the various subsidiary companies. The parent company manufactures private telephones, which are purchased by various subsidiary companies and leased to subscribers. On October 31, 1921, there were, it is stated, "nearly 7,000 such agreements, securing an unexpired total revenue of £948,868, and yielding a present income of £95,335." Other figures are given in the prospectus, which brings the latter amount down to £54,221, after deducting 20 per cent. for maintenance. Out of these rentals, it is intended to form a sinking fund, and the subsidiary companies have agreed jointly and severally to pay £36,780 per annum to the trustees, and it is further agreed that they shall

not pledge their assets or future income "in priority to or *pari passu* with the service" of these bonds. This issue is limited to £300,000, but power is reserved to issue further bonds "ranking *pari passu* with the present issue," subject to the provision of the necessary sinking fund, but so that the total principal amount "shall not exceed one-third of the rentals." Profits are set out from 1917 to 1921. The high interest offered of £8 6s 8d per cent., exclusive of profit on redemption, denotes the fact that the security behind the issue is not of quite a gilt-edged nature, and intending investors should consider this aspect. On the other hand, there is no reason why hiring agreements should not be suitable documents for pledging, although in some quarters it may be considered that the necessary finance should be provided primarily by shareholders. Non-shareholders must weigh the attraction of the security offered against the nature of the security. In this particular case we regard the offer as reasonable without possessing exceptional attraction.

The New Ice and Cold Storage Company.—Authorised capital, £50,000 in ordinary shares of £1 each. Issue of the whole amount at par. The company has been formed to take over from the Hallam Syndicate, Limited, certain premises at £9,000, which are stated in independent evidence to be worth "considerably more than double that amount." Net profits are estimated at £11,000. A speculative proposition for the consideration of local investors with some knowledge of the business abilities of the directors, and the scope in Sheffield for the development of such a business on remunerative lines.

Crookes, Roberts, Ritchie, and Co., Limited.—Authorised capital £80,000, divided into ordinary shares of £1 each. This is an issue, presumably at par, of £65,000 7½ per cent. first debentures, tax free up to 6s in the £. The company was incorporated in November, 1921, to acquire two businesses of manufacturers of guillotine machine knives, &c., carried on at Sheffield. The debentures will be secured by a first mortgage to trustees on leasehold property and fixed plant, also a floating charge on other assets. Property and plant have been independently valued at £72,638, while total assets are stated as £129,908. Thus the margin of security does not appear to be attractive. The annual turnover of these businesses for the past three years is shown, but the prospectus is singularly reticent over giving figures of past profits, although mention is made of "the old-established firm of Crookes, Roberts, and Company." The directors have taken an unusual course in offering to debenture holders the "option of requiring the company to repay the principal on April 1st and October 1st of any year on giving six months' previous notice in writing." It would be interesting to know if this repayment is to be at par. This is not clearly stated. In any case, this might be an excellent plan for debenture holders, but viewed from the company's standpoint, the wisdom of the offer must be questioned. If the undertaking encountered a period of bad trading at the very time when it would be needing all its cash resources, it would have to face the almost certain situation of paying out debenture holders. It is not likely that some debenture holders would stand idly by and see their assets gradually wasting, while others obtained their cash. Indeed, it might be pertinent to ask how the money could be found to pay out, say, 50 per cent. of debenture holders without selling the property and plant held in trust. It is noteworthy on this point that the company agrees not to create any charge in priority to or *pari passu* with this issue. Does this mean that the company are cutting themselves off from the usual right reserved to borrow from their bankers in the ordinary course of business and pledge all assets? If the repayment is at par, it is obvious that astute speculators would purchase in the open market whenever the debentures were at a discount and present for payment. With so many points doubtful, consideration of this issue should be left to the study of those who have personal knowledge of and faith in the business and the directors.

Colonial Gas Association, Limited.—Shareholders are invited to apply not later than December 17th for an issue of £21,000 8½ per cent. redeemable debentures of £50 each at par. The debentures will be repayable at par on January 1, 1935, but the holders may, on three months' notice before that date, convert each £50 debenture into 50 ordinary shares. The additional capital is required to meet the increasing demand for gas.

The Commercial Bank of Australia, Limited.—We are officially informed that the issue of new shares has been largely over-subscribed.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

ANGLO-EGYPTIAN BANK, LIMITED.

SATISFACTORY YEAR—DIVIDEND AND BONUS 17½ PER CENT.
COTTON FLUCTUATIONS AND EGYPT'S PROSPERITY.

The thirty-fifth ordinary general meeting of the Anglo-Egyptian Bank, Limited, was held, on the 29th ultimo, at the bank premises, 27 Clements Lane, London, Mr Raoul Hector Foà (the chairman) presiding.

The secretary (Mr G. H. Soul) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen, before dealing with the affairs of the bank, it is incumbent upon me to bring to your notice the serious loss you have experienced by the death of our friend, Mr H. A. Richardson, who for 26 years was a director of this bank, and for twelve of those years was our chairman. He was a man whose sterling qualities endeared him to his colleagues, and to whose energy and intelligence much of the prosperity of this bank is due. We have also to regret the death of a former colleague, Mr J. Howard Gwyther.

You will remember that our financial year ends on August 31st, and among the articles of our association there is one which lays down that the annual general meeting shall be held in London during the month of November. I must frankly confess that had it not been for the existence of this law, I would have deferred giving myself this pleasure until later, for I only returned last week from a trip which I had undertaken to look into the business of our not unimportant branch in Gibraltar. This has left me none too much time to prepare the few words which I am now addressing to you. As regards Egypt, the chief field of our activities, the whole of the situation has been overshadowed by politics, which you will admit is not our business. The delegation headed by Ably Yeghen Pasha, which had been over here for some months to settle the relationship which is to exist in the future between Great Britain and Egypt, has, I grieve to say, left our shores without having apparently arrived at an arrangement, but I hope and trust that a *modus vivendi* satisfactory to both nations will ultimately be reached.

EGYPTIAN PROSPERITY AND COTTON PRICES.

You know that the prosperity of Egypt largely depends upon the amount of money accruing to that country from the sale of its cotton. There have been since this time last year very considerable fluctuations. At the end of November, 1920, f.g.f. Sakellarides was about \$40 a cantar; on March 4, 1921, the price was \$22; on September 30th last it was from \$56 to \$57; and on the eleventh of this month it stood at from \$37 to \$38, a cantar being equal to 99 lbs avoirdupois. Under date October 13th, our cotton manager in Alexandria wrote:—"The fellah has taken advantage of the unexpected rise in cotton, and shows the greatest good will in parting with his cotton, so that, with an average demand from outside, the end of this season should see the interior warehouses bare of the staple." It is to be remembered, however, that since the date of this letter there has been a considerable fall in cotton. During the period under review the imports of manufactured articles into Egypt have been on a very much smaller scale than in preceding years, and the warehouses in Egypt, overflowing with unsold merchandise then, now certainly contain far less of this than they did a year ago. In the Sudan business is difficult. There have been many delays in the development of the country, due to world-wide penury, and this has reacted naturally very much upon a young country. For further information on the position of cotton in the Sudan I would refer you to the report of the chairman's speech at the meeting of the Sudan Plantations, which appeared in the newspapers last week.

NEW BRANCHES.

Your directors have felt it incumbent upon them to gradually extend the number of branches, and I have to report that since we last met our bank is now working at Assiut and Suez, in Egypt, Omdurman, in the Sudan, and at Nazareth, in Palestine. We have at last been able to secure a site for premises in London large enough for our needs, and these will, I hope, be ready for our occupation within six months from to-day. Our staff has worked in London under the most unfavourable conditions conceivable for the last five years, and I am sure that in the new premises we shall be able to carry on the work in all departments much more easily than it has been in our power to do lately. Financial and other newspapers will have, no doubt, brought to your notice the extreme prominence given to the fluctuations in

HEAD OFFICES: LIVERPOOL AND LONDON.
ROYAL
INSURANCE COMPANY, LIMITED.
ALL CLASSES OF INSURANCE EFFECTED.

foreign exchanges in London. I am glad to be able to tell that, owing to the linking up of the Egyptian pound and the pound sterling, all preoccupation on that score has been spared to us. In Palestine we are proud to be able to say that we have been of considerable use to the Government in the country, but commercial development there is a plant of slow growth.

BALANCE-SHEET ITEMS.

It will be no news to you that banking profits have diminished all over the world, and from a variety of causes. We cannot expect to be an exception to the general rule. Our deposits, as you will see from the report in your hand, have been somewhat reduced. One-third of this is due to the disappearance of one Government account, which we knew was only of a temporary nature, and the rest is no doubt due to the withdrawal of money by clients who had to make good the shrinkage in commodities, or other values. You will observe that there have been very few important variations in the items in the balance-sheet. The one calling for most attention on the creditors' side is the rise in the freehold and leasehold premises from £94,000 to £161,000, which principally relates to the London premises. The totals of the two sides of the balance-sheet are down from £18,000,000 to £14,000,000, reflecting the shrinkage in business which has followed upon the inflation brought about by the world war.

THE DIVIDEND.

We have great pleasure in being able to declare a final dividend of 15 per cent., together with a bonus of 2½ per cent., both free of income-tax, but our satisfaction is to a certain extent qualified by the fact that we have had to claim back some of the excess profits duty which we had previously paid to the Government. Your directors continue to do what in their power lies to keep up the reputation which the bank has for so long enjoyed, and Sir Marshall Reid will in a few weeks be visiting most of our branches, thereby, besides exercising a supervision over the general business of the bank, being brought into close personal contact with our many good clients. I have now only to thank the managers and the staff generally for their devotion to the work which they have undertaken, and I am sure, from your side of the room, an acknowledgment of their efforts on your behalf will give them as much pleasure to receive as it gives you to make.

Sir Marshall F. Reid, C.I.E., seconded the motion, which was carried unanimously, and the usual formal business terminated the proceedings.

WESTERN TELEGRAPH COMPANY, LIMITED.

EFFECTS OF TRADE DEPRESSION AND ADVERSE EXCHANGE RATES.

The eighty-eighth ordinary general meeting of the Western Telegraph Company, Limited, was held, on the 30th ultimo, at Electra House, Finsbury Pavement, London.

Sir John Denison-Pender, G.B.E., K.C.M.G. (chairman of the company), presided.

The secretary (Mr E. Steer Hodson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, after paying a tribute to the late Lord Balfour of Burleigh, said: Although the accounts for the year ended June 30th last, now before you, do not show such a large balance of profit as the previous year—which constituted a record in the history of the company—they are certainly of a satisfactory nature, when you take into account the state of trade generally, and the question of exchange, which is causing, not only in South America, but in other parts of the world, so much anxiety in commercial dealings.

RECEIPTS FROM MESSAGES.

Receipts from messages show a decrease of nearly £613,000. The general depression in trade and commerce is accountable very largely for this, as it has, of course, affected the business of our company, and this year the depreciation of the currency of all the countries which we serve, against an appreciation in the previous year's accounts, is responsible for very heavy loss on remittances and also forms a large part of the decrease in revenue.

The balance of sundry increases and decreases in other items of revenue—namely, interest, rents, and transfer fees—reduces the net decrease to under £610,000. On the other side of the revenue

account, the total working expenses were more by nearly £85,000, which includes special allowances given to our staff both at home and abroad to meet the exceptional times we have been passing through.

Income-tax, excess profits duty, and corporation profits tax were less by over £381,000. I am glad to say excess profits duty will not appear in our next year's accounts, having terminated as far as the company is concerned in July last.

There was also relief to the extent of £6,500, expenses of the issue of the new capital and interest on instalments paid in advance on the new shares offered to, and practically all taken up by, our shareholders in the previous year.

After distributing the dividends on the increased share capital, amounting to a total of £279,125, and transferring to the general reserve £350,000, to maintenance of ships reserve fund £50,000, and to the land and buildings depreciation fund £50,000, there remains a balance of £128,738 to be carried forward.

BRAZIL TO BARBADOS CABLE.

On the last occasion when we had the pleasure of meeting you here I expressed regret that our new cable from Brazil to the island of Barbados was lying idle. You will remember that this cable was laid in conjunction with the well-known American company, the Western Union Cable Company, who laid one northward towards Florida from Barbados, at which latter place they received the requisite permission to land from the British Government.

The Western Union cable is still buoyed outside United States territorial waters, and the Western Union and our cable are still lying idle in consequence of the refusal of the Government of the United States of America to permit the landing in Florida. I am sorry to say there is no change in that state of affairs, but I hope that a decision on the matter will be arrived at shortly.

In the meantime, a valuable direct cable communication between South America and the United States is being held up, and this traffic is at present mainly passing by the lines of our competitors, the All-America Company, whose route from Brazil is south to Argentina, over the Andes, and north up the west coast of South America. Look at the map of the American Continent, and you will be able yourselves to judge which route should be selected in the interests of commerce.

RENEWALS AND ADDITIONS TO COMPANY'S CABLES.

The renewal of our older section between Lisbon and Madeira, to which reference was made at our last meeting, has been effected, and arrangements are now in progress to carry out a similar renewal of the original Madeira-St Vincent cable early next year by the cable steamer, which will, immediately after carrying out the work, continue her voyage to Brazil and lay the new cable between Pernambuco and Maranham, also other cables connecting Pernambuco with Macao, and with Victoria and Rio de Janeiro, and a third cable between Rio de Janeiro and Santos, thus materially strengthening our coast connections. The ship will also carry some further cable to replenish our stock on the coast of South America. This expedition will entail an expenditure of about £700,000, bringing our total expenditure since 1918 on new communications and on renewing older sections of our system up to no less a sum than £3,000,000.

When these operations are completed the transmission of traffic will be expedited, thereby permitting us to give a quicker cable service at ordinary rates to the commercial community.

However, it may be opportune to mention here that "urgent" telegrams carried, not only by this company, but by all the associated cable companies, only form the small percentage of 10 per cent. of the total commercial traffic. As you are no doubt aware, "urgent" telegrams are charged triple rates and have priority over messages tendered at ordinary rates.

CURRENT YEAR.

With regard to the message revenue for our current year—namely, since July 1st last—the depression continues, and we cannot hope for a reaction until exchange becomes more settled, which will, of course, mean renewed activity in international commerce and trade.

Mr E. C. Humphreys said that, although the results for the past year showed a reduction of a little over £201,000, he thought they could accept the position with equanimity in view of the general depression of trade, accentuated by the disorganisation of the exchanges. On the other hand, they had the great satisfaction of having received their full 10 per cent. dividend, free of income-tax, with a good margin over for reserve and other funds, with only a slight diminution in the carry-over. The three items—income-tax, excess profits duty, and corporation profit tax—were indicative of the very heavy toll made on their profits. He imagined that they could not hope for any relief from income-tax, but, as the chairman had stated, they had happily seen the last of the excess profits duty, but the corporation tax still remained. That

tax was radically unsound, and if maintained would undoubtedly prejudicially affect the ordinary stocks. In his view the corporation tax was much more unreasonable than the excess profits duty, and it weighed more heavily upon the ordinary shareholders of limited liability companies.

The resolution was carried unanimously.

THE EASTERN TELEGRAPH COMPANY, LIMITED.

A MORE EFFICIENT SERVICE.

The ninetieth ordinary general meeting of the Eastern Telegraph Company, Limited, was held, on the 29th ult., at Electra House, Finsbury Pavement, London, Sir John Denison-Pender, G.B.E., K.C.M.G., chairman of the company, presiding.

The secretary (Mr A. R. Hardie) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: You will find that the gross revenue for the year under review again shows an increase over that for the previous year, which at that time stood as the record year in the history of the company. It has now reached the substantial figure of £4,381,855. For the year 1919 it was £4,059,062, or an increase of £322,793. This is satisfactory as far as the gross revenue is concerned, but, on the other side, the very large increase in our working charges for the present year is relatively considerably greater; so that our net revenue, after providing for all working expenses and other revenue charges, is £352,500 less than it was last year. I am glad to say, however, that in anticipation of the further increase in expenses, and to provide for the uncertainty of future taxation, we carried forward from last year's 1919 accounts the sum of £416,082, so that our available balance for the year ending December, 1920, was £1,335,140. Out of this sum we have carried to general reserve fund £500,000 and to the maintenance ships' fund £100,000, and after meeting the dividends on the ordinary and preference stocks, there remains a balance of £316,478, which we propose to carry forward as a safeguard until affairs generally become more normal, when we hope to be able to gauge more clearly the relation between income and expenses.

I am glad to say that our staff, though reduced in numbers, responded loyally to the expansion of our business and willingly worked long hours in order to meet the demands of the Government and the public, but as this condition of affairs could not continue indefinitely, we have been making every effort to speed up the training, and I am glad to say that the additional numbers which have passed through our college and been distributed over the various stations abroad is having the effect of reducing the amount of overtime and allowing the usual well-earned home leave, thus to some appreciable extent relieving those who had to bear the brunt of the exceptionally heavy work during the last few years. Fortunately our financial resources have enabled us to deal generously with our staff. It was also a source of satisfaction that we were able to justify an increase in the rate of dividend on our ordinary stock from 8 to 10 per cent. for the year 1919, so that the interest of the proprietors and the staff, which are so closely allied, thereby benefited by the prosperity of the company.

To meet the claims of both it is necessary to maintain and improve the financial resources of the company, and this result can only be achieved by providing the Government and the public with a service equal to and, if possible, better than that which earned for us a good reputation in past years. When I last had the pleasure of addressing you on this subject, I stated that we were making every effort possible to re-establish the efficiency of our service, which had, in common with other public services, been adversely affected during the war, when it was impossible to transmit commercial traffic without very heavy delay owing to our inability to lay new cables or carry out the necessary constant renewals of our older sections. This drawback naturally prevented us from carrying satisfactorily the greatly increased volume of traffic with which we had to deal at that time; but I then informed you that an improvement had already taken place, and foreshadowed a still greater improvement when the whole work on hand was finished. This work is still proceeding, and as each section is completed the good effect is realised, and when the whole programme is finished we anticipate a cable service even more efficient and faster than that prior to 1914. These improvements will have entailed an expenditure by this company alone of about £3,750,000 sterling. So far £1,300,000 has been charged against the general reserve fund, only £1,000,000 additional ordinary capital being raised—offered to and readily taken up by our stockholders, and we at present propose to meet the balance out of reserve fund accumulations. The traffic this year has been very variable, at which no one can wonder, but when business becomes more normal I hope we may look for a traffic little short of that we have been carrying during the last two or

three years, and, if so, we may find it advisable to still further increase our carrying capacity by laying additional cables, in order to provide a larger margin of capacity in the possible event of an abnormal succession of temporary interruptions to our main line sections occurring, so that the traffic can be, even under these circumstances, carried without delay.

Sir Albert J. Leppoc Capel, K.C.I.E., seconded the motion, which was carried unanimously, and the usual formal business terminated the proceedings.

EASTERN EXTENSION TELEGRAPH COMPANY, LIMITED. SATISFACTORY YEAR—INCREASED GROSS RECEIPTS.

The annual meeting of the Eastern Extension, Australasia and China Telegraph Company, Limited, was held, on the 30th ult., at Electra House, London.

Sir John Denison-Pender, who presided, said he thought the shareholders would agree that the accounts presented were highly satisfactory. The gross receipts for 1920 amounted to £2,514,825, and showed an increase of £67,960 as compared with 1919, notwithstanding the fact that the revenue for the latter year was £376,000 higher than that of 1918. Compared with the pre-war year of 1913 the past year's revenue showed an increase of over 300 per cent. During the current year the traffic had naturally been affected by the acute commercial depression which had prevailed in all parts of the world, but, in all the circumstances, the revenue was considered to be not unsatisfactory. The transmission of the greatly augmented traffic in the past year had necessarily involved a considerable addition to the working and other expenses, which amounted to £1,196,000 against £962,000 in 1919, and, adding the increased excess profits duty, the new corporation profits tax, debenture interest, &c., the total expenditure for 1920 at £1,898,000 showed an increase of £492,000. The increased expenditure was principally due to the revised staff salaries and special allowances and the exceptionally heavy cost of maintenance of cables during the past year. The balance they had now to deal with was £617,000, and with the amount brought forward there was a total of £849,000. They had transferred £450,000—or £100,000 more than in 1919—to the general reserve fund and paid £38,800 in dividend, leaving £81,000 to be carried forward. In the balance-sheet the new capital offered to and practically all

taken up by the shareholders had been added to the capital account, which had been debited with £559,824 in part payment of the new Madras-Singapore cable and the acquisition of land and staff buildings at many of the company's stations to meet pressing needs for additional house accommodation.

"WORKING NOW GREATLY IMPROVED."

At the last annual meeting he referred to the public complaints in connection with the regrettable delays in transmitting the Far Eastern and other traffics, and expressed the hope that when the cable renewals and additional new cables which the Eastern and Eastern Extension Companies had in hand were completed, the efficient working provided in pre-war days would be restored, if not improved upon. Unfortunately, this had taken longer than had been anticipated, owing to a variety of adverse circumstances arising, which had added to their troubles during the early part of the current year, but he was glad to say that the working was now greatly improved, and it was expected that ere long the public would have a faster service, even at times of exceptional interruptions in the main line sections, to which cables were always liable. The Chairman concluded by moving the adoption of the report and accounts and the approval of the dividend of 10 per cent., free of income-tax, paid for the past year.

Sir Albert J. Leppoc Cappel seconded the motion.

In reply to Mr Burt, who asked whether recent developments in "wireless" would adversely affect the cable companies,

The Chairman said that shareholders had always tried to get him to prophesy with regard to this question, but he was not going to do so. He would, however, give them certain facts from which they could judge for themselves. The Germans were supposed to be well up in "wireless" before the war, and it was their only direct means of communication to the outer world during the war—a fact which ought to have tended very materially towards making it efficient, but at the present time they were entering into arrangements with the big Atlantic companies for direct cable communication with the United States. Then Italy, which was looked upon as the birthplace of "wireless," was at the present time endeavouring to get direct communication with North and South America by cable. This being so, it did not look as if the days of cables were over. If "wireless" were better than the cables it would cut them out, but it had some work to do before it got into that position.

The motion was carried unanimously.

SOUTH DURHAM STEEL AND IRON COMPANY, LIMITED.

CHAIRMAN ON NEED FOR CHEAPER PRODUCTION.

The adjourned twenty-second annual ordinary (1920) general meeting was held, on the 30th ultimo, at Middlesbrough, the Right Hon. Lord Furness presiding.

The Chairman, in moving the adoption of the report and accounts, said: We are here to-day for the purpose of considering the accounts for our financial year, which ended on September 30, 1920. You will notice from the directors' report that, after making provision for taxation, the profit for the year was £247,364 18s 2d, which is £61,000 less than in the previous year. Allowing for the usual appropriations for debenture and preference share interest, and after placing £50,000 to depreciation, we were able to pay a dividend of 25 per cent. on the ordinary share capital, and carry forward the balance of £122,846, as against £44,481 in the previous year.

Our manufacture of plates is, as you know, very largely confined to the shipbuilding and engineering trades, and I need scarcely remind you that since we last met the shipbuilding trade, with which, of course, the engineering trade is closely allied, has experienced an unprecedented setback. A variety of causes contributed to this slump, which occurred with remarkable suddenness, and resulted in the cancellation of numerous shipbuilding orders. As a consequence, many of the steel orders upon our books have not been specified owing to shipbuilders not being in a position to take delivery.

Further to this, several large steel works have been built during recent years for plate manufacture, some of which are in operation, others having not even yet commenced; and unless the output of shipbuilding and engineering is increased, it does not appear likely that the prospective increased capacity for plate production will be profitably absorbed. In any event, the position of your company, like all other steel and iron companies, will naturally be affected by the coming competition from the new works, when these are all in successful operation.

As some of you will doubtless remember, I anticipated the possibility of this coming competition in my speech of 1918; and after giving the matter very serious thought, your directors are of opinion that it might be desirable, when conditions become more stable, to consider the advisability of entering into some other finishing trade, instead of, as we have done in the past, relying so largely on the heavy plate trade. There are other departments of steel manufacture, which will require other mills and finishing departments, but which will not affect our open hearth steel plants.

Though your directors do not consider that the present is the right time to embark upon such changes, very careful consideration is being given as to how we can later on diversify our manufacture of steel, having regard to the large additions which have been made in recent years to the heavy plate-rolling capacity of the country.

As to the prospects of a revival in trade, I have referred to this and other matters of general interest in my speech to the Cargo Fleet shareholders earlier in the day, and it scarcely seems necessary for me to go over the same ground again. But here the same general principles apply: Labour is too high, when it is transferred to the cost per ton of the products we manufacture, and there can be no doubt that, if we are to succeed as iron and steel manufacturers in this country, these tonnage costs will have to be reduced.

The railroad rates, for the carriage of both raw and finished materials, are out of all proportion, and I see it was recently stated in the Press by the railway companies that, although the pre-war wage bill of £770,000 per week rose to £2,700,000, this year, owing to the heavy wages being arranged on a cost of living basis, the reductions in labour costs have so far not been sufficient to enable them to make any adequate reductions in their freight charges generally.

If we are to regain our former position in the iron and steel industry, these reductions will have to be made to enable us to compete successfully in the markets of the world. Otherwise our industry will languish and ultimately lose the pre-eminence which it occupied in the past.

For these reasons, I regret I am unable to indicate any more hopeful outlook for the immediate future.

The report and accounts were unanimously adopted.

The twenty-third annual meeting was then held.

The Chairman (the Right Hon. Lord Furness) said: As indicated, for our financial year ended September 30, 1921, we are unable, for reasons already stated, to present to you to-day the completed accounts for that year. Meantime, after full consideration of all the circumstances and such figures as are available, your directors have decided to pay a dividend of 10 per cent., less income-tax, for the year on the ordinary share capital.

The retiring directors and auditors were elected, and the meeting was adjourned.

CARGO FLEET IRON COMPANY, LIMITED.

BURDEN OF RAILWAY CHARGES ON COAL, IRON, AND STEEL INDUSTRIES.

The adjourned annual ordinary general meeting (for 1920) was held, on the 30th ultimo, at Middlesbrough, the Right Hon. Lord Furness presiding.

The Chairman, in moving the adoption of the report and accounts, said: The reductions of working hours and the reduced output per man in the coal industry have resulted in the price of coal being too high to enable the iron and steel trade of this country to meet foreign competition. It is hoped, indeed, I think I see signs of a further fall in the cost of this commodity, which is sincerely to be wished for, as there is no gainsaying that coal is one of our principal assets, and the backbone of the iron and steel industry.

Secondly, with regard to the question of railway rates, these have been increased—so far as the commodities connected with the iron and steel industry are concerned—by an average of nearly 113 per cent. as compared with the rates ruling in July, 1913. The general increases which have taken place in railway rates are a serious handicap to all manufacture, but in no case do these affect any industry so adversely as the iron and steel trade, and this is strikingly illustrated by the following table of figures, which gives you a comparison of the railway carriage charges incurred in connection with the manufacture and delivery of one ton of finished steel in July, 1913, and October, 1921.

Commodity.	Carriage Charge July, 1913.		Carriage Charge October, 1921.		Per Cent. Increase
	s	d	s	d	
Coal and coke.....	5	4.6	11	11.06	121.43
Iron ore and limestone.....	5	3.43	10	1.21	91.07
Lime, basic bricks, &c.....	0	11.77	2	0.98	112.05
General stores, &c.....	1	0.83	3	1.66	196.18
Delivery of 1 ton of finished steel	6	11.71	14	8.42	114.53
	19	8.34	41	11.33	112.96

Delivered price of steel sections£7 10 0 ..£10 0 0 .. 33.33

To summarise the figures, this means that the total charges on the commodities I have mentioned amounted to 19s 8d in July, 1913, as against £2 1s 11d in October, 1921, representing an increase on the total charges of no less than 113 per cent.

In contrast to this exorbitant increase in railway rates actually paid at these works on our raw materials and finished products, it is interesting to note that the increase in the price of finished steel, as between the same dates, is only 33½ per cent.—our price for steel sections in July, 1913, being £7 10s per ton, as against £10 per ton in October, 1921. In other words, whilst the railway rates have more than doubled, our selling price of finished steel has only increased by one-third.

You will particularly note that, in the case of coal and coke—which form so large a proportion of the steel-makers' raw materials—the increase in the railway rates is over 120 per cent., notwithstanding the fact that coal and coke provide more ton mile rail traffic and more economical loading than any other goods.

It is true that the railway companies have announced a small reduction, as from November 1st, on ironstone, iron ore, and limestone, but this only represents a reduction of approximately 2s per ton on the raw materials required in the manufacture of a ton of pig-iron, while no relief whatever is made in respect to coal and coke, and iron and steel products.

I think I am correct in stating that the iron and steel trade, through its raw and finished materials, provides the railways of this country with approximately 25 per cent. of their total traffic, measured in tons.

In this connection, it might interest you to know that to produce a ton of finished steel seven to ten tons of raw and finished material, slag refuse, &c., has to be handled, of which quantity about six tons has to be conveyed by rail. If, therefore, the railway companies desire to see a trade revival in this industry, and thereby increase their volume of traffic, they must get nearer to the old rates. This is a question of the utmost national importance, not only to the iron and steel trade, but to all other industrial undertakings in this country.

Another serious factor is the present high level of rates and taxes, and although the position is complicated by the necessity for the relief of distress arising out of the present unemployment, it is a matter for very careful consideration by the Government, and also the local authorities, to eliminate all unnecessary expenditure with a view to diminishing the burdens which industry has to bear to-day.

In conclusion, I would like to say that, while I view the present condition of trade with concern, I am nevertheless sufficiently

optimistic to believe that we shall surmount our present difficulties and re-establish our trade on a firm and lasting foundation, provided Capital and Labour are prepared to work harmoniously together to meet the great difficulties which confront us to-day in a spirit of mutual trust and co-operation.

The report and accounts were unanimously adopted. The annual meeting (for 1921) was then held.

The Chairman (the Right Hon. Lord Furness) said: Your directors are again unable to present the balance-sheet and directors' report. In the meantime, your directors have decided to pay a dividend of 5 per cent., less income-tax, in respect of the year ended September 30, 1921.

The retiring directors and auditors were elected, and the meeting was adjourned.

ANSELLS BREWERY, LIMITED.

WHY PRICE OF BEER CANNOT BE REDUCED.

Mr Edward Ansell presided on Tuesday, November 29th, at the Queen's Hotel, Birmingham, at the annual meeting of Ansell's Brewery, Limited. Proposing the adoption of the report, the Chairman drew attention to the fact that the assets of the company at the time of its reconstruction were valued at £800,000, while at the end of their financial year, September 30th last, after making full provision for depreciation and deducting the only liability—namely, sundry trade creditors—the new assets stood at £1,436,467, or an increase of £636,467. This increase represented the investment of the large amounts placed to reserve from time to time, and this, he ventured to say, had been conducive to the interests of both debenture and preference shareholders in strengthening their financial holding. On the asset side, licensed properties stood at £1,144,822, as compared with £557,817 at the date of reconstruction in 1907. The short leases had been consolidated into freeholds or long leases, and new properties added, which had been carefully selected. They were now mostly freeholds, or long leaseholds, and a large number had been either rebuilt or modernised during recent years. There was no item for goodwill or mortgage security of any kind; the assets were actual and most tangible.

IMPOSSIBILITY OF REDUCING BEER PRICES.

In seconding, Mr Thomas Ansell referred to the question which was being often raised of the high price of beer. The company's balance-sheet showed a profit of £117,000. If they reduced the price of their ales to the public without any alteration of quality by one penny per pint, it would cost at least £360,000 per annum, so that the profit would be wiped out three times over. Even an attempt to reduce the price by one halfpenny per pint would involve the company in a net loss of about £60,000. He submitted the onus of lowering the price of beer lay with the Government by reducing the duty, which was thirteen times greater than it was before the war. The duty to-day was £5 per standard barrel, as compared with 7s 9d in pre-war days.

The report and accounts were approved, and Mr A. E. Wiley was re-elected a director. At a subsequent extraordinary general meeting a resolution was adopted altering the articles of association.

INDO-BURMA OILFIELDS (1920), LIMITED.

RESULTS FROM NEW WELLS.

The first annual general meeting of the Indo-Burma Oilfields (1920), Limited, was held, on the 1st inst., at Winchester House, London, the Rt. Hon. the Earl of Denbigh presiding.

The Chairman, in moving the adoption of the report and accounts, said: Turning to the general operations of the company, you will recollect that the prospectus declared the policy of the company to be the development of its Yenangyaung Well Sites. After giving the matter the fullest and most anxious consideration, and believing it to be in the best interests of shareholders to get oil at the earliest possible date, your directors authorised work to be started at Yenamma. The first well drilled came in with a production of 6½ barrels per day at 690 feet against the prospectus estimate of three barrels. Seventeen wells have been drilled in the neighbourhood of No. 1 Well, and the results are set out in the technical adviser's report, which accompanies the directors' report. Four further wells are being drilled, and the results may be received at any time. You will note that oil has been struck in every well, the six best giving results of 12, 14, 18, 25, 30, and 45 barrels per day respectively. Results from three wells have been cabled since the report was issued: No. 20, which produced 11½ barrels per day, No. 21 producing 18 barrels, and No. 22 producing 30 barrels. Including these the average for the producing wells so far drilled is just 11 barrels initial yield per well per day against the prospectus estimate of three barrels average production.

PADAUKPIN AREA.

Coming now to the Padaukpin area, work was commenced in No. 1 well in January, 1921, and in No. 2 well some little time later. It was subsequently discovered, as the result of a large scale survey, that the centre of the dome was situated on an area of 1.8 square miles contiguous to the company's original area. This area was the property of a Burmese Syndicate, from whom the company's managing agents obtained an option to purchase at the price of £17,500, and I am glad to say that they have now turned the whole of this area over to the company at the price they paid for it, subject only to the same royalty as is payable in respect of the original area. Five sites were located on that area, and No. 3 well struck the oil at a depth of 1,414 feet, the yield being 63 barrels per day. No. 1 well was drilled to 1,950 feet, when on account of bad caving-in it was decided to abandon it. No. 2 well has now reached a depth of 782 feet, No. 4 well a depth of 1,450 feet, and may strike the oil at any time. No. 5 has reached 705 feet and No. 6 100 feet. The rig is erected on No. 7 well. This is very satisfactory, and the company is to be congratulated in owning a property of such great possibilities.

The satisfactory results which I have just mentioned from the Yenamma and Padaukpin areas fully confirmed and justified the change of programme in making the development of these areas the principal work of the company, but the directors had no intention of allowing their valuable well sites at Yenangyaung to lie dormant. As, however, the Yenamma and Padaukpin operations could be controlled easily and satisfactorily from a central base at Thayetmyo, the starting of work at Yenangyaung would have meant the duplication of staff, stores, machine shops, &c. The company had a short time before completed negotiations with the Yomah Oil Co., Limited, for the erection of a joint refinery (to which I will refer later), and as the Yomah Company were drilling at Yenangyaung, an arrangement was made with them to drill a number of the company's sites on a co-operative basis.

QUESTION OF THE REFINERY.

The next matter to which I would like to refer is the question of the refinery. On making careful search for a suitable site, it was found that the Yomah Oil Company had already acquired the best site for a refinery, which could be discovered anywhere in the neighbourhood of Rangoon. That company had already ordered a considerable amount of material, and eventually it was decided to join with them in the erection of a co-operative refinery. The first unit of this refinery is nearing completion. The refinery is laid out on the most modern lines, and is capable of extension up to 4,000 barrels capacity per day.

Referring to finance, we have been going very carefully into the figures with Colonel Harry Johnson since his arrival home, and although owing chiefly to the delay in getting the refinery going, the running expenses will have to be provided for some months longer than was anticipated, and provision made for the odds and ends of plant which are always being required on an oilfield, we think that the finance will be about sufficient. In any case, whatever additional money is required to bring the company to the revenue earning stage will be forthcoming.

Now, as to the question of profits, I hesitate to give figures because it is so easy to err on the optimistic side and give too high an estimate, while it is just as foolish to be unduly pessimistic and estimate too low. I am assured that, taking a moderate view, the company can, beginning early in the New Year, count on earning profits of £10,000 per month, which sum will be progressively increased as production increases. With regard to the future programme, work will proceed with the present plant at Yenamma and Padaukpin continuously. The company's experts have the fullest confidence in the future of the company, and so has every member of the board.

The report was unanimously adopted.

BUKIT TAMBUN ESTATES, LIMITED.

BOARD'S CONSERVATIVE POLICY.

The sixth annual general meeting of Bukit Tambun Estates, Limited, was held, on the 24th ultimo, at the registered office, 65 Bishopsgate, London, Sir Gordon B. Voules (the chairman) presiding.

The Chairman said: You will see that our profit for the year amounted to £2,494, making, with the sum of £2,679 brought forward from the previous year, an available balance of £5,174, which your directors recommend should be carried forward.

This is somewhat disappointing reading after our experience of last year, when, you will recollect, we declared a dividend of 8 per cent., but most of us who are interested in Eastern produce and similar concerns are growing accustomed under the present depression to this carrying-forward policy, and feel fairly satisfied so long as the carry-forward is not on the wrong side.

The number of nuts harvested was nearly 2,060,000, an increase

of 460,000 over the previous year's figure. This is a satisfactory result, considering that only some 50 per cent. of our planted area has reached the productive stage.

Out of this crop we manufactured 400 tons of copra (as compared with 323 tons in 1920) at a cost f.o.b. of £19 3s a ton. This was an increase of 30s a ton over the previous year, due to a rise in the wages during the first part of the year, to a heavier loss on rice supplied to our coolies, to the passage on leave of our manager, and to other incidental expenses. The copra was all sold locally. The net average price realised was £27 15s a ton, compared with £47 7s in the previous year. This falling off was due to larger stocks of copra becoming available in the market, and to a somewhat smaller demand.

Last year I had to call your attention to the difficulties we experienced in getting a sufficient number of coolies. This difficulty no longer exists, and sufficient labour was obtained, and is still obtainable, to meet all our requirements. I now move the adoption of our report and accounts.

Sir Francis Voules: Gentlemen,—The directors have asked me to second the resolution because in March last I went to Penang and spent two days on the estate, in addition to considerable time spent with your visiting agent, Mr Gillespie, and with your agents at Penang, Messrs Brown, Phillips and Stewart, and went very thoroughly into all matters in connection with the estate.

I was most favourably impressed with my visit to Bukit Tambun. You have a very fine estate, well kept up, and extremely well adapted for cocoanuts as regards soil, situation, and economic transport by water; so that it seems to me that, assuming the selling price of copra has satisfactory relation to your cost, which should be low, the future of the estate is assured.

The motion was carried unanimously.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED

CHAIRMAN OPTIMISTIC OF COMPANY'S POSITION AND PROSPECTS

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held at the Cannon street Hotel, Cannon street, London, on the 1st inst., Lord Harris (chairman of the company) presiding.

Mr H. G. Sidgreaves (one of the joint secretaries) having read the notice calling the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—Shall we, as usual, run through the accounts and take those of the New Consolidated Gold Fields first and the profit and loss account? The management cost of the new company this year is £51,000 odd, as compared with £39,000 odd last year. The increase is due to the increased cost for a full year of revision of salaries in 1920 and to the war bonus to the staff, accounting for £9,000, and to reduction in receipts from rents and fees in London and South Africa. Last year I intimated that the reduction in our mining interests in South Africa would, of course, entail a reduction in staff there, much to our regret, but inevitable, and that has been going on through the whole year, and has still to make itself thoroughly effective. The subscriptions and donations have decreased by £700, and the staff provident fund has increased from £4,100 to £4,300 odd. Debenture interest has, of course, disappeared.

On the other side, by dividends, profits on sales, &c., we have £430,000 this year as compared with £590,000 last year, the difference being due to the profit on sales having fallen by £181,000 odd. On the other hand, dividends have increased by £103,000 odd. Underwriting commission is £10,000 odd less, and interest is £14,000 odd less.

NEW COMPANY'S BALANCE SHEET.

Turning to the balance-sheet of the new company, the capital authorised and issued is unaltered; sundry creditors are £250,000 odd. This amount is accounted for by deposits by sub-companies as a temporary measure, amounting to about £138,000 odd, and an amount deposited by the old company temporarily. The contingent liabilities have been decreased by £44,000 odd, and more than half can be treated as negligible. The investments amount to £3,416,000 odd this year, as compared with £3,721,000 odd last year, a decrease of £304,000 odd. Purchases during the year exceeded sales (at cost) by £172,000 odd, but depreciation has had to be written off to the amount of £476,000 odd. There is a long list of purchases, the chief of which you will find in the schedule, as also by comparison with last year's schedule the principal sales. Properties and ventures show a considerable difference, an increase of £187,000 odd, but really this is a transfer from sundry debtors

to this heading owing to the purchaser of our interest in the Devonshire House having failed to complete. We are, therefore, treating it now as an investment in property, instead of, as last year, treating it as a debt which we expected would be shortly paid off. Sundry debtors are, therefore, much decreased for the same reason. Cash advances and mortgages are this year £295,000 odd, as compared with £220,000 odd last year. I can give particulars if asked for them, but none of the items are very large amounts. Real estate and buildings, £51,000 odd, as compared with £56,000 odd last year. We sold some land properties in South Africa which accounts for it.

All our gilt-edged Government securities have been sold or matured, and we arrive at the entirely novel and much-to-be-regretted item of a balance at debit of £111,000, entirely due to the system of depreciation which we have always followed, but this year producing a result which has never before happened in the experience of the company. The cash position is quite good; the combined figures are £709,000 odd, as compared with £741,000 odd last year.

OLD COMPANY'S ACCOUNTS.

The accounts of the old company call for little comment. In the absence of a dividend on the shares in the New Consolidated Gold Fields our only income is the interest on the few assets we retain, £3,600, to which has to be added the amount brought in from last year, £162,600, a total of £166,243. Against this have been charged the dividends on the two classes of preference shares, and this leaves a balance of £57,342 to carry forward to next year.

The total assets of the two companies, after deduction of liabilities, are £4,446,000, to which must be added the unrealised appreciation of share holdings, unfloat properties, stands and buildings, which we estimate to amount to a very big figure.

What I have said, I think, explains to you the position. It is very unfortunate that, notwithstanding the very large revenue we have received, you do not receive a dividend, as we are bound, much as we may dislike it, to use our profits in meeting depreciation. I would further add this: In the case of quoted securities we have, of course, no difficulty in arriving at the amount of depreciation, but in the case of unquoted securities we must use such knowledge as we have and give consideration to every factor which in our opinion governs the situation and the value of the investments, and I think I can fairly say that, in view of the unsettled state of business throughout the world, we have perhaps been more drastic than we should have been in ordinary times.

CHAIRMAN OPTIMISTIC.

I hope I have said enough to justify our contention that the net result of this year's work was to a great extent unavoidable, and I hope I have shown you that this set-back need not cause you deep concern; in fact, what has happened is that you have written down in your books many investments to such a price as will ensure in the future a sale of many of them at large profits. In the meantime, you have a substantial list of investments bringing you in a well-assured revenue, while your cash position is such that it not only need give you no anxiety, but will give you the opportunity of fresh business.

We have been very much touched by the absence of recrimination on the part of shareholders. But there have been some letters asking what the position of the preference shareholders is, and you will doubtless expect me to make some special reference to their share in the business. We have not forgotten them. It does not by any means follow that because there is a debit balance on the year's accounts that the dividend of either the first or second

preference shares will have to be passed, though if that should happen in either case it will not mean a loss of interest, but only a postponement of its being paid, for they are cumulative, for it will be quite possible, if profits permit, for New Consolidated Gold Fields to declare and pay an interim dividend which would enable the old company to meet its obligations at due date. I believe I am justified in assuring them that they need be in no anxiety that their dividends will ever be permanently in arrears, and the usual notification of the payment of the first preference dividend on January 1st next has been issued.

Mr. Hyman then spoke in criticism of the board's management and policy.

The Chairman answered Mr Hyman's criticisms at some length, and the resolution being then put to the meeting, 44 hands were held up in favour and none against. The Chairman, therefore, declared it carried *nem. con.*

BISICHI TIN COMPANY (NIGERIA), LIMITED.

IMPORTANT DISCOVERIES ON THE FORUM PROPERTY.

The tenth annual general meeting of the Bisichi Tin Company (Nigeria), Limited, was held, on the 30th ultimo, at the Cannon street Hotel, London, Mr James Gardiner, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that at no time in the history of the company had operations been more seriously restricted by lack of a sufficient labour force. The small production for the year was largely, but not entirely, due to this cause. The other reason for the decrease was that the ground treated during the year was of low grade. This was alluded to last year when shareholders were prepared for a temporary reduction in output. This referred to the Bisichi property only, for with the larger resources resulting from the amalgamation so many points of attack were now available, both during the dry and wet seasons, that the regulation of an average and consistent output was rendered a matter of more easy accomplishment. Notwithstanding the reduced output, a profit would have been shown but for the fall in the price of tin. The tin industry had been very seriously hit, and whilst Nigeria had not suffered to the same extent as Cornwall, nevertheless there had been a forced curtailment in expenditure and in the scope of operations generally.

The Chairman then referred to the remarkable developments which had taken place since the last meeting. On the area formerly held jointly with the Forum Company, and now this company's own property, discoveries had been made which exceeded their most sanguine expectations. He felt on safe ground in stating that it was one of if not the most important discoveries ever made in Nigeria. Considerable additions had also been made to the reserves proved on other sections. There were large areas yet to be tested. The possibilities of the old leases were by no means exhausted, for already in several instances payable ground had been found to exist where it was least expected. In the statement of reserves in the report no allowance was made for ground known to be payable but not sufficiently tested to enable definite calculations to be made, and therefore the figure given might be taken as a strictly conservative one. Everything was being done to increase output, and to take advantage of any improvement in the price of the metal. As to the future, tin would be one of the first commodities to be favourably affected by any improvement that was brought about.

The report was unanimously adopted, and the usual formal business having been transacted, a hearty vote of thanks was passed to the chairman and directors, and to the staff in Nigeria.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £50,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Dec. 5th-Dec. 10th, were opened on Dec. 2, 1921, and the total amount applied for was £67,640,000. Tenders for Monday bills at £99 2s 4d, about 20 per cent., and above in full. Tenders for Tuesday to Saturday bills at £99 2s 2d, and above in full. The average rate of discount was £3 12s 0.7d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition of Bills.	Tenders at Rates below receive.
Nov. 4 (3 months)	60,000,000	87,405,000	3 16 2.6	3½	£99 0s 7d (Monday to Friday bills), about 44.79%, and above in full. Saturday bills £99 0s 10d and above in full.
Nov. 11 (3 months)	45,000,000	78,340,000	3 17 0.43	3½	£99 0s 6d (Monday to Friday bills), about 75%, above in full. Saturday bills £99 0s 9d and above in full.
Nov. 18 (3 months)	40,000,000	54,365,000	3 17 8.27	3½	£99 0s 3d (Monday to Friday bills), about 77%, above in full. Saturday bills £99 0s 6d and above in full.
Nov. 25 (3 months)	45,000,000	78,155,000	3 14 2.15	3½	£99 1s 3d (Monday bills), £99 1s 5d (Tuesday bills), £99 1s 7d (Wednesday to Saturday bills), about 27%, and above in full.
Dec. 5 (3 months)	50,000,000	67,640,000	3 12 0.07	3½	£99 2s 2d (Tuesday to Saturday bills), and above in full.

The amount to be offered next week will be £45,000,000.

British India	131,743	Gold Coast	1,272
China	2,415	Bombay, via other ports	20,000
		Other Countries	197
Total values of import of gold	821,096	Total declared value of exports registered in the week	1,279,691

Messrs Samuel Montagu and Co. write as follows on December 1st:—

GOLD.

The Bank of England gold reserve against its note issue is £126,612,435, as compared with £126,610,100 last week. A fair amount of gold was again on offer, and was taken mainly for the United States of America. It is reported that gold to the value of \$7,000,000 has been received in New York—\$6,000,000 from France, \$900,000 from London, and \$100,000 from Germany.

SILVER.

The market has been again off colour. China has been working both ways—selling from that quarter preponderating. A fair amount of speculative business has been done, mostly bear covering. America has not been offering silver, but the Continent has been a free seller, and seems likely to be. The Indian bazaars have been quite inactive. This state of affairs may not continue indefinitely; indeed, it is expected that a large amount of silver will be required for the next settlement steamer, due to leave London just before Christmas. Should China reverse its attitude and pose as a buyer, when Indian bazaar purchases are made, the market may become more robust for awhile, though it should be borne in mind that without competition permanent improvement of prices is not likely to be maintained. The plenitude of cash supplies was such that on the 26th inst. the quotation for both spot and forward was fixed at the same figure, viz., 37 1/2 d; the last occasion on which prices were even was July 2nd last, when 35 1/2 d was quoted. On the 28th inst. cash silver was quoted at a discount of 1/2 d, 37 1/2 d being fixed for cash, and 37 1/2 d for forward delivery. Cash silver was last at a discount on January 7th this year, when 41 1/2 d was quoted, against 41 1/2 d for forward. Prices were again even yesterday, whilst to-day a demand for covering purposes had the effect of restoring a premium of 1/2 d for spot delivery. The Government of India have sanctioned for exports to all destinations 100,000 tons of the balance of the 1921 rice crop. In the Commercial Supplement of the *Munchener Neueste Nachrichten* (October 9th), the suggestion is made that it would be as well for Germany to have recourse as soon as possible to a new silver currency by minting silver coins of the same weight and fine silver contents—5.55 and 5 gr.—as the existing Reichsmark pieces. The new coins could be called "schillings" or "Reichsschillings" to distinguish them from paper marks. Their value in paper marks would be fixed from time to time in accordance with the price of silver in the world's markets, allowances being made for minting expenses and for a small profit to be made by the mint. The rate would be about 10 paper marks for the new coin, with a 5 gr. fine silver content. In order to attain this end, free silver coining for private individuals at the German mints would have to be allowed, as was formerly free gold coining. Home mining and trade with silver-exporting countries, e.g., Mexico, would have to be encouraged by means of preferential treatment and agreements in order that Germany's coinage system might once more have a support of specie. German mines, especially those at Mansfield, produce sufficient silver to enable the minting of such coins to be commenced at once, when the necessary formalities have been complied with. For a later date, when Germany is better consolidated politically and economically, a new gold coinage, with a 5 gr. fine gold content, might be introduced, which would consist of gold shillings or gold gulden, whose value would depend on the price of gold obtaining at the time. It does not seem likely, however, that bimetalism would be favoured by countries whose currency is based upon a gold standard alone in order to extricate Germany from the impasse to which she has brought herself by almost unrestricted issue of paper money.

INDIAN CURRENCY RETURNS.

NOTICES.

The International Committee of Bankers on Mexico has invited Mr James Speyer, of Messrs Speyer and Co., New York, and Mr R. G. Hutchins, junr., of Messrs Hallgarten and Co., New York, to become members of the American section, and these gentlemen have been duly elected upon the committee. The British section has been enlarged by the election of Mr Frank C. Tiarks, of Messrs J. H. Schroder and Co., London, who will represent the Mexican issues of Messrs Speyer Brothers, London. These additions to the committee bring about a further community of interests representing American and European holders of Mexican securities.

Reports and Notices.

Major J. E. Franck, chairman of Zungon Tin Syndicate, Limited, has been elected to a seat on the board of East and West African Exploration Company, Limited.

Baring Brothers and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 21st to the 31st instant, both days inclusive, for the preparation of the warrants for the interest due January 1, 1922.

At the extraordinary general meeting of the Kimberley Waterworks Company, Limited, held on December 1st, the resolutions confirming the sale of the undertaking and the voluntary liquidation of the company were carried unanimously.

Adjourned meetings of the holders of 5½ per cent. first mortgage bonds and the 5½ per cent. income bonds of the Barcelona Traction, Light, and Power Company, Limited, will be held at the office of the Canadian and General Finance Company, Limited, 3 London Wall buildings, E.C. 2, on December 29th next, at 12.15 p.m. and 12.30 p.m. respectively.

GOVERNMENT STOCKS, &c.

SALVADOR.—Salvador Government 6 per cent. Sterling Loan, 1908, and 7 per cent. Funding Bonds.—A general meeting of bondholders will be held on December 8, 1921, at 3.15 p.m., at Winchester House, Old Broad Street, E.C. 2, to consider a scheme of rearrangement which has been put before the committee. It is important that a full attendance of bondholders should be at the meeting, and all those desiring to attend must lodge their bonds with the Anglo-South American Bank, Limited, Old Broad Street, E.C. 2, or their own bankers, and produce the relative receipt at the meeting.

RAILWAYS.

ARGENTINE NORTH-EASTERN.—The result of working for year ended June 30, 1921, shows that net receipts amounted to £34,671, which compares with £143,011 for 1919-20, the decline being 75½ per cent. The sum of £41,545 is brought in, making £76,215 available. The sum of £125,798 goes to payment of debenture interest and interest on loans, leaving a debit balance of £49,583 to go forward. With regard to debenture interest the report states interest for the six months ended June 30, 1921, amounting to £27,682 6s 2d on the "B" debenture stock and "B" debentures has been provisionally satisfied by the issue of deferred interest scrip, in accordance with scheme passed July 28, 1921. The report states that "with a view to a revision of the tariffs, and of the labour regulations as applied to the railway which has a light traffic, negotiations are proceeding with the Argentine Government, and the directors look forward with confidence to the result."

ENTRE RIOS.—The results of the working for year ended June 30, 1921, as compared with the year ended June 30, 1920, are as follows:—

	Year ended	Year ended	
	June 30,	June 30,	Difference.
	1920.	1921.	Amount.
Gross receipts	1,236,371 ..	1,180,230 ..	- 56,141 .. - 4.54
Working expenses ..	989,444 ..	1,054,894 ..	+ 65,450 .. + 6.61
Net receipts	246,927 ..	125,336 ..	- 121,591 .. - 49.24

To the balance of £125,336 must be added balance brought forward July 1, 1920, £25,996, and miscellaneous receipts, interest, discounts, profits on exchange, transfer fees, &c., £30,946, making £186,279, less interest on debenture stock and debentures paid and accrued to June 30, 1921, £160,350, leaving a balance of £25,929 to be carried forward. The report states that the cash position of the company at the present time precludes a transfer from the first preference stock dividend fund to the net revenue account for the purpose of the payment of a dividend on this stock. The company is owed by the Argentine Government for transport accounts accrued the large sum of £86,082, which does not bear interest. When payments on this account are received or the cash resources of the company are improved by better earnings, the directors will be able to transfer from the dividend fund the amount necessary to provide for the payment of the arrears of dividend of 6 per cent. on the first preference stock.

RAILWAYS AMALGAMATION TRIBUNAL.—The Railways Amalgamation Tribunal announce that, in accordance with section 10 of the Railways Act, 1921, they have appointed as clerk of the tribunal Mr Henry Allan Holden Steward, barrister-at-law, who is at present the chairman of the Light Railway Commission. The offices and address of the tribunal will be at 1 Horse Guards Avenue, Whitehall, S.W. 1.

BANKS.

LONDON AND GENERAL TRADE BANK.—In the Chancery Division on November 29th, Mr Justice Astbury sanctioned a scheme of arrangement between the London and General Trade Bank and its creditors. The scheme proposed that securities held should be valued as at a certain date, and that they should be exchanged for debentures. For the unsecured part of the debt creditors would receive half payment in debentures and half in shares.

ROYAL BANK OF SCOTLAND.—The report for the year ended October 8, 1921, shows a net profit of £377,501. The dividend of 10 per cent. and a bonus of 2 per cent. absorbed £168,000. There has been written off expenditure on bank buildings and heritable property £20,000. The sum of £30,000 has been carried to pension reserve fund, and the balance of £159,501 has been added to rest, making the rest £1,241,777. The report states that all the bank's investments are valued in the state of affairs at or under the prices ruling at the date of the balance.

ASSURANCE.

LIVERPOOL MARINE AND GENERAL.—The report for the year ended June 30, 1921, shows that in the marine account the net premiums amounted to £864,948, and the claims in respect of this and the previous years to £529,067. The expenses of management were £36,219. The amount of the marine fund at the end of the year was £542,626, against £422,964. The net premiums for the fire department were £47,038. The claims paid and outstanding amounted to £25,925; commission, £9,678; and expenses of management, £10,379. The directors have appropriated to this account £5,000 from the general reserve and £5,729 from profit and loss account, thus making the total of the fire fund at the end of the year £18,815, being a reserve of 40 per cent. of the premiums for the year. The accident department shows net premiums of £60,913 1s 2d; claims paid, £20,967; commission, £15,270; and expenses of management, £9,374. The directors have appropriated £5,000 from general reserve and from profit and loss account £5,311, thus making the total of the accident fund £35,146. The balance in the profit and loss account, after providing for income-tax and writing off depreciation on lease and furniture, the transfer of amounts to the fire and accident accounts, amount £4,307, which is subject to directors' fees.

RUBBER.

BATU MATANG.—The report for year to June 30, 1921, shows a debit balance of £5,460. The sum of £6,760 is brought in, thus leaving a credit balance of £1,300 to go forward. The report states that the output of rubber, with restriction for eight months of the year was 198,905 lbs., which compares with 211,444 lbs. in the previous year. The net average price realised for the crop was 8.865d per lb., the corresponding figure for 1919-20 being 1s 9.403d. In view of the heavy fall in price of rubber, the board have taken steps to reduce the expenditure for the current year to the minimum, consistent with keeping the property in good order.

CASTLEFIELD (KLANG).—After writing off the sum of £2,727 for depreciation on buildings, machinery, water scheme, &c., the year's

NOTE.—The value of the gold output fluctuates each month in accordance with the amount of premium which may be declared to the Mines Department of Southern Rhodesia in that month.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions continue to be generally favourable for growing cereals, the young plant in most instances being strong and healthy. Seeding operations are practically completed, while reports from some districts still point to a slight reduction in wheat acreage. Supplies of native wheat were on a larger scale at the principal statute markets, and prices at first displayed a weaker tendency, but subsequently recovered in sympathy with renewed strength of imported varieties. Suitable milling samples ruled from 49s to 52s, and inferior lots down to 40s per 504 lbs free on rail. Imported grades proved somewhat irregular, but firmer on balance, though millers were not disposed to follow the advance. No. 1 Northern Manitoba 58s 6d, No. 2 hard winter 55s, both ex ship 54s per 480 lbs, and Australian 53s 6d ex quay per 496 lbs. On c.i.f. terms prices further hardened under stimulating advices from North America and Argentina together with a better European demand. Cargoes of No. 1 Northern Manitoba just sailed sold 54s, River Plate new crop January-February 50s, hard Pacific float 51s to U.K. Pacific float 51s and Australian on passage at 50s 6d, both to Italy. The demand for flour shows no improvement despite further price reductions, home milled grades being 1s per sack lower. London straight run quoted 48s to 49s, patents 51s, town households 46s. All English straights 43s per sack delivered. Country straights on rail London 37s to 40s. Imported makes ruled steady, but quiet. Canadian export patents quoted 48s, straights 44s, Kansas patents 45s, Australian 43s ex store per 280 lbs. In the forward market American sorts were more reservedly offered at prices above the parity on this side, but Canadian parcels were put out freely. Kansas top patents December seaboard quoted 45s, Canadian 41s to 43s 6d, and Australian new crop January-February 37s per 280 lbs. There is a good inquiry for offals, which are firmly held, broad brand at £10 to £10 5s, middlings £11 ex mill, fancy Plate middlings £12 10s ex ship all per ton. English malting barley meets with fair support, choice samples realising 70s and occasionally 75s for stand out samples, with inferior lots at 45s. Grinding sorts range from 38s to 44s per 448 lbs. Of imported, No. 4 Canada Western 34s, Canada feed 31s 6d, American feed 30s, Morocco 33s to 34s, all per 400 lbs landed terms. Maize in good demand and prices firmer. Yellow La Plata 35s 6d, yellow African 36s, white flat African 35s, all landed per 480 lbs. White African maize meal £8 5s ton. The forward market was also firmer, with fair activity displayed. Cargoes of La Plata float sold 33s to 34s 3d, and white flat Rhodesian in similar position 32s 3d per 480 lbs. Oats dearer, in common with other feeding stuffs. English ranges from 29s to 34s per 336 lbs. Of imported Plate f.a.q. 27s 6d, ditto clipped 28s 6d, Canadian Western 31s 6d to 32s 6d, Chilian tawny 28s all landed per 320 lbs. Oatmeal firmer. English all cuts, £20 to £21, ordinary Scotch £19 10s, American £19, English rolled oats £22 to £23, flaked £24 to £25 per ton. Beans steadier and in fair demand. English Springs 54s to 58s, Winters 49s to 51s per 532 lbs. English peas in better request, Maples ruling at 59s to 62s, Duns 50s to 54s per 504 lbs. Dutch blue 23s to 27s, New Zealand blue 22s to 25s per cwt. A good chartering business in heavy grain took place from the River Plate, chiefly prompt loading, at firmer rates, steamers up-river being fixed at 25s to 26s 3d, and new season's loading at 25s, with options of lined oats and oats cargoes at proportionate increases. North American ports inactive, Continental and Mediterranean requirements being apparently satisfied for the time being. Northern Range to four ports Denmark December was closed at 22 cents per 100 lbs and Gulf to Continent at 15½ cents. Eastern markets dull. Bombay on dead weight prompt 20s, Madras Coast kernels to Genoa/Hamburg indicated 25s, while Dalny beans would be worked at 35s. Australia continues to place tonnage for new season's wheat at 50s U.K./Continent and 35s India, loading at usual ports. South African maize remains steady at 31s 3d, and similar cargoes from the Danube firmer at 21s paid to U.K./Continent. Other markets quite featureless.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated December 1st, is as follows:—Market: A reduction of 10s per ton has been made in Cleveland pig-iron, making the price of No. 3 G.M.B. 100s. These reductions are necessary, and bring us nearer to the point when foreign buyers may be tempted to place orders. Four more furnaces will shortly resume making hematite. Orders, however, are still very scarce. 110s is still the quotation for mixed numbers East Coast hematite pig-iron. Manufactured iron and steel: Although prospects are considered brighter, there is no improvement in actual demand. Steel ship plates, home, £10 10s; steel ship angles, home, £10; iron bars, home, £12 10s; steel rails, home, £10 10s net. Iron ore: The increase in the hematite output should mean a few orders for imported ore eventually. Meanwhile, the furnaces have stocks and old contracts. Best Bilbao rubio ore nominally 27s per ton.

BANKING BUSINESS OF EVERY DESCRIPTION transacted at all
Branches and Agencies.
CURRENT ACCOUNTS opened on the usual terms, and **DEPOSITS**
RECEIVED for fixed periods at rates which may be ascertained on
application.

SAVINGS BANK ACCOUNTS opened on terms, particulars of which may be obtained at Branches.
BILLS NEGOTIATED and COLLECTED.
DRAFTS issued, MAIL and TELEGRAPHIC REMITTANCES made.

LETTERS OF CREDIT and COMMERCIAL CREDITS established.
TRAVELLER'S LETTERS OF CREDIT issued available in all parts of the world.
PURCHASE and SALE of Stocks and Shares effected.
DIVIDENDS, ANNUITIES, ETC., received and COUPONS COLLECTED.
STRONGROOMS provided for the safe custody of Securities and Valuables.

ASSAY DEPARTMENT—Gold, etc., and all Mineral Ores assayed and analysed. **EXECUTOR and TRUSTEE** business undertaken. *The Officers of the Bank are bound not to disclose the transactions of its customers.*

Our Sheffield correspondent writes:—Business in raw steel continues to taper off, and many people have ceased to buy for the present year, except to meet the needs of the day. Pig-iron is again lower, and foundry iron can now be bought below £5 at furnaces. This compares with the highest figure last year of £14 10s. This compares with Continental pig of inferior quality; nevertheless, buying has not revived, and it is thought consumers are holding back their orders until the new year. No further furnaces are being put into commission. Owners are standing out for cheaper fuel and reduced railway rates. Foreign trade is extremely depressed, although some signs of revival are to be seen in the Far East and Australia. European competition has ceased to be formidable except in a limited number of steel commodities. The demand for high-speed steel scarcely counts. Several good orders for steel for automobile construction have come in, and there is a demand for permanent magnets for magnetos and general purposes. Wire rods have been reduced again, but the quotations are higher than Continental. The finished steel branches are less depressed than the heavy and raw material departments, but business with them is far from satisfactory. Although cutlery and plate dealers are receiving increased orders on account of the Christmas season trade, things are abnormally quiet for the time of year, and the business is unequally shared. The receipt of several good orders from Australia suggests the ending of the recent slump in that market. Unemployment and short time working continue to increase.

The house coal market is only moderately active, except in the best qualities, which are in demand. Inland consumption of steam coal continues to taper off, and South Yorkshire is not getting much export trade, for which competition is extremely keen. Buyers everywhere are expecting lower prices and cheaper railway freights. Gas fuels are more active, as the companies are adding to their depleted reserves. Small fuels are steady, and best grades sell rather freely. The production of blast furnace coke is going into consumption.

Our Glasgow correspondent (writing on Thursday) says:—Dealing in Scotch pig-iron has been very quiet this week, and that both on home and export account; yet the situation has not been devoid of feature. The most interesting that transpired was the marked increase in inquiries from foreign markets as to the conditions on which business can now be done. As one leading house declared, if half of the negotiations initiated materialised those concerned would have reason to be satisfied with the prospects. A variety of transactions have been carried through, but they do not come up to expectations, though the tone of things is mending, and requires but a little more strengthening to assure for trade an actual expansion which would be appreciable. It is concluded that the improvement, slight though it be, which has taken place in the steel trade has given cause for thought in other departments, and has driven heads of consuming firms to consider whether—bottom not having been convincingly reached—they are acting wisely in ignoring the progress that has been made in prices towards bedrock, and the danger therefore faces them of being badly caught when the "turn" comes, as come it inevitably will some day. Authorities in the pig-iron trade position thoughtfully declare that founders and others, in respect of stocks are running as near the wind as they have ever done; and there are no reserves in makers' yards to fall back upon in a demand emergency. In somewhat similar circumstances in past years (before the war) consumers gave little heed to the matter of material (iron) supplies, as public and private stores were always full of them. To-day, if the iron and relative trades were suddenly to develop even a moderate measure of activity it could not be taken prompt or full advantage of, for the reason that the raw article does not exist in quantity, North of the Tweed, at least. The situation is a grave one, and will not be easily handled, especially if buyers as a body realise the risks to which they are exposed, and hurriedly, as usual, make effort to protect themselves. For long now Scotch users of pig-iron have been drawing for their purposes largely, if not solely, from the Continent. But that source is drying up, and should be practically shut down, owing to the drastic cut of 10s a ton by the Cleveland producers this week. As regards the steel trade, the position continues to improve, though there is a lot of ground to cover before the current state of depression can be overcome. A good many lines for ship and boiler plates have been booked this week, yet a great many mills are standing idle, and there has been a goodly tonnage for structural material given out, with more, it is confidently felt, to follow, for a big catalogue of bridge and heavy building is in contemplation. One of the larger steel works, it is reported, is purposing the laying down of plant for rail rolling, a branch that has somehow been neglected by Scotch establishments. The re-equipment of the Scotch railways alone will require a big quantity of light and heavy rails. Black sheet makers, meeting with less Continental competition, are more comfortable than they have been

over a season on home, colonial, and Indian accounts. Bar iron makers are a good bit off from full employment, but they are gradually pulling up to their old level, and have prospects of further expansion. There are said to be some large inquiries on circuit for locomotive engines, and there are also conditional inquiries about for marine engines, and for a miscellaneous assortment of machinery. Rivet, bolt, and nut makers are fairly well off, tube makers have gathered in a few more contracts, but in these and some other connections there is a disposition shown amongst purchasers to limit their dealings to the covering of requirements on to the end of December only. Clyde shipbuilding returns for November make about the poorest show on record—7 vessels and 15,850 tons bringing the aggregates for the 11 months to 202 steamers and 421,845 tons. There is still a lot of fitting-out of boats to go on with. These should be substantially reduced between now and Christmas, which must add to the number of empty berths, and there are no new contracts being given out, so far as disclosed. In some informed quarters the opinion is expressed that a departure for the better will be witnessed with the arrival of 1922.

Supplies of coal are increasing, thanks to the greater energy shown by the men in the pits. But owing to many large works being off, great difficulty all over the Scotch field is being experienced in disposing of smalls, and the accumulations are burdensome. It is reported that, in the circumstance, Fife coal owners are giving away their dross for nothing, shipping it from Burntisland to Grangemouth. The takers pay only haulage rates.

THE COTTON TRADE.

MANCHESTER, Dec'd per 1. 151-9.4

A restricted business continues to be in all parts of the market, and the outlook is too uncertain for buyers to display any enterprise. The tone, however, is not worse, and there are more indications of some of our customers being in urgent need of fresh supplies. A little more cloth inquiry has been made for India, with occasional sales. There has not been any activity for China. The Near Eastern outlets remain quiet. Quite an encouraging turnover has been reported, chiefly in printed and

dyed goods for our colonial markets, and increased activity continues to show itself in home trade fabrics, especially in heavy makes. The output of cloth continues to be reduced by the stoppage of more looms. In American and Egyptian yarns for home consumption prices have been very irregular, and there has been a poor offtake. Some moderate lines have been booked in bundle yarns for India, with a rather increased inquiry for certain Continental countries.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Business is still being conducted on very restricted lines, and in the absence of general buying it is somewhat difficult to test values. There is not the confidence that was displayed a few weeks ago, and even for spot lots of merino tops prices are in buyers' favour. Of course, if the value of the raw material becomes stabilised on about the present basis, it should tend to bring out a certain amount of business, and in this connection it may be noted that the sales in London this week have not revealed any real weakness beyond what was recorded at the opening. In any case, tops are being quoted in Bradford for forward delivery at prices which look very low compared with to-day's price of the raw material, and it is difficult to see where wool is to be bought to bring in 64's tops at 3s 6d per lb. However, some firms are offering to

sell at that price, and they apparently trust to being able to pick up cheaper wool. There is not much change in the yarn trade; most firms are well employed, but new business is not coming to hand at all freely, and the outlook for next year is by no means bright. It is just possible, however, that if 64's tops can be stabilised on the basis of 3s 6d, manufacturers may be able to do something. In the meantime the home market is quiet, and the best export market is the Far East. There is still a fair demand for hosiery yarns, but prompt delivery is wanted.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The auctions are being continued in Coleman Street under such conditions that on some days the sale has been either abandoned or valuing has taken place in a bad light. The fact is that the progress of the auctions is being somewhat retarded by weather and manufacturing conditions, which cannot be described as of the best. Then the character of the offerings is also somewhat disappointing, particularly the merinos. Evidently B.A.W.R.A. does not see its way to offer a better selection, and those representing growers' interests are also not in a position to catalogue the wools which are most wanted. There is considerable grumbling among home trade top makers that what they want is not being put up for sale with any degree of freedom, the bulk of the merinos being on the short side, and more suitable for Continental combing purposes than for home trade requirements. On a few days the sale has been fairly good, due to the improved offerings. It is significant that the character of the wools catalogued has a good deal to do with determining both the competition and price. It is remarkable that, although the opening decline is still in evidence, wool is selling distinctly higher than top values in Bradford justify, and it is a mystery that top makers should be offering good average 64's tops at 3s 7d for spot delivery. Some spinners say they can buy at even 12 less for immediate delivery. Yet no such corresponding prices are ruling in Coleman Street Wool Exchange. It makes one wonder what market is providing raw material to bring in tops at these low prices. There must be some who expect still lower prices, otherwise they would not be prepared to sell at the figures named. However, I believe that the raw material is still wanted in fair weights by both home and Continental buyers. Germany, no doubt, needs to purchase on a liberal scale, but the state of her exchange is such that her buyers purchase only what they actually need. French buyers are operating as liberally as anyone could expect. Switzerland, too, is taking some nice lines of the best merinos.

Crossbreds are moving freely into the hands of home trade top makers and spinners, and, on the whole, these are selling at full opening prices. Coarse and medium crossbreds are moving fairly satisfactorily, the demand coming chiefly from the little boom which is being experienced in low quality hand knitting yarns. It is apparent to many that if Continental exchanges were more reasonable, there would soon be a real boom in the export of all descriptions of yarn. The present set-back is entirely traceable not to any apparent reduction in customers' needs, but to inability to pay in sterling at a price which will enable buyers to get back their own. The set-back in wool values to-day is very largely traceable to this adverse factor. In regard to the clean scoured cost of wool, it is difficult for anyone to quote the best classes of merinos with absolute certainty, the market being so irregular. I note that for good super 64's medium fleeces the clean scoured cost is quoted by Messrs Kreglinger and Fernau at 40d to 43d, ex warehouse without oil. It is not often this firm shows such a margin, but they are right. For the wools most wanted to-day, that is anything showing length of staple, buyers are very keen, the decline being no more than 7½ per cent. compared with the best of the previous series, but the lower clean scoured costs prevail for short Continental style wools. I am satisfied that a better selection of merinos would bring out better bidding, but apparently such wool is not available or owners are not prepared to sell.

DE BEERS CONSOLIDATED MINES, LIMITED.

REPORT OF DIRECTORS

For the Twelve Months ended 30th June, 1921.

To be submitted to Shareholders at the Thirty-Third Ordinary General Meeting to be held on 9th December, 1921.

TO THE SHAREHOLDERS.—Gentlemen,—Your Directors beg to submit their Thirty-Third Annual Report, Balance-Sheet at 30th June, 1921, Profit and Loss Account for the year ended 30th June, 1921, and Appropriation Account, 30th June, 1921.

The balance undistributed at 30th June, 1920, was represented by:—
Suspense Profit Account—Diamonds unsold at that date, £354,244 14s 10d; Balance unappropriated, £237,830 16s 11d ... £592,075 11 9
During the year the Diamond Account amounted to ... 2,300,580 16 11
Add to this the following:—Interest and Dividends on Investments £407,426 15s 5d; Profits realised on Investments £146,159 19s 11d; Revenue from other sources, £35,861 14s 5d ... 690,448 9 9
Amount transferred from General Fund ... 1,010,232 0 8

£4,542,336 18 8
Deduct Expenditure as follows:—Mining Expenditure £1,976,053 5s 10d; Expenditure on Farms and Landed Property and Kimberley-Alexandersfontein Railway, £143,424 17s 2d. Charges: Donations, £66,104 17s 0d; Grants to Employees leaving the Company's service consequent on trade depression, £112,731; Other Charges, £104,537 9s 7d—£343,873 6s 7d; Interest on Debentures and on Capital of Leased Companies, £164,469 19s 6d; Sinking Fund towards Repayment of Debentures, £34,185 16s 8d ... 2,711,507 5 9

Leaving a Balance of ... £1,830,829 12 11
Which has been dealt with as follows:—Union of South Africa Income-Tax, amount set aside, £6,532 19s 0d; amount appropriated for Stabilisation Reserve, £119,504 17s 0d. Dividends:—Preference Shareholders, after deduction of Tax, £740,000; Deferred Shareholders, free of Tax, £500,000—£1,240,000 ... 1,366,097 16 0
Balance undistributed carried to next year:—Suspense Profit Account—Diamonds unsold 30th June, 1921, £354,331 7s 2d; Balance unappropriated, £110,350 9s 9d ... £464,731 16 11
The stock of blue ground and lumps on the floors at 30th June, 1921, was as follows:—De Beers Mine, 48,396 loads; Wessellon Mine, 2,683,871 loads; Bultfontein Mine, 3,022,659 loads; Dutoitspan Mine, 3,173,226 loads—8,923,152 loads.
The General Reserve Fund now stands at £700,000. The Fund to redeem the De Beers Four and a Half per Cent. Exploration Debentures has been increased to £746,475 2s 4d, both funds being represented by securities which have been taken into the Accounts at market prices on 30th June, 1921. The Special Reserve Fund for the Stabilisation of the Diamond Trade has been increased from £2,357,395 1s 3d to £2,476,899 18s 3d. This fund is invested in the shares of other Diamond Mining Companies and kindred interests, and is included in the £2,926,899 18s 3d shown on the Assets side of the Balance-Sheet, which represents

in some cases actual cost and in other cases less than cost of the various items which make up the total, and your Directors consider that from the point of view of the Diamond Trade generally, they are undoubtedly of great value to the Company. The Company has paid during the year to Preference Shareholders the usual dividend of 20s per share, and to Deferred Shareholders 10s per share.

Your Directors in their report last year mentioned that there was then a lull in the demand for diamonds. Since that date the world generally has been passing through a period of severe depression, which has been felt most acutely in the Diamond Industry. For many months there was a complete cessation of sales by the Syndicate of diamonds purchased by them from the four large producers, and up to now no sales of any importance have taken place. In consequence of the stagnation in the Diamond Market and of representations by the Diamond Syndicate, meetings of the four large producers and the Diamond Syndicate were held at Cape Town in March and May of the present year, when matters were discussed and a satisfactory arrangement as to future deliveries was come to. The severe and continued depression compelled your Directors to take steps to curtail operations and to economise wherever possible, which unfortunately necessitated the retrenchment of large numbers of employees, both European and Native. All Mining work was stopped and expenditure in every department was greatly reduced.

A slight improvement in the Diamond Market has been noticeable recently, but it is still necessary to exercise patience and economy, for the depression through which the industry is passing makes the present a difficult period. The Cape Explosives Works, Limited, which is owned and controlled by your Company, has carried on its operations successfully during the year. The sales of explosives amounted to 870,760 cases, a decrease of 57,688 cases as compared with the sales for the previous year, which is mainly accounted for by the temporary closing of the diamond mines of South Africa and the base metal mines of Australia.

The Company has guaranteed payment of the interest and principal moneys in connection with an issue of £1,250,000—7½ per Cent. First Mortgage Debentures made by the Cape Explosives Works, Limited, for the purpose of extending its activities and repaying advances made to it by your Company. The South African Marine, Fire and General Insurance Company, Limited, in which your Company held a fifty per cent. interest, having fulfilled its object of providing marine insurance for diamonds during the war period, when it was otherwise unavailable the liquidation of that Company was decided upon and has been carried out.

A report by the General Manager on the operations of the Company during the year will be submitted at the Meeting. In terms of clause 84 (Sub-section C) of the Company's Articles of Association, three Directors retire, namely:—Friedrich Hirschhorn, Robert Frederic Philipson-Stow, William Pickering, but, being eligible, offer themselves for re-election.

G. W. COMPTON, R. PHILIPSON-STOW,
D. ROSS FRAMES, W. PICKERING,
D. HARRIS, Directors.

Kimberley, 21st September, 1921.

Single Copies, One Shilling.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist."

Office: Granville House, Arundel street, Strand, London, W.C.2. Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birch Lane; Barker and Howard, East India Avenue, and 6 Fenchurch Buildings, Sugar Loaf Court, Leadenhall Street; Pottle and Son, 15 Cullum Street; Willing and Co., Limited, 50 Cophall Avenue, and 53 Finsbury Pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: Economist Office, 20 Broad Street (Room 1,709).

THE MONEY MARKET.

DOUBTS whether the beginning of December would show that ease in the market which is now usual were quickly resolved. Money became very easy indeed as the result of the payment of dividends on War stock, which sales of new Treasury bonds were not enough to counteract, and remained easy through the week. Banks bought bills freely at the same rate as that charged for weekly loans. Thus discount rates were weak, and there was talk of a further fall in New York being likely.

* Additional to those offered by tender the preceding week.

The Bank return showed reductions of £8,800 in the stock of gold and of £151,100 in the circulation, making the Reserve £142,300 higher. Government securities were further increased by £12½ millions, while Other securities were reduced by £2 millions. Deposits were thus £10½ millions higher, Public being reduced by £1½ millions, while Other rose by £12½ millions. The circulation of currency notes was increased by £3,085,800 to £315,714,100, which includes £1,772,000 for notes called in but not yet cancelled. The fiduciary issue is £265,992,100, or £51,563,100 below the maximum.

The following table shows public income and expenditure for the week ended December 3, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	14,245	Supply Services	11,437
Amount borrowed	37,612	Interest on Debt	41,402
Taken from Exchequer Balances	1,410	Sundries	428
	53,267		53,267

These operations increased the National Debt by the sum of £37,611,604, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 13,535	Depreciation fund	- 700
National Savings Certificates ..	+ 250	Surrenders of Bonds, &c.	- 378
Bank of England Advances ..	+ 19,000	Treasury Bills	- 7,232
Public Department Advances ..	+ 10,350		
Unemployment Insurance ..	+ 330		
Sundries	+ 104		
	+ 43,259		- 8,310

The principal items of revenue during the week were £3,569,356 from Special Miscellaneous Receipts, Customs and Excise £4,570,000, and Property and Income-tax £2,910,000. Sales of 5½ per cent. Treasury Bonds were on a large scale, amounting to £13,535,000. The net sales of National Savings Certificates amounted to £250,000. The sum of £340,000 net came from Advances for unemployment insurance, and £2,662,500 from repayment of housing advances. Treasury Bill sales were £7,425,000 lower than maturities, the amount outstanding being £1,100,107,000. Borrowing from the Bank of England amounted to £19,000,000, making the Government's indebtedness to the Bank £27,250,000, against £64,750,000 a year ago. Advances by Public Departments were increased by £10,030,000, the total from this source now standing at £194,438,000, against £203,664,000 a year ago. The floating debt is £21,605,000 higher on the week at £1,321,795,000; at the corresponding period of 1920 the floating debt stood at £1,395,143,000.

FOREIGN EXCHANGES.

In the foreign exchange market there has been another week of difficulty, under much the same influences as before. Rates have been extremely sensitive, and quite small dealings have caused disproportionate movements in one direction or another. Interest has again centred in the mark, although movements in the other chief exchanges have been this week more spectacular. Apart from a reaction up to 936 on Monday, the mark rate has fallen more or less steadily from 897½ on the 2nd to about 780 yesterday morning, on the expectation of a favourable result to the Rathenau negotiations in London, an expectation increased by the visit of M. Loucheur, by far the most sane and capable member of the French Ministry. The ill-advised idea of a loan from this country to Germany as a preliminary to a moratorium still seems to hold the field, but it is quite clear that no decision has

yet been reached. Indeed, it would seem impossible that any decision could be reached without full discussion of all the Powers concerned, as the release of German liens as a security for such a loan, which would presumably be necessary, could hardly be arranged without the consent of these Powers. In the meantime, the future rate for marks is one to three points per month below spot. New York, which on December 2nd stood at 4.05, has moved up quite steadily and uninterruptedly to 4.10½ yesterday morning. The causes for this rise would seem for the time being almost exclusively political, the Washington Conference and the possibilities of a reparation settlement having given an almost excessive feeling of confidence to the New York market, in particular with regard to sterling. The Irish decision would appear to be playing a very large part, as it is felt that the large Irish vote in America may now be prevented from exercising a persistently hostile influence on relations with this country, an even more important factor than is generally realised. The rate for futures remains about the same, at 3½ to ½ cent per month over spot. The main influence also has been political in the case of Paris, where the rate has moved from 55.60 on the 2nd, with some slight irregularities, down to 52.45 yesterday morning. On the more immediate economic outlook this recovery is not justified, and, among other factors, the adverse balance of trade is again increasing. There is, however, a general conviction, held especially strongly in New York, that a reparation settlement will ultimately be for the benefit of France, and that even its immediate interests will be safeguarded in any plan now adopted. The Belgian rate has moved, as usual, in sympathy, and at 54.40, as compared with 57.47½ a week ago, shows about the same spread as before. In Paris the quotation for futures has narrowed to 1½ to 4 centimes per month over spot from 3 to 5 centimes a week ago, while the Brussels rate remains unchanged at 4 to 7 centimes per month below. Italy has shared in the general recovery, but more erratically, the rate yesterday being 92½, as compared with 94.87½ a week ago, having been up and down on each alternate day of the period. Some hesitation has been caused in connection with the difficulties of the large Ansaldo group. Among neutral exchanges, Amsterdam, which on the 2nd stood at 11.33, went in our favour, and after a relapse on the 8th jumped suddenly yesterday in our favour to 11.44. The future rate is one to two points per month over spot. Switzerland has been rather steadier, and yesterday at 21.20 was only slightly better than the 21.15½ a week ago. A good deal of financial difficulty is being experienced among smaller banks, and an unpleasant feeling has been caused by the recent heavy fall in Nestlé's shares. Madrid, after going higher, has recovered a little, and stands at 28.77½, as compared with 28.83½ a week ago. Among the Northern States Helsingfors, after recovering sharply to 217½ on the 2nd, has fallen away again to over 220. Christiania has depreciated from 28.07½ to 28.22½. Stockholm has remained more or less steady about 17, while Copenhagen has appreciated from 21.69½ to 21.62½. In Central Europe Warsaw has been relatively steady, and has finished a little better at 13,000. For Vienna the London (Auslandskrone) rate is 12,000—about the same as a week ago. The Inlandskrone rate on the 5th, the latest available date, was 30,000, as compared with an Auslandskrone rate of 12,000 on the same day. Budapest is again depreciating, and now stands at about 3,250, as compared with 2,700 a week ago. Prague is about the same at 367½. Belgrade, after some recovery, is a little worse again at about 280. Sofia, somewhere round 600, shows signs of recovery, but for Bucharest there are still no quotations, owing to the slowness of the Roumanian Government in realising the impracticability of their recent measures of restraint. In the East the rupee at 15.3½d is somewhat dearer than the 15.4 1-32d quoted a week ago, while the yen at 25.4d is a little cheaper. The absence of demand from India, and selling both on Chinese and Continental account, has brought down the price of silver to 34½d—a figure lower than any since the half-year—and the Hongkong and Shanghai rates are both lower in sympathy. In South America Buenos Ayres has gone against us, from 43½d to 43½d, while Montevideo is unchanged at 40d. Rio is cheaper at 7 21-32, and Valparaiso has depreciated from \$37.70 to \$38.70.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO DECEMBER 3, 1921.

Total spent	£ 688,440,966	Raised by revenue ..	£ 598,312,226
Dec. in balances....	143,942	Net borrowings	89,984,798
Total	688,297,024	Total	688,297,024

ESTIMATES FOR YEAR 1921-22.

Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000

Surplus* £ 176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £20,000,000.

EVENTS OF THE WEEK.

DECEMBER 3RD.—Death of Mr Frederick Huth Jackson.
DECEMBER 5TH.—Anglo-Irish Conference. Sir Robert Horne at Manchester. Mr Lamont speaks in America on the Consortium and China.
DECEMBER 6TH.—Anglo-Irish Treaty signed. Coal prices reduced. Royal Commission on Local Government of Greater London opened inquiry. M. Briand on German reparations.
DECEMBER 7TH.—Lord Inchcape on need for general economy. Mr Asquith at Paisley.
DECEMBER 8TH.—Sinn Fein Cabinet divided over Peace Treaty. Labour Conference on Unemployment. M. Loucheur arrives, and discusses reparations with Sir Robert Horne. Egyptian Prime Minister resigns.
DECEMBER 9TH.—Sir James Craig confers with Prime Minister.

Although the expansion of business was not very great, the tone in the stock markets improved generally and substantially on the news of the Irish settlement. High-class investment stocks are in stronger demand than ever, while interest and support are more conspicuous in a number of industrial and semi-speculative sections. In the cotton market prices have shown little change. An improvement in inquiry for piece-goods for export is reported. Our Bradford correspondent records a growth of business and firmer conditions in the wool market, although buyers of tops and yarns are still cautious. Lower pig-iron prices have checked foreign imports. But with the possible exception of the Glasgow district, no improvement is reported in the iron and steel industry generally. Conditions in the steam coal market are unchanged, but the demand for house coal is on a better scale. Recovery continues in the hide market; the tone of the leather trade is better, and shoemakers are more optimistic. Markets for vegetable oil and oilseeds are steadier.

THE CLEARING SKY.

At last a brilliant gleam of sunshine has shot through the Irish clouds. In the early hours of Tuesday morning, at a moment when the vital spark of political hope was burning low, or almost to the point of extinction, came the dramatic ending of the Irish negotiations. At 2.45 a.m. on December 6th, the plenipotentiaries of Southern Ireland and the representatives of the Imperial Cabinet signed an agreement which virtually places Ireland upon the dominion basis as an equal partner with Canada, Australia, New Zealand, and South Africa in the British Commonwealth of Nations. It is easy perhaps to say that this great event is long overdue, and would have been achieved long since but for the folly of politicians. It is easy to say that those who take credit for the settlement must bear the blame also for the desperate conditions out of which peace has eventually come. But we hope and believe that the temper of the majority of the peoples both in Ireland and Great Britain is to forget the bitterness and miseries of the past, and to hail with unfeigned joy the opportunity that is now presented for closing finally the most disastrous and discreditable chapter in the history of British rule. The full terms of the Agreement are published on a later page, and from them it will be seen that, whether the solution of the Irish problem is really to be complete and final at this stage, depends on the decision of Ulster. Ulster is given the option to contract out of the Irish Free State, and to retain the powers accorded by recent legislation, or to join hands with Southern Ireland in the task of establishing a real and representative national régime for the whole island. Judging by Ulster utterances of the last few days, it is perhaps too much to expect that Ulster will, at this stage, join in, but there is surely ground for hope that Southern Ireland will use the opportunity now accorded to her in such a fashion that within a few years Ulster will find it to her interest and advantage to end the feud which has been the tragedy of Irish history, and lend her powerful assistance towards building up a great and composite dominion in partnership with the Mother Country, and with the British States overseas. The immense relief universally felt at the achievement of an Irish agreement should not, however, blind us to the fact that the road is not yet entirely clear of obstacles. Of the sanction of the British Parliament for the legislation necessary to establish the Irish Free State, there can be no reasonable doubt. Of the acceptance by Dail Eireann there is at least very good hope. But the recalcitrant attitude of Mr De Valera and the extreme elements of Sinn Fein threaten further anxieties, and there are questions outstanding which may yet call for an extension of that determined tact which alone has made it possible to reach the present agreement. But whatever may be the difficulties remaining to be solved, they are surely insignificant compared with those that have already been surmounted. To the plain man it would appear unbelievable that when the feat of swallowing the camel has been safely accomplished, the value of the feat should be destroyed because parties concerned in the agreement insist upon straining at gnats.

Failure in Ireland has for many scores of years been the great blot on British statesmanship. The last three

or four years have provided perhaps the darkest chapter in the whole dark volume of Irish history, and during these last years the Irish question has been, more than ever before, a great stumbling block to British policy abroad. Wherever British statesmen preached the blessings of self-government they were met with the retort that "Charity begins at home." Now at least by a bold and generous stroke that stumbling block has been removed from the path. Whatever difficulties and hitches may yet arise it can no longer be said that either the British Government or the British people have refused to Ireland the fullest measure of self-government compatible with partnership in association of nations. Mr Asquith has warned us that we may not yet be out of the wood. The Northern Parliament may yet provoke a crisis over the boundary question; Mr De Valera may lead a revolt against the settlement; but, come what may, the fact that the British Cabinet, backed without doubt by the great majority of the people of Great Britain, have agreed to set up an Irish Free State, will clear the atmosphere of international politics as no other event could possibly have done. We have, from time to time, pointed out the rôle played by the Irish question in holding back America from the effective participation, which she alone can give, in the settlement of the world's economic and financial affairs. In his annual message to Congress last Tuesday, President Harding said:—"It is not my purpose to bring to you a programme of world restoration. In the main such a programme must be worked out by the nations most directly concerned. They must themselves turn to heroic remedies for the menacing conditions under which they are struggling. Then we can help, and we mean to help. We shall do so unselfishly, because there is compensation in the consciousness of assisting, and selfishly, because the commerce and international exchanges in trade which marked our high tide of fortunate advancement are possible only when the nations of all the Continents are restored to the stable order of normal friendship." In the Irish agreement America will find, let us hope, a genuine and signal effort to restore the "stable order of normal friendship." The bold initiative of the American proposals for Naval Disarmament lit a spark of hope which the subsequent proceedings of the Conference are rapidly fanning into flame. That flame will spurt the higher for the great news of Irish agreement. The world is still faced with problems that will tax to the utmost the concerted powers of international statesmen working in harmony, but it is at least a great thing gained that the chances of their working in harmony are now, in the light of recent events, brighter than could have been expected by the most optimistic a few months ago. If the Reparations problem is approached by British, French, and German statesmen in the same spirit of earnest goodwill and practical accommodation that Englishmen and Irishmen have devoted to the settlement of their differences, then another of the great outstanding international irritants should be allayed. The visit of M. Loucheur and the Chancellor's speech at Manchester strengthen the hope that a practical and concerted reparations policy will be evolved. There are still lions in the path, but it seems at last that we are to have a Christmas when the traditional phrases of peace and goodwill may no longer be a mockery on men's lips, and there is at least some promise that, with the "steady remorseless march towards sanity" progressing in political and economic affairs alike, there will dawn with the new year a hope of better times such as has not dared to raise its head since the failure of Versailles demolished the first visionary dreams of a war-worn world.

THE EGYPTIAN DEADLOCK.

EVER since Great Britain was constrained by circumstances to assume the sole control and protection of Egypt our statesmen have held out hopes of an eventual withdrawal. Lord Salisbury's efforts to that end in 1887 were defeated by French and Russian disbelief in their sincerity, and by the influence of those Powers on the Sublime Porte. Since then our "veiled Protectorate" has been unavoidably strengthened by habit and circumstance, until the

war compelled us to make it open and formal. The Milner Commission made a spirited effort to return as far as possible to pre-war conditions, and to prepare the way for eventual independence. That effort, like Lord Salisbury's, has now been thwarted by the distrust of the other party to the negotiations. The plan sketched in the Milner Report has since been embodied in a draft convention, necessarily more precise and specific in its terms. It formally terminates the British Protectorate, recognises Egypt as a sovereign State, and gives her the option of representation by her own diplomatic and consular agents abroad. But it establishes a perpetual treaty of alliance with Great Britain, and protects British interests by establishing a High Commissioner, with precedence over the representatives of other Powers, and a right to be consulted before the conclusion of any conventions with them. The abolition of the Capitulations with 13 other Powers, which fetter Egypt in legislation and taxation, is to be negotiated by the Government of Great Britain, which is to take over the protection of foreign interests. The interests of foreign and British residents would then be watched over by a British Judicial Commissioner, in close touch with the Egyptian Minister of Justice. The existing Financial Commission would be replaced by a Financial Commissioner, in close relations with the Egyptian Ministry of Finance, and his consent would be necessary to the issue of any external loan. British officials would gradually be replaced by Egyptian, and freedom would be guaranteed by Egypt to racial minorities, especially as to their languages and schools. Great Britain would guarantee Egyptian independence and territorial integrity, but would maintain British troops in Egypt with full right of passage over all railways and facilities for establishing military and naval stations and aerodromes. Finally, the existing partnership in the Sudan would continue, and a triumvirate, representing Egypt, the Sudan, and Uganda would secure the equitable distribution of the waters of the Nile.

From the British standpoint these conditions are reasonable, and really constitute a stage on the way to the complete achievement of Egyptian independence. But as in India and Mesopotamia, so in Egypt; Nationalist impatience blocks reasonable reform. The Nationalist representatives, enabled by the silence of the Moderates to claim a mandate from the Egyptian people, object that the Commissioners, and the control of foreign relations and of the protection of foreign residents, constitute a virtual British Protectorate. They also demand, on historic grounds, that Egypt shall have full control of the Sudan, which she could at present neither administer nor hold. But their chief objection is clearly to the garrisons, the ever-present sign of British power and control. They desire that the British troops shall be stationed in the canal zone, preferably on the eastern side of the canal; and the Milner Memorandum, by speaking of "the place" where they shall be stationed, may seem to have foreshadowed this solution. But in another passage it pointed out that a British military station in this neutral zone might cause trouble with other Powers, and that Egypt is becoming more and more a "nodal point" in British communications by land, air, and sea. On this proposal, as on the rest, the British Government stands firm, and the correspondence (Cmd. 1555) closes with a letter from Lord Allenby, as High Commissioner, declaring that reconsideration of the principle of the proposals is impossible, and pointing out that it is to British protection that Egypt owes her national existence, and that were it withdrawn other and less considerate Powers might take up the task. Every sentence of his letter is strictly true, but all foreigners, and unfortunately some Englishmen, are apt to doubt the sincerity of British official utterances, and it is not likely to mitigate the impatience of Egyptian Nationalism.

Thus there is a deadlock, and we can only hope that the refusal to reconsider the proposals may not be final. For the military provisions it may fairly be argued that the Canal might easily be blocked, so that railway transit would become imperative, that the protection of foreign residents might require British assistance to the Egyptian forces (a view strongly held by those residents themselves), and that there might even be a Mahdist or Pan-Islamic rising, excited, as in Mesopotamia last year, by Bolshevik propaganda. But these provisions might possibly be

modified by specifying a limited number of British stations and imposing conditions on the movements of troops. The need of a Judicial, and still more that of a Financial Commissioner, must lessen as Egypt develops a fully competent Civil Service. Already she is a wealthy country, and her external loans are passing to native holders. Her hopes of full nationhood depend on her prosperity and internal stability, and on an improved education which will raise up native officials in place of the Europeans retiring under a new order of things. Recent British administrative mistakes, and British aloofness, have of late given her educated classes legitimate offence. But a settlement on the lines rejected by the Nationalists would free Egypt from martial law, and give her admission to the League of Nations. Her representatives have strong motives for resuming negotiations; her upper classes contain a large Moderate element, which the influence of Adly Pasha, now out of office, may encourage to make itself felt; and nine-tenths of her population are non-political and contented fellaheen. And worse difficulties than those now blocking negotiations have been satisfactorily overcome in the case of Ireland.

SOURCES OF OUR IMPORTS SINCE THE ARMISTICE.

We have shown in previous numbers of the *Economist** that most of the nations of Europe have made an astonishing recovery since the Armistice as markets for our exports and re-exports. In the following table we have grouped the countries from each of which in 1913 we received not less than 1 per cent. of our imports, showing the values for 1913, 1919, 1920, and the first nine months of 1921, as well as for the combined period from January, 1919, to September 30, 1921:—

Imports by U.K. From—	Value of Imports in 1913, £768,700,000.	Value of Imports in 1919, £1,626,200,000.	Value of Imports in 1920, £1,932,600,000.	Value of Imports from Jan. to Sept., 1921, £827,700,000.	Value of Imports from Jan., 1919, to Sept. 30, 1921, £4,386,500,000.
U. States.	141.7	184.4	541.6	291.1	2134.4
Germany.	80.4	105.5	30.3	1.6	156.1
Bh. India.	48.4	6.3	108.2	6.7	95.7
France.	46.4	6.0	48.5	3.0	75.3

Italy.	8.1	1.1	14.6	0.9	17.9
Ceylon.	7.8	1.0	16.8	1.0	16.8
Norway.	7.4	1.0	17.1	1.1	23.8
Total.	694.1	902.2	1,379.8	84.1	1,619.2

The values in the table for the years 1913, 1919, and 1920 are taken from pages 143-147 of the first volume of the Annual Statement of the Trade of the United Kingdom [Cmd. 1503], and those for the present year from the October number of the Trade and Navigation Returns, pages 336-338. The values of our imports from the Anglo-Egyptian Sudan are included in those from Egypt. Under the title "S.E. Europe" are included Austria-Hungary, Rumania, Bulgaria, Servia, and Greece for the years 1913, 1919, and 1920. For 1921 the values of our imports from Czechoslovakia and the Serb-Croat-Slovene State are added, and in the case of Russia the separate values for Finland, Estonia, Latvia, and Lithuania are included. The table shows that whereas in 1913 we drew 21.7 per cent. of our total imports from Germany, France, and Russia, in 1919 the percentage was only 4, that in 1920 it had risen to 7.2, and for the first nine months of the present year to 7.6, or only a trifle higher than one-third of the percentage in 1913. On the other hand, our imports from the United States rose from 18.4 per cent. of our total imports in 1913 to 33.3 per cent. in 1919, falling to 29.1 in 1920, and to 25.8 per cent. in the present year. The percentage of total imports which we drew from British India in 1913 (6.3) rose to 6.7 in 1919, but fell to 4.9 in 1920, and to

3.8 for the current year. In the case of our imports from both Australia and Canada the percentages were higher in 1919, 1920, and 1921 than in 1913. In the case of Egypt we took a higher percentage of imports in 1919 and in 1920, but a lower percentage in the present year than in 1913. New Zealand sent us a higher percentage in 1919, and a much higher percentage in the present year than in 1913. Our imports from Argentina were rather lower in 1919, but higher in 1920 and this year than in 1913. Our imports from the Straits Settlements show a steady fall in the percentage value, and although our imports from the Union of South Africa have improved in the present year, they are not yet up to the 1913 percentage. Our imports from Ceylon remain steady. The following table gives a summary of the percentage values of our imports from the countries of Europe and their colonial possessions as compared with those from the British Empire and the countries of America and Asia.

U.K. Imports From—	Imports in 1913.		Imports in 1919.		Imports in 1920.		Imports from Jan. to Sept., 1921.		Imports from Jan., 1919, to Sept., 1921.	
	Mln. £.	%	Mln. £.	%	Mln. £.	%	Mln. £.	%	Mln. £.	%
Europe	309.3	40.3	247.5	15.3	450.5	23.2	225.5	27.4	923.5	21.1
Foreign Possessions of Europe	10.4	1.3	36.5	2.3	52.5	2.7	18.2	2.2	107.2	2.4
British Empire	212.1	27.6	579.7	35.7	553.8	28.7	249.1	30.2	1,582.6	31.5
America	217.3	28.1	693.8	42.4	786.2	40.7	305.0	36.9	1,785.0	40.6
Asia	16.5	2.2	60.0	3.7	75.4	3.9	21.9	2.6	157.3	3.6
Total values ..	765.6	99.5	1,617.5	99.4	1,918.4	99.2	819.7	99.3	4,355.6	99.2

In 1913 we received 40.3 per cent. of our total imports from countries in Europe. From the Dutch possessions (mainly Java) we received .5 per cent. of our total imports. This percentage in 1919 rose to 1.4, in 1920 to 1.8, but fell to 1 per cent. for the first nine months of the present year. This increased percentage was, of course, due to purchasing sugar from Java to replace our supplies formerly drawn from Germany. In 1913 we received imports from Cuba amounting to .5 per cent. of our total imports. In 1919 the percentage rose to 1.1, and in 1920 to 1.4, but fell this year to .6. Our imports in 1913 from China (£4,700,000) and from Japan (£4,400,000), amounting in each case to .6 per cent. of our total imports, rose to 1.4 per cent. and 1.5 per cent. respectively in 1919 and 1920. But the outstanding feature of the above table is seen in the fact that our imports from Europe, which fell to 15.3 per cent. of our total imports in 1919, rose to 23.2 per cent. in 1920, and to 27.4 per cent. for the first nine months of 1921. Taking our imports in 1913 as a standard, we have constructed a table which shows how our imports from the chief countries of Europe in 1919, 1920, and for the first nine months of 1921 compare with percentages taken in 1913:—

Imports by the U.K. from—	Percentage of the Total Imports by the U.K. taken in—				Increase or Decrease Upon or From the Percentage of 1913 Taken in—		
	1913.	1919.	1920.	1921.	1919.	1920.	1921.
Denmark	3.1	0.6	1.6	3.8	- 2.5	- 1.5	+ 0.7
Holland	3.1	1.3	2.0	3.6	- 2.8	- 1.1	+ 0.5
Belgium	3.0	0.6	2.3	3.1	- 2.4	- 0.7	+ 0.1
Sweden	1.8	2.2	2.9	1.9	+ 0.4	+ 1.1	+ 0.1
Spain	1.9	2.1	1.9	1.9	+ 0.2	equal	equal
Norway	1.0	1.1	1.2	1.0	+ 0.1	+ 0.2	equal
Switzerland	1.4	0.9	1.9	1.8	- 0.5	+ 0.5	+ 0.4
France	6.0	3.0	3.9	5.0	- 3.0	- 2.3	- 1.0
S.E. Europe	1.6	0.7	0.7	1.2	- 0.9	- 0.9	- 0.4
Germany	10.5	7.7	1.6	1.9	- 10.5	- 8.9	- 8.6
Russia	5.2	1.0	1.7	0.9	- 4.2	- 3.5	- 4.2

In face of the partial Protectionist tariff recently imposed with the main object of keeping out the manufactures of Germany, that country is slowly but steadily increasing the percentage of goods that our importers are glad to buy from her. Holland, Belgium, Denmark, Sweden, and Switzerland are sending us larger percentages than they sent in 1913. France and the countries of S.E. Europe are also recovering their places in the list of those countries upon which we relied to supply us with goods which we believed we could most profitably purchase from them. Certainly we believe in Europe as a "going concern," and if the Governments of Europe (including our own) return to the path of sanity and free imports, the gaps in the machinery of international commerce will begin to be filled.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

CUBA.—The financial position of Cuba has improved but little since I last commented upon it, and the views expressed over a year ago that the results of the sugar crisis would be felt for long have been justified. Those optimists who declared the economic troubles of the island to be merely transient, or the consequences of "too much prosperity," have been forced to concede that the evil went very much deeper than they supposed; recovery will be correspondingly slow and difficult. It has taken more than 12 months to induce North-American financiers—who are materially interested in the well-being of Cuba—to come to the rescue of the commercial community, and not then until they had been amply secured by the Government of that State. It was the hope of the Cuban Administration that the banks and their principal customers, the sugar-planters, might arrive at an arrangement without the interference of the Government. The moratorium, granted first in October, 1920, then extended upon two or three occasions, proved merely a stop-gap in the situation, which since then has steadily deteriorated. The appointment of Mr Albert Rathbone, at one time Assistant-Secretary to the United States Treasury, as Financial Adviser to the Cuban Government has proved of some value; his main efforts, however, have been devoted to the working-out of definite plans for avoiding a general collapse and the prevention of any further occurrence of the causes leading to the trouble. That the progress towards economic restoration is proceeding but slowly may be gauged from the fact that at the present time Cuban merchants owe a debt of about \$200,000,000 (= £40,000,000) to their foreign suppliers, while in the Cuban market there have accumulated something like 2,000,000 tons of sugar, which it has been impossible to dispose of, and which cost \$200,000,000 to produce. In the meantime, the price of the commodity has fallen from 23 cents at one time last year to little more than 3 or 4 cents per pound. It is estimated that if to the large sum above mentioned is added the interest and dividends which have had to be paid, or are owing, upon foreign capital invested in Cuba, there is a balance against the island of about \$500,000,000 (= £100,000,000).

PERU.—Like all other Latin-American countries, Peru has had her financial troubles of late; but the position has been materially lessened in seriousness through cautious and shrewd handling. Believing in the superiority of foreign procedure, the Government has recently appointed an American trade expert as head of the Peruvian Customs, while, at the request of Congress, a Commission, under the direction of a former Assistant-Secretary of the United States Treasury, is now in Peru assisting in the drawing up of a plan for placing the national finances upon a sound basis. One result of the new arrangement will be the placing (it is supposed without any difficulty) of a loan for £700,000 on the New York market, as part of a proposed issue in the near future of £2,000,000 (\$10,000,000). Some three years ago an arrangement was concluded whereby the Junta de Vigilancia de la Emisión de Cheques Circulares paid Peruvian bank-notes to exporters of produce to the United States against deposits made with the New York Federal Reserve Board by importers of the goods. The rate fixed was \$5.01½, plus 1-20 per cent. and cable charges, for

the Peruvian pound. This arrangement led to a considerable increase in the commercial relations of the two countries, while certain concessions granted by American shippers to Peruvian customers have still further acted in their favour, and correspondingly against those of British exporters. These latter are too much wedded to old-fashioned and nowadays impossible methods, such, for example, as stipulating for established credits in London, or that payment should be made by cash against documents in London. As a rule, the purchaser in Peru is averse to the latter method of doing business, or making payment against goods before he has had any opportunity of viewing them, which, by the existing Customs regulations, he is privileged to do. The most favourable terms that can be expected in effecting commercial negotiations with Peru are those of cash against documents in Lima, while the general terms of the market are 90 days' credit. Such concessions are now being conceded in the United States, while others even more liberal are freely offered from Germany. The financial position of Peru being inherently sound and improving, British shippers might well reconsider their determination to adhere to ancient and unpopular methods.

COSTA RICA.—Commercial conditions in Costa Rica, which depend largely upon the value of the coffee crop, appear to be more promising, and foreign trade to be reaching a more satisfactory level. The country is upon a gold basis, and since 1910 the banks have been privileged to issue gold notes up to 50 per cent. in excess of their paid-up capital, upon the stipulation that they maintain a gold reserve equal to at least 50 per cent. of their outstanding notes. It will be remembered, however, that at the outbreak of the war a moratorium was placed against the redemption in gold of these notes, and was not lifted until the commencement of last April. In the following July the power of issuing paper currency was restricted to the Banco Internacional de Costa Rica, the limit being 4,000,000 colones; the continuity of this decree is now being protested by the other banks. An improvement in the revenues of the small Central American State is to be noted, for while there was a deficit of 834,973 colones for the year 1920—both income and expenditure were in excess of the estimates—the first half of the present year yielded a substantial surplus, namely, 826,180 colones, or almost as much as the deficit for the whole previous 12 months. On the other hand, the public internal debt of the Republic has increased, while the external has decreased. In 1903-4 the amount of the internal debt stood at 29,493,374 colones, but by the end of 1920 it had amounted to 69,291,796 colones. The external debt, which in 1912 stood at 31,337,240 colones, in 1920 was reduced to 30,366,966 colones, but the internal debt advanced from 3,887,708 colones to as much as 38,924,830 colones. Allowing for the difference in exchange, the heavy expenses connected with the armed encounter with the neighbouring State of Panama, and other liabilities incurred, the total indebtedness of Costa Rica has now increased to 85,087,331 colones. This means a *per capita* charge of 200 colones. The service on the Republic's debt required last March 6,025,959 colones, while during the second quarter of this year the sum of 870,774 colones was paid in interest on the foreign debt, and 235,686 colones on the internal debt. On account of the removal of the restriction on the exportation of gold and silver in June last exchange is slowly improving. Should the coffee crop prove as profitable as hoped for, the improvement in exchange will continue. The colon, worth in the United States \$0.46536 at par, fell last July to \$0.214. The nominal premium on the American dollar is 115 per cent., which means that \$1.00 U.S. currency is usually worth \$2.15, in terms of Costa Rica currency; but when the embargo was placed upon the export of gold from the country the premium advanced from 115 per cent. to 180 per cent. Movements of this character naturally prove very injurious, and it takes a long time to overcome the adverse effects upon the trade and commerce of the country.

MEXICO.—The Mexican Government has decided to accept the recommendation of the Finance Department to coin a gold piece to the value of 50 pesos, or, £5, and to call the new coin "Contenaoio," in commemoration of the anniversary of Mexican independence achieved in the year

1821. At present the largest gold coin in circulation has a value of 20 pesos, equal to £2, and is called "Azteca," since it bears on one side a representation of the Aztec calendar stone. The next coin in actual size is the 10 peso (£1) piece, known as "Hidalgo," bearing a bust of the patriot martyr-priest of that name. Five, two-and-a-half, and two peso gold coins also exist.

THE IRISH AGREEMENT.

THE following is the full official text of the Irish Agreement, signed by the British and Irish delegations, on December 6, 1921:—

ARTICLES OF AGREEMENT.

1. Ireland shall have the same constitutional status in the Community of Nations known as the British Empire as the Dominion of Canada, the Commonwealth of Australia, the Dominion of New Zealand, and the Union of South Africa with a Parliament having powers to make laws for the peace, order, and good government of Ireland, and an Executive responsible to that Parliament, and shall be styled and known as the Irish Free State.

2. Subject to the provisions hereinafter set out the position of the Irish Free State in relation to the Imperial Parliament and Government and otherwise shall be that of the Dominion of Canada, and the law, practice, and constitutional usage governing the relationship of the Crown, or the representative of the Crown, and of the Imperial Parliament to the Dominion of Canada shall govern their relationship to the Irish Free State.

3. The representative of the Crown in Ireland shall be appointed in like manner as the Governor-General of Canada, and in accordance with the practice observed in the making of such appointments.

4. The oath to be taken by Members of the Parliament of the Irish Free State shall be in the following form:—

I.....do solemnly swear true faith and allegiance to the Constitution of the Irish Free State as by law established and that I will be faithful to H.M. King George V., his heirs and successors by law, in virtue of the common citizenship of Ireland with Great Britain and her adherence to and membership of the group of nations forming the British Commonwealth of Nations.

5. The Irish Free State shall assume liability for the service of the Public Debt of the United Kingdom as existing at the date thereof, and towards the payment of war pensions as existing at that date in such proportion as may be fair and equitable, having regard to any just claims on the part of Ireland by way of set-off or counterclaim, the amount of such sums being determined in default of agreement by the arbitration of one or more independent persons being citizens of the British Empire.

6. Until an arrangement has been made between the British and Irish Governments whereby the Irish Free State undertakes her own coastal defence, the defence by sea of Great Britain and Ireland shall be undertaken by His Majesty's Imperial Forces, but this shall not prevent

the construction or maintenance by the Government of the Irish Free State of such vessels as are necessary for the protection of the Revenue or the Fisheries.

The foregoing provisions of this article shall be reviewed at a conference of Representatives of the British and Irish Governments to be held at the expiration of five years from the date hereof with a view to the undertaking by Ireland of a share in her own coastal defence.

7. The Government of the Irish Free State shall afford to His Majesty's Imperial Forces:—

(a) In time of peace such harbour and other facilities as are indicated in the Annex hereto, or such other facilities as may from time to time be agreed between the British Government and the Government of the Irish Free State; and

(b) In time of war or of strained relations with a Foreign Power such harbour and other facilities as the British Government may require for the purposes of such defence as aforesaid.

8. With a view to securing the observance of the principle of international limitation of armaments, if the Government of the Irish Free State establishes and maintains a military defence force, the establishments thereof shall not exceed in size such proportion of the military establishments maintained in Great Britain as that which the population of Ireland bears to the population of Great Britain.

9. The ports of Great Britain and the Irish Free State shall be freely open to the ships of the other country on payment of the customary port and other dues.

10. The Government of the Irish Free State agrees to pay fair compensation on terms not less favourable than those accorded by the Act of 1920 to judges, officials, members of Police Forces and other Public Servants who are discharged by it, or who retire in consequence of the change of government effected in pursuance hereof.

Provided that this agreement shall not apply to members of the Auxiliary Police Force or to persons recruited in Great Britain for the Royal Irish Constabulary during the two years next preceding the date hereof. The British Government will assume responsibility for such compensation or pensions as may be payable to any of these excepted persons.

11. Until the expiration of one month from the passing of the Act of Parliament for the ratification of this instrument the powers of the Parliament and the Government of the Irish Free State shall not be exercisable as respects Northern Ireland, and the provisions of the Government of Ireland Act, 1920, shall, so far as they relate to Northern Ireland, remain of full force and effect, and no election shall be held for the return of members to serve in the Parliament of the Irish Free State for constituencies in Northern Ireland, unless a resolution is passed by both Houses of the Parliament of Northern Ireland in favour of the holding of such elections before the end of the said month.

12. If before the expiration of the said month an address is presented to His Majesty by both Houses of the Parliament of Northern Ireland to that effect, the powers of the Parliament and the Government of the Irish Free State

shall no longer extend to Northern Ireland, and the provisions of the Government of Ireland Act, 1920 (including those relating to the Council of Ireland), shall, so far as they relate to Northern Ireland, continue to be of full force and effect, and this instrument shall have effect subject to the necessary modifications.

Provided that if such an address is so presented a Commission consisting of three persons, one to be appointed by the Government of the Irish Free State, one to be appointed by the Government of Northern Ireland, and one who shall be Chairman, to be appointed by the British Government, shall determine, in accordance with the wishes of the inhabitants, so far as may be compatible with economic and geographic conditions, the boundaries between Northern Ireland and the rest of Ireland, and for the purposes of the Government of Ireland Act, 1920, and the purposes of the Government of Northern Ireland shall of this instrument, the boundary of Northern Ireland shall be such as may be determined by such Commission.

13. For the purpose of the last foregoing article, the powers of the Parliament of Southern Ireland under the Government of Ireland Act, 1920, to elect members of the Council of Ireland shall after the Parliament of the Irish Free State is constituted be exercised by that Parliament.

14. After the expiration of the said month, if no such address as is mentioned in Article 12 hereof is presented, the Parliament and Government of Northern Ireland shall continue to exercise as respects Northern Ireland the powers conferred on them by the Government of Ireland Act, 1920, but the Parliament and Government of the Irish Free State shall in Northern Ireland have in relation to matters in respect of which the Parliament of Northern Ireland has not power to make laws under that Act (including matters which under the said Act are within the jurisdiction of the Council of Ireland) the same powers as in the rest of Ireland, subject to such other provisions as may be agreed in manner hereinafter appearing.

15. At any time after the date hereof the Government of Northern Ireland and the provisional Government of Southern Ireland hereinafter constituted may meet for the purpose of discussing the provisions subject to which the last foregoing Article is to operate in the event of no such address as is therein mentioned being presented, and those provisions may include:—

(a) Safeguards with regard to patronage in Northern Ireland.

(b) Safeguards with regard to the collection of revenue in Northern Ireland.

(c) Safeguards with regard to import and export duties affecting the trade or industry of Northern Ireland.

(d) Safeguards for minorities in Northern Ireland.

(e) The settlement of the financial relations between Northern Ireland and the Irish Free State.

(f) The establishment and powers of a local militia in Northern Ireland and the relation of the Defence Forces of the Irish Free State and of Northern Ireland respectively;

and if at any such meeting provisions are agreed to, the same shall have effect as if they were included amongst the provisions subject to which the powers of the Parliament and the Government of the Irish Free State are to be exercisable in Northern Ireland under Article 14 hereof.

16. Neither the Parliament of the Irish Free State nor the Parliament of Northern Ireland shall make any law so as either directly or indirectly to endow any religion or prohibit or restrict the free exercise thereof or give any preference or impose any disability on account of religious belief or religious status or affect prejudicially the right of any child to attend a school receiving public money without attending the religious instruction at the school or make any discrimination as respects State aid between schools under the management of different religious denominations or divert from any religious institution any of its property except for public utility purposes and on condition of compensation.

17. By way of provisional arrangement, which must elapse between the date hereof and the date of a Parliament and Government of the Irish Free State in accordance therewith, steps shall be taken for summoning a meeting of men

elected for constituencies in Southern Ireland since the passing of the Government of Ireland Act, 1920, and for constituting a provisional Government, and the British Government shall take the steps necessary to transfer to such provisional Government the powers and machinery requisite for the discharge of its duties, provided that every member of such provisional Government shall have signified in writing his or her acceptance of this instrument. But this arrangement shall not continue in force beyond the expiration of twelve months from the date hereof.

18. This instrument shall be submitted forthwith by His Majesty's Government for the approval of Parliament and by the Irish signatories to a meeting summoned for the purpose of the members elected to sit in the House of Commons of Southern Ireland and if approved shall be ratified by the necessary legislation.

Business Notes.

Overseas Trade.—The November trade returns, which appear as we go to press, show that imports for the month were valued at £89,258,000, as against £84,741,900 in October, British exports at £62,894,800 against £62,265,400, and re-exports at £9,823,200, against £10,385,600. The surplus of imports is thus £16,540,000, as against £12,091,000 in October. We postpone further examination of the statistics until our next issue.

The Bank Statements.—The monthly statement of average weekly balances of the London clearing banks for November is set out in full in a later column. Below we compare the totals for the nine English banks with those of previous months:—

(Million £'s.)

Loans and advances, pre- ferred	110.5	81.4	74.1	72.0	76.2	84.8
Assets	2,013.9	1,942.0	1,929.3	1,934.5	1,969.3	1,968.6

The decline in deposits as compared with October has been offset by an advance in acceptances. On the whole there is an increase of nearly £21 millions in the resources, presumably owing to purchases of Treasury bills, and of £5 millions in investments. The Treasury, on the other hand, is £17 millions lower, and cash in the hands of banks is £6 millions lower, while advances have been reduced by over £12 millions. The ratio of cash to deposits is 13.8 per cent., which compares with 14.6 per cent. a month ago.

—A further increase is shown in the output of coal. The mines of Great Britain for the week ended November 26th. For the week ended November 5th the output was 4,182,400 tons. In the three succeeding weeks it has been 4,372,500, 4,646,300, and 4,673,600 tons. In the week ended November 27, 1920, the output was 5,176,500 tons.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that in November rapid progress was made with autumn cultivation, and the sowing of the land intended for winter corn

is practically completed in all parts of the country. Occasionally, the land has been too hard for satisfactory cultivation, but generally it has worked well, and a good seedbed has been secured. Wheat has germinated well and is vigorous in growth, with a good colour; in some cases growth is too forward, and sheep have been put on the crop to keep it down. Oats, rye and beans, with rare exceptions, also give good promise. The lifting of the potato crop has been completed under favourable conditions, but the frosts in the early part of the month caught a proportion of the crops still in the ground, and to a small extent also damaged those in the pit. The total production is estimated at 2,958,000 tons, or about 200,000 tons less than in 1920, but greater than in any year before 1917, the comparatively large production this year, in spite of the low yield per acre, being due to the increase in the area devoted to this crop. Mangolds made some growth during November, but crops have now mostly been lifted in good order. The roots are of small size as a rule, but quality generally is satisfactory. The total production is estimated at 6,280,000 tons, or about 1,000,000 tons less than last year. The yield per acre is estimated at 16.8 tons, or nearly 2 tons below average. The open weather has suited cattle and sheep, which are generally in fairly good condition for the season, and has enabled cattle to be kept in the pastures in which there has been a fairly plentiful supply of grass during the month in many districts. There is still a scarcity of water in some parts of the country. The supply of labour is ample for requirements, and in many districts there is a certain amount of unemployment, mostly among casual workers.

The Position in Guatemala.—The revolution early this week in Guatemala is ascribed by those who know the country to President Herrero's failure to fulfil his promises, and to the depression in trade, which, of course, was laid to the charge of the Government. The Liberal party seized power, and the support of the Army ensured their success. All was reported quiet on Thursday, and business is being carried on as usual. A later telegram reports a triumvirate of Generals, which has promised to spare the ex-President's life. In these circumstances, we do not think that the external bondholders need fear a suspension of the debt service. The funds covering the next two coupons are already in London. How far the revolution may interfere with the achievement of the federation of Central America is an interesting question, but the Federal Constitution offers no scope for an ambitious leader.

Japanese Trade and Finance.—Cabled advices from Tokyo record stringency in the money market in the latter half of November, the market being affected by big subscriptions to the new Exchequer bills, by the withdrawal of the Government railway deposit from the banks, by payments for dollars sold by the Government to the exchange banks, and by a drain on the market into the exchange banks on account of the increasing adverse balance of trade. Towards the end of the month, also, there was an increasing demand for remittances to the country, and the cash resources of bankers were reduced. Short loans were in strong demand. The Washington Conference caused sales of armament shares, which led to a spreading of uneasiness in the stock markets. The rice market is reported to be unstable, and the Government have announced the suspension of the import duty on rice from November 21st till next October. The cotton yarn market remains dull, but American buying is responsible for brisk conditions in the market for silk yarn. The note issue of the Bank of Japan on November 30th was 1,283,000,000 yen, as compared with 1,180,000,000 yen a year ago, discounts and advances being 237,000,000 yen, against 191,000,000 yen.

The Salvador Debt.—After all, the negotiations between the Bondholders' Committee and the American banking syndicate who were preparing to raise a new loan in the United States have broken down owing to the alteration

by the syndicate at the last moment of its offer of terms. Their original proposal was that the new loan, secured on the gross Customs revenue (part of which is already pledged to the holders of the existing external loans), should consist of three series of bonds. Series "A," consisting of 8 per cent. bonds to the nominal amount of \$5,000,000, would constitute a first charge, and be issued in the United States; series "B," amounting to the equivalent in American dollars of the outstanding external loans (respectively £756,900 of the 6 per cent. loan of 1906 and £201,358 of the 7 per cent. funding loan of 1915), carrying interest at 6 per cent., would be exchanged at par for the bonds of those loans; it would be a second charge on the gross Customs revenue. Series "C," to be devoted to the payment of domestic indebtedness of the Salvador Government, coffee bonds, and the arrears of the railway subsidy, £44,000, would be issued to the amount required for settlement, provided that the total nominal amount of all three series should not exceed \$16,000,000. An American official appointed by the syndicate would supervise the collection of the Customs revenue. An agent of the Salvador Government took part in the negotiations; and it was agreed that the arrears of interest on the existing external bonds would be paid in cash. But within the last few days the syndicate demanded in addition the power to issue an extra \$5,000,000 of the "A" series whenever the gross Customs revenue for three years had been thrice the amount required for the "A," "B," and "C" bonds. Thus the security for the "B" bonds was so diminished that the offer could not be accepted, and, pending further negotiations, the bondholders are requested to deposit their bonds—or at present a banker's receipt for them—with the London and South American Investment Trust, 62 Old Broad street, E.C. Meanwhile, the Foreign Office has been invited to protect their interests, threatened by the possible imposition of a prior charge on the Customs revenue.

Cotton Trade Wages.—The time is near at hand when there is every probability of the employers in the Lancashire cotton industry seeking a further reduction in the wages of the operatives, writes our Manchester correspondent. Last June wages were revised after a lock-out of three weeks. The agreement provided for an immediate fall of 60 per cent. on list rates, or 3s 10d in the £ on current wages, and a further reduction of 10 per cent. on list rates, or 7d in the £ on current wages in the last week of this year. It will be open for either side to claim a change in list rates at the end of this month, and owing to the severe trade depression which exists it is anticipated that the masters will give the trade union secretaries three months' notice of a reduction. The wages now being paid are on lists which are about 140 per cent. above July, 1914. There has recently been some discussion as to increasing the working hours which were reduced in 1919 from 55½ to 48 per week. It is doubtful, however, whether the employers will take any action in this connection. An attempt to make the operatives work longer hours will be very sternly resisted by the trade unions, and it may be taken for granted that if an application is made for a reduction in wages strong efforts will be made to make the fall as small as possible.

Royal Dutch.—Our Amsterdam correspondent writes, on December 1st:—To-day a general meeting of shareholders was held in order to consider the proposed alteration of the statutes in order to authorise the board to pay dividends in scrip instead of cash if required by circumstances. The meeting could take no binding decision, as the statutory number of shareholders was not represented. The meeting was adjourned, but Mr Deterding availed himself of the opportunity to explain this proposed alteration, giving at the same time some interesting details about the present position of the company. The financial results are such that the declaration of an interim dividend of 15 per cent., as in previous years, should be fully justified. Payment in cash, however, might, in view of certain possible contingencies, be unwise. Considerable sums have in 1921 been invested by the daughter companies in many parts of the world. More than 100,000,000 fl have been invested in Mexico, where the company now owns extensive oil-fields, pipe-lines, refining plants, and tanks, and the production there is 150,000 tons a week, while the stock may be taken at about 1,000,000 tons. Extension of the company's fleet absorbed 30,000,000 fl. Taking also into consideration the capital expenses in England, France, and elsewhere, the total amount thus spent may be estimated at 200,000,000 fl. It will be impossible to find new money if the Netherlands Indian Government pursue their course of taxing the products of the Royal Dutch in the way contemplated. Last May the export duties on petroleum products were considerably increased. Since 1905 the directors have opposed these taxes. The Netherlands Indian Government expect to draw 54,000,000 fl out of these increased taxes, which are said to be of a temporary nature, but may, of course, continue for an undefined space of time once in vigour. They are of opinion that the trade of the Royal Dutch in our Colonies may easily be burdened with the above-named sum in excess of the amount of 30,000,000 fl, which is already paid in taxes by the company and its subsidiaries in Holland and Netherlands India. In 1920 the Royal Dutch-Shell group made a profit of 200,000,000 fl, but only a small part of this was made in the Dutch colonies. Out of 19,000,000 tons crude oil produced in 1920 only 2,300,000 tons were derived from the Dutch Indies. From Mexico they derive thrice as much. The chief source of profits is not the production of crude oil, nor the manufacture of benzene, lamp oil, liquid fuel, and similar products, but the transportation, distribution, and sale of these articles. The strength of the Royal Dutch lies in the large fleet, extensive installations, and the well-organised and trained selling department. Considerable revenues are drawn from the transportation of oil, the use of pipe-lines, the buying, working, and selling of oil and oil products in various countries, and from numerous transactions in which our Colonies do not at all play any rôle of importance. Comparing the policy of our Colonial Government with that of other countries, we see that Japan protects the inland industry by means of a duty of 42 fl per ton kerosene, British India by a duty of 20 fl, while in the United States the constitution does not allow the imposition of export duties. The Royal Dutch do not ask protection, but they object to unjust taxation of their trade only. Mr Deterding said that the position of the company at present is such that there is 200,000,000 fl hard cash. The stocks on which for a considerable part freights and rights have already been paid represent another 100,000,000 fl to 150,000,000 fl. The company have no bankers' debts, they are financially perfectly independent, and all stocks are free of any charge. Whatever crisis may occur in the money market the Royal Dutch will be able to continue the exploitation and extension without having to refer to the shareholders.

British Overseas Bank.—The second annual report and accounts of the British Overseas Bank, Limited, for the financial year ended October 31st last records the steady progress made in its development. Profit for the year amounts to £102,326, to which has to be added £35,200

as surplus from the previous accounting period. The 6 per cent. dividend on the "A" ordinary shares absorbs £60,000, while £10,000 is allocated to the reserve fund, against shareholding interests in foreign banks, and £10,000 is placed to a reserve "premises account." This leaves £57,527 to be carried forward. It is of interest to observe that all taxation charges are now deducted before declaring profits. Thus the amount now carried forward is subject to no deduction, as was the case in the accounts published a year ago. The Anglo-Polish Bank, which was recently established in co-operation with Messrs A. Peretz and Co., has "had a satisfactory initial year," and the Polish undertaking is now issuing 50,000 additional shares, amounting to 25 millions Polish marks. Relations have been entered into with the Dorpat Bank at Dorpat, and a "small shareholding participation has been taken." The balance-sheet will be found fully analysed in another column. Total assets are now £4,360,584, as against £5,222,792 last year. Cash in hand at £568,826 is lower, while money at call and short notice is down to £1,395,000, as against £2,025,499. Balances with bankers abroad have increased from £318,125 to £1,098,744—significant figures—while the item "bills discounted" has fallen from £117,321 to £59,586. "Investments in foreign countries" which formerly stood "at cost" at £32,442 are now replaced by "shareholding interests in foreign banks at cost £44,943." Advances have moved from £212,166 to £385,506, preliminary expenses of £39,017 have disappeared, and premises account now assumes the respectable dimension of £238,527. Acceptances are considerably lower at £449,117, which compares with £1,621,148 a year ago.

Peruvian Corporation.—Not only have the revenues from the railways and steamers owned by the Peruvian Corporation declined during the year ended June 30th last, but the monthly instalments of the Government annuity of £80,000 have not been paid since January last. On the other hand, a sum of £36,026 has been received from the Peruvian Government in respect of guano shipped, a temporary arrangement having been made pending sanction by Congress of the agreement between the Government and the corporation for purchase by the former of the rights in respect of 762,872 tons of guano due to the corporation. The table below sets out results for the past five years:—

	Year to June 30.				
	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Railway net revenue ..	£ 372,622	£ 458,641	£ 386,364	£ 426,391	£ 379,341
Government annuity ..	110,000	110,000	95,000	115,000	46,667
Guano account.....					36,026
Interest, exchange, &c..	40,282	29,337	31,641	58,413	30,893
Total income.....	525,033	597,979	513,005	599,804	492,927
Administration.....	21,976	23,389	31,892	30,894	45,816
Balance of revenue ...	503,057	574,590	481,113	568,910	447,111
Deb. int. (4%)	206,000	216,000	216,000	216,000	216,000
Sums written off, &c. ..	84,370	72,271	48,317	92,956	37,950
Deb. amortisation	54,000	54,000	54,000	54,000	54,000
Available balance	148,687	232,319	162,796	205,954	140,061
To reserve					
Additional deb. int. (2%)	108,000	108,000	108,000	108,000	108,000
Preference dividend....	74,573	111,861	74,576	93,225	37,294
	(1%)	(1½%)	(1%)	(1½%)	(1½%)
Year's balance	Dr 33,886	12,458	Dr 19,780	4,729	Dr 5,233
Brought forward	183,407	149,521	161,978	142,198	146,927
Carried forward	149,521	161,979	142,198	146,927	141,694

The amounts written off consist of £4,000 for Lake steamers' insurance and £33,050 for income-tax, the latter comparing with £68,306 a year ago. Additional 2 per cent. interest on the debenture bonds absorbs £108,000, and the preference dividend is reduced to ½ per cent., which leaves 97½ per cent. in arrears. After making these payments, there remains £141,694, or £5,233 less, to be carried forward. A comparative summary of the main items of the balance-sheet is given below:—

June 30.	Liabilities.			Assets.		
	Deben- tures.	Credi- tors and Bills.	Sinking Fund, Reserve, Insurance and Net Revenue.	Conces- sions, &c.	Rail- ways.	Invest- ments, Bills, and Cash.
1912	£ 5,236,750	£ 67,228	£ 1,159,121	£ 12,772,305	£ 9,682,939	£ 259,155
1913	5,176,000	71,769	1,253,291	12,772,305	9,700,667	258,741
1914	5,111,750	130,829	1,370,807	12,772,305	9,741,496	322,001
1915	5,043,850	101,634	1,331,057	12,772,305	9,674,848	286,810
1916	4,975,450	84,651	1,440,396	12,772,305	9,568,853	400,943
1917	4,903,800	89,112	1,596,049	12,772,305	9,526,033	540,631
1918	4,824,050	125,153	1,734,037	12,772,305	9,506,566	579,520
1919	4,739,700	120,001	1,770,044	12,772,305	9,506,566	566,685
1920	4,650,550	137,436	1,899,811	12,772,305	9,506,566	383,273
1921	4,556,300	306,257	1,929,906	12,772,305	9,509,988	289,157

Operations in land resulted in a debit balance of £8,759, "owing to (1) the failure of the purchaser of the 1920 coffee crops, who, in consequence of a sudden fall in prices, declared himself unable to carry out his contract, the £1,000 deposited by him being forfeited; and (2) the shortage of the 1921 coffee crop, which has been occasioned by the exceptionally cold conditions preventing the formation of the berry." Experimental boring for oil has been held up by delays in receiving the drilling apparatus, and "developments have not sufficiently advanced for a forecast to be made." Strong representations have been made to the Government with regard to its failure to pay the monthly instalments of the annuity, and the Government has promised to pay "as soon as the finances of the country improve." The directors of the corporation have for some time been pressing for a revision of railway tariffs, and their efforts have now met with success, a decree having authorised "certain modifications and adjustments" in railway rates to come into force on December 19th. The average rate of exchange for the financial year 1920-21 was 27½d to the sol, as compared with 29½d in the preceding year.

Orient Steam Navigation.—A sharp decline in profits is recorded in the report of the Orient Steam Navigation Company for the year ended June 30th last. The previous year, however, had shown an exceptional increase, and the past year's figure is slightly better than that of two years ago. A transfer of £50,000 from underwriting account raises the amount for disposal to last year's figure. A comparison of results is given below:—

June 30.	1913-14	1916-17	1917-18	1918-19	1919-20	1920-21
Profit	£ 227,454	£ 180,152	£ 166,271	£ 162,062	£ 218,699	£ 164,656
Brought forward	56,717	96,996	112,359	115,073	63,912	118,678*
Deb. int. and fees....	284,171	277,148	278,630	277,135	282,611	283,334
Reserve	23,383	24,127	22,895	22,561	21,265	18,014
Repairs and renewals.	75,000	100,000	50,000	150,000	100,000	70,440
Prof. div.	25,000		50,000			
Def. div.	10,176	14,603	14,603	14,603	14,603	14,603
	63,701	26,059	26,059	26,059	78,065	130,110
	(55%)	(15%)	(15%)	(15%)	(15%)	(12½%)
Carried forward	86,911	112,359	115,073	63,912	68,678	50,167

* Includes £50,000 transferred from Underwriting Account.

After paying debenture interest and preferred dividend and transferring £70,440 to general reserve, a dividend of 12½ per cent., free of tax (as against 15 per cent. a year ago), is paid on the deferred shares, and £50,167 carried forward. A year ago £520,440 of the general reserve fund was capitalised and distributed to shareholders, and this accounts for the fact that the reduced dividend requires £52,000 more. The balance-sheet shows reductions of £234,000 in creditors, and of £204,000 in the property item. Debtors are £99,700 lower, but cash is up by £20,300. The report states that as a consequence of the Australian Navigation Act the company has "been forced to abandon the conveyance of passengers between Australian ports." A new contract has recently been made with the Commonwealth Government for a four-weekly mail service.

Dorman, Long, and Co.—The report of Dorman, Long, and Co., Limited, for the year ended September 30th last shows reduced profits as compared with figures published

a year ago. In the table given below profits for the last two years are set out, together with details showing how these have been distributed:—

	1919-20.	1920-21.
Profit.....	£ 716,013	£ 397,711
Brought forward	205,852	248,540
Debenture interest.....	921,865	646,251
Redemption of 5% debentures..	37,371	36,286
Reserve	20,954	10,477
Preferred ordinary dividend....	200,000	
Ordinary dividend	120,000	120,000
	295,000	240,000
	(10%)	(5%)
Carried forward	248,540	239,488

The report states that "various questions between the Government and the company still remain to be settled," but "negotiations are proceeding," and it may "be possible to arrive at a settlement in the near future." Referring to industrial conditions, the report mentions that "on October 18th last year a stoppage began which lasted nearly three weeks, and again from March 31st till July 1st no coal was worked." These events, it is pointed out, "have had a most prejudicial effect on our business." Total assets are now given as £11,931,453, while share capital amounts to £7,119,900. There are debentures for £809,061 outstanding, in addition to a secured loan for £938,475. Investments and advances total £4,656,511, of which the investment part is taken at cost, with the exception of £482,836 taken "at or under cost." It is pointed out that prices have fallen heavily during the year, and "effect has been given to this in valuing the stocks, which have been taken at their present value." These are stated at £1,650,504 in the balance-sheet, as against £2,113,616 for 1919-20.

Ind, Coope's Profits.—A year ago Ind, Coope and Co. paid a 15 per cent. dividend and distributed £36,537 by way of bonus. This year the 15 per cent. dividend is maintained and the amount distributed as bonus is £105,000. As the following table shows, this increased distribution is made in spite of a decline in gross profits:—

Year Ended Sept. 30th.	Gross Profits.	Interest on Debenture Stocks and Mortgages.	Depreciation.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.
1914..	£ 110,821	£ 58,332	£ 28,516	£ ..	£ ..	£ 14,290
1915..	146,238	54,300	34,375	..	40,000	680
1916..	152,906	53,625	36,084	..	50,000	2,484
1917..	204,717	58,186	34,186	14,026	50,000	23,277
1918..	392,575	55,686	29,991	20,671	185,000	57,281
1919..	474,202	55,722	39,373	49,594	285,000	103,872
1920..	415,249	53,814	45,863	91,341	85,000	139,613
1921..	375,657	53,504	49,783	168,000	10,000	106,345

Trading profits in the year ended September 30th last were over £41,000 lower at £314,079, while income from investments was £61,578, against £59,954. During the past three years allocations to reserve have been on a generous scale. This year only £10,000 is set aside—this sum to go to the debenture redemption fund—and the carry forward is reduced by £33,000. An analysis of changes in the balance-sheet will be found in a later column of this issue.

Bleachers' Association.—The half-yearly statement of the Bleachers' Association for the six months ended September 30th last shows that net profits, after deducting central charges, providing for corporation profits tax, and charging maintenance and upkeep, debenture interest, &c., amounts to £137,872, as compared with £576,404 for the corresponding period of 1920. The depreciation fund is credited with £90,000, as last year, and the preference dividend absorbs £67,994, leaving a debit balance of £20,122, or a credit balance of £317,769 when the balance brought forward from the previous accounts is included. The directors propose to pay out of this an ordinary dividend at the rate of 5 per cent. per annum, as compared with 8 per cent. for the last two years. At this time last year, after payment of the interim ordinary dividend, there remained a balance of £620,029 to be carried forward.

Amalgamated Cotton Mills Trust.—In the third annual report and accounts of the Amalgamated Cotton Mills Trust, Limited, for the year ended October 31st last the directors state that, "with a view to conserving all available liquid resources, the board agreed with the directors of the subsidiary companies that no dividends shall be declared in respect of the company's holdings for the period under review." The revenue account is brief. Interest and receipts, £97,220, less management and other expenses, including directors' fees, £30,492, and interest, £42,352, leave a credit balance of £24,376. The amount brought forward is £117,524, preference dividends absorb £136,500, and £5,400 is carried forward. The accounts of the subsidiary companies have been made up to August 31st last, the combined results of which show a loss. The amount of this loss, however, cannot be stated until the "outstanding questions with the Inland Revenue authorities with regard to excess profits duty are settled." It is difficult to appraise the value of a paragraph in the report giving figures of liquid assets and trade liabilities without giving values of fixed assets. The balance-sheet is not particularly informative. Total assets are now £8,306,393, as compared with £8,971,643. The principal item on this side is "investments," at £7,066,873; of this sum investments in cotton mill companies are stated at £6,987,397, followed by the term "at cost" in brackets. On the last page of the report some particulars of controlled mills are given, but such interesting generalities, even when accompanied with details of liquid assets, are not sufficient to guide critical investors to a true understanding of the position of affairs. Under liabilities there is a loan outstanding against security, which, with accrued interest, figures at £176,208, while sundry loans and accrued interest amount to £337,439, and a bank overdraft is stated as £130,126. In addition to this, it should be noticed that there is a contingent liability in respect of a guarantee given for bank overdrafts of some of the subsidiary companies. Perhaps the directors will shed some further light on affairs at the annual general meeting, which is to be held on December 12th. The balance-sheet is analysed in our usual column.

Van Ryn Gold Mines.—When a Witwatersrand main reef proposition has been in the dividend list since 1895 it is a foregone conclusion that the exhaustion of the property must be within sight. Such is the position of the Van Ryn, which has distributed in all fully 2½ millions upon a capital of half-a-million. It is significant, though satisfactory, that one-third of the ore dealt with during the year ended June 30th last consisted of reclamation material from the old workings. An interesting feature of the operations consists in a large increase in the percentage of waste rock sorted out. From a trifle in 1919-20, the proportion for 1920-21 rose to 20, and at the end of the period stood at 27. Naturally, this procedure tends to expand the cost ratio, but the net gain is appreciable. The factor just named, in conjunction with higher wages and taxation, higher charges for stores, and the improved dietary of the native workers, had the effect of expanding the expense ratio by 6s 3d per ton, to 25s 9d. However, thanks partly to the extra revenue derived from the gold premium, the working profit of £112,900, or 5s 11d per ton, scored a moderate

advance both in total and average. After the payment of 15 per cent.—as for the preceding year—a somewhat larger balance remains to go forward. As usual, the year's capital expenditure was written off. Once again, to meet the abnormal conditions, the manager presents two ore reserve estimates—one based upon gold at the standard value, the other on the price at the time of writing—112s 6d per fine ounce. The current figure is about 100s. Taking the mean of the two estimates, the ore at present available may be reckoned to represent some two years' extraction, irrespective of what may be secured in the way of reclamation. Emphasis has been laid in some quarters on the point that but for the excess over the normal price of gold no profit would have been made last year. This, of course, is undeniable. But it is equally correct that as the gold premium declines costs tend to come down, although not in a corresponding degree. In this connection reference may be made to the new measures afoot with a view to bringing about a higher degree of efficiency in Rand mining. As already noted, the effective working hours of the natives have been extended. A conference is shortly to be held between the Chamber of Mines and the workers' representatives for the purpose of considering the revision of the contract system, the removal of trade union restrictions, and the abolition of the *status quo* agreement arrived at some years ago in connection with unskilled work sometimes performed by Europeans and sometimes by natives. With the paper price of gold falling away, it is coming to be recognised by all classes that drastic steps are necessary to avoid the unemployment and falling off in trade generally which must occur in the event of more mines being compelled to close down.

South West Africa Company.—Several weeks ago, writes our mining correspondent, speculative interest sprang up in the shares of this Anglo-German undertaking, and some rather optimistic stories gained currency in market circles. Endeavours to obtain confirmation or otherwise of these statements were met with the reply that all the information would be embodied in the forthcoming annual report, and could not be anticipated. In the event it transpired that in respect of sums owing, cash assets in Germany, securities sold by the German Government, and compensation, the company had since December 31, 1920, secured a total of about £590,000. Moreover, at Tuesday's meeting the chairman mentioned that no account had been taken of further sums totalling about £120,000 net which may be recovered directly or indirectly. With the money already received, plus a moderate temporary accommodation, the company is purchasing from the Public Trustee, at 11s 6d each, some 1,200,000 ex-enemy shares. An interesting and unusual position here arises. Hitherto the blocks of shares acquired by companies in similar circumstances have been almost immediately re-offered to friendly shareholders on terms constituting a bonus. In the case of the South West Africa Company, however, such a course of procedure would not be desirable, seeing that the ex-enemy shares comprise over two-thirds of the total capital, and is unnecessary, as the additional funds which could be thus provided are not required. Consequently, the 1,200,000 shares in question are to be treated as unissued capital, leaving the issued capital at £500,000 only. Against this the company holds British and other investments at to-day's prices worth about £516,000, irrespective of mortgages, buildings, and other assets; irrespective, also, of the remainder of the Damaraland concession—about 1,600,000 acres freehold. Hence there would appear to be ample ground for those computations which appraise the undertaking considerably in excess even of the current improved market valuation. Both in the report of the directors and at the meeting strong comments were made upon the action of the Union Government in confiscating the whole of the company's mineral rights apart from those relating to the Damaraland concession. As a partial compensation the said authorities have extended until November 17, 1923, the period within which the company retains the sole right to prospect for minerals within the balance of the Damaraland area. Very naturally, in the circumstances, active exploration is

now in progress. Having regard to the general tendency to depreciate Government departments, it may be noted that at the meeting a tribute was paid to the ability displayed in the negotiations by the Board of Trade and the Public Trustee.

The Corporation of Insurance Brokers announce that a lecture will be delivered by Mr B. A. Glanville, F.C.I.B., entitled "Experiences of a Lloyd's Broker During the Last 30 Years," on December 14th, at 5.45 p.m., at 59A London wall, E.C. 2.

The Board of Trade have appointed Mr H. F. Carlill to be Inspector-General in Bankruptcy, as from December 1, 1921, vice Mr J. G. Willis, C.B., retired.

Oversea Correspondence.

UNITED STATES.—MISSOURI, KANSAS, AND TEXAS REORGANISATION—COTTON GINNING REPORT — OCTOBER EXPORTS — BAD INVESTMENT DEMAND.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 25.

AFTER being in receivership for six years, the Missouri, Kansas, and Texas Railway Company, one of the largest systems in this country, is to be reorganised. Negotiations, which were begun shortly after the company failed, in September, 1915, to refund \$19,000,000 of short-term notes, but which were interrupted by the war and Federal control of the railroads, have finally resulted in a definite plan, according to an announcement this week by the reorganisation managers, J. and W. Seligman and Co. and Hallgarten and Co. The plan has been approved by the directors and accepted by all of the 18 committees representing the different classes of securities concerned. It will be declared operative when, in the judgment of the reorganisation managers, a sufficient amount of securities has been deposited. The stockholders' participation in the plan will be underwritten by a syndicate composed of Speyer and Co., Seligman and Co., Hallgarten and Co., and the Equitable Trust Company. The underwriting will amount to \$18,420,000. Since about \$55,000,000 of \$89,000,000 total bonds involved have already been deposited, the managers feel that the success of the undertaking is assured. Among the outstanding features of the plan are the following:—The fixed interest-bearing debt of the railroad is to be reduced from \$146,543,142 to \$100,320,913, and the fixed interest charges (including sinking fund payments) from \$7,429,376 to \$4,917,717. In addition, the new company is to have \$57,500,000 5 per cent. convertible adjustment mortgage bonds, bearing a contingent interest charge of \$2,875,000, cumulative from January 1, 1925. The total capitalisation of the old company, amounting to \$223,000,000 stocks and bonds, is to be replaced by the new company's bonds and preferred stock aggregating \$182,320,000, and 783,155 shares of its common stock without par value. Assessments of \$20 per share are to be made on the \$13,000,000 old preferred and of \$25 per share on the \$63,283,257 old common stock to provide \$18,420,000 new cash for reorganisation purposes, of which \$4,042,000 will be used to pay off receivers' certificates and bank loans, \$1,275,000, to pay deferred interest under the plan, \$1,000,000 to meet next year's equipment trust maturities, and \$4,000,000 to provide the new company with a working balance; the sum of \$8,103,000 will be reserved for additions and betterments, and for the expenses of reorganisation. The plan, if put into effect, as seems probable, will reduce 18 bond issues to two, except to the extent that holders of bonds issued under the old first mortgage, which are not foreclosed, do not elect to deposit them under the plan. Except for that contingency, the bankers explain, the new prior lien bonds will be substantially a first mortgage on the entire system, including terminals and rolling-stock. That is true of few existing railroad mortgages.

The Census Bureau's fifth ginning report of the season, issued this week, gives the amount of cotton ginned up to

November 14th as 7,270,575 bales, or 733,575 bales more than the Department of Agriculture predicted; the latter will announce its final estimate on December 12th. The quantity ginned between November 1st and November 14th was 624,439 bales, as against 1,406,000 for the corresponding period of last year. Many authorities in the cotton trade believe that the actual yield this year will prove to be close to 8,000,000 bales. But even the latter figure, if realised, would still be some 5,000,000 bales less than the previous normal production.

Details of our exports of commodities in October show that the expansion in the outward movement of cotton, mineral oils, and other exports more than offset decreases in breadstuffs and meats, and was responsible for the gain in that month's export trade over September of \$20,000,000, or 6 per cent. As compared with August, however, breadstuffs fell off \$68,000,000, and meats \$14,000,000, those losses being only partly counterbalanced by the gain of \$60,000,000 in raw cotton shipments. Compared with October of last year, breadstuffs exports dropped \$88,000,000, meats \$16,000,000, and mineral oils \$27,000,000, while cotton, which gained 50 per cent. in volume, lost a fifth of 1 per cent. in total value. The exports of five leading commodities or products fell by \$132,000,000, or 42 per cent., from October, 1920; "other products" decreased \$272,000,000, or 62 per cent., and all exports were less by \$405,000,000, or 53 per cent. The exports by groups of products for the first ten months of the present calendar year, as compared with the corresponding period in 1920, show decreases in every class, as will be seen from the following table:—

	TEN MONTHS ENDED OCTOBER.		Decrease.
	1920.	1921.	
Breadstuffs.....	\$ 883,074,913	\$ 686,987,106	22.3
Cotton-seed oil	26,742,955	22,434,551	16.1
Meat and dairy products ..	451,995,922	306,601,367	34.3
Cotton	952,885,151	408,192,816	57.1
Mineral oils	439,568,355	328,618,138	25.2
Total above	2,754,267,296	1,752,833,978	36.3
Total other	4,076,933,926	2,145,473,755	47.3
Grand total.....	6,831,201,222	3,898,307,733	44.4

The feature overshadowing all others in financial markets here is the further pronounced strength and activity displayed by bonds. Government, State, and municipal issues, both foreign and domestic, were conspicuously strong this week. Some of the Liberty bonds and Victory notes reached new high records for the year. Railroad, industrial and public utility bonds and notes scored advances ranging from ½ to 1 or 2 points. Some idea of the remarkable improvement in the bond market in recent weeks may be gained from the fact that General Electric 5's, for instance, which were selling around 85 a short time ago, have lately sold above 97; Armour 4½'s, which could be bought at close to 70 a few weeks ago, are now selling around 86. Many similar instances of advances could be cited. Railroad and industrial bonds are up from 10 to 15 points from the low levels of the year, but they are still far below quotations which prevailed prior to the war. For the first time in a number of years the demand for seasoned, high-grade bonds exceeds available supplies in many investment houses. An interesting development this week was the unusually high price at which the State of Pennsylvania sold an issue of \$11,200,000 4½ per cent. semi-annual 15 to 30-year optional highway bonds. The entire issue was taken by a syndicate

THE BOOK OF THE HOUR! THE WORLD'S MONETARY PROBLEMS BY GUSTAV CASSEL

Paper, 3s. 6d. Cloth, 5s.
The PRIME MINISTER speaking at Inverness on October 4, said: I received in the course of the last day or two a very remarkable memorandum written by one of the most brilliant economists in the world, Professor Cassel of Sweden. He wrote that brilliant document, which attracted so much attention, on the exchanges of the world for the Brussels Conference last year, and now he has written a second.

CONSTABLE & Co. Ltd. 10 Orange St. W.C.2

of New York and Philadelphia bankers at 104.31, or on a 4.35 per cent. basis, representing a new high record for the year for securities of that class. The bonds will be re-offered at 106, or a 4.20 per cent. basis. Various explanations are advanced for the extraordinary and sustained purchases of bonds. But, whatever the cause or causes, the fact remains that a tremendous amount of capital is being invested or reinvested, not only in existing bonds and notes, but in new securities. The latter continue to be offered in heavy volume, and where yields are attractive, with reasonably safe security, they are quickly snapped up by the investing public, corporations, and institutions. This week's offerings included an issue of \$22,779,300 15-year 6 per cent. non-callable gold bonds of the Cities of Lyons, Marseilles, and Bordeaux, priced at 86½ and interest to yield about 7.65 per cent. The bonds are part of an authorised issue of \$15,000,000 for each city, the remainder of which was sold in 1919. Subscription books were opened this morning, but almost immediately closed, the entire offering having been largely over-subscribed.

FRANCE—THE RUMOURED MORATORIUM—LONDON FINANCIAL AGREEMENT—GERMAN LABOUR IN FRANCE—AN INDUSTRIAL RESTORATION LOAN—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 6.

THE suggestion that Germany shall be accorded a moratorium of anything from two to five years' duration in respect of her reparations payments to the Allies was received here at first with an outburst of little less than exasperation. When it became known, however, that Sir John Bradbury had denied that he was the actual author of the proposal, and it began to be assumed that, although the British Government was believed to be in favour of the idea, it was in all probability of German origin, opinion here became much less excited over the matter, and it is now considered that no great harm will be done if the suggestion is thoroughly threshed out on its merits by the experts on both sides of the Channel. The return of M. Briand from Washington since the moratorium proposal was first mooted, and the overwhelming vote of confidence which he has this afternoon received in the Senate, have contributed still further to relieve the tension caused first by Lord Curzon's comminatory Note to the French Government with reference to the Franco-Kemalist agreement, and then accentuated by the report that the British Government was directly responsible for the suggestion that time should be granted to Germany in which to pay. It is now hoped that M. Loucheur and other French experts, who are to leave for London to-morrow night, will be able to come to an agreement with their English colleagues that will enable the two countries henceforth to follow a common policy, in regard to the reparation payments as a whole, that will meet the interest of all concerned.

The two main points to be discussed during this Anglo-French technical conference, according to French opinion, are (1) the inter-Allied financial agreement drawn up in London last August, determining the manner in which the first milliard marks gold (already paid over by Germany) should be distributed among the Allies; and (2) the Wiesbaden agreement between France and Germany, under which this country would be entitled to call upon Germany to furnish her, without payment, such materials as she might require for the reconstitution of her devastated regions, and to set off their value, to the extent of 1,000,000,000 per annum, against the 1,600,000,000 a year which would in the ordinary course be France's proportion of the German reparation instalments. The inter-Allied financial agreement of last August, it will be remembered, was signed by the French Finance Minister, M. Paul Doumer, under reserve of ratification by his Government. So far the French Government has failed to confirm an agreement that

allotted to Great Britain practically the whole of the first milliard in cash paid by Germany, on the ground that France, by virtue of the benefit she draws from the control of the Saire coalfield, has already received more than her proper share from Germany, and is therefore not entitled to any portion of this first cash payment. Many people here express the opinion that Lord Curzon's Note to the French Government, calling upon it to ratify the London agreement of last August, can only be interpreted as saying, in other words, that unless France agrees to forgo any payment in cash out of the first milliard paid by Germany, the rest of the Allies will refuse to sanction the Wiesbaden agreements between France and Germany.

The Wiesbaden agreements, under which German materials and German labour may be used to bring about the reconstruction of the devastated North, are by no means popular in the eyes of French opinion, but they are regarded as an unavoidable evil that will enable this country to surmount a vital difficulty that appears to have no other remedy. The French would naturally prefer to receive the money from Germany that is due to them, and to buy the necessary materials for reconstruction in their own markets, which never stood more in need of encouragement, or at least from the other Allied countries, as she has already very largely done. It is realised, however, that Germany has already been dispensed from paying the 20,000,000,000 marks gold which should have been handed over to the Allies, according to Article 235 of the Treaty, before May 1st last. If she is now to be absolved from further payments in cash for some years, under a moratorium agreement, it will be much more advantageous to the victims of war damages that they should be given a means of recovering their damages forthwith in kind, instead of having to wait indefinitely until Germany is recognised as being able to pay her debts in cash. In a nutshell, the French argument is that it will be well worth while to sacrifice the profit that would accrue from purchasing materials in this country's own markets, if by so doing it can be rendered easy for Germany to pay more promptly.

An indication of the state of mind in the devastated regions as to the employment of German materials and German labour is to be found in a communiqué that has just been issued by the Ministry for the liberated regions. It will be remembered that some few weeks ago a project for the reconstruction from German materials, and by German labour, of 12 ruined villages in the Somme, was laid before the Ministry. Both the French and the German trade union organisations were in accord on the matter, but M. Loucheur desired that before formal sanction was given to the proposal, a referendum should be taken on the question of German labour among the inhabitants of the villages in question. The Ministry now reports that out of 400 families who have actually returned to the villages 303 (being those whose property has suffered damage) have voted on the proposal, with the result that 149 families, or 49 per cent., voted in favour of German labour being employed, while 154, or 51 per cent., voted against the proposal. The Ministry expresses the opinion that the result was due to fear on the part of many of the people of the possible disturbances that might arise if the German workmen were allowed to move freely about the villages, instead of being confined in camps. The official returns of unemployment for the week ending December 2nd show that the total number of men and women in receipt of unemployment allowances was 12,374 (9,023 men and 3,351 women), as compared with 12,645 the previous week. Of this total 8,686 were resident in the Paris area.

Following the loan issued for the restoration of the coal mining and sugar industries in the devastated areas of France, the French metallurgical group are this week offering for subscription mortgage bonds to the total of 500,000,000, for the reconstitution of the blast furnaces, forges, steel works, and iron mines that were systematically destroyed by the Germans in the North and East of France. The issue is divided into 1,000,000 bonds of 500 each, yielding 6 per cent. interest. The issue price is 475, the bonds carry interest payments as from October 15th last. The companies in whose interest the loan is made include several of the most important in France, many of which have resumed work since the war. As most of them

possess valuable ore deposits, as well as other important works elsewhere in France and abroad, and the purchasers of the bonds, moreover, are guaranteed by the instalments that are to be paid to the companies by the State, in respect of the war damages due to them, the security is generally considered as sufficiently satisfactory to leave no doubt as to the success of the issue.

Business on the Bourse during the past week showed an almost astonishing revival, and for the first time for some two or three months past there was something like real activity. Sugar and Oil descriptions were exceptionally lively, and their movements gave a fillip to other departments of the market that has led to the hope that this better state of things may continue over the end of the year. In the gilt-edged section 3 per cent. Rentes were again marked up substantially, and closed at 54.84, as against 53.70. In the foreign group, Argentines, Brazilians, Egyptians, and Japanese all fell off, losing for the most part the improvement shown a week ago, with the exception of Chinese and Spaniards, which resisted successfully. French banks were irregular, with the exception of Union Parisienne, which dropped heavily from 760 to 718, and Crédit Lyonnais from 1,395 to 1,380. Among the foreigners Banque Ottoman was bought freely, and rose from 612 to 632. French railways shared in the wave of mild optimism, P.L.M., Midi, and Nord all being marked up from two to five francs, but shipping descriptions were heavy. Among Electrics Thomsons were a bright spot, being marked up from 755 to 770 on the week. Metallurgical descriptions showed good deal of activity, but gains were largely counterbalanced by losses. Among Industrials, Galleries Lafayette, after drawing on its reserves to the extent of 5,100,000, announces a distribution of 9,000,000 as its profits for the year, the dividend being fixed at 7.95 for the ordinary shares, and 360f for the founders' shares. Bon Marché's report for the year shows net profits of 3,673,294f, against 19,911,111f last year, the dividend announced being 62.95 per share, as against 162.40 last year.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised .. £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

GERMANY. — REPARATIONS — EXCHANGE AND BOURSE — PRICE LEVEL — EXCHANGES AND FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 6.

THE Chancellor on the 4th made a speech in relatively optimistic vein, declaring that the Reparations fulfilment policy pursued since May will be maintained; but at the same time proclaimed that the policy which he described as "squeezing Germany like a lemon" is impracticable. How the fulfilment policy will be maintained if the squeezing policy is impracticable was not explained. Dr Wirth, however, repeated that he holds to his plan to make property bear the burden. The Chancellor is being attacked for allowing the reins in negotiations to pass into the hands of private citizens like Herr Stinnes and Dr Rathenau. The Cabinet, having no resources except the note-printing press, and no security except deficit-yielding State undertakings, is in a weak position for negotiating. It is further in practice unable to impose on industry any burden which can be permanently transformed into Reparations payments. The Erzberger taxes on property, as was admitted at Brussels, are sufficiently severe, and the new Wirth taxes on property are much severer. But the increased yields in paper marks represent an ever lower buying power abroad, and a correspondingly decreased value for Reparations. Prospects of a postponement of the January gold payment are considered small; the prospect of a credit, which the Cabinet, Dr Wirth announced, is trying to get independently of the London negotiations, seems rather better. Few persons believe that January 15th will see a formal default, and the political convulsion which default, unless May plans are altered, would bring.

According to the German text, a Reparations Commission Note declares that Germany's difficulties in Reparations, being connected with the low mark exchange, are financial rather than economic, and it is implied that financial difficulties of this kind are no obstacle to the making of gold payments. This view cannot be accepted; the essential difficulty is that gold cannot be bought with marks of present exchange, and that German "economic" (real) values cannot be converted into Reparations gold payments without, in principle, buying gold with paper marks at present exchange. The whole German national economy, State finances, price-level, and industrial capitalisation, is not on a paper-money level representing the exchange depreciation of the mark. This fact is ignored in the report prepared for the Federation of British Industries. The report assumes that the latent gold value of German industries is available for payment of an actual gold debt. In fact, were, say, a third of all German industrial stocks (bonds may be ignored as they have only the old, ever-dwindling paper value, and today represent no claim worth mentioning on industry's assets) to be presented to the Reparations Commission, the dividends therefrom, or the capital if realised abroad, would be wholly trifling. Before either could represent

any material part of the Reparations claim one or two things must happen:—(1) Without any further fall in the mark's exchange, the companies' capitals must be increased until they more or less represent the gold value of the assets at a given exchange, and at the same time the dividend percentages paid on present lower capitalisation must be maintained; or (2) the foreign exchanges must fall to a small fraction of their present level, without any fall in the companies' present capitalisation, or in their present nominal profits. Either event means an economical revolution. In view of the fact that in all very low-exchange countries the levels of industrial finance and profits persistently keep far behind the exchange depreciation, such a revolution may be considered impossible. In some other matters the Federation's report shows failure to enquire into German conditions. So far from there being willingness to meet Reparations by giving foreigners "considerable influence over the development and direction of German trade," both State and private policy is in the opposite direction. Two years ago the Government formally declared for legislative measures against the so-called "Ueberfremdung"—the growth of foreign influence by purchases of stocks and real estate. A clause of the Peace Treaty makes this official plan impossible as against Ally citizens. But during these two years nearly every great industrial enterprise has, with the aim of preventing foreign influence, issued preference shares equipped with plural voting, and designed to be held by natives. The statement in the Federation's report that something like its scheme has been discussed in responsible quarters in Germany is contrary to fact. Even the Reichswirtschafts Ministry, in its plan to expropriate industrial preference shares for State, not for foreign ownership, was obliged to premise that the shareowning State would not claim the shareholder's usual right of voting on company affairs.

The Reichsbank report for November 30th shows the largest increase in inflation so far. Month-end reports, as a rule, show a rise in circulation; but as the preceding weekly reports also showed large increases, it is plain that the great rise in the price-level caused by the mark exchange fall is already having its effect. Private discounts rose from 1,109,325,000 marks to 1,445,667,000 marks; discounted Treasury bills from 100,552,191,000 marks to 114,023,477,000 marks, the largest week's rise so far; State deposits from 3,891,014,000 marks to 5,144,615,000 marks; private deposits from 11,549,663,000 marks to 20,168,499,000 marks; note circulation from 96,463,895,000 marks to 100,943,632,000 marks. "Kassenschein" circulation showed a small increase to 7,329,600,000 marks. Clearings in November were 140,493,000,000 marks, against 75,426,000,000 marks in November, 1920; clearings in the first 11 months of the year were 950,685,000,000 marks, against 621,908,000,000 marks. The net increase in savings banks deposits in January-October, inclusive, was 2,600 million marks, against 5,390 million marks in the same months of 1920.

Thursday, December 1st, brought the year's first considerable recovery in mark exchange. The dollar, which on November 8th reached 310, fell to 190. The recovery was caused exclusively by expectations based on the London negotiations, again confirming the observation that the mark's movements are governed, not by the commercial payment balance, or even by the whole payment balance, including Reparations, but by speculative sales and purchases inspired by public estimates of Germany's prospects. It is surprising in view of this that inflation, as a factor reducing the purchasing power of the mark, is almost daily in Ally official statements made responsible for the mark's decline. The inflation in the three weeks in which the mark rose from 310 to 190 was the greatest recorded. The Berlin and all other German Bourses experienced a black Thursday on December 1st. All dividend-paying papers fell violently, including certain stocks which had already dropped heavily since the mark's lowest day, November 8th; and one of these stocks sold on December 1st at 20 per cent. of its highest quotation. Very heavy losses were suffered by the outside public; professional speculators, who sold on the first hint of negotiations for a moratorium or loan, mostly escaped. The *Frankfurter Zeitung* reports that between November 24th and December 1st its stock and bond

index figure fell from 41,996 to 33,504, the fall for 25 stocks being from 38,567 to 30,876, for foreign loans from 2,504 to 1,765, and for home loans from 925 to 923. On December 1st leading stocks fell as much as 700 points; the highest-quoted, Sarotti Chocolate, fell from 3,500 to 2,500; Mannesmann lost 380, Deutsche Petroleum 625, Harpener Bergbau 585, Hohenlohe 320, Hamburg-America 312, General Electricity 248, Badische Aniline 285, Daimler 312.50, Siemens and Halske 254, Schuckert 315, Deutsche Bank 170, Disconto 110, Dresdner 145. In private dealings on Friday and Saturday and in official dealings yesterday stocks were firmer; but sentiment is doubtful, awaiting a lead from the exchanges, which in turn wait on London. War Loan yesterday was 77.50; 4 per cent., 80.50; 3½ per cent. 71.70; 3 per cent., 96; Colonial 4 per cent., 120; Savings and Premium, 84.25; Prussian 4 per cent. Consols, 75. The Bourse continues congested. Inquiry by the Reichswirtschaftsrat into the old plan for restoring monthly or fortnightly settlements brought a declaration from experts that in present conditions the risks are too great. The restriction of official dealings to stock parcels not under 5,000 marks nominal value will come into force on January 1st.

The price rise continued in November, but was proportionately slightly less than in October, probably owing to the fall in mark prices of imported goods after November 8th. The *Frankfurter Zeitung's* wholesale prices index, which is based on 100 for January 1, 1920, shows for the beginning of December:—

	Textiles	Food.	Leather.	Minerals.	Miscel- laneous.	All.
	378	241	256	295	303	

the preceding movements (for beginnings of months) being:—

1914.....	11.38	3.67	7.15	12.0	9.23
April, 1920.....	131	153	140	170	147
December, ".....	176	105	118	190	152
January, 1921.....	154	97	121	189	143
May, ".....	133	78	112	195	122
June, ".....	127	77	109	191	123
July, ".....	145	79	114	191	136
August, ".....	203	84	117	186	159
September, ".....	211	96	125	193	168
October, ".....	227	120	151	308	184
November, ".....	317	173	210	251	249
December, ".....	378	241	256	295	303

Taking 100 as pre-war level, the present index figure is 3,283.

A provisional report for October shows imports of 3,000,000 metric tons, of value 13,900,000,000 paper marks; exports, 1,970,000 metric tons, value 9,700,000,000 marks. The import surplus is 4,200,000,000 marks. Import surpluses, measured by weight or by value, have been rapidly increasing; September import surplus, 3,149,000,000 marks; August, 2,734,000,000 marks; July, 1,372,000,000 marks; June, 976,000,000 marks; May, 928,000,000 marks. Whereas by weight exports in May-September rose from 1,145,200 metric tons to 1,870,700 metric tons, imports rose from 1,534,000 metric tons to 2,532,600 metric tons. A new qualification of abstract economic theory is supplied by the fact that a declining mark increased import more than export. The reason is that a declining mark causes violent home buying; so that while the mark's fall made it ever easier for Germany to undersell her competitors, she had ever less to export, export being rationed whenever home scarcity is threatened. Owing to the present scarcity, the Government last week imposed new restrictions on export of goods in 18 out of 19 sections of the Customs schedule, and export-prohibited all textiles, with the exception of lace and passementerie, while the Eisenwirtschaftsbund and other commercial bodies have also taken measures against export. A further mark recovery (if it is not big enough to throw German prices above foreign) will probably foster, instead of discouraging, export, as such a recovery will kill the home buying mania, and so free goods for export. In fact, after December 1st the rush to the shops ceased. Of the numerous anti-theoretical vagaries of the exchanges, none is more remarkable than this inability to export owing to the too rapid fall in one's own exchange.

SWITZERLAND.—HOURS OF LABOUR AND COST OF LIVING.

(FROM OUR CORRESPONDENT.)

GENEVA, December 5.

THE experts of the factory inspectorate in Switzerland propose to increase the weekly labour hours in the embroidery trade from 48 to 52 by the re-introduction of the nine hours' day from Monday to Friday, and seven hours of Saturday. The resolution of the experts will probably be extended to other textile trades. Not only the labour unions, but also some of the manufacturers, are against this method of governmental cheapening of production. As a matter of fact, the trade unions agree to a systematic reduction of wages in proportion to the fall in the price of commodities, but unfortunately the import prohibitions for slaughtering cattle, meat, corn, flour, sugar, butter, and cheese practically prevent a drastic reduction in the cost of living. In view of the political power of the Peasants' League, the Government cannot reduce the cost of living for the workman, so that the cheapening of production cannot be made in any other way than by increasing the hours of labour. Many manufacturers are of the opinion that this will not be as efficient a way as reducing wages by reducing the cost of living. The Government itself, as a condition of financial assistance to the watch industry, imposes reduction of wages and no increase of the hours of daily labour. Unfortunately, so long as the prohibitionist tendency of the Peasants' League guides the decisions of the Swiss Government, any efficient reduction of costs of production is impossible. At any rate, increasing weekly hours of labour will not decrease unemployment.

JUGO-SLAVIA.—BUDGET—EXCHANGE—EXTERNAL LOAN.

(FROM OUR CORRESPONDENT.)

BELGRADE, November 30.

THE Ministry of Finance has presented to the Chamber of Deputies the estimates of the Budget for the year 1922, according to which the Budget balances at a total of 6,257½ million dinars. However, one must take into consideration that in the plan three new taxes are introduced. If these new taxes are not agreed by the Chamber of Deputies a deficit of 1,400 millions will remain to be covered. The first is the tax on turnover. Such a tax actually exists on the basis of a Decree—i.e., by order of the Government, without authorisation of the Chamber of Deputies. In accordance with the Constitution, the Chamber of Deputies has to decide immediately whether they will pass this law or no. A discussion on this point has already begun, but no definite decision has so far been arrived at. There is a strong opposition against the tax.

The second new tax is that on capital (fortune) which has already been introduced in Germany and other countries, but it is not known whether the Chamber of Deputies and public opinion will agree with its introduction here.

The third new source of revenue must come from an additional surtax on the direct taxes already in existence. It is also a question how this proposition will be received, above all because of the inequality of the direct taxes existing in the various provinces of Jugo-Slavia. There are four different legislations for this purpose (Serbian, Bosnian, old Magyar and old Austrian) in Jugo-Slavia, and the rates of taxation are different.

If the Chamber of Deputies adopts these new taxes the effect on the value of the dinar, which is seriously depreciated at present, will be beneficial.

At the beginning of November the dinar stood at an unprecedented figure. The pound was quoted at 400 dinars, and the French franc reached 750 dinars per 100 francs. Following this an improvement has taken place. To-day the £ is quoted on the Belgrade Bourse at 288 and francs at 510. This improvement may be to a great extent attributed to the proposed Budget, the balancing of which is foreshadowed, and also to the improvement

of the general political position of Jugo-Slavia. On these factors also depends the improvement of the dinar, especially if serious steps are taken to increase ordinary revenue and to avoid further issues of bank-notes on behalf of the State.

The Minister of Finance has returned from London and Paris, but without having settled definitely an external loan. Several propositions which he has brought with him will be examined by the Council of Ministers.

Letters to the Editor.

THE RISING WALL OF TARIFFS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your article upon this subject in your issue of 3rd instant is sad reading. Sad, not only from what is apparently your contributor's point of view—as showing the innate stupidity and wrong-headedness of mankind—but doubly sad when we glance back at our own position as an exporting country, of whose producers nearly two million are still unemployed, because for various reasons the fruits of their labour cannot be marketed.

The theory of Cobden, upon which the fabric of British industry has been built, namely—to speak broadly—that we should manufacture for the world, who would in return supply us with food and raw materials, does not fit in with the facts in these days. In my view, the theory and the facts were diverging for some years before the war, when unemployment was becoming more and more a frequent and serious phenomenon. During the war, by dint of spending our capital, we employed all the workers in Great Britain who were not needed in the Army. Now, admittedly, the situation is aggravated by the impoverishment of Europe, which reacts upon the prosperity of other countries, whose buying power is in turn thereby lessened. But suppose Europe restored, we still have the curious fact—absurd as it may seem to us educated in our old theory—that every country desires to run itself as an independent economic unit, and with this object in view does, by means of tariffs and other contrivances, endeavour to exclude the products of great exporting countries like ourselves.

If this is the case, surely our great population in these small islands is in a most dangerous position, and the situation will tend to worsen, although we may hope that some alleviation will take place, at any rate temporarily, when Europe is settled.

What, then, is the remedy? In the writer's view it is the transference of a portion of our population to the unoccupied lands of the Dominions. We ought to be grateful to Lord Northcliffe for his efforts towards this end. A great scheme of emigration, coupled with training for emigrants, would no doubt be a costly affair. But it would be productive of permanent benefit in the increase of wealth and human happiness. I fear, upon the other hand, that the relief works undertaken in this island to meet the present emergency are only a temporary palliative—while the interest and sinking fund of the capital employed will constitute a further charge on the industry of the country, and no additional wealth will be created.—Yours, &c.,

December 5th, 1921.

REPARATIONS, ALLIED DEBTS, AND EXCHANGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—At the risk of using too much space on a subject which has already received sufficient attention from correspondents, I should like to give Mr Alfred E. Leaf the contradiction which he invites in his letter published in your issue of the 3rd instant. He assumes that, since it is possible to effect a reparation payment without a foreign exchange transaction, such payments have no effect upon exchange rates. In a previous letter Mr Leaf took the simple example of Hans trundling a brick-laden barrow into France and returning empty-handed, thus making a reparation payment without an exchange operation. As Mr C. Craies has since pointed out, the German exchange

is affected, even in this instance, in an indirect and negative sense, because the bricks delivered without payment might otherwise have been exported; assuming, on the other hand, that they were used for reparations, Hans and his colleagues who made the bricks will require certain commodities which must be imported into Germany, and there will be a corresponding decline in the exchange value of German currency. Similarly, in the case of Schneider and Co.—who export woollens to India, and thus by trading operations through China to America succeed in making a reparation payment for Germany to Britain, at the same time liquidating a portion of our debt to the United States—your correspondent does not state where Schneider and Co. purchase the goods! If these or any of the means of their manufacture were imported into Germany, the effect on the external value of the mark is obvious, while even if they were produced entirely in Germany there is nevertheless an indirect effect on exchange through their disposal abroad without the ultimate creation of German credit. Whilst it will be generally conceded to Mr Leaf that the whole of a country's foreign trade is not financed through exchange, the export of commodities in satisfaction of reparations or inter-Allied indebtedness certainly does affect the exchange market, although it may not touch it directly.—Yours faithfully,
Egham, Surrey, December 8th, 1921. Stocks.

"RECEIVED FOR SHIPMENT" BILLS OF LADING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the notes on "Received for Shipment" bills of lading on page 973 of your issue of the 3rd instant, the form usually used for shipments to the Far East by steamers loading at Manchester and Liverpool, commences with the words "Shipped or Delivered for Shipment" by a particular steamer. The Court of Appeal decision, which is referred to in your note, had reference to a similarly worded bill of lading, and with regard to that kind of bill of lading, Lord Justice Scrutton said:—

"The buyer is not the only person concerned in this contract. The ship and the shipper are also concerned in it. The ship wants to have a bill of lading beginning with the time delivered for shipment, because he wants the time delivered for shipment covered by the exceptions, and the exceptions throughout this bill of lading refer to matters which the ship wants. The shipper wants it in that form because he wants to be protected from the time he has given the goods into the hands of the ship for shipment, and so you have the usual form for this named ship."

This makes it clear that the Court of Appeal judgment, and not the judgment of Mr Justice McCardie, governs the bill of lading used in the Far Eastern trade.

In the bill of lading upon which Mr Justice McCardie gave judgment, the following words were used

"Received.....to be transported by s.s. —, now lying at the port of....., and bound for, or failing shipment by said steamer, in and upon a following steamer,"

so, as Mr Justice McCardie pointed out: "This document does not even say immediately following, nor does it indicate that the following ship may be under the control of the person who issues the bill of lading." ".....The document seems to me to be in substance a mere receipt for goods, which at some future time, and by some uncertain vessel, are to be shipped." It will thus be seen that the "shipped or delivered for shipment" bill of lading used in the outward Far Eastern trade is quite a different kind of document from the one referred to in the case upon which Mr. Justice McCardie gave judgment.

Therefore, the Court of Appeal cases should not be considered as a hint of a case tried by Mr Justice McCardie.—Yours faithfully,
JAS. S. MCCONECHY.

Books and Publications.

REVIEWS.

"War and National Finance." By the Hon. R. H. Brand. Edward Arnold and Co., 1921. Pp. 287. 15s net. It needs courage to reprint in 1921 an essay on Lombard Street and War written in 1912. But Mr Brand's courage is justified, and this collection of articles from the *Round Table* will be welcome to their original readers, as well as to others who have heard tell of them (for they were much talked about). Mr Brand has a way of writing about topical subjects *sub specie aeternitatis*, and his work loses little of its interest and freshness by the mere lapse of time. But nearly half the book deals with subjects which by no means yet belong to past history: the post-war economic position, international co-operation in finance, the problems of the Brussels Conference, and Reparation. Perhaps the most interesting pages are those which treat not of world economics or international finance, but of our own position and prospects here at home. Mr Brand has no doubts in his own mind where the main trouble lies; and if some of those who can spare twopence a day for a newspaper would find fifteen shillings to buy this book, the money would be well spent from the national as well as from the personal point of view, unless it be that Mr Brand is fighting the battle which Schiller said the gods themselves must lose.

"Delegated Legislation." Three Lectures by Cecil T. Carr, LL.D., Barrister-at-Law. (Cambridge) University Press, 1921. 7s 6d net.

THE case of Attorney-General v. Brown, decided by Mr Justice Sankey in 1919, is barely mentioned by Dr Carr. That was a case where, by the use of delegated legislation, the Executive had done something which the Court held to be illegal and invalid. By proclamation, authorised under a re-enactment of the Customs Act, 1853 (which the judge described as "the Magna Charta of Free Trade"), a system of restriction of trade was set up. By straining the language of the statute import prohibitions were enforced by the Board of Trade. Imported goods were seized as forfeited to the Crown, but, as already indicated, judgment went against the authorities when proceedings were taken for condemnation of the goods. Parliament, Dr Carr points out in a footnote, afterwards ratified the *ultra vires* use of delegated legislation, but that is all the reference he makes to the case. His book shows, with many valuable illustrative references, how much Acts of Parliament now depend for their operation upon laws subsequently made by lesser authorities. He discusses how far our liberties, if imperilled by the system, can be protected by safeguards, but, in view of the illustration with which he does not deal, he is possibly too sanguine as to the effectiveness of the safeguards. In the instance in question a whole department of the Board of Trade had been set up under delegated legislation to carry out a policy the reverse of that embodied in the Act which delegated the powers illegally used.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 14.	December 15.

BRIGHTNESS illuminated the Stock Exchange markets on the news that settlement with Ireland had been reached. There was a general rise in most classes of securities. Few markets failed to benefit from the removal of a dead weight which has hung over enterprise, investment and speculative alike, for months past. Nor is the Stock Exchange greatly disappointed at the general volume of business showing no particular expansion. Money stocks have been active and strong. In other departments there is little fresh accession of orders.

People who have been wanting to sell are in many cases deciding to wait for higher prices, and have accordingly cancelled their limits, but no new buying movement, except in the gilt-edged market, can be recorded. In a sentence, the tone is better than trade, but the Stock Exchange is content to wait until the turn of the year, when money may become more willing to seek market channels, for resumption of animation. The principal feature, apart from the rises in War Loan and kindred stocks, is the remarkable manner in which scrip issues recently made by the colonies have gone ahead under the stimulus of the unexpectedly early closing of the subscription lists for the Straits Settlements 6 per cent. Loan, offered at 97. This brought about sharp rises in the existing lists. On the week, it may be noticed that nearly all the best-class securities stand higher. Irish Guaranteed stocks improved with the rest. The gilt-edged boom, as the Stock Exchange calls it, is in full swing.

Amongst foreigners, a smart recovery in Chinese bonds stands out prominently. The hope that a permanent peace may be effected between China and Japan, on Washington representations, has helped to dissipate much of the uneasiness felt in connection with the security of China. The country's loans have risen from 5 to 8 points. On the other hand, Japanese dollar bonds, in company with most of the other securities quoted in dollars, have gone back by reason of the New York exchange movements. Brazilian issues are better,

and French bonds advanced briskly, on a little demand coming on a market bare of stock. Germans, while stronger in price, have been more placid, the market hesitating because of the different views taken in regard to a possible moratorium. Honduras are amongst the low-priced stocks that have appreciated.

Home Railway stocks were hoisted at a rate which proved too fast to continue, though gains are left on balance. Under-grounds managed to hold the greater part of their advances. Grand Trunks are slightly harder as a result of the Canadian elections. Mexican Railway stocks improved in the prevailing atmosphere of optimism. Argentine Railways, fluctuating a good deal, kept to the higher side for choice, while Brazilians have remained quiet.

The rubber share market is amongst the few departments that have gone softly, there being no business to back up the more cheerful sentiment engendered by the fact of rubber rising to nearly 1s per lb. Oil shares spurted strongly. The Shell company has declared the usual 2s net cash dividend, payable in January, and the 143,000 shares held by the Public Trustee on account of ex-enemies have been placed in the hands of a syndicate at £4 6s 3d per share. These two considerations, combined with the conviction that the Mexican Eagle dividend will be 19 per cent., making 30 per cent. for the year, served to infuse strength into the list as a whole. Several of the Roumanian shares have recovered. Trinidad has given way on unfavourable dividend gossip, and their fall caused a wavering.

The speech of Lord Inchcape, at the P. and O. meeting, had no particular effect upon the market for shipping shares, which, however, is noticeably better. The insurance group has started again to advance, a number of rises being recorded on the week. The banking market is also firmer, with more money being diverted into the shares than has been the case of late. Crosse and Blackwells weakened on the dividends being passed. Speculative counters, such as Dunlops and Vickers, move somewhat erratically, and, in the textile market, the passing of the dividend by the Amalgamated Cotton Company was followed by a rise in the price, probably because a payment had been scarcely expected. Courtaulds have enjoyed more animation and rising prices.

In various departments of the industrial market, evidence of shortage of stock led to abrupt rises immediately the touchstone of buying was applied. Various new issues, more particularly those connected with electrical schemes, hold their premiums, and investment money goes steadily into good stocks which pay anything like 7½ per cent. on the money. Wireless shares are better, owing to vague rumours of developments said to be impending in the Marconi Company, but the Eastern Cable group declined, because of the falling-off of profits shown by the three principal companies.

Kaffirs were disposed to go better, on the announcement that the labour dispute on the Crown Mines had been settled. The Cape lent a little support, but this was not reinforced by buying on this side, with the consequence that the market, although firm as a whole, continues very neglected. De Beers, Rio Tintos, and other Paris favourites sympathised with the improvement in French bonds. Rhodesians are a little harder. The recovery in the price of tin, the metal, led to inquiry for shares of the Malayan tin producers; most of the prices show rises on the week. To a minor extent, West Africans have also benefited. Mexicans and Russians remain in a state of neglect, and the mining markets as a whole are left almost alone by the public, what little business there is being mainly on behalf of professional and semi-professional groups.

NEW ISSUES.

5½ per Cent. Treasury Bonds.—Issued at £99 per cent. and repayable at par on May 15, 1930. Interest payable half-yearly on May 15th and November 15th. Full particulars of this issue will be found in the *Economist* for December 3rd (see page 986).

Straits Settlements Government 6 per Cent. Inscribed Stock, 1936-1951.—Issue of £5,155,000 at £97 per cent. This loan is the first instalment of an issue to produce a total of £10,000,000, and is raised for the purpose of re-loan to the Federated Malay States Government, partly to enable that Government to repay the debt due to the Government of the Straits Settlements, but chiefly to pay for railway, harbour, and other public works now in course of construction and about to be constructed during the next three years. The loan is secured on the general revenues and assets of the Government of the Straits Settlements, but an Act has been passed in the Federated Malay States pledging the repayment of the loan and the loan charges from the revenues of the latter

Government. But the Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury are not directly or indirectly liable or responsible for the payment of this loan. Principal is repayable in December, 1951, by a sinking fund of not less than one pound per cent. per annum, to be formed under the management of the Crown Agents. An inset to the prospectus contains an excellent table of imports and exports and revenue and expenditure. This is a trustee investment, and was quickly subscribed.

The British Burmah Petroleum Company, Limited.—Authorised capital 3,100,000 ordinary shares of 8s each, of which 2,491,039 shares have been issued, amounting to £996,415. There is also an authorised issue of £525,000 6 per cent. first debenture stock, "redeemable 1932," of which £269,741 has been "issued and unredeemed." This is an issue of £600,000 8½ per cent. second mortgage debenture stock at 98 per cent., repayable at 105 per cent. on or before November 30, 1936. The stock will be secured by a Trust Deed on the property and fixed assets of the company, subject to the first mortgage charge and a second floating charge on other assets. Each stockholder of this issue will have the right in any year up to November 1, 1936, to exchange fully-paid stock into fully-paid ordinary shares of the company (on giving ten days' notice in writing to the company) on the basis of £1 of stock for one fully-paid ordinary share of the nominal value of 8s. In view of past movements of the shares, this exchange offer is not without some speculative merit. In respect of the year ending July 31, 1923, and during each succeeding year up to 1936, £42,000 is to be set aside out of profits and applied in redemption of this £600,000 of debenture stock, either by drawings at 105 per cent., purchase in the open market, or by private treaty at or under 105 per cent. The company was incorporated in 1910 for the purpose of acquiring oil properties in Burma and India. It holds over 165 well sites in the Yenangaung Oil Fields and over 12 square miles in the oil territories of Singu, Minbu, Ngahlaingwin, &c., either on lease or licence from the Government. It also owns a refinery near Rangoon, and certain launches and steamers, &c., and acts as managing agents and holds 96 per cent. of the share capital of the Rangoon Oil Company, Limited. Profits are given for five years. Surplus assets work out at £2,491,958, after adding the proceeds of this issue and deducting a sum sufficient to cover sundry creditors, including holders of the first mortgage debenture issue. Apparently ordinary shareholders have had a good return on their capital for the past four years, and it may be that the proceeds of this issue can be profitably utilised. The high yield obtainable—namely, £8 13s 6d per cent., without making allowance for profit on redemption at 105 in 1936—is a warning to the cautious investor that there is a considerable amount of speculative risk attached to the security. On the whole, the risks and the yield offered appear to be commensurate.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK.	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded....	323,809,861			
TREASURY BONDS.				
Total receipts, 5-15 Year, 1925-35				1,024,990
5½% 1925 receipts to November 26, 1921				122,469,459
Week to December 3, 1921 (including new series)				13,535,000
Receipts to date				136,004,459
NATIONAL SAVINGS CERTIFICATES.

OIL OUTPUTS.

LOBITOS OILFIELDS, LIMITED.—The production for November is cabled as 8,716 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during November, 18,000 tons; oil purchased from other companies, 1,000 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, November 30, 1921, amounted to 1,070 tons.

COMPANY MEETINGS, &c.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

LORD INCHCAPE ON THE INDUSTRIAL OUTLOOK.

THE NEED OF NATIONAL ECONOMY.

The annual general meeting of the P. and O. Steam Navigation Company was held, on the 7th instant, at the offices of the company, 122 Leadenhall street, London, the Right Hon. the Lord Inchcape presiding.

The Chairman said they met that day under happy auspices, and on a really historical occasion. That morning the terms of settlement with Ireland had been published, and he thought it was their first duty to congratulate his Majesty the King and Mr Lloyd George on having at last, so far as could be seen, secured peace in Ireland after 700 years.

Continuing, he said:—

Since August last he had been engaged on the Economy Committee appointed by his Majesty's Government, under the chairmanship of Sir Eric Geddes, to inquire into public expenditure, expenditure which had reached figures that the country could no longer stand. Even, he said, if he had had time to prepare a lengthy address, he could have added but little to what he had preached from many platforms during the past few years.

NATIONAL SOLVENCY OUR FIRST LINE OF DEFENCE.

The nation had been greatly impoverished by the war, and if we were to regain our first line of defence, which was solvency, we must curtail our expenditure in every direction. We had launched out into all sorts of wild-cat schemes, and had made commitments which, if not modified, would lead us into bankruptcy. We realised now that we had no funds with which to build up the new heaven and the new earth on which we started three years ago. The multiplication of ministries was landing the nation in enormous expenditure, and the country was getting filled up with functionaries who were living on the people.

A RUINOUS HOUSING SCHEME.

Well-meaning pundits and idealists got hold of departments, and launched out regardless of cost. According to a recent statement in the House of Commons, 500,000 houses were to have been built at a cost of 500 millions, houses which would not give a return on the capital outlay at a lower rent than £75 a year, and which could not be let for more than £16. Fortunately, the Prime Minister had stepped in, and succeeded in limiting their number to the 176,000 which had been started; but even this reduced number would cost the country 176 millions, and the taxpayer would be saddled with 10 millions a year to make up the deficiency of rent for the next 60 years.

Education was now costing the country over 100 millions a year, against one-fourth of that sum before the war; teachers' salaries, based on the standard of two years ago, had been more than doubled, and the resulting pensions, if maintained, would shortly involve us in another 10 millions a year.

THE ONLY WAY TO RENEWED PROSPERITY—NATIONAL ECONOMY AND TRADE REVIVAL.

It was necessary to realise that the Government and the local authorities had no fund to draw upon except what they extracted from the people. If industrial undertakings were depleted by excessive taxation, less money was available for the expansion of industry, there was less employment in the country, and a reduced standard of living all round. Unable to increase our revenue, our only hope lay in reduction of expenditure, and to this end he did not doubt but that the common-sense of the country would come to our aid.

He was glad the shipping industry was now free from Government control, and, he continued, he had hopes that before long the trade of the country would have settled down to normal conditions, free to work out its own salvation, and to make profits out of which to contribute to the revenue. Government trading and Government interference in trade disputes had proved disastrous, and he hoped the country had learned its lesson.

440 EX-GERMAN SHIPS SOLD.

Recalling his undertaking, a year ago, of the sale of ex-enemy ships for the Government, he stated that he had so far disposed of 440 vessels for upwards of 20 million pounds. He had very few left to sell, and would be glad when this rather troublesome and thankless task was finished.

A YEAR OF DEPRESSION.

Turning to the directors' report, he greatly regretted that they had felt compelled to withhold a bonus for the past year. The dividend and bonus for the year ending September 30, 1921, totalled 15 per cent.; for the year ended September 30th last it was 12 per cent., or 3 per cent. to the bad; but, in the present condition of shipping the directors, if they had not reduced the dividend, would have been guilty of imprudence. They had to look to the future and to husband their resources; they were passing through a period of unprecedented depression; and, in lowering their distribution, they were not alone. In common with most shipping companies, they had had a wretched year; Government control of coal had caused enormous prices during the spring; then came the coal strike, which drove their ships to the Continent for coal, while the joiners' strike and the delays which it involved had driven steamers to the Continent for overhaul. They had had besides to bear enormous increases in wages, both afloat and ashore, and to crown all trade unions and Wages Boards had kept production costs in this country so high that the world had been unable to purchase from us, and steamers had been leaving this country with nothing more than ballast cargoes and often not with these, and the consequent greatly lessened demand for imported raw material had made it increasingly difficult to find homeward cargoes. Some of their cargo steamers, he continued, they had laid up; but their obligation to maintain their services had prevented the laying up of their mail and passenger steamers, which had been kept running, although at a heavy loss. As exemplifying the scarcity of cargo, the P. and O. branch line, which runs a regular service from London to Adelaide, Melbourne, and Sydney, had, he said, in the last financial year, despatched 11 steamers capable of carrying 101,000 tons of measurement cargo, and these had sailed with 68,000 tons of unfilled space. The board had foreseen that, after the war, the company would be faced with difficulties. They refrained from recommending any large increase in their dividend; and, instead of distributing cash resources, they suggested a small bonus in stock. That policy he thought would eventually prove to have been right. In order to pay for new ships they had had to realise their War Loan investments at a serious loss, and to write down to present market values those which they still held.

HIGH WAGES AND UNEMPLOYMENT.

Under the National Maritime Wages Board set up in November, 1917, wages had enormously increased. These increases were at that time borne by the Government, for the ships were under Government requisition, and the Government distributed the taxpayers' money with a lavish hand; but once the vessels had been discharged from Government service, and economic conditions had to be faced, it was found that these high wages could not be paid out of commercial earnings. Wages had been slightly reduced, but were still much beyond what shipowners could afford to pay, and, in consequence, 650 British ships of 1,117,092 tons were at the moment laid up in the United Kingdom, and probably as much tonnage again, if not more, in ports outside the kingdom, with the result that thousands of captains, officers, engineers, and men were unemployed, while those remaining in employment were drawing pay much above the economic rate. There was no use in mincing matters—wages afloat would have to come down if British shipping was to hold its own. In the case of their own unemployed officers and engineers, they had done what they could in granting half pay for a certain period, and although this meant a considerable charge on the company's resources, he felt sure the meeting would approve of the course adopted. Dockers' wages, fixed by a Government tribunal in May, 1920, at 16s for a day of eight hours, had lately been reduced to 14s a day, but the tonnage handled here per man per hour was much less than in former days, and while it cost 25 a ton to work cargo in Antwerp, the cost in Middlesbrough was 6s.

QUALITY OF PASSENGER SERVICES—AN APPRECIATION.

Seldom, he continued, did a day pass in which he did not receive a personal appreciative letter—some consolation in these hard times. Recently he had such a letter from Lord Northcliffe, now on his way home from a tour round the world. In that letter Lord Northcliffe said the ship on which he was travelling was run with the

punctuality of a clock, and that so far he had found nothing but efficiency in the handling of the company's ships and those of its associated lines. Such letters he invariably passed on to the captains and others concerned. He confessed to the occasional receipt of grumbling communications, and these, too, were passed on with a view, if possible, of remedying defects.

SOME GRAPHIC STATISTICS.

During the past year the steamers in commission of the P. and O. and its associates had numbered 444; they had traversed 15,345,081 nautical miles, had made port entries 25,315 times, had carried 13,236,981 tons of cargo, 188,575 animals, 2,111,564 passengers, and had employed crews numbering 45,912. They had run without serious accident and without the loss of a single life by marine casualty. With regret, he had to record the loss by death during the year of two of their colleagues, Lord Burghclere and Lord Balfour of Burleigh.

He could not, he said, conclude without expressing the appreciation of the board of the loyal and whole-hearted devotion to the company of their staff, afloat and ashore, at home and abroad. No institution, he felt safe in saying, was better served than the P. and O. and its associated lines.

He was sorry to say that Sir Thomas Sutherland, who had occupied that chair with such marked ability for 37 years, was not at all well. He had seen him the other day, and, though vigorous as ever in mind, he was suffering a good deal physically. He was sure they would join with him in an expression of sympathy for Sir Thomas Sutherland in his illness, and in the hope that he would make a good recovery. In conclusion, he moved: "That the report and statement of accounts now read, which have been circulated amongst the proprietors, be adopted."

Mr H. N. Gladstone seconded the resolution.
Mr Grinnell-Milne, in the course of some appreciative remarks, commented on the form of the report and accounts, and expressed a hope that the example of some other companies might be followed in future.

Lord Inchcape, in replying, pointed out that some years ago the form of accounts was agreed to by shareholders in general meeting, as it was considered best not to disclose to the world and their competitors the methods and details of their business.

The resolution was carried unanimously.
The Chairman moved, and Sir Montagu C. Turner seconded: "That a dividend for the half-year ended September 30th last of 2½ per cent. on the preferred stock, less income-tax, and a dividend of 6 per cent. on the deferred stock, free of income-tax, as recommended in the report, be now declared, and that payment for the same be made on and after the 14th inst."

The resolution was carried unanimously.
The Chairman moved, and Lord Kilbracken seconded: "That Alexander McLaurin Monteath, Esq., be re-elected a director of this company."

The resolution was carried unanimously.
The Chairman moved, and Sir Duncan Carmichael seconded: "That Sir Montagu Cornish Turner be re-elected a director of this company."

The resolution was carried unanimously.
The Chairman moved, and Lord Chalmers seconded: "That the Hon. Kenneth Mackay be re-elected a director of this company."

The resolution was agreed to unanimously.
Sir J. Fortescue Flannery, Bart., moved a vote of thanks to the board and the staff.

Mr Grinnell Milne seconded, and it was cordially carried.
The Chairman briefly acknowledged the compliment.

AFRICAN STEAM SHIP COMPANY. INCREASE OF CAPITAL SANCTIONED.

An extraordinary general meeting of the African Steam Ship Company was held at the company's offices, 23 Billiter street, London, E.C., on Friday, December 2, 1921, the Right Hon. the Viscount Pirrie, K.P., P.C. (chairman of the company), presiding. The Secretary having read the notice convening the meeting, The Chairman said:

Ladies and Gentlemen,—We have called you to attend an extraordinary general meeting of the company for the purpose of obtaining your authority to issue further capital, consisting of £500,000 6 per cent. cumulative preference shares of £1.

As you know, the authorised capital of the company is £5,000,000, of which £2,000,000 has been issued in ordinary shares of £20 each, and we now propose to increase the capital of the company to £2,500,000 by the present issue of £500,000 6 per cent. cumulative preference shares of £1 each.

REASON FOR NEW CAPITAL.

This extra capital is issued for the purpose of paying for new ships ordered to replace those lost by submarine action during the period of the war, and also to provide for up-to-date passenger vessels for the West African trade.

SHAREHOLDERS' RIGHTS.

The company has received an offer for the whole of the proposed issue, but, in accordance with the provisions of the company's charters, the shareholders will have the right of subscribing in proportion to the number of existing shares held by them, viz., one preference share for every four shares of their holding.

SUB-DIVISION OF SHARES.

We further propose to sub-divide the ordinary shares of the company from £20 to £1. We have been urged by shareholders in the past at the general meetings to reduce the denomination of the ordinary shares to £1 each, and we consider this is a convenient opportunity to do so, especially as the voting power is now altered by the issue of the new capital.

Each £1 preference share is entitled to a vote, and as, according to the present articles of the charter, only one vote is given for 10 ordinary shares of £20 each, it is necessary, in order to give each class of share equal voting rights, to make the ordinary shares of a denomination of £1 each, and to give each ordinary and preference share one vote, and we ask you to pass the necessary resolution to effect this alteration. This is, of course, subject to the approval of the President of the Board of Trade.

The Chairman then moved, and Mr G. W. Neville seconded, the necessary resolutions authorising the issue of £500,000 preference shares and the sub-division of the ordinary shares.

These resolutions were carried unanimously, and the proceedings then terminated.

CASTLEFIELD (KLANG) RUBBER ESTATE, LIMITED. LABOUR ARRANGEMENT WITH F.M.S. GOVERNMENT.

The annual general meeting of the shareholders of the Castlefield (Klang) Rubber Estate, Limited, was held, on the 7th instant, at the registered offices, 7, Martin's lane, Cannon street, London, Mr W. Arthur Addinsell (chairman of the company) presiding.

Mr C. Jackson, A.C.I.S., on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—

The loss of £11,814 which has been sustained during the year under review is occasioned chiefly by the severe fall in the market value of the commodity, together with increased working expenses and the high cost of materials.

Another important factor with which every company operating in the East has had to contend is the difference between the purchase price of rice and the issued price to the coolies; this has cost us £3,025.

There is a balance to the credit of profit and loss account of £7,875, which will be augmented by a refund of excess profits duty, amounting to approximately £13,000, which has been paid by the company in previous years.

The position of the company to-day is not unsatisfactory, as the cost of production for the current year to date compares favourably even with the lowest prices at which the commodity has changed hands, and more especially so with the prices ruling to-day. Therefore, I think you will agree that the outlook for the current year is encouraging.

You will no doubt be interested to know that the manager has been able to arrange for a portion of the labour force to be employed on public works, such as road-making and cleaning out a canal, by contract with the F.M.S. Government. This will enable us to retain the force so employed free of cost to the company, arrangements having been made for the return of these coolies to the estate as soon as normal conditions prevail.

A intimated in the report, the crop was restricted for this current year, in accordance with the scheme inaugurated by the Rubber Growers' Association. The voluntary agreement entered into by the majority of the members of that association expires at the end of this month, and I may add that this company has agreed to adopt the recent recommendations of the association to continue to restrict output by 25 per cent. until June 30, 1922.

Mr James Murray, our visiting agent, speaks in very high terms of the condition of the estate. He also states that "without restriction I am confident the property would show results equal to the best in the country."

The motion was passed unanimously, and the usual formal business terminated the proceedings.

STRAND HOTEL, LIMITED. SATISFACTORY YEAR DESPITE TRADE DEPRESSION.

The fourteenth ordinary general meeting of the Strand Hotel, Limited, was held, on the 8th inst., at the Trocadero Restaurant, London, Mr Alfred Salmon presiding.

The Chairman, in the course of moving the adoption of the report and accounts, and after expressing regret at the death of Mr Isidore Gluckstein, said: The accounts show a decided improvement upon the previous business, notwithstanding the period of depression through which we have been passing. The last coal strike had very disastrous effects upon the trade of the country generally, and undoubtedly delayed in no small measure the return to the more normal conditions of trading for which we were all hoping.

That a careful attention to business, studying every point of economy and efficiency, can maintain a certain degree of prosperity, is shown by our figures. When I tell you that our present prices, if reduced only 33 per cent., would be down to pre-war rates, you will agree they are extremely moderate.

Then, as regards food, you have but to consider the condition of markets at over 100 per cent. in excess of pre-war rates, and you will agree that we are not taking any undue advantage of our customers, but, on the contrary, are giving them even better value than they had in pre-war days.

The balance from trading account, after charging all expenses, depreciation, redemption, provision for income-tax and corporation profits tax, and including dividends received, amounts to £104,313. This compares with an amount of £91,924 last year. There is, therefore, an increase in the profits of £12,389.

There remains, after payment of interim dividends, sufficient to enable us to make a final distribution on the participating preferred ordinary shares of £17,250, which is at the rate of 15 per cent., for the half-year ending September 30th, making, with the interim payment, a dividend of 11 per cent. for the year; that is, 1 per cent. more than was paid last year.

The hotels have been, notwithstanding the depressing conditions of trade, abnormally full the whole year round. We can only conclude that this is so because the public recognises that it is getting better value for its money than it can get elsewhere. We look to the future with confidence, even though the period of depression continue, for, failing a complete catastrophe in the country's affairs, travel will not cease; people will move about seeking business. London is the great centre for the business efforts of the country, and we shall be called upon to provide food and lodging for those travellers as hitherto.

The report and accounts were unanimously adopted.

SOUTH-WEST AFRICA COMPANY, LIMITED. CHAIRMAN ON COMPANY'S FUTURE. SOUND FINANCIAL POSITION.

The annual meeting of the South-West Africa Company, Limited, was held, on the 6th instant, at Winchester House, Old Broad street, London, Mr Edmund Davis (chairman of the company) presiding.

The secretary (Mr C. Launspach) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said that they now presented their report and accounts to December 31, 1920, and previous to dealing with the items set out therein and with the present position of the company and what it might possibly be when they presented their next accounts, they wished to state that the delay in calling this meeting was in no way due to the board or to official circles on this side. Their original claim in respect of amounts held on deposit in Berlin and sums which accrued to the company during the war period had been dealt with at various dates. Their concessions were a direct grant from the German Government, and covered such extensive rights that at a later date the company, agreed to some modifications, and in exchange for the rights they waived were granted a joint interest with the German Government in the mineral rights of Ovamboland, a territory covering about 20,000 square miles. It was, therefore, impossible to understand how the Union Government of South Africa—which held a mandate over South-West Africa—could justify their acts in confiscating the mineral rights covered by the company's concessions.

PROBABLE POSITION IN THE FUTURE.

The accounts presented on that occasion were up to December 31, 1920, but, of course, they in no way reflected the position as at to-day's date, nor could shareholders in any way form an idea from them as to how the accounts would be framed when they next met. Under those circumstances, the directors desired to set out what would probably be the position as soon as effect had been given to the transaction relating to payments under their claim and to the purchase of shares by the company. They might take it for granted that, at any rate, 1,200,000 of their shares would be acquired by the company, though the actual number might be slightly in excess of that figure. Those shares had been acquired from the Public Trustee at 11s 6d per share, with the formal approval of the Board of Trade, which was subject to the shareholders passing the necessary resolution adopting the new articles of association. Taking the figure 1,200,000 shares as being correct, those would be added to the unissued capital, thus reducing the issued capital to £550,000 in shares of £1 each.

ASSETS.

Against that capital they would have their British, colonial, and foreign—other than German and Hungarian—investments, which at to-day's market price were worth about £516,000. To that should be added the unpaid purchase money on farms and town lots sold and advances to settlers, the whole of which were secured by registered mortgages on the properties themselves, and which the board considered good, amounting to £40,834, buildings in South-West Africa £5,785, and furniture, plant, and farm implements £10,535. As regarded shares in other companies, the board considered for to-day's purposes that they might take the amount at which they stood in the balance-sheet, namely, £14,896, although one of those investments alone—their holding in the Otavi Mines and Railway Company—was worth, even at to-day's rate of exchange, about £20,000. Next came debtors, of which they need at the moment only take into account the balance of their claim admitted by the German authorities, and which the company should receive at an early date, namely, £28,000, and finally there was their concessions account at the book entry, £56,977. Those items alone gave a total of £673,027.

CAPITAL REPRESENTED BY CASH OR EQUIVALENT.

With their concessions account, though only valued at their balance-sheet figure, namely, £56,977, which included 1,600,000 acres of freehold land, which he supposed might conservatively be estimated as being worth about £240,000, the whole of the issued capital of the company as it would stand in the next accounts would be more than represented by cash or its equivalent. Of course, due consideration would be given when framing the next accounts to the land sales account, which was really a reserve account, and stood at £84,503, and the balance of profit £95,238.

The report was adopted, and the new articles of association were approved.

Mr Harris proposed a hearty vote of thanks to the chairman for his conduct in the chair, and for his very satisfactory statement, and the vote was duly accorded.

The Chairman briefly acknowledged the compliment, and the proceedings terminated.

PREMIER OIL COMPANY, LIMITED.

REASONS FOR SALE TO FRENCH.

The first ordinary general meeting of the Premier Oil Company, Limited, was held, on the 9th instant, at River Plate House, Finsbury circus, London, Mr F. H. Hamilton, chairman of the company, presiding.

The notice convening the meeting and the report of the auditors having been read,

The Chairman, after a sympathetic allusion to the death of the late chairman, Mr Frederick Walker, said that the revenue account covered 18 months, and showed a net profit of £5,321, being, in effect, the surplus of interest over the outlay for general and administrative expenses. He went on to say that when the present company was formed the Germans, or rather neutrals under German control, had physical possession of the properties in Galicia, largely through subsidiary companies or individual representatives who were entirely under their control. The old Premier Company, of which this company was the successor, was in debt to the extent of considerably over £100,000, before the war, to the German group. Subsequently this company succeeded in getting Polish sequesters appointed to carry on the business of the company, and at a meeting in June resolutions to sell to a French company were unanimously adopted. This sale had been carried into effect.

The reports on the properties in Galicia were of a very detailed character, and showed the progress made in the first three quarters of the year. The record was a highly satisfactory one, especially when it was borne in mind that it was only during this year that the French company assumed control. Production was increasing, an active drilling programme was being maintained, a large scheme of electrification, which would effect important economies, was making good progress, and for the months for which the French company had complete figures satisfactory profits were earned. Speaking from his own observations, and that of his English colleagues upon the French board, he had no hesitation in saying that the difficult task of reorganising the very intricate machinery of the company had been tackled with energy and intelligence, and that they had to-day a working organisation absolutely second to none in Galicia. A question of great importance, namely, the prolongation of lease had been settled in a highly satisfactory manner, the State Lands leases having now been extended for a further period of 20 years. The French company had extensive rights of export, wages were maintained at a low level, and the negotiations in progress for distribution and supply were on sound lines.

Proceeding to consider the results of this transfer to the French company in the light of the experiences of the last 12 months, the Chairman said that but for this having been done they would not have been in possession of the properties, which would still have been held by the sequesters representing the Polish Government, and they would not have had a shadow of right to control their policy. Had they preserved the old status they would have been deprived of the backing and influence of the French Government, which was by far the most important political factor in Poland to-day, and had been in one way and another of great service to the company. Nor would they have obtained the extension of the concession on the State Lands. Those were the factors which influenced the board in taking the line they did. It was not an easy line at the time they took it, but, looking back after nearly 12 months, they had even less doubt than they had when they had asked for the shareholders' sanction for it, that it was well worth the trouble, and that only by this means was the company saved from another and perhaps disastrous reconstruction. He thought the shareholders would agree that it must be considered far sounder and more satisfactory than they had reason to expect 18 months ago. With regard to their future policy, he thought under favourable conditions they ought, within a reasonable period, to realise some part of their interest in the French company, while retaining an important holding, to write down the capital by one-half, and distribute 2s or 2s 6d per share by way of return of capital, still leaving them sufficient funds to secure other interests. The bulk of their money was on deposit, except that they had underwritten and purchased £80,000 of 10 per cent. debentures in the Indo-Burma Oil Company.

The report was unanimously adopted.

AERATED BREAD COMPANY, LIMITED.

RECORD VOLUME OF BUSINESS.

The sixty-eighth ordinary general meeting of the Aerated Bread Company was held, on the 5th instant, at the Cannon street Hotel, London.

Mr C. E. Cottier, who presided, said that the gross profits for the past year amounted to £688,425, an increase of £20,583 as compared with the previous year, while the charges and expenses, at

£582,380, were higher by £62,106. The net profit, £145,995, showed a decrease of £19,561. The period had been one of the most difficult experienced in business for many years, not even excluding the war years.

The company's business, however, again achieved a record in the amount of turnover, the number of customers served, and the amount of gross profit earned.

Prices charged to customers had been continuously reduced during the year, lower even than costs warranted. Some items on their tariff were down to pre-war level, in spite of the fact that, according to Board of Trade figures, the average total cost of foodstuffs was still 100 per cent. above that level.

Dealing with the accounts, he pointed out that the valuation made in 1920 of the whole of the company's properties, plant, machinery, &c., by two well-known firms of London valuers disclosed the fact that they were worth over half a million sterling more than the figure at which they appeared in the balance-sheet—an appreciation in value which formed a very substantial undisclosed reserve, and strengthened the company's financial position. Moreover, no account was taken in the books for the very valuable goodwill of the business.

With regard to the acquisition of the Wilton road site, he remarked that a very substantial profit was confidently expected to accrue to both the Aerated Bread Company and the other interested parties, but in the extreme and unlikely event of a loss being made, the company was secured, Messrs Harvey, Rutter, and himself alone standing to lose over the transaction in their individual capacity. The company had on this site a most important depot, the lease of which would have fallen in within a few years, and it had been very necessary to preserve this valuable asset.

A very important development was the contemplated purchase of the well-known provincial business of Messrs Cottle, Limited, of Liverpool and Manchester, a restaurant and café business well known and esteemed in the North Country, and forming a splendid opportunity for the extension of the company's operations to important provincial centres. With the completion of the new Buzard chocolate and confectionery factory, the sale of these products in the A.B.C. depots was being developed with excellent results.

The report was unanimously adopted, and the dividend recommended was declared.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Dec. 12th-Dec. 17th, were opened on Dec. 9, 1921, and the total amount applied for was £82,850,000. Tenders for Monday bills at £99 3s 5d, and above in full. Tenders for Tuesday to Saturday bills at £99 3s 2d, about 98 per cent., and above in full. The average rate of discount was £3 8s 17½d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition'l Bills.	Tenders at Rates below receive.
	£	£	£ s d		
Nov. 11 (3 months)	45,000,000	78,340,000	3 17 0·43	3½	£99 6s 6d (Monday to Friday bills), about 75%, above in full, Saturday bills £99 0s 9d and above in full.
Nov. 13 (3 months)	40,000,000	54,365,000	3 17 8·27	3½	£99 0s 3d (Monday to Friday bills), about 77·8%, above in full. Saturday bills £99 0s 6d and above in full.
Nov. 25 (3 months)	45,000,000	78,155,000	3 14 2·15	3½	£99 1s 3d (Monday bills), £99 1s 5d (Tuesday bills), £99 1s 7d (Wednesday to Saturday bills), about 27%, and above in full.
Dec. 5 (3 months)	50,000,000	67,610,000	3 12 0·07	3½	£99 2s 4d (Monday bills), about 20%, and above in full. £99 2s 2d (Tuesday to Saturday bills), and above in full.
Dec. 12 (3 months)	45,000,000	82,850,000	3 8 1·71	3½	£99 3s 5d (Monday bills), and above in full. £99 3s 2d (Tuesday to Saturday bills), about 98%, and above in full.

The amount to be offered next week will be £45,000,000.

both positions. This figure is the lowest fixed for cash since June 6th last, and for forward since June 8th last. Very large shipments are reported from San Francisco to the East, most of which is destined for China. Some portion, however, is shipped with option for India, a proviso which suggests that the bazaars may have little inducement to buy here for the February settlement in Bombay. Continental supplies can be expected to come into the market now from time to time, so that, the requirements for the Chinese New Year having been completed, and the Indian bazaars being sluggish buyers only, the immediate outlook can hardly be regarded as healthy. The net imports of silver into India during the month of September amounted to 4,065,283 ounces, valued at Rs 95,86,997. Mr Findlay Shirras, the Director of the Labour Bureau in India, stated that monsoon conditions in Bombay were satisfactory. He went on to say:—"As the monsoon is the backbone of labour conditions, this means that the next year is full of agreeable possibilities. There will be produce to be marketed and exported, and goods to be imported or manufactured and consumed. The solemn fact is that India during the space of a twelvemonth has been struggling against an overmastering depression. A change is, above everything else, to be welcomed."

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Nov. 15, 1921.	Nov. 22, 1921.	Nov. 30, 1921.

Reports and Notices.

We are informed that a war memorial to the members of the staffs of "The London and Lancashire" and allied companies will be unveiled at the office of the company at 5 and 7 Chancery lane, London, W.C. 2, on Thursday, December 15, 1921, at 3.10 p.m.

Mr Robert J. Hose, chairman of the Anglo-South American Bank, has been elected a director of the Antofagasta (Chili) and Bolivia Railway Company, Limited, to fill the vacancy created by the death of Mr A. H. A. Knox-Little.

Mr Edward Manville, M.P., J.P., has been elected on the court of directors of the Royal Exchange Assurance, in place of the late Lord Ebury.

We are informed that the address of Sanderson and Co., produce brokers, now is 23 Rood lane, London, E.C. 3.

GOVERNMENT STOCKS, &c.

BULGARIAN 6 PER CENT. LOAN OF 1892.—British holders of coupons and drawn bonds are offered payment in French francs converted into sterling at the sight rate of exchange on Paris on the day of presentation (less income-tax). Coupons and drawn bonds due January, 1916, July, 1916, January, 1917, July, 1917, January, 1918, and July, 1918, may be deposited at the Imperial Ottoman Bank, Coupon Office, 25 Austin Friars, E.C., where lists and declaration of ownership forms may be obtained. Coupons and drawn bonds which are the property of foreigners, but which were deposited in Great Britain before October 1, 1915, and have remained in deposit in Great Britain since that date, may also be presented, but are subject to special arrangements, particulars of which can be obtained at the Imperial Ottoman Bank, as above.

BULGARIAN GOVERNMENT 4½ PER CENT. LOAN OF 1909.—Messrs J. Henry Schröder and Co. announce that they are prepared to receive for payment in French francs under the scheme put forward by the Bulgarian Government (conditions of which appeared in the Press on October 27, 1921), coupons and drawn bonds of the above loan due December 1, 1915, to June 1, 1919, inclusive. The offer of the Bulgarian Government having now been extended, holders, other than British subjects, whose national currency has not depreciated more than the French franc, may also present their coupons and drawn bonds, provided these have been held continuously since October 1, 1915.

CITY OF PERAMBUCO (RECIFE) 5 PER CENT. GUARANTEED LOAN.—Messrs Dunn, Fisher, and Co. announce that they have now received the funds to pay the coupon due November 1, 1921.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders have received the December instalment of the Debt Service in respect of the half-year ending December 31, 1921.

BANKS.

BANK OF MONTREAL.—The statement of the result of the business of the bank for the year ended October 31, 1921, shows that the balance of profit and loss account, October 30, 1920, was \$1,251,850, and profits for the year ended October 31, 1921, after deducting charges of management, and making full provision for all bad and doubtful debts, \$3,949,796, making \$5,201,646, which is disposed of as follows:—Dividend for year of 12 per cent. and a bonus of 2 per cent. absorbed \$3,080,000; war tax on bank note circulation to October 31, 1921, \$220,000; reservation for bank premises, \$400,000; balance of profit and loss carried forward, \$1,501,646. The market

price of Bank of Montreal stock, October 31, 1921, was 208 per cent ex dividend, and bonus 2 per cent.

YORKSHIRE PENNY BANK, LIMITED.—An impressive service was held at the head office of the Yorkshire Penny Bank, Limited, Leeds on December 7th on the occasion of the dedication of a memoria which has been placed by the directors of the bank in the banking hall of the head office, in memory of members of the staff who fell in the war.

RAILWAYS.

MISSOURI, KANSAS, AND TEXAS.—A plan and agreement for the reorganisation of the Missouri, Kansas, and Texas Railway Company has been prepared under date of November 1, 1921, and Messrs J. and W. Seligman and Co. and Messrs Hallgarten and Co., of New York, have been appointed reorganisation managers. Holders of bonds, notes, preferred stock, and common stock are invited to deposit such bonds, notes, and stock on or before January 7, 1922, with the reorganisation managers, and we advise all interested to secure a copy of the plan and agreement and information with regard thereto, which may be obtained in London from the Equitable Trust Company of New York, 3 King William Street, London, E.C. 4, or Messrs Seligman Brothers, 18 Austin Friars, E.C.

RUBBER.

BAKAP.—The report for year ended June 30, 1921, shows that the heavy fall in the market price of rubber which commenced during last year continued and increased throughout the season, resulting in a loss of £6,036. This has been transferred to profit and loss account, and after payment of debenture interest, £2,089, and sundry adjustments, there is a balance at credit of £2,064, which it is proposed to carry forward. The crop amounted to 164,080 lbs, and realised an average price of 10.40d per lb. The expenditure at Telok Karang during the year amounted to £8,022.

BROOKLANDS SELANGOR.—The loss on the year to June 30, 1921, amounted to £2,638. After deducting this from the balance brought forward from last year, viz., £27,888, there remains a credit balance of £25,250 to be carried forward. The report states that no provision has been made in the accounts for the year for depreciation of buildings, machinery, and plant in view of the fact that these have already been written down to and stand at a figure in the company's books substantially below their replacement value. The rubber crop for the

year was 615,204 lbs. The whole of the crop was sold in the Federated Malay States, and realised an average price of 10.59d per lb. The all-in cost of production, including the administration expenses of the company, amounted to 11.32d. The coconut crop for the year was 756,285 nuts. This was sold partly in London and partly in Singapore, and realised, after taking at market valuation the portion of the crop not yet disposed of, the sum of £4,871 16s. 9d.

GAN KEE.—The report for year ended June 30, 1921, shows that after writing off the sum of £956 for depreciation on buildings, machinery, &c., the year's working resulted in a net loss of £5,182. There is a balance of £1,799 standing to the credit of profit and loss account now. The total crop harvested during the year amounted to 199,024 lbs.

INSULINDA (SUMATRA).—The output of rubber for the year ended June 30, 1921, was 226,801 lbs, which realised an average price equal to 9½d per lb, London. The average number of trees tapped during the financial year was 60,000, giving a yield of about 3½ lbs per tree. The restricted estimate for the year ending June 30, 1922, is 360,000 lbs, of which 120,290 lbs have been harvested in the four months ended October 31, 1921. A debit balance of £4,830 was brought into accounts, and there is a debit balance of £13,295 for the past year to add to this, making a debit balance of £18,125 to be carried forward.

KELANTAN.—For the year to June 30, 1921 the rubber produced was 411,010 lbs, against 342,104 lbs in the previous year. Of that crop there was sold, prior to the close of accounts on June 30th last, 319,152 lbs, at an average gross price, at Singapore, of 9.226d as compared with 2s 1.536d per lb for 1919-20. The cost of production for the year, including selling charges and home expenses, was 1s 3.227d per lb delivered at Singapore, against 1s 3.992d per lb for the preceding 12 months. These figures do not include depreciation. The year's working has resulted in a loss of £12,228. The loss for the year falls to be deducted from the balance brought from last account, £13,751, which was further reduced by £274, being corporation profits tax on accounts for year to June 30, 1920; these deductions leave the sum of £1,249 to be carried forward. The labour available having been concentrated on the cleaning of the areas already matured and the satisfactory working of that portion of the estates, no further extensions have been made; the cultivated areas of the estates remain unchanged.

KENNY (SELANGOR).—The working for year ended June 30, 1921, shows a profit of £3,949, out of which provision of £1,279 has been made for income-tax, leaving £2,670 to carry forward. The report states that the original estimate of crop for year to June 30, 1921, was 10,000 lbs dry rubber. In consequence of the restriction of output the actual crop secured for the year (after deducting loss in weight in transit) was 276,420 lbs, which has all been sold. The gross average selling price of this crop was 1s 3.18d per lb, and the "all-in" cost of production is 0.27d per lb, giving a profit of 2.91d per lb, as compared with 8.64d for the previous year. The cost of production for the past year includes rice losses, representing 1.38d per lb of crop.

KILLINGHALL.—The report for the year ended June 30, 1921, shows a balance to credit of profit and loss of £9,461. This is arrived at by a debit balance of £6,547 for the past year being deducted from the £16,008 which was brought in from previous account. It is anticipated that there will be a refund of approximately £7,500 for excess duty paid in previous years. The sum of £9,461 will be carried forward, and will be augmented by the excess profits duty refund. The amount of rubber harvested during the year was 333,130 lbs.

KUALA LUMPUR.—The report for the year ended June 30, 1921, shows a loss of £30,630, to which is added £5,923 for loss on investments realised and depreciation on those still held, making combined losses £36,553. The sum of £20,000 is re-transferred from reserves for losses, making the debit balance £16,553. Deducting this from £32,512 brought forward makes a credit balance of £15,959 to be carried forward. The yield of rubber during the year was 350,385 lbs, being 359,152 lbs less than in the previous year, and 99,615 lbs short of the restricted estimate. Of this crop 106,760 lbs were shipped to Europe, and inclusive of an estimated cure for a small portion unsold, realised an average gross price of 160d per lb, while 282,695 lbs were sold in Singapore at the equivalent of 6.72d per lb. The combined average gross price for the whole crop is thus 9d per lb.

SUMATRA PARA.—The report for year ended June 30, 1921, shows that, after writing off the usual amount of £3,000 for depreciation of buildings and machinery and making provision for taxation in the Netherlands Indies, there is a loss on the year's working of £14,737; deduct balance of profit and loss brought forward from 1919-20, £3,114, leaving an adverse balance of £11,623, which has been written off by a transfer from the reserve fund. The unfavourable result of the season's working is due to the abnormally low level of prices ruling for rubber. It was mentioned in the directors' report for 1919-20 that the rubber crop was being restricted as from November 1, 1920, in accordance with the proposals of the Rubber Growers' Association. As a consequence, the average monthly output, which for the five months of the season prior to the commencement of restriction was 106,000 lbs, dropped to under 78,000 lbs for the remaining even months. This is equivalent to a reduction of 26 per cent. on the actual output for the corresponding seven months of season 1919-20. Satisfactory declines are shown both in the estate expenditure and the "all-in" cost of the rubber. The latter is 1s 2½d per lb as compared with 1s 4d per lb for 1919-20, while estate expenditure is less by 6.129.

UNITED TEMIANG (F.M.S.).—The report for year ended July 31, 1921, shows that the extension of 313 acres on the south division has been completed during the year under review. The cultivated area in the Sungai Kaya division was increased by 19 acres. The estates are reported to be in good order, and the supply of labour is adequate or present requirements. During the year £4,794 was expended on new equipment. The f.o.b. cost (including 1 16d for depreciation) was 1s 1.16d per lb. This would have been lower but for the restriction of output and the loss incurred in supplying rice to the labour force below purchase price. Substantial economies have been intro-

duced, the effects of which should be apparent in the accounts for the current financial year. The balance brought forward from the year 1919-20 amounted to £34,373, from which there is to be deducted (after providing £4,038 for depreciation) a net loss for the year of £1,720, leaving a balance of £32,653 to go forward.

UGANDA PLANTATIONS.—The eighth annual report, to February 28, 1921, shows a loss of £6,041, to which must be added a loss of £1,304 brought forward, making a debit balance of £7,345 to be carried forward. The directors point out that the total crops for the year amounted to 26,880 lbs of coffee (clean bean), 1,904 lbs of cocoa, and 19,001 lbs of rubber. During the past year every endeavour has been made to run the estates with as little expense as possible.

MISCELLANEOUS.

BRITISH INDIA STEAM NAVIGATION.—The report for the year ended September 30, 1921, discloses a balance available for distribution after providing for depreciation of £137,072. Preference stock dividend absorbs £35,000. The ordinary share dividend of 8 per cent., free of income-tax, absorbs £76,576, and £25,496 is carried forward. The report states that "freights continually declined during the year, and are still declining without an adequate reduction in expenses, many items of which, such as wages, still remain on practically a war level. The prospects for the current year are not bright, and as the future generally of shipping is uncertain and the cost of building ships continues abnormally high, the directors think it advisable to conserve the company's funds against the possibility of less prosperous years, and they therefore do not recommend a bonus for the past year."

BRITISH MERCHANTS' MOROCCO ASSOCIATION.—At the fourth annual general meeting on the 1st inst., the Right Hon. Viscount Wolmer, M.P., the president, pointed out that the trade had nearly doubled itself in the last year; that the economic position in Morocco depended to a very large extent on the economic position in Europe; that there was no royal road of return to prosperity, but that that position could only be won by patience, unselfishness, and wisdom. Mr Leslie Couper, C.M.G., the general manager of the Bank of British West Africa, said that he would like to ask the French merchants, shipowners, or bankers as to the present economic position of their tropical possessions which depended—like so many of ours—upon finding markets for their raw materials, and whether the output of recent years could be maintained, much less increased, with the limitation of markets now imposed by reason of the conditions existing in Europe to-day.

GOVERNMENT AND GENERAL INVESTMENT.—The report for year ended November 30, 1921, shows that the amount to the credit of profit and loss account is £20,989. Deducting interest paid on debenture stock, together with all expenses of administration, there remains a balance of £12,806, which is distributed as follows:—A dividend of 4 per cent. on the preferred stock, £3,486; a dividend of 12 per cent. on deferred stock, £6,325; participating certificates service fund, £2,520; undivided profits account, £475.

IMPERIAL AND FOREIGN CORPORATION, LIMITED.—The directors announce that they have entered into an agreement with the Parent Tyre Company, Limited, for that company to acquire a large interest in the shares of the corporation. To give effect to this it is proposed to write the assets of the corporation down to an amount agreed upon, and on account of the "large depreciation in the assets of the corporation during the last 12 months" the directors suggest that it is better "boldly to face the situation" and write off an "adequate amount of capital." It is proposed to "write off 12s per share of the nominal value of the issued preference shares, and 9s per share off the nominal value of the issued ordinary shares." The method of protecting preference shareholders is interesting. These £1 preference shares, which are now to be considered at 8s per share, are to have 15 per cent. cumulative preferential dividend rights attached, and in the event of winding-up, preference shareholders are entitled to receive 20s worth of assets for each share held, before ordinary shareholders receive any portion of the assets. Arrangements have also been made for securing to preference shareholders a preferential right to arrears of dividends out of future profits. From the preference shareholders' standpoint these proposals appear to be reasonable.

JOHN MACKINTOSH AND SONS.—The first report for year ended September 30, 1921, shows a net profit of £151,203. The directors propose to deal with this sum in the following manner:—Preference dividend at rate of 10 per cent. per annum, absorbing, with income-tax, £11,929; the ordinary shareholders will receive a dividend of 25 per cent. for the year, absorbing, with income-tax, £74,805; £12,500 will be utilised to write off part of the preliminary expenses, and a balance of £51,969 goes forward to new account.

MEXICAN EAGLE OIL.—Shareholders are reminded that definitive share warrants to bearer are now ready for delivery at the office of the London Joint City and Midland Bank, 5 Threadneedle street, London, E.C.2. The provisional receipts, dated January 1, 1921, which must have coupon No. 18 attached, may be lodged for exchange at any branch of that bank; the Belfast Banking Company, Belfast, or any of its branches; the Clydesdale Bank, Glasgow, or any of its branches. Listing forms, which must accompany the provisional receipts, can be obtained from any of the offices of the banks mentioned. It is pointed out that provisional receipts must not be transmitted to the above-mentioned banks through the post, but must be lodged personally or through a banker, and must be left seven clear days for examination.

STRAND HOTEL, LIMITED.—The fourteenth annual report to September 30, 1921, shows that the profit, after providing for depreciation, redemption, and contingencies, was £104,314, to which is added £15,036 brought in, making £119,350 available. The preferred ordinary dividend is 506 per cent., absorbing £25,300. The preferred participating ordinary dividend of 11 per cent. for the year absorbs £25,300. Preference share dividends amounted to £37,000, and debenture interest, &c., £11,360. The sum of £20,390 is carried forward to next account.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions remain generally favourable for agricultural pursuits, recent rains and frosts proving beneficial to ploughed lands. Sowings are practically completed, and reports of the young wheat plant continue satisfactory. Market conditions proved firm during the week, especially for feeding stuffs, with a fair trade in force. Native wheat sells steadily at 48s to 51s for suitable milling grades free on rail, while inferior lots realise from 40s to 45s per 504 lbs. Imported descriptions meet a fair inquiry, and rates fully maintained. No. 1 Northern Manitoba quoted 58s 6d, No. 2 hard Winter 55s 6d, both ex ship, per 480 lbs, and Australian 54s 6d per 496 lbs, ex quay. On c.i.f. terms the undertone remained steady, though business proved generally quiet with regard to cargoes. Australian January shipment changed hands at 51s 6d to 51s 9d, and a sailer old crop, November bill of lading, at 51s per 480 lbs. Stocks in the United States are gradually decreasing, but Canadian quantities have become larger. Supplies on passage are also on a more liberal scale, while visible stocks in this country are maintained. Crop reports from Argentina indicate a large surplus, but the Australian estimate has been reduced owing to bush fires and adverse weather. United States crop news is still very unsatisfactory, though some rain has fallen in the droughty South-Western districts. The demand for home-milled flour shows no improvement, though prices remained unaltered. London standard straight run quoted 48s to 49s, town households 46s, patents 51s, all English straight-run 43s per sack delivered London district. All English country-strights 37s to 40s, free on rail London stations. Imported quiet, though holders required steady prices. Canadian export patents 47s, straights 44s, Kansas patents 44s 6d, and Australian 44s, all per 280 lbs ex store. Business on c.i.f. terms is more or less at a standstill. Kansas top patents, December seaboard, quoted 45s, Canadian patents 43s 6d, straights 40s, and Australian 35s to 37s 6d per 280 lbs. Offals remain firm, while sparingly offered. Broad bran £10 to £10 10s, ordinary £9 to £9 10s, middlings £10 10s, ex mill, fancy Plate middlings £11 10s, ex ship, Plate pollards £9, landed, all per ton. Maize opened firm, but quieter since in view of lower forward offers. Plate, ex ship, 35s, ditto, landed, 36s, yellow African, landed, 36s 6d, white in similar position 35s 6d. Cargo market quiet and rates eased on resellers becoming more prominent. Steamers of La Plata, on passage, sold at 34s 14d to 34s 6d per 480 lbs. There is a good business passing in African maize meal, and parcels of white afloat sold at £7 15s to £7 12s 6d, December-January £7 15s per ton. Barley quiet, and occasionally the turn easier for imported descriptions. English steady, and malting varieties range from 45s to 75s as to sample, with grinding sorts at 39s to 44s, free on rail, per 448 lbs. No. 3 Canada Western, ex ship, quoted 35s; No. 4 ditto, landed, 34s; Canada feed, 31s 6d. American feed 30s, both landed per 400 lbs. On c.i.f. terms, a cargo of Dan-Bess-Kustendje afloat sold at 30s 3d per 400 lbs. Scotch pearl barley, £20 to £22 per ton. Oats were in fair demand, but towards the close slight weakness was apparent with regard to imported descriptions. English ranges from 30s to 35s, according to sample, per 336 lbs. Of imported Plate, f.a.g., 27s 9d; clipped, 28s 6d; No. 2 Canada Western, 32s 6d; No. 3 ditto, 31s 6d; Chilian, tawny, 28s 6d per 320 lbs, all landed terms. A cargo of River Plate f.a.g., December shipment, sold to the Continent at 26s per 320 lbs. Oatmeal firm, with a good demand. English quoted £20 to £21, ordinary Scottish £19 10s to £20, American £19, English rolled oats £22 to £23, flaked £23 to £24 per ton. Beans firm. English springs 54s to 58s; winters 49s to 51s per 532 lbs. Chinese horse beans £10 10s to £11 10s per ton. Peas firm, with improved inquiries. English Maples 59s to 63s, Duns 50s to 54s, small blue 60s to 80s per 504 lbs. Of imported, New Zealand blue quoted 22s to 25s, Dutch blue 23s to 28s per cwt. Homeward freight markets were fairly active with regard to heavy grain, and rates steady for prompt tonnage. Australia continues to book space at 50s, South Australia/Victoria to U.K./Continent, with Indian options at 35s, January-February, to India dried at 37s 6d, and Japan 32s 6d; Bombay, on dead weight, prompt, paid 20s home. The River Plate opened very firm for prompt loading, and at one time as much as 37s 6d was bidding for a spot boat, which was held at 40s. Later rates gave way on quieter grain markets here, and also in view of vessels proceeding out in ballast. At the close of the week 30s was the best indicated for December, while new season's loading remained steady at 27s 6d, a fair business being effected thereat. North America generally quiet, and rates eased on freer tonnage offers. Northern States to U.K. prompt done 4s per qr, Antwerp/Hamburg 13½ cents per 100 lbs, and Mediterranean No. 1 East of West Coast Italy 10½ cents December. South African maize quiet at about 30s to 31s 3d, December-January, while similar cargoes from the Danube ruled easier, 22s being paid for a prompt steamer to U.K./Continent, with Mediterranean options at 18s 9d ton. Other markets quiet, and nominally unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-19.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated December 8th, is as follows:—Pig-iron: The lower prices of pig-iron have stopped the importation of foreign pig-iron to Middlesbro', but with present railway rates we cannot regain the Scotch market for our foundry pig-iron. It is important that we should have this in order to restart more blast furnaces. Two of the four furnaces mentioned last week have now started the manufacture of hematite pig-iron, and the remaining two will be blown in shortly. The demand for hematite iron, however, is still very poor. No. 3 Cleveland G.M.B. pig-iron is 100s per ton, and although 110s is asked for small lots of East Coast mixed numbers hematite pig-iron, it is now possible to obtain same at 105s per ton for fairly large quantities. Manufactured iron and steel: No improvement yet in the demand for steel. Orders are scarce. Steel ship-plates (home), £10 10s; steel ship angles, £10; iron bars, £12 10s; steel rails, £10 10s n. Iron ore: Sellers' prices for best Kubio are firm, but the demand for ore is only very small, and for prompt delivery.

Our Sheffield correspondent writes:—Business has suffered further curtailment this week, and the year is ending with slump more pronounced than at any former time. Hopes are centred on the New Year, when it is thought substantial business will be placed with British steel works in the absence of effective competition from abroad. Scarcely any material for Great Britain is now being ordered from the Continent, but there is still a good deal to come under contracts placed some time ago, Germany being badly in arrears with her deliveries. British prices for some kinds of iron and steel are unremunerative, and probably below cost, makers having adopted this policy in the hope of stimulating business and to some extent to keep their workmen together. It is confidently anticipated that costs will soon be eased by reductions in fuel and railway carriage. Orders for tool steel and tools in France and Italy are limited to odd lots which cannot be done without. Those countries need great quantities of Sheffield's staple, but the state of the exchanges makes the cost of them prohibitive. Most firms have called in their travelling representatives on account of the unremunerative results of their journeys. The Christmas holiday at most works will be a lengthy one. The works will resume as soon as orders come forward in sufficient volume to warrant it. The demand for house coal is on a substantially larger scale, but the tonnage is considerably below the average for the time of year. It is evident that householders are using less coal than formerly. The steam coal section remains unchanged, demand being poor, whether for inland sales or export. Users refuse to buy forward owing to the possibilities of price coming down further, revised rates in the New Year now being regarded as certain. Gas fuels show more activity. More small fuels are available, with a fair demand, and coke is in steady request, exports being rather easier.

Our Glasgow correspondent (writing on Thursday) says:—Business reports this week are somewhat contradictory in tone. On the one hand, there is a feeling that there is more trade doing in iron and steel productions than was the case a few weeks ago, and if statements in circulation in informed quarters are to be relied on, the

The "ALL-IN" POLICY

affords the Householder the most complete cover yet devised.

The method of covering household risks by a diversity of Insurance is wasteful, to say the least. By covering all your household risks by the "All-In" Policy, you are economising in the true sense of the word—5/- per £100 per annum (Minimum Premium, 7/6) will cover practically every serious risk in respect to the contents of your home. List of risks and full particulars post free. Address:—"All-In" Policy Dept.

ASSETS EXCEED - - £19,000,000.

ances seem to point to an improvement in volume of work accomplished and offering between now and the end of the year. Inquiries are undoubtedly on the increase for nearly all kinds of material—in the raw and manufactured state—and prices and costs are still on the decline to a level which should at least help to give enterprise. This yielding of values will go far to close our doors against Continental competition, which must be effectively overcome if we are to approach a state of normal activity. Producers and consumers in iron and steel are recognising that prices of manufactures here are on a trading basis, and that at any moment the tide which has been so long on the ebb may once more begin to flow. But they are still slow to move, slow to believe that bottom has really been touched. It is necessary to recall that when the selling dispute broke out a few weeks ago between the English and Scotch steelmakers quotations for boiler plates were not touched, remaining at £15 10s. But the hands of the Scotch makers have been further forced, and boiler plates are now called £14 a ton, with ship-plates at £10 10s and angles £10. Black sheet makers have lowered their list terms by 20s a ton, so that ½-inch gauge stands at £11 15s; ¾-inch, £12 5s; 1½-inch to 6 gauge, £13; 16 to 20, £13 10s; 20 to 24, £14; 24 to 27, £15. In the beginning of the year prices were generally £17 a ton higher than they are to-day. On the week, Scotch hematite has fallen 2s 6d a ton at £6 5s; Scotch foundry No. 1, 2s at £6 2s 6d; and ditto No. 3, 2s 6d at £6. These changes, as has been indicated, have been mainly inspired by a desire to check demand for Belgian and German material, and the measure is being attended by some success. In the last day or two some fair export purchases have been concluded in Scotch iron; constructional engineers have booked a few orders for bridgework; sheet makers have sold good lines for prompt despatch to India and Australia, and have negotiations in hand for later shipment. While steel plant is running more fully there are a number of mills in different establishments standing idle. It is said to-day that a leading Scotch steelmaker has sold a substantial line of steel billets for the United States. There is no question as to this transaction being exceptional, and it could not have gone through had the rate of exchange and the high price on the other side not been favourable. But it is something to the good. An interesting general business feature has developed on the Clyde since the month came in. For months back there have been groups of vessels laid up at different points in the river. Of late a change has come over the situation—in short, all the idle tonnage has been picked up, and to-day there is not an empty berth in Glasgow harbour. It is a long time since that condition last obtained, and demonstrates, for the time being at least, the existence of a respectable increase in the volume of trade movement in the river, and gives ground for hope.

THE WOOL TRADE.

Our Bradford correspondent writes:—Although considerable caution is still being displayed by buyers of tops and yarns, there is undoubtedly rather more business passing, and the market generally is firmer than it was a week ago. The improved competition at the colonial wool sales in London has helped in no small measure to bring about a better feeling in the consuming centres, and the new basis of values appears to be fairly well established. At present spinners are not finding very much new business for the early part of next year, but it is certain that if a demand does come there will be something like a rush to buy. Stocks of tops are low and most firms are working on hand-to-mouth lines, so that any recovery in demand is sure to make itself felt on prices. During the past few weeks some considerable weights of 64's tops have been sold for delivery in the first two or three months of next year at 3s 6d, and this looks cheap when the cost of wool in London is taken into account. In order to make tops out of wool bought in Coleman Street Wool Exchange during the present series of topmakers should have at least 2d per lb more than the figure quoted above, so it is evident a good deal of speculation is being indulged in one way and another. On account of the comparatively poor inquiry for weaving yarns some spinners are again cutting quotations and offering yarns at prices which can leave nothing for the producer, and this has a demoralising effect upon quotations generally. On the other hand, the demand for hosiery and knitting yarns is still brisk, and most firms have booked all the orders they can deal with in the time allowed for delivery. The piece trade is steady, and stocks are gradually being reduced. In some quarters an improved demand is expected early next year, but that will depend on world finance.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Little that is really new can be said about the London sales. They are due to finish at the end of the week, and there is not much change compared with the opening decline. Some regard the fall as a good thing for the trade, but it is well known that B.A.W.R.A. and importing merchants think otherwise. Naturally each section of the trade views the position from its own standpoint, and it is significant that values in Australia are to-day distinctly lower than those ruling in London. Cables from Adelaide last Friday said that good spinners' 64's warp merinos could be bought on a clean scoured basis of 32d to 32½d, and 64's ordinary top-making wools were selling clean at 29d to 30d. Even super 60's wools could be bought as low as 27d, while the very deep ordinary Adelaide 60's wools were selling on a clean basis of 25d, all descriptions landed Bradford. Such prices have not been ruling in Coleman street, and one need only study the clean scoured costs,

THE CHATWOOD SAFE

Since 1858

The Monument commemorating the Great Fire of London, 1666

THE degree of protection against Fire provided by THE CHATWOOD SAFE extends considerably beyond what is generally understood by the phrase "Fireproof."

Ample provision has also been made in its construction for withstanding a fall from a considerable height (during a big fire), or the direct fall upon it of a great weight (such as collapsing walls or massive girders) while still in its heated condition.

In the early days of 1858, when the late Samuel Chatwood laid down the high standards upon which the great name of THE CHATWOOD SAFE has been built, amongst the many unique tests which were made to ensure the utmost protection against Fire was the following:—

1. The Safe was placed upon a specially constructed coal fire for the period of two hours.
2. Whilst the Safe was in its heated condition it was raised to a height of 30 feet and dropped on to a solid concrete engine bed.
3. It was then immediately returned to the fire for a further period of two hours.

This is only one of the many ordeals which THE CHATWOOD SAFE had to successfully withstand before the words "Fire Proof" were allowed to be used in connection with this Safe.

Post a card to-day for a copy of THE CHATWOOD SAFE BOOK, gratis and post free on application.

which will be issued at the close, to see where prices stand. The home trade throughout has been the chief buyer, although France has done some useful bidding. The improvement in the mark has not made any material difference to German buying. Germany wants wool, but the value of the mark to-day is notoriously low. It makes one feel that something must be done in order to save Germany from utter ruin, for England can no more do without Germany than Germany can do without England. Now that the political sky has become clearer in Ireland it is imperative that a real effort be made by the various Governments interested to bring about more sane conditions in regard to trade and commerce between England, America, and all Continental countries.

Turning to conditions in consuming centres, there is, on the whole, a somewhat better feeling in regard to the future. The principal of one of Bradford's leading firms said this week that he believed that in a quiet way spinners were booking a few orders, and while on the surface things were quiet, yet it would not need a great deal to see a further big buy of tops. As a matter of fact, some fair sales for next year were effected last Monday on a basis of 3s 6d for good 64's, and those who are accepting less than that figure are courting disaster. No less trade will be done than that to topmakers and spinners stand out for a reasonable price, and I do not think values are going to move much lower unless trade gets distinctly worse. I think the new year should dawn before any topmaker ought to accept less money. At 3s 3d for 64's tops there would be a very big buy, but such a price is a mere gamble, and after the experience since August topmakers should risk nothing. What Bradford needs to-day is an accession of new orders from America for high-class botany yarns. Even American mills are not too well supplied either with merino wool or really good merino yarns. Stocks of dear pieces are being gradually liquidated.

MANCHESTER, December 8.

Prices in the market during the past week have not shown much change. On the whole, the tone has been rather steadier. Inquiry in piece goods for abroad has been slightly better. More cables have come to hand from India asking for quotations, and moderate lines have been booked in light fabrics and shirtings. It is believed

Service that counts

Anything that comes within the province of Banking is included in the Service offered its customers by The Merchants Bank. If you want disinterested advice on any business subject or first-hand information concerning trade conditions in any part of Canada—this Bank is in a position to help you.

A banking service of practical value to your business.

that the boycott of foreign goods in our Dependency will down early next year. Operations for China have been res by the unfavourable course of exchange rates. Very little has done for the Near Eastern outlets, but steady buying has for the home trade, especially in heavy materials. While manufacturers are curtailing production, there are cases of restarting looms. A slightly improved turnover has taken place American and Egyptian yarns for home consumption, and encouraging business has been done in bundles for India.

VEGETABLE OILS AND OLSEEDS.

(FROM OUR CORRESPONDENT.)

Raw linseed oil, though it has eased off about 20s per ton from its highest point reached on better Continental outlook, has, on the whole, been a steady market round £28 10s down to £28 spot. April delivery, ex Hull mill. Trade is, however, on only moderate lines, export demand not being large and home consumers particularly active. Cotton oils, on scarcity and a good inquiry have continued to advance, Egyptian crude oil especially being firm and 30s dearer on the week. Refined is 10s to 20s more money. Soya bean oil, English make, is in moderate request, and sellers are scarce. Rape oil a better trade at the reduction, but only small business passing in palm kernel and ground nut oils. Coconut oil inactive and values unchanged.

Plate linseed retains its firmness for spot and near positions, and although English crushers bought fairly substantially of seed abroad and for shipment at prices ranging up to £17, the chief demand came from the Continent. On lower Argentine options and more pressure on the part of shippers to sell the market here has taken an easier turn, crushers' requirements having been met for the present. Indian linseed has also been firm, but little trade passing. Egyptian cottonseed, after a good trade at advancing prices, inclined easier. More interest continues to be shown in Bombay new crop.

The demand for oilcakes, both linseed and cotton, is good, and late prices are firmly held.

The quantity of linseed shipped from Argentina from January 1st to December 3rd was 456,600 tons to the United Kingdom, and 531,000 tons to the Continent—together 987,600 tons against 422,800 tons a year ago. Argentina also shipped to North America

tons, against 554,000 tons a year ago. The total shipments for (11 months) are thus 1,224,600 tons, against 976,800 tons for the period last year. India has exported 34,000 tons to the Kingdom and 43,800 tons to the Continent—together 77,800 tons against 179,785 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

recovery in the hide market after the recent slump is still a feature of the trade, and tanners seem determined to the market up. At Thursday's Bermondsey auctions best ox made 8 1/2d and lights from 6 1/2d to 7 1/2d, an advance of 1 1/2d at week's prices. Cows at 6 1/2d also show an advance of 1 1/2d. The position is made all the more peculiar by the fact that at this time of the year are about at their worst condition. Hides were erratic, heavies falling 1 1/2d, and lights at 12 1/2d, and 1 1/2d to 1 1/2d advance. Wools were cheaper, selling from 10s to 7s, and showing a slight fall of 3d each. The demand for tanned hides has improved and S.A. frigorifics are very firm, at 5 1/2d being quoted. Cables just to hand from Chicago report position as strong, with best heavy packers now standing at 16 1/2d, an advance of 1 1/2d on last week's figures.

There is a better tone to the leather trade, as both buyers and sellers seem to feel bottom in price has been reached, and that no "slaughter" price parcels of bends will be available. Low price bends from dry hides are the best sellers, and are quoted at 16d to 18d per lb. Offal is neglected, and dressing hides are in very small parcels, tanners refusing to sell further at low prices. Upper leather is dull, and glacé kid is asked for at about 8d to 12d per foot. Heavy kip upper stock is not wanted, and curriers are very slack.

Reports from the shoe centres are cast in a more optimistic tone, and makers are now fairly well employed on goods suitable for the Christmas trade. Much is also expected of the settlement of the Irish question, as formerly quite a big business in wear was done with the sister isle—especially for the better goods.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, coming with British standard specification, delivered in London in full van or motor loads to site, 77s 6d to 83s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 7s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 9.

The markets in most cases continued very quiet, buyers showing little or no disposition to exceed pressing requirements at this advanced period of the year, while export trade still moves within very narrow limits.

SUGAR.—There was no new feature to record, only a comparatively small amount of business being effected, at prices showing no material change. Messrs Tate and Lyle's cubes, 54s 3d to 55s 3d; crushed, 50s 9d; caster, 51s 3d to 51s 9d; yellow crystals, 3s 3d. Crystallised West India sold in limited quantities, at 38s 6d to 41s, according to quality. Muscovad and syrups in poor request. American granulated, spot, nominally 47s 6d to 47s 9d; ditto, January-March steamer, 18s 6d, c.f. and i. terms. White Java, spot, 6s; white Mozambique, 45s 6d; Natal, 44s 6d to 46s, as to sample; Belgian crystals, 45s 6d; ditto, December, 18s 9d, f.o.b., Antwerp. Czechoslovakian crystals and ordinary granulated, December, 20s, and cubes, 23s 9d, f.o.b., Hamburg. Brazilian basis, 96 per cent., January-February, sellers, 12s 6d, and basis, 80 per cent. held for 7s 9d, c.f. and i. terms, U.K. Cuban stocks 968,000 tons, against 234,000 same time last year. Stocks in the three chief ports of the U.K. 35,000 tons, against 158,000 same time last year. Glucose quiet, and liquid, December delivery, quoted 25s 3d per cwt, duty paid.

COFFEE.—The chief feature continues to be a sustained demand for the finer qualities suitable for home-trade purposes, and with only small supplies of such extreme rates are easily secured. Up to 123s was paid for fine bold Kilimanjaro, with peaberry 135s 6d. Fine bold Colono Rica went at 158s to 167s 6d, peas up to 171s 6d. Common kinds very slow, as there is no revival whatever in export requirements. Futures steadier on stimulating advices from the Brazils, and March sold, 50s 6d to 50s and 50s 9d; May, 51s 6d to 51s 3d and 51s 6d.

COCOA.—Market still very quiet, with quotations in most cases nominally unaltered. Butter sold, 1s 8 1/2d per lb. TEA.—In auction this week some 51,000 packages Indian were submitted to auction. All the undergrades were again keenly competed for at a further advance in values, but the finer invoices disclosed slight irregularity, while about unaltered on balance. 16,000 packages

Ceylon were also offered, and all qualities up to 1s 6d per lb cleared to a brisk demand at full rates.

RICE.—Market still quiet at about previous rates. Two Stars Rangoon, spot, 18s. Bran steadier with more trade doing, and afloat Rangoon to London and Liverpool, sold, £6 to £6 5s per ton, ex ship terms. Beans unsettled and easier, with some pressure to sell from second-hands. Spot hand-picked quoted 8s 6d, and afloat sold 7s 3d to 8s 6d per cwt. Peas dull of sale.

SPICE.—After showing fair activity the market for pepper became quieter owing to some falling-off in demand on continental account. Fair black Singapore, spot, sold, 3 1/2d; ditto December-February steamer, 3 1/2d to 3 1/2d; Aleppy, spot, quoted 4d; Tellicherry, 4 1/2d; white Singapore, spot, 7 1/2d; Muntok, ditto, 7 1/2d; ditto, December-February, 7 1/2d, and buyers. Zanzibar cloves, spot, 1s 6 1/2d; pimento, 2 1/2d; flake tapioca, spot, 1 1/2d per lb. Fair Penang seed, spot, 15s for fair quality; small sago, spot, 26s; sago flour, October-December, sold, 13s 6d; and January-March, 13s. Desiccated coconut, fine cut, spot, sold, 41s 6d to 41s; medium, 42s 6d to 42s. Ginger quiet, but steady. Fair Japanese, limed, on spot, 45s.

FRUIT.—A quiet tone continued for currants, and Pyrgos quoted 53s; Amalia, 58s to 61s; Gulph, 68s to 74s; Vostizza, 77s to 87s. Sultan met with but quiet patronage. Smyrna, medium to good, 115s to 125s; choice, 140s; Cape, 90s to 110s. At public sale 180 tons Valencia raisins offered experienced a very slow demand, and only a small proportion sold at a general decline of 10s per cwt. Half boxes, sold, 128s; quarters, 120s to 138s; with fine up to 151s. Seedless went off at 85s to 90s. Muscatels steady, and a moderate demand ensued at public sales. Clusters, sold, 150s to 215s; fine up to 230s. Spanish almonds sold, 190s to 215s. Dates steady Hallowee, 40s; Siar, 28s 6d.

JUTE.—A very quiet tone governed this market, but prices ruled steady as sellers were not inclined to force their sales. Native first marks, spot, Hamburg, sold, £26 10s for the assortment; new first grade, December-January, Hamburg, at £23 15s to £24 10s; Lightning grade, ditto, £19 15s to £20 7s 6d; Hearts, sellers, at £16 10s; Daisee grade, December-January, Dundee, sellers, £24; and No. 3, £20. Calcutta hessians quiet. 10-ounce, spot, 23s; 8-ounce, 19s 6d. B twills, 62s.

HEMP.—Only small transactions were effected in Manila descriptions at about unaltered prices. C grade, December-February steamer, sellers, £54; D grade, £50; E, £47; G, £39; H, £37; J, £37; K, £35 10s; L, £35; streaky, one, £45; two, £43 10s; threes, £40 10s. New Zealand dull. High point fair, spot, quoted, £38; December-February, £35 10s; fair, spot, £35; ditto, December-February, £33. Tow ranges from £15 to £17 per ton. Bristle fibre still neglected, and general position nominal. Indian hemp idle.

SHELLAC, after opening the week quietly, became firmer. Fair T.N., spot, sold, 340s; December, 315s to 335s and 330s; March, 285s to 312s 6d and 305s.

United States Income Tax Returns

NON-RESIDENT Americans and all other persons outside the United States who derive income from American sources and who have not filed United States Income Tax Returns for the years 1918, 1919 and 1920, should, if liable, file such returns within ninety days from November 14.

Assistance in the preparation of their returns will be given by this Company to its customers and others interested. Inquiries should be addressed to the Pall Mall Office of the Company.

pavement.Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's,
37 Avenue de l'Opera. New York: Economist Office, 20 Broad
street (Room 1,709).

THE MONEY MARKET.

THE stagnant condition of trade was still the ruling in-
fluence in the money market. Banks lack outlet for their
funds, and so took three months' bills as low as 3½ per
cent., and though short-dated National War Bonds even
now yield considerably more, the possibility of trade
reviving within the next six months prevents their com-

MENTHOL.—Spot lots quoted 20s 6d; Japanese peppermint oil,
spot, 4s 7½d; aniseed, 2s 2d; Japanese refined slab camphor, 5s;
crude camphor, spot, 4s per lb. Japanese wax, spot, 100s per cwt.

EGG PRODUCTS.—Market dull. Prime liquid yolk, spot, 110s per
cwt, and albumen, 2s 11d per lb.

COPRA.—A steadily improving market with fair inquiries experi-
enced. F.M.S. Straits, December-February, and also January-
March, steamer, to Rotterdam, sold chiefly at £28 to £27 12s and
£27 15s; Ceylon, December-February, London, £29; Cebu, ditto, to
Hamburg, quoted £26 10s; South Sea Islands, ditto to London,
£26 5s. Palm kernels quietly steady, and December-February,
Liverpool, sold, £18 15s.

RUBBER.—Market generally quiet, and standard crepe, spot, sold,
11½d to 11¼d; January-March, 11½d to 1s; April-June, 1s 0½d to 1s 0½d.
Standard smoked ribbed sheet, spot, sold, 11¼d; January-March,
1s; and April-June, 1s 0½d. Fine hard Para, spot, 1s 2½d. Caucho
ball, ditto, 8½d.

OILS.—Linseed irregular. Spot, net, naked, 29s; December,
28s 1½d; January-April, 28s 3d; May-August, 28s 3d. Rape dull.
Crude, spot, 46s; refined, 51s. Cotton firmer. Crude Egyptian, 37s;
Bombay, nominal; common edible, 44s. Chinawood: Hankow, spot
(barrels), 66s 6d; and shipment, 65s. Coconut quiet. Ceylon, spot,
46s; November-December, 43s; Ceylon, ditto, 46s. Soya steady.
Oriental, barrels, ditto, 34s 6d. Japan fish quiet. October-Novem-
ber, cases, 21s. Cod quiet. English, spot, 29s to 31s. Groundnut
quiet. English crushed, naked, spot, 46s; deodorised, barrels, 59s.
Turpentine irregular. American, spot, 69s 6d; December, 69s 6d;
January-April, 69s. Rosin quiet. American, grade B, 16s 6d; F,
16s 9d; G, 17s; K, 18s 6d; WW, 22s; French, F/G, 15s 9d; H,
15s 9d; WW, 18s 6d; extra pale, nominal. Petroleum quiet.
American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OLSEEDS.—Linseed: Market opened firmer, but subsequently
irregular. Calcutta, November-December, sold, £17 17s 6d to £17 5s
and £17 17s 6d; Plate, spot, Hull, quoted, £17 10s; alfalfa, £17 10s;
November-December, sold, £17 to £16 5s and £17 5s; January-
February, value, £16 10s. Rapeseed quiet. Toria, November-December,
£18; real bold Ferozepore quoted £18; brown Cawnpore, £17.
Cotton-seed irregular. Egyptian black, December, sold, £12 15s to
£12 12s 6d; and white, £12 10s to £12 5s. Bombay, December-
January, £9 2s 6d paid. Gingly firm. Chinese, November-December,
Continent, £24. Castor, Bombay, December-January, £16 10s.
Ground nuts quiet. Coromandel, machine-dried, December-January,
Hull, £20; new crop, December-February, Continent, £19 10s.
Chinese decorticated, f.a.q., ditto, Continent, £21 10s to £22 per ton.

METALS.—Tin continued an active market during the greater part
of the week, the tendency being somewhat irregular until last
Tuesday, when cash fluctuated between £169 and £168; three
months', £171 and £169 10s. A slight decline was established on

Wednesday, under selling desire, cash being registered at £167
three months', chiefly at £169. Thursday's market was again easier
while these dates realised £166 and £168 respectively. At Friday's
session prices hardened, dealings being active. Cash changed hands
at £167 15s to £168 5s, and three months' from £169 to £170. English
ingots, £167 to £167 10s. Copper occupied good attention, and
values tended rather steadier until the middle of the week. Standard
cash changed hands to £67 10s; three months' to £68 5s. A rather
lower range characterised Thursday's movements, cash being sold
at £67 5s, and three months' at £68 2s 6d. At Friday's sessi-
standard cash realised £66 15s to £66 17s 6d, three months' £68
£67 17s 6d. Electros, £75 to £76 10s; best selected, £67 10s
£69 10s; strong sheets, £101. Lead firmer at £25 10s to £24 10s
as to position. Spelter steadier at £26 10s to £26 17s 6d. Antimony
English regulus, £36 to £39. Aluminium: Home delivery, £12
export, £12 5s.

TALLOW.—Messrs Colchesters and Woolner write on December 7,
1921, as follows:—The tallow was quiet during the week, and
prices show 3s decline. This brings prices for Australian tallow
to those current for South American. The stock in London on
November 30, as returned by the wharves, amounted to 17,402 packages,
showing an increase during the month of 6,967 packages. At a
to-day 2,395 casks tallow were offered, and 253 were sold. Quota-
tions are:—Australian mutton: Fine, 46s; good to fair, 42s to 40s; dull
dark, 37s to 35s; hard, 44s. Australian beef: Fine, 43s; good
fair, 41s to 38s; dull to dark, 36s to 34s; sweet, 46s. Pr
shipment from Australasia:—Mutton, fair coloured, 48 degs.,
and mixed, 43½, c.i.f., London, 40s. The market letter is lo
tallow 3s, stuff 1s. Town tallow, 35s 6d per cwt. Rough fat, p
lbs, 13d; melted stuff, 23s per cwt. Quotations are:—Town, 34s
net cash, naked, ex works. Country: Frail casks, 30s; h
melted, shipping casks, net, f.o.b., good coloured, none; fair to d
35s to 33s. Bone fat: White, none; pale, none; benzine, 28s
melted stuff, 28s, f.o.b.

peting fully with bills. The rate for renewals of old loans remained at $3\frac{1}{2}$ per cent., but balances were available every afternoon at 2 per cent., and often lower. Apart from bills connected with the seasonal movement of cotton, first-class commercial paper was hard to find, and the scarcity of bills from the East was again remarkable.

* Additional to those offered by tender the preceding week.

Changes in the Bank Return were on a small scale. The gold stock expanded by £3,700 and the note circulation fell by £227,400, so that the Reserve was £231,100 higher. Government securities were reduced by £264,600, while Other securities were increased by £46,300. Deposits were, thus, £11,000 lower, a decrease of £1,873,200 in Other being practically offset by an increase in Public. The circulation of currency notes was increased by £2,614,900 to £318,329,000, which includes £1,763,800 for notes called in but not yet cancelled. The fiduciary issue is £268,615,200, or £48,940,000 below the maximum.

The following table shows public income and expenditure for the week ended December 10, 1921:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	15,610	Supply Services	5,464
Taken from Exchequer Balances	551	Interest on Debt	6,518
		Sundries	980
		Reduction of Debt	3,599
	15,661		15,661

These operations reduced the National Debt by the sum of £3,599,445, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 15,500	Depreciation fund	— 963
National Savings Certificates	+ 500	Surrenders of Bonds, &c.	— 662
		Treasury Bills	— 8,652
		Bank of England Advances ..	— 7,250
		Public Department Advances ..	— 630
		Sundries	— 1,445
	+ 16,000		— 19,599

Customs and Excise yielded £5,499,000, Special Receipts under Miscellaneous £4,534,800, and Property and Income-tax £2,285,000. Treasury Bond sales were again on a large scale, amounting to £15,500,000. The floating debt was reduced £16,521,000, to £1,305,274,000. Advances by the Bank of England were reduced by £7,250,000, leaving £20,000,000 outstanding. Public Department Advances were reduced by £630,000, making the amount outstanding £193,808,000. Treasury Bill sales were £8,641,000 lower than the maturities. Treasury Bills outstanding now amount to £1,091,466,000, against £1,137,604,000 a year ago.

FOREIGN EXCHANGES.

In the foreign exchange market one further stage in the advance towards certainty has been reached by the announcement on Thursday that Germany had officially declared itself unable to meet the next instalment of reparation payments. Although it had become increasingly obvious that without external assistance payment could not be made, the possibility of a loan had for the time being obscured the issue which now has to be faced. Although the news was known in Paris early on Thursday, rates were little affected till the publication in the Press on Friday morning, when the mark rate fell away to 880 from a quotation of 777½ on the previous day.

During the week the quotation had moved from 800 on the 9th down to 692½ on the 12th, in sympathy with the burst of optimism emanating on that day from New York, after which it had remained round about 750. What will happen during the next week depends, of course, almost entirely on the coming conference between M. Briand and Mr Lloyd George. The quotation for future marks is 1 to 3 marks per month under spot, as last week. The franc, almost entirely as the result of American buying, fell away steadily from 53.25 on the 9th to 51.42½ on the 14th. On the following day the general decrease in confidence brought it up again to 51.90, and yesterday morning, as the news from Germany became known in other centres, the rate rose sharply to 53.50. From 55.30 the Belgian franc moved in sympathy with Paris down to 53.55, and is now up again to 55.60. In Paris the quotation for futures has narrowed again still further to par with spot, while Belgium is little changed at 4 to 6 centimes under spot. In New York sterling has had a spectacular week. Starting at 4.10½ on the 9th, and moving up about a cent on the following day it leapt up suddenly to 4.23½ on Monday on the wave of enthusiasm following on the signature of the Four-Power Agreement. From that there was a natural reaction, but on Thursday it remained at about 4.19½. The German news of yesterday morning, however, brought it down again to 4.16½. The position is a difficult one. Unless there are some undisclosed operations at work, as some suspect, the recent movement is one of sentiment alone. At the same time, the rapid decrease in America's trade balance, although it can hardly justify the present level of rates, may be enough, combined with the growing interest shown in foreign investments, to keep the dollar some where near present prices, even if the present optimism dies away. Another definitely adverse political factor, however, would probably send down rates again with a run, and any revival of trade would in itself place a heavy strain on the exchange. The rate for futures is slightly narrower at ½ cent per month over spot. Italy, after a recovery from 93.82½ on the 9th to 89.64½ on the 14th, has reacted like the other Allied exchanges, and is up again at 92½. Among neutral exchanges, Holland and Switzerland moved sharply in our favour, following New York, but the German news sent them against us again, so that yesterday morning Holland was 11.43, as compared with 11.44½ a week ago; Switzerland 21.47½, as compared with 21.25; Madrid, after moving down from 28.69 on the 9th to 27.58 on the 13th, was yesterday up again to 28.25. Among the Northern exchanges, Christiania has dropped from 28.14 to 26.75½, a rapid recovery not reflected either in Stockholm or Copenhagen, where the rates are 17.01½ and 21.55½ respectively, as compared with 17 and 21.67½ a week ago. Helsingfors, at 21.67½, is rather better than the 22.2 quoted a week ago. In Central Europe energetic measures in Austria have brought the London (Auslands-)krone quotation down from about 12,000 to 11,500, while the last Inlandskrone quotation available—26,350 for the 12th—compares very favourably with the top figure of 34,500 quoted on November 30th. In Poland, also, where the new Finance Minister is showing real capacity and determination, the rate is about 12,500, as compared with 13,000, and the relative steadiness at which it has been maintained for some little time shows that the for stability rather than rapid improvement has been realised. Budapest, at 3,000, is some 250 per cent. better than a year ago, and Prague, at 342, and Belgrade, at 270, are also lower. In Bucharest no steps have been taken to cure the present impossible position, and in consequence the lei remains unquoted. Sofia remains about 250 at 575, and Athens is a little higher at 100½. In East India the rupee, at 1s 4d, is about ½d more expensive than a week, the yen, at 2s 3½d, about ½d cheaper. There has been a good deal of business in the silver market, although China was dull, India was buying well. However, supplies were plentiful, and the price has only moved up slightly, to about 35½d. Hongkong shows little change, but Shanghai is 2d cheaper at 3s 6d. In South America Buenos Ayres has dropped from 43½ to 43¼, but Montevideo, at 40½, is ½d dearer. Rio is a little cheaper at 7 17-32, while Valparaiso has moved in our favour from 39½ to 40.60½.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO DECEMBER 10, 1921.			
Total spent	£ 700,502,938	Raised by revenue ..	£ 613,922,388
Dec. in balances	195,197	Net borrowings	86,385,353
Total	700,307,741	Total	700,307,741

ESTIMATES FOR YEAR 1921-22.

Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure ..	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000

Surplus*

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

DECEMBER 10TH.—Chancellor of the Exchequer announces E.P.D. concessions. Four-Power Pact agreed to at Washington.

DECEMBER 12TH.—Text of Anglo-Afghan Treaty published. New York exchange touches 4.24.

DECEMBER 13TH.—Four-Power Pacific Pact signed. Grand juries to be restored after December 22nd. Sir Edgar Speyer denaturalised.

DECEMBER 14TH.—King opens Parliament. Stormy debate at meeting of Dail Eireann. Ulster Parliament prorogued.

DECEMBER 15TH.—Germany asks for moratorium. Naval ratio agreement reached at Washington. Economy Committee's report handed to Chancellor.

DECEMBER 16TH.—Commons ratify Irish Treaty.

During the early part of the week stock markets were buoyant, and improvements were noticeable in most gilt-edged securities. The issue of the Indian Loan, however, checked the rise a little, while Germany's notification of default sent prices down yesterday.

In the cotton market business continues restricted, although a hopeful feeling prevails as to prospects early in the New Year. An encouraging demand is reported in yarns for India. In the wool trade a marked market change is recorded by our Bradford correspondent; depression has given way to a feeling of confidence, and prices of merinos and fine crossbreds have advanced. For pig-iron there is little change in the outlook, and the same remark applies to leading branches of the iron and steel industry. A demand for ordinary house coal is noticeable. Hides made a slight advance in London, although country markets record little change. Raw linseed oil is inclined to be easier, but prices generally in

the market for vegetable oils and oilseeds continue to keep close to previous quotations.

Further particulars of movements in the principal markets from special trade correspondents appear on later pages of this issue.

THE Proprietors of the *Economist* have appointed Mr Walter T. Layton, C.H., C.B.E., Editor of the paper, and he will take up his duties early in the New Year.

CRISES AND POLICIES.

It would be difficult to find a week more crowded with fateful events than the one which is now drawing to a close. It opened with news of the signature of the Four-Power Pact in the Pacific, an achievement that carries with it a high promise of international harmony, and closes with Germany's official statement that she cannot fulfil her obligations to the Allies maturing on January 15th and February 15th next. In the meantime, a titanic struggle has been raging at Dublin over the Irish Treaty between Mr de Valera and his supporters and the Irish signatories. The outcome of the struggle is still in doubt as we go to press, but the general trend of the forecasts is that the treaty will just win the day. In both Houses of the British Parliament sanction by a large majority is now assured, in spite of the fiery denunciation of Lord Carson, while the deliberate, if lukewarm, support of the treaty by Mr Bonar Law in the House of Commons has made it practically certain that the "die-hard" movement in this country will not assume serious proportions. Ulster, as was expected, has decided to cling to her isolation, and is in fighting mood over the boundary question. Thus, while there have been no unfavourable developments which could not have been reasonably expected, we are by no means out of the Irish wood as yet. But whatever the gravity of crises that may yet arise, the Irish problem can never again present quite the same blackness as in past days. The fact that the British Government, with the overwhelming support of the nation, has offered to Ireland a generous form of self-government, which has been accepted by large sections of Irish opinion and welcomed in America and the British Dominions, must at least colour with a brighter hue the complexion of Anglo-Irish relations. Even if, as we refuse to believe, Irish peace hopes are cheated at the eleventh hour, there has at least been built a bridge which will remain for future use.

The new reparations crisis is one that was bound to occur sooner or later, and it is as well, perhaps, that it should occur on the eve of M. Briand's visit to discuss economic policy with Mr Lloyd George, for it emphasises beyond all question the urgent necessity for a definite and united Anglo-French policy, and will provide a definite subject to next week's conference between the two Premiers. The manner in which Germany has brought about the crisis naturally causes temporary resentment among her creditors, for the letter in which Herr Wirth acquaints the Reparations Commission with his Government's decision is a *non possumus* of a somewhat blunt description. But the actual course followed in applying to the Reparations Commission formally for a revision is, of

course, that which is duly prescribed in the Treaty. The letter, as published in yesterday's *Times*, reads as follows:—

SIR,—As I had the honour to explain to the Reparation Commission during its visit to Berlin, the German Government has made every effort to ensure the payment of the two instalments shortly due under the terms of the schedule of payments of May, 1921. In view of the fact that the success of its efforts depended on a foreign loan, and that for a transaction of this nature the active collaboration of British financial circles was absolutely necessary, the German Government opened negotiations in England with a view to this loan.

From competent quarters, however, the reply was received that, as long as the conditions prevailed which at present determined the obligations of the German Government to the Reparations Commission in respect of payments during the coming years, such a loan could not be obtained in England either in the form of a long-dated loan or in the form of a short-dated credit.

Under these circumstances the German Government cannot anticipate the possibility of procuring the sum necessary for the total payment of the instalments of January 15th and February 15, 1922. Even by exerting every effort and without considering the requirements of its own Budget, the German Government cannot procure for the instalments apart from deliveries in kind and the credit derived from the recovery account a sum of more than 150 or 200 million gold marks (£10,000,000).

The German Government is, therefore, obliged to request the Reparation Commission to extend the time limit for the payment of the portion of the instalments of January 15th and February 15th which it cannot pay at those dates. It confines itself to this request, although it realises that similar difficulties will arise in connection with subsequent payments.

I have the honour to be, &c.

(Signed) WIRTH.

Perhaps the most serious point about the letter is that although merely a formal notification, it may arouse, especially in France, and until its true significance has been realised, public feelings calculated to obstruct cool and considered judgment upon the economic merits of the question. It comes, moreover, at a moment when, as our Paris correspondent points out on a later page, French opinion was definitely moving towards the practical point of view, and when a distinguished French audience has favourably received a considered review by Lord Derby of the British attitude. Lord Derby reminded his French hearers that Britain, too, has her devastated regions—regions devastated by unemployment, where factories are silent and millions of men seek vainly for the opportunity of earning their daily bread. But when the first impulse to exasperation is passed, it will be succeeded by the thought that Herr Wirth's crude statement may not be wide of the truth in its financial facts. Germany has raised £10,000,000 by selling marks. If she were to attempt to raise the remainder of the January and February instalments by the same methods, the collapse and dislocation caused might assume proportions that would cause widespread embarrassment.

British financial and industrial opinion may be taken as regarding trade recovery as more important than reparation receipts, but it is not unkind of France's need for ready money or of the fact that the German Government, if it can obtain the support of German industrialists, can probably pay (if innocuous methods can be devised) very substantial sums, at least without the extreme dislocation consequent upon the pursuance of present methods. It is prepared to accept liberal concessions to France in the matter of reparations priority and of France's war debt to Britain if through such concessions a strong and concerted Allied policy can be reached. There is general recognition here, and recognition has recently been growing in France, that a revision of the Reparations Scheme is essential. Germany's announcement of default may strengthen the views hitherto held as to the stringency of the conditions which Germany must accept in return for any revision of the programme; and it will stamp once more on the minds of the business communities of the Allied nations the desirability of preventing this perpetual recurrence of crises, which can only be done if the Allies can in harmony evolve a scheme based on purely business considerations. This latest crisis has come rather more suddenly than was expected. Its arrival may yet prove a blessing in disguise if it spurs statesmen to further efforts to remove from the realm of controversy, at any rate for the time being, this problem, which is the most powerful and persistent irritant of European difficulties.

THE PACIFIC PACT AND THE ANGLO-JAPANESE TREATY.

LAST Saturday the four Great Powers now chiefly concerned in the future of the Far East took a long step towards provision for the amicable settlement of all future differences among them in that quarter of the world and everywhere else. The treaty agreed on between the representatives at Washington of the United States, Great Britain, France, and Japan binds these Powers reciprocally to respect their several rights over their "insular possessions and dominions" in the Pacific, and to initiate a joint conference for the settlement of any dispute between them which cannot be arranged by ordinary diplomatic means. Should any other Power threaten these rights, the signatories engage to take measures in concert to maintain them. The Treaty holds good for ten years from ratification, and may thereafter be terminated by any one of its signatories at twelve months' notice, and, on its ratification, the Anglo-Japanese Alliance is to cease. The abolition of this much-misapprehended Alliance makes for a better understanding between the Powers, clears up the Far-Eastern horizon, and opens the way for more important and comprehensive agreements, in particular for ensuring the integrity of China.

The Anglo-Japanese Alliance was originally devised to avert the partition of the decrepit Chinese Empire, which seemed likely to be set up by the unexpected victory of Japan over China in the Korean War of 1895. Japan was compelled to give up the chief fruits of her victory by the joint action of Russia, France, and Germany, and for the next seven years China was threatened with one of two alternatives—either partition into foreign possessions and "spheres of influence," or maintenance as a single State with equal opportunities of commerce for all nations alike. British policy seemed at times to hesitate between these alternatives; but to ensure the latter an Anglo-Japanese Agreement was suggested by Mr Chamberlain and other British statesmen, and brought about in January, 1902, by Count Hayashi, partly by a hint that Japan might otherwise come to terms with Russia. By it Great Britain and Japan declared that they aimed at maintaining the *status quo*, the open door, and the territorial integrity of China and Korea. They recognised that they both had special economic interests, Great Britain in China, Japan in both countries, while Japan might be threatened politically were Korea occupied by a third Power and made into a base for attack on herself. Were either ally constrained through foreign aggression or Chinese unrest to defend these interests, and thus drawn into war with one other Power, the other party to the Alliance was to remain neutral and attempt to keep other Powers from joining the aggressor. If, nevertheless, a second Power should join in the attack, the Allies would make common cause in their own defence.

Two years later the Russian "expansionists" forced Japan to defend her Korean interests in a war which brought disaster to Russia. Korea, impotent to govern herself, became a Japanese possession, and the Anglo-Japanese Alliance was renewed during the peace negotiations in August, 1905, and published on their close. Its aims were defined more precisely, and were extended to include the special interests of the Allies in Eastern Asia and India. Japan was given a free hand in Korea, Great Britain in Indian frontier defence, the provisions for joint co-operation were made more specific, and the *casus fœderis* was to operate on aggression by one Power, provided that it was unprovoked. The Alliance was again declared to aim at the preservation of peace. The Treaty was renewed for ten years certain, and thereafter might be terminated by either party on twelve months' notice; it was again renewed in 1911, with a provision precluding the contingency that it might set up war between Great Britain and the United States; and it constituted one reason for the entry of Japan into the world-war, though, as Great Britain was technically the assailant of Germany, the *casus fœderis*, strictly speaking, had not arisen. Recently the parties promised to bring it into formal accord with the League of Nations Covenant—a need now obviated by its abolition. But the implications of a Treaty, actual or hypothetical, count for more than its stipulations; and the hypothetical implications, for students

of politics, count most of all. To many publicists on the Continent and in Great Britain, Japan has seemed bent on controlling and exploiting China at once, and all Asia by and by. To American and Australasian observers she has seemed eager to flood America and Australasia with her immigrants, and to have had an eye on the Philippines and other Pacific islands as stepping-stones. A German Professor has denounced Great Britain as betraying the white races by preparing to use the Japanese army for her own ends in the Far East and India, and in return to allow Japan to gain a foothold in China which would ultimately facilitate British ruin. These suspicions, or some of them, might conceivably be justified if Japan were entirely controlled by her militarist prophets of expansion. The best proof that she repudiates their policy is her acceptance of the substitution of three Powers for one in a pact blocking a policy of expansion. The alliance has been beneficial in some respects, but of late it has been a cause of friction, owing to the interpretation placed upon it in America and elsewhere. Its supersession by the new and wider pact to which both parties enter in company with the United States and France is one of the most hopeful symptoms of world politics which has been seen since the war.

OVERSEAS TRADE IN NOVEMBER.

IN view of the amount of talk recently current about improvement in trade, the November trade returns are a little disappointing. July, August, September, and October each saw a substantial rise in export value figures, the average advance being about £6 millions per month. In November British exports at £62.9 millions were only some £600,000 better than in October, while imports declined by half a million, leaving the net gain total exports of only a trifling character. Imports, on the other hand, rose by about £4½ millions to £89.3 millions, which is the highest figure since April last, since when, of course, the decline in commodity prices has been very pronounced. A summary of the value figures for November and the first eleven months of 1920 and 1921 reads as follows:—

	MONTH OF NOVEMBER.		
	1920.	1921.	Decrease in November, 1921.
Imports	£ 144,238,100	£ 89,258,795	£ 54,979,305 — 37.4
British exports	£ 119,364,994	£ 62,894,842	£ 56,470,152 — 47.2
Re-exports	£ 13,114,859	£ 9,823,199	£ 3,291,660 — 25.1
Total exports	£ 132,479,853	£ 72,718,041	£ 59,761,812 — 45.0
Excess of imports over total exports ..	£ 11,758,247	£ 16,540,754 +	£ 4,782,507 + 40.7

In October the import excess only slightly exceeded £12 millions—the smallest balance of the year on the published merchandise figures. In November it was £16½ millions, but this is well below the average monthly import excess of the present year to date, which works out at about £23½ millions per month, against about £31½ millions per month in 1920. It was estimated in 1920 that invisible exports for that year were sufficient to fill up the gap and leave a comfortable margin on the favourable side. Certain optimistic forecasts, semi-officially put out

at the beginning of this year as to invisible exports. In 1921, must, of course, be subject to severe revision owing to trade and shipping stagnation. But that revision would have to be very drastic indeed if it were to reduce invisible exports to a sum insufficient to balance or more than balance the declining import excess in the exchange of merchandise.

Compared with October figures the feature of the import accounts is an increase of £8½ millions under the heading of "raw materials and articles mainly manufactured," imports of food and manufacturers being lower in value. The following instances are taken from the returns to illustrate the increases in takings of raw materials in November, as compared with the previous month:—

	Quantities Imported In—	
	Oct., 1921.	Nov., 1921.
Raw cotton	732,771 cwt.	1,950,263 cwt.
Sheep and lambs' wool ..	571,061 cwt.	672,180 cwt.
Jute	4,730 tons	11,424 tons
Raw silk	49,710 lbs.	55,168 lbs.
Flax	874 tons	2,657 tons
Hemp	6,240 tons	6,668 tons
Dry and dyed hides	42,356 cwt.	45,043 cwt.
Pulp of wood	46,942 tons	66,232 tons

The list is capable of considerable expansion. There are, of course, examples to the contrary, raw rubber imports in particular having fallen off in November. Some of the increases in raw material imports may be due to seasonal and incidental movements. But the cumulative effect is noteworthy. A revival in trade will entail increased imports of many raw materials, and the fact that this increase appears to have begun, even if only in a small way, may perhaps be taken as a favourable sign.

On the export side coal shipments were rather larger in quantity than in October, but the export market is still slack. The value of iron and steel and manufactures thereof exported in November was over half-a-million sterling better than in the previous month. Machinery and cotton goods also show up rather better in the value figures. The textile machinery figures are remarkable. Shipments of textile machinery in the 11 months have amounted to a value of £22,908,180, the corresponding figures for 1920 and 1913 being £6,952,871 and £7,597,565. Imports and exports of coin and bullion for November and the eleven months have been as follows:—

	Gold.		Silver.	
	November.	11 Months.	November.	11 Months.
Imports	£ 3,914,073	£ 47,157,897	£ 1,490,092	£ 9,956,837
Exports	£ 4,037,349	£ 55,727,585	£ 1,786,346	£ 11,019,871

Below will be found tables setting out under their official classifications the value figures for imports and exports in November and the first eleven months of 1920 and 1921:—

	IMPORTS (Value C.I.F.).		Exports (Value F.O.B.).	
	Month Ended November 30.	Eleven Months Ended November 30.	Month Ended November 30.	Eleven Months Ended November 30.
	1920.	1921.	1920.	1921.
I.—Food, Drink, and Tobacco—				
A. Grain and flour	£ 19,597,030	£ 9,331,730	£ 217,031,260	£ 130,873,959
B. Feeding stuffs for animals	£ 641,875	£ 8,065,573	£ 6,042,479	£ 125,239,352
C. Meat	£ 11,033,687	£ 6,721,478	£ 123,113,646	£ 2,742,799
D. Animals, living, for food	£ 13,957,351	£ 13,402,081	£ 156,189,624	£ 152,774,092
E. Other food and drink, non-dutiable ..	£ 14,454,559	£ 9,301,508	£ 165,167,904	£ 89,619,158
F. " " dutiable	£ 1,732,748	£ 1,601,686	£ 34,184,496	£ 21,082,557
G. Tobacco	£ 61,477,250	£ 41,245,970	£ 708,753,503	£ 528,374,396
Total, Class I.	£ 144,238,100	£ 89,258,795	£ 1,490,092	£ 9,956,837
II.—Raw Materials and Articles Mainly Unmanufactured—				
A. Coal	£ 779,924	£ 406,707	£ 8,697,476	£ 5,975,615
B. Other non-metallic mining and quarry products and the like	£ 1,201,188	£ 354,738	£ 19,101,419	£ 4,762,741
C. Iron ore and scrap	£ 1,930,704	£ 501,278	£ 16,503,298	£ 7,636,717

THE IRISH LABOUR MOVEMENT.

(BY OUR LABOUR CORRESPONDENT.)

POLITICS have so dominated Irish affairs that the fact that there is a Labour movement in Ireland has been overlooked. Yet Irish Labour has been an important political factor. Though it has kept its own identity and its own organisation and formulated its own policy, its active spirits have been closely identified with the Sinn Féin movement, and there can be no doubt that much of the strength of Sinn Féin has been due to the backing of the rank and file of the organised Irish workers.

Whilst in this country the political and industrial side of the Labour movement are separately organised, in Ireland there is a single body—the Irish Labour Party and Trades Union Congress. The Irish Trade Union Congress, which was founded in 1894, was originally a body similar in its constitution and methods to the British Trades Union Congress. At the Congress in 1912, however, a motion in favour of the organisation of the Irish workers into a distinct political Labour Party was carried by a large majority, and the Congress executive was made responsible for the political activities of Labour as well as for co-ordinating trade union policy and activities. In 1918 the constitution was revised and the present name adopted. At the present time the affiliated membership is 300,000. The total number of wage-earners in Ireland over 18 years of age is about 650,000.

One-half the workers who are members of organisations affiliated to the Congress are enrolled in the Irish Transport and General Workers' Union, founded in 1909. Jim Larkin, whose name is associated with the bitter strike in Dublin in the year before the war. The I.T.G.W.U. has, from its birth, stood for the idea of "one big union" for all workers. To-day, with a membership of 150,000, it is by far the largest and most powerful union in Ireland. The remaining organised workers are distributed over a number of unions, some of them with but a small membership. A substantial portion of the Irish trade unionists are members of British unions, such as the National Union of Railwaymen, the Associated Society of Locomotive Engineers and Firemen, the Amalgamated Society of Woodworkers, and the Workers' Union. There are also about 10,000 organised workers in the Belfast area who are attached to the Irish Labour Party and Trades Union Congress, and are politically "Unionist Labour" and O. T. members. Even in North-East Ireland there are important organisations affiliated to the Congress.

Irish trade unionism possesses a degree of discipline which exists in no other country. In April, 1918, a one-day strike was called, at short notice, to protest against the imposition of conscription in Ireland. Apart from the Belfast zone, the country stood still. Again, in May the following year a general stoppage of one day was declared, and was as unhesitatingly and unanimously carried out. In April, 1920, the national executive of the Irish Labour Party declared at twelve hours' notice a general stoppage of work as a protest against imprisonment without trial, and for two days, with the exception of the telegraph and humanitarian occupations which were specially exempted, Ireland stopped work, and over a hundred political prisoners were released from Mountjoy Prison. These spectacular strikes illustrate the authority wielded by the executive of the Irish Labour Party and Trades Union Congress and the solidarity of the Irish Labour movement. The railway strike of last year failed in its object because troops, police and munitions were conveyed by Government motor transport. In the famous Dublin stoppage of 1913, the workers, judged by the results, were badly beaten, but in the struggle between Jim Larkin and W. M. Murphy, banker, draper, hotel proprietor, tramway and railway director and newspaper proprietor, Irish Labour entered on a new chapter in its history, and the Irish Transport Workers' Union became the most militant organisation in Ireland.

Out of the Dublin struggle grew the Irish Citizen Army and ultimately, largely through the influence of James

Conolly, the friendly understanding between Irish Labour and Irish Republicanism. In the rebellion of 1916, James Conolly was wounded, and afterwards executed. Since the Dublin rising many trade unionists have been imprisoned without trial or been shot, and several trade union offices destroyed by fire. It is not denied that the overwhelming majority of Irish trade unionists are Republicans. At the General Election in 1918, when the dominant issue was the Sinn Féin demand for a republic, the Irish Labour Party did not promote Labour candidates, the rank and file giving their support to the Sinn Féin candidates. In the local elections, however, Labour candidates have been put forward. In January, 1920, there were municipal elections in about 120 towns. 11,736 seats filled, 341 went to Labour Party candidates, 126 to trade unionists elected on other than "the four tickets," mainly as Republicans. In May and June, 1920, at the County Council and Rural District Council elections 513 Labour candidates were returned. In Ulster, at the local elections, of 565 seats to be filled, no less than 106 were secured by Labour candidates, by what were called anti-Carsonite Labour candidates in contradistinction to "Unionist-Labour" candidates.

Once the political problem in Ireland is settled, Irish Labour will need to adapt itself to the new circumstances. Though, as has already been pointed out, the Labour movement has its supporters in Belfast, political and religious differences have developed into open warfare at Belfast shipyards, where the Catholic, Nationalist, Sinn Féin and Labour employees have been bitterly opposed by their Orange fellow-workers. Difficulties have arisen in the Irish sections of British unions. The National Union of Railwaymen, for example, has both Orange and Sinn Féin branches in Ireland, and the feud between the two camps in Ulster has been a source of embarrassment to the British Trades Union Congress. When a political settlement is finally reached, the Irish Labour Party will look to the gradual cessation of hostilities between the workers in North-East Ireland, and efforts will be made to unify the whole movement. This is clearly a matter of time. It is equally certain that there will be a forward movement both industrially and politically. The executive of the Labour Party was instructed some years ago to work out a plan for "a single-inclusive Irish Workers' Union," which would amalgamate all sections of the organised workers in a comprehensive organisation. The idea of "one big union" of all workers lay behind the efforts of Larkin and Conolly in their work on behalf of the Transport Workers' Union; but the difficulties of war-time and since have prevented any serious attempt at its realisation. No doubt the proved organisation of the trade union movement will in the near future engage the serious attention of Irish Labour. There will also be a concerted policy for improving the economic conditions of the Irish workers. Though during the unsettled times through which Ireland has recently passed Labour conditions have not been left to take care of themselves, nevertheless, the political struggle has prevented the trade unions from giving undivided attention to the economic interests of their members.

The settlement of the question of the form of Government will result in a regrouping of political parties in Ireland. There is certain to be a strong Republican party, and as the Labour Party in Ireland is also predominantly Republican, some confusion will be created, and it may be that here and there Labour men who attach prime importance to Republicanism will throw in their lot with the Republican Party. This, however, may not weaken the political influence of the Labour movement. Its effect may be to create a bond between the Labour and Republican parties. The strength of the Labour Party on local bodies in Ireland, where they hold about four-fifths of the seats, is an indication that in the Irish Parliament Labour will occupy a prominent place, though it is difficult to say how large a Parliamentary party they will form in the early days of the new constitutional arrangements. It is, however, certain that both industrially and politically Labour is an effective force in Ireland, and that, with the settlement of the political problem, its influence will steadily increase.

ARGENTINE LAND COMPANIES.

In previous review of land companies operating in Argentina we have pointed out that these companies may be roughly grouped into two classes, the first group consisting of undertakings which farm their own land and develop its resources, and the second being more concerned with selling land or financing cultivators. The distinction, however, appears to be gradually disappearing, and companies are inclined to develop their resources in the most expedient way. Last year, owing to the rate of exchange, we showed that out of total aggregate profits, amounting to £868,315, for five of the companies' accounts analysed in our article, £149,889 represented profit arising from favourable exchange rates. This year the swing of the pendulum has brought adverse rates for the companies, and these windfalls belong to the past. Indeed, the Cordova Land shows a change over from a profit on exchange last year of £47,280 to a loss on exchange this year of £5,357. This almost leads one to ask the question as to what extent a company trading in a foreign country should reckon differences on exchange fluctuation as profits immediately available for distribution. There may be perhaps something to say for the contention that such differences should be credited to reserves, at least until erratic exchanges show some sign of becoming more stable.

An interesting picture of agricultural conditions can be gleaned from a perusal of the reports of the companies which comprise the group of representative Argentine land undertakings whose accounts are analysed in the tables given below. But first we present a summary of the gross revenue and net profits of these companies for their last three financial years:—

	Year Ended.	1918-19.		1919-20.		1920-21.	
		Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.	Trading Rev'ue.	Net Profits.
Argentine Land and Investment.....	June 30	£ 87,167	£ 59,692	£ 135,594	£ 98,844	£ 94,030	£ 65,772
Argentine Southern Land.....	June 30	144,919	54,025	224,087	94,134	172,500	33,463
Cordova Land.....	Sept. 30	156,828	61,520	214,565	125,887	131,558	40,458
Forestal Land, Timber, and Railways.....	Dec. 31	1,147,137	615,980	1,433,351	992,381	754,335	560,261
Leach's Argentine Estates.....	Mar. 31	353,516	262,069	282,870	171,959	176,245	81,727
Rio Negro.....	June 30	60,608	28,021	182,772	88,692	82,103	18,713
Tecka.....	June 30	85,529	33,671	130,614	57,703	77,951	20,731

The Cordova Land Company, whose accounts are given for the year ended September 30th last, in their report state that "the market for cattle has been in an unsettled state throughout the year; labour troubles caused a temporary cessation of shipments from the River Plate during the first six months, whilst a subsequent spell of exceptionally dry weather compelled many breeders of cattle to send heavy consignments to market, prices thereupon receding to a very low level." The average price for all classes of cattle sold by this undertaking was £10 4s 5d per head. This compares with £15 18s 6d per head for the previous year, and an average price of £12 12s 5d per head since the formation of the company. The Rio Negro points out that "the period under review has been one of great difficulty," stating that "with the exception of rains in the early winter" the year "has been one of extreme dryness, the average moisture over the 840,142 acres in the south owned and leased by the company having amounted to under 3.5 inches." The chairman of the company has stated that he would be satisfied with 8 inches of rain a year, but with less than 50 per cent. of such a minimum a satisfactory return on capital cannot be earned. The Tecka, in pointing out the combination of adverse circumstances which it had to contend with, observes that "the unprecedented position of the wool market throughout the world has seriously affected the company's main source of revenue." Leach's Argentine Estates, in its report for the year ended March 31,

1921, deploring that "Severe frosts were experienced throughout the sugar-growing district, and the total crop of the Republic yielded only 209,653 tons, but to this the company contributed 13,132 tons. It is pointed out in the accounts of the Argentine Southern Land that the development of further lands makes it difficult to compare accounts of one year with those of another, and for this reason we refrain from comment. That land sales were a rather more active feature may be judged from the fact that the Argentine Land and Investment Company announce that sales of land "in the Original Concession during the year amounted to 1,446 acres for the sum of £7,446, against 648 acres and £4,039 in the previous period."

In our next table we extract from the balance-sheets the most important items in liabilities and assets, and group them under the following headings:—

	Liabilities.			Assets.		
	Capital, Debentures, and Loans.	Reserves and Undivided Profits.	Creditors.	Land and Property.	Stocks, Produce, &c.	Investments and Cash in Hand.
Argentine Land and Investment	£ 488,075	£ 189,683	£ 68,000	£ 246,990	£ 16,063	£ 411,074
Argentine Southern Land	500,000	149,364	34,793	504,001	87,858	82,092
Cordova Land	1,494,872	116,808	62,357	1,560,377	..	80,333
Forestal Land, Timber, & Rlys	5,165,312	2,788,226	1,666,738	4,036,506	2,720,481	2,355,348
Leach's Argentine Estates	1,829,440	486,413	292,003	1,994,663	352,926	71,035
Rio Negro Land	500,000	74,579	33,111	246,109	54,762	121,054
Tecka Argentina	200,000	87,603	25,962	213,103	28,057	72,402

Leach's Argentine Estates continue to show the item "Goodwill" under assets at £132,700. This intangible asset, we would suggest, might be reduced. In Forestal Land and Timber under investments we have included holdings in associated undertakings, amounting to £978,417, "at cost," but War Loan and Bonds are taken at "market value," while other investments are mentioned as £112,892, without further information as to method of valuation. In addition to reserves shown above for this company there is a depreciation account amounting to £1,053,265, while debenture issues which appeared in the balance-sheet for the year ended December 31, 1919, at £2,224,332, are now reduced to £12,477, although it should be mentioned that preference and ordinary capital has increased from £3,606,985 to £5,152,835. In the case of the Argentine Land and Investment, mortgage loans and accrued interest totalling £188,310 have been included under investments and cash in hand. The local auditors of this company report that a large number of colonists and purchasers of town lands are still in arrear with payments. But balances outstanding for colonists' land, rent and interest amounted to but £38,609, as compared with £58,723 a year ago, while land instalments unmaturing stand at £20,359. Cordova Land lump together in one item land, buildings, cattle, horses, sheep, &c., and give "Investment at cost," £20,848.

In our next table we show how profits have been allocated for the past year, and submit similar figures of a pre-war year for purposes of comparison:—

	1913-14.			1919-20.		
	Dividends, &c.	To Reserve, &c.	Carried Forward.	Dividends, &c.	To Reserve, &c.	Carried Forward.
Argentine Land and Investment	£ 15,717	£ 25,000	£ 481	£ 54,032	£ 10,000	£ 1,664
Argentine Southern Land	19,600	..	13,775	25,000	..	8,463
Cordova Land	43,935	..	31,376	54,404	..	13,947
Forestal Land, Timber, & Rlys	356,661	22,790	5,304	525,583	300,000	265,321
Leach's Argentine Estates	21,000	..	..	60,000	20,000	1,727
Rio Negro Land	..	..	6,094	21,000	..	2,237
Tecka Argentina	..	1,000	3,490	14,000	..	6,732

Allocation to reserves are naturally not on the generous scale prevailing last year. Indeed, some companies, as our table shows, have not been able to provide further in this direction. The amount apportioned for reserve for the Forestal Land and Timber is for "Excess profits duty, income-tax, and corporation profits tax." In a statistical statement issued by this company the net addition to reserve for 1920 is stated as £691,697, exclusive of the abovementioned £300,000.

We conclude with a table showing dividends for the past three years, and a record of share prices:—

Name and Amount of Share.	Dividends.				Prices.				Present Yield.
	1917-18.	1918-19.	1919-20.	1920-21.	July 27, 1914.	Nov. 22, 1920.	Dec. 12, 1921.	Dec. 12, 1921.	
Argentine Land & Inv't, 10s	5	12	15	10	1	1 1/2	1 1/2	1 1/2	12 6

* Free of income-tax.

That while paying interim preference dividends January next, it had been decided to propose "consideration of a dividend payment" on ordinary shares "owing to adverse trading conditions prevailing throughout the current year," was the recent announcement of Forestal Land, Timber, and Railways, which tersely apply sums up the situation.

The outlook is not without some redeeming feat. "Prospects for the current year's clip are excellent according to latest reports, "both as regards quantity and quality," and it may be that with an improvement in British and Continental demand for Argentine produce, and let us hope, foreign exchanges tending towards a degree of stabilisation, troubles will gradually away.

Business Notes.

An E.P.D. Concession.—Sir Robert Horne, speaking Newcastle last Saturday, announced a concession regard to the payment of outstanding arrears of export profits duty. The Chancellor said: "With a view assisting industry in the present difficulty I intend propose to the House of Commons, in connection with Finance Bill of next year, a scheme for spreading payment of the outstanding arrears of excess profits duty, suitable cases over a period of five years from a fixed date which I propose should be January 1st next. Payment of the duty, in those cases to which the scheme is applied, will be made in full within that period of five years, quarterly instalments each year, the first instalment being payable before March, 1922. I propose that interest payable in cash at the net rate of 5 per cent. and without allowance for income-tax, should be charged from the fixed date upon all outstanding arrears as assessed, whether falling within the scheme I have adumbrated or not. A right of appeal to the Special Commissioners of Income-tax will be afforded to any payer whose application to be allowed to come under the scheme has been refused, the decision of those Commissioners on appeal being final. In the meantime, pending the passing of the necessary legislation, effect to this proposal, should the House of Commons assent to it, I have instructed the Commissioners of the Revenue as far as possible to give effect to this proposal to many concerns. It will also reduce prospective cheque receipts from this source in the financial year 1921-22."

Iron and Steel Output.—The National Federation Iron and Steel Manufacturers states that the production of pig-iron in November showed a further slight rise, 271,800 tons (compared with 235,500 tons in October), but is still much below the production immediately before the coal stoppage and less than 40 per cent. of the production in the autumn of 1920. Or 85 furnaces were in blast at the end of the month compared with 82 at the beginning of the month, having suspended and five resumed operations during the month. Before the stoppage 109 furnaces were in blast and in the autumn of last year over 300. Of the pig-iron produced, 90,300 tons were hematite, 80,500 tons basic, 79,100 tons foundry and 15,000 tons forge. The production of steel in November amounted to 442,800 tons, the highest output attained since February, but only 50 per cent. of the production of September, 1920.

The Home Railway Position.—A Stock Exchange correspondent writes:—Stock Exchange speculation is accustoming at this season of the year to concern itself with dividend estimates in respect of the ordinary stocks of the home railway companies, and the fixing of January 15th next as the date on which it is proposed to hand over the first instalment of 24½ million pounds amongst railway companies has revived interest in the dividend calculations of the market. A month ago gloomy predictions were current in regard to dividend possibilities. Preference stocks in various home railway companies had fallen to levels at which they offered an average of 7½ per cent. on the money to those who at that time were sufficiently courageous to make purchases of such stocks. There was also a fair amount of debenture stock on offer, and the atmosphere, together with market prices, had become charged with doubts, which deepened into depression. To-day, the actual quantity of home railway debenture stock which is on offer in the market is literally negligible. The preference stocks are also being absorbed at a rate which has left jobbers' books bare of supply.

One day this week rises occurred in 65 prior-charge stocks of the home railway companies, and other days have contributed their quota to advances ranging from 1 to 3 points per diem. The market for ordinary stocks has not kept step with that of the prior-charge issues, and some of the deferred issues still languish, owing to the continued fear that they may have to go dividendless in respect of the current twelve months. The market sentiment in connection with the dividend outlook has changed, and, apart from the derided stocks, the general conviction to-day is that the companies will have no difficulty in meeting their debenture interest, nor are they likely to pass the payment of dividends on the preference stocks. The substantial amounts which the railway companies will receive under section 12 (1) (a) serve to relieve the fears that were current a month ago. The North-Western stands to get over three million pounds, both the Great Western and Midland nearly three millions apiece, the South-Western, Great Northern, Great Eastern, South-Eastern and Great Central are all down for a little over a million each, the North-Eastern for £2,375,000, while there is an extra £1 million pounds to be distributed amongst those companies which suffered abnormally from standardisation of wages and pay, hours of duty and other conditions of service. This is the first instalment, of course, of the money set aside by the Government for payment to the companies, the other moiety falling due a year after the first. Consequently, the market is ready to accept it as an almost practical certainty that the interest and dividends on the prior-charge stocks of the stronger companies will be paid next month. More obscurity lies around the chances of the ordinary stocks, though here again a mild hopefulness has taken the place of the profound pessimism in which the market was sunk quite lately, and now it is cautiously hoped that the dividends to be declared next month on the ordinary stocks may not be much less than those of a year ago. Prophecy on this point, however, wisely prefers not to enter into precise details. Several of the home railway companies are known to be contemplating new issues of capital. Holders of existing stocks are tempted to look a little askance at the likelihood of prior-charges being put in front of their present securities; but it is pointed out in the Stock Exchange that unless the railway companies can obtain the money they require for extensions and upkeep, they cannot hope to continue earning profits for distribution on the same scale as that which prevailed before the war.

Indian Fiscal Commission.—A few months ago the Indian Government appointed a commission of inquiry into the future fiscal policy of India. It is now reported the members of the Commission have started upon a tour, and visits will be made to the leading cities of the Dependency. On behalf of the Commission, a list of questions for witnesses has been compiled, and these number over eighty. The chief questions refer to the desirability of Free-trade or Protection; to the question whether a tariff provides a more or less suitable form of taxation for India than direct taxation; to the effect the existing tariff

policy has had on Indian industries in the past. The Commission is also anxious to ascertain to what extent, in the opinion of witnesses, India may look forward to becoming in time independent of other countries in regard to her requirements of manufactured goods. Witnesses are also to be asked if they think that, if a protective policy is adopted, it is likely that British or foreign industrial firms will endeavour to establish themselves in India in order to get the benefit of the protective tariff. Opinions are to be ascertained as to what effect a policy of protection would have on the foreign trade of India and on the general commercial position and prospects of the country. It is understood that the question of Imperial preference is to be discussed, and inquiry is to be made as to whether a system of this kind is likely to increase or diminish the total volume of Indian imports or exports, or to alter appreciably the proportion between them, and thus effect the balance of trade.

American Cotton Statistics.—For some years the Department of Commerce of the United States Government has collected information relating to the cotton crop during the growing season, and in addition to condition reports being published, figures have been issued from time to time relating to the amount of cotton which has passed through the ginneries. It is now apparent that the statistics for this season have been very unreliable. Early in October it was stated that on the basis of the information available the growth would be only 6,500,000 bales. A little later the ginning figures showed that the forecast was quite incorrect. At the beginning of this week, writes our Manchester correspondent, the Agricultural Bureau officially estimated the crop at 8,340,000 bales, exclusive of linters, which means that the commercial yield will probably be about 9,000,000 bales. It is understood that the discrepancy in the figures is due to a miscalculation of the acreage. At the beginning of July this was forecasted at 26,578,000 acres, but the estimate has now been revised, and the area under cultivation is given as 31,427,000 acres, as compared with 37,168,000 acres in 1920. All people interested in cotton supplies have been very seriously misled by the inaccuracy of the information published. During September there was an important rise in prices on the bad crop reports, and it is of interest to mention that even farmers in the United States did not sell freely at the higher values, as it was believed that rates would go still higher before the end of the season. Lancashire traders are disgusted at the state of affairs, and undoubtedly statistics from the United States Government in the future relating to cotton will be discredited. At the beginning of July, fully middling American cotton in Liverpool was being sold at less than 8d a lb. Towards the end of August there was a distinct advance, and by September 29th the price had risen to 15.71d per lb. A little later it was apparent that there was no justification for the advance, and owing to selling pressure, a decided downward movement occurred, until 10.40d was registered on November 18th. Since then prices have varied somewhat, the official quotation on Wednesday last being 11.16d.

Debentures and Mortgages.—The propriety of describing a security as a "first mortgage debenture" when the land and other property on which it is made a specific charge is already subject to a mortgage was discussed in a recent

"Note" in the *Economist*. Though possibly legally correct, this course might, it was suggested, lead some investors to imagine that there were no prior charges whatever on the property. Debenture is not a word the meaning of which has been reduced to precision by legal definition. A debenture is a bond or other documentary evidence of a debt, owed usually by a company. The debenture may or may not charge any property as security for the debt. If it does charge property, the charge may be specific or floating. A specific charge, duly registered, definitely and at once attaches to certain property, but a floating charge, it is now well established in English law, is an equitable charge on the assets for the time being of a going concern, which remains dormant until the undertaking charged ceases to be a going concern, or the holder of the charge intervenes in pursuance of his rights. It then ceases to float, and crystallises. Though a floating charge is an immediate and continuing charge, it leaves the company free to deal with property in the ordinary course of its business, and, unless otherwise agreed, leaves the company free also to create specific mortgages ranking in priority to the floating charge. A floating charge often does restrict the power of mortgaging, but it is inferior as a security to a specific charge. Nevertheless, where a specific charge ranks after a first mortgage, the holder of the debenture which creates the specific charge (or the holders of debenture stock issued upon the basis of the debenture) may find that the investment is not very well secured. The holder of a debenture worded so as to create a specific charge ranking after a first mortgage is a second mortgagee, and his position necessarily has all the disadvantages of that of a second mortgagee. The fact that the debtor is a company does not make the case different in principle from that of a second mortgage by an individual. The disadvantages in question are shortly, that, if land is concerned, the title deeds are in the hands of the first mortgagee, and that, whatever the nature of the property, the first mortgagee may exercise his power of sale (when it arises) without consulting any but his own interests, or he may foreclose his security. The second mortgagee may then, in either case, lose his security altogether unless he is in a position to redeem the first mortgage by providing the necessary funds. If the first mortgagee and the debtor act together their arrangements may be prejudicial to the interest of the second mortgagee. If the debtor is a company, the directors may be in a position to act in the company's name in doing what would be against the interests of debenture holders entitled to the benefit of a second mortgage. Under the articles of some companies the directors hold all the powers of the company other than those required by statute to be exercised in general meeting. That was so in the circumstances which came before the Scottish Court of Session in *Bruce Peebles v. Bain* in 1918, where a provisional agreement had been entered into between the company's creditors and the directors in the name of the company, though the company had not been consulted. The practical point for an investor is that, in considering the degree of security offered on an issue of debentures or debenture stock, the position of second mortgagee is not a strong one, but, of course, a number of points must be taken into account in forming an opinion. The terms of the deed appointing trustees for the debenture holders are material. The security may be good, though there is no mortgage, as in the case of English railway debenture stock, where the power to put the property in the hands of a receiver on default in payment of interest provides the security. (Receiverships of American railroads are, of course, quite another thing.) Provision for a sinking fund is another point which may be material in a trust deed. Thus, while attention should not be restricted to the one question, it is clear that a debenture issue which depends in the main for security on the fact that it rests on a specific charge, may not be well secured if that charge ranks after an existing mortgage.

Cost of Agricultural and Fishery Research Work.—The eleventh report of the Development Commissioners for the year ended March 31st last has recently been published. The report gives in detail agricultural research, experimental and advisory work undertaken, including interesting summaries of a few rural industries. Considerable

space is devoted to activities in connection with development and improvement of fisheries. The balance a credit of the development fund on April 1, 1920, taking investments at cost, was £1,175,243. Receipts during the year amounted to £204,316, which sum included £71,247 described as "profit on investments." Payments amounted to £584,102, of which £568,852 represented advances by way of grant and loan, while administration expenses absorbed £15,250. Thus a credit balance of £795,457 is left. Against this balance there must be set estimated liabilities of £550,000 in respect of advances recommended or promised.

Mexican Railway.—The directors of the Mexican Railway Company, Limited, announce "that it is impossible in the circumstances of the Company to discharge in full the liabilities in respect of the deferred interest certificates," except "to the extent of a payment of a centage of the certificates representing interest on 6 per cent. debenture stock." It is proposed to pay 20 cent. of debenture stock interest certificates in cash, the remainder by the issue of two "new series of registered stocks," the first section payable without interest or before December 31, 1925, while holders of second debenture deferred interest certificates are offered the whole amount in stock payable without interest in 1928. Meetings of holders of the various descriptions of securities are to be held on December 21st, and "the directors strongly recommend the debenture stock and debenture holders and certificate holders to support these proposals. A Stock Exchange correspondent, however, considers that the "scheme now put before the holders of the deferred interest certificates of Mexican Railway is an extremely unfair one. Holders of both classes of deferred interest certificates have right to be repaid at par, plus accrued interest, less tax, before any interest is paid on the 6 per cent. debenture stock or the second debentures." He points out "Condition 7, printed on both classes of certificate reads: 'No interest in respect of any period is to be paid on any 6 per cent. debenture stock or 4½ per cent. second debentures until all interest for any previous period in respect of such stock or debentures as the case may require (including in the case of interest represented by certificates issued under the second scheme the interest aggregated therewith for the purposes of the third scheme) has been paid or provided for.' Our correspondent's complaint is that 'it is now proposed to reduce payments in cash on the 6 per cent. debenture stock and second debentures. But the 6 per cent. debenture stock deferred interest certificate holders are asked to accept only 20 per cent. in cash, and the balance in non-interest-bearing stock, redeemable on or before December 31, 1925, while the second debentures deferred interest certificate holders are offered no cash at all, but only non-interest-bearing stock, redeemable on or before April 1, 1928.' The writer concludes:—'I protest against this arrangement as being most unfair. I do not think it would be acceptable by the deferred interest certificate holders if there could be a clean vote, but as a large number of these certificates are held by the debenture-holders, they will readily trample upon the rights of the deferred interest certificate holders, if by doing so interest payments in cash are resumed on both classes of the debentures. deferred interest certificates have been dealt in on the Stock Exchange with the knowledge of the Board, and have been bought by investors on the assumption that the conditions printed on the back thereof would be carried out or a fair *quid pro quo* given.' No doubt these considerations will be brought to bear upon the directors at these meetings, and it is to be hoped that a speedy settlement of outstanding differences amicable to all parties will be arrived at.

Anglo-Persian Oil.—A very satisfactory report for the year ended March 31st last is presented by the Anglo-Persian Oil Company, Limited. After charging administration expenses and depreciation, the profit amounted to £5,277,600, as compared with £3,577,600 for the previous year. As will be seen from the table below, which shows the remarkable growth of the company since 1913,

he past year's increase in profits follows one of 50 per cent. in the previous year:—

March 31.	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.

Carried forward	Dr£6,711	19,537	454,725	275,528	910,978	1,648,792

* E.P.D. 1919-20, £854,665, deducted.

Debenture interest and income-tax are higher, and £141,000 more has to be paid to the Persian Government by way of royalty. The special donation of £25,000 to Birmingham University. Excess profits tax and corporation profits tax for 1919-20 absorb £47,700, and this leaves, with the amount brought forward, a total of £3,948,800 available for distribution. A general reserve fund is credited with £455,000, as against £575,000 a year ago, while £100,000 is put to provision amortisation reserve. The preference dividend at the rate of 8 per cent. absorbs £400,000. This paid on the first preference shares, which were converted last March from participating preference shares. The 9 per cent. second preference shares were issued at the same time, but do not rank for dividend until the next year. The ordinary capital was increased towards the end of the year 1919-20, and this accounts for the fact that the dividend of 20 per cent. requires so much more. According to a recent White Paper, the Persian Government holds £5,000,000 of the ordinary capital, the total paid-up amount of which is £6,075,000. The balance-sheet, which is analysed in another column, shows some important alterations. The new second preference shares stand at £1,629,500, while "deposits by associated companies" have risen from £345,300 to £482,200. On the credit side the property item is £235,200 higher at £12,012,900, advances to associated companies have risen by £1,364,700, refineries, lines, &c., by £1,047,100, stores and materials by £87,700, and debtors by £1,539,400, but investments are £438,000 lower, while Treasury bills, which stood at £945,000 in the previous balance-sheet, no longer figure in the accounts. The report states that the recovery at Llandarcy (Wales) is now nearly completed. Preliminary operations were started in July, and the full recovery will be in operation in the spring. The results obtained have "fully justified anticipations."

Vickers' Year.—In the accounts and report for the year ended December 31, 1920, the directors of Vickers, Limited, reasonably point out the adverse circumstances with which they had to contend during the period under review. Profits amounted to £541,261, of which preference dividend absorbed £395,985, leaving a balance of £145,275, to which falls to be added £846,364 brought forward, leaving £991,639 at the credit of profit and loss account. Obviously, in the circumstances, the company is taking the right course in passing ordinary dividend. A year ago accounts were issued for four years, which showed a profit of £4,493,726 for the whole of that period. Dividends on the ordinary shares in these years varied between 11½ and 12½ per cent. For 1920 it is satisfactory to learn that the fall in the value of stocks has been provided for, and it is not surprising to anyone with internal knowledge of the relations between the company and the Government during the war to find that matters have not yet been settled with various Government Departments "concerning the prices of certain contracts executed during the war." In the balance-sheet total assets at £38,321,704 are down by over four millions. Amongst assets the principal item is "interests in subsidiary and connected companies" at £18,076,591.

Stocks at £3,481,572 show a decrease £430,000, while land, buildings, plant, &c., figure at £7,570,960, an increase of just over a quarter-million. Share capital at £20,678,426, and loan capital at £2,770,175 is a gentle reminder that profits in future years will need to be on a much more substantial scale than that shown in the accounts before us. The balance-sheet is compared with last year's figures in another column.

The Parent Tyre.—The report and accounts now issued of the Parent Tyre Company, Limited, for the year ended August 31st last, show net profits to be £85,784, after including £2,314 brought forward from last year's accounts. After payment of dividends at the rate of 5 per cent. per annum on preference and 8 per cent. on ordinary shares, less tax, amounting to £69,824, a balance of £15,960 is carried forward. Dividends accrued but not yet declared on Dunlop Rubber preference shares are stated to be £75,110. It is proposed to pay a dividend on the deferred shares at the rate of 25 per cent. after receipt of such dividends from the Dunlop Rubber Company. An informative circular letter to shareholders accompanies the accounts, and details of various transactions with the Dunlop Rubber Company are given. The report states that: "Owing to the depreciation which has taken place in nearly all industrial securities as a result of the general depression, the directors during the year transferred the sum of £792,627 9s 10d from the capital reserve account, and applied the same to an all-round writing-down of the company's investments, so as to bring them more nearly in accord with present prices. The directors consider that the company's investments now stand in the books at a figure which, although still above the market quotation in cases of quoted securities, is yet below intrinsic values, and a figure which in normal times should show appreciation." The directors have entered into a "conditional agreement" with the Imperial and Foreign Corporation, under which the Parent Tyre Company will for £300,000 take up 400,000 15 per cent. preference shares of 8s each and 1,000,000 ordinary shares of 1s each in that corporation. It is proposed to increase the capital of the Parent Tyre Company by the creation of 500,000 additional deferred shares of £1 each. Of these new deferred shares 281,250 will be offered to shareholders at 27s 6d each, on which the premium will be carried to reserves. The balance-sheet shows total assets as £2,647,966, of which share bonds and securities, "as re-valued by the directors," amount to £2,452,204, while issued share capital figures at £2,119,948. In another column the balance-sheet will be found fully analysed.

Wall Paper Manufacturers.—As indicated by preliminary published figures, the Wall Paper Manufacturers, Limited, made a heavy loss during its last financial year, ended August 31st last. The deficit for the year's trading, after making provision for depreciation, amounted to £878,610. After crediting the balance of £181,054 brought forward from the previous year, making transfers from reserves, but deducting interest on debenture stock and interim dividend on preference shares, a debit balance of £557,203 is shown. The directors state that the company "has a very considerable claim against the Government for an adjustment of its excess profits duty liability under the Finance Act, 1921," and "no credit has been taken for this claim in arriving at" the figures given above. The company's claim in respect of the German factory has resulted in the recovery of £46,814, but it is estimated that there is still a considerable balance to come. Total assets are valued at £6,770,647, of which £3,441,705 represents expenditure on land, buildings, plant, and goodwill. This item has, however, been reduced to £3,400,038 by allocating £41,668 for depreciation. Stock-in-trade is given as £1,167,815, and it is possible that an amount for depreciation purposes has also been applied here. A year ago this item amounted to £1,836,846. The issued share capital amounts to £4,359,453, while there is mortgage debenture stock for £1,028,445. The report is reticent over future prospects, concerning which information may be forthcoming.

at the general meeting, which is to be held on December 20th. The balance-sheet will be found analysed in the usual column.

Dividendless De Beers.—In the review of the report for last year, which appeared in these columns on December 3rd, writes our mining correspondent, reference was made to the fact that but for the transfer of over £1,000,000 from the general fund even the preference dividend could not have been paid in full, and, the "Note" continued, "the due payment of the preference interest in respect of the current half-year would appear to be more than a little doubtful." This view has been quickly verified by events. At the annual meeting of the company at Kimberley on the 10th inst. Sir David Harris announced that owing to prevailing conditions it was not intended to declare any interim dividend to either preference or deferred shareholders for the half-year ending December 31st next. It also transpired that the directors had decided not to carry into effect the project for the transfer to a subsidiary company of the industrial business (explosives, &c.). In connection with the complete suspension of productive operations, which takes effect at the end of the year, a Cape contemporary has raised the question whether the mines could not be kept going if the price of the stones were substantially reduced. There seems much force in the suggestion. It is true that the value of diamonds depends in part upon their comparative scarcity. Nevertheless, it is difficult to discover any logical reason why the price per carat should be maintained so much above the pre-war level; in 1911 it was 35s per carat, last year £5 17s, and now £4 10s. The selling values of practically all articles of luxury have come down—in some cases very appreciably. It is not easy to see why diamonds, which undoubtedly must be thus classified, should be an exception to the rule.

West African Gold Producers.—Amongst the usual end-of-the-year flood of reports now to hand (writes our mining correspondent) figure the annual statements of practically all the important gold producers of West Africa. Of these, two—the Abbontiakoon and Prestea—are distinctly belated, covering 1920; the accounts of the Abosso and Taquah companies, also the Ashanti Goldfields, are made up to June 30th last. During each of the past two years the last-named undertaking has had to contend against disadvantages in the shape of a shortage of labour and fuel. Fortunately, towards the close of the latest period an improvement occurred in both respects, and was reflected in a partial recovery in the tonnage crushed. Owing, however, to some decline in the value of the ore treated the net profit came out £40,500 less than before at £81,800. From this one dividend of 20 per cent. was paid (as against 6½ per cent. for 1919-20), leaving an increased balance to be carried forward. An interim distribution of 25 per cent. on account of the current year has recently been declared. The ore reserves—511,400 tons, estimated profit value £805,500—show no material change compared with the figures of twelve months previously. As the tonnage represents over six years' supply at the normal rate of operations, the position in this respect is a strong one. Both the Abosso Gold and the Taquah Mining companies also suffered from shortage of native labour—indeed, to such a degree that the mill could only be run part time, while development had to be restricted. In these circumstances it is not surprising that the accounts make a poor showing. The Abosso records a net loss of £5,400 after providing for depreciation. The ore reserves, however, at 301,550 tons of a mill-head value of 34s 6d per ton, score a small increase. There is the satisfactory feature that improved values are disclosed in the deepest workings. The Taquah secured a small profit—insufficient to provide a dividend—but an interim distribution of 1s per share is declared. In the case of this company the curtailment of underground work is reflected in a moderate shrinkage in the ore reserves, which now figure at 162,400 tons, value 51s 3d per ton. With expenses at something like a normal level, there is obviously a considerable margin for profit. In 1919-20 a net profit of £51,100 was earned, covering the 12½ per cent. distributed. The accounts of the

Abbontiakoon Mines indicate that the interim dividend of 5 per cent. paid in November, 1920, was really for the most part provided out of the balance brought forward from the previous year, the net earnings amounting to no more than £13,600, whereas the distribution called for £33,400. Despite the shortage of native labour, the payable ore reserves were expanded to nearly 500,000 tons, the value being slightly lower than before at 9½ dwts. This quantity represents five years' work at the present rate of crushing. This gives time for the location of the reef at the 16th level—a break having occurred. The Prestea Block "A"—in which a large sum was embarked by a leading Kaffir finance house several years ago—has a deplorable story to tell. As a result of the unfavourable conditions the treatment of 115,700 tons of ore resulted in a working loss of £24,000. This was supplemented by £22,900 depreciation, while no less than £183,100 had to be written off development in consequence of the adjustment of the ore reserve estimates rendered necessary by the increase in costs and other circumstances. Thus a transfer of the reserve a debit balance of £216,150 g forward. It is not surprising that at the meeting desirability of liquidation was mooted, nor did the bo altogether oppose the idea.

Transvaal Output for November.—The November statistics of gold output in the Transvaal show that the production of fine gold during the month amounted to 704,236 ounces, as compared with 707,825 ounces in October, and 633,737 ounces for November, 1920. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on Tuesday next, at 4 p.m., at which a paper on "The Mandatory Provisions of the Covenant of the League of Nations," will be read by D. Campbell Lee, Esq., M.A. LL.D.

Oversea Correspondence.

UNITED STATES.—RAILROAD LABOUR BOARD REVISES RULES AND CONDITIONS—OCTOBER RAILROAD EARNINGS—STEEL MERGER—TRADE QUIET—NOVEMBER FAILURES.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 2.

MUCH sooner than had been expected, the United States Railroad Labour Board this week announced sweeping revisions in shopcrafts' rules and working conditions governing approximately 400,000 men employed on railroads throughout the country, including carmen, sheet-metal workers, machinists, boiler-makers, blacksmiths, and electricians. The new rules, about 150 in number, which were made effective as of December 1st, supplant the so-called national agreements entered into between

the Railroad Administration and various railroad brotherhoods and unions during the period of Federal control of the carriers. The Board estimates that the changes will mean an annual saving to the carriers of approximately \$50,000,000; the exact amount, however, can be determined only by actual operation. The revision just completed, together with one or two others recently effected, disposes of all the shopcraft cases, with the exception of minor matters that have been remanded back to the railroads and their employees for adjustment, and leaves the Labour Board in a position, it is understood, to consider applications for wage reductions in the near future; in fact, much earlier than the railway unions expected when they called off the threatened railroad strike a month or so ago.

October railroad earnings statements thus far received indicate that the complete returns for that month will show a larger net operating income for all the country's first-class roads than in any preceding month this year, or since the lines were returned to private management. Reports from 145 of the 201 Class 1 railroads give net operating income for October of \$82,654,480, representing an increase of about 23 per cent. over the \$65,972,000 reported by the same companies for the corresponding month of last year. On that basis, it is estimated that the complete returns will show a net operating income of \$92,000,000, roughly, as against \$87,174,000 in September and \$90,241,103 in August, the two preceding months with the highest records for the year, and \$86,000,000 in October, 1920. The favourable showing is again due largely to curtailed expenses, for while gross earnings fell off more than 16 per cent. from those of October, 1920, operating expenses were reduced 25 per cent.

Reports have been current for some time that plans for merging leading independent steel companies were being worked out, but the rumours lacked confirmation until this week, when it was definitely stated by interests concerned that negotiations to that end are in progress. Seven companies are mentioned in connection with the undertaking—namely, the Midvale Steel and Ordnance Company, Lackawanna Steel Company, Youngstown Sheet and Tube Company, Inland Steel Company, Brier Hill Steel Company, the Steel and Tube Company of America, and the Republic Iron and Steel Company. A merger of those companies would embrace the leading independent steel producers, with the exception of the Bethlehem Steel Corporation and Jones and Laughlin. The manufacturers named as the possible members of the new combine have a total producing capacity of 7,400,000 tons of steel, and their aggregate capitalisation at present amounts to \$467,000,000. The proposed merger would rank second only to the United States Steel Corporation, and would be larger than any steel consolidation that possibly might be consummated in this country. The plans, however, are still in the preliminary stage, and may or may not be carried to a successful conclusion.

Trade and industry show varying degrees of activity or inactivity. Business, generally speaking, is very dull. Wholesale trade during the past week has been much quieter, and jobbing trade smaller, except in lines to meet holiday requirements. Retail trade has been retarded by unseasonably warm weather, with drought and storms in some sections of the country. The bituminous coal industry is depressed by the mild weather. Primary and secondary textile markets are experiencing about the quietest period of the year, although a few cotton and woollen goods mills, as well as producers of knit goods, are operating at close to capacity, while manufacturers of silk hosiery, notably full-fashioned styles, are heavily booked ahead. Demand for print-cloths, sheetings, and other grey goods, however, is extremely light, and prices have declined steadily during the past few days, partly on account of the weakness in cotton. Broad silk mills, with few exceptions, are running at a low percentage of capacity; while their supplies of raw silk are greatly depleted, they are not replenishing stocks, owing to the recent sharp advance in raw silk, and to doubts as to their ability to secure a corresponding increase in the price of silk piece-goods. Steel and lumber industries are less active. November failures, taking the country as a whole, were the largest in number since January, while the liabilities were the heaviest since last February.

FRANCE.—BUDGET BILL—M. BRIAND'S VISIT TO LONDON—A LOAN TO GERMANY SUGGESTED—FRANCO-SPANISH TARIFF—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 13.

THE Chamber, in its heroic efforts to get through the discussion of the Budget Bill well before Christmas, in order that it may have time to pass through the Senate and receive sanction as law before the end of the year, sat specially on Saturday, Sunday, and Monday, and is now well within sight of its goal. Most of the departmental Budgets have been disposed of, and the only formidable rock ahead is the discussion that must inevitably take place as to the manner in which M. Doumer proposes to bring about a balance between revenue and expenditure. This he proposes to achieve, as already explained, by (among other things) transforming into short-term bonds the 1,500,000,000 in Rentes which he expects to receive during the coming year in payment for war profits (instead of extinguishing them by redemption in the ordinary way), and by raising the tax on turnover, or "sales tax," from 1.1 per cent. to 1.60 per cent. The latter proposal and the modifications "upwards" which the Finance Minister proposes shall be applied to various details of the income-tax regulations are likely to provoke serious objections that may be far-reaching in their effects.

Meanwhile all attention is focussed on M. Briand's coming visit to London, where he is expected to meet Mr Lloyd George in direct private conversation next Monday. It is universally taken for granted here that the pending meeting of the two Premiers will be merely the preliminary to a great Allied and possibly a still greater international conference, to be convened for the purpose of dealing with the question of how best to bring about a better economic situation throughout the world as a whole. French opinion is undoubtedly to-day much more inclined to look upon the whole situation from a much more unselfish point of view than would have been possible a few months ago. It is now recognised here that if France is

burdened with a devastated industrial area in the region of her ten ruined provinces, England is no less suffering under similar distressing conditions in the form of silent factories and millions of hungry workpeople, which opinion here is more and more inclined to recognise as merely another form of a devastated industrial area. There can be no doubt that, under the hard pressure of cold economic facts, the British as well as the French aspect of the situation has now become clearly known here.

The fact that now appears to emerge more clearly than anything else, as French opinion sees the situation, is that any aid that is extended to Germany by the Allies must be based on the principle that it will be still more beneficial to the Allies themselves, and especially to France. In this connection a remarkably interesting article was published last night by the *Temps*, possibly as a *ballon d'essai*. In this article the *Temps*, whose close connection with the French Government is well known, suggested the possibility of the issue of a great "International German First Mortgage Loan, 1922-1923," of \$1,000,000,000, yielding interest at 7 per cent., and redeemable within 50 years, with half-yearly dividends payable in dollars in all the principal money markets of the world; this loan to be issued through a group of international bankers (who would receive the stock at 95½ per cent.), who would be authorised to take a certain rate of commission, and who would undertake to issue the loan in section in such a manner that the proceeds of each section would be available for distribution to the Allies as each of Germany's quarterly payments of 500,000,000 marks gold fell due. Before authorising the issue of such a loan the Allied Governments would come to a decision not to demand from Germany during 1922 and 1923 the payment in gold of anything more than the fixed instalments of 2,000,000,000 gold marks a year laid down in the present agreements. Payment of the variable annuities in cash would not be called for unless the German mark surpassed the value of the United States cent, in which case the Allies would reconsider the situation. It would be left open to any of the Allies to make direct arrangements with Germany, however, for payment in kind in respect of any country's proportionate share in the variable annuities thus held over. The loan in question would be placed under the control of the Reparations Commission, and would be secured by mortgage on all the assets and resources of the German Reich, the rights of the bondholders taking priority over even those of the Allies, and power would be given for the representative of a neutral country to sit on the commission of guaranties.

The event of the week has been the coming into operation of the denunciation of the Franco-Spanish Customs treaties, notice of which was given a month ago. Both countries since Saturday last, have withdrawn from each other the benefits of the most-favoured-nation Customs tariff, and exchanges of commodities can now be made only on the basis of the general or highest existing tariff. The Minister of Commerce, M. Dior, in the course of an interview, asserts that the denunciation of the arrangement hitherto existing became necessary owing to the fact that the Spanish Government, in reply to the recent modifications in the French Customs tariff, retaliated not only by raising the rate of duty, but also insisted on the payment of Customs dues in gold, and in imposing an additional tax to compensate for the present low situation of the franc. The French Government naturally regards this compensatory tax as the negation of the most-favoured-nation clause. French fisheries, for instance, sell some 25,000,000 of worth of produce to Spain every year, but through the compensatory tax they are unfavourably handicapped in comparison with Norway, which escapes it. In the case of cotton exports, again, both British and French goods pay Spanish duties, but the imposition of a compensatory tax on the French consignments renders competition with the more favoured British exporter impossible. The Minister remarked that France raises no objection to the Spanish demand for the payment of the duties in gold, but to impose a surtax, he insists, is an abuse. He repudiates the claim of the Spanish Government that the new duties are merely reprisals for the severe treatment accorded to Spanish wine exports, and points out in support of this that Spanish wine entering France pays only 31f 20c per hecto-

litre, where French wine entering Spain has to pay a duty of 150f the hectolitre. The French retort to the Spanish Government was taken on Sunday, when a decree was promulgated imposing *ad valorem* surtaxes varying from 10 per cent. to 80 per cent., on a large number of categories of Spanish products, in addition to the existing higher scale of duties. The Franco-Spanish rupture probably marks the opening volley in the great pending tariff battle for which most of the nations of the world have been manœuvring for many months past.

The improved conditions that characterised the Bourse during the period under review in my last letter continued throughout last week, so far as concerns, at any rate, the activity of the market, and were, if anything, even more marked than during the previous seven days. A long time has elapsed, in the Parquet especially, since such an amount of activity has been seen. The amount of capital available at present is so great that the big Metallurgical firms' issue of 500,000,000f has in no way had an adverse effect on the volume of business on the Bourse. The new issue, in fact, will absorb only a small portion of the dividends payable during the current month. Buying orders have been put forward in much more satisfactory numbers, and there is every indication that the year will now close with better prices and much more satisfactory outlook. French Three per Cents. have again moved up, and closed at 55.15, against 54.85 a week earlier. In the foreign group, however, Argentines, Brazilians, Egyptians, and Japanese funds fell away, but Turks were marked up appreciably on the report that a payment is to be made shortly on account of outstanding dividends, the 5 per cent. 1914's closing at 37, against 33.

It is announced that the loan of \$20,000,000, which the Ville de Paris arranged some months ago to issue through a group of Canadian bankers, for the purpose of buying foodstuffs for resale to the inhabitants of the city, resulted in a fiasco. The syndicate, which was under the obligation of furnishing one-half the total amount of the loan by a given date, were unable to obtain more than \$6,000,000, which was paid over to the Ville de Paris, and expended in accordance with the original purpose, the contract then being renounced.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

G E R M A N Y. — REPARATIONS — FINANCES —
EXCHANGE AND BOURSE—TRADE—PORTS.
(FROM OUR CORRESPONDENT.)

BERLIN, December 12.

THE Reparations question, as far as is known, has made no definite progress towards settlement; but the continuation of negotiations last week fostered optimistic sentiment, and this expressed itself in a further drop of the foreign exchanges, of stocks, and of certain commodity prices. The result of Dr Rathenau's visit to London is not yet publicly known. The Chancellor is pressing the Federal Economic Council to hurry through the "Credit-Vereinigung" Bill, by which Industry, Agriculture, and Real Estate are organised into groups, each of which is to raise a fixed capital sum as loan to the State. There is considerable opposition to this in the "Heavy Industry" Press, and still stronger opposition to any measure for expropriating particular kinds of private property, such as balances held abroad.

The Ally conditions expected in exchange for mitigation of the Reparations payments are being discussed. The measures suggested by M. Briand, Sir Robert Horne, and other Ally authorities for remedying supposed German financial abuses are criticised as impracticable, and most of them, in fact, show ignorance of German conditions, which is not veiled by the fact that the remedies are expressed as categorical musts. Having no military force, and therefore no really good reasons, the Germans are unable to solve problems in this summary way, and they point out absurdities which would be at once visible also to foreigners if these foreigners had to find solutions instead of merely dictating them. Sir Robert Horne complains, as an obstacle to Reparations, that German coal is sold at about half the price paid for coal elsewhere (which system he describes as a State subsidy, though it has nothing to do with the State). This cheapness is due to the abnormal foreign exchange movements, which have thrown the whole German price-level down to a mere fraction of that of high exchange countries. It is not possible to dictate that German coal prices shall be held at world price-level as long as the foreign exchanges in Germany rise as much as 400 per cent. in six months. At the exchange of to-day the best German coal is about 10s a ton; at the exchange of early November it would be about 7s, and at the exchange of January about £2. The "railway subsidies" are also ultimately a freak of the exchanges. The Government has repeatedly raised rates and fares in hope of overtaking the increased cost of administration; but after in May last it announced a six milliards decrease in the deficit, it was obliged last month, for no cause except the mark exchange collapse, to transfer this six milliards back to the deficit side. Even in countries with high and relatively stable exchanges railways are being conducted at a heavy loss, and the paper-money system, doles system, and all other abuses which Germany is expected to get rid of summarily are the common practice of some prosperous European countries which have no Reparations liabilities. The one difference between Germany and the rest of Europe, and the chief cause of bad German finance, is that Germany is obliged to pay a great part of her foreign liabilities in gold (or gold values), whereas the rest of Europe pays in paper of value determined by itself. A command to Germany to overcome her difficulty in paying in good currency abroad by eradicating bad currency at home recalls the system of the Prussian Dr Eisenbart. The Reparations question has come up again to-day in aggravated form merely because the ultimatum system was adopted last May instead of an intelligent plan, and if the ultimatum system of commanding Germany to put her finances in order, raise her coal prices, stop her railway deficits, and do in a hurry other impracticable and in part foolish things is again adopted the question is likely to come up soon again in still more aggravated form.

The current deficits in State finance, and with them the floating debt and the inflation, are increasing headlong.

The last quarter of 1921 will show a record aggravation in these respects. The floating debt, which on January 1, 1920, was around 100 milliard marks, on the 30th of last month reached 241,939,304,997 marks, having increased by 4.1 milliard marks between November 11th and 20th, and by 5.3 milliard marks between the 20th and 30th. Of the total floating debt, 226,476,420,300 marks consisted of discounted Treasury bills, of which, according to the last weekly report, 108,338,297,000 marks are in the Reichsbank's hands. From December 1st railway fares were again increased to 8½-9½ times the normal prices in force up to March 31, 1918. A heavy increase of postal rates—the unit letter rate to be two marks, or 20 times pre-war rates—is announced for next year, while telegraphing charges will also be raised, and the telephone charges doubled. Even these increases will probably not extirpate those large deficits which to foreigners appear to be agreeable subsidies; but at times of rapidly depreciating money it is impossible to raise charges for State services with sufficient speed. A summary of the Budget for 1921, after amendment by inclusion of supplementary estimates, shows ordinary expenditure (including deficit on State services, but not their gross expenditure) 157,421,000,000 marks; extraordinary, 76,547,000,000 marks; total, 233,968,000,000 marks. The originally proposed ordinary expenditure was only 46,945,000,000 marks; but the first and second supplementary estimates added 1,535,000,000 marks, and the third 108,941,000,000 marks. Revenue is put at 61,927 million marks ordinary and 10,500 million marks extraordinary, so that 161,541,000,000 marks deficit, to be covered by loans, remains. The expenditure entered as "Contributions Budget" totals 12,276 millions, three-quarters of the deficit being due to obligations under the Peace Treaty.

The Reichsbank statement for December 7th shows further heavy inflation, note circulation rising from 100,943,632,000 marks to 102,789,634,000 marks. Circulation of "Kassenscheine" was 7,668,300,000 marks. The bank's holding of State and Darlehnskassenscheine among its assets was only 3,522,209,000, as against 20,524,898,000 marks on December 7, 1920. The Palatinat Bank last week suspended payment, owing to losses of 340 millions suffered in irregular exchange deals; and the Allgemeine Bankverein of Düsseldorf followed suit. The latter is a new bank of no great reputation; but the Palatinat Bank was an important concern, with capital and reserves of 99,685,000 marks and numerous branches. It has been taken over by the Deutsche and the Rhenish Credit Banks. It is reported that bear speculations in marks were going on headlong even after the mark had fallen to a fourth of its value of the spring, and when, according to the precedent of all sharply fluctuating exchanges, a reaction might have been expected. Industrial capital totalling 4,876,930,000 marks was raised in November, as against 1,662,010,000 marks in October, and an average of 1,400,000,000 marks in the first 10 months of the year. This, like the increased State demand for credit, is an outcome of the price-rise. The Badische Aniline Company is reported to be about to increase its capital by 100-150 millions, yielding at present Bourse quotation 700-800 millions, in order to repair the damage done by the Oppau explosion. The Linke-Hofmann Company (engineering), of Dresden, will raise its capital by 80 millions, and Krupps by an unstated amount. Krupps' capital, raised by 70 millions after the outbreak of war, is only 250 millions, or less than a quarter of that of the Allgemeine Elektrizitäts Gesellschaft, the highest capitalised of German concerns. Deposits in the Savings Banks are declining, the loss in October being 1,800,000,000 marks. The net increase in January-October, 1921, was 2,600,000,000 marks, against 5,390,000,000 marks in 1920.

The Bourse last week and again to-day recorded sharp drops in dividend-payers; but to-day home loans were active and rising, War Loan being 77.50; 4 per cent., 84.50; 3½ per cent., 73.60; 3 per cent., 105; Colonial 4 per cent., 100.25; Savings and Premium, 84.25. Further foreign buying of loans, as result of optimistic views as to the mark exchange, is reported. The *Frankfurter Zeitung's* Bourse Index shows 30,711 for December 9th, against 33,504 for the 1st, and 41,996 for November 24th. Since the last date 25 dividend-payers have

fallen from 38,507 to 28,090. The Bourse is entirely under the influence of the exchanges; and is therefore in an unsettled mood, with bear sentiment prevailing. The *Essen Bergwerks-Zeitung* estimates the losses on December 1st alone at 40 to 50 milliards; but stocks fell before that day, and have fallen since. Last week some textile stocks lost as much as 1,200 per cent., Western mining stocks as much as 860 per cent., and shipping stocks as much as 590 per cent., while the highest-quoted stock, Sarotti Chocolate, which recently touched 4,500, to-day stands at 1,600. The banks to-day, for the first time, began selling out margin-holders. The further drop of the dollar to-day to 165.57, the lowest point since October 25th, caused further heavy selling.

Details of October's foreign trade, summarised briefly last week, are:—Imports, 3,004,800 metric tons, of value 13,875 million marks, against 2,582,600 tons, value 10,668 millions in September. Exports, 1,973,100 tons, value 9,711 millions, against 1,870,700 tons, value 7,519 millions, in September. Imports of food increased from 1,054,000 tons to 1,235,600 tons; of minerals and mineral oils from 1,259,800 tons to 1,509,700 tons. Exports of minerals declined from 1,116,200 tons to 1,073,600 tons; of chemicals and dyes increased from 182,100 tons to 209,200 tons; of pottery from 34,900 tons to 40,200 tons; glass, from 9,100 tons to 10,400 tons; of base metals and wares therefrom from 235,800 tons to 258,400 tons; of firearms, clocks, toys, &c., from 5,600 tons to 8,000 tons; of textiles and goods classed therewith, from 12,500 tons to 16,100 tons. Paper exports declined from 29,100 tons to 29,000 tons, and machinery and vehicles from 41,300 tons to 38,400 tons. Coal production in January-October, inclusive, was 112,578,872 metric tons, against 107,606,340 tons and 145,559,159 tons in the same months of 1920 and 1913 respectively, Alsace-Lorraine, the Saar, and the Palatinate being in all cases excluded. Brown coal production was 101,488,914 tons, against 91,684,891 tons and 72,323,966 tons respectively. The coal shortage is being increasingly felt, and frost, it is announced, would cause a crisis. Shipping in Hamburg in the first 11 months of the year was: Arrivals, 7,898 vessels, of 8,659,632 net tons; departures, 9,150 vessels, of 8,616,416 tons; figures for the same months of 1920 being 4,296 of 3,845,641 tons, and 4,574 of 3,780,850 tons. Compared with 1919, shipping in 1921 so far increased more than sixfold, and is about two-thirds of that of 1913. Bremen's shipping in January-October, inclusive, was: Arrivals, 2,219,208 tons, against 1,033,960 tons in the same months of 1920; and departures, 2,256,169 tons, against 1,005,892 tons, this year's shipping being also about two-thirds of that of 1913.

ITALY.—THE BUDGET SPEECH.

(FROM OUR CORRESPONDENT.)

TURIN, December 10.

On December 8th, Signor de Nava, Minister of Finance, made his Budget speech in the Chamber of Deputies. By statute he was bound to review the past fiscal year 1920-21, the current year 1921-22, and the coming year. For the year ended June, 1921, it was estimated in December, 1920, that there would be a deficit of 12,141 million lire, the difference between 22,947 million lire expenditure and 10,806 revenue. In the final accounts, the figures were greatly changed; expenditure rose to 28,783 million lire and revenue to 18,071 millions, so that the deficit was reduced to 10,712 millions. For the present year there was an estimated deficit of 10,370 million lire. But in July the Treasury Minister was able to announce to Parliament that the estimated deficit was to be only 5,000 million lire, thanks mainly to the discontinuance of the bread subsidy. The results of the first quarter of the fiscal year, from July 1st to October 30th, confirm that the deficit will be about 5,000 million lire, in spite of a rise of 1,750 million lire in revenue, which should have reduced the deficit to 3,250 million lire. But the rise in expenditure is swallowing up all increase in the revenue.

In the next fiscal year, 1922-23, the expenditure is calculated at 18,525 million lire and the revenue at 15,763 millions, with an estimated deficit of about 3,000 million lire. The Minister might have safely estimated that the deficit

will be wiped out next year, as there is no reason why the revenue should amount only to 15,763 million lire, having in the past year risen to 18,071 millions, while in the present one it will probably touch 19,000 million lire. The Minister evidently supposes that expenditure also will rise, and will absorb the surplus of effective revenue upon estimates. The situation is undoubtedly improving, as the deficit has diminished from 11 to 5 and to 3 billion lire in three successive fiscal years. A good feature, which is worth noting, is that the Treasury does not put on the revenue side any figure from war indemnities. If indemnities are paid, so much to the good. It is probable that the 11 billions deficit of 1920-21 was less than the true deficit, as various State administrations had a separate current account with the Treasury, and their deficit did not enter into the general Budget; while the Minister has assured the Chamber that the 5 and 3 billions deficit of the current and next financial years are the true net results of all public administrations, all separate accounts being from July 1, 1921, thrown, as of old into the general Budget.

The debt situation is as follows (in billion lire):—

	July 31, 1914.	June 30, 1919.	Oct. 31, 1920.	Oct. 31, 1921.
Perpetual and long-dated debts	14.8	28.4	48.9	49.3
Exchequer bills	0.4	15.0	10.7	23.0
3, 5, and 7 year bonds	..	5.7	4.6	5.7
State and bank notes	0.5	8.6	12.7	10.6
Deposit and loans State banks	..	0.5	0.6	0.6
Total internal debts	15.7	58.2	77.5	89.2
External debts	..	19.2	20.6	21.0
General total	15.7	77.4	98.1	110.2

The external debt, which was non-existent before the war, increases slowly as unpaid interest accumulates with the capital. The items are calculated at the par of exchanges; and if we estimate them at the current rate of exchanges, the figure should probably be put at about 90 billion lire, a sum equal to the internal debt, and an overpowering burden for the Italian taxpayer. Public opinion has not lost the hope that the *Economist's* thesis of the total cancellation of the inter-Allied debts will ultimately prevail; as, otherwise, all hopes of balancing budgets are lost and total confusion will prevail in our financial and monetary situation.

Notes (paper money) issued directly by the State or indirectly by the issue banks for the account of the State are less by 2.1 million, having fallen from 12.7 to 10.6 billion lire. The significance of this is, however, somewhat obscured by the rise of the so-called issues for the account of commerce, which rose from 8,230 million lire at September 30, 1920, to 9,775 million lire at September 30, 1921, a rise of 1,545 million lire. If we deduct this rise of the notes in circulation for the account of commerce from the decrease of 2,100 millions lire in the circulation for State account, we have a net decrease of 600 million lire. But the picture is marred by the great increase in the figure of outstanding Exchequer bills, which have risen during the year from 10.7 billions to the utterly unmanageable sum of 23 billion lire. As the longest dated are one-year bills, and a large amount is maturing from day to day, the State is liable at a moment's notice to convert them into cash; with the risk of a rise in the note circulation. The gist of the speech is that we are laboriously groping toward the light; that the revenue is coming on very well; but that a very great effort is to be made toward curtailing the growth of expenditure. If the Treasury should succeed in the task of checking this growth, the port of rest for our financial ship would be within easy reach.

SPAIN.—COMMERCIAL RELATIONS WITH FRANCE.

(FROM OUR CORRESPONDENT.)

MADRID, December 12.

THE official statement of the commercial rupture between France and Spain, though on the whole not unexpected, has caused consternation in Spanish financial and commercial circles. The Note of the French Government is in itself serious enough, stating that, in consequence of the rupture, France will from December 11th exact on all Spanish products imported into France the general tariff

rates, while many products will also be subject to an extra *ad valorem* duty. The orange trade will be the first to suffer under this severe restriction, since this is the season when contracts have been signed and the fruit already packed for the annual export to France, which is Spain's largest market for oranges. The wine trade, too, will suffer. Among other victims of the disagreements and ultra-protectionism of both countries are Spanish dealers in raw materials and French exporters of luxury goods. However, it is expected in Spanish commercial circles that this present state of affairs cannot last long, and that national interests on both sides will put an end to this tariff war between two nations that need so much from each other. It is expected that negotiations will be renewed before long, and that a new commercial treaty will be drawn up. The Spanish Government announces the immediate publication of a Red Book fully explanatory of the Franco-Spanish commercial relations. It is considered likely that, pending the establishment of more friendly commercial relations between the two countries, the new Spanish tariff that was to have come into force on January 1st will be postponed with a view to possible modifications.

HOLLAND.—TRADE BALANCE—GERMAN CREDIT—SPECULATION—FINANCES OF AMSTERDAM—PROTECTION.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, December 10.

THE unfavourable balance of trade is growing. In October it was 64,000,000 fl, as compared with 61,000,000 fl in September and 44,000,000 fl in August.

Comparing the figures of last October with those of a year ago imports declined by 158,000,000 fl, and exports by only 33,000,000 fl. Had exports receded to the same extent matters would be still worse than they are at present.

Holland was the first country to grant a credit to Germany after the war. This credit amounted to 200,000,000 fl, of which 60,000,000 fl were to be used for foodstuffs and 140,000,000 fl for raw materials. It appears that on November 7th of the first-named credit Germany had availed herself to the extent of 26,500,000 fl, leaving a balance still to be utilised of 33,500,000 fl. Of the amount taken up, however, 24,100,000 fl had already been paid back, so that only 2,400,000 fl were outstanding. Of the raw materials credit only 11,700,000 fl had been utilised. This shows that the fear of some that by this credit Holland was supporting German competition against Dutch industry had no grounds.

The losses which our country sustains owing to the fall of the mark are enormous. People have been gambling in marks ever since the beginning of its decline, and one may rest assured that at present, after the recent rise from 1 cent to 1½ cent, millions of marks are being bought again. Some estimate the total losses in this respect as nearly equalling the losses suffered on Russian bonds held in this country, and this means a good deal, as it is well known that Dutch investors have always paid much attention to Russian securities. In fact, one will find, with few exceptions, that a considerable part of every investment portfolio consisted of this sort of securities. It seems not at all impossible that about a tenth of the Dutch national wealth has been lost in Russian bonds and marks.

The financial burden of this city is vividly illustrated by the following figures:—The wages and salaries of municipal employees have increased since 1914 from 16,500,000 fl to 50,000,000 fl; taxes went up from 10,700,000 fl to 49,700,000 fl, and the income of the citizens from 257,000,000 fl to 468,000,000 fl. The previous year, however, it was 638,000,000 fl. Should the total income of the citizens go back again next year to the average of 1910-1916, and the expenditure of Government and municipalities not decrease, all incomes above 3,000 fl would have to be taxed nearly 65 per cent. by Government, province and town.

It can be understood that as industry and trade are badly suffering from foreign competition, voices are heard in favour of Protection. Last week a conference was

held between the Committee for Economic Policy and various Ministers or their delegates. It is evident that industry in Holland, surrounded as it is by countries with weakened money, has difficult times to face. In addition, monetary affairs in this country are far from what they ought to be. The unfunded debt exceeds 820,000,000 fl (before the war the total National Debt was 1,156,000,000 fl), of which amount, however, nearly half has been lent to the colonies. The impending new loan prevents liquid means from being employed more permanently, and this also hampers industry. The question was raised whether the Minister was willing to consider temporary import prohibition or temporary increased import duties. The Minister took the wisest decision in similar matters, and appointed a small sub-commission to report on this problem.

Letters to the Editor.

TARIFF DISARMAMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your article in the *Economist* of 3rd inst. on "the rising wall of tariffs" causes me to write you a suggestion which has for a long time been germinating within me.

When one talks to Protectionists, they almost always say that if Free-trade were the general rule among nations they would also be Free-traders; in other words, they admit the correctness of Free-trade, but only if all countries adopt it. A vicious circle is thus created somewhat akin to that caused by competitive armaments, which can, it seems to me, only be broken by bold initiative, like that taken by America at the beginning of the Washington Conference on the subject of naval disarmament.

It is, however, to be feared that a similar initiative regarding "tariff disarmament" is not to be hoped for without a very exhaustive preliminary inquiry into the probable effects of such a step. My suggestion is that an attempt should be made to bring about an international conference to inquire into and to report upon the effects of international Free-trade, (1) on each of the countries which entered the conference, (2) on the trade of the world. Obviously, each country would require to make exhaustive inquiries within its own borders, and those of us who are Free-traders must be prepared to find that in a world agreement concessions would have to be made to certain geographical, climatic, ethnographic, or other natural conditions. But it can hardly be doubted that the final report of such a conference would in the main be overwhelmingly in favour of "tariff disarmament," and that the way would thereby be opened for Governments to take initiatives which at present they dare not do.

There is so much to say on the possible directions in which such a conference might work, that I must leave this till another occasion. Meanwhile, I would venture the assertion that the question is for all of us only less important than the general disarmament questions now being discussed at the Washington Conference, and that "tariff disarmament" is also in a very real way a corollary of those important discussions.—Yours faithfully,

WILLIAM OLSSON.

Stockholm, December 7th, 1921.

Books and Publications.

REVIEWS.

"Business Costs." By De Witt Carl Eggleston, M.E., C.P.A., and Frederick B. Robinson, Ph.D. (New York and London) D. Appleton and Co. 18s net.

THIS work deals comprehensively with the principles of cost accounting—covering industrial, manufacturing, and mercantile, and either the continuous process or the job-order type. All kinds of details, devices, and useful practices are fully set out and well illustrated. At the end of each chapter a list of practical questions on the contents of the chapter is given, and these questions will attract the interested attention of the manufacturer as well as of

the student. The authors claim that the book represents a digest of all the available literature on costing in the English language. Mechanical aids in costing are dealt with, and the use of graphic charts is explained and illustrated. Part VII. contains examples of complete cost systems. Special attention is given to the use of suitable accounting terms, and—following the recommendation of a well-known English writer—the term “expired capital outlay,” in connection with manufacturing and other plant, is officially adopted in place of the commonly used, but inadequate, word “depreciation.” The book can be well recommended to all in search of knowledge on this wide and important subject.

“City of Manchester Abstract of the Treasurer’s Accounts for the year ending March 31, 1921.” (Manchester) Henry Blacklock and Co., Limited.

THIS is an important volume of accounts, full of interesting information. It cannot be said, however, that a study of the financial position of municipalities nowadays inspires very cheerful reflections, and the accounts of the City of Manchester are no exception to this rule. The amount of the secured debt has increased on the year by about 10 per cent., to £25,994,445. More than half the increase is due to housing and public health, but large additional sums have been borrowed for electricity, gas, and tramways. Interest varies from 6 per cent. downwards, the average rate payable on £17,203,896 of the debt secured by ordinary mortgages being £5 4s 10d per cent. Manchester’s loan debt is increasing at a much greater rate than its population, which in 1911 was 714,385 and in 1921 is 730,551. During the year the loan debt per head increased from £28 os 4d to £33 19s 2d. The number of persons employed by the Corporation at March 31, 1921, was 24,568, which—assuming that one-third of the present population are workers—shows that about one in every ten of those workers is employed by the Corporation. The financial position of the tramways undertaking is particularly unsatisfactory. While the opinion is gaining ground that, owing to the rapid development of the motor-bus, tramways will soon become obsolete, Manchester has during the year increased its capital outlay on tramways plant by about 10 per cent. to £2,583,036. Mr John Williams, F.S.A.A., the city treasurer, is to be congratulated on the clear way in which he has caused the accounts to be set out.

BOOKS RECEIVED.

The Settlement of Wage Disputes. By Herbert Feis. (New York) The Macmillan Company.

Obtainable from Messrs Macmillan and Co., Limited, London. 12s net.

How the Hague Rules Affect Merchants. By Andrew Eric Jackson. (London) Effingham Wilson. 2s 6d net.

Le Problème Internationale Chômage. By Hector Turpin. (Paris) Giard et Cie., 16 Rue Soufflot (5e). 2 francs.

Monthly Journal of the British Empire Chamber of Commerce in the United States of America. November, 1921. (New York) 120 Broadway.

Investment Suggestions. December, 1921. (London) Offices of Guaranty Trust Company of New York.

An interesting pamphlet, giving details of a number of investments exempt from income-tax deductions to holders resident abroad. It also explains the position under existing American tax legislation of American investors holding foreign bonds.

Holland’s Import and Export Trader. November 28, 1921. (Amsterdam) 286 N.Z. Voorburgwal.

Dr Vissering writes in this number on monetary problems.

Better Business. A Quarterly Journal of Agricultural and Industrial Co-operation. November, 1921. (Dublin) The Co-operative Reference Library, The Plunkett House. 2s net.

Imperial Institute Map of the Chief Sources of Metals in the British Empire. (London) George Philip and Son, Limited. 5s 6d net.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
December 29.

ACCOUNT.
December 30.

THE Irish debates and the quick subscription of a new ten million pounds loan from India, in 5½ per cents. at 93½, are the two outstanding features of the week, so far as the Stock Exchange markets are concerned. After the buoyancy displayed by gilt-edged issues this month, it is not surprising that the unexpected India appeal should have put the brake on the lavish buying which had served to run up the prices in the Consol market. The uncertainty which has developed in connection with Ireland made another cause for restraint. Although prices have receded from the best, there is, however, noticeable firmness in practically every market concerned with investment securities, some of the industrial issues, for instance, having further improved their position. The County of London Electric 7 per cent. debenture stock, at 10½ premium, makes a good example. The Federal Banks were half expected to reduce their rate on Wednesday, which coloured the anticipation of a fall in the Bank of England rate. But neither minimum has been changed, although money continues on the easy side. The City of Auckland achieved immediate success with an issue of 6 per cent. debentures at 94.

The rise in the value of the £ as compared with the dollar led to a general reduction of prices of dollar stocks, several hundreds being lowered to the extent of 1 to 3 points. German Threes have been up to 3½, giving way, however, on a rush of profit-taking sales before Christmas. French issues have also been firmer, though here again a fair amount of selling caused reaction. South American bonds are better on the whole, and the more assured feeling in regard to Chinese credit finds reflection in the continued firmness of Chinese Government bonds. Russian bonds were inclined to move upward on French demand.

Amongst Home Railway stocks, several of the Undergrounds have gone ahead sharply, by reason of the proposed rearrangement of the Common Fund, to which the companies of the Underground group contribute. Hopes are revived of a dividend on Districts next year. Underground Electric Incomes kept Districts company in their rise, and various prior-charge stocks of the group participated in the improvement. In the market for steam stocks, it is the pre-ordinary issues that display the principal improvements, persistent demand being stimulated by the avid manner in which gilt-edged descriptions have been absorbed. The buying of the latter served to widen the area of inquiry on the part of purchasers, who found, however, the Home Railway prior-charge lists quickly denuded of the stocks on offer. Several scores of gains are recorded on the week, while the ordinary stocks are more or less marking time, the public being cautious on account of the uncertainty of the dividend outlook. Grand Trunks have hardened again, because of the recent political landslide in Canada. Mexican Rails, after advancing, soon relapsed, and the Argentine Railway market is dull, although some of the other foreign railway stocks were disposed to improve.

The rubber market remains what the Stock Exchange calls sticky, and almost the only item of interest during the week has been a rise in Bitings, on the statement that oil had been discovered on the property. The oil market itself underwent the usual rapid fluctuations, considerable speculation being aroused by the close imminence of the Mexican Eagle dividend announcement. The Lobitos Company has increased its interim dividend. Trinidad shares are quiet, after the disappointment aroused by the passing of the dividend on Trinidad Leaseholds.

Some of the lower-priced oil shares engaged speculative attention, without attracting much public interest. Shipping shares are better, with P. and O. deferred and Royal Mail ordinary stocks as features of strength. Further progress has been made in the steady rise in practically the whole of the gas companies’ list, owing to dividend expectations.

Insurance shares have also been mounting, and the banking market is beginning to rise, inquiry spreading from colonial and foreign banking shares to those of the London group. Anticipation looks for increased dividends from the discount companies. The dramatic rise of the past three weeks in tea shares has served to bring in a few sellers, and the boomlet, therefore, received a check. Crosbie and Blackwell shares materially recovered, after being flat, on the passing of the dividend on the two issues of preference shares. The cable group is firmer, and amongst wireless, Marconi Marines show a moderate recovery. A number of rises occurred in the shares of drapery and stores companies. Breweries are quiet. Forestals, after a dip on the not entirely unexpected passing of the dividend, rallied smartly, while, amongst other land shares, Egyptians have come in for more support, and are better on the week. The Vickers’ accounts up to the end of 1920, showing a profit of rather more than half-a-million pounds, but no dividend on the ordinary, led to bear-covering. Iron, coal, and steel shares continue to creep up quietly. Dunlops are lower, though the debenture stock, in company with most industrial debentures, gained ground.

South Africans have been under the shadow of a fall in gold to about 98s per ounce, in consequence of the decline in the value of the dollar. This influence is partially counteracted by dividend announcements now being made by the South African companies. The Cape and Paris has been doing little in Kaffirs, but French buyers are taking copper shares again, and prices of these are mostly better, with the exception of Cape Coppers, which gave way upon a very melancholy report. Rhodesian shares are quiet. Malayan tin issues stand out as the principal feature of strength in the mining markets, prices advancing day by day in connection with the rise in the price of tin. Russo-Asiatics and other gambling counters are attracting little notice. Broken Hills have benefited by the resumption of dividends on the preference shares by the Zinc Corporation. West African and Cornish tin shares received a little professional attention, without its having much effect upon prices, and Mexican mining shares continue listless, Santa Gertrudis weakening upon the report just published.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5½ per Cent. Treasury Bonds.—Issued at £99 per cent and repayable at par on May 15, 1930. Interest payable half-yearly on May 15th and November 15th. Full particulars of this issue will be found in the *Economist* for December 3rd (see page 986).

The Government of India 5½ per Cent. Loan.—This is an issue of £10,000,000 stock at 93½ per cent., repayable at par on January 15, 1932. This issue is made under the provisions of the East India Loans Act, 1910, and previous Acts. The entire proceeds will be utilised for Indian railway purposes. It may be held in the form either of stock or stock certificates to bearer (which are equivalent to bonds to bearer) at the option of the subscribers. Stock may be inscribed as “Transferable in the stock transfer books,” or may be registered as “Transferable by deed.” The books of the loan will be kept at the Bank of England. Transfers and stock certificates will be free of stamp duty. It is interesting to observe that the prospectus points out that persons or firms applying for allotments of this issue are hereby notified that, by virtue of the provisions of Acts 22 George III., Chapter 45, and 41 George III., Chapter 52, every allotment will be made subject to the express condition that no member of the House of Commons will be admitted to any part or share therein, or to any benefit to arise therefrom. The Statute does not apply to contracts entered into by incorporated trading companies in their corporate capacity.” This information was not vouchsafed in the previous prospectus, which also contained a provision omitted in this prospectus that “The entire proceeds will be utilised for the purchase of railway material in the United Kingdom.” The stock is an investment authorised by “The Trustee Act, 1893, and trustees may invest, unless forbidden by the document creating the trust.” The attractions of the issue are qualified by political and geographical considerations.

New Zealand, City of Auckland 6 per Cent. 1943 Loan.—Issue of £400,000 in debentures to bearer at £94 per cent. The principal will be repayable at par on January 1, 1943, in London, where the interest is also payable. The proceeds of this loan, forming part of a total authorised issue of £500,000, will be devoted to provide further funds for existing electric tramways, for drainage, street and other improvements. Subject to existing loans, this issue is a direct obligation of the city, and is secured by a special rate on property in and around the city. Annual rateable value for 1921 is £1,519,520, while revenue is stated as £1,077,047. The total debt of the city is £4,403,024. This is covered by an annual charge for interest of £219,883, and for sinking fund £67,410, while against debt there is an accumulative sinking fund of £499,827. For persons domiciled outside New Zealand the loan is free of taxes levied by that country. A good security in its class.

Newcastle-upon-Tyne Electric Supply Co., Limited.—Authorised share capital £6,500,000, of which £4,296,247 has been issued. Authorised debenture capital, £4,146,508, of which £2,646,508 has been issued. Messrs Lazard Brothers and Co. have been authorised by the company to receive applications for an issue of £750,000 6 per cent. second mortgage debenture stock at 85¼ per cent. The stock is to be secured by a trust deed, subject to a prior trust deed, securing the company’s 4½ per cent. first mortgage debenture stock for £2,146,508 as a first charge. This 6 per cent. second mortgage stock will be repayable at par on March 1, 1949, but the company reserves the right to redeem before that date at 102½. According to the “offer for sale” for this total authorised issue of £2,000,000 6 per cent. debentures (of which the present offer is a part), there are surplus assets, after the proceeds of the present issue have been taken into the accounts, amounting to £5,769,121. As the total second debenture issue up to date, including the present offer, amounts to but £1,250,000, there appears to be a reasonable margin of security. With reference to the margin of profits available for interest service on the second mortgage debenture stock, it is well to remember that this undertaking has increased its capital rapidly in the past few years, its total called-up share capital in 1914 being £1,709,355, and the loan capital £1,087,500. In September of this year the directors announced that, “owing to the adverse effects caused by the stoppage of the coal mining industry, profit for six months ended June 30th last is not such as to justify the payment of an interim dividend on either the ordinary shares or the 5 per cent. preference shares.” Subject to these comments, the issue may be considered a well-secured industrial risk.

Sheffield Steel Products (Stores), Limited.—Authorised capital £500,000, divided into 200,000 ordinary shares and 300,000 guaranteed 10 per cent. cumulative preference shares of £1 each. This is a new company, formed for the purpose of selling direct to the public goods handled by the Sheffield Steel Products, Limited. The parent company—the Sheffield Steel Products, Limited—has agreed to subscribe at par for the whole of the ordinary capital, of which they propose to pay 20 per cent. on application, and the balance when “required by the company.” It is provided that no prior charges can be made upon assets without the sanction of preference shareholders, except to secure loans from bankers or “to secure the purchase price of any shops which the company may not find it possible to rent.” This is an issue of the whole of the preference capital at par. Capital and dividends are guaranteed on these cumulative preference shares by Sheffield Steel Products, Limited. The net excess of assets over liabilities of the latter undertaking is stated at £2,501,969, while profits are set out from 1916 before charging several important items, but after making allowance for depreciation; stocks valued at £566,364 are included in assets, having been taken “at cost or market price, whichever was the lower,” at December, 1920. Since May last Sheffield Steel Products, Limited, has created and issued £850,000 8 per cent. first mortgage debenture stock. Of this amount, in April last, the company publicly offered £750,000, and stated that total surplus assets were £2,501,969—similar figures to those now issued. The present prospectus points out that the net proceeds of these debentures “have been used in extensions to the works and plant and in repayment of loans to its bankers.” The progress of the proposition will be watched with interest by most people, and should be certainly financially supported by those who take favourable views of the prospects of the parent concern.

The Portland Town Estate Company, Limited.—Authorised capital £40,000, divided into ordinary shares of £1 each. There is also loan capital of £105,000 8 per cent. “A” debentures, of which £52,500 has been redeemed, and £50,000 6 per cent. “B” debentures. The company was incorporated in May, 1921, and the entire share capital is, or will be, issued against cash. The objects of the company are to acquire the property in London known as the Portland Town Estate, and develop it. Borrowing powers have been exercised to the extent of £355,000, being £200,000 on specific mortgage, secured on the company's freehold property, and the balance by debenture issue, as above. “The purchase money originally agreed upon was £350,000. The seller of the property, however, agreed to accept £300,000 for cash down instead of £350,000. It was, therefore, possible to redeem £52,500 of the ‘A’ debentures.” We extract these details from information published to comply with the requirements of the Committee of the Stock Exchange. It is not often that a company with a capital of £40,000 exercises borrowing powers to the extent of £355,000, and unless the property has been bought at much under value, the margin of security for “A” and “B” debenture holders is not very large.

The Llanelly and District Electric Lighting and Traction Company, Limited.—Authorised share capital £300,000, of which £285,000 has been issued, and is fully paid up. There is, in addition, outstanding £53,331 5 per cent. debenture stock. The borrowing powers of the company are limited to amount equal to the issued and paid-up capital of the undertaking. This is an issue of £125,000 7½ per cent. debenture stock at 94 per cent. The stock will be secured by a trust deed on property and a floating charge on other assets, subject to “mortgages and charges created to secure the 5 per cent. debenture stock.” The company undertakes, however, that no further debenture stock “shall be created or issued” ranking in priority to the present issue without the consent of holders of 7½ per cent. debentures, but it should be noted that under the trust further borrowings can rank equal with the present issue. The stock will be repayable by means of a sinking fund, either by purchase in the market or by drawings at 102, while right is reserved to redeem at 102 at any time on giving two months' notice. Profits are given from 1915, and the dividends on ordinary shares display a progressive distribution. Total expenditure is stated to be £431,002 on “Plant, mains, buildings, rolling-stock, &c.” But it is significant that the word “capital” is omitted in front of “expenditure,” and in the absence of further information, it might be taken that this sum includes money spent on maintenance without a compensatory allowance for depreciation. The position would have been clearer had a balance-sheet been provided. The issue has been underwritten for a commission of 4 per cent.—a moderate rate. But the rate of cash commission paid, namely, 5s per share for the issue of 30,000 £1 preference and 77,085 ordinary shares, together with 4s 6d per share on 13,000 preference shares, during the last two years, appears to be rather high, unless there is in addition a consideration which is not vouchsafed in the prospectus.

Reading Electric Supply Company, Limited.—Authorised share capital £152,200, divided into ordinary shares of £1 each, of which £152,125 has been issued. This is an offer for sale of £100,000 7½ per cent. first mortgage debenture stock at 95 per cent., repayable on or before December 31, 1921, by means of a cumulative sinking fund in annual drawings at 102½, or “purchase below that price.” The company reserves the right to pay off the stock at any time after December 31, 1925, on giving six months' notice from any interest date. The stock will be secured by a trust deed, which will constitute a specific first mortgage on property and plant, and a floating charge on other assets. There are outstanding 6 and 4 per cent. debentures, amounting to £32,000, which mature for payment in 1922. The company was incorporated in 1892, and it is stated that net assets, as shown by the balance-sheet of December 31, 1920, together “with the proceeds of the present issue,” amount to £284,922. Net profits, “after payment of all charges other than interest on loans and provision for depreciation,” are given for the past three years. The price paid to the company by the present vendors for the issue is £90 per cent., the purchasers paying an underwriting commission of 2½ per cent. and expenses of issue. This is an attractive offer in its class, yielding £7 17s 10d, exclusive of profit on redemption, but regard must be paid to the restricted market for so small a loan.

The Mexican Corporation, Limited.—Authorised share capital £1,400,000, in shares of £1 each, of which 1,000,000 have been issued. No debentures have been issued, and neither the company nor the local Mexican concern may create charges without consent of noteholders, other than to secure bankers' loans made in the ordinary course of business. This is an announcement in the Press to comply with Stock Exchange Regulation concerning an issue of £380,000 10 per cent. seven-year convertible notes, repayable at £120 per cent., being part of a total authorised issue of £400,000. Apparently, the notes are convertible into shares at par. The company engages to pay off outstanding bonds by means of drawings in four instalments on specified dates, and undertake to set aside £35,000 per annum. These £380,000 of notes have been subscribed for at par, subject to a commission of £28,500. The bonds will hardly appeal to conservative investors.

Woking Water and Gas Company, Incorporated by Acts of Parliament.—Authorised capital £228,250, of which £168,515, including premiums, has been issued. This is an issue of £20,000 7 per cent. debenture stock, redeemable June 30, 1932, at par. The stock will rank after existing issues as regards principal, but *pari passu* with them as to interest. The existing borrowing powers of the company are £83,725, of which £41,682 has been borrowed upon perpetual debenture stock. These particulars are extracted from an advertisement in the Press to comply with the regulations of the Stock Exchange. The information given is insufficient to gauge the merit of the issue.

Surrey Public House Trust Company, Limited.—Authorised capital £100,000, divided into 399,996 ordinary shares of 5s each and 20 deferred shares of 1s each. There is a mortgage of £3,200 on one of the company's freehold properties, and an issue of £10,000 debentures. Of these debentures, £7,000 are held by bankers, together with a charge on some properties, to secure an overdraft amounting to £22,590. The maximum dividend payable on ordinary shares is 7½ per cent., and the deferred shares are held in trust. Ordinary shares for an amount of £16,542 have been issued, and 213,830 ordinary shares are now offered for subscription, presumably at par. The company began business in 1902, and, according to a statement of gross profits from 1905 in the advertised prospectus, has made on average good progress. Net profits are quoted for 1919 and 1920 only. It would have been better, perhaps, if net profits for the whole period had been given. Net surplus assets are, according to the balance-sheet, valued at £23,380, but properties reckoned by the company at £56,439 have been valued independently at £72,340. The undertaking appears to be a reasonable proposition, and the issue is a suitable industrial risk for opulent investors.

Trinidad Lands Reclamation, Limited.—Authorised capital £100,000, divided into shares of £1 each. The directors have power to borrow money up to £150,000, without sanction of a general meeting. This is an offer by Messrs Sperling and Co. at par of £100,000 5 per cent. two and a-half year bonds, repayable on June 30, 1924, at 10 per cent. premium. “Each subscriber of the bonds will be entitled to receive an allotment or a transfer from Messrs Sperling and Co. of shares of this company, credited as fully-paid up, of the nominal value of 50 per cent. of the nominal amount of the bonds allotted to him.” The following undertaking is given by the company. It “will covenant that so long as any of the bonds are outstanding, it will not, without the sanction of a resolution at a general meeting of the bondholders, passed by a majority of three-fourths in value of those holders who are present or represented at the meeting, create or issue any mortgage, charge, or other

similar security, except to secure bankers' loans incurred in the ordinary course of business.” The repayment of these bonds, also interest and premium payments, are guaranteed by the parent concern, British Controlled Oilfields, Limited. These particulars are taken from a statement “made for public information only, and to comply with the regulations of the Stock Exchange, and is not an invitation for subscription to shares or bonds.” In connection with this advertisement, however, it may be pointed out that British Controlled Oilfields, Limited, the guaranteeing company, was incorporated in Canada in 1918, and has its head office at Montreal. According to the *Stock Exchange Official Intelligence* for 1921, the authorised and issued capital consisted of \$40,000,000 in \$5 shares, divided into common and preferred issues. “The first accounts were made up to July 31, 1920, and submitted in December. No dividend was paid on either class of shares.” Dealings have recently taken place in the preferred stock at round about 6s 6d. On the information at our disposal, a purchase of the bonds could not be recommended should they be quoted.

Peco, Limited.—Authorised capital £75,000, divided into 1,500,000 shares of 1s each, of which shares have been issued and wholly or partly paid to the amount of £35,025. The company was formed in February, 1921, for the purpose of acquiring a method for the treatment of peat. This information is taken from particulars given in a public announcement in the Press, made to comply with Stock Exchange regulations. In its present stage the proposition will only appeal to those with inside knowledge.

Diamond Fields of Africa (D.F.A.) Exploring Company, Limited.—Incorporated in April, 1920, under the laws of the Orange Free State. Authorised capital £110,000, divided into 880,000 shares of 2s 6d each, of which 780,000 shares have been issued and are fully paid. The capital will be increased to £400,000 in shares of 2s 6d each, of which 1,000,000 shares will be issued in connection with agreements for amalgamation entered into with two other undertakings. These shares will be issued as fully paid to two vendor companies, and 1,420,000 shares “will be issued in the event of the exercise of” certain options. These details are taken from an announcement in the Press, made to comply with Stock Exchange regulations, and will not be considered as sufficient information to guide an outside speculator.

Langkapoera (Sumatra) Rubber Estate, Limited.—An issue of £25,000 second convertible debenture stock is offered to shareholders at par. The stock will be secured by trust deed as a second fixed charge on the leasehold estates in the Lampongs (South Sumatra), and shares and other interests in the local Netherlands Company, and as a second floating charge on the other assets, including uncalled capital, subject to the first debenture stock. The second debenture stock will be entitled to fixed interest at 10 per cent., and to 25 per cent. of the profits available for distribution among the ordinary shares, subject to provision for agreed reserves. Holders have the right to convert their stock into fully-paid ordinary shares at par at any time previous to actual redemption. The stock will be “redeemable on December 31, 1931,” but the company will have the right to repay it earlier on 12 months' written notice, expiring on any 30th June. The issue appears to be worthy of consideration by existing shareholders.

The Commercial Company of the Channel Islands, Limited.—Registered under the law of Guernsey. Authorised share capital £105,000, divided into £100,000 8 per cent. cumulative preference shares of £1 each, and the remainder in ordinary shares of 1s each, all of which have been issued or are under option. This is an offer for sale of the whole amount of preference capital at par. Applications are to be for not less than a minimum number of 50 shares, and not more than 500 shares. As an additional inducement to subscribe, shareholders are invited to stay at the company's hotels for one week free of charge. The company owns and manages two hotels in the island. In the statement before us no mention is made of past profits, and a vague reference is made to “Rente-bonds,” which, when all issued, will require an annual interest of £2,000 a year. An independent valuation of the hotels is given, but without more information of the charge, which will cost £2,000 per annum, and profits, we must advise intending investors to leave the shares alone, unless the attractions of a free holiday overcome the desire for intelligent preservation of capital.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM CO., LIMITED.—The production of crude oil by this company and the Rangoon Oil Co., Limited, for the month of November amounted to 71,049 barrels.

COMMONWEALTH OIL CORPORATION, LIMITED.—Four weeks ending December 2, 1921:—Shale retorted, 2,067 tons. Crude oil and naphtha produced, 203,404 gallons.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during November amounted to 117,122 barrels, or approxi-

mately 16,732 tons, including 67,743 barrels from the properties of the St Helen's Petroleum Co., Limited.

THE GENERAL PETROLEUM COMPANY OF TRINIDAD, LIMITED.—Oropughe Field:—Production for week ended December 10, 1921, restricted to 1,400 barrels owing to continued lack of piping facilities.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, December 7, 1921, amounted to 1,031 tons.

ACTIVE SECURITIES

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

COMPANY MEETINGS, &c.

BRITISH OVERSEAS BANK, LIMITED.

DEVELOPMENT OF BANK'S ORGANISATION.

BOARD'S SOUND AND CAUTIOUS POLICY.

INTEREST IN THE DORPATER BANK.

The second annual general meeting of the British Overseas Bank, Limited, was held, on the 16th instant, at the Cannon street Hotel, London, E.C., the Right Hon. Viscount Churchill, G.C.V.O., the governor, presiding.

The Chairman: Gentlemen, I will ask the secretary to read the notice calling the meeting.

Mr Escott Thorne, the secretary, read the notice accordingly.

The Chairman: I will ask the secretary to read the auditors' report.

The secretary read the auditors' report also.

The Chairman: The report and accounts are submitted, and I will ask the meeting if the same may be taken as read.

This was unanimously agreed to.

CHAIRMAN'S SPEECH.

The Chairman:
Ladies and Gentlemen,—

The balance-sheet and profit and loss statement are before you. You will find in them evidence of the difficult times which we, in common with the rest of the world, have experienced during the last 12 months. However, I hope that you will also find evidence of the strength and capacity for progress which we have developed during the short period of our existence. We have passed from an unhealthy boom to the deepest depression, and it was inevitable under these conditions that our progress should be slow. I will not waste your time by discussing the evils of inflation, and of disorganised exchanges. All of us, and especially those who have anything to do with foreign trade, know them only too well. Nor will I attempt any general survey of conditions abroad. There is at present an almost uniform monotony of distress. On the one hand we have countries whose depreciated and fluctuating currencies make foreign trade almost impossible. On the other hand, there are the relatively stable countries which are suffering almost equally through the shutting down in this way of their normal markets. The result has been a drop in prices, and particularly a discrepancy between the prices of raw materials and finished products which has had disastrous consequences. As always in these times of crisis, bankers have had to stand as a buffer between their clients and the full force of depression. We ourselves, like other banks, have suffered, but owing to our shorter period of activity, in a somewhat different way. Our credits and advances at the end of our first year's working were, of course, small compared with older banks, and a well-grounded fear that depression would soon be upon us had fortunately made us very cautious. The result was that in this respect we were in a better position than most of our neighbours. On the other hand, the test of depression came to us so soon that we had had little time to build up our internal position, and prepare ourselves to meet such a strain; and we are thankful now that so much of our energy during our first year was directed to construction rather than to taking business which at that time was everywhere so readily offered.

SECOND YEAR'S OPERATIONS.

During our second year the turnover on individual accounts has been smaller, and business as a whole far more difficult to carry through. In spite of this, the number of our clients has steadily increased; relations with our older clients have been maintained and strengthened, and the development of our internal organisation has been substantially advanced. Our relations with banking institutions abroad have become closer, and many new friends have been added. As a result, although our network of connections is still not complete, it is considerably more widespread and efficient, and we are able to offer satisfactory services in almost every part of the world.

DORPATER BANK.

With one exception we have refrained this year from extending in other countries the form of co-operation exemplified by our interest in the Anglo-Polish Bank. Our representatives have again visited a number of centres, but a careful study of conditions convinced us that the moment for action on these lines had not yet arrived. At the same time, further useful connections have been formed which have made it possible to offer improved facilities to our clients. We continue to follow conditions very closely and the knowledge we have already gained will, we hope, enable us to act effectively at the right time. The exception to which I have referred is Esthonia, where we have acquired a shareholding

interest in the Dorpater Bank. This is a small but old-established institution of the highest reputation, which is on the point of extending its activities. Our participation is modest, as naturally the field is at present limited, but an active little business has already been established. The connection is, however, almost more interesting from the wider vista it opens up, and from the point of view of future development still further afield.

POLAND.

In Poland general conditions continue to be unsatisfactory. In spite of the real efforts towards reform which have recently been made, Government finances have continued to sink further into the morass produced by heavy expenditure, insufficient revenue and consequent rapidly increasing inflation. The result has been an exchange collapse that, for practical purposes, has made foreign trade so difficult as to be almost impossible. This state of affairs is particularly to be regretted, as within the country itself substantial progress has been made during the last 12 months. Agriculture has become almost normal and the harvests have been excellent. In railway transport, in spite of the difficulty of obtaining assistance from abroad, the improvement has been astonishing. In industry, especially in the textile area, production has until recently been rapidly increased. Unfortunately on the other hand the vast army of officials, and exaggerated military expenditure, are an increasingly heavy burden, to meet which it becomes increasingly hard owing to the difficulty of collecting the taxes imposed. The peasants especially, who are very prosperous, have proved the most difficult of all to deal with. Before Poland can be pulled together these problems of pruning down bureaucracy and militarism and of increasing the efficiency of the tax-collecting system will have to be solved.

HELP FOR POLAND.

You will have seen in the Press during the year references to a request by Poland to the British Government for assistance in providing a financial adviser in order to meet the exceedingly difficult situation now existing. We most sincerely hope that such help will be given, and that co-operation on these lines will not only prove the beginning of better things in Poland, but will tend in addition to draw the two countries more closely together. Given a reform of Government finance, we may, I think, rely with confidence on the energy of the agricultural and industrial elements to restore prosperity to Poland.

ANGLO-POLISH BANK.

In spite of the misfortunes of the country as a whole, which we hope are only temporary, the Anglo-Polish Bank has been able to record a satisfactory year. As you will have seen from the balance-sheet published a few months ago, the bank on its first year's working has been able to declare a dividend of 10 per cent., and, in addition to clearing off preliminary expenses, has established a reserve of P.M. 2,607,188. Recently a further issue of shares has been made, bringing up the capital from P.M. 25,000,000 to P.M. 50,000,000. The new shares have been taken up for the greater part by the Bank of the United Lands of Poland, whose chairman, Prince Stanislas Lubomirsky, becomes the new president of the Anglo-Polish Bank. The relations established with these new friends have been of the most cordial character, and we look forward to the future of the bank with confidence.

From the experience we have gained during the past year we are able to confirm the soundness of the general policy which the bank on its foundation had decided to pursue, that is, wherever possible to co-operate with the nationals of the countries in which we are operating rather than to establish competitive institutions. Developments have this year been slow. But I think you will agree that conditions have justified our caution in this matter. Our relations with our correspondents in all the more important centres, especially in Brussels and New York, have been increasingly satisfactory, and have given us much encouragement for the future, when better times will allow more active operations.

FOREIGN EXCHANGES AND TRADE REVIVAL.

When these better times will come we cannot say. It is difficult with justice to be optimistic enough to expect much improvement for some time to come. The root of most of our evils, as we have learnt by now, lies in the instability of the foreign exchanges; and the causes of this instability are on the one hand the bankrupt conditions of the finances of most countries in the world, and the numerous problems, still left unsolved, giving rise to international

friction. Many ingenious solutions have been proposed for the restoration of financial stability, but almost all have been marked rather by idealism than by a practical knowledge of affairs. Regrettable as it may be, it is probable that for some years longer we shall be tossed about in the trough of depression before the hard lesson has been learnt that the losses of the past must be cut, and that each nation must itself set its own house in order before stability can be reached. The only satisfactory sign to be seen at present is the growing recognition that such a disturbing element as the existing reparation scheme for Germany requires reconsideration, and must be placed upon a more practical basis. With this central difficulty adjusted, it is possible perhaps that a beginning may be made towards better times.

THE YEAR'S WORKING.

Now, ladies and gentlemen, as to the year's working. Our work this year, although less profitable than before, has been equal in volume and very much greater indeed in complexity and difficulty, and the strain on our staff has in consequence been exceptionally heavy. That it has been possible to execute this work to our clients' satisfaction and at the same time materially to advance the details of our internal organisation has been due to the energy of our staff, whose efficiency and loyalty have been thoroughly tested. It is with great satisfaction that I can bear witness to an *esprit de corps* and an interest which cannot be surpassed in the work of the bank by the staff.

CURRENT AND DEPOSIT ACCOUNTS.

Our deposits, you will see, have increased by some £390,000. For the greater part, as last year, these deposits represent balances of our foreign clients, or of home clients who are accumulating funds in anticipation of credits. By their nature such balances are subject to considerable fluctuations, but the average level has been substantially higher than in our initial year. This increase, as can well be understood from the character of the past year, has been due not to any increase in individual balances, but to an increase in the number of accounts brought about by the general growth of our business.

CREDITS.

As regards credits, acceptances and endorsements show a decline of some £1,200,000. In view of the conditions prevailing during the past 12 months this fall of some 75 per cent. will no doubt be thought natural and satisfactory.

CASH POSITION.

Our cash in hand shows little variation. The nature of our business requires a strong position, and we have felt it desirable to act with the same prudence as before. Money at call and short notice is down some £700,000, but an equivalent figure, covered, of course, by forward sales, will be found in balances with agents abroad.

INVESTMENTS.

As you will see, our investment in National War Bonds has this year been changed into Treasury bills of approximately the same amount, and a further item added of some £20,000 for other investments. Our investments in foreign banks have been increased by the purchase of further shares in the Anglo-Polish Bank.

NEW PREMISES.

With regard to new premises, our premises account has been increased by approximately £170,000. As you will remember, we acquired in 1920 the freehold interests in Nos. 33, 35 and 36 Gracechurch street. Difficulties in the way of our acquiring certain tenants' leases in No. 36 have made it desirable to defer for some years the erection of a building on the whole site. The site furnished by Nos. 33 and 35 was, however, vacant, and work is already well advanced on a building which we anticipate will be ready for occupation next summer. These premises will, we expect, give us ample accommodation until 36, Gracechurch street becomes available.

ALLOCATION OF PROFITS.

As to allocation of profits, if you will turn now to the profit and loss statement you will see that net profits amount to a figure of £102,326, after making provision for bad and doubtful debts and for all taxation for the past year.

These figures are on the surface less flattering than those of our first year, from which, however, no allowance for taxation was deducted. I think you will agree that, in view of the extreme depression through which we have been passing, and in view particularly of the caution which we as a young institution are bound to adopt, they probably give in reality more ground for solid satisfaction. It has been our policy to go slow. But nevertheless we have moved, and have moved all the time with the knowledge of being on firm ground.

A further dividend on the "A" shares is recommended by the council of 3 per cent., less income-tax, bringing up the total dividend for the year to 6 per cent., that is to say, the same distribution as in the preceding year. At present the council do not suggest a dividend on the "B" shares, and the soundness of this policy will,

I think, be generally endorsed. This self-denying ordinance of the Associated Banks must be welcomed as substantial evidence both of a desire on their part that the bank should be built up on the soundest possible footing, and further that for the present they regard as sufficient recompense the undisclosed and more intangible benefits derived from association with us and with each other.

Following the policy laid down a year ago, the council recommend the allocation of a further £10,000 towards the formation of a reserve against our investments in foreign banks. It is the intention of the council that this reserve shall ultimately correspond in amount to the purchase price of these assets. This is the ideal, but, of course, time must elapse before its complete fulfilment.

An allocation of £10,000 towards premises account is also recommended. The soundness of such a policy is so universally recognised that further words of mine, I feel, are hardly necessary on this point.

If these recommendations are adopted by the meeting, we shall be left with a carry forward for next year of £57,526 10s 2d in undivided profits, which sum is free from any known liability.

I think, ladies and gentlemen, that brings to an end the remarks with regard to our working that I have to put before you, but, of course, before I put the resolution I shall be very happy if any lady or gentleman will ask any questions that may occur to them. I now beg to move the following resolution:—

"That the report and accounts as audited and certified by the company's auditors, now before the meeting, showing the position of the company's affairs as at October 31, 1921, be approved and adopted, and that the final dividend recommended to be paid by the governing council at the rate of 6 per cent. per annum on the 'A' ordinary shares for the half-year ending October 31, 1921, be approved. That the dividend be paid to shareholders on the register of members at the closing of the books on December 3, 1921."

I will call upon Mr John Sampson to second the resolution.

VIEWS OF MR SAMPSON.

Mr John Sampson, C.B.E.: My lords, ladies and gentlemen, I beg to second the resolution, and I am sure that all present will be very grateful to our noble chairman for having given us such a full and clearly expressed statement of the general progress of the company's affairs during the past year. I would crave just a few moments for a word to endorse my lord's words, and express my personal appreciation of the manner in which the business of the company has been carried out by the chairman, the directors, and the board of management. As the name of the company implies, it exists for the purpose of overseas trade. Well, when you come to reflect on the instability of the Governments of the majority of countries now, the wide fluctuations of exchange, it needs very little thought to realise how difficult it is to steer the good ship on a course clear of the rocks and the shoals that lie in wait for the inexperienced and the unwary when dealing with overseas business. I think we are to be congratulated on the fact that our profits for the year are approximately the same as in the previous year, and that we have not been led into any disastrous whirlpools or pitfalls.

The Chairman: In the absence of any other remarks, ladies and gentlemen, I beg formally to put the resolution which I have read.

The resolution was carried unanimously.

The Chairman: I will now call on Mr Currie to move a resolution.

Mr Laurence Currie: Lord Churchill, ladies and gentlemen, I have great pleasure in moving:—"That Sir Harry McGowan, K.B.E., and Mr John Sampson, C.B.E., who retire by rotation, be re-elected as members of the governing council." Those two gentlemen enjoy the complete confidence of their colleagues, and I hope the meeting will elect them to continue the very able service which they have already rendered to the bank.

Mr R. T. Hindley: I have very much pleasure indeed in seconding that resolution.

The resolution was carried unanimously.

The Chairman: Will a shareholder move the reappointment of the auditors?

Colonel Westropp: My Lord, ladies and gentlemen, I have much pleasure in proposing:—"That the retiring auditors—Messrs A. W. Tait, C.B.E., and A. S. Macharg, chartered accountants, be re-appointed as auditors of the company for the current year at the same remuneration, viz., a collective fee of 500 guineas."

Mr G. C. Sim: I shall be pleased to second that.

The resolution was carried unanimously.

The Chairman: That, gentlemen, concludes the business.

VOTES OF THANKS TO LORD CHURCHILL.

Mr Edgar Horne, M.P.: Before we separate, I feel sure we should like to express our very hearty thanks to Lord Churchill for his conduct in the chair to-day.

The vote was unanimously accorded.

The Chairman: I am very much obliged. I can only repeat what I said this time last year, that any success I have in conducting this meeting, or anything else connected with the bank, is entirely due to the keen guidance and help of my friend on my left, and my colleagues on the council and the board.

The proceedings then terminated.

LIVERPOOL MARINE AND GENERAL INSURANCE COMPANY, LIMITED.

THIRD ANNUAL ORDINARY GENERAL MEETING.
"EMINENTLY SATISFACTORY MARINE FIGURES."

The third annual ordinary general meeting of the Liverpool Marine and General Insurance Company, Limited, was held at the Law Association Rooms, 14 Cook street, Liverpool, on Wednesday, December 7, 1921, Sir Alfred Read (the chairman of directors) presiding.

The other directors present were:—Mr Bernard Barton, J.P., Major A. S. Collard, C.B.E., J.P., Messrs H. Ernest Leatham, J.P., H. Percy Steeves and William Symington, with Messrs E. Bailey (London underwriter), A. W. Edmondson (Liverpool underwriter), W. E. Mounsey (auditor), A. E. Hewitt (solicitor), P. H. Exell (fire manager), E. Gormly (accident manager), and Andrew Hannay (secretary). Amongst the shareholders present were:—Messrs V. E. Cotton, E. Redmayne Jones, W. R. Nielson, Ernest Pelling, A. G. Steeves, E. W. Stubbs, W. Norman Thomas, Joseph Watson, R. J. Williams, E. C. Winter, J. R. Wynne, &c.

The secretary read the notice convening the meeting and the auditors' report.

The Chairman: I welcome you all here to-day to hear a little of the doings of the past 12 months of the Liverpool Marine and General Insurance Company. You have before you the accounts which I presume you have all perused and studied carefully in every possible way. Referring to the marine account, the figures are before you, and I need not repeat them—I do not think you would wish me to do so—but I feel sure you will agree with me that having regard to the bad times we are all passing through, in whatever business connection we may be employed, that they are eminently satisfactory. It has involved a great amount of work on the part of our underwriters both in Liverpool and in London, and I think we can claim, as a young company, that we have done satisfactory business.

FIRE AND ACCIDENT ACCOUNTS.

The fire account and the accident account are before you, gentlemen, and your directors are satisfied with both these accounts. Rome was not built in a day, neither was any great corporation or business built in a day. You have either to purchase a goodwill or you have to create a goodwill—we are doing the latter. We are on the right road to making a huge success of both these departments. We have men appointed in various places in the United Kingdom and elsewhere whom we consider second to none, and they are assiduously working to the end of building up a business which I shall hope to present to you at some future time as a very profitable one.

THE INVESTMENTS.

The investments, which you also have before you, have proved to be very satisfactory. They are represented by a large proportion of money being invested in Government securities, which anybody who follows the market knows full well recently have appreciated, and I think in view of the settlement of one or two Imperial matters, not the least being the vexed question of our friends across in the Emerald Isle, I look forward to a further appreciation of these investments. The item of loans to other companies, &c. Those are investments in an allied company with which we are very closely connected, and your directors are perfectly satisfied with that investment, that in the future it will prove a profitable one. As I stated, I think, at our last meeting, the Liverpool Marine and General Insurance Company is a young company, and when one bears in mind the years that have passed over the heads of some of the principal insurance companies in Liverpool and London, some dating back, as many of you in this room know, to a century and more, we cannot but be satisfied with the position. I am sorry, of course, that we do not propose to pay a dividend, primarily because we want to conserve our resources. The directors have been considering for some little time the question of our financial year, and it is proposed that instead of ending on June 30th it shall be December 31st in the future, which is merely to bring it into conformity with the usual practice in the insurance world.

DIRECTORS' APPRECIATION OF THE STAFF.

I should like here to take the opportunity of expressing the high appreciation of the directors, who are very closely in touch with all affairs, of the loyalty of and the manner in which the work has been done by the employees of the company in every department. I feel sure that there is no insurance company that has a better staff, loyal to the core, never stinting in their duty or work, and having one object only in view, the success of the Liverpool Marine and General Insurance Company. Before I move the usual resolution that the accounts, &c., should be passed, I would like to answer any question that any gentleman would like to put to me. If there are none, then I shall assume that you are satisfied with the manner in which we have conducted the business.

The report and accounts were unanimously adopted, the retiring directors were re-elected, and the auditors re-appointed.

ORIENT STEAM NAVIGATION COMPANY, LIMITED.
CHAIRMAN'S CRITICISMS OF GOVERNMENT COMPETITION.

The twenty-second ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 13th instant, at 3 and 5 Fenchurch avenue, London, Sir Kenneth S. Anderson, Bart., K.C.M.G. (the chairman of the company), presiding.

The secretary (Mr R. T. Garrett) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the profit for the past year, after providing for depreciation, was £162,177, or some £50,000 less than in 1920, despite the fact that the number of voyages performed by the company's steamers had been greater. It was proposed to pay a dividend on the deferred shares at 12 per cent., free of income-tax, and to carry forward £50,166. With the addition this year of £70,440, the general reserve would stand at £550,000, and the underwriting account, after using £50,000 towards payment of the dividend, would stand at £274,286. He was sorry he could not prophesy smooth things for the current year. Outward freight was simply deplorable, though fortunately trading conditions were such as to favour somewhat the mail steamers. In Australia climatic conditions had assured a good season, but the collapse of the world's markets was paralysing produce exports, and the homeward steamers—although the position was much better than it was outwards—were at present leaving short of cargo. Reductions in freight had been made in order to facilitate business, but no freight reductions would have the desired result unless and until there was a general scaling down of all the costs of production and handling. Passenger prospects were better than freight, but even they were indifferent. Charges, on the whole, manifested a better tendency than revenue, but running costs were still more than double what they were before the war. The two main factors, the coal and wage bills, continued inordinately high, and unless costs in the shipping industry could be reduced, employers and employed would both be in the ditch together.

NEW MAIL CONTRACT.

It was very satisfactory to this company, and he hoped to the Commonwealth Government, that they had been able to get the arrangements for the carriage of mails regularised in the early months of this year. They had made a new contract for a four-weekly mail service terminable by either party at a year's notice. This programme had now been operative since September, and, in conjunction with a similar service of vessels of the P. and O. Company, provided a regular fortnightly delivery and despatch of mails. Despite the fact that they had had to deal with arrears of traffic held up during the war, their experience had shown the reduced service to be quite adequate to deal with all passengers during the full season, supplemented, possibly, by an occasional extra steamer, and much more than adequate in the off season, while at the present time the four-weekly despatch by itself appeared more than sufficient even for the full seasonal traffic. The policy of the Orient Company would always be to provide sufficient, and more than sufficient, facilities in quantity and quality for the traffic offering, but it was obvious that to double the service under present conditions would involve a vast excess of capacity, which must be paid for in the shape of either higher fares or bigger subsidies.

COMMONWEALTH GOVERNMENT LINE.

It was unfortunate that at this rather anxious juncture the private British shipowner in the Australian trade should have to sustain the competition of the newly inaugurated monthly service of the Commonwealth Government Line. They were assured that there was no intention to damage the shipping interests of this country, which were as vital to Australia as to Great Britain, but even if eventually this action on the part of the Government did not result in driving the shipping interests of this country out of the Australian trade, it must, in any case, immediately and inevitably act as a strong deterrent to their development. If, therefore, the policy was designed to assure and improve communications with Great Britain, it appeared ill-calculated to produce that result. The Commonwealth Parliament had definitely decided upon the continuance of the Government Line, and it only remained to wait and see whether the experiment was more successful in Australia than it had been elsewhere. Apart from this disturbing feature, the general outlook for the Australian trade was not unfavourable. He shared the general belief that the trade of this country, and therefore the industry of shipping, the most sensitive of trade barometers, had passed the bottom of the trough.

Sir Duncan Carmichael: I have much pleasure in seconding the resolution.

The Chairman then invited questions, and, none being asked, the resolution was put to the meeting, and carried unanimously.

On the motion of Mr P. H. Devitt, seconded by Mr Greening, the auditor, Sir Nicholas E. Waterhouse, K.B.E., was re-elected for the year ending June 30th next.

A vote of thanks to the chairman, managers, and staff, which was unanimously accorded, terminated the proceedings.

DORMAN, LONG, AND COMPANY, LIMITED.

CHAIRMAN ON THE POSITION OF THE INDUSTRY.

"SCRAP" STEEL'S EFFECT ON STEEL INDUSTRY.

RAILWAY, WHARFAGE, AND SHIPPING CHARGES AND CHEAPER PRODUCTION.

The thirty-second ordinary general meeting of Messrs Dorman, Long, and Co., Limited, was held at the company's offices, Zetland road, Middlesbrough, on the 13th instant, Sir Hugh Bell, Bart., C.B., presiding.

The Chairman, in moving the adoption of the report and accounts, explained that Sir Arthur Dorman, much to the regret of his colleagues, had been advised to undergo a slight operation to his eye. Sir Hugh was glad to say that the operation had been entirely successful, and that before undergoing it Sir Arthur had prepared his speech for the meeting, which he (Sir Hugh) would read.

The Chairman read:—"I assume you will, as usual, take the directors' report and balance-sheet, which you have before you, as read."

PROFIT AND LOSS ACCOUNT.

"The profit and loss account for the year 1921, after providing for estimated liabilities to the Government, and after writing down stocks to present value, shows a profit for the year of £413,799 2s 8d, which, together with the balance of £248,540 8s 5d brought forward from last year, makes a total of £662,339 11s 1d, which your directors propose to deal with in the following manner:—

"£36,285 10s is applied to the payment of interest on debentures;

"£120,000 for dividend on the 8 per cent. preferred ordinary shares for the year;

"£240,000 dividend at the rate of 5 per cent. for the year, free of tax, on the ordinary shares, *pro rata* on the amounts paid up on the respective issues;

"£11,863 8s 4d interest on calls paid up in advance on the new ordinary shares;

"£3,000 directors' fees;

"£1,225 15s 10d further expenses in respect of the issue of 3,000,000 ordinary shares;

"£10,477 for redemption of 5 per cent. debentures;

"Leaving a balance of £239,487 16s 11d to be carried forward to next year.

"I will now go through the balance-sheet in the usual way. The share capital has been increased during the year to £7,119,930 4s, due to the payments of the various calls amounting to 16s in the £ on the issue of 3,000,000 ordinary shares. The whole of the share capital of the company has been issued, and at the date of the balance-sheet was paid up with the exception of the final call, which became due on October 1st last. The final call has since been received, though some portion of it was paid in advance and consequently appears in the balance-sheet.

SIMPLIFIED SHARE LIST.

"It has been arranged that as soon as the ordinary shares are quoted on the Stock Exchange as ex-dividend, the whole of the 6,000,000 ordinary shares will rank equally—there will then be only two forms of shares, namely, the preference and the ordinary. The company's holding in their 4 per cent. first mortgage perpetual debenture stock has been increased during the year, the company now holding £55,120 stock, as against £51,765 in 1920.

"The 5 per cent. sinking fund mortgage debentures have been reduced during the year by the amounts required to be paid off and cancelled under the term of the trust deed, the total debentures cancelled up to September 30, 1921, being £99,940 in nominal value.

"The amount of the secured loan to the company by the Government stands at £938,475, having been reduced by the sum of £200,000 paid early in the year. This loan, you will remember, was made by the Government for the purpose of the erection of steel furnaces and plate mills, and rebuilding the blast furnaces at Redcar.

"The debts due by the company amount to £975,709 14s 6d, as against £2,063,157 18s 5d for the year 1920, a reduction of £1,087,448 3s 11d, largely arising in the company's liability for taxation. The reserve accounts now stand at £745,342, as against £524,388, and it is proposed to add (as I have told you) £10,477 to reserve for redemption of debentures out of the balance of credit of profit and loss account at September 30, 1921.

HUGE CAPITAL EXPENDITURE.

"The last item on the liabilities side of the balance-sheet is the profit and loss account, with which I have already dealt. On the assets side of the balance-sheet the amount of capital expenditure at September 30, 1920, was £1,027,955 18s 1d. An amount of

£201,330 16s 6d is added as net expenditure during the year ending September 30, 1921, making a total of £1,229,286 14s 7d.

"The suspense account now stands at £2,261,441 14s, and includes the balance of special expenditure on plant under arrangements with the Ministry of Munitions at the Redcar Steel and Iron Works and on houses and other buildings at Dormanstown. It has not been possible to close this account owing to the fact that we have not yet been able to effect a settlement with the Government departments concerned. Negotiations are now proceeding with the Government, and it is hoped that a settlement may be arrived at in the near future, when the final balance on suspense account will be transferred to capital expenditure.

"Under the heading of 'Investments' the item of £4,173,674 11s 8d, as against £3,285,407 12s 10d last year, now includes the amount of the advances to the North-Eastern Steel Company, Limited, which in the last balance-sheet—then a much smaller amount—was shown under the head of 'Debts due to the company.' The whole of the National War Bonds and Victory Bonds held on September 30, 1920, have been realised or handed to the Government in discharge of liabilities for taxation.

INVESTMENTS IN INDIA.

"The item of £482,835 19s 11d now includes the shares acquired during the year in Messrs Braithwaite and Co., Engineers, Limited, to which I will refer later. The stocks on September 30, 1921, amount to £1,650,503 19s 9d, as against £2,113,615 18s 1d at the end of September, 1920. The stocks have been written down to present value, but as the quantities of stocks held were greater at September 30, 1921, than at the same date in 1920, the difference between the two figures does not represent the full amount of the depreciation written off, which as a matter of fact amounts to approximately £650,000.

"The debts due to the company amount to £1,001,864 16s 9d, as against £1,699,894 18s in 1920. This reduction is mainly due to the restriction of trade at the end of the financial year under review in comparison with the condition of trade in 1920.

"The cash at bankers and in hand amounts to £231,844 13s 9d, as against £226,268 7s on September 30, 1920.

"I will now deal somewhat more fully with certain of these items.

"The increase in capital expenditure during the year is mainly due to the cost of the new Sheet Mills of which you were told at our last meeting. Four of the six mills are already working, and the other two mills will be completed in the course of a few weeks. I am pleased to say they are giving splendid results, and it just happens that they come into operation at an opportune time, as the demand for sheets, which was very slack the whole time the mills were under reconstruction, has revived. At the moment we have plenty of work in this department, and we hope that this will continue for some time to come.

EXPENDITURE ON N.E. STEELWORKS.

"Expenditure on the North-Eastern Steel Company's Works, to which I have referred on several occasions, and which was one of the reasons for which fresh capital was issued by us in 1920, is now nearly at an end. When the alterations and extensions are completed it will be a matter for decision how the expenditure shall be capitalised having in view the fact that the works will have been completely reconstructed and modernised without increase in the share capital of the North-Eastern Steel Company, Limited. We have provided the money, and, as I have already stated, the amount has been included this year in the balance-sheet under the heading of 'Investments.' Up to now it has been treated as a loan to the North-Eastern Steel Company. Those portions of the works which are already in operation are showing good results, and promise fully to justify the expenditure which has been carried out.

"Turning now to the investments in Messrs Bell Brothers, Limited, Sir B. Samuelson and Co., Limited, the North-Eastern Steel Company, Limited, and the Carlton Iron Company, Limited, I think it is as well to make a few remarks on the small return we have received on such considerable investments.

"We have acquired these concerns as part of a policy which we believe to be sound, namely, that a great industrial undertaking should as far as possible be self-contained, and should produce its own raw material. From time to time circumstances alter, and for relatively short periods the possession of such resources proves a burden instead of a help. We are going through such a period at present.

"One of the results of the war has been to throw on the market

large quantities of steel scrap. At the same time from causes with which we are all familiar the cost of producing coal and ironstone has risen out of all proportion. Scrap is being sold at prices pounds below the cost of pig-iron, with the result that for the moment it is better to buy scrap than to make pig-iron for use in the steel furnace. We have been constrained, therefore, to let the larger part of our blast-furnace plant stand idle, to our great inconvenience and loss, with the still more serious consequences that large numbers of our men, both at the ironworks and the ironstone mines, are thrown out of employment.

"This is, I am convinced, only a passing phrase; the supply of scrap will be absorbed, the relation between cost of production of pig-iron and its value will return to a normal state, and the soundness of our policy will be vindicated. In the long run, and apart from such accidents as those to which I have been referring, pig-iron must be the measure of the world's capacity for the production of steel. In the meantime it can readily be understood that unless we had taken advantage of the low price of scrap not only would our blast-furnaces be idle, but so would our steel furnaces and mills.

THE BLAST-FURNACES.

"The present position as regards the blast-furnaces of our several companies is that out of thirty-two only six are at work—one on hematite at Samuelson's, one at Carlton, making ferro-manganese, two at Clarence, and two at North-Eastern—all four on basic iron. I am pleased to say that they are giving very good results, particularly the last four.

"Included under the heading of 'Investments' is the amount which we have this year paid for a share in the business of Messrs Braithwaite and Co., Engineers, Limited. This is an old-established firm, with whom we have done business for many years. They possess works at West Bromwich and Newport (Mon.), and carry on a contractors' and constructional engineering business of considerable size both at home and in India. We look to the closer connection with this company to provide a further outlet for our finished material, and you will be glad to hear that already since our union with them they have obtained a valuable contract for supplying and laying some 60 miles of double pipe line for the Bombay Corporation. This means for us the supply of 70,000 tons of plates during the next three or four years, a weekly quantity of about 500 tons, when we start work on the order about six months hence.

"During the year Mr Charles Dorman paid a visit to Australia, and as a result we have decided to extend our business there by opening a constructional yard at Sydney, for which purpose we have purchased a suitable site. We are sending representatives from this country to conduct our business there, and to supervise the erection of the necessary shop and plant. I am glad to say Mr Charles Dorman found our Melbourne works busy, and the prospects for the future good.

"As regards our interest in Kent, I have little to add to what I have said in previous years. Under present conditions, and with prices as high as they are at the moment, we are limiting our expenditure to the amount that is necessary to fulfil our obligations under the leases and options that we hold in that county. Such expenditure forms part of what will necessarily have to be incurred when the development of the property really commences.

AN EXTRAORDINARY TRADE REVERSAL.

"The year under review has witnessed an extraordinary reversal of trade conditions—from great prosperity to deep depression. A year ago the price of rails and plates was £24 10s; to-day it is £10 10s or lower. Such an unprecedented fall has made our task a very trying and difficult one, as it has brought with it all sorts of complications with regard to contracts and labour. We are trying to adjust our cost to the demand of buyers, but it is not an easy matter, and it cannot be achieved without sacrifices and suffering all round.

"One thing is certain, and that is that if we are to recover our trade the cost of production must be still further lowered. So far as we ourselves can control cost, I can see that this is possible; the wages of men engaged in the iron trade are determined by a sliding scale regulated by the price of the material they produce; the settlement come to in the coal trade after the three months' stoppage, from April to July, makes the coal trade wages also dependent on the price of coal, though not so directly.

"But outside these and beyond our control are such things as railway rates and wharfage and shipping charges. I do not propose to enter into details with regard to these, but I will tell you briefly that the railway item of cost in the manufacture of one ton of Cleveland pig iron has risen from 10s 3d in 1914 to 22s 3d to-day, while the average railway delivery rate for a ton of finished steel to certain destinations, which before the war stood at 11s 3d, now amounts to 23s 5d.

"In the case of export, the cost of placing one ton of steel on

HEAD OFFICES: LIVERPOOL AND LONDON
ROYAL
INSURANCE COMPANY, LIMITED
ALL CLASSES OF INSURANCE EFFECTED

board ship has risen from 2s 3d to 6s. This is an unfair handicap, and we look to the railway companies to help us and to bring their rates to a figure which will compare more favourably with the fall in prices which has taken place in every other direction. The point I wish to emphasise is that whereas all other classes of labour have suffered heavy reduction in wages, and while employers are working with little or no profit, railway rates remain at a figure which, if maintained, must ultimately cause a complete stoppage in the iron and steel trade.

"It makes it all the more aggravating to hear of English railway companies who possess a monopoly of our carrying trade placing orders for rails on the Continent on account of a difference in price which would be negligible had they adapted themselves to present-day conditions.

"WE SHALL PULL THROUGH."

"We have been through hard times before, and I am confident that we shall pull through our present troubles, as we have in the past, but I must say that in all my long experience of the iron and steel trade I have never known the position so difficult as it has been during the last few months.

"We have to consider our moral obligation to provide work to support our men and their families, and we have kept our works going at a time when there was little or no profit in so doing. At the same time, we have to consider the interests of our shareholders and to bear in mind that we cannot conduct our business indefinitely without profit.

"We are not yet out of the wood, but I do begin to see indications of a revival of business. The world consumed 70 million tons of iron and steel annually before the war, and it is out of the question to suppose that the same quantity is not required to-day. It is my opinion that the buyer will come into the market again as soon as he believes that a level of stability in prices has been reached. I do not think we are far off this level.

"This brings me to the end of my remarks, and I now beg to propose that the directors' report, balance-sheet, and accounts of the company submitted to this meeting be, and the same are hereby approved and adopted."

This was seconded by Mr Chas. Dorman.

The Chairman invited any questions, after which the resolution was put to the meeting and carried unanimously.

A dividend at the rate of 8 per cent. per annum, less tax, on the preferred ordinary shares, and a final dividend of 2½ per cent., free of tax, on the ordinary shares, *pro rata* on the respective issues, were declared.

Mr J. Francis Mason, Dr Arthur Cooper, Mr Arthur Dorman, and Mr Francis Samuelson were re-elected directors of the company, and Messrs W. B. Peat and Co. were re-elected auditors.

At the request of the meeting a telegram was sent to Sir Arthur Dorman of sympathy and congratulation on having successfully undergone the operation.

A vote of thanks to the managing director, staff, and chairman concluded the meeting.

AMALGAMATED COTTON MILLS TRUST.

RESULTS OF TRADE DEPRESSION AND RATES OF EXCHANGE.

The third annual general meeting of the Amalgamated Cotton Mills Trust was held on the 12th instant, at the registered offices of the company, Yard Works, Stanley street, Preston. Lord Fairfax (chairman) presided.

Mr Stanley Hutchinson, F.C.A. (the secretary) read the notice convening the meeting, and the auditors' report having been read,

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—In conformity with the policy of the board announced by me at the last annual general meeting held on December 14, 1920, no further capital has been expended in the acquisition of new businesses, and our investments in cotton mill companies therefore remain the same as when I had the pleasure of last addressing you.

A year ago I had to report that for four months the trade of our subsidiary companies had slackened off considerably, but

in spite of that we, in conjunction with others well qualified to judge, had every hope that the depression was only temporary.

Unfortunately, as is now well known, the depression in trade has been of longer duration than was anticipated, and the year under review, covered by the accounts now submitted, has seen an unprecedented drop in stock values, and a stagnation of trade unparalleled in the history of Lancashire.

Since August 31st last, the date to which our subsidiary companies made up their accounts, I am glad to state that certain improvements have taken place both in stock values and trade generally. We have, however, a long road to travel before the cotton trade regains its usual prosperity, and I am afraid this will not be attained until the general condition of the civilised world, and in particular the rates of exchange between countries, become more normal. Much of the trade of our allied companies is export, and until our customers can afford to buy freely, their demands for our output must necessarily be restricted to absolute immediate requirements.

In view of the provisions of the 1921 Finance Act, all the allied companies made up their accounts to August 31st last in order to obtain, where possible, the reliefs provided for in that Act. Although, as mentioned in the directors' report, certain of the subsidiary companies have earned profits during the period under review, I regret to state that the combined results of all the companies show a loss.

E.P.D. CLAIMS DELAY STATEMENT.

I should have liked to have been able to make a frank statement to the shareholders of the amount of this loss, but I feel sure you will agree that pending the settlement of certain important questions relating to Excess Profits Duty, any figures I could give you would only be misleading, and I know you will appreciate the directors' difficulty in this matter, and will accept my assurance that everything possible is being done by the board to formulate our claims against the Inland Revenue Authorities in a manner best calculated to further the interests of the company.

I wish to point out that a very large proportion of the loss referred to has been made by the three companies owning merchant businesses, where the depreciation of values of stocks of finished

goods cannot, even if foreseen, be guarded against in the same way as in spinning and weaving companies.

Our stocks, however, are now standing at such low prices that with any reasonable recovery in trade the loss made by the subsidiary companies during the period under review should be rapidly recovered.

We, in common with others, have suffered very considerably by the fact that many of our customers have been unable to fulfil their contracts for the purchase of goods at much higher prices than those ruling at the time the contracts fell due.

After consultation with the boards of the subsidiary companies, your directors decided that it was desirable to conserve the liquid resources of the companies, and agreed that no dividends should be declared on this company's shareholdings for the year under review. The board, therefore, regret that they are unable to recommend the payment of a dividend on the ordinary shares of the company.

The directors' report and accounts, covering the financial year of the company ended October 31st last, have been in your hands for the prescribed period, and I, therefore, propose, with your permission, to take them as read.

Before closing, I should like to state that, during the year under review, we were glad to appoint Colonel N. Seddon Brown managing director of the Amalgamated Cotton Mills Trust, Limited, which office he now holds, in addition to that of supervisor of the subsidiary companies, and I can assure you he has carried out these additional responsibilities with great credit to himself and benefit to the Trust. Our board has also been strengthened by the addition of such well known and respected gentlemen in the cotton business as Sir Frank Hollins, Messrs Galloway and Beck, all of whom have had lifelong and successful experience in the textile world.

Mr William Gaunt, a man of wide commercial experience, has also joined our board. I consider these additions will be most beneficial to your company, and I am most grateful to have such gentlemen as these associated with us.

Lieut.-Colonel N. Seddon Brown seconded the resolution, which was passed unanimously, and the usual formal business terminated the proceedings.

CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

SATISFACTORY RESULTS OF YEAR'S TRADING.
INCREASED COAL DEMAND FOR CURRENT YEAR.
COMPANY'S HUGE TAXATION FIGURES.

The ninth annual ordinary general meeting of the Chinese Engineering and Mining Company, Limited, was held, on the 12th instant, at Winchester House, Old Broad Street, London, Mr W. F. Turner (the chairman) presiding.

The secretary (Mr Alfred W. Berry) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The distinguishing feature of the report and accounts for the year ended June 30th last, which we submit to you to-day, is that while, owing mainly to the fall in the average rate of exchange, they deal with smaller figures than those of the preceding year, the net result is equally satisfactory. For the year ended June 30, 1920, we paid a dividend of 30 per cent., free of income-tax, on a share capital of £1,000,000. The balance dividend of 12 per cent. which we propose to declare to-day will make, with the interim dividend of 10 per cent. paid in May last, a total of 22 per cent., free of income-tax, on the increased capital of £1,400,000, so that we shall be distributing £308,000 in dividends, against £300,000 in the preceding year. It must be borne in mind that the 400,000 new shares did not constitute any addition to the working capital of the company. It was merely the capitalisation of profits which had accumulated during past years.

KAILAN MINING ADMINISTRATION RESULTS.

The net profit of the Kailan Mining Administration, after providing for interest on the 6 per cent. Kailan bonds, redemption of bonds for the year, reserve for depreciation, and the profit to which the Chihli Government is entitled, was £7,313,448, against a net profit of £8,917,456 for the preceding year. This result, as you will have seen from a later paragraph in the report, is due, not to any falling off in the demand for coal, but solely to difficulties in regard to railway transport, and it compares very favourably with the profit of about \$6,000,000 two years ago.

Our share of the profit amounts to \$3,850,012. We were careful to point out to you at the meeting last year that the profits of that year had been largely increased by the high rate of exchange which had prevailed throughout the year. The average rate for the past year shows a reduction of about 2s per dollar, and the amount brought to credit of our profit and loss account therefore works out, including interest in China, at £564,723. Interest in Europe is £72,221, and there are some small items which bring up the total to £641,469.

Expenses in Europe are larger than before, as I told you they would be. There is donation of £5,000 to the China Famine Relief Fund, which was reported at the last meeting; exchange amounts to £16,259, and there is a loss of £11,942 on the sale of 5 per cent. War Loan. Two of these items, amounting to nearly £17,000, will not recur. The net balance of profit on the year is £587,994.

COMPANY'S TAXATION FIGURES.

You will find a statement on pages 10 and 11 of the accounts showing the disposal of the profit balance at June 30, 1920, the chief items being the final dividend, which was £200,000, paid on December 17, 1920, and the £400,000 which was applied in making fully paid the 400,000 shares of £1 each allotted on May 12th last, pursuant to the resolutions of the extraordinary general meeting held on January 4, 1921; the £37,784 remaining is brought into the following year. We have, therefore, a total credit to profit and loss of £625,779. Income-tax absorbs £112,316, excess profits duty requires £122,304 to bring up the reserve to the required figure of £189,000, and corporation profits tax is £26,600. These three items, making a total of £261,220, form our contribution to the Inland Revenue, and, as you see, they amount to almost exactly 45 per cent. of the year's profit. The interim dividend of 10 per cent., free of income-tax, paid on May 23rd last was £140,000, so that we have a balance of £224,559 to deal with to-day.

I have already said that we propose to declare a balance dividend of 12 per cent., free of tax, payable to-morrow, December 13th. The further remuneration to which the directors are entitled under the articles of association is £9,133, and we propose to write off the whole of the expenses in connection with the increase of capital (consisting chiefly of stamp duties), amounting to £25,685, so that there will be a balance of £21,740 to be carried forward to the current year.

OVER £1,400,000 PAID IN E.P.D.

This result is more gratifying when one bears in mind that the profits have had to bear a charge of £122,000 for excess profits duty, and that the company's liability to that impost ends with these accounts. It is interesting to know that the company will have paid in all for excess profits duty over £1,400,000.

As regards the balance-sheet, there are only one or two items to which I need refer. The first is the increase of the share capital from £1,000,000 to £1,400,000. On the other side of the account you will see that our loan account to the Kailan Mining Administration has been increased from £50,000 to £152,000, a sum of £102,000 having been provided by us, and a similar amount by the Lanchow Mining Company for further working capital of the Kailan Mining Administration. It is quite likely that we may very shortly have to contribute another £100,000 of working capital.

The next paragraph of the report relates to excess profits duty and the directors' remuneration. There is a provision in the Finance Act of 1916 to the effect that a company may recover from the directors the amount of excess profits duty payable by the company in respect of any increased remuneration above a certain limit. The object of the section was to prevent salaries or remuneration of employees or directors being increased capriciously for the purpose of reducing a company's liability to excess profits duty. No consideration of that sort arises here. The effect of the section in our case would be to defeat, to a certain extent, the object of the resolutions passed by the shareholders last year, and it would operate inequitably as between the individual directors who are concerned. The amount involved is about £2,000. It is therefore proposed that the section shall not be acted upon, and I may add that a similar course has been taken in other cases of the kind.

COAL SALES.

The next paragraph deals with the business done by the Kailan Mining Administration during the year. The sales of coal amounted to 3,775,000 tons, a reduction of 235,000 tons compared with the preceding year. This is not due to any falling off in the demand for coal. It is entirely a question of railway transport. Major Nathan reports as follows:—"The reduction recorded in sales is due to the following reasons: The internal troubles which occurred in the latter part of the last financial year and the beginning of this affected the transportation of coal for nearly six months—military interference on the railway and movements of troops decreasing the number of cars available for the coal traffic. No sooner were the troubles due to these causes overcome than the famine in Central China was again responsible for a reduction in our coal traffic, owing to the demands made on the railway for the export of grain from Manchuria for the relief of famine sufferers. These two reasons alone were sufficient to cause the reduction in sales which has been experienced during the year. The actual carrying capacity of the railway has not been greatly increased, the supply of trucks and locomotives having been practically stationary during that period. At the present time conditions are still unsatisfactory, although there is an improvement on our experience in the early part of the financial year under review.

IMPROVED RAILWAY FACILITIES.

"Towards the end of the financial year a great improvement was noticeable, largely due to the use by the Peking-Mukden Railway of cars belonging to the Peking-Hankow line, and for a short period we were able to move by rail an average of about 15,000 tons per day. As a result of a traffic conference between the various lines the supply of these cars has been much reduced, and the average at the present moment may be said to be about 12,000 tons per day, including a traffic of about 1,000 to 1,500 tons per day carried by our own cars to Hsukochwang and Hianku, from whence the coal is shipped by boat to Tientsin. We were enabled to increase our traffic in this way by a purchase of 200 small cars from the railway which they had thrown out of use. The burden of my monthly reports, as will have been noticed, has practically always been the same—namely, the want of cars and consequent inability to keep pace with the demand. It has been my great endeavour to persuade the railway to double the track between the mines and Chinwangtao and to purchase sufficient rolling stock to meet our demands for transport facilities, and I am pleased to say that I have at last been successful in inducing the autho-

rities to carry out the doubling of the track and also the supply of further locomotives and cars. The effect of the latter will be seen, I hope, towards the end of the present calendar year, but that of the former, I anticipate, not before the end of 1922 at earliest."

CURRENT YEAR'S PROSPECTS.

Now, as regards the prospects of the current year, Major Nathan writes that: "Sales of coal have been limited only to our transport facilities, and therefore no comparison can be made with former years as to the possibility of increase if facilities had been available for the transport of our coal by rail to Chinwangtao to meet the demand. It can only be said that we were obliged to neglect or entirely abandon any attempts to develop our overseas market. The same condition will apply to a certain extent during the present year, but the quieter conditions now prevailing in the country will undoubtedly have the effect of allowing of a considerable increase in our sales compared with last year. At the time of writing, in the first three months of the financial year 1921-22 our sales have augmented by a quarter of a million tons as compared with the same period in 1920-21. Although these figures are not likely to be maintained throughout the whole year, there is no reason to expect that our sales will not be considerably higher than in the year under review."

The stock of coal at the latest date we have was about 370,000 tons. Our output capacity is 15,000 tons daily, and Major Nathan states that, given fair labour conditions, he has every expectation of reaching a total production of over 4½ million tons during the current financial year. The coal in sight at June 30th last is given as 24,435,000 tons. The yards at the port of Chinwangtao have been extended to allow the handling of 15,000 tons of coal per day and the storing of 260,000 tons. The sales of coal during the first 23 weeks of the current year amount to 1,841,000 tons, as compared with 1,521,000 tons for the same period last year, an increase in round figures of 320,000 tons. You have seen probably from the Press this morning that the sales for the last week, which are included in the figures I have given you, were a little over 100,000 tons. The average rate of exchange for the present financial year, so far as it has gone, is approximately 2s 9d per dollar, and does not differ materially from that of the preceding year. The business prospects, therefore, are entirely satisfactory.

IRONWORKS AT CHINWANGTAO.

At the last general meeting we explained at some length the position of matters in regard to the project for the establishment of ironworks at Chinwangtao. The matter has been followed up throughout the past year, and considerable progress has been made. Mr David Roberts, of Cardiff, who is a well-known blast-furnace engineer, went out to China on behalf of Messrs Riley and Harbord to inspect and decide upon the best available site for the proposed works. A satisfactory site has been chosen, and the necessary arrangements in regard to it are in progress. Further investigations are proceeding, especially in regard to certain deposits of iron ore and the treatment of them and the question of treatment plant generally. These may still take a considerable time, and until they are completed a definite scheme cannot be formulated and adopted. In the meantime, the prices of labour and materials are falling, and it is expected that there will be a saving of several hundred thousand pounds in the ultimate outlay for plant compared with the figures which we had before us a year ago.

I now move: "That the directors' report and accounts to June 30, 1921, be and they are hereby received and adopted, and that a final dividend be declared of 12 per cent., free of income-tax (making 22 per cent. for the year, free of income-tax), payable on December 13, 1921."

Colonel H. A. Micklem, C.B., C.M.G., D.S.O., seconded the resolution, which was carried unanimously.

The Chairman next moved the re-election of the three retiring directors, Mr Félicien Cattier, Colonel H. A. Micklem, and Mr W. F. Turner.

Mr Edmund Davis seconded the motion, which was unanimously agreed to.

The auditors (Messrs Annan, Dexter and Co.) were reappointed, on the motion of Mr Sledge, seconded by Mr Dixon.

The proceedings then terminated.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED. SATISFACTORY YEAR—WORKING PROFIT RECORD.

The twenty-fourth ordinary general meeting of the shareholders of the New Modderfontein Gold Mining Company, Limited (incorporated in the Transvaal), was held in Johannesburg, on Friday, November 4th.

The Chairman (Sir Evelyn Wallers, K.B.E.) said: Gentlemen,—The position reflected in the reports and accounts for the financial year 1920-21, now submitted for your approval, must have given you the greatest satisfaction—as, indeed, it has to your directors.

You will have seen that the scale of operations and the total working profit derived from those operations are the greatest ever obtained by this company. We milled during the year 1,083,000 tons, yielding 9.741 dwts per ton, representing an increase in tonnage milled of 114,500, and a decrease in grade of .58 dwt per ton. The latter point was a desirable feature of the year's work because, although the value of the ore mined was still somewhat above the average value of the ore reserves, it was decidedly below the average value of the tonnage developed during the year. The number of fine ounces recovered was 527,477, with a total extraction of just under 98 per cent., which, you will agree, constitutes extremely good metallurgical practice. The price we obtained for our product was appreciably higher than for the previous year, namely, £5 12s 7d per fine ounce, as against £5 2s 3d for 1919-20. Obviously this factor had a very marked effect upon your profit. Working costs increased by 1s 6d per ton milled, but notwithstanding this fact, combined with the decrease in yield of .58 dwt per ton (to which I have already referred), the final working profit showed an increase of 7d per ton. The total profit for the year was £1,720,202 17s 4d, of which £751,427 was obtained from the increased price of our product above standard price.

APPROPRIATION ACCOUNT.

The appropriation account shows that we commenced the year with a credit balance of £344,025 13s, and this amount, added to the year's profit which I have just mentioned, and including a small amount of £763 12s 9d in respect of forfeited dividends, gave us for disposal a total of £2,064,992 3s 1d. The distribution has been as follows:—Dividends Nos. 29 and 30, £1,400,000; Government and provincial taxes, £297,950 9s 5d; net capital expenditure, after allowing for Bewaarplaatsen receipts, £60,193 3s 7d; balance unappropriated and carried forward, £306,848 10s 1d. Development operations during the year were carried on with activity, and show a substantial increase, as compared with the preceding year. The total footage was 20,165, of which approximately 14,000 feet developed ore, and the remaining 6,000 feet was in the nature of dead work and the various purposes connected with the handling of the ore. The results achieved by this work in all directions were entirely satisfactory as to the values exposed. We have from time to time directed your attention to the encouraging values, which, in our opinion, were likely to be met with in the western and south-western sections of the mine, and the work which we are able to do year by year confirms in a very gratifying way the opinions expressed. Thus, on the 13th level west, which can be readily followed by reference to the plan attached to your reports, good values were disclosed after passing through a dyke, and were referred to at the last annual meeting. These values have been energetically followed up during the year which we are reviewing, and resulted in the development in that locality of 302,800 tons of ore of a value of 9.7 dwts over 82 inches. On the eastern side of the mine the result of the work carried out was equally satisfactory, and, as you will have observed, the final outcome of the year's development operations is that all ore mined was replaced, and, indeed, your ore reserves at 8,884,600 tons of a value of 8.4 dwts show some little increase in tonnage when compared with the previous year.

HEALTH CONDITIONS AT THE MINE.

The health conditions of the mine are in first-class order, having been commented on by the District Inspector of Mines in very appreciative terms, and I can say with the utmost confidence that the general underground position is in most excellent shape. On the surface a similarly gratifying situation is met with. The increase to the eastern reduction plant, which brings our total capacity up to at least 105,000 tons per month, was completed during the year, at the very moderate cost of £14,000, and is now running well. The other items of importance on capital expenditure were £22,000 expended in providing additional houses for married employees, and £16,700 for extension to our water system. In regard to this latter item we have had some anxiety in the dry season owing to the fact that the number of consumers, of whom we are one, drawing water from the President Dam has appreciably increased. We therefore considered it prudent to spend this money on making the position secure by connecting up our storage reservoirs with the Rosherville Dam. For the current year no capital expenditure of any particular importance is contemplated. In order to bring your information up to date, I will briefly review the salient features of the work since the close of our financial year, i.e., during the last four months. The native labour force has continued to hold up well, and our tonnage milled has steadily progressed. In July the figure was 96,000; August, 100,000; September, 101,000; and in October we reached a total of 107,000. Working profits have been respectively £141,800, £153,100, £142,900, and £138,000. There is naturally some decrease in profit, due to the recent substantial fall in the price of gold, but the effect of the reduction in the price of our product has been counteracted in a very satisfactory way by the increase in the tonnage milled. Working costs during the last four months have shown an en-

couraging decrease; the figures for the respective months per ton milled are 22s 6d, 22s 4d, 22s 2d, and 21s, as compared with the average for last year of 23s 5-5d.

DEVELOPMENT WORK.

The development work since July last has also been very energetically pushed, and we have averaged well over 2,200 feet per month. The values exposed on the whole have been of high grade, both east and west. On reference to your plan you will notice that there are four winzes not yet very far advanced going down from the 14th level, and constituting our present lowest working—two on the west side of the circular shaft, and two on the east side; three of those winzes are exposing ore of an average value of approximately 1,000 inch-dwts. At the present footage rate practically the whole of the mine above the 14th level will be completely developed in about two years' time, and the scheme for the development of the mine below the 14th level to the southern boundary is already receiving attention, although there is ample time in which to formulate our plans. In any case, the problem is one of comparative simplicity. Considerable attention is being given to the cleaning up of the old workings, and to facilitate this work a sand-filling scheme of some magnitude is now being put in hand on the upper levels on the east of the mine; at the same time opportunity will be taken to further prospect a few isolated blocks of ground which have been left standing in the past as of doubtful payability. At the last annual meeting reference was made to the question of the enemy shares vested in the Custodian of Enemy Property. As you know, the company made an offer for those shares, which was not accepted. They, therefore, still remain in the hands of the Custodian, but you may rest assured that your directors are carefully watching the situation, and if there is any possibility of acting in your interests on a satisfactory basis the opportunity will not be lost. All that I have said indicates again in an unmistakable manner not only the extraordinary soundness and strength of position of your mine, but also the excellence of the year's work of your general manager, Mr Miles; Sharp; the underground manager, Mr Tillard; and the staff and employees generally. Mr Stuart Martin continues to act as your consulting engineer with conspicuous success. You will, I am sure, join with me in recording our very keen appreciation of their services.

I now beg to move that the directors' report, balance-sheet, and accounts for the year ended June 30, 1921, laid before the meeting, be received and adopted.

Mr S. C. Black seconded the motion, which was carried unanimously.

BOYRIL AUSTRALIAN ESTATES, LIMITED. SUGGESTION FOR VOLUNTARY HOSPITALS.

The thirteenth ordinary general meeting of Boyril Australian Estates, Limited, was held, on the 15th instant, at the offices of the company, 152-166, Old street, London. The Hon. Sir Cornthwaite H. Rason (chairman of the company) presided.

The secretary (Mr C. W. Curtis) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report, said that the year's net profit of £13,949 showed a reduction of £6,818. It was, however, more than sufficient to meet the debenture interest and enable the board to pay the dividends, and, considering that this result was obtained in spite of the fact that the meat works at Darwin and Wyndham were closed throughout the period, he thought the shareholders would agree that it was satisfactory. The company had an immense holding in the Northern Territory of Australia, some 10,000,000 acres, with immense potentialities. It was true that it was only leasehold, but the leases had still 21 years to run, and everything pointed in the direction of there being great developments within the next decade. If at the end of 21 years their leases were not renewed, what would happen? The company would still have their enormous herds of cattle, horses, mules, stores, and plant to dispose of, and over and above that they would have to be compensated for all improvements which they had effected. It would be seen, therefore, that they would have a tangible asset to realise in any case.

SIR GEORGE LAWSON JOHNSTON'S SPEECH.

Sir George Lawson Johnston (vice-chairman), in seconding the motion, said that the chairman had so exhaustively surveyed the actual position of the company that there was little left to be said under that head, but he wished to offer a suggestion which might have an important bearing on the future of the voluntary hospitals of the country. Speaking with the inside knowledge of one who had for over twenty years been associated with hospital work, he would say that the danger of the financial position in which our hospitals now stood could not be exaggerated. While he did not venture to claim that he could offer a complete solution of the pro-

blem, he would like to indicate a direction in which he thought a solution might be found.

In Canada and the United States, from which he had just returned, a system was in operation which brought in a steady revenue to the great hospitals of these countries; a revenue which, if it was not sufficient to meet all the costs of running them, was large enough to prove the balancing factor between income and expenditure.

The system simply consisted in the provision of private rooms for well-to-do patients, in which these could be operated on or treated by their own surgeons or doctors, and at the same time enjoy all the advantages of a well-equipped modern hospital—its operating theatre, X-Ray, pathological, and other special departments, and the attention of its skilled nursing staff. Charges were made for these rooms, which varied from £1 up to as much as £9 per day, and brought in a substantial profit to the hospitals that provided them. The doctor's or surgeon's fees were, of course, paid by the patient.

In this country only the poor ever experienced the great advantages of being nursed in a big general hospital. In Canada and America the well-to-do insisted upon sharing these advantages, and the hospitals gained accordingly. In both of these countries the system enjoyed the wholehearted support of the medical profession. It gave the surgeon or doctor the chance of treating his cases under the most favourable conditions, with the added satisfaction of knowing that medical attention was always at hand in case of emergency, and it had many other advantages for the doctor. The system had already been noted in this country, and he thought it was time its possibilities should be thoroughly explored by the proper authorities.

The resolution was carried unanimously.

The Chairman then proposed the re-election of the Hon. Sir Cornthwaite H. Rason, the retiring director, at the same time suggesting that a bonus of £250 should be voted to that gentleman in recognition of his great services to the company during the past year. He added that Sir Cornthwaite devoted a great deal more time to the affairs of the company than was customary on the part of a chairman.

The resolution was seconded by Mr D. Walker and carried unanimously.

VOTE OF THANKS TO THE CHAIRMAN.

Sir James Crichton-Browne, in proposing a vote of thanks to the chairman, said that he would like to take advantage of the occasion to say how gratified shareholders in Bovril Australian Estates must be to learn that their operations in Australia were not only successful in conducting to the main object of the company—the earning of a dividend—but that they were also giving lessons, as they had learned from the remark of Sir George Lawson Johnston, in introducing the elements of nursing among the backward aborigines of the country in which their estates were situated.

The vote of thanks was seconded by Mr Walker and unanimously adopted.

The Chairman briefly acknowledged the compliment, and the proceedings terminated.

MANAOS HARBOUR, LIMITED.

RATE OF EXCHANGE AND YEAR'S RESULTS.

The nineteenth annual general meeting of Manao's Harbour, Limited, was held, on the 12th instant, at 11 Adelphi terrace, London, Mr George M. Booth (chairman of the company) presiding. The Chairman, in moving the adoption of the report and ac-

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

counts, said: In the year under review our gross receipts in currency amounted to 1,864 contos, which compares with 2,276 contos for a year ago, a decrease of approximately 400 contos. The cost of exploration for this year amounted to 915 contos, against a cost a year ago of 1,070 contos. This reduction, the result of most rigid economy, reduces our gross decrease in earnings from 400 contos to a net decrease in earnings of about 250 contos. Our receipts a year ago were the highest currency figures reached since before the war, and at the same time we were fortunate enough to experience a fairly high rate of exchange. Unfortunately, throughout the year with which we are now dealing, the rate of exchange fell steadily, and the average for the 12 months has been just under 10d, whereas a year ago our average was about 1s 4½d. The net result is that, after the payment of all debenture charges, the year's working shows a loss of about £1,000.

You may remember that a year ago your directors expressed the view that the good results we were then recording could not be regarded as permanent, and a large sum, £15,000, was appropriated for the purpose of starting to deal with our future liabilities in connection with debenture issues. We feel that the results of the year under review have fully justified our action. Our works in Manao's have been carefully maintained, and we have spent 203 contos on this account, as against 211 contos a year ago, and, owing to the low exchange rate, this means that our expenditure for this year is approximately £9,000, against £14,000 for a year ago, although the milreis expenditure is almost identical. As regards trade conditions at Manao's, the amount of rubber exported from the district continues to decline in volume. Fortunately, Brazil nuts appear to be in constant demand, and for this commodity we have no rival producers in the East, as in the case of rubber. A good crop was gathered and shipped last season, and the forecast for the coming one is also hopeful. A new industry has recently sprung up in the Amazon in the shape of the export of cedarwood, but whether a demand for this and other valuable timbers obtainable there will continue only time will show.

Mr E. H. Tootal seconded the motion, which was carried unanimously.

THE ANGLO-SIAM CORPORATION, LIMITED.

SUBSTANTIAL DIVIDEND ON INCREASED CAPITAL.

The twenty-fourth annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held at the registered offices of the corporation, 2 Fenchurch avenue, London, E.C., on Tuesday, December 13, 1921, the chairman, Mr J. M. Ryrie, presiding.

After referring to the changes on the board of directors, and making reference to the loss the corporation had sustained through the resignation of Mr H. N. Gladstone, and the death of Mr Frederic S. Clarke, the chairman dealt fully with the operations of the year, and the accounts, and mentioned that, although the profit which had been arrived at before taking credit for any dividend that may be due in respect of excess profits duty, showed a serious falling off as compared with the previous record year, there was reason for congratulation that, in spite of the recent industrial crisis, it was possible to pay a substantial dividend on the increased capital.

Continuing his remarks, the Chairman mentioned that full provision had been made out of the profits for the year to meet all losses and bad and doubtful debts, and that the rates of exchange at which the assets in the East had been converted into sterling were at or below those ruling on March 31st last, and that in this as in other matters the directors had adopted a conservative policy.

ENCOURAGING PROSPECTS FOR THE CURRENT YEAR.

The Chairman further stated that, on the whole, prospects for the current year were encouraging, in view more particularly of the anticipated large rice crop in Siam, though he did not expect any sensational results from the general business in the near future.

The directors' report and the statement of accounts for the year ended March 31, 1921, were adopted, and final dividends of 3½ per cent. on the preference shares, and 1½ per cent., together with a bonus of 5 per cent., on the ordinary shares, were declared, making a total distribution of 25 per cent., less tax, on the ordinary shares for the year.

A resolution was passed increasing the borrowing powers of the corporation to £500,000.

Mr J. M. Ryrie, who retired from the board by rotation, was re-elected, and the election of Messrs H. Bateson, W. Greaves, and J. Fairclough as directors was confirmed.

Messrs Turquand, Youngs and Co. were appointed auditors for the current year.

After a vote of thanks to the directors and the staff in London and in the East had been passed, the proceedings terminated.

YAN RYN GOLD MINES ESTATE, LIMITED.

LARGE BLOCKS OF PAYABLE ORE TO BE OPENED UP.

The twenty-sixth ordinary general meeting of the Van Ryn Gold Mines Estate, Limited, was held, on the 14th instant, at Winchester House, London, Mr L. B. Burns (chairman of the company) presiding.

The secretary (Mr T. Fredk. Thorne) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that at last year's meeting he was able to refer to an increase in the value of the gold produced, as compared with the previous year, amounting to just under £100,000. For the year now under review they had to record a further increase under this heading of just over £100,000—that was to say, an increase within two years of £200,000 in the value of the gold produced. This increase was largely due to the increased price which the company was obtaining for its gold, but an improvement in the grade of ore crushed had this year also been a contributing cause. As a set-off to the increased value of the gold produced, working costs showed a substantial increase, being £92,866 more than for the year 1919-20. The net result was satisfactory, however, inasmuch as the profit from mining, at £112,855, showed an increase of £8,031 over the previous year. He could add nothing to his previous remarks as to the uncertainty which surrounded the maintenance of the gold premium, which had enabled the company to declare satisfactory dividends during the last two or three years, in spite of abnormally high operating costs, except to say that its tendency seemed to be towards a lower level. Whereas the average price received for their gold during the period under review was 10s 2d per fine ounce, it had now receded to about 9s per ounce. The extreme importance of this upon the company's operations was clearly stated by the managing director in his report, in which he pointed out that the premium on gold during the financial year represented an amount of £132,001, or £19,146 more than the total profit earned. The crux of the whole position, therefore, lay in a gradual reduction of working costs, and in this direction certain progress had already been made.

Large blocks of payable ore—estimated at about 600,000 tons—were known to exist in certain isolated sections of the mine, and the company's technical adviser estimated that for an expenditure of about £10,000 on an underground auxiliary shaft, hoisting equipment, &c., these sections could be rendered available for stopping. This expenditure would be debited to working costs.

The report and accounts were adopted.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Dec. 19th-Dec. 24th, were opened on Dec. 16, 1921, and the total amount applied for was £66,840,000. Tenders for Monday bills at £99 4s 1d, and above in full. Tenders for Tuesday to Saturday bills at £99 3s 10d, about 87 per cent., and above in full. The average rate of discount was £3 5s 3 1/4d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition'l Bills.	Tenders at Rates below receive.
	£	£	£ s d		
Nov. 18 (3 months)	40,000,000	54,365,000	3 17 8-27	3½	£99 0s 3d (Monday to Friday bills), about 77½%, above in full. Saturday bills £99 0s 6d and above in full.
Nov. 25 (3 months)	45,000,000	78,155,000	3 14 2-15	3½	£99 1s 3d (Monday bills), £99 1s 5d (Tuesday bills), £99 1s 7d (Wednesday to Saturday bills), about 27½% and above in full. £99 2s 4d (Monday bills), about 20%, and above in full. £99 2s 2d (Tuesday to Saturday bills), and above in full.
Dec. 5 (3 months)	50,000,000	67,640,000	3 12 0-07	3½	£99 3s 5d (Monday bills), and above in full. £99 3s 2d (Tuesday to Saturday bills), about 93%, and above in full. £99 4s 1d (Monday bills), and above in full. £99 3s 10d (Tuesday to Saturday bills), about 87%, and above in full.

R. G. JAQUET, Accountant-General.

India Office, December 12, 1921.

Messrs Samuel Montagu and Co. write on December 15th as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,613,385, as compared with £126,612,690 last week. A substantial amount of gold was on offer, and was practically all taken for the U.S.A. The price to-day, 98s 1d—which represents a premium of only 15.6 per cent. over the Bank of England buying price—is the lowest fixed since October 8, 1919. Gold to the value of \$6,685,000 is reported as having arrived at New York—\$3,540,000 from London, \$2,045,000 from France, \$1,000,000 from Sweden, and \$100,000 from Germany. Indian gold movements during October, 1921, show a net import of 1.02 lacs of rupees. The following are the figures relative to the United Kingdom movements of gold during the month of November, 1921:—Total imports, £3,914,073; exports, £4,037,340.

CURRENCY.

The Director of the Japanese Mint, Osaka, reports that the grand total of all coins struck during the fiscal year ending March 31, 1921, amounted to 436,022,087 in number, and to 12,780,649.07 yen in face value, an increase over last year of 6,660,335.15 yen in nickel coin, and 949,647,595 yen in bronze coin. Gold and silver coins were not struck at all, which is significant.

SILVER.

Business has been active through the week. The Indian bazaars bought with freedom on several days for prompt shipment. There was, however, an absence of competition, except on the part of a few bears, and the prices did not, therefore, harden to any extent. Supplies, too, from the Continent and elsewhere were unusually plentiful. China has been inactive, and trade demand is at a standstill. A relaxation of Indian demand, therefore, would probably give ease to the market. We are informed from Bombay, under date of the 26th ultimo, that there was a better demand for the metal, but that it was mostly supplied with country bar silver, of which there was a good stock in that market. This plentiful supply of country bar silver was owing to the arrival of a large amount of silver krasans (Persian coins). Indian trade figures show a net import of silver amounting to 1.41 lacs of rupees during the month of October, 1921. The use of silver in the East for banking purposes is of great antiquity. The Berlin Museum possesses an ancient papyrus, the back bearing words which link a loan of silver with a rate of interest which would be highly attractive to a modern holder of the metal. The inscription is a draft of a due bill relating to about 850 B.C., a period far earlier than that of any previously discovered Egyptian document of like import. A priest of Amon, who was manager of a royal sub-treasury, lent 5 deben of silver (about 20s) for one year at 100 per cent. interest. The silver, it was stated, belonged to the Treasury of Harsophes, an Egyptian god, indicating its fineness. Assayers, who take just pride in their wonderful accuracy, may appreciate this suggestion of divine origin.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

No coinage was reported during the week ending 7th inst. The stock in Shanghai on the 10th inst. consisted of about 27,900,000 ounces in sycee, 24,500,000 dollars, and 1,520 silver bars, as compared with about 28,700,000 ounces in sycee, 23,500,000 dollars, and 2,290 silver bars on the 3rd inst. The Shanghai exchange is quoted at 3s 6d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

(a) Increased capital.

C. A. VANDERVELL states that the questions of E.P.D. and allowances by the Government on the war plant and buildings are not yet settled. The accounts for the year ended March 31st show a loss of £251,472. The directors have transferred from reserve account £75,000, which, added to the balance of £117,999 brought forward, makes £192,999. After allowing for the loss as above, there is carried forward a debit balance of £58,473. In the previous year a net profit of £106,266 was realised, and the preferred ordinary shares received the full dividend of 10 per cent.

D. NAPIER AND SON.—After paying the dividend on the preference shares for the year ended June 30, 1921, and deducting the debit balance of £49,574 brought forward, there remains to be carried forward £7,024.

KAYSER ELLINGTON AND CO. have decided not to pay the usual interim dividend on the ordinary shares. The exceptional trade conditions still prevailing make it necessary in the best interests of the shareholders, to conserve the finances of the company until the actual result of the year's working is known. The half-yearly dividend on the preference shares will, however, be posted on December 31st.

LUNUVU (CEYLON) TEA AND RUBBER ESTATES, LIMITED.—By arrangement with the debenture holders, the whole of the outstanding debentures will be redeemed at par on or before December 31st.

NATIONAL OMNIBUS AND TRANSPORT.—The profit of the National Omnibus and Transport Company for the year ended October 31st was £26,350, while £7,682 was brought forward. It is proposed to allocate £15,000 to the reserve of rolling-stock account, and to carry forward £19,612. In view of the necessity for conserving the cash resources of the company for the purposes of development during 1922, no dividend for the past year is being paid. In the previous year profits were £20,103, and a dividend of 8 per cent. was paid.

REPORT—WHITWORTH.—Owing to the incidence of taxation it has been decided to end the financial year on August 31st, instead of July 31st. This involves the payment of an additional dividend of one month, to August 31st, on the preference shares. At the general meeting to be held on December 19th it will be proposed to confirm the dividends paid on the preference shares to July 31st; the dividend (to be paid by warrant on December 16th), at the rate of 6 per cent. per annum on the preference shares to August 31st, less tax, and to confirm the dividend (to be paid by warrant on December 16th), at the rate of 10 per cent. per annum on the ordinary shares, free of tax.

THE AFRICAN AND EASTERN TRADE CORPORATION announces that the usual half-yearly dividend on the "A" and "B" preference shares will be paid on January 3, 1922, but they have deferred consideration of paying an interim dividend on the ordinary shares pending the adjustment of excess profits duty and the determination of the amount required for depreciation.

THE WYE SHIPPING COMPANY, LIMITED, CARDIFF.—The directors do not recommend any dividend for the year, in view of the present slump in shipping and depreciation of steamers.

TRINIDAD LEASEHOLDS is paying no dividend for the year ended June last.

VICKERS, LIMITED, report for the year 1920 shows that no dividend on the ordinary shares can be paid.

(a) Including arrears. (l) 5 % free of tax. (g) Vickers. Net profit for 4 years, dividend for half-year ended Feb. 28, 1921. (k) Wallpaper Manufacturers.—Preference

Northern Manitoba, ex ship, quoted 55s per 480 lbs. No. 2 hard winter landed 54s, and Australian ditto, 53s per 496 lbs. In the forward cargo market business was on a limited scale, and confined to one or two steamers of Australian afloat, and December shipment at 52s 6d to 52s to Italy. Visible supplies in North America are maintained by good receipts, chiefly in Canada. The quantity on passage, however, shows a falling off, while Port stocks have decreased owing to lighter arrivals. Yields of new crops in Argentina and the Commonwealth are somewhat erratic and disappointing so far, but Indian prospects remain favourable, while conditions in the United States South-West mark an improvement on further rains. Flour continues in quiet request, and prices were reduced by 2s per sack for home milled qualities. London standard straight run now stands at 47s, town households 45s, patents 50s, all-English straight run 43s per sack, delivered London district. All-English country straights 37s to 39s, free on rail London stations. Imported also dull and tendency weaker. Canadian export patents 46s, straights 43s, Kansas top patents 43s, and Australian 42s 6d to 43s, all per 280 lbs ex store. On c.i.f. terms, Canadian patents, December seaboard quoted 42s 6d to 43s, straights 40s, Kansas patents 44s 6d, and Australian new crop January-February 38s per 280 lbs. Millers' offers quiet and tendency easier. Broad bran £10, ordinary ditto £9 to £9 5s, middlings £10 5s to £10 10s ex mill. Of imported, fancy Plate middlings £11 10s, and pollards £9 per ton ex ship. Barley dull and rates tend in buyers' favour. English malting nominally ranges from 45s to 70s, and grinding descriptions 37s to 41s per 448 lbs free on rail. Imported easier for feed sorts Californian ex ship 38s to 52s per 448 lbs. No. 4 Canada Western 32s, Canada feed 29s 6d, and American feed 29s, all landed per

400 lbs. Maize quiet and easier. Yellow La Plata quoted 34s 6d, yellow round African 35s, white flat ditto 34s, all landed terms. In the forward market a quieter tone ensued, and with sellers more in evidence rates moved in a downward direction. Cargoes of La Plata arrived sold at 34s 1 1/2d, and ditto on passage 34s 3d, both to Continent. Oats in less request, and values tended against holders. English ranges from 29s to 34s per 336 lbs, free on rail. Imported irregular. Plate f.a.q. quoted 27s 3d, ditto clipped 27s 9d, No. 2 Canada Western (old) 32s, and No. 3 ditto 31s, Chilean tawny 28s, all per 320 lbs. Oatmeal ruled steady with a fair inquiry. English all cuts quoted £20 to £21, ordinary Scottish £19 10s to £20, American £18 10s to £19, English rolled oats £22 to £23, and flaked oats £24 to £25, all per ton. Beans steady, but demand quieter. English springs quoted 54s to 58s, winters 49s to 51s per 532 lbs. Imported dull. Peas also quieter. English Maples 6s to 68s, Duns 50s to 53s per 504 lbs. Of imported, New Zealand blue quoted 21s to 24s, and Dutch blue 22s to 26s per cwt landed. Home-ward freight markets generally steady, with moderate chartering of heavy grain. From the River Plate prompt loading now rules at 32s 6d, January 30s, and new season's loading fixed at 27s 6d upper ports to U.K./Continent, with full options. North American Range ports to U.K. was done at 4s per quarter prompt, 14 cents per 100 lbs to Antwerp/Hamburg range December, and 4s 10 1/2 quarter West Italy February, option Adriatic at 3d quarter extra. India quiet but fairly steady. Bombay on dead weight prompt done at 20s 6d, and January 21s 6d to U.K./Continent. Outports inactive and nominally unaltered. A fair amount of chartering has taken place in new season's wheat from Australia on the basis of 50s South Australia/Victoria, 51s 3d Sydney to U.K./Continent, Indian options at 35s one, 36s 3d two ports of discharge. South

African maize quiet at about 30s to 31s 3d December-January home. Danube dull, and reports from Braila and Galatz state that navigation is now closed owing to frost. Other markets remain without new feature.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919.

IRON, STEEL, AND COAL.

Our Glasgow correspondent (writing on Thursday) says:—A rather more active tone has obtained this week in industrial circles, due not so much to the booking of new business as to the concentration of effort on the clearing off of contracts in hand. This is common at this season of the year to most steel and iron branches, but particularly to shipbuilding and engineering, and invariably leads to a substantial volume of work passing through the various shops and yards. Properly speaking, there is not a big volume of work at this time in sight to handle, but such as is being attacked vigorously, and the end of the month figures will, without question, reflect an improvement on those that have of late been disclosed; and that in probably all constructive departments. In normal times it would give cause for satisfaction, say, in shipbuilding, that the tonnage launched was higher than that put into the water for preceding months, for thereby room was provided for proceeding with new undertakings. But presently there are no means of filling up the vacancies which launches leave behind, and the greater the pressure of deliveries the nearer comes the verge when there will only be bare poles to greet the eye on the river and lower reaches of the Clyde—a prospect that is lamentable and close at hand. It may be that sooner than expected, shippers will come along and place instructions for new craft, but meantime they are confining their interest to promises of good times to come, and to the old, stale, advice of living and getting corn. Opinion offers a bit as to the fact, but the story goes that in the past fortnight two or, at most, four orders for steamers have been entered to builders in the Clyde area. That's a poor showing, yet it is not unsatisfactory in existing circumstances, the financial side of them especially. Authorities argue that the immediate future movement depends largely on the course of prices for material, meaning, it is needless to remark, their downward course. And it has been very sharp of late. Ship plates are still called £10 10s a ton, and angles £10, but prompt business can be done the turn lower. At these rates steelmakers declare money is being lost on production, and that they cannot face further "cuts" unless costs are sensibly lowered, and that labour declines at the moment to face. Under the influence of the cleaning-up policy already referred to, a number of rolling mills have been put in operation at different establishments, and at one or two places, notably Mossend, they are going full strength, which possibly will be maintained till the end of the month. The subsequent state will depend not a little on how export trade develops. It is looking more hopeful in relation to India, Australia, and the East generally. Lord Invernairn has been pointing out that now that naval construction seems going by the board, steelmakers must strike out in other lines, so that their productions may be utilised, and it goes that his firm (Beardmores) is proceeding with the setting up of a large Bessemer heavy rail plant, for the output of which markets lie both at home and abroad. But after all is said and recognised, it remains that position and conditions in the steel trade are far from being what could be desired. A very favourable factor, one that will work to the advantage of general engineers, machinery builders, and others in related connections, is the pronounced easing off for Continental competition in steel half-products, and in lesser measure in finished material. There is no improvement to note in the Scotch pig-iron situation. Other three furnaces have been damped down this week, leaving only nine blowing, and none of them on hematite. Scotch foundry irons are quoted £6 to £6 2s 6d, and even less money, it is said, would be taken for a good line. There are no stocks in sight, and it is hard to see how a demand, if it were to arise in bulk, could be met. In all manu-

COMPANY ANNOUNCEMENT.

ENDING THE CONSUMERS' STRIKE

IMPORTANT MOVE MADE BY SHEFFIELD COMPANY TO PROVIDE INEXPENSIVE CUTLERY AND HARDWARE.

One of the most practical moves yet made for bringing to an end the "Consumers' Strike," and thus getting the retail trade started again, is the establishment by Sheffield Steel Products, Ltd., of a chain of multiple retail shops throughout the country. This firm is an amalgamation of a group of the oldest and most important manufacturers of cutlery, tools and hardware in the Midlands. Its immense organisation, and the consequent economy possible in production enables it to sell to retailers at a price which, allowing them a reasonable profit, would permit these British-made goods to compete successfully with any foreign articles of similar quality.

RETAILERS' PRICES TOO HIGH.

The Company have found, however, that the majority of retailers, instead of passing a proper share of these economies on to the public, are either taking an average profit of from 100 to 150 per cent., or else are pushing foreign goods of inferior quality at even more exorbitant prices. They have decided, therefore, to open their own retail shops, which will be operated by a subsidiary organisation known as Sheffield Steel Products (Stores), Ltd. These stores, by purchasing direct at specially advantageous prices from the parent company, will be able to supply the British market at a very considerably lower average than is now ruling.

Within the next few weeks some 25 or 30 of the new stores will be open for business in London and other parts of the country. Cutlery will be one of the leading lines stocked, and there will be shown a wide range of table and pocket knives, trade cutlery, scissors, shears, and razors. A variety of electro-plated tableware of serviceable quality and handsome design will be a second speciality, and the stock will include an assortment of fitted cutlery cabinets, ranging from an excellent but inexpensive "Cottage Parcel" of 43 pieces, priced at 44 shillings, up to a very elaborate one costing 90 guineas. Apart from the general reduction in prices of all these articles which will be effected, one of the greatest boons to the housewife from the scheme will be the bringing of stainless cutlery within reach of practically every purse.

A REVOLUTION IN HOUSEKEEPING.

In the near future, it is designed to stock articles made of stainless iron, important patents held by the parent company now enabling them to produce this wonderful new metal at a low cost which virtually puts them beyond the reach of any competitor. Articles such as door handles, knockers, fingerplates, stair rods, fenders, fireirons, grates, stoves and all sorts of kitchen and bathroom fittings will be made of the new metal. These articles will not only be rust-proof, but unlike similar objects made of copper, brass, nickel and silver, they will neither stain nor tarnish. The saving in labour which will be effected by their use is expected to bring about little short of a revolution in housekeeping methods.

Capital, Surplus and Profits
\$37,500,000

per cent., 500 tons, January-February, sold, 95 6d. c.f. and i. London. Peruvian basis, 95 per cent., January-February, sellers, 12s. c.f. and i. Cuban stocks stand at 951,600 tons against 234,200 same time last year. Stocks in the three chief ports of the U.K., 37,000 tons, against 170,200 at corresponding period last year. Liquid glucose, December, 25s, duty paid.

COFFEE.—A sustained demand continued for the better qualities at extreme rates. Moderate supplies in auction were well competed for. Good bold Nairobi sold up to 127s 6d; Kilimanjaro, 128s; Vera Paz, good middling grey, 127s. Future delivery stronger under the influence of higher Brazilian cables. March sold, 53s 6d.

COCOA.—Public sales were held this week, when 7,938 bags were offered, of which 5,847 bags consisted of Colonial descriptions. With buyers manifesting but little interest, only a restricted proportion sold at about late rates. Fine bold Ceylon, sold, 95s to 100s; fine Trinidad, 58s; fine washed Samoa, 85s cwt. Cocoa Butter: Market quiet at 17s 9d per lb.

TEA.—This week offerings of India totalled 50,540 packages, and with a quieter demand prices in most cases ruled weaker, as sellers showed more desire to meet the market. 15,500 packages Ceylon attracted fair competition, and prices disclosed no material alteration, with the exception of leaf kinds, which proved easier.

RICE.—Market remains very quiet, with actual trading quite retail in extent. Two stars Rangoon, spot, 17s 6d. Burma Government estimate quantity available for export from coming crop as 2,735,750 tons. Broken descriptions neglected and nominal. Beans steady, but generally quiet. Spot hand-picked Rangoon, 8s 6d; afloat, 7s 6d. Bran steady.

SPICE.—Pepper market disclosed fair activity, but slight irregularity ensued at times with regard to forward positions. Fair black Singapore, spot, sold, 34d; ditto, December-February and January-March, 34d. Aleppy, spot, 40d; Tellicherry, 43d; white Singapore, spot, 74d; white Muntok, 73d to 74d; ditto, January-March, 73d. Zanzibar cloves, spot, 1s 6d; November-January, steamer, 1s 4d. Pimento, spot, sold, 8d. Tapioca steadier. Fair flake, spot, sold, 14d per lb; ditto, December-February, London, 15s 3d; fair Penang seed pearl, spot, 16s; small sago, spot, 26s. Sago flour, January-March, done 13s 4d. Desiccated coconut ruled quiet. Fine cut, spot, sold, 41s; medium, 41s 6d; January-February, 40s. Ginger steady, but general trade quiet.

FRUIT.—The market for currants remained in a quiet, but steady, state. Pyrgos quoted 53s; Amalia, 56s to 60s; Vostizza, 75s to 85s. Sultanias steady, but with only a small trade doing. Valencia raisins slow. Half-boxes quoted 128s to 132s per cwt. Dates steady, with moderate inquiries.

JUTE.—Market, after ruling firm and dearer on stimulating cables from Calcutta and a better inquiry, became rather quieter, but recovered. New crop, first grade, December-January and January-February, Continental ports, sold, £25 5s to £24 15s and £26 5s.

Lighting grade, ditto, £21 5s to £21 and £21 15s. Calcutta hessians and twills steadily held, but trade proceeded quietly. 10 oz, spot, sold, 22s 6d; 8 oz, ditto, 19s; A twills, spot, 70s; B ditto, 61s.

HEMP.—Manila met with slow support, and prices tended against sellers. C grade, November-January, sellers, £54; D, £50; E, £45; G, £37 10s; J, £36 10s; K, £35; L, £34; M, £30. Streaky one, November-January, £42 10s; two, £40; and three, £38. New Zealand dull. Fair, October-December, £33; and points, £35.

SHELLAC.—Market quiet, and forward positions unsettled. T.N., spot, 33s 5s; March done 290s to 285s.

COFRA.—Market quiet, and easier. F.M.S. Straits, October-December to January-March, Rotterdam, sold, £28 to £26 10s; F.M. ditto, December-February, Marseilles, at £26 12s 6d to £26 5s; Ceylon, December-February, London, done £28 15s to £28; South Sea Islands ditto, quoted £25 5s; Cebu to Hamburg, £25 10s. Palm kernels, December-February, Liverpool, changed hands at £18 7s 6d.

RUBBER.—Market presented a quiet tone throughout the week, and prices eased slightly. Standard crepe and sheet, spot, sold, 113d to 118d, and 113d; January-March, 1s to 113d, and 1s; April-June, 1s 9d to 1s 9d, and 1s 9d. Fine hard Para, spot, 1s 24d; ball ditto, 83d per lb.

EGG PRODUCTS.—Market very quiet, and quotations largely nominal. Prime liquid yolk, April-June, 65s per cwt. Albumen, spot, held for 2s 11d per lb.

OILS.—Linseed irregular and easier. Spot, net, naked, 27s 6d; January-April, 27s; May-August, 27s. Rape dull. Crude, spot, 46s; refined, 51s. Cotton firmer. Crude Egyptian, 37s; Bombay, nominal; common edible, 45s. Chinawood: Hankow, spot (barrels), 66s 6d; and shipment, 65s. Coconut quiet. Ceylon, spot, 46s; December-

THE BRITISH OVERSEAS BANK

Established 1919.

TIMES,

Report presented to the Second Annual General Meeting of Shareholders, held
Hotel, London, E.C., on FRIDAY, 16th December, 1921.

The GOVERNING COUNCIL submits to the Shareholders the Balance Sheet of the Bank, as at 31st October, 1921, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing for rebate of interest and providing for all bad and doubtful debts, Income Tax and other Taxation for the year ended 31st October, 1921, amounts to £102,325 2s. 10d., to which has to be added the sum of £35,200 7s. 4d., being the balance available from last account, after payment of Income and Corporation Profits Taxes for the previous year, making a total of £137,525 10s. 2d.

Interim Dividend on "A" Ordinary Shares at the rate of six per cent. per annum for the half-year ended 30th April, 1921, and Income Tax thereon 30,000 0 0

Leaving a Balance of £107,525 10s. 2d.

which the Governing Council recommends should be dealt with as follows:—

In Payment of a Dividend on the "A" Ordinary Shares at the rate of six per cent. per annum (less Income Tax) for the half-year ended 31st October, 1921, which together with Income Tax thereon amounts to £30,000 0 0

To Reserve Fund against Shareholding Interests in Foreign Banks 10,000 0 0

To Reduction of Premises Account 10,000 0 0

Leaving a Net Balance to be carried forward to next year of 57,525 10s. 2d.

£107,525 10s. 2d.

The Governing Council has now been able to con- practice of deducting all Taxation charges before deca year. The balance of £57,525 10s. 2d. is, therefore, not sub last year, to any deductions of this character.

The Governing Council has pleasure in reporting that no political and commercial difficulties the Anglo-Polish Bank, Ltd. 4,087. satisfactory initial year. The Bank is issuing 50,000 additional shares to P.M. 25,000,000, and the Bank Zjednoczonych Ziem Polskich (Bank of Lands of Poland), with which close relations have been established, is tak large participation in this issue.

In the latter part of the financial year close relations were established with the Dorpat Bank at Dorpat, in which a small shareholding participation has been taken, and an important increase of its activities in Estonia is anticipated.

In accordance with the Articles of Association, Sir Harry McGowan, K.B.E., and Mr. John Sampson, C.B.E., retire by rotation from the Governing Council, and being eligible, offer themselves for re-election.

The retirement of Mr. A. Pilling, one of the Bank's Auditors, on account of his withdrawal from professional practice, is to be reported with regret. It will be necessary for the Meeting to appoint Auditors. Messrs. A. W. Tait, C.B.E., and A. S. Macharg, the retiring Auditors, are eligible for re-election and offer themselves for re-appointment.

By Order of the Governing Council,

ANGUS MCPHAIL, F. H. HOPE SIMPSON, Managers.

BALANCE SHEET as at 31st October, 1921.

REPORT OF THE BOARD OF DIRECTORS.

Gentlemen,—In accordance with Art. 32 of the Statutes, we have the honour to
submit for your approval the Balance Sheet and the Profit and Loss Account of
the Company's tenth business year, ending June 30th, 1921.

During the period under review we have opened our Office in Valparaiso, where
our business is developing normally.

We have acquired an important property in that City to be used as offices for
this new Branch.

As our Office in Montevideo is at a distance from the Exchange and the Banking
centre, we have acquired new premises near the Exchange, which will better serve
the requirements of the clients and the development of the business of that Branch.

This will explain to you the increase under the item "Premises" in the Balance
Sheet.

In accordance with our policy of housing our branches in buildings of our
own, suitably arranged for our needs, we are now the owners of our Bank premises
in Sao Paulo, Montevideo, Buenos Aires and Valparaiso.

The crisis which followed the Armistice was felt very much in all South
American countries, due to excessive importation of goods, more especially from
North America. This situation has caused, particularly in the countries in which
we are established, a rapid and heavy fall in the rates of exchange, the excess of
imports having been accompanied by a reduction of the exports of all products,
even those of primary necessity. This severe drop seems at least partly attributable
to the reduced purchasing power of the European importing countries on account
of the fall of their currencies. This break in the economic balance has created
a difficult situation, immediately followed by a great stagnation of business.
However, the almost total abstention of the buyers cannot last indefinitely. There
are requirements to be satisfied; the stocks in Europe of raw material and
articles of primary necessity are almost exhausted, and as in the meantime
a heavy fall in prices has occurred in the producing South American countries, a
slight revival of business has already become noticeable. However, up to now,
Central Europe and Russia participate only to a very small extent, if at all, in the
world's trade, and this is a factor for the future the importance of which cannot be
appreciated at present.

The accounts and stocks of manufactured goods in South America are being
slowly absorbed, and one notices a slight resumption in the exports from Belgium
and Italy to South America, which exports, as you know, are the object of our
special attention. As in the past, we continue to finance this class of business to
the largest possible extent. However, sight must not be lost of the fact that the
more and more pronounced fluctuations in the rates of exchange form a great
hindrance to exports, and in many cases we are compelled to observe an extreme
reserve in the interests of the exporters as well as in our own.

The results obtained during the business year, in spite of the troubled situation
mentioned above, will enable you to realise that the Bank has passed this critical
period without difficulty. We are carefully watching the numerous political and
economic factors which are continually upsetting the daily life of the business
world, but it must be mentioned that the normal development of business at
present depends less upon private activity and initiative than upon unexpected
economic and political factors.

CAPITAL.—Since October 1st, 1920, our capital of 50 millions has been fully paid-
and, although the Bank has not had the new capital at its disposal more than about
9 months, the dividend proposed applies to the 50 millions.

BOARD OF DIRECTORS.—We had the great sorrow of losing Mr Born, who
died last December, and who was a collaborator from the very first. Mr Bunge
tendered his resignation a few days afterwards, for private reasons. Consequently,
in order to replace the late Mr Born and Mr Bunge, we propose to you to appoint
Director Managers our General Managers, Messrs Delaborde and Tardieu. These
gentlemen have been with the Banque Italo-Belge from the beginning. You will
realise with us that, considering our Institution's activity is devoted to South
America, it is advisable to appoint to the Board persons who have resided in those
countries and who are acquainted with the business methods prevailing there.

Mr Ed. Bunge, Junior, Commissaire residing in the Argentine, and having no
further occasion to return to Antwerp, has just tendered his resignation.

BALANCE SHEET, June 30th, 1921.

37 Avenue de l'Opera. New York: Economist Office, 20 Broad
street (Room 1,709).

THE MONEY MARKET.

EXPECTATIONS of a real increase in the demand for money
were again falsified. Even on Wednesday and Thursday
surplus balances were available under 3 per cent., and in
consequence there was no recovery in the discount rate.
There was again a very slight improvement in the quan-
tity and quality of commercial bills, but the amount of
banking money seeking employment at anything above

the deposit rate is still greater than that of the Treasury and bank bills together.

	Dec. 22, 1921.	Dec. 16, 1921.	Dec. 9, 1921.	Dec. 2, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

Thursday's Bank Return showed an increase of £1,936,600 in the note circulation, and as the gold stock was reduced by £6,100, the Reserve was £1,942,700 lower. Government securities were reduced by £18,975,000, while Other securities rose by £4,517,300, so that Deposits fell by £16,404,700, more than the whole of which came off Other. The circulation of currency notes showed a seasonal increase of £6,099,900 to £324,428,900, which includes £1,748,300 for notes called in but not yet cancelled. The fiduciary issue is £274,739,600, or £42,824,600 below the maximum.

The Imperial Bank of India's rate of discount was advanced 1 per cent. to 6 per cent. on December 15, 1921. It had stood at 5 per cent. since June 2, 1921.

The following table shows public income and expenditure for the week ended December 17, 1921:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	24,315	Supply Services	9,987
		Interest on Debt	1,752
		Sundries	249
		Reduction of Debt	11,702
		Added to Exchequer Balances ..	1,625
	24,315		24,315

These operations reduced the National Debt by the sum of £11,701,534, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 6,538	Surrenders of Bonds, &c.	- 730
National Savings Certificates ..	+ 550	Treasury Bills	- 7,240
		Bank of England Advances ..	- 7,000
		Public Department Advances ..	- 300
		Other Debt Repaid	- 2,154
		Unemployment Insurance	- 300
		Exchequer Bonds Repaid	- 108
		Housing	- 958
	+ 7,088		- 18,790

Customs and Excise yielded £11,350,000, Special Receipts under Miscellaneous £8,400,000, and Property and Income-tax £918,000. Treasury Bond sales amounted to £6,538,100. The floating debt was reduced £14,605,000, to £1,290,669,000. Advances by the Bank of England were reduced by £7,000,000, leaving £13,000,000 outstanding. Public Department Advances were reduced by £300,000, making the amount outstanding £193,508,000. Treasury Bill sales were £7,305,000 lower than the maturities. Treasury Bills outstanding now amount to £1,084,161,000, against £1,131,579,000 a year ago.

FOREIGN EXCHANGES.

After the excitement of the past few weeks the foreign exchange market since the 16th has been relatively quiet, although compared with other times movements have been still very wide. As soon as it was realised that Germany's declaration that she was unable to pay the next reparation instalments would promote no immediate crisis, the rate for marks fell away again from 82½ on Friday and Saturday to 77½ on Monday. The very absence of information as to the deliberations of M. Briand and Mr Lloyd George has been taken as a favour-

able rather than unfavourable sign, and in consequence there was a further fall by Wednesday to 737½. By yesterday morning, however, the optimists were beginning to feel the strain, and there was a reaction to about 770. As yet it is quite impossible to say which way the rate will go, but if the apparently inspired hints at "firm" treatment of Germany are correct, it is hardly possible that any improvement can be expected. The quotation for future marks remains unchanged at one to three marks per month below spot. Uncertainty as to the result of M. Briand's visit has also been the chief factor in influencing the Paris rate, which after improving to 52.02½ on Tuesday rose again on the following day, and yesterday morning was quoted at 53.15 as compared with 52.97½ on the 16th, while the Brussels rate had risen, after a similar improvement, from 55.05 to 55.35. Dealings in futures are very quiet at present, and the rates quoted for Paris vary from one to two points per month either side of spot. In Brussels the rate has widened from 4 to 6 centimes to 10 to 12 centimes per month below spot. In New York, in spite of minor fluctuations, sterling has shown a general tendency to continue its improvement, and moved from 4.17½ on the 16th to 4.21½ on the 20th. After that, however, there were signs that the bull movement had been carried too far, and by yesterday morning the rate had fallen away again to 4.20½. While sentiment has undoubtedly played, and still plays, a very large part in this appreciation of sterling, economic factors are for the moment tending in the same direction. American November trade figures show a very much smaller export surplus, and the demand by America for foreign securities has recently increased much more rapidly than before. At the same time the position remains instable, and unfavourable political news might provoke a sharp reaction. The rate for futures, at ¼ to ½ cents per month over spot, remains practically the same as last week. Italy, with some fluctuations, has depreciated, and yesterday morning stood at 93½ as compared with 91½ on the 16th. Among the neutral exchanges Amsterdam, after moving up to 11.50½ on the 19th, has gone rather rapidly against us, and stands at 11.43 as compared with 11.48 a week ago. Switzerland since the 16th, when the rate stood at 21.46½, has gone steadily in our favour to 21.52½, and the growing strain of industrial depression in that country does not augur well for the future. Madrid, on the other hand, shows some improvement from 28.48½ to 28.27½. In the Northern group the improvement in Christiania has been less marked, the rate having fallen from 27 to 26.77½. Stockholm is 16.82½ as compared with 17, while Copenhagen has gone down more rapidly from 21.37½ to 20.77½. Helsingfors is much the same as last week at 217½. In Central Europe vigorous action by the Austrian Government and the call for a return of all foreign currencies held has brought down the rate for the Inlandskrone from 27,600 on the 16th to 24,800 on the 21st. Yesterday the Auslandskrone was quoted in London at 11,500, practically unchanged on the week. Warsaw at 12,000 is again rather better than a week ago, and the report of a capital levy to be imposed at once would suggest that the financial problem is being vigorously tackled. Budapest remains unchanged at 2,750. Prague shows a sharp recovery from 342 to about 318, Belgrade, on the other hand, shows an upward tendency at rather over 270. Sofia remains about the same at 600, and Bucharest is still unquoted. In the East the rupee rate, after being up over 1s 4d, has weakened again to about 1s 3½d. Silver is slightly lower on the week at 35½d, after a temporary rise owing to buying from India. Hong Kong is rather lower at 2s 7d, Shanghai unchanged at 3s 7d. Japan is slightly weaker at 2s 3½d. In South America Buenos Ayres is 43½, as compared with 43½d on the 16th, Montevideo 40½d as compared with 40½d, Valparaiso 9.80s as compared with 40.60s. Rio, on the other hand, is unchanged at 7½d.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO DECEMBER 17, 1921.

	£		£
Total spent	711,491,063	Raised by revenue ..	638,237,388
Inc. in balances	1,430,144	Net borrowings	74,683,819
Total	712,921,207	Total	712,921,207

ESTIMATES FOR YEAR 1921-22.

	£		£
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000		1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

DECEMBER 17TH.—Dail Eireann sits in secret. Damage at Hull through high tide.

DECEMBER 18TH.—M. Briand and Dr Rathenau arrive in London.

DECEMBER 19TH.—Dail Eireann debates in public. Angle-French conversations at Downing Street.

DECEMBER 20TH.—Conversations between Mr Lloyd George and M. Briand continued. More speakers in Dail Eireann debate.

DECEMBER 21ST.—Railway rates decision announced. Economy Committee's report circulated among Cabinet Ministers.

DECEMBER 22ND.—M. Briand returns to France.

The approach of the holiday has brought a contraction in Stock Exchange business, and a slight reaction occurred in the gilt-edged market. German and French bonds improved on the strength of the Downing Street Conference.

The cotton markets continue to present a rather firmer appearance. There is less anticipation of lower values, and an increased inquiry for cloth for Calcutta. Wool, the raw material, is a strong market, buyers having regained confidence; the demand for tops has improved, and there is rather more business doing in woollen piece goods. In the iron and steel trades conditions have not improved, but railway rates reductions will enable further cuts to be made, which, it is hoped, will stimulate business. In the Sheffield district unemployment is increasing, and the volume of work on hand is reported to be the smallest on record. But brighter hopes are entertained with regard to the new year. The year is closing with a better tone in the markets for hides and leather, and the shoe trade is improving.

Details of movements and news in the principal markets from special correspondents will be found on later pages of this issue.

THE DARKEST HOUR.

In the records of British economic history Christmas, 1921, will probably mark the lowest point in the depression following the Great War. How feebly the vital spark has been glowing during the past year will be shown by the various indices which we shall have occasion to lay before our readers in the next few weeks. It will suffice to mention here that coal output, which amounted to 230 million tons in 1920 and 285 million tons in 1913, will barely exceed 160 million tons in the current year, while pig-iron output, which amounted to 10 million tons in 1913, will barely amount to 2½ million tons in 1921. The record of other industries and economic activities, though perhaps in some cases less startling, will confirm that national production has this year been at an abnormally low ebb, and has left us in mid-winter faced with the stupendous fact of nearly two millions of our industrial population unemployed, at a moment when we are practically free from any important industrial dispute.

Such figures are entirely without precedent since we became an industrial nation, and are indeed so large that, like all enormous numbers, they tend to be mere digits, unrelated to the facts they represent. But at this season of the year we can at least attempt to conceive their human implications in our industrial towns and mining villages, so aptly described by Lord Derby as our devastated areas. Actual hunger and want have hitherto been kept within narrower limits than might have been feared, but as month after month has gone by without appreciable improvement in the outlook, and the numbers have grown with the approach of winter, savings have melted away, while morale is threatened by those grim allies, idleness and poverty.

Colonel Armstrong, the recently elected president of the F.B.I., reminds us of another aspect of the problem in calling attention to the thankless task which the business world is faced of paying high taxes from an empty till and a large bank overdraft. In a letter to the Chancellor of the Exchequer he pleads the case for lower taxation in urgent terms:—"The federation desire to urge you most earnestly to consider the grave danger to the economic position of the country which will be involved by disregarding this warning a second time, and to realise that the question is not now one of mere hardship or even of possible disaster to individual firms, but whether the whole industrial system of the country can possibly withstand any prolongation of the strain to which it has been subjected." But serious as the position still is, there are features which lead us to believe that the present is the darkest hour which precedes the dawn. Apart from the technical consideration that stocks accumulated in the boom of 1919-20 have for the most part now disappeared, the year now drawing to a close has seen the passing of the political and economic illusions harboured by all peoples, classes, and parties in the last three years. Employers and employed, in their common distress,

are beginning to work together, and to recognise that their mutual interests are more fundamental than their differences. In certain of our most important industries workpeople have come to recognise that wages are governed not by theoretical standards, but by what the world is prepared to pay for their products. At this moment, at the close of a year in the course of which was waged the greatest coal fight in our industrial history, the coal industry has travelled so far that the output of the mines, per man per shift, is as high as it was in the "banner" year of 1913. Within a little while there is a prospect that the cost of industrial coal will so far decline that our great iron and steel industries may come within sight of revival.

But the economic illusions have not been wholly or even mainly on the side of workpeople. The legislative records of the last three years in the economic sphere are strewn with the debris of repeatedly abandoned or ineffective legislation; while employers and business men, forgetting the lessons of the past, permitted themselves to build hopes upon a fantastic level of prices. One of the main reasons for optimism is that these illusions have given way to realisation of hard facts. Prices have fallen, and we have already gone so far in the much more difficult task of readjusting wages and costs of production, that already some of our industrialists are beginning to quote in competition with Continental sellers. There is yet much to be done in this direction, and, in particular, the small reduction in railway charges announced this week is not enough to give much impetus to the reduction of prices in the new year. Nevertheless, a beginning has been made, and all concerned are now well aware of the goal. But even more important is the sign of light on the political horizon. If economic fallacies have concealed at home the necessity of limiting spending to our earning power, the illusions that we have helped to foster in international politics have prevented the restoration of international trade, and reduced the world to a condition of subnormal and ill-balanced production.

With the economic realisation that a world ravaged by war is a very hard, uncomfortable place to live in, and one which cannot be made a place of comfort except by our own very strenuous efforts, there has come also the political realisation that a world in which peace and goodwill among men and among peoples are not realities, to be striven for and cherished, must become a world in which civilised mankind will cease to exist. It is but quite recently that we have come to realise the material as well as the spiritual value of peace on earth and goodwill among men. Until we had lived through our delirium and suffered our disillusion, and achieved our realisation, it was not possible for us even to begin upon the work of true reconstruction. We in this country—happier than some other peoples—have now passed through the various stages on the road from war to peace, from insanity to reason. The Washington Conference has declared peace in the Pacific, and we have ourselves declared peace in Europe. Whatever may be the domestic tribulations of Ireland, the war between the English and the Irish has been ended. Only those who have made a study of our history during the past few centuries can appreciate the immensity of that achievement. After both Houses of the British Parliament, with the approbation of the whole English-speaking world, have declared peace with Ireland, it is no longer possible for the Irish, either of North or South, to revive a war in which the English will be morally involved. Finally, we are satisfied that in perhaps the most difficult problem of all, the French and ourselves, in spite of appearances to the contrary, are fundamentally nearer to a common view on the steps needed for the economic recovery of Europe, and in particular on the Reparation problem, than ever before, because both movements have striven to found their politics upon reality, instead of upon illusions. Hence, though a survey was realised that our trade, and our commerce preserved as unable to pay the than in any year of peace for more, did promote no immediate mas 1921 finds us with bright away again from 822½ on prospects, and we can prep 777½ on Monday. The very assurance that the night is as to the deliberations of M. George has been taken as a favour-

WAR STOCK APPRECIATION.

To the Stock Exchange and to many thousands of its clients (and to other investors who have never had a Stock Exchange transaction in their lives), the remarkable series of rises which have occurred in the prices of war stocks during the past few days will come as an acceptable Christmas present. The appreciation in prices over the past two months in gilt-edged stocks has been substantial, and the austere investor who has refused the flattering temptations to embark money upon more speculative issues will indeed feel that his virtue has been rewarded. Moreover, the course of the market, in spite of the slight reaction which has taken place this week, appears to encourage the impression that, in course of time, the issue prices of the various loans may again be recovered. After eight years of warfare and depreciation, it is timely to set out some of the details connected with the War Loans that have appeared during the interval. The first popular War Loan was the 3½ per cent. stock issued in November, 1914. The amount of 350 millions was considered at that time enormous. The price was 95, and, in spite of the sum required, it was rapidly provided by nearly 100,000 subscribers. The first really big loan, however, was the 4½ per cent. War Loan offered at 100 in June, 1915. The loan had the unusual character of being unlimited in extent. Applications for nearly 600 million pounds were received from the public through the Bank of England and the post offices. Holders of the 3½ per cent. loan had the option of converting into the 4½ per cent. upon terms which a good many embraced, and, at the same time, proprietors of Consols were given the right to convert into the 4½ per cent. stock, with the result that a large part of the existing amount of Consols became changed into the 4½ per cent. stock, leaving a comparatively small balance, which exists at the present time, of 277 million pounds in Consols. Of the 350 millions of the 3½ per cent. loan there remains £62,745,476, while of the once popular 4½ per cent. stock there is left to-day less than thirteen million pounds, the remainder having been converted into the 4 and 5 per cent. stocks. The success attendant upon the issue of these two loans was quickly eclipsed by that which attended the issue of the 5 per cent. War Loan, with its 4 per cent. supplement. This appeared in January, 1917. Over two million applicants through the banks and post offices subscribed for amounts which, added to the Treasury bills and the 4½ per cent. War Loan convertible into the 5 per cent. stock, brought the total up to 1,976 millions, with another 64 millions subscribed for the 4 per cent. stock. After the war the Treasury offered Victory Bonds and Funding stock, both carrying 4 per cent. interest, of which the amounts outstanding at the present time are respectively 356 millions and 409 millions. To summarise the details a short table is useful:—

Stock.	Red.	Interest.	Issue	Present	Rise in
War Loan.....	1925-28	3½	95	90½	7½
Do	1925-45	4½	100	83	6
Do	1929-47	5	95	91½	8½
Do	1929-42	4	100	96½	5
Funding	1960-90	4	80	75½	7½
Victory		4	85	80½	8½

These are, of course, the purely popular loans, and no account of the various National Savings Certificates, a temporary rise owing to buying Loan, and other Hong Kong is rather lower at 28 7d. The war loan of 25 3d. In South America Buenos Ayres is 43½, a compared with 43½d on the 16th, Montevideo 40½d compared with 40½d, Valparaiso 9.80s as compared with 40.60s. Rio, on the other hand, is unchanged at 7½d.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO DECEMBER 17, 1921.			
	£	£	£
Total spent	711,491,063	Raised by revenue ..	638,237,388
Inc. in balances	1,430,144	Net borrowings	74,683,819
Total	712,921,207	Total	712,921,207

time, it probably involves the Exchequer in a good deal of leakage of income-tax on the interest payments.

The substantial advances in quotations that are exhibited by the table set out above are welcome to millions of individual holders, but their importance is even greater in another direction. For many years past banks, insurance companies, and joint-stock concerns of all kinds have seen their holdings of gilt-edged securities steadily depreciate. The gilt-edged rise recorded in 1921 is a boon to balance-sheets, while profits of banks and other great concerns will no longer be subject to the serious drain of large allocations for writing down investment holdings. Indeed, the appreciation of the past few months in gilt-edged stocks in general, and in War stocks in particular, will form a valuable hidden reserve in many company accounts.

THE GROWTH OF FOREIGN TRADE OF THE NATIONS OF AMERICA.

ALTHOUGH the chief nations of the New World cannot show so great an actual increase in the value of their foreign trade in 1912 over the value of 1901 as can the chief nations of Europe, in this respect they compare very favourably with the chief Dominions and Overseas Possessions of the British Empire, as shown in the following table:—

Foreign Trade of European Nations, in Million £.	Actual Increase in 1912 over 1901.	Foreign Trade of Dominions, &c., of the British Empire.	Actual Increase in 1912 over 1901.	Foreign Trade of Nations of America, in Million £.	Actual Increase in 1912 over 1901.
United Kingdom	437.7	British India	159.7	United States	522.2
France	331.7	Canada	143.6	Argentina	116.8
Holland	243.0	Australia	65.2	Brazil	76.0
Belgium	232.3	B. Sth. Africa	42.9	Chile	30.0
Germany	231.8	New Zealand	19.3	Cuba	28.9
Italy	131.5	B. West Africa	17.4	Mexico	20.8

* Increase in 1911 over value of 1901. † Increase of 1912 over 1906.

But in respect to the rate of increase since the beginning of the century many of the nations of America show an astonishing increase, thus indicating how vast are the potentialities of these countries awaiting development.

TABLE SHOWING THE GROWTH OF THE FOREIGN TRADE OF THE UNITED STATES FROM 1901 TO 1912.

	Population.	Imports.	Exports.	Total Trade.	Per Head of Population.		
					Imports.	Exports.	Total Trade.
UNITED STATES.					£ s d	£ s d	£ s d
1901	77,613,000	171.5	310.0	481.5	2 4 2	4 0 0	6 4 2
Average, 1902-1906	82,467,000	219.3	313.6	532.9	2 13 2	3 16 1	6 9 3
Average, 1907-1911	92,528,000	291.1	383.3	674.4	3 2 11	4 2 10	7 5 9
1912	95,411,000	344.4	459.2	803.6	3 12 2	4 16 4	8 8 6

The population of the United States rose from 77,613,000 in 1901 to 95,411,000 in 1912, showing a percentage increase of 22.9. The value of her imports rose in the same time from £171,500,000 to £344,400,000, showing an increase of 100.8 per cent. The value of the exports rose from £310,000,000 to £459,200,000, or at the rate of 48.1 per cent. And her total foreign trade rose from £481,500,000 to £803,600,000, showing an increase of 66.7 per cent., and considerably exceeding the percentage increase (54.5) of the United Kingdom, but falling short of the percentage increases shown by Italy, Belgium, Holland, and France. Throughout the 12 years the value of the exports of the United States have considerably exceeded the value of her imports. The value of the foreign trade per head of the population is higher than the value and an increased income of Italy, but is much lower than that of the raw material, is a strong factor in the nations of Europe.

gained confidence; the demand for iron, steel, and other goods and there is rather more business doing in wool, cotton, and other goods. In the iron and steel trades conditions have improved, but railway rates reductions will enable further cuts to be made, which, it is hoped, will stimulate business. In the Sheffield district unemployment is increasing, and the volume of work on hand is reported to be the smallest on record. But brighter hopes are entertained with regard to the new year. The year is closing with a better tone in the markets for hides and leather, and the shoe trade is improving.

Details of movements and news in the principal markets from special correspondents will be found on later pages of this issue.

imports by Argentina rose by 237.7, and those by Brazil by 196.2 per cent. Their exports rose by 187.0 and 83.7 per cent. respectively, and the value of their foreign trade by 207.4 and 122.6 per cent. The value of the total trade or Argentina per head of her population was in 1912 rapidly approaching that of the United Kingdom.

TABLE SHOWING THE GROWTH OF THE FOREIGN TRADE OF CUBA, CHILE, AND MEXICO.

	Population.	Imports.	Exports.	Total Trade.	Per Head of Population.		
					Imports.	Exports.	Total Trade.
CUBA.					£ s d	£ s d	£ s d

Average, 1902-1906		12.9	17.4	30.3			
Average, 1907-1911		22.0	23.2	45.2			
1912	3,500,000	25.1	28.3	53.4	7 3 5	8 1 9	15 5 2
MEXICO.—1901	13,800,000	13.0	15.2	28.2	0 18 10	1 2 0	2 0 10
Average, 1902-1906		15.8	19.2	35.0			
Average, 1907-1911		20.7	26.0	46.7			
1912	15,000,000	18.6	30.4	49.0	1 4 10	2 0 6	3 5 4

The population of Cuba increased at the rate of 35.3 per cent., the value of its imports by 83.8 per cent., of its exports by 133.6 per cent., and the value of its total foreign trade by 108.2 per cent. The value of its foreign trade per head of the population was higher in 1912 than that of Argentina. The population of Chile increased by 13.0 per cent., the value of its imports by 141.3, the value of its exports by 117.7, and the value of its foreign trade by 128.2 per cent. Mexico shows an increase of population of only 8.7 per cent. Its imports rose in value by 43.1, its exports by 100.0, and its total foreign trade by 73.7 per cent. As in the case of the United States, the tables show that the export values of Argentina, Brazil, Cuba, Chile, and Mexico exceeded the values of the imports in each country—the single exception of the year 1901 in the case of Cuba being insignificant.

TABLE SHOWING THE GROWTH OF THE FOREIGN TRADE OF PORTO RICO, URUGUAY, PERU, AND BOLIVIA FROM 1901 TO 1912.

	Population.	Imports.	Exports.	Total Trade.	Per Head of Population.		
					Imports.	Exports.	Total Trade.
PORTO RICO.					£ s d	£ s d	£ s d
1901	960,000	1.9	1.8	3.7	1 19 7	1 17 6	3 17 1
1912	1,200,000	9.0	10.4	19.4	7 10 0	8 13 4	16 3 4
URUGUAY.—1901	965,000	4.9	5.8	10.7	5 1 6	6 0 3	11 1 9
1912	1,226,000	9.3	8.8	18.1	7 15 0	7 6 8	15 1 8
PERU 1901	4,700,000	2.8	4.3	7.1	0 11 11	0 18 4	1 10 3
1912	5,000,000	5.2	9.4	14.6	1 0 10	1 17 7	2 18 5
BOLIVIA .. 1901	1,750,000	1.4	3.0	4.4	0 16 0	1 14 3	2 10 3
1912	2,300,000	4.0	7.2	11.2	1 14 10	3 2 7	4 17 5

The figures for Porto Rico are somewhat misleading, as they include the values of the shipments received from or dispatched to the United States, as well as the direct trade with foreign countries. This state-Depu for the great increase in the values of the HEAD OFFICE: 5, arts, which rose respectively by 373.7 and OVER 1,550 Whilst the population of Uruguay in- OVERSEAS BRANCH: 65 & 27 per cent., the value of its imports AFFILIA that of its exports by 51.7 per BELFAST BANKING CO. LTD. alue of its total foreign trade OVER 110 OFFICES IN IRELAND approached the corresponding

value of France. The value of the total foreign trade of Peru increased by a higher percentage—viz., 105.6 (compared with 69.2 per cent. of Uruguay); the value of the Peruvian imports rising by 85.7 per cent., and that of the exports by 118.6. The imports of Bolivia rose still more rapidly—viz., by 185.7 per cent., and her exports by 140.0 per cent., the value of her total foreign trade in 1912 being 154.5 per cent. higher than in 1901.

TABLE SHOWING THE VALUE OF THE FOREIGN TRADE OF COLOMBIA, VENEZUELA, AND CENTRAL AMERICA IN 1912.

	Popula- tion.	Im- ports. Min. £.	Ex- ports. Min. £.	Total Trade. Min. £.	Per Head of Population.		
					Imports.	Exports.	Total Trade.
					£ s d	£ s d	£ s d
Values for 1912.							
Colombia	5,473,000	4-8	6-4	11-2	0 17 6	1 3 3	2 0 9
Venezuela	2,700,000	4-2	5-5	9-5	1 11 1	1 19 4	3 10 5
Central America ..	4,000,000	7-0	8-2	15-2	1 15 0	2 1 0	3 16 0

Complete trade returns are not available for Colombia before 1906. In that year her imports were valued at £1,871,000, and her exports at £2,967,000. The total value of her foreign trade was therefore £4,838,000. The increase in the value of her imports in the six years was at the rate of 152.6 per cent., of her exports 113.3 per cent., and of her total trade 128.6 per cent. The earliest figures for Venezuela are for 1903. Between that year and 1912 her imports increased in value by 281.8 per cent., her exports by 231.2 per cent., and her total trade by 253.7 per cent. The value of the imports of the five States, which now form the Federation of Central America, was in 1901 about £2,900,000, and rose in 1912 to £7,000,000, showing an increase of 141.4 per cent. The value of their exports in the same period rose by 78.2 per cent., and the value of their total foreign trade by 102.7.

In 1912 the imports by Uruguay exceeded the value of its exports by £500,000, but in the case of each of the other countries dealt with in these tables the value of the exports has exceeded that of the imports. The total value of the imports of these countries, beginning with the United States and ending with the Federation of Central America, in the year 1912 amounted to £597,000,000. The total value of their exports amounted to £774,900,000, showing an excess of £177,900,000, equal to 29.8 per cent. This excess of £177,900,000 of American exports may be compared with the excess of £437,100,000 in the value of the imports over that of the exports of the seven countries of Europe dealt with in an earlier article.*

CO-OPERATIVE SOCIETIES' RESULTS.

(FROM A CORRESPONDENT.)

THE last six months have produced a series of reports from directors of public companies showing a complete reversal of the conditions that obtained a year ago. All distributive concerns dealing with foodstuffs, clothing, furniture, &c., have found difficulty in maintaining their turnover against the fall in values and the restricted buying power of the community. And the same tendency is seen in co-operative societies as in joint-stock companies. A study of the happenings in the industrial class trading organisations is interesting, and affords possibly an even clearer idea of the actual commercial position than is obtainable from the information given in the accounts of the ordinary limited liability companies.

Co-operative societies issue their reports quarterly or half-yearly. A few years ago the three-month period was the rule; but the greater extent of the business has led to the half-yearly period being generally accepted, an interim dividend on purchases being declared at the end of the quarters when no balance-sheet is presented. Examining the accounts of nine societies which present their accounts half-yearly (in London, Yorkshire, Lancashire, and Durham), we find there has been a decreased trade in six of them. At Eccles the business has fallen from £21,867 to £16,743 per week; at Liverpool the average weekly purchases per member were 11s 11½d, as against 14s 6½d in the corresponding period of 1920. During the same months the distributive wages rose from 1s 1½d to 1s 3½d

per £ of sales, and the distributive expenses from 2s 2½d to 2s 6½d per £. In eight articles of grocery (sugar, eggs, margarine, lard, butter, potatoes, tea, and bacon), falling values were responsible for a decrease of no less than £5,365 in a week's trade. And yet, despite the trade depression, heavier expenses and fluctuating markets, Liverpool would have been able to pay a dividend of 23 per cent. if the profits had been dealt with in the same way as in public companies. The society paid 5½d per cent. on capital and 5 per cent. (1s in the £) on the purchases made by the members. In studying the following analysis of societies' accounts, it should be remembered that interest on share and loan capital was paid in every case before the net profit was arrived at; that stocks were taken at the current market rate or at the cost price—whichever was the lower figure—and that the investments are, in the main, with the Co-operative Wholesale Society and the various small productive societies in the movement. In all cases the stocks were considerably less than at the previous valuation, those of the Woolwich society having been reduced from £400,368 to £336,914:—

* Increase.

The accounts of the five societies in the second half of the table are concerned with the trade for the last three months only. They are as representative as the others of the general tendency of things. Crewe is a railway centre, and its expenses were 2s 2½d in the £ of sales. Nottingham and Soho (Birmingham) had a decreased share capital—a feature that has synchronised with the development of the political flirtation with the advanced Socialist party; and the falling trade is observable all round.

These societies deal in grocery, provisions, bread, green-grocery, boots, drapery, clothing, furniture, hardware, and other necessities. For a score of years they have been steadily increasing their turnover. The present setback is abnormal, and as prices become stabilised and trade steadies may be satisfactorily readjusted. But the universal fall of the dividend is distinctly disturbing to the advocates of co-operation. In the south dividends of 2s were formerly regarded as excellent, and anything above 1s 6d as good. Now 1s is exceptionally good, and 4d and 5d acceptable; while the London society (a combination of the Stratford, Edmonton, and West London societies) has lost its dividend in the political wrangles that now divert its leaders from their co-operative purpose. In the north, where 3s and 4s dividends were the rule, 1s and 1s 6d have become the usual standard. Consumers are wondering whether it is better to get the immediate advantage from dealing at private traders or multiple shops, or to wait for the declaration of a declining dividend at the end of the half-year. Moreover, there has grown up a network of machinery—educational, entertainment, political, &c.—that is proving very costly. Annual congresses, quarterly conferences all over the country, frequent deputations to various societies, and scores of incidental gatherings have to be paid for out of profits. The managers of the retail societies have to secure profits for many other purposes than dividends for the consumers, in whose interests the movement was founded. The impression is growing that there is need for a Geddes axe

to lop off some of the auxiliary branches that are preventing many stores getting along real competitive avenues with their rivals. If the prevailing national conditions continue for a few months longer the problem thus indicated will require very serious discussion in the movement.

THE ECONOMIC POSITION IN CZECHO-SLOVAKIA.

(FROM A CORRESPONDENT.)

THE crisis which has prevailed for several months in various branches of industry in Czechoslovakia has recently become less acute. This is the case, in particular, with regard to the textile, timber, iron and machinery trades, which have of late been favoured with considerable orders from abroad, a circumstance which is partly reflected in the unemployment statistics. According to the latest official report, the Czechoslovak Republic contains about 26,000 persons in receipt of unemployment doles from the State. It is, of course, impossible to say yet whether this partial improvement in these industries is to be regarded as a sign of the commencement of a permanent all-round improvement, or whether it is only a passing phenomenon connected with the brisker demand which is generally observable in the autumn. Particularly in the case of textiles the rise in the price of cotton and the higher exchange value of the dollar are indications that caution is needed in drawing conclusions as to the prospects of work in this branch.

The great depreciation of the currencies of the neighbouring States, hitherto Czechoslovakia's best customers, compared with the value of the Czechoslovak crown, has a deleterious effect upon mutual trade relations; there is no need to emphasise the fact that the manufacturers of Czechoslovakia are acutely feeling the competition which Germany, as a result of the fall of the mark, is able to make. Nevertheless, the watchword of Czechoslovakia in respect of her trade policy still continues to be stabilisation of wages and stabilisation of currency, and this policy is universally acknowledged to be the soundest guarantee for the future development of trade enterprise. Not even the recent mobilisation and the expenditure involved in it has done anything to affect this standpoint, which has found a firm advocate in the present Minister of Finance, M. Augustin Novak. Wage disputes, so far as such have arisen of late, have been settled in every case in some other manner than by a rise in wages (e.g., grants have been made in return for increased production).

The Budget for the year 1922, just placed before Parliament, is also a documentary proof of the slow but sure economic development of the State. The revenue is estimated at 18,884 million crowns and the expenditure at 19,672 millions, leaving a deficit of 788 millions. The so-called "Investment Budget," which forms an independent section of the State finances and which deals with sums laid out as capital investment in buildings, railways, &c., will require a sum of 3 milliard crowns to meet its demands, and this amount it is proposed to raise, as last year, by internal loans, the works to be carried out being limited according to the funds actually raised.

It is true that the State expenditure in Czechoslovakia increases from year to year; in 1919 the Budget estimate was 8½ milliard crowns; in 1920 it increased to 10½ milliards; in 1921 to 14, and for the coming year it is 10½ milliards. On the other hand, however, the revenue figures prove the economic and financial strength of the country, and the Minister of Finance has been able to declare that the existing taxes are sufficient to meet all requirements—in all previous years they yielded very considerably more than was expected—and that there is no intention of imposing new taxation. The following table shows the amounts derived from various taxes in the last four Budget years:—

At the same time it is worthy of note that the State undertakings are paying their way.

The Budget for the railways, which are owned by the State, accounts for 25 per cent. of the expenditure appearing in the State Budget, but, on the other hand, it produces a surplus of 285 million crowns. The Post Office is also a paying concern, and provides a surplus of 91 millions. In the Budget for the year 1922, moreover, the hitherto existing remnant of State control will be dispensed with. During the coming year there will remain only a partial control by the State over the export of sugar. Sugar has been decontrolled for home trade and consumption, but in view of the fact that the profits on exports arising from the difference between the home price and the price on the world market is divided up between the State, which takes 50 per cent., the beet growers, who receive 43 per cent., and the sugar factories, which get 7 per cent., the State has reserved to itself a certain control over the profits derived from the sale of sugar to other countries. Otherwise no obstacles are placed in the way of sugar export. The sale of this commodity to other countries has, by arrangement between the beet growers and the refiners, been entrusted to the Czechoslovak Sugar Export Company. As regards this year's production, it is estimated that in consequence of the high percentage of sugar yielded by the beet last year's figures—500,000 tons—will be again attained.

The abolition of State control over agricultural products has proved a success; the food supply service works without a hitch, and the prices of flour and corn keep within reasonable bounds. The failure of the potato crop, however, owing to the drought which prevailed throughout the summer, is felt appreciably, and the prevailing prices amount to about 150 per cent. higher than the prices for this commodity last year. The consumption of potatoes for industrial purposes, e.g., the production of methylated spirits, starch, &c., has been restricted.

Business Notes.

The Railway Rate Reduction.—Nearly a year before the Government released control of the railways rates were raised to a general level 100 per cent. above pre-war figures, together with certain flat rate additions. This decision, taken in September, 1920, which raised rates higher than the corresponding increase in passenger fares, was made on the recommendation of the Rates Advisory Committee, and its object was to collect from the trade of the country 16 months' revenue in the 11 months of control in order that the State might recuperate itself for the loss already sustained since 1920; but it was understood that when the railways were decontrolled the trade of the country should have relief from this exceptionally high level of charges. The coal strike, however, upset these calculations, and when the railway companies

* See p. 330 of the Economist of August 27, 1921.

resumed full responsibility they found themselves faced with costs which made it difficult to fulfil the traders' expectations. During the last four months the railway companies have interviewed all the important bodies representative of British industry, who have urged upon them the necessity for reduction not only in the interests of the industries themselves, but also as one means of stimulating the recovery of trade, which means increased traffic for the companies. The result of these long deliberations was announced on Wednesday morning, and has, on the whole, proved disappointing to industry. The companies propose to reduce, as from January 1st, the rates upon coal, coke, &c., and upon pig-iron, semi-finished iron and steel, and lime. The increase of 100 per cent. is in these cases to be reduced to 75 per cent., and the additional flat rate increase of 6d is reduced to 4d. The reduction in the rate will, therefore, average about 15 per cent. on these commodities. In the case of coal, however, the concession is much smaller than appears at first sight, because by the arrangement of September, 1920, the increase upon coal was limited to 4s per ton. All coal rates, therefore, which before the war were more than 5s per ton will not be reduced at all, since 75 per cent. increase of 5s, plus 4d flat rate, yields a figure higher than a net 4s increase. This means that there will be no fall in prices of coal in the London area. We regret that the companies have not applied their reductions more universally, and have made them in such a form that they are of such limited application for even those commodities to which they apply. The times call for a bold policy, and the companies would have done well to follow the lead of those industries which have taken risks in reducing their prices in order to rehabilitate their trade, but the moment is an unpropitious one for getting joint action by the companies. Parliamentary control of rates has been removed, the Rates Tribunal which is to take its place is not yet in existence, and though the railway companies have to a great extent ceased to compete, they are not yet amalgamated under the leadership of four general managers. Pending this amalgamation, the interests of the companies on the financial side are divergent, and the unsatisfactory character of the present concessions is to no small extent due to the difficulty of harmonising conflicting interests at a meeting of from 12 to 20 companies which have responsibility but no cohesion.

Employment in November.—Employment on the whole did not improve in November. The *Labour Gazette* reports that while in some industries, including coal, iron, shale mining, tinplate, and steel sheet manufacture, and the hosiery and silk trades, an improvement was recorded, in a number of other trades, including engineering, shipbuilding, brick, cement, pottery, and building, there was a further decline in the demand for labour. The percentage unemployed among members of trade unions sending returns to the Labour Ministry was 15.9 at the end of November, compared with 15.6 a month before. How this percentage has moved month by month is shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

End of—	1913.	1916.	1917.	1918.	1919.	1920.	1921.

* Excluding coal miners. † Revised figure.

The percentage unemployed among workers insured under the Unemployment Insurance Act was 15.7 on December 2nd, as compared with 14.9 on November 4th. The percentages for males and females respectively at December 2nd were 17.7 and 10.6. The total number of workpeople registered at the employment exchanges as unemployed at December 2nd was approximately 1,834,000, of whom 1,415,000 were men and 318,000 were

women, and the remainder were boys and girls. At November 4th the number on the live register was 1,729,000, of whom 1,332,000 were men and 294,000 were women. In addition to those unemployed, 155,000 males and 113,000 females were registered on December 2nd as working systematic short time in such a manner as to entitle them to benefit under the Unemployment Insurance Act. At November 4th the corresponding figures were 153,000 males and 99,000 females.

Cost of Living.—Another fall is recorded in November by the *Labour Gazette's* calculation of the cost of living for an average working-class family. At December 1st the figure was 99 per cent. above the level of July, 1914, as compared with 103 per cent. above on November 1st. How the decline has progressed this year may be seen at a glance below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.

1920.	Per Cent.	1921.	Per Cent.
January 1st	125	January 1st	165
February "	130	February "	151
March "	130	March "	141
April "	132	April "	133
May "	141	May "	128
June "	150	June "	119
July "	152	July "	119
August "	155	August 2nd	122
September "	161	September 1st	120
October "	164	October "	110
November "	176	November "	103
December "	169	December "	99

Retail food prices alone are recorded on December 1st as being 95 per cent. above the eve-of-war level, as against 100 per cent. above on November 1st. The fall during November is attributed mainly to further reductions in the prices of meat, bread, and flour. Bacon and fish also became cheaper, but the price of eggs rose in November by nearly ½d each.

The Cost of Pensions.—The fourth annual report of the Minister of Pensions (White Paper 244, price 9d) gives the following figures of the expenditure of the Pensions Ministry in 1919-20 and 1920-21:—

Heading of Expenditure.	Comparative Total, Year Ended March 31, 1920.	Approximate Total, Year Ended March 31, 1921.*
(i.) Salaries, wages, and expenses of staff, including fees to medical referees and members of medical boards, and expenses of pensioners attending medical boards	£ 3,881,029	£ 5,403,000
(ii.) Administrative expenses of local war pensions committees	1,341,168	1,299,400
(iii.) Pensions and gratuities (officers and their dependants)	4,911,991	5,915,000
(iv.) Pensions and gratuities (nurses and their dependants)	55,023	94,900
(v.) Pensions and gratuities (men and their dependants)	69,241,282	71,927,000
(vi.) Treatment and treatment allowances	16,394,246	19,165,200
(vii.) Artificial limbs and appliances ..	739,488	1,139,900
(viii.) Training	704,345	— †
(ix.) Miscellaneous	1,666,094	715,600
Totals	98,934,666†	105,660,000†

* The final figures are published in the appropriation account for the year.

† The provision of industrial training was transferred to the Ministry of Labour in 1919; see "Third Report," para. 43. The expenses of providing concurrent treatment and training are included under heading (vi.).

‡ Of these amounts £18,986,400 (approximately) and £21,188,500 respectively were expended on behalf of the Ministry by local committees.

As regards the increase under heading (i.), the report explains that the rates of remuneration to staff were higher, in view of the increased cost of living; the cost of medical boarding was greater, because of the larger number of pensioners boarded; and there also was an increase in the cost of travelling in respect of pensioners attending medical boards. The increases under headings (iii.), (iv.), (v.), and (vi.) are accounted for by the larger number of pensioners, and by the increased rates of retired pay and pension authorised as a result of the recommendations of the Select Committee on Pensions. The transfer

of the administration of wounds pensions, referred to in paragraph 1, also contributed to the increase under heading (iii.). As regards heading (vii.), the increase arose mainly because of higher costs, the increased number of limbs and appliances supplied, and in maintenance and repair. There is a substantial decrease under heading (ix.), due to the transfer to the Service Departments as from April 30, 1920, of expenditure under the regulations of the Special Grants Committee in respect of supplementary and special separation allowances to the dependents of serving soldiers.

October Trade Volume.—The Board of Trade has compiled the following figures, showing how the volume of imports and exports passing in October compare with figures for October, 1920 and 1913, respectively. The comparison reads as follows:—

Month of October.	Imports.		Exports.	
	Tons.	%	Tons.	%
1921	3,470,000	—	4,456,000	—
1920	4,076,000	14.9	2,707,400	64.6
1913	5,517,000	37.1	8,555,600	47.9

The comparison with October, 1920, is vitiated by the fact that in that month the effects of the coal strike then in progress seriously affected export. The tonnage of coal, coke, and patent fuel exported in October, 1921, was 3,636,000 tons, or 1,971,000 tons more than in October, 1920. This, it will be seen, more than accounts for the rise, as compared with last year, in the total export tonnage.

Ireland's Overseas Trade.—The Department of Agriculture and Technical Instruction for Ireland has issued a report on the Trade in Imports and Exports at Irish Ports in the year 1920. This shows that with the exception of 1915 there was a substantial surplus in the value of exports for each year since 1914. For 1904, the first year for which records of Irish trade are available, there was an import surplus of £5½ millions. This figure fell fairly steadily to £590,000 in 1913. The following table gives the figures since that date, and also the values at 1904 prices:—

Year.	Imports.		Exports.		Excess of Exports.	
	Value at Year's Prices.	Value at 1904 Prices.	Value at Year's Prices.	Value at 1904 Prices.	Value at Year's Prices.	Value at 1904 Prices.
1914....	£ 74,125	£ 61,176	£ 77,311	£ 63,243	£ 3,186	£ 2,067
1915....	87,257	59,124	84,463	58,372	* 2,794	* 753
1916....	104,517	56,619	107,171	58,716	2,654	2,097
1917....	119,181	49,785	133,805	56,715	14,624	6,930
1918....	126,016	44,167	152,931	50,569	26,915	6,402
1919....	158,716	50,081	176,052	51,175	17,336	1,094
1920....	203,750	56,455	204,715	53,268	965	3,187

* Excess of imports.

The growth in the export surplus is attributed to a large decrease in quantities imported and a small increase in the quantities exported, and also to the slightly steeper rise in export than in import prices. The fall in the surplus of exports since 1918 is due to the fact that the recovery in the more depressed import trade was much more rapid than in the export trade. Of the total imports into Ireland in 1920 78.3 per cent. were from Great Britain, as against 83.4 per cent. and 88.1 per cent. in 1919 and 1918 respectively, while Great Britain took no less than 99.1 per cent. of Ireland's exports, as against 98.9 per cent. and 99.6 per cent. in 1919 and 1918. Shipments from Ireland represented 9.7 per cent. of Great Britain's total imports in 1920, while 9.3 per cent. of this country's exports went to Ireland.

American Steel and Disarmament.—Our American contemporary, the *Iron Trade Review* of Cleveland, produces some striking statistics which show the relatively small effect which will be produced on the steel trade of the United States by the proposed limitation of naval armaments. From June 1, 1887, the time of the first American armed line ship, it is estimated that the requirements of the United States Navy for steel plates, &c., has been 1,061,428 tons. This, together with armour plate and guns, machinery, &c., gives a total of just over two million tons for the 34 years. How this compares with the total output may be seen from the following table:—

	Net Tons
Armour plate	280,802
Finished rolled steel for hulls	1,061,428*
Guns, machinery, and outfitting (estimated)	671,115
Total all steel	2,013,845
Total output finished steel, including armour plate	555,107,301
Navy requirements approximately per cent.	0.36

* Includes relatively small tonnage of castings.

The *Iron Trade Review* further points out that, assuming that the remainder of the 10-year period of the naval holiday would see naval construction go forward at the rate of the so-called five-year programme, which might be concluded by 1924, the steel industry would be called upon to produce in all approximately 140 per cent. more steel of navy specification. This would mean an additional 723,058 tons of steel, including everything except guns, machinery and other equipment. From the spring of 1919 to the end of 1931 the steel mills and armour plants in America would produce 1,239,528 tons of steel for actual warship construction. This averages little more than 103,000 net tons per year. Again, assuming that guns, machinery, &c., required to equip all vessels in the fleet would necessitate a duplicate tonnage of steel, which is a most liberal allowance, the annual steel requirement would be approximately 206,000 tons. Against the maximum tested capacity of the industry in finished rolled product, 33,067,700 gross tons, or 37,039,380 net tons, in 1917, this is only 0.55 per cent. Compared with the average finished steel output of the past five years of 30,810,650 gross tons, or 34,507,920 net tons, it is only 0.59 per cent.

Argentine Finance and Trade.—A very full report by the Commercial Secretary of H.B.M. Legation at Buenos Ayres points out that Argentina has suffered less from the war than most countries, and in a different way. The currency is not inflated, and taxation has not increased, though this latter result is due to legislative mismanagement rather than design. Yearly deficits from 1914 to 1919 have set up a floating debt of \$600,000,000; a two-year 7 per cent. loan has been issued in New York at 97; British capital, believed in Argentina to be exhausted, would be attracted by an offer of adequate terms. Banking and insurance show progress; about half the former and two-thirds of the latter are British. The recent trade depression was due to the over-confidence of importers, coupled with increased exports; hence the appreciation of exchange on New York, and subsequently on London. To evade the increased cost of goods, many Argentine firms refused them on flimsy pretexts; but British exporters have now learnt what firms they can trust. The more enduring causes of the depreciation of the Argentine exchange do not comprise inflation, for the additional currency issued is covered by gold; nor is the balance of trade unfavourable. They are the large remittances to Europe for freights and interest on investments, and from foreign immigrants; the suspension of the flow of capital from Europe, and the prohibition—which is not likely to be removed—of the export of gold. The official view is that the remedy lies in the increase of exports and the limitation of imports to urgent necessities. The internal conditions are hopeful. The good crops have averted a commercial crisis; though the cost of living in 1919 was 72 per cent. more than in 1913, there is practically no unemployment, and the labour unrest has died down. The railways have been free from it, and the Buenos Ayres dockers have at last worn out the patience of the Government. British goods are still most in favour, but must face severe competition, especially from Germany, and buyers have now more opportunities for comparison; in Buenos Ayres and in Europe British shipping is still pre-

eminent, though the services of other countries are multiplying; and two lines, one *via* South Africa, the other *via* Panama, connect Buenos Ayres with Japan. Coastal traffic is developing with 18 (mostly very small) Southern ports. Settlement on the land is being actively promoted, mostly in the remote North and South; immigration is being resumed. The railway rates controversy is fully dealt with; of the mileage (22,140 miles) 65 per cent. is British, 16 per cent. belongs to the State, the rest is mostly French. The oil industry is being aided by State tank vessels, but the output does not cover home needs. Aviation is being promoted with the aid of various British and Continental companies. There are no adequate roads except near the towns, though a motor-car highway is talked of from Buenos Ayres to Rosario. The Report indicates that the future prosperity of the country is assured, provided that the labour difficulties are adjusted, that foreign investors are treated fairly, and that less dilatory methods are adopted in public finance.

Peru and Chile.—The Peruvian resentment against Chile for occupying the nitrate provinces has again been made acute by the offer of the Chilean Government, backed by all the chiefs of parties, to take the plebiscite of the inhabitants on their ultimate ownership contemplated by the Treaty of Antón in 1883. The plebiscite fell due in 1893, but could not be taken, Peru being then in revolution; since then negotiations for taking it have been frequent, lengthy, and fruitless. Chile now offers to carry it out on the lines suggested in 1912 by the Peruvian Government, but next year, instead of, as was then contemplated, in 1933. The offer seems liberal; but Peru maintains, with some reason from certain phases of the earlier negotiations, that this method of settlement is obsolete; that Chile has been so long in possession, and has provided so effectively for eliminating the Peruvian voters, that the result is a foregone conclusion; and that the proper method of determining the question of ownership is a reference to arbitration, preferably that of the Government of the United States. Chile appears to be ready to go to arbitration on the conditions of the plebiscite, but not on the question of holding it; and, as the export duties on the nitrate constitute nine-tenths of her whole revenue, it seems clear that she does not expect the decision to be adverse to herself. Her offer is said to be prompted by the desire to get rid of the controversy so as to leave the way open for the formation of a Spanish-American League under the hegemony of Spain, a project lately revived by the Uruguayan Government. Outside observers had best keep out of the controversy, but a final settlement is urgently needed. Chile's hold on the provinces can only be strengthened by delay; both States are planning development of their great resources, and in this direction Peru has most to do. The work can only be retarded by repeated outbursts of ill-feeling, which happily cannot under present conditions lead to a settlement by war. The nitrate share market has been only slightly affected by the reopening of the dispute.

American Cotton Crop.—The Census Bureau of the United States Government has this week published its seventh ginning report on the cotton crop for the current season. It is stated that up to the 13th inst. 7,799,000 bales had been ginned, the amount dealt with during the fortnight since the previous report being 158,000 bales. At the same time last year the total figures up to December 13th were 10,876,000 bales and 9,397,000 bales in 1919. The report just issued, writes our Manchester correspondent, was considered rather bullish in the market, and prices during the last few days have tended to harden.

Cotton Trade Wages.—The wages agreement between the employers and the operatives in the Lancashire cotton industry expires this week, and it is now open for either side to make an application for another revision of list rates. This week the situation has been considered by the masters, and it is thought in some quarters, writes our

Manchester correspondent, that owing to the unprofitable state of trade the employers will seek a further reduction. On the other hand, many people are of opinion that owing to the large amount of unemployment, and the fact that during the last six months those operatives who have not been unemployed have had to work a lot of short time, it is not advisable at the moment to press for any alteration in list rates. If any action is taken three months' notice will have to be given. The present wages are 145 per cent. above the lists, and 140 per cent. higher than the level existing in July, 1914.

Scotch Whisky Trade.—An Edinburgh correspondent writes:—After several years of great prosperity, the Scotch whisky trade appears to be entering upon a period of comparative depression. Distillation having been prohibited for quite three years during the war, the stocks of matured whiskies were depleted to an alarming extent, particularly as under the impulse of the universal inflation which the war engendered the demand was on a very large scale. The big distributors, with a world-wide connection built up at enormous expense, speedily became the holders of the major portion of the stocks of matured whiskies. Other distributors were left to pick up supplies as best they might, with the result that before the prices were officially controlled single whiskies in bond were run up from about 8s or 9s to as high as 60s per proof gallon. When distilling was resumed after the Armistice blenders, finding the demand keener than ever, and seeing little prospect of substantially augmenting their supplies of matured whiskies, rushed to fill new at high prices, and the Highland malt whisky distillers had two bumper seasons. But when the Government raised the spirit duty to the inordinately high level of 72s 6d per proof gallon, the consumption dwindled rapidly, particularly as the increase in the spirit duty, and consequently in the price of the commodity, synchronised with the collapse of the trade boom resulting in widespread unemployment and an all-round declining tendency in wages. This season the Highland distillers reduced their filling prices from 9s 6d to 5s 6d per proof gallon, and even at that figure are experiencing very great difficulty in securing orders. From present appearances, it looks as if the output of the Highland distilleries will not exceed fifty per cent. of that of the preceding season. Somewhat paradoxically, the prices of matured whiskies are again on the up grade, the fact being that, while there is plenty of comparatively new whisky, none of it can be sent out for distribution until it has lain in bond for three years. The average age at which Highland malt whisky is used may be put at six or seven years, and it is estimated that it will be 1925 at the earliest before the stocks of whisky with that degree of age are anything like adequate. Obviously, this calculation is based on expectations of a recovery in the consumption to something like normal, which in turn can only be looked for if the spirit duty is reduced to a lower figure. Some little time ago Mr William H. Ross, of the Distillers Company, Limited, who is regarded as the leader of the Scotch whisky trade, stated that the decline in the consumption as a result of the high spirit duty was already sufficient to render redundant fifty of the Highland distilleries now working. Such a state of affairs means a resumption of fierce competition, as a result of which quite a number of Highland distillery companies had to go into liquidation or face a reorganisation of their capital some twenty years ago. Since the beginning of the present Highland distilling season, about six weeks ago, the price of barley has fallen heavily, being now quite 10s per quarter cheaper than it was then. This has necessitated a revision of the prices of new whisky. The Highland distillers, through their Association, fixed the price to begin with at a flat rate of 6s per proof gallon, but it is now being generally sold at 5s 6d, and in some cases at even 5s, without attracting any substantial volume of orders. The Lowland malt distillers have also had to reduce their prices since the season began, and it is more than likely that the grain whisky distillers will shortly follow suit. One of the curious anomalies at present observable in this trade is that, whilst the demand for the cheaper classes of whisky

is being adversely affected by the high prices, the demand for really fine old whisky, sold under well-known names, particularly in England, is rapidly increasing. This makes the situation more than usually complex, as while most blenders are suffering from a scarcity of matured whiskies no relief is to be obtained by bonding new spirit, which when it reaches maturity six or seven years hence may prove to be in excessive supply.

Japanese Trade and Finance.—Cabled advices from Tokyo report stringency in monetary conditions early in December, owing to repayments to the Bank of Japan and demand for end of the year accommodation. But later on conditions became easier, owing to Government disbursements. The stock market has been quiet, but buoyancy marked the rice market owing to speculation, until sales of Government stocks came as an unexpected shock to bullish buyers. The market for cotton yarns has been weak, and the silk yarn market steady. The note issue of the Bank of Japan on December 15th was 1,185,000,000 yen, against 1,127,000,000 yen a year ago, discounts and advances being 97,000,000 yen against 187,000,000 yen. Imports in November were 151,000,000 yen, compared with 108,000,000 yen in November, 1920, and exports 121,000,000 yen against 105,000,000 yen.

Grand Trunk Appeal.—On Wednesday the Judicial Committee of the Privy Council granted special leave to appeal from the decision of the majority of the Board of Arbitration in Canada. This board, it will be remembered, was composed of three arbitrators, Mr Justice Cassells, Chief Justice Taft of the United States, and Sir Thomas White. Mr Justice Cassells and Sir Thomas White decided that the preference and common stocks of the Grand Trunk had no value, while Mr Taft dissented, and accorded to them the value of \$48,000,000. The stocks of the company improved on the news. But whatever hopes may be held as to prospects of the Privy Council decision, stockholders will have to exercise patience, for it is understood that the appeal is unlikely to be heard for several months.

The Mexican Railway.—The report for the half-year ending June 30, 1921, indicates that the expected improvement in the economic situation of Mexico is still to come. Till June 19, 1920, the line was in the hands of the Government, and comparison of the two subsequent half-years is unsatisfactory, partly because of the difference of seasons and partly because the first contains 15 days more than the second. However, gross receipts for the second half-year were \$6,759,255—a decline of \$240,438, or about 3½ per cent., while the working expenses increased by \$213,726, chiefly through a partial strike for six weeks last spring. But passenger and freight receipts, though fewer passengers were carried, increased slightly; express receipts went up by over 10 per cent.; the yield of the pulque traffic fell off by over 10 per cent., which possibly shows that the Government is really striving to reduce the consumption of intoxicants, and goods receipts declined by nearly 9 per cent., presumably (as elsewhere) through the fall in the purchasing power of Europe. The net revenue from traffic was \$1,018,828, or £101,882, which rather more than covers the payment of 20 per cent. on the deferred interest certificates under the new scheme of arrangement with the debenture holders which was before them on Wednesday last. [The modification then effected in the scheme, however, will require a considerably larger charge for interest.] Gain on exchange, interest, and transfer fees bring up the total net revenue to £130,844; after allowing for a reserve for taxation of £10,000, the remainder reduces the debit balance to £694,985, or by nearly £20,000. An increase of rates (with certain exceptions) by 25 per cent. was sanctioned by the Government on September 1st; half of this is to be credited to the compensation due from it to the company. Partly through this increase the net receipts for the first four months of the current half-year are estimated at \$1,192,100, or more than the whole of the six months preceding. Payment of interest on the first and second debentures is to be resumed respectively on January 1st and April 1, 1922. But the deficit on net revenue account

is still very heavy, and, until all liability for outstanding interest is discharged, there can be no dividend on the £5,820,000 of share capital stock. The line has been "maintained in fair state of repair, and in some instances considerably improved"; the plant and rolling stock have been "kept in the best possible working condition and repair."

Mexican Eagle Oil.—The report of the Mexican Eagle Oil Company, Limited, for the year ended June 30, 1921, shows that the profit on trading, including \$3,338,129 for interest, amounted to \$85,320,429, which compares with \$59,453,574 for the previous year. Results for the past four years are set out below:—

MEXICAN GOLD PESOS. (Par value 24½d.)				
	1918.	1919.	1920.	1921.
Trading profit after providing for administration expenses, interest and interest on debentures	28,235,441	37,194,427	59,453,574	85,320,429
Forward from previous year	6,503,419	2,219,054	3,543,282	3,814,189
	34,738,860	39,413,481	62,996,856	89,134,618
Transfer to field redemption and reserves accounts	19,081,009	10,061,707	7,452,318	49,615,670
	15,657,852	29,351,774	55,544,538	39,518,948
Provident fund	750,000	1,000,000	1,500,000	1,500,000
	14,907,852	28,351,774	54,044,538	38,018,948
Distributed in dividends	12,688,798	24,808,492	50,230,349	36,645,767
Carried forward	2,219,054	3,543,282	3,814,189	1,373,181

The reserve appropriations include transfers of \$11,279,509 to field redemption account, \$4,956,964 to depreciation reserve, \$3,379,198 to legal reserve, \$1,500,000 to provident fund, and \$30,000,000 to general reserve. The dividends on the preference and ordinary shares are at the rate of 30 per cent., as compared with 60 per cent. for the previous year. The directors point out that during the last two years capital expenditure has been exceptionally heavy. Over £6 millions has been spent in increasing tankage and pipe line capacities, and in extending refineries. The company has also advanced to the Eagle Oil Transport Company and to the Anglo-Mexican Petroleum Company over £7 millions. Towards these outlays about £7 millions has been obtained from the issues of new shares to existing holders in December, 1919, and December, 1920, and about £3 millions from the sale in September, 1921, of notes of the Eagle Oil Transport Company. In future the company's financial year is to close on December 31st, and a half-yearly report for the six months ended December 31, 1921, will be issued in May next. The report contains an interesting paragraph on the presence of salt water, which should serve to allay any alarm among shareholders.

Samuel Allsopp and Sons.—A substantial decline in profits is recorded in the report of Samuel Allsopp and Sons for the year ended September 30th last, as will be seen from the summary of past results given in the table below:—

	1914-15.	1917-18.	1918-19.	1919-20.	1920-21.
	£	£	£	£	£
Trading profit	120,717	307,268	355,434	346,918	251,125
Deb. int. &c.	71,201	97,915	100,058	102,365	101,160
Red. of Certs. of Rights ..	..	42,796	..	..	..
Deprec. and repairs	45,917	82,246	104,964	114,916	92,140
Net profit	3,599	84,311	150,414	129,637	57,825
Brought forward	13,048	20,930	19,324	19,324	19,324
	16,647	105,241	169,738	148,961	77,149
Reserve	..	50,000	72,061	51,871	..
Preference dividend	..	33,917	58,413	58,413	47,107
Ordinary dividend	..	..	18,148	19,016	10,030
	..	..	(5½%)	(5½%)	(3%)
Carried forward	16,647	21,324	21,116	19,661	20,013

Some saving has been made on repairs and maintenance of premises and plant, which requires £62,900, as against £78,400 last year, and depreciation of plant, casks, &c., takes £7,400 less at £25,400. The participating preference shares receive, in addition to their 5 per cent., a further 1½ per cent., as compared with 2½ per cent. for the

previous year, while the ordinary stock gets 3 per cent., as against 5½ per cent. The balance-sheet shows no very striking changes. Creditors are lower by £287,300, and stocks have been reduced by £293,100. Debtors have fallen by £149,800, but cash is £101,100 higher. At an extraordinary general meeting to be held on December 30th resolutions will be proposed for amending certain of the articles of association for converting the £315,707 ordinary stock of the company into 315,707 ordinary shares of £1 each.

Slaters' Report.—The report of Slaters, Limited, for the year ended September 30th last shows a decline in trading profits, and a still larger drop in net profits, owing to an increase of nearly £11,000 in management expenses, dilapidations, &c., &c. The table below shows the company's record since 1906:—

	Trading Profit.	Interst and Divs.	Exp'ses and Interst Ch'rges.	Net Profit.	Prof. Div.	Ord. Div.	Rate.	Balance.
1906	52,021	4,513	19,508	37,203	5,650	30,281	12½	£ 1,222
1907	52,650	4,680	20,443	37,046	5,650	30,281	12½	1,066
1908	48,502	4,718	20,756	32,385	5,650	30,281	12½	2,460
1909	41,630	4,839	21,416	25,193	5,650	19,295	8	223
1910	41,068	3,097	21,834	22,443	5,650	19,200	8	Dr. 2,317
1911	39,045	2,353	21,261	20,238	5,650	16,808	7	Dr. 2,220
1912	42,890	3,119	21,881	24,229	5,650	16,808	7	1,771
1913	44,065	2,169	22,644	23,573	5,550	16,808	7	1,215
1914	42,506	2,133	23,822	20,811	5,640	14,180	6	860
1915	12,786	1,556	20,988	Dr. 6,603	3,997	..	..	Dr. 1,861
1916	14,261	1,427	22,474	Dr. 6,786	..	..	..	Dr. 45,178
1917	18,006	2,554	27,337	Dr. 6,777	..	..	..	Dr. 61,955
1918	23,148	3,315	27,769	Dr. 1,306	..	..	..	Dr. 53,262
1919	68,612	3,193	29,858	41,947	..	..	..	Dr. 11,315
1920	81,306	4,435	31,260	46,481	22,050	7,140	4	7,976
1921	60,971	4,993	46,107	17,758	4,200	8,925	5	8,508

Last year 3½ years of arrears of preference dividend were paid off, and 4 per cent. was distributed on the ordinary shares. The 6 per cent. preference dividend for the past year requires only £4,200, and after payment of 5 per cent. on the ordinary shares the carry forward is increased by over £500. The balance-sheet, which is analysed in detail elsewhere, shows a reduction of £17,800 in stocks, but the property item has been increased by £44,500 to £409,000, while investments are £11,200 lower.

Camp Bird Group Finances.—Our mining correspondent writes:—It is seldom that investors and speculators in mining enterprises meet with greater disappointment than has been recently experienced in connection with what is known as the Baker group. At the outset it may be recalled that the Camp Bird is one of the very few United States mining concerns taken over by British interests which have turned out satisfactorily for the purchasers. From 1902 to 1913 inclusive dividends totalling 205 per cent. were paid on the ordinary shares. There being indications that the exhaustion of the original property was a contingency which might have to be faced before very long, the company (in January, 1910) purchased a controlling interest in the Santa Gertrudis group of gold and silver mines situated at Pachuca, some 60 miles from Mexico City. This concern also had a fair run of prosperity; but here again the exhaustion of the original properties came into sight, and (in June, 1918) an arrangement was made for the operation of the neighbouring El Bordo group, in consideration of receiving 40 per cent. of the profits, the ore being treated at the mill of the Santa Gertrudis company. For the next two financial years distributions totalling 10 per cent. per annum were made. In the autumn of 1919 the two companies in conjunction formed the Mexican Corporation, with a capital of £1,000,000 in £1 shares, and a board strong in both financial and technical experts. The National Mining Corporation was also registered with a capital of £3,000,000, and a directorate embracing "all the talent." These transactions, however, appeared to constitute the turning-point in the fortunes of the group. The last dividend paid by the Camp Bird on its ordinary shares was 5 per cent. in respect of 1914-15; the preference dividend is in arrears since June, 1920. The statement to June 30th last shows a deplorable financial position. Investments at par figure for £1,187,100—their market value is less than one-third that amount; Santa Gertrudis Company current account stands at £85,300; cash, War bonds, and debtors total £24,500. On the other side there is a loan of £100,000, secured by

the deposit of investments; calls, £30,100; creditors, £12,300. In the absence of any appreciable income, the credit balance of £37,400 brought forward becomes converted into a debit of £19,900. Camp Bird ordinary shares are now quoted at 3s, as against 24s 6d at one time last year; the preference at 5s 3d compare with 17s 9d. The last dividend of the Santa Gertrudis Company was 5 per cent. in July, 1920. Information as to the mining position is satisfactory, and the El Bordo group ore reserves have expanded to over 1,300,000 tons; but there is an absence of details on the important point of operating costs; indeed, the accounts of the Mexican subsidiary are not given at all. London expenses, &c., swallowed up practically the whole of the £29,900 brought forward. Investments at cost figure for £305,000—their value is indicated by subsequent remarks. The sum of £50,000 has been deposited with bankers as security for overdraft in Mexico, and £131,200 is owing to sundry creditors, besides £44,600 calls on investments. Like its associate, the Mexican Corporation also issued notes on onerous terms—£380,000 10 per cents., repayable at £120. On more than one occasion the amalgamation of these three companies has been suggested. There are difficulties in the way, of course; but the financial position of each is such that drastic measures would seem necessary sooner or later. Mexican Corporation shares are about 4s 6d in the market, while National Minings, 10s paid, are only 1s.

South African Diamond.—The changed fortunes of the industry are vividly reflected in the report of this corporation for the year ended June 30th last. In 1919-20 a net profit of £131,300 was made, and two dividends of 50 per cent. each were distributed—one on the original capital of £100,000 and one on £300,000. A large interest was taken in the National Diamond Factories, established with most praiseworthy intentions by the late Mr Bernard Oppenheimer. The accounts now in the hands of the shareholders show a net loss of £144,400, and the interim dividend of 12½ per cent. paid in January last proves to have been unjustified. It is intimated that to reduce the liabilities some of the company's holdings, particularly in Far-Eastern Rand concerns, have been sold, but at a heavy loss. Work at the diamond factory is now greatly restricted. Possibly the new interests of the corporation in South-West Africa may turn out well. All the shareholders can do at the present time is to wait and hope.

Oversea Correspondence.

UNITED STATES.—BUDGET — SECRETARY OF TREASURY MELLON'S ANNUAL REPORT — COMMODITY PRICES — OCTOBER RAILROAD EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 12.

IN line with the Administration's efforts to curtail the annual expenditures of the Government, the first Budget prepared under the new national system, which was submitted to Congress this week, shows drastic reductions in many items. The Budget is for the next fiscal year, that is, for the year ending June 30, 1923. It gives the estimated expenses for that year, as well as those for the fiscal year ending June 30, 1922, and the actual expenditures for the fiscal year 1921. A summary of the totals of receipts and expenditures for the three years, taken from President Harding's message of transmittal, is as follows, the figures excluding postal revenues and postal expenditures paid from postal revenues:—

	1921 (Actual).	1922 (Estimated).	1923 (Estimated).
Total receipts	\$ 5,624,932,960	\$ 3,943,453,663	\$ 3,338,182,750
Total expenditures, including reduction in principal of public debt	5,538,040,689	3,967,922,366	3,505,754,727
Excess of expenditures ..	..	24,468,703	167,571,977
Excess of receipts	86,892,271	..	..

Estimated receipts for 1923 show a decrease of \$2,286,750,210 from the actual receipts for the fiscal year 1921, while expenditure will be \$2,032,285,962 less than in 1921. For the year 1921 there was an actual excess of receipts amounting to \$86,892,271, whereas an excess of expenses amounting to \$24,468,703 is estimated for the fiscal year 1922 and of \$167,571,977 for 1923. President Harding points out that such discrepancies are unavoidable when authorisations of expenditures are being enacted during the process of Budget closing, but there are ways, he says, for relatively easy adjustment without additional taxation. A portion of the funds necessary to balance the Budget for 1923 can be provided, he suggests, through legislation in connection with the naval appropriation Bill for that year, whereby \$100,000,000 now held in the naval supply account would be released. With the passage of such legislation, and with continued economy in all departments, President Harding believes the balancing of total receipts and expenditures for the fiscal years 1922 and 1923 can be accomplished. Director of the Budget Dawes says that in making up his estimates for 1922 and 1923 he paid no attention to reductions in expenditures which may result from the Conference on the Limitation of Armaments.

Among the items showing the heaviest cuts expenditures for the War Department stand first. Estimates for that branch of the Government are \$712,000,000 less for 1922 than in 1921, with a further reduction of \$19,000,000 approximately for 1923. Expenditures on account of the Panama Canal are more than cut in half. The provision for the Navy Department is made more than \$171,000,000 less in 1922, with an added cut of nearly \$47,000,000 in 1923 as compared with 1921. Expenditures under the Railroad Administration and Transportation Act, which amounted to \$730,711,669 in the fiscal year 1921, are reduced to \$337,679,235 for the current fiscal year, and eliminated entirely in 1923. For the Treasury Department estimated expenditures in 1922 will be about \$306,000,000 less than in the present fiscal year, and an additional cut, though slight, will be made in 1923. The Federal Board for Vocational Education is allowed \$99,000,000 less for the 1922 fiscal year than in 1921, but its provision for 1923 is somewhat larger than for 1922. The sum set aside for the Shipping Board is more than \$80,000,000 less in 1923 than in 1921, while the provision for other branches of the Government, including the War Finance and Grain Corporations, is \$66,000,000 less. Items for the purchase of the obligations of foreign Governments and for the purchase of farm loan bonds disappear, effecting a total reduction of over \$90,000,000, and a saving of some \$108,000,000 in postal service deficiencies is made in 1923 as compared with 1921. There are a few increases. For instance, the United States Veterans' Bureau, which is not listed in the 1921 expenditures, will cost \$438,122,400 in 1922, it is estimated, and \$455,232,702 in 1923. Expenditures for good roads show an increase from \$57,400,000 approximately in 1921 to \$125,000,000 in 1923, the latter sum representing an increase of more than \$20,000,000 over the current fiscal year.

In his annual report, Secretary of the Treasury Mellon says that, while the past fiscal year was marked by pronounced economy in Government expenditure, it is imperatively necessary to continue the policy of retrenchment. New undertakings that would impose additional burdens on the Treasury should be avoided, he remarks, especially since a large amount of short-dated debt—\$6,750,000,000—will mature within eighteen months. Pointing out that, despite the reductions made, the ordinary expenditures in the last fiscal year, including sinking fund and miscellaneous fixed debt charges, still exceeded \$5,500,000,000, he says that the Administration expects to hold expenditures on the same basis in 1922 down to about \$4,000,000,000, representing a reduction of \$1,500,000,000 from those of the fiscal year 1921. That decrease reflects in some measure the liquidation of war liabilities, but to an important extent also a reduction in the cost of government; from either viewpoint, it means a lightening of the tax burden. Determined efforts for economy, he says, have resulted in cutting expenditures for the current fiscal year over \$400,000,000 below the amount originally estimated as necessary by the various spending

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000

Paid Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

departments. While the new revenue law, recently enacted, will reduce the tax burden by more than \$800,000,000 for the fiscal year 1923, as compared with the former law, our system of taxation, Secretary Mellon believes, requires further revision. He strongly opposes high surtaxes under present conditions, declaring that the higher surtaxes are rapidly ceasing to be productive of revenue. "That they are being evaded or avoided no one of any experience doubts," he says. He points out that a large and steadily increasing amount of money formerly invested in productive industry is now going into tax-exempt securities, the amount being estimated by the Treasury at approximately \$10,000,000,000. Another serious effect of high surtax rates, he declares, is the destruction of incentive—the diminished activities of individuals in trade and industry—with consequent lessening of business transactions, curtailment of production, and ultimately loss of revenue to the Government. Secretary Mellon urges a reduction of the surtax rates to a maximum of 20 or 25 per cent.; he believes the lower rates would produce more revenue than higher rates, owing to the increase in taxable transactions. The head of the Treasury Department urgently recommends, among other things, the speedy adoption of legislation for the funding of the war-time obligations of Allied nations held by the United States Government. The funding of those obligations and placing them in a business-like form, he declares, is one of the outstanding needs of the present economic situation. Figures accompanying the report show that the accumulated interest on such foreign obligations now aggregates \$1,155,502,181, of which \$509,173,742 is charged to Great Britain, \$327,917,938 to France, and \$202,279,732 to Italy. In this connection it is noteworthy that progress is being made with the Foreign Debt Funding Bill now before Congress. The Senate Finance Committee has changed the Bill, so that less discretion is given to the Commission which will have charge of the negotiations than was granted by the measure passed by the House of Representatives. The Bill as changed by the Senate Committee provides that the \$11,000,000,000 owing to the United States shall be funded into obligations maturing not later than June 15, 1947, and bearing interest at not less than 5 per cent., payable semi-annually. Just what form the final legislation will take remains to be seen.

Commodity prices, after five successive monthly advances, covering the period from July 1st to November 1st, showed a slight reaction during November. *Bradstreet's* index number as at December 1st, namely, 111.3127, marks a decline of three-tenths of 1 per cent. from that at November 1st. The December 1st index, nevertheless, is still above that of every previous index number back to and including that of May 1st, which it exceeds by 4.5 per cent., while it exceeds the low level number of the past six years, touched on June 1st, by 6.5 per cent. The decline from December 1st a year ago is 17 per cent., and from the peak of 1920, which was the high point in *Bradstreet's* record of 29 years, 45.7 per cent. Compared with December 1, 1918, just after the armistice, the decline is 40.4 per cent. Eight groups of articles, including breadstuffs, provisions, and groceries, hides and leather, metals, oils, naval stores, chemicals, drugs, and miscellaneous products, increased in price; four, including livestock, textiles, building materials, and coal and coke, declined, while one, namely fruits, remained unchanged. In all 29 out of 106 articles advanced, 29 declined, and 48 remained unchanged.

Returns from all but two small lines show that the Class I railways earned a net operating income during October of \$105,186,283, the largest total for any month since the carriers were returned to private control and management, and equivalent to an annual yield on the valuation of their property investment of 5.4 per cent., or closely approximating the 6 per cent. return allowed by the Transportation Act. Operating revenues in October were \$535,135,126, or 16.6 per cent. less than in October, 1920, while operating expenses of \$337,114,777 were 24.6 per cent. less. Although net operating income was 21.8 per cent. greater than in the corresponding month of last year, it was nearly \$12,000,000, or 10 per cent., short of the amount expected to be earned under the rates fixed some time ago by the Inter-State Commerce Commission.

FRANCE.—BUDGET BILL—LONDON CONFERENCE—TRADE RETURNS—RAILWAY RATES—BANQUE INDUSTRIELLE DE CHINE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 20.

THE Budget Bill for 1922 was finally disposed of—it is hoped—by the Chamber after a sitting of 23 hours' duration, that lasted until 7.45 in the morning. The final vote gave approval to the Bill by 521 votes to 75, and it now remains to be seen whether the Senate can be induced to complete their discussion of the Bill by the last day of the year. The Bill, as sent to the Senate, provides for the following expenditure and revenue:—

	Francs.
Expenditure.....	25,140,913,642
Revenue	24,827,782,047
Estimated deficit.....	313,131,595

This estimated deficit, it was decided during the final discussion, may be expected to disappear in the course of the coming year, owing to the economy that will be effected from the suppression of 50,000 functionaries (whose services the Chamber has decided may be dispensed with as opportunity arises during the coming twelve months), by increased revenue that will be derived from a modification of the formalities in connection with succession duties in the liberated regions, and by the imposition of *droits de statistique* on imports that do not pay duties on entering France.

The outstanding hope and belief held by most people here is that the direct negotiations that are being carried on this week in London between the British and French Premiers will result, above all else, in a clear and full understanding being arrived at between the two countries in a common foreign policy, and, if possible, in a definite Anglo-French alliance. Once these fundamental principles are settled the Eastern, Russian, German indemnity, and other problems, it is insisted, will fall into their proper places as merely detailed items in a plan of action that will extend to every quarter of the globe. What is feared is that Mr Lloyd George may be inclined to place too great a value on some of the numberless details to be dealt with, and decline to deal first with the basis on which, from the French point of view, everything else must rest. So far as Germany is concerned, French opinion is firmly convinced that the Government of the Reich is capable of meeting its obligations and ought to be made to do so. In this connection there is a growing body of opinion in favour of greatly strengthening the powers of the Committee of Guarantees that is supposed to function under the auspices of the Reparations Commission, and to endow it with full powers to control the German national finances. The principle of forbidding any interference by the Allied organisations in the internal affairs of Germany, it is universally felt here, has been proved to be a mistake, and it is argued that Germany will never restore her finances to order until she

is compelled to do so by pressure from outside forces, exercising direct control over her revenue and expenditure.

In view of the now generally admitted fact that the essential feature of the whole economic difficulty is that some means must be found to reduce the money debts existing between the nations to the lowest possible figure, the value of bringing the Franco-German Wiesbaden agreements into operation is more and more attracting attention here. It is argued that the principle of the system of payments in kind should be accepted by all the Allies, who should be obliged for some years to come to take a fixed proportion in kind of the value of the amount due to them. To the argument that the devastated regions could not absorb the whole of the payments in kind that Germany might be able to make, it is retorted that other outlets might be found for both German goods and German labour. In France, for instance, many public works for the benefit of future generations might be carried out in this way without being burdened with either taxes or loans. Germany, in her state of insolvency, is nevertheless planning great undertakings, such as the Rhine-Danube canal and the great electrical power scheme now before the Diet of Baden. Why should not France have the benefit of the labour and material that will otherwise be devoted to furthering the future prosperity of Germany?

The French trade returns for the first 11 months of the current year have now been published, and afford interesting comparisons, both as to value and weight, as against the figures for the corresponding period of last year. In considering the figures, it must be remembered that the valuation of the imports and exports for 1921 is based on the prices that prevailed in 1919, whereas the returns for last year are valued at the prices then prevailing. The figures show that during the 11 months the total imports have been reduced by over 25 milliards of francs in value and by over 12,000,000 tons as compared with the corresponding period of last year, but that, while the value of the total exports has also been reduced (by 5,256 million francs), they have increased in weight by over 1,806,000 tons. The outstanding feature of the returns is the fact that the balance of trade, which was favourable to this country in the earlier part of the year, is now turning against her. During the first nine months of this year there was a surplus of exports valued at 29,000,000f. This was transferred in October into a surplus of imports amounting to 438,000,000f, which during November was increased to a deficit on exports since the beginning of the year amounting to over 1,000 million francs.

In view of the serious handicap imposed on all forms of trade by the high railway rates in vogue in this country, an important "Transport Congress" sat throughout the whole of last week for the purpose of considering what steps ought to be taken to bring about a reduction of the present cost of transport. The list of resolutions adopted at the close of the Congress, at which an encouraging speech was delivered by M. Le Troquer, Minister for Public Works (which includes all forms of transport) included motions in favour of (1) a general revision of the existing transport rates in the direction of a return to the basis figures of 1914; (2) revision of the classification of merchandise, with a view to products that were subject to special rates in 1914, as well as products then non-existent, being again placed in special classifications; (3) the adaptation of transport rates to new centres of production or new industries, and to the new commercial currents (such as Alsace-Lorraine); (4) the establishment of competitive rates, with a view to certain markets, and notably, in the event of the Wiesbaden agreements being applied, with a view to the market in the Liberated Regions; (5) the institution of "relief tariffs," for the benefit of certain threatened industries; (6) adaptation of the minimum weight to the normal conditions of consignment, definite of "complete train," &c.; (7) much fuller consultation with chambers of commerce and other organisations before tariff modifications are adopted.

The French railway managers are under the obligation to send in to the Minister of Public Works, before the end of the year, their proposals for tariff revision. In consequence of the suggestions put forward by the "Semaine

des Transports," however, they have asked for further time to consider the new proposals. As a direct result of last week's Congress, however, the managers of the French railways have already informed the Minister that they are unanimously in favour of a general reduction of rates, and that their coming into operation is only a question of time.

It is reported that an agreement has been signed between the Chinese Government and the French Minister in Peking, by which the former consents to devote to the rehabilitation of the derelict Banque Industrielle de Chine the amount owing to France in respect of the Boxer indemnity. What the sum in question is it is difficult to ascertain.

The volume of business on the Bourse has again, for the third week in succession, continued to be substantial, but it is now evident that the improvement in the situation is really far more apparent than real. As a matter of fact, the better aspect of affairs that has ruled during the past three weeks has been due almost entirely to professional transactions, plus a certain amount of business by enterprising speculators among the investing classes, who have gone into the market again with the firm resolve to be content to resell at an extremely moderate profit. Genuine investment business is still lacking. The public, as a whole, is still showing itself extremely cautious, no doubt as the result of the impression left by heavy losses within recent memory, and appears to be reserving itself for the numerous new issues that are to take place during the earlier weeks of the coming year. The fortnightly settlement passed off without incident, the carrying over rate being raised from 3½ per cent. to 5 per cent. The business in hand showed a large increase in speculation for the rise. French 3 per cents. have been marked up automatically from 55.15 to 55.25, in view of the pending coupon. Among foreign funds, Argentines, Brazilians, Egyptians, and Japanese have been influenced by the fall in the exchange rate. Russian have been more active and Turks firm.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

NEW ZEALAND.—NEW CUSTOMS TARIFF.

(BY A CORRESPONDENT.)

CHRISTCHURCH, November 9.

ON November 3, 1921, resolutions were introduced into the House of Representatives bringing a new tariff into force on the following day. The proposals laid before the House were drawn up by a Tariff Commission composed of departmental officers, presided over by the Comptroller of Customs, and including the chairman of the Board of Trade. Previous Tariff Commissions in New Zealand have usually been composed of members of Parliament, whose investigations consisted in getting information from manufacturers as to the amount of protection needed. The present schedule appears to be workmanlike and conservative, but in both these respects it will probably be changed for the worse in its passage through Parliament. Anomalies in tariff rates are often, if not usually, the result of political compromise, and it is fairly evident that these first proposals, which leave the old tariff very little changed, represent a conservative basis from which the Government may offer concessions to the Protectionists.

It is not possible to summarise a tariff list in which 566 items are distinguished, but certain general tendencies may be noted. There are three rates of duty chargeable—general, on goods coming from all foreign countries; intermediate, on goods coming from countries with which reciprocal arrangements may be concluded; and preferential, on goods from British countries. The intermediate tariff is, therefore, inoperative at present. The duties chargeable on British goods are practically unaltered, but an outstanding feature of the new tariff is the fairly substantial and general increase in the general tariff on goods from foreign countries. Goods formerly charged 20 per cent. if British and 30 per cent. if foreign are now commonly charged in the three schedules at 20 per cent., 30 per cent., 35 per cent. Goods, such as cotton piece goods, formerly free from all countries, are now commonly free, 10 per cent., 10 per cent. In fact, new duties have been placed on foreign goods of almost every kind, and the existing handicaps have been increased. Almost the only reductions in the preferential treatment of British goods are the removal of the 10 per cent. duty on foreign dairying machinery (replaced by a 5 per cent. duty, which may be put into force by Order in Council, but which is at present suspended), and the reduction of the 20 per cent. duty on foreign printing paper to 10 per cent. Goods, such as dyes, glass, scientific instruments, which are being made in Britain and "safeguarded" there, are given a measure of preference, usually 10 per cent., and an interesting proposal is the tax of a penny per lineal foot on foreign cinema films, British films remaining free.

There has been a persistent agitation among local manufacturers for high protection on the Australian model. No effort has been too great in support of evidence given before the Commission. Newspaper and pamphlet propaganda, visits of journalists, M.P.'s, and Ministers to factories were followed by a well-staged exhibition of local products in Wellington while the session is in progress. But the present tariff proposals have left the manufacturers, in their own words, "dumb with stupefaction," and they complain that the Commission need never have sat for all the value it has been. Apart from the higher duties on foreign goods, there is no protection in the tariff except for the farmers. Although much is made of foreign competition, the real competition which local manufacturers have to face is from Britain and Australia. It was hoped that the duties on British goods would be increased, and apparently it was also desired that Australia and Canada should be put on the same footing as foreign countries. The fact is, of course, that a policy of economic nationalism, either in the Colonies or in Britain, is inconsistent with Empire-building. The Government evidently considers that it will gain the extra revenue it needs from two sources—the increased duties on foreign goods, and unprecedented additions to the taxes on beer, spirits, and tobacco. The duty on spirits is doubled (from 18s to 36s the proof gallon); imported tobacco is to pay 4s 6d per lb instead of 3s 6d per lb, and the Excise duty on beer is about doubled, being now 11½d per gallon.

It is clearly not the intention of the present Government to foster local manufactures in New Zealand. Most duties

which afford protection are left unchanged, and where specific rates have been commuted for *ad valorem* rates there is no increase aimed at. The old tariff on British boots was 15 per cent., plus specific rates from 1s 6d per pair on men's boots to 6d per pair on youths' boots. The average rate of this complicated duty varied as prices varied, and has recently been as low as 22 per cent., though in pre-war times it averaged 30-35 per cent. on the value of all boots. The new rate is 25 per cent. *ad valorem*, so that the duty has been stabilised at its lowest level. The only new protection granted is to the wheat-growing and fruit-growing industries, to some by-industries of the dairying group, and to the making of basketware and wickerware, presumably because returned soldiers are engaged in the industry. From the point of view of manufacturers and merchants in Great Britain the tariff is all that can be desired—their rivals in New Zealand are given no further advantage, and their rivals in foreign countries are burdened with extra duties. The tariff is thus an indication of the sincerity of Mr Massey's statements on Imperial Preference, and is perhaps as close an approximation as is practicable in New Zealand to what he has stated as his ideal—Free-trade within the Empire.

SWEDEN.—THE EXCHANGES—PRICES—WAGES—SHIPBUILDING.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, December 14.

In an interview, the Minister of Finance recently stated that the Government is paying attention to the exchange question, although no definite steps have been taken as yet. Swedish commerce and industry will hail some amelioration in this respect with the greatest satisfaction, as during the past year the abnormally high position of the krona has completely stopped exports and seriously handicapped Swedish shipowners in competition with such countries as Germany, Norway, and Finland. The situation has developed so that many owners find themselves compelled to part with their tonnage. The fact that so many orders for domestic consumption are placed in Germany and Finland, including the printing of books, &c., is also due to the abnormal Swedish exchange. In one way the high position of the Swedish currency has had a favourable influence on conditions, inasmuch as the cost of living has gone down considerably. Wholesale prices, which during October showed a considerable decline, continued their downward tendency during November, although to a less extent. Farm products, fuels, oils, textiles were cheaper, but metals, wood pulp, and building materials were a shade higher in price. This latter feature is undoubtedly due to the fact that old stocks have been exhausted and the new production costs are much higher. A revision of railway rates and telephone charges has begun, and will take effect from January next. There will be lower passenger and goods tariffs, but whether they will be sufficient to encourage trade it is difficult to say. The charges for telephone subscription will also be lowered, but not trunk calls or postal fees, the latter being probably the highest in Europe. It costs nearly as much to send a letter across the street in Sweden as in England to send a letter abroad. The mark has kept steady for some days round 2.30-2.40, pound sterling has improved to 17.12. The dollar exchange is now only 15 per cent. above normal. The Danish krona has shown considerable weakness of late and has receded to 78.50. The adjustment of wages in Swedish industry proceeds, but not without friction. Most trades are at present in negotiation with their workmen, including the miners, the manufacturers, and the textile and pulp mills, and considerable reductions are claimed. In the phosphate industry the employers have asked for a 40 per cent. wage reduction, but the workers will only agree to 15 per cent. Likewise in the shipping trade the owners' proposals entail in some cases reductions of up to 60 per cent. Another condition which labour claims is the right to control industrial undertakings by means of workmen's councils. This condition is strongly rejected by employers, who consider that through their trade unions the

workmen have already a certain amount of control over industry. So far very few undertakings have published their reports for the past year. A satisfactory report is furnished by the leading shipyard, the A/B Götaverken of Gothenburg, which declares a net profit of 840,000 kr., as against 930,000 in 1920, the dividend being unchanged at 8 per cent. This shipyard will be fairly well employed until the middle of next year, having four new vessels to complete. Other yards are working considerably restricted time, and nine yards are left without any work at all. Amongst them is the large A/B Oresundsvarvet at Landskrona, with which Herr Stinnes has been associated. This company is closing down entirely.

NORWAY.—SHIPPING LOSSES—INSURANCE TROUBLES—NOTE CIRCULATION—HEAVY TAXATION.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, November 30.

The Government Maritime Board have recently published statistical information about maritime casualties during 1920. During the year 21 steamers, of 24,319 gross register tons, 21 sailing ships of 28,603 tons, and 31 motor-vessels of 5,493 tons were lost. Currents, storms, fogs, &c., have been the most common causes of the accidents, but in not a few cases the cause has remained unknown. It is quite certain that two losses have been caused by drifting mines, and very likely that that has been the cause of the loss of several more of the vessels.

The war period was a great time for starting new enterprises. Hardly any branch of trade saw such a host of new undertakings as the insurance business. Numerous new undertakings were set on foot, and old companies extended their range of business, in several cases by establishing branch offices abroad, mainly in England and America. The consequences of the after-war depression of general trade are, therefore, more acutely felt perhaps by insurance concerns than by any other sort of business. No less than 22 companies have discontinued their operations. Some have decided to wind-up voluntarily and withdraw while they are still able to do so without any loss to those interested; others are being wound up compulsorily, while several companies have been merged into others, and a few have been reconstructed. It has been officially stated that, as far as is yet known, none of the insured have sustained any loss on account of these misfortunes, but, of course, the shareholders in many cases have been unable to escape unscathed. The affairs of the Norske Lloyd, a company started in 1905, with a share capital of 10 million kroner, are attracting much interest. It had one of the ablest insurance experts of this country for its manager, and embraced all the current branches of insurances. The company did very well, and distributed very satisfactory dividends—for 1919, 12½ per cent. Prudence prompted the board, however, to allot no dividend for 1920. Still the confidence in the company was so great that even towards the middle of the present month there were buyers of the shares at 600 kr., the face value being 500 kr. It is believed that when the company is liquidated the original share capital will be preserved. The future does not seem to have been definitely decided, but a plan is being considered of forming a fresh company with a capital of 5,000,000 kr., to take over, for the benefit of the old shareholders and creditors, the stock of policies of the late company. It may be stated that though there are many fine companies, the insurance trade of all the Scandinavian countries is passing through a very troublous time.

The note circulation of the Bank of Norway is being contracted at a much quicker rate than could have been anticipated, and it is now considerably over 100 million kroner below highest. The discussion of a lowering of the discount rate, which is now 6½ per cent., has begun, and if deflation should go on to any further considerable degree it is likely that the rate will be reduced. Meanwhile, the continued drought helps to increase the unemployment which is now very keenly felt all over the country. The Government and local authorities, as well

as private employers, are making efforts to mitigate the difficulties of the workmen; but this is difficult, seeing that a similar situation prevails also in other countries on which we are dependent for our exports. Unfortunately, the long strikes during the earlier part of this year have considerably added to the difficulties of our industries, as have also the crushing rates of taxation. As an instance of the present tax burden may be mentioned some figures stated by the general director of one of our largest industrial concerns, the Norsk Hydro, at the recent general meeting. Last year the wages paid were about 30 million kroner. The taxes were about 17 millions, besides 3 to 4 millions paid for the welfare of the labourers (dwellings, &c.). The consequence was a deficit for the year of 1,300,000 kr. For the present year the taxes will be about 20 millions. It is this concern which the workmen, above all others, have set their hearts on socialising. The dividend was only maintained at 15 per cent. by drawing on the accumulated funds.

POLAND.—OIL PRODUCTION AND EXPORT—RETAIL PRICES AND EXCHANGES—TRADE DEPRESSION—BANKING.

(FROM OUR CORRESPONDENT.)

WARSAW, November 30.

HITHERTO little has been known of the extent of the Polish oil deposits. No systematic survey has been undertaken by the Austrian Government in Galicia. The new Geological Department organised by the Polish Government as a branch of the Petroleum Board has now made a survey, and published the results in the last issue of the *Przegląd Naftowy* (Petroleum Review). In the Carpathian mountains two zones are distinguished, an inner and an outer. Hitherto the first has been mainly exploited. The greatest part of the outer zone is still, as far as oil production is concerned, virgin land. Though the inquiry of the geological survey has shown that there are chances of new discoveries of oil deposits in the inner zone, it may be nevertheless expected that in the future the oil production of the outer zone will grow proportionately more important. According to the estimates of Dr Nowak, the head of the Geological Department of the Petroleum Board, 7,500 new shafts could be easily sunk in Galicia. This would enable Poland to increase its oil production by 600,000 tons a year, without exhausting her deposits during the next 60 years. If these prophecies prove to be correct, the position of Poland among the oil producing countries of the world will become in the future more important.

Mr Lipinski, head of the Department of Labour Statistics, has published in the *Trybuna* (November 12th) some very interesting data illustrating the movement of the numbers of retail prices of food in Poland and abroad, which we reproduce below:—

INDEX NUMBERS OF RETAIL PRICES OF FOOD.
(July, 1914 = 100.)

	Poland.	United Kingdom.	United States.	France.	Germany.
January, 1921....	25,139	263	169	410	1,265
February, "....	31,827	249	155	382	1,191
March, "....	32,882	238	153	359	1,188
April, "....	31,710	232	149	328	1,171
May, "....	32,639	218	142	317	1,152
June, "....	35,392	220	141	312	1,175
July, "....	45,654	226	145	306	1,274
August, "....	53,100	225	152	317	1,399
September, "....	60,728	220	150	317	1,418

It is interesting to observe the movement of foreign exchanges during the same period. Taking the par of exchange as basis (100), we obtain the following results:—

MOVEMENT OF FOREIGN EXCHANGES IN WARSAW.

	English £.	American \$.	French Francs.	German Marks.				
	Ex- change.	% of Par. £1 = M.20.40.	Ex- change.	% of Par. \$1 = M.4.20.	Ex- change.	% of Par. 100frs. = M.51.	Ex- change.	% of Par. 100 = 100.
Jan., 1921....	2,685	13,143	730	17,381	44	5,432	10.2	1,020
Feb., "	3,175	15,564	800	19,050	59	7,284	13.5	1,350
Mar., "	3,490	17,082	880	20,902	63	7,777	13.7	1,375
April, "	3,280	16,080	800	19,050	58	7,150	13.3	1,330
May, "	3,600	17,783	840	20,010	71	8,765	15.0	1,500
June, "	4,475	21,904	1,180	28,109	98	12,038	20.0	2,000
July, "	6,900	31,733	1,990	45,250	152	18,255	26.0	2,600
Aug., "	8,600	42,095	2,400	57,171	186	22,953	32.0	3,200
Sept., "	17,800	87,126	4,450	105,952	360	44,440	49.0	4,800
Oct., "	16,467	80,720	4,350	103,571	327	40,350	28.3	830

In comparison with the pre-war level, the American dollar has appreciated 1,036 times, the English pound 807 times, the French franc 403, and the German mark 28 times. It seems that in September the culminating point of this process of depreciation had been reached. The foreign exchanges have decreased in October and November in a very marked degree.

At the present rate of exchange foreign products are cheaper in Poland than home manufactures. So, for instance, at the beginning of November home-made pig-iron was quoted 110,000-130,000 marks per ton, while the same product could be imported from Czecho-Slovakia inclusive of transport and customs duties, for 65,000 marks. Silesian coal, which is of a much better quality than that which is extracted in Poland, was sold for 4,500 Polish marks a ton, while the price of Dombrowa coal reached 13,000 marks, being by 200 per cent. dearer. The disorganisation of the foreign trade, which has been brought about by the rise of the Polish mark, is a big factor in the existing trade depression. But the principal cause of the crisis must be sought in the exhaustion of all available capital. The number of unemployed is growing daily. In Warsaw 14 factories, and in the surrounding rural district 15 factories, have been closed. In Lodz 120 undertakings (with 15,000 workmen) have ceased work. The total number of registered unemployed is nearly 150,000. The private banks are unable to provide industry and trade with the necessary credit, and the Polish National Bank has been obliged to assume the rôle which in other countries has been always played by the central banks of issue as supporters of the national credit system.

Hitherto the Polish National Bank was mainly issuing notes for covering the budgetary deficits of the Government. Private loans and discounts played in comparison with the advances to the Government only a very small part, as may be seen from the figures below:—

	Advances to the Government.	Private Loan and Discounts
	Milliard Polish Marks.	
July 31	140.6	8.8
August 31	158.0	11.7
September 30	178.0	16.1
October 31	198.5	21.5

From the 21.5 milliards of private loans and discounts 7 milliards must be deducted, which have been given as advances to persons subscribing to the Reconstruction Loan, and which indirectly passed into the hands of the State. So that in reality at the end of October private loans and discounts amounted to only 15 milliards, as compared with 198 milliards of advances to the Government. Actually the Polish National Bank is pursuing a more liberal policy as far as the discount of private bills is concerned. The Bank rate has been increased to 7 per cent.

Letters to the Editor.

THE REPAYMENT OF NATIONAL DEBT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Year after year I study my *Economist* and derive therefrom much financial wisdom. But what I am unable to understand is why neither the *Economist* nor its correspondents urge the early repayment of a substantial portion of Great Britain's National Debt—War Debt, most of it—as one of the first and most urgent duties of Government.

The little islands of Britain are quite unable to feed and clothe themselves from their own local resources, so regular imports of food and the raw material for clothes from overseas are of vital importance. These imports must be paid for, either by sales abroad of British products and services, or by transfers out of Britain of valuables in some form or another. Sales abroad of British products and manufactures are at present handicapped by, amongst other things, high prices. A contributory to these high British prices is the appallingly heavy load of interest on the National Debt (nearly a half of Government's annual expenditure), which forces everybody to try and earn sufficient to pay the taxation, direct and indirect, essential to enable Government to meet its obligations. Until the weight of this handicap be lessened,

British manufacturers will never be able regularly and continuously to compete with other manufacturers over the seas who are less heavily handicapped. *Ergo*, a substantial reduction of Great Britain's National Debt is essential to save the country from disaster.

Were the debt—over £8,000,000,000—due outside the United Kingdom, national bankruptcy would be inevitable. As, however, over three-quarters of the debt is, I believe, held by investors inside the Kingdom, its partial repayment can obviously be engineered with no greater inconvenience than bringing home to every man and woman the true position. For every man and woman in the Kingdom is at present morally responsible for a share of the debt. Let that responsibility be frankly recognised, and as far as possible be accurately determined, and then let attention be concentrated on the work of repayment. If this be any longer omitted, we die. The British horse cannot possibly continue to come in first in the great world race for manufacturing supremacy. The splendid animal is at present hopelessly over-handicapped by National Debt charges, to make no mention of other serious difficulties. I write as a practical merchant and financier who buys from Japan and America as well as from the United Kingdom and the Continent of Europe, and I claim some knowledge of what I am writing about.

—Yours faithfully,
M. DE P. WEBB.

REVIEWS.

"Law and Business." Vol. I. Introduction. By William H. Spencer. (Chicago) University of Chicago Press. 1921. \$4.50.
"Theory and Practice of International Commerce." By Archibald J. Wolfe. (New York and London) International Book Publishing Company. 1919. \$5 (25s net).

THOUGH business cannot be learned from books alone, the study of books is a material help. One of these books (the first of a three volume work on law and business) belongs to a series of "Materials for the Study of Business." The other is a text-book of export and import. Both are intended to be used in collegiate training for business management by American students, but they are practical manuals which may interest readers on this side of the Atlantic. Mr Spencer rightly points out in "Law and Business" that a business man should know some law, not because he is going to be a lawyer, but simply because he must have some appreciation of his relation to organised society in order to carry on his business intelligently and successfully. The contents of the volume are referred to as "materials," and this is literally correct. The book is a compilation. Except for connecting links supplied by the author, the introduction is made up of extracts from Blackstone, interspersed with extracts from modern American legal writers. The "background for the study of law" thus provided rather lacks continuity. This is followed by a series of chapters composed of selected reprints of reports of law cases, briefly introduced and each followed by a set of questions. The other work is concerned in the first of its two parts with various questions of organisation in relation to international commerce, and with sale contracts. The second part—on problems of modern American export practice—is more specific. It deals with foreign credits, American banking practice (with special reference to the federal reserve system), British and German banking practice, the promotion of foreign trade, and foreign laws regulating trading by non-nationals. A great deal of useful practical information is given. In discussing "basic facts," Mr Wolfe says: "A protective tariff, it may be frankly admitted, permits the reasonable pricing of manufactured goods for home consumption, leaving the producer free to charge somewhat lower prices for exported goods." In other words, dumping abroad is paid for by home consumers. This may be excellent from the protected producer's standpoint, but when every country tries to play the game, as at present, stalemate results.

"Income-tax, Super-tax, and Corporation Profits Tax." By Ernest Evan Spicer, F.C.A., and Ernest C. Pegler, F.C.A. Seventh edition (revised and enlarged). H. Foulks Lynch and Co., Limited, 1921. Price 18s.

THIS valuable handbook, which has hitherto been known under the title "Income-Tax in Relation to Accounts," has been brought up to date with the most recent Finance Acts, and now has a chapter upon corporation profits tax. It contains an adequate description of the personal aspects of taxation relating to the returns of individual incomes and the personal allowances, but the special feature of the work is that in addition to the ordinary treatment of principles under Shedule D, it devotes much space to the actual practical computation of liability by analysis of specimen accounts. Most handbooks do not go beyond the statement of items which are respectively to be allowed or disallowed, but here every important point has a concrete illustrative example. At the outset there is a comparison between the rival methods of presenting accounts to the Revenue: (a) the ordinary account with a special account adding back the disallowed items to the net balances, and (b) the expurgated account, from which all disallowable items have been removed, so that the balance of the account shall show the balance taxable. Although both lead to the same result, the former is, rightly, preferred. Special illustrative accounts show how rent and interest must be treated, and there is more real help under this difficult head than can be found elsewhere. The allocation of tax between partners is also very well illustrated. Special paragraphs deal with the peculiar difficulties of breweries, insurance companies, schools, solicitors, stock-jobbers, and underwriting syndicates. The manual can be recommended as thoroughly sound and practical for all business accountants, as well as for individual taxpayers.

"The Bankers' Almanac and Year Book, 1921-22." (London) Thomas Skinner and Co. 42s net.

PARTICULARS of upwards of 3,000 institutions are given in this fresh edition of the "Bankers' Almanac," which is an increase of 600 over and above the undertakings detailed a year ago. This issue bears evidence of much careful revision, and considering the extensive nature of the ground covered by such a valuable work of reference, the information given has been fairly well brought up to date. In the preface it is pointed out that a year ago a Bill was being prepared by the Government to deal with the question, "What is a bank?" The Bill has been shelved, "but while the claims of business men, including bankers, to be free from governmental control must receive acknowledgment, it seems regrettable that legislation is still wanting in this country to protect the public from spurious and speculative concerns under the guise of 'bankers' or some cognate designation." It is observed that from time to time suggestions are put forward "to establish a sort of reciprocity in banking between Great Britain and other countries," and it is remarked that "any foreign bank can open a branch in London, while London banks are not permitted to establish branches in foreign countries." The writer continues "that in spite of handicaps of this nature, British banking institutions have been able to effect arrangements for international transactions which operate very effectively; on the other hand, it is acknowledged that London's position as financial centre of the world (which has been maintained in spite of the war's upheavals) would not have been so solidly established had it not been for the 'free trade' policy which permitted foreign banks to open branches here. In this connection it may be remarked during the recent crises several countries overseas have had reason to be thankful for the presence of foreign banking elements within their midst. When local institutions were embarrassed by the dramatic fall in value of commodities which had been accepted as security for advances, British and other foreign institutions have performed invaluable services."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
December 29. December 30.

Close approach of the Christmas holiday led to contraction of business in the Stock Exchange, though in the gilt-edged market the strength of prices was maintained surprisingly well, having regard to the extent of the previous advances. Some firms of dealers are said to have done 1,500 to 2,000 bargains per diem in this market during the busiest days. New issues are not so conspicuous this week. It is known that many are being carried over for the early part of the New Year. The India 5½ per cent. scrip gained a premium of about ¾ per cent., while for the new Auckland City sixes there was a strong demand up to 1½ premium. The price of the War Loan touched 92½ before it suffered reaction. It may be pointed out that the loan is now only 2½ points below the price at which it was issued five years ago. The various scrip stocks of the new loans, Colonial and Corporation, have advanced with the rest. Scores of rises are recorded this week in the lists of Home Railway prior-charge stocks. It is interesting to recall that when the Bootle and Wallasey 6 per cent. loans came out at 95 the prices of both fell to about 5 discount, whereas at the present time they stand at 5 premium.

German bonds recovered on the political developments, and French bonds are also firmer on the week. Norwegian sixes strengthened substantially, the buying evidently based upon the fact of the first coupon payment being close at hand. South American bonds are generally steady, and the advance in Russians continues, several of the Russian Government, municipal, and railway-guaranteed loans being quoted a point or two better, upon demand said to emanate from French sources.

Home Railway stocks strengthened here and there, in consequence of the overflow of investment demand from the more gilt-edged markets. Several of the preferred stocks are better. Underground income bonds went ahead, though Districts gave way after their sharp rise of last week. Canadian Pacific and Grand Trunk prior-charge stocks have improved, while Mexicans are neglected and Argentines have been disposed to droop, owing to the issue of the new Buenos Ayres Western 4 per cent. debenture stock, for the underwriting of which there was keen competition. Brazilian Rails are better, on the assumption that the long-deferred permission to raise rates will be granted immediately.

There is nothing doing in rubber shares, owing to the lack of resilience in the price of the produce. The oil market has been busily employed with dealings in the Mexican Eagle coupons. These are payable at 3s 9½d at the company's bankers, but can be sold for about 8d per share more to people who buy them for shipment to America. The Mexican Eagle report aroused no enthusiasm, and business has been on the quiet side, the market being disposed to horseplay in order to while away the time before the holiday. The dramatic rise in tea shares of the past few weeks has brought in sellers, with

the usual effect upon prices. Shortage of stock is evident in the market for shares in the drapery and stores section, causing rises in Army and Navy, Barkers, Aerated Bread, Lyons, and several others of the same kind. Forestal Lands have more than recovered from the fall produced by the interim dividend having been passed. There is nothing much doing amongst textiles. Allsopps gave way on the report and reduction in the dividends on ordinary and preference. Some of the cable stocks are better, Anglo-Americans and the Eastern group both improving, while the interim dividend of 5 per cent. on Marconis served to stiffen the price of the company's shares. The banking market is quiescent; discount shares maintain their rises, on the hopes of increased dividends. Movements amongst insurance shares are mixed, though rises preponderate. Further improvements occurred in several of the best-known shipping descriptions.

Declaration of the usual December dividends served to keep Kaffirs tolerably steady in the face of another fall in the price of gold. The latter, however, is of sufficient consequence to check any buying which there might be otherwise on the part of the public. The Chartered report is to be issued at the end of next week. De Beers moved erratically, with the price keeping to the firmer side on balance. The rise in tin has halted, and in consequence some of the Malayan tin shares are not quite so good as they were. Mount Elliotts fell ros. on the meeting last Tuesday. A little speculation in Colombian Mining shares served to advance the price. In Mexican and other mining markets business has drifted to something like a full stop.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

1918	1,358,840,901
1917	1,318,596,010
1916	585,436,850
1915	685,236,326
1914	685,236,326
1913	512,522,633
1912	512,522,633
1911	196,536,980

5½ per Cent. Treasury Bonds.—Issued at £99 per cent and repayable at par on May 15, 1930. Interest payable half-yearly on May 15th and November 15th. Full particulars of this issue will be found in the *Economist* for December 3rd (see page 986).

Croydon Corporation.—Issue of £500,000 6 per cent redeemable stock, 1937-1947, at £99 10s per cent. The corporation has the option of redeeming the issue at par on or after January 1, 1937, on giving three months' notice, or the stock will be definitely redeemed at par on January 1, 1947. The Ministry of Health requires the corporation to make annual provision by means of a sinking fund for redemption, and the stock will rank *pari passu* with all other loans of the corporation. Total outstanding debt amounts to £2,670,852, against which the corporation holds "reproductive works" of a cost of £2,175,453. The proceeds of the issue will be applied for "water, electricity, street works, and other purposes." An excellent trustee investment.

(a) Increased capital.

ANGLO-PERSIAN CORPORATION OF SOUTH AFRICA.—It has been decided not to pay a dividend for the half-year ending December 31st. The 5 per cent. interim dividend paid on June 30th last will, therefore, constitute the dividend for the year. The corporation has agreed, if and when called upon, to afford the Consolidated Diamond Mines of South-West Africa certain financial assistance. For this reason the directors consider it advisable to conserve the cash resources of the corporation. For the previous year a dividend of 10 per cent. was paid. Nissen James Pascal, Larmer, state that, having regard to the probability of a loss on the year's trading, they have decided to postpone a decision as to the payment of the six months' dividend due January 1st on the 8 per cent. preferred ordinary shares until the accounts of the company have been made up for the year 1921, and the actual position ascertained. The dividend being cumulative, payment of any arrears will be made at the earliest possible date. PROVINCIAL CINEMATOGRAHS THEATRES.—The trading results for the year to date do not justify the payment of the dividend for the last half of the year on the 10 per cent. cumulative preferred ordinary shares.

REFINERY AT LLANDARCY NEARLY COMPLETED.

As mentioned in the report, the refinery of the National Oil Refineries, Limited, at Llandarcy, is now nearly completed. It has been in partial operation since July last, and I am pleased to say that the results we are obtaining are even more favourable than our anticipations.

I may take this opportunity of saying that there is no foundation whatever for the fantastic figures which have from time to time appeared in the Press as to the amount of capital we have expended on this refinery. While the refinery represents the last word in the scientific and economic treatment of petroleum—comprising, as it does, not only the best of the known processes and methods of refining, but also some entirely new and valuable ones which have been evolved by our own research chemists—the capital expenditure involved in it is only a mere fraction of some of the wild sums which have been named, and it is more than justified by the returns we are now getting.

I should like to add that the plant is running at 30 per cent. in excess of its estimated capacity, and that its capacity can be largely added to at small cost, and that the petrol and lamp oil produced from it are the best qualities now on the market.

RESEARCH WORK.

I may take this opportunity of mentioning also that we have for some years past had a research laboratory of our own under the charge of a staff of research chemists possessing high qualifications, and that this staff are constantly engaged, in conjunction with our engineering staff, in solving the numerous problems involved in the refining of petroleum and in obtaining from the crude oil products of the very best quality. The results of their research work have, I am pleased to say, been most valuable, and have led to the adoption of many improvements in our refineries.

THROUGHPUT OF REFINERIES AT ABADAN.

In the period under review the throughput of our extensive refineries at Abadan show a very satisfactory increase over that for the previous year. To give you some idea of the magnitude of Abadan, I may mention that the refinery and township cover an area of over two square miles, and that a further large area, about three miles lower down the river, is being rapidly developed for the storage and shipment of the more dangerous oils. When the extensions in hand and contemplated are completed, it will rank as one of the largest, if not the largest, single refinery in the world.

Mr Nicholas, one of our managing directors, visited Persia during the year, and has returned with gratifying accounts as to the progress of the developments and as to the great potentialities of the present producing fields.

DISTRIBUTING ORGANISATIONS.

Our two organisations in the United Kingdom—the British Petroleum Company and the Scottish Oil Agency—have been largely extended during the year, and the petrol and lamp oil now being marketed by them are largely of our own production, and before long we hope to be in a position to supply them with their entire requirements of these two products. Further augmentations are still being carried out, and when these are all completed we shall have as complete and well-equipped an organisation as any in the country, and be in a position to meet all demands.

FRANCE.

Our French organisation—the Société Générale des Huiles de Pétrole—which now has a capital of 220,000,000 francs, is proceeding rapidly with the erection of installations, and has, as mentioned in the report, recently acquired three established businesses of considerable importance, through which it has now entered the French market.

BELGIUM, DENMARK, AND NORWAY.

In Belgium, Denmark, and Norway we have also acquired interests which will enable us before long to commence trading operations in these countries, and negotiations are proceeding for acquiring similar interests in other countries.

AUSTRALIA.

As regards Australia, a suitable site for a refinery has been acquired by the Commonwealth Oil Refineries, Limited, and the building of the refinery has now been commenced.

ARGENTINE.

In the Argentine we have acquired important interests in two companies which hold large areas in the Comodoro Rivadavia, Neuquen and other fields. Six test wells are being put down in the first of these fields, and we have just received advice that one

of them has already struck oil, but the capacity of the well has not yet been ascertained owing to a temporary plugging. In the other fields two test wells are about to be commenced.

EGYPT.

In Egypt we have acquired the concession of a considerable area on the Sinai Peninsula, on which we are now putting down a test well. Although we are still a long way from the depth at which our geologists anticipated oil would be struck, we have had favourable indications in the form of gas. If this should prove a successful field, it would be a very valuable addition to our Eastern sources of supply.

PERSIAN FIELDS STILL MAINTAINING HIGH RATE OF PRODUCTION.

I have great pleasure in reporting that our Persian fields are still maintaining their high rate of production, and that further areas of oil-bearing territory have been proved.

I have often referred to our well F7, from which we have been getting our main production for a number of years. You will be interested to learn that the total production from this well during the past ten years has been 4,000,000 tons, or 26,000,000 barrels, and that it is now giving a yield of 2,000 tons, or 13,000 barrels per day, which is considerably more than the average during the period I have referred to. This increase in the daily yield is not, of course, due to an increase in the volume of oil available, but to the fact that we are not now shutting the well in as much as we did formerly. So far as my knowledge goes, no other well of equal producing capacity and continuity has ever been known in any field producing light gravity crude, and, as I have said before, we believe we have many other as good, or better, wells.

LOW COST OF PRODUCTION.

It is perhaps needless to point out that this high rate of production—and the fact that our oil is all obtained from flowing wells, or “spouters”—means a very low producing cost—probably not a tithe of the average cost obtaining in other fields yielding light gravity oil of equal quality.

This low producing cost and the unusually large proportion of the more valuable products contained in our crude—in this respect our crude is probably superior to that of any other field in the world from which large productions are obtained excepting Burmah—gives us, of course, a great advantage over other producers.

INCREASED PRODUCTION DURING THE YEAR.

With the coming into operation of portions of our extensions to pipe lines, pumping stations and refineries we were able to increase the production from our wells to some extent during the year under review. A further increase is being effected in the current year, but the full effect of our extensions will not be shown until the completion of our new 12-inch line and the necessary additions to the pumping stations, when our production will probably amount to no less than 2½ times as much as in the year for which you now have the accounts before you.

ELECTRIC POWER STATION AT TEMBI COMPLETE.

Among our many developments is a large electric power station which has been recently completed at Tembi, the electrical energy from which is now being utilised at Maidan-i-Naftun and Maidan-i-Naftek for drilling and other purposes, whereby a considerable economy in our working costs has been effected. Large new workshops, stores, &c., are also in course of erection, and mechanical transport for material and men has been greatly augmented.

Transport to and from the fields has been one of our greatest difficulties, and to overcome this the construction of a railway from the riverhead to the fields, estimated to cost £500,000, has been sanctioned, and the work is now in progress.

FLEET.

As regards our fleet, in view of the considerable decline in the cost of shipbuilding and of the much larger supply of tanker tonnage now available in the open market, we and our associated companies have deemed it wise to cancel such of our outstanding orders as can be so dealt with on satisfactory terms, so that we may be free to take advantage of the lower costs and/or time charter rates likely to be ruling in the near future. The present fleet and the boats coming into commission and to be delivered during the next twelve months will amply suffice for our requirements in the immediate future, and such further additions as may be necessary will be made from time to time as required. It will interest you to know that the total fleet owned or managed by our subsidiary and associated concerns—including river and coastal craft—now numbers 150 vessels.

POLITICAL SITUATION.

As regards the political situation, for the first time on record I regret to have to report that a difference of opinion has arisen between the Persian Government and ourselves in connection with

some concessions in Northern Persia which were acquired by us from the original concessionaire about a couple of years ago.

As you will no doubt have noticed from the references to this matter which have appeared in the Press, the Persian Government have, on quite untenable grounds, declared that these concessions, which were quite legitimately granted and acquired, and which have on many occasions since they were originally granted been recognised and acted upon by them, are now invalid, and that they have been in negotiation with another company for the grant to it of a new concession covering the same areas and also two additional provinces.

AN ILL-ADVISED ACTION.

While fully sympathising with the present financial and other difficulties which have doubtless led to this step, I must—as a well-known and staunch friend of Persia, and one who has done much to help it both financially and politically—express my most profound astonishment that the present Government should have been so ill-advised as to attempt confiscatory action of this nature; because Persia's future is dependent entirely upon financial assistance from other countries—either in the form of loans or of capital for its industrial development—and if it once establishes a reputation for repudiating contractual obligations its credit abroad will be destroyed for ever. I cannot believe that the Persian Government will deliberately commit their country to so suicidal a policy, and I am confident that they will before long see that they have no alternative, if they desire to maintain the credit of Persia in this or any other country, but to honour the signatures and commitments of their predecessors.

I may add that one of the signatures which is being repudiated is that of a former Prime Minister, who happens also to be a brother of the present Prime Minister. This gentleman, for whom I have the highest respect, was cognisant of the negotiations for the sale of the concessions to us, and was, in fact, the principal guest at a dinner, at which I also was present, given by Mr Khostaria in London to celebrate the conclusion of the negotiations. I would like to know the views of this gentleman, who is, I believe, still in London, on the action of his Government, and what steps he proposes taking to secure recognition by them of his acts and deeds and to deny the statement put forward by them that the concessions were obtained by coercion.

In the south—that is, in the area of the D'Arcy Concession—we are experiencing no trouble whatever, and our friendly relations with the various tribal chiefs remain undisturbed.

OIL RIGHTS IN MESOPOTAMIA.

Last year I referred to the misconceptions which existed, and to which some measure of publicity had been given in the Press of this country and in America, in regard to the oil rights in Mesopotamia, and also in regard to the attempts of this country to secure a more adequate share of the world's stores of oil.

As regards the question of Mesopotamia, this has, as you know, since formed the subject of diplomatic correspondence between the two countries, and it would be out of my province to deal with it here; but I would like to say that in this matter, and in regard to oil questions generally, our relations with the Standard Oil Company are of a perfectly friendly nature, and that there is not the slightest ground for suggesting, as has been done in some quarters, that these or any other questions are likely to lead to any serious dispute between the two concerns.

APPRECIATION OF THE STAFF.

Gentlemen, I would like you to again join me in expressing our great appreciation of the services of our staff. When I speak of “our staff” I mean, of course, not only the staff of the Anglo-Persian Company, but the staffs of all our associated companies—in this country, Persia, and all other parts of the world.

As I mentioned last year, we have around us the finest and most enthusiastic body of workers possessed by any oil company in the world, and their enthusiasm and readiness to sacrifice themselves for the welfare of the company grow each year with the company's success.

EMPLOYEES NUMBER FIFTY THOUSAND.

It will be a matter of interest to you to know that the company and its subsidiaries is now giving employment to something like 50,000 people, and that out of this number no fewer than 20,000 are employed in the United Kingdom alone. The latter figure is one that cannot even be approached by any other oil company trading in this country, and it is a matter of great satisfaction to us that the policy which we have been following of creating a British oil industry should not only have been beneficial to the company, but should also have provided employment for such a large body of British workers, the majority of whom would otherwise doubtless have to-day been ranked among the unemployed.

NEW LONDON PREMISES.

In London our staff has grown to such large proportions that it has been necessary to accommodate them in a number of different buildings in various parts of the City. This obviously has many disadvantages, and to meet the situation we have acquired a large site with frontages on Finsbury circus and Moorgate street on which a suitable building capable of housing our entire staff is now in course of erection.

That finishes my remarks, gentlemen, and I now beg to move: “That the report, balance-sheet, and profit and loss account for the year ended March 31st be received, approved, and adopted.” I regret that Lord Inchcape, owing to his duties on the Super-Axe Committee, has been unable to attend here to-day, as usual, to second this motion, but I have no doubt that Sir Edward Packe, the other Government representative, will be good enough to do so in his place.

Sir Edward H. Packe, K.B.E.: I have much pleasure in seconding the resolution.

The Chairman: Before I put the motion I shall be pleased to endeavour to answer any questions any shareholders may like to ask. Well, gentlemen, there appears to be no one who desires to ask any questions, and I will therefore put the motion to the meeting.

The resolution was carried unanimously.

DIVIDEND ON ORDINARY SHARES.

The Chairman: I now beg to propose: “That a dividend at the rate of 20 per cent. per annum, less income-tax, on the ordinary shares in respect of the year ended March 31, 1921, be declared, and that such dividend be paid on a date to be determined by the board.” I will ask Sir John Cargill kindly to second the motion.

Sir John T. Cargill, Bart.: I have much pleasure in seconding the motion.

The resolution was unanimously agreed to.

RE-ELECTION OF DIRECTORS.

The Chairman: The next motion deals with the board of directors. No changes in the board have, I am pleased to say, taken place since we last met. The directors falling due to retire by rotation are Mr F. W. Lund, Mr Frank C. Tiarks, and Sir Trevredyn Wynne, and in view of their good services to the company I am sure it is your wish that they should be re-elected. I therefore now beg to move: “That Mr F. W. Lund, Mr Frank C. Tiarks, and Sir Trevredyn R. Wynne, K.C.S.I., who retire by rotation and are eligible for re-election, be and are hereby re-elected to the board.” I will ask Sir Hugh Barnes kindly to second the motion.

Sir Hugh S. Barnes, K.C.S.I., K.C.V.O.: I have much pleasure in seconding that resolution.

The Chairman: Before I put the resolution to the meeting I would like to explain the reasons for the absence of one or two of our colleagues to-day. I have already mentioned the cause of Lord Inchcape's absence. The other absentees are Admiral Sir Edmond Slade, who has just left England on a visit to India and the Persian Gulf, and Sir Trevredyn Wynne, who has taken short leave of absence for the purpose of visiting India and Burma.

The resolution was then unanimously carried.

The Chairman: Will some shareholder kindly propose the usual resolution for the appointment of auditors?

Mr William Hayes: I have much pleasure in proposing, “That Messrs Brown, Fleming and Murray be and are hereby re-appointed auditors for the financial year 1921-1922 at such fee as may be determined by the board.”

The Hon. Bernard Howard: I have pleasure in seconding that.

The motion was unanimously agreed to.

The Chairman: That concludes our business, gentlemen. I beg to thank you for your attendance.

VOTE OF THANKS TO THE CHAIRMAN.

Mr Creighton: I should like to propose a vote of thanks to the chairman for presiding to-day and for the very satisfactory report he has given us.

The Hon. Bernard Howard: I second that with much pleasure.

The vote was unanimously accorded.

The Chairman: I have to thank you very warmly, gentlemen, for the kind manner in which the vote has been proposed and passed, and I should like to express the great satisfaction it gives my colleagues and myself at meeting you here to-day with such an extremely satisfactory report and one that gives very great hopes for the future.

The proceedings then terminated.

MEXICAN RAILWAY COMPANY, LIMITED.

MR V. W. YORKE EXPLAINS SCHEME.

CONCESSION GRANTED TO CERTIFICATE HOLDERS.

SCHEME AS AMENDED PASSED UNANIMOUSLY.

By order of the Court, in the matter of the Mexican Railway Company, Limited, meetings were held, on the 21st instant, at River Plate House, Finsbury circus, London, of the holders of the 6 per cent. perpetual debenture stock, the holders of the second debentures, the holders of the deferred interest certificates issued in respect of the debenture stock, and holders of the deferred interest certificates issued in respect of interest in the second debentures, with the view of approving a scheme of arrangement. Mr Henry Parkman Sturgis presided.

The Secretary (Mr C. Tennant) read the notice convening the meeting.

The Chairman said that there had been some comment in the newspapers and certain letters received from holders of the deferred interest certificates, and the directors felt that they had the support of the two classes of debenture-holders, and that if there was any opposition to the scheme it would come from the deferred interest certificate-holders. It was therefore thought advisable that the meeting of the certificate-holders should be first held so that Mr Yorke, the chairman of the company, could answer any questions raised before the debenture-holders' meetings were held.

This course was adopted.

The Chairman, in opening the proceedings, said he did not propose to offer any remarks upon the scheme or go into any of the questions raised, but would call at once upon Mr Yorke. He would only say as one of the trustees that the trustees had conferred with the directors and had come to the conclusion that, taking into consideration all the varied interests of the different holders of the Mexican Railway securities, they were prepared to endorse the scheme as a proper one to be put before the meeting.

MR YORKE'S STATEMENT.

Mr Vincent W. Yorke (chairman of the company) said that the Mexican Government took over the property in November, 1914, and it remained sequestered in their hands until June, 1920, except about seven months. Since that date the company had operated it themselves. The amount owing on the debenture certificates, with interest added to December 31st, was £1,044,000, and on the second debenture interest certificates £186,000. The result for the two half-years to December and June last were £147,000 and £101,000 respectively, which made the earnings £248,000 for the year, without any credit being taken for profit on exchange. Up to October this year they had earned £119,000, which made £367,000 earned from June of last year, without taking any credit for exchange. In addition, they had received by way of indemnity from the Mexican Government on account of the money they owed to the company, which amounted to £2,500,000, a sum of £100,000, which was collected by the company as an extra 25 per cent. on passenger earnings, that was allowed to be treated as payment on account of the indemnity. Since September they had had an increase in rates of 25 per cent., half of which had to be credited to the indemnity. Though small, this would be useful to them in time. The increase in rates had added very much to their earning power. The returns for September and October amounted to £80,000, or at the rate of £480,000 per annum. In addition to this, an extra 12½ per cent. might be safely estimated—if the volume of traffic was maintained—at £109,000 per annum. He could not, of course, give the slightest guarantee that the earnings would be maintained, but this was the only basis he had to go on. In other words, it was the best estimate he could make of their earning power, and, though the earnings might fall off in the future, it was quite possible they would be maintained, and even improved upon. Thus, they got prospective earnings of £589,000, without allowing for profit on exchange, which, though diminishing, was still a useful factor. Debenture interest would come to £142,000, and corporation profits tax was estimated at £35,500, and this, deducted from the £589,000, left £411,500, which should be the amount per annum available for reduction of the "A" debenture stocks. If this could be maintained, after allowance was made for 20 per cent. which the scheme contemplated should be paid in cash at once, the whole of the balance on the "A" debenture stock should be paid off in two years, and that on the "B" stocks in less than one year after that. The amount of cash in London was £370,000, and under the scheme £60,000 would go out for payment of the first debenture interest. He saw no reason why, if things went on all right, a further £100,000 should

not be paid, if the scheme went through, about March 31st next. The cash in hand might not seem much, in view of the past and present earnings, but he would like to point out that very heavy capital expenditure had been necessary, owing to the disgraceful state in which the railway was handed back to them by the Mexican Government. In considering the figures he had given, he thought he ought to sound a note of warning as to the condition of affairs in Mexico. There were many adverse possibilities in regard to political and labour troubles. There was also a prospect of trade depression.

Dealing with the scheme, he said there was an error in the circular, which stated that if the profits for the half-year only came to £25,000, that would be retained by the company and nothing would go to the trustees.

ERROR IN THE CIRCULAR.

The circular said £25,000 per annum, and he was perfectly willing to make the scheme agree with the circular. The figure chosen was perfectly arbitrary, and would not make much difference. The only idea in putting it in was that in case the Government took over the property again they might have some funds in hand to pay London office expenses. There would be a modification in the resolution to carry that into effect.

As for the rest of the scheme, he did not think much explanation was needed. There had been a great deal of criticism of it, not from debenture-holders but from certificate-holders, and that was all centred on one point, the payment of current interest henceforth on the certificates. An attempt had been made to impute bad faith to the board because of the definite undertaking inscribed on the back of the interest certificates, which restrained the company paying interest on debentures until the certificates had been discharged, but this was a guarantee only for the duration of the scheme, and was not a continuing guarantee. The words were only binding so long as the scheme was in force.

Proceeding to analyse the scheme, he said there had been a good deal of give and take on each side, and he considered the scheme absolutely fair. The position of the company was an extremely enviable one compared with other railways in Mexico. He had no hesitation in recommending the scheme.

CERTIFICATE-HOLDERS' CRITICISMS.

Mr Leigh said he had taken counsel's advice and had been advised that the scheme was a breach of the conditions on the certificate. A lot of certificate-holders bought their certificates on the face of that condition. Whatever was done at that meeting the scheme would be opposed as far as possible in the Courts.

Mr Parker said he did not see why the interest, at all events, should not be allowed to accrue.

Mr Baker, who said he represented £70,000 of stock, urged that they should receive 6 per cent. until the interest warrants were paid off.

A number of other shareholders urged that the interest should be paid, and urged the chairman to amend the scheme to that effect.

Mr Yorke said they could not do it.

An amendment was then proposed that the scheme should be adopted, subject to an amendment to the effect that interest be paid on the certificates.

On a vote, 29 voted for the amendment and 94 against. The 29 votes represented £32,789 and the 94 votes represented £143,655. The Chairman declared the amendment lost.

CONCESSION GRANTED.

Mr Yorke said that though the amendment had been lost, they recognised that a great many certificate-holders felt very strongly on the question, and they had decided to propose a concession, namely, to pay 4½ per cent. on the "A" debenture stock certificates until redeemed, and 3 per cent. on the "B" debenture stock certificates until redeemed.

Several stockholders who had voted for the amendment expressed their satisfaction at this announcement, and said that they would withdraw their opposition, the resolution, with this amendment, being unanimously carried.

The resolution for the approval of the scheme, as amended, in accordance with the statement of Mr Yorke, was then put and carried.

At the other meetings the scheme was also approved.

LONDON AND RIVER PLATE BANK, LIMITED.

BOARD'S SOUND AND CAUTIOUS POLICY.

CHAIRMAN'S SURVEY OF CONDITIONS IN SOUTH AMERICA.

The 59th ordinary meeting of shareholders of the London and River Plate Bank, Limited, was held, on the 20th instant, at the offices of the bank, 7 Princes street, London. Mr J. W. Beaumont Pease (the chairman) presided.

The secretary (Mr George H. Smith) read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen, I will commence my remarks to-day by asking you to go through shortly with me the figures of our balance-sheet. If you will turn to the liabilities side, the first two items of £2,040,000 and £2,100,000 for capital and reserve fund respectively, you will see no change as compared with last year. In the next item acceptances—account branches at £2,870,349, there is a difference of roughly £1,000,000; they are £1,000,000 less this year than last year. The same remark applies to the next item, merchandise credits, which stand this year at £1,215,401, and also to the following item bills advised—drafts in transit, £1,380,340. Our current and deposit accounts at branches stand at £30,001,768, and are also about £1,000,000 less than they appeared in our balance-sheet last year. The current and deposit accounts at head office are £684,328, which is about £200,000 less. The note issue at the Monte Video branch is about the same. Bills for collection, which also appear on the other side of the balance-sheet, stand at £5,847,753, and they are also £3,000,000 less than they were last year. The rebate of interest on bills not due is slightly less.

PROFIT AND LOSS ACCOUNT.

The profit and loss account shows £599,924, which is about £130,000 less than last year. In our profit and loss account our gross profit, after providing for bad and doubtful debts, shows a balance of £1,081,785, which is about £200,000 less than last year. The net profit and loss balance you have already seen in the balance-sheet. The balance available amounts to £722,324 10s 9d, before the deduction of the interim dividend at the rate of 6 per cent. paid in June last. It is now proposed out of the balance to pay a final dividend of 6 per cent., making 12 per cent. for the year against last year's declaration of a final dividend of 9 per cent. That will absorb £122,400, and we propose to credit our contingency reserve account with £160,000, and to carry forward the balance of £317,524 10s 9d.

You will see that we had ample funds to pay a final dividend of 9 per cent., as we did last year, and still have a substantial balance for reserve, or other purposes, but I think you will agree with me that it is a wise and prudent policy in these days, and in conformity with the traditions of this bank, that we should err on the safe side.

The strong position of the bank is illustrated by the large amount of cash held at the different branches; as you have already seen in the balance-sheet, the figures which we have just gone through reflect fairly accurately the trend of business during the last year. They show a reduction in nearly every case, especially in this so in our acceptances and bills, but I may here remark that the comparison between our figures of this year and those of last year are greatly vitiated by the lower rates of exchange at which the figures of this year are converted into sterling. For instance, our current and deposit accounts show an apparent decrease of £7,000,000, but if last year's figures had been converted at the rates of exchange ruling at the end of September this year instead of a decrease our present balance-sheet in this item would have shown an actual increase of nearly £2,000,000.

Increased taxation and salaries, not only in this country, but abroad, are accountable for the large increase in charges of business, although in our sterling balance-sheet, owing to the difference in exchange, an apparent decrease is shown.

TRADE SLUMP AND RATES OF EXCHANGE.

It is common knowledge, however, that prices and business have been declining, culminating in a stagnation of trade which has made the year under review a period of great difficulty for all commercial transactions, and has resulted in many failures and losses. From the consequences of some of these we could not hope to be entirely immune, but our internal position has enabled us to regard our own share of these with equanimity, and the proper caution with which our business has always been conducted has again been justified.

Exchanges have fallen considerably in nearly every country in South America, and with Government restrictions introduced with the ostensible idea of preventing speculation operations have been considerably reduced—in some countries stopped altogether and profits thereby curtailed.

Rates of exchange in Argentina and Uruguay rose very rapidly in the beginning of last year, but have since fallen considerably—this we may perhaps regard as only a passing phase—as the gold held by the Conversion Office in Argentina represents 7½ per

cent. of its note issue, and in Uruguay 90 per cent. of gold is held by the Banco de la Republica against its circulation. Neither country has allowed the export of gold since war broke out.

BRAZILIAN TRADE RETURNS.

In Brazil the official trade returns for the last three years give a fair indication of the adverse balance of trade. In 1919 there was a surplus of exports over imports of £51,908,000; in 1920 that surplus had been converted into a deficiency amounting to £17,484,000; and in the first months of 1921, to July 31st, that deficiency had been reduced to £10,345,000. Since July, however, the exports had again exceeded the imports by some £3,000,000. The total digress from January to September inclusive shows exports at £42,500,000 roughly and imports at £50,000,000, that is to say, a balance against Brazil of about £7,500,000. Brazil depends principally on the value of its chief production—coffee. Recent crops are experiencing the result of heavy frosts of a couple of years ago, which did considerable damage to the plants, which are now only beginning to revive. Germany and Austria, which were large consumers of coffee before the war, and other countries as well, now take very little. In the Argentine, we understand, they have been favoured with good harvests, and prospects for the coming one appear to be good. From a telegram they had received, which was sent off on December 6th, it was estimated that there would be a surplus to export of wheat, including the balance of the old crop, of 3½ million tons, of linseed 700,000 tons, of oats 300,000 tons, and in regard to maize, the prospects are considered excellent, but it is a little too early to be absolutely definite on the point.

BRITISH WORK IN ARGENTINA.

In order to protect producers the Government in the Argentine introduced measures and fixed a minimum price for the export of wheat, which has not been advantageous to the country, as wheat has been obtainable elsewhere on cheaper terms. As a consequence of these measures, the country is left with 750,000 tons available for export, in addition to the new crop ready to be harvested in a few weeks. During the month of October only 10,000 tons of wheat were exported. Locusts have appeared in some parts of the country, but we understand that the damage done by them so far has been slight, although they may do so later on to the maize crop. When I was in Argentina last year I had the opportunity of travelling over many thousands of miles of the British-owned railways in that country. It was impossible not to be impressed with the good work that has been done by the combination of British capital, British engineers, and British management. The engineers have conquered with their railways the difficulties of the Andes, the swamps of Ibicuy, the alluvial earth of the Province of Buenos Aires, and the sands of the deserts, whilst the great Port of Bahia Blanca, with its immense grain elevators, will remain only as one of the many monuments to their skill. The service these railways provide reaches a very high standard of comfort and convenience. As a nation, we have 250 millions of money invested in these lines. An all-round return of 6 per cent. on this capital means, in the shape of interest and dividends, a yearly revenue to come to London of about £15,000,000. But this is not all. The value of coal, rolling stock, and of the thousands of articles exported from Great Britain for the working of the railways is very large, so you will see how very deeply interested are our investors and manufacturers, and as a consequence our bankers also, in their welfare and stability. We bankers are following very carefully the negotiations between the Argentine Government and the various railway companies which have been the subject of so much comment of late, and we feel assured that the outcome will be satisfactory, and that we shall be able to carry on our credit operations in connection with the Argentine in the future with the same confidence as we have been able to do in the past.

In Colombia we are satisfied with the progress made at Bogota, our branch there; and we have been encouraged to open at Medellin, where premises have been secured and a manager appointed.

CONDITIONS IN CHILE.

Chile, like most other countries, has not escaped the bad business conditions which afflict the world generally. Her main commercial movement centres in nitrate of soda, and the year that is now concluding has been one of extreme depression in the trade, following, as it did, a period of prosperity.....

Since the prices were lowered considerable progress has been made with sales, and there is reason to expect a fair consumption in Europe and elsewhere in the coming spring, in view of the more moderate prices. It is noteworthy that in spite of the large monetary values involved and the serious drop in prices, not a single nitrate contract for delivery, so far as I can learn, has failed to be implemented by the purchaser.

Other exports from Chile, such as copper, wheat, barley, oats, have taken place on a moderate scale, and these have been disposed of readily enough on this side, although in falling markets.

The important trade of Chile during the past year has been much restricted, due by much to the paralysation of the nitrate industry, and also because of the low rates of exchange that have ruled. In spite of more than one foreign loan, the rate has fallen to \$40.30 per £, or, say, to less than 6d. per peso.

You will see from our report that we are extending our operations in Chile and opening a branch at Antofagasta. We hope that this city, which is one of increasing importance owing to its position as the gateway for Bolivia, will be a useful and fruitful field for our operations.

THE PAST YEAR.

It is not only in the realms of commerce that 1921 will be remembered as a period of great difficulty. In political, financial, and social spheres the same unrest and uncertainty have prevailed, and although on many tombstones the epitaph of the ancient philosopher might truly be written: "I have lived many years and I have had many troubles, most of which never happened," yet undoubtedly men's minds have been troubled with many real perplexities, and have had to face the realisation of their fears in many respects. These problems and difficulties have affected both nations and individuals in different ways. Some have pinned their faith on wild schemes and revolutionary and undisciplined experiments, resulting in confusion, becoming worse confounded, and providing an object-lesson from which wiser men could take warning. Others have preferred to proceed cautiously on the path of progress to more normal times and with new energy and enterprise, but with the old and well-tried weapons of straight dealing and right thinking to combat the present-day problem. Needless to say, our board and our staff will endeavour to adopt the latter alternative, and if ever they find their way into our ranks—I do not suggest that any can be found—who may be tempted to try rash experiments or who have been influenced by the spirit of unrest so prevalent in the world to use it for selfish ends and to discard sound doctrines, they will not find a congenial atmosphere in this bank.

Mr Herman B. Sim seconded the resolution, which was carried unanimously.

Messrs Richard Foster, Herman B. Sim, and Robert A. Thurburn were unanimously re-elected directors of the bank.

A vote of thanks to the managers and staff terminated the proceedings.

WESTERN AUSTRALIAN BANK.

SATISFACTORY RESULTS—DIVIDEND MAINTAINED.

The one hundred and sixtieth half-yearly meeting of shareholders of the Western Australian Bank was held on November 2nd at the Banking House, St. George's terrace, Perth, W.A., Sir E. H. Wittenoom, chairman of directors, presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said it was gratifying to find that the directors were still able to give them the usual dividend of £1 per share, free of dividend duty; and, in addition, they would, of course, note with satisfaction that no less a sum than £33,752 was being carried forward, which was more than sufficient to give them a similar dividend at the end of the next six months. The best evidence of the popularity of the institution was reflected in its deposits, of which there were no less than £3,109,643. This sum was a little less than that of the previous meeting, but when they remembered that the Federal Government floated a £10,000,000 loan within the Commonwealth, they must consider themselves very fortunate in not having their deposits depleted to a much larger extent. They would note that advances were

some £83,000 less than the last statement, but at the same time the directors endeavoured to give all the accommodation they could on reasonable and suitable lines. Until recently the agricultural industry had been on a satisfactory basis, but late developments had altered the position for the worse, and prices for wheat were falling and unsettled. Meantime the season had been most favourable, and there was every indication of a heavy yield of grain, so that it only remained to arrive at remunerative prices and reasonable freights. The markets in connection with the pastoral industry had taken a decided turn for the better, and whilst a large quantity of wool was going into consumption, the prices were satisfactory. Unfortunately the same could not be said of meat, whether at home or abroad, especially frozen meat, which was almost unsaleable in London. As far as the gold industry was concerned, no improvement had taken place. The cost of production continued to be almost prohibitive and the output was decreasing.

The motion was carried.

THE NATIONAL BANK OF SCOTLAND, LIMITED. RESULTS OF THE PAST YEAR.

The annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held, on the 22nd inst., in the Bank's head office in Edinburgh, his Grace the Duke of Montrose, K.T., Governor of the Bank, presiding.

In moving the adoption of the report, as published, His Grace said: The conditions prevailing during the year are reflected in the Bank's deposits, which show an increase of £1,616,000, and now stand at £38,590,000, as compared with £18,116,000 at October, 1914. The money at call and short notice amounts to £10,578,000, being £1,660,000 less, but the liquid position is well maintained in respect that the Treasury bills payable periodically within the next three months amount to £5,005,000.

British Government securities show an increase of almost £938,000, this being accounted for by recent purchases. These securities are entered in the balance-sheet at cost, but the depreciation since the date of purchase is provided for. Our investments in general securities stand at £114,000 less than last year, sales having been made during the period, and these are valued in the balance-sheet at or under the market price ruling at November 1 last. It is gratifying to your board that the securities show a considerable appreciation over last year's prices. The bills discounted to customers stand at £2,268,000, being £118,000 less than last year. The loans against marketable securities, £1,116,000, show little change.

Our advances to customers on current account, now £12,124,000, have fallen by £1,798,000, the lesser trade requirements explaining this decrease.

The Bank's acceptances on behalf of customers and correspondents, £861,000, show a small fall of £37,000.

As regards the Bank's property, two or three purchases were made, the amount running only to a few thousand pounds, however, but the continued high costs for work and material, where alterations were necessary, were a heavier charge. Your directors have set aside £20,000 to property account, and this more than meets the costs of these alterations.

We now come to the profit and loss account, which shows gross profit of £681,455, an increase of £41,450; but this is more than met by a large increase in administrative charges. They stand at £395,997, an increase of £51,300 over last year, and of £227,050 since 1914.

The directors, after providing for a dividend on similar lines to last year, and having made appropriations to property account,

pension fund and Bank's annuity fund, have, as stated, placed £100,000 to the credit of the Bank's reserve fund. Grants to the annuity fund have not hitherto appeared, but your directors have before them the desire to see the annuity to officers' widows and minor children increased, and have this year given tangible proof by a payment to the fund of £15,000, in addition to their usual donation of £800 a year. The capital of the fund now amounts to £223,052.

The claims on the Bank's pension fund have increased, and £25,000 has been transferred to this fund, as against £15,000 last year.

The report was adopted.

RIO DE JANEIRO LAND MORTGAGE AND INVESTMENT AGENCY COMPANY, LIMITED.

ENCOURAGING LAND SALES.

The seventh ordinary general meeting of the Rio de Janeiro Land Mortgage and Investment Agency Company, Limited, was held, on the 21st instant, at 11 Angel court, London, the Earl of Orkney, chairman of the company, presiding.

The secretary (Mr C. N. Cook, A.S.A.A.) read the notice convening the meeting and the auditors' report.

The Chairman said:—Gentlemen,—The share capital of the company remains unaltered at £500,000. The next item refers to the issue of debentures made during the current year. £10,260 has been issued so far, and I should like first to complete my remarks on the balance-sheet before referring to this matter in a more detailed manner. We have next on the debit side "Sundry creditors, including loan," amounting to £26,528 6s 9d, which represents mainly temporary accommodation obtained for the general purposes of this company. The item "Exchange reserve account," £7,291 14s 5d, figures in the balance-sheet because exchange transactions, which show in our books a profit, are not finally adjusted, and we decided that it would be advisable, in view of the difference between the rate of Brazilian exchange ruling at present and the rate of exchange at which our assets stand in the books, to build up a reserve account.

Turning now to the assets side, you will observe that "shares in subsidiary land companies" are represented by the same amount as in last account. The next item, "sundry debtors and advances to subsidiary land companies," namely £41,989 4s 8d, consists mostly of advances to subsidiary companies in Brazil, to enable them to develop their properties. "Investments at cost," £744 7s 6d, represents a small participation in another land company, which promises well. "Cash at bank, at call, and in hand, including foreign currency abroad," requires no special explanation, and the same may be said with reference to the amounts standing for "debenture issue expenses" and "preliminary expenses," which latter amount is the same as last year.

With reference to "administration expenses," these are kept as low as possible, and the total under this heading, less transfer fees and interest received, comes to £4,495 19s 8d, so that there is now standing to the debit of profit and loss account, including the balance from last year, an amount of £8,492 18s 10d.

THE DEBENTURE ISSUE.

I will now refer again to the issue of debentures. I pointed out to you last year that the low rate of Brazilian exchange then ruling is not a disadvantage for us, as we had still to remit funds to Rio, and also that the cash we receive on account of sales would, for the moment, have to remain in Rio. This state of affairs still continues; in fact, the Brazilian exchange ruled during the current year at even a lower rate than at the time of our last meeting, and thus we were enabled to remit funds to provide the cost of work executed in Rio on a favourable exchange. The consensus of opinion is that the present low rate of exchange is temporary. Brazil, through the unusual conditions arising as the aftermath of the war, and in common with almost every other country, was seriously handicapped, but the enormous natural resources of Brazil will make it possible for the country to regain its economic stability. Your directors therefore felt that it would be distinctly advantageous to make use of the low rate of exchange in order to transmit funds, to the largest possible extent, to Rio. To provide these funds it was resolved to make an issue of debentures guaranteed by the whole of our assets.

DEVELOPMENT OF THE PROPERTIES.

During the year covered by the report the development of the properties owned by our subsidiaries proceeded satisfactorily, and the sales of land effected to date are most encouraging. I should like to point out to you that the 34 acres mentioned in the report as sold are part of an estate of over 1,200 acres. The acreage sold represents 284 building plots purchased by a similar

number of prospective settlers on the estate. By consulting the map which we are exhibiting you will be able to see the position of the plots which have been sold up to the end of October. The position of the plots sold during November is being sent forward by mail, and has not reached us yet. We are also exhibiting a map of the Affensos estate, on which the plot which has been sold to the Brazilian Government is marked in red. You can also see from this map where about it is proposed to erect the railway station which, for the present at least, is to be the terminal point of the branch railway line the Brazilian Government has agreed to construct. The Chairman concluded by moving the adoption of the report and accounts, which was carried unanimously.

The Chairman: Gentlemen, before terminating the proceedings, I wish to inform you that in the year 1922 and thereafter we propose to have our accounts prepared to December 31st in each year, and to present same to you as soon as possible thereafter during the following year. For the year 1921-22, therefore, we shall have to cover a period of 13 months. Our reasons for making this change are that we find it difficult to prepare accounts and hold our annual meeting in the short time available between November 30 and the close of the year, and with the growth of our activities this difficulty will increase.

The proceedings then terminated.

THE WALL PAPER MANUFACTURERS, LIMITED.

CHAIRMAN CONFIDENT OF THE FUTURE.

1921 FINANCE ACT UNFAIR TO THE COMPANY.

The annual meeting of the Wall Paper Manufacturers, Limited, was held, on the 20th instant, at the Connaught Rooms, 61 Great Queen street, London, Mr Edgar Smith (the chairman) presiding.

The secretary (Mr John T. Chasney) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen, you will have received a copy of the report and balance-sheet. I intend to deal with these very fully, so I may assume that it is your pleasure that we take them as read. You will have realised that we have had a very bad year's trade, and it is with great regret that the directors have to put before you such a disappointing report.

In the report now before you there is necessarily but a brief summary of the position and of the results, hence I welcome the opportunity of meeting you here to-day to give you the history of the year under review and to put before you in more detail our company's present position.

Last year was an extraordinary and an unprecedented year. When I addressed you at our annual meeting 12 months ago, your directors had before them the figures of the first two months of the year, which showed satisfactory results, and a higher margin of profits than did the corresponding months of our previous and record year.

The slump that followed was so complete as to be almost staggering.

Also at the time of our last meeting there was no hint of the coming financial legislation which has pressed so heavily and, what is more, so unfairly upon our company.

COMPANY'S E.P.D. TERMINATION DATE.

It seems almost incredible that the date at which we happen by mere chance to have been in the habit of making up our annual accounts should be one of the prime causes of the position in which we find ourselves.

I shall go fully into the details of this later, but I may mention here that if our accounts had always been made up to July 31st, a month earlier, instead of to August 31st, our position would have been better, so our auditors assure us, by some hundreds of thousands of pounds.

Our unsatisfactory balance-sheet is due to two things—to an unprecedented slump in trade and the 1921 Finance Act terminating our excess profits duty accounting period at August 31, 1920.

Against these two factors your directors, despite all their efforts, have been powerless, and I am sure, when you have grasped the situation, you will feel that there has been nothing done or left undone by your board which could have averted the unsatisfactory results of last year's trading.

Speaking generally, I can assure you that our company is in a sound financial position, and that there is no need for depression with regard to our prospects.

We stand to-day, as far as we can see, with our losses behind us, with our stocks written down to bedrock, with our investments written down to to-day's prices, and with confidence in the future.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

DISTRIBUTION CRITICISMS ANSWERED.

Before dealing with the balance-sheet, I should like, with your permission, to reply to a criticism of our recommendations in regard to last year's accounts, viz., that we made too large a dividend distribution. The facts are these. The net profit made during the year was £710,750. Out of this we paid the dividend on the preference stock and the 10 per cent. dividend on the ordinary shares. We recommended the payment of 12½ per cent. to the deferred shareholders. This last amounted to a gross sum of £240,376, from which had to be deducted income-tax, leaving a net distribution in cash of £168,264. We appropriated £65,000 to the contingency fund and carried forward £181,054. These recommendations were approved by the shareholders in general meeting.

When those dividends were recommended your directors had before them, as I have already mentioned, the figures of the first two months of the present year, which showed satisfactory results, and revealed a greater margin of profit than that of the corresponding period of the previous year.

Almost immediately after our meeting of December 9, 1920, the phenomenal trade slump set in with a cancellation of orders at home and abroad, a long coal strike and world-wide depression which gave a shaking to some of the soundest businesses in the country.

When I tell you that in the first ten weeks of the business year we sold 43 per cent. of our total sales for the whole year, you will realise how serious was the slump in our trade, and how difficult and expensive we found it to keep the mills going under such conditions.

We took steps at once to concentrate and retrench in every possible way without prejudicing our efficiency.

With regard to excess profits duty, it was not until some months after our last meeting that the Government brought forward their proposals for terminating this tax, and no one can be criticised for failing to foresee the possibility of such legislation as the Finance Act of 1921, a measure so grossly unfair in its incidence as between one taxpayer and another, and so dependent upon the elements of pure chance as to create a new departure in the annals of British taxation.

CRITICISMS OF THE E.P.D. REMOVAL.

The method of removal of the excess profits duty became a hardship to us instead of a help, and we should have been better off if the tax had continued for another 12 months, as I will explain.

The Act in a professed attempt to treat everyone alike provides that there shall be 84 months during which traders are liable to this duty.

It sounds fair enough to say that everyone must have 84 months of excess profits duty liability, but as a matter of fact, fairness does not lie in giving each taxpayer the same number of months of duty liability, but it lies in terminating the tax at the same date for all.

We have always made up our accounts to August 31st so that when excess profits duty (a war tax) was imposed our first 12 months accounting period terminated on August 31, 1924, and contained only 27 days of war.

From what I have said it is apparent that our final accounting period ended at almost the earliest possible date, at the height of the boom, and when all goods and raw materials were at their highest point.

If we had by mere chance been in the habit of making up our accounts at some date prior to August 4th, say June or July, we should like many others have terminated our liability period after the slump in values had occurred, and we should, like them, have been able to set the deficiency of duty upon our losses against previous excess profits duty payments.

As it is, in respect of last year's loss we are limited to a claim for loss due to depreciation on our stocks held at August, 1920, and to some relief on our forward contracts.

From this explanation it will be realised with what extreme injustice the incidence of the 1921 Finance Act presses upon our company.

When this Bill was still before Parliament, your directors made earnest and repeated efforts to demonstrate to the Government the great hardship and unfairness if the Bill became law that firms with an early accounting period would suffer as compared with firms which had a late accounting period, and they tried to obtain amendments to the Bill, but without success.

We realise to the full the Government's necessity of obtaining revenue, but this should not be achieved by a form of taxation which bears with undue harshness on one taxpayer and deals leniently with another.

Our claim, which is still a large one, on stocks and forward contracts is being prepared. It will be sent in as soon as it is ready, and, although we hope to obtain a substantial adjustment

of our excess profits duty liability, we cannot at this moment indicate the amount, nor would it be in the general interests of the shareholders to give them what would at the best be only a rough estimate at this juncture.

Your directors discussed the advisability of delaying the presentation of the accounts to their shareholders until they knew what the amount of the adjustment of excess profits duty would be, but they were unanimous in deciding that it was best to put the facts before you at the usual date in accounts in which all our losses are written off, and no credit is taken for our claims arising under the Finance Act.

PRESENT CONDITIONS—GERMAN COMPETITION.

With regard to our trade, the sales during the past year were very much below normal, but this was due entirely to trade depression, as our goods rank as the highest in the world, and we believe that our new sets for the current season are the best in every grade that we have ever produced.

On the falling market our customers have been working on their stocks, and only buying from hand to mouth, but when trade revives, and we feel there are signs already of a move in that direction, we shall reap the benefit of this as our customers will then have to replenish their stocks.

It has been stated that our bad year is the result of German competition, but this is not so. The Germans have naturally re-appeared, and have participated again in some of the markets in which they were strong before the war, but so far as our usual overseas markets and home trade are concerned we have not felt their competition.

BALANCE-SHEET ITEMS.

I have now told you all there is to tell, and I would ask you to turn to the figures of the balance-sheet.

On the assets side our lands, buildings and machinery stand at their pre-war figures, less the usual depreciation and the value of the property destroyed by fire.

Our investments, including War Loans, shares in our subsidiary companies, and shares in other concerns, have been written down to their present or market values.

The stock-in-trade has been taken as usual at cost or market price, whichever is lower.

The debts are taken at a conservative figure after allowing ample reserves for doubtful cases.

On the liabilities side the issued capital and debenture stock remains the same as last year.

Then we have creditors £1,370,860. As was the case last year, we have included in this item the amount we have reserved to cover any balances of outstanding liabilities for excess profits duty and corporation tax in previous years. The portion of this sum which represents trade creditors is not abnormal when the high cost of materials, as compared with pre-war values, is borne in mind.

PROFIT AND LOSS ACCOUNT.

The profit and loss account shows that after taking credit for income-tax reserve, no longer required, £109,847, transfer from contingency fund £100,000, and last year's carry forward £181,054, there is to carry forward to the next balance-sheet an adverse balance of £557,203, against which the company has the claim for the adjustment of its excess profits duty liability already referred to.

During the year we have had a serious fire, which occurred at the Leeds branch. The warehouse and stock rooms were totally destroyed. It was only through the splendid efforts of the City Fire Brigade and of our own staff that the machine room was saved.

The rebuilding has commenced, and should be completed by the end of March. We were adequately covered by insurance.

During the year we have put a new commodity on the market called "Tacko," being a specially prepared paste powder for hanging wallpapers. This proprietary article we hope will prove a profitable undertaking.

Our Walpamur Paint Factory and the French Factory have been and are doing well, and there seems scope for considerable expansion in these two branches. Our relations with labour are very satisfactory.

I may say, in conclusion, that though we have had this bad year we have faced our losses, we have written down everything to the fullest possible extent, and we face the future with every reason for the belief that the present year's working will show satisfactory results.

I move the adoption of the report and accounts, and when this resolution is before the meeting, I shall be pleased to answer any questions which the shareholders wish to put to me.

Mr A. V. Sugden seconded the resolution.

The Chairman, in reply to questions, stated that the stock was taken at cost or market price, whichever was the lower. The directors did not anticipate that the stock would fall further. He

did not see any necessity to revalue the stock, or to write down the capital. They had sufficient money to conduct the business.

The resolution was carried *nem. con.*

The retiring directors and auditors were re-elected, and the proceedings terminated.

THE AMALGAMATED PRESS, LIMITED, COMPANY'S SOUND POSITION. BOARD'S NET SALES POLICY.

The twenty-fifth ordinary general meeting of the Amalgamated Press, Limited, was held, on the 22nd instant, at the Memorial Hall, Farringdon street, London, Sir George A. Sutton, Bart., the chairman, presiding.

Mr J. R. Sumpter, one of the joint secretaries, having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I assume that the report and accounts will be taken as read. It is my privilege to present to you to-day our twenty-fifth balance-sheet, and having regard to the difficult year through which we have passed, a year which has seen the shipwreck of so many industrial concerns, and began darkly with the disastrous three months' coal strike, the result disclosed in the statement of our accounts can be considered satisfactory. You will have observed that, after writing off depreciation of plant and building, and part of the cost of our new printing works and plant, the profits amount to £368,000 (three hundred and sixty-eight thousand pounds).

During the year we have issued six new periodicals and a new magazine.

I am glad to be able to say that the net sales of our publications for the financial year just concluded were considerably higher than for the previous year.

NEW PRINTING WORKS.

A subject of remark in past addresses here has been the erection of the new printing works on the Sumner street site, which was acquired for that purpose prior to the war. I am happy to say that the new building is now making noticeable headway. The printing of our various magazines and periodicals is at present carried on in no fewer than eight different factories, large and small, situated in London and Gravesend. The greatly increased cost of production resulting from high wages, shorter hours, increased taxation and the enhanced cost of material make the study of economy and efficiency more than ever imperative. Out of this pressing need our Sumner street undertaking is developing.

These new premises will be very extensive, and it is proposed to concentrate our periodical and magazine production in three large factories—Sumner street, Lavington street, S.E., and Gravesend, Kent—and thus close down the smaller works which it is no longer easy to run economically. Several valuable freeholds will then be at the disposal of the directors to deal with as expediency may dictate.

There is no doubt that such concentration will materially contribute to increased efficiency and economy in working, and will more than repay the large expenditure incurred. The printing works, when fully effective and complete with new buildings and plant, which has mostly been provided for already, will be quite the largest organisation of the kind in Great Britain, probably in the world, and will be able to deal with every demand that may be made upon it in every department of printing.

OUR NET SALES POLICY.

Passing from the subject of technical achievement, I should like to call the attention of advertisers to a matter of policy—our policy of selling space on a net sale basis. Month by month our latest net sale figures, certified by chartered accountants, are made available for all who desire to know them. We do not content ourselves with the issuing of figures privately to members of various associations; nor do we furnish our canvassers with letters to be shown discreetly to selected advertisers. We publish our certified net sales to all the world; firstly, because we believe advertisers are entitled to have them, and secondly, because we are proud of those figures.

WONDERFUL "ANSWERS."

Take, for instance, the net sales of *Answers* during the year under review. Everybody knows them, and we are proud that they should be known, as we feel confident that they are higher than those of any competing journal of the same type. Actual comparison is not possible, because of the significant fact that no other paper at all, of what advertisers usually (though wrongly) think of as the *Answers* class, has published a chartered accountant's certificate of net sales. This fact should speak for itself in the ears of advertisers.

It gives me great pleasure to be able to assure you that *Answers* has never stood higher in the estimation of responsible advertisers than it does at the present moment. It has always been a first-

rate medium; but it is now attracting an even better class of advertisement than formerly.

In addition to *Answers*, the name of which is, I may venture to say, almost a household word, I should like to call the attention of all advertisers to *Home Chat*, *London Magazine*, *My Magazine* (the net sales of which have doubled in two years), *Woman's Weekly*, *Woman's World*; our three fashion papers, *Fashions for All*, *Home Fashions*, and *Children's Dress*, and, indeed, had I the time to recite the titles, to many other of our weekly journals and monthly magazines, each pre-eminent in its particular field.

CERTIFICATES FOR ADVERTISERS.

A chartered accountant's certificate of the net sales of each and all these papers is available for any advertiser who wishes to consider the buying of space in them. Those figures show that our string of advertisement-carrying publications (40 in number), falling roughly into three groups—(1) those with a general appeal; (2) those with an especial appeal to women and girls; and (3) those that appeal to men and boys—constitute a great publicity and selling machine which stands absolutely unrivalled in this country, if not in the whole world.

I need not tell you that 1921 has been a very difficult year for advertisers, as the consequences of the "slump" are only too well known. It is therefore all the more gratifying to be able to announce that our advertisement revenue for 1921 has exceeded that of any preceding year. This highly satisfactory result is perhaps the most striking of all testimonials to the "selling" or "pulling" value of our magazines and periodicals.

Not only do we sell space on a very large scale; we buy it on a scale very nearly as large. We take a high place even among the largest and boldest advertisers in the kingdom.

APPOINTMENTS ON THE STAFF.

In previous years I have mentioned that we are always glad to give sympathetic consideration to applications from ambitious young men and women anxious to embark on a journalistic career, and I desire to repeat that statement now.

NEW DIRECTOR.

I shall ask you presently to confirm the appointment to the board of Mr William Blackwood, who has been in the services of the company for nine years, for six of which he has been editor of *Answers*, and we hope that he will still further strengthen the board of this company.

THE IMPERIAL PAPER MILLS.

The paper trade of this country has been through unfortunate times during the year. Your mills at Gravesend, in common with all others, have suffered from the heavy depreciation in the value of stocks of pulp and paper-making materials. Trade depreciation and the loss due to depreciated currencies have been contributory causes. We hope and believe the worst is over, and that the coming year will see some improvement in the industry.

The efficiency of the mills, the second largest in this country, has been maintained on the highest possible level, and your directors are satisfied that as an insurance for this company, with its magnificent equipment and large output, it stands in an unrivalled position to cope with all future developments of the Amalgamated Press.

THE FUTURE.

As to the future, you know it is never our policy to indulge in undue optimism, but this I can say, our plans for the coming year are well laid, and we hope we shall not experience any set-back in the next 12 months.

There are already signs of recovery in many industries throughout the country, though at present, there seems to be but little diminution, if any, in the large unemployment figures. Not until the country is afforded some appreciable relief from the present crushing burden of taxation will our national industries go forward and progress in accordance with their potentialities. With reduction of Government expenditure and reduced taxation, businesses would have a chance to breathe more freely, and universal prosperity, needless to say, is as helpful to this business as to any other.

I now beg to move, "That the report of the directors produced, together with the annexed statement of the company's accounts at October 31, 1921, be received, approved, and adopted, and that a final dividend for the year of 5s a share, free of income-tax, be now declared on the ordinary shares." I will ask Mr Linforth, our vice-chairman, to second that resolution.

Mr Arthur E. Linforth seconded the motion.

CONGRATULATIONS TO CHAIRMAN AND BOARD.

J. H. Panting: Permit me to congratulate you, Sir George, and your co-directors, upon the success you have achieved during the past year. The difficulties you have had to contend with have been enormous. A great struggle has been going on during the year in the world of commerce as well as in the world of politics,

and in the course of that struggle many undertakings have gone under, and when this has not happened, failed to pay a dividend. In addition, there have been fluctuations in the rate of exchange, falling prices, and depreciation, labour unrest, and fierce competition. At times, indeed, it has seemed as though the very existence—the economic existence—of this Empire were wavering in the balance. All these difficulties have been overcome by you, Sir George, and your co-directors—not only so, but, as this balance-sheet shows, the foundations of this vast enterprise have not been in the least degree shaken, but solidified. That, sir, is a great achievement. As for competition, this company seems to thrive upon competition, "Come one, come all," it seems to say, and the more that come, the better it seems to like it. So far as Labour is concerned, I think that I am right in saying that this company gives employment to something like 2,500 employees, and that Fleetway House is regarded as one of the best houses in the trade to work for. I feel certain of this, that we should hear little about the cry of unemployment if there were more enterprises of this character. Once again, Sir George, allow me to say that I have the greatest pleasure in supporting the adoption of this report.

The resolution was carried unanimously.

The Chairman then moved the confirmation of the election to the board of Mr William Blackwood.

The motion was seconded by Brigadier-General William F. Milden, C.B., C.M.G., D.S.O., and carried unanimously.

On the proposition of Mr Charles Steel, seconded by Mr R. Pearson, Messrs Turquand, Youngs and Co., and Messrs E. Layton Bennett, Sons and Co., were re-appointed auditors.

The proceedings then terminated.

HARRODS (BUENOS AIRES), LIMITED.

CHAIRMAN OPTIMISTIC OF COMPANY'S PROSPECTS.

The eighth annual general meeting of Harrods (Buenos Aires), Limited, was held, on the 19th instant, at Harrods, Limited, Brompton-road, London, Sir Woodman Burbidge, Bart., C.B.E. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said his colleagues on the board had unanimously elected him to the position of chairman, rendered vacant by the death of Sir Alfred J. Newton, Bart. Continuing, he said:—"The diminution in profits is directly attributable to the fall in prices, which have dropped to an extent probably unprecedented in the history of commerce. But for the heavy decline in prices it would have been my pleasant duty to present to you very different figures to those which we are now considering, for our profits would have equalled those of last year. During the war years there was constant difficulty in obtaining supplies. After the Armistice the world hunger for all classes of manufactured goods created a period of eager buying, when the legitimate demands of traders and the operations of speculators caused a shortage of supplies and forced all prices upwards to a level they had never previously reached. As soon as the pressing demands of the world for manufactured goods had been supplied, the whole commercial aspect was changed, almost without warning, owing to the high pinnacle which prices had reached. Manufacturers were faced with a cessation of orders, cancellations, compromises and refusal to take delivery or inability to pay, and were forced to liquidate their stocks on an unwilling market, thereby forcing prices rapidly downwards.

During the first six months of our year, we (and the South American Stores) made satisfactory profits, but unfortunately were not able to maintain them owing to the fall in the prices of merchandise, which hit us very severely, especially towards the end of the financial year, when we sold goods at prices which yielded but a small margin of gross profit. Your board were of opinion that it was preferable to face an immediate loss of profit by selling goods at cost price or under rather than attempt to hold for a further period. We thus disposed of goods purchased at high wholesale prices, and the wisdom of this policy has been amply justified by after events. The stocks on hand have been written down to meet present competitive prices ruling at August 31st, and all goods in transit have been taken at replacement values. You will be interested to know that in respect to such goods in transit and commitments on August 31st, only a negligible sum was required to meet depreciation, as the orders were principally placed since the break in prices. I think we may claim to have frankly faced the unpleasant situation and placed our stocks upon a safe basis for the current year. A very satisfactory feature of the year's trade is that the sales have been maintained. We have served many thousands more customers than ever before, and our aim has always been to give them the best quality, service and value, and thereby to warrant their confidence. Though our trading profits are far from being such as we should desire, in all the

circumstances I think we may congratulate ourselves they are not worse, and that we have not had to draw upon our reserves to meet the position.

In March we opened a portion of the ground and first floors of the extension of our main building. In October, after the close of our financial year, the second and third floors were opened for business, and the remainder of the premises should be ready about March next, when we shall possess the best-equipped and most up-to-date store in the world. It will be apparent, therefore, that during the year our profits have received no benefit from the new building. Harrods continues to be the fashionable rendezvous in Buenos Aires. Mr. Griffith tells me that during the August sale our premises were crowded out. The streets surrounding the store were blocked with private cars, the entrance had to be closed from time to time, and customers let out by the San Martin doors before others could be admitted from Florida. The August sale figures compare favourably with the returns for the same sections in Harrods, London. This will give you some idea of our great possibilities and prospects when the new premises are fully developed.

I should like to give you some indication of the trade outlook in Argentina. I consider the present unfavourable conditions are only temporary. Your directors have boldly faced the position and written down stocks on hand to prices which should enable trading to be carried on at more normal rates of profit during this current year. Owing to the depreciations already made, the weekly rate of gross profit earned since August 31st has been steadily improving. Knowing the recuperative powers of the Argentine, and anticipating more stable conditions, I believe our trading will show happier results for the current year.

Mr G. L. Devan seconded the resolution, which was carried unanimously.

ASHANTI GOLDFIELDS CORPORATION, LIMITED.

SPLENDID DEVELOPMENT RESULTS.

PRICE OF GOLD—VALUE OF STERLING IN AMERICA.

The twenty-fourth ordinary general meeting of the Ashanti Goldfields Corporation, Limited, was held, on the 20th instant, at the Holborn Restaurant, London, under the presidency of Mr Jeremiah Colman, J.P.

The Chairman, in moving the adoption of the report and accounts for the year ended June 30 last, stated that a profit of £79,878 had been made under trying conditions, the main difficulty, as in the previous year, being a shortage of native labour. Extra gas-units to relieve the fuel situation had been delayed, but fortunately firewood supplies had increased.

Referring to the impending change to a wet-crushing process, which he briefly described, the chairman said that the dry-crushing process would be abandoned with regret, as this gave better extraction, but the final result on the profit and loss account was the chief consideration. Great advantage would accrue from steady and regular working. The new plant had been housed at the central treatment plant, so securing crushing, handling, and power plants to the best advantage. The new plant was expected to commence running in January.

The ore reserves were shown in the directors' report; it was noteworthy that development on No. 19 level (the lowest level) had, in the first 100 feet, opened up over 38,000 tons of ore. Within the last few days a cable had been received stating that a further 100 feet of the chute had been opened up; for the total length exposed the reef had a width of over 26 feet, averaging 24 dwts. Lateral development was so favourable that it was not considered necessary to continue sinking the main shaft for about twelve months.

The cocoa and mahogany "booms" had disorganised native labour, but with lower prices for these commodities conditions were considerably improving, and the latest advices reported a full staff of natives in every department.

SIR GEORGE LAWSON JOHNSTON'S SPEECH.

The Deputy-Chairman (Sir George Lawson Johnston), in seconding the motion, submitted at some length a suggestion for dealing with the gold output and fixing the price of same for the next few years. The African gold production that now comes to London and is usually sold to America would, under this scheme, be dealt with as follows:—

Germany would pay four-fifths of the gold at a fixed premium of 25 per cent. above its par value. Three-fifths of the gold would then go to France and Belgium in payment of reparation claims, and would count against such claims at 25 per cent. above gold's par value; one-fifth of the gold would go to Germany, and remain there with a view to eventually building up a reserve against their own currency. The one-fifth that remains would be taken at par by the British Treasury and added to the £28,500,000 coin and bullion that stand against our Treasury note issue. Gold from other producing countries could be dealt

with in the same way, if such countries agreed, and in each case the country of origin would be allowed to retain one-fifth of the gold at par.

As the gold output of the world last year, excluding the United States and Canada, was reduced to £52,466,000 (at 85 per fine ounce), the amount that Germany would have to pay would be only a small proportion of the total reparation amounts as at present fixed.

The gold, when produced, would be sent where it is wanted, instead of being directly added to an excessive hoard in the United States, and this diversion of a stream of gold to the right places would be a benefit to Europe out of all proportion to the reductions made on the reparation payments.

Instead of an almost daily fluctuation in price, the production would then receive a fixed premium of 20 per cent. (i.e., the 25 per cent. premium on four-fifths with one-fifth taken at par), and with a fixed price the output would be kept up.

Continuing, he said:—"Whatever method is eventually adopted of fixing the price we are to receive for our gold, nothing could be more unsatisfactory to a deserving industry than the present rapid fluctuations.

AMERICAN EXCHANGE RATE.

I do not know who has engineered the price of the pound up to \$4.20, but this ratio certainly does not represent Britain's financial position *vis-à-vis* the United States, to whom we owe over £865,000,000.

The impression I formed in America last month was that a high-priced pound sterling was a bad bargaining point, as it indicated to the average American, who is a business man, that even with the debt around our necks he can have an exchange that will enable him to export goods to us. This artificial suggestion of affluence is unfortunate, because though we have many friends in America it will be difficult to convince the others that it is wise to forgive any of their European debtors save those who are unlikely to pay. Only a wave of enthusiasm, such as the one that brought America into the war, can help in this debt matter, and I suppose we will, as usual, leave the matter to our Premier, and, fortunately, in America the favourable opinion as regards him is so universal and intense that anything might happen when he goes over. The report and accounts were unanimously adopted.

SHOWELL'S BREWERY COMPANY.

CHAIRMAN ON THE CRUSHING EFFECTS OF TAXATION.

The annual meeting of Showell's Brewery Company was held at the Queen's Hotel, Birmingham, on the 20th inst., Mr James Davenport (chairman) presiding.

The Chairman, in moving the adoption of the report, said:—"They, as a company, had felt, as he expected they would feel, the decline in the spending power of the community. Their capital remained unaltered. Sundry creditors and reserves at £182,758 showed a substantial reduction. A very large part of this consisted of internal reserves which they had built up in good times for contingencies which might arise, and he was glad the conservative policy they had followed would allow them to face many severe storms with confidence. The reserve stood at £40,000 against £30,000 a year ago, and they proposed to strengthen this again by the transfer of a further £5,000. On the other side of the account their properties showed little difference at £839,741. Stock-in-trade showed a considerable reduction at £63,388. They did not consider it was either necessary or prudent to carry high stocks, and they had constantly kept their commitments to a minimum figure. In regard to their investments they still retained their large holdings in Government stocks amounting to over £125,000—a very handsome liquid reserve. The balance-sheet was good and sound.

The profit for the year amounted to £47,535, and showed a considerable falling off, which was not difficult to account for. The disastrous coal strike had a serious effect not only in the coal mining districts, where they had many good properties, but directly on the iron and steel works industry, where also they had many houses, and indirectly on trade generally. There had been widespread unemployment, with the consequent reduced spending power of the industrial classes, and as a result their sales had fallen.

In the immediate future he did not see any very hopeful signs of these adverse factors improving. Industry is stifled by the crushing load of taxation we are called upon to bear, and until this load is lightened we shall see no material diminution in the large number of the unemployed. Our great hope is economy, and the bright lining to the clouds, so far as I can see, is the hope that the Government are now serious in their determination to cut down expenditure ruthlessly and thereby prepare the way for the relief of the overburdened taxpayers of this country.

Mr H. W. Walmisley seconded the adoption of the report, which was carried.

NOTICES.

At a general meeting of the members of the British Overseas Banks Association, held on December 16, 1921, the following were elected to form the committee for the ensuing year:—Mr. Percy Arnold, O.B.E., Bank of Adelaide; Mr. Charles Cambie, Canadian Bank of Commerce; Mr. Leslie Couper, C.M.G., Bank of British West Africa; Mr. T. J. Finnie, London and Brazilian Bank; Mr. W. E. Preston, Chartered Bank of India, Australia, and China; Mr. Sydney F. Rogers, Imperial Bank of Persia; Mr. Francis Shipton, Standard Bank of South Africa; Mr. Geo. H. Soul, Anglo-Egyptian Bank; Mr. T. R. Whitley, Royal Bank of Canada; and Mr. Arthur Willis, National Bank of New Zealand. At the subsequent meeting of the committee Mr. W. E. Preston, of the Chartered Bank of India, Australia, and China, was elected chairman thereof, and Mr. Francis Shipton, of the Standard Bank of South Africa, was re-elected honorary secretary and treasurer.

During the rebuilding of their premises in Bishopsgate, the Banque Belge pour l'Etranger, S.A., will occupy temporary offices at Moorgate Hall, Moorgate (Finsbury pavement), E.C. 2, as from December 27th. The telegraphic address remains unchanged, "Eglebonis," but the telephone numbers will be London Wall 1502, 1503 1504, 6700, 6701, and 3448, the last for the stock department only.

The London Joint City and Midland Bank, Limited, announce the opening of new branches as follows:—43A High street, Littlehampton (Mr F. H. Bush, manager); 1 Cornhill, Wisbech (Mr Henry Douglas Blount, manager); and 57 High street, Stone, Staffs (Mr Douglas P. Taylor, manager). An office has also been opened at 4 Station view, South road, Bishop Auckland.

Barclays Bank, Limited, announce that as from January 3rd next their branch at 33 to 35 Castle street, Liverpool, will be under the management of Mr M. E. Robinson. Mr Thomas Cooper, the present manager, is retiring on the 31st inst., after 45 years' service.

The Commercial Bank of Australia, Limited, advise the opening of a branch of the bank at Napier, New Zealand.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

now asking prices based on the recent advances in tops. Some fair weights of yarn have been booked during the past week, and this is one of the most encouraging features of the trade. There is also rather more doing in piece goods, and manufacturers who have orders for which they have not covered in yarns are placed in a quandary owing to the rising market. On the whole, the year is drawing to a close with values exceedingly firm, and a much brighter outlook than at any time during recent months.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

Wool markets are firm and advancing everywhere, and it looks as if a new chapter has opened in connection with the raw material. Buyers are apparently becoming more optimistic, the activity seen during December having inspired them with greater confidence regarding the future. The sale held at Hull last week passed off very satisfactorily, notwithstanding that the offerings were of a most miscellaneous and disappointing character. There was a good deal of grumbling among the buyers at the many lots which were catalogued as "extra super combing," but which were not even passable combing, and if they had known the actual character of these wools some of the buyers would have left earlier. One of these had been round all the offerings by 3 o'clock on Monday, and was kicking his heels till Thursday greatly disappointed at what he had seen. Intending buyers are entitled to better consideration than this. It is essential that all wool should be correctly described in the catalogues, and it is certainly ridiculous to catalogue as extra super combing wools that would not give a clean yield of more than 43 per cent., and which was distinctly deficient in length and character. However, anything of combing style showed 5 per cent. advance, though many question the advance quoted in the public Press for crossbreds, 10 to 15 per cent., which was the rise named, surprising a good many. No doubt values were distinctly in sellers' favour, and many felt that even crossbreds were worth buying, although in Bradford no one is paying any more for medium and coarse crossbred tops. The closing sales for the year have finished with a strong tone, and with the attitude of buyers distinctly more favourable to the free movement of the raw material.

Turning to colonial markets, Australian and South African advances all show a strong tone, and it now remains for European markets to maintain a similar front. It is understood that during the past ten days a very large business has been done in Bradford in tops and yarns, covering practically all qualities, but consisting mostly of merinos. It looks as if the home trade have made up their mind to buy, and it is a fact that many firms have now sold their whole output of tops and yarn to the end of March; 3s 9d has been paid for 64's tops for April delivery, which is clear proof of returning confidence in the future. Those who have sold at 3s 5d stand to suffer serious loss unless they have covered in Australia. The latest cable advices state that in Sydney last week good 64-66's topmaking wools were selling on a clean basis of 39d, c.i.f. Bradford. Good spinners 64's were disposed of on a clean basis of 42d, which is all proof that there is nothing cheap in Australia.

A sale of B.A.W.R.A. wool, including 1,700 bales of Australian, and a quantity of New Zealand wool, and consisting almost entirely of inferior scoured and greasy lots, was held in Bradford on Tuesday. The purpose of this sale was to separate the inferior offerings from those available for sale in other centres in this country in order to give the better lines of wool a better chance. What will happen at future sales in London when good combing wools are offered remains to be seen, but it now seems pretty certain that all declines are for the time being done with. With regard to the Bradford offerings, prices were fully maintained on a level with the previous sale at Hull, when values for all greasy wools were above a parity with London. The shabbiest lots were largely taken by merchants.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

Contrary to expectations, the wintry weather has changed, and shipments on a fairly large scale have been made from Sweden and Finland. Even now navigation is permissible at Baltic ports in the Sundsvall and Gelfe districts, whilst from Archangel cargoes have been reaching us, showing that Soviet Russia is not sparing in trouble and expense to get timber lying there to this country. Thus the moderate stocks of wood on the British market a month ago have been supplemented by fairly large arrivals, with promise of still more to come, but in spite of these additions to spot stocks, the home market has shown a firmness in values over the month, and rumour has it that the market will go higher before f.o.w. next year. The deliveries of building woods from docks and ex ship have been fairly good, but not on such a large scale as those of last year, and it must also be added that much of the recent clearances have gone to replenish timber merchants' yards, which had been allowed to get very low in stock owing to the lull in f.o.b. purchasing between January and August. The legitimate consumption is not, however, of such a satisfactory character as those holding moderate to large stocks would desire, and the speculative element in the market, though at the moment not very large, might send prices to a figure that would still further restrict buying for consumption, and have the effect of eventually entailing losses on an inflated market.

The question of timber prices for 1922 is now being considered by English importers, who are faced with a similar, though less acute, difficulty as that which confronted them exactly a year ago. Then Swedish exporters insisted on a £32 Petrograd standard

basis for 7 in. battens, which stopped f.o.b. trading for six months (ending with the break-up of the selling combine), whereas they are now demanding £20. Whether the future will provide a demand that will make the above basis quotation a business one remains to be seen; but in view of the fact that the high prices of timber (though not nearly so high comparatively as other building materials) are now restricting the demand, little purchasing for f.o.w. can be expected until importers are absolutely compelled to come into the market. Advices to hand state that Swedish exporters have shipped only a little more than half-a-million standards this year (about half of her 1913 shipments), and that with overlying stocks and new productions, she will have a million standards for next season. With the supplies from Finland and likely increases from Russian and other European ports, there seems to be a prospective sufficiency of supplies that would make it difficult for foreign timber manufacturers to hold at other than supply and demand prices. The lower values ruling a few weeks ago for mahogany logs have greatly stimulated the demand, and considerable quantities have been disposed of and yards replenished. For American hardwood lumber the inquiries have fallen off to some extent owing to the approaching holidays, but better business is expected in the New Year. For cedar the market has shown an improvement for the better grades. Teak timber is still a disappointing market, the demand continuing to be of a very limited character.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The year is closing with a better tone in the hide market, as prices are gradually recovering from the recent slump. Provincial prices held firm this week, and tanners seem in a better mood. The foreign position is also steady, and business done in frigorifics at origin has been at steady prices, as America is still in the market. Dry hides have also sold better, B.A. Americanos making 8½d shipping weights. The American position is cabled as easier, with best heavy packers still quoted at 16½ cents.

On the whole, the year is closing with a better tone in the leather trade, and tanners seem hopeful the worst has passed. True, trade is quiet for sole leather, but this is partially accounted for by the lack of wintry weather. Repairers are finding their business very slow, and the amount of repairing very much below normal at this time of the year. Good-class repairing bends are selling at 3s to 3s 2d per lb, but low, dry hide bends, favoured by the cheap manufacturing trade, may be bought freely at about half this figure, although there are already complaints as to the wear of much of the rubbish which has of late flooded the market. Anxiety is still expressed at the possibility of a dump of American sole leather now that the exchange has improved, and of late fair-sized quantities have been landed in Liverpool. The upper leather section is slow, with the demand for low grades still a feature. American supplies are increasing, and offers of big blocks of willow and box leather have lately been received from the other side. British glacé tanners are, however, fairly busy again, although the high price of goat skins hampers their enterprise.

The shoe trade is slowly improving, as inquiries are coming in from overseas customers, and much is hoped for in view of the probable Irish settlement, as quite a large business was formerly done in boots with the Emerald Isle.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 77s 6d to 83s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Thursday, December 22.

Business in most directions pursued a quiet course, holiday influence being felt, and prices in some instances ruled weaker.

SUGAR.—A further decline was registered on all descriptions, and a fair demand predominated. Messrs Tate and Lyle's cubes sold, 52s to 53s; crushed, 49s 3d; nibs, 50s; granulated, fine and coarse, 47s 9d; London, 47s 3d; caster, 49s 3d to 49s 9d; yellow crystals, 41s 9d. No. 2, and also London granulated, January, 46s; and February-March, 45s 6d. West India crystallised sold, 38s to 39s 6d, as to quality. American granulated, spot, changed hands at 46s 9d; ditto, January-March, 18s, c.f. and i. terms. White Java, spot, sold, 44s to 44s 6d; ditto, due steamer, 19s, c.f. and i. White Mozambique, 43s to 45s; white Natal, 43s 6d to 45s; Belgian crystals, spot, sold, 43s to 44s, as to sample; ditto, ready, 13s 3d, f.o.b., Antwerp. Brazilian, basis 80 per cent., January-February, London, sold, 9s 6d, c.f. and i.; with Peruvian and Cuban, basis 96 per cent., January-February, offered, at 11s 6d, c.f. and i. Stocks in Cuba amount to 940,500 tons, against 205,300 last year. Terminal market quiet and featureless. White, May, also August, sold, 17s 3d.

COFFEE.—There was a fair general inquiry for all the better qualities, and full recent rates were secured. Common sell rather quietly as export requirements do not extend. Future delivery market quiet. March, sold, 52s to 51s 9d; and May, 53s to 52s 6d.

TEA.—Only 23,000 packages Indian were offered during the week, and engaged but moderate attention, while prices ruled somewhat irregular and easier, particularly with regard to the finer descriptions.

COCOA.—Market still quiet, but rates show no material change. Cocoa butter slow at 1s 7d per lb.

RICE.—Market quiet and featureless. Two Stars Rangoon, spot, 17s 6d. Broken kinds neglected and nominal. New crop scarcely mentioned. Beans quiet. Rangoon, hand-picked, spot, 8s 6d; afloat, 7s 9d, c.f. and i. Japanese peas, January-February, 30s.

SPICE.—A moderate amount of business was effected in pepper at generally steady prices. Fair black Singapore, spot, sold, 3½d; October-December, steamer, 3½d to 3½d; Aleppy, spot, quoted 4d; Tellicherry, 4½d; white Singapore, spot, 7½d; Muntok, ditto, 7½d; ditto, January-March, sold, 7½d to 7½d, and 7½d. Zanzibar cloves, spot, 1s 6d to 1s 6½d; December-February, steamer, 1s 4½d. Pimento, spot, 2½d. Tapioca steady, quiet. Fair flake, spot, sold, 1½d; ditto, December-February, steamer, London, 15s 3d; fair Penang seed pearl, on spot, sold, 16s; ditto, December-February, London, quoted 16s 6d. Small sago, spot, 26s; sago flour, October-December, sellers, 13s 9d; January-March, 13s 3d. Dried coconut, fine cut, spot, sold, 41s; medium, 42s; and February-March, halves, quoted 40s. Cinnamon steady, quiet. Ceylon firsts, 1s 1d per lb.

FRUIT.—The market for currants ruled quietly steady. Pyrgos quoted 53s; Amalia, 56s to 60s; Vostizza, 75s to 85s. Valencia raisins quiet. Halves quoted 128s to 130s; quarters, 132s to 155s. Sultanas steady, quiet. Smyrna, 110s to 125s; choice, 140s. Dates sold quietly at previous quotations, Siar, 28s 6d.

JUTE.—Despite stiff advices by cable from Calcutta and the settlement of the strike, a quieter tone ensued in the London market, and prices were the turn easier. Continental spinners were inclined to show more reserve after recent fairly liberal purchases. The close, however, was steady. New crop, first grade, December-January and January-February, Continent, sold, £26 to £25. Lightning grade ditto, £21 10s to £21; heart grade quoted £17 10s. Calcutta hessians steady. 10-oz, spot, sold, 22s 9d; 8-oz quoted 19s 3d. A twills, spot, quoted 78s; B, ditto, 62s.

HEMP.—The market for Manila presented much firmer features, sellers adopting reserved measures, owing to higher rates now ruling with regard to Mexican sisal on the imposition of an export tax. New Zealand and African sisal also influenced thereby. C grade, December-February quoted £54; D, £50; E, £46; G, £39 10s; J, £38; K, £35 10s; L, £35; M, £32. Streaky one, £43; two, £41; three, £39. New Zealand high point, fair, spot, quoted £38, and business done in fair at £36.

SHELLAC.—Market steady, though rather quiet. T.N., spot, sold, 330s; March delivery, 295s to 297s 6d and 287s 6d.

COPRA.—Market steady, but actual dealings were on a small scale. F.M.S., Straits, December-February and also January-March, Rotterdam, sold, £26 10s to £27; F.M., ditto, December-February, Marseilles, £26; Ceylon, December-February, London, quoted £28; South Sea Islands, ditto, £25 10s; Cebu, ditto, Hamburg, £25 18s 9d; Java, January-March, Rotterdam, £27 5s. Palm kernels firm. January-March, Liverpool, sold, £18 5s to £18 15s.

EGG PRODUCTS.—Market quiet, but steady. Prime liquid yolk, spot, 110s; ditto, April-June, 67s 6d, c.f. and i. Albumen, spot, 2s 11½d.

MENTHOL.—Spot, 21s; Japanese peppermint oil, 4s 6d; aniseed 2s 2d. Japanese slab camphor, spot, 5s; crude, spot, 3s 11d per lb. Japanese wax, spot, 100s cwt.

RUBBER.—Market unsettled, and easier during the greater part of the week. Standard crepe and also sheet, spot, sold, 11½d to 10½d and 11½d; January-March, 11½d to 11½d and 11½d; April-June, 1s 0½d to 11½d, and 1s. Fine hard Para, spot, 1s 2½d; ball ditto, 8½d per lb.

OILS.—Linseed steadier. Spot, net, naked, 28s 6d; January-April, 27s 6d; May-August, 27s 9d. Rape dull. Crude, spot, 45s; refined, 50s. Cotton quiet. Crude Egyptian, 37s; Bombay, nominal; common edible, 45s. Chinawood: Hankow, spot (barrels), 66s; and shipment, 64s. Coconut quiet. Ceylon, spot, 46s; December-January, 42s 6d; Cochin, ditto, 46s. Soya steady. Oriental, barrels, ditto, 34s 6d. Japan fish quiet. December-January, cases, 21s. Cod quiet. English, spot, 29s to 30s. Groundnut quiet. Eng-

International Banking Service

THE Guaranty Trust Company of New York offers a complete and direct banking service to all parts of the world.

Its chief functions and facilities are:

Opening current and deposit accounts
Dealing generally in foreign exchange and collecting foreign bills

Issuing documentary credits and discounting approved acceptances

Issuing letters of credit and travellers' cheques
Supplying credit information to responsible firms and companies

Buying and selling foreign and domestic securities for customers' account
Safe-keeping of securities

Acting as executor and trustee under wills, etc.

The Company issues a series of booklets which explain the wide range of its services and also contain commercial and financial information of current interest.

A list of "Publications of Current Interest" will be sent on request.

Paris: Galgani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709).

THE MONEY MARKET.

AFTER the Christmas holiday there was a heavy accumulation of home and foreign payments to be made in the money market. With the last day of the year falling on a Saturday, there was no inclination to postpone the application for loans from the Bank of England which is usual at this season, so the market borrowed a fair amount there on Wednesday and Thursday, and still more yesterday. Three months' bills were taken at 3½ per cent. for cash, but for delivery after the turn of the year the rate was naturally

lish crushed, naked, spot, 45s; deodorised, barrels, 59s. Turpentine irregular. American, spot, 67s 3d; January-April, 67s 9d. Rosin lower. American, grade B, 16s; F, 16s; G, 16s; K, 18s; WW, 21s; French, F/G, 15s; H, 15s; WW, 18s; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market irregular. Calcutta, December-January, sold, £16 12s 6d to £17 5s; Plate, spot, Hull, quoted £17 5s; afloat, £17; December-January, £16 10s; January-February at £16 5s. Rapeseed quiet. Toria, December-January, £18; real bold Ferozepore quoted £18; brown Cawnpore, £17. Cotton-seed quieter. Egyptian black, December, sold, £13 to £12 15s; and white, £12 10s to £12 5s. Bombay, December-January, £9 2s 6d. Gingly firm. Chinese, November-December, Continent, £24 10s. Castor, Bombay, December-January, £16 10s. Ground nuts quiet. Coromandel, machine-dried, December-January, Hull, £20 15s; new crop, December-January, Continent, £20 10s. Chinese decorticated, f.a.q., ditto, Continent, £20 15s per ton.

METALS.—Tin: The market exhibited irregularity and ease until last Tuesday, cash fluctuating down to £171 10s, and three months' to £172 5s, while since registered at £173 10s. During the middle of the week, cash changed hands at £172 to £171 10s, and three months' between £173 15s and £173, finally at £173 7s 6d. At Thursday's session the tendency was rather easier. Cash sold at £170 5s to £171, late January £171 15s, early February £172 5s, and three months' £172 10s to £172 5s, while since done at £173. English ingots £170 10s to £171. Copper remained generally quiet and slightly lower, being steady at the decline. Standard cash during the first part of the week moved at £66 17s 6d to £66 15s, and three months' £67 17s 6d to £67 15s. At Wednesday's meeting a low but steady tone prevailed, with business chiefly in cash at £66 15s, and early January at £67. Rates declined slightly at Thursday's market. Cash realised £66 5s, and three months' £67 10s to £67 5s. Electros, £74 10s to £75 10s. Lead steady at £25 5s to

£24 7s 6d as to position. Spelter maintained at £27 7s 6d. Antimony: English regulus, £36 to £39. Aluminium: Home delivery, £120; export, £125.

TALLOW.—Messrs Colchesters and Woolner write on December 21, 1921, as follows:—The tallow market was steadier during the week and prices show no quotable decline. There was almost sufficient demand to clear the last catalogues, and the next catalogues are fixed for January 4th. Shipments of tallow from Australasia during November, amounted to 2,906 tons. At auction to-day—casks tallow were offered, and—were sold. Quotations are:—Australian mutton: Fine, 44s; good to fair, 42s to 40s; dull to dark, 37s to 34s; hard, 44s. Australian beef: Fine, 42s; good to fair, 40s to 37s; dull to dark, 36s to 34s; sweet, 45s. Present shipment from Australasia:—Mutton, fair coloured, 48 degs., 41s; and mixed, 43½, c.i.f., London, 40s. The market letter is unchanged. Town tallow, 35s 6d per cwt. Rough fat, per 8 lbs, 1½d; melted stuff, 23s per cwt. Quotations are:—Town, 33s 6d net cash, naked, ex works. Country: Frail casks, 30s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 34s to 32s. Bone fat: White, none; pale, none; benzine, 28s; melted stuff, 28s, f.o.b.

The Bank return showed an addition of £3,200 to the stock of gold, and a reduction of £150,800 in the note circulation, so that the Reserve was £154,000 higher. Government securities were further reduced by £13,862,600, and Other securities were £2,035,200 lower. Deposits thus declined by £15,733,600, Other being reduced by £17,674,500, while Public rose by £1,941,000. The circulation of currency notes was increased by £1,155,500 to £325,584,400, which includes £1,745,400 for notes called in but not yet cancelled. The fiduciary issue is £275,889,000, or £41,666,200 below the maximum.

The following table shows public income and expenditure for the week ended December 24, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	23,612	Supply Services	15,738
		Interest on Debt	2,543
		Sundries	466
		Reduction of Debt	4,853
		Added to Exchequer Balances ..	512
	23,612		23,612

These operations reduced the National Debt by the sum of £4,852,946, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 10,465	Surrenders of Bonds, &c.	- 725
National Savings Certificates ..	+ 220	Bank of England Advances ..	- 13,000
Treasury Bills	+ 4,112	Public Department Advances ..	- 7,054
Housing	+ 3,440	Unemployment Insurance	- 440
		Depreciation Fund	- 1,000
		Telegraph (Money) Act	- 800
		Sundries	- 551
	+ 18,217		- 23,070

Customs and Excise yielded £8,693,000, Special Receipts under Miscellaneous £7,250,314, and Property and Income-tax £2,086,000. Treasury Bond sales amounted to £10,465,000. The floating debt was reduced by £15,959,000, to £1,274,710,000, advances by the Bank of England being entirely wiped off by the repayment of £13,000,000.

FOREIGN EXCHANGES.

The short business period since the 23rd has been the quietest for a long time past, not only in consequence of the holiday period, but because there is a general feeling of uncertainty as to the results of the coming conference on the economic affairs of Europe. For a large part any favourable results of a satisfactory settlement of reparation and a serious attempt to tackle the problem of Russia have already been discounted, and the markets are waiting anxiously to know which way to turn. The only marked feature has been a rapid rise in the lira from 94.50 to 99.25, as the result of the serious banking trouble in Italy, and the fear that it may not be possible to isolate the affairs of the bank in question. Until greater clarity has been obtained we may perhaps expect a further rise. In Paris the rate improved from 52.77½ to 52.10 on the 28th, but it has since risen again to 52.57½ yesterday morning, consequent upon the position in which France has placed itself by its attitude over the submarine question. As usual, the Brussels rate has moved in sympathy, falling from 55.07½ to 54.54½, and rising again to 55.05. The rate for futures in Paris is par to

2 centimes per month over spot, while in Brussels it is 8 to 12 centimes per month below spot. The Berlin rate has been exceptionally steady, quotations yesterday morning being 780, as compared with 797½ on the 23rd, after being down to 771 on the 29th. The future quotation is 2 to 3 marks per month below spot. The New York rate has also been relatively steady, and has moved quietly in favour of this country from 4.18½ to 4.19½. The rate for futures has narrowed slightly to ½ per month over spot. Among the "neutral" exchanges, Holland has moved 1 cent. against us to 11.43½, while Switzerland has risen from 21.43½ to 21.45, and Spain from 28.12½ to 28.15½, after some considerable fluctuations. In the Northern group Finland, whose improving trade gives promise of better rates, after some improvement, is back again at 215½, the same as the 23rd; Norway has continued its recent improvement, being 26.27½, as compared with 26.72½; Stockholm has moved from 16.81½ to 16.77½, while Copenhagen has moved up sharply again, after its recent recovery to 21.15½. In Central Europe the Austrian rate for Inlandskronen on the 23rd, the last date for which figures are available, was 23,500, as compared with 27,150 the week before. The Auslandskrone rate yesterday was 11,000, as compared with 10,500 on the 23rd. Warsaw, at 12,000, remains unchanged, as also Budapest, at 2,600. The Prague rate continues to improve, and is now down to 290; Belgrade, however, is still marked 270 sellers, Bucharest is still unquoted, and Sofia remains about 600. In the East, Calcutta at 1s 4d is slightly dearer than a week ago, while Japan at 2s 3½d is slightly cheaper. The silver market is quiet, with rates practically unchanged. Hong Kong is quoted at 2s 7½d, Shanghai at 3s 8d. Of the South American exchanges, Buenos Ayres, at 43½d, is rather cheaper; Montevideo, at 41½d, rather dearer; Valparaiso, at 39.90s, is 20 below the rate of the 23rd, while Rio shows little change.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO DECEMBER 24, 1921.

Total spent	£ 730,237,709	Raised by revenue ..	£ 661,849,274
Inc. in balances	1,442,438	Net borrowings	69,830,873
Total	731,680,147	Total	731,680,147

ESTIMATES for YEAR 1921-22.

Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000		1,039,728,000

Surplus* 176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

DECEMBER 24TH.—Prince of Wales at Calcutta. Death of M. Raffalovich.

DECEMBER 26TH.—Premier goes to Cannes. Italo-Russian commercial agreement signed.

DECEMBER 27TH.—Bank Holiday. Severe gale.

DECEMBER 28TH.—Premier states that Government can go no further in Irish Treaty question. Washington Conference resumed.

DECEMBER 29TH.—Banca Italiana di Sconto closes its doors. Committee of business men leaves for Paris.

DECEMBER 30TH.—British, French, Italian, and Belgian business men meet in Paris.

The Stock Exchange re-assembled after Christmas to find only a small accumulation of orders. However, the general tone has been cheerful, the continued strength of the gilt-edged market being the feature. There have been speculative purchases of Russian bonds, owing to developments in international politics, and Argentine Railway stocks have advanced. Home Railway prior-charge stocks are a strong market.

In the principal commodity markets the holidays have restricted operations. But firmness is the characteristic in all sections of wool markets, while the demand for cotton goods is reported to be rather more encouraging. The iron, steel, and coal trades have been quiet under the influence of the holidays, and there is little fresh to report from these industries, except a general disappointment with the extent of the railway rates concessions. The markets for vegetable oil and oilseeds have been quiet since the holidays. In the leather business stocktaking is in progress, and most boot and shoe factories have not yet resumed.

Details of movements and news in the principal markets from special correspondents will be found on later pages of this issue.

CANNES.

WELCOME, if long overdue, is the decision of the European Allies to take up once more the problem of the European economic chaos, and to endeavour at Cannes to find the road which will lead back to normal conditions. The experience of the past year has demonstrated in this country the futility of searching for a means of rehabilitating industry or for panaceas for unemployment without dealing first with the international conditions which have produced the present world-wide crisis of under-production. The business world has, in fact, been attempting the hopeless task of trying to overcome difficulties mainly outside its control, and we are glad to think that the Government at last recognises what are the causes which have rendered abortive so many of their attempts to deal with the internal economic situation. The Prime Minister has done well to call in expert assistance at the outset of his task, though the usefulness of this step has been limited by his incurable habit of hurried action, which has made it quite impossible for the four gentlemen selected to get into touch with business opinion in London before being carried over to Paris. We welcome also the intention, which has been encouraged from the other side of the Atlantic, to follow the meeting of the Premiers by a European Economic Conference. Experience has taught the world much since the Brussels Economic Conference, which met in the autumn of 1920. The exchange crisis existing at that date has been succeeded by stagnation and unemployment in Great Britain, while the nations of Europe have made hardly any progress at all in carrying out the cardinal principles then laid down, namely, the balancing of income and expenditure and the removal of economic barriers.

But we deceive ourselves if we imagine that a Conference can prove a royal road to prosperity, or that some grandiose scheme such as has been vaguely foreshadowed, of an international consortium to take charge of the railways of Europe and restore international trade by means of a new currency independent of Governments, can save the nations from the difficulties in which their Governments have placed them. It is of the first im-

portance that the statesmen who meet at Cannes should recognise that politics are the root cause of our present ills, and that they cannot shuffle out of their responsibility by leaving the task of reconstruction to business men. The best and wisest advice of expert business men is useless when countered by political folly. We have already seen numerous well-founded plans, such as that of the League of Nations scheme for the rehabilitation of Austria, rendered abortive by political obstacles, and the same fate will inevitably befall any economic scheme for dealing with Central Europe or Russia until the politicians have cleared the ground. The French Government has not made this task easier by its unwillingness to fall in with the proposal to limit submarine construction—an attitude which has led Mr Balfour to declare bluntly that a large French fleet of submarines can only be useful for offensive action, and that Britain cannot fail to regard very seriously indeed the creation of such huge undersea fleets a few miles away from her own shores. According to a *Reuter* cable, Mr Balfour said: "It is not unreasonable for Great Britain, when threatened by the establishment within a few miles of her coast of a vast fleet of submarines which are of no use except to destroy commerce, to say candidly that she cannot look with indifference upon the situation thus created." Mr Hughes pointed out tersely that the Washington Conference was called to consider not the expansion, but the limitation of armaments, while Signor Schanzer expressed the serious view taken by Italy of the French naval programme. It may be that the French Government is, in its naval demands, merely manoeuvring for position in the discussion on the German question; but it is evident that for the moment the prospects of sane international co-operation are gravely jeopardised, and that until such questions are settled the reports of conferences and the schemes of business men are so much labour wasted.

We are given to understand that reparations and the problem of Russia are the two main dishes on the menu at Cannes. But it is important to recognise that from the standpoint of Great Britain the former problem is not only of much greater urgency, but is also far more susceptible of early treatment than the latter. It is true that the world needs Russia to resume her place as one of the great food-producing countries, but in the last five years some compensation has been found by development elsewhere. Germany, on the other hand, is a country whose trade not only is of much greater importance to Great Britain, but also plays a far larger part in international commerce. It is conceivable that the world's trade might return to a fairly normal post-war basis with Russia excluded; but if Germany and Central Europe remain in their present abnormal condition a new equilibrium which would provide a tolerable commercial prospect for Great Britain is impossible. Moreover, while a solution of the reparation question which would hold out some prospect of leading to exchange stabilisation on lines which would command much approval in this country is within the power of the Premiers who meet at Cannes, the rehabilitation of Russia is a problem of a different order. Economic growth on modern lines in Russia was a young and tender plant before the war, and the conditions which

obtained from 1914 to 1916 killed it. The Bolshevik régime has in many ways removed means of its rebirth, and in none, perhaps, so effectively as in the annihilation of the commercial and professional classes, and by throwing back the peasant upon his own economic resources, and so removing the impulse to add to his well-being by trade. Russia's recovery involves rebuilding from new foundations, and important though it be, it would be regrettable if the discussion of this question should drive from the centre of the stage the greater and more immediate problem of reparation, with its corollary of more stable relations between Germany and Central Europe and the rest of the world.

But if a European Economic Conference will not afford a short cut to the millennium, it will at least be of great service if it restates in terms suited to the problems of the day the underlying economic truths of Brussels. This is more likely to happen if the delegates occupy the same independent position as at the former conference, and speak the opinion of the business world without qualifying it in the interests of their respective Governments. Such declarations, if endorsed by official and unofficial opinion in the leading countries, are one of the few means available for wearing down and tempering the excessive nationalism which at present stands in the way of either currency reform or any general unification or centralisation in the working of the transport system of Central Europe. But, unfortunately, the success or failure of Europe's uphill struggle towards economic recovery depends upon Governments and policies. The political wisdom or folly of European statesmen can open or can bolt the only doors that lead to the resumption of normal activity and well-being.

MONEY IN 1921.

Economic historians of the future will probably regard 1921 as merely the successor, in monetary matters, of 1920. The fall in money rates which took place in 1921 will be regarded as the outcome only of the rise which took place in 1920. The steady decline in wholesale prices (our Index Number fell from 131 per cent. above the pre-war level in December, 1920, to 74 per cent. in November, 1921) will be put down to the adoption of a policy of checking further inflation in 1920. In fact, the year, from the banking point of view, has been one of very great anxiety. The last time prices fell on anything like the scale of 1921 was after 1815, and then the failures of commercial houses and country banks were on a large scale. In 1921 there were few country banks left outside the orbit of the "Big Five," and commercial failures, though numerous, were on a relatively small scale. But a fall of 25 per cent. in wholesale prices must obviously, from the credit point of view, have rendered precarious the position of those who trade in commodities to the extent of an average of five times their capital. In addition, repudiation of contracts in the East, bad debts on the Continent, and difficulties in America must have contributed to the troubles which confronted dealers in credit. The history of 1921 is a tribute to the soundness of mercantile and banking methods in England. At the end of that year the credit position is sounder than it was at its beginning. Thus, though the authorities were able to reduce the Bank rate from 7 per cent. (by four reductions of $\frac{1}{4}$ per cent. in each case on April 28th, June 23rd, July 21st, and November 3rd) to 5 per cent., the price of gold, normally 77s 9d, fell from 116s 1d on December 31, 1920, to 97s 10d on December 28th, and the price of silver fell from 40 $\frac{1}{2}$ d per ounce to 35 $\frac{1}{2}$ d. If we consider also that Treasury bills were reduced from £1,102 millions to £1,088 millions. (on December 24th), and Ways and Means advances from £306 to £186 millions (all from Public Departments), it is clear that the financial strength of this country has survived a severer test than that it had to face during the war.

FLOATING DEBT.			
	Dec. 31, 1920.	June 30, 1921.	Dec. 24, 1921.
Bank of England advances	£ 87,250,000	£ 39,250,000	Nil.
Public Department advances	218,722,000	113,074,000	186,454,000
Treasury bills	1,102,109,000	1,221,647,000	1,088,256,000
	1,408,081,000	1,373,971,000	1,274,710,000

The trade depression was accompanied by a decline in the demand for currency notes. The total of these outstanding fell from £367.6 millions on December 29, 1920, to £311.6 millions on October 26, 1921, and had only risen to £325.6 millions on December 28th. Similarly, the total of bank-notes in circulation fell during the same period from £132.8 millions to £126.5 millions.

Without the support given in 1920 from the reserves of other banks in the United Kingdom, the Bank's gold holding showed no further increase, being £128.4 millions on December 28th, compared with £128.2 millions at the end of 1920, and the gold in the currency note department remained at £28 $\frac{1}{2}$ millions, the proportion of gold to notes being consequently higher in each case.

The fall in the value of money here has followed that in New York, and has been accompanied by a fall in most Continental centres.

CHANGES IN BANK RATES.

April 6, 1921, Swiss Bank rate reduced	$\frac{1}{4}$ % to $\frac{1}{2}$ %
April 15, 1921, Austrian " " raised	1% to 6%
April 26, 1921, Swedish " " reduced	$\frac{1}{2}$ % to 7%
May 5, 1921, Danish " " "	$\frac{1}{2}$ % to 6 $\frac{1}{2}$ %
May 4, 1921, Swedish " " "	$\frac{1}{2}$ % to 6 $\frac{1}{2}$ %
May 5, 1921, New York Federal Reserve reduced	$\frac{1}{4}$ % to 6 $\frac{1}{2}$ %
May 19, 1921, Belgian Bank rate	" " 4% to 5%
June 2, 1921, Indian " " "	" " 1% to 5%
June 16, 1921, New York Federal Reserve	" " $\frac{1}{4}$ % to 6%
July 5, 1921, Swedish Bank rate reduced	$\frac{1}{4}$ % to 6%
July 5, 1921, Danish " " "	" " $\frac{1}{2}$ % to 6%
July 5, 1921, Norwegian " " "	" " $\frac{1}{2}$ % to 6 $\frac{1}{2}$ %
July 21, 1921, New York Federal Reserve reduced	$\frac{1}{4}$ % to 5 $\frac{1}{2}$ %
Aug. 11, 1921, Swiss Bank rate	" " $\frac{1}{4}$ % to 4%
Sept. 21, 1921, New York Federal Reserve	" " $\frac{1}{4}$ % to 5%
Oct. 19, 1921, Swedish Bank rate	" " $\frac{1}{4}$ % to 5 $\frac{1}{2}$ %
Nov. 2, 1921, New York Federal Reserve	" " $\frac{1}{4}$ % to 4 $\frac{1}{2}$ %
Nov. 5, 1921, Danish Bank rate	" " $\frac{1}{2}$ % to 5 $\frac{1}{2}$ %
Dec. 15, 1921, Indian " " raised	1% to 6%
Dec. 30, 1921, Indian " " raised	1% to 7%

The lowering of the official discount rate has been accepted by the banks, which have lowered their deposit rates, in succession to each lowering of the Bank rate, from 5 to 3 per cent., the notice rates of the discount houses remaining $\frac{1}{4}$ per cent. above the deposit rates.

London Correspondents

Barclay's Bank, Ltd.

Hambro's Bank, Ltd.

When the year began banks and financial houses were still feeling the results of 1920's demand for credit, so that the margin between the rates of three months' bills and short money was about 1 $\frac{1}{2}$ per cent. At its close three months' bills and short money were each, on the average, worth about the same, so that the margin had disappeared. On April 21, 1921, the Treasury began offering its weekly quota of Treasury bills by public tender, instead of "on tap" at a fixed rate, and the results, together with the rates for "additional bills," introduced at the same time, are shown in the subjoined table:—

TREASURY BILL SALES BY PUBLIC TENDER.

Date.	Amount Offered.	Amount Applied For.	Average Rate of Discount.	Rate for "Additional" Bills.

When the year began the total of commercial bills outstanding was not much less than it was in 1914 (£350 millions); by its end the total was probably of the magnitude of £100 millions. Similarly, the advances of the clearing banks decreased from £861 millions to £792 millions. As has already been mentioned, commercial failures were on a relatively small scale, and so bankers' deposits did not decline in proportion to the decline in bankers' advances, and were, in fact, 40 millions higher in November than they had been in February. Thus, though £266 millions of new Treasury bonds (including conversions) were created in the second half of the year the demand for Treasury bills exceeded the supply, and the margin between bills and money disappeared, to the disadvantage of banks' and discount houses' profits. This process was accentuated by the employment in the market of certain special balances connected with the settlement of Reparations and of the Government's liabilities to special industries. But from the standpoint of banking profits the effects of this process were counteracted by the consequent substantial appreciation in all gilt-edged securities, depreciation in

which had used up a large part of the profits, not only of the last seven, but of several years before 1914. This recovery in long-dated securities was most marked (contrary to precedent) in December, when also the decline in the weekly returns of the town clearing was checked.

It may be said, then, that this country's banking and credit system faces 1922 with a consciousness of proved strength. The liquidity of banking resources has been proved to be quite as great as any informed critic ever supposed it, so that, despite difficulties in unexpected quarters, the capacity of bankers to take their part in any reasonable revival of trade activity need not be doubted. At the same time, the money market has had a wholesome reminder that it is only the servant of trade and industry.

A YEAR'S NEW CAPITAL.

The aggregate of new capital issues in the London market in 1921 at nearly £389 millions exceeded the aggregate for 1920 by nearly £21 $\frac{1}{2}$ millions. But in 1921 British and Colonial Governments absorbed nearly six times as much as in the previous year, while the activities of industrial and other private borrowers were severely restricted. Another feature of the figures which we analyse below is that more than one-half of the 1921 aggregate was raised during the last quarter of the year, after the great decline in money rates had set in. The amounts borrowed quarter by quarter for the past eighteen years are set out below:—

New Capital Applications.

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1904.....	19,905,000	50,654,000	9,547,000	42,913,000	123,019,000
1905.....	67,301,200	36,915,500	22,854,100	40,116,600	167,187,400
1906.....	30,264,800	55,059,800	10,835,800	24,012,800	120,173,200
1907.....	49,428,600	40,304,600	15,631,400	18,265,400	123,630,000
1908.....	45,287,900	64,385,600	31,541,800	50,988,400	192,203,700
1909.....	64,238,400	56,835,200	27,694,400	33,588,800	182,356,800
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,966,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,382,100	65,281,900	57,890,600	202,423,600	388,978,200

British Government borrowings, as will be seen from a subsequent table, totalled £202,896,300 in 1921, against only £37,530,700 in 1920. These figures are exclusive of Treasury bills and Ways and Means advances, which are not taken into consideration in our calculations. From statistics given elsewhere in this issue it will be seen that during 1921 the floating debt has been reduced by about £133 millions, a reduction which is due not, unfortunately, to excess of revenue over expenditure, but to the

replacement of temporary borrowings by $5\frac{1}{2}$ per cent. Treasury bonds. The 1921 total for British Government borrowings is made up as follows:—

5½ % Treasury Bonds.....	£ 173,866,300
Savings Certificates (excess of sales over encashments) ..	11,130,000
3 % Local Loans Stock	17,900,000
	202,896,300

Of this total the last quarter was responsible for over £143½ millions, thanks mainly to heavy Treasury bond subscriptions. The purposes to which the remainder of the new capital was devoted are analysed in the following table:—

	Whole Year 1920.	Year 1921.		
		Three Quarters to Sept. 30.	Fourth Quarter.	Total for Whole Year 1921.
British Government Loans	£ 37,530,700	£ 59,248,800	£ 143,647,500	£ 202,896,300
Colonial Government Loans	11,970,000	32,409,600	41,240,400	75,650,000
Foreign Government Loans	nil	5,905,000	nil	5,905,000
British Corporations, &c.	46,571,000	16,586,200	2,417,500	19,003,700
Colonial Corporations	nil	4,506,000	376,000	4,882,000
Foreign Railways	1,116,000	585,000	45,000	636,000
Australasian Mines	54,700	387,500	18,600	18,600
South African Mines	3,526,000	150,900	35,000	387,500
Other Mines	14,131,100	1,831,300	95,000	188,900
Exploration, Financial, &c.	1,894,700	1,067,400	3,350,000	1,926,300
Breweries	1,760,300	300,000	nil	4,407,400
Merchants, Importers, &c.	78,666,000	19,619,000	142,500	300,000
Manufacturing	6,090,800	3,500,000	300,000	23,761,500
Stores and Trading	1,743,000	818,900	nil	5,800,000
Rubber and Land	5,893,500	1,101,900	30,000	818,900
Oil	13,004,600	14,864,400	957,300	15,821,700
Iron, Coal, Steel, & Engineering	25,292,100	3,803,800	970,000	4,773,800
Elec. Light, Power, & Telegraph	6,247,000	3,649,000	2,028,800	5,677,800
Tramway and Omnibus	1,021,300	774,000	nil	774,000
Motor Traction & Manufacturing	8,567,700	905,000	nil	305,000
Gas and Water	990,200	2,297,100	159,500	2,447,600
Hotels, Theatres, & Entertainments	6,452,900	2,329,900	199,500	2,529,400
Patents and Proprietary Articles	1,068,200	116,200	15,300	131,500
Docks, Harbours, and Shipping	18,150,600	5,183,200	nil	5,183,200
Banks and Insurance	16,879,400	2,302,000	1,277,000	3,579,000
Miscellaneous	55,057,800	2,319,500	1,127,700	3,447,200
	367,549,600	186,554,600	202,423,600	388,978,200

A comparison of the first column with the last shows at a glance that almost every branch of trade, commerce, manufacture, and miscellaneous enterprise figures very much less prominently than in 1920, a fact clearly explained by the existence of high money rates during the first part of the year, and the grave trade depression extending over the whole period. Colonial Governments were exceptionally active during the last quarter, when Ceylon, New South Wales, Nigeria, the Commonwealth of Australia, Kenya Colony, Western Australia, South Africa, Straits Settlements, and India between them raised over £41 millions. Most of these loans took the form of 6 per cent. stock, issued at prices ranging from 95½ to 97. The foreign Government loans were those floated by the State of San Paulo, Norway, and Iceland. British Corporations figure less conspicuously than in 1920, but Birkenhead, Newcastle, Nottingham, Salford, Birmingham, Liverpool, Derby, Gateshead, Newport, Reading, Wallasey, Glasgow, Sheffield, London-derry, the Port of London Authority, and Croydon have all been in the market. In the last few months of the year the abnormally large output of high-class investment securities failed to satiate the appetite of the public. Quick oversubscription in this period has been frequent, and the new scrips have in most cases gone to a premium.

In the sphere of industrial borrowing, the feature has been the vogue of the debenture, which suited contemporary investment fashion as well as the short term note, the participating preference share, and the ordinary share suited the less sober taste of 1920. The important industrial debenture issues of the year make an imposing list. The following is a selection:—

LARGE DEBENTURE ISSUES IN 1921.				
	Amount.	Rate of Interest.	Issue Price.	Redemption Date and Price.
Lever Bros.	£ 4,000,000	7	92½	par, 1931-41
Dunlop Rubber	3,000,000	8	98	105, 1928-40
General Electric	3,500,000	7	92½	par, 1922-53
Peter Walker and Robert Cain	2,000,000	7	92½	par, 1922-64
Cunard Steamship	2,425,844	7	90	par, 1941
Baldwins	2,250,000	7½	95	par, 1931-50
Joshua Hoyle	1,500,000	7½	94	par, 1922-50
British Thomson-Houston	1,500,000	7	92½	par, 1922-62
Pearson and Knowles	1,000,000	7½	97	par, 1951

In July, Eagle Oil Transport issued £3,000,000 12-year notes at 98; in April, Brunner Mond issued £2,500,000 7½ per cent. cumulative preference shares at par; and in the same month appeared the offer of £2,000,000 8 per cent. cumulative preference shares of Nestlé and Anglo-Swiss Condensed Milk. In March, Harrods offered £1,000,000 7½ per cent. cumulative preference shares, and the Anglo-Persian Oil Company £3,500,000 9 per cent. cumulative second preference shares of £1 each at par. Large issues of industrial ordinary shares were infrequent, the largest being the offering in January of 4,313,865 ordinary shares of £1 8s each at par by the Mexican Eagle Oil Company.

The extensive Colonial Government borrowings referred to above have changed the complexion of the analysis of geographical destination:—

	DESTINATION OF NEW CAPITAL.				
	Whole Year.				
	1911.	1912.	1913.	1920.	1921.
United Kingdom.....	£ 26,145,900	£ 45,335,300	£ 35,951,200	£ 328,021,400	£ 276,176,500
British Possessions	64,994,800	72,642,400	76,137,200	31,639,800	90,577,800
Foreign countries ..	100,618,700	92,872,300	84,448,600	7,868,400	22,223,900
Total	191,759,400	210,850,000	196,537,000	367,549,600	388,978,200

The distribution is veering back towards the pre-war proportions. If the borrowings of the Imperial Government be eliminated, more new capital in 1921 was destined for British possessions than for domestic employment. The amount of new capital for foreign countries is beginning to grow, but is, of course, still very far behind the pre-war figure.

LABOUR IN 1921.

(BY OUR LABOUR CORRESPONDENT.)

THE past year will stand out as an important period in the history of the British Labour movement. When the year opened unemployment had already reached a high level; the time had passed for that "audacity" to which the Prime Minister himself had prompted the organised workers; "reconstruction" had become a memory. When the New Year dawned the prospect was black, and the past twelve months have in many respects been a black year for Labour. During the whole of the year there has been serious unemployment. Trade union savings to the extent of ten million sterling have been distributed in out-of-work pay supplementary to the benefits payable under the contributory State scheme. The drain upon trade union resources was increased by the long and bitter stoppage in the coal industry. The events of "Black Friday," when the Triple Alliance strike was finally called off, seemed to many workers to be a public confession of the weakness and lack of solidarity of organised Labour. In every industry wages were reduced, and in some below the level of real wages prevailing before the war. The Agricultural Wages Board was abolished, and a serious attack made upon the legal minimum wage system in operation under the Trade Boards Acts. Hours of labour were here and there increased, and towards the end of the year it appeared that further attempts would be made to lengthen the working day. There were defections from the ranks of the trade unionists, particularly in the case of the unions of semi-skilled workers. The story of Labour's development during 1921 is, however, not one of quite unrelieved gloom. The trade union movement, notwithstanding the decline in the number of trade unionists, is far stronger than it was in 1914, and will remain so. And though wages have fallen and hours of labour tended to increase, the degradation of labour standards has not been as considerable as might have been anticipated having regard to the general economic situation. It may be, however, that the movement towards lower standards has not yet expended itself. Moreover, though the

farm-workers have lost their minimum wage, the trade board system remains intact.

But the significance of the past twelve months from the Labour point of view does not rest on the immediate economic reactions upon the workers of the trade depression: The real importance of 1921 lies in the new developments which have taken place in the structure and machinery of the Labour movement, in the new temper of Labour, and in the heart-searchings which have been a marked feature of the year. As regards the last, there has been a good deal of discussion of methods and policies. The formation of the Council of Action in the summer of 1920 focussed attention on the need for some effective central organisation of the Labour movement; the amalgamation of unions which had proceeded fairly rapidly during the past few years had resulted in stronger trade union machinery, but it was not clear that the spirit of the rank and file had been strengthened; the shop stewards' movement had cast doubts on the method of organisation of the trade unions; the advance of Socialism on the Continent had influenced the "left wing." There was, therefore, a ferment at work in the Labour movement, which naturally affected the temper of organised Labour. Like all movements, the Labour movement has three sections—a large centre body of opinion, flanked by a left wing and a right wing respectively. A part of the left wing has been strongly influenced by Communism, and has formed the Communist Party of Great Britain. It is, however, the outlook of the large centre group which is of real importance. Notwithstanding the attempts which have been made to identify Labour with Bolshevism, all who have any knowledge of British Labour are aware that it is not, and never has been, Bolshevik. The best proof is to be found in the formation of a separate Communist party.

The truth is that the effect of the ferment on trade unionism has been to direct its attention not so much to a re-orientation of its policy as to a reconsideration of its organisation. The movement feels that no revolution in its policy is required; but it is convinced of the need for consolidating its forces and improving its machinery. This has been the prime task of the past year—a task undertaken as a result of past experience and in view of the future which Labour believes lies before it. It is true that there has been a good deal of consideration of policy, but the conclusions which have been reached, notably in the fields of foreign affairs and unemployment, have been developments of established policy, and have not in any sense been new departures. The Russo-Polish crisis in the summer of 1920 and the unemployment situation illustrated the need for some body which could speak with the full weight of the Labour movement. Labour has three organs of expression—the Trades Union Congress, the Labour Party, and the Parliamentary Labour Party. At the Labour Party Conference in June last and the Trades Union Congress in September it was decided to set up a National Joint Council representative equally of the General Council of the Congress, the executive of the Labour Party, and the Parliamentary Labour group. This council of 15 members, which has already been appointed, is charged with the duty of co-ordinating Labour policy and securing common action on questions which arise. In the future this body will play an increasingly important part, and its formation marks a stage in the development of the Labour movement.

The two Labour assemblies which ratified the proposal to set up a National Joint Council also approved a scheme of co-ordination affecting the headquarters of the Trades Union Congress and the Labour Party. Though the former really gave birth to the latter, the industrial and political movements have remained distinct, and the organisation and machinery of the latter has naturally become larger than those of the parent body. With the growth of the Labour Party and the formation of a Labour group in the House of Commons, some of the chief functions of the Parliamentary Committee of the Congress, as its executive was called, passed over to the political movement. But the relative spheres of the industrial and political sides of the Labour movement were never clearly thought out. Recently, however, it was realised that whilst it had undoubtedly been a wise step to establish an

independent political movement with its own organisation, it was time for the Trades Union Congress and the Labour party to enter into closer relations, for two reasons. In the first place, there are few questions which can be labelled either purely industrial or purely political. Industry and politics cannot be kept distinct. Unemployment, though an industrial problem, is a matter largely for Parliamentary action. Hence the need for the National Joint Council, to which reference has already been made. In the second place, it was felt, the Congress and the Labour Party should minimise overlapping, and make their work more effective, through a common administration, so far as this was practicable. Accordingly, it was decided to establish four joint departments. Under the adopted scheme there is to be a Research and Information Department, an International Department, a Publicity Department, and a Legal Department, each in charge of a responsible officer and under the control of a joint committee of the General Council of the Trades Union Congress and the National Executive of the Labour Party. Steps have been taken to put the co-ordination scheme into operation. In this respect also the year which is closing has seen a new development of considerable importance to the Labour movement. The character and scope of the joint departments are significant. They are an indication of a desire for an effective equipment.

Mention must be made of the supersession of the old Parliamentary Committee of the Trades Union Congress by the new General Council, an enlarged executive with wider powers. From the point of view of the industrial Labour movement, this development is the most important step which has been taken since the foundation of the Trades Union Congress over half-a-century ago, except perhaps the formation of the Labour Representation Committee in 1900—the body which became in 1906 the Labour Party. The General Council, with its grouping of allied unions under its auspices, pre-supposes a more elaborate administrative machinery than the Congress has hitherto possessed, and steps have been taken in this direction. It is certain that the trade union movement, so far as its general headquarters are concerned, will be far better equipped in the future than it has been in the past.

Education has always been a plank in the programmes of the Trades Union Congress and the Labour Party, and this year has witnessed a widespread interest in education throughout the whole Labour movement. At the Labour Party Conference in June there was an *informed* and interesting discussion on the postponement of the Fisher Education Act, and the subject has been ventilated both before and since in Labour circles. At the Congress in September the delegates ratified the general approval given by the Parliamentary Committee to the Report of the Trade Union Education Inquiry Committee set up by a conference convened under the auspices of the Workers' Educational Trade Union Committee. This Report contains far-reaching proposals on the question of adult education, and its acceptance is an indication of the recognition by the trade union movement of the value of education to the rank and file. A fortnight ago a joint meeting of the General Council of the Trades Union Congress and the Labour Party Executive unanimously passed a resolution protesting against the reduction of the annual universities grant from £1,500,000 to £1,200,000, and the educational economies proposed by the London County Council. It may be news to many people that either body had ever heard of the universities grant or had any interest in it. These examples are mentioned in order to show the emphasis which the Labour movement now places upon education.

The key notes of 1921, so far as Labour is concerned, are organisation and education. The attention which has been paid to both of these questions springs from a common purpose—the desire for the better utilisation of Labour's resources. The past year clearly demonstrates that the Labour movement has entered upon a new stage in its history. The days of the Combination Laws, to the Trade Unionists, have been won. Labour is now seeking power, and its methods are effective organisation and education.

RUSSIAN FINANCIAL POLICY.

(BY A CORRESPONDENT.)

It seems inevitable that during periods of social upheaval attention should be almost entirely focussed on the political theories surging in and around the struggle. It was so during the French Revolution and the many minor ones which marked the course of European 19th century history, and history in this respect, at least, has repeated itself in the world's way of looking at the Russian experiences during the last four years. Yet, after all, political theory is but the yeast, the ferment, which rises to the surface in times of intense internecine or international struggle; a real understanding and appreciation can only be gained by a study and knowledge of the deeper and more fundamental currents of economic and financial policy and intention. A mere statement of the fact that on January 1, 1921, the issue of Russian paper money had reached the meaningless total of 1,168,598 million roubles, whilst production of ordinary industrial commodities had dropped to an average of 15 per cent. of the pre-war total (figures of the Commissariat of Finances), is at once more dramatic and indicative of catastrophic change than all the political polemics which have littered the world during the last few years. In Russia the broad and easy path of inflation was entered soon after the commencement of the war in 1914. In August of that year the State Bank had issued 1,700 millions of roubles against which 1,604 millions of gold roubles were held. Free conversion was forbidden by decree before the end of the year, and on January 1, 1915, the note issue had risen to 3,215 million roubles. This total had risen to 5,737 million roubles a year later, and on January 1, 1917, the amount of paper money in circulation was 9,225 millions of roubles. At the moment of the February revolution the Kerensky Government found 9,975 millions of paper roubles in circulation, and, following the well-beaten path of all revolutionary Governments, kept itself by an intensified use of the printing press, so that when it fell in November of 1917, it left as an epitaph of its stormy existence a paper currency swollen to 18,917 million roubles. The Bolsheviks seized power, and in 1918 temporarily lost the Ukraine, Siberia, the Ural, Caucasus, and the Don, which partly accounts for the comparatively modest increase to 61,265 million roubles which had been reached by January 1 of 1919. The following 12 months showed a logarithmic advance to 225,016 million roubles, and the next year to January 1, 1921, to 1,168,598 million roubles.

Industry during the same period had declined through many reasons, not the least being the concentration on war purposes. The middle of 1920 saw the bottom touched, since when there has been a tendency, slow and fluctuating, to show an upward trend. At that time M. Larin in the *Economic Life*, a Russian daily paper, published a list of production in the main branches of the national industrial life. A selection from this list is interesting:—

	Yearly Production in Year 1913-1914.	Production First Half of 1920.	% to Half-year Production before the War.
	Poods.	Poods.	
Dye stuffs	3,000,000	33,000	2.2
Paper	13,500,000	1,030,000	15.2
Naphtha oil, Caucasus and Emba	600,000,000	100,000,000	33.0
Copper	1,330,000	less than 330,000	less than 50.0
Platinum	300,000	50,000	33.0
Gold (Siberia)	4,000	240,000	12.0
Iron ore (without Crimea)	530,000,000	32,000,000	12.0
Cast iron	267,000,000	30,000	2.4
Cotton-wool (raw)	(in 1915) 20,000,000	(in 1919) 4,000,000	20.0

NOTE.—A Russian pood = 36 En.

According to all precedents, this 1921 divergence between a decreasing productivity and an inflated currency should have led to the worthlessness of the paper money being generally recognised, it would cease to be accepted, and its use as a means of exchange necessarily ended. Such was the

fate of the French Assignats, yet in Russia, where the paper money issued is incomparably greater both in quantity and in relation to productivity than during the French upheaval, the worthless stuff is still accepted with nothing more disturbing to the Government than a fatalistic acceptance of the certainty of another bound in prices at any moment. The printing of the notes themselves raised problems of technical difficulties. The addition of noughts and the substitution of T's (thousands) for H's (hundreds) failed to keep pace with the increased demand and necessity of issue, so that whereas note manufacture was originally carried on only in Petrograd, the Government found it necessary in the spring of 1918 to open a new factory in Penza, and to supplement these by additional factories in Moscow and Perm. From a technical point of view, the later issues mark an advance on previous issues, those of 1920 bearing water print marks and an "orlov" net, which makes forgery difficult. In 1920 4,000 tons of rags were used, and a special department for their collection had to be inaugurated. On January 1, 1921, 13,616 labourers were employed in the manufacture of the notes. To account for the absorption of this unimaginable quantity is a difficult task. The only thinkable solution is mainly a psychological one. There are undoubtedly a few people in the country who have gathered the notes in the expectation of an appreciation in their value, but this is but an unimportant factor. The bulk of them have gone into the peasants' homes, thousands of whom could, with no exaggeration, paper the walls of their small wooden huts with their collections of notes. In spite of this fact, the Russian peasant, possibly with a less grace, still accepts them in exchange for his essential products. Such an attitude is unthinkable on the part of a more educated Western land-worker, but in Russia, the land of unending steppes and forests, the difference between paper money and wealth has not been realised with such vivid clearness as in the countries nearer to the Atlantic. In some few places, such as the Ukraine, the difference has been slowly realised through painful experience, and there old Tsarist and Kerensky notes have retained a high measure of value, not so much because they indicate a hope of the return of either of the two former régimes, but as a standard of measurement for exchange purposes.

In at least one other interesting example has Russian experience differed from the West. There has been no near or far relationship established between currency issues and prices. Until 1916 there was free interchange of goods and services on the market, yet prices, as judged by the cost of bread, lagged behind the issue of circulating money. The following table shows this clearly:—

	Actual Price of Bread. Kopecks.	In %.	Quantity of Currency in Circulation.	Issue of New Paper Money.
1914	2.8	100	100	100
1915	3½	125	183	183
1916	4½	160	235	244

From 1916 onwards the balance between town and country began to swing surely in favour of the country. Industrial products became increasingly scarce, but food remained none the less vital. In 1918 private banks and credit houses were "liquidated" by a series of Government decrees, and the velocity factor of the quantity theory was practically eliminated. Notes began to serve the purposes of only one exchange, and then to find a more or less permanent resting in the strong box of some peasant or peasant family. It became a question not of injecting more paper into a circulating system, but of pouring it like water into an arid, sandy desert; each issue was absorbed, leaving no trace of its absorption. "Wealth," said Bacon, "is like muck—of no use unless evenly spread." One would hardly call Russian paper money wealth. It is certainly of little use, and it is certainly not evenly spread. For the time being, at all events, the towns are in bondage to the country, and it is a bondage to escape from which will need more than the cleverness of a Portia. The unevenness is leading to some curious effects at the present moment in the country. Under the new economic policy the "speculators" of the towns are reaping a rich harvest through "arbitrage operations." The absence of easy communication has led to as many price levels in Russia as there are administrative districts. Rice is a good example. Before the

famine dictated the Government absorption of all surplus stocks rice in Turkestan was selling for 300 roubles per lb. In Moscow the price was 18,000. The restaurant-keepers of the latter place had established an intricate system of family relays, whereby each member was appointed a place in a chain stretching from the border country to the capital, and along which passed in one way the worthless paper of Moscow, and the other the precious rice from the South.

In view of the realised need of establishing trading relationships abroad, and a stabilised currency abroad, the financial policy of the Soviet Government has loomed to a position of vital importance. The success of their new economic policy will depend to a large degree on their success in establishing a stable currency. Their task is made doubly difficult by the fact that not only has their currency swollen to dropsied proportions, but their industrial policy will demand for some years hence an attention to the building up of plant and to repairing, rather than to its productive ability.

Business Notes.

Banca Italiana Di Sconto.—The apprehensions held in interested circles in London that the situation in which the Banca Italiana di Sconto had found itself would prove difficult of adjustment, were confirmed on Thursday by the news received that the bank had decided to apply to the Italian Government to take advantage of a Moratorium, provision for which exists under legislation devised to meet temporary embarrassment on the part of companies possessing a capital of 5,000,000 lire or over. The root of the trouble appears to lie in the loss of popular confidence owing to the publicity given to the large advances granted by the bank to the Ansaldo industrial group. Attempts to transfer to a syndicate of bankers part of the weight of these advances, had proved difficult of consummation, and there is no doubt that events were hastened by notices to withdraw deposits, many of which matured at the end of the year. It is too early yet to speak of the results of the steps taken, but hopes are held that eventually depositors will not suffer heavily, and it is believed that the trouble will not be allowed to spread to other banks.

Coal Output.—The production of coal from the mines of Great Britain continues to expand, and for the week ended December 17th the highest figure for 1921 was recorded—namely, 5,026,800 tons. The weekly output since the conclusion of the three months' stoppage has been as follows:—

1921.	Tons.	1921.	Tons.
July 9th	2,352,700	October 1st	4,118,200
July 16th	3,935,200	October 8th	4,287,900
July 23rd	4,334,200	October 15th	4,237,200
July 30th	4,592,500	October 22nd	4,236,600
August 6th	3,623,200	October 29th	4,210,200
August 13th	4,536,600	November 5th	4,182,400
August 20th	4,327,800	November 12th	4,372,500
August 27th	4,101,700	November 19th	4,646,300
September 3rd	4,141,900	November 26th	4,673,600
September 10th	3,939,800	December 3rd	4,693,300
September 17th	4,161,700	December 10th	4,855,100
September 24th	4,273,100	December 17th	5,026,800

In the week ended December 18, 1920, the production was 5,307,000 tons.

Rubber Problems.—The rubber industry appears to be plagued with unexpected difficulties in the way of securing harmony between the various interests. First, it is the interests abroad that are in conflict. Then it is the selling agency arrangements in which lack of agreement becomes manifest. Again, it is the Rubber Growers' Association and the Rubber Shareholders' Association which admit, through their various committees, that they are unable to settle upon a joint line of action. In practically every consideration of the rubber industry that has appeared in the pages of the *Economist* for the past five years this aspect of the case has been emphasised *ad nauseam*. The trouble has mainly centred upon the fact

that rubber is grown under such varying conditions that it is only natural for discord to break out when attempts are made to formulate a common policy. In Ceylon, for instance, charges are unusually low; in Java and Sumatra the soil is particularly fertile, and in other parts of the world labour and soil conditions differ considerably from those which rule in the countries mentioned. Some rubber-producing companies turn out their produce even to-day at 9d per lb, while others find it costs them twice as much to market their rubber. The Dutch rubber-producing interests have all along stood out against proposals to take a common line in connection with restriction of output and centralisation of selling. It was largely this action which prevented the recent scheme of the Rubber Growers' Association from coming to a successful head. The Rubber Shareholders' Association stepped into the limelight last October, and attracted no little attention from those who have been inclined to criticise the older body as torpid and unenterprising, though to anyone conversant with the difficulties against which the R.G.A. has had to struggle such charges carry no weight. The Rubber Shareholders' Association, however, being a younger body, entered the field with the determination of putting into force a vigorous campaign for benefiting the industry at large. The association applied to the Colonial Office for the right to add one of its representatives to the Committee which the Colonial Office formed, a little while ago, for examination of the conditions surrounding the rubber industry, although, in point of fact, the Colonial Office declined to accede to this request. After that, the R.S.A. approached the R.G.A. for a joint conference on the question of initiating an active propaganda campaign. The Rubber Growers' Association has already developed several of the suggestions now put forward—e.g., encouragement of the use of manufactured rubber goods, appeals to shareholders, development of suggestions, publicity for new uses of rubber, establishment of the Press service, &c. The proposals of the Rubber Shareholders' Association are somewhat similar, but go further. They aim at getting the rubber-producing companies to subscribe a fund of £25,000 for immediate propaganda purposes. This amount, admittedly, they state, is in the nature of a trial, which if successful would be followed by a much wider process on a more permanent basis. A decided cleavage between the two bodies is shown by the Rubber Shareholders' Association's statement that their Committee feel the attitude adopted by the R.G.A. shows the hopeless incapacity of the latter to grasp the essentials of the situation. The R.S.A. appeals for support towards the active and vigorous prosecution of its proposals, support which may be worth the rendering as it is, but which would be doubly useful if a path could be found, even at this late hour, that should bring the Rubber Growers' Association to join hands with its younger sister in exploring the avenues leading to the rubber industry's return to prosperity in the New Year.

Official Cotton Trade Statistics.—Since the Board of Trade in 1920 ceased the publication of the linear yardage figures of cotton piece goods exported from this country, and substituted square yardage returns, traders have been at the great disadvantage of being unable to compare current returns with those of past years. This has been a special difficulty, because the pre-war basis has been and remains the only valuable basis for comparisons. The Manchester Chamber of Commerce, writes our Man-

chester correspondent, has made urgent representations for the publication of both sets of figures, at any rate until such time as square yardage figures have been published for a period of years sufficient to provide all the comparisons required. These representations having met with no success, the Chamber went to considerable expense and trouble to secure the linear yardage figures for the first six months of this year. A table in due course was published, and the trade showed its appreciation in no uncertain way. The authorities have been impressed with the need for the figures, and although they still maintain their inability to include the linear yardage in the Board of Trade monthly returns, recent interviews between representatives of the Manchester Chamber of Commerce and the authorities in London indicate that the Government will endeavour to supply the necessary figures in 1922. The Chamber will publish them in the monthly record, and the arrangement is considered a very satisfactory settlement of the difficulty.

The Situation in Mexico.—A correspondent writes:—The chairman's speech at the annual meeting of the Mexican Railway Company last Wednesday confirms the indications in the company's report that trade is suffering from the prolonged delay in recognising President Obregon's Government. Non-recognition, as he pointed out, only strengthens the hands of the anti-foreign party, while recognition would set up a boom and a general improvement in trade and traffic. His views will be endorsed by all observers of Mexican conditions; but France and Great Britain are obviously awaiting the action of President Harding's Government, which apparently still demands that President Obregon shall sign a treaty guaranteeing American interests, and especially the oil companies, against the threat to their rights implied by the Carranzist Constitution. President Wilson's experience shows that no President of a Republic with a Constitution of the type of that of the United States can promise that its Congress will accept a Treaty; but the recent decisions of the Mexican Supreme Court should allay American fears. Recognition would, among a multitude of other and more obvious benefits, remove the landowners' fear of expropriation by enabling the Government to obtain the funds required for the preparation of waste land for small holders—a process which, if carried out judiciously, offers the best safeguard against future revolutions. But the United States Government, having done its best to secure world-peace at the Washington Conference, can hardly refrain much longer from a fresh effort to stabilise Mexican conditions.

Bulgaria's Difficulties.—The Bulgarian Government has shown its desire to meet its engagements as far as practicable by compounding with its foreign bondholders, and by delivering the livestock required by the Treaty of Neuilly as compensation to Greece, Roumania, and Jugo-Slavia for what was carried off by its troops during the war. It is about to begin delivery of the coal due under the Treaty to replace what was taken during the occupation of Serbia; but it has asked that the reparation payments may be postponed for three years more. The total amount of these, it will be remembered, is fixed by the Treaty at 2,250,000,000 in gold, payable half-yearly from July 1, 1920. The first two instalments represent interest at 2 per cent. per annum on the whole sum; the remainder is to be paid in 74 instalments, each including interest at 5 per cent. per annum, and so adjusted that the whole sum will be paid off by 1958. The payment is supervised by an inter-Allied triumvirate, representing Great Britain, Italy, and France, which makes recommendations to the Reparations Commission in Paris, and has power to advise postponement of payment or acceptance of commodities, concessions, securities, ships, or Bulgarian currency instead of gold. The three payments now due—the first two of which were postponed by the Inter-Allied Commission at the outset of its labours—amount together to about £5,266,000, which represents over three milliards of leva at the present rate of exchange. Budget deficits were chronic before the war, and the financial aid rendered by Germany appears to have consisted chiefly in

guaranteeing issues of Bulgarian currency. It is true that the peasants, who are four-fifths of the population, made large war profits through the rise in the price of food, and still more of tobacco; they paid off their mortgages and largely increased their savings bank deposits; but their wealth is widely distributed and mostly not liquid, and there is no means of getting at it rapidly. Payment in concessions must await concessionnaires; and the Sofia correspondent of the *Temps* suggests that strict financial supervision, coupled with guarantees for eventual payment and economic penalties for default, will stimulate the development of resources which will afford means of payment. The Inter-Allied Commission, according to the same authority, is in favour of postponement, and is devising a scheme. Insistence on prompt payment would obviously endanger the service of the external debt, which is largely held in France. And it may be noted that the same correspondent argues in another letter that, in view of the inevitable revision of the Treaty of Sévres, the allocation of Western Thrace to Greece may be subject to revision, and that Bulgarian agriculturists, who are cramped for room at home, could develop the district better than the Hellenes, who are commercial and maritime rather than agricultural. French interests are evidently in favour of lenient treatment for Bulgaria.

Roumania's Recovery.—A lengthy and encouraging account of the financial recovery of Roumania from the effects of the war, given by her Finance Minister, M. Titulesco, appeared in the *Temps* of December 7th. Briefly, the service of the pre-war loans has been resumed as regards English and French holders, who constitute the great majority; the currency of the new and the old territories has been unified, Austrian kroner and Russian rubles giving place to lei; the hand-to-mouth finance which followed the Armistice has been replaced by regular Budgets, of which the first was passed in July; new taxes, some of them already in operation, have been imposed on inherited property, on various kinds of income, and on total income, on war profits and business turnover, and on successions; preparations are being made for a new land tax, and the revenue shows a progressive increase. A settlement with the few Swiss and Italian holders of the pre-war loans is pending; the Belgian holders are standing out for better terms than the Government is prepared to give. (The French bondholders have accepted payment in francs.) The post-war Treasury bonds will be dealt with when the names and addresses of the holders are sent in to certain specified banks—in Great Britain to the Bank of Roumania. (They have since been formally invited to furnish full particulars before January 10th.) The ordinary Budget amounts roughly to 7.7 milliard lei; though prices of food are surprisingly low, the lei is worth only one-twelfth of its gold value, but as the pre-war Budget was some 600 million lei in gold, the present expenditure, with a greatly increased territory, is not much more. The extraordinary Budget of three milliards comprises expenditure in connection with the distribution of land (now complete), payment of the State debt to the National Bank, and expenditure on railways and schools, and all of this, in one form or another, tends to augment the national wealth. The reasons for the depreciation of the foreign exchange, the Minister declares, are psychological rather than economic. But steps have been taken to remove them by prohibiting, as from November 14th, all dealings in lei which cannot be shown to represent actual imports, exports, or services approved by the Commission on Exchange. M. Titulesco notes also that the ratio of the existing currency to the population is very much smaller than in France. It may be noted that, owing to the change of Ministry, he is about to become the representative of his country in Great Britain.

The Salvador Debt Settlement.—At the bondholders' adjourned meeting on Wednesday the chairman was fortunately able to announce that the obstacle to an arrangement had been removed. Three series of bonds are to be issued and secured on the gross Customs revenue: (a) To the amount of \$5,000,000, to be placed in the United States; (b) the equivalent in dollars of £951,388, the nominal amount of the existing external loans; (c) bonds

satisfying the claims of other creditors, to an amount bringing up that of the three series to \$16,000,000 at most. The American syndicate concerned, however, had unexpectedly added a demand for the right to issue another \$5,000,000 of "A" bonds whenever the gross Customs revenue for three years running should have reached twice the amount required for the service of all three series; but it has now withdrawn this demand, and the settlement goes through. Holders of external bonds are invited to deposit them with the London and South American Investment Trust, 62 Old Broad street, E.C. The settlement takes place before the inauguration of the new Federal Republic of Central America, and, though not conflicting with its constitution, might have encountered difficulties had it been undertaken at a later date. But the inauguration, fixed for February 1st, may possibly be interfered with by the recent revolution in Guatemala.

S. Smith and Sons.—The condition of many companies in the motor manufacturing industry is reflected in the latest accounts just published of S. Smith and Sons (Motor Accessories), Limited. For the twelve months ended July 31st a loss of £292,768 on the year's trading is recorded. Profits amounting to £59,444 were recorded for 1918-19, and to £98,338 for 1919-20. In the report published a year ago it was pointed out that the accounts covered "the whole of the transition period," and it was optimistically observed that "the company's works are now fully organised to manufacture the various products under the most favourable circumstances." The difficulties through which the motor industry was passing is illustrated by the statement then made that "latterly the company has been requested by its principal customers to hold up delivery owing to the demands made upon them having slackened," and though it was admitted that the company had been "suddenly called upon to finance large stocks without commensurate sales," it was confidently stated that "the contracts on hand, however, will enable these stocks to be realised on a profitable basis." The sequel is recorded in the present report. With the large volume of orders in hand, the company made "corresponding commitments for raw material." Stocks depreciated heavily in value, and the directors, with wisdom and courage, "have considered it advisable to write off the whole of the loss." In addition, the failure of several big motor manufacturing companies "involved the company in a considerable loss in respect of bad debts, which have also been written off." During the year an issue of £600,000 8½ per cent. first mortgage debentures has been authorised, of which £65,100 have been issued to shareholders and £520,000 deposited with the company's bankers as security for advances, which now total £570,149. Investments in subsidiary companies are stated at £337,747, but these yielded nothing. This is not a very pleasant picture, but with efficient management and the loyal support of shareholders it may be that the undertaking has passed through its worst difficulties.

Hungarian Property.—The Board of Trade announces that all persons or corporations within the United Kingdom who hold or have under their control or management any property, rights or interests, including shares, stocks, debentures, or other securities belonging to or held on account of Hungarian nationals, or who are indebted to any such persons in respect of pre-war transactions or contracts, are required at once to communicate the fact, in writing, giving full particulars, to the Administrator of Hungarian Property, Cornwall House, Stamford street, London, S.E. 1, unless a return of such property has already been made to the Public Trustee in accordance with the provisions of the Trading with the Enemy Acts, 1914-18. Failure to furnish such particulars renders the person in default liable on summary conviction to a fine of £100. This notice concerns the property in the United Kingdom of all Hungarians who are resident in the United Kingdom, as well as those resident abroad, irrespective of whether or not they were at any time interned, and is addressed to all Hungarians who have property, rights, and interests in the United Kingdom, as well as to other persons who hold any such property, rights, or interests on their behalf.

UNITED STATES.—STRONG INVESTMENT DEMAND—NEW YORK CITY BOND SALE—GOVERNMENT NEW SAVINGS CERTIFICATES — BUILDING ACTIVITY.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 16.

UNDER broad investment buying of both old and new issues, the bond market continues to display exceptional strength and activity. Railroad, industrial, and other corporate bonds and notes, as well as government and municipal securities, are being absorbed on an extensive scale, owing principally to the easier money situation and to the present light demand for fresh capital in trade and industry generally. Prices of all classes of bonds have recorded further advances within the past few days, United States Government War loans, especially, registering marked gains; the Liberty bonds and Victory notes reached new high records for this year, while the Victory 4½'s commanded the highest premium in their history. But the feature which attracted most attention, perhaps, was the highly successful sale this week of \$55,000,000 City of New York 4½ per cent. 50-year corporate stock to a banking syndicate headed by J. P. Morgan and Co. Other members of the syndicate are the Chase Securities Corporation, the First National Bank, the National City Company, the Guaranty Company, the Bankers' Trust Company, Brown Brothers and Company, and Harris, Forbes, and Company. The syndicate's bid was 103.407 for all or none. The premium is the highest ever received for this class of stock, and will bring the city approximately \$1,800,000 additional. The last previous sale of long-term bonds with which this week's offering is comparable was on July 12, 1917, when \$47,500,000 50-year 4½ per cent. bonds brought an average bid of only 100.6507. That was the last long-term issue, because during the war only short-term issues were put out in order not to interfere with the Government's flotations. In June, 1915, when the United States was not at war, a similar issue brought only 101.253, and in May, 1913, a like offering went for 100.137. The total of bids, 58 in number, exceeded \$218,000,000, or nearly four times the amount of the issue. The bonds are now being offered to the public at 104½, at which price they will yield investors slightly more than 4½ per cent.

The Government this week placed on sale at post offices and Federal Reserve banks a new issue of Treasury savings certificates in three denominations, maturing five years from date of issue (December 15, 1921), and bearing compound semi-annual interest at 4½ per cent. The certificates, which are known as thrift bonds, are issued on a discount basis, but are offered to the public at flat prices instead of at prices which increase from month to month; for the present the prices are \$20 for the \$25 certificate, \$80 for the \$100 certificate, and \$800 for the \$1,000 certificate. The bonds are redeemable before maturity upon presentation and surrender to the Treasury Department in Washington, and in that event will yield interest at the rate of about 3½ per cent. per annum, compounded semi-annually. The Government will discontinue the sale of 25-cent and \$5 war-saving stamps after this month, but for a time the \$1 stamps will continue on

sale as a convenience to those who wish to accumulate the purchase price of the new certificates by acquiring such stamps, which are non-interest bearing, but are redeemable on demand.

Present indications point to further activity and possibly still higher prices in the bond market. A great deal of financing remains to be done. The early part of 1922 will probably be marked by new issues of all sorts on a large scale. Many first-class offerings are scheduled to be made within the next month or two, including, it is understood, bonds of several foreign governments as well as domestic, municipal, and corporate issues. According to precedent, money should work easier after the turn of the year; any downward tendency is expected to stimulate purchases of bonds, as it has in the last month or two. It remains to be seen, however, to what extent the usual January re-investment demand may have been anticipated or discounted by the heavy buying in recent weeks at rising prices.

Reports of building activity throughout the country continue very favourable. Reports to Bradstreet's from 157 leading cities of the United States show that the total expenditure for which permits were issued in November amounted to \$142,512,634. While that total represents a decrease of about 15 per cent. from that reported by the same cities for October (which was the second best month in the annals of American building), it is 95.4 per cent. larger than in November a year ago. In fact, the returns indicate far less than the usual slackening in a late autumn month, and show that a big business in actual construction is being prepared for next year, following a high record business in the year now closing.

FRANCE.—BUDGET AND DEBT SERVICE—LABOUR DEVELOPMENTS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 27.

THE Senate is making remarkably good progress with the Budget, and there is now every hope that it will go back to the Chamber in time to be passed into law before the close of the year. So far, with the exception of making a somewhat heavy cut in the Army Estimates, and again refusing to approve the credits asked for in connection with the maintenance of the French Embassy to the Vatican—which may lead to delay in the Lower House—the Senate has made little modification in the Bill as it left the Chamber.

The most striking feature of the discussion has been the report presented on the national finances by M. Henry Chéron, the *rapporteur général* for the Budget, who has sounded therein a note of alarm that has attracted wide attention. He points out that the French national debt, including the external debt, which amounted to some 30,000 odd millions in 1914, rose to 171,000 million francs by the end of 1918, and is now, if the external debt be taken at the current rate of exchange, over 328,000 million francs. This enormous increase in three years, however, is largely due to the high rate of exchange. As a matter of fact, the year 1919 resulted in an additional debt charge of over 45,000,000,000, 1920 in another 35,000,000,000, and the present year 24,000,000,000. From 1922 to 1929, M. Chéron estimates, the cost of re-constituting the devastated regions will require an additional expenditure of 66,000,000,000, the payment of pensions another 28,000,000,000, the liquidation of the various "special accounts" another 4,000,000,000. This, with a further 20,000,000,000 or more that will be required by the Treasury to meet various services, will bring the total indebtedness of the country up to 467,000,000,000, without including the interest on the foreign debt of France, or the special expenditure that, as M. Chéron expresses it, "will be indispensable for bringing up to date the national roads, bridges, defence, &c." Moreover, supplementary credits and annual budgetary deficits, during the coming seven years, may be estimated at 80,000,000,000, from which must be deducted debts owing to France by other nations, say 14,000,000,000, and the produce from reparation payments, estimated at 45,000,000,000. This would leave a net additional sum

of 21,000,000,000 to be added to the total of 446,000,000,000 already arrived at, making a grand total of 467,000,000,000.

Assuming, for reasons which it is unnecessary to go into here, that the French national debt amounts, at the end of 1929 to 427,000,000,000, M. Chéron points out that the annual charge to be met will amount (at 5 per cent.) to 21,350,000,000 a year, "which is equivalent to saying that almost the whole of our Budget resources will be absorbed in meeting the interest on the public debt, without leaving anything to pay our public officials or to ensure any of the public services. There lies the peril: the possibility that the whole of our budgetary resources may be absorbed in paying the interest on our public debt." In 1919, he points out, the Treasury had to pay out 62,000,000,000, in 1920 58,000,000,000, in 1921 53,000,000,000, and in 1922 it will have to pay 41,860,000,000 on this account. He expresses the opinion that the annual budgetary deficit will increase in future to such an extent that it will be necessary to procure in some way 7,000,000,000 of new resources from fresh and permanent taxation.

Supposing that these new milliards be obtained from the taxpayer, however, and Germany is compelled to carry out her obligations—two very substantial assumptions, it is admitted—M. Chéron has faith that from 1931 onwards the situation will be greatly improved. From 1931 it will be possible to convert the 1915, 1916, and 1920 issues of Rentes, which will enable substantial economies to be effected. He insists, however, that in the meantime it is absolutely imperative that a balance between income and expenditure should be brought about every year, and that any kind of deficit should be rigidly suppressed.

The past week has witnessed what appears to be the last act in the long-drawn-out process of cleansing French trades unionism of Bolshevism. After the disastrous general strikes of last year, it will be remembered, the leading officials of the *Confédération Générale du Travail*, the supreme body in French organised labour, were placed on their trial on charges of having surpassed their legal rights and taken on the complexion of a political revolutionary body. The officers were found guilty, and an order was made for the C.G.T. to be dissolved. The Government, however, prudently held this sentence in suspension, in order to give the organisation an opportunity to place its house in order by purging itself of the revolutionary element. This the C.G.T. has been making a conscientious effort to do. Rules were adopted rendering liable to expulsion any union or federation of unions that proclaimed its adhesion to the Moscow International, and under this rule the extremist unions among the railwaymen's federation, who were the real cause of the last general strikes, were some time ago actually expelled. In spite of this example, many of the extremists in other trades (chiefly in the Paris district) have for some months past been fomenting a movement to seize control of the C.G.T. in order to force French labour to proclaim itself openly Communist. In defiance of the new rule referred to above, the leaders of these extremist unions recently convoked an independent congress, in open defiance of the C.G.T., with the avowed intention of formally giving in their adhesion to the Moscow or Red International. This congress actually opened a day or two ago. The governing body of the C.G.T., once this attempt at open rebellion had been consummated, took immediate action, and it was announced to-day that all unions that participated in the Communist Congress will be expelled as from January 1st. The decision is all the more impressive in view of the fact that a few days before the congress was due to meet telegrams were sent by the Moscow International to the secretary of the Amsterdam International (to which both French and British labour is affiliated), pointing out that such a gathering could lead only to a split in the ranks of the French proletariat, and urging that the congress should at any cost be postponed.

A tendency towards recovery on the Bourse that was noticeable at the beginning of December has not been sustained, though this week, as a result of favourable political news from London, there was another slight optimistic tendency. It was, however, of short duration, the reason being that buyers are remaining shy. French 3 per cents. are at 54.75, and Foreign Government stocks

have, as usual, reacted in sympathy with the exchange. Banks have been irregular, Union Parisienne having dropped from 745 to 710, and *Crédit Lyonnais* from 1,427 to 1,415. *Banque de Paris* is rather stronger at 215, after 195, while *Crédit Mobilier* remains firm at 418. Railway stock has suffered from over-liquidation. P.L.M. is back at 806, as against 835, and Nord at 910, as against 920, while Orléans remains firm at 864. Nord-Sud has improved from 168 to between 185 and 180. Shipping has declined, *Chargeurs Réunis* dropping from 490 to 475, *Transatlantique* from 234 to 230, and *Messageries* from 209 to 205. Electrical undertakings have been calm, Thomson fluctuating from 770 to 760, while other electrical undertakings have either remained unchanged or have been weaker. Metallurgical enterprises have also been irregular; thus Longwy has advanced from 1,060 to 1,070, and Micheville from 805 to 950; *Acieries de la Marine* have dropped from 1,020 to 1,006, and St Nazaire from 785 to 766.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

DEBTOR.	Dec. 22, 1921.	Dec. 15, 1921.	Dec. 26, 1913.

ITALY.—THE DEBT CHARGE—BANKING DEPOSITS—STOCK MARKET DEPRESSION.

(FROM OUR CORRESPONDENT.)

TURIN, December 24.

FROM the vast mine of the appendices to the Budget speech, which have been circulated only to-day, it is possible to add various interesting facts to my last letter. The figures of the annual charge on the public debt are as follows:—

	(Millions of Lire.)	1913-14.	1920-21.	1922-23.
Perpetual debt.....	359.6	2,097.9	2,082.5	..
Redeemable debt.....	89.3	157.4	155.3	..
3, 5, and 7 years' bonds.....	38.3	261.9	265.0	..
Other long term bonds.....	31.3	25.8	24.5	..
Exchequer bills.....	10.0	575.0	1,500.0	..
Current account.....	2.1	71.4	77.4	..
Internal debt.....	530.8	3,189.4	4,098.7	..
External debt.....	..	972.0	1,100.0	..
Total.....	530.8	4,161.4	5,198.7	..

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE,
Gresham House, Old Broad Street,
London, E.C.2

The sum inscribed under the head of external debt is only figurative, as the interest is accumulating from year to year on the debts towards Great Britain and United States. If these debts were to be repaid, their repayment would absorb a great deal more in paper money, as the 972 millions for 1920-1921 and 1,100 millions for 1922-1923 are in gold lire.

Deposits in banks (issue and ordinary) and in savings banks are increasing, as the following figures show:—

	End of June.	1914.	1915.	1919.	1921.
Banks of issue.....	100.0	649.6	774.5	996.8	..
Ordinary banks.....	1,044.6	664.8	3,447.6	5,612.5	..
Popular and co-operative banks.....	1,211.3	1,010.8	2,661.2	3,665.7	..
Savings banks (ordinary).....	2,800.3	2,552.4	5,589.2	7,475.8	..
Postal savings banks.....	2,121.3	1,861.7	4,225.7	7,869.4	..
Pawn banks (Monti di Pietà).....	214.5	220.0	457.4	553.7	..
Rural banks.....	103.7	96.9	282.0	444.4	..
	7,595.4	7,056.2	17,435.5	26,618.3	..

The middle of 1915 was the moment of maximum panic and of reduced deposits. But thereafter deposits went on increasing year after year. It may, however, be observed that deposits have only increased about 3½ times, as compared with the pre-war figure, whereas the purchasing power of the lira is only one-fifth of what it was before the war. If deposits had multiplied in the same ratio as the lira depreciated, the sum total of deposits should have increased to about 38 billion lire, instead of to 26. But we have to reflect that, upon a total sum of 26.6 billion lire of deposits at June 30, 1921, upward of 21.7 billions were savings deposits and 4.8 current accounts. In Italy only these last are truly banking deposits of the trading and financial classes. The savings deposits are derived from the middle, employee, and working classes, and are apt to reflect the pinch of high cost of living. As this cost has risen from 100 in 1913 to about 500 in 1921, it is interesting to find that these classes have maintained a sufficient margin for saving. It is also interesting to

observe that the greater volume of deposits is not accumulated in the ordinary or issue banks, but in co-operative or public banks. Only 6,609 million lire are deposited with the issue and ordinary banks, 20 billions being under the patronage of the co-operative and public banks. This is an element of stability in the financial situation of Italy. In the last two weeks we have heard much of disastrous results of some giant companies, such as the well-known Ansaldo and Ilva iron and steel concerns. Shareholders' meetings were summoned to hear a story of capital wholly or almost wholly dissipated. Share quotations dwindled, to the despair of unfortunate holders. Much loose talk was heard about the consequences of the winding-up of concerns of such magnitude on the creditor banks; and a consortium was formed, under the Bank of Italy's guidance, for guaranteeing the Banca Italiana di Sconto,* which, however solid, was known to the public as the Ansaldo's patron, against the peril of a rush by depositors. Amid all these rumours, the foundations of Italian credit remain unshaken, as depositors of popular and savings banks are sure that their savings are invested by their old-fashioned institutions in acquiring bills of the surest description and moderate amount, and securities gradually written down to current prices. The stock exchanges are, however, closing the year in a very pessimistic temper, as they are feeling acutely the influence of the bad news relating to Ansaldo and Ilva companies. The public which has bought these iron and steel shares at 300 lire and upward and sees them to-day quoted at 45 and 16 lire, with a downward tendency, is shy of the share market.

AUSTRALIA.—BANK FIGURES—TRADE OUTLOOK.

(FROM OUR CORRESPONDENT.)

MELBOURNE, November 21.

THE quarterly average returns to September 30th of bank liabilities and assets within Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) show deposits and advances (including Government securities) comparing with the previous quarter and a year previously as follows:—

	September Quarter, 1920.	June Quarter, 1921.	September Quarter, 1921.
Deposits—			
Australia	213,548,008 ..	218,936,020 ..	212,896,899
New Zealand	60,659,079 ..	53,699,629 ..	47,101,629
Total	274,207,087 ..	272,635,649 ..	259,998,528
Advances—			
Australia	185,477,816 ..	192,742,752 ..	186,934,894
New Zealand	46,117,399 ..	61,112,085 ..	54,234,076
Total	231,595,215 ..	253,854,837 ..	241,168,970
Cash items—			
Coin and bullion (Australia and N.Z.)	27,465,456 ..	27,435,031 ..	27,559,664
Australian notes	30,073,803 ..	29,564,235 ..	27,955,160
Legal tender notes of other banks (N. Z. only) ..	830,693 ..	971,180 ..	643,773
Total cash	58,369,952 ..	57,970,446 ..	56,158,597

Deposits show a decrease of £14,208,559 as compared with a year ago, this being the net result of a decrease of £18,406,088 in current accounts and an increase of £4,197,529 in deposits bearing interest. Advances show an increase of £9,573,755 on the year, but a decrease of £12,685,867 on the quarter. The latter movement, which is unusual for the September quarter, when the country districts usually look to the banks for accommodation, is partly due to the fact that the cash received on account of wool and wheat payments in Australia in July has reduced the borrowing requirements of the country, and partly to the reduction of trading overdrafts, which had assumed unusual proportions earlier in the year in consequence of heavy importations. As progress has been made in realising stocks, the importers have been able to reduce their liabilities to the banks, both in Australia and New Zealand, to an extent which would be more fully displayed if absolute figures at fixed dates were available, instead of averages for the quarter.

* Further developments since our correspondent wrote are discussed in a "Business Note" in this issue.

The principal figures (within Australia) of the Commonwealth Bank of Australia, not included in the table above, compare as follows:—

	September Quarter, 1920.	June Quarter, 1921.	September Quarter, 1921.
Deposits—			
Not bearing interest	15,686,266 ..	15,966,669 ..	16,588,230
Bearing interest	12,452,446 ..	10,672,210 ..	12,486,109
Total	28,138,712 ..	26,638,879 ..	29,074,339
Savings bank deposits	18,305,601 ..	34,324,917 ..	35,687,445
Discounts, loans, &c.	12,586,695 ..	14,896,362 ..	13,678,539
Govt. and municipal securities ..	18,092,776 ..	33,640,763 ..	33,575,297
Coin and bullion	1,855,879 ..	1,857,556 ..	1,718,611
Australian notes	3,776,789 ..	4,922,840 ..	6,271,218

The increases in the Savings Bank deposits and in the Government and municipal securities held by the Commonwealth Bank of Australia as compared with a year ago are largely due to the taking over of the Queensland Government Savings Bank.

Adding to the coin and bullion held by the ordinary banks, £27,559,664, that held by the Commonwealth Bank in its banking department, £1,718,611, and the approximate average of the gold reserve held against the Australian note issue, £23,700,000, the total stocks of coin and bullion in Australia and New Zealand amount to £52,978,275, against £52,721,335 for the September quarter 1920, and £45,826,337 for the June quarter 1914.

After the decline in imports for some months past, there are indications that importers are launching out again in ordering. At the lower prices now ruling this will not mean such large values as a year or so ago, but against this the outlook is for a reduced amount of Australian import trade, owing to the much lower prices now obtainable for wheat, butter, and frozen meat, and the unprofitable state of the mining industry, which does not encourage operations. From the point of view of exchange, the various borrowings in London have helped to relieve the strain experienced some time ago, but it is felt in financial circles that a close regulation of the volume of imports is still required.

POLAND.—FINANCIAL REFORM—NEW OIL DEPOSITS—SUGAR PRODUCTION.

(FROM OUR CORRESPONDENT.)

WARSAW, December 20.

WHEN at the beginning of October Mr Michalski became Minister of Finance he hoped that in a few weeks he would be able to collect a capital levy of 100 milliards. His expectations in this respect were too optimistic. Only after a struggle lasting two and a-half months have the Financial Reform and Capital Levy Bills passed through the Diet. The fundamental principles of Mr Michalski's programme (see *Economist*, October 15th, p. 582) are embodied in the two Acts, and the modifications introduced by the Diet are only of a secondary importance. While Mr Michalski was in favour of a uniform rate of taxation for all kinds of rural property, the majority of the Sejm introduced a progressive scale for great estates. The Financial Reform Bill has been passed by a majority of only eight, 140 members voting for and 132 against it. The powers conferred on the Minister of Finance are very wide. Neither the Cabinet nor the Diet can vote new credits without the consent of the Minister. He has also an absolute financial control over all branches of administration. It may be expected that the new Acts will enable Mr Michalski to stop the progress of inflation and to bring the revenues and expenditure of the country into equilibrium. Some small step has been already accomplished in this direction. In November, for the first time, the returns of the Polish National Bank reveal a less rapid progress of Government indebtedness than during the previous months. According to the estimates of the Financial Committee of the Diet, the capital levy will yield 80 milliards; 60 or 70 milliards will be contributed by agriculture, the rest by industry and trade and by the urban population. If these expectations prove true, the Government will be able to cover its expenditure for three or four months in the beginning of next year without resorting to the use of the printing press.

Little has hitherto been known of the extent of the

Galician oil deposits. It was only after the foundation of the new Polish State that a systematic survey was organised for ascertaining the mineral wealth of Galicia. A special geological department as a branch of the Petroleum Board has been founded and charged with this task. The results of this survey have now been made public. In Galicia can be distinguished an outer and an inner zone of oil deposits. Hitherto the inner zone has been mainly exploited, while the outer zone is still, as far as oil production is concerned, virgin land. In this zone the existence of 42 saddles stretching along a line of 570 kilometres has now been ascertained. Of this area only 47 kilometres are exploited. According to the estimates of Dr Nowak, Director of the Geological Department of the Petroleum Board, 7,500 new shafts could be easily constructed in Galicia. They could yield 600,000 tons a year. The quantity of the Galician oil reserves is estimated at 37,500,000 tons, so that they would not reach exhaustion for years. Though Poland possesses very rich unexhausted deposits, the production is actually steadily declining, as shown by the figures below:—

PRODUCTION OF CRUDE OIL.			
Wagons of 10 Metric Tons.			
1909	205,315	1915	73,009
1910	176,142	1916	89,870
1911	145,303	1917	84,973
1912	118,650	1918	82,294
1913	107,104	1919	83,064
1914	87,802	1920	76,569

In 1921 will probably be seen a further decline. It is certain that as the inner zone is exhausted, the centre of the Galician oil production will necessarily be shifted to the still virgin outer zone.

The outlook for this year's sugar season is very favourable. The area under sugar-beet amounted to 87,528 hectares, which is only 50.5 per cent. of the average area under cultivation during the last three pre-war years, but in comparison with 1920 there is an increase of 15.5 per cent. for Congress Poland and for the former Austrian Poland, and of 25 per cent. for Posmania and Western Prussia. The year's crop is estimated at 2,000,000 metric centales, or 37.2 per cent. of the pre-war production. According to the estimates of the Ministry of Finance, 400,000 metric centales will be available for export. It is expected that the sugar industry will yield to the State a revenue of 30 milliards.

SWITZERLAND.—BUDGET DEFICITS—RAILWAYS.

(FROM OUR CORRESPONDENT.)

GENEVA, December 21.

THE accumulated deficits of the Swiss Federal Treasury since 1913 had reached 1,173 million of francs by the end of 1920, of which 532.2 millions were due to the mobilisation during the war. Originally the items of military character amounted to 1,253.9 million francs, but about 720 millions have been redeemed since by the means of extraordinary taxation. The next big instalment of redemption will take place in 1922, and will probably yield 400 millions. A further important reason for the deficit is the State monopoly for the import of foodstuffs, which was originally created for the purpose of cheapening imported foodstuffs, but has now become one of the chief instruments of artificially increasing the cost of living in favour of the peasants' league. These deficits on State commerce amount to a total of 275.25 millions. Imported foodstuffs are now being sold by the State at very much over the world market prices, but there is no likelihood that these commercial services will at any time yield any profit to the Treasury. Besides these excesses of expenses over income in the extraordinary Budget, the ordinary Budget of the Confederation has closed regularly since 1913 with a deficit. This deficit amounted in 1920 to 99.6 millions, in 1919 to 95.7 millions, in the average of the five years of war to 35 millions, and in 1913 to only 5.3 millions. The estimate of the deficit for the year 1921, excluding the 80 million francs for unemployment assistance, exceeds 100 million francs.

Furthermore, the Federal Treasury is responsible for the accumulated deficits of the Swiss Federal Railways,

which at the end of 1920 had reached 92.7 millions, and was estimated for 1921 at 48.9 millions, and for 1922 at 30.3 millions. No wonder, therefore, that many people are demanding some form of denationalisation of the Federal Railways. Denationalisation is, of course, an impossibility, owing to the numerous local lines constructed without any economic necessity, and only for the purpose of pleasing the electorate. There is no doubt that, in spite of very high wages (owing to the high value of the currency and a superfluous staff—the individual man is not better paid than in the private railway companies of the country) the main lines of the Federal system are still well paying, but their excess of profit is not sufficient to cover the deficits of the many local lines, which ought to be managed in a different way, but would certainly not yield any appreciable profit even under the most skilful commercial management.

REVIEWS.

Economie Industrielle. Par Wilhelm Roscher. 8th Edition, revue et augmentée par Wilhelm Stieda. Traduit par M. P. Halluin. (Bibliothèque Internationale d'Economie Politique). Tome II. Paris: Marcel Giard. 1921.

PROFESSOR WILHELM ROSCHER, of Leipzig University, who died in 1894, was among the best-known of German "historical" economists, and his great work, like those of other leaders of German learning, has now become a classic. This volume represents the last half of the third volume of the standard German edition, originally published between 1899 and 1906, but brought up by Prof. Stieda to the year before the war. It deals with the history of industry in Europe from the break-up of the old organisation (which survived longer in Germany than elsewhere), with State regulation of labour conditions and of industry, cartels and trusts; with co-operative societies, trade unions (including the non-militant kinds peculiar to Germany and France); and goes on to technical education, international exhibitions, crises due to over-production, and, finally, the history and regulation of mining. The erudition is immense and various; industrial crises, for example, are illustrated from seventeenth-century Holland and fourteenth-century Florence, and the mining history begins with the later Roman Empire; but the particulars given are mainly about Germany, and the treatment of trusts and of English labour legislation and trade union history is by no means adequate or properly brought up to date. But in spite of these lacunæ, the work is of high value to all students of economic history.

"L'Evolution Actuelle du Bolshevisme Russe." Par Simon Zagorsky. Préface de M. Emile Vandervelde. (Paris) J. Povolosky et Cie. 1921.

EARLY this year Professor Zagorsky set forth the failure of Bolshevik economics; now he describes very fully, and from Bolshevik evidence, the acknowledgment of failure implied in the determination to revert to "capitalism." Briefly, the Soviet system of distribution has collapsed through lack of goods; a new bourgeoisie has arisen; on nineteen-twentieths of the agricultural land there are peasant proprietors, with very unequal holdings, and a firm intention to stick to them; and there are small master craftsmen in the villages and towns; the "col-

lectivist" Government farms have failed through grotesque mismanagement; freedom of exchange has been legalised again; production is encouraged in the factories by making wages dependent on output, with piece-work and overtime; factories are to be leased to foreign capitalists, who will pay partly in imported goods; taxes are to be paid in money; competition is officially favoured as stimulating the workers, and the hoarded paper money received by the peasants for illicitly sold goods is to be recovered for the State by setting up savings banks and paying interest on deposits! The famine has incidentally increased the inequality among the peasants, and has supervened on a long and artificial dearth. M. Vandervelde's Preface maintains that Socialism can only be realised at an advanced stage of economic development, and can nowhere be lasting if forcibly imposed by a small minority, as in Russia.

"Industrial Government." By J. R. Commons and others. (New York) The Macmillan Company. 1921.

NINE representatives of the University of Wisconsin, financed for the most part by four Wisconsin manufacturers, set out in 1919 to investigate some of the more progressive types of industrial government in the United States. In this volume they describe 18 of the establishments visited (including some as well known as the Ford Motor Works), and summarise the inferences on the subject of industrial relations which they draw from their experience. Specially interesting to the English reader is the account of the organisation at Demuth's, with its miniature copy of the United States Constitution, and the arrangements at Filene's Store (Boston), where the Board of Arbitration, composed entirely of elected representatives of the employees, has the final decision upon all discharges, and can even retain employees against the wishes of the management. The authors are not revolutionary in their conclusions. "Labour, as such, in control of industry, breaks down on discipline, on credit, on depreciation accounts, on planning for the future, on finding managers who can shoulder responsibility..... What we find that labour wants, as a class, is wages, hours, and security without financial responsibility, but with power to command respect." The book tends to a somewhat ecstatic style, and does not leave the impression of a very scientific and unprejudiced investigation.

"National Welfare and National Decay." By Prof. W. McDougall, F.R.S. Methuen. 1921. 6s.

THE theme of this volume is that men and races not being all alike or all equal, it is of the utmost importance that populations should be replenished from the best and strongest stocks. In any population, mental and moral, as well as physical, qualities are distributed according to a normal "frequency curve," a relatively small number having any given quality in an extremely high or in an extremely low degree, the great majority being of moderate stature, moderate intelligence, and moderate character. As far as intelligence goes, Professor McDougall adduces evidence (which we do not think is conclusive) to show that the distribution of intelligence roughly coincides with the distribution of social status, and that consequently the low birth-rate of the middle and upper classes is quite disastrous. As between race and race, he sees certain clearly marked distinctions, the Negro, for instance, having less innate capacity for education than the white population of the United States. In Europe he distinguishes two principal types, the Nordic, with a tendency to fair hair, curiosity, neurasthenia, divorce, and suicide; and the Mediterranean, dark-haired, and prone to hysteria and violence, but not to self-destruction. The book is well written, and should command much attention.

"Industrial Fatigue and Efficiency." By H. M. Vernon, M.A., M.D. Routledge, 1921. 12s 6d.

DR VERNON, Investigator to the Industrial Fatigue Research Board, aims in this volume at giving a "fairly complete account of our present-day knowledge concerning Industrial Fatigue and its influence on Efficiency." The book is packed with information, since every conclusion is supported by reference to a number of actual work-

shop investigations. For the most part it is concerned with the effects of various conditions of work upon output. We learn (and experience shows that in this we need much telling) that the "optimum hours" of work cannot be determined by a priori argument, but are matter for careful investigation in each industry; that overtime is nearly always objectionable, even when it is not excessive, because it upsets the routine adjustment of effort to work, and that the way to obtain increased output is not simply to lengthen the hours worked. Dr Vernon also deals with the thorny subject of conscious restriction of output, and explains how the existence of this may be detected by a study of "output curves." If these do not conform to the "laws of probability," there is ground for supposing that the workers have some agreement to keep their output within a certain limit. The later part of the book deals with lost time, sickness, mortality and accidents, and contains a wealth of valuable data bearing on the relation of fatigue to these misfortunes.

In a review of "Business Costs," by Mr De Witt Carl Eggleston and Mr F. B. Robinson, which appeared on page 1069 in our issue of December 17th, the price of the book should have read as 35s net, and not 18s net as stated.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. January 11. ACCOUNT. January 12.

Three days make a short week's work, even for the Stock Exchange, and with the same amount of holidays ahead for the New Year, it is natural that markets should offer few features of interest. The Stock Exchange reassembled after Christmas to find a slender accumulation of orders, most of which appeared to consist of further investment in the gilt-edged groups. Speculative purchases of Russians have been taking place this week, and another feature was provided by a spurt in Argentine railway stocks. The mining markets have been enlivened by a recovery in Russo-Asiatics, but in South Africans, business sunk to the minimum.

The War Loan rose abruptly until it touched 92½, while advances in the Funding Loan and in Victory Bonds imparted an air of robust strength to the market as a whole. Participants in the improvements which have occurred this week are to be found in the lists for colonial and corporation stocks.

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business. Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

Home Railway debenture, preference, guaranteed and rent-charge securities have made fresh upward strides. The premium on the new issue of India 5½ per cent. stock dwindled to a small discount on the news received from the country, but the reception of the Prince of Wales in Calcutta and elsewhere, has served to assuage nervousness. Various new issues are known to be coming early in the New Year.

Russian bonds, Government, railway and municipal, have risen several points on the opening of the Conference at Cannes. It is expected that something may yet be done to re-establish trade with Russia, more particularly as the Russo-Asiatic Consolidated has been approached by the Soviet Government in placable mood, with the request that negotiations may be restarted. Part of the buying of Russians emanates from Paris. French bonds are themselves better, and Germans pursued a fairly steady path. Norwegian Sixes at 95½ are now 7½ points above their issue price; most Norwegian, Danish and similar securities have steadily advanced. Finland 4½ per cents. are five points higher than they were a week ago. The South American group is quiet, and there is nothing much going on either in Chinese or Japanese.

Apart from the strength of prior-charge stocks already mentioned, the Home Railway market is very placid. Rises in Undergrounds have been checked a trifle, and until some of the early dividends appear, it is not anticipated that Home Railway Ordinary stocks will show marked signs of life. Grand Trunks continue to harden. Mexican Railways are dullish by reason of the meeting of the company this week. The chairman painted the present position none too brightly, but spoke more hopefully of the outlook for the future. Argentine Railway stocks spurted sharply, in consequence of the better prospects that are opening in the Argentine Republic for trade and industry. The traffics begin to look less discouraging. It is thought that the Argentine railway industry may have touched something like the lowest point of its depression. The market is comparatively bare of stock, so that it took but little demand to bring about a smart rally in quotations. Brazilians are also better, and in this department, as in that for Home Railway stocks, the pre-ordinary issues are difficult to obtain.

Nothing of fresh interest has transpired amongst rubber shares so far as the market is concerned, and oil shares are unusually quiet, the main feature of interest being recoveries in some of the Russian companies' shares. The Shipping market is firm under the leadership of the higher-priced stocks. Scarcely a charge has occurred amongst banks. Insurance shares show a few rises. The cable group has further recovered, while the wireless shares mark time. Levers are better, on the announcement of a dividend on the ordinary shares. In Dunlops, the interest centres upon the expected publication of the report, now fully due. Stores shares are holding their prices, and amongst textiles price-movements are insignificant. The Iron and Steel market attracts no particular attention, and the brewery section is equally uninteresting.

With the price of gold showing no recovery, Kaffirs are naturally quiescent, this month's batch of dividends being regarded as disappointing on the whole, though some of the announcements are exceptionally good. The chartered company's report caused a slight stiffening of the price in advance of the document's appearance. Russo-Asiatics spurted, on the invitation of the Soviet Government, already referred to above, and Esperanzas, with Colombian mining shares, gave a little exhibition of activity upon buying that was largely of professional character. Broken Hills are dull, in consequence of the Proprietary Company's announcement that part of its iron and steel works will have to be closed owing to labour conditions. The various tin shares, Malayan, Cornish, and West African, can scarcely be said to have developed at all.

Stock Exchange shares, now £25 paid, finished the year at 87, while Nominations are quoted about twenty pounds. The number of members who have made a living, outside those connected with the investment markets, is admittedly small.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

5½ per Cent. Treasury Bonds.—Issued at £99 per cent. and repayable at par on May 15, 1930. Interest payable half-yearly on May 15th and November 15th. Full particulars of this issue will be found in the *Economist* for December 3rd (see page 986).

New Zealand—New Plymouth Harbour Board 6½ per Cent. Loan.—Issue of £128,000 debentures, being part of an authorised issue of £300,000. Principal will be repayable at par on February 1, 1932, at the London office of the Bank of New Zealand. Under authorisation by the New Plymouth Harbour Board, the Bank of New Zealand is negotiating this sale of debentures amounting to £128,000. Subject to a loan of £300,000, "the principal and interest of these debentures will be secured by the rents, profits, and dues chargeable and receivable by the Board, and by a special rate over an area valued in 1913 at £8,961,746, which, if required, would yield an annual income of £25,050." The ordinary revenue of the Board for the past five years averaged £24,645, and for the year 1920 amounted to £35,284. The indebtedness of the Board amounts to £300,000, represented by debentures maturing in 1939, having the service of a sinking fund of 1 per cent. per annum, in respect of which £50,000 has already been accumulated. The loan is free from all New Zealand taxes, unless held by person domiciled in the Dominion of New Zealand. This information is extracted from an announcement in the Press to comply with Stock Exchange regulations. At a reasonably attractive yield these debentures would be a fairly good investment.

Parent Tyre Company, Limited.—The directors of the Parent Tyre Company announce that 281,250 of the 500,000 shares recently created are now offered at the price of 27s 6d per £1 deferred share to ordinary and deferred shareholders. In the event of the issue being over-subscribed, a minimum allotment will be made to the ordinary and deferred shareholders of one share for each four shares held. Subject to this offer to the ordinary and deferred shareholders, the shares are offered to the holders of preference shares on the same conditions. It will be interesting to learn the results of this offer. On Wednesday business was done in the existing £1 deferred shares at 26s 6d ex rights. It would, therefore, appear that holders of the shares have faith in the future of the undertaking.

The San Paulo Mortgage and Finance Company, Limited.—Authorised and issued capital £100,000, divided into ordinary shares of £1 each. This is an offer for sale of £100,000 8 per cent. first mortgage debenture stock at 95, and is part of a total authorised issue of £200,000. This stock will be secured by a trust deed, "constituting it a first specific

charge on all moneys receivable by the San Paulo Mortgage and Finance Company, Limited." The security offered cannot be regarded as of a gilt-edged nature, and one is naturally led to ask the question why it was necessary to form a financing company, with a share capital of £100,000, to finance an undertaking with an issued share capital of £2,000,000. The issue is to be redeemed by March, 1937, but the company may, on giving three months' notice after December 31, 1923, pay off debentures at 102½ per cent. It is understood that there is to be no Stock Exchange quotation for the debenture stock, and we are not informed of the price paid by the present vendors. Having regard to published information and lack of other details which are necessary, the offer is one which the cautious investor will leave alone.

Sunday Publications, Limited.—Authorized share capital £250,000, divided in shares of £1 each, "all of which has been allotted." The company is the owner of two newspapers, of which "it is obviously a little too early to speak with confidence of the earning capacity." But estimates are worked out which show profits as sufficient to pay a dividend of "nearly 30 per cent. upon the share capital." Astute people will no doubt accept this generous estimate at its true value. This is an offer for sale by Mr Horatio Bottomley, M.P., of £100,000 7 per cent. first mortgage debentures, "income-tax free, and carrying a bonus of two fully-paid £1 shares in respect of each debenture allotted." The statement making this offer says that "the debentures constitute a first charge upon the copyrights, goodwill, machinery, and other assets of the company." But the document in which the offer is made is deficient in information on three most essential matters, which we enumerate as follows:—(1) What is the value of the net assets, which, we assume, are to be definitely assigned as security for the first mortgage debenture-holders? (2) Is the charge to be made by means of a trust deed, and who are the trustees; and (3) will there be a Stock Exchange quotation for these debentures? Any person who acquires these debentures solely on the information contained in the document in front of us will, indeed, have thrown all financial caution to the four winds.

ACTIVE SECURITIES

LEYEN BROTHERS, LIMITED, have declared a dividend of 10 per cent. on the ordinary capital and dividend on the co-partnership certificates. In addition, the company propose to place to reserve fund a sum equal to a further 10 per cent. on the ordinary capital.

NEW CHARTERLAND EXPLORATION.—The accounts of the North Charterland Exploration Company (1910) for the year ended December 31, 1920, show a debit balance of £6,073, which sum has been carried to the balance-sheet. After allowing for the sum of £4,291 standing to the credit of profits and loss account as at December 31, 1919, the debit balance is reduced to £1,782. Ample depreciation under the various headings has been allowed. The board are not able to pay a dividend on the preference shares.

MEXICAN RAILWAY COMPANY, LIMITED.

RECOGNITION OF THE MEXICAN GOVERNMENT NECESSARY.

BRIGHTER OUTLOOK FOR THE FUTURE.

The 113th ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 28th instant, at River Plate House, Finsbury circus, London, E.C., Mr Vincent W. Yorke, chairman of the company, presiding.

The secretary (Mr C. Tennant) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said he was glad they had been able to return more or less to normality in the form of the report and accounts now presented. The only difference as regarded the past was that the comparison was given with the preceding half-year instead of with the corresponding half-year, as would be the case in the old days. He was afraid they might consider the results of the half-year distinctly disappointing, but he did not think they were more so than he led the shareholders to expect at the last meeting. There had been several reasons for the unsatisfactory result: they had insufficient equipment to work with, the property had been in a very bad state of repair, and they had had a very serious strike—a partial one, but a serious one—from March 1st to April 14th. These three causes, together with the high cost of materials and rise of wages, had led to an enormous increase in their expenses.

SATISFACTORY INCREASE IN GROSS REVENUE.

If it had not been for the very satisfactory increase they had received in gross revenue, which showed 40 per cent. increase over 1913, they would have made a very bad showing. Passenger traffic gave an increase of 28 per cent. Express business showed an enormous gross increase of from 330,000 pesos in 1913 to 1,850,000 pesos during the half-year under review. The congestion at Vera Cruz had now been cleared up, and the shortage in foreign traffic might be regarded as transitory. The final result, which, as he had said, was distinctly disappointing, had only given them £101,882, and, after deducting debenture interest and taxation, there was only about £19,000, which was not much more than the profit on exchange in respect to their remittances by which to reduce the large debit to the revenue account.

That was all he had to say with regard to the dark side of the picture; the rest of his remarks, he was glad to say, would be of a rather more cheerful nature.

INCREASE OF RATES.

He had ventured to express the hope at the last meeting that the two important questions of raising of rates and the indemnity would be decided in a short time by the Government, and, as shareholders would have seen, an increase of rates was granted to them from September 1st last. The increase was 25 per cent. in all. Half of this had been published in their weekly returns and half retained in the coffers of the company, and credited to the Government as part payment of the indemnity they owed to the company. Shareholders should bear in mind that the 12½ per cent. in respect of the indemnity only applied to certain classes of their traffic; it did not apply to articles of prime necessity, Government passengers, and so forth. It might be roughly taken to amount to 7 per cent. on goods and 10 per cent. on passenger traffic, and the round figure brought into the company was something like £300 per diem. In addition to that, they had been allowed to retain about £100,000, which they had already collected from the public in the shape of extra fares before the question of indemnity had been gone into by the Government. That was, he need scarcely say, a valuable concession on their part. The indemnity now amounted to the large figure of about 2½ millions sterling, and at the present rate of collection—£300 a day—it would take them over 20 years to collect it all. He only hoped they would be able to induce the Mexican Government to accelerate the rate of payment before long. The effect on the net earnings of the raising of the rates had been quite satisfactory. The two months' returns which they had received—September and October—came together to 796,000 pesos, altogether about £80,000, without counting in any profit on exchange, or just about £480,000 per annum. He was also hopeful that various large purchases of equipment they had had to make would result in a sensible reduction in working expenses.

EASIER WORKING OF THE LINE.

Unfortunately they had to be paid for, and in the early months of the coming year the bills in respect of these articles might come to nearly £20,000 per month, but owing to the fact that they now possessed this new equipment, the working of the line in the current half-year had been very much easier. As stated in the report, the congestion of goods at Vera Cruz, which was severe when he was in Mexico in February and March last, had been entirely

cleared up, and the fact that that was so reflected great credit on the general manager and staff.

TRAFFIC PROSPECTS.

The traffic situation, generally speaking, had also been cleared. With regard to the prospects of the traffic in the future, he thought they might say that on the whole they were fairly satisfactory. Business had been, and still was, going through very difficult times in Mexico, as elsewhere. Delay on the part of the railways had much hampered commerce. It had led to very high costs, and in consequence, to a very slow sale of stocks, but so far as he could learn there had been very little repudiation on the part of Mexican traders, as, he believed, had happened in other parts of Latin America. The harvest promised to be moderate, and there was less land under cultivation. The railway, however, would be helped in the future by imports of corn which must come along to supply the full amount of food required by the country. There was also promise of a large sugar crop in the southern region served by the company. Alcohol, also, a traffic which in the old days used to be competitive, he now understood came almost completely over their line.

CABLE FROM THE GENERAL MANAGER.

They had just received a cable from their general manager as follows:—"Business conditions here very dull. Large stocks on hand bought at high prices last spring. Few buyers all waiting for fall in prices. Very few new orders being placed at present, and imports are decreasing. Some maize, wheat, and flour being imported, which is not a good sign. Agrarian owners reluctant to plant on large scale owing to fear of expropriation. Political conditions quiet, but present Government can make no headway without recognition, which would create a boom and bring about general improvement in trade. I think we shall have a dull time during the next six months."

This did not read altogether cheerfully, but if they could have telegrams sent by the managers of foreign railways all over the world he thought they would be couched in very much the same language as the one sent to them. Business depression had taken some time to reach Mexico, but it had reached Mexico now in good earnest.

POSITION OF DEBENTURE-HOLDERS.

The scheme with regard to the debenture-holders would come to an end on December 31st. They brought a new scheme before them a week ago, which met with a good deal of criticism from the certificate holders—the people who, he understood, were not interested in the company before it got into trouble. The debenture-holders who had retained their certificates mostly supported the scheme. To allay the dissatisfaction they consented to a compromise—namely, to pay 4½ per cent. on the "A" debenture stocks and 3 per cent. on the "B" until the stocks were redeemed. This was carried, but the scheme had still to be approved by the courts. but as the resolutions were passed unanimously, he did not anticipate trouble in that direction.

Shareholders might be interested to know that the board were studying the question of the electrification of the mountain section of the railway with the assistance of the General Electric Company of America, who had been good enough to send a man down to report thereon without making any charge to the company, and without any engagement on their part. They had been assured on all sides, by perfectly competent experts, that the problem which they had for solution was an ideal one from the point of view of the electrical engineer. It would, however, naturally be impossible for the company to undertake any works of that nature until they were out of debt.

The last matter he would touch upon was that of the recognition of the Mexican Government. He had referred to that at the last meeting, and could not help referring to it again. He believed the present Government in Mexico, to be friendly to foreigners and foreign investors, but it was no good concealing the fact that there was an anti-foreign party. The longer recognition was withheld the stronger that party would grow. That party had shown its strength from time to time in promoting socialistic legislation, and it was difficult as things stood for the Central Government to take up a firm attitude which he thought they would like to take. As it was, he had to confess himself as amazed at the success which had attended the efforts of the present Mexican Government to restore prosperity to the country, and the peaceful methods they had employed in doing so, and he also confessed himself amazed that their performance had not met with the reward of recognition by the civilised Powers of the world.

Mr C. J. Cater-Scott seconded the motion, and the Chairman having replied to questions, it was carried unanimously.

A vote of thanks to the chairman, directors, and staff terminated the proceedings.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED.

SATISFACTORY RESULTS DESPITE TRADE DEPRESSION. LABOUR AND WORKING COSTS.

The annual meeting of the Johannesburg Consolidated Investment Company, Limited, was held in Johannesburg on Wednesday, November 23, 1921.

The Chairman (Professor J. G. Lawn), in moving the adoption of the report and accounts for the year ended June 30, 1921, said:—During the year, under review Mr Joel, the permanent chairman of the company, accompanied by Mr Imroth, one of your directors, visited South Africa. Mr Joel's energy and capacity for work are so well known that it seems needless to state that during his comparatively brief stay he made himself thoroughly conversant with the recent developments of the company's interests in South Africa, and assisted the board of directors here with much valuable advice.

The period we are considering was one of considerable difficulty and anxiety. Financial strain and crisis was the dominating note in many businesses, especially in the latter part of the company's year. This was owing to the beginning of a period of deflation which was inevitable after the universal inflation which followed the conclusion of the Great War. Fortunately only certain sections of your company's business was affected, so that, although the year was not quite so prosperous as the year before, still, the results as exhibited in the accounts must be considered highly satisfactory in view of the prevailing conditions. The directors were happy to find themselves in a position to declare a dividend of 10 per cent. on June 23rd last, and yet leave the financial position of the company in practically the same position as it was at the end of the previous year.

I shall now proceed to review the principal items in the accounts before you.

THE ACCOUNTS.

The issued capital remains unchanged at £3,950,000. The reserve fund of £250,000 is the same as at June 30, 1920. Sundry creditors, £1,449,104—this item shows a decrease of £463,003, due to the reduction of deposits and of the ordinary current liabilities of the company. Contingent liabilities, £349,635—our contingent liabilities show a decrease of £249,292 over last year's figures, principally due to the calling up of the balance on partly-paid shares in the New State Areas, Limited.

Investments in stocks and shares, £3,915,649—investments in stocks and shares show an increase as compared with June 30, 1920, of £232,537. The increase represents the difference between investments acquired and realised and the amount of depreciation written off.

The investments acquired during the year include holdings in various coal companies, which it is confidently expected will eventually yield a satisfactory return on the capital invested. The payment of calls to the New State Areas, Limited, referred to in my remarks on contingent liabilities, have likewise added largely to the total cost of our shareholdings.

In accordance with our usual practice, our holdings have been written down to their market value at June 30th in cases where the book value was above the market value, but no credit has been taken in the accounts for the appreciation of such of our shareholdings as have to-day a higher market value than the value at which they stand in the books. The appreciation represents a very considerable sum.

Mining properties and advances to mining and other companies, £277,312—a decrease of £106,751 is reflected under this heading. The whole of the amount due by the Randfontein Estates Gold Mining Company, Limited, has been repaid, while the total amount due by other companies in which this company is interested, and which require advances from time to time of a more or less temporary nature, is somewhat larger than a year ago.

Real estate and buildings, £421,031—this amount is made up as follows:—Johannesburg properties, £270,059; Johannesburg suburban estates, £42,002—£312,061. Other properties in South Africa and London, £108,970—total, £421,031.

The decrease of £13,133 is accounted for by amounts received from the sale of ground on our various suburban estates during the year, and the redemption of ground rents.

Carlton Hotels (South Africa), Limited.—The business of the hotel was affected to some extent by the commercial depression which prevailed in the town, especially during the latter half of the company's year. The hotel is nominally owned at the present time by a company registered in England called the Carlton Hotels (South Africa), Limited. By reason of the registration in England we have to pay heavy income-tax in England, as well as being taxed in South Africa, on the profits made by the hotel. In order to avoid the double taxation it has been decided to liquidate the company and domicile the ownership of the hotel in South Africa. To effect this it will be necessary to offer the hotel for sale by auction, and I would like to take the opportunity of saying that it is not intended that this shall in any way interfere with the ordinary running of the hotel, as the Johannesburg Consolidated Investment Company, Limited, holds itself responsible for carrying on in the meantime.

Polana Hotel.—This hotel is being built at Lourenço Marques for the Delagoa Bay Lands Syndicate, Limited, in which your company is largely interested. At the time of our last annual meeting it was hoped that the hotel would have been completed by the end of this year, but owing to certain alterations the completion will be a little delayed. However, there seems every reason to hope that it will be completed in time to admit of its being opened at the beginning of the coming winter season.

Loans on Mortgage and Real Estate, £161,026.—This amount is approximately the same as last year, a small decrease of £843 appearing between the figures for the two years, representing the difference between loans reduced or paid off and new advances granted. Our loans under this heading continue to be of a satisfactory nature and amply secured.

Loans at Short Call on Market Securities, £455,878.—A substantial reduction of £322,366 is reflected here; a decrease which may be regarded as natural in view of the restriction of business consequent on the unsettled and depressed conditions universally prevailing.

Sundry Debtors and Dividends Accrued, £798,323.—The dividends accrued, but not paid at June 30th, were slightly in excess of the corresponding figure of last year. Sundry debtors representing temporary current balances of accounts are substantially lower than they were last year at the same date, the result being that the total figure shows a decrease of £264,482 as compared with June 30, 1920.

Cash at Bankers, £190,345.—This figure varies from day to day, and does not call for special comment.

Financial Position.—It will be seen by an examination of the balance-sheet that the difference between the total assets and the liabilities to the public, excluding contingent liabilities, after allowing for payment of the dividend of £395,000, declared on June 23rd last, amounts to £4,384,411. The corresponding figure for last year was £4,391,453, so that the surplus for this year only shows a difference of £7,042, as compared with the corresponding figures for last year. In each case it must be remembered the surplus is based on the book value of your assets, and takes no account of the large appreciation in some of your shareholdings, to which reference has already been made.

I think it will be acknowledged that the position of the company as at June 30, 1921, was a very fine one, especially when account is taken of the difficulties which had been passed through.

The net profit for the year amounted to £387,958, which, with the balance carried forward from last year, left an available balance for the profits appropriation account of £579,411. After providing for dividend No. 24 of 10 per cent., we were in the position of carrying forward to the current year an amount of £184,412, a decrease of approximately only £7,000 on the amount carried forward last year. Although the distribution was 2½ per cent. less than that of last year, yet shareholders have much reason to be gratified with the results obtained.

GOLD MINES.

The gold mines of the Rand profited very substantially from the premium on gold, as they did during the previous financial

EUROPEAN WORKERS.

We now come to the European workers, and it is in connection with them that most room for economies exists. Wages have been increased enormously since pre-war days. Thus it will be seen from the Government mining engineer's reports that in 1920 it cost in European wages £11,047,256 for the winning and treatment of 24,157,515 tons of ore; a sum £4,315,325 greater than would have produced a similar effect in 1914. The Prime Minister recently pointed out that the average white wage in 1914 was £324, whereas the average white wage in 1920 was £499.

The white workers have already agreed to certain reductions in wages, based on the fall in the cost of living, but whether this sliding scale will afford sufficient relief will depend chiefly upon the gold premium, any heavy fall in which would make it necessary to reconsider the whole position with regard to rates of wages. A point which is often overlooked is that before the Great War there was no place in the world where such a high level of wages was paid as on the Rand.

Turning next to the efficiency of European labour, this has been reduced by a shortening of the hours of work, and by the granting of regular holidays amounting to four weeks per year in the case of underground workers. These were just measures, but it must not be forgotten that the industry has paid and is paying for them. I suppose there is no industry in the world where the European workers have better conditions of service than on the Rand, but there is no reciprocal keenness or loyal service on the part of the workers.

WORKING COSTS.

Another point in this connection is that there are more white workers employed in the industry than are necessary, which greatly adds to working costs. These surplus workers are thrust upon the industry by Government regulations, and by agitation and threats on the part of the European employees. It is quite clear that a large number of white men must always be employed—both in skilled work and in supervision—but every unnecessary white man means a high wage and increased costs in native wages and stores. Indeed, it would be much cheaper for the industry to support these men in idleness at the coast than to keep them on the mines. If economic laws are transgressed the industry will die prematurely, and then it will provide neither work for white or black nor revenue for the country at large.

After dealing with the individual mines controlled by the company, the Chairman continued: Despite the prevailing depression and the uncertainty of what the immediate future has in store, there is every reason to hope that gradually more stable conditions will be established and the present clouds which hang over the financial world dispelled.

Mr C. Marx seconded the resolution, which was carried.

STOLL PICTURE THEATRE (KINGSWAY), LIMITED.

SIR OSWALD STOLL ON TRUE AND FALSE PRINCIPLES.

CRITICISMS OF ENTERTAINMENT TAX AND L.C.C. INTERFERENCE.

The annual general meeting of the Stoll Picture Theatre (Kingsway), Limited, was held on the 29th instant.

Sir Oswald Stoll, chairman, in moving the adoption of the report, which recommended a dividend making 12½ per cent. for the year, said:—

I rise to move the adoption of the report and accounts, which I assume may be taken as read. They compare well with the generality of the reports and accounts that are being issued at the present time. There are no heavy losses to chronicle, but, on the other hand, substantial profits. Those profits would have been higher but for higher expenses and lower receipts caused by circumstances over which we had no control. A living wage nowadays has to be higher than it ought to be owing to the chaotic conditions regulating the cost of everything, and consequently the cost of living.

Our revenue was reduced not only by the coal strike, but by the exceptionally fine and protracted summer. These were causes during part of the year. But other causes extended throughout the year. The chief of these was the taxation drain upon the people, which left them little or nothing to spend on luxuries. In addition to our usual rates and taxes, running into thousands of pounds, which are quite sufficient burden on our business, the Entertainments Tax paid by this company on the year amounted to £24,927. Added to our revenue, that sum would have equalled a further dividend of nearly 17 per cent.

It is said that the company does not pay this tax, but that it is paid by the company's public. So, for that matter, is all our other expenditure. But that other expenditure contributes to our entertainment, whilst our Entertainment Tax does not. All the money that the general public can spend on entertainments is not additional to the tax, but included the tax. It is one total. If the Government obtains part of that total and the entertainment industry only the other part, it is obvious that the industry's receipts are reduced to the full extent of the tax. As the times

Considering next native wages, it can scarcely be expected that the rate of wage paid can be reduced, because, in spite of the increase in the cost of living, there has been comparatively little increase beyond the pre-war rate. We must look, then, for increased efficiency under this head. One step in this direction has been made possible by the alteration of one of the mining regulations recently arranged by the Prime Minister, which will enable more time to be worked in the stopes by natives. Then, no doubt, the number of natives on miscellaneous services can be reduced. This kind of labour is often used wastefully because it is considered cheap; but it is not really cheap and should be used with every economy.

become harder, the public stay away from more and more theatres rather than give money for nothing. This tax really is money for nothing, in so far as the entertainment public is concerned. Thus the Treasury is depriving entertainments of receipts to an extent which threatens the bulk of the industry, and is daily adding to the industry's unemployed, for the sake of a diminishing return from a tax which, in common with taxes in general, is supposed to be imposed and applied in order to protect life instead of to worry and starve it, and to protect property instead of to ruin it. Either this tax is bad in principle, and should therefore be dropped, or, if it is sound in principle, it should be imposed all round on every consumer in respect of everything consumed, whilst other taxes incompatible with that principle should be dropped. But the demands of the Treasury are not the only menaces to our receipts.

L.C.C. AND THE CINEMAS.

The London County Council is subordinate to the Central Government, but it is the autocrat of the London area. Together with its own subordinate authorities—the municipal bodies—it levies very heavy and increasing rates on the entertainment world. The rates must be paid from revenue, yet the Council never tires of hitting that revenue with weapons fashioned out of any absurd idea that may occur to the mind of any so-called reformer within its ranks. The latest is a sweeping generalisation that cinemas are not fit places for persons under 16 years of age unless those persons are accompanied by a parent or guardian. That is a cruel aspersion to be spread broadcast against a lawful and legitimate industry by a public authority. The irony of it is that the more the respect in which public authority is held in this country, and the present is more than usually a time when such respect should be both encouraged and upheld, the greater the damage such sweeping decisions can do. The one generalisation involves another in classing persons under 16 years of age as one homogeneous body without distinction of sex or circumstances to whom a single autocratic rule may reasonably apply. It is all merely a question of age—about one-quarter of the normal span of life. If people lived to-day as long as in the days of Methuselah, then before they could visit a cinema children up to the age of 240 years would have to be accompanied by a parent or guardian. In my youth I began to manage a theatre at the age of 14 years and three months. It was fortunate for me that no such council existed in those days. Our authorities to-day are creating false general principles on the

one hand through misinterpreting facts, and on the other hand they are creating harmful facts through misinterpreting sound general principles. One might despair of our outlook if it were not so easy to see how conditions of abounding prosperity would be created if proper authorities would in the main merely reverse their present policies. This will doubtless be done before long if only through the force of circumstances.

BAKER STREET COMPANY.

Our report explains that a new company is to be formed in connection with an enterprise at Baker street. As a reply to inquiries I may say that all those having an interest in this company will have preferential treatment should they desire to participate in the issues of that company when the prospectus appears. Turning to our balance-sheet, the only point to be noticed is that the cash which stood at £46,889 in 1920 is reduced to £25,865.

But we have large cash resources at call, and we shall have use for them for the construction of the Bijou Theatre and Cafes at the rear or northern end of our existing theatre. The restrictions upon building as well as the high cost of building have held up unduly this intended expansion of our business, for which necessary plans have long been issued. But now the building restriction has been removed, and we are advised that the cost has come down. We are obtaining definite tenders, and we hope that we shall find them low enough to enable us to proceed with the building, which will greatly enhance the value of the services that it is the business of the company to render to the public.

BOARD'S SOUND POLICY.

For this reason and other reasons which you will have gathered from my remarks, we are not recommending as high a dividend as the company's resources would allow. But we have had only one complaint on that score against several letters of congratulation. The wise investor knows that a strong cash position should be maintained in uncertain times. It is the best way in which to safeguard any undertaking. It is the undertaking as a whole that lies to the charge of the directors. They represent the collective interest, and are therefore not free to embark on an unsound dividend policy merely because an individual who may have reason to sell his shares desires before he does so that a higher dividend shall be paid.

Sir James W. McCraith seconded the motion, which was carried unanimously.

VICKERS, LIMITED.

DISARMAMENT CONFERENCE AND ITS EFFECTS.

The annual general meeting of Vickers, Limited, was held at the River Don Works, Sheffield, on the 22nd instant, when Mr Douglas Vickers presided over a largely attended meeting.

The Chairman, in moving the adoption of the report, referred at the outset to the accounts, and said that the item £370,000 secured loans under the item "Creditors" referred to £220,000, an interest in the successful shipping company of Donaldson South American Lines, Limited, which the company financed by deposit of the shares and £150,000, a similarly secured advance to one of the subsidiary companies, the Rubber and Water Proofing Company, Limited. These investments were shown on the assets side of the balance-sheet. The total of creditors was down about £5,700,000, as compared with the last balance-sheet, these reductions being chiefly due to the liquidation of liabilities. The value of land, buildings, machinery, &c., had increased, due to additions during the year. No depreciation was mentioned. The fact was that the future, chiefly owing to what might be the possible results of the Washington Conference, was so uncertain that the directors were of opinion that the question of depreciation should be left over until the final results of the Conference were known, and the effect arrived at by the Conference became more clear, as also the position of trade generally. Interests in subsidiary and connected companies showed an increase over the last balance-sheet of about £840,000, partly due to a transfer of £250,000 from marketable securities, and the acquisition of certain electrical interests. The outstanding interest in this account was the Metropolitan Carriage, Wagon and Finance Company, Limited, which stood at about £12,954,000, against which might be set a considerable sum received as premium on the shares sold to the underwriters to pay those Metropolitan shareholders who elected to receive cash. This covered 99.9 per cent. of the capital of that company, and electrical manufacturing interest directly held by Vickers was that of Messrs W. T. Glover and Co., Limited, cable makers, in which they owned about 99 per cent. of the capital, which stood in their books at about £227,000. Their interest in the Wolseley Motors, Limited, was the whole of the ordinary shares, a million in number, and standing in their books at £700,000. The Isle of Walney Estates Company, Limited, was formed to provide housing accommodation at Barrow, and stood at £24,000. Another housing company at Crayford stood at £45,000. The interest in W. Beardmore and Co., Limited, was 845,000 £1 shares standing at £484,000. This low figure was due to Vickers having secured 750,000 of them by exchange of shares at a premium in connection with manufacturing companies abroad concerned mainly with armaments. They had interests in Spain and Italy and Japan. These investments were made many years ago partly to manufacture their material, and partly to secure the acceptance of their technical designs in the countries in question. The results had been satisfactory. He referred to other subsidiary holdings, and mentioned that the total investments under this head came to about £17,389,000.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss account, he said that this showed that a profit had been made for the year of £511,260, and after payment of the preference dividends for 1920 the carry-forward amounted to £991,639. He had no doubt that it would be urged that the directors with this amount to carry forward should have recommended a small dividend. The matter was, of course, considered from every point of view. If it had been considered prudent, the directors would have been glad to recommend the distribution of such a dividend, for their sympathy was entirely with the shareholders in this matter. It was held, however, that there were so many disturbing elements at present that such a course would have been inadvisable. Reviewing the past year, he went on to say that adverse influences of 1920 continued during the past year. Owing to depression in the shipping trade, construction had been suspended or cancelled, and in some cases completed on terms involving loss to the shipbuilder.

WASHINGTON CONFERENCE.

In other engineering trades high wages and low output at home as compared to low wages and high output in foreign countries with depreciated currencies had made it most difficult to secure orders. The price of coal still remained at far too high a level, as very nearly all the company's interests were in steelmaking, shipbuilding, or engineering. Nobody could expect the results for the year to be good. As far as armaments were concerned there had been a little relief through the order obtained from the Japanese Government about twelve months ago, but except for that this year had been no better for ordnance work than the previous one. The effect was more serious, because at the request of the Government the very expensive organisation was kept ready for future construction. The company obtained a fair share of the orders for the four battle-cruisers, although the orders for the

hulls were placed elsewhere. These orders raised a hope of better times, but owing to the discussions at the Washington Conference instructions were received recently to suspend work on them. It was not clear yet whether the four cruisers were entirely only partly abandoned or whether ships of somewhat different design may be substituted for them, nor was it clear whether their representatives had given up one of England's greatest advantages by assenting to the prohibition of the building of ships of war in private yards for foreign countries. In any case, it appeared that the field for armament work would be very much reduced, and that it would be impossible for the company to retain more than a small proportion of the large expert staff or to continue to spend large sums, as of old, on development and experiment in this connection. Measures have been taken to effect at once very large reductions. The conditions brought about by the Washington Conference were from the point of view of the Vickers' shareholders another justification of the policy which led to the absorption of the Metropolitan Carriage Company and the acquisition of the electrical interests. The great engineering schemes of the near future were certain to be centred round electrical power traction and transportation, and in no other field did it seem possible to find work for the steelworks and non-special engineering plants which were created for war purposes. Mr Vickers concluded with a reference to the recent litigation with Sir Percy Scott and the work done by Commander Burney in connection with paravanes. He also referred to many changes on the board, and afterwards moved the adoption of the report.

The report was adopted.

PHOENIX OIL AND TRANSPORT COMPANY, LIMITED.

COMPANY'S PROGRESS—PROFIT EARNING REACHED.

The first annual ordinary general meeting of Phoenix Oil and Transport Company, Limited, was held, on the 28th inst., at River Plate House, Finsbury circus, London, Mr E. Manville, M.P. (the chairman of the company), presiding.

The Chairman said that the meeting was a formal one, as the accounts were not yet ready for presentation to the shareholders. They would be made up to the end of December, and presented early in the spring, to which date this meeting would be adjourned. The shareholders would doubtless recollect that he paid a visit to the properties last June. A short report was circulated on the termination of his visit, setting forth the progress the company had made up to that date. Since that time very good progress had been made in various directions. The progress had perhaps been a little slower than was anticipated, but it had been very steady and sure, and, he thought he might say, very satisfactory in every respect. The business was divided into three parts—oil production, refining, and distribution. Dealing with production, up to date they had unplugged and reconstructed 10 of the old wells which were in existence before the German occupation of Roumania, in addition to those which had been unplugged by the Germans themselves and came into the possession of the company as producing wells. Those wells had between them produced in the aggregate a very substantial quantity of oil, and were still producing at a very satisfactory rate. There were seven distinct oil fields in which the company were interested, and each of these was situated at some considerable distance from the others. It required a very great deal of energy and time to transport the requisite materials to the sites on which wells were to be drilled.

DRILLING WORK.

In order to start drilling the wells they now had in hand, no less than 3,500 tons of materials had had to be transported to the various sites over imperfect roads, and therefore it was greatly to the credit of those who represented the company on the spot that to-day—little more than one year since operations were started—no fewer than seven new wells were in process of being drilled. Several of those wells were approaching the oil horizons; one had already reached the producing sands, and was producing oil of a very high grade. Four further new wells were in process of preparation for drilling and would shortly be commenced, and two further ones had had the preliminary preparations made for drilling. They had one very distinct advantage in drilling on the sites upon which they were operating; instead of starting from the surface they started at a considerable depth beneath the surface, thus minimising the time taken in reaching the oil sands. The sites of the new wells had all been very carefully chosen. So far as it was humanly possible to speak when talking of oil production, it was probable that all of them would be producing wells, and some of them very satisfactorily. Another very satisfactory feature was the large amount of materials which they had recovered belonging to the various companies they controlled.

With regard to the refining side of the business, the refinery was started at the end of August, and was now capable of refining 250 tons of oil per day. They had contracted for large quantities

of crude oil, which, together with their own production, was enabling the refinery to be operated under satisfactory conditions from the financial point of view.

TRADING AND SALES ORGANISATION.

The third side of the business, namely, that of trading and sales of the company's commodities, had been developed very largely during the last six months. They were fortunate in having the services of Dr F. Bossel, who was a gentleman very distinguished in Roumania for his connection with the refining industry and with commercial dealings in petroleum products. That gentleman was now entirely in the company's service, under Captain Master-son, and the results which he had achieved up to date were of an extremely satisfactory character. The trading part of the business was going to be an increasingly important one. One direction in which they wanted to develop it was that of local distribution—the distribution of the company's commodities along the banks of the Danube and the Pruth. That meant a development in the way of sea carriage, and Mr Cornrich came to their help in that matter by supplying them on very reasonable terms—chiefly for shares in the company—with four new tugs of a description eminently suitable for enabling the products to be taken along the Danube and up the shallow River Pruth. Having regard to Dr Bossel's connection in that neighbourhood, they had every prospect of being able to dispose with great facility of their products. Generally, he thought it might be said that the very high quality of Roumanian oil, and especially of that in which the company was particularly interested, and the geographical position of Roumania, were of great importance to the future of the company. He thought he might say they had reached the first epoch in the history of the company, inasmuch as they had now reached a point when their receipts were in excess of their expenditure. They had actually entered the profit-earning stage, and when he said that the receipts were in excess of expenditure he meant all the expenditure, whether of a capital nature or otherwise. Therefore the position of the company from that point of view was one that must be satisfactory to the shareholders. The position of the company financially was extremely sound. In conclusion, he stated that the future of the company looked promising.

The retiring directors and auditors having been re-elected, the meeting was adjourned to a date not later than May 31st next.

THE STOLL FILM COMPANY, LIMITED. LARGE PROFITS AND STRONG POSITION.

The third annual meeting of the Stoll Film Company, Limited, was held, on the 29th instant, Sir Oswald Stoll, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, which showed a profit balance of £55,669 3s, and recommended a dividend of 15 per cent. on the ordinary shares, said:

I rise to move the adoption of the report and accounts, which, I assume, may be taken as read. It is common knowledge that very few companies in the film industry have made so good a showing as this one. It is equally true that this company, amongst its own kind, stands alone in having obtained such excellent results. This, in my view, is entirely due to the fact that whereas other companies have set out with the double object of both making and renting pictures in a green industry, the conditions of which are changing daily, and which is developing in various forms and directions, both unforeseen and unexpected, we, on the contrary, have set out with a single object one on which we have set both our eyes, instead of having to keep one eye on one object and the other eye on another object, in a manner which always produces, vulgarly speaking, one-eyed results. We have endeavoured to do one thing well. We have known that the ground in any new industry is treacherous, and with one interest alone to observe, we have refrained from putting our foot in anywhere too deeply for it to be withdrawn. With one object in view, we have been able to watch how the daily changes affected it, and to act accordingly. It would be better for every branch of the cinema industry at the present time if such cautious methods of business were observed. Every branch of it is in process of two phases of reconstruction. The one, the industry's own particular reconstruction, due to greater experience of the requirements of a new industry; the other, more general in its character, due to the unavoidable participation of the industry in the general reconstruction of the industrial situation of the whole country. We, as a company, are in a very strong position. We have made large profits, and have used practically the whole of them in order to strengthen that position. If there is a bad time before us we shall be able to bear it. If there are only good times before us we shall show splendid results.

ANSWER TO CRITICISMS OF BOARD'S FINANCIAL POLICY.

There has been only one criticism of our accounts. It was said that we should call up the whole of our capital, instead of using loans; that the preference shareholders have a right to expect that.

On that point, however, the directors differ from the critic. The preference shareholders have a right to expect the dividend. The rest is a question of management, and one which may be safely left to the discretion of the board. The board can, and will, use all the financial resources available as and when it finds this both safe and expedient. With proper care for the future, this company may be regarded as in its infancy, because the film industry in general is one which, when it has cast its swaddling clothes, acquired strength in its limbs, brains in its head, and sound character in its composition, is going to astonish mankind with its general usefulness. This company will make all the progress that is possible when it is possible. It cannot do so earlier. We have a managing director in Mr Jeffery Bernerd who is quite equal to any situation he may have to meet, but, like all who know their work and are willing to do it, he, figuratively speaking, likes a fixed destination and a clear course before going full steam ahead.

Major B. W. Broad, M.B., seconded the motion, which was carried unanimously.

FREDERICK HOTELS, LIMITED. SATISFACTORY YEAR—INCREASED PROFITS.

The twenty-third ordinary general meeting of the Frederick Hotels, Limited, was held, on the 30th instant, at the Hotel Russell, Russell square, London, Mr Ronald Peake (the chairman) presiding. The general manager and secretary (Mr A. Macmurchy) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that in postponing the meeting to such a late date they had hoped to have included in their report a statement of the final settlement with the Government in respect of the Hotel Great Central claim for the consideration of the award of the War Compensation Court. The business of their hotels, and particularly those out of London, was very seriously affected by the coal strike in the spring of this year. It had affected them in two ways, from the effect of the lack of visitors, and its effect in accentuating the depression in trade. The turnover at the hotels was not so great as that of the previous year, but it was still at a very high level. The costs of foodstuffs, wages, and all expenses showed very little reduction on those of the war years. The balance of profit carried to the balance-sheet showed an increase of £18,672 over the previous year. They had paid a dividend of 6d. per share on the ordinary shares, equal to 6-2-3 per cent.

With regard to the prospects for the current year, their expenditure on the Sackville Hotel, Bexhill-on-Sea, had been justified by an increased business at the hotel. The other seaside hotels had, however, not done so well as in the previous year. They were suffering from the competition of Continental watering-places, which had spent large sums of money in advertisement in the British Press for the purpose of attracting visitors. With regard to their London hotels, the Hotel Great Central and Hotel Russell, they were well known, and had good connections, and he felt sure that visitors would continue to patronise those hotels. The reduced spending power of visitors had been very noticeable for some time past, particularly on wines and cigars. They were, however, accommodating themselves to the changed conditions by reducing their prices, and hoped by that means to retain their customers. There were two factors which were ever before them. One was the number of visitors they had in the hotels, and the other was the amount which each visitor spent. To fill their hotels with visitors they must keep their properties in a high state of repair,

provide efficient service, and supply the best of food. Their success in the past had been due in great measure to their observance of those essential factors, and to paying the closest attention to the details of their business. During the war years, and also for a part of the year under review, many commodities were still being controlled, but latterly they had changed over from the period of control and war-time restrictions to normal methods. It was very difficult to prophesy what the prospects of hotel business would be in the immediate future, but the shareholders might rest assured that the board would do their utmost to secure the economical and efficient working of their various hotels.

Sir John H. Bethell, Bt., M.P., seconded the resolution, and it was carried unanimously.

SAMUEL ALLSOPP AND SONS, LIMITED.

BEER DUTY AND RAILWAY RATES.

The 33rd annual general meeting of this company was held, on the 30th instant, at the Cannon street Hotel, London.

Sir William B. Peat, C.V.O., who presided, said that the divisible profit was less by £72,000 than in the year ended September 30, 1920, and this was attributable to three causes. The first was the curtailment of demand; the second was that they were carrying somewhat heavy and high-priced stocks in September, 1920; and the third that during the whole of the past year railway rates had been 100 per cent. higher than pre-war. With regard to the first point, Allsopp's main supplies went to the industrial districts of the country most affected by the coal strike, lack of employment, and reduction in wages, with the consequent curtailment of the spending power of the people, and a lessened consumption of the necessities of life, including beer. In regard to the second point, it would be seen by the balance-sheet that the stock had been substantially reduced as compared with September 30, 1920, in money value, and he might also add in quantity. The stock remaining had been written down to the market price at September, 1921. As to the increase in railway rates, this affected them in a peculiar way. Less than 10 per cent. of their entire trade was within carting distance; the remainder had to go by rail, and a large proportion of it might be regarded as long-distance traffic, so that a profit could very quickly be substantially cut by the operation of increased railway rates. How serious this was for Allsopp's could be seen from the fact that whereas on the pre-war basis of railway rates their carriage of beer outwards last year would have been £52,000, it was actually £103,000. The trade was also subject to increased railway rates on materials consumed in the manufacture of beer, and they could not pass on to their customers any of these extra costs. The Burton brewers had made representations to the railway authorities interested in Burton, and these were being seriously considered. In 1914 the company had large holdings of licensed property in such far-off places as Belfast, Dundee, Newcastle, South Wales, and Plymouth, but few in their neighbouring counties of Stafford and Derbyshire. When the present board took office they adopted the policy, as favourable opportunity offered, of selling their more distant properties, and invested the money nearer Burton, and this policy they were continuing.

Dealing with the balance-sheet, he pointed out that the cash and War Loans totalled £474,000, as compared with £373,000 at the corresponding date in 1920—an increase in cash resources of practically £100,000. The company's brewery and maltings were solidly built, but as regarded labour-saving machinery they were based on the practice of the year 1886, when they were built, and the directors had steadily and at great expense been modernising the plant and installing labour-saving machinery, with great advantage to economic manufacture and the saving of unnecessary waste—a most important point when the beer duty was not 7s 9d a barrel as in 1914, but £5 as in 1921.

With regard to the current year's prospects, with a beer duty of £5 per barrel, excessive railway rates, excessive local taxation, and high labour costs, it might be impossible to make any reduction in the price of the commodity the company sold sufficient to bring that commodity within the reach of the straitened circumstances of many of the people. There was some hope that, accompanying diminishing costs, the volume of the trade of the country might be increased and greater numbers of men might be in full employment at lower rates of wages, but, taking a broad view of the situation, it did not seem to him that the brewer could, with confidence, look forward to better times in the current year.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £60,000,000 in three months' Treasury Bills, dated from Tuesday to Saturday, Jan. 3rd-Jan. 7th, were opened on Dec. 30, 1921, and the total amount applied for was £117,040,000. Tenders for Tuesday to Saturday bills at £99 1s 5d, about 98 per cent., and above in full. The average rate of discount was £3 13s 6½d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date of Bills.	Amount Offered.	Amount Applied for.	Average Rate of Discount.	Rate for Additional Bills.
1921.	£	£	£ s d	
December 2	50,000,000	67,640,000	3 12 0-07	3½
December 9	45,000,000	82,850,000	3 8 1-71	3½
December 16	45,000,000	66,840,000	3 5 3-41	3½
December 23	60,000,000	67,975,000	3 7 11-09	3½
December 30	60,000,000	117,040,000	3 13 6-52	3½

The amount to be offered next week will be £60,000,000.

Messrs Samuel Montagu and Co. write on December 29th as follows:—

GOLD.

Only small supplies of gold were available, the chief proportion of which was taken for the United States of America. Gold valued at \$8,776,000 has arrived in New York—\$5,796,000 from London, \$2,040,000 from Sweden, \$640,000 from France, \$200,000 from Uruguay, and \$100,000 from Germany.

CURRENCY.

The large amount of French, Italian, Belgian and Greek five-franc silver pieces which had accumulated in Switzerland during the war proved a source of embarrassment, and these foreign five-franc pieces were removed from circulation. A convention has been concluded between the Latin Union countries empowering Switzerland to coin her own silver five-franc pieces to the extent of 80,000,000 francs, using for the purpose 35,400,000 Italian francs, 29,400,000 Belgian francs, and 900,000 Greek francs, all in five-franc pieces. Arrangements were made that Switzerland should receive payment in full for the balance of the silver coin not provided for as above—the payment to be made in five years, commencing 1927. The total amount concerned amounts to 225,000,000 francs, in five-franc pieces, and 6,500,000 francs in Belgian pieces of smaller denominations.

SILVER.

Owing to the holidays, the market has been inactive. The few buying orders, which have come through from the Indian bazaars, have been met by sales on Continental account. The tone continues to be somewhat dull. In our letter of the 15th inst. we referred to the arrival at Bombay of a large amount of silver kraans (Persian coins). It is stated that a quantity of Persian coins has been struck recently by the Russian Mint, which holds possession of authentic dies. The issue does not appear to be under the control of the Persian Government, to whom any seigniorage should belong as a matter of sovereign right. The fact suggests that the emission of these coins may be a profitable method of utilising such silver resources as may be under the control of the Soviet Government. Indian official statistics indicate the scale upon which the exchange of gold for silver has been made recently by the Indian people. During the seven months ending with October, the net export of gold from that country was 1,281,743 fine ounces, worth, say, £6,960,000, whilst the net import of silver was 32,542,032 fine ounces, worth, say, £5,400,000. The stock in Shanghai on the 24th inst. consisted of about 29,400,000 ounces in sycee, 24,000,000 dollars, and 2,930 silver bars, as compared with about 27,300,000 ounces in sycee, 23,500,000 dollars, and 570 silver bars on the 17th inst.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

1921.	Gold.		Silver.		Date.	Silver.
	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.	Compared with Previous Year.

NOTICES.

The Standard Bank of South Africa, Limited, announce that, consequent upon the retirement of Mr J. M. Wallace, after many years of valued service as London manager of the African Banking Corporation, and more recently as manager of the London Wall office of the Standard Bank of South Africa, Limited, Mr J. C. Alleyne and Mr Charles Lammond have been appointed manager and sub-manager respectively of the London Wall branch. They also announce that their sub-branch at Breyten, near Ermelo, in the Transvaal, has been converted into a full branch.

BRITISH BROKEN HILL.—Cable dated Dec. 24th:—"No. 12 level crosscut assays 13 ozs silver, 18½ per cent. lead, 18 per cent. zinc; similar ore at 262 ft. Tons milled last week, 2,327; produced lead concentrates 400 tons, zinc concentrates 400 tons. Carbonates raised 180 tons."

THE MOUNT LYLE MINING AND RAILWAY COMPANY, LIMITED.—"From Nov. 17th to Dec. 14th inclusive, ore treated by flotation plant, 6,390 tons; concentrates produced by flotation plant, 1,767 tons. A total quantity of 9,209 tons of ore was smelted, being 5,805 tons from the Mount Lyle mine, and 3,404 tons from the North Mount Lyle mine; also 1,931 tons concentrates. The converters have produced during the same period 595 tons of blister copper, containing copper 591 tons, silver 13,781 ozs, gold 402 ozs. Furnace in blast 671 hours."

Reports and Notices.

Mr Marcus L. T. Hare and Mr Charles Warren have been appointed directors of William Hollins and Co., Limited. Mr L. T. O'Hanlon and Mr David Brooks have been appointed secretaries of the company.

The governor and committee of the Hudson's Bay Company have accepted with great regret the resignation of Sir William Mackenzie as a member of the committee. Acting under the powers conferred by the company's charters, the board have elected Mr F. H. Richmond, a managing director of Messrs Debenhams, Limited, to fill the vacancy thus created.

The British Empire Trust Company, Limited, notify that on and after January 1, 1922, their address will be Stafford House, 14-20 King William street, London, E.C. 4.

GOVERNMENT STOCKS, &c.

ORIENTAL REPUBLIC OF URUGUAY 5 PER CENT. LOAN OF 1896.—Messrs Glyn, Mills, Currie, and Co., as agents of the Government of Uruguay, hereby announce that, in accordance with the conditions of the general bond of this loan, the 38th amortisation will take place by public tender in London on Tuesday, the 10th proximo, the amount applicable being £22,802. They are therefore prepared to receive tenders of bonds for redemption on January 10th, on forms which may be obtained at 67 Lombard street, E.C. 3. Tenders will be opened at 2.30 p.m., and should be lodged not later than 2.15 p.m., on January 10th. They must not be made at any fraction of a shilling, other than threepence or multiples of threepence, and should be enclosed in a sealed envelope marked outside "Tender of Uruguay 5 per cent. 1896 Bonds for Redemption." All bonds tendered must bear the coupons due April 1, 1922, and all subsequent coupons. Messrs Glyn, Mills, Currie and Co. reserve the right of accepting or rejecting the whole or part of any tender, and may require the deposit of the bonds offered for sale under any tender.

RAILWAYS.

NEW SOUTH WALES GOVERNMENT RAILWAYS AND TRAMWAYS.—Report of the Railway Commissioners for New South Wales on the working of the railways and tramways for the quarter ended September 30, 1921, is as under:—

(1) For half-year.

MISCELLANEOUS.

ALBY UNITED CARBIDE FACTORIES, LIMITED.—At the meeting of shareholders, held December 22, 1921, the chairman, Colonel O. C. Armstrong, D.S.O., stated that suggestions had been received from Norway urging an adjournment of the meeting in order to give the directors an opportunity of making a further effort to save the company. After a general discussion a resolution for adjournment until a date not later than February 28, 1922, was unanimously passed.

A. M. PEEBLES AND SON.—The directors regret that, owing to the heavy fall in the price of paper and the consequent decrease in the value of raw material and paper stocks, there has been a loss on the working of £85,352 for the year ended June 30, 1921. The depression in the paper trade which has occurred during the past year is unprecedented, and this company has, in common with other companies, felt the full effects of this depression. Owing to great pressure of work, the inspector of taxes has stated that he will not be able to deal fully with the company's claim for repayment of excess profits duty until the New Year, and as some considerable time is bound to elapse before a final settlement is reached, the directors have decided to publish the accounts now, rather than wait until the reclaim has been agreed.

NEW ZEALAND AND RIVER PLATE LAND MORTGAGE.—After making due provision the net profit for the year ended October 31, 1921, exclusive of the amount brought forward from the preceding year, amounts to £62,123. By the addition of £22,223 brought forward from the preceding year, the balance to the credit of profit and loss account amounts to £84,347. To payment of a dividend of 7 per cent. for the year, subject to income-tax, absorbed £49,000; to reserve, £10,000 (making the reserve £245,000); to be carried forward, £25,347.

SHIP CANAL PORTLAND CEMENT.—The trading profit for the year ended March 31, 1921, amounted to £91,299, and after writing off £12,500 to depreciation, setting aside £12,000 as reserve for taxation, and charging maintenance repairs and all general expenses, there is a credit balance of £45,535. To this must be added the credit balance brought forward from the previous year, viz., £23,950, making £69,485. Preference dividends were paid to June, 1921, amounting to £6,305, leaving a balance of £63,180 to the credit of profit and loss account. Of this sum it is proposed to transfer £25,000 to reserve, and to carry forward the balance of £38,180 to the current year's account. Whilst during the year under review a full year's preference dividend was paid, the directors regret they were unable to pay off any of the accumulated arrears, the changed trading conditions necessitating husbanding the company's cash resources in order to provide for capital expenses.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have continued mild and open, while favourable to growing crops. Cultivation is well advanced, and the young plant appears strong and healthy. Useful rains have fallen, but more moisture would be welcome in some districts where the water supply remains low. Market presented a holiday appearance throughout the week, transactions being on a limited scale, but prices for the most part maintained a fairly steady level. English wheat is in fair supply, and suitable milling grades rule at 46s to 49s, with inferior down to 40s per 504 lbs, free on rail. Imported descriptions generally quiet. No. 1 Northern Manitoba quoted 55s 6d ex ship per 480 lbs; No. 2 hard winter, 54s; and Australian 53s, both landed per 496 lbs. In the forward market prices ruled barely steady, and business almost at a standstill. Cargoes of Rosafé, 62½ lbs loading, sold 50s 6d. Australian arrived 52s 6d. Crop reports from the principal exporting countries are favourable,

while visible supplies in North America are well maintained. Flour steady, with a slight improvement in demand for home-milled grades. London standard straight run quoted 47s; town households 45s, patents 50s, all English straight run 43s per sack delivered London district. All English country straights 37s to 39s, free on rail at London stations. Imported steady. Canadian export patents quoted 46s, straights 43s, Kansas top patents 43, and Australian 43s 6d per 280 lbs, ex store. On c.i.f. terms, Canadian patents, January seaboard, quoted 42s; straights 40s, Kansas patents 43s, and Australian new crop, January-February, 35s per 280 lbs. Millers' offals quiet. Broad bran quoted £8 15s to £9 5s; ordinary ditto, £8 5s to £8 10s; middlings £9 10s per ton, ex mill. Fancy Plate, middlings, £11 10s, and pollards £9, both ex ship, per ton. Barley quiet, and without new feature. English malted nominally 43s to 65s, grinding sorts 37s to 41s per 448 lbs, free on rail. Imported steady. No. 4 Canada Western, 32s, Canada feed 29s 6d, American feed 29s, and La Plata 30s, all landed per 400 lbs. Business on c.i.f. terms remains in abeyance. Maize ruled steady on light shipments, though demand shows no appreciable expansion. Yellow La Plata, ex ship, sold 33s 6d; ditto landed quoted 34s 9d. American mixed quoted 33s; yellow round African 34s, white flat Rhodesian 33s, all landed terms per 480 lbs. White African maize meal quoted £7 17s 6d per ton, ex store. Forward market unsettled, but generally quiet, and no cargo sales reported. Oats quietly steady. English quiet, with liberal supplies on offer. Whites quoted 30s to 33s, grey winter 29s to 30s, and black winters 28s to 30s per 336 lbs, free on rail. Imported fairly steady. Plate f.a.q. quoted 26s 6d, ditto clipped 27s, No. 2 Canada Western 32s, No. 3 ditto 31s, and Chilian tawny 28s, all per 320 lbs landed terms. Oatmeal in moderate request, and prices reduced by 10s per ton for English at £19 to £20, all cuts. Ordinary Scottish quoted £18 to £18 10s, American and Canadian £18 to £19, English rolled oats £21 to £22, ditto flaked £23 to £24, all per ton. The demand for English beans ruled quieter, and rates eased slightly. Good winters quoted 49s to 51s, while choice lots of springs are held for 55s to 57s 6d per 532 lbs. Chinese horse beans quoted £10 10s to £11 10s, ex store. Peas move off quietly, though English varieties were in rather better request. Maples rule from 68s to 74s, and best Duns 52s to 53s per 504 lbs. Of imported, New Zealand blue quoted 21s to 24s, and Dutch blue 22s to 26s per cwt landed. Home-ward freight markets quiet, but rates steady for heavy grain for early shipment. From the River Plate 33s 9d was paid, up river, January 15th, to U.K./Continent, with option of clipped oats at 2s 6d ton extra, with 30s established for a steamer Bahia Blanca. February 15th, later dates being worth 27s 6d to 25s. North America steady, and range to West Italy quoted 20-21 cents; Greece, 24 cents per 100 lbs, while U.K. indicates 4s per qr, heavy grain. Gulf ports to Continent would come at about 15 cents per 100 lbs. Eastern markets inactive, and Bombay on dead weight nominally 20s 6d to U.K./Continent. Australia steady for wheat at 50s, loading at usual ports to U.K./Continent, while Indian requirements are now fairly well covered. West Australia paid 45s 9d home. South Africa quiet at 30s to 31s 3d for maize cargoes U.K./Continent, January. Alexandria cottonseed would come at about 9s 6d per 60 cubic feet. Mediterranean dull, and other departments nominally unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated December 29th, 1921, is as follows:—Pig-iron: No further development in the position. Business practically suspended during the holidays. Much disappointment is expressed on all hands at the inadequate reduction of the railway rates. The assistance towards reduced costs by the last reduction will be trifling. Manufactured iron and steel: Steel works are closed during the holidays. So far there is no increased demand for steel. Iron ore: The demand is extremely small, most attention being given to working off arrears of old contracts. Best Rubio can be bought at about 26s.

Our Sheffield correspondent writes:—The year 1921 will be a black memory for traders in whatever industry they may be interested, and many people are glad that it has come to an end. The hopeful feeling with regard to the new year is becoming general. In the pig-iron and heavy steel branches, makers are sending out inquiries for scrap and other raw materials, which indicate that they are about to restart their furnaces. At present the iron and steel furnaces working do not exceed one-fourth of the total available, and in the Lincolnshire area production has been almost at a standstill for months. This state of things is due to makers finding it more expedient to produce finished goods from foreign raw material. As British quotations for pig-iron and steel billets now approximate those of European countries, there no longer exists any inducement to buy from abroad. When makers of wire rods, bar iron, bright bars, strip, &c., place their orders for materials at home instead of abroad, British works will be moderately busy again, and this is what must happen so soon as the imported stocks are used up. British foundry iron can now be bought at £4 12s 6d, compared with £12 10s a year ago. The recovery of the heavy steel departments is certain to react favourably upon the tool steel branch, which has been stagnant all the year. It would also be helped by a revival of engineering. The state of the exchanges makes the cost of Sheffield tool steels prohibitive in Germany, France, and Italy, who were large buyers of such materials before the war. At the present time there is practically no export trade in high-speed steel, and there are large stocks of it in this country. An early improvement in the overseas demand for hand tools and cutlery is prophesied. At the moment, these branches are doing very badly. The coal trade has been quiescent all the week in consequence of the holidays. The position is unchanged, except that industrial consumers are showing some interest in forward contracts. The house coal demand is also likely to be strong in the future, as stocks in consumers' cellars are low and the severe weather necessitates good fires.

Our Glasgow correspondent (writing on Thursday) says:—In industrial circles this week attention has been solely given, it may be said, to the clearing off of as much work as possible, in view of the Scotch New Year holidays, and a big lot of material has thus been pushed through the finishing departments in iron and steel. Operations will generally be suspended to-morrow afternoon, and there will be no resumption to speak of for the next seven to ten days. This because order-books are on all hands very light—hardly exist, in fact—and therefore there is no call for hurrying up a restart. During the interval opportunity will be taken to carry out repairs on machinery and to check stocks, an easier task, no doubt, than has been the case for years. Managements report that over the past week there have been no new orders of any significance placed in the district, and that is not matter for surprise considering the uncertainty that obtains as to the future course of events in all leading iron and steel departments. There is particular lack of life observable in business in pig-iron, though one or two houses advise that export inquiries, even from the Continent, are more numerous than of late; whether they will materialise in actual business remains yet to be seen. Some sanguine dealers believe they will. Prices continue nominally where they were a week since—£6 per ton f.o.b. Glasgow for Scotch hematite, £6 for No. 1 foundry, and £5 15s for No. 3. These constitute the lowest level of the year. But that in reality applies to quotations for all representative materials. Consumers of steel are thought to be holding off the

market for a further break in terms. For all inquiries on circuit keen competition prevails, English makers especially manifesting eager anxiety to increase their footing here. It is reported to-day that Scotch 4 in. ship plates have been dealt in at £9 15s Glasgow, the last officially fixed list price being £10 10s. Angles are given as near £9 10s. All the rolling mills at Mossend (Beardmore's) are said to be in full operation, but conditions are slow elsewhere. Still, producers are not without hope, and several firms are taking advantage of the current slackness to introduce improvements, and at Clydebridge works a powerful rolling mill for ship and boiler plates is being put down—one of the most up-to-date plants in the United Kingdom. Though not confirmed, those who should know are disposed to credit a story going round that orders for a couple of first-class steamers have been placed with Clyde builders, to be proceeded with on the turn of the year. Completed returns of work executed on the river in the course of 1921 show that 314 vessels of 514,549 tons were put into the water—not a bad result in the circumstances, but appreciably below the figures for 1920, when 263 vessels of 660,960 tons were launched. There is a sharp shrinkage noted in the amount of tonnage in hand; many yards are wholly empty. Yet more than one influential builder has expressed the conviction that by next midsummer construction will have returned to its normal state. But outward appearances afford scant encouragement. Exceptionally, the season is winding-up more hopefully for the black sheet and sheet bar trades. For sheets a good inquiry is in evidence for India, and in that connection a factor has leaked out about which strict secrecy has so far been maintained. It appears that consumers in India are endeavouring to get into touch direct with makers, thus eliminating merchant firms in this country, who hitherto have been the medium through which business has passed. More will be heard of the matter, as it involves an important trade departure.

CUMBERLAND IRON.

(FROM OUR CORRESPONDENT.)

The conclusion can scarcely be resisted that rock bottom was touched in the last few weeks of the year, and that the New Year opens with prospects of a slow but steady recovery of trade. Labour costs have now fallen to the lowest level to which they can drop in present circumstances, and if the reduction in railway rates is not nearly so satisfactory as was desired, it is, at all events, sufficient to warrant the expectation of a further "cut" in the price of iron, and if that "cut" brings Bessemer mixed numbers down to £5 per ton at works, it is more than likely

that business will be forthcoming on a more considerable scale than has been witnessed this year. There are large requirements of hematite pig-iron waiting to be placed directly users are convinced that there is little to be gained by delaying any longer, and the impression is growing that at £5 per ton iron will be at a price below which it will not recede for some time to come. It is not at all unlikely, therefore, that between now and the end of March we shall see an additional 10 or 12 furnaces put into full blast. At the moment only four furnaces are in operation, three having been damped down during the latter part of the month, and these may be anticipated to be blowing again before the close of January. Of course, a great deal depends upon what happens in the steel trade. Orders as yet are very scarce, and neither at Workington nor at Barrow, where most of the old contracts have been executed, is there a substantial amount of work awaiting to be undertaken. But the outlook is not so bad as it looks, and quick and satisfactory developments would not be surprising. The steel trade absorbs the greater part of the production of ordinary iron. For the special and semi-special iron there are foreign as well as home needs to be considered; and it is undoubted that the American demand for ferro-manganese, of which there has been no make since March, is reviving. The iron-ore industry is almost entirely idle, but if the difficulty as regards the selling price of iron, on which wages are to be based, is disposed of, substantial activity in the hematite iron-ore field may be expected in the course of a month or two. The coal trade is very dull, and must remain so until the collieries here can restart their coking plants. The impossibility of dealing with the accumulations of smalls hampers the collieries at every turn. There will be no return of prosperity for the coal trade until at least 20 furnaces on iron in East Cumberland and North Lancashire are in full draught. No Continental market can be found for the local coke, and, with the ovens idle, the collieries are dependent entirely for the absorption of their output upon the Irish market and the local land-sale trade.

MANCHESTER, December 29.

Owing to the holidays this has been a short week in the market, and a rather unsettled feeling has prevailed. The undercurrent of demand, however, continues rather more encouraging, and in certain sections a considerable inquiry has been dealt with. Despite the fact that the political outlook in India is still uncertain, more business has been offered in cloth, especially for Calcutta, and fair lines have been booked. Transactions of any importance for China have been isolated, but trade has been done in shirtings and sheetings. The Near Eastern outlets have been quiet, and the disturbances in Egypt cause anxiety. Printing and finishing styles have been in request for South America, and trade advices from that part of the world are rather better. Practically nothing has been done in home trade fabrics. There seems to be a possibility of more looms being started early in the new year. American and Egyptian yarns for home use have been firmer in quotation, and in an irregular way rather more business has been about, but prices remain on a very low basis. Useful orders continue to be secured in bundles for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The holidays have naturally interfered with the normal flow of business, and with mills closed during the early part of the week there was not much opportunity to test the position. On 'Change to-day, however, there was quite a good attendance, and although actual business was of a restricted nature, the tone of the market was sound, and in all departments prices were very firm at late rates. Spinners have recently booked some very good orders in Botany and fine crossbreds, and several firms are now beginning to be a bit anxious about deliveries of tops. Unfortunately, the output from the combs is not equal to any sudden spurt in the demand, and in some quarters a marked scarcity of fine tops is anticipated. Good warp 64's tops are quoted at about 49 3d per lb, and 80's are 3d dearer at 55 6d. An advance is also recorded in 58's comeback at 38 to 39 3d. The outlook for worsted spinners has greatly improved during the past two or three weeks, and most firms now have sufficient work in hand to keep machinery running for the next two or three months. Yarn prices are very firm, and some firms are refusing new business except on their own terms. There is also a slight improvement in the manufacturing section of the industry, though this still constitutes the danger zone. What is wanted in order to put things on a really sound basis is a good general demand for pieces, and until this trade opens out there will always be cause for a certain amount of anxiety in the other departments. Some firms believe, however, that the wholesale houses will be forced into the market in the not distant future, and as wool values now appear to be fairly well established, it is possible that those who have been waiting for lower prices will decide to operate without further loss of time.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

It must be said that 1921 has been one of the most disastrous years in the history of the wool trade. It has been bad for both growers and consumers, and there has hardly been one redeeming feature. The year opened with heavy clouds of depression upon the entire trade, and they continued to rain loss and disaster upon all sections of the trade up to the end of April. Values declined very materially, for out of April London sales wool was bought to bring in good 70's tops at 25 45d. Such a price was no good to either the grower of the raw material or the consumer of same; in fact, during most of the year wool values

have been sensibly below an economic level, and it is only during the past three months of the year that merinos can be said to have shown sufficient recovery to make them a profitable proposition. Values were all on the easy side from April to the middle of August, it being at times very difficult indeed to shift the raw material at all. B.A.W.R.A. did their very best to stabilise prices, encourage demand, and promote consumption, but the law of supply and demand was the dominating force, and will continue to be so. The complete dearth of new business led to demoralised markets everywhere up to the end of August, when at the lowest point Bradford topmakers sold forward heavily in merino tops at as low as 25 3d. A very big business at around 25 9d to 3s was also done, and when sales on a large scale had been effected, a big covering movement began in September, which led to a rapid rise in merino values. That rise continued during the September and October series of London sales, many seeing what a big blunder had been committed. When the covering movement had to a large extent been completed, and when the desire for further business had been checked materially by a big slump in the value of the mark, a setback took place, values declining sensibly in consuming centres and also during the first two weeks of the last series of London sales. Towards the finish a slight improvement took place, which paved the way for some big sales of both tops and yarns, Bradford spinners purchasing heavily of good 64's on a basis of 39 5d to 3s 6d. Topmakers soon put up their prices, the year finishing with good 64's tops around 4s for March-April-May delivery.

One cannot review the past without feeling that the year has not been productive of any good to anybody engaged in the wool textile industry. Almost from first to last it has been a case of clearing out dear piece stocks at the best price possible, and endeavouring to get values down to a sound, economic level—one on which it would be possible to commence business operations anew. I think that point has now been reached. Crossbreds are certainly much below where they should be; there is need for sensibly advanced values to establish them on a really profitable level. There is, however, good reason to anticipate that the forthcoming year will see a sensible improvement in every section of the wool textile trade, and that values will remain firm and sound. Extreme advances are not to be advocated. There is the most need for crossbreds to have a lift. Given the establishment of Continental exchanges on a more reasonable basis, both medium and coarse crossbreds will appreciate. The manufacturing machinery of the world is hungry for wool, and millions of people are in urgent need of good clothing.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Markets opened quietly after the holiday, with very little disposition or inducement to do business. The demand for linseed oil by home consumers continues most disappointing, and practically no inquiries are in the market on foreign account. Cotton oils remain steady and late quotations are maintained, as is also the case with other crude oils. In the oilseed section supplies of Plate linseed are short, and spot seed commands a premium of 20s to 25s per ton over "shipment." Calcutta has received more attention of late, prices being relatively favourable. No black Egyptian seed appears to be offering, and Sahellarides is held for about £12 10s spot. Manchurian soya beans on passage have been bought for Hull at £12 15s.

A good deal of interest centres in the estimates of the new Argentine crop which will soon be offering. The consensus of opinion on information received from various American sources is that surplus available for export will be round 700,000 tons, plus 150,000 tons old crop carried over. This is much below expectations. The outlook at present for a larger yield is not encouraging, and this, and the reports that "shorts" will be found buying freely, account for the steady maintenance of values. On this side, crushers, in view of the unsatisfactory oil demand, are content to hold their hands and watch the course of events.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

No public auction of home-slaughtered cattle hides and skins has been held in London this week, but in the provinces where a few sales have taken place since the holidays prices remain steady at the recent range of values. In the foreign hide market sufficient time has not yet elapsed since the closing down of last week to mark any alteration in the position as compared with that last recorded. It is stated that a few frigorifics on the spot have changed hands, while at origin sales of Saladeros and Montevideos are reported. Most descriptions of dry and dry salted are only receiving a limited enquiry.

Most of the firms connected with the production and distribution of leather have been engaged since the resumption of business on Wednesday with the annual stocktaking, and I am afraid for many the task will be a most unpleasant one. Prices have fluctuated to such an extent during the past 12 months, and in many instances forced down to the point where no profit was made, even if a loss was not incurred. Generally speaking, therefore, those firms who have been able to pass through the 1921 trading period without making a loss, leave alone a profit, must consider themselves fortunate. Regarding the coming year more optimism is noticeable,

although it is feared finance may be a troublesome feature. As it is many firms are experiencing considerable difficulty in obtaining prompt payment of their accounts, while the rumour of the impending embarrassment of a very old-established house in the trade has now become a *fait accompli*. Demand for both sole and upper leather during the week has been practically non-existent. Supplies of the former are quite sufficient to meet the possible call for some few weeks, and taken on the average values are to some extent easier. In the upper leather section the only decent enquiry at the moment is for suede leathers for ladies' shoes, although some of the material going into consumption for this purpose would make a very poor showing in wet weather.

The majority of shoe factories are closed down until next Monday, so that at the time of writing no business is passing. Opinion is inclined to the view that so far as the shoe trade is concerned the corner has now been turned, and that the early part of the coming year should mark an improvement.

PORTLAND CEMENT

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 77s 6d to 83s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 30.

The markets presented very quiet features while under holiday influence, though in one or two directions a fair business was effected at lower prices.

SUGAR.—This market opened after the holidays at a general decline of 9d per cwt for spot goods, and at this reduction a fair business was effected, chiefly in British refined. Messrs Tate and Lyle's cubes sold, 51s 3d to 52s 3d; crushed, 48s 6d; granulated from 46s 6d to 47s, as to quality; caster, 48s 6d to 49s; icing, 49s 6d; ditto, in drums, 48s 9d; pieces, 36s to 42s; yellow crystals, 41s. Granulated No. 2, also London second half January delivery, sold, 45s 9d; ditto, February-March, 45s 3d. Crystallised West India slow, with small transactions, from 37s to 39s, according to sample. American granulated, spot, sold, 46s; ditto, January-March, steamer, quoted, 17s 6d, c.f. and i. terms U.K. Belgian crystals on the spot changed hands at 43s; and ditto ready delivery, 17s 9d, f.o.b., Antwerp. White Java, spot, quoted, 43s 6d to 44s; white Mozambique, 43s to 44s 6d; white Natal, 43s to 45s. Terminal market ruled quiet. White May sold, 17s 13d to 17s.

COFFEE.—Spot market quiet, but all the finer qualities command full prices, while in small supply. Future delivery market slow. March quoted 52s; May, 52s 9d.

COCOA in quiet request, but sellers required steady asking prices. **COCOA BUTTER** quiet, and English quoted 1s 7d per lb.

TEA.—Market quiet, unaltered, business being quite of a holiday character.

Correspondence Solicited

Capital, Surplus and Profits
\$37,500,000

RICE.—Market very quiet, and quotations for the chief part nominal. Rangoon, Two Stars, spot, 15s to 15s 6d. Broken kinds quite neglected. Beans dull of sale, and Rangoon, hand-picked, spot, quoted 7s 6d per cwt.

SPICE.—Pepper market steady, though quiet. Fair black Singapore, spot, 33d; ditto January-March, 33d; Aleppy, spot, 4d; Tellicherry, 44d; white Singapore, 74d; Muntok, 78d; ditto January-March, 74d. Zanzibar cloves, spot, 1s 7d; December-February steamer, 1s 5d. Pimento quiet at 23d. Tapioca steady, quiet. Fair flake, spot, 18d per lb; fair Penang seed pearl, on spot, 10s 3d; small sago, 26s; sago flour, December steamer, quoted 14s 3d; January-March, 13s 3d; desiccated coconut, fine cut, spot, 41s; medium, 42s. Ginger flat. Japanese lime, spot, 40s; fair washed rough Cochín, 45s.

JUTE.—Market presented steady features, a moderate demand in force being reservedly met. New crop, first grade, January-February, usual Continental ports, quoted £25 5s; ditto February-March, sold, £25 15s; old crop, spot, Antwerp, at £27; new lightning grade, January-February, Continent, quoted £21 5s. Heart, grade ditto, £17 15s. Daisiee, grade No. 2, January-February, Dundee, £25 10s; ditto No. 3, £21 10s; Sova Daisiee, No. 2 ditto, sold, £25 10s ton. Hessians steady. 10 oz. spot, sold, 22s 6d; 8 oz. quoted 19s 6d. A twills, afloat, sold, 78s; B, January-February, 63s.

HEMP.—Manila steadily held, but there was not much response from buyers. C grade, December-February, sellers, £54; D ditto, £50; E, £46; G, £39; J, £38 10s; K, £36 10s; L, £36; M, £32 10s; streaky one, £43; two, £41; and three, £39 10s. New Zealand fully steady. High point fair, spot, £38; fair, £35 10s.

SHELLAC.—Market remained quiet. T.N., spot, 32s; December, 30s; March, 28s.

COPRA.—Market quiet, but held for steady prices. F.M.S. Straits, January-March, Rotterdam, sold, £26 17s 6d to £26 12s 6d; ditto February-April, £27 to £26 15s; F.M.S. Straits, December-February, Marseilles, £25 17s 6d; Ceylon, ditto to London, £28; South Sea Islands ditto, £23 10s; Cebu, ditto to Hamburg, £26. Palm kernels steady, quiet. January-March, Liverpool, quoted £18 10s.

RUBBER. steady during the greater part of the week, but general trade moved quietly. Standard crepe and sheet, spot, sold, 11½d to 11½d; January-March, 11½d to 11½d; April-June, 11½d to 11½d. Fine hard Para, spot, 1s 2d; Caucho ball, 8d.

OILS.—Lined steady. Spot, net, naked, 28s 6d; January-April, 27s 6d; May-August, 27s 6d. Crude, spot, 45s; refined, 50s. Cotton quiet. Crude Egyptian, 37s; Bombay, nominal; common edible, 45s. Chinawood: Hankow, spot (barrels), 65s; and shipment, 63s. Coconut quiet. Ceylon, spot, 46s; December-January, 42s 6d; Cochín, ditto, 46s. Soya steady. Oriental, barrels, ditto, 34s 6d. Japan fish quiet. December-January, cases, 21s. Cod quiet. English, spot, 29s to 30s. Groundnut quiet. English crushed, naked, spot, 45s; deodorised, barrels, 59s. Turpentine

steadier. American, spot, 68s; January-April, 68s 3d. Rosin easier. American, grade B, 15s; F, 15s; G, 15s; K, 17s; WW, 20s. French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OLSEEDS.—Lined steady. Calcutta, December-January, quoted £17 5s; Plate, spot, Hull, quoted £17 5s; afloat, £17; December-January, £16 5s; January-February at £16. Rapeseed quiet. Toria, January-February, £17 10s; real bold Ferozepore quoted £17 10s; brown Cawnpore, £16 10s. Cottonseed slow. Egyptian black, December, quoted £12 15s; and white, £12 5s. Bombay, December-January, £9 2s 6d. Gingelly quiet. Chinese, December-January, Continent, £24. Castor, Bombay, December-January, £16 10s. Ground nuts quiet. Coromandel, machine-dried, December-January, Hull, £20 10s; new crop, December-January, Continent, £20 10s. Chinese decorticated, f.a.q., ditto, Continent, £20 10s per ton.

METALS.—Tin: At the renewal of business last Wednesday, the market exhibited a firmer tone, dealings being on a satisfactory scale, cash moving up to £172 5s, three months' fluctuating to £174 7s 6d. An easier feeling prevailed at Thursday's market, while cash sold at £171 5s to £171, late February at £172 10s, and three months' from £174 to £173. At Friday's session cash realised £171 to £171 15s, late February £172 10s, and three months' £172 10s to £173 5s, while finally registered at £173. English ingots, £170 10s to £171. Copper: After remaining steady last Wednesday, the standard market manifested a rather weaker tone at Thursday's meeting, with business in cash at £66 2s 6d, and three months' £67 5s. A quiet but steady tone prevailed at Friday's session. Cash sold at £66, early February £66 7s 6d, and three months' at £67 to £67 2s 6d. Electro, £74 to £75; best selected, £68 10s to £70 10s; strong sheets, £98. Wire bars, £74 to £75. Lead easier at £24 7s 6d to £24 2s 6d, as to position. Spelter rather lower at £27 2s 6d to £27 5s. Antimony: English regulus, £36 to £39. Aluminium: Home delivery, £120; export, £125.
