The Economist,

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

THE MONEY MARKET.

Up till last Thursday the market looked like getting over the turn of the half-year very easily, but on that day pressure was found to be severe, and a very large amount was borrowed from the Bank of England for a week at 6½ per cent., so much so that some borrowers were obliged to take loans for eight days, so as to spread the problem of repayment. Outside lenders were able to extract 7½ and even 8 per cent. for loans over the night from borrowers, who were thus enabled to avoid going to the Bank. This unexpected pressure was accompanied

by the equally unexpected announcement that the sale of yearling Treasury bills had been suspended, and had been replaced by the offer of six months' bills at the same price, $5\frac{1}{2}$ per cent. Since January 1st is a Sunday, six months' Treasury bills sold on June 30th and dated July 1st will be payable on December 31st, and there was consequently an eager rush to apply for this specially cheap and desirable maturity, which put a handsome present into the pockets of those who secured it. As end-December bills could easily have been placed at $5\frac{1}{2}$ per cent., the market made merry over the incident, which it was inclined to ascribe to a mistake on the part of "Treasury high-brows"; but it seems more likely that the Bank of England would be responsible for a detail of this kind. Yesterday, owing to the large sum due from the market in payment for Treasury bills, there was still a fair demand for money. Commercial bills remained extremely scarce, but it is expected that now that the coal stoppage is over the supply will improve. Three months' bills, now an October maturity, were quoted nominally in the neighbourhood of $5\frac{1}{2}$ per cent.

* Additional to those offered by tender the preceding week.

The Bank return was less favourable. The stock of gold rose by £9,000 and the circulation by £1,528,000, and so the Reserve was £1,519,000 lower. Securities were swollen by £9,630,000, of which £6,923,000 went to Other, and the Deposits were thus more than eight millions higher, Other rising by $9\frac{1}{2}$, while Public fell by $4\frac{1}{2}$. The currency notes circulation declined by £1,065,000 to £323,884,400, which includes £2,024,500 for notes called in, but not yet cancelled. The fiduciary issue is £273,909,900, which is £43,645,300 below the maximum.

The statement of Revenue and Expenditure for the first quarter of the financial year 1921-22 shows that Revenue during that period amounted to £204,168,385, which is a decline of £110,818,067 on the corresponding period of the previous year. Too much importance, however, must not be attached to this drop, which is fully accounted for by Special Receipts, which yielded £14,007,884, a decline of £84,338,950, and Excess Profits Duty, which at £17,114,000 shows a decline of £39,254,000. Property and Income-tax, at £63,900,000, shows an increase of £10,162,000 as compared with the corresponding quarter. Customs and Excise totalled £73,241,000, against £71,408,000. Telephone Service yielded £900,000, against £1,900,000. Interest on Sundry Loans at £1,954,837 is £1,870,897 lower. Stamps yielded £2,697,000, a decline of £2,928,000. Expenditure during the quarter totalled £271,420,290, against £284,728,238. It will be noted from our table below that the Floating Debt has increased by £98,641,000 during the quarter. Treasury Bills outstanding have increased £100,806,000 during the quarter. Net sales of National Savings Certificates amounted to £2,080,000, and Treasury Bonds £1,002,675. During the quarter £13,666,369 of Other Debt has been repaid.

In the foreign exchange market there has been another very dull week, varied only by a further dramatic depreciation in the Polish mark, the value of which on the 30th reached a figure of 8,000-8,500 marks to the £ sterling. The enormous increase in note circulation, consequent mainly on the difficulty of getting in taxes from the rural population, and the ill-advised policy of the Poles over the Silesian and Lithuanian questions, go far to explain this movement. But it is unfortunate that the collapse

should have been accentuated just at the time when Poland shows real signs of getting its house in order, both politically and industrially. The Austrian krone continues also to fall, although at a less rapid rate, and the London quotation on the 30th had reached 2,100-2,300. In Vienna on the 27th the rate for Inlandskronen was 2,675-2,695, as compared with the London rate for Auslands-kronen of 1,900-2,000 on the same day. For the time being little is being heard of the League of Nations' plans for relief. The New York rate, after recovering at the end of last week to 3.76 $\frac{1}{2}$, fell back again at the end of the half-year to 3.72 $\frac{1}{2}$, apparently on some revival of orders in the States after the settlement of the coal strike. Yesterday, however, there was a recovery to 3.73 $\frac{1}{2}$. The quotation for futures remains the same as last week at about $\frac{1}{2}$ to $\frac{3}{4}$ cent per month above spot. Very little movement has been shown in the Paris rate, which with a little irregularity ended the period at 46.57 $\frac{1}{2}$, or about 15c better than the week before. Brussels at 46.90 is again at a slightly higher discount as compared with Paris than last week, but this discrepancy is unlikely to continue. In Paris the quotation for futures has narrowed a little from 5c to 8c last week to 3c to 5c per month below spot, while the Brussels rates at 10c to 15c have remained practically unchanged. The lira, in spite of the fall of the Giolitti Cabinet, has shown considerable activity, and has recovered from 78.75 to 75.60. Amsterdam, after being as high as 11.37 $\frac{1}{2}$, has fallen back to 11.34 $\frac{1}{2}$, only 1 cent. above last week's quotation. Madrid has gone some 40 points in favour of this country, while the Swiss rate has remained comparatively steady. Christiania also has moved very little, while Stockholm and Copenhagen have gone slightly in our favour. In Germany the steady depreciation, which is the almost inevitable consequence of reparation payments, is having its effect, the rate at 280 being about 11 marks higher than last week. The quotation for futures remains at 1 to 2 marks below spot. Helsingfors, after some very irregular movements, has been able to retain some of its recent recovery, and is now quoted at just above 220, although there has as yet been little sign of revival in the timber trade. Prague, at 275, has depreciated slightly, while Bucharest, at 245, is some 6 points higher, and Budapest at 975 some 25 points higher, than last week. Sofia (at 340) has depreciated also very slightly, as, too, has Belgrade at 130. Among the South American rates there has been little movement, Buenos Ayres, Rio, and Valparaíso being slightly cheaper, and Montevideo unchanged. The rupee has moved very little, and the yen is also unchanged. The silver market remains very dull, with little on offer and a slight rise in spot prices, but with complete uncertainty as to what may come, and forward rates slightly below spot. Singapore is unchanged; Shanghai $\frac{1}{2}$ d dearer.

It is announced that the business of Messrs Arbuthnot, Latham, and Co., of 33 Great St Helens, Bishopsgate, is being converted into a joint stock company. The firm has been in existence under the same title and at the same address since 1833, and the business will continue to be conducted by the existing partners (in the new capacity of directors) on the same lines as in the past. The capital of the new company is to be £600,000, of which £550,000 will be issued and £400,000 of it paid up. Mr R. W. M. Arbuthnot and Mr Reginald Abel Smith will become directors of the company, in addition to the present four partners. It is always a matter of more than merely sentimental regret when such changes happen, since the old private firms of the City perform a special and most useful function. In this case it appears to be due to the fact that the present partners have no sons to carry on the business.

News of the suspension of the Banque Industrielle de Chine, a French institution, founded in 1913, was received in the City on Thursday with more regret than surprise. It has for some time been known to be in difficulties, owing to a too spirited policy of expansion following a successful beginning. The incident cannot fail to have a bad effect in China, where the Government was closely interested in the bank as creditor and shareholder, and the public had placed considerable deposits in its charge.

Liquidation has been proceeding for some months, and it is believed that the positions open in silver and in exchange are largely cleared.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JUNE 30, 1921.

Total spent	£ 271,420,290	Raised by revenue ..	£ 204,168,385
Dec. in balances....	253,757	Net borrowings	66,998,148
Total	271,166,533	Total	271,166,533
ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts...	£ 1,058,150,000	Ordinary Expenditure	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

JUNE 25TH.—Premier invites leaders of Northern and Southern Ireland to a conference.

JUNE 26TH.—Italian Cabinet resigns.

JUNE 27TH.—Coal Conference assembles. Provisional agreement reached. Empire Premiers meet at Downing Street. House of Commons discuss unemployment pay. New Zealand Loan issued. Polish mark touches low record. London Congress of the International Chamber of Commerce opens. New Irish Lord Chancellor appointed.

JUNE 28TH.—Coal agreement completed. Government offer of £10,000,000 renewed. Southern Irish Parliament opened at Dublin, only 15 Senators and four members of the Lower House attending. Coal settlement terms debated in Commons. Premier of Northern Ireland accepts London Conference invitation.

JUNE 29TH.—Empire Premiers discuss Anglo-Japanese Alliance.

JUNE 30TH.—Agreement reached in engineering dispute. Quarterly revenue returns issued. Safeguarding of Industries Bill in the Commons. Yearling Treasury bills withdrawn and six months' Treasury bills again offered. Suspension announced of the Banque Industrielle de Chine.

JULY 1ST.—Vote for the £10,000,000 coal subsidy discussed in the Commons.

The Stock Exchange has not enjoyed any considerable increase in the volume of business, but the tone has improved on the reduction in Bank rate and the coal settlement. Consols and National War Bonds have advanced conspicuously, and Home Rails are a little better on the improvement in the industrial outlook.

A distinct increase in activity is reported from the cotton trade, buyers having displayed increased confidence, and extensive purchases of piece goods for India have taken place this week. The feeling in the wool trade is more optimistic, owing not only to the coal settlement, but also to the wage agreement with operatives. Some woollen mills are restarting, and as soon as coal supplies are available it is anticipated that many of the larger mills will be able to run longer hours than before the coal stoppage began. The iron and steel industry is preparing for a revival of activity as soon as fuel is available; and the position in the engineering branch is relieved by the wage agreement arrived at this week. The boot trade is looking forward to a big increase in demand, as stocks have run very low during the coal stoppage.

Details of market movements and news from special correspondents will be found on later pages of this issue.

THE MONETARY HALF-YEAR.

DURING the first half of 1921 several interesting features have marked the course of the money market's history. The two reductions in Bank rate from 7 per cent. to 6 $\frac{1}{2}$ per cent. on April 28th and to 6 per cent. on June 23rd have marked a relaxation in the dear money policy, either because, as in the opinion of its supporters, it had done its work and effectively checked the speculation in produce and the rise in prices which was producing chaos, or because, as is the opinion of those who are most strongly opposed to it, it has helped to produce widespread depression in trade, which has for the time being killed enterprise and so severely checked the demand for credit. Probably the truth, as usual, lies somewhere between these extreme views, but, at least, it is satisfactory to know that the official reduction in the value of money accompanied by a lowering in the price which the Government had had to pay on Treasury bills has cheapened the financing of the country's floating debt. On the other hand, the extreme depression in trade, accentuated by the coal stoppage, which has done such enormous harm to the country as a whole, and no good to those whose interests were believed to be involved by it, has been a sufficiently disastrous cause for an easier level of rates in the money market. Though it may well be argued that the coal stoppage might have been avoided by a better display of statesmanship on the part of all concerned, it is probably true that the trade depression, which has been almost world-wide, was a stage that had to be gone through in the course of economic convalescence. The feverish activity of the first half of 1920 was bound to be followed sooner or later by exhaustion and depression, and though it came sooner than many expected, it was perhaps just as well to get it over, and it may even be hoped that there are signs of an improvement in trade, when the effects of the coal stoppage have ceased. But with regard to this possibility of better trade in the future everything depends in this country on a reduction in the cost of production to a level at which it can compete in the markets of the world.

Changes in various Bank rates have been numerous during the half-year and with the exception of the Austrian

have all been downward. The following table gives the principal movements:—

April 6, 1921, Swiss Bank rate reduced $\frac{1}{2}\%$ to $\frac{4}{3}\%$
April 15, 1921, Austrian " " raised $\frac{1}{2}\%$ to $\frac{6}{3}\%$
April 26, 1921, Swedish " " reduced $\frac{1}{2}\%$ to $\frac{7}{3}\%$
May 5, 1921, Danish " " $\frac{1}{2}\%$ to $\frac{6}{3}\%$
May 4, 1921, Swedish " " $\frac{1}{2}\%$ to $\frac{6}{3}\%$
May 5, 1921, New York Federal Reserve reduced $\frac{1}{2}\%$ to $\frac{6}{3}\%$
May 19, 1921, Belgian Bank rate " $\frac{1}{2}\%$ to $\frac{5}{3}\%$
June 2, 1921, Indian " " $\frac{1}{2}\%$ to $\frac{5}{3}\%$
June 16, 1921, New York Federal Reserve " $\frac{1}{2}\%$ to $\frac{6}{3}\%$

A highly important and successful departure was the inauguration on April 21st of the tender system for the sale of three months Treasury bills. These were on continuous offer at the beginning of the year at $6\frac{1}{2}\%$ per cent. This rate was reduced to 6 per cent. on March 11th. This method of sale ceased on April 20th, when the tender system was begun for bills of this usance, a fixed sum being on offer each week, at first on Thursdays, though the date of tender was altered to Fridays on May 12th. Additional three months bills have been sold on the intervening days at rates notified from time to time by the Treasury, ranging from $5\frac{1}{2}\%$ per cent. from April 22nd to 28th to 5 per cent. from June 23rd to 30th. We append a complete record of the results obtained by the tender system, which shows that it has worked in a manner highly satisfactory to the Treasury, while at the same time its advantage has been obvious in making the sale of Treasury bills less a matter of official control, and leaving the rate to be decided by the competition of the market working according to its estimates of the conditions:—

Date.	Amount. £	Applied for. £	Average Rate of Discount. £ s d
April 21	50,000,000	51,930,000	5 19 3.95
28	50,000,000	76,735,000	5 14 5.64
May 5	50,000,000	94,620,000	5 12 11.18
12	45,000,000	93,355,000	5 11 2.81
20	45,000,000	65,565,000	5 14 11.02
27	55,000,000	72,490,000	5 13 1.83
June 3	55,000,000	84,775,000	5 12 1.06
10	40,000,000	83,977,000	5 12 2.28
17	40,000,000	82,670,000	5 10 1.06
24	55,000,000	96,485,000	5 6 8.89

A considerable reduction has taken place during the half-year in the amount outstanding of the floating debt, though it should be noted that the total at the end of March was some 99 millions lower than that which is shown at the end of June. The same tendency is noticeable in the movement in what is perhaps the most important item in the floating debt, namely, the Ways and Means Advances made by the Bank of England. These, as will be seen from our table, began the year at $87\frac{1}{2}$ millions, and had been wiped out altogether by the end of March, but have had to be increased to $39\frac{1}{2}$ millions on June 30th:—

	Dec. 31, 1920.	Mar. 31, 1921.	June 30, 1921.
Bank of England advances	£ 87,250,000	none	£ 39,250,000
Public Department advances	218,722,000	154,489,000	113,074,000
Treasury bills	1,102,109,000	1,120,841,000	1,221,647,000
	1,408,081,000	1,275,330,000	1,373,971,000

The increase in the floating debt during the last three months of the past half-year, which were the first three months of the current financial year, was chiefly due to the failure of the revenue to keep pace with expenditure. Too much stress has been laid upon this point by some of the critics of the Government finance, who have now been encouraged by an answer too hastily given by the Chancellor of the Exchequer last Thursday, in reply to a supplementary question. The decline in revenue as compared with last year's is fully accounted for by E.P.D. and special receipts. In fact, the general revenue of the country has so far come in remarkably well, and there is quite a fair chance, in spite of Sir Robert's statement, that the estimated revenue will be gathered.

The market rates of discount have, as usual, moved in accordance with the rate ruling for Treasury bills. As a whole, except on occasions of seasonable demands, the supply of short credit in Lombard street has been comfortable, though some complaint has been heard of the effect produced by arrangements made for the monthly balance-sheets by the joint stock banks. The following

comparisons show how the averages compare with those of the four previous years:—

	DAILY AVERAGE FOR FIRST HALF-YEAR.				
	1917.	1918.	1919.	1920.	1921.
Bank rate	£ s d 5 6 0	£ s d 5 0 0	£ s d 5 0 0	£ s d 6 8 7	£ s d 6 16 0
Market rate (3 months)	4 16 7	3 13 0	3 10 0	6 2 2	6 2 7
Margin	0 9 5	1 7 0	1 10 0	0 6 5	0 13 5
Short loans	£ s d 4 11 0	£ s d 3 6 2	£ s d 3 4 7	£ s d 4 16 0	£ s d 5 7 7
Deposit rate (banks) ..	4 0 0	3 2 6	3 0 0	4 8 7	4 16 0
Margin	0 11 0	0 3 8	0 4 7	0 7 5	0 11 2

The following table gives the principal movements in exchange:—

Centre.	Method of Quoting.	Par Level.	Rate, Dec. 31, 1919.	Rate, Dec. 31, 1920.	Rate, June 30, 1921.
Paris	Francs to £1	25.22½	40.90.95	59.72.77	46.70.75
Berlin	Marks to £1	20.43	186.189	257.259	281.283
Amsterdam	Florins to £1	12.107	10.08.10	11.26.28	11.35.36
Copenhagen	Kroner to £1	18.159	19.68.72	23.15.20	22.15.20
Rome	Lire to £1	25.22½	50.00.50.10	101.1.102	76.76½
Switzerland	Francs to £1	25.22½	21.10.13	23.15.20	22.18.20
Madrid	Pesetas to £1	25.22½	19.60.65	26.44.49	28.72.75
Lisbon	Pence to mills	53½	19½.20½	63.7	81.3½
Athens	Drachmae to £	20.43	25.70	47.50	64.65
Warsaw	£2. Marks to £	20.43	2.250	8.000.8.500	
New York	Dollars to £	4.86½	3.76.76½	3.54.54½	3.72½.72½
Buenos Aires	Pence to dollars	47.58	61½.62½	51½.51½	43.44
Rio de Janeiro	Pence to dollars	18	17½	9½	7½
Montevideo	Pence to dollars	51	65½.66	49½.50½	40½.41½
Valparaiso	Pesos to £	13.33	12½(a)	9½(a)	35.50
Calcutta	Ster. to rupee	10 to gold sov.	12.47½.7½	15½.7½	1.33½.7½
Hong Kong	Ster. to dollar	24½	4/10½	3/2.2½	2/7.7½
Shanghai	Ster. to tael	7/9	4/1.2½	3/5½.6½	2/6½.6½
Yokohama	Ster. to yen	24½	2/8.8½	2/8.8½	2/6½.6½

† Par value of rupee was 1/4 for these quotations. (a) Pence to peso.

The most notable features in the above table are the improvement in the currency of our principal Allies and of the value of sterling in New York. Sterling, in fact, rose to over \$4 to the £ in the middle of May, and then fell back sharply owing to the effects of the coal strike and the action of the Reparation Commission in demanding the first instalment of Germany's indemnity payment in dollars. The comparatively small depreciation in the value of the mark is notable, in spite of the reparation settlement and its consequences. Greek currency has depreciated severely owing to the politics and military adventure, and the same reasons may be assigned for the extremely rapid tumble in the value of the Polish mark, though German manipulation is alleged to have assisted it.

Thanks to trade depression, unemployment, and deflation the value of the outstanding currency notes shows a decline of not less than $43\frac{1}{2}$ millions during the half-year, from $367\frac{1}{2}$ millions on December 29th last to $323\frac{1}{2}$ millions on June 30th. During the same period the Bank of England note circulation declined from £132,851,150 on December 29, 1920, to £129,006,290 on June 30th.

PROBLEMS OF INTERNATIONAL FINANCE.

MUCH sound doctrine—some of it open to criticism as counsels of perfection—has been preached during the past week at the London Congress of the International Chamber of Commerce. On the whole, the bankers, merchants, and financial experts there assembled repeated and endorsed the conclusions arrived at last autumn at the Brussels Conference, which have since been glibly accepted by spokesmen of the various Governments to whom they were addressed, and consistently ignored by most of them in the financial policy pursued. Our own Government has certainly made an effort to provide a margin out of revenue (giving a somewhat generous meaning to the word) for reduction of debt, but its effort to free commerce from restrictions—an object on which strong emphasis was laid at Brussels and now in London—has consisted of the fatuous Reparations Recovery Act, now followed by the almost equally preposterous Safeguarding of Industry Bill, which is being forced through in spite of weighty protests by bankers, scientists, and the cotton trade. The Lord Chancellor, in welcoming the delegates on Monday, observed, only too truly, that the primary object of business men was to carry on business, and of politicians to attend to politics. If the Government had thought less about politics and more about the economic interests of the country its record might have been less emphatically condemned by the country in a series of by-elections.

A resolution was brought forward on Tuesday urging, among other things, that in order to remedy the dislocation and instability of rates of exchange, Governments should pursue a strict policy with regard to taxation and economy; that inflation of paper currency should be stopped and progressively decreased; that the question of inter-Allied debts should be studied, and the greatest possible liberty should be granted in all commercial and financial transactions. The clause concerning the progressive decrease of inflation produced a difference of opinion and an interesting discussion. Professor Gustav Cassel moved the deletion of this phrase, urging that stability was more important than deflation—in fact, that Governments must prohibit attempts to deflate currencies, because it was impossible to stabilise while such attempts were in progress. "One of the main causes of the present serious depression of trade and the unparalleled degree of unemployment was the efforts which had been made to increase the internal value of money and force prices down." (Times report, June 29th.) This contention was vigorously traversed by Sir Felix Schuster, who maintained "that countries which had departed from their pre-war gold standard must aim at deflating their currencies gradually, so as to inflict the least injury, but with one object in view—a return as soon as possible to the pre-war gold standard. That would be the policy of the bankers of the United Kingdom, and until that object was attained he thought they must adhere to a policy of gradual deflation—certainly in this country." The position taken by Sir Felix was endorsed by Mr Watts, on behalf of the United States delegation, and also—a highly important fact, which was not reported—by the French and Belgian spokesmen; and Dr Cassel's amendment was defeated, in spite of his protest that if currency were made more valuable the burden of State debts would be so crushing that productive work could not be carried on. With doctors so distinguished in disagreement, the ordinary seeker after truth may well be bewildered. Certainly, we must agree with the Swedish specialist that stability in prices and rates of exchange would be, if it could be secured, an immeasurable help towards a revival of trade and confidence; but could we be sure that any "stabilisation," for example, of the Polish mark at its present level would long remain stable? Stability cannot be won merely by giving new names and denominations to currencies, but has to be founded on the solvency of the State and the productive power of the people. On the other hand, Sir Felix admitted that deflation might be carried on too rapidly, and we understand that he must not be taken as urging that countries like France and Italy should necessarily aim at returning to the pre-war par. We have always hoped for a gradual cure for the chaos into which our currency has been reduced by bad war finance, through increase of goods rather than through too hasty measures for diminishing the volume of currency and credit. But most of our readers will heartily endorse Sir Felix's view that any action by the conference which might have encouraged our own or other Governments to fresh currency naughtiness would have been a disaster. The paper-strewn path is so easy and alluring, and can be made to look so specious in its attractiveness, especially to a Prime Minister and a Chancellor of the Exchequer who are blissfully ignorant of finance and at their wits' end to restore the waning popularity of a discredited administration. And everyone who understands and values the true foundation of British financial prestige will agree with Sir Felix that a return to the pre-war gold standard is, for us at least, a financial goal towards which we have to work with steady determination.

On the subject of Allied debts, the American delegation deprecated action, on the ground that the time was inopportune, and that it was undesirable that the International Chamber should seem to weaken the integrity of obligations. On Wednesday Sir Drummond Fraser, on the ter Meulen scheme, had a highly satisfactory innings, and scored the hearty endorsement of the American delegation. Mr G. E. Roberts, of the National City Bank of New York, made an important statement on the subject of the Reparations Agreement, saying that, though it had been welcomed in America, American financiers viewed with concern the possibility that Reparation bonds might be offered in the United States on the ground that the low price at which they would have to be offered to secure

sale might "spoil the market not only for these bonds, but for foreign offerings generally, and thus seriously interfere with all efforts to aid the European situation."

The subject of German Reparations was also prominent in the address delivered on British Financial Policy by Mr Edgar Crammond to the Bankers' Institute last Tuesday, which also ranged over many other interesting matters. Mr Crammond, for example, with a temerity rare even among statisticians, told his audience not only that the total income of the nation in 1920 was £4,400 millions, but also that in 1921 it could not exceed £2,800 millions, and argued that on this basis the present rate of official expenditure could not be maintained without endangering the whole economic fabric. On the subject of Reparations, Mr Crammond argued that even if it were physically and financially possible for Germany to make reparation in the form now proposed, this payment would give Germany such a commanding position in the markets of the world that they were entitled to ask France to reconsider the matter from another point of view, namely, that of the capacity of the markets of the world to absorb Germany's manufactures without disturbing the economic position of the other great manufacturing Powers. Where were these vast exports going to find a market? "Germany would become the central workshop of the world, although operating under depressing conditions and at famine wages; her central shop would stretch out its tentacles to all markets of the world, aided by the boundless passion and tenacity of a people fighting for its life with the whole force of its concentrated productive machinery. In the past, Germany supplied one-tenth of the world's consumption of manufactures, hereafter she would be compelled to increase her share to 40 per cent. and to oust a corresponding proportion of competitors' goods."

Like other Jeremiahs who warn us of the evil effects of receiving an indemnity, Mr Crammond omits several important considerations. He assumes that the world's power to consume goods is strictly limited; but surely it may expand—with good sense in foreign politics it may expand very considerably, especially when the "safeguarding of industry" absurdities are put on the scrap-heap. He also forgets that the indemnity payment will be a handicap on German industry, and will give its foreign competitors a handsome margin in their favour. In fact, if British industry is true to itself, and gets to work instead of whining for Protection, Germany will only be able to export the huge total ultimately required by finding and making new markets. Mr Crammond concluded that Germany must be compelled to pay such an indemnity as could be safely exacted without disturbing the economic balance of the world, and he believed that she was willing to do so, but he was convinced that it must be a very much smaller amount than that laid down by the London Conference. France might fairly claim that she could not re-open this question unless it was considered in connection with her own external war debts. He urged that the whole problem should be reconsidered by France, the United States and this country on the understanding that both Great Britain and America would cancel the French war debts, and that France in her turn would cancel the war debts due to her by the smaller Allies. "The cancellation of the French war debts by Great Britain and the United States should form part of a general policy of the cancellation by all the Powers of the inter-Allied war debts, except in the case of the British war debt to the United States, which we could quite easily meet when the trade of the world became normal."

SALVING THE COAL INDUSTRY.

ALTHOUGH a wages settlement has been reached, and on Monday as many men will return to work as can be employed to immediate advantage in the pits, the coal industry is not at all in the position of making a simple re-start after a prolonged period of inaction. The export markets have gone, and the home markets are paralysed. Both the producing and selling ends of this fundamental industry will need to be reconstructed before any of those engaged in it can know whether the future will hold any place for them at all. Many pits will never be reopened; many more will absorb much work in pumping and timber-

ing before coal can be cut from them; many others will become producers before sure markets have been found for their products. We shall see before us not the re-starting so much as the salving of an industry.

It was not so after the five weeks' strike of 1912, or after the three weeks' strike of last autumn. Then the industry resembled a ship which was placidly lying in port, ready to set forth upon a voyage as soon as steam could be raised in the boilers. Now the industry more nearly resembles a derelict hull upon the rocks, a hull which cannot become a live ship until it has been repaired and pumped out and coaxed into deep water; and even then the problem will remain of finding profitable freight for the ship to carry. During the three months of inactivity in the coal fields the trade of this country has been drawing near to a stop; it cannot instantly revive merely because once more coal is being cut and stocks being piled up. Much of our trade cannot be revived until coal has become both plentiful and cheap. Trade is much more quickly lost than it can be regained. It is not in any spirit of pessimism that we write. If our people will settle down to real hard work in the coal industry and in all other industries, so that costs of production may be lowered and markets re-won, this country will quickly make up for its losses in the war and in the peace. But just as nothing saved us in the war except courage, hard work, and a united front, so nothing can save us in the difficult days of peace except courage, hard work, and, above all, a united front. Industrial stoppages such as those which have directly and indirectly resulted from the coal troubles, must not happen any more. We cannot stand them; they augur ruin to us all.

The value of the settlement of this week cannot immediately be appraised. Everything will depend upon the spirit in which the new system of profit-sharing is worked by the mine owners and the mine workers. The men have been defeated upon the issue of a National Pool of wages and profits, but they have really won more than they have lost. Their enduring loyalty, the splendid self-sacrifice of the miners in the more favoured districts to the interests of those in the less favoured, and their perfectly wonderful discipline and law-abiding quietness have commanded the sincere respect of all classes in the country. We like to believe that in no country except Great Britain could thousands of men slowly starve for thirteen weeks without bursting forth into violence and crime. At the price of their painful endurance they have won respect and obtained a profit-sharing system wider in its scope and more hopeful in its possible effects than any other which has yet been devised for a great industry. For the first time in the history of coal-mining the miners have had a "square deal" expressed in plain terms. And the country, which contributes ten millions to help the miners through the first three months of their difficult salvage operations, is committed to the task of seeing that the deal is kept square. We, all of us, have become trustees of the contract of settlement.

We have no great fear that export markets will remain closed, always provided that costs can be substantially lowered. The quality of British coal is its own best advertisement. Our European customers, after learning how bad other coal can be, will gladly go back to their first love, if they can obtain supplies at a reasonable price. We do not take very seriously the threat of United States competition, except possibly in South America. Although American coal is far more cheaply produced in America than is British coal in England or Scotland, the cost and difficulty of transport to Europe are prohibitive in normal times. One cannot add large quantities of coal to America's regular outward shipments of grain, cotton, and other raw materials without placing a greater demand upon shipping space—all one way—than it is able to meet. Heavy American coal exports increase the difficulties and cost of shipping, while British exports of coal—because they are moving in the opposite direction—diminish the difficulties and lower the costs. It may be that much time will pass before the wide markets of 1913 can be re-won for British coal; but the natural advantage which our coal enjoys of employing shipping in the most economical manner by affording return freights will operate in the future as in past. Our export collieries will have to win their way back by turning out the stuff cheaply and

cutting prices, just as in the far-off days before the war they won and held their way.

The salving of an industry is a hard and cruel task. We are afraid that a substantial proportion of the men who were employed before March 31st in and about the coal fields will find their occupation gone. No really substantial reduction in the cost of coal can be achieved except by employing fewer men and getting better results from their work. Between 1913 and 1921 the number of men employed went up by 20 per cent., and the output of coal per man went down by 20 per cent. No industry in a competitive world can exist under conditions so economically impossible. No one, least of all perhaps the members of the miners' executive, expects that more than two-thirds of the miners can get back to work on Monday. The industry was over-manned before the stoppage; it will be still more seriously over-manned after work recommences. There will be much suffering before the men who are permanently displaced can get other work, and in the meantime there must be a new drain upon the country of unemployment doles to workless miners. At the lowest estimate there are two hundred thousand more men in the coal fields than the coal industry can permanently support.

It is instructive to note by what process this apparently interminable dispute was brought to a sudden end. The actual settlement, except in some points of detail specially favourable to the men, is not new. The principle of profit-sharing was agreed upon four months ago. The dispute ended because the miners' leaders usurped powers of negotiation and decision which the constitution of the Federation did not give them. The constitutional course, which up to this week had been scrupulously observed, was for the executive, first, to negotiate with the mine-owners and the Government, not as plenipotentiaries but as representatives; secondly, to report their conclusions to a conference of delegates from the districts; and, thirdly, if so instructed by the delegate conference, to ascertain the views of the men by ballot. This procedure was gone through some three or four weeks ago, with the unexpected result that the men, too proud to admit defeat though anxious to get back to work, returned a more than two-thirds majority in favour of continuing the fight. The executive, who knew the financial stresses of the situation better than the men, realised that heroic endurance further persisted in must mean starvation. They took the bold course of passing over the ballot and cutting out the constitutional procedure; they approached the mineowners and the Government as self-constituted plenipotentiaries, saying, "If you will settle with us we will settle with the men." The intermediate conference of delegates, with its majority of "die-hards," was washed out completely. Desperate men will take desperate courses, and we may all be thankful that the miners' executive had enough courage of desperation to convert a nominal into an actual effective leadership.

There can be no doubt that, so far at least as the coal miners are concerned, the men have shown themselves to be more pugnacious than the leaders. And this is no new experience. In 1912, after five weeks of stoppage, the Government of the day promised legislation for a minimum wage, the executive recommended acceptance, but the miners by a substantial majority refused compliance. Fortunately the rule of a two-thirds majority for a strike, or the continuance of a strike, was brought by the executive into operation, the men were instructed to go back to work, and went like lambs. They appear to have regarded their hostile vote as a protest, and not as a decision. Exactly the same thing happened last autumn. There was the same disregard of the executive's recommendation, the same invocation by the executive of the two-thirds majority rule, and the same obedience to the order of return. Now we have a real two-thirds majority practically overruled, and the usurpation of authority by the executive, to all appearances, willingly condoned. These experiences do seem to suggest that the rank and file of the coal miners prefer to be governed rather than to govern themselves. We should be glad to believe that the true remedy for industrial disturbances is the development of a sense of responsibility among the men, and of a determination to restrain the ambitions of restless leaders. But when one sees, as one constantly does see, trade union leaders striving for peace and men

persistently voting against peace, that belief is difficult to entertain. It is not easy to escape from the conclusion of Mr Clynes, expressed in the House on Tuesday last, that "a ballot of the rank and file of the workmen, no matter in what trade, has never yet ended a dispute which would not otherwise have been ended; but, on the contrary, ballots have very often been the cause of disputes being prolonged.....The worst body of men very often, or the men least capable of forming a true judgment of their own interests, are the masses of the workmen themselves." In the present stage of industrial education we are afraid that Mr Clynes is right; "self-determination" by the rank and file of trade unions does not make for peaceful settlements. One big factor in this coal business cannot be disregarded: the settlement which we all welcome was the work of one resolute man, Mr Frank Hodges. If Mr Hodges could have prevailed with his own executive he would have ended the dispute on pretty much the same terms two long months ago. We owe to the courage of one man the peace which the mass of his supporters had refused to accept.

THE RAILWAYS BILL IN COMMITTEE.

THE fifteenth of August is getting dangerously near, but the Railways Bill, like a wounded snake, drags its slow length along. It has been four weeks in Committee, and about one-seventh of its clauses and a portion of one of its seven schedules have been discussed. Possibly, if the railway companies could thrash out an agreed policy beforehand, instead of leaving individual directors to discuss their differences before the Committee, if, for instance, their representatives on the Committee would refrain from objecting to clauses which the Railway Company's Association had asked for, progress might be more rapid. Possibly, also, if the senior member for the City of London, who, according to an ingenious statistician, has spoken at sufficient length to occupy one-sixth of the total columns of Hansard contributed by the whole Committee of about 70 members, were to curb his benevolent desire to improve a Bill to which he has announced himself as totally opposed, a further measure of acceleration might be attained. Until the Bill has become an Act not a few boards of directors will have to face the disagreeable necessity of deciding whether they shall withhold or whether they can venture to pay interim dividends at least on their ordinary stocks.

The amendments made so far are not of far-reaching importance, except that the grouping of the Scotch railways with the English East Coast and West Coast companies respectively has been accepted in principle. After a discussion lasting the best part of an hour the important question has been decided that the costs of the Amalgamation Tribunals, which are not to exceed £35,000 in all—say, roughly, one-thirtieth of 1 per cent. of the revenue which the companies will receive during the life of the Tribunal—shall be borne by the companies themselves and not by the taxpayer. The period for submitting voluntary schemes has been extended for a year till June 20, 1923, and it has been decided that the Minister shall consider representations made to him before giving his approval to a scheme or sanctioning changes in the groups as laid down in the Bill, and that a scheme shall not become operative unless and until formal resolutions to that effect have been passed through both Houses of Parliament. In the face of a forlorn opposition led by one of the members for Hull, it has been decided that the groups shall be on a territorial basis, and not so planned as to preserve competition between important points. The Committee have refused to overload the present Bill with the question of the ultimate fate of joint lines, of which the railways of the Cheshire Lines Committee are the most important instance.

Clause 6, which we discussed at some length on our last reference to this subject, has been entirely deleted, and a short clause substituted providing that the Amalgamation Tribunal shall take into consideration all the circumstances of the case, and in particular the value on a net earning basis of each of the constituent and subsidiary companies both as a separate company and as a

component part of the new amalgamated company. The £60,000,000 to be handed over by the Government in satisfaction of all claims for compensation is to be paid not into the Bank of England, but to Messrs Glyn, the bankers of most of the companies. The question how the money shall be finally allocated was postponed on the understanding that it would probably be possible at a later stage to bring up an agreed clause dealing with the matter.

Meanwhile, a careful memorandum on the Bill has been circulated by the National Federation of Iron and Steel Manufacturers. With their introductory statement—stressing the importance of the railways to the iron trade, and the importance of the iron trade to the railways—no one is likely to quarrel. But not all the claims they make will find universal acceptance. They still pin their faith to statutory maxima as a protection to the trader. For one thing, all railway history is against them. For another, they themselves state that the bulk of their trade will continue in the future, as in the past, to be carried at exceptional rates. And it is difficult to see how statutory maxima can serve to keep down exceptional rates—that is, rates which already are below not the maximum only, but the normal scale. On the question of competition the industry takes a somewhat ambiguous attitude. It is not opposed to the proposed amalgamations, "provided there is reasonable assurance that some substitution for competition in promoting efficiency and low costs is found." The industry is not satisfied that such a substitute is provided by the Bill; but it is not successful in finding any preferable alternative. The Bill, says the memorandum, professes to provide two safeguards: statistics adequate as a basis for criticism of efficiency, and the provision that, only on condition that the management is efficient and economical, shall rates be adjusted so as to secure to the companies their standard revenue. How can a trader, asks the memorandum, prove affirmatively that management is not efficient and economical? How can statistics help them unless they have a right to prescribe the form which the statistics take? There is force, no doubt, in both objections. But it is difficult to see what more can be done. The Rates Tribunal, it must be remembered, will be in future an expert body. The members will themselves be competent to interpret the existing statistics, and to call for further information when there is justification for demanding it. It will be easy, for instance, for traders in future to claim that the train-load or truck-load of a company whose rates are under discussion, as compared with those of another company, is so small as to prove inefficiency. And then the burden of disproof is shifted to the company. It seems to us that, once adequate statistics are furnished, the traders will no longer be fighting in the dark with their hands tied, as they have in great measure done hitherto before the Railway Commission. Certainly, in America the proceedings before the Inter-State Commerce Commission show very clearly that traders there have no difficulty in bringing forward experts competent to meet the railwaymen on their own ground; and in discussing the statistics of the companies and putting forward calculations of their own giving a different aspect to the case.

The industry further complains that separate tribunals decide—the one the wages to be paid, and the other the freight rates to be charged. But they do not, as indeed they could not, suggest that the two sets of decisions should be made by the same tribunal. And it is surely obvious that the Wages Board, when fixing rates of pay, must necessarily have regard to the amount that the public can reasonably be asked to pay for carriage. And similarly the Rates Tribunal must consider how much the railway staff can reasonably claim to receive. The two tribunals must in a sense each regard the other as supplementary. The conclusions of the one will always form an important element in the decisions of the other. The memorandum points out very truly that revenue can be dissipated, not only by paying too high wages, but by employing an unnecessary number of men. But here, too, surely statistics should be adequate to test efficiency. It is an everyday matter, for instance, to check up man-hours as against tons loaded and unloaded in a goods shed, or against trucks handled through a marshalling yard. It is done by the companies themselves. The

Rates Tribunal and the traders will be fully entitled to be told the results.

One statement in the memorandum we cannot let pass without a word of comment. It is asserted that "the only satisfactory test of efficient and economical management is the ability to earn a profit." Surely, let us say, a fleet of clipper ships between Liverpool and New York might be most efficiently and economically managed. But they would hardly make a profit. The clippers have gone out of the business, and the owners have transferred their capital elsewhere. It is unfortunate for railway shareholders that to them this course is not open. Railway tunnels cannot be shifted. Few of them can even be adapted, like the famous tunnel under Edinburgh, to the growing of mushrooms.

THE HALF-YEAR'S NEW CAPITAL.

New capital issues in the quarter just ended were a little larger in aggregate than in the first quarter of the present year, a fact which may at first sight seem surprising in view of the disturbance of the economic position caused by the coal dispute. As will be seen from figures given in the course of this article, issues of speculative securities and industrial shares were comparatively small, while issues of investment stocks and debentures account for an unusually large proportion of the quarter's total. In view of the grave uncertainties of the outlook the investing public have been concentrating their attention upon investments of a well-secured and fixed-interest-bearing type, and borrowers have catered abundantly for their taste, while the release by the industrial crisis of funds normally employed in production and commercial enterprise have assisted in the absorption of the large supply of investment securities put out. The aggregate of new capital applications during the June quarter was £65 millions, as compared with £63 millions in the March quarter and £98 millions in the June quarter of 1920. For the past half-year the total is £128 millions, which compares with £233 millions in the first half of 1920. New issues, quarter by quarter, in recent years are set out in the following table:—

New Capital Applications.

Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
	£	£	£	£	£
1904.....	19,905,000	50,654,000	9,547,000	42,913,000	123,019,000
1905.....	67,301,200	36,915,500	22,854,100	40,116,600	167,187,400

A comparison of the geographical distribution of the capital raised in the past half-year with the records of last year and of previous years is given below:—

DESTINATION OF NEW CAPITAL.

	First Half of Years.				
	1911.	1912.	1913.	1920.	1921.
	£	£	£	£	£
United Kingdom.....	16,677,000	24,159,400	20,324,400	207,742,400	70,241,000
British Possessions.....	35,576,800	27,322,200	43,002,600	21,541,100	37,568,600
Foreign countries.....	65,230,000	58,252,000	57,032,600	3,822,700	20,764,900
Total.....	117,483,800	110,313,600	120,359,600	233,106,200	128,574,500

In the first half of 1913 of the £120 millions of new capital raised only one-sixth was destined for employment in the United Kingdom, while only a little short of one-half was for foreign countries. The result of the war was to concentrate the resources of the capital market upon home purposes. Thus in the first half of 1920, out of a total of £233 millions raised in the first six months, no less than £207 millions were employed at home, while the total for

employment in foreign countries was only a paltry £33 millions. The figures for the first half of 1921 reveal a movement in the direction of pre-war distribution, both foreign countries and the Empire having largely increased their proportions.

A classification of the purposes for which the new capital was raised is given in the following table:—

Description.	Total, First Half-year 1920.	First Quarter, 1921.	Second Quarter, 1921.	Total, First Half-year 1921.
	£	£	£	£
British Government loans.....	17,190,000	16,984,300	3,082,700	20,067,000

	233,106,200	63,292,600	65,281,900	128,574,500

For the past half-year British Government loans figure for nearly £20 millions, of which £3 millions was raised in the second quarter. Our figures do not include temporary borrowings through Treasury bills and ways and means advances, and, as regards the past quarter, consist of £1,002,675 for Treasury bonds, and £2,080,000 representing the excess of sales over repayments of National Savings Certificates. Colonial Government borrowings were heavy in the past quarter, and are made up as follows:—

Description.	Nominal Amount.	Issue Price.	Yield at Issue.
	£	£ s d	%
Government of India 7 % 1926-31.....	7,500,000	.. par ..	7 0 0
Ceylon Government 6 % 1936-51	3,000,000	.. 97 ..	6 4 6
South Australia 6½ % 1930-40	3,000,000	.. par ..	6 10 0
Tasmania 6½ % 1930-40	2,000,000	.. par ..	6 10 0
New Zealand 6 % 1936-51	5,000,000	.. 96 ..	6 5 9

* Including profit on redemption at final date.

The sole foreign Government loan in London in the June quarter was the issue by the Norwegian Government of £4,000,000 6 per cent. stock at 88. Borrowings by British local authorities were not so heavy in the past quarter as in 1920, but Derby, Gateshead, Newport, Reading, Wallasey, Glasgow, Sheffield, and Londonderry have been in the market for an aggregate of over £7 millions. Under the heading "manufacturing" a big decline from last year's figures will be noticed. Here, and, indeed, in most branches of industry and trade, issues of ordinary shares have been conspicuous by their infrequency, the recent issue, of £150,000 ordinary shares by A. W. Gamage being a noticeable exception. Among the large preference share and debenture issues of the past quarter the following may be noted:—Nestlé and Anglo-Swiss Milk 2,000,000 8 per cent. £1 cumulative pre-

ference shares at par; Brunner, Mond and Co. 2,500,000 7½ per cent. £1 cumulative preference shares at par; General Electric, £3,500,000 7 per cent. mortgage debenture stock at 92½; Cape Explosive Works, £1,000,000 7½ per cent. first mortgage debenture stock at 95; Harrods Buenos Ayres, 1,750,000 8 per cent. £1 cumulative preference shares at par; Baldwins, Limited, £2,250,000 7½ per cent. debenture stock at 95. For a considerable part of this quarter the market's appetite for investment securities seemed insatiable, and quick oversubscription was a frequent experience. Among oil companies the principal issue of the past quarter was that of 3,000,000 8 per cent. £1 cumulative preference shares at par by the Burmah Oil Company. A distinct feature of the quarter has been the large number of small debenture issues by gas and water companies. In the Banking section the Bank of Australasia issued to its shareholders 12,500 shares of £40 each at the price of £60 each, and the only large insurance issue of the June quarter was that of 300,000 £1 shares (5s paid) by the Employers' Liability Insurance Company at £4 per share.

THE BUILDING GUILD EXPERIMENT.

(BY OUR LABOUR CORRESPONDENT.)

ONE of the most interesting and significant developments of the past 18 months is the growth of the building guild movement. What is called "Guild Socialism" has made remarkable headway in the trade union world, largely because it supplied an element lacking in the more austere form of socialism known as collectivism. That element struck the imagination of organised workers because it offered "industrial democracy," not merely in the shape of public ownership, which might take the form of an official-ridden bureaucracy or a more or less benevolent autocracy, but in the form of industrial self-government. Collectivism made its strongest appeal to the consumer; guild socialism makes its most powerful appeal to the producer, to whom is held out a new status. Broadly speaking, the Guild idea centres upon public ownership combined with government and administration by the employees of all grades.

The Building Guilds have not attained to the public ownership of the building industry, but they are conducting an experiment in industrial self-government divorced from "production for profit." In January, 1920, a Building Guild Committee was started in Manchester. Similar committees rapidly sprang into existence in Lancashire and other parts of the country. These various committees were associated in the Building Guild, Limited. Later the Guild of Builders (London), Limited, was founded.

The various local committees consist of representatives of the trade unions in the building trades, and provision is made for the representation of administrative and technical workers. Each representative on the committee is responsible, in co-operation with the labour director or district secretary, for the supply, conditions of employment and discipline of the employees in his own trade union. Foremen are appointed by the committee on the recommendation of the managing committee of the trade union concerned. The Guild is not a profit-making concern. It undertakes to build houses for local authorities for a sum equal to the cost of labour and material, plus 6 per cent. (to cover plant and overhead charges, salaries of buyers, head office expenses, &c.), plus £40 per house (to provide for continuous pay for the workers on Guild contracts). This sum of £40 per house is put into a central pool, and used to pay men for "wet time," sickness, and other interruptions to employment.

The Co-operative Wholesale Society is in the position of a joint contractor, advancing the money for plant and acting as the Guild's banker. The Co-operative Insurance Society acts as guarantor for the due performance of contracts. The great co-operative movement is therefore closely associated with the Building Guild scheme.

The purposes of the Guild are to reorganise the building industry as a public service, to apply the principle of self-government to the industry, and to maintain the spirit of craftsmanship. Actual building operations only

began last October, and, therefore, the experiment is yet in its early stages. What is clear from the testimony of clerks of works and other independent people is that the output of the Guild worker is substantially higher than that of the worker in private employment. It is agreed also that the work is of a high standard. An official of a local authority has said that "the quality of the work is extra good and far superior to that done by any other contractors in the district." A responsible officer of the Ministry of Health recently declared of the work of the guildsmen on one contract that it was "the best in England and Wales."

The tenders submitted by the Guild are generally substantially lower than those submitted by private contractors. The Guild appears to be able to build workmen's houses for a sum approaching £200 less per house than the average private builder. So far the number of contracts given to the Guild number barely a dozen. There is a certain prejudice against the Guild, and the Ministry of Health has not been exactly enthusiastic in support of it. Recently the Minister of Health informed Guild representatives that it was intended to put the Guild as regards future contracts on the same terms as ordinary builders. This subtle decision is naturally deemed to be an attempt to destroy the spirit of the Guild by converting it into a profit-making concern.

What the future holds for the Building Guild none can say, but it seems certain that it will extend its operations, and that the idea will be applied to other industries. In the case of building, the capital required is relatively small. Guilds in most other industries will be faced with the provision of a good deal larger capital expenditure per worker. Nevertheless, guilds have been inaugurated in both the packing-case and furniture industries, and active propaganda is being undertaken with a view to the establishment of guilds in other trades.

It may be justly stated that our experience of the guild in action is insufficient to warrant general deductions. But there is no doubt whatever that experience of capitalist industry shows conclusively enough that the keener and more intelligent workers are in permanent revolt. They cannot, with any confidence, anticipate any large measures of nationalisation. The more pernicious forms of public control established during the war have been pointed out as experiments in nationalisation, when, to use the elegant phrase of the Prime Minister, they were types of "bastard nationalisation" of the worst sort. Nevertheless, there is a reaction against public ownership. Moreover, capitalism has succeeded in assuming its old sway. We have not even clipped its wings or persuaded it to become "enlightened." The only course left to Labour, apart from continuing the struggle, is to go into business itself.

This seems reasonable enough, and the Building Guild has, on the whole, been kindly received by the non-Labour section of the public who have heard of it. Yet there are misgivings about it, though nobody has yet dared to call the new movement Syndicalism—which it is—and therefore there has been no panic in Mayfair or the Middle Classes Union. The real opposition will begin to show itself if guilds of various kinds become, as they may in some industries, a serious challenge to the existing industrial order. Notwithstanding the fact that the Guilds will embody the principle of voluntary co-operation—which is commonly regarded as an excellent thing, in reason—they will be frowned upon by capitalist competitors because their code of morals and conduct will be different from—and Labour would say superior to—the code of capitalist enterprise. There is reason to think that the obstacles which have been placed in the way of the Building Guild have been raised directly or indirectly by the vested interests in the building industry—which is not surprising.

Apart from interested opposition, the guilds will have their own difficulties. The real testing time will come when the first flush of enthusiasm has died away; mistakes will be made, experiments will fail. The guilds will necessarily be modified in the light of experience. But though they may not succeed in becoming the predominant form of productive organisation, the movement contains principles which Labour deems to be essential to a just economic order.

Business Notes.

Cotton Wages Agreement.—As anticipated the provisional agreement relating to the wages dispute in the Lancashire cotton industry was signed by all the officials of the organisations affected at the end of last week. The strike altogether lasted three weeks. The agreement provides for an immediate reduction of 60 per cent. on list rates or 3s 10d in the £1 on present wages, with a further reduction in six months of 10 per cent. on list rates of 7d in the £1 on current wages. The agreement is for six months, but at the end of that period, if either side wants a further change in wages, three months' notice will have to be given; so wages are fixed until the end of March, 1922. The operatives have returned to the factories this week, but in the spinning mills the short-time policy of the Masters' Federation has remained in force. The state of trade was to have been considered yesterday (Friday) in Manchester, at the monthly meeting of the Masters' Federation, and it is reported that if the improvement in business continues the federation will soon be prepared to abandon the scheme of organised curtailment of production. The workpeople are now being paid on a basis of 155 per cent. above the lists, but when wages are considered it must be remembered that two years ago the working hours in the mills were reduced from 55½ to 48. Speaking generally, therefore, it may be said that the operatives are now obtaining about £2 5s against each £1 earned in 1914. It is estimated that this cut in wages means a fall in the cost of production for spinners and manufacturers of about 12½ per cent.

India and the Cotton Trade.—Our Manchester correspondent writes:—For over six months English merchants, and especially those in Lancashire, have been very seriously affected by the refusal of native dealers in India to pay for goods shipped on the basis of current exchange rates. The native dealers have contended that the Government promised to stabilise the value of the rupee at 2s, whereas exchange to-day stands at about 1s 3½d. The position of affairs has frequently received the attention of the India Section of the Manchester Chamber of Commerce, and on certain occasions particular firms have urged the compilation of a black list of firms abroad who have not met their obligations. The executive of the India Section of the Chamber of Commerce declined to permit such a list to be drawn up in the name of the Chamber, but an attempt is now being made to form an Indian Merchants' Information Bureau. It is proposed that shipping firms should supply a firm of chartered accountants with the names of native dealers who are defaulters in paying for goods. When a shipping house receives an inquiry from abroad from a firm not known to them they will at once make an inquiry to the chartered accountants as to the standing of the dealer in question. It is hoped that in this way the unsound firms will be frozen out of trade. It remains to be seen whether the suggested information bureau will receive sufficient support; but it is understood that so far many leading Manchester firms have not yet given their support. It may be said that, compared with two or three months ago, the trade position in India is much better, and remittances are being received on a free scale in Manchester from Bombay and Delhi, the two places where most of the trouble has arisen.

Raw Cotton Prices.—Our Manchester correspondent writes:—A review of the spot prices in Liverpool during the half-year ended June 30, 1921, for fully middling American and fully good fair Sakellaris Egyptian cotton, which are the recognised standards, reveals some interesting facts. On January 3rd the quotations were 9.99d per lb and 21d per lb for American and Egyptian respectively, and the period closed with the prices at 7.85d and 15.50d. The highest rates were American 11.78d on January 11th and Egyptian 23.50d on January 17th, the lowest levels touched being 7.13d for American on February 28th and 13d for Egyptian from February 28th to March 4th. For the 125 days on which the market was open the average is 8.60d in the case of American and

17.33d for Egyptian. The average prices for the previous six months ended December 31, 1920, were 20.31d for American and 50.83d for Egyptian, whilst similar figures for the first half of last year work out at an average of 28.97d and 80.09d respectively. In the first six months of the year 1914, just before the outbreak of the European War, the comparative averages were 7.47d for American and 10.96d for Egyptian.

Trade Conditions in South Africa.—According to a report on conditions in South Africa issued by the Standard Bank of South Africa, industrial unemployment is increasing at most centres. The share market is reported quiet and without feature. There is little change in wholesale and retail trade conditions, but the slight improvement in the produce market continues. Wool is making, on the average, about pre-war prices. The wheat market is reported firmer as a result of import restrictions. Hides and skins are in better demand, with an improvement of about 10 per cent. in prices, excepting goats and bastards, which are unchanged. There is more inquiry for all classes of mohair, except winter kids. The quality of this season's crop is below the average.

Burmah Oil.—The exceptionally high level of profit reached by the Burmah Oil Company in 1919 was not quite maintained last year, the report for 1920 showing a drop in trading profits from £4,344,500 to £3,965,950. This decline, however, is apparently due to the large amounts written off for depreciation on various accounts, amounting in all to £1,153,800, as compared with £498,900 for 1919. The amount written off oil wells, &c., account alone for 1920 was £972,900, as against £374,900. The report states that the increase in fields expenditure is due partly to extended drilling, testing, and exploratory work. Results for the past four years and for 1914 are given below:—

	1914.	1917.	1918.	1919.	1920.
	£	£	£	£	£
Trading profit ..	971,278	2,306,225	2,849,103	4,344,469	3,965,950
Interest, &c.	58,335	161,270	215,692	287,149	322,177
	1,029,613	2,467,495	3,064,795	4,631,618	4,288,127
Income-tax	50,509	205,360	268,927	318,121	294,835
Administration ..	27,596	31,832	52,550	126,761	103,713
Depreciation	124,242	..	..	..	..
War expenses	30,028	5,173	..	..	..
Insurance	20,000	20,000	20,000	20,000	20,000
To reserve	200,000	200,000	186,695	1,361,447	346,848
Prof. dividend ..	55,375	45,200	36,750	42,000	44,531
Ord. dividend ..	523,875	619,125	857,250	1,428,750	1,543,050
	(27½ %)	(32½ %)	(30 %)	(50 %)	(30 %)
Carried forward..	72,601	1,383,977	1,776,229	1,536,994	2,142,184

* Includes £40,000 written off investments. † Tax free. ‡ Tax free, and in addition 50 per cent. as a bonus in new ordinary shares. § Including donation of £50,000 to Cambridge University.

The report points out that, as in 1919, the high average value of the rupee contributed considerably to the year's profits, and that although petroleum values have fallen during the past six months the company never benefited to the full extent by the very high prices. "Against any reductions in profits due to increased field expenditure, the fall in prices, and the now lower value of the rupee, can now be set the relief from taxation consequent on the abolition of the excess profits duty." The latter cost the company £1,333,000 for 1919, and as will be seen from the table a substantial balance is being carried forward to meet the final payment. The ordinary capital was increased during the year by a bonus distribution, and the present rate of 30 per cent., free of tax, is equal almost to 54 per cent. on the old capital. A detailed analysis of the balance-sheet will be found in the usual column.

Lipton's Profits.—The report of Lipton, Limited, for the year ended March 31st last shows a heavy decline in profits, owing to "unprecedented falls in market values of commodities," losses on overseas trade, and a loss on the tea and rubber estates. The report states that the losses on the export business amounted to £103,000, towards meeting which the War Contingencies Reserve of £50,000, "built up to meet a situation of this kind,"

has been applied. The appended summary shows results since 1902:—

Year Ended March.	Gross Profits.	Expenses, &c.	Net Profits.	Depreciation.	Div.
	£	£	£	£	%
1902.....	228,202	39,441	188,761	19,063	8

* Including £220,889 drawn from "premium on shares account."

It will be seen that, in spite of the decline in profits, the dividend of 12½ per cent. is maintained. This is done, however, at the expense of the reserve account, which gets nothing as against £100,000 a year ago. The balance forward is also more than £44,000 lower at £30,800. The principal change in the balance-sheet is a decline of £367,800 in stock-in-trade, which now stands at £1,783,000. Plant and machinery are £147,700 higher at £559,400, the outlay having been made "with a view to decreasing costs of production." The report states that an interest has been acquired in a large oil refining works by the purchase of debentures at a cost of £110,000, of which £85,000 has been paid since the close of the financial year. The installation of a margarine factory on adjacent premises is awaiting more favourable conditions. Since the date of the balance-sheet the paid-up capital has been increased by the issue of £600,000 9 per cent. preference shares. Savings bank deposits stand in the balance-sheet at £132,700, or £7,700 more than a year ago.

Spiers and Pond.—The report of Spiers and Pond, Limited, for the year ended March 31st last, which is the third year of operation since the company was re-organised, shows that there was a drop of about £20,000 in net profits. A comparison of results for the past three years is given below:—

	1918-19.	1919-20.	1920-21.
	£	£	£
Profit	128,520	151,365	136,072
Deb. interest, &c.	26,714	26,419	31,209
Net profit	101,806	124,946	104,863
Brought forward	..	15,355	15,652
	101,806	140,301	120,515
Reserve, &c.	35,000	43,000	22,000
Directors	2,000	5,000	5,000
Dividend	49,451	76,649	70,984
	(10 %)	(12½ %)	(12½ %)
Carried forward	15,355	15,652	22,531

The report gives no information as to the year's business. A year ago it was stated that no settlement had been arrived at with the Government in respect of occupation of properties during the war, and the latest profit and loss account has a footnote to the effect that no credit is included for rent of premises occupied during the war by the Government. During 1919-20 the paid-up capital was increased from £494,500 to £692,800, a bonus distribution being made for about one-half of the increase. The increase, however, only became effective at the beginning of the financial year just closed. The reserve is now credited with £20,000, raising it to £80,000, and £2,000 goes to staff provident fund. Directors' additional remuneration again amounts to £5,000. The balance-sheet is analysed in detail elsewhere.

HARRISONS & CROSFIELD, LIMITED.

ISSUED CAPITAL £1,844,986.

The Company offers the services of its organisation to manufacturers and others desirous of establishing new connections in the East and elsewhere.

A Wonderful Old Mine.—Our mining correspondent writes:—The report presented at Thursday's meeting of the St John del Rey Gold Mining Company—the 90th annual statement—contains many interesting features, not the least consisting in the intimation that, thanks to the successful operation of the cooling plant, this venerable undertaking has secured a new lease of life. For years past work in the lower levels—which have now attained the record depth of 6,400 feet—has been conducted with increasing difficulty owing to the rise in the temperature of the air and the rock. Naturally, this problem received careful consideration, and a design for a cooling plant was evolved. Completed after many delays and at a much greater expense than anticipated owing to war conditions, the installation started work in December, and although designedly not run to full capacity, had by March effected a reduction in rock temperature of 0.8 deg. Fahr., and in air temperature of 5.3 deg. Fahr. The company, it is intimated, now has sufficient power for working the mine down to and including horizon No. 26, or four levels below the present bottom. Appended is a summary of the results for the past three years:—

	1918-19.	1919-20.	1920-21.
Ore crushed.....tons	165,000	166,000	146,800
Value of bullion.....	£429,069	£516,212	£549,914
Average per ton	52/-	54/-	57/8
Working cost in Brazil	33½	44/-	48/-
Net profit.....	£124,338	£108,605	£167,749
Dividends, tax, &c.	£91,218	£93,193	£102,719
To capital works account.....	£35,000	£50,000	£85,000
Carried forward	£19,255	£16,936	£18,585

The growth in revenue arises partly from improvement in the value of the ore and partly from the premium on gold; the latter, however, is not included in the average. On the other hand, costs have also advanced. In each of the past two years the accounts have received a windfall in the shape of a return of taxes. It will be seen that the whole of the surplus available after providing for the dividends—which since 1910-11 have ruled at a steady 10 per cent.—has been devoted to capital expenditure. No considerable further outlay should be necessary for some time. The manager calculates the ore opened up as 1,228,000 tons, equal to about 6½ years' reserves at full output, or excluding part of the lowest level, which has not been fully explored, 827,000 tons, equal to 4½ years' supply. A favourable feature is the rise in values. Looking at the position all round it would seem reasonable to expect, at any rate, a continuation of the recent dividend rate, on which basis the yield is about 13 per cent, while the "profit in sight" works out at 9s on the 4½-year and 13s on the 6½-year reserve estimate. This is irrespective of the discoveries which may—and doubtless will—be made below the 22nd level of the gold mine. There are also the unexploited iron and manganese deposits.

Russo-Asiatic.—The eagerly-awaited report was issued on Monday evening, and if not exactly disappointing, proved to contain little new regarding the position as between the company and the Soviet Government. On this

subject shareholders must possess their souls in patience until the meeting, which is to be held on July 6th. It is, however, stated that recent information received from Russia confirms that no material damage has been done to the properties. In the light of this intimation, and generally, it is a little startling to read that claims to the amount of £56,000,000 have been made for compensation in respect of the confiscation carried out in 1918, "based on the stocks of metals, materials, &c., on hand, the profit value of the proven ore reserves, and the cost of plant, machinery, &c." With regard to the European properties taken in hand while the company was marking time in Russia, it appears that boring on the Villemange silver-

lead area in southern France has been attended with encouraging results, but the Algerian concession, although "surface conditions of great promise were found, supported by large dumps left by mining operations carried on 40 years ago," did not come up to expectations. The accounts to December 31st show net expenditure £47,800, debenture interest being the chief item. Net cash assets stood at £887,000; of this, however, £721,600 is receivable from the preferred stockholders of the Russo-Canadian Development Corporation (in liquidation). It may be recalled that the position of the Russo-Asiatic Consolidated was discussed at some length in our issue of May 14th under the heading "The Revival in Russian Shares."

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1922, as compared with the corresponding periods of the preceding Year.

THE UNITED STATES.—REDUCTION IN NEW YORK RATE—BANKERS AND LIVESTOCK INDUSTRY—RAILROADS' LOWER INCOME.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 17.

THIS week's reduction by the New York Federal Reserve Bank in its rediscount rate from 6½ per cent. to 6 per cent. occasioned no surprise in financial circles; it was quite generally expected, in view of the marked improvement that has taken place lately in the banking position. The reduction is the second made by that institution in less than six weeks. The 6½ per cent. rate came into force on May 5th. From June 1, 1920, to the latter date the rate had stood at 7 per cent. The present reduction puts the rate back to the figure which prevailed during the first five months of 1920. At that time, or, rather, in January, 1920, the New York bank's reserve ratio was 38 per cent. By June of last year it had advanced to about 40 per cent., and it now stands at 60.6 per cent. Changes in the rediscount rate of the New York Federal Reserve Bank, however, are not governed merely by its own reserve position, and the same is true with respect to such action by the other 11 central reserve institutions. Due consideration has to be given to the reserve position of all of the banks, and to credit conditions generally. For that reason this week's reduction is all the more significant; it is plainly a recognition not only of the stronger reserve position of the local bank and of the Federal reserve system as a whole, but also of the relaxation of the strain on credit generally. The new rate became effective on June 18th, and applies to all classes of paper eligible for rediscount at the local institution, namely, advances on commercial paper for a period not exceeding 15 days; advances not exceeding 15 days on Liberty Loan bonds, Victory notes, or United States Treasury certificates of indebtedness and customers' notes secured by those issues, and rediscount of customers' notes so secured for period not exceeding 90 days; and advances not exceeding 15 days secured by bankers' acceptances and rediscounts of same not exceeding 90 days. All Federal Reserve banks now have a rediscount rate of 6 per cent., with the exception of those at Chicago, Minneapolis and Dallas; it is expected, however, that those three institutions, which are maintaining a 6½ per cent. rate, will shortly make a reduction to 6 per cent. Should the credit and banking situation continue to improve, a further lowering of rates may be looked for during the summer. The commercial paper market has thus far reflected the Bank rate reduction only to a slight extent; prime names are now being discounted at 6½ and 6¾ per cent., the choicest obtaining the former rate, while paper less well known moves at 7 per cent. Time money is still firm, and very sparingly offered; borrowers are bidding 6¾ per cent., with 7 per cent. asked, but demand for fixed-date accommodation is light, since borrowers are providing for their requirements in the call money market, where rates have eased considerably to 5½ per cent. on the Stock Exchange, and to as low as 3 per cent. in the unofficial or outside call money market. At present there is a plethora of call funds, with very little demand for stock market purposes.

A highly important and constructive development this week was the agreement on the part of eastern and western banking groups to extend much-needed financial assistance to the livestock industry, thereby making it unnecessary for the Government to provide relief directly through the War Finance Corporation or any other agency. The agreement was reached as a result of recent conferences in Washington between the Administration and private banking interests. Between 15 and 20 New York and other eastern institutions have undertaken to subscribe some \$25,000,000 toward a fund of \$50,000,000 which is to be advanced to livestock interests; the other part of the fund is to be provided by western bankers. Details of the plan are now being worked out at conferences at which J. P. Morgan is presiding. The plan as thus far outlined is to make six months' advances on cattle through loans approved by a committee of bankers who are familiar with that class of paper. By limiting the

loans to six months' periods the paper will be eligible for rediscount at the Federal Reserve institutions, thus relieving the banks from the burden of carrying it. The six months' paper will be subject to review upon maturity, and the loans will be renewed unless circumstances and conditions develop to disqualify them. They will, therefore, virtually be long-term credits of from, perhaps, two to three years.

Net operating income of the railroads in April amounted to \$29,201,000, or \$1,494,000 less than in March. On the basis of the tentative valuation fixed by the Inter-State Commerce Commission for rate-making purposes, the April showing is at the rate of an annual return of only 2.18 per cent., as compared with 2.30 per cent. in March. In other words, the April net operating income fell short by \$51,286,000, or nearly 64 per cent. of the amount which the carriers should have earned in order to get a return at the annual rate of 6 per cent. authorised by the Transportation Act. Total operating revenues in April were \$433,181,000, representing an increase of 7.7 per cent. over those for the corresponding month of last year, while operating expenses were \$375,752,000, or 6.2 per cent. less. Net operating income aggregated \$29,201,000, as against a deficit of \$23,767,000 in the same month last year. In making comparison with April, 1920, however, account should be taken of the fact that railroad operations in that month were greatly interfered with by the "outlaw" switchmen's strike. The ratio of operating expenses to revenues in April was 86.74 per cent., as compared with 87.10 per cent. in the preceding month. For the eight months since September 1st, when the Government guaranty period expired, and when the higher freight and passenger rates authorised by the Commerce Commission took effect, the net operating income of the railroads totalled \$279,008,000, which is at the annual rate of return of 2.41 per cent. on their tentative valuation, according to statistics compiled by the Association of Railway Executives. That sum is \$414,253,000 below the amount which they were expected to earn from the increased rates.

FRANCE. — TAXATION PROSPECTS — INDUSTRIAL LOANS — TELEPHONE CHARGES — COMMODITY PRICES — BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, June 28.

NOTWITHSTANDING the continued illness of M. Doumer, the Minister of Finance, it is hoped that the Bill for the Budget of 1922 will be laid before the Chambers during the first week of July, so that the Deputies and Senators may be able to consider its provisions during the holidays. What those provisions will be remains a secret, but it was stated in the Chamber this week by M. Bokanowski, who is one of the financial experts of the House, that it will be necessary to impose some 3,000,000,000 of new taxes during the coming twelve months to meet expenditure that will have to be incurred. "There are some of us," M. Bokanowski added, "who think that if the taxpayers did their duty the present taxes would be sufficient." Unfortunately, as the figures I quoted recently eloquently showed, the French fiscal net is made of a mesh that is very much more open than it ought to be, and so far there is no indication of any serious attempt to draw the net closer.

The position of M. Doumer is exciting a good deal of speculation, both in regard to his health and for other reasons, and it would be no surprise for anybody if he made way for another. At the same time the resignation is to-night announced of M. Charles Dumont, who has for the past two years held the important post of *rapporteur général* to the Budget Commission in the Chamber. M. Dumont, who was spoken of as a possible Minister of Finance shortly before M. Briand selected M. Doumer for that post, gives as the reason for his resignation his feeling that he has held the post long enough. In private affairs M. Dumont occupies an important official position in connection with the management of one of the two important Paris banks whose financial complications have latterly been much discussed.

The situation of the Banque Industrielle de Chine (with which, it may be stated, M. Dumont is in no way connected) continues to excite a good deal of nervousness, and is the subject of much comment in the French Press. It is announced that several conferences have taken place to-day, at the Ministry of Finances, between M. Doumer and representatives of the Banque de France, the Banque de Paris, and the Banque de l'Indo-Chine, but led to no tangible result. The delay in arriving at a solution is all the more unsatisfactory as the French Government has received telegrams from its Chargé d'Affaires in China indicating that the position in that country is steadily becoming worse. There are still hopes that arrangements may be made to enable both the Banque Industrielle de Chine and its fellow in adversity to weather the storm, but the outlook in both cases is regarded as extremely unsatisfactory.

The Chamber has spent a good deal of time this week in discussing modifications to the unfortunate "turn-over tax," which has met with almost universal disapproval since its inception, and has so far failed to yield even 50 per cent. of the amount expected from it. One of the modifications decided upon has been the creation of two categories of hotels, &c., on one of which the tax will be fixed at 3 per cent. and on the other at 10 per cent. Another innovation is the establishment of a fixed sum per annum in respect of this tax in the case of business concerns whose total turnover does not exceed 120,000 of a year, the payment being made by four quarterly instalments.

The public loans from which the money is to be obtained that is required to bring about the restoration of the wrecked towns and ruined industrial organisations of Northern France are now being steadily issued one after the other. Albert, Rheims, and Verdun have during the past few weeks all issued appeals to the investor, backed by the double guarantee of their own municipal resources and the annual payments due to them from the Government in respect of their respective shares in the German indemnity. Simultaneously, as I stated a few weeks ago, the various industrial groups are also organising loan issues. The loan asked for by the great group of colliery undertakings was issued not long ago, and this week the

prospectus has appeared of a loan of 200,000,000 issued by the "Groupeement de l'Industrie Sucrière Française en Reconstitution (Sucreries et Raffineries)," which is the official title under which the 40 great sugar-producing industrial undertakings who are concerned have elected to be known. Practically the whole of the French beet sugar-producing concerns are situated in the devastated regions, and they, like the colliery firms, have united for common action. The money will be used for the reconstitution of the collective plant. The issue takes the form of bonds of 500f each, with interest at the rate of 6 per cent., free of all present and future taxation, and the bonds are offered at 475, redeemable at par during the next 30 years. Interest and sinking fund charges are guaranteed by the deposit, by each of the companies in the group, of the legal titles to the compensation which is due to them from the Government, amounting to a total sum of 14,529,782f per annum.

In view of the heavy deficit on the French postal, telegraph, and telephone services, and of the serious capital expenditure that will be required to place the services on a proper working basis, efforts are being made to re-organise the scale of charges in a manner that will render it possible to bring about at least a balance between revenue and expenditure. The first of the three services to form the subject of definite proposals for reform is that of the telephones, in respect of which a Bill has for some time been under the consideration of Parliament. The outstanding feature of this Bill is the substitution of the message rate principle for the flat annual subscription rate. The proposed new scale has raised a great deal of controversy, but its Governmental sponsors claim that it will reduce the number of demands on the service by 50 per cent., while increasing the revenue from subscribers by some 12,000,000 of a year.

Remarkable figures are published by the *Illustration* this week tracing the variations in prices of a large number of different articles during the period of 1914 to March, 1921, and M. André Pavie, the author, expresses his belief that the present tendency towards a fall will be continued. Foodstuffs in most cases have shown a drop in the period from the fourth quarter of 1920 to the end of the first quarter of this year, though bread and flour, which used to cost 40c and 60c per kilogramme, have remained unchanged at 1f 30c and 1f 75c. Beefsteak, which was 3f 80c the kilo in 1914, rose to 17f 20c in 1920, and dropped in March of this year to 16f 80c. Eggs, which were 1f 50c the dozen in 1914, rose to 10f 40c, and have dropped to 7f 20c. Potatoes, curiously enough, only doubled in price in 1914-20, and in the first quarter of 1921 dropped from 50c per kilo to 45c. Rice, which was 90c the kilogramme, began dropping after the autumn of 1920, when it stood at 4f 80c, to fall since to 3f 25c. The above are Paris prices, but there is a fairly exact comparison between Paris and the provinces. Food costs reached their maximum in the winter of 1920 of 326 for Paris and 350 for the provinces, but in March this year the increase had fallen to 258 per cent. As regards clothing, the figures show that an ordinary suit to measure in 1920 had risen from 70f to 500f, to have fallen in 1921 to 375f. A suit *de luxe* has shown an enormous slump, the fall being from 1,200f to 600f, and this is typical of clothing of all sorts.

The week has seen the sudden revival of Bourse activities, due, no doubt, to a certain extent to the desire of certain important financial groups that there should be no collapse on the eve of various important issues that are being made. Thus the town of Paris is shortly placing a loan of 18 hundred millions on the market; the sugar industry is absorbing 200 hundred millions, the town of Rheims is asking for 120 millions, Verdun for 60 millions, and Algeria is proposing a loan of one milliard six hundred million. Consequently, it cannot be expected that for the time being a keen interest will be taken by the public in Bourse operations. French 3 per cents. closed at 57.70, as against 56.80. Banque de Paris rose from 1,245 to 1,260, and Union Parisienne from 1,220 to 1,330. Transports have improved, Chargeurs Réunis advancing from 535 to 555, and Transatlantique from 235 to 250. Metallurgical shares have shown little change, Creusot being typical in improving from 2,180 to 2,230. Tintos are up at between 1,350 and

1,380, though Boléo is weaker, having dropped from 485 to 470. Petrol shares have for the most part failed to participate in the general improvement. Royal Dutch is down from 18,950 to 18,500. Shell has held its own at 256, and Mexican Eagle is actually stronger, having advanced from 279 to 288.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

	June 23, 1921. Francs.	June 16, 1921. Francs.	June 26, 1913. Francs.

GERMANY.—REPARATIONS PLANS—SANCTIONS—EXCHANGE AND BOURSE—EMPLOYMENT.

(FROM OUR CORRESPONDENT.)

BERLIN, June 27.

THE submission of a detailed Reparations taxation plan is expected this week. The only definite announcement since last week is that the Corporations Tax is to be raised to 30 per cent. This tax (*Koerperschaftssteuer*), which came into force on April 15, 1920, is an income-tax on public companies at an uniform rate of 10 per cent., plus supplements rising from 2 per cent. on net profits exceeding 3 per cent. on capital to 10 per cent. on profits exceeding 18 per cent. At these rates the tax will this year yield 1,050,000,000 m. The increased sugar tax, decided on before the Reparations settlement, is being opposed by the Socialists. A Bill has been submitted creating a Federal Reparations Office (*Reichsentschaedigungsamt*) with administrative and judicial functions, and with local branches. Another Bill authorises the issue of the Reparations Bonds on the lines laid down in the ultimatum. The Reichstag is to-day to occupy itself with the sanctions, which, according to M. Briand's statement of the 25th, will be retained for a time to be measured by Germany's goodwill. If goodwill is to be proved by payment of reparations, this particular test is unfortunate, as the sanctions are seriously injuring Germany's production and commerce, and therefore her ability to pay. The smuggling in of forbidden wares is proceeding wholesale, to a value estimated by the Commissary for Import and Export Licences at between half a milliard and 1 milliard a month.

With the mark exchange already falling as result of the increased demand for foreign currency, caused by reparations, this smuggling is disastrous. Even if the continued occupation of the three Rhine towns is necessary, the dissolution of Germany into two Customs Unions is unnecessary and obstructive. The bad economic condition of the Austrian Succession States is largely due, it is admitted, to the new obstructive Customs frontiers. The results here are similar. The Succession States' frontiers have at least the excuse that they gratify Nationalistic passions, for the Rhine Customs frontier there is not even that bad reason. The Reichsbank is this week buying gold at the rate of 300 marks for the 20-mark coin, and 42,500 marks for 1 kilogramme of fine gold. The foreign exchanges rose considerably in the past week; are now in some cases more than 100 per cent. over the lowest prices of last year, and are all much above the lowest prices of this year:—

	May 25, 1920.	Jan. 26, 1921.	June 27, 1921.
Sterling	140.65	215.75	279.80
Dollar	34.80	55.56	74.58
French franc	270.30	400.40	602.15
Lire	200.20	210.25	372.90
Gulden	1,336.50	1,861	2,472.50
Swedish crown	785.80	1,226.25	1,669.20
Swiss franc	620.60	885.90	1,261.30

The Reichsbank statement for June 22nd has not yet appeared. On the whole week stocks had again a big rise, which continued to-day. The *Frankfurter Zeitung's* stock index figure for June 25th is 15,628, against 15,134 on the 18th, 13,438 on March 5th, and 17,013 (highest reached) on January 8th. Tuesday and Wednesday witnessed extensive profit-taking, which had not much effect on prices, but the boom was renewed next day, and has not since weakened. Among metal stocks there was a large demand for Phoenix and Mannesmann Tubes. Shipping stocks, which have been dull for some time past, showed new activity under leadership of the German-Australian and Hamburg-South American lines, and Hamburg-Americans were for a time firm under influence of the agreement for Baltic trade with the Soviet Government. Single stocks in various groups rose sharply without any known cause. Quotations of leading stocks to-day and on June 30, 1919, after which date the "Catastrophe Boom" proper began, are:—

	June 27, 1920.	June 30, 1919.

Federal Loans show no uniform tendency. Unchanged at 77.50 is War Loan; 4 per cent. is to-day quoted 77.20, as against 77.60 on June 17th; 3 1/2 per cent. at 77, against 69.50; 3 per cent. at 76.40, against 74.75; Colonial 4 per cent. at 69.10, against 72; and Savings and Premium at 85.30, against 85.70.

Unemployment is declining. The number of publicly supported entirely unemployed on June 1st was 358,000, against 395,000 on May 1st, and 429,000 on March 1st. The number of publicly supported members of unemployed persons' families fell in June from 440,000 to 384,000. Not included in the unemployed figures are 250,000 persons engaged in public emergency works.

POLAND.—THE FINANCIAL OUTLOOK—WAGES—EXCHANGES.

(FROM OUR CORRESPONDENT.)

WARSAW, June 24.

THE most important event of the past fortnight has been a struggle between the Cabinet and the Finance Minister over financial policy. Some Ministers were opposed to Mr Steczkowski's policy of economy. The Cabinet voted a supplementary credit of eight milliard marks, not foreseen in the budget estimates, and in consequence the Minister of Finance tendered his resignation. This happened just when the Polish mark had begun to decline in a manner hitherto unknown. The Cabinet was strongly attacked by almost the whole Press for its policy of financial extravagance. The pressure exercised by public opinion was so strong that the Cabinet has been forced to rescind its vote granting to the Ministry of Public Works a supplementary credit. At the same time, Mr Steczkowski has been asked to remain in office, and has consented.

On June 21st, before a Committee of the Diet, the Finance Minister expressed the opinion that if a policy of strict economy is pursued Poland's next budget will be a normal one. To achieve this, however, it is necessary to reduce military expenditure and to adopt a foreign policy which is in accordance with the financial resources of the country. Mr Steczkowski is convinced that he will be able to cover this year's deficit by foreign and domestic loans. According to figures quoted by the Finance Minister, Poland is only covering 20 per cent. of her expenditure out of revenue. Mr Steczkowski pointed out that the post and telegraphs yield a surplus, while of the deficit of the Ministry of Railways, amounting to 15 milliards, 11 milliards are for the purchase of rolling stock, the building of new lines, &c. For education 11 milliards are expended; for the army 60 milliards. From direct taxes seven milliards are obtained; from Customs duties and monopolies 23 milliards.

With the steady decline of the currency, wages are steadily rising in a manner unknown in Western Europe. The figures given below show how difficult and uncertain are the conditions under which Polish industry is working:—

	Highest Warsaw Wages.	Index of Wages.	Index of Cost of Living.
1920 April	400—500	100	100
May	400—500	100	124
June	500—600	122	125
October	1,500—2,000	389	173
November	1,500—2,000	389	207
December	1,401—1,500	322	305
1921 January	2,001—2,500	500	384

From April to January the wages have risen five times, while the cost of living has increased much more slowly.

Since the beginning of this week there have been no official quotations of foreign exchanges, Russian roubles excepted. Last quotations were as follows:—American dollars, 1,570, 1,550, 1,545, 1,490. German marks, 23.65, 23.50, 22.80. English pounds, 6,900, 5,800, 5,760. French francs, 120, 115.

It may be seen from these quotations that during the last ten days a further decline in Polish currency has taken place. On June 13th American dollars were quoted 1,250, 1,270, and they now stand at nearly 1,500. According to Mr Steczkowski, this decline is due to the uncertain political situation, especially with regard to Upper Silesia

and to the great demand for foreign bills by the Lodz industry, which is accumulating great stocks for the Russian market. The Ministry of Finance is trying to persuade the soda manufacturers to sell their stocks in countries with a sound currency. It is expected that this will help to relieve the pressure which is exercised on the foreign exchanges by the imports of cotton.

INDIA.—CHEAPER MONEY—LOAN AND EXCHANGE QUESTIONS.

(FROM OUR CORRESPONDENT.)

BOMBAY, June 4.

THE one event of political importance that has taken place in India during the past fortnight was the interview accorded to Mr Gandhi, Pundit Malaviya, Lala Lajpat Rai, and other leaders of the non-Co-operation Movement by His Excellency Lord Reading. The conversations were of a private character. Opinion in India was at first sharply divided in regard to the value and necessity of these meetings, but a speech made before the members of the Chelmsford Reform Club by the Viceroy has considerably assisted in moulding an idea that much good may come out of the conversations. It is significant to note, however, that since these meetings the Ali Brothers, who lead the Mohammedan wing of the non-Co-operators, have issued an apology for various inflammatory speeches made by them.

The official standard of the Imperial Bank of India was lowered to 5 per cent. on June 2nd. This reduction has been expected for some time in this city and Calcutta. This decision strengthens the rumours that are afloat to the effect that the issue of a new Indian rupee loan is about to be made, and the main topic of interest in the bazaar centres upon its probable interest rate. Opinion appears to be fairly solid on the point that 6 per cent. per annum will not be exceeded. The general dissatisfaction surrounding the 7 per cent. India loan recently raised in England, to which I referred in my last despatch, has mainly disappeared. It arose, in the main, out of misunderstanding. But in the meanwhile further particulars have been received from home regarding the loan, and the Finance Department of the Government of India has issued a statement on the subject. The Chamber of the Indian Merchants in Bombay has asserted that, judging from the results of the loan, and from the fact that immediately after its issue its price went to a premium, the sum asked for (£7,500,000) might have been obtained on terms more favourable to this country. The Government of India repudiate any suggestions of lack of judgment on the parts of either themselves or the Secretary of State for India regarding the issue of this loan. It is pointed out that the last sterling loan raised in England on behalf of India took place in 1912, and that since then conditions, political and financial, have completely changed. It was essential that this loan should prove a success.

Gold in Bombay now stands at Rs.30-4 per tola, and has been moving slightly in sympathy with the London-New York cross rate. Sovereigns are being bought at Rs. 18-15 a coin, and silver is coming in for moderate inquiry. Exchange registers no improvement of note, still ruling just above the 1s 3d line. Yesterday's Bank telegraphic transfer rate was 1s 3 5/32d, with a quiet undertone. The Viceroy's statement that a fall in exchange "is a symptom of the dislocation of the world's trade, and, applied to India, is a mirror of the changed conditions of the balance of trade during recent times," is not accepted in financial circles as presenting this country's position in exactly the correct light. It is pointed out that in many instances countries that have experienced a depreciated exchange have been more or less impoverished as a result of the war. But India was not impoverished. She contracted no external debt. So, it is argued, other reasons must be looked for to explain India's present unfavourable position; and here it is that the recommendations of the last Currency Committee come in for adverse criticism, particularly in regard to its resolution fixing the rupee at 2s gold.

SWEDEN.—INDUSTRIAL IDLENESS—MONEY AND STOCKS—HARVEST PROSPECTS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, June 26.

THE past month has been marked by a further closing down in industry. Many works have taken the occasion of the midsummer holidays, which in Sweden under normal conditions are usually very thoroughly celebrated from June 22nd or 23rd until the end of the month, to give their workers a longer rest than usual, several serving notices of indefinite termination of work. Lack of capital compels many sawmills to stop working and putting goods on stock, there being practically no outlet whatever for further deliveries. It is said that the co-operation between Swedish and Finnish timber exporters will be continued, and that a further lowering of prices is imminent. It is doubtful, however, if that will attract buyers, who seem to have lost altogether the courage to purchase. One must go back as far as the beginning of the 'nineties to find such remarkably poor figures of sales and export. In normal times three-quarters of a million standards used to be placed by this time of the year. Now not one-tenth of this quantity has been disposed of. The greatest interest in industrial circles seems to be concentrated eastward. Although on the whole Swedish traders have been disappointed with Soviets' bombastic trade programme, and actually insignificant quantities, as compared with Press statements, have found their way to Russian Baltic ports, two important concerns, the Swedish Ballbearing Company and the Match Trust Company, seem to have come to some arrangement with Moscow. The Soviet Government has invited the latter concern to take charge of the match factories in Russia, to put them on a workable footing by supplying engineers and machinery against permission to dispose of the output at liberty, after leaving some portion for Russian consumption. The company has accepted the invitation, and a delegation is now on the way to Moscow to fix up an agreement. The position in the money market is a little easier than it used to be, and there are hopes that the State Bank will make a further cut in the discount rate. The Stock Exchange has experienced further falls, and there seems to be practically no limit to the downward trend. Scandinavian and Finnish exchange rates have moved up and down during the last few days, especially Finnish marks, which have been down to practically the same level as German marks. It is hoped that the settlement of the Aaland question may help to stabilise Finnish exchange. The prospects of harvest are again brighter, plenty of rain having come down just in the nick of time. This will prevent the need for imports and make up somewhat for the damage the industrial deadlock is causing. And work will be offered pretty soon to crowds of unemployed who are now walking the streets.

NORWAY.—CHANGE OF GOVERNMENT—DEPRESSED INDUSTRY—EXCHANGE MOVEMENTS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, June 25.

POLITICAL events have taken place during the last week which most likely will considerably influence the economic life of this country in the near future. The Liberal-Conservative Government, which superseded the Radical Government, in its turn has now, after exactly one year, been superseded by the Radical Government. The late Government followed a line of handling the finances of the country, and more particularly the taxing, which the present Government will certainly deviate from in various ways. The trading community view with concern the growing burden of taxes, especially at a period when trade and shipping is so extremely dull. It is calculated that about one-third of the entire tonnage of the country is laid up. Besides, the seamen's strike is still going on, though, as it seems, gradually ebbing out. Industry, general trade, and exports, as well as imports, are languishing.

The stock market during the latter half of the week showed a little more activity, probably because there is an expectation of an impending reduction of the Bank rate, which for just one year has kept steady at 7 per cent. The exchanges remain extremely high—against this

country—with some slight ups and downs. Just now sterling is 156.15 kroners, dollars 7.00, and Swedish kroners 156. Also Danish kroners are getting higher and higher. The last explanation of the high price of the Swedish krona is that much Bolshevik gold is handled in Sweden, involving great demand for Swedish money, with a consequent rise in the price of the same.

The protracted British coal strike would have long before now placed Norwegian industries in a very precarious situation if business had been brisk. As it is now consumption is much reduced, and it is calculated that there is a supply in the country for another three months, leaving out of consideration large quantities of firewood remaining from the coal crisis of two or three years ago.

Letters to the Editor.

THE BURDEN OF THE RATES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The enormous increase in the rates all over the country constitutes a serious problem, and it is vitally necessary that those responsible should make every effort towards reduction.

It is not easy for the ordinary ratepayer in London, where the rates required by a number of different authorities are levied at one and the same time through the borough councils, to place his finger on the worst offenders. Undoubtedly, at the present moment the London County Council is incurring more odium than is its due. To say this is not for one moment to suggest that there has been no expenditure by the L.C.C. which an earlier recognition of the real financial circumstances of the country would have shown to be inexpedient. Nor, although there will probably be a decided fall in the L.C.C. rate for the next half-year owing to the fall in wages and costs of materials and to the measures which the Council is itself taking, is it to be thought that there is no need for strong and steady pressure of public opinion to be brought upon the Council to cut down expenditure ruthlessly. Especially serious is the rise in the education rate, since it connotes a parallel increase in expenditure out of taxes also. The same is true of the police rate, for which the L.C.C. has no responsibility.

It is, however, a fact that the record of the London County Council compares very favourably with the record of other authorities spending the ratepayers' money.

I attach statistical tables, for which I fear that I can scarcely expect you to find space, but which I would ask you to allow me to summarise. Table I. shows the total, treating the rates in 1913-14 as the basis (100), the total rates in the £ in metropolitan boroughs in 1920-21 stood at 190, in county boroughs at 195, in other urban areas at 196, and in rural parishes at 216. The L.C.C. rate stood at 156 in 1920-21, and on the Estimates it will stand at 169 in the current year 1921-22.

Table II. gives in detail for a number of years the total average rates in the £ in London (excluding the City), the precept rates of various central authorities, and the average net rate in the £ for the expenditure of boards of guardians controlled and borne locally; while Table II. (a) expresses these figures in relation to the year 1913-14 (100). Summarised, the result is as follows:—

	Year, 1918-19.	Year, 1919-20.	Year, 1920-21.	Year, 1921-22. Estimated.
Total average rates in £	114	130	193	210
London County Council	110	106	156	169
Metropolitan Police	137	172	204	237
Metropolitan Asylums Board	127	181	278	277
Metropolitan Water Board	133	248	458	578
Boards of Guardians	116	192	361	..

Table III. gives in detail for the same years the net rate in the £ levied by each metropolitan borough council for expenditure under its own control, dividing the boroughs according as they passed under Labour-Socialist control in November, 1919, or remained under Municipal Reform.

control, and also expresses the figures in relation to the year 1913-14 (100). The average rate per borough for the years 1918-19, 1919-20, 1920-21, and 1921-22 (estimated) is as follows:—

	Year, 1918-19.	Year, 1919-20.	Year, 1920-21.	Year, 1921-22. Estimated.
All boroughs (28)	121	160	287	336
14 boroughs under Labour-Socialist control since 1919-20	121	162	305	365
12 boroughs under Municipal Reform control throughout	113	147	247	281

These tables, taken together, are of peculiar interest to the ratepayers and municipal electors of London. It was in 1906-7 that the Municipal Reform Party were returned to power on the L.C.C. and on almost all the borough councils. On the L.C.C. they kept down the rate for purposes other than education, so that it was the same in Armistice year (1918-19) as in 1906-7. And the total L.C.C. rate to-day shows a far smaller increase compared with 1913-14, the last pre-war year, than do the rates of other authorities. The borough councils, with few exceptions, remained under Municipal Reform or kindred control from the elections of November, 1906, till those of November, 1919, when the Labour-Socialists captured half of the councils. Between 1906-7 and 1913-14 the Municipal Reformers effected a marked reduction in the rates for borough council purposes, and in 1918-19 the average rate was little higher than in 1906-7, and in the councils on which they retained control in 1919 they have contrived that the rates should rise far less than elsewhere. The extraordinary rise in the borough council rates in places where the Labour-Socialists gained power in 1919 should certainly serve as a lesson to those whose apathy led to that event, and as a warning against its repetition at the L.C.C. and Borough Council Elections next year.—I am, Sir, your obedient servant, GEORGE H. HUME.
County Hall, June 28th, 1921.

THE COST OF PRODUCTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Labour correspondent evidently misses the meaning of the points I raised; it is, therefore, not worth while to repeat them. It is, however, desirable to correct him on one point of fact. He states that I finally suggested "what is essentially co-partnership and profit-sharing." What I suggested was that the workman should "himself make an effort to provide the capital he requires." This has nothing to do with co-partnership or profit-sharing.—Yours faithfully, HAROLD COX.
Gray's Inn, June 28th, 1921.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I must apologise to Mr Mason for having unintentionally misrepresented his views as to the probable amount of the fall in prices involved by a return to the gold standard. I agree also that if the output of gold increases the eventual fall will not be so great as now appears probable.

I am not convinced as to the importance of bringing sterling into parity with the dollar. The price levels must also come into parity, so that we should get just the same amount of American produce in exchange for a given amount of our goods, as we do now.

Both sides in this controversy have the same ultimate object in view, that is to stop the present violent fluctuation of the standard of value which is obstructing the exchange of goods.

We should approach the problem from the standpoint of what seems really practicable within reasonable time. If we take a careful look at the financial conditions to-day we see that an international gold standard can be restored only when the inter-Allied debts are cancelled, paid off, or funded, when the indemnities are paid, when the internal debts of all ex-belligerent countries have been written down in the ratio that prices must fall to restore the gold standard, when redundant currencies have been with-

drawn from circulation, and banking credit based thereon contracted, and when the gold accumulation in the United States is distributed among the nations.

So far very little progress has been made towards these objects. In this country the actual amount of the decrease from the maximum of currency and bank deposits appears to be about 6 per cent., though there has been a fall of 40 per cent. in wholesale prices. The falling revenue is a sure sign of more inflation to come, and bank deposits are already increasing again. In the United States prices have fallen 49 per cent. from the highest, but gold is still accumulating, and there is now 60 per cent. more gold than in 1914, though prices are only 22 per cent. higher than in August, 1914. It is clear that one country alone cannot restore the gold standard, for gold prices will not find their true level till gold is restored in all the principal commercial countries. The United States will have inflation in spite of anything they can do. It would seem that the dead weight of liabilities makes it impossible to do more than play at deflation.

Very little return of confidence and stimulation of the velocity of circulation will bring prices bounding up again, when I suppose the screw will be put on again and a fresh crisis generated. I fear that the policy of trying to restore the gold standard, as pursued up to the present, will not give us the gold standard, or any kind of stability of prices at all, but very wide movements up and down, each swing dipping perhaps a little lower than the preceding one.

I conclude that the real practical question before us is not really paper or gold, but opportunist management of paper, or a new standard of value, and scientifically regulated currency.

The steps needed to steady the price-level are simple and capable of immediate execution; that is, to unite the Bank of England note issue to the Treasury note issue, and maintain the notes at a fixed purchasing power by regulating the circulation and the Bank rate. Foreign exchanges would continue to follow the purchasing power parities. The actual level of purchasing power selected would require very careful study. I would suggest off-hand the mean between the highest reached and the present level.

It is a terrible thing that men should suffer privation in the midst of potential plenty because of a bad system of book-keeping. I venture to suggest that all those interested in setting up a stable standard of value should arrange to meet together in order to formulate a definite programme.—I am, Sir, your obedient servant,

C. CRAIES.

Books and Publications.

REVIEWS.

"World Revolution." By Nesta H. Webster. Constable and Co. 1921. 18s.

MRS WEBSTER in this volume maintains the reputation for brilliance and originality which she has already obtained by her *French Revolution*. This book traces the course of Revolution from the first French Revolution through 1848, the First International, the Paris Commune, and the Bolsheviks to the present day. Each movement is the child of the same parent—secret societies bent on destruction, and using well-intentioned idealists as their unwitting instruments. Originating with the Bavarian "Illuminati" in 1776, the secret revolutionary infection has contaminated Freemasons, trade unions, and Socialists, and has gained additional virulence by intermixture with the Pan-German and Semitic toxins. In spite of Mrs Webster's extensive research and sometimes striking parallels, we confess that our belief in human wickedness and human credulity stops short of the conclusion that a century and a quarter of Revolution can be made by a handful of Nihilists, Anarchists, or lunatics. We cannot agree that Internationalism is a "policy of national suicide" and "only another name for Pan-Germanism." Nor do either Mrs Webster or the Socialists do themselves or anybody else any good by the

common practice of assigning sinister interests as the only possible explanation of views differing from their own.

"Kelly's Directory of Merchants, Manufacturers, and Shippers of the World." (London) Kelly's Directories, Limited. 64s net.

THESE two volumes contain a concise statistical account of each country, its ports and principal towns, with classified lists of consuls, bankers, merchants, brokers, shipping agents, buyers of British goods, and the manufacturers of goods exported; also the names and addresses of the manufacturers of the United Kingdom, and very carefully arranged lists of exporters and importers. It is stated that this, the 35th edition, involved over 600,000 alterations as to trade references alone. Some idea can be gathered of the magnitude of the work. It is certain that this directory can be used to advantage by every merchant and manufacturer who is capable of handling world trade and is desirous of expanding his business beyond the limits of the British Isles.

Among the important changes relating to foreign countries (additional to those made in last year's edition) are the following:—The towns of Alsace-Lorraine have been arranged in their proper order in the French section. Sections have been opened for Palestine, Syria, and the Kingdom of Hedjaz. What has hitherto been known as the British East Africa Protectorate now appears as Kenya Colony. Russia, unfortunately, still remains out.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. July 13.	ACCOUNT. July 14.
THE end of the first half of the year finds Stock Exchange markets in a condition of subdued hopefulness. Six months ago expectation ran high of an early reduction in the Bank rate to 6 per cent., an expectation which was fulfilled ten days ago. The intervention of the miners' strike and the rapid decline in trade have led to such restriction of Stock Exchange business as would have seemed almost impossible a year or 18 months ago. Gilt-edged stocks have risen during the six months. Speculative issues have mostly declined. The broad trend of public inclination, so far as investment and speculation are concerned, has been indicated many times in the <i>Economist</i>. Although the miners return to work on Monday, the effect of the coal strike cannot fail to make itself felt upon profit and loss accounts in the early future. And, with the summer season so close at hand, the brightening of the general	

outlook, financially and industrially, has led to very little increase of business in Stock Exchange markets.

Nevertheless, prices are inclined to be firmer, and the Stock Exchange looks forward to better times in the autumn. The gilt-edged market remains strong, and already the optimists discuss the possibility of further reduction in the Bank rate.

New Zealand has come forward as an applicant for five million pounds in 6 per cent. stock at 96, but in spite of this the existing colonial and corporation stocks are mainly better on the week. A feature is provided by the way in which Consols and National War Bonds of all series have advanced. Foreign Government bonds are somewhat jerky. Brazilians continue under a cloud, because of the rate of exchange. French and German bonds are out of favour. Mexicans keep steady, on the possibility of a satisfactory funding scheme, to deal with arrears of interest on the bonds, being propounded in the near future.

Home Railway stocks advanced on the conclusion of the coal strike. The energetic way in which the railway companies are pushing forward preparations to deal with holiday traffic have attracted attention to the stocks, and there has been a little investment buying in the heavy group. The other railway markets have, however, little to boast about. Movements in Argentines are narrow and irregular. Mexicans remain comatose, and in Canadians nothing of fresh interest has happened during the week. Brazilian Rails are flat.

What steadiness there is in the rubber market may be ascribed to the impression that raw rubber cannot possibly go much lower than its present price of 8½d per lb, and that a change for the better may be in sight, owing to the more favourable statistical position shown, for the third time in June, by the deliveries exceeding landings of the produce. Chairmen at various meetings this week, however, have taken a very cautious view of the present position and of the immediate outlook. Amongst oil shares, the postponement by the Mexican Government of the suggested increase of the export tax upon oil led to a recovery in several of the leading shares. Shells remain firm on the eve of the meeting to be held on Monday and the dividend payment to be made on the day following. There is, however, little public business to support the list. A drop in Trinidad Centrals, brought about by disappointment with the dividend, was wiped out by a subsequent rally. The textile list is the firmest amongst industrials. Settlement of the trouble in the cotton trade and the fact that the market, both in London and Manchester, appears to be ill-supplied with shares, brought about a noticeable improvement in the popular issues. The shipping section is quiet, but insurance shares have again responded to a breath of buying from the North. The banking list is not yet affected by the reduction in the Bank rate. There have been minor recoveries in various iron, coal, steel, and armament shares. Other industrials derived a certain amount of benefit from the prospect of differences being composed and of trade, as a whole, settling down to work. Gas stocks are better, as a natural sequel to resumption of work in the coal mines, and in the electrical market one of the few features has been a keen demand for underwriting in the new issue of debenture stock made by the North Metropolitan Electric Power Company.

Brightness has taken the place of depression in the Kaffir Circus. It needed but little support to bring about a fairly general recovery, and when the Cape started to send buying orders in the middle of the week, the list responded promptly. The Randfontein and the Modder groups have been prominent in the movement. Chartered and other Rhodesians attracted a little fresh attention, and the changes in De Beers have been wrought, as usual, by a few handfuls of Paris orders. Russo-Asiatics went ahead, on the issue of the company's report, though the price failed to maintain its full advance, and in the Mexican mining market, Santa Gertrudis 8 per cent. notes have come up from 50 to 56½. Broken Hills are harder, on account, according to market reasoning, of the gradual restoration of peace conditions in the industrial world. West Africans are idle, and no changes of consequence occurred amongst Malayan or Nigerian tin shares, although the Cornish prices hardened.

The Stock Exchange Committee have confirmed their decision to add to the permanent Rules of the House the provision that permission must be obtained from the Committee for all dealings in new issues, except those of the British Government. A meeting of proprietors was held on Thursday, at which the resolutions for reorganisation of the capital of the Stock Exchange were formally confirmed. It may be added that preparations for establishment of the War Memorial in the Stock Exchange are now well advanced, and the work of excavation in Capel court for the erection of the monument itself will probably be started this month.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Government of India Rupee Loan.—The Indian Government 1921 Rupee Loan was opened on June 20th, and within the first six days subscriptions in India and in London have exceeded Rs. 16½ crores. The loan, which is in the form of 6 per cent. (free of Indian income-tax) five and ten-year bonds at par, is for an unlimited amount, and remains open until July 30th for cash subscriptions, and later for the conversion of 1921 and 1922 Indian War Bonds.

New Zealand Government £6% Inscribed Stock, 1936-1951.—Issue of £5,000,000 at 96 per cent. The Bank of England are authorised to receive applications for £5,000,000. If not previously redeemed, the stock will be paid off at par at the Bank of England on August 1, 1951, but the Government reserve to themselves the right to redeem the stock at any time on or after August 1, 1936. The New Zealand ordinary revenue and expenditure account has shown a surplus in each year during the war, the accumulations to March 31, 1921, amounting to £23,730,000. Of the accumulated surpluses, a sum of £1,200,000 has been used to increase to over £2,000,000 the gilt-edged securities held under the Reserve Fund Securities Act. Approximately, £3,000,000 of the proceeds of the loan will be applied to the payment of contracts placed in the United Kingdom for the supply of rolling-stock and material required for extension of the railways, for plant required in the development of additional electric power installations, and for equipment for other necessary public works. Interest will be payable half-yearly, on February 1st and August 1st. This is a trustee investment.

Chapman and Sons, Eastbourne, Limited.—Authorised capital, £100,000, divided into 60,000 10 per cent. non-cumulative preference and 40,000 ordinary shares, all of £1 each. The present issue consists of all the preference and 15,000 ordinary shares, at par. The company has been formed to acquire the business of garage and motor-coach proprietors carried on by Messrs Chapman and Sons, of Eastbourne. Profits are given for two years. The business, it is stated, expanded rapidly after the Armistice. The purchase price is fixed at £78,421, of which a minimum amount of £20,000 is payable in cash. Goodwill is fixed at £25,000, and is payable in ordinary shares. Valuations of property and motor-coaches have been made by independent people. The prospectus is a reasonably clear statement of affairs. The shares are a speculative risk, but not without merit in their class.

Redhill Gas Company.—Incorporated 1865. Issue of £30,000 7½ per cent. debenture stock at par, to be redeemed at par on July 1, 1931. The total authorised stock capital is £200,000, of which there has been issued £179,500. The authorised loan capital is £68,750, of which £16,150 has already been issued. The net revenue of the company for the year ended December 31, 1920, was £10,919, and as the interest on debenture stock, including that now to be issued, only absorbs £2,896, the issue may be regarded as well secured for interest payments. After due consideration has been paid to the smallness of the issue, these debentures are a sound investment of their type.

The Colne Valley Water Company.—Incorporated by special Act of Parliament in 1873. Issue at par of £63,263 7 per cent. debenture stock, to be redeemed at par on July 1, 1931. The authorised stock capital is £490,000, of which (including premiums) £381,525 has been paid up. The authorised loan capital is £245,000, of which £127,000 has been already issued. The net revenue of the company for the year ended December 31st last was £24,578, while the interest on existing debentures, including those now to be issued, will amount to £11,028. Thus this issue is reasonably well covered. Moreover, the stock is a trustee investment within the meaning of the Trustee Act of 1893. But no mention is made as to a Stock Exchange quotation. With this exception, the issue is a good one.

Anglo-Ecuadorian Oilfields, Limited.—We are officially informed that 76 per cent. of the recent issue by the Anglo-Ecuadorian Oilfields, Limited (to shareholders of that company and of Lobitos Oilfields, Limited), has been subscribed. The underwriters are thus called on to take up 24 per cent.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

CONTINUED GROWTH.

LARGER AVERAGE SUMS ASSURED.

The seventy-second ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on June 30th, at the chief office, St Mildred's House, Poultry, London, E.C., Sir Reginald Macleod, K.C.B. (the deputy-chairman), presiding.

The Chairman said: Gentlemen,—I beg to move: "That the Directors' and auditors' reports be approved and adopted." Exactly a year ago to-day the chairman welcomed you to our annual meeting with an assurance of the continued growth and progress of the society. I deeply regret that he is not now with us, and that we are thus deprived of the annual survey, in his hands of unrivalled experience, not only of our own position, but of the world condition as it affects assurance. Sir Charles Hanson is suffering the penalty of over-strain from over-devotion to his many duties, and I can assure you that his enforced absence to-day is a cause of great disappointment to him, as it is, I am sure, to you and to the board, and most particularly to myself. He has been chairman of the society for 13 years, and this is the first occasion that he has been unable to preside at the annual meeting. The reports of his progress are favourable, and I hope that he will soon be among us again in renewed vigour.

PROGRESS OF THE BUSINESS.

The business of the society continues to expand. 6,711 policies have been issued assuring an amount of £4,354,000, as compared with 6,029 assuring £3,524,000. The policies are both more numerous and for larger amounts, the increase in number being 11 per cent. and in total sums assured 23 per cent. This volume of business, testifying as it does to the great confidence inspired by the name of the "Gresham" in all the countries where we continue to do business, is the more encouraging, since, as you are aware, no new business is undertaken in Austria and Hungary—countries which used to be among the most important on our list. It is interesting to observe that in the last year before the war—1913, which was very prosperous, and when these branches were in full activity—the sum assured was £2,426,000, the present increase from that date being 79 per cent. Indeed, 1920 has established a record for the "Gresham," which is now in its 72nd year. The premiums for new assurances have been £193,000, as compared with £162,000 in 1919 and £107,700 for 1913. The sum of £89,000 has been received as consideration for annuities, and does not differ materially from the figure for 1919.

SOCIETY'S INCOME.

The income of the society reached a total of £1,526,000, a reduction of £38,000 on last year. This fall is due to the fact that in 1919 we brought into account some arrears of premiums from previous years. But for this item the revenue in 1920 would have exceeded that of the previous year. The death claims amount to £460,000, being £50,000 less than the sum required last year, when the figure was swollen by the deferred notification of deaths which had occurred during the years of war. The claims are now normal and are within the actuarial expectation. The payments under matured endowment assurances amounted to the large sum of £551,000, as compared with £518,000 the previous year. I may remind you that, while the maturity of endowment policies leaves a void requiring to be filled by new business, every such policy has meant a profit to the society. On the debit side of the first schedule you will notice a sum of £153,000 entered under the heading of surrenders, this being more than treble the figure of 1919. This involves no loss to the society. Policies had been maintained in being under moratoria established in various countries. It has now been possible to cancel such policies as were not renewed by the payment of due premiums, and the outstanding premiums were fully covered by the values of such policies.

RATIO OF EXPENSES TO PREMIUM INCOME.

It will be noticed that the ratio of expenses to the premium income on the present occasion has reached a very high figure, owing

to reasons which are briefly stated in the report. With regard to the effect upon this ratio of the abnormally large amount of new business transacted during the year it is universally recognised that a considerable part of the expenses of a life assurance company is directly attributable to the acquisition of new business, and this is especially the case when a company is operating abroad, where it is customary to remunerate the agent mainly by payment of a comparatively high rate of commission upon the first premium. It is estimated that in the accounts now under notice more than one-half of the total expenses is attributable to the "procurement" of new business, and a return to a normal rate of production would therefore automatically reduce the expense ratio. The general rise in prices is a matter of common, not to say painful, experience. This rise is naturally greatest in those countries in which the currency shows the greatest depreciation. The abnormal costs in such countries are responsible for an appreciable part of the rise in our expense ratio. The policyholders and shareholders may rest assured that everything is being done to reduce expenditure, the present high level of which can only be regarded as a passing and transitory phase in the society's history.

INCREASED RATE OF INTEREST.

The rate of interest earned upon the society's funds is at the rate of £4 5s per cent. after deducting income-tax, and the improvement of no less than 3s 7d per cent. upon the figure of 1919 is highly gratifying. It means an additional profit to the society of over £17,000 a year. You will see on reference to the note to the balance-sheet that foreign currencies have again been converted into sterling at pre-war rates. No other course is for the present possible, but the inconvenience is fully realised, and the earliest opportunity will be taken to remove, or at least reduce, the anomaly. Meanwhile, I repeat the assurance given by the Chairman last year that our assets and liabilities are affected in an equal degree, and the position of the society is in no way prejudiced. As to the year now half run, the slackness of trade and many industrial upheavals have for the time involved some slackening of activity. I believe this is an almost universal experience, but our business interests are so widely spread as to lessen to a great extent the effect of local conditions.

From what I have said you will appreciate that the work of this society requires, and I can assure you it receives, the most loyal and constant attention of the officers and staff. It is a much more exacting business than in the case of a life office pursuing the even tenor of its way in dealing with British business alone; negotiations have frequently to be undertaken in foreign countries and with Government Departments at home and abroad. In Mr Lawson, the general manager and secretary, you have a very able and devoted servant. The actuary, Mr Harry Bearman, possesses our entire confidence, and from the assistant manager, Mr Savery, Mr Lawson has loyal and indefatigable support.

THE FUTURE.

With regard to the future, such is the vitality of the society that the cessation of business in ex-enemy countries in no way impairs our strength. We rely more and more upon our home branches, as well as upon those we have established in the Dominions and in India. In France, Egypt, Spain and in other European countries the demand for our policies is gratifying evidence of the confidence entertained in our society, which has taken a leading part in the introduction of life assurance. In foreign lands, although such business entails certain difficulties, among others a greater apparent expense ratio, it has compensating advantages, and undoubtedly adds to the strength of the society. It is with complete confidence that I recommend this report for your adoption.

Mr Courtney C. S. Fooks seconded the motion, which was carried unanimously.

The retiring directors, Mr C. C. Macrae, Mr Courtenay C. S. Fooks and Mr Charles H. Beadnell were re-elected.

On the motion of the Chairman, the Right Hon. Lord Southborough, G.C.B., was elected a director of the society.

The proceedings then terminated.

COMPANY'S STRONG FINANCIAL POSITION.

COMPANY EXTENDING ITS FIELD OF ENTERPRISE.

QUEBRACHO MARKET—LABOUR IN THE ARGENTINE.

The fifteenth ordinary general meeting of the Forestal Land, Timber, and Railways Company, Limited, was held, on the 30th ultimo, at Rixter Plate House, Finsbury circus, London.

The Hon. Sir Arthur Lawley, G.C.S.I. (the chairman), presided. Mr O. J. Buxton (secretary and London manager) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Turning to the balance-sheet, I will briefly explain the figures and compare them with those relating to the year 1919. The capital issued now includes the whole of the new issue, and the participating rights of the preference shares are now eliminated.

The item for debentures outstanding is due to the failure, for various reasons, of holders of bonds to present them for payment. In course of time these will be redeemed. You will notice the depreciation account stands at a lower figure than in last year's balance-sheet. This is due to the fact that £190,554 had been written off the Estancia assets by way of depreciation during past years; and the Estancia business now having been sold, at a price substantially in excess of the book value, the sum of £190,554 has been taken out of the depreciation account and become part of the profit made on the Estancia business. Our reserve account has now attained to the substantial figure of £1,849,338, after writing off all the costs of the recent reorganisation of capital and redemption at a premium of 2½ per cent. of our two series of debentures. The statement of the realisation of Estancia and other assets speaks for itself.

ESTANCIA SALE PROFITS.

In comparing the properties and assets figures for 1919 with those for 1920, it may be asked why the figures for freehold lands, &c., for 1920 are not much smaller than they are, regard being had to the very large amount realised by the Estancia sale; but it has to be remembered that all the assets sold were not included in the first figure on the assets side of the balance-sheet, but were distributed among the succeeding items, such as holdings in associated companies, livestock, stocks of stores, and sundry debit balances. The whole of the assets sold were valued in our books, after deducting the depreciation above mentioned, at £1,578,040, and, having been sold for £2,500,000 odd, will leave a profit of £924,510. Your directors have decided not to deal with this item this year, but to leave it over for treatment in future balance-sheets. In allocating the profit and loss balance of £938,886, as set out in the balance-sheet and report, we found it advisable to set aside to taxation reserve £300,000. It is a large amount, but you will not have forgotten that income-tax for the year 1920 is based on the average of the profits for the years 1917, 1918, and 1919, and we had to provide a substantial reserve. Coming to the properties and assets side of the balance-sheet, a few comments are necessary. The first item, freehold lands, &c., is less than last year by reason of the sale of the Estancia assets included formerly, but includes £197,438 due to capital expenditure during the year on railways and factory plant and buildings.

Holdings in associated undertakings, which are valued at cost, now include our interest in the Natal Tanning Extract Company, amounting at the date of the balance-sheet to £356,000, but our holding in the Development Company of Santa Fé has, of course, been taken out. Livestock is down from £569,657 to £161,444, due to the sale of Estancia cattle. The item now remaining represents the value of our cattle at Las Camas and La Aurora for our own use and for sale in our stores. Our stocks of extracts and felled timber are largely in excess of the figures of last year, owing to the trade depression, but they have been valued at or below cost, and a substantial portion has now been realised. Stocks of stores and materials are up £90,000 on the 1919 figure, due largely to the greatly increased cost of purchases in 1920. Sundry debit balances are considerably less than last year, and are all realisable.

It will be noticed that about half of the amount due from purchases of our Estancia business was received during the year. Bills are held to cover the balance, and £351,000 has been received

on account of these since the date of the balance-sheet. War loans and bonds are all at market value on the date of the balance-sheet. Other investments include local Argentine Government bonds at the nearest valuation possible.

QUEBRACHO MARKET.

Standing on this platform 12 months ago, I was able to say that the market for quebracho extract was constant, and prices for the manufactured article were higher than in the previous year. Within a very few weeks a dense cloud of depression descended on the industrial world and has not yet lifted. The depression was universal and world-wide. The tanning industry shared the same fate as other industries, and, with the greatly diminished activity in the leather market, the demand for quebracho extract was correspondingly greatly reduced. In the first eight months of 1920 our sales were maintained in goodly quantities and at satisfactory prices. In the concluding months of the year the tonnage sold was very small and at prices lower than in the earlier months preceding. During the same period conditions in the Argentine changed adversely from the company's point of view. Unrest in the labour world prevailed throughout the Republic. Strikes and rumours of strikes were constant in our factories, as well as among the dock labourers in Buenos Aires and at Santa Fé.

It is no exaggeration to say that from week to week and from month to month the members of our staff went literally with their lives in their hands. In spite of the dangers and difficulties by which the members of the staff were confronted, the tally of work done was remarkably good, the output was maintained at a high level, and this, in my opinion, does infinite credit to all concerned, and places the shareholders under a great obligation to the staff for the courage and loyalty with which the latter safeguarded their interests.

LABOUR AND COST OF PRODUCTION.

At the beginning of the year the eight-hour day came into practice, and, while the hours of labour were thus reduced there was an increase in the rate of wages. It would have been impossible for the company to have resisted successfully the demand for such an increase at such a time. At the same time we have endeavoured to increase the amenities of life for our staff and workmen. So it has come about that, while the price of our manufactured article has fallen, there has been a steady and inevitable rise in the cost of production. The accumulation in our stores of quebracho extract has been so great and the demand so limited that we resolved to close down all our factories. The present moment is opportune for a complete overhaul of our factories, so that when once again our existing stocks have to be replenished we shall enter into competition with other manufacturers with the comfortable assurance that in the forests, in the wood depôts, and in the factories the organisation and the mechanical equipment shall be as economical and efficient as human labour and skill can make them.

During the year under review we acquired large and valuable interests in certain wattle plantations and factories for the production of wattle or mimosa tanning extract in Natal. Advantage has been taken of the condition of commercial paralysis, which we confidently hope is only a temporary condition, to put our house in order, to overhaul, to clean up, and to equip all the factories in South Africa, so that when the present dark days of depression are ended we may be ready to go full steam ahead on a rising market.

ORGANISATION STRENGTHENED.

Our industrial organisation has been further strengthened by the inclusion in the sphere of our activities of Messrs Fontana's factory at Resistancia, in South America, as well as an interest in Messrs Brillas Pagans and Co.'s factory in Barcelona. You will see, therefore, that we are looking to a wider horizon and an extended field of industrial enterprise, so that we may be in a position to take the fullest possible advantage of the revival of trade which is certain, sooner or later, to come along. Meanwhile, the necessity of a reduced dividend will be evident to our shareholders, and I can assure you that to your directors it is a great disappointment that such a necessity should have arisen. When, however, we look around and see how other industrial undertakings have fared in the same period, and when we take into consideration the strength of our reserves, we find material comfort so far as the past is concerned, while as to the future, all our energies will be devoted to perfecting our organisation so as to produce at as low a cost as possible extract of the highest quality.

TRADE CONDITIONS OF THE CURRENT YEAR.

I would like to say a word or two as to the trade conditions of the current year. At its commencement we deemed it wise to liquidate a portion, at all events, of our very large stocks at prices which hardly show any margin of profit. We hope by this policy we have helped to keep running the wheels of the tanning industry and to revive trade. Latterly, demand for extract has consider-

ably increased, and prices have somewhat improved. We hope that they will soar still higher, but it is only right that I should impress upon you the necessity of patience, and warn you that the results of this year's trade must inevitably be adversely affected by the world-wide depression and paralysis of trade. At the same time, I say—and say emphatically—that we have every confidence that we shall surmount our present difficulties, and in the future achieve success fully comparable with the success which we have achieved in years gone by. I have only to add that we are all of us greatly indebted to the members of the local board and our officials in Buenos Aires for their valuable co-operation in carrying on the business of the company in the face of serious difficulties.

BARON D'ERLANGER'S SPEECH.

Baron Emile B. d'Erlanger (vice-chairman), in seconding the motion, said that in these troubled times shareholders might not be indifferent to hear from one who had been connected with the company since its inception, and one who looked upon this financial enterprise as his fondest child, what were the difficulties they had had to meet, and what were the difficulties which they still had to contend with, how they intended to cope with them, and upon what rested their absolute confidence that those difficulties would be temporary and would be overcome. He would like to preface his remarks by stating that the difficulties of the company were in common with those of every industrial enterprise, almost without exception, all over the world. He thought they could esteem themselves more than fortunate in comparison with nine-tenths of industrial enterprises. In the first place, their financial situation was not only strong, but sound. That was an assertion which could not and ought not to be lightly made, and therefore he proposed to review the figures of the balance-sheet which had been submitted to them by the chairman. If they would delete, for the moment, the first two items, fixed assets and sundry investments, it would be found that the rest of their assets, which were all liquid assets—and he insisted upon the word "liquid"—amounted to £6,586,000. On the other hand, if shareholders looked on the other side of the balance-sheet and read it in conjunction with the report, it would be seen that £300,000 had been set aside for income-tax reserve. Also, they must take into consideration the amount which had to be paid to the shareholders by way of dividends. Further, if they excluded from the debit side of the balance-sheet the items owing, and which, therefore, should not enter into the calculation, it would be found that their total liabilities to third parties amounted to £2,507,000.

LIQUID ASSETS.

Therefore, the total balance of liquid assets over liabilities to third parties amounted to no less than £4,078,000. What did that mean? It meant that the first two items which he had asked them to delete from their present calculations would have to sell for the ridiculously small sum of £1,072,000 to give shareholders back the whole of the capital at the par value of the company. Those two items, fixed assets and sundry investments, stood in their books respectively at £4,036,000 and £978,000, or a total of £5,114,000. Against that sum they had accumulated a depreciation of £1,053,000 and £1,849,000 of reserve. He ventured to state, with an experience of over 12 years in the company and a knowledge of the assets which they had, that if they tried to-day, notwithstanding the world-crisis, they could not replace those fixed assets for the £5,114,000. Consequently, it would be seen that the total assets of the company—liquid and fixed—amounted to no less a figure than £9,294,000, and after deducting the preference capital, which amounted to £1,545,852, a balance of £7,548,367 would be left for the ordinary shareholders—a value of over £2 per share. He had made those calculations to show the shareholders that the depreciated value of their shares to-day was due to the general conditions of the world, to the trade depression, and to the appreciation in the yield expected from securities of every kind. He considered, and he hoped he was right, that this trade depression and this high yielding of value of money were both more or less of a temporary nature. He would now ask the meeting to review the situation which existed in the early days of the war—in the year 1915. At that time there was such an enormous demand for leather, and consequently such an enormous demand for tanning materials, that the price of quebracho rose not only in comparison with itself, but in comparison with all other tanning materials that competed with it or which were used in conjunction with it. Therefore, the whole efforts, the whole mind of the board and the staff in the Argentine, were centralised upon producing the greatest quantity of extract possible, in order to meet the demand of the armies in the field. Almost every ingredient which was required in the manufacture of extract rose, and provision had to be made accordingly. As the exceptional demand lasted a considerable time after the war, costs rose to a very high level indeed. Then, drastically and suddenly, the slump occurred in the leather market, as in all other commodi-

ties required to meet the needs of the world. He could, however, assure the shareholders that the board were seeking every means by which they could reduce the costs of every factor that entered into the charges of manufacturing extract.

COMPANY READY FOR TRADE REVIVAL.

He would like to state that, from the point of view of an industrial company making tanning extracts, the Forestal Land rested to-day on a much stronger and sounder basis than ever before. They could produce a greater quantity of material and sell a greater quantity of material than they had ever been able to do before. In his opinion—and he believed that opinion was shared by his colleagues on the board—when the great depression in trade was past, when they had put all their factories in the best possible condition, they ought, with a reasonable margin between cost price and selling price, which they were sure to obtain, and the vast quantity of material which they would be in a position to sell, to be able to make profits at least equal, if not superior, to what they had done before. He thought that there was every reason to congratulate themselves upon what had already been achieved, and if in the future they could maintain that record, he considered they ought to be satisfied.

The resolution was passed unanimously, and the formal business having been transacted, a vote of thanks to the chairman, directors, and staff terminated the proceedings.

BANQUE DE LA SEINE.

SATISFACTORY YEAR—INCREASED PROFITS.

The general meeting of shareholders of the Banque de la Seine was held on the 17th ult., under the chairmanship of M. Léon Pissard, chairman of the board of directors. Sir Basil Zaharoff and M. Verdé Delisle, the two largest shareholders present, acted in the capacity of scrutators. The accounts submitted to the meeting show that the net profits for the financial year 1920 amounted to 4,060,008.02 francs, as against 828,235.25 francs in 1919. After placing the sum of one million francs to reserve, the profits available for distribution are 3,060,008.02 francs. The dividend on the shares has been fixed at 35 francs per share, i.e., 7 per cent.

The figures in the balance-sheet at December 31, 1920, total 185,459,107 francs, as against 95,319,639 francs in 1919.

The amount of bills discounted and Bons de la Défense Nationale has increased from 14,865,369 francs in 1919 to 38,882,966 francs in 1920; correspondents from 6,044,811 to 26,710,682 francs; advances and loans from 6,671,897 francs to 28,801,416 francs; financial participations from 1,534,117 francs to 6,787,480 francs; stocks and shares (which include a very large proportion of liquid securities) from 6,723,420 francs to 7,745,386 francs.

On the debit side, the total of deposits and creditors has increased from 61,872,132 francs in 1919 to 112,730,241 francs in 1920. Of this latter figure, deposits at short notice and current accounts amount to 44,020,888 francs, which is considerably less than the liquid assets, which consist of cash in hand and at bankers, liquid securities and Bons de la Défense Nationale, and balances with correspondents.

The Chairman's speech showed that on June 3, 1921, the deposits at short notice and current accounts at short and longer notice amounted to 55,200,000 francs, as against liquid assets of 63,700,000 francs. At the same date securities stood at 6,383,000 francs, financial participations at 6,562,000 francs, and financial syndicates at 8,256,000 francs.

MEXICAN RAILWAY COMPANY, LIMITED.

LARGE INCREASE IN TRAFFIC RECEIPTS.

ECONOMIC CONDITIONS IN MEXICO.

The 112th ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 29th ultimo, at River Plate House, Finsbury circus, London, Mr Vincent W. Yorke (chairman of the company) presiding.

The secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that it was a matter of satisfaction to them to be able to present a report dealing with the actual working of the railway and accounts dealing with money earned. The increase in gross receipts, over 7,000,000 pesos, as compared with just under 5,000,000 for the last half-year that could be usefully compared, namely, July-December, 1913, was most striking and gratifying. All classes of traffic showed a substantial increase with the exception of foreign goods. That falling off was really due to want of motive power.

The increase in passenger traffic was really the most remarkable feature of the whole report. The money earned was £471,000 more than in the corresponding half of 1913, while the number of pas-

sengers had increased by no less than 380,000, an increase of no less than 40 per cent. That large increase in passenger traffic had been obtained in spite of considerably less facilities for travel being offered to the public. To his mind, it was convincing evidence of the great prosperity of the country. Express earnings also showed a remarkable rise. Goods traffic had been extremely heavy, the total paying goods having increased by over 25,000 tons, and the receipts by \$890,000. Local traffic had been good, but the principal feature was the large increase in petroleum and fuel oil.

Expenses, unfortunately, had increased to a greater extent than the receipts, roughly speaking, by \$3,000,000, as against \$2,000,000. In addition to the large increase in salaries and wages and the higher cost of all railway material, increased expenses had been incurred in making good the serious damage of the revolutionary period. The working of the property during the half-year had been a difficult matter. The amount of traffic to deal with had been vastly in excess of any previous half-year, and the equipment with which to handle it had been so depleted as to prove quite inadequate to cope with it. It had been found possible to increase the passenger kilometrage and the goods kilometrage by 32 per cent., as compared with 1913. Several serious strikes had added much to the difficulty of operation.

The financial results of the half-year, in view of the great difficulties under which the line had been worked, should be considered satisfactory. Though the net earnings had only produced £147,000, the premium obtained on remittances owing to the high value of the peso had brought them up to over £200,000.

RESULTS OF THE CURRENT HALF-YEAR.

As regards the working of the current half-year, they had made a most promising start, and the results obtained prior to March 1st had been a great improvement on the preceding half-year. The work of renewing the equipment and improving the service was proceeding well. Unfortunately, a strike had broken out on March 1st, and had lasted until April 24th, which had had the effect of curtailing their earnings and increasing their expenses. During the last four or five weeks since the strike ended the traffics had been extraordinarily good, and if labour troubles abated he saw no reason why they should not continue so.

A cable just received indicated that there were prospects of very heavy traffic over the line, and the only doubt in his mind was whether they would be able to carry it.

CHAIRMAN'S VISIT TO MEXICO.

On his recent visit to Mexico he had been agreeably surprised with the state in which he found the property to be. Much work remained to be done, but, given normal conditions and if funds were available, it should be a very good property again in two years' time. As regarded the economical condition of the Republic, he had been agreeably surprised. The City of Mexico had made on him a far more favourable impression than on any of his previous visits.

Prosperity was apparent in every direction, the population had largely increased, there had been a great uplifting of the lower classes, wages were high, employment was abundant, and the value of property was very high. What he had seen in Mexico City was also true of the two large cities which the railway served—Puebla and Vera Cruz. Investigation had proved that there was a real solid background to what might have been only superficial indications. In the first place the replacement of a paper by a gold and silver currency had made an extraordinary difference to economic conditions. In spite of the bad services given by the railways and the frequency with which strikes had occurred, trade was very active, and most traders were willing to admit that they had rarely done so well as recently.

On the other hand, the state of the outlying districts was not so satisfactory. Farms and sugar plantations had suffered very seriously by the revolutions, and in many parts of the country confidence had not been restored. In most places the mines were working to their full capacity, and the output of silver was very little short of the best figures recorded. The public revenue was estimated at over 250 million pesos, or nearly 2½ times the highest revenue obtained in any year by the Government of General Diaz. On the other hand, public expenditure in every direction was very high.

The situation of the public finances was to him full of hope. There was a genuine desire, he believed, among those in power to cut the coat according to the cloth, and though a firm hand would be needed, there appeared to be plenty of margin, under careful administration, to provide for the payment of the various indemnities owing and the regular service of the external and the internal debt, and to do so without recourse to a loan. He had formed a very favourable impression of the new Government of President Obregon. Though they had been but a short time in office, they had met with remarkable success in restoring order to the country. There were no organised forces in any part of the vast Republic operating against the Government, and the only

outbreaks that were taking place were in the nature of pure brigandage.

With regard to the question of the payment of the indemnity and the raising of the rates, he had not been successful in obtaining any definite promise with regard to either question. Some progress has since been made by their general manager, who informed them that the increase in rates had been agreed to by President Obregon, but awaited the sanction of an executive department. There had always been an excellent feeling between the Mexican Government and the Mexican Railway, and he by no means despaired of a favourable issue being reached. It was obvious to him that uppermost in the minds of Mexican Ministers was the fact that their Government had not been recognised by H.M. Government. That grievance was not against our Government only, but against those of the U.S.A. and France.

RECOGNITION OF THE PRESENT GOVERNMENT.

Recognition by those three Governments would mean a great deal to those in power in Mexico. In his opinion, anything that would add to the strength of the present Mexican Government was most desirable from the point of view of the company. The question was really also one of great public importance to France and Great Britain, who had both been financially crippled by the war. Of the £750,000,000 foreign capital invested in Mexico, £250,000,000 belonged to France and £250,000,000 to Great Britain. Approximately a return of £10,000,000 sterling came annually to this country, and £10,000,000 to France from those investments, and that income at the present time had almost vanished. In August 1914, the Mexican peso was a piece of paper with the value of 1s 1d in English, and 1.35 francs in French currency. At the present time the peso was of gold or silver, and was worth 2s 8d, more than double in English, and six francs, nearly four times, in French currency.

Therefore, while France and England had suffered cruelly in the value of their currency, Mexico had, in spite of the revolution, added enormously to the value of hers, and any payments received from that country were not only much magnified by the present rate of exchange, but in themselves helped to put exchange right. To look at the matter in another light, the capital of the Mexican Railways represented less than 5 per cent. of the total of British investments in Mexico, but the receipt of the indemnity owing by the Mexican Government, together with other amounts owing for income-tax by the company, would mean a payment of no less than £650,000 to H.M. Government by way of income-tax. To sum the matter up, he believed that the Mexican Government was not only willing but able to pay its debts within a reasonable time, but they looked for recognition. To refuse recognition until debts were paid was to him to enter on a vicious circle, which, by obstinacy on both sides, might last for an indefinite time. So obsessed had he been with the justice of the case that since his return from Mexico he had never ceased for one day to endeavour to form a body of public opinion in the City in favour of recognition, and he had every reason for believing that in a very few days a petition, signed by really representative and influential firms and persons, would be presented to H.M. Foreign Office pleading for their most earnest consideration of the matter.

The report and accounts were unanimously adopted, and the usual formal business transacted.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

SATISFACTORY YEAR—LARGE INCREASE IN GROSS RECEIPTS.

CHAIRMAN OPTIMISTIC AS TO COMPANY'S FUTURE.

The thirty-third ordinary general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held on the 28th ultimo, at Winchester House, London, the Hon. Charles N. Lawrence (the chairman) presiding.

Mr A. W. Bolden (managing director and secretary) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said that the directors had to record a very good traffic year to December 31st last, but the company had before it, he was afraid, the prospect of a poor succeeding 12 months, somewhat similar to the results for 1919. The nitrate industry certainly seemed to suffer from time to time through the fluctuations of fortune, and whereas in 1920, and particularly in the early part of the year, there was a boom in nitrate, they were at present faced with a slump in the industry. The gross receipts for the past year were excellent, totalling £2,370,079 from the combined undertaking of the railway and waterworks, or 76.01 per cent. increase on the gross receipts of the previous year. Practically all classes of traffic gave increases very much greater than for 1919, but they had to remember that that was a very poor year. The amount of nitrate carried in 1920 was 1,013,491 tons, or nearly four and a-half times what they handled in 1919. The shipping results were also considerably improved, again on account of the greater production of nitrate,

while the receipts from the waterworks undertaking were £140,140, as compared with £119,700 in 1919.

All this, of course, was a bright picture, but it was marred somewhat by the fact that the total working expenses were 68.14 per cent. of the gross receipts, as compared with 65.48 per cent. With the amount brought forward they had a total of £1,115,131 to deal with, and the directors recommended a final dividend on the consolidated ordinary stock of 4 per cent., making a total of 7 per cent. for the year, and that £285,706 be carried forward.

CORPORATION PROFITS TAX.

Referring to the corporation profits tax, he contended that it was an unfair tax, as it penalised holders of ordinary or deferred stock in limited liability companies, as compared with those who derived their income from other sources. He wished our legislators would seriously and definitely decide that this burden of taxation should be removed, and that quickly, and that expenditure should not be guided by what was merely desirable, but by what the country's revenue could bear. Capital expenditure had still been kept to as low a limit as possible, but the company's lines of railway, like others in growing countries, were constantly having to be added to in some form or other, and a railway's capital account might be closed in theory, but it could never be in practice. Certain increases in tariffs had been authorised by the Chilean Government in order to compensate the company in some measure for the higher wages bills which they had incurred, as well as to meet the other growing expenditure, but it had yet to be seen whether they were sufficient. As to Bolivia, they were taking all steps open to them in order to obtain an increase, but so far they had not had any increase whatever over pre-war rates. With regard to the outlook, at the moment they were faced with the problem of the nitrate industry being at a low ebb. Things were bound to recover, but it was a question of time. As improvement occurred he had faith that nitrate would be one of the things which would be required first, because agriculturists who had used it in the past were only waiting their ability to purchase it again.

The report and accounts were unanimously adopted.

BARCLAY, PERKINS AND COMPANY, LIMITED.

GOVERNMENT RESTRICTIONS AND PROMISES.

The twenty-sixth ordinary general meeting of Barclay, Perkins, and Co., Limited, was held, on the 27th ultimo, at Cannon street Hotel, London, Mr E. W. Giffard (chairman and managing director) presiding.

The secretary (Mr E. P. Pullar, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that this was the twenty-fifth anniversary of the formation of the company, and, on the whole, the directors could congratulate the shareholders on a satisfactory report. They had had a very difficult year to contend with. It was true that some of the restrictions imposed by the Control Board and the Ministry of Food had been slightly relaxed, but, on the other hand, others remained in force, and, in particular, the restrictions on gravity and on the retail price of beer, both of which were great handicaps to their business. There had been a strong movement in the House of Commons to get rid of the Control Board, and upwards of 170 members had requested the Government for time to move resolutions to do away with it, but the Government had refused to grant time.

He proceeded to read extracts from speeches made by the Prime Minister when introducing the Bill for the Control Board in 1915, in which Mr Lloyd George said that the measure was a purely war measure, and that the Bill was a temporary one. He (the Chairman) could not help thinking that in the business world, if anybody gave those pledges and did not keep them, they would not be looked upon—well, as good business people. Few of them wished to return absolutely to pre-war conditions, as they recognised that improvements in certain directions were desirable. Sometimes he could not help wondering whether promises of that sort, made but not kept, were not the cause of the great discontent in the country at the present time, and which they saw voiced at recent elections. He thought that the people felt that the promises of the Government were not always sincere, and in this case they had reason to think so.

THE ACCOUNTS.

With regard to the accounts, the profits added to the balance from the previous year gave a total of £316,567. Debenture interest and interim dividends on preference and ordinary shares had been paid, and they recommended the payment of 4s per share free of tax on the preference shares, making 10 per cent. for the year, and £6 per share on the ordinary shares, free of tax, equal to 6 per cent. on the original ordinary share capital, making a total of 8 per cent. for the year. The general reserve had been increased by £250,000, and now amounted to £550,117. That was a very substantial figure, and had been built up entirely out of profit. The

gross profit on trading showed a decrease of £193,000, and the net profit a decrease of £178,359. At first blush that was very unpleasant reading, but he had warned them last year that they could not possibly expect to keep up the rate of profits they were then making, as they were abnormal. Apart from that, the main reason for the decrease in the profit was the decrease of 62,000 barrels in sales, which was due to unemployment, and the consequent scarcity of money. Further, it was due to the fact that the net price to the consumer did not cover the enormous increase in the duty and in the cost of material, including labour and materials. The retail price of beer was still controlled, and therefore they could not get more for it.

Costs had continued to rise. As compared with 1919-20 the average cost of coal had increased a further 22 per cent., and was now three times the pre-war figure. Wages and materials for repairs, &c., had not reached their maximum in 1919-20, but had done so in the year under review, and the cost per barrel was now nearly three and a-half times the pre-war figure. With regard to the future of our business, as far as it is possible for us to judge the outlook for the immediate future is not very promising. With increasing unemployment and the general industrial unrest, falling wages, and high taxation, sales are hardly likely to increase. With wages falling, if the working man is to continue to have his beer, the retail price must come down, and this is obviously impossible unless the duty is put down first. With a duty of roos per barrel there is no room for a decrease in the retail price of beer, so that the immediate future is a little obscure from that point of view. What the effect may be when the Control Board ceases to exist, and the control of gravities and retail prices is removed, it is impossible to foresee. In conclusion, the Chairman stated that they had made a new departure, having taken to brewing a lager beer, which they had hoped to have ready at the beginning of this summer, but the industrial unrest had kept it back.

Mr Granville Beven seconded the resolution, and it was carried unanimously.

A vote of thanks to the chairman, directors, and staff concluded the proceedings.

JOHN BROWN AND COMPANY, LIMITED.

DEVELOPMENTS IN COMPANY'S WORKS.

FOREIGN COMPETITION AND THE COAL DISPUTE.

An ordinary general meeting of the shareholders of John Brown and Co., Limited, was held, on the 28th ultimo, at the Royal Victoria Hotel, Sheffield. Lord Aberconway (chairman of the directors) presided.

The general secretary (Mr E. Middleton) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and balance-sheet, said the situation in which they found themselves was the most serious situation he had ever known in this country. Since he became connected with the business the position of their trade in iron, coal, steel and shipbuilding was hardly reflected in the balance-sheet, but part of last year's operations were very profitable. Although the trade outlook was gloomy, they must not forget the company had an investment of great value to use in maintaining the income of the company. They were sparing no effort in turning their undertaking from the production of war material to peace products. That policy they had continued vigorously, and those who had seen, or heard about, developments at Sheffield, Clydebank, Scunthorpe, and the collieries would readily see they had not left any opportunity unexploited; and they would also notice from the increased figures on the balance-sheet that they had spent a good deal of money.

They had turned their attention closely to new plant for axles, bars and railway springs. Castings and railway materials received their special attention, and the work at the colliery which they mentioned last year would produce good results when they got to work again. In all directions they were economising, they were cutting down overhead charges and endeavouring to introduce machinery for reducing costs, such as coal cutters. The company's undertakings were in first-class condition, and ready for profitable work when trade recovered. At the moment one saw very little sign of trade recovering.

FOREIGN COMPETITION.

It was quite certain that firms were waiting for lower prices, and they were buying from America, Belgium, and Germany. He would give one item to show the conditions of the iron and steel trade. He found that Belgium was delivering basic pig-iron here at £5 per ton, and we could not make it at less than £8 15s to £9 without any profit at all. Basic blooms coming in this country from Germany and Belgium were £8 15s. Here the makers' price was £15.

These were instances of competition they had to face to-day, and they could not expect Continental people who were poorer

than we, and whose capital had been depleted, to deal with a country like ours, where economic conditions and prices were still at an impossible level. The worst of it was that till foreign exchanges were stabilised foreign business would have the advantage over us, which with energy on our part we could overcome.

He thought the very first duty of our statesmen ought to be to adjust the exchanges and stabilise conditions under which commodities were dealt with. This no doubt was responsible for a good deal of the present difficulties, and if only our labour leaders would turn their attention to these economic facts and look into the current quotations for steel, iron and machinery, and see how we were handicapped against the foreigner, he felt satisfied they would take a very much wider view than they had done.

Capital and labour both shared in the prosperity of the last few years, and it seemed to him only reasonable that both should participate in the difficulties, and yet at a time when we had hardly recovered from the war, when there was the greatest financial stringency in the country, these Socialistic adventurers chose this as their time for trying their experiments. They had driven a million miners out of work, and now apparently these men, having spent all their resources, were to be led back again on conditions which, if they had consulted those men who know, they would have known were the very best conditions that could have been offered them.

There were hundreds of thousands of men out of work in trades dependent on coal. Blast furnace men, fitters, shipyard workers, all depended on the price of coal, because unless the price of coal was brought down they could not expect to get the price of materials down.

He felt certain, and every steel-maker would agree, that till coke fell to about 25s or 35s per ton and coal proportionately, it would be impossible to start a single blast furnace in this country.

He would like to say a word of sympathy for the men, because they had their own point of view. The men had played the game, and he thought it was creditable to our British instincts of fair play that they had practically universally turned down

the wrecking policy of the revolutionists who were trying to get the upper hand of the unions.

Sir Charles Ellis seconded the adoption of the report, which was agreed to.

MEXICAN LIGHT AND POWER COMPANY, LIMITED. PROVISIONAL AGREEMENT CONFIRMED.

A meeting of the holders of the 5 per cent. first mortgage gold bonds of the above company was held, on the 29th ultimo, at Winchester House, London, at which resolutions were passed confirming the agreement of arrangement provisionally entered into by the committee on behalf of the bondholders. Mr Harold G. Brown, representing the National Trust Company, presided.

Mr E. R. Peacock, the chairman of the Bondholders' Committee, in moving the resolutions, recalled that until 1913 the Mexican Light and Power and the Mexican Tramways Group of Companies had been very prosperous concerns. Having traced the troubles of the succeeding eight years and the recent progress, he went on to say: When, in May last year, the party of General Obregon established its position, he, the speaker, went with Mr Hubbard to Mexico, and made a rapid survey of the situation, and it seemed to them that the new Government might reasonably be expected to establish itself permanently. Immediately after that visit to Mexico the Committee had begun to study how best to regularise the situation, and the provisional agreement before the meeting that day was the result. He was glad to say that concessions had been reached, and the results indicated made possible without ill-feeling on the part of anyone. Out of a total of amounts overdue to creditors aggregating £1,887,000, an agreement had been reached with all except two, who claimed £89,000 in respect of principal and interest, and he was hopeful that a settlement would be come to with them on lines approximating those reached with other creditors. As to the position of the companies, when the resolutions should have been made effective,

the Tramways company was naturally in the less fortunate position because of the five years' period of Government intervention. No arrears of interest were now being paid, but it was hoped that earnings would be sufficient to pay off the arrears of the first mortgage bonds fairly rapidly. The second mortgage bonds had a prospect of several years' waiting before interest was available, but the claim of the company of over 19,000,000 pesos for damages against the Government had a very important bearing upon this situation. In principle the members of the Mexican Government recognised responsibility for substantial damages, and if a satisfactory settlement were reached on the whole question of Mexican finance, it might well be that the Company's claim or part of it might be included in that settlement. The Light and Power Company and its subsidiaries found themselves in an unhappy position for another reason. A new power plant was wanted, and the only money on hand belonged to the bondholders.

THE OUTLOOK.

Under the scheme provision was made for setting aside part of that money for new power plants, and, in anticipation of that, the Committee had taken all steps to advance preparations so that no loss of time could result. Owing to the failure of the rains of last August, it had been necessary, despite all the efforts to utilise steam reserve, to ask all power users to reduce demands by 25 per cent., and to reduce the tramways service and public lighting. Such measures had been very unpopular, and everyone blamed the company, including the Government. It was clear, however, that in the circumstances the Government, which, with the municipality, together owed the company over 7,000,000 pesos for services rendered, could not reasonably blame them for not having begun the construction of a power plant earlier. The bondholders, however, would readily recognise that under such conditions it was essential that no time should be lost in making the situation safe for the future, and in doing that he believed they were serving their own best interests, because the demand for power was great, and, given reasonably normal conditions, the earnings of the company should increase. That would affect not only the Light and Power Company, but also the Tramways Company. He was hopeful that the position of the companies would steadily improve. If they would co-operate with the Government of Mexico the future was bright; otherwise prospects would be, to say the least, somewhat doubtful. On the whole, he regarded the chances of an understanding as reasonably good, and the future with tempered optimism.

Mr H. F. Chamen seconded the resolution, which the Chairman declared to be carried unanimously.

Similar resolutions were passed at the meetings of the Mexican Electric Light Company, the Pachuca Light and Power Company, and the Mexican Tramways Company.

Mr Peacock stated that as soon as the arrangements approved by the bondholders had been confirmed by the Canadian Courts and had become absolute, notice would be published in the Press, so that holders might collect their bonds from the Committee and cash the coupons payable.

THE DINNERINGTON MAIN COAL COMPANY, LIMITED. OWNERS' LIBERAL TERMS TO THE MINERS.

Mr Maurice Deacon presided at the annual meeting of this company, at Sheffield, on Monday, 27th ultimo, the other directors present being the Right Hon. Lord Aberconway, P.C., the Right Hon. Sir Henry Norman, Bart., M.P., Mr F. Fowler, Mr W. H. McConnel, and Mr W. D. Gainsford.

The report and accounts covered the two years ended March 31, 1921.

The Chairman stated that the 30 new coke ovens which were ready for starting could not be set to work because the iron and steel trades of the country were now at a complete standstill, and it was very doubtful whether these industries would start again until the price of coke was reduced to a figure at which, for some time at any rate, it would be worth while to manufacture it.

Reviewing the past year, he stated that they had had a dispute with the deputies, which caused the collieries to stop for a week, and another stoppage of 17 days in common with other collieries throughout the country. Referring to the present stoppage, he said the terms offered by the owners were, in his opinion, exceedingly liberal. They were based on the principle that a living wage to the colliers, and a living wage to the owners, should govern the future of the trade, and that each district should pay the wages which the industry in that district was able to afford. Those principles were, more or less, agreed by the owners and the men. The offer made by the owners, which included a proposal to give the men 80 per cent. of surplus profits over a fixed minimum profit, had been refused. If the Government agreed to renew their offer of ten million pounds, it was very probable that the owners would agree to pay the 80 per cent. of surplus profits. The standard

profit had yet to be agreed, so that they were not really out of the wood. They did not know that day when the pits were going to work any more than they did a month ago, but one of the principal miners' leaders had admitted that they had not the strength to continue the fight, and it was therefore hoped that the strike would soon come to an end.

COMPANY'S MINES IN SOUND CONDITION.

When work was resumed at the collieries a very great difficulty would arise throughout the country because many collieries would not be able to re-open and take back their men. At Dinnington, he was glad to say, they would be able to start, as having a good roof, the pit had been standing very satisfactorily throughout the strike. They had no difficulty from spontaneous combustion, nor from water, so that they would be amongst the fortunate ones who would be able to start. If they had been able to pay a rather high dividend in the past, he was sure that they would be glad to sacrifice a portion in order to produce cheaper fuel, and so enable the trade of the country to be built up again. Only when that happened could the coal trade itself be prosperous.

Although they were going through exceedingly troublous times, and they must bring themselves to look for small dividends, he thought they must rely upon the fact that the colliery has a long lease of life, and they might hope that during that long period there would be a prosperous time for the coal trade again.

A final dividend of 5 per cent., making 10 per cent. for the year, free of income-tax, was declared.

Mr W. B. M. Jackson, of Chesterfield, was appointed a director. The Right Hon. Lord Aberconway, P.C., the Right Hon. Sir Henry Norman, Bart., M.P., and Mr F. Fowler were reappointed directors.

A shareholder, in proposing a vote of thanks to the chairman, said that as an engineer, he knew that engineers in this country could not carry on unless the price of coal was greatly reduced. Orders were going to America for large sugar plants and boilers at a lower price than the plates could be brought at in Sheffield.

THE EX-LANDS NIGERIA, LIMITED.

CHAIRMAN OPTIMISTIC OF COMPANY'S FUTURE.

The ninth ordinary general meeting of shareholders of the Ex-Lands Nigeria, Limited, was held, on the 29th ultimo, at the Chartered Institute of Secretaries, 59A London Wall, London.

Mr H. G. Latilla, the chairman of the company, proposing the adoption of the report and accounts, said they had met this year under circumstances which were not so favourable to them as they had been in the past six years. The price of tin, as they all knew, had fallen very seriously, with the result that, instead of realising £196 per ton in London for their ore, the average price this year had only been £131 per ton—a considerable difference. In consequence, they had only been able to pay a dividend of 5 per cent. for 1920, as against 20 per cent. for 1919, 12½ per cent. for 1918, and 20 per cent. for 1917. In all, since 1915, they had paid shareholders in dividends 75 per cent., free of income-tax, which, he ventured to think, was a very fair record, and one which he hoped they would be able to equal, if not surpass, when the present world depression cleared away. He did not know if shareholders had read speeches by the heads of the Government to the Colonial Premiers. Mr Winston Churchill, speaking of the Colonies and of Nigeria especially, said: "The whole of Nigeria is self-supporting. It is moving rapidly ahead, and there is no doubt that the two Nigerias (meaning the North and South) will absolutely vindicate the exertions made on their behalf by the late Mr Joseph Chamberlain."

are established.

(They constitute one of the most solid and valuable possessions of the British Crown, and will repay handsomely any further support by British credit which they may need.)

Owing to various circumstances no tin had reached the company since last January. We therefore now had a stock of 207 tons in Nigeria, which at the current price of £165 per ton represented in cash about £24,000. Their expenditure in Nigeria was not so great as that of many companies, but they were giving that matter their consideration. Two of the staff whose engagements had terminated were not returning to the property, and as the agreements of others terminated they would consider the question as to re-engaging them unless things improved. They did not wish to take drastic steps if it could possibly be avoided.

The company had spent £1,000 for the acquisition, with others, of properties in Nigeria, representing a total of 29.7 square miles, which might be of considerable potential value. It was desirable, however, at the present time not to do more than rest on those properties until an improvement in conditions prevailed. He was optimistic enough to believe that a return to better times was in store for the company at no distant date.

Mr T. Piercy seconded, and the resolution was carried unanimously.

THE MORTGAGE COMPANY OF EGYPT, LIMITED.

VIOLENT ECONOMIC DISTURBANCES IN EGYPT.

The thirteenth ordinary general meeting of the Mortgage Company of Egypt, Limited, was held on the 30th ultimo, at the Cannon Street Hotel, London, Sir Henry Babington Smith, G.B.E., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The period to which the accounts refer was one of violent economic disturbance throughout the world, and not least in Egypt. The sudden end of the general boom in trade which followed the termination of the war led to a complete cessation of demand, and the price of cotton fell even more rapidly than it had risen. The other staple products followed a similar course, though their fluctuations were not so extreme as those of cotton. The best lands have fallen by 60 or 70 per cent., while second or third lands have fallen from 30 to 50 per cent.

Turning to our own business, the first point to which I would call your attention is the table in the board's report, giving the amount invested in first mortgages at the end of each year since 1910. For the first time for 60 years the total shows an increase. It reached its maximum in 1915, when it amounted to £3,481,000. It then steadily declined, mainly owing to the prosperity which the war brought to Egypt, until, in 1920, it had fallen to £2,589,000. At March 31 last it stood at £2,877,000, an increase of £288,000 on the previous year. The instalments in arrear have increased from £111,158 to £240,238. This is still much smaller than the high figure of £410,938 reached in 1916. As very little new business has been entered into in the last six years, it follows that a substantial number of instalments have already been paid on the loans which have now fallen into arrear, and the margin of security is therefore satisfactorily high. The board are of opinion that the arrears need not give you any cause for anxiety, and that any losses which may arise are fully provided for in the reserve for bad debts, which now stands at £32,733. The item for property acquired by foreclosure is still negligible in amount.

In addition to the reserve for bad debts, the general reserve now stands at £200,000, to which we propose to add a further £10,000. The profit on sales, amounting to £91,139, is held in suspense, because it is receivable from the purchasers in instalments, and cannot, we consider, be definitely treated as profit until it is actually received. Having regard to these reserves, and also to the fact that we have purchased £731,100 of our debentures, ultimately repayable at par, at a cost of £589,824, I think you will agree that the position of the company is exceptionally strong.

The balance of profit and loss account amounts to £80,310, as against £117,488 last year and £83,777 the year before. This diminution is in great part due to the heavy burden of income-tax and of the corporation profits tax. We feel justified in recommending you to maintain the dividend on the ordinary shares at the rate of 2 per cent., and to add £10,000 to the general reserve, with the net result that a balance of £43,249 will be left to be carried forward to the next account.

The report and accounts were unanimously adopted.

THE MALTBY MAIN COLLIERY COMPANY, LIMITED.

BOARD'S CONSERVATIVE POLICY IN VIEW OF THE STRIKE.

At the annual meeting of the Maltby Main Colliery Company, Limited, in Sheffield, on Monday, 27th ultimo, Mr Maurice Deacon presided. The other directors present were the Right Hon. Lord Aberconway, P.C., the Right Hon. Sir Henry Norman, Bart., M.P., and Mr W. H. McConnel.

The directors presented balance-sheets for the two years ended March, 1921.

In view of the serious consequences of the strike, which had now lasted nearly three months, and of the fact that a large amount of money would have to be expended to bring the pit back into a state of efficient repair, the directors felt that it was not only wise but necessary to strengthen their financial resources very substantially to enable them to meet these heavy items of expenditure. The future of trade was very uncertain, and he thought that the shareholders would agree that it was wise to be conservative in the distribution of profits made. Last year they paid 7½ per cent., and this year it was proposed to pay 5 per cent. for the year, less tax. In addition, they would set aside £20,000 for the purposes just mentioned. It must be remembered that the colliery was still in the developing stage, but their output was gradually increasing, and they were getting nearer to the point when it would be commensurate with the large amount of capital spent. Until they arrived at that point they could not expect a good dividend. In spite of all the obstacles of strikes, and the general lack of energy and attention to work which the men had shown throughout the country, the output was considerably more than it was in 1920.

Mr Deacon went on to say that the industry had been placed in comparative bankruptcy by the action of the Government in terminating the subsidies at March 31st.

NEED FOR FUEL PRICE REDUCTION.

Trade was seriously depressed. The iron and steel trades were dead for the time being, and every other trade was suffering very seriously. Until the price of fuel was greatly reduced, it was quite evident that industry could not be brought round to normal, nor would they be able to compete with the foreigners. Belgian pig-iron was being sold for £6 per ton in this country. Prior to March 31st pig-iron could not be produced in this country for less than £9 per ton.

Mr McConnel, in seconding the report, said that it was absolutely necessary that the price of coal should come down if this country was to carry on at all. If that were done, the cost of living would be less, and the real wages would therefore be increased. He did not know whether it was possible to hope that the men discussing the matter in London at the present time would take up the question of the hours of labour, and ask for the old eight hours' day to be reverted to. It was one possible solution of a definite improvement in the output of coal without bringing the miner's wages below the figure at which it was possible for him to live. He expressed the hope that the miners' leaders would be Englishmen enough to put that forward as a solution of the present difficulties, leaving the seven hours' question for some future time when it might be possible to carry it out.

Mr W. H. McConnel and the Right Hon. Sir Henry Norman, Bart., M.P., were re-appointed directors.

India Office, June 30, 1921.		

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended June 29, 1921, the stock of coin and bullion showed an increase of £9,582 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended June 23, 1921.	Countries to which Exported.	Week Ended June 23, 1921.
Belgium	£ 674	United States	£ 1,297,250
British West Africa ..	51,694		
British South Africa ..	952,456		
Other countries	656		
Total values of imports of gold	1,005,480	Total declared value of exports registered in the week ..	1,297,250

Messrs Samuel Montagu and Co. write on June 30th as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,551,350, as compared with £126,548,220 last week. A fair amount of gold came on offer, and was practically all taken for New York. Gold to the value of \$400,000 has been received in New York from Holland. The following are the United Kingdom imports and exports of gold during the month of May last:—Imports, £2,032,452; exports, £6,079,479. In this instance the very wide discrepancy between the sterling totals of the gold imports and exports probably arises from some delay in Customs entries passing into the statistics. It is, however, of importance to remember, when comparing sterling values of the imports and exports, that incoming gold is declared on the basis of its coinage value, and outgoing gold upon that of its value in the open market, i.e., coinage value plus the premium paid by the exporters. The Southern Rhodesian gold output for May, 1921, amounted to 48,744 fine ounces, as compared with 47,853 fine ounces for April, 1921, and 46,266 fine ounces for May, 1920. An important find of gold is reported from Meekatharra (Western Australia). We learn from Bombay, under date of 11th inst., that the feature of the gold market then was that, in spite of the advance in price to Rs. 30.14, up-country arrivals of the metal were small. The net up-country arrival, even at this high rate, was not more than about 5,000 to 10,000 tolas per day. Notwithstanding that the New York cross rate was down heavily, the banks were not able to secure gold freely from the market, owing to these small arrivals, and the market was also bare of stock.

SILVER.

On the whole, the market has been steadier in tone, though not very active. The Indian bazaars bought for shipment by this week's steamer, but generally sold an equal amount for two months' delivery. The operations for China have been singularly erratic. On several days both purchases and sales were made for that same quarter. No fresh developments have taken place in regard to the German silver to which we referred last week. Some of it is being shipped to America, but whether for the purpose of being pledged, or ultimately for realisation, is not yet known. The following details, published by the Shanghai Commercial and Savings Bank, Limited, give a bird's-eye view of the great activity of currency within China and the comparative scantiness of bullion movements with other countries. Arrivals and shipments of silver during the month (April) were as follows:—

Arrivals of bar silver	378
Shipments of bar silver to Hongkong	232
Shipments of sycee to Foochow	60,000
Do Hongkong	900,000
	960,000
Arrivals of dollars from 16 various China ports	4,120,000
Shipments of dollars to 4 China ports	730,000
Do 2 Japanese ports	590,000
Do 1 British port (Hongkong)	2,955,000
	4,275,000

The above indicates that the British colony of Hongkong received more than 80 per cent. of the total exports.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	June 7, 1921.	June 15, 1921.	June 22, 1921.
Notes in circulation	16,789	16,843	16,994

Silver coin and bullion out of India ..	2,436	2,435	2,435
Gold coin and bullion out of India ..	6,799	6,799	6,799
Securities (Indian Government) ..	835	835	835
Securities (British Government) ..			

The coinage during the week ending 22nd inst. amounted to 10 lacs of rupees. The stock in Shanghai on the 25th inst. consisted of about 35,750,000 ounces in sycee 27,000,000 dollars and 420 bars of silver, as compared with about 36,700,000 ounces in sycee and 27,000,000 dollars on the 23rd inst. The Shanghai exchange is quoted at 3s 5 1/2d the tael. Statistics for the month of June are appended:—

Bar Silver.

	Cash Delivery.	Forward Delivery.	Bar Gold.
	Per Oz. Std.	Per Oz. Std.	Per Oz. Fine
Highest price	35 1/2	35 1/2	111 0
Lowest price	33 1/2	33 1/2	105 5
Average price	34-971	34-831	108 10-2

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

NOTICES.

The London Joint City and Midland Bank, Limited, announce the opening of a new branch at Church House, Salisbury road, Blandford, Dorset, under the management of Mr J. G. Hall.

Lloyds Bank, Limited, announces that a branch of the bank, to be known as "The Stock Exchange Branch," was opened on July 1st, at 21 Austinfriars, E.C. 2, under the management of Mr O. W. Bart.

Lloyds Bank, Limited, announce that branches of the bank are now open at 45 The Broadway, Ealing, under the management of Mr E. T. Stanley, and at 77 Clarence street, Kingston-on-Thames, under the management of Mr F. J. Wills (also manager of the Teddington branch).

The directors of Barclays Bank, Limited, have decided to establish a joint local board for Liverpool and Manchester and the South Lancashire district. The board will consist of the following members, viz:—Col. the Right Hon. the Lord Rochdale, chairman; Mr Frederick Charles Bowring (Liverpool), Mr Allan Heywood Bright (Manchester), Mr Peter Forrester (Manchester), Mr Robert Durning Holt (Liverpool), Mr Thomas Lonsdale (Liverpool), the Right Hon. the Lord Stanley (Liverpool), Mr Cecil Mercer Woodbridge (54 Lombard street, London).

Barclays Bank, Limited, announce that they will open on Monday, July 4th, a branch at 42 High street, Ilfracombe, under the management of Mr W. T. Annear.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now opened at 383 Station road, Harrow.

The London office of the National City Company of New York announces the opening of a Continental office in Geneva (Switzerland), which office will take over the investment business which Messrs N. W. Halsey and Co., Limited, have been conducting in Geneva for many years.

Branches of the Merchants' Bank of Canada have been opened at Montreal (St Catherine and Drummonds street); Baie St Paul, Quebec; Winnipeg Beach, Manitoba.

The Commercial Bank of Australia, Limited, notify the opening of a branch at Gisborne, New Zealand.

It is announced that a West-End branch of Hambro's Bank of Northern Commerce, Limited, was opened on July 1st at Norway House, 21-24 Cockspur street, Trafalgar square.

Reports and Notices.

We are informed that the offices of Walter R. Skinner, "Capitalist," "Mining Manual and Mining Year Book," and "Oil and Petroleum Manual" have been removed to 15 Dowgate hill, Cannon street, London, E.C. 4.

The Mediterranean Company for General Trade have removed their head offices to 14 Trinity square, London, E.C. 3.

Mr Joseph Hood, M.P., has resigned his deputy-chairmanship and directorship of the British American Tobacco, Limited, and directorships of the Associated Companies.

We are officially informed that the following have now joined the board of the General Petroleum Company of Trinidad, Limited:—Sir Clifford Cory, Bart., M.P., chairman of Cory Bros. and Co., Limited, and Messrs F. W. Barker, chairman of the Lanadron Rubber Estates, Limited; Herbert Guedalla, managing director of the Imperial and Foreign Corporation, Limited, and Henry Ernest Leatham, director of Messrs Henry Leatham and Sons, Limited.

Sir Arthur Worley, C.B.E., F.C.I.I., general manager of the North British and Mercantile Insurance Company, Limited, was elected president of the Insurance Institute of London on Tuesday, June 28th,

Mr Henry Mann, deputy-general manager of the Commercial Union Assurance Company, Limited, was re-elected hon. treasurer, and Mr J. A. Pollard of the Alliance Assurance Company, Limited, was re-elected hon. secretary.

Mr Chas. A. Sack has been appointed director of the Sungei Matang Rubber Estate, Limited, to fill the vacancy on the board caused by the death of the late Mr Ewen Cattanech.

GOVERNMENT STOCKS, &c.

3 PER CENT. CONSOLIDATED EXTERNAL DEBT OF COLUMBIA.—Tenders of bonds of the above debt for amortisation were opened to-day at the offices of the Council of Foreign Bondholders. Tenders ranged from 53½ to 65 per cent. Those at and under 55 per cent. were accepted.

RAILWAYS.

CHILIAN TRANSANDINE.—At the adjourned meeting of debenture holders, held at Winchester House on June 24th, at which holders of debentures to the amount of £896,100 were present, either in person or by proxy, the resolution dealing with the exchange of the present debentures of the above company for Chilean Government 8 per cent. bonds was unanimously passed. This resolution is binding upon all debenture-holders, whether represented at the meeting or not. Bankers who have given certificates of deposit of debentures are advised that they are now free to release the debentures so deposited. Immediately advices have been received by the company that the contract made with the Chilean Government has been approved by the Chilean Congress the present debentures will be exchanged for scrip certificates for the Government bonds.

LEOPOLDINA TERMINAL.—The net revenue of Leopoldina Terminal Company for 1920 was £64,980, plus £15,237 brought in, making £80,217, less interest on 5 per cent. first debentures £59,270, sinking fund charge for redemption of debentures £9,480, income and corporation taxes £2,750, leaving £8,717, which the directors propose be carried forward. As a result of the fall in Brazilian exchange sterling value of dividend received from Cantareira Company shows considerable falling off. Administration expenses and general charges of Cantareira Company for year amounted to Rs.317,160½, as compared with Rs.314,923½ for 1919.

ASSURANCE.

CENTURY INSURANCE.—An arrangement has been made between the Century Insurance Company, Limited, and the Commercial Union Assurance Company, Limited, under which the Commercial Union will, as from July 1st next, act as the Century's underwriters and managers for marine insurances transacted in the United Kingdom. City Underwriters, Limited, will complete all matters connected with the business accepted for the Century Insurance Company during their management, and will continue to supervise the marine foreign agencies of the Century.

MISCELLANEOUS.

BRAZILIAN TRACTION.—The revenue of Brazilian Traction Light and Power Company received under contracts with subsidiary companies for 1920 totalled \$7,036,824, which with interest on investments and miscellaneous income \$206,618, together \$7,243,443, less general and legal expenses, administration charges and depreciation on securities \$313,782, interest and charges on secured gold notes and other loans \$674,537, provision for general amortisation \$260,000, leaves a net revenue \$5,995,122. Dividends on preference shares at 6 per cent. per annum absorbs \$600,000, leaving surplus of \$5,395,122, plus \$2,587,008 brought forward, making \$7,982,131. Approximately \$4,900,000 has been utilised towards meeting capital expenditure on properties, leaving \$3,082,131 to be carried forward. The board is disappointed that they have been unable to authorise resumption of payment of dividends on ordinary share capital. This has been due to extremely unfavourable exchange conditions which have prevailed and still continue, and stringency of money, which has made it impracticable to finance necessary capital expenditure by sale of securities.

Mr Frank Henderson has resigned the chairmanship of the City of Santos Improvements Company, Limited, owing to increasing obligations in other directions, but retains his seat on the board. Mr Norman B. Dickson has been elected chairman in his place.

† Tax free. (b) Burmah Oil.—Ordinary capital increased during 1920. The 1919 dividend of 50 per cent. absorbed £1,428,750, and the 1920 dividend of 30 per cent. took £1,543,050.

OIL OUTPUTS.

COMMONWEALTH OIL CORPORATION, LIMITED.—Advice from Australia reports for the four weeks ended May 20, 1921: Shale reported, 2,617 tons. Crude oil produced, 236,273 gallons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, June 22, 1921, amounted to 588 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Droughty conditions prevailing for some time past have been partially relieved by welcome rains over the Southern, Western and Midland counties, but further moisture is needed for spring cereals and fodder crops. Official reports, however, continue to speak favourably respecting the wheat crop. Hay is being secured under ideal conditions, and small supplies arriving on the markets show excellent quality. Offerings of native wheat are on a very limited scale, with many provincial markets bare of supplies. Suitable milling qualities realise 96s to 98s, with inferior grades 88s to 93s per quarter 504 lbs. Imported descriptions move off quietly, and prices are 2s 6d to 5s lower, both for Governmental and free offerings. No. 1, Northern Manitoba, ex ship, 91s, No. 2, ditto, 91s, ex store. Australian, ex ship, 81s 1½d, and Argentine, ex ship, 84s to 85s. per quarter. Shipments of late have been on a very liberal scale, and the outlook generally for next season remains favourable to importing countries, crop news, on the whole, being quite satisfactory. It is reported that measures are being taken to accelerate the de-control of wheat; which would involve the liquidation of Governmental holdings. Flour.—The demand shows no improvement, and prices 2s easier at 69s for London straight run delivered per 280 lbs. Country straights rule at 62s to 63s, free on rail. There is a fair demand for best grades of imported at steady rates, the market being scantily supplied, and recent arrivals were readily absorbed. Manitoba export patents quoted 71s, straights 69s, Kansas patents 67s, and Australian 65s per 280 lbs, ex store, with Australian July shipment quoted at 56s to 56s 6d per sack. The market for maize developed a steadier tone, consumptive demand showing some improvement, owing to the spell of dry weather. Plate quoted 48s, yellow South African 46s 6d,

47s, white ditto 44s, and Rangoon 46s, landed, per 480 lbs. The forward market also showed more activity, buyers being attracted by the lower prices ruling recently, and quite a good business transpired in European and Plate cargoes at advancing rates. Sales include Plate steamers afloat at 42s to 44s 6d, as to size and position, July-August 40s 6d, Dan-Gal-Foxanian afloat 44s 4½d, and a part cargo Moldavian afloat 45s per 480 lbs. Barley quiet but fully steady on the spot. English grinding quoted 45s to 52s, Californian 50s to 54s, and Morocco 46s landed per 448 lbs. American malting 44s 6d landed, No. 4 Canada Western ex ship 44s, Canada feed 40s 6d, American feed 41s, and Egyptian feed 40s landed per 400 lbs. Scottish pearl barley £21 to £23 per ton ex store. On c.i.f. terms the market ruled quiet, but prices the turn steadier. Cargoes of Dan-Bess-Kustendji afloat sellers 44s 6d, and new crop August-September 41s, with a part cargo afloat done at

Capital, Surplus and Profits
\$37,500,000

44s per 400 lbs. Parcels firmer for Californian, but business confined to narrow limits. Beans steady. The U.K. crop promises to be very light owing to absence of rain, and many fields have been attacked by vermin. English spring quoted 55s to 68s, and new winters 52s to 55s. Old crop firmly held at 73s to 85s per 532 lbs. China horse beans £9 5s to £10 10s per ton ex store. Peas firm with a hardening tendency. English maples range from 75s to 95s. Duns 55s to 63s, marrowfats 60s to 100s per 504 lbs. Japanese marrowfats 27s 6d to 28s, and Tasmanian blues 17s to 19s per cwt ex store. English oats firm and sparingly offered, while prospects of the new crop indicate a light yield, while very short in straw owing to continued drought. Whites range from 47s to 50s per 336 lbs. Foreign sorts remain quiet. Plate f.a.q. 30s, ditto clipped 31s 6d, Chilean tawny 32s 6d, No. 2 Canada Western 34s 6d, No. 3 ditto 31s 6d per 320 lbs landed. Oatmeal quiet, but late rates generally maintained. Lentils quiet. No. 1 split quoted 49s, and Egyptian 34s per 100 lbs ex store. Homeward grain freights have been generally quiet apart from some inquiry from the Continent. The River Plate section is somewhat depressed, and rates lower on free tonnage offers. Up river to U.K./Continent July 1-20th done at 45s to 43s 9d, with tonnage since obtainable at 42s 6d ton. North America steady, with 6s quarter quoted U.K. and 27½ cents per 100 lbs Hamburg, while several vessels were fixed at 27½ cents Gulf to Rotterdam/Hamburg August. North Pacific paid 55s ton to U.K. Eastern markets firm but quiet on scanty tonnage offers. Bombay/Karachi 25s scale basis. Dalry wheat 50s, Saigon rice 50s, Australian wheat July 65s per ton to U.K./Continent. Danube grain showed more interest in prompt loading at 27s 6d, with possibly 30s obtainable for handy size steamers to U.K./Continent, with 5s ton less if Mediterranean ports of discharge. Time charter steady quiet at 7s per ton per month for one trans-Atlantic round, and proportionately less money for longer periods.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated June 30th, is as follows:—Pig-iron: It is not yet possible to say when the iron and steel works may resume operations. In the meantime, there is practically no business doing. No. 3 Cleveland G.M.B. and No. 4 foundry are very scarce, but lower qualities are plentiful. No. 3 and No. 4 are quoted £6 15s. per ton for home consumption, and the export price is now 143s per ton. The free market for East Coast hematite has resulted in mixed numbers being offered at their rate of 140s per ton. Manufactured iron and steel: It is uncertain when operations may be resumed at the local works. Steel ship plates, home, £15; steel ship angles, home, £14 10s; iron bars, home, £19; steel rails, home, £15 net. Iron ore: A few cargoes have lately arrived against old contracts, but so far there has been no resumption of buying for forward deliveries.

Our Sheffield correspondent writes:—The coal strike has been settled, and a stoppage in the engineering trade, which would have been almost as serious, avoided. Some branches of engineering are at present well supplied with orders from both overseas and home sources. As coal may be available to some extent next week, a good many local firms are preparing to restart operations. In the lighter and finished branches a fair amount of business has accumulated, but the outlook for raw steel remains as bad as before the strike. Makers of acid steel can see, perhaps, two months' work, but not more. Most of the basic steel wanted is being obtained from abroad. Continental billets are less than £7, whereas the home price is £12. This figure should, however, be reduced £2 next week. Prices generally, however, are in the melting-pot, as steelmakers want to know what they will have to pay for their coke. If they can get down to within a couple of pounds of the Continental prices of steel they may have a chance of doing business. There will be no general restarting of the blast furnaces for the present, although foundry iron is scarce. The

crucible steel department is still almost without orders. Inquiries generally are plentiful, and tend to increase. Bright steel has been reduced from £25 to £20, Yorkshire Crown bar iron from £19 to £16, and iron hoops from £23 5s to £20 5s. Wire rods have not been lowered officially, but prices are being cut. Some collieries have been kept in a condition whereby a prompt start can be made in getting coal. Many, however, have suffered from fall of roof and water to such an extent that they will not be ready for normal working for two or three weeks. It is expected the distribution will be controlled for some time, railways, gas, and electric works having the preference.

Our Glasgow correspondent (writing on Thursday) says:—The settlement of the coal dispute has given great satisfaction to trade and industrial circles in the West of Scotland, which were on the brink of total paralysis. There have been several cargo lots landed in the Clyde from America and Canada of late; but, acceptable as these were, they were quite inadequate to requirements, even those alone applicable to utility purposes. It is recognised in informed quarters that weeks must elapse before production approaches to normal conditions. At every colliery in this district repairs, more or less heavy, have to be effected ere the workers can have free scope at the faces and before the outputs can be appreciable in quantity. In some cases the reconstructions, it is said, will occupy attention to the end of July, and that not sooner will the great body of the men be employed. Fortunately, the annual summer trade holidays fall in during the interval, and therefore demand from public works will not be in force, and by the time it again comes into play it is hoped that supplies on hand account will be well adequate for needs. It will take a longer period, it is feared, to meet any inquiry which may come along in shipment interests. While the immediate outlook for coal supplies is by no means assured, it is surprising how encouragingly the tone of business in iron and steel has gathered strength in the past few days—to the extent even of the opinion gaining acceptance that by the beginning of August a departure for the better will be visible in several of our leading manufacturing departments. This feeling has been helped forward unquestionably by the prospects that the trouble in the joiners' trade, which has lasted for six months (and greatly hampered shipwright business), is ripe for adjustment; and that the threatened dislocation with the engineers will be averted. Happily, coincidentally, a substantial quantity of new work has come into the market. Locomotive builders have booked an order for 45 powerful engines for the New Zealand Government, and negotiations are proceeding relative to 2,500 wagons for the same authority, who are also credited with having given out to local firms a valuable line for hydro-electric works to be erected in the colony. Then a Glasgow firm has secured a £30,000 contract for constructional work. Harland and Wolff are said to have acquired an extensive stretch of territory on the south side of the Clyde, on which they purpose large expansions, such as should raise their yard to the premier place, as regards size, in the United Kingdom. This firm is said to have an enormous volume of work in hand, and has been continuously employed throughout the general slump in shipbuilding. Despite the prevalence of some adverse factors, Clyde shipbuilders last month put into the water 16 vessels of 40,371 tons, bringing the totals for the half-year up to 118 craft, of 235,800 tons, not a bad issue in all the circumstances. Since last week Scotch bar iron has been reduced by £3 a ton, making "Crown" quality £16 per ton. Thirteen months ago the quotation was as high as £30 a ton. As against £16 per ton for home make at present, it is instructive to note that Continental steel bars are selling at about £10 ton, delivered Forth ports. A strong inquiry has set in for Scotch foundry iron for both home and foreign markets, and values are still hardening, and this mainly because of the shortage of supplies. Hematites are more plentiful, and are named as at £9 f.o.b. at works.

BY-PRODUCTS TRADE.

Our correspondent writes:—The continued coal strike has caused the coal tar products market considerable depression. Pitch, however, shows a tendency to recover, and will probably be much

MENTHOL.—Spot lots changed hands at 19s; Japanese peppermint oil, spot, sellers, 4s 3d; aniseed, spot, sold, 2s 3d; refined slabs of camphor, Japanese, on spot, quoted, 4s, and Chinese, 3s 10d; crude, spot, 2s 9d per lb. Japanese wax, spot, 90s per cwt.

EGG PRODUCTS.—Market generally slow but steady. Liquid yolk, spot, prime, 135s per cwt; albumen, spot, 2s 11d per lb for hen.

RUBBER.—A steadier tone governed the market this week, and a fair volume of business resulted. Plantation crepe, spot, sold, 8½d to 9d; July-September, 8½d to 9d; October-December, 8½d to 9d; smoked ribbed sheet, spot, sold, 7½d to 8d; July-September, 8½d; October-December, 9d to 9½d. Fine hard Para, spot, quoted 10½d; caucho ball, 7½d.

OILS.—Linedseed irregular. Spot, net, naked, 35s; September-December, 34s 9d. Rape quiet. Crude, spot, 52s; refined, 60s. Cotton firm. Crude Egyptian, 38s; Bombay, nominal; common edible, 46s. China wood firm. Hankow, spot (barrels), 92s; and shipment, 66s. Coconut firm. Ceylon, spot, 56s; July-August, 48s 9d; Cochin, ditto, 54s. Soya firm. Oriental, cases, July-August, 33s; barrels, ditto, 36s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 22s to 24s. Groundnut firm. English crushed, naked, spot, 43s; deodorised, barrels, £55. Turpentine irregular. American, spot, 80s; Rosin easier. American, grade B, 15s 6d; F, 16s; G, 16s; K, 17s 6d; M, 17s 6d; WW, 24s; French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum steady. American, spot, 1s 9½d; and water-white, 1s 10½d per gallon.

OLSEEDS.—Linedseed: Market irregular and firmer, with fair dealings. Calcutta, July-August, £20 5s, sellers; Bombay, £21. Plate, spot, Hull, £19; affloat, sailer, sold, £18 12s 6d; steamer, early July, £19 2s 6d; parcels, June-July and July-August, sold, £18 to £18 15s; August-September, £18 2s 6d to £19; September-October, £18 5s to £19. Rapeseed quiet. Toria, June-July, £21 5s; real bold Ferozepore quoted £20 15s; brown Cawnpore, £19 10s. Cottonseed firm. Egyptian black, July, sold, £11 5s; and white, £11. Bombay, June, Hull, nominally £10 5s. Gingelly firm. Chinese, June-July, Continent, £25. Castor, Bombay, June-July, sold, £16 10s, and Brazilian, £13 10s, Hull. Ground nuts, Coromandel, machine-dried, July-August, £21 15s; ordinary, £20. Chinese decontaminated, f.a.q., July-August, £22 15s per ton.

METALS.—Tin exhibited a rather firmer tendency at the week's commencement, dealings being confined chiefly to forward dates, with July selling at £168 and three months' £168 15s to £169. Little change characterised Tuesday's movements, while prices were rather easier at Wednesday's market, cash being registered at £167 10s to £166 15s, three months' £169 10s to £168 10s. A firmer tone pre-

vailed on Thursday, cash being sold at £167, late August £168 10s, and three months' from £169 to £168 15s, finally £169 5s. At Friday's session prices moved in an upward direction. Cash changed hands at £168 10s to £168 and since at £169 10s; August dates £168 10s to £169 10s, and three months' from £171 to £170, improving to £171 15s, and since done at £171 5s. Copper tended quiet and somewhat lower, while steady at the decline. By the middle of the week standard on spot moved down to £70 7s 6d, and three months to £70 12s 6d. A larger business was concluded at Thursday's meeting, values being dearer. Cash changed hands at £71 2s 6d, July dates £70 17s 6d to £71 5s, and three months' £71 to £71 10s. At Friday's session values advanced. Standard cash realised £72 2s 6d to £72, late August £72 7s 6d, and three months' £72 7s 6d to £72 2s 6d. Electros, £75 10s to £77 10s; best selected, £72 10s to £74 10s; strong sheets, £112. Wire bars, £75 10s to £77 10s. Lead firmer at £23 5s to £23 2s 6d, as to position. Spelter easier at £27 2s 6d to £27 12s 6d, according to position. Antimony, English regulus, £37 to £40. Aluminium, home trade and export, £150.

TALLOW.—Messrs Colchesters and Woolner write on June 29th as follows:—The tallow market was firm during the week, with prices advancing. A more lively demand developed; the unsold lots of the previous auction were mostly cleared and buyers still remained unsatisfied. At to-day's auctions the better kinds of mutton advanced 6d, good mixed 2s, and inferior sorts 2s 6d. At auction to-day 1,433 casks tallow were offered, and 1,353 were sold. Quotations are:—Australian mutton: Fine, 36s 9d; good to fair, 35s 6d to 34s 6d; dull to dark, 33s 9d to 29s 6d; hard, 35s 6d. Australian beef: Fine, 43s; good to fair, 38s to 34s 9d; dull to dark, 30s 3d to 29s 3d; sweet, 43s 9d. TABLE OF CONTENTS.

ment caused much bewilderment, and, by a complicated chain of argument, was pointed to in some quarters as a fresh indication that Bank rate will have to come down in order to stimulate applications for the new Treasury bond issue.

	July 8, 1921.	July 1, 1921.	June 24, 1921.	June 17, 1921.	Previous Rate and Date Changed.

Market rate (3 months' bills)	5½	5½	5½	5½	..

* Additional to those offered by tender the preceding week.

The Bank return showed no improvement. The stock of gold was increased by £2,000, and the circulation rose by £102,000, making the Reserve £100,000 lower. Securities rose by £1,870,000, Government securities being £2,595,000 higher and Other £725,000 lower, and Deposits were thus a million and three-quarters higher, Public rising by £4,423,000 and Other being reduced by £2,698,000. The currency notes circulation expanded by £1,523,000 to £325,407,000, which includes £2,012,500 for notes called in, but not yet cancelled. The fiduciary issue is £275,444,600, which is £42,110,600 below the maximum.

The Swedish and Danish Bank rates were reduced by ½ per cent. to 6 per cent. on July 5, 1921. The Swedish Bank rate had stood at 6½ per cent. since May 4, 1921, and the Danish rate has been at 6½ per cent. since May 5, 1921.

There has been more business in the exchange market this week than for some little time past, but, although no rates have moved violently, there is no feeling of certainty anywhere. New York, which ended on July 1st at 4.72½, rose to 4.73½ on Monday, fell away again gradually to 4.72½ on Thursday, and although yesterday morning it was up again to 4.71½, the tendency was weak, and there is a general feeling that rates may go somewhat lower. Quotations for futures, at about one-half cent per month above spot, are practically unchanged. Paris, in spite of banking troubles and a deterioration in harvest prospects, has moved up only a little, after some irregularity, to 46.65 yesterday (as compared with 46.55 a week ago), when Paris was inclined to offer sterling. Brussels, on the other hand, at 47.35, showed a rather wider spread from Paris than it did a week ago at 46.82. Paris, at about 3 centimes per month under spot, and Brussels, at about 9 centimes, are rather narrower quotations for futures than last week. Both Italy, at 77½, and Madrid, at 29, have moved in our favour, while Switzerland has gone against us from 22.17½ to 22.12, and Amsterdam, after a slight relapse, has ended at 11.36, the same as the preceding week. Christiania at 26.37½ and Copenhagen at 22.27½ have both slightly depreciated; Stockholm, at 17.00, after being some points higher during the week, is practically unchanged. On Monday there was, for some unexplained cause, a sharp appreciation in the German mark to 273, after which, however, the rate rose again almost at once to its old level of about 279. Helsingfors, at 222, has shown itself able to maintain some part of its recent recovery, while Portugal, at 8½d, reflects in its improvement the announcement of a small loan in America. Among the Central European exchanges the London rate on Vienna (Auslandskronen), after rising to 2,450 on Monday, is back at 2,300 as compared with 2,150 a week ago. On Monday last the Vienna rate (for Inlands-kronen) was 2,820. This tendency of the two rates to come more closely together is the inevitable result of the decree issued towards the end of April permitting the purchase of Inlands-kronen from abroad for the purpose of direct payments in Austria, and as the meaning of the decree becomes more widely understood we may expect to see a still closer approximation of the rates. Warsaw, after recovering to about 5,500 on the news of the energetic measures contemplated by the Polish Government, has moved up again to about 7,500. Prague has

remained steady at about 275½, Belgrade at about 132, while Budapest is slightly better at about 1,000. Sofia has depreciated from 340 to 350, and Bucharest, in spite of harvest prospects, is also a little higher at 251. Athens at 66, although a little below its worst, continues to depreciate; Constantinople at 535 is also somewhat higher. South American exchanges, as a whole, have moved somewhat in favour of this country. India, perhaps on more doubtful monsoon news, has weakened slightly. The yen, on the other hand, has moved up to about 2s 7½d, reflecting the general improvement in Japanese trade conditions. As the result largely of fears occasioned by the Banque Industrielle de Chine there was on the 5th a sharp demand for silver from China, bringing up the price to 36½d, but since then demand and price have fallen away again somewhat. Shanghai and Hong-kong have, of course, followed these movements.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JUNE 30, 1921.

Total spent	£ 271,420,290	Raised by revenue ..	£ 204,168,385
Dec. in balances....	253,757	Net borrowings	66,998,148
Total	271,166,533	Total	271,166,533
ESTIMATES for YEAR 1921-22.			
Ordinary Receipts..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

JULY 2ND.—U.S. President signs peace with Germany and Austria-Hungary.

JULY 4TH.—Coal mines reopen. Conference of Southern Unionists and Sinn Fein leaders at Dublin. Corn Production Acts (Repeal) Bill debated in Commons.

JULY 5TH.—General Smuts in Dublin. Chancellor of the Exchequer announces new issue of Treasury bonds. British Mediterranean Fleet concentrating on Constantinople.

JULY 6TH.—General Smuts confers with Prime Minister on Irish question. Debate on time for passing Railways Bill in Commons. Death of Lord Balfour of Burleigh. Australian Government introduces Bill to establish a Tariff Board.

JULY 7TH.—Commons debate on coal settlement. Housing subsidy to end.

JULY 8TH.—Ulster Premier visits the King.

On the Stock Exchange the announcement of the forthcoming Treasury bond issue caused a reaction in gilt-edged securities, which, however, was arrested later in the week, partly on hopes that the new loan will be instrumental in bringing Bank rate lower. The volume of business remains small, hopes that lower Bank rate and industrial settlement would cause a revival being disappointed.

The cotton market has continued to present a more active appearance, a feature being the volume of speculative purchases by shippers of cloth to India, while a healthy turnover is reported for several minor outlets. From the woollen textile industry more business is reported than for many weeks past, and the general tone is good. Another series of colonial wool sales begins at Coleman street on Monday. Work is gradually being resumed in the iron and steel industries, and it is hoped that next week will see some blast furnaces in operation. From Sheffield, however, a continuance of idleness is reported by steel makers. The hide market is a little firmer. A rather better demand is reported for linseed oil.

Details of movements and news in the principal markets from special correspondents will be found on later pages of this issue.

NEW TREASURY BONDS.

ON Tuesday last the Chancellor of the Exchequer made the following statement in the House of Commons:—

"After careful consideration and consultation, I have decided to offer for subscription an issue of 5½ per cent. Treasury bonds maturing April 1, 1929, the price of issue being fixed at 97. Holders of the 5 per cent. Exchequer Bonds maturing on October 5, 1921, and of National War Bonds maturing in 1922 and 1923, will be offered an opportunity of converting their holdings into these Treasury Bonds. The sole purpose of the issue is to provide for redeeming maturing obligations, and thus to avoid undue recourse to Treasury Bills and Ways and Means Advances. I am sure that I can confidently rely on the people of the country to support this issue, and so assist our efforts to maintain our financial position on a sound footing. I should add that the loan will not be for any fixed amount, and I do not propose in the first instance to fix any definite period within which subscriptions will be received. I will circulate in the Official Report a *résumé* of the terms of the issue."

The following are the terms of issue as thus officially published:—Price of issue, £97 per cent. Principal repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. Interest exempt from corporation profits tax. Bonds convertible at the holder's option as on April 1, 1922, or October 1, 1922, into 3½ per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Applications will be received on July 12, 1921, and thereafter until further notice. The first dividend will be payable on October 1, 1921, and will represent interest to that date from the date on which payment for the bond is made. On notice given not later than July 26, 1921, holders of the following Exchequer and National War Bonds may surrender their holdings in whole or in part, and receive in exchange therefor similar holdings of like amounts of Treasury Bonds of the present issue, together with a cash payment as follows:—

5 per cent. Exchequer Bonds, due October 5, 1921, a cash payment of £4 per £100 of bonds surrendered.
5 per cent. National War Bonds, due October 1, 1922, a cash payment of £4 per £100 of bonds surrendered.
5 per cent. National War Bonds, due April 1, 1923, a cash payment of £3 10s per £100 of bonds surrendered.
5 per cent. National War Bonds, due September 1, 1923, a cash payment of £3 10s per £100 of bonds surrendered.

All conversions will take place as on July 26, 1921, to which date interest will be paid in respect of bonds surrendered, and from which date the 5½ per cent. Treasury Bonds issued in exchange will carry interest.

It will be seen that the terms attached to the new issue should be very attractive to investors, since they can place their money at a high rate, and acquire an option which will enable them to transfer it to a long-dated security, the 3½ per cent. Conversion Loan, if before October, 1922, such securities should have become more desirable than

short-dated obligations. If not, the holder of the new bonds can wait for redemption in 1929, and this comparatively short life will secure him, to a great extent, against depreciation in the meantime. Offered at the right time and by the right Government, the security might easily have been very successfully placed, in spite of the obvious criticism that it is too short for the investor and too long for the market, because the option attached robs the first half of the criticism of most of its sting. But the time, of course, is ill-chosen with the holiday season just going to begin, though, as the issue is to be on offer till further notice, it is possible that when the world comes back to business the loan may be galvanised into something like success. But the worst obstacle in its way is the discredit from which the present Government suffers, especially in the matter of expenditure, which has imbued most investors with the belief that by lending to it they are likely to encourage it in extravagance. Such an atmosphere is most unfavourable to the efforts of the Treasury to put the finances of the country on a sounder basis, and must remain so until it can be dispelled. In spite of the cash bonuses offered to holders of maturing securities to induce them to convert, it is not expected that professional owners of them will be beguiled into an eight-year security. To real investors the conversion terms should be as attractive as the terms of subscription.

THE RAILWAYS BILL.

THE Railways Bill is advancing through Committee with slow but not stately steps. In spite of the fact that the Committee is now sitting till 6 p.m. three days a week, the 75 clauses of the Bill are being disposed of at a rate fractionally less than one clause per diem. On Wednesday Sir Frederick Banbury proposed by an amendment to Clause 12 to deprive the Transport Minister of power to order a company to afford reasonable facilities and conveniences to the public. After a discussion lasting 1½ hours he found one other member in a Committee of more than 60 to support him. The groups have been settled practically in the form proposed by the Minister, with the addition of the Scottish grouping which he accepted on the first day. But the precise terms of amalgamation are to be finally settled on Report. The South Wales coal lines, the Taff, the Barry, &c., have been transferred from the category of "absorbed" to that of "constituent" companies in the Great Western group. The change, while possessing some importance from the internal company point of view, makes no difference affecting the public interest. There were one or two interesting discussions as to what was to be done with a company, with a liability of some thousands of pounds for Parliamentary expenses, whose only asset was an Act which nothing had been done to put in force. Attempts to maintain the old idea of competition, in place of the idea of territorial monopoly substantially embodied in the Bill, were made in the shape of amendments to create a Central and a Liverpool and Manchester group, but were defeated. The members for Hull, needless to say, died in the last ditch in an endeavour to prevent the Hull and Barnsley being absorbed in the North-Eastern group, but were beaten by a majority of nearly three to one.

In the course of the week it became evident that something must be done to accelerate progress. August 15th is only five weeks off, and on that day the companies become responsible for their own finance. Without the £60,000,000 grant, for which the Bill provides, the position of many of them will be perilous in the extreme. In the language of a member, who is also a railway director: "Unless this Bill is passed before that day many of the less financially strong railway companies will be faced with absolute bankruptcy." Accordingly on Wednesday evening, in the House downstairs, Mr Chamberlain submitted a series of drastic proposals, which, after a long debate and several divisions, were duly passed. Part III. of the Bill, consisting of 40 clauses, establishing a Rates Tribunal and giving it full powers to control rates in future, is transferred to a separate Committee. The step was very necessary. When the Bill was introduced it was generally understood that this part, having been accepted by the railway companies on the one hand and the great trading organisations on the other, was mainly non-contentious. Since then about 500 amendments have been put down. The separation of the Bill into two parts, referred to two different Committees, is said to be unprecedented. But there is no practical difficulty involved, for Part III. is really in effect a separate measure, and might perfectly well have been introduced as such, except for the technical reason that it makes provision for the rates to be charged by the groups which only come into existence under the provisions of Part I. Secondly, power is given to the chairman of each Committee to enforce what is technically known as a "Kangaroo" closure, that is, to select from the amendments those which appear best suited to secure discussion on important points of principle, and to jump over the rest. Thirdly, Mr Chamberlain proposed that when the Bill emerges from Committee three days and no more should be allotted for the report and third reading stages. He subsequently gave way to the extent of allotting five days. But from the table of the allocation of Parliamentary time which he put forward it is evident that it will only be with good luck, and after a fierce scramble, that the Bill will receive Royal Assent by August 15th.

The railway companies are fortunate in their choice of the member who acts as their principal spokesman, Major Hills, a North-Western director, who sits for Durham City, and who has done his best not only to improve the Bill, but to smooth its passage.

SAFEGUARDING UNEMPLOYMENT.

WHEN we say that a man is "well-meaning" we politely imply that though his intentions may be good his actions in their working out are both feeble and futile. In this qualified sense we do not doubt that the Government, urged by their Protectionist supporters, were "well-meaning" when they drafted their Bill for the "safeguarding" of industries. Their intention was to reduce the risk of men in some of our industries being thrown out of work by the so-called dumping of foreign-made imports. But what they overlooked at the beginning, and are trying with the aid of distorting spectacles to overlook now, is that no industry in this highly organised country stands by itself. They are being warned by the big banks and by the great woollen, cotton, and steel trades that in regard to industry this country is a highly articulated machine in which the elementary completed product of one trade is the semi-manufactured raw material of another trade higher up the industrial scale. In the words of the hymn, "We are not divided, all one body we." If the elementary product of one trade be advanced in price by means of a tariff on competitive imports, then the trade higher up the scale, which uses this product, home or imported, as a raw material, is at once penalised in the world's markets. In other words, by "safeguarding" employment in some trades we shall certainly safeguard unemployment in other and possibly more important trades. The danger which threatens us, as has been clearly brought out in the debates on the Bill in Committee, is lest protective tariffs may be imposed in the interests of some trades, because the procedure laid down in this Bill does not permit the effect of these tariffs on other trades to be adequately appraised.

In Part II. of the Bill Clause 2 lays down the conditions under which specific trades may by Order be brought within its provisions, and be protected by a tariff of 33½ per cent. on imported goods. A trade applying for an Order has first to satisfy a Committee set up by the Board of Trade that goods are being "dumped" at prices below the cost of production here, or are being imported from countries with depressed exchanges at prices below those at which similar goods can be profitably manufactured here. Next the Committee has to be satisfied that by reason of the above importation "employment in any industry of the United Kingdom is being, or is likely to be, seriously affected." Those conditions being declared by the Committee to be fulfilled the Board of Trade "may" make an Order. In the original Bill an Order made had merely to be laid on the table of the House of Commons for twenty-one days, but the protests against the unconstitutional grant of taxing powers to the Board of Trade have brought out a Government amendment under which Orders to have effect must be definitely approved by resolution of the House. This amendment does ensure that the House of Commons shall take responsibility for Orders, but there is no adequate provision in any part of the procedure yet laid down whereby the inquiring Committee and the Board of Trade will be compelled to look beyond *ex-parte* applications by specific trades, and to take into account the effect of any Orders upon the general trade and employment in the country. The whole procedure is *ex-parte*; it permits trades which are threatened by dumping to seek the protection of tariffs, but it does not permit other trades to show cause why these tariffs should not be imposed. One may produce evidence to show that unemployment is caused by dumping, but one is not allowed, as the Bill stands, to produce evidence to show that unemployment will be caused by tariffs.

It was not possible seriously to defend this one-sided arrangement when Clause 2 came before the Committee of the House in the latter part of last week. The out-and-out Protectionists, to whom tariffs bring a mystic soul comfort by mere imposition, could vote down amendments more easily than they could produce plausible arguments against them. The fight came over an amendment requiring a Committee (under Part II. of the Bill) to satisfy itself that the effect of an Order in a specific case would not diminish the aggregate employment in the United Kingdom. A typical example of the dependence of one trade upon the products of another is afforded by paper. The trades—publishers, printers, bookbinders, &c.—which use paper as a raw material employ five times as many people as the trades which make paper. The paper-making trades might apply for an Order setting up a protective tariff upon imported paper, a Committee of the Board of Trade would be empanelled to hear them, but the much larger paper-using trades would not have any *locus standi* to appear also before the Committee and offer evidence against the application. An inquiry taken under such conditions would be flagrantly absurd, and yet nothing would stand between the paper-using trades and a protective tariff on their raw material except an appreciation by the Board of Trade of the absurdity of the whole proceeding. Similar examples can be taken from any trade in this country which uses as its raw material the completed product of another trade. No industry uses more partly manufactured material, much of it imported, than do our great shipbuilding yards, and yet, under that Bill, the shipbuilders would be unable to put up their case against a duty of one-third *ad valorem* on ships' plates.

Although the President of the Board of Trade, Mr Baldwin, showed in his speech against the amendment that he realised its unanswerable force, he felt constrained to oppose it in the name of the Government. Mr Baldwin is the victim of "political exigencies." This Bill has been thrown as a sop to the rebellious Protectionist majority in the Government; it has been deserted by the author of its being (gone to the Exchequer), and Mr Baldwin is compelled to play the part of a conspicuously reluctant foster-parent. His argument against the amendment was conclusive in its favour. He said that if a Committee took into consideration the effect of a tariff in one trade upon employment in other trades, the inquiry in each case would be protracted into months and no decision reached. It

would be far better that no decision should be reached than that the *ex-parte* appeal of one trade for protection should lead directly to loss of trade and unemployment in other and more important trades. The case for the amendment was: "Hear the other side." The case for the unamended Bill was the case of the judge who refused to hear more than one side, lest the mind of the court should be confused. In order that the inquiring minds of the Board of Trade Committee may not be confused, they will not, if the Protectionists have their way, be allowed to hear more than the case for protection.

But Mr Baldwin, though he opposed the amendment to which we have referred, and secured its rejection, clearly sees that Clause 2 of the second part of the Bill cannot be left in its present state. He promised that before the Bill leaves the Commons he would try to find some means by which a Board of Trade Committee "might be enabled to take cognisance of some facts other than those directly concerned with the one industry" which was applying for protection. We trust that he will be patient in trying, that if at first he does not succeed, he will try, try again. The instinct of self-preservation may stimulate his flagging imagination. For, as President of the Board of Trade, he will have a "rotten time" if Clause 2 be not substantially amended. Every report by a Committee in favour of a tariff on some industry will be received with howls of protest by all those other industries which will be adversely affected. Though the Committee could not hear them, the President of the Board of Trade will not be able to refuse audiences. He will spend no small part of his working day in receiving deputations and in retrying, with the assistance of his officers, the *pros* and *cons* of a case concerning which the Committee has heard no more than the *pros*. The Board of Trade will never dare to make an Order which it cannot defend from every point of view when that Order is submitted for confirmation by the House of Commons. Even in a House with a Protectionist majority, sheer protection, for its own sake, regardless of consequences, cannot find many thick-and-thin supporters.

PILFERAGE.

ONE of the greatest difficulties in the prevention of pilferage is the number of hands and people interested in every sea voyage. First there is the consignor and his packer, whose duty it is to see that the merchandise starts the voyage in a fit condition to travel, and resist the attentions of wayside thieves; second, the carter who takes the goods from warehouse to wharf or dock; third, the lighterman; fourth, the dock authority; fifth, the stevedore; sixth, the police; seventh, the shipowner; and lastly, the thieves and the underwriters—the former pocketing the proceeds of the pilferage, and the latter being expected to pay for the thieves' fun.

It is largely because there are so many interests concerned that pilferage continues, every party being inclined to say that the fault lies elsewhere than with him, the shipowners saying that most thefts take place on land, the carters declaring that they are committed in warehouse or at sea, the dock authorities putting the blame on anybody but themselves, and all agreeing that underwriters ought to pay the claims. If only these conflicting interests could be harmonised or so far brought into touch with each other as to make common action possible we should have gone a long way towards stopping the evil. For this reason we welcome every open statement of opinion from shipowner, carrier, lighterman, or dock authority, and are especially glad to note the practical suggestions made in the second interim report of the Chamber of Shipping Committee, published during the past week. The points on which the Committee touches may be summarised as follows:—

- (1) Greater care in the issue of bills of lading, and discouragement of bills "received for shipment."
- (2) Better definition of lighterman's liability and amendment of the London Lighterage clause, this amendment depending on a Bill now before Parliament.
- (3) Improvement of the police service, and extension of the London police scheme to the whole of the River.

Adoption in other countries of similar schemes, accompanied if necessary by a levy on steamers using the docks.

(4) Enlistment of special help at certain foreign ports, and especially co-operation of the Seamen's Union.

(5) Assistance in foreign ports of officials of the Department of Overseas Trade, who can render valuable help.

(6) Regulation of the packing of goods, or rejection by the shipowner of goods which appear to be insufficiently packed.

(7) Improvement in ships' fittings to make the task of thieves on board ship more difficult.

(8) Fuller instructions to masters and men for the safe handling of cargo.

(9) A more complete tally of goods, and better relations between shipowners and dock authorities for examination of cargo at the time of discharge.

There is little doubt that the suggestions made by the Committee follow the right lines, and if they can be successfully carried out a great reduction of the evil should be achieved. The fundamental principle is to bring about better co-operation of all the parties, those who carry the goods, those who handle them, and those who are responsible for law and order in the docks. In other words, the whole organisation of transport has to be tightened up, and a much closer control established at every stage of the voyage. The old organisation which was good enough for pre-war conditions, when dishonesty, flagrant enough to commit downright theft, was comparatively rare, is not strong enough for the present day, when most men seem ready to yield to the first temptation that offers itself. Until the pre-war standard of conduct is restored everybody must be prepared to spend more money on police, on clerks to tally goods, on more expensive methods of packing, and on better supervision, both in warehouse and on board.

Apart from their advice to shipowners to take greater care in issuing documents and in tallying goods, two points stand out in the Committee's report—the extension of the London police scheme and the possibility of forcing shippers to pack their goods more effectively. In the London docks there has undoubtedly during recent months been an improvement due to better police methods, and if in other ports and other countries a corresponding improvement could be made merchants all over the world would be greatly benefited. On the matter of packing shipowners are in something of a difficulty. An attempt to standardise the packing and force shippers to reach a given standard of efficiency is not a plan that inspires confidence. On the other hand, the present method of scribbling across bills of lading some such words as "packages frail" is equally unsatisfactory. No one supposes that the person who writes the words on the bill has made a thorough examination of all the packages he condemns, and experience suggests that certain lines make a practice of damning all the packages of certain shippers against whom they have for some reason or other a black mark. There are, we believe, some firms in London whose method of packing is as good as their neighbours who never get a bill that is not "clausured," and are consequently having perpetual trouble with their insurers when claims come along for settlement. If it were possible to give up the habit of clausuring bills and instead to reject the frail cases and make shippers repack the goods, the change might have excellent effects in making merchants really careful in selecting their cases for shipment.

Two points not dealt with in this second interim report must not be lost sight of, first delay, and second underwriters' liability. The thief's best friend is the man who delays goods at the docks, either because he cannot ship them or because he does not want the delivery. Leave goods in the dock warehouse in Constantinople for three or six months, and the chance of getting them intact when you do apply for them is very small. Quick loading, quick discharge, quick delivery are essential to satisfactory international trade. The question of insurance seems for the moment to be settled. Underwriters are now accepting only 75 per cent. of the theft risk, based on the actual shipping value. That underwriters' action in forcing part of the risk on to the merchants' shoulders has had some effect is obvious, but for all that the present arrangement is far from perfect, and as the scandal of pilferage decreases we may hope that it will again be

possible for merchants to take out a full policy of insurance. For desperate times desperate remedies are required, but let us hope that these need not be kept in force for ever.

OUR INDEX NUMBER.

THE very small decline in our Index Number of wholesale prices of commodities recorded for May has been followed by a considerably larger drop during June, the total falling from 4910 to 4810, a decline of 100 points. This results from a sharp reduction in one or two quotations rather than from a general decline. The present figure of 4810 compares with 7847 a year ago, with 8352 at the end of March, 1920, the highest point reached, and 2565 at the outbreak of war, and is the lowest figure recorded since November, 1916. Our usual table below gives the monthly fluctuations of the five groups:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0
Jan. 1, 1914....	563	355	642	491	572	2623	119.2

" May "....	1195	691	996	963	1065	4910	223.2
" June "....	1174	665	973	973	1023	4810	218.6

The minerals group, it will be seen, is alone in showing a slight rise, this being due to a rise in pig-iron. Steel rails and iron bars were unchanged, while tin and copper were slightly lower. In the first group of foodstuffs beef and mutton were lower, and barley fell a little, but otherwise there were no movements worth recording. In the group of subsidiary food products the only alteration of note was a sharp drop in sugar, tea and coffee being a shade firmer.

In the textiles group Australian wool and silk have moved up a little, but hemp and jute are lower, and all cotton quotations show a fall. Messrs Robert Barbour and Brother's monthly report shows that prospects of revival in trade, now that the coal and cotton disputes are settled, have brightened. They write:—

The outlook at the beginning of the month was about as bad as it could be. No coal, no mills running, no business offering, was in general terms the daily menu. Whilst negotiations in regard to the two great industrial disputes dragged on without in either case the least apparent prospect of a settlement, business of any weight was impossible, and no developments could be expected so long as the question of delivery remained entirely

vague and without guarantee. Later on, however, an improved undercurrent of inquiry began to make itself felt, and in one way or another, despite prevailing hindrances, the position showed distinct signs of improvement. Mail and telegraphic reports from China indicated a healthier state of things in that market, stocks were being gradually reduced, and fresh purchases of grey and white shirtings finding their way into the older books. Within the last two weeks Calcutta has shown renewed interest in dhooties, mulls, jacconets, and shirtings, whilst other Indian markets have put out feelers not altogether without promise.

In the miscellaneous section the only change of any size is a drop of over 20 per cent. in petroleum.

We show below how prices at the end of June compare with those ruling at the time of the Armistice, the index numbers for the end of November, 1918, being taken as 100:—

	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Total.
End Nov., 1918	100	100	100	100	100	100
" Mar. 1919	100	100	81	94	93	92
" Sept., 1919	108	104	107	116	97	106
" Dec., 1919	112	113	132	126	104	118
" Mar., 1920	117	116	161	138	123	134
" Aug., 1920	111	118	136	144	112	124
" Sept., 1920	117	119	128	145	110	123
" Oct., 1920	121	115	104	145	104	116
" Nov. 1920	115	111	89	139	96	106
" Dec. 1920	104	103	69	134	92	95
" Jan., 1921	100	102	64	125	87	90

" May, 1921	93	89	54	107	77	79
" June, 1921	91	85	53	108	74	77

Minerals alone remain above the Armistice level, while textiles are nearly 50 per cent. lower than at the termination of hostilities, after having been over 60 per cent. above that level at the end of March, 1920. Taking the end of July, 1914, figure as 100, the present totals work out as follows:—Cereals and meat, 203; other foods, 189; textiles, 158; minerals, 210; miscellaneous, 185; total, 188.

GOVERNMENT TRADING.

A BLUE-BOOK has recently been issued, which is likely to be a work of frequent reference in future discussions upon the subject of excursions by Governments into the realm of commerce. This official publication (Cmd. 1368, price 3s 6d net) contains the trading accounts and balance-sheets relating to the services undertaken by the Government during the war in connection with war materials and food supplies, with comments thereon by the Comptroller and Auditor-General. The volume is not entirely comprehensive, in so far as it excludes the accounts of the Ordnance Factories, the Army Clothing Factories, the Ministry of Munitions National Factories, and other Government establishments, which are published separately. But, on the other hand, it includes the accounts of the operations of the Ministry of Food, of the Ministry of Munitions as regards wool and other raw materials, of the Sugar Commission, the Wheat Commission, of the Ministry of Agriculture, of the War Risks Insurance scheme, and other Government war activities. The accounts are in some cases complete, in others provisional, while in some cases the activities concerned are still being carried on. The financial results of the various operations are diverse. On its dealings in wool and other raw materials the Ministry of Munitions shows a profit of over £71 millions. Of this sum apparently about £57 millions is due to colonial wool, and this amount is subject to profit-sharing arrangements with the Dominion Governments. On the wool accounts the Auditor-General writes as follows:—"The purchase of the colonial wool clips continued until June 30, 1920, under the agreement with the Dominion Governments, and large stocks remain unsold. The department, however, will render only one further account, covering the period April 1st to December 31, 1920, arrangements having been completed by which the remaining stocks will be liquidated as from January 1, 1921, by an independent company known as

the British Australian Wool Realisation Association. This company has acquired from the Commonwealth Government the entire interest (one-half) of that Government in the Australian profit-sharing wools remaining in the possession of the Ministry. It was estimated that, when the accounts for this section up to December 31, 1920, were completed, the total assets would be found to consist of a stock of wool, fully paid for, exceeding 1,800,000 bales, and a cash balance exceeding £12,000,000. The nominal share capital of the company based on these estimates has been fixed at £25,000,000."

Other profits include £2 millions odd on imported timber administered by the Board of Trade, and £988,090 on the operations of the Ministry of Food, while from the operations of the Central Control Board (Liquor Traffic) £435,336 accrued to the Exchequer up to March 31, 1920. On the War Risks Insurance scheme there was at March 31, 1920, a surplus of receipts over payments of £22,267,595, but "a portion of this amount will be required to meet liabilities not definitely ascertained." Profits on trading with interned steamers, &c., were £1,338,008, and profits on freight on Government-owned prize, detained, and other vessels, £1,151,922. Entries on the losses side are numerous. They include deficits of £4,270,868 on home timber, £2,003,655 on sugar, £1,172,603 on flax production, £5,396,260 on fertilisers, £12,962,932 on fish, oil, and vegetables, £4,462,596 on motor tractor and horse ploughing, while far the most formidable loss in the list is that of £104,810,517 on cereals administered by the Wheat Commission. This figure, it is stated, represents "approximately the loss involved in selling the loaf below its cost, taking into account the profit realised on the sale of cereals used for purposes other than the loaf." The Government has not, of course, been immune from the unfortunate experience of private concerns in suffering loss through falls in the values of stocks. The accounts of the Sugar Commission provide a striking illustration of this point. On its operations from August, 1914, to March 31, 1919, this Commission showed a net profit of £6,057,799, but in the following twelve months a loss of no less than £8,061,454 was sustained. It would be very easy, in the case of many of the accounts, to frame an indictment of the authorities responsible, but it must always be remembered that most of the operations which led to loss were carried on not under ordinary commercial conditions, but under the stress and haste of pressing national emergency. And sometimes, as in the case of the Wheat Commission, the losses were incurred voluntarily and as a matter of high policy, which, whether right or wrong, was altogether beyond the control of those who had to conduct the business in question. The Auditor-General, the public usefulness of whose investigations is apparent all through the volume, is able to conclude that:—"Subject to the observations in the subsequent paragraphs of my report, the results of my examination were generally satisfactory."

However, some of these "observations in subsequent paragraphs" disclose shortcomings which make unpleasant reading for the taxpayer. A few examples may be taken for illustration. Arrangements were made, without Treasury sanction, for the erection at Hull of wool storage accommodation at a "possible expenditure of £250,000." The contract apparently was placed "without competitive tenders and without consultation with other manufacturers as to other types or designs of sheds." In this case the Treasury were dissatisfied and refused to share responsibility. In connection with the Home Timber Supplies Department one reads of "an excess charge of £28,451," a refund of which from the Canadian authorities is being sought, while apparently unnecessary cost was incurred by paying sums to "an Allied Government" at a less favourable rate of exchange than that agreed upon. It is also rather startling to find that losses on flax production were about 50 per cent. of expenditure, and that in one year upwards of £200,000 was paid to each of two firms as commission on sales of bacon and lard. The Auditor-General suggested a decreasing rate of commission on larger turnovers, but the Ministry of Food, rightly or wrongly, rejected the suggestion. Then there is the well-known case of British

Farina Mills, Limited, in connection with which public funds have been charged with over £500,000, and assets to be realised are estimated not to exceed £70,000. The thoroughness with which the facts about such dealings as these are set out justifies the description of the Auditor-General as one of the most useful of our public servants.

Business Notes.

The Indian Monsoon.—The monsoon in India broke at Bombay about a month ago, and during the first couple of weeks the rains were very heavy. According to a telegram received this week from the Viceroy in India, there has been a break in the rains, chiefly in the North-Western area. A revival of buying for India in Lancashire cotton goods is now showing itself, and Manchester merchants are rather concerned as to the effect of the less satisfactory monsoon reports upon trading conditions. It may be said, however, writes our Manchester correspondent, that private cables received this week in Manchester are rather better than the public telegrams. Buying of cotton goods has yet not been checked, and although the grain crops in certain parts of India may not do very well, it is believed that the coming season will be generally satisfactory.

Bank Dividends.—Many of the midsummer interim dividends of the leading joint-stock banks have been announced this week, and few changes are shown as compared with last year. The dividends for a number of years are shown below:—

	Per Cent. per Annum.							
	1914	1915	1916	1917	1918	1919	1920	1921
Bank of Liverpool and Martin's	*16	*16	*16	*16	*16	16	16	..

Union Discount.....	13	13	13	13	13	14	14	14

* Final dividend. † On old capital.

The only change shown by the banks is an increase by the Lancashire and Yorkshire, but the alteration is made "with a view to equalisation of the two half-yearly distributions." Alexanders Discount Company pays an additional 1 per cent. It had been generally anticipated that few changes would be made in dividends, for any decline in profits due to the trade conditions of the half-year has probably been counterbalanced by the absence of investment depreciation.

The Railway Deficit.—A statement issued by the Ministry of Transport shows the claims put forward by the railway companies under the agreements for the month of May. Total gross receipts were £13,255,000, and total expendi-

ture £18,102,000. After deducting the debit balance shown on the working of "other businesses" the deficit was £5,242,000. The Government guarantee is £3,852,000, making the net Government liability as claimed £9,094,000. The Government liability for April was £9,544,000, making a total of £18,638,000 for the first two months of the financial year. Passenger receipts were not much lower in May than in April, but goods train receipts fell from £6,978,000 to £5,738,000. Receipts from coal, coke, &c., were only £285,500. Goods train traffic in May, 1920, was returned as £11,114,000.

American Cotton Crop.—The Agricultural Bureau of the United States Government has published its second report on the cotton crop for the season 1921-22. The condition on June 25th has been returned at 69.2 per cent., against 66.0 per cent. a month previously, and 70.7 per cent. in June, 1920. The bureau has also issued an estimate of the acreage, this being given as 26,519,000 acres, as compared with 35,654,000 acres a year ago. The reduction in the acreage, therefore, is over 28 per cent. The reports are about as expected, and when published the figures did not cause any particular change in raw cotton values. On the basis of the statistics published, the crop should be only about 8,500,000 bales, against 13,350,000 bales for the season which is now ending. The condition report is the worst for 20 years, and all sections of the belt appear to have been adversely affected by the wet spring. Numerous advices are being received of the plants being seriously injured by the boll weevil pest.

Oil in Troubled Waters.—The innumerable shareholders in the Shell Transport and Trading Company have derived consolation from the study of the chairman's speech at the meeting last Monday, while they have gained illumination from that of Sir Henri Deterding. The effect in the Stock Exchange was to bring about improvement in the prices of Shells, Mexican Eagles, and Royal Dutch, though Burmahs, the fourth member of the giant quartette, have been little influenced by the improvement in the others. The dividend on Shells is now paid, and the price will be up on Thursday. As the amount is free of tax, a clear 5s will be deducted from the quotation, giving Shells what the Stock Exchange calls a "cheap" look. The chairman declined to be drawn on the point as to when, and in what shape, a new issue of capital is likely to be made, so the anticipations of Shell shareholders will continue to be pleasantly excited by the prospect of their being allotted new ordinary shares at some bonus price. The market rumour in advance of the meeting was to the effect that a new issue of shares might take the form of preference capital, and the recent example of the Burmah Oil Co., with its offer of 3,000,000 8 per cent. preference shares at £1, was indicated as furnishing an example that the Shell Company might find it convenient to follow. There is sufficient probability in this theory to render it advisable for proprietors of Shell shares to bear it in mind; otherwise, when a new issue is made, there will certainly be disappointment if it is not in ordinary shares. The outlook for the oil industry can hardly fail to be influenced by conditions and considerations which are affecting other trades. The Shell is paying 35 per cent. dividend, free of tax, equal to 50 per cent. with tax at 6s in the £. The Mexican Eagle dividend at present is 60 per cent. On Royal Dutch the dividend has recently been reduced from 45 per cent. to 40 per cent., and the Burmah dividend, instead of being 50 per cent., as it was a year ago, is now 30 per cent., tax free. It is necessary to add, of course, the reminder that new issues of capital have been made that call for additional profits if previous dividends are to be maintained; but so great has been the prosperity of the oil industry that the shareholders in the various companies have been led, almost unconsciously, to look for a maintenance of previous distributions in spite of increased capital. The Burmah dividend reduction was candidly foretold by the chairman seven months ago, and there was great curiosity to learn from the Shell meeting whether any "cut" in dividend

might be expected from this quarter also. The chairman referred to the matter in very guarded terms, and it may be well if some of those who went to the meeting were impressed with the possibility of the dividend coming down. The American oil interests are apparently spoiling for a fight with any companies which have threatened the American supremacy in control of the oil trade. The Government of Mexico is about to impose fresh taxation upon oil exported to other countries, and to this step some of the American groups have retorted by the threat to withdraw their tankers from the American service, and to cease taking supplies from Mexico altogether. The shrewd presumption is that stocks of oil in America are sufficient to meet decreased demand, in these days of commercial depression, without it being necessary for the companies to take active steps for replenishment of those stocks. Conceivably, the Americans may be able to do without purchase of Mexican oil for some time to come. As, however, a certain amount of the American trade in oil is concerned with re-export, it is contended that buyers, instead of applying to Americans, will go direct to the Mexican producers, and take their supplies without the intervention of the American parties. It may be doubted whether the Americans would have adopted what seems to be a high hand if they had not felt pretty confident of success in retaining their present trade, and, at the same time, of cutting off customers from Mexico. Those who are interested in the industry must face the prospect of a tough struggle. The present position suggests that war between the American oil interests and those of outsiders is at least a possibility that must be faced. The extraordinary popularity achieved by oil shares during the boom of a couple of years ago has resulted in the whole country being deeply concerned in the fortunes of oil, and so great has been the optimism built upon the outlook, that any curb put upon the imagination in respect to oil fuel is scouted as pure pessimism. But even the oil industry, in spite of the advertisement it has achieved by reason of the coal strike, is subject to conditions that are governed by present depression in trade. The Foreign Office has issued a further statement on the subject of the friction that has arisen in connection with the oil interests of this country and those of the United States. Lord Curzon pays handsome tribute to the power of the Americans in the matter of oil markets, and undertakes a painstaking defence against the suggestion that the British Government is paying undue heed to the protection of the interests of British subjects.

Conditions in South Africa.—According to a cable received by the National Bank of South Africa, from its Cape Town office, dated July 1st, the Customs returns for the quarter ended March 31st reveal a decrease in South Africa's exports of £14,750,000, compared with the first quarter of the year 1920. Total imports were the same as 1920 quarter at £17,500,000, of which £9,500,000 from the United Kingdom and £6,500,000 from foreign countries. As regards the proposed reduction of Rand miners' wages, deadlock, it is reported, prevails momentarily, but some confidence apparently exists in commercial circles regarding ultimate solution of the problem by miners' representatives taking a broader view of the present and future conditions of the gold industry.

Japanese Trade and Finance.—According to recent advices from Tokyo the increasing demand for money by raw silk manufacturers kept the tone of the money market firm during the second half of June—this demand has come rather later than usual this year—while the approach of the half-yearly settlement tended in the same direction. Discount rates, however, were stationary. The market for cotton yarns was firmer, although the American cotton market was weaker. The prices of rice and other cereals tended towards weakness. Government rice purchases up to the end of June were estimated at 364,000 koku. Dullness characterised the stock markets, and changes in security prices were unimportant. According to the first half-yearly reports, spinning, weaving, electricity, and oil manufacturing concerns show better results, but ship-

building, shipping, iron manufacturing, and chemical industries produced less favourable figures. Profits mostly showed a decrease, except in the case of big firms. Many new enterprises paid no dividend, and there has been a certain amount of liquidation and capital reorganisation. At the end of June the Bank note issue stood at 1,218,000,000 yen, Government deposits at 312,000,000, and advances and discounted bills of the Bank of Japan at 147,000,000 yen.

The General Electric Company.—The recent issue of £3,500,000 7 per cent. mortgage debenture stock by the General Electric Company, Limited, lends an added interest to the report and accounts just issued for the year ended March 31, 1921. As profits are on an increased capital a comparison of figures with the previous year would for this reason be of little value. Including £175,668 brought forward, total profits amount to £971,817. After deducting £8,000 for debenture interest, allocating £157,915 for depreciation, and contributing £17,266 to a pension fund, the preference issues receive their dividends, and £211,198 goes in distributing 10 per cent., free of interest, among ordinary shareholders. A sum of £348,094 is carried forward, subject to excess profits duty (if any) and corporation profits tax. The report points out that "Owing to the present state of industry the directors consider the usual allocation to reserve out of profits inadvisable, and recommend that the amount which they would have allocated under normal conditions should remain in the 'carry forward' to next account, which thus stands at the total of £348,000. They feel all the more justified in making this recommendation as the reserve account has benefited during the year by the sum of £257,016, through the transfer of net premiums received on the share issue of March, 1920, thus making the total of this account over £700,000." For the previous year profits were £771,646, and a similar dividend to that mentioned above was paid on ordinary capital. The balance-sheet will be found analysed in the usual column.

Distillers' Company.—The report of the Distillers' Company for the year ended May 15th shows a decline in gross profits from £669,464 to £597,582. Expenses were also higher, and net profits after payment of debenture interest are about £86,000 lower at £415,393. Recent years' financial results are compared below:—

YEAR ENDED MAY 15th.

	1914.	1917.	1918.	1919.	1920.	1921.
Gross profits ..	£ 310,993	£ 397,141	£ 394,199	£ 502,379	£ 669,464	£ 597,580
Brought forward ..	19,223	60,600	61,872	65,358	70,435	100,526
Income-tax, &c.	330,216	457,741	456,071	567,737	739,899	698,108
Debit interest ..	28,733	82,020	96,217	140,167	140,862	155,099
Reserve & dep.	36,409	29,025	28,813	27,090	27,090	27,090
Balance	100,550	144,061	60,000	125,000	255,000	105,000
Balance	164,524	202,635	271,041	275,480	316,947	410,919
Preference div.	13,499	10,762	10,684	10,045	11,432	11,432
Ordinary div..	130,000	130,000	195,300	195,000	204,989	290,493
(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
Carried forward ..	21,025	61,873	65,357	70,435	100,526	108,994

Allocations to reserves at £105,000 are £150,000 less than the high figure to which they were raised a year ago. This decrease enables the 10 per cent. dividend on the ordinary shares (free of tax) to be maintained on an increased capital, while the carry forward is slightly raised. Last October the company offered to shareholders at par one new ordinary share for every five preference shares, and two new ordinary shares for every five ordinary shares held. The balance-sheet, an analysis of which will be found in the usual column, shows that the offer has resulted in an increase in the ordinary capital from £2,049,890 to £2,916,670.

Wm. Cory and Son.—The high level of profits reached in the year ended March 31, 1920, by Wm. Cory and Son, Limited, has been exceeded in the past financial year, the report issued this week showing a net profit of

£770,800, which compares with £755,500 for 1919-20. Profits and appropriation for a number of years past are given below:—

	1914-15.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Profit	£ 215,328	£ 447,689	£ 492,734	£ 468,616	£ 755,523	£ 770,843
Brought forward ..	44,511	88,970	130,897	135,084	177,153	278,308
Deb. interest ..	259,839	536,659	623,631	603,700	932,675	1,049,151
Written off	37,000	37,000	37,000	37,000	37,000	37,000
Reserve, &c. ...	6,000	41,199	110,000	175,000	25,000	..
Ord. dividend ..	42,500	42,500	42,500	42,500	42,500	42,500
(10 %)	(15 %)	(20 %)	(20 %)	(20 %)	(20 %)	(20 %)
Employees' shs	1,108	2,562	4,047	4,047	4,851	7,819
Carried forward ..	58,231	130,897	135,084	177,153	278,308	391,812

No allocation is made to reserve, but it will be seen that a substantial addition is made to the balance forward. The ordinary dividend is maintained at 20 per cent., but a distribution of 25 per cent. is made on the employees' shares as against 20 per cent. a year ago. The balance-sheet shows an addition of £281,300 to creditors, while investments in Government securities are up by £471,600. Reserves, including premiums of £440,000 on ordinary shares, total £1,190,000, while staff funds amount to £142,400.

Liebig's Extract.—The report and accounts of Liebig's Extract of Meat Co., Limited, continue to record the activity of this company. Although profits are down, the directors are able, by allocating a smaller sum to reserve, to pay the now usual 25 per cent. dividend free of tax. The company's record since 1914-15 is as follows:—

	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Sales	£ 601,251	£ 683,442	£ 900,979	£ 2,056,671	£ 1,073,632	£ 1,114,291	£ 1,049,088
Expenses	375,381	372,912	570,240	1,737,546	769,287	791,284	763,703
Net profit	225,870	310,530	330,739	319,125	304,345	323,007	285,385
Brought forward ..	50,859	70,142	150,619	247,647	243,609	252,076	247,878
Directors	276,729	380,672	481,358	566,772	547,954	575,083	533,263
Ord. dividend ..	19,587	28,053	31,711	31,163	33,878	35,205	18,221
Ord. dividend ..	50,000	50,000	50,000	50,000	50,000	50,000	50,000
(22½ %)	(25 %)	(25 %)	(25 %)	(25 %)	(25 %)	(25 %)	(25 %)
Reserve, &c.	2,000	2,000	92,000	92,000	62,000	92,000	59,228
Carried forward ..	70,142	150,619	247,647	243,609	252,076	247,878	255,814

The directors take only £18,221, as compared with £35,205 last year. The company is engaged in constructing a refrigeration plant at Fray Bentos, and in connection with this and other developments fresh capital is required. A circular has, therefore, been issued to shareholders. An increase in the company's capital by the creation of 180,000 new ordinary shares of £5 each is recommended, and it is proposed to issue at an early date to the ordinary shareholders at par 120,000 of the new shares in the proportion of one share for every ordinary share at present held. The remaining 60,000 shares will be held in reserve. As the £5 ordinary shares are at present quoted at round about 18½, shareholders are offered a substantial bonus. In another column we analyse the balance-sheet.

Oroville Dredging Group.—Our mining correspondent writes:—The reports for 1920 of the producing subsidiaries of the Oroville Dredging Company contain, amongst other interesting items of information, a calculation of the remaining period of "life." For the benefit of readers not conversant with the position, it may be recalled that the Oroville originally acquired the share capital of an American company owning gold-dredging rights. As these areas came near exhaustion, fresh fields were sought, and found in the Republic of Colombia. A subsidiary company—the Pato Mines—was formed to operate the dredging concession, which comprised 40,000 acres. Then an adjoining area of 400 acres was secured, and the Nechi Mines formed to operate it. As the existence of the American company had ceased to serve any purpose, it was placed in liquidation. In 1919 a further property in Colombia—this time a gold and silver mine—was taken up, and transferred to the Colombian Corporation. The main assets of the Oroville Dredging

Company consequently comprise shares in these several undertakings. In like manner, the company is dependent for its income chiefly upon the dividends of the Pato and Nechi concerns; the third is only in the preliminary stages of development. During the year ended September 30th last the Pato dredged 1,437,600 cubic yards for a yield averaging 36.6 cents, an improvement in both respects upon the 1918-19 results, while the total operating costs, at 13.71 cents, were somewhat less than before. Thus the company's profit and loss account shows a surplus of £98,800, with no allowance for taxation, as against £27,900, after deduction of £33,700 income-tax. The dividends of the past year total 21s per share, in place of 3s previously, the profits having been over-distributed in the one case and under-distributed in the other. With regard to the mining position, the general manager reports that the prospected area so far exhausted has yielded \$502,000 in excess of the estimates, and that the remaining blocks represent about 12 years of work for the dredge. In addition, there is a large area not completely prospected. Having worked 83.7 per cent. of the possible running time, as against barely 50 per cent. in 1918-19, the Nechi naturally treated an increased quantity of ground. The yield, however, fell off somewhat, and while the total operating cost average apparently shows a marked reduction, it is above that of 1917-18; the ratio for 1918-19 was swollen by various adventitious circumstances. The net profit of £140,000 more than doubled the previous year's figure, and a careful examination of the available records elicits that the dividends have been increased in corresponding proportion, amounting to 100 per cent. on the ordinary shares, as against 45 per cent. in respect of 1918-19. Half the issued capital is in 25 per cent. preference shares. From the balance-sheet it might be inferred that these alone received any distribution for the past year; nor is the matter made clear in the report of the directors. A feature is the strength of the financial position. This is a point of importance, seeing that the remaining ground is likely to be exhausted in 18 months from the date of the report, or nine months from the present time. After having been practically stationary for two years, the net profit of the Oroville Dredging Company, reflecting the increased distributions of its subsidiaries, expanded to £114,100. The payment of 3s per share in place of 2s for 1918-19 left the enhanced balance of £42,800 to go forward, subject to excess profits duty (if any) and corporation tax. The yield on the basis of the past year's dividends is 12 per cent.—not excessive, having regard to all the circumstances. Shareholdings figure in the balance-sheet at £715,000, this total covering 126,000 ordinary shares in the Pato, 89,000 in the Nechi, and 255,000 in the Colombian Corporation. With reference to the last-named undertaking, upon which the future of the Oroville so largely depends, it is stated that developments continued to show satisfactory results, and that the new mill is expected to be installed by the end of 1922.

German Debts.—The Board of Trade announce that by an agreement made with the German Clearing Office, now awaiting the approval of the Reichstag, the time for lodging claims with the British and German Clearing Offices by their respective nationals under Article 296, Section III., Part X. of the Treaty of Versailles, has been extended to September 30, 1921. No further claims under the above Article will be accepted after that date by the Clearing Offices concerned.

Czechoslovak Foreign Trade.—The Czechoslovakia Bureau of Information states that during the month of April the value of goods exported from Czechoslovakia to America was 740,966,000 dollars, as compared with 331,440,000 dollars for the corresponding period of last year. During the same month the value of imports from the United States to Czechoslovakia was 26,744 dollars, as compared with 93,303 dollars last year. The Czechoslovak department for foreign trade has decided to reduce the export tax on all kinds of paper, paper goods, writing and drawing requisites from $\frac{1}{2}$ per cent. to $\frac{1}{4}$ per cent.

of the invoice price. The export tax on linen products and hempen goods will also be reduced to $\frac{1}{4}$ per cent. These reductions took effect from June 20th.

Serb, Croat, Clovene Coal Concessions.—H.M. Consul at Zagreb has forwarded to the Department of Overseas Trade particulars of certain concessions for coal fields in the Zagreb district, in respect of which the concessionaire hopes to attract British capital. Details of the concessions in French and German may be consulted at the Inquiry Room, Department of Overseas Trade, 35 Old Queen street, Westminster, S.W. 1.

The annual dinner of the London Chamber of Commerce, at which H.R.H. the Prince of Wales, K.G., has accepted an invitation to be the principal guest, and which was postponed on account of the industrial situation, will take place on the 26th instant at the Connaught Rooms.

The Right Hon. W. F. Massey, Prime Minister of New Zealand, will be the chief guest at a luncheon to be given in his honour by the British Empire Producers' Organisation, at the Hotel Victoria on July 14th. Application for tickets should be made to the Secretary, 5 Old Queen street, S.W. 1.

Oversea Correspondence.

THE UNITED STATES.—MARKED IMPROVEMENT IN THE GENERAL BANKING POSITION—FURTHER RELAXATION IN MONEY—FOREIGN TRADE WITH PRINCIPAL COUNTRIES—INDUSTRY QUIET, EXCEPT APPAREL TRADES.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 24.

FURTHER marked improvement has taken place during the past week in the general banking position. For the entire Federal Reserve system the ratio of reserve to note and deposit liabilities now stands at 60 $\frac{3}{4}$ per cent.—the highest of the year. The gain of more than 3 per cent. for the week resulted partly from an increase in cash reserves, principally gold, but mostly from reduced credits for member banks, a decrease in deposits, and further contraction in the amount of notes outstanding. The week's reduction of \$35,000,000 in note circulation makes the present total less by \$765,600,000 than the maximum reached in December last. The New York Federal Reserve Bank's ratio has advanced to nearly 69 per cent., the highest recorded for any week since 1917, notwithstanding heavy loans to interior banks. Most of the central reserve banks throughout the country have shared in the recent improvement, but the New York institution has the highest reserve ratio, with the exception of the Federal Reserve Bank at Boston. Eastern banks are in a much stronger position, so far as reserve ratios are concerned, than are those at central reserve points in other parts of the country, which seems to indicate that liquidation and contraction has been more pronounced in the East than elsewhere.

Partly reflecting the betterment in the banking situation money rates have shown further relaxation, more so in call money rates than in rates for fixed-date loans. Call funds are now obtainable on the New York Stock Exchange at 5 per cent., and in the outside money market at 4 per cent., and offerings greatly exceed the demand. Owing to the prolonged declines in the stock market requirements for speculative purposes are comparatively light. The daily turnover in the call money market for some time past has probably not exceeded \$10,000,000 or \$15,000,000, as against about \$40,000,000 to \$45,000,000 in a normal bull movement in the securities market. In this connection it is noteworthy that Wall street brokers' loans, according to reliable estimates,

now aggregate only \$600,000,000 approximately, the lowest since pre-war years, and comparing with the maximum total of such borrowings reached in July, 1919, namely, \$1,750,000,000. Time money is slightly easier, being offered in limited amounts at 6 $\frac{1}{2}$ to 6 $\frac{3}{4}$ per cent. for short periods, but borrowers are not disposed as a rule to bid higher than 6 per cent., and demand even at that figure is very light. Business paper is being more generally discounted at 6 $\frac{1}{2}$ and 6 $\frac{3}{4}$ per cent. for choice and prime names, respectively, than heretofore, although the rate for names less well known is still 7 per cent. The Federal Reserve Bank at Dallas, Texas, has just lowered its rediscount rate for commercial paper from 6 $\frac{1}{2}$ to 6 per cent., following similar action taken recently by the New York Federal Reserve Bank; only two of the 12 central reserve institutions, those at Chicago and Minneapolis, now have a 6 $\frac{1}{2}$ per cent. rediscount rate, but they are expected to reduce to 6 per cent. shortly.

Ordinarily, relaxation in money rates would stimulate a rise in prices of securities, but thus far it has had little, if any, effect upon the stock market. The latter suffered further violent declines this week, due chiefly to aggressive bear raids, the execution of stop-loss orders, and liquidation of speculative accounts in which margins had become exhausted or impaired by the almost continuous decline of recent weeks. The average price of 20 leading industrials used for statistical purposes fell this week to 64.90, the lowest level reached since June 1, 1915, while that of 20 prominent railroad shares touched 65.52, the lowest recorded since July 25, 1898. The market has been steadier, with some recovery from the lowest levels during the past few days, but buying power at the moment is rather feeble. There are indications, however, that the active trading list is heavily oversold. Oils, steels, motors, rubber and sugar stocks, and miscellaneous specialties have sustained the severest losses, together with some of the standard rails, including Canadian Pacific, which dropped to 101, the lowest point witnessed in 20 years.

Detailed figures of our foreign trade by countries during May, made public by the Department of Commerce, disclose the fact that nearly one-quarter of the decrease, in total imports that month, of \$50,000,000, as compared with April, was due to reduced shipments from Cuba. More than 85 per cent. of the decrease in imports from Europe was the result of smaller shipments from the United Kingdom. Although total exports were some \$10,000,000 less than in April, there was a slight increase in our shipments to Europe and Asia. The following tables show, in thousands of dollars, the exports to grand divisions during May, and exports and imports for eleven months ended with May, with comparisons:—

EXPORTS.

Industry generally is less active, and the dullness is likely to become more pronounced with the summer shut-down of many plants for repairs. How extensive the further slowing down may be is problematical, especially since industrial production now ranges from only 25 per cent. to about 75 per cent. of full capacity. Curtailment has been heaviest in iron and steel, petroleum, lumber, and coal industries, and trade is quietest in those lines so far as new buying is concerned. The apparel manufacturing trades—woollens, silks, and cottons—are the most comfortably situated, as they have been for a number of months with respect to production and orders in hand for forward delivery. The leading interest in the woollen goods industry, for instance, is running its plants virtually at full capacity. Trade in broad silks and in silk hosiery is much larger than a year ago and steadily expanding, and a very substantial volume of business has been done on fall lines. Finished cotton goods, though seasonably dull in some lines, are active in others, notably gingham; the demand for spring, 1922, gingham far exceeds available production of manufacturers who have offered lines for that season. The woollen goods industry, in particular, has shown a marked increase in production during the past five months. The Census Bureau's reports, giving returns from 917 manufacturers employing wool machinery, as to the active and idle machinery on June 1st, show the following percentages idle on that date, as compared with preceding months:—

	Feb. 1.	March 1.	April 1.	May 1.	June 1.
Wide looms.....	53.9	43.1	36.1	26.2	20.5
Narrow looms.....	48.7	41.7	34.4	28.7	25.2
Carpet looms.....	49.7	60.5	57.2	53.6	53.0
Cards.....	56.5	46.2	33.0	25.3	21.6
Combs.....	43.8	28.8	18.7	14.2	10.9
Woollen spindles....	58.0	47.2	32.3	23.8	20.6
Worsted spindles....	45.0	33.0	21.8	12.9	10.1

From the foregoing percentages it will be seen that carpet looms are the only exception to the improvement in the entire industry from the depression of last winter.

FRANCE.—THE NEXT BUDGET—PURCHASE OF GERMAN MATERIAL—TARIFF CHANGES—BANQUE INDUSTRIELLE DE CHINE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, July 5.

THE Finance Commission of the Chamber is proceeding steadily with its work in connection with the Budget Bill for 1922, and there is still hope that the Estimates comprised in it may be laid before the Chamber before it rises for the holidays. M. Bokanowski, who is generally regarded as one of the soundest financial critics in the House, was to-day elected Rapporteur-Général of the Budget, in succession to M. Dumont, whose resignation was reported last week. It is significant of the tendency towards drastic economy that now pervades the Chamber that the Commission to-day, after considering the credits asked for in connection with the maintenance of the troops in Syria and Cilicia, decided, in principle, by 12 votes to 10, to reject these credits, except as regards the effectives strictly necessary for the protection of Syria, and to support the immediate return of the surplus troops now in Cilicia. The presence in Paris at this moment of Bekir Samy Bey, the representative of the Kemalist Government, is regarded as foreshadowing the probability of some arrangement being come to, possibly in the form of a resumption of the agreement tentatively reached a few weeks ago between the French Government and Kemal Pasha, that will enable the French army of occupation to be withdrawn from Cilicia.

The conversations that have been going on here between the French and German economic experts have been adjourned, and will not be renewed until July 11th. It is understood that an agreement has been come to, for all practical purposes, between M. Loucheur and Herr Dr Rathenau, which turns on the purchase by France of an enormous amount of industrial and other material from Germany. The total amount in question is reported to be something like 15,000,000,000f. The commodities to be furnished by Germany will include both manufactured goods and raw materials, and will comprise, I understand, not only all classes of things needed in the devastated regions, but also general merchandise of various kinds. It will also probably be found that France will make large purchases of railway material from Germany, including, it is reported, 500 locomotives of the latest types and 25,000 wagons. French industry, for obvious reasons, is not at present in a position to furnish supplies of this kind in anything like the quantities urgently required, and will not be able to do so for some time to come. On the other hand, the low price of the German mark, as compared with the franc, is a factor in the situation that cannot be ignored in the present condition of the national finances.

The Presidential decree fixing the new co-efficients of increase in the French General Customs Tariff was promulgated in the *Journal Officiel* on Monday morning, and reveals substantial increases in the duties on goods entering the country from ex-enemy countries and others that have no commercial conventions with France. The decree completes the modifications that have been going on for many months past in connection with the whole of the French Customs duties. It has a double character—the one aiming at re-establishing as exactly as possible the measure of protection given to domestic industry before the war and until it was enormously reduced by the general rise in commodity prices, and the other having for its object the provisional establishment of new rates, with a view to a further revision, in a few months' time, in the event of price changes continuing unstable. It is hoped, however, that the stabilisation of prices in the near future will render further revision unnecessary.

A comparison between the new co-efficients of increase in duties with the co-efficients of increased commodity prices since 1914 shows that in fixing the new scales of duties the French authorities have not erred on the side of undue severity against the foreign importer. In many cases (perhaps, indeed, in the majority) the percentage of Customs protection set up against countries benefiting from the minimum tariff (such as Great Britain) is appreciably lower than it was before the war. This, indeed, was one of the basic general principles of the modification that has just been completed, namely, to give allied

and friendly countries more favourable treatment, after the war, than they previously enjoyed, as compared with other nations. As a retort to the strong opinions that have been expressed in England and elsewhere in regard to the new Customs rates, it is insisted in many quarters here that the actual figures of the new tariff demonstrate that France is even now much less Protectionist, in fact, than some of the reputed Free-trade countries. In support of this the case of Belgium is cited, and such comparative figures as the following are quoted:—

	Belgian Duties.	New French Duties.
Men's clothing	20	15.5
Women's clothing	15 and 20	9.4 and 16.4
Jewellery and silverware	10	7.3
Furniture	15	13.9
Watches	80.4	3.4
Photographs, films, &c.	15	7.1
Perfumes (alcoholic)	20	16.8
Do (ordinary)	20	4.5
Gloves (skin)	15	5.9
Lace	15	8.6
Silk tissues	20	8.7
Common glass	10	5.6
Motor cars and chassis (heavy)	15	14.9
Other vehicles	15	13.6

The Banque Industrielle de Chine, to which I referred last week, has closed its doors, but whether the undertaking will be formally wound up or whether it will be allowed to come to an arrangement with its creditors and continue trading remains to be seen. The deficit is estimated to amount to something like 250,000,000f (although double that figure has been mentioned), and the unfortunate position of the bank is generally understood to be largely due to unduly heavy commitments in connection with the boom in rice and other commodities. There is a good deal of controversy in Paris as to the reasons which induced the Government to decide finally that it was inadvisable for aid to be extended to the concern, and there is a tendency in some quarters to blame the Finance Minister, M. Doumer, for his action in the matter. It is alleged that the Banque de Paris et Pays Bas offered to come to the rescue by issuing a Chinese loan in this country, if the Government would give its consent to such a course, but that the latter refused to agree to this course. On the other hand, it is alleged that this consent was dependent on the Chinese Government guaranteeing the proposed loan, and that the Pekin authorities refused to give this guarantee. A third version is that the Chinese Government was at first disposed to extend the desired help, but was subsequently persuaded to refuse. The whole question is to form the subject of an important debate in the Chamber.

The blow to French influence in China through the failure has naturally been enormous, but would have been much more serious but for the action of the Chinese Native Bankers' Association, who have taken upon themselves to honour the whole of the notes issued by the Banque Industrielle de Chine that have been put into circulation through its numerous Far-Eastern agencies. These notes, which ranged in nominal value from a dollar upwards, were in the hands of the poorest classes, and are reported to total about \$2,000,000, or some 16,000,000f. The action of the local Chinese bankers has undoubtedly prevented serious public disturbances, that would have been almost certain had the failure been allowed to run its normal course.

An application has been made to the Paris Tribunal of Commerce for the Banque Industrielle de Chine to be allowed to take advantage of the special law passed on July 2, 1919, to meet special cases arising out of the war, and come to an arrangement with its creditors that will enable it to continue business. This law was passed as a kind of prolongation of the moratorium, and stipulates that, until October 24th next year (or three years after the ratification of the peace treaty), any trader who finds himself insolvent "pour cause générale de guerre," may apply to the courts for permission to ask his creditors to allow him to come to an arrangement with them. In the event of such a request being granted, the debtor may continue to carry on business under an administrator specially appointed for the purpose. When the application came before the court this afternoon, it was pointed

out that, in the case of a limited company, the consent of the shareholders in general meeting assembled must be obtained before such an application can be entertained. The application was adjourned until after the general meeting of shareholders, which has been called for July 25th.

A curious point has been raised in connection with the possibility that the shareholders may be called on for the balance of their share capital. Some few months ago the directors invited subscriptions for a large amount of share capital, which was issued at a premium of 155f per 500f share. This premium and 50 per cent. of the nominal share capital was payable immediately, leaving an uncalled 250f per share. In order to test their liability on this point, certain shareholders have laid an information against the directors, alleging that the latter must have known that the bank was insolvent at the time the new capital was taken up, and that consequently they should be allowed to escape further liability.

The dominating feature of the Bourse this week has been the collapse of the Banque Industrielle de Chine, but there is a very definite feeling among financiers that perhaps the wisest policy was to let the bank go. Any attempt at saving it would have resulted in very heavy sacrifices. This view undoubtedly explains why, despite the failure of so important a bank, the Bourse has remained stable. As regards securities owing by the bank, these have long ago been discounted, and it is common knowledge that for months past the bank was in difficulties. French Three per cents. closed this week at 56.17, as against 56.70, but Foreign Government stocks have shown no very great tendency to move. Banks have fluctuated, Banque de Paris rising from 1,235 to 1,280, to finish at 1,260. Union Parisienne varied between 780 and 820, and closed at 810. Crédit Lyonnais was slightly stronger at 1,340, as against 1,330. Transports are on the whole stronger. Nord Sud has dropped from 180 to 165, but Omnibus has risen from 595 to 619, Chargeurs Réunis have risen from 590 to 595, Transatlantique from 250 to 260, and Chargeurs Français from 750 to 790. Petrol is rather stronger, and Royal Dutch rose from 18,500 to 20,600; Shell is stationary at 259, and Mexican Eagle has maintained its position at 287.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

	June 30, 1921. Francs.	June 23, 1921. Francs.	July 3, 1913. Francs.

CANADA.—HOPEFUL CROP PROSPECTS—U.S. "EMERGENCY TARIFF"—MAY TRADE RETURNS—REVENUE PROBLEMS—RAILWAY COSTS—CANADIAN-WEST INDIES TRADE.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 23.

THE crop prospect is very hopeful, Dr Grisdale, the Deputy Minister of Agriculture, being authority for the statement that, unless a period of very bad weather intervenes, the crops will be the best in the history of the country. As in 1915 the yield of wheat was 393,000,000 bushels, one can readily see what a really big crop means. But there is nothing as uncertain as a Western crop. To date the conditions have been unusually good, and if only an average amount of moisture falls, then a big yield would seem to be assured.

It is gratifying to note that the acreage sown to wheat, instead of showing a decline, as one might naturally expect, owing to the marked drop in prices, is actually higher than ever before in the history of the country. The Dominion Bureau of Statistics reports that the number of acres under wheat is 18,654,000, as compared with 18,232,000 for 1920. This is 2,311,000 more than the average for the 1915-19 period. When one recalls how the cultivation of wheat was stimulated by high prices and the urgent call for greater production during the war years, one can readily see that the Canadian farmers are doing their utmost to get the most out of the soil.

Of the 18,654,000 acres under wheat, only 709,000 acres are of the fall variety. As an indication of the important part played by the prairie provinces in wheat-raising, it may be said that of the total foregoing acreage, 17,418,000 is credited to them. Saskatchewan naturally leads, and in this respect quite sustains its reputation as the greatest wheat-producing province in Canada, if not in the whole of the Empire, the acreage being 10,061,000, or practically the same as last year. Manitoba is credited with 2,679,000 acres, and Alberta with 4,679,000, or 600,000 acres more than last year. It is interesting to note that Manitoba, which for so long was the banner wheat province, is now far behind Alberta in this respect. The very large acreage in the latter province may to a very considerable extent be attributed to the splendid crop of 1920, which has induced many farmers to seed every available acre, especially as the conditions have been so favourable.

The question of a market naturally arises, but in reality this is secondary to that of the yield, for no matter how high prices may be, if the wheat is not available, the farmer can derive no benefit therefrom. The placing of a duty of 35c per bushel bars the way to the American market for wheat intended for consumption. This would be a serious matter were it not for the fact that it is expected that the United Kingdom will be in the market for her usual supply, which she was not last fall.

This brings up the probable effect of the "emergency" tariff legislation of the United States on Canada. After making due allowance for possible outlets for trade in other directions, it must be admitted that the effect will undoubtedly be very serious for Canadian agriculture. Were it not for the rate of exchange, it is quite probable that Canada might, as she did after the passing of the McKinley and the Dingley tariff legislation, find compensating markets in the United Kingdom or Europe; but the situation is quite different to-day, as the story of falling exports to the Mother Country and France shows. So it is quite apparent that, through the force of circumstances, this country is dependent on the American market to a greater extent than she has been for some years.

The live-stock industry will probably feel the effect most. During the last few years the effect of the embargo in the United Kingdom has been offset through the free entrance of cattle into the United States. But with the latter market effectually closed, there is a rather dark outlook for this branch of industry. Add to this the high freight collected on domestic shipments, and there is grave danger.

that the industry may receive a blow from which it will not recover for years.

The trade returns for May show a marked falling off in all departments, but most of all in imports. As compared with May, 1920, the decline in the total figures is equal to one-third, they being \$129,038,951, as compared with \$193,739,631 for the same month last year. Over the same period, the falling off in imports was equal to 40 per cent., the figures being \$68,304,986 and \$113,320,699 for the same month in 1920. Exports declined from \$80,000,000 to \$60,600,000 for May, 1921. The decline in imports was due to a genuine reduction in purchasing power, though, of course, a lower level of prices manifestly reduced the totals. In this connection it may be said that the reduction was brought about through the natural corrective forces operating in the currents of trade. This is of importance, so much having been said as to the necessity of taking measures to reduce imports. Shipments from the United States and the United Kingdom seem to have been about similarly affected, the marked falling off in imports of textiles from the latter pretty well indicating the general decline in the demand for this class of goods.

Taking everything into account, exports, while they were 20 per cent. in value below those for the same month last year, or \$60,600,000 as compared with \$80,000,000, held their own surprisingly well. This is especially true when one takes into account the marked decline in prices that has taken place during the last 12 months. Doubtless the desire to reach the American market before the incoming of the new scale of duties swelled shipments to the United States beyond what they otherwise would have been. On the month's operations the adverse trade balance was \$7,500,000.

The decline in receipts from Customs, the sales tax, as well as from minor sources of revenue, seems likely to constitute quite a problem. The Minister of Finance anticipated a falling off in Customs amounting to nearly \$40,000,000. On the first two months of the current fiscal year the loss has been equal to about 50 per cent. of that amount. From present indications a revenue of \$115,000,000 from this source would appear to be more probable than the estimated \$132,000,000. The sales tax as a revenue-producer has also failed to come up to expectations. A moment's reflection would show the strong probability of this, for it is impossible that collections should maintain the same level on a rapidly declining volume of business. Happily the income-tax has come to the rescue of the situation in a surprising manner. As in most other countries, it took some time to get the collecting machinery thoroughly under way. In the first year the collections were but a little over \$9,000,000, in the second year they mounted to \$20,000,000, and in the third to \$47,000,000. This year it was arranged that collections should be made in the form of four instalments, the first of which fell due at the end of April. At this date \$39,500,000 was paid in, which gives rise to the hope that the collections for the full year may amount to nearly \$100,000,000. The day is not far distant when the income-tax will be Canada's chief source of revenue. This is a surprisingly good showing for a country that introduced this tax but four years ago.

The railway managements are wrestling with the problem of reducing costs, but as traffic continues to fall away in a very marked manner, without as yet a corresponding decrease in operating expenses, it is difficult to see that much progress has been made in the matter of net returns. Notices of a reduction of 12 per cent. in wages, beginning July 1st, were issued to the railway employees, the position of the companies having also been very plainly stated to the latter in conferences at Montreal. Within a few days it was, however, found necessary to postpone the date for the incoming of the reduction. The truth is, that to effect a reduction in wages has, for the better organised employees, been found to be a much more difficult matter than had been imagined. Considerable reductions will doubtless be made, but for the most part they will be most marked among clerks and the weaker unions. This means that the saving will not be as large as had been expected. It may be taken for granted that wage scales adopted in the United States will be those in Canada.

The Canadian-West Indies trade agreement went into effect on June 18th. As it provides for the granting of greatly increased preferential duties on certain Canadian products entering the Islands, in return for which a similar preference is granted on certain products of the Islands entering Canada, it has been hoped that trade between the two groups would thereby be much stimulated. From present indications it is doubtful whether the high expectations of some will be realised. The Canadian Government's Mercantile Marine, which has been operating a service to the West Indies, reports that, on the business of the first four months of this year, it was the only one of its routes that did not pay. The purchasing power of the Islands having been much reduced through the fall of sugar prices, it is questionable whether Canada will derive much immediate benefit in the matter of increased exports. As the Islands should, however, through the increased preference, get much of the sugar business that now goes to the United States, the Treaty should confer substantial and immediate benefits on them.

ITALY.—THE TRANSITION TO FREE TRADE IN WHEAT—PROPOSALS FOR INCREASING EXPENDITURE—THE RESIGNATION OF THE GIOLITTI CABINET AND FINANCIAL PROBLEMS—THE FALL IN STOCK EXCHANGE QUOTATIONS.

(FROM OUR CORRESPONDENT.)

TURIN, July 2.

SINCE my last letter Signor Soleri, the High Commissioner for Food, has obtained the consent of the Cabinet to a scheme for the final passage to free trade in wheat. After declaring that they will accept until August 31, 1921, all offers from agriculturists of national wheat at 125 lire per quintal for soft wheat and 145 lire for hard wheat, with additional premiums of 21.50 and 25 lire for southern provinces, islands, and territory formerly occupied, the Government were obliged to forbid until the same date any commercial intercourse between the two sets of provinces, those with and those without premiums, as otherwise all wheat could be smuggled from the latter into the former provinces for the sake of the premiums.

For the two months of July and August the sale price by the Government to millers is fixed at 128 and 150 lire for the two qualities. They hope that agriculturists will prefer to sell to private millers at a price from 125 to 128 lire rather than to the Government at 125 lire, so that the Government will be relieved of the burden of too great a mass of wheat thrown upon it by national producers fearing the competition of foreign wheat at lower prices. As the imports of foreign wheat will be made free only from September 1st, the prices will oscillate until that date about 128 and 150 lire. The loss of the national Exchequer will be reduced to the payment of the premiums in the Southern and other privileged provinces. One may hope that this will be the last loss, and that after September 1st the State will be free from this appalling source of expenditure, and the wheat trade definitely restored to its natural freedom.

In his recent speeches the Premier uttered significant warnings against proposals of new expenditure which are forthcoming after the announcement, repeatedly made by responsible Ministers, that the deficit of the Italian Budget was reduced from 14 billion lire in 1920-21 to 4 billions in 1921-22. Signor Giolitti said very pointedly that 4 billions are not a matter to be trifled with, and that the deficit figure will easily increase if Parliament and Government will not set their faces resolutely against all new expenditure. The proposal, largely patronised in the Chamber of Deputies, of giving another monthly bonus of 200 lire to all public employees would add 900 millions lire to the expenditure. A scheme for national health insurance would cost another 900 millions, and so on.

The warnings fall as yet on sterile ground as far as concerns the House of Deputies, where the Government encountered a bitter opposition when they proposed the reduction of the number of public employees and the concession to this end of the necessary discretionary powers to Ministers. The Cabinet had to resign, apparently upon a doubtful vote on foreign policy, but in reality also owing to the difficulties encountered in the task of limiting the

increase of expenditure and of applying the somewhat wild schemes of taxation voted by Parliament in September last. Especially the total confiscation of war profits is proving difficult in a falling market. As the law of September 24, 1920, prescribes that the valuations for taxing purposes shall be made at the date of June 30, 1920, and as at that date all prices were in Italy at their maximum, the taxpayers are confronted with the impossible task of paying enormous taxes upon a basis of values which is fast disappearing. For example, taxpayers who had invested, upon the advice of the Government, their war profits in ships, when these had to be bought from 2,000 to 2,200 lire per deadweight ton, are to-day obliged to pay these same 2,000-2,200 lire to the public Exchequer when the price of the ton has fallen to 500 lire.

To this cause of financial instability there is added the menace of compulsory inscription of all private securities. Inscribed securities are far from popular in Italy, where only bearer securities are practically negotiable. The fear of compulsory inscription is not the least cause of general decreases in the prices of stocks and shares. A recent calculation by Professor Bachi gives the following results on a basis of 100 for December, 1918:—

	Dec., 1918.	Dec., 1920.	May, 1921.
Banks	100	103.17	96.54
Ex-Railways	100	62.21	51.37
Transportation by land ..	100	70.86	60.11
Transportation by sea	100	83.61	51.79
Cotton	100	137.77	103.38
Jute	100	118.18	96.07
Wool	100	101.47	101.11
Hemp and Flax	100	152.81	98.42
Silk	100	172.32	123.79
Mines	100	74.54	55.79
Metals	100	47.75	26.93
Engineering	100	55.12	58.28
Motorcars	100	72.71	50.39
Electricity	100	67.68	63.48
Chemicals	100	80.26	67.07
Sugar	100	108.91	92.24
Food	100	106.40	90.66
Waterworks	100	87.13	87.44
Land and houses	100	100.63	102.66
Miscellaneous	100	130.50	108.67
General index	100	79.67	68.39

For cotton, wool, silk, and miscellaneous maximum prices were quoted later than December, 1920. The land and houses category is alone enjoying a continuous rise, owing to better prospects for the future, when the exceptional Rent Restriction Acts will cease to operate. The fall was most severe in navigation, mines, engineering, motor-cars, which were the greatest war profiteers, and reaches its maximum in the metallurgical group, owing to the artificial nature of this industry in a country like Italy deprived of coal and iron. One of the last acts of the Giolitti Cabinet was a decree promulgating the new fiscal import and export duties. The publication of this new general tariff is awaited with interest, as it is feared that Protection has gained by it a signal victory just at a time when all people are clamouring for a reduction in the high cost of living.

FINLAND.—POLITICS—FINANCES—BANKING—INDUSTRY AND TRADE—PRICES—RAILWAYS, SHIPPING, AND PORTS.

(FROM OUR CORRESPONDENT.)

BERLIN, July 4.

FINLAND in April experienced a change of administration, a new Cabinet then being formed of eight members of the Progressive and four of the Agrarian party, under premiership of Professor J. H. Vennola, formerly Minister of Trade, with M. R. Holsti remaining as Foreign Minister. Home politics have been quiet. The contentious Language Laws, regulating official use of Finnish and Swedish, have been finally put through, against Swedish opposition. The League of Nations' decision in favour of Finland in the Alands Question has been well received, and has apparently prevented a worse conflict, as Finland seemed resolved not to surrender the

islands. The Communist party is relatively quiet, and some of its most determined members of late transferred their activities to Sweden. From Russia there has of late been no threat, and, according to Moscow newspapers, the numerous and active Finnish Reds at Petrograd are in bad odour with their hosts.

Details of the Budget for 1921 were sent from here to the *Economist* in January. The somewhat altered figures after handling in the Riksdag Budget Committee in March were:—

Expenditure—	Fin. Marks.
Ordinary	1,808,631,305
Extraordinary	430,473,100
	2,239,104,405
Revenue—	
Ordinary	2,154,855,650
Extraordinary	76,291,000
	2,231,146,650

deficit being 7,957,755 Fm., to be covered out of the Budget Fund, which, according to the State Comptrol, amounted to 120,000,000 Fm. at close of 1920. The Budget of 1913 balanced at 178,436,300 Fm. Since before the war the Budget has been radically transformed, not only by the inflation and price-rise, but also by the introduction of an effective direct taxes system. In 1913 direct taxes played practically no rôle, the receipts being only 6,500,000 Fm.; in 1921 they are estimated at 344,900,000 Fm., a fifty-fold increase, while indirect taxes have increased about ten-fold. The estimated yield of the income and property taxes in 1921 is 320,000,000 Fm. The State Debt on April 30th is officially stated:—

Consolidated—	Millions of Fm.
Foreign	543.4
Home	933.9
Floating—	
Foreign	136.5
Home	516.7
	2,130.6

showing an increase since January 31st of 281,000,000 Fm., due mainly to consolidation loans concluded in the Scandinavian countries in February. An official report puts the following values on State-owned productive property:—Forests and land, 5,351,614,000 Fm.; buildings, 239,533,000 Fm.; sawmills, 11,000,000 Fm.; railways, 2,248,893,000 Fm.; waterfalls, 345,750,000 Fm.; Jokki Estates Company, 50,000,000 Fm.; shipping, 37,000,000 Fm.; total, 8,283,790,000 Fm.

The money market all last year was strained, and this condition has continued. Since the autumn of last year the Bank of Finland's discount rate has been 9 per cent., the highest in Europe, and private banks in November raised their deposit rate to 6½ per cent. These high rates have not reduced the demand for money. The note circulation, which at close of 1919 was 1,123,942,801 Fm., at close of 1920 reached 1,341,041,560 Fm., a little less than its maximum for the year; was 1,404,900,000 Fm. on May 30th, and 1,392,100,000 Fm. on June 15th. The non-conversion of notes into gold, which has been the practice since 1914, was legalised until further notice by a law presented in April. The Bank of Finland's net profits in 1920 were 75,079,188 Fm., against 118,115,940 Fm. in 1919. The Bank's current account claims on Russian and Austrian correspondents were written off to 1 Fm. each, and its holdings of Russian, Austrian, and

Hungarian bonds similarly treated. Its capital, which at close of 1919 was 25,000,000 Fm., has been increased to 100,000,000 Fm. by transfer of 75,000,000 from reserve, reserve being left at 23,583,153 Fm. Its loans and advances increased during the year by 136,900,000 Fm. The monthly reports of the private banks show that deposits on January 31, 1921, totalled 3,657,900,000 Fm., and loans 5,584,800,000 Fm., and that on May 31st deposits were 3,808,100,000 Fm., and loans 5,895,100,000 Fm., the excess of loans having increased in the four months from 1,926,900,000 Fm. to 2,087,000,000 Fm., which figure is nearly double the excess (1,052,900,000 Fm.) on January 31, 1920. The banks' net debts to abroad rose from 779,100,000 Fm. on January 31st, to 911,400,000 Fm. on May 31st.

The Fin. mark's foreign exchange, after a considerable recovery in December last, has heavily fallen this year, but after reaching a lowest rate of 262½ to sterling on June 16th, and has since somewhat risen. The exchanges index published by the trade journal *Kauppaliehti* (based on 100 as average price in Finnish currency of 10 leading currencies) shows for January, 1920, 386.7, May 272.4, November 559.6, February, 1921, 399.8, and April 581.4. Apart from political apprehensions as regards Russia, which make it difficult to obtain large foreign credits for imports, the only known cause of this exchange decline is the suspension of the export boom which began towards the middle of 1920; but this is aggravated by the circumstance that prices of imports have risen considerably more than prices of exports. In April, the Bank of Finland declared in principle against providing the private banks with exchange for payment for imports; and the private banks are refusing to finance imports for their clients. The Economic Council, which last year advised the Government, and was later dissolved, has been reconstituted; but it is not stated that the former exchange regulation system will be restored.

Industry and foreign trade are in a bad condition. The number of protested bills in January-May, 1921, was 1,606, against 1,117 in the same months of 1920, and 836 in 1919. The causes of bad trade are similar to those of Europe generally: the consumption of imports, largely food, cannot be cut down beyond a certain point, while the demand for exports has declined. Finland's troubles are aggravated by loss of the Russian market, which before the war was her chief paper buyer. Small paper deals were last month concluded with Russia. Finland's problem is to gain new permanent markets for her specific export goods, and last year it seemed that this aim was attained through very large sales of paper, pulp, and timber to England. Of 2,906,600,000 Fm. exports 1,257,600,000 Fm. went to England. But the precariousness of a trade balance dependent mainly upon purchases by a single country has been proved by the practical cessation since last autumn of English buying, and the result is a return of the passive trade balance of the first months of 1920. Finland always had a passive trade balance, but her pre-war payment balance was maintained by moneys sent home by emigrants and by money brought in by the numerous Russian villa residents between the frontier and Vyborg. The last resource has entirely ceased. Figures of foreign trade in the first five months of 1921 and 1920 are:—

(Millions of Fm.)				
	Imports.	Exports.	Impt. Excess.	
1920.				
January	254.6	43.3	211.3	
February	254.8	97.7	157.1	
March	213.0	59.7	153.3	
April	273.6	97.8	175.8	
May	205.0	197.5	7.5	
1921.				
January	194.7	95.4	99.3	
February	271.1	64.2	206.9	
March	170.4	58.4	112.0	
April	296.6	111.2	185.4	
May	340.4	138.9	201.5	

The marked recovery shown in May, 1920, was so well continued that three of the following months actually showed an excess of exports, and that on the whole year exports reached 2,906,600,000 Fm. against 3,620,300,000 Fm. imports, which was a great improvement over 1919 with imports of 2,509,900,000 Fm.

and 880,400,000 Fm. exports. Only a sudden and great improvement of the weed, paper, and pulp trades can produce in 1921 the relatively good results of 1920. Business is naturally depressed, and prices and wages are falling. In February the paper mills resolved to reduce wages 25 per cent., and in May were announced wage reductions of 15.20 per cent. in the metal industries. The absence of commercial treaties is felt. France, as retaliation for prohibition of wines, &c., imposed maximum duties on Finnish paper and pulp, but an agreement is being concluded. In the first five months of this year France sold to Finland only 11.4 million Fm. of goods, and bought only 8.1 million Fm. Figures for other chief countries (in million Fm.) are:—

	Imports.	Exports.
Germany	353.3	57.9
England	324.8	188.8
U.S.A.	152.0	55.7
Sweden	145.6	61.6
Denmark	112.9	23.2
Holland	55.9	18.8

The index cost of living (100 July, 1914) was 830.6 in first quarter of 1920, 1,103.2 in December, 1,065.4 in January, and 1,007.5 in April.

In spite of the depression considerable activity is being shown in public enterprises. In February a State Railway Commission recommended a construction programme for 33 years, to cost altogether 3 milliards, and including (1) transit railways, chief of which would join Abo directly with Riihimäki, the function for Helsingfors, thereby providing a shorter trade route from the Gulf of Bothnia ports to Petrograd; (2) local and suburban lines around Helsingfors, Tammerfors, and Viborg; (3) North Finnish lines, chief of which would connect Rovaniemi in North Finland with Petchenga (now called Petsamo) on the strip of Arctic Ocean territory acquired through the Peace Treaty with Russia, length 500 kilometers. The whole programme covers 23 lines of 3,302 kilometres length. A Commission is at present inspecting the Petchenga route. The improvement of harbours and preparations for free ports are being proceeded with, in particular the harbour and free port at Graesholm and Sandvik at Helsingfors. Finland's commercial fleet at the beginning of 1921, reports the *Helsingfors Mercator*, consisted of 5,385 vessels, gross tonnage 619,789, of which, however, 292,599 tons were lighters and barges, 99,556 tons being steamers, 12,311 tons motor ships, and 140,830 tons sailing ships. In 1920 159 vessels of 31,935 gross tonnage were under construction; completed during the year were 135 vessels of 22,779 tons. Most of these vessels were laid down in 1919 under more favourable freight conditions, and at present shipbuilding is depressed. The State Railway Department, reports the *Hufvudstadsbladet*, is about to establish a large railway construction workshop somewhere in the centre of the country to replace obsolete establishments at Kuopio.

Letters to the Editor.

THE RAILWAYS BILL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of July 2nd you deal very fairly with the Memorandum on the Railways Bill issued by the National Federation of Iron and Steel Manufacturers, with the main theses of which you appear to agree. Railway receipts must inevitably be governed by the ability of the traders and the travelling public to pay, and any attempt to impose higher charges will defeat its own object by driving traffic on to the roads or by killing trade.

May I, however, say a word in defence of the statement in the memorandum that "the only satisfactory test of efficient and economical management is the ability to earn a profit"? You say that railway companies are in a different position from other concerns in that they cannot transfer their capital. But railways are not alone in this respect. Merchants and bankers may be able to transfer their capital, but most industrial capital is fixed, and unless an industrial concern makes provision for future changes in methods of production its capital is irretriev-

ably lost when economic progress renders its plant obsolete.

The prudent business man is therefore constantly modernising his plant or, to quote your example, replacing his sailing ships by steamers, out of revenue. This is precisely what the railway companies ought to do; they must be made to fight for their revenue by proving themselves a more efficient means of transport than any other method. They must do this by electrification, by improved methods of loading and handling merchandise, by rapidity of service, &c. If they fail to keep up to date, even the Minister of Transport would hardly maintain that they are entitled to a standard revenue in perpetuity. Such a doctrine would not only be economically unsound, it would be futile. The unfortunate user of the railways who has no prospect of escaping from the railways would not be able to provide sufficient revenue to furnish a standard return on a capital of £1,300 millions, and when other traffic had transferred itself to other means of transport a great part of the railway track of the country would suffer the fate of the Edinburgh Tunnel. If the railways are to be assisted to secure a revenue without having to work hard for it by progressive methods and constantly improving administration, the main argument for leaving them in private hands is removed.

It is for these reasons that the first instruction to the Rates Tribunal—to whom Parliament is delegating its power of regulating all railway charges—should be to fix such rates as will maintain and develop transport by rail. It is then for the railway companies so to organise their undertakings and to make such arrangements with their men as would enable them to pay a dividend.—Yours faithfully,

M. S. BIRKETT.

National Federation of Iron and Steel Manufacturers, London, July 7th, 1921.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I desire to thank Mr Craies for his letter which appeared in your issue of the 2nd inst., and am glad to find there is so much agreement between us, so far as the ultimate object we have in view is concerned.

It does not appear to me to be either fundamental or necessary that all inter-Allied debts, as stated by your correspondent, should be either cancelled, paid off, or funded before an international gold standard can be restored. It is no doubt an advantage to have these debts settled in some form, but they existed in pre-war days, although to a lesser extent, and their existence should not therefore hinder the carrying out of this most necessary reform.

The price levels which Mr Craies desires to see come into parity are surely more likely to do so when the various currencies have been restored to parity. I entirely agree with your correspondent that the redundant currencies must be withdrawn from circulation as a first step in preparation for the resumption of specie payments. Whether all the Continental countries will be able to restore their former units of value is open to doubt. Austria, Russia, and Poland, I imagine, will find it impossible, but they ought to make a beginning, and I believe our good example will encourage them to do so. I do not agree that we must wait until they are ready.

Mr Craies' suggestion that all those interested in setting up a stable standard of value should arrange to meet together in order to formulate a definite programme appears to me to be an admirable one, and I shall have pleasure in bringing it before my executive committee. A meeting or conference, which might take place in the autumn, at which plans or proposals for the rehabilitation of the currencies of the various countries could be discussed and recommended, would be most valuable, and should hasten the restoration of the exchanges on which the revival of trade and commerce so much depends.—I am, Sir, your obedient servant,

D. M. MASON.

Chairman Executive Committee Sound Currency Association, 115 Cannon street, London, E.C. 4.

July 4th, 1921.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000

Paid Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondents are in general agreement upon one thing—that what we require, both for our export trade and for the security of the relations between capital and labour, is stability of values; and a gold standard is a good thing so far as it guarantees this. But having failed to maintain the gold standard, we have still the problem of securing stability before us. The reason of our failure to maintain that standard is not far to seek. We could not have won the war without borrowing, but the creation of liabilities on a prodigal scale without a corresponding creation of assets is nothing more nor less than inflation, and the expansion of the currency is an unavoidable consequence.

If we wish to return to the gold standard now or in the near future, our national income must fall to approximately pre-war figures, unless our production is greater than before the war. But the Board of Trade figures show that on the basis of 1913 values our imports for the first quarter of this year are only £122,410,000, as compared with £164,500,000, and our exports £66,989,000, as compared with £124,942,000, with the result that our turnover has fallen to £189,399,000, compared with £289,442,000; while the balance of trade against us is £55,421,000, compared with £39,558,000 in 1913.

This is evidence of the great decline in production, due to shorter hours of labour and other restrictions. We have lost a large portion of the income formerly derived from abroad, partly through sales of investments, and partly through debts contracted abroad, as with the U.S.A., and our Russian debts are practically irrecoverable. In these circumstances, it would not be safe to assume that the income of Great Britain on a gold basis is larger to-day than in 1913, even allowing for the increase in population. This gives us a figure of £2,000,000,000, the usual estimate for the year 1913.

The problem before us, then, is how, out of this income, to provide a sum of £500,000,000 per annum for the service of the national debt and war pensions—i.e., 25 per cent. of our income. The working class will not suffer such a deduction from their standard of living. Capital exacts a larger amount, both because high rates of interest are sanctioned by a high Bank rate, and because there is an increase of approximately 50 per cent. in its claims due to our huge national debt. The whole income of the middle class would not suffice to provide the amount, and in any case if that class is subjected to an unfair burden it will be reduced to ruin, and we shall have a reproduction of the condition of Russia on a worse scale, for Britain's greatest asset is the brain and activities of that class.

We are left with no alternative but to revalue our liabilities in a depreciated currency, as all our neighbours have done. To put the case in the most concise form, industry cannot bear the burden of the present national debt in terms of gold, and our attempt to deflate without regard to this fact has not been without an influence on the balance-sheets of our railways and coal mines.

The solution of our difficulties will come before long. The Bank of England has already realised by its action

in reducing the Bank rate to 6½ per cent. that the use of the discount rate to bring us to gold parity cannot be exercised without some regard to the state of trade in the country. The present policy of the directors has yet to be clearly formulated, but from the moment they acknowledge the gold standard to be beyond their reach even for a relatively brief period, they have no choice but to maintain stability of values by other methods, and there are at least two guiding principles by which they can do so. They may regulate the issue of currency and the discount rate so as to maintain the pound sterling at parity with an average of all the principal foreign exchanges; or, secondly, so as to maintain the pound sterling at parity with an approved index-number of general commodity values constructed on scientific lines, such as would command the confidence and respect of the whole world as a measure of values. The latter principle is unquestionably the sounder of the two, and is advocated by advanced economists like Dr G. M. Verrijn Stuart. There is nothing revolutionary in it. The Bank of England have already the power now to control the demand for currency by means of the Bank rate within the rigidly inflexible restriction imposed by the Government. If this arbitrary restriction is removed, the control will remain in their hands and can be exercised on the terms stated—namely, that the standard of values be maintained within reasonable fluctuations without reference to the stock of gold in the coffers of the Bank, which has, after all, merely a commodity value at present. This stock of gold will become available for the settlement of international debts, and there will be no further need to hoard it uselessly in the coffers of the Bank. Our power to draw gold from abroad for our requirements will be no less than before the war, for it depends on our production, which will always bring gold in exchange. Indeed, the falling off in our production to-day is seriously compromising that power to draw gold.

With the currency of the country controlled in this manner, not cramped as at present in iron bands, the trade and commerce of the country can expand freely; merchants and manufacturers will be assured of that stability of values without which business becomes chaos; wages will no longer have to be varied, as they are now, in accordance with an index-number, as the currency itself will guarantee the desired constancy of values for the working classes; our foreign customers will find the pound sterling an even more reliable standard of value than we achieved by adherence to gold in less difficult times.

The situation of industry to-day is no surprise to the writer, who warned the members of the Cunliffe Committee in January, 1918, of the disastrous consequences that would ensue from any attempt to bring back values to gold parity without taking into consideration the inflation caused by the public debt. Now that the matter has been put to the proof, we must look forward to an intelligent revision of the policy to which the Bank of England was committed by the recommendations of that Committee. The return to a gold standard will be possible when we can equate the assets and liabilities of the nation in terms of gold at its pre-war rate with the pound sterling; but if by a stroke of the pen we could achieve that rate to-day, it would, on the admission of the gold-mining companies themselves, only result in destroying the very foundation of a gold currency—the gold-mining industry itself.

If I may venture a prediction, the present generation will not witness a return to the pre-war gold basis, for the colossal creation of debt in Europe has disturbed all values far more deeply than most of us are aware. It is the instability of the present situation that makes it impossible for merchants and manufacturers to make any provision for the future, and which, therefore, cuts at the very root of business development. If England would set herself the task of providing a really sound and scientific basis on which her trade, both at home and abroad, could be healthily developed, she would confer the greatest blessing that is possible on the whole world, as well as on herself.—Yours faithfully,

F. WIGGLESWORTH.

THE CHANGES IN THE VALUE OF GOLD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The following broad conclusions may be drawn from a study of this question. From the nature of the case the estimates offered can only be approximations to the truth:—

(1) The quantity of gold now in the possession of mankind is about 1,000 million ounces—enough to make 4,250 million sovereigns. Of this quantity the United States holds about 200 million ounces, India about 100 million, and the United Kingdom about 60 million.

(2) The new production of gold at present averages about 21 million ounces per annum (last year it was 16.5), and, owing to the comparative indestructibility of gold, the world's stock is increasing at a rate exceeding 1 per cent. per annum.

(3) This progressive increase in the world's stock of gold must, taken by itself, have a tendency to cheapen the value of gold in exchange for other commodities—that is to say, to raise the gold prices of commodities generally.

(4) Gold in the form of coin or bullion can easily be hoarded or made into ornaments, and so withdrawn from currency; and, on the other hand, gold in hoards or in the form of ornaments can easily be turned into coin or bullion and made available for currency purposes.

(5) At present, of the 1,000 million ounces of gold in the world, only about 400 million are held or used for purposes of currency, and about 600 million are in private hands, either in the form of coin, bullion, or ornaments.

(6) Of the 400 million ounces held or used for purposes of currency (mainly by treasuries and banks), the United States now holds about 160, the United Kingdom about 43, France 52, Japan 30, and India six million ounces.

(7) Gold is still the common measure of the value of paper currencies for the purposes of international exchange, whether of credit or commodities.

(8) Although during the last seven years the banks and treasuries of the world (excluding Russia) have nearly doubled the quantity of gold held by them, they have absorbed little more than the world's new production during that period, and a considerable quantity of the gold which has disappeared from currency has been added to private hoards and ornaments, and can easily be made available for currency purposes should the holders of it so wish. Should any large quantity of gold be brought out of hoards and added to currency, this would tend to a rise in the gold prices of commodities.

(9) The general result of the restrictions imposed on movements of gold during the war was to reserve new production for the use of the European countries (other than Russia) and of the United States, and to lead to a great accumulation of gold in the United States. This process must have had a strong influence towards raising the gold prices of commodities in that country.

(10) In consequence of the removal of most of those restrictions after the Armistice, the countries of Asia and South America were enabled to obtain the gold they wanted, and one result of this re-distribution of the world's gold was to reduce the accumulation in the United States—a process which must have had some effect towards the fall in gold prices in that country which has been so marked since April, 1920. Most countries in the world have now obtained all the gold they at present require, and most of the surplus gold which becomes available, either from new production or from other causes, now finds its way to the United States, which is again rapidly accumulating gold. This process must have a tendency towards raising the gold prices of commodities in the United States, and may retard, or even to some extent reverse, the fall in the gold prices of commodities in that country which has been going on during the last 12 months.

(11) The fall in the gold prices of commodities in the United States during the last 12 months has been so much more rapid than the fall in the prices of commodities in the United Kingdom, measured in gold, that by the ordinary operations of trade it is likely (even if there is a rise in prices in the United States) to lead to a further fall in the prices of commodities in the United Kingdom measured in gold, and therefore to a further fall in those

prices measured in British paper currency, unless there is a serious fall in the rate of exchange with New York and in the quantity of gold which the British paper pound will buy in London. That can only happen if (1) an increase is made in the quantity of British paper currency outstanding, or if (2) the world's financiers (including bankers and merchants generally) lose faith in Britain's ability and determination to pay her just debts and to restore the pound sterling to the value of the 113 grains of gold contained in a sovereign.

SIR JAMES WILSON, K.C.S.I.

Ochilview, Crief, June 27th, 1921.

THE COST OF PRODUCTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Economists are continually lecturing workmen on the futility of restricting output, and yet the workmen do not listen. How is it that workmen are not convinced of so obvious a truth as that a better standard of life all round can only be obtained by increased output?

I think the root of the matter is somewhat as follows:—Habit is the greatest of social forces. If in a given society a bigger output per hour is obtained by better methods, the benefit can be felt in three ways:—

- (a) More leisure.
- (b) A higher standard of comfort.
- (c) A greater power to carry out capital works.

If a given society gets a better output per hour, but does not alter its habits and standard of life, nor go in for capital extensions to a sufficient extent to take up at once the labour displaced by improved methods, either all must work less, or, more probably, some workmen will remain outside the circle of employment.

It is the feeling of the difficulty and delay in overcoming this inertia of society which leads men to go slow and make work, and leads, also, to an enormous expense in sales propaganda in order to create new wants. It is curious to consider that it required a world-war to stimulate production to its utmost and to absorb all the available labour.

The problem of getting workmen to do their best will be solved when we find means of directing to useful work, without loss of time, all labour saved by improved methods (or of spreading the leisure gained evenly through society), and of doing this in such a way that all workmen are able to follow and appreciate the process.—I am, Sir, your obedient servant,

C. CRAIES.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 13.	July 14.

The announcement by the Chancellor of the Exchequer of his intention to introduce a new 5½ per cent. Treasury bond at 97 gave the Stock Exchange the opportunity for speculating in advance upon a possible reduction in the Bank rate last Thursday. When the announcement was made in the House, the fact of there being no alteration caused some little amusement. Gilt-edged stocks at first fell sharply on the news of the 5½ per cent. forthcoming loan, the prospectus of which is to be issued on Monday. It was not long, however, before the decline was arrested. The War Loan touched 87½ before it recovered to 88½, and the rest of the gilt-edged list moved on lines somewhat similar.

Brazilian bonds are better, in the foreign market, and there has been a recovery in French issues. German Threes are flat. Argentine, Chinese, and Japanese have received rather more favourable attention, but it cannot be said that business in Foreigners is of any volume worth mentioning. The same remark might be applied, indeed, to many other parts of the Stock Exchange, and the conclusion of the coal-strike has brought about no such increase in general business as the House had hoped would be the case. The prospects of early peace in Ireland are helpful to investment stocks, but the proximity of the holiday season tends to restrict investment and speculation.

Holders of Home Railway stocks are too accustomed to disappointment for them to feel any great surprise at the failure of their market to respond to the end of the coal strike. The various stages of the Railway Bill and the debates which have risen thereupon are studied with a good deal of interest, but apparently they have not aroused hopefulness, for prices of ordinary, deferred, debenture, preference, and guaranteed are mostly lower on the week. There is, in short, no support accorded to any of the stocks, apart from the Undergrounds, in this market. Grand Trunks have been moving listlessly and irregularly. Mexican Rails gave way on the political difficulties that have arisen in connection with the oil export duty. Brazilians are weaker, and Argentines continue to dwindle.

New schemes are afoot for dealing with restriction of the output of rubber, and the desperate condition of the industry is rousing into renewed effort the Rubber Growers' Association and various other bodies connected with rubber. Prices of shares are, on the whole, rather better. In the oil market the feature is the way in which Mexican Eagles were depressed, owing to a genuine fear lest the imposition of further taxation upon the export of oil by Mexico may bring to a head the minor points of friction which have been developing between Mexican oil interests and those of American oil groups. The tendency of the market, therefore, has been heavy, although Shells kept fairly firm, owing to the cautiously cheerful speeches at the Shell meeting last Monday. A number of iron, coal, steel, and armament shares gained a few pence apiece as the sequel to the resumption of work in the coal mines. A more cheerful view prevails in connection with the textile trades, and this found reflection in a fair number of rises at the beginning of the week, which, however, were scarcely held, owing to the lack of public support. The Banking group is inclined to be better, thanks to the dividends now in course of declaration. The feature is the strength of National Discounts, which have risen about a point, owing to the directors' decision to wipe off £10 of the liability on the shares. The rises amongst Insurance shares have been checked, and the Shipping market is very quiet, failing to derive any benefit from the coal position. Marconis have given way, apparently on fears as to what the forthcoming dividend announcement is likely to be, and the Cable group, also, is a little easier, for which vague apprehensions of American competition may be deemed responsible. Spiers and Ponds advanced on the dividend and meeting, and other catering shares remain quietly steady. Money continues to go into such good-class preference and debenture issues as offer 7 to 8 per cent. on the money.

The Cape has been buying a few Kaffir shares, with the result that Springs Mines, and certain others of the Deep Level list, show a hardening tendency. Arbitrage houses report a fair amount of activity in De Beers, where movements have been sharp and irregular. Rio Tintos gave way after exhibiting strength. In the Rhodesian market, Chartered has kept about 11s 9d for the greater part of the week. Russo-Asiatics fell to 9s 9d after the meeting on Wednesday, subsequently recovering in the course of a couple of hours to 11s, and again sagging-off a trifle. Mexican Mining shares are inclined to be dull owing to the political developments, and the only section of the mining markets to show any pronounced strength is that for Broken Hill shares, where all the leading descriptions are better on buying orders received from the Colony. West Australians are a little heavier, and the proverbial doornail is not more dead than is the market for West Africans.

A ballot was held in the Stock Exchange, on Thursday, for the election of a member of the Committee in place of Mr Lionel Robinson, recently resigned on account of ill-health. Out of three candidates, Mr J. H. Chaldecott, of Messrs Jourdan and Pawle, was successful.

The North Metropolitan Electric Power Supply Company.

Incorporated by the North Metropolitan Electric Supply Act, 1900. Authorised capital £1,500,000, of which £950,000 has been issued and paid up. By their special Acts the company is authorised to borrow up to one-third of its issued share capital, providing that one-half of it has been paid up. The company also has power to borrow further up to £500,000 under other Acts. There are issued and outstanding £234,800 5 per cent. mortgages of £100 each, "redeemable at 105 per cent." This is an issue of £228,460 7½ per cent. debenture stock at 95 per cent. This 7½ per cent. debenture stock will be secured by a trust deed, and constitutes a floating charge on the assets of the undertaking. But it is subject to a prior floating charge to secure the £234,800 5 per cent. mortgages already mentioned, and a specific mortgage of the Willesden Power Station, upon which the sum of £23,570 is now secured. The company undertakes not to issue further charges, floating or specific, under trust deeds, except for the purpose of securing bankers' advances. The prospectus shows a statement of capital expenditure, uncalculated capital, and investments at cost, which total £1,408,904. After allowing for prior charges, the present issue is well secured as regards capital. An excellent table of income and distribution is submitted, which dates from 1908. This shows that there is ample cover for interest payments. The issue is a good one of its class, and was quickly subscribed.

The United Glass Bottle Manufacturers, Limited.

Authorised capital £1,500,000, divided into 500,000 7½ per cent. cumulative preference shares of £1 each (free of income-tax up to 6s in the £), of which 499,800 have been issued, and 1,000,000 ordinary shares of £1 each, of which 417,530 have been issued. In the *Economist* for May 14, 1921, on page 981, we recorded and commented upon an offer for sale of £600,000 7 per cent. (free of income-tax up to 6s in the £) first mortgage debenture stock at par. The following details are taken from an advertised statement which appeared in the Press to comply with the requirements of the Committee of the Stock Exchange:—"The cumulative preference shares originally bore interest at the rate of 6 per cent. (free of income-tax up to 6s in the £), but the rate was raised from 6 per cent. to 7½ per cent. prior to the issue, in May, 1921, of the 7 per cent. first mortgage debenture stock. In April, 1913, 25,250 preference shares of £10 each were issued at par in part payment of the purchase price of subsidiary companies, and in March, 1914, 730 preference shares of £10 each were also issued at par in part payment of purchase price of subsidiary companies. These preference shares were subdivided into £259,800 shares of £1 each in July, 1919. Under contract, 240,000 of the preference shares were subscribed for at par by B.S.T., Limited, who received a commission of 2½ per cent."

Mediterranean Oilfields, Limited.—Authorised capital £75,000, divided into 750,000 shares of 2s each. This is an offer of 250,000 shares for subscription at par. This company has agreed to purchase the coal and oil shale rights over approximately 4,000 acres of a farm known as Twyfelaar No. 3, situated in the Sheepmore district of Ermelo, in the Transvaal province of the Union of South Africa, on the main line of railway to Johannesburg, Natal, and Delagoa Bay. Favourable and independent reports on the property have been made, but the issue should only be considered by those with an intimate knowledge of the directors.

Colombian Proprietary Gold Mines, Limited.

Nominal capital £200,000, divided into shares of £1 each. This is an issue of 150,000 shares, of which 90,000 will be issued as fully paid up in payment of purchase consideration, and 60,000 are now offered for subscription at par. The vendors undertake to discharge certain preliminary expenses, and it is stated that the 60,000 shares now offered have been guaranteed without the payment of any cash commission, but in consideration of the right to subscribe at par for 32,000 shares up to October 22, 1922. The company has been formed to acquire certain gold-mining properties or claims in Colombia. The independent reports, from which only extracts are given in the prospectus, are carefully worded, but though in a conservative vein, give the outside readers little to go upon. It is a favourable point that the vendors show their confidence by taking payment in shares. A highly speculative proposition, and only suitable for those with more knowledge than can be gleaned from the prospectus.

The Savoy Super-Cinema (Wallasey).

Authorised capital £25,000, divided into ordinary shares of £1 each. This is an offer for subscription at par of 23,250 shares. The company has been formed to purchase freehold land at Liscard, in the borough of Wallasey, and erect a picture theatre. The vendor of the land is also interested in promoting the company, independent valuation is offered in the prospectus. The prospectus mentions that certain other directors are interested in the promotion, and will receive each £250 in cash and £250 in ordinary shares. The proposition is only suitable for those who have personal knowledge of the directors and of local conditions.

Lion Picture House and Estate (Huddersfield), Limited.

Authorised capital £125,000, divided into shares of £1 each. The company has been formed to acquire from two limited companies, a "picture house" and other properties. An independent valuation is submitted, which gives the value of the properties to be acquired as £104,000. The purchase price has been fixed at £116,000, the difference, £12,000, representing goodwill. This prospectus, as far as cinema prospectuses are concerned, is remarkable for one thing—past profits are stated for a few years back. But these, it should be noticed, are given before charging depreciation, interest, and income-tax and excess profits duty. It is intended to undertake a considerable amount of building construction alterations. These are to be financed by mortgages. This is an issue for consideration by local investors and those who have faith in the business capacity of the directors. It is satisfactory to note that an application is to be made to the Stock Exchange for permission to deal in shares.

Bovril, Limited.—At a meeting held on July 1st the directors allotted 100,000 6 per cent. preference and 60,000 7½ per cent. ordinary shares. Consequently upon this new issue, the 500,000 5½ per cent. preference shares and the 750,000 7 per cent. ordinary shares in Bovril, Limited, will in future rank for dividend at the rates of 6 per cent. and 7½ per cent. respectively.

COMPANY MEETINGS, &c.

BURMAH OIL COMPANY, LIMITED.

RECORD PROFITS AND DIVIDEND.

"LONG HISTORY OF UNBROKEN PROSPERITY."

CHAIRMAN ON HIS VISIT TO COMPANY'S PROPERTIES.

FALL IN PRICES AND FUTURE PROSPECTS.

The annual general meeting of the Burmah Oil Company, Limited, was held, on the 7th instant, in Glasgow.

Sir John T. Cargill, Bart. (the chairman), presided.

The Chairman said: In these difficult and trying times, when, after a period of exceptional, but undoubtedly in many ways artificial prosperity, the swing of the pendulum has come with a vengeance, and in a very large number of cases shareholders are faced with much reduced dividends, and in many cases none at all, I feel it is a great privilege to be in the happy position of submitting to you a statement of accounts which marks another record—both as regards the total profits and the dividend proposed—in the company's long history of unbroken prosperity.

LARGE INCREASE IN GROSS PROFIT.

The total gross profit shows an increase of £236,682 9s 7d on the 1919 record one of £4,654,793 19s 10d, and though the rate of dividend is only 30 per cent., as against 50 per cent. for 1919, the reduction on the rate is, of course, due to the capitalisation of reserves carried through last year, and the amount of the ordinary dividend proposed to be paid is actually £1,543,050, as against £1,428,750 for 1919. Personally I look on this as, under all the circumstances, a most gratifying result of the year's operations, and I feel sure that the great majority of the shareholders will agree with me in this view.

CHAIRMAN'S WARNINGS AT PREVIOUS MEETINGS.

Looking to the exceptionally large amount—£1,291,000—placed to general reserve in 1919 and subsequently capitalised, I am just afraid that in some quarters there has been a certain amount of disappointment that more profit was not available for dividend purposes in 1920, but those of you who were present at the last annual meeting, or who read my speech afterwards, will no doubt remember the warnings I then gave as to the very heavy way in which our profits were bound to be hit by increasing taxation and increased working costs—especially in connection with our largely extended and much more expensive fields operations—and I suggested you should adopt by own attitude of what I called reasoned and reasonable optimism, and not pitch your expectations on too high a basis and so run the risk of disappointment.

ALLOCATION TO RESERVE.

As against the £1,291,000 placed to general reserve in 1919, we have placed £195,000 for the year 1920 in the accounts now before you, a difference of £1,096,000, and a comparison of the accounts for these two years will show you that the total taxation for 1920 appearing in these accounts, allowing £1,800,000 for excess profits duty and £135,000 for corporation profits tax, shows an increase of no less than £581,760 15s 8d as compared with 1919, while the amount written off the fields account in 1920 is £598,066 8s up, as compared with 1919, so that the increases under these two heads almost account for the difference on the amount placed to general reserve, and the increase of £236,682 9s 7d on the gross profit.

TAXATION AND WORKING COSTS.

As regards taxation, I told you last year that we roughly estimated the increase at £750,000, figuring on the same profit as for 1919, and taking into account the amount we pay for taxation in India, which does not appear in the accounts before you, and the refund of income-tax we are receiving under the Boustead decision, our estimate has proved to be very near the mark. As regards the fields account, it was quite impossible for me at that time to even hazard an estimate of what the increase was likely to amount to, but no less than three times in my speech I emphasized, as I had done on several occasions before, the great increase working costs were going to show for several years to come owing to the enormously enhanced cost of drilling and all material; the very much deeper wells we are having to sink, especially in the Yenangyoung field; our largely extended drilling and testing operations necessitating the employment of a greatly increased staff and the general all-round increase on salaries and wages. It was really only in 1920 that all those factors began to take material effect, for as I told you at several past annual meetings we were

fortunate in having bought ahead at pre-war prices very large quantities of pipe and drilling materials, and these cheap purchases pretty well covered our requirements until the end of 1919. Now the pipe and materials we are working on cost anything from three to six times what our pre-war supplies did. And in addition, as I told you in July, 1918, we have been using large quantities of second-hand pipe drawn from abandoned wells, and this, of course, kept our drilling costs much lower than they otherwise would have been. These supplies are now practically at an end, and this has also tended to unduly emphasize the rise in fields expenditure.

COLOSSAL NATURE OF THE COMPANY'S OPERATIONS.

No one who has not seen—as I did during the course of my tour in Burma last winter—the extent and nature of the operations covered by what we call our fields account, can really have the slightest idea of what I think I can truthfully describe as the colossal nature of these operations, but the following comparatively few details will, I think, help you to grasp the position and realise why the expenditure involved under to-day's conditions is so great. Our American staff, responsible only for actual drilling and production work, numbers now fully 100, and we have about 100 strings of tools constantly working—many of them day and night—drilling wells. We have something like 700 wells actually completed and producing oil, all of which require more or less constant attention, and many of our wells have now to be drilled to well over 3,000 feet. Out of a total number directly employed in the company's service in Burma and India of some 35,000, we have, roughly speaking, between 13,000 and 14,000 Europeans, Americans, Indians, and Burmans on our oil fields operations alone, including a highly-trained geological staff of 10, which is constantly engaged in searching for and examining likely oil-bearing land and advising on operations in the proved fields.

TESTS IN OUTSIDE AREAS.

Between Burma, Assam, and the Punjab we are either actually engaged on or on the point of starting up some nine tests in outside areas, mainly in outlying districts requiring heavy expenditure in road-making, laying of water lines, and provision of accommodation for drillers and employees generally. We have always devoted a fair proportion of our profits to this exploratory and testing work because your directors have recognised that it is in the interest of the company and of the oil industry of Burma and India that we should do so. After all, crude oil is the life-blood and very existence of the company, and I am sure you will all agree that no stone must be left unturned in order to try and discover fresh sources of supply, particularly in Burma and India, where the company both holds such a commanding position in the market, and possesses all the transport, refining, and marketing organisation required to deal with a large production of crude oil.

COMPANY'S INTERESTS IN ASSAM OIL COMPANY.

It is because of this position and in this direction that, after careful geological examination of the properties of the Assam Oil Company, Limited, your directors, towards the end of 1920, decided to make their offer to the shareholders of that company to acquire their shares at £2 each for cash or in exchange for shares in your company, in the proportions of nine Assam Oil Company for two Burmah Oil Company shares. As you are aware, this offer was made conditional on at least 75 per cent. of the Assam Oil Company shares being thus offered to us, and this proportion and more being forthcoming, the transaction was duly completed. Since then we have acquired further shares of the company for cash on a much lower basis than our original offer, and we now hold over 90 per cent. of the Assam Oil Company's capital. Although these properties may not be capable of very greatly increased production or yield wells of great calibre, our geologists advise us that the possibly productive area is greater than had been previously imagined, and that satisfactory, steady, and lengthened production can safely be looked for even only from the already proved areas.

At Badarpur, in Lower Assam, our developments have been fairly satisfactory during the past year, and give promise, if not of a big field, at any rate of paying production.

As mentioned in the report, in my speech at the recent extra-

ordinary meeting of the company and in the prospectus of the recent issue of preference shares, our production from our proved Burma fields and their production potentialities for the future continue satisfactory.

We have not been fortunate to strike oil in any of our outside tests either in Burma or in India during the year, but, as already mentioned, this policy of exploitation for oil is being energetically continued in every area of reasonable geological promise, and no effort is being spared within justifiably speculative limits to prove or disprove by the drill—the only real if expensive solution—whether these carefully selected geologically promising areas actually contain oil in commercial quantities. I say commercial advisedly because, as I have previously had reason to point out, not every oil show, or even oil well, means a commercially exploitable oil field, and this less so than ever, at least at the moment, when there has been such a heavy fall in the value of crude oils and a temporary overplus in the world's production.

THE ACCOUNTS.

I will now run through the accounts and refer briefly to the items calling for special comment. I have already referred fully to the large amount written off the fields account. You will observe that £112,413 15s 9d is added to the £100,000 at which this account stood in the last balance-sheet. This represents purely capital expenditure on buildings and machinery—as separate from the drilling and other expenses incurred in the production of crude oil, which we will continue to write off annually in the future as we have done in the past—and ample provision will be made from time to time for depreciation on this capital portion of the fields account, and any further additions which may be made to it.

The £70,499 8s 7d, £30,000, and £80,328 15s 9d provided for depreciation on refineries, pipelines, and tankers and tank installation accounts respectively are on the usual ample scale.

The customary £20,000 has been added to insurance reserve, bringing this account up to the substantial figure of £360,000, and the fire and marine insurance account has been raised from £279,335 15s 6d to £366,988 13s 8d.

PROFIT AND DIVIDENDS.

After providing for the above appropriations and the £195,000 placed to general reserve and paying income-tax, directors' fees, and all charges there is a balance of £3,729,765 2s 11d. From this fall to be deducted the interim dividends paid in November amounting to £537,881 5s, leaving a balance of £3,191,883 17s 11d, and this your directors recommend should be applied in payment of the final preference dividends, amounting to £21,000, and of a final dividend of 4s per share, free of income-tax, on the ordinary shares, £1,028,700, amounting together to £1,049,700, and leaving £2,142,183 17s 11d to be carried forward, subject to the payment of excess profits duty and corporation tax, which together we estimate at something in the neighbourhood of £1,935,000.

COMPANY'S HUGE TAXATION PAYMENTS.

While on the subject of taxation it will no doubt interest you to know that in the years 1915 to 1920 the total taxation paid by the company in the shape of income-tax, excess profits duty, and corporation tax amounted to no less than £7,870,776, while in the same period the total ordinary and preference dividends paid to the shareholders have only amounted to £5,816,331, so that the National Exchequer has actually received fully £2,000,000 more from the company than the shareholders have.

In connection with the payment of the preference dividends the directors have decided to bring the three classes of preference shares into line and pay dividends on all three at the same time—namely, April 30th and October 31st. The first full half-year's dividend on the new 8 per cent. preference shares will be paid on April 30th next.

STAFF'S APPRECIATION OF PROVIDENT AND PENSION FUNDS.

Under the provisions of the provident and pension fund by which the members of the fund share in the prosperity of the company on the basis of the rate of dividend paid on the ordinary shares, you will see that the substantial sum of £141,847 18s 9d has been credited to that fund. I was aware how greatly appreciated this fund is by the staff on this side, and during the course of my tour in India and Burma, when I came into personal contact with so many of our Eastern staff, it was very deeply impressed on me how far the creation of this fund has gone to still further strengthen the very friendly and harmonious relations which have always existed between employer and employed in our company.

The increase on interest account from £285,154 8s 9d to £319,816 16s 10d is almost entirely due to the larger dividend—10 per cent., free of tax, as against 8 per cent., free of tax, for 1919—received on our holding of Anglo-Persian ordinary shares for 1920, and similarly the increase on investment account from £3,204,390 16s 9d to £4,266,963 3s 3d is practically accounted for by our increased holding in that company.

CHAIRMAN'S VISIT TO THE PROPERTIES.

I had the great pleasure and satisfaction of last winter taking the trip to India and Burma which I told you last year I intended doing. I first of all visited the company's principal agencies in India and then spent two months in Burma, and this gave me ample time to inspect the company's properties and operations and to consult with the managers and agents on the many very important points in connection with those operations, and generally on the management of the company's affairs in the East, on which personal consultation with those on the spot is so helpful and so desirable. I am not going to detain you with any detailed account of my trip, and will only say that, taken all over, what I saw thoroughly satisfied me once more as to the immense value of the company's oil lands and the high state of efficiency in which all its properties—refineries, plant, and buildings generally, and fleet are maintained—and I was more than ever impressed with the immensity and completeness of the arrangements for the production of the crude oil and its conveyance from the fields to the refineries; its refining and the transportation of the finished products to the main installations in India; and finally the sale and distribution of these products throughout the whole of India and Burma.

Owing to the war I had not been able to go East since 1913, and many changes had taken place during those eight years, but the one direction in which I saw no change was in the loyalty to the company's interests and the keenness in their work displayed by the managers, agents, and the staff throughout the entire business, and I welcome this opportunity of publicly testifying to the great value of these services to which in such a large measure the success of the company's operations is due. And again it was impressed on my mind how highly desirable it is in a corporation such as ours that, as far as possible, those at the head of affairs on this side should keep in personal touch with not only those in charge of the management on the other side, but also those responsible for the conduct of every branch of the company's business and operations there, so as to promote and encourage in every possible way that good feeling between employer and employed which goes so far to ensure the successful running of any business, and so long as I am fortunate enough to remain chairman of this great company and am given the health and opportunities to do so, it is my intention to continue to regularly pay these visits to the seat of our operations in the East.

NATIVE WORKERS AND OUTSIDE AGITATION.

Last year I ventured to say we were a very large but, on the whole, a very happy family, and the warmth and kindness of the welcome extended to me personally on every side, and all I saw of the excellent relations existing between the managers and the staff and the great majority of the workers in every branch of the business, made me feel how justified I had been in making that statement. As the outcome of the war, and in common with nearly all large employers of labour in India and Burma, we have been experiencing a certain amount of "liveliness" amongst our native workers and have had several strikes to contend with. With practically only one exception these strikes have been engineered and fostered by outside and political agitators—Gandhi, non-co-operators, and otherwise—whose main idea seems to be to stir up strife between employers and employees and clog the wheels of industry. As I have told you on more than one occasion, we do everything in our power to make our native workers comfortable and contented, and our wages for both skilled and unskilled labour have for a long time past been at least equal to the highest and in most cases higher than those paid by other employers of similar labour. We believe that the great majority of our workers are—and have been—quite satisfied with their pay and the conditions under which they live, but when a strike was declared many of them, though anxious and willing to work, were forced to join the strikers by intimidation of the most flagrant character. We have always been prepared—and still are prepared—to receive and give every consideration to any reasonable requests or complaints put forward in proper form by any of our workers.

THE REFINERIES.

Operations at our refineries during the past year were steady and results satisfactory in a further reduction in fuel consumption and increase in the volume of our more valuable products. Our refineries in Burma at present occupy three separate sites—at Dunnedaw, near Rangoon, and on that side of the river; at Syriam, some six miles down, and on the other side of the river; and at Boggyok, some two miles or so from Syriam. In the direction of concentration of management and control we are now considering a scheme to bring our refining operations all together at Syriam, and, in the process, to apply the most modern and up-to-date methods of distillation and refining there. From these proposals very considerable economies in labour, management, and fuel consumption besides improvements generally in products are anticipated.

The substantial addition, £185,470 2s 4d, to refineries account is principally due to the provision of a large amount of new gas-tight tankage for the storage of benzine and also to considerable additions to the new type of refining plant to which I referred fully last year. These gas-tight tanks are expensive to erect but amply repay the expenditure through the reduction of loss by evaporation.

The £87,273 18s 4d added to the pipe-lines account is the cost of the two additional pumping stations which I told you in 1919 we were installing with a view to materially increasing the throughput of the line and lengthening its life by operating it at a reduced pressure. These two stations came into operation in December last, and have been working quite satisfactorily. In due course, when we have our oilfields electrification power house completed, it is intended to apply electrification to our main pipe-line pumps. The £35,016 6s 11d charged to the depreciation account is the cost of relaying about 35 miles of the main pipe line which had become seriously corroded owing to the soil in that small section of the line being very heavily impregnated with alkali.

COMPANY'S TANKERS.

The company's fleet has run steadily and without any serious mishap during the year. The construction of our new 10,000-ton tanker is now making fairly satisfactory progress in view of all the circumstances of to-day's labour conditions here, and delivery is anticipated early in 1922. The bulk of the £170,801 11s 1d added to tankers, &c., account is represented by the cost of a number of the launches and river steamers which I told you last year had been put in hand, principally to replace those purchased from us by the Government for Mesopotamia. Material additions have also been made to our installations and distributing facilities in India. While I was East I had the opportunity of inspecting nearly the whole of our fleet of tankers and launches, and the very high state of efficiency in which I found them all reflects the greatest credit on our marine superintendent, Captain Currie, and all the officers and engineers of the fleet.

Progress with the electrification of the Yenangyoung Oil Field has been satisfactory in all the circumstances of delays in receipt of plant, &c., consequent on labour troubles in this country, and two of our neighbours in that field have contracted to take their requirements of current from us.

INTERESTS IN TRINIDAD.

As regards our interests in Trinidad, I regret that our friends the United British Oil Fields of Trinidad, Limited, have not yet succeeded in developing production either of a steady character or of important volume, but everything possible continues to be done to achieve these two essentials to success, and in this direction their board has recently made arrangements to place fields operations under the direct management on the spot of the technical experts associated with the producing companies of the Anglo-Saxon Petroleum Company, Limited, which company, as you know, is also interested in the United British Oil Fields of Trinidad, Limited.

As regards the market for our products in 1920, the report and accounts before you speak fully for themselves. The recent very heavy fall in petroleum values does not affect your company as regards kerosene—by far the largest marketed product of our crude oil. And in the case also of our lubricating, &c., oils, which are similarly almost entirely marketed in India, these had not advanced to anything like the levels reached in other markets, and consequently have not, at least meantime, shared in the decline in values elsewhere.

LOWER PRICES FOR PETROLS, WAX, AND CANDLES.

The decline in the market value of petrols, paraffin wax, and candles affects us as it does others. In the former case the full disposal of our production is, however, assured, and in the latter, although demand is far from strong, we see no reason to anticipate that our production will not continue to go reasonably satisfactorily into consumption. But in the case of these three products we shall require to be content with much lower values than have recently ruled—at any rate until world trade conditions become more settled, and the markets at present more or less closed to consumption again become free buyers and consumers.

Our petrols continue to go largely into consumption in India, and in due course—at least on the basis of our present production—we should market our entire output there, and so cease to be exporters of this product. In any case, what we do require to export will in less than a year from now be exported by us and sold on our own account, instead of, as at present, on a profit-sharing arrangement with buyers under contract, and these new conditions should be to the advantage of the company.

At the recent extraordinary general meetings I fully explained the reasons necessitating the raising of further capital, and as you

are all aware, the recent issue of £3,000,000 8 per cent. cumulative preference shares was a great success, and very largely over-applied for. As you are also aware, the holders of the 250,000 preference shares of £1 and the 75,000 shares of £10 each were given the opportunity of consolidating these two classes of shares and having the rate of interest on them raised from 6 to 6½ per cent., but, apparently owing to apathy, the proxies returned fell very largely short of the majority required to carry the necessary resolutions, and the directors had perforce to drop the scheme.

THE OUTLOOK.

In regard to the outlook for the future in general and the prospects for the current year in particular, I am sure that in these abnormally trying and uncertain times you will not expect me to deal with this undoubtedly difficult question in any other vein than the cautious one I have invariably adopted in the past. As I said last year, I am no pessimist as regards the future of the Burmah Oil Company—the very reverse—but when it comes to looking ahead, I always endeavour to see both sides of the picture—the unfavourable as well as the favourable—and every year it is more strongly impressed on me how impossible it is to foresee the course of events for any length of time ahead, and how foolish it is to attempt to enter into the dangerous realms of prophecy.

EFFECTS OF TERMINATION OF E.P.D.

Dealing with the current year, the one extremely favourable feature is the termination, at December 31st last, as far as we are concerned, of the excess profits duty, our liability for which for 1920 as shown in the accounts is estimated at the huge sum of £1,800,000. I have, however, been astonished to find how many people—including even men of large business experience—have jumped to the conclusion that supposing our net profits for 1921 were the same as for 1920, this whole sum would be saved to the company. As a matter of fact, it would be subject to deduction of 6s income-tax and 1s corporation profits tax, equal to £630,000, so that the net saving would be £1,170,000. Against the very large saving there will be under this heading will have to be placed the reduction in profits through the fall in the prices of petrol, paraffin wax, and candles, to which I have just referred, the severe drop in the Indian exchange, and higher working costs due principally to increased wages granted to our Indian labour. How far the one will go against the other it is impossible for me to attempt to forecast at present, but I feel that we can with every confidence look forward both to satisfactory trading results for the current year and to the future of the company for many years to come. And, fortunately, prices of materials and stores are distinctly on the downward grade, and, as I have said, we anticipate in due course considerable economies in working costs from the electrification of the oilfields and the concentration and further improvements of our refineries.

TRIBUTE TO THE LATE MR CHRYSTAL AND MR HAMILTON.

I opened my address last year with an intimation of an apology, for absence on account of illness, from Mr W. J. Chrystal, and I closed it with a reference to Mr James Hamilton's retirement, for health reasons, from the post of manager of the company which he had held for 15 years. In less than a month afterwards Mr Hamilton passed quietly away, and in April of this year Mr Chrystal was also taken after a long-drawn out and painful illness borne with wonderful patience and fortitude. I need not repeat here the tribute I last year paid to Mr Hamilton, and will content myself by again saying that after 27 years' daily association with him in connection with the affairs and management of the company no one can speak with greater knowledge than I can of the immense value of the services rendered by him. Mr Chrystal joined our board in 1911 and proved himself an ideal director, regular in attendance at all board meetings, and keenly interested in all the affairs of the company. His career—commercial, public, and private—is too well known in Glasgow to require any panegyric from me, and, speaking for myself and my co-directors, I will only say that through his death we have lost not only a valued and trusted colleague, but one whom we always felt it was a privilege to call our friend.

NEW MEMBERS OF THE BOARD.

Acting on the powers conferred on them under article 89, the directors appointed Mr Gilbert C. Whigham to fill the vacancy caused by Mr Hamilton's death, and you will be asked in due course to confirm this appointment. After serving the company for 14½ years in Rangoon Mr Whigham came to the London office at the end of 1919, and has there taken an important share in the management of the company's affairs, and the board ask you with every confidence to confirm their action in appointing him to a position which he has so worthily earned.

From the report you will have seen that to fill the vacancy caused by Mr Chrystal's death the directors recommend the election of

Mr David McCowan. Mr McCowan is so well known in the commercial and public life of Glasgow that I feel there is no necessity for me to enlarge in any way on his fitness for the position, and I am sure you will heartily and unanimously endorse your directors' choice.

I now beg to propose "that the report of the directors and audited statement of accounts, including the balance-sheet and the profit and loss account, as at December 31, 1920, presented to the meeting be received, approved, and adopted." I call on Mr Ashton to second the motion, and after it has been seconded an opportunity will be given to the shareholders to ask questions or make any comment.

Mr. H. S. Ashton : Mr Chairman, ladies, and gentlemen, I beg to second the motion.

The Chairman : Gentlemen, are there any questions anyone would like to put, or any remarks anyone would care to make? There being none, I now beg to put formally to the meeting the resolution which I have proposed and which Mr. Ashton has seconded.

The motion was carried unanimously.

THE DIVIDENDS.

The Chairman : I have now pleasure in moving that the following dividends, recommended by the directors—namely, "First, on the 6 per cent. first preference shares of £1 each, of 7 1-5th per share, equivalent to 6 per cent. per annum, from June 30th to December 31, 1920, less tax; second, on the 6 per cent. second preference shares of £10 each, 6s per share, equivalent to 6 per cent. per annum, from June 30th to December 31, 1920, less tax; third, on the ordinary shares of £1 each, 4s per share, free of tax, making, with the interim dividend, 30 per cent. for the year—be adopted, and that the same be hereby authorised to be paid on July 26, and that the balance of £2,142,183 17s 11d, subject to excess profits duty and corporation tax, estimated at £1,935,000, be carried forward." I shall ask Mr Honeyman to second the motion.

Mr O. H. Honeyman : I beg, sir, to second the motion. The motion was adopted.

ELECTION OF DIRECTORS.

The Chairman : I now beg to move that Mr Gilbert C. Whigham be re-elected a director of the company.

Mr William Robb : I beg to second.

The motion was adopted.

The Chairman : I now beg to move that Mr Robert I. Watson be re-elected a director.

Mr T. H. Gollan : I beg to second the re-election of Mr R. I. Watson.

The motion was adopted.

The Chairman : I also beg to move that Mr H. S. Ashton be re-elected a director of the company.

Mr William Auld seconded the resolution, which was adopted.

The Chairman : I beg to move that Mr David McCowan be elected a director of the company.

Mr Robert Clark seconded the motion, which was adopted.

Colonel D. S. Morton : I beg to propose the appointment of Mr J. Herbert Wilson, C.A., as auditor of the company, at the remuneration of 500 guineas. This is an increase on last year. I understand that the last increase took place in 1916. As every business man knows, like ourselves, the auditor has to pay largely increased salaries to the staff; not only so, but the work connected with the auditing of a company like this has increased, and is increasing, year by year, and I think, under the circumstances, you will agree with me that the augmentation of the remuneration is amply justified.

Mr J. B. Couper : I have much pleasure in seconding the proposal of the appointment of Mr J. Herbert Wilson, C.A., as auditor of the company. The motion was adopted.

The Chairman : That, gentlemen, is all the business, and I have to thank you very much for your attendance here to-day.

VOTE OF THANKS TO THE CHAIRMAN.

Mr R. C. Greig : I should like, just in a very few words, to ask you to accord to Sir John Cargill, our esteemed chairman, a hearty vote of thanks. By his speeches in the past he has set himself a high standard, and I venture to say the speech we have listened to to-day is more than worthy of its predecessors. We have received an interesting account as to the present position of the company, and also with regard to the future. In proposing this vote of thanks I should like also to make special reference to the visit paid to Burma by Sir John during the past year in our interest. As many of you know, travelling is still uncomfortable and subject to the post-war conditions. When he started out the reports from India of unrest were not reassuring. It is only in keeping with Sir John's *esprit de corps* and devotion to the interests of this company that he should have cast aside these

considerations and hastened to personally oversee the important developments which have taken place. He has given us a most satisfactory account of the state of the staff, and I am sure that they, on their part, will feel that his visit has inspired them. I ask you to accord Sir John Cargill a most hearty vote of thanks. This was seconded, and carried unanimously.

CHAIRMAN'S REPLY.

The Chairman : Mr Greig, ladies, and gentlemen, I have once again to thank you most heartily for the very kind reception you have given to me to-day, and Mr Greig specially for the very kind and encouraging words he has used in proposing this vote of thanks. I referred to the very kindly reception I got on all hands when I was in the East, and I again ventured to liken my 35,000 odd employees there to a happy family. I feel now that I can add to that already not inconsiderable family the very large body of shareholders, some 20,000 odd now, on this side, so that together I am at the head of what I think I might call a very large family. But I think I can say this family is so extremely well behaved that it does not cause me any real anxiety, as is evidenced by the fact that when my barber was cutting my hair two days ago he told me he had been looking for a grey hair, and he could not find one. I think that is a very excellent testimony to the behaviour of my large family. I can only say what a great pleasure it was to me to take my trip to the East, and I purpose, so long as I am given health and strength, to do so again so that I can come before you, ladies and gentlemen, with a thorough knowledge of every branch of my business and give you first-hand information of what is going on on the other side, where, after all, the real work of the business of the company has to be carried on. I thank you very much indeed.

The proceedings then terminated.

BANK OF ADELAIDE.

SATISFACTORY YEAR—INCREASED PROFIT.

On Wednesday, May 4, 1921, the fifty-fifth annual meeting of shareholders of the Bank of Adelaide was held at the head office in Adelaide. Mr Arthur Waterhouse (chairman of directors) presided.

The Chairman, in moving the adoption of the report and accounts, said : The bank has maintained a very strong position. The net profit is £104,678, as compared with £101,571 last year, an increase of £3,107 after making provision for all doubtful dependencies, and also for loss and depreciation on Government stocks, some of which we deemed it advisable to sell.

Deposits show a decrease of £395,000, which is mainly due to the repayment of Government deposits. Bills in circulation are £474,500 higher, mainly due to the issue of currency drafts instead of cable remittances and sight drafts owing to the exchange difficulty. On the asset side coin and bullion remain about the same as last year, as gold coin is not much disturbed in these days of paper currency. Australian notes are £290,000 more, owing to the inflow of money as the result of partial realisation of the harvest. Government debentures show a fall of £121,600, as the sales of stocks were greater than the purchases during the 12 months. Imperial Government Treasury bills, money at short call, and bank bills purchased, together show a fall of £1,579,000, caused by heavy drawings on London to meet our customers' engagements. Bills receivable and all other advances have increased by £1,811,000, largely owing to the brisk demand for accommodation by our customers, caused to some extent by the increased cost of their stocks. Our liquid assets, which amount to £3,303,900, represent 9s 7d in the £1, or 47.9 per cent. of the total liabilities to the public, which stand at £6,857,950. That is a very satisfactory position, the strength of which I am sure will commend itself to you.

The resolution was unanimously agreed to, and the usual formal business terminated the proceedings.

LONDON ASIATIC RUBBER AND PRODUCE COMPANY, LIMITED.

CHAIRMAN OPTIMISTIC OF THE COMPANY'S FUTURE.

The thirteenth ordinary general meeting of the London Asiatic Rubber and Produce Company, Limited, was held, on the 5th instant, in the council room of the Rubber Growers' Association, 38 Eastcheap, London, Mr H. J. Welch (chairman of the company) presiding.

Mr E. Martin, representing the secretaries (Messrs Harrison and Crosfield, Limited), having read the notice convening the meeting, and the report of the auditors,

The Chairman, in the course of his speech, said : During the year the issued capital was increased by the issue for cash of 633,516 shares, at a premium of 2s per share.

A sum of £63,351, representing the premium on these shares, was added to our reserve account, which then amounted to £98,457.

To the amount of the reserve might be added our net profit and loss carry-forward of £61,693, our claim for refund of excess profits duty £30,850, and the difference between the par value and the agreed price of 6s per share upon the shares since issued for the Tamok estate, amounting to £32,972. As we are declaring no dividend these can all be properly regarded as reserves existing on December 31st, and together make a total of approximately £224,000, equal to over £30 per planted acre.

On December 31—including the Tamok estate, but excluding Elphil estate, not then acquired—we possessed a planted area of 6,859 acres. If you deduct the net value of our liquid assets from the nominal value of our issued share capital—including the shares since issued for the Tamok estate—you will see that the net balance of the par value of our issued share capital on December 31st was equal to less than £26 per planted acre.

The net profit for the year amounted to £35,611, which, with the sum of £31,082 brought forward from last year, makes an available total of £66,693. In addition to this, the company is entitled to a refund of excess-profits duty of approximately £30,850.

Four thousand acres were in bearing last year, and the yield per acre was increased to 424 lbs, against 409 lbs the previous year. According to the latest reports from the visiting agent, all our seven estates are in good order, and everything will be done to keep them in that condition as economically as possible.

The forward contracts deliverable out of the 1921 crop amount to 116,480 lbs, at an average net price of 2s. 3½d. Of this 40,320 lbs—part of a contract taken over with the Elphil Company—has been bought back at a profit to the company of 1s 8d per lb, in order to leave us free further to restrict tapping on that estate.

RESTRICTION OF OUTPUT.

The heavy visible stocks of rubber and the further considerable and continual fall in its price during the last two or three months have led the board to the conclusion that in the interests of the company further restriction beyond 25 per cent. is advisable. They hope by these means to reduce the ultimate net cash loss to the company. The board have therefore cabled instructions for the reduction as soon as possible of the total output of the company's Malay Estates at least to 50 per cent. of the normal output, and for this reduced amount to be obtained from the areas where yields are best and cost of production cheapest.

Tapping has been stopped entirely on the Plang and Simpang Estates, and the agents have been instructed, if advisable, to cease tapping altogether on some of the other estates or divisions of estates, and to concentrate on the remainder. As any substantial saving must be made by reduction of the labour force and of the cost of European supervision, the board have given special instructions to limit the number of coolies. The board have also again emphasised upon our agents and managers that considerable further economies are essential, and that all expenditure except that absolutely necessary to preserve the estates must cease.

Amongst the advantages which will ensue from the appalling depression in the rubber industry will be the reduction of cost of production and the elimination of expenditure entered into when profits were phenomenal, but which the stress of the present times will demonstrate are not essential. Many of the economies now being made will become permanent. This will enable us, if necessary, to sell our product cheaper and so increase the demand for it, and perhaps eliminate to some extent competition from reclaimed rubbers and fillers and substitutes.

Another advantage which will probably result from our present troubles will be the stimulus afforded to new uses and development of the present uses of rubber.

Having regard to the existing crisis in the industry and the uncertain outlook, the board much regret they cannot recommend the payment of a dividend at the present time.

They consider that the most important matter at present is to ensure that this company should come through the present crisis with the smallest loss possible, and with the estates in a reasonably good condition. The financial position of the company is very strong and the directors are of opinion that the company's resources will be sufficient to carry it through the present crisis. The directors see no reason to doubt that when the selling price of rubber again shows a reasonable profit over the cost of production of the average of well-managed and favourably placed estates, we shall again enter the dividend-paying list of companies with a capital cost per acre, a financial position and a cost per pound of our product which will be inferior to few and the envy of many.

Mr M. Wilkinson seconded the resolution, and it was carried unanimously.

The retiring directors and auditors were re-elected and the proceedings terminated with a vote of thanks to the staff in the East.

HOWARD AND BULLOUGH, LIMITED.

"MORE FAVOURABLE RESULTS THAN IN PRECEDING YEAR."

INCREASED OUTPUT DESPITE STRIKES.

The twenty-seventh annual ordinary general meeting of the shareholders of Howard and Bullough, Limited, was held at Globe Works, Accrington, on Thursday, the 7th instant, at twelve o'clock noon. The chairman of the company, Sir George Bullough, Bart., presided.

The reports of the directors and auditors, and balance-sheet were taken as read.

In moving the adoption of the reports and accounts, the Chairman said: Since our last meeting our year's production has been interrupted on two occasions by coal disputes through which the country has passed; but in spite of this, by gradually putting into operation and employing our plant and staff to the fullest available extent, your directors are glad to state that the output has been increased in an appreciable degree, which has naturally led to more favourable results than was possible in the preceding year.

ALLOCATIONS.

Of the disposable balance of £158,749 your directors propose, after payment of the customary 10 per cent. dividend on the ordinary shares, and after payment of the preference dividends and the debenture interest, to place £40,000 to the dividend reserve account, which will then amount to £200,000, and to carry forward to next year's account the remaining £50,956.

You will observe that our balance-sheet shows a bank overdraft, accounted for by the large sums disbursed by us for the important extensions of our works alluded to in my previous report, and now approaching completion. Your directors did not consider it advisable, during the depressed stock markets, to convert a portion of our investments into cash; but found it more advantageous to bridge over this period with the help of an overdraft.

WISDOM OF AMICABLE ADJUSTMENT OF DISPUTES.

As to the future, I am glad to see that the wisdom of solving difficulties by amicable adjustment round the conference table is becoming more generally recognised, and the prospect of improved industrial activities and relations are therefore distinctly brighter. I now beg to move the adoption of the reports of the directors and auditors as presented in the balance-sheet.

Mr F. Scarisbrick seconded, and the resolution was carried.

Mr T. Gordon moved that a dividend be paid for the half-year ending May 31, 1921, at the rate of 6 per cent. per annum, less income-tax, on the preference shares, and a fourth quarterly dividend of 2½ per cent., less income-tax, on the ordinary shares, making, with the interim dividends already paid, 10 per cent. for the year on the ordinary shares.

Mr R. W. Bugler seconded, and the resolution was carried.

Mr H. Ross proposed the re-election of Sir George Bullough, Bart., as director of the company.

Mr S. W. Wilkinson seconded, and the resolution was agreed to.

Mr W. A. Walsh proposed the re-election of Messrs. John Adamson, Son and Co., of Manchester, as auditors of the company, on the same terms as before.

Mr W. Livesey seconded, and it was agreed to.

Mr R. W. Bugler moved a vote of thanks to the chairman and co-directors, and to the staff for their services.

Mr W. Livesey seconded.

Sir George Bullough suitably responded, and the meeting then terminated.

LIPTON, LIMITED.

RECORD FIGURES IN HOME TRADE.

The annual general meeting of the shareholders of Lipton, Limited, was held at Winchester House, Old Broad street, London, on the 5th instant, Sir Thomas J. Lipton, chairman of the company, presiding.

The Secretary having read the notice convening the meeting, the Chairman, in the course of moving the adoption of the report and accounts, said: Notwithstanding that we have still further increased our turnover, our trading has been less satisfactory than for the last few years. This is a matter of much regret, but I have no doubt most of you are aware of the very exceptional, and to a great extent unforeseen, trading circumstances that have been generally experienced, both at home and abroad. I will go fully into the causes that have contributed to our results, but before doing so I will ask Mr H. L. Peters, who has succeeded Mr Williamson Milne as deputy-chairman, to explain to you the variations that have occurred in the figures of our profit and loss account and balance-sheet.

Mr Peters, having gone through the accounts and given explanations of the various items,

The Chairman, who was received with cheers, in the course of his speech, said that, while the dividend had been maintained at the 12½ per cent. paid in the preceding three years, the profits had

been adversely affected, first by increased wages and heavier cost of carriage; secondly, by the drop in values of commodities; and, thirdly, by the severe slump in the export and foreign trade. The increased wages paid amounted to £110,000 more than last year, while the increased charges for carriage cost them £76,000 more. With regard to the fall in values, he stated that they had made no fewer than 243 reductions in prices during the year, and the loss of profit on the articles so reduced had amounted to £147,000. In reducing prices they had done their part in forcing down the cost of living. There was no doubt that this policy had won the further confidence of the public, as evidenced by the considerable expansion that had taken place, and was still continuing, in the company's home sales. Although the export trade had been for a considerable time greatly curtailed compared with a period of activity in the preceding year, he was glad to be able to report a renewal of inquiries for goods and other recent indications of a more favourable nature. Their tea and rubber estates in Ceylon, like those of the large majority of planting companies, had been worked at a loss; but in their own case there was a decided recovery already as regards tea. The three factors mentioned as adversely affecting profits cost the company £436,000, which was more than double the shrinkage in the total profits. To partly compensate for this set-back, they had transferred £50,000 from the war contingencies reserve, which was created to meet unforeseen circumstances such as he had alluded to, and they had taken credit for Excess Profits Tax recoverable.

LARGE INCREASE IN HOME FIGURES.

The most important compensation they had for the set-back was the increased trade that the company had done throughout the United Kingdom, the figures of which were considerably larger than in any previous year. There had been a considerable amount of competition, in which they had taken their share, which had tended to restrict profits, and a slightly lower rate per cent. of gross profit had been earned. With a view to strengthening their resources, they had during the year purchased additional properties, and had extended their factories. They had also opened a further number of new branches, which had shown good results. This expenditure had put them in a stronger position to carry on not only the increased trade they had already secured, but also the further expansion it was the board's determination to secure. They had no doubt whatever that when trade generally assumed a more settled state, which he trusted would not be long, they would be able to show still further progress. In this connection, it would interest the shareholders to note that the company's home trade during the past four years had shown an expansion of 178 per cent.; in other words, their trade was now two and three-quarter times as great as in 1917. Each year had shown a substantial increase on the preceding one, last year's figures being a record; and since the making up of the accounts there was still further improvement, the present rate of increase being 2½ millions a year. These figures could not fail to carry conviction as to the strength and vitality of the business, and he was quite sure that the results of the past year, in view of the exceptional circumstances with which they had had to deal, and the extremely difficult times through which they had passed—the reflection of which could be seen much more severely in many other industries—could only be regarded as satisfactory, and showed what good grounds they had to look forward with every confidence to the future.

FUTURE DEVELOPMENT.

As an instance of future development, allusion was made in the report to the purchase of £125,000 in debentures secured on a large oil refinery at a cost of £110,000. Part of the consideration for this investment was a lease for 99 years at a nominal rent of adjacent premises on the property which was suitable for conversion to a margarine factory. The board's intention was to supply the plant and machinery and carry on the manufacture of margarine under the company's own control. Since this investment was made there had been changes in the conditions of the oil refining business generally, and they had considered it expedient to defer this development until conditions were more favourable. They were continuing their policy of extending the business wherever possible and opportune. At the same time, they realised the need for caution in times like the present, and were alive to the necessity of economising where possible in view of the heavy costs of trading to-day. He stated that, after paying the dividend of 12½ per cent. for the year, there was left a balance of £30,779 to be carried forward.

A few questions having been replied to by the Deputy-Chairman, resolutions approving the report and accounts and the dividend, re-electing Mr G. J. Lemmens, Mr H. L. Peters, and Mr Bowker to the board, and reappointing the auditors, were all carried unanimously.

A cordial vote of thanks having been passed to the chairman for presiding, and to the board for its conduct of the business during the year, the proceedings terminated.

CITY DEEP, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

SATISFACTORY YEAR'S PROGRESS.

The twentieth ordinary general meeting of shareholders was held in Johannesburg on Friday, May 27, 1921, Mr J. R. Leisk (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—Before we proceed to examine the reports and accounts of our company for the year 1920 it is desirable, I think, to remind shareholders that, in making any comparison of the figures set out therein with the figures of previous years, they must not overlook the change in our capital and property accounts that has been occasioned by the acquisition, a year ago, of the City and Suburban mine, plant and equipment. As will have been seen from the annual report and accounts now before us, this transaction is reflected in the balance-sheet as at December 31st last by an increase of £121,500 on both sides of that account. It was reasonable, therefore, to expect that our profits for the past year would be greater, owing to the increased capital thus invested in our company, and also that our tonnage would show an increase, owing to the corresponding addition to our mine property. To the foregoing extent, therefore, we must discount the improvement in our 1920 results in order to obtain a true comparison with the results of the preceding year.

However, even if we make the most liberal allowance for this discount factor, the returns now before us must be regarded as exceedingly satisfactory. At £649,348 the working profit for the year shows an increase of £191,661 over the profit for the previous twelve months, while the rock crushed was 862,500 tons—an increase of 244,000 tons over the corresponding figure for 1919. It must be remembered too, that these results were achieved in spite of the dislocation at the mine occasioned, in the first place, by the native disturbances in February of last year, and, secondly, by the strike of white workers in November last.

The net profit for the year, viz., £644,184, together with the unappropriated balance of £245,471 brought forward from 1919, and a small amount in respect of dividends forfeited—in all £890,095—was carried to appropriation account and applied as follows:—Expended on capital account, £87,995; less proceeds from sale of stands, receipts under Bewaarplaats Act and value of liquid assets taken over from City and Suburban Company, £12,472, leaving a balance of £75,523; less Government taxes, £96,121; and dividends Nos. 16 and 17 of 12½ per cent. and 20 per cent. respectively, £415,250; making £586,894, leaving a balance of £303,201. Of this balance £118,940 was represented by net cash and investments, the remainder consisting of stores and materials, sundry debtors, &c., as detailed in the directors' report.

I would now invite your attention to the very important question of mine development. No doubt you will have remarked the decrease during the last few years in development footage, and the decrease at the end of 1920 in the volume and average value of the ore reserves. So long, of course, as our native force remained inadequate, any increase in development could only be secured at the expense of current mining, but our labour supply has been greatly improved by the City and Suburban absorption, and since the beginning of the current year it has been possible to do a great deal more towards maintaining our reserves. In this connection I may observe that the development footage driven for the first four months of 1921 has exceeded that for the corresponding period of 1920 by 1,459 feet, equal to an increase of 365 feet per month. It would be difficult, however, to give any useful review of the values of this most recent development, owing to the fact that the bulk of the driving has been in the footwall of the reef, and consequently very few complete reef exposures have been made. All that can be said is that these exposures indicate normal values.

You may ask why it was that, with the increased labour force available for the greater part of last year, an earlier commencement was not made with the more vigorous development programme. The answer is, that the re-organisation necessary to make a success of the absorption of the City and Suburban mine, entailed the use of a considerable amount of native labour, and delayed the diversion of the boys to development work.

In consequence of the conditions to which I have just alluded the ore mined last year from the reserves was not replaced by the ore developed. Moreover, the ore developed during 1920 was somewhat below the value of the ore mined from reserves; the City and Suburban brought some ore of lower grade into the payable reserves, and, finally, owing to increased working costs, 301,200 tons of a low value had to be eliminated from payable reserves.

THE ORE RESERVES.

As a result of all these factors the ore reserves as re-calculated at December 31, 1920, show a decrease of 318,850 tons in volume and of 0.4 dwt in value, as compared with the reserves at the commencement of that year. It should not be forgotten, however, that if working costs decrease, as it is earnestly to be hoped they will,

a large body of developed tonnage will be restored to the payable ore reserves.

Another factor that has retarded development during the past year is the fact that the winding capacity of the two incline shafts has been insufficient for effectively handling the tonnage for the mill, the rock broken in shaft sinking, and the men and material. To meet this difficulty, a second winder has been installed in No. 2 shaft, and has been running since the end of last month, while a new engine chamber has been cut at No. 1 shaft, and a new winder is at present in course of erection. When both these winders are running, it will be possible to sink the two incline shafts more rapidly, and thus accelerate the adoption of a policy of more rapid development.

Progress throughout the year in the sinking of the South Shaft was steady. A monthly average of 121 feet was maintained, notwithstanding difficulties experienced through encountering excessively hard rock; and at April 30th of this year the shaft was down 3,200 feet, leaving 1,300 feet to complete the first stage. It is anticipated that the sinking of this first stage will be completed about the end of the year. The 17th level main crosscut, which is being driven to intersect the shaft at the 4,500 feet mark, is now only 1,065 feet from the shaft.

With regard to the expenditure upon the South Shaft, the estimate is £238,500 for sinking and temporary equipment, preparation of site, &c. Of this sum, £160,821 had been expended to the end of last month, leaving a balance of £77,679 still to be spent. Later on, of course, it will be necessary to set aside a substantial sum out of profits to provide for the permanent equipment of this shaft.

As regards the general situation during the expired portion of the current year, the tonnage milled continues to increase, and the average yield is higher than last year by about 0.5 dwt. On the other hand, costs also are above the average of last year, owing very largely to the small tonnage milled in February, when the strike of white workers occurred involving a stoppage of work for nine days. Mention of the increased yield of 0.5 dwt for the last

four months leads me to repeat and emphasise how essential it is for the future of the company that a grade of ore should be mined more in keeping with the grade of the ore reserves—profits being maintained by milling a greater tonnage. The completion of the installation of the second winding engine at No. 2 incline shaft will greatly facilitate the reversion to this policy. As this shaft has had to handle most of the men and material for the mine, it has been impossible to haul through it the amount of ore that should have come from the lower section of the mine, with the result that we have had to mine a larger amount of ore from some of the richer blocks in the upper portion of the property, and thus have obtained an average yield higher than is justified.

The resolution was unanimously adopted, and the usual formal business terminated the proceedings.

RUSSO-ASIATIC CONSOLIDATED, LIMITED. IMPROVED POSITION IN RUSSIA.

The first ordinary general meeting of Russo-Asiatic Consolidated, Limited, was held, on the 6th instant, at Winchester House, London, E.C., Mr Leslie Urquhart (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Although the balance-sheet states the cash in hand at £170,785, it is perhaps not made sufficiently clear that our liquid resources amount to £892,000, for the £721,649 due from Russo-Canadian shareholders is in course of collection by fixed calls.

In some quarters surprise has been evinced that our claims against the Soviet authorities should amount to such a large figure as £56,000,000, and, in fact, doubt has been expressed as to the accuracy of that figure. These claims were filed more than three years ago, and I find that in the covering letter sent with them it was stated that the claims did not purport to include all the properties and assets, and were only indicative of the general value of the main business. I have again gone through the figures of these claims with our engineers and other experts, and find not only that

the figure of £56,000,000 is a conservative one, but that certain very important assets have been omitted entirely.

I now have to refer to the negotiations between ourselves and M. Krassin, the representative of the Russian Soviet Government in this country, which were inaugurated after discussions with and on the advice of the Board of Trade. My discussions with M. Krassin have been of a practicable, helpful, and very friendly nature. I mention this because under ordinary circumstances it would have been difficult for the representatives of two such antagonistic systems as those of Capitalism and Communism, as applied to economics, to find a common basis of understanding. Capitalism stands for right of property and economic freedom, while Communism is the absolute negation of both these principles. I quickly found, however, common ground for agreement with M. Krassin in our mutual intense desire for the resuscitation of the economic life, peace, and prosperity of Russia.

You will appreciate that our negotiations have been lengthy partly because of the difficulty of communication with Moscow, but mainly because of the large principles involved, for not only will our agreement with the Soviet authorities open the way to resumption of operations on our own properties, but it will, I hope, provide a firm basis on which foreign capital may re-enter Russia.

I may say I was only yesterday evening officially notified by M. Krassin that the Moscow Government has telegraphically agreed to the basis of the proposed agreement discussed with him. There are certain outstanding questions on which we are not in complete accord, but which, I have reason to believe, will be settled very shortly to our satisfaction. So soon as matters are definitely settled a statement will be made to our shareholders.

POSITION AT THE PROPERTIES.

In the meantime, we are organising a mission, comprising members of our staff, to proceed to the properties to investigate the conditions and prepare a programme.

The question of resumption of work on the properties after a long period of stagnation is one which may appear of great difficulty. So far as we are concerned, we can only speak from our own experience. When the Urals and Siberia were administered by the Siberian Government in 1918 and 1919, and we resumed control after the retirement of the Bolshevik forces who had been in possession for some nine months, we had no difficulty in restarting the various departments and reaching in four to five months' time a production which not only covered all operating expenses, but left a profit. This result was obtained without restarting our copper department and without any moneys being remitted from this country. The position to-day is certainly not so difficult as it was in 1918; there is no fighting front as there was then 100 miles away, and our mechanics' shops, railways, and coal mines are still in operation—on a small scale, it is true, but in a position to help us materially in starting up. Further, the majority of the members of our technical and administrative staff are on the properties, and the workmen are only too anxious to see us come back.

As to transport, which is undoubtedly a serious question in Russia, we are fortunate in having our own railways for local needs, and only require limited facilities on the State railways for the import of necessary materials and supplies and export of our high-priced metal products.

Let me repeat that our sole aim and object in endeavouring to come to an agreement with the Soviet Government for the return of our properties is the safeguarding of the interests of more than 10,000 shareholders. While we may not agree with the past policy of the Soviet Government because of the losses we have sustained as shareholders in the Russo-Asiatic Consolidated, we have no concern, as foreigners, with the politics of Russia; and I repeat with the strongest emphasis that our only desire is to see the return of prosperity to that great country, which will bring benefit to the Russian people and to us as shareholders in this country.

The report was agreed to unanimously, and the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

CHANNEL TUNNEL COMPANY, LIMITED. EXPERIMENTS WITH NEW BORING MACHINE.

Presiding at the annual meeting of the members of the Channel Tunnel Company, Limited, held on the 4th instant, at the Cannon Street Hotel, London, Baron Emile B. d'Erlanger, in moving the adoption of the report and accounts, said that the accounts in the coming year would show an appreciable difference, because it was not their intention to stand idle, and they had taken advantage of certain communications made to them to construct a machine which, if ever they got permission, would greatly expedite the boring of the tunnel. They had spent some £6,000 on the construction of the machine, and the trials so far made, though of an experimental character, had proved quite satisfactory.

They intended a little later on to move that machine to the cliffs of Dover and to make experiments with it on the material

with which they would have to deal when the construction of the tunnel actually took place. Should it prove satisfactory they might use it for contracts, and in that way seek to recoup themselves for the expenditure incurred upon it.

In the matter of obtaining the sanction of Parliament to the construction of the tunnel little progress had been made. Notwithstanding the continued efforts of the members of the Committee for the Channel Tunnel in the House of Commons, and especially of their chairman, Sir Arthur Fell, they had not yet received any intimation that the Government was prepared to entertain the question seriously for the present. What the world was most in need of was peace, and until that peace was established on a more solid basis he was afraid that permission to make the tunnel would be more or less long deferred. He moved the adoption of the report and accounts.

Mr C. Sheath seconded the resolution.

Sir Robert Perks suggested that the proposed experiment with the boring machine should be carried out as part of the trial heading, or of the permanent tunnel, thereby securing to the company a preferential right to construct the tunnel. He further remarked that the South-Eastern Railway and Northern of France Railway might reasonably be expected to encourage the preliminary work indicated in view of the threatened diversion of traffic owing to the construction of the port of Richborough in view of the large sums that the French Government was spending on deepening the channel up the Seine to Paris, which would increase very materially the already huge traffic conveyed by water from this country to Paris.

The motion was carried unanimously.

SIAMESE TIN SYNDICATE, LIMITED. COMPANY'S STRONG POSITION.

The fourteenth ordinary general meeting of the Siamese Tin Syndicate, Limited, was held on the 5th inst., at Winchester House, London, Mr William H. P. Stevens (the chairman) presiding.

The secretary (Mr Charles A. Underwood, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of moving the adoption of the report and accounts, said: Out of the profits of the year 1920 we actually distributed in dividends 30 per cent., compared with the 25 per cent. of the previous year, and the net profits were sufficient to have allowed of the payment of a final dividend of 5 per cent., making 35 per cent. for the year, had we not thought it more prudent, in view of the present price of tin and the dislocation of trade and commerce generally, to conserve our cash position. With the 40,000 fully-paid shares of the Bangrin Tin Dredging Company, Limited, which under the heading Investments at Cost, figures for the first time in the balance-sheet, we have the whole consideration that we received for the sale of that property intact, after paying the 30 per cent. dividend. The benefit of the outlay on equipment made during the year is reflected in the very satisfactory performances of all three dredges during the past year. With tin at its present price numbers of mines cannot afford to produce, and it is inevitable that the resumption of the industrial demand will be followed by a rise in the market price of tin. We have got the tin. We can produce at a profit with tin at a price at which many other mines would starve, and the efficiency of the dredges to-day is greater than it has ever been since they were erected.

And Ngow is not the only property, as it has been in the past, from which we may expect returns in the future. The dredge that is to work the Bangrin property is nearing completion, and, it is hoped, will be erected and operating early next year. The shares that we hold in the Bangrin Tin Dredging Company, Limited, will earn us dividends as soon as the dredge can be got to work on that estate. The sale of the Ratroot property to the Australian Company, of which I told you in my speech last year, is on the eve of completion. If Merah and Bandon have been disappointing, the other properties that are ripe for development give promise of prosperity for the Siamese Tin Syndicate for many years to come.

The resolution was carried unanimously, and a hearty vote of thanks having been accorded to the chairman, directors, and the staff, both at home and abroad, the meeting terminated.

HOVIS, LIMITED. CLAIMS ON MINISTRY OF FOOD.

The ordinary general meeting of Hovis, Limited, was held, on the 6th instant, at the Caxton Hall, Caxton street, Westminster, London, Mr J. Browne-Martin (chairman of the company) presiding.

The secretary (Mr A. E. Cressall, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

THE SOUTH AMERICAN BANKS.

This Map indicates the points at which
THE ANGLO-SOUTH AMERICAN BANK, LTD.,
and its affiliated Institutions,
THE BRITISH BANK OF SOUTH AMERICA, LTD.,
and **THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.,**
are established.

• BRANCHES OF THE ANGLO-SOUTH AMERICAN BANK, LTD.
• BRANCHES OF THE BRITISH BANK OF SOUTH AMERICA LTD.
• BRANCHES OF THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

The Chairman, in moving the adoption of the report, said: We have not yet settled with the authority that has taken over the Ministry of Food the accounts of the company either for the year ended March 31, 1920, or the year ended March 31, 1921. There is no doubt that the control of the milling industry was greatly for the benefit of the public in general at the time in which control was established; on the other hand, the milling industry was placed at a disadvantage compared with other businesses.

Amongst other restrictions this company suffered was one restricting the company's advertising, and we look to the Ministry of Food, who have reaped the benefit of our previous advertising, to see that at any rate we do not suffer by the control placed upon our industry in an inequitable way. I may, however, tell you that in consideration of the millers accepting decontrol at March 31st last certain payments were made to them. This amount in the case of the Hovis Company was about £12,000, and was in respect to possible loss which might be sustained through taking over the stocks of wheat and flour at the prices which ruled at March 31st last. This sum of money, it was agreed, should be free from any taxation whatsoever, and will be placed to reserve.

The directors think it advisable to recommend a dividend at the rate of 8 per cent. per annum, which is the same dividend as paid last year, and also to defer the consideration of capitalisation of certain of the company's reserves to be distributed amongst the shareholders. This step will, of course, meet with the full approval of the shareholders, as it has always been the policy of this company to adopt a conservative attitude in the matter of its finances, but the directors feel that it is due to the shareholders to make this statement in view of the issue of fresh capital to the company in November last. That issue was made for the purpose of purchasing the share capital of an old-established mill—namely, that owned by Marriage, Neave and Co., at the Albert Flour Mills, Battersea. That investment has so far turned out even more satisfactory than the directors anticipated. I also wish to refer to a further investment we made in March last of two small mills in Newbury, which, added to the means we have already at our disposal, will provide us with an equipment to ensure steady-going and satisfactory results to the company.

The dividend of 8 per cent. was approved, and the usual formal business having been transacted, the meeting terminated with a vote of thanks to the chairman and board.

SPIERS AND POND, LIMITED. SATISFACTORY RESULTS.

The thirty-seventh ordinary general meeting of Spiers and Pond, Limited, was held on the 6th instant, at Cannon street Hotel, London, Sir J. S. Harwood Banner, M.P., the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, and dividend of 12½ per cent., said: The share capital remains unchanged at £692,829. Debenture stock, you will be glad to observe, shows a reduction in the year of £13,834, leaving an amount outstanding of £455,187. While a proportion of the debentures redeemed have been paid off out of the proceeds of sales of property, no less than £6,740 have been redeemed by the operation of the sinking fund, which came into force for the first time in the period covered by these accounts. If you will just glance at the profit and loss account for a moment you will see that we have debited the revenue this year with £4,815, this being the amount available for redemption under the sinking fund set up by the trust deed. I need hardly say that to the extent debentures are so redeemed out of our profits we are in effect creating an additional reserve account, and in comparing the accounts with last year you will no doubt bear this fact in mind. The general reserve account stands at £60,000, as compared with £30,000 a year ago, and if you approve the recommendations we are to submit to you to-day this reserve will stand in the next balance-sheet at £80,000. If to this you add the £10,000 of taxation reserve which was created last year, and which remains intact, we have in these two reserve items a fund of £90,000, which, I think you will agree, is not an unsatisfactory figure to have attained in the three years since the company was reorganised and your present board came into office.

Now referring to the profit and loss account, the profit on trading to March 31st, totalled £128,364, as compared with £144,755. We have a net profit available for distribution of £104,863 as compared with £124,946 last year—a reduction of, say, £20,000, of which £4,800 is accounted for by the redemption fund. With the amount we brought forward from last year, viz., £15,651, we have available £120,515. We propose to carry £20,000 to reserve account, raising this to £80,000; and to allocate to the staff provident fund £2,000; leaving us after payment of the directors' additional remuneration with the sum of £22,515 to carry forward to next year, or some £7,000 more than we brought into the account.

The report and accounts were unanimously adopted, and the usual formal business terminated the proceedings.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £55,000,000 in three months' Treasury Bills, dated from Monday to Saturday, July 11-July 16th, were opened on July 8, 1921, and the total amount applied for was £117,220,000. Tenders for Monday to Friday bills at £98 13s 9d will receive about 93 per cent. and above in full, and for Saturday bills at £98 14s 1d and above in full. The average rate of discount was £5 3s 6.64d. The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition'l Bills.	Tenders at Rates below receive.
	£	£	£ s d		
June 17 (3months)	40,000,000	82,670,000	5 10 1.06	5½	£98 12s 2d (Monday to Friday bills) about 84%, above in full, and for Saturday bills at £98 12s 6d above in full.
June 24 (3months)	55,000,000	96,485,000	5 6 8.89	5	£98 12s 10d (Monday to Friday bills) about 27½% above in full, and for Saturday bills at £98 13s 2d above in full.
July 1 (3months)	60,000,000	77,540,000	5 7 3.34	5	£98 12s 7d (Monday to Friday bills) about 52½% above in full, and for Saturday bills at £98 12s 11d above in full.
July 8 (3months)	55,000,000	117,220,000	5 3 6.64	4½	£98 13s 9d (Monday to Friday bills), about 93%, above in full, and for Saturday bills at £98 14s 1d, and above in full.

The amount to be offered next week will be £60,000,000.

A POLICY IN THE SCOTTISH PROVIDENT INSTITUTION

owing to the very MODERATE RATE OF PREMIUM, is the ideal method of providing for

DEATH DUTIES OR DEPRECIATION ON INVESTMENTS.

particularly in view of the Abatement of Income Tax allowed in respect of PREMIUMS PAID.

Example: Age 40 next Birthday.

The Annual Premium, limited to 25 payments, to assure £2,500, payable at death, to provide Estate Duty of £82 7 11 that amount would be 12 7 2
Less rebate of Income Tax (at 3s. per £) 12 7 2

Making Net Annual Outlay £70 0 9

MAXIMUM Amount of Premiums Payable, £1,751

MINIMUM Sum Assured Payable, £2,500

Head Office: 6, St. Andrew Square, Edinburgh.

LONDON: 3, Lombard Street, E.C.3.

WEST END: 17, Pall Mall, S.W.1.

Accumulated Funds £16,500,000.

British India	United States
British South Africa ..	France
Straits Settlements	Netherlands
Total values of imports of gold	Total declared value of exports registered in the week ..

Messrs Samuel Montagu and Co. write, on July 7th, as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,552,890, as compared with £126,551,350 last week. A fair amount of gold came on offer, and was taken for New York. New York reports the arrival of gold value 50,849,000 and \$3,400,000 from France and London respectively.

SILVER.

The market has been more active during the week, with China the dominant factor. Inquiry from this quarter, in conjunction with a continued scarcity of supplies, was the cause of sharp advances in the quotations. On the 5th instant the price rose 1d for spot and 1/2d for forward delivery. The

price for cash thus attained—viz., 36 1/2d—was the highest since February 9th last, and that for forward—36 1/2d—since January 29th last. The rise, however, proved somewhat overdone, as yesterday saw a decline of 1/2d and 1/2d for cash and forward respectively. While on the whole there has been more business, it seemed scarcely on a scale to justify the wide fluctuations. We have been informed, under date June 23rd, that the production of silver in the United States has fallen off, and that the stocks in New York have been considerably reduced, with the result that offerings there have been limited. Reverting to the question of the German silver, latest advices from New York appear to indicate that the matter of arranging advances on the security of silver presents more difficulties than was first anticipated. It was announced on Friday that the Banque Industrielle de Chine had suspended payment. This institution was an important operator in silver in all markets. It is understood that their position in this country has already been liquidated. News from India as to the monsoon was to the effect that it commenced rather patchily. A more recent report announces an improvement on the West Coast of the Peninsula. Nevertheless, it would appear from latest advices very doubtful as to whether expectations in this connection will be realised. The monthly balance of Indian trade for May shows a marked improvement in favour of that country—namely, minus 200 lacs, as compared with 685 for April. Since June, 1920, the balance has been adverse—to the average extent of 692 lacs per month. The worst month was November, 1920, with a minus balance of 1,107 lacs. An early return to normal conditions of trade is extremely desirable for the Indian Empire, and anything which might assist toward that end would be specially welcome at the present time. The Indian Empire possesses an abundance of bamboos and savannah grasses capable of being transformed into paper pulp. An official inquiry has been made recently as to how an industry derived from this material could be developed, which would obviate the import of paper pulp, and also build up a profitable export trade with other countries. Paper plays such an important and increasing part in the world's activities that success would add considerably to the assets of the Indian Empire. The potentialities of such a trade are so great that it might well become a significant factor in the exchange, as well as in the internal prosperity of India. Recent labour troubles in Australia have caused a great shrinkage in its production of metals, as will be seen from the following statistics (in fine ounces):—

	1918.	1919.	1920.
Refined silver recovered by Australian smelters, &c.	9,736,757	6,534,888	562,651
Refined silver recovered by Australian Mints	183,705	*150,000	*150,000

The coinage during the week ending 30th ultimo amounted to 13 lacs of rupees. The stock in Shanghai on the 4th instant consisted of about 36,700,000 ounces in sycee, 27,000,000 dollars, and 420 bars of silver, as compared with about 35,750,000 ounces in sycee, 27,000,000 dollars, and 420 bars of silver on the 25th ultimo. The Shanghai exchange is quoted at 3s 6 1/2d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

† Tax free. (b) Three years.

£9 to £10, and Chinese horse beans £10 to £10 10s per ton ex store. Peas firmer, with a good demand. English Duns 60s to 67s. Maples 80s to 95s per 504 lbs. Australian blue 18s to 20s. Japanese marrowfat 32s to 33s ex store, Chinese white July-September sold 14s 3d c.i.f. per cwt. Offals firm. Middlings £11 to £11 10s. Plate Pollards ex ship £8 15s to £9 per ton. Lentils quiet. No. 1 split 30s, and Egyptian 34s per 100 lbs. Oatmeal generally quiet, and prices unaltered on the week. Homeward freight markets generally quiet, but rates steady, as owners show no disposition to press tonnage. Montreal to U.K./Antwerp/Rotterdam prompt done at 5s 10½d one and 6s 1½d qr two cents discharging ports. Gulf to Rotterdam/Hamburg quoted 27½ cents per 100 lbs, while 8s qr was paid to West Italy prompt, and 7s 9d also 7s 7½d second half August. The River Plate section displayed a firmer tendency, especially for forward loading, and there is a strong inquiry for August tonnage. Drought conditions in Central Europe have occasioned an improved demand for feeding stuffs, which is reflected in the freight markets. Steamers were taken for heavy grain spot up-river loading at 45s, and August 42s 6d, while 48s 0d was established for linseed cargoes from Santa Fé to U.K./Continent July. North Pacific rates at 56s 3d ton U.K. India quiet. Bombay-Karachi 25s scale basis and 27s 6d on dead weight. Burma rice paid 37s 6d to Germany, while 50s is the nearest indicated for similar cargoes from Saigon, with Dalny wheat and/or beans 50s to 52s 6d U.K./Continent. Australia paid 63s 9d July-August steamer, and 50s quoted for sailing vessels, home. Danube grain in fair request, and 20s 9d paid prompt; 28s 3d to 27s 9d July to U.K./Continent. Other markets without new feature.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated July 7th, is as follows:—Pig-iron: Resumption of work is proceeding slowly as blast furnace works have their coke supplies to produce before starting. It is expected that next week will see some furnaces in operation. Foundry pig-iron will be scarce for some time to come,

as the lower-grades of iron only can be produced until the furnaces get into regular working order. The current quotation of No. 3 Cleveland G.M.B. is 135s per ton, and for East Coast mixed numbers hematite the price is 160s per ton, for home consumption. Manufactured iron and steel: Some of our steel works will be working on Monday next. Meanwhile, steel prices have been reduced to:—Steel ship plates, home, £15; steel ship angles, home, £14 10s; iron bars, home, £16; steel rails, home, £14 net. Iron ore: The market is still dead. Works have good stocks to start on and are not anxious about buying yet.

Our Sheffield correspondent writes:—One effect here of the settlement of the coal dispute is a marked increase in the number of inquiries for finished steel material of many kinds, and it is expected that a proportion of these will result in business. A few of the works which were closed for want of coal have restarted in part, and there will be a more general resumption next week. The majority of the steel makers, however, have no appreciable weight of orders on their books. So far as they are concerned, the depression is as acute as ever, nor are there any indications of a revival of demand for raw steel of the cheaper class. Everything points to a continuation of idle plants and part-time working so far as the large part of Sheffield's industries is concerned. The news that coal prices are to go up has produced a feeling of discouragement among the local optimists. Advancing local rates and increased insurance charges also mean an addition to production costs, which must tell against the cheapening of prices, which is an indispensable condition to the restoration of normal trade. A few Russian orders have been booked on suitable terms as regards payment. There is a fair demand for steel forgings, castings, files, saws, edgetools and farm tools. Future prices of steel are under consideration. Crucible steel, and tool steel in particular, remains stagnant, the overseas demand being quite negligible. Work at most pits was resumed on Monday, but outputs have been small so far, and it is not expected that they will be normal for some weeks. Collieries are congested with orders. The coke trade is likely to be quiet for the present, as it is unlikely that many iron furnaces will be put into blast for some time to come. Some collieries are advising increased prices of coal.

Our Glasgow correspondent (writing on Thursday) says:—The settlement of the coal trade dispute has this week imparted a rather better tone to iron and steel connections, has led to more buying of material here and there, and the expression of more cheerful hopes as to the future. At the same time, there is no getting over the fact that there is a spirit of hesitancy abroad as to entrance on commitments running into forward periods. For it is feared that the spirit of unrest in the labour world has not been quite laid—a condition that makes for caution if not restriction in business. Then, while satisfaction obtains at the production of coal having been revived, dissatisfaction is expressed at the course which prices have already taken, and threaten to follow. As a body, consumers maintain that there can be no appreciable and sustained revival in trade unless quotations for fuel are sensibly reduced, meaning to a point substantially under what ruled prior to the strike. Instead, this week Scotch coal-owners have issued circulars fixing their prices at from 7s 6d to 15s a ton over their pre-strike charges. At the new level—at the old (March) one as well—steel, iron, ship, and engineering firms advise that they cannot pull along; hence the difficulty in the current position that is cropping up. In all the leading industrial relations coal appears to be the one block to a partial, at least, trade rally, and those industrially concerned are resolved on once more closing down rather than face the demands made upon them. This is a most unhappy conjuncture—just when there was some promise of an improvement. It was on the cards that several structural concerns had arranged to keep machinery running full throughout the coming holidays—from the middle to the end of the month; that two or three steel works in the middle ward of Lanarkshire were about to restart their rolling-mills, and that generally the recent stagnation was to be broken-in upon. Now the whole prospect seems likely to remain as it was, and is—filled up with idleness. Steelmakers have just booked orders for several thousand tons of ship plates; a good inquiry exists for sectional steel, steel tubes, and for wire ropes (which is ahead of the output), for galvanised sheets, and all kinds of locomotive-building material. Scotch pig-iron makers continue to experience an eager demand for foundry sorts, of which there is only a small tonnage in sight, and none being produced. For No. 1 £8 15s f.o.t. at the works is named, and £8 10s for No. 3. Scotch hematite sluggish at £9 a ton. Large quantities of basic steel are being offered from Belgium and Germany round about (and under) £6 a ton. This iron is going, it seems, into ship plates, and is being mixed with Scotch for special qualities and purposes. Reverting to the coal position, it may be mentioned that at a great many collieries no start has yet been made, because of the bad state of the roads, floodings, and accumulations of gas, &c. To-day house prices are fully 50s at the pit-head; splint, 60s; dross, 50s.

THE COTTON TRADE.

MANCHESTER, July 7.

The market has continued to present a more active appearance. Operations have been somewhat irregular, and in some quarters it is asserted that the recent improvement in the turnover is being exaggerated. The fact remains, however, that certain leading shippers of cloth to India continue to purchase speculatively on a

THE CHATWOOD SAFE

SINCE 1858.

THE NIGHT WATCHMAN.

IN olden times the aristocracy, the wealthy traders and others possessing large quantities of cash, jewellery, or negotiable securities, found the sound of the night watchman's step and his cheery "all's well" very welcome during the small hours; for in those days

there was no CHATWOOD SAFE, and owners of treasure often slept uneasy in their beds—robberies, frequently accompanied by violence, being of common occurrence.

Compare these conditions with those prevailing to-day: The Banker or Merchant who entrusts his valuables to THE CHATWOOD SAFE may leave his premises unguarded, in the contented confidence that whether Fire, collapse of his building, or a desperate attack by scientific Burglars takes place in his absence, this triumph of steel and ingenuity affords him the highest degree of security against every risk that it is possible to obtain.

This Book is Free—

Send to-day for a complimentary copy of The Chatwood Safe Book. Over 40 pages, profusely illustrated, containing fullest particulars. Gratis upon request.

free scale. Makers of light fabrics, chiefly in Blackburn and districts, have now decidedly more work to go on with. Operations for China have been restricted, although bids are becoming more numerous. Quite a healthy turnover has taken place for several minor outlets. Prices tend to stiffen, as manufacturers when they have sold refuse to accept further contracts at old rates. Business has been on healthier lines in American and Egyptian yarns, and spinners have obtained support as a result of further buying in descriptions suitable for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says: Although there is no great activity in any department of the wool textile industry, there is certainly more doing than for many weeks past, and the tone, on the whole, is good. More machinery is being brought into operation as coal becomes available, and although mills are mainly working off arrears which accumulated during the enforced period of idleness, the increased consumption should ultimately have a good effect on the general position. Prices generally are steady, but most firms are again waiting for the London sales to reveal the strength or otherwise of the raw material market. A sale of colonial wool will be held at Hull to-morrow, and on Monday the auctions will be resumed in Coleman street Wool Exchange, the offerings for the series amounting to 170,000 bales. Some traders think that values will be easier, but everything depends on the nature of the Continental competition. In the meantime Bradford quotations for tops are mostly unchanged, and there is just a moderate amount of business passing, with warp 64's tops in the neighbourhood of 3s 4d per lb. Yarn business on home account is quiet, but rather more is being done in the export section, particularly with Germany in single and twofold crossbreds, while a fair amount is going through in mohair yarns. Prices are steady, though a certain amount of undercutting is still met with here and there. Heavy stocks of plain goods are being held by some firms, and low prices are being accepted in order to clear. The financial position remains acute, and meetings of creditors are of frequent occurrence. At the same time, there are signs of some improvement, especially in dress goods, and more interest is being shown in proofed union gabardines. A fair amount of business is also being booked for Japan in spring goods for October-November delivery.

COLONIAL WOOL.

Attention is being turned to Coleman street Wool Exchange, where another series of sales will begin on Monday. The previously announced arrangement that the auctions would continue three weeks is to be carried out, and 170,000 bales of wool will be catalogued. It is to be hoped that the trade will be able to absorb this quantity without values suffering a serious relapse. There are very few indeed who expect that last sales closing values will be fully maintained. The knowledge that the auctions will last three weeks will make many buyers go slow at the beginning, in the hope of picking up at lower prices. It is understood that both importers and the B.A.W.R.A. are prepared to meet the market, but that they will not sell any wool below the reserves fixed last April. It is most desirable that this policy should be strictly adhered to, for it is not the price of wool which is preventing trade revival, but the slowness of the demand for the fully manufactured article. If retailers had acted in line with manufacturers by reducing their prices to a similar extent, a larger volume of summer trade in textiles would have been done. There is reason for saying that wholesale and retail clothiers who have laid themselves out to meet the public purse by reducing their prices in harmony with present manufacturing costs, have done a good volume of trade.

There should be a very good offering of wool in London, and as far as can be ascertained both merinos and crossbreds will be well represented. Some surprise has been expressed at no German representatives being present at the recent Antwerp sale, but for all that the auctions went well, although slightly lower values were in evidence. The B.A.W.R.A. acted wisely in meeting the market, a policy which should be repeated at the forthcoming sales. Shearing becomes general in Australia this month, and it will be just as well for the association to get rid of all they can before the advent of another new clip.

Trade in consuming centres is somewhat better, and the manufacturing position generally presents a more hopeful appearance. The settlement of the coal strike has enabled many mills to start running again, and quite a number are running four full days per week, whilst in several cases full time (48 hours) will be worked for the next month or two. This certainly indicates a larger consumption, though in many cases longer hours have been introduced to catch up with arrears. This week a reduction in the wages of textile operatives comes into force. Carbonisers' charges are reduced as from July 1st, and a reduction in combing charges is also expected shortly. These, of course, all contribute to a modification of working charges—a very desirable end. It is understood that the reduction in combing charges will be much less than is considered desirable by the trade, and some concern is also felt respecting the price of coal. Fabulous prices have been paid during the recent weeks of scarcity, and it will be some little time before supplies become adequate to the demand. Meanwhile it is considered that fuel should become available at considerably more reasonable prices. Everybody is anxious to see a permanent in-

EMPLOYERS' LIABILITY INSURANCE.

You may be paying too much. You may be covering too little.

In the former case we may effect a very considerable saving on your Premiums under our system of Employers' Liability Insurance. Or it may be that your risk is one for which we can quote you special terms, or for which we can suggest precautions that may materially reduce your Insurance Premiums. We invite your inquiries. crease in the number of hours worked in the mills, and providing this can be brought about there will be no difficulty in clearing the wool offered in London.

LONDON COLONIAL WOOL SALES (July (V) Series, 1921).

The following are the approximate quantities of B.A.W.R.A. wool to be offered in London during the "V" Series, commencing on July 11th:—Australian—Greasy merino combing, 38,500 bales; do lambs, 800; do carbonising, 1,700; do carbonising lambs, 200. Scoured merino combing, 4,000; do clothing, 4,000; do lambs, 200; do carbonising, 1,000. Greasy crossbred combing, 9,400; do lambs, 1,000; do carbonising lambs, 600. Scoured crossbred combing, 1,000; do clothing, 1,200; do lambs, 700; do carbonising, 200. New Zealand—Greasy crossbred, 10,400; scoured do, 5,200; slipe do, 4,400; re-conditioned wool "R.M.D.," 500—85,000 bales. In addition to the above 85,000 bales of privately-owned wool will be offered during the series, say, 36,000 bales Australian, 39,000 bales New Zealand, 2,000 bales Cape, and 8,000 bales Punta Arenas.

BELFAST LINEN TRADE.

Flax.—In consequence of the small quantities of flax offered in the local markets, prices were well maintained this week. The improved demand for yarns may cause prices to go higher, as farmers are not disposed to offer their flax for sale at present prices. On the Continent there is no change to report, as very little flax is being marketed. There will be supplies of fresh retted flaxes in the course of a few weeks, which will increase the quantity of flax offered for sale, and may improve selection.

Yarns.—A better feeling is quite observable in the trade. Orders are becoming more numerous, and in some cases for fair quantities. The last monthly returns show stocks somewhat reduced, whilst yarns invoiced and delivered are considerably in excess of production.

Weavers.—Improvement continues. More business has been done, and the tone is much better. The drastic curtailment in production must sooner or later make itself felt in healthier conditions. Factories generally are closing down for the whole of next week, and in some cases in addition for the week following.

Merchants.—There are more enquiries for all classes of goods from the export markets, and while the volume of business actually placed is small, there is a distinctly better feeling. The home trade is quiet, and little can be expected till after the August holidays, and the amount of trade to be done will depend largely on the success of the midsummer sales.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

Rather more business has been done in linseed oil, though demand is intermittent. There has on balance been an advance of about 20s per ton, and the market appears to have a firm undertone, with prices still in buyers' favour. More interest has been evinced in forward positions, the last four months of the year having a slight premium of 10s over spot and near oil. Cotton oils have advanced strongly on scarcity of crude, which is about 40s dearer on the week, with refined 40s to 50s advance. Comparatively little cotton oil is being produced now, supplies of seed being only moderate, and the cake residue more or less a drug in the market. A steady trade is reported in soya bean oil at about unchanged prices. Rape oil is, however, quiet, and quotations purely nominal. Some large contracts for palm kernel oil have been placed with Hull crushers. A fair trade has been done in ground-nut oil at advancing rates. On the whole, however, while the oil market is steady and values rather higher, there is no great amount of activity. The outlook for the immediate future depends to a certain extent upon the speed with which industrial equilibrium is restored.

Plate linseed, which experienced a setback last week, when as low as £18 was accepted for seed on passage, has made a good recovery, and at Hull up to £19 has been freely paid for La Plata about being shipped, this figure about representing current values of spot and forward. Egyptian cottonseed has again been a firm market, with more inquiry and some business done at slightly more money. Bombay cotton is, if anything, inclined lower. After a period of idleness, some business has been done from Hull in Manchurian soya beans at £13 to £13 5s for July-August loading, and for Brazilian castor seed £13 10s has been paid for July.

The shipments of linseed from the Argentine from January 1st to the end of June are returned at 613,900 tons, against 590,400 tons a year ago, and of Indian linseed 23,275 tons. The shipments to the U.K. round 252,000 tons, to the Continent 275,000 tons, and to the United States 113,000 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(FROM OUR OWN CORRESPONDENT.)

Market hides were again firmer in Bermondsey on Thursday, best ox making from 6½d to 9½d per lb, an advance of ½d to ¾d on last prices. Cows were steady, one class dropping an ½d. Calf showed little alteration, light being a shade weaker. Lambs sold from 1s 3d to 5s 2d. Supplies coming to markets are small, and the demand is keen for best grades, as tanners are now working in more hides in view of the improved outlook. Trade in imported hides is moderate, sales of Leibig Colons being reported at 10½ c.i.f. Liverpool. Contrary to conditions here, the American market is cabled as nominal, with best heavy packers now offered at 13 cents, and Bogota drys at 12 cents.

Trade in sole leather remains steady, although business is not evenly distributed. Tanners are very firm on prices, especially as they know stocks in warehouses of factors and merchants are low. Consumers are, however, very conservative, and buy still for immediate needs only. Best pinned bellies are now scarce, and prices are advancing as the demand is good. Chrome upper leathers are selling fairly well, and prices are firm to an advance. Semi-chrome is not much wanted in view of the supply of real chrome, and dressers are hard put to find work for their limited number of hands. Chrome sides are dearer, and as high as 1s 4d per foot is now being asked. Brown glacé is in short supply, but little coming in from overseas.

Shoe manufacturers are a shade busier, but orders are trickling in for winter boots and shoes. Supplies of heavy boots in retailers' hands are very low, and good business is expected in this direction, once wages become circulated in the late disturbed districts.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 87s 6d to 93s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.

"Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 8.

Improved trading conditions were in force during the week in several directions, manufacturers interesting themselves more freely in raw materials, and on balance there was decidedly more confidence expressed.

SUGAR.—A very firm market resulted this week, particularly for refined at dearer prices. Tate's cubes sold, 60s 9d to 61s 9d; granulated 57s to 57s 6d; castor, 61s to 61s 6d; pieces, 47s to 51s. Lyle's granulated, 57s to 57s 3d; yellow crystals, 51s 6d. American granulated, spot, sold, 56s 9d to 57s, as to quality; ditto, July, steamer, 28s, c.f. and i. White Java, August-September, 19s 6d, c.f. and i. terms. White Brazilian, spot, sold, 53s; crystallised West India, from 45s to 49s 6d, as to sample. Dutch granulated, prompt, quoted 27s 6d to 28s, f.o.b. terms; and Czecho-Slovakian granulated, 27s 6d, f.o.b., Hamburg. Term market dearer, and December sold, 17s. Later the market reacted, and December sold, 15s 1½d, but recovered to 15s 10½d.

COFFEE.—Moderate quantities were offered in auction, and all the finer qualities received fair support at about steady rates, but the market for common remained extremely dull. Good bold Mysore, sold, 108s 6d; good bold, Vera Paz, 125s. Future delivery market quiet, but steady. March, sold, 42s.

COCOA.—Market steadier, with fair transactions at full values. Fine Grenada, 56s. Butter, 2s 1d per lb.

TEA.—Indian auctions this week totalled 53,500 packages. Good competition predominated for all good to fine liquoring parcels, but common and medium moved off slowly at irregular rates. 22,700 packages Ceylon offered, received but quiet attention, and rates tended against the seller, especially for the lower grades.

RICE.—Market firm, with a sustained demand for all descriptions, also broken. Rangoon, two stars, spot, sold, 18s 3d to 19s 3d; ditto, afloat and loading, 17s 3d to 18s 7½d, c.f. and i., Hamburg. Saigon, No. 1, afloat, to London, 16s to 18s. No. 1 garden Siam, due steamer, Hamburg, 16s 10½d to 18s 6d. Burma No. 1 a broken, June-July, sold, 14s 3d to 15s; Hamburg, No. 2 A, 13s 9d to 14s 6d. Siam C. 1, broken, June-July, 13s 6d to 14s 6d; and C. 3, 13s 3d to 14s, c.f. and i., Hamburg. Rangoon bran firm at 8s, ex ship, to arrive. Beans and peas very firm. Rangoon hand-picked beans, on spot, sold, 10s, and August-September, 11s 6d. Japanese peas, spot, sold, 34s 6d; crop 1920, July-August, 29s; and crop 1919, 28s.

SPICE.—Pepper market steady with a moderate amount of business effected both with regard to spot and forward. Fair black Singapore, spot, sold, 4½d; ditto July-September, steamer, 4½d; Aleppo, spot, sold, 4½d; Tellicherry, 4½d; white Singapore, spot, 9½d; Muntok

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899)

ditto, 93d; ditto July-September, steamer, 93d. Zanzibar cloves, spot, sold, 83d to 9d, as to quality; pimento, spot, done 24d; flake tapioca, fair quality, spot, changed hands at 14d all per lb. Fair Penang seed pearl, spot, sold, 21s; ditto July-September, 18s 3d; small sago, spot, 27s; sago flour, June-August, 14s 3d. Desiccated coconut, fine and medium cuts, spot, sold, 55s; halves, July-August, 50s.

FRUIT.—A moderate demand prevailed for currants, and Pyrgos sold, 50s. Sulphur quoted, 65s to 68s; Vostizza, 89s to 90s. Valencia raisins and sultanas steady, quiet. Dates steady, and Siar, spot, sold, 15s 6d.

JUTE steadily hardened this week on stiff advices to hand by cable from Calcutta and sustained buying orders chiefly on continental account. Native first marks assortment, spot, Hamburg, sold, 22s to 23s; lightning assortment, ditto, 22s to 23s; ditto, spot, Dundee, 22s to 23s; ditto, subs, June-July, steamer, 16s; native firsts, subs, ditto, 22s 5s; heart, subs, ditto, at 15s to 16s. Hessians and twills steadily held, but only a quiet demand prevailed during the greater part of the week.

HEMP.—In poor support, but prices about steady, as sellers were not unduly pressing. J grade, July-September, sellers, 36s 10s; K ditto, 33s 10s; L, 33s, and M, 29s. New Zealand quite neglected. Fair quality, July-September, sellers, 33s. East India quiet. No. 2, Benares, to arrive, quoted 17s.

SHELLAC.—Market generally firm, and T.N., spot, sold, 320s; August, 265s; October, 230s to 240s, and 220s.

COPRA.—Market, after being firmer, assumed a quieter tone. F.M.S. Straits, August-October, Rotterdam and Hamburg, sold, 29s 10s to 30s, and later at 29s 15s. Ceylon, July-September, London, sellers, 31s 10s. Palm kernels dearer, and July-September, sold, 21s 2s 6d, with August-October, 21s 5s.

RUBBER.—Market commenced the week firmly, but later developed some irregularity on easier American advices. Standard crepe, spot, sold 83d; August-September, 9d; October-December, 9d to 93d, and 93d; January-March, 10d to 103d. Sheet, spot, sold, 73d to 78d, and 73d; August-September, 8d. Fine hard Para, spot, 103d.

OILS.—Linseed firm. Spot, net, naked, 35s 6d; September-December, 34s 9d. Rape quiet. Crude, spot, 52s; refined, 60s. Cotton firm. Crude Egyptian, 38s 6d; Bombay, nominal; common edible, 46s. China wood firm. Hankow, spot (barrels), 92s; and shipment, 66s. Coconut firm. Ceylon, spot, 55s; July-August, 48s 6d; Cochin, ditto, 54s. Soyabean firm. Oriental, cases, July-August, 33s; barrels, ditto, 36s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 22s to 24s. Groundnut firm. English crushed, naked, spot, 43s; deodorised, barrels, 55s. Turpentine nominal. American, spot, 77s; Rosin quiet. American, grade B, 15s 6d; F, 16s; G, 16s; K, 17s 6d; M, 17s 6d; WW, 24s; French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum steady. American, spot, 1s 93d; and water-white, 1s 103d per gallon.

OILSEEDS.—Linseed: Market irregular and firmer, with fair dealings. Calcutta, July-August, 21s, sellers; Bombay, 21s 10s. Plate, spot, Hull, 19s 5s; afloat, sold, 19s 5s; June-July and July-August, sold, 18s 15s to 19s 5s and 19s; August-September, 19s to 19s 5s and 19s; September-October, 19s to 19s 5s and 19s. Rapeseed quiet. Toria, June-July, 21s 5s; real bold Ferozepore quoted 20s 15s. Brown Cawnpore, 19s 10s. Cottonseed irregular. Egyptian black, July, 11s 5s; and white, 11s. Bombay, June, Hull, nominally 7s 6d. Gingly firm. Chinese, June-July, Continent, 22s. Castor, Bombay, June-July, 16s 15s, and Brazilian, 13s 15s, Hull. Ground nuts, Coromandel, machine-dried, July-August, sold, 21s 10s; ordinary, 20s. Chinese decorticated, f.a.q., July-August, 22s 15s per ton.

METALS.—Tin continued active and firmer until Tuesday last, cash fluctuating to 172 5s and three months' to 174 5s, the tendency being easier during the middle of the week on realisations, while these dates moved down to 169 15s and 171 10s respectively. A further decline was established at Thursday's market, dealings being on a liberal scale. Cash changed hands at 168 10s, middle of July 169 to 168 10s, and three months' at 171 10s to 170 5s—finally 170 10s. At Friday's session the market was quieter and prices slightly easier. Cash changed hands at 168 5s, early September 170 to 169 10s, and three months' at 170 10s to 171, while since done at 170 10s. English ingots, 168 to 169. Copper: The standard market manifested a steady tone at the week's commence-

ment, cash being registered at 72, and three months' 72 10s to 72 5s, values moving in a slightly upward direction on Tuesday, while a little lower during the middle of the week, when cash changed hands at 72 5s to 72 2s 6d, and three months' 72 7s 6d to 72 5s. Values were a little dearer at Thursday's meeting. Cash, sold, at 72 7s 6d; August dates, 72 7s 6d to 72 12s 6d; and three months' at 72 5s to 72 10s. At Friday's session a steady tone prevailed, business being moderate. August dates sold at 72 5s to 72 2s 6d, and since at 72 10s, with three months' at 72 5s to 72 10s. Electros, 75 10s to 77 10s; best selected, 73 to 75. Lead steady, at 23 2s 6d to 23. Spelter slightly easier at 26 17s 6d to 27 7s 6d, as to position. Antimony, English regulus, 37 to 40. Aluminium, home trade and export, 150.

TALLOW.—Messrs Colchesters and Woolner write on July 6th as follows:—The tallow market was firm during the week, but less active. At to-day's auctions the better kinds of mutton advanced 6d, good mixed was unchanged, and inferior sorts declined 6d. The stock in London on June 30th, as returned by the wharves, amounted to 28,129 packages, showing a decrease during the month of 1,888 packages. At auction to-day 1,903 casks tallow were offered, and 1,158 were sold. Quotations are:—Australian mutton: Fine, 37s 3d; good to fair, 36s 3d to 35s 3d; dull to dark, 33s 9d to 29s 6d; hard,

35s 6d. Australian beef: Fine, 43s; good to fair, 38s to 34s 9d; dull to dark, 30s 3d to 29s 3d; sweet, 43s. Present shipment from Australasia:—Mutton, fair coloured, 48 degs., —; and mixed, 43½, c.i.f., London, nominal. The market letter is unchanged. Town tallow, 29s per cwt. Rough fat, per 8 lbs, none; melted stuff, 17s per cwt. Quotations are:—Town: 29s, net cash, naked, ex works. Country: Frail casks, 27s; home melted, shipping casks, net, f.o.b., good coloured, 32s; fair to dull, 29s 6d to 26s. Bone fat: White, none; pale, none; benzine, 22s; melted stuff, 22s, f.o.b.

FRANCE.—This Bank is affiliated with Messrs COX & COY. (FRANCE), LTD., with offices at Algiers, Amiens, Boulogne, Cannes, Cologne, Havre, Lyons, Marseilles, Mentone, Monte Carlo, Nice, Oren, Paris and Rouen. Agents in British West Africa, The Belgian Congo, Madagascar, and the principal Cities of the World.

Report of the Directors to be presented to Shareholders at the Ordinary General Meeting to be held at Pretoria on the 29th June, 1921.

The Directors beg to submit the Balance Sheet of the Bank for the year ended 31st March, 1921. After making full provision for bad and doubtful debts and applying £50,000 in reduction of Bank Premises Account, the net profits for the year are £382,081 10s 9d, inclusive of the balance of £43,200 1s 8d brought forward from 31st March, 1920. The Bank's investments stand at or under the present market prices.

They recommend that the profit be apportioned as follows:—

To Dividend of 8 per cent. (of which the Interim Dividend paid for the six months ended 30th September, 1920, absorbed £118,600)	£237,200 0 0
Reserve Fund (raising it to £1,300,000)	50,000 0 0
Pension Fund	60,000 0 0
Balance to be carried forward	34,881 10 9
	£382,081 10 9

BALANCE SHEET, 31st March, 1921.

THE MONEY MARKET.

A FURTHER creation of credit, as indicated by Thursday's Bank return, has evidently been responsible for the easy conditions which characterised the market this week. In the early days short loans were offered freely down to as low as 3 per cent.; on Thursday and yesterday there was a better demand. Early expectations of a reduction in Bank rate were modified as the week advanced, especially in view of the firm tendency of rates in America. The discount market was very quiet and easy in tone until Thursday, when there was a tendency for rates to harden on the announcement of no change in Bank rate. Yesterday the discount market was weak, and the quotation for three months' bills almost nominal. The result of the

Treasury Bill tenders, given elsewhere, was lower than had been expected.

	July 15, 1921.	July 8, 1921.	July 1, 1921.	June 24, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

The Bank return reflected heavy repayments by the market to the Bank, and a large addition to the Government overdraft. Other securities being £7,489,700 lower, while Government securities rose by £12,205,000. There was a slight addition to the gold stock, and a reduction of £1,152,700 in the circulation, so that the Reserve rose by £1,157,300. Deposits were thus £5,867,600 higher, Other being increased by £5,923,200, while £55,600 came off Public. The circulation of currency notes rose by £96,000 to £325,503,300, which includes £2,005,300 for notes called in, but not yet cancelled. The fiduciary issue is now £275,548,000, or £42,007,200 below the maximum.

The following table shows public income and expenditure for the nine days ended July 9, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	31,589	Supply Services	15,610
Taken from Exchequer Balances ..	660	Interest on Debt	7,043
		Sundries	417
		Reduction of Debt	9,179
	32,249		32,249

These operations decreased the National Debt by the sum of £9,179,686, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Min. £		Min. £
Public Departments Advances + 1,000		Treasury Bills	4,104
		Bank of England Advances ..	3,000
		National Savings Certificates ..	150
		Surrenders of Bonds, &c.	1,242
		Depreciation Fund	660
		Other Debt	1,000
		Sundries	224
	+ 1,000		10,180

Property and Income-tax, including Super-tax and Mineral Rights Duty, brought in £8,562,000, while Customs and Excise yielded £6,079,000 to revenue. Ordinary Receipts under Miscellaneous yielded £142,354, and Special Receipts £9,808,642. The floating debt was reduced by £6,560,000 to £1,367,411,000.

The Norwegian Bank rate was reduced ½ per cent. to 6½ per cent. on July 5, 1921. It had stood at 7 per cent. since June 25, 1920.

Business in the exchange market this week has again been active, with rather more excitement than for some time past. As was expected a week ago, New York fell away rapidly from the 3.71½ quoted on the 8th to 3.62½ on Monday, and although there was some recovery on the two following days to 3.65, it has relapsed again to 3.63. Many different reasons have been assigned for this movement, which is probably the result of the combination of several of these, such as, for instance, grain and other purchases on French and German account, with the underlying expectation of a considerable revival in demand for American raw materials on their present price level, and a consequent further depression in the value of sterling. The rate for futures has narrowed a little from ½ cent a week ago to ⅓ cent per month above spot. The franc has so far been little affected by the fall in sterling values, the Paris rate, in fact, having fallen from 46.60 on the 8th to 46.37½ on the 14th. Yesterday, however, a reaction set in, bringing up the rate again to 46.50. Contrary to expectation, the Brussels rate has not drawn nearer to Paris, and, indeed, at 47.60 yesterday shows a further widening compared with 47.37½ a week ago. Berlin, after being quoted at 279 on the 8th, rose on Monday to as high as 284½. This movement, however, was followed by a rapid fall to 270½ on Wednesday, on well-advertised reports that credits had been arranged by the Reichsbank in Holland, and the announcement of the

visit of Mr Lamont and other American business men to Berlin. It is clear that this reaction has been overdone, and yesterday's figure of 273 is still surprisingly low, in spite of reports that advances to Germany for grain purchases are now being discussed in New York. If Germany is to fulfil its reparation obligations, the pressure on the mark will surely be so heavy as to counteract factors such as these. Among other West European exchanges, Amsterdam, after rising from its quotation of 11.36½ a week ago, has remained stationary for three days at 11.40½, while Switzerland has moved irregularly against us from 22.10 to 22, and Madrid has fallen rapidly from 29 to 28.02. Italy, which on the 14th was about 77.38, rose above 80, but has now gone down again to about 79. Portugal at 8½d has remained fairly steady. After some irregularity, the three Scandinavian countries show a movement on the week well in our favour, while Helsingfors has recovered a little to 217½, as compared with 222½. In Central Europe the London (Auslands-kroner) quotation for Vienna has moved up on the week to 2,550. On the 12th the quotation for Inlandskrone was 2,815, as compared with an Auslands-kroner rate of 2,600, showing that the two rates are drawing still more closely together. Warsaw, although it was not able to maintain its recovery to 5,500 on the 14th, has been rather more steady at about 6,500. Prague, where a bank clerks' strike is stopping almost all business, is quoted in London very slightly better, at about 276. Budapest is about the same at 1,025. Belgrade has depreciated, in spite of harvest prospects, from 134½ to 138½, while Sofia, where there are various troubles, owing to agrarian legislation, the abolition of the moratorium and reparation payments has leapt up from 360 to about 500. Athens has remained relatively steady, while Constantinople has depreciated a little. Among the South American exchanges, Buenos Ayres, Rio, Montevideo, and Valparaiso have all moved somewhat against us. The rupee is slightly more expensive on more reassuring monsoon reports, and the yen has moved up again by about ⅓ to 2s 7½d. Silver this week has shown more strength than for some time past, the price on Thursday being up to 37½d spot. Such a price, however, is hardly justified by general conditions or outlook, the cause being rather a temporary stringency in China, resulting from the troubles occasioned by the recent troubles in banking circles.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JULY 9, 1921.			
	£		£
Total spent	294,489,971	Raised by revenue ..	235,757,357
Dec. in balances	914,152	Net borrowings	57,818,462

EVENTS OF THE WEEK.

JULY 10TH.—President Harding issues invitation to Disarmament Conference. Heat wave in England.

JULY 11TH.—Truce in Ireland. Premier makes statement in Commons on Anglo-Japanese Treaty and President Harding's proposal.

JULY 12TH.—Irish delegation arrives in London. Debate on Safeguarding of Industries Bill.

JULY 13TH.—Engineers ballot in favour of acceptance of employers' terms.

JULY 14TH.—Mr Lloyd George and Mr De Valera confer at Downing Street. Resignation of Dr Addison. Sir Alfred Mond makes statement on Housing Policy.

JULY 15TH.—Ulster Premier in London.

The stock markets this week have enjoyed rather better business than for some time past; hopes of Irish peace and of cheaper money, and the Washington disarmament conference proposal, having, as well as the improvement in the Labour outlook, been responsible for improved sentiment.

In the Lancashire cotton trade inquiry has again been fairly large. The demand from India remains healthy, and business for Egypt is better. In weaving districts more machinery has been restarted, and unemployment is being reduced. Recovery in the woollen industry hangs fire. Prices of the raw material have fallen, and buyers are mainly awaiting developments. Consumption is increasing, but most mills are merely working off arrears, and the amount of new business coming forward is small. In the iron and steel industry the approach to resumption of activity is slow. No general restarting of blast furnaces is expected just yet. In the Glasgow district holidays are in full swing. Partial resumption of work is reported in the Sheffield district, but business is not large. Vegetable oils remain a steady market, but business is on a modest scale. The shoe trade is improving.

Details of movements and news in the principal markets from special correspondents will be found on later pages of this issue.

NEW HOPES.

FOR many months past general circumstances have been such that the pessimist has enjoyed himself to the full. It is refreshing, therefore, to find the optimist at last having an innings, and the present week, with a truce in Ireland, an Irish Peace Conference in Downing Street, and President Harding's invitation to an armament restriction conference at Washington, not to mention the resumption of normal railway services, has certainly given him a chance. Even the optimist, perhaps, will fear to predict that the Downing Street conference will compose the bitter quarrels which for centuries have rent Ireland in twain; and, with memories of the Hague still fresh, it is easy to remember how very long a step it is from the proposal of a conference on armament restriction to a mutual curtailment of unproductive expenditure, which might give budgets a chance of balancing, and relieve overburdened taxpayers. Nevertheless, the revival of hope, however distant, which this week has brought, is as welcome as refreshing rain after the long drought of statesmanship failure, which, progressively since the Paris Conference began, has withered up hopes of international stability and concord and financial sanity. An official statement issued on Sunday night in Washington gave the following information about the President's proposal:—"The President, in view of the far-reaching importance of the question of limitation of armaments, has approached with informal but definite inquiries the group of Powers heretofore known as the Principal Allied and Associated Powers—that is: Great Britain, France, Italy, and Japan—to ascertain whether it would be agreeable to them to take part in a conference

on this subject to be held in Washington at a time to be mutually agreed upon. If the proposal is found to be acceptable, formal invitations for such a conference will be issued. It is manifest that the question of limitation of armaments has a close relation to Pacific and Far-Eastern problems, and the President has suggested that the Powers especially interested in these problems should undertake in connection with this conference the consideration of all matters bearing upon their solution, with a view to reaching a common understanding with respect to principles and policies in the Far-East. This has been communicated to the Powers concerned, and China has also been invited to take part in the discussion relating to Far-Eastern problems." On Tuesday in the House of Commons the Prime Minister welcomed the President's "wise and courteous initiative," and, coming straight from a meeting of Empire Premiers, was able to accept on behalf of the British Empire. As Mr Lloyd George pointed out, this acceptance could not have been so "prompt, effective, and unanimous" but for the happy chance that the Imperial Conference was in session in London. France has been equally prompt in acceptance. In the course of his statement, Mr Lloyd George dealt at length with the Anglo-Japanese agreement, and made the important announcement that it is the desire of both countries "that the agreement shall be brought into complete harmony with the Covenant of the League of Nations, and that wherever the Covenant and the agreement are inconsistent, the terms of the Covenant shall prevail." Peace and concord are in the air this week, and the re-entrance of the United States into the arena of world politics provides the brightest hope that reason is once more dawning in international affairs. "We have been looking," said Mr Lloyd George, "to the United States for a lead." That lead has now come in practical and welcome fashion. If the Washington Conference, which, it appears, may assemble in October or November, does no more than produce understanding between the chief naval Powers of their policies in the Pacific, it will still have made an invaluable contribution towards the re-establishment of international confidence.

Few events could more effectively rub in, so far as this country is concerned, the urgent need for the retrenchment, which an international armament agreement would make possible, than the issue this week of a new Government loan, the features of which we discussed last week. And if sanity is reviving in the International sphere, we are not yet free from "Bedlamite" features at home. Next to the secure establishment of peace, the greatest need of the world is the freest possible interchange of commodities. Yet the Government's happy-go-lucky protectionist proposals, masquerading under the title of "The Safeguarding of Industries Bill," drag themselves painfully through the House of Commons under the guillotine. Tuesday night's debate produced incidents the humour of which will appeal to Free-traders. The Bill sets up a Committee with power to fix certain duties. Intolerable, some members complained, to deprive the House of Commons of its control over taxation. An amendment was moved that this Committee should be a Select Committee of the House of Commons, and it was left to a Unionist

member to point out that if the Committee were to be so composed "members' lives would be made perfectly hideous by lobbying from outside." This dilemma is a pretty illustration of the difficulties and dangers that arise as soon as protection is approached. But it is by no means the only dilemma. Sir Stanley Baldwin was faced by a time-honoured difficulty when he was asked to define what is a raw material, and, being a skilful Parliamentary hand, was not drawn into the attempt. The question arose out of the suggestion that a manufacturer who exports a finished article made out of imported raw material, on which a duty has been paid, should be allowed a rebate. Here we are back to the old awkward truth that the finished product of one industry is the raw material of another, and that by taxing any form of raw material required by British industry, legislation must tend to decrease and not to increase employment. This week has seen the publication of manifestoes against the Bill, by a group of merchants, by a long list of prominent firms in the woollen industry, and by the Parliamentary Committee of the Trades Union Congress and the Labour Party executive. These follow upon the weighty protests of bankers and scientists, to which we have previously referred. But the guillotine continues its work, and the limbs, if not the head, of the fiscal system under which this country has prospered will shortly fall into the basket.

HALF-YEAR'S OVERSEAS TRADE.

THE Board of Trade figures of overseas trade in June are very much in accordance with the poor expectations necessitated by the prolongation of the coal stoppage. British exports were valued at £38.2 millions for June, as compared with £116.4 millions in June, 1920, and £92.8 for the first month of the present year. That June exports were, in value, less than half those of January is an eloquent illustration in which the hopes of the past half-year were disappointed. June imports were £88.1 millions, against £170.3 millions a year ago. The extent to which the fall in prices is responsible for these changes may be roughly gauged by the movements in our Index Number, which were printed in detail last week. Since June a year ago, according to this calculation, the general level of wholesale prices has fallen about 38 per cent. A summary of trade value figures for June and the six months of 1921 and 1920 reads as follows:—

MONTH OF JUNE.				
	1920.	1921.	Inc. or Dec. in 1921.	
	£	£	£	%
Imports	170,265,687	88,182,481	82,083,206	48.1
British exports	116,352,350	38,152,238	78,200,112	67.1
Re-exports	20,123,928	7,082,764	13,041,164	64.8
Total exports	136,476,278	45,235,002	91,241,276	66.8
Excess of imports over total exports	33,789,409	42,947,479	9,158,070	27.1

SIX MONTHS ENDED JUNE 30.				
	1920.	1921.	Inc. or Dec. in 1921.	
	£	£	£	%
Imports	1,033,037,703	571,691,493	461,346,210	44.6
British exports	637,466,884	368,895,027	268,571,857	42.1
Re-exports	135,891,048	49,685,689	86,205,359	63.7
Total exports	773,357,932	418,580,716	354,777,216	45.8
Excess of imports over total exports	259,679,771	353,110,777	105,568,994	41.1

* Adjusted figures.

Over £106 millions have been knocked off the visible adverse balance, as compared with the first half of 1920. This reduction was the work of the early months, for in May and June the import excess was greater than in the corresponding months of last year. How the visible balance has moved month by month is shown in a table given below:—

EXCESS OF IMPORTS OVER EXPORTS (MERCHANDISE).				
(In Millions of £'s.)				
	1920.	1921.	Change in Balance in 1921.	
	£	£	£	%
January	52.0	14.2	37.8	72.7
February	61.8	20.6	41.2	66.7
March	45.8	18.0	27.8	60.7
April	40.5	21.5	19.0	47.0
May	26.8	36.0	9.2	34.3
June	33.7	42.8	9.1	27.0
	260.6	153.1	107.5	41.3

As regards the half-year's real balance, it must be supposed that the idleness of much shipping, both in this country and in many parts of the world, has caused some considerable decline in our invisible exports.

The aggregate value of the past half-year's trade turnover was £816 millions less than in the corresponding half of 1920. Of this drop the cotton industry alone accounts for about £27.1 millions, imports of raw cotton being less by £151.8 millions, exports of cotton yarn and manufactures less by £101.1 millions, and re-exports of the former £19 millions less. The gross declines were distributed as follows over the main classes:—

DECREASES IN JANUARY-JUNE, 1921, AS COMPARED WITH JANUARY-JUNE, 1920.				
	Imports.	Exports.	Million £'s.	
	£	£	£	%
Food (British) and tobacco	79	7.2	71.8	8.9
Raw materials and articles mainly un-	292.4	56.9	235.5	29.8
manufactured				
Articles wholly or mainly manufactured	90.0	202.4	112.4	12.5

In the half-year we exported only 6,025,448 tons of coal, valued at £15,433,560, and imported 1,849,537 tons, worth £6,577,916. The effect of prices changes, and also the smaller quantities (in many cases) of raw materials and food imported in the past six months compared with January to June, 1920, is seen from the following figures:—

	1920.		1921.	
	Quantity.	Value.	Quantity.	Value.
	Tons	£	Tons	£
Raw cotton (centals)	12,758,131	182,358,806	5,133,176	31,719,795
Sheep and lambs wool ..	4,578,456	47,892,005	3,693,251	24,080,830
Flax, hemp, & jute (tons)	271,803	21,855,594	96,290	5,976,102
Wet hides	249,754	2,449,910	144,258	631,867
Dry & salted hides (cwts)	568,956	5,656,352	112,039	571,385
Pulp of wood	505,225	12,437,969	178,592	4,306,507
Rubber	1,155,940	13,665,321	1,157,347	6,110,519
Iron ore	3,459,508	9,158,827	1,284,166	2,748,363
Grain and flour .. (cwts)	82,207,111	94,107,544	75,593,976	67,715,537
Butter	1,057,785	14,745,747	2,145,705	27,912,013
Sugar	16,056,844	39,818,488	13,840,648	21,979,814
Tea	217,539,336	15,278,628	219,607,479	10,739,331

In almost every case a substantial price fall is indicated, while, with the exception of rubber, most important raw materials were imported in much smaller quantities than in 1920—a sign of the industrial depression. Among British exports, machinery, electrical goods and apparatus have recorded advances in the value figures, while sales of ships abroad have been heavier.

Gold imports in the six months were £23,874,490, against exports of £29,538,587, of which over £28 millions went to the United States. In the corresponding period of 1920 gold exports were heavier at £42,685,926, but of this amount the United States took only £10½ millions. Silver imports in the past half-year were £4,896,014, and exports £5,281,007. The shipping figures illustrate trade depression and the effects of the coal dispute. Last month only 1,993,656 tons of shipping engaged in foreign trade cleared with cargoes, compared with 3,105,494 tons in June, 1920, and 5,584,411 tons in June, 1913. The six months' figures for the three years respectively are 13,716,784 tons, 18,263,337 tons, and 32,896,245 tons. The Board of Trade has issued the following statement showing the weight of imports and exports passing in May compared with May, 1920, and May, 1913:—

Month of May.	Imports.		Exports.	
	Tons.	Decrease in May, 1921.	Tons.	Decrease in May, 1921.
1921	2,891,000	..	590,100	..
1920	3,876,000	25.41	3,498,700	83.13
1913	4,496,000	35.70	7,655,900	92.29

The decline in the weight of exports is caused to a considerable extent by the cessation of coal shipments, while among imports for May the returns show 450,162 tons of coal.

Imports and British exports for June and the first six months of 1921 and 1920 are compared below under 42 heads.

IMPORTS (Value C.I.F.).				
	Month Ended June 30.		Six Months Ended June 30.	
	1920.	1921.	1920.	1921.

Total	116,352,350	38,152,238	637,466,884	368,895,027

The average profit per company for the whole period is £102,300. The effect of the abolition of E.P.D. can as yet have made itself felt in only a very few cases. In the next table we give a comparison of profits in 20 different groups, from which it will be seen that certain branches of industry have felt the effects of the depression much sooner than others:—

NET PROFITS (after Payment of Debenture Interest, &c.).

	No. of Cos.	Reports Published in Year Ended June 30.		Increase.		Decrease.	
		1920.	1921.	£	%	£	%

	1,563	126,861,374	138,521,335	11,659,961	9.2	..	..

Thus the motor, textiles, retail shops and stores, and rubber groups show substantial declines in profits, while tea plantation companies have fallen on very hard times, the aggregate profits of 67 companies in this section showing a decline of 87 per cent. On the other hand, there are several conspicuous increases in profits, the most prominent being the nitrate group, which has made a remarkable recovery from the post-war slump through which it passed. The oil, telegraph, and canals groups have also done well.

The next table shows how profits were distributed, the last column including the amounts by which the balances carried forward exceeded the amounts brought in:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Reserve, &c.
1920.	£	£	£	£
Third quarter	27,032,462	16,252,981	2,357,136	8,422,345
Fourth quarter	27,633,839	14,390,397	3,115,713	10,127,729
1921.	£	£	£	£
First quarter	43,387,538	24,377,364	6,357,529	12,652,645
Second quarter	40,467,496	23,732,561	8,028,662	8,706,273
	138,521,335	78,753,303	19,859,040	39,908,992

There is considerable divergence in the methods of company directors in the matter of reserve and similar appropriations, for some strike profits after making allowance for full depreciation and contingencies, while others make such allocations after disclosing profits. In compiling these statistics a uniform method has been followed as far as possible. It will be seen that reserve appropriations have grown smaller in 1921, the average for the 12 months being less than 29 per cent. of profits, as against 36½ per cent. in the last quarter of 1920. How profits for the 12 months were appropriated in each group may be seen from the next table:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Carried to Reserve, &c.
Breweries	8,624,099	4,415,595	1,342,865	2,865,839
Canals, docks, &c.	553,574	257,166	251,609	44,799
Electric lighting, &c.	2,562,136	854,387	586,489	1,121,260

Shops and stores	6,618,423	3,885,892	1,224,524	1,508,007
Tea	287,875	438,991	239,960	391,076
Telegraph, &c.	5,361,562	1,833,282	290,708	3,177,572
Textiles	12,676,435	7,670,827	1,447,033	3,558,575
Tramways	1,656,101	623,761	1,042,042	970.2
Trust companies	4,845,492	2,804,685	1,091,897	948,920
Waterworks	504,054	337,923	66.9	71,276
Miscellaneous	37,496,416	19,985,778	6,932,010	10,578,628
	138,521,335	78,753,303	19,859,040	39,908,992

* Decrease.

The most remarkable feature in this table is the tea company group. The amount brought forward from the previous accounts by these 67 companies was £1,252,600, and only £715,900 is carried forward to next year. Specific allocations to reserve were £145,600, so that we get a distribution of a sum equal to 152 per cent. of net profits going to ordinary shareholders, 83 per cent. to preference shareholders, while the reserve appropriation is a minus quantity to the extent of £391,100. The gas and tramways groups also draw on the balance in hand to a slight extent to meet dividends. The highest percentage of profits going to reserve is shown by the telegraph and telephone group, but a high figure is also shown by the electric lighting and power, nitrate, and shipping groups. A very small proportion of profits goes to preference shareholders in the nitrate and rubber groups, but this arises from the fact that the amount of preference capital issued is quite insignificant.

We next show the proportion borne by net profits and amounts carried to reserve to total ordinary and preference capital:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1920.	£	£	£
Third quarter	163,024,500	27,032,462	8,422,345
Fourth quarter	182,215,000	27,633,839	10,127,729
1921.	£	£	£
First quarter	365,534,600	43,387,538	12,652,645
Second quarter	336,719,100	40,467,496	8,706,273
	1,047,493,200	138,521,335	39,908,992

There is a conspicuous reduction in the ratio of reserve allocations to total capital, the figure for the last quarter being very much below the average. There has also been a progressive decline in the ratio of net profits to capital. The average rates paid on the various classes of capital for each quarter and the 12 months, together with the previous year's averages, for comparison are given below:—

	Debenture Capital.	Debenture Interest.	Average Rate.	Average Rate a Year Ago
1920.	£	£	%	%
Third quarter	31,409,000	1,298,625	4.12	4.35
Fourth quarter	52,562,300	2,329,632	4.43	4.40
1921.	£	£	%	%
First quarter	86,124,600	3,831,042	4.43	4.25

Textiles	11,637,036	4.3	28,191,541	5.1	56,664,113	13.6	23.1
Tramways	24,640,829	4.5	12,391,642	8.4	17,523,157	3.6	3.3
Trust companies	34,099,605	4.1	31,892,618	3.4	37,827,357	7.4	5.9
Waterworks	2,858,095	4.0	2,760,928	3.4	5,982,420	5.7	6.1
Miscellaneous	26,328,718	4.9	120,636,193	5.8	146,120,651	13.6	12.4
	246,339,776	4.5	379,171,511	5.2	668,321,724	11.8	11.9

The debenture rates call for no comment. The rate on preference shares in the tramways group is due to payment of arrears by the Anglo-Argentine Tramways Company. The rates on ordinary capital mostly show a reduction, the oil, nitrate, and trust company groups being notable exceptions. Each of the sections which recorded a decline in net profits has suffered a reduction in the average rate of ordinary dividend, the largest being that shown by the textile group. The figures, it should be pointed out, do not include issues of bonus shares, or the benefits obtained by shareholders from the issue of shares at a price below market value. Were it possible to compute the value of such items in the above table, the only effect would be to produce a more marked decline in the ordinary shareholders' receipts, for such practices are rapidly becoming a thing of the past.

THE CLOSING OF E.P.D.

DESPITE the welter of new clauses and proposed amendments with which the Chancellor was faced on the Finance Bill at the Committee stage, he may be said to have escaped comparatively lightly. A thin attendance during a night sitting seemed to render ineffective what opposition there might have been to his views. So far as it concerns the termination of the excess profits duty, with all that it meant to industry, two main features have, so to speak, been resuscitated from the Committee stage, and are now facing him upon Report, reinvigorated by all those methods of concerted interest with which the Press and the Federation of British Industries have familiarised us in the past few years.

These two questions relate to the position of forward contracts and bad debts. Some astonishment has been expressed that the concessions already granted by the Chancellor in relation to stocks have cost the Exchequer

£80,000,000. That is to say, they have been taken into account in arriving at an Exchequer estimate of £120,000,000 for the current year which, but for these concessions, we are told, would have been £200,000,000. It is fashionable, and, indeed, very forcible, to state that the Exchequer really cannot afford any more concessions, but an important distinction has to be made here. Any money which is involved in putting taxpayers on an equitable level amongst themselves should be regarded as an integral part of the tax, and it should never be reckoned even as part of the potential yield, and, therefore, should never be counted as a sacrifice of revenue. Once having made the tax equitable to taxpayers as a whole, any further concession that is given to them truly ranks under the second category as a real expense to the Exchequer, the "pros and cons" of which should be carefully weighed. No question of what the revenue can or cannot afford, therefore, should avail under the first head on constructing an equitable tax, but it is all the more important that under the second head every concession that can possibly be avoided should be withheld. As we have said on a previous occasion, the excess profits duty taxpayer must learn that a time is coming when he can no longer rely on his past payments to the Exchequer—long since spent—to save him from the slings and arrows of outrageous fortune!

Now, the questions that are clamouring for settlement affect the revenue mainly under the first head, viz., that of equality amongst taxpayers. As the Federation of British Industries points out, two competing firms placing forward contracts in September, 1920, for delivery of similar quantities of material at a similar price on June 1, 1921, may fare very differently under the duty if the final accounting period of one ends on September 30, 1920, and of the other not until July 31, 1921, should the value of the material purchased have fallen substantially by, say, June 1, 1921. The proposal now made is that just as the earlier accounting period is to be put on a level with the later by the first clause of the White Paper—known as the "levelling process"—in regard to its stock-in-trade, so also it should be put on a level as regards its stock that is under contract for purchase. The firm with the later accounting period may secure handsome rebates on the reduced price of the goods delivered, whereas the firm with the earlier period must stand the racket of the whole loss, and it is alleged that many bankruptcies are imminent under this head.

The first point that occurs to one was made by the Chancellor in resisting this proposal at the Committee stage, viz., that as a rule selling contracts when made are based on the buying prices, and, therefore, no loss will actually mature. The new clause rules this out by providing that such cases of selling contracts shall not be eligible for relief. The clause also provides that a valuation of such forward contracts must be customary in the business, and the amount claimed shall not be greater than the general average of forward contracts in previous years.

It is obvious, too, that if the seller of such goods sold forward also includes them in his stock in hand at the end of his accounting period without bringing in the contract profit on them, the revenue will already be making, under the ordinary stocks concession, an allowance in respect of that particular block of physical goods, and can hardly be expected to do so a second time. Obviously the vendor should not, in equity, be allowed to secure this advantage. The proposed clause also meets this point, and, therefore, as it is drawn it may be taken to have robbed the whole question of its worst perils. Without such an allowance it is clear beyond question that some taxpayers will be penalised because their excess profits duty period ends prior to a substantial slump in prices.

What will be the position if the Chancellor refuses the clause? There is nothing whatever in the law to say whether such an accountancy loss at the date of closing the account is not a proper claim, and upon appeal before the Commissioners, and, indeed, in the High Court, it may easily be that it will prove to be allowable, following the lines laid down in judicial dicta as to the computation of profits upon a commercial basis. In the absence of any clause, either negative or positive, such claims will be inevitable, and if the Revenue contests them much litigation will undoubtedly result, involving unnecessary expense, with the highly probable ultimate result that, without any of the safeguards that have been suggested, the Revenue will lose the point.

On the second clause relating to bad debts, the proposal is that if the estimate for bad and doubtful debts given in the final accounting period is shown on August 31, 1922, to be too small in the light of ultimate results, the conditions obtaining in August, 1922, shall be substituted in that final accounting period. But it will be seen that here we have something additional to the question of "levelling up" the taxpayer. In so far as the conditions at August 31, 1921, are looked at, it is, no doubt, in view of the present great slump in trade, quite a necessary provision to put traders upon a level in this respect. Two firms each have a debt due to them from a third business, which they both regarded as good on September 30, 1920. The firm making up its accounts on that date has to treat it for excess profits duty as good, but if it fell bad in the following March the second firm making up its accounts to June, 1921, would get a full allowance. A revision at August 31, 1921, appears, therefore, to be but a general part of the levelling process, but the suggestion that it should be taken to a year later puts it on quite another footing. It is one of those concessions to all taxpayers which may be regarded as being costly to the Revenue, and we could well understand if the Chancellor's decision were that it should be resisted. If 1922, why not 1924?

The closing of the Report stage will end a notable epoch in fiscal history, so far as legislation is concerned, but the administrative side is going on for a long time, and what with the necessity for a chartered accountant for the owners and for the miners in each coal mine, and for overlooking the excess profits duty settlements during the next five years, there is, at least, one profession that seems to be ensured prosperity by the State when all others are forsaken.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

TAKING the past quarter as a whole, the experience of cotton spinners and manufacturers in Lancashire has been very unsatisfactory, but during the last few weeks there has been a distinct revival of inquiry, especially in certain sections, and more business has been done than for over 12 months back. The depression was very acute when the coal strike began, and the shortage of fuel was not a very great hardship for producers as a whole, as most firms had very little work to go on with. Uncertainty has also prevailed with regard to the outcome of the negotiations on the wages question in the cotton trade, and owing to the operatives declining to submit to the reduction proposed by the employers, all the spinning mills and weaving sheds closed down early in June. A settlement was not reached until production had been at a standstill

for three weeks. The agreement provided for an immediate reduction in wages of 60 per cent. on list rates, or 3s 10d in the £ on current wages, and a further drop of 10 per cent. on list rates, or 7d in the £ on present wages from the beginning of next year. The agreement is for six months, but at the end of that period either side desiring a change will have to give three months' notice, so wages are fixed until the end of March, 1922. It is estimated that the reduction in wages will mean a fall in the production costs of spinners and manufacturers of about 12½ per cent. A favourable development has been cheaper money, the fall in the Bank rate to 6 per cent. being very welcome.

During the past three months there has not been any marked change in raw cotton prices. On March 31st the quotation for fully middling American on the spot in Liverpool was 8.02d. Rates fluctuated from day to day, and on April 18th the figure was 8.31d. By April 29th the price had fallen to 7.99d, but there was a rise to 8.34d on May 9th. Alterations were quite unimportant, and on May 31st 8.19d was posted. After 8.40d being registered on June 13th there was a rather easier tendency until 7.50d was quoted on June 21st. Since then prices have been dearer, the figure on June 30th being 7.85d and on Wednesday last 8.67d was posted. Imports from the United States to this country have continued limited. Until this week Lancashire spinners have purchased sparingly both on the spot and in futures. Demand, however, is now improving. The season in America is drawing to a close, and the crop will probably be about 13,350,000 bales, against 12,218,000 bales in 1919-20. For the new season the outlook for supplies is far from satisfactory. The official condition reports are poor, and the reduction in the acreage is estimated at about 28 per cent. There is a possibility of the yield being less than 9,000,000 bales. Stocks, however, throughout the world are heavy. Egyptian cotton prices have been fairly steady. The quotation on March 31st for fully good fair Sakellaridis on the spot in Liverpool was 17.50d. There was an advance to 18.25d in the middle of April, but on May 2nd the figure was 17.50d. At the end of that month 16.50d was the figure, and on June 30th 15.50d was registered. Since then prices have been rather firmer, the rate on Wednesday last being 16.50d. The Egyptian crop for this season will be about 4,620,000 cantars, against 5,642,000 cantars in 1919-20. The new crop is very backward, and there has been a reduction in the area under cultivation. A small output in 1921-22 must, therefore, be expected. Stocks, however, in Alexandria are much larger than 12 months ago.

Towards the end of May inquiry in piece goods for abroad began to broaden, and many customers in foreign outlets displayed increased interest in Manchester prices. Most of the attempts at transactions were futile, as buyers were not prepared to pay the rates required. The continuance of the coal strike and the wages dispute in the Lancashire cotton industry checked developments, but gradually the needs of consumers became more urgent. Manufacturers at that time were not in a position to guarantee delivery, and this fact made progress very difficult. Towards the end of June the settlement of the coal and cotton labour disputes resulted in a distinct change of sentiment in the Manchester market, and since then a much larger business has been done, and manufacturers have been enabled to extend their order lists. The buying movement has been initiated by India, and in addition to a substantial indent trade, especially for Calcutta, several leading merchant houses in this country have bought speculatively on a considerable scale. There has been a slight break in the monsoon rains, but it is believed that there will be a good season in our Dependency. A big turnover has taken place in light fabrics, such as dhooties, which are chiefly made in Blackburn and district, and some manufacturers have engagements into next year. Inquiry for China has broadened, and more trade has been done, but operations have not been very important. Stocks in the Far-East are being reduced, and buying on a bigger scale is probably near at hand. Business has been of larger volume for Java, Singapore, Egypt, Persia, and other minor outlets, but not much support has been given by shippers to South America. A steady improvement is now showing itself in home trade circles, and much better clearances are taking place in light fancy materials.

The following is a comparative table of our shipments of piece goods:—

SIX MONTHS ENDED JUNE.			
	Yards.	£	
1913	3,582,788,800	48,756,738	
	Square Yards.		
1920	2,396,798,000	153,347,097	
1921	1,211,021,700	75,104,452	

In square yards we have exported so far this year on last much less freely to Bombay, China, Turkey, Egypt, and Bengal, but there are small increases in the takings of Roumania, Mexico, and British East Africa.

Although the outlook for spinners of yarn is now brighter trading conditions during the past quarter have been wretched. The recent increased activity in piece goods has not yet been fully reflected in a larger offtake in twist and weft. This position of affairs is due to the fact that cloth makers have been "long" in yarn, and they have not found it necessary to cover contracts booked. So far back as last October the Master Spinners' Federation organised short-time working in mills using Egyptian cotton, and since then the factories have only worked four days a week. Last December it was decided only to run American mills three days a week. This curtailment of production on an organised scale is still going on, but the state of trade is to be considered by the Masters' Federation at the end of this week, and there is a possibility of the short time being abandoned, or some variation in the restriction of output. Comparatively few spinning companies now publish balance-sheets, but most mills at the end of June were unable to pay a dividend for the half-year. During the past six weeks there has been a distinct revival of demand in yarn suitable for India, and an extensive business has been done.

The following is a comparative table of our export trade in yarn:—

SIX MONTHS ENDED JUNE.			
	Lbs.	£	
1913	106,409,000	7,512,062	
1920	78,614,000	23,912,824	
1921	50,638,100	10,301,588	

So far this year on last we have shipped on a smaller scale to the Netherlands, France, the United States, Belgium, and Sweden, but there have been small increases in the exports to Roumania, Germany, and Bengal.

The trade prospects are brighter than for a long time back. Up to recently no business of importance has been done in either yarn or cloth since the spring of last year. Since then there has been a marked depreciation in values, and many difficulties have been experienced by merchants in liquidating stocks. The process, however, has been carried through without any important failure. The refusal of native dealers in India to meet their drafts has been a very serious matter for Manchester shippers, but according to recent telegrams our customers are more inclined to pay their debts as fresh supplies of goods are wanted, and new contracts cannot be arranged until past obligations are met. The Manchester market is now firmer, and in certain classes of goods producers are in a position to hold out for profitable rates. No real boom in trade is expected, but it is believed that a steady improvement will show itself during the next few months. Unemployment is decreasing, and there should be very little idle machinery by the end of the year. Shares in textile concerns and mill companies are hardening in price, and brokers are experiencing a better demand from the public.

Business Notes.

Currency Policy.—Sir Peter Rylands has addressed to the Prime Minister a letter conveying the following resolutions of the Credits and Currency Committee of the Federation of British Industries:—"That the Credits and Currency Committee of the Federation of British Industries urges the Government to appoint a Commission, with terms of reference similar to those of the Committee on Currency and Foreign Exchanges after the war, presided over by the late Lord Cunliffe, in order to reconsider the currency policy in the light of recent

HARRISONS & CROSFIELD, LIMITED.

events. This Commission should contain representatives not only of industry and commerce, but also of Labour, so that the effect of any policy on trade and employment may be fully considered." The proposal "is not put forward as a criticism of the policy recommended by Lord Cunliffe's Committee." But the letter enumerates changes in conditions since the publication of the Cunliffe Report, which, in the opinion of the Federation, constitute an argument for the appointment of a new Commission to reconsider currency problems.

Coal Output.—The official figures of the production of coal during the period of stoppage show that the total tonnage raised in the various areas during the 13 weeks from April 4th to July 2nd was 179,100 tons, made up as follows:—

	Tons.
Northumberland	30,000
Durham	3,400
Yorkshire	20,900
Lancashire, Cheshire, and North Wales	12,900
Derby, Nottingham, and Leicester	18,900
Stafford, Salop, Worcester, and Warwick	77,500
South Wales and Monmouth	5,500
Other English districts*	4,200
Scotland	5,800

Total for Great Britain

* Including Cumberland, Westmorland, Gloucester, Somerset, and Kent.

The average output for the first 13 weeks of the year was 4,275,000 tons, but in the week ended April 2nd production dropped to 1,950,100 tons.

Crop Prospects.—The monthly report of the Ministry of Agriculture and Fisheries states that the very dry weather of June, following the previous dry period, had a bad effect on grass and spring-sown crops, but was very favourable for the hay harvest. In many districts ponds have dried up, and there is a scarcity of water for live-stock. Autumn-sown wheat has stood the dry weather well, though in some cases the straw is short; but spring wheat, where sown, is patchy and has not done so well. On present appearances, the yield will probably be about average. Where sown early, barley and oats are satisfactory plants, as a rule, and have made fair growth in most districts, though the straw will be shorter than usual. Later sowings are, however, thin and stunted in growth, and have often come into ear prematurely, while on light land the plant is sometimes dying off. Winter oats are fairly promising. On the average, both barley and oats are expected to give poor yields in all parts of the country. Potatoes came up well, but they have been checked by the drought, and, although healthy, have not made much growth, as a rule. The frosts which occurred during June did some damage. Early varieties are only giving light crops, and generally poor yields are expected. Hay-making began earlier than usual in all parts of the country, and in the South was almost finished by the end of June, while in most of the later districts quite half the crop had been carted. The crops are very light, however, especially of meadow hay, but they have been secured in splendid condition with a minimum of labour. Aftermaths are making no growth, and the fields which have been cleared are very brown. Root crops which are being grown for seed have suffered from the drought, but mangolds and turnips will probably give moderate crops of seed.

Swedes are less satisfactory. The dry weather has caused a good many apples and pears to drop from the trees, and soft fruits are not yielding so well as they promised. Gooseberries, though variable, are giving about average yields in most districts, but other descriptions of small fruit are distinctly under average. Plums and pears are very light, and yields of cherries are below average, on the whole, but apples still promise satisfactory crops. Summarising the returns, it would appear that wheat is the only crop which is likely to give an average yield. Expressing an average crop by 100, the appearance of the crops on July 1st indicated probable yields per acre as shown by the following percentages:—Wheat, 100; barley, 87; oats, 89; beans, 94; peas, 93; potatoes, 90; mangolds, 91; seeds hay, 90; meadow hay, 77; and hops, 96.

The Quarter's Shipbuilding.—According to Lloyd's Register shipbuilding returns for the quarter ended June 30, 1921, the merchant tonnage returned as under construction in the United Kingdom at the end of June, 1921, amounts to 3,530,047 tons. This represents a reduction of about 269,000 tons as compared with the total at the end of the previous quarter, but under the present conditions the figures can only be regarded to a large extent as nominal. As in the previous quarter, the total includes a considerable amount of tonnage on which work has been suspended owing to the decline in the demand for tonnage, and also a large quantity of tonnage the completion of which has been postponed owing principally to the joiners' strike and the coal dispute. The tonnage on which work has been suspended amounts to 735,000, and the tonnage which has been delayed in completion amounts to about 444,000 tons. These two totals, amounting to 1,179,000 tons (equal to one-third of the whole of the tonnage under construction), must be deducted in order to enable a comparison to be made with the figures for normal times, and we thus arrive at a reduced total of 2,351,000 tons under construction in the United Kingdom. As compared with the figures for the quarter ended March 31, 1921, there has been a reduction of about 104,000 tons in the tonnage launched during the past quarter. Whereas in 1913 the average tonnage completed during each quarter was over 23 per cent. of the total work in hand at the beginning of the quarter, the corresponding figures for 1920 fell below 13 per cent. There is a still further reduction during the last six months, the output for this period having fallen as low as 8½ per cent. There is a continued reduction in the tonnage commenced. In the March quarter the decrease amounted to 113,000 tons, and there is now a further reduction of 224,000 tons. The tonnage actually commenced during the June quarter was only 68,928 tons, which represents less than 2 per cent. of the tonnage in hand at the beginning of the quarter. This is perhaps the most significant figure in the return as indicating the very unfavourable outlook for the immediate future. The total merchant tonnage building abroad is 2,669,421 tons; and it may be noted that, unlike the returns for the United Kingdom, those for abroad are not subject to any considerable reduction on account of suspended or delayed work. The tonnage is about 619,000 tons lower than the total building at the end of March, 1921, largely due to the continued decrease in the United States of America, in which country the tonnage now under construction is only 17 per cent. of the total building there in March, 1919. Apart from the United States, the leading countries abroad are: Holland, with 391,389 tons; France, 390,453 tons; Italy, 310,333 tons; and Japan, 200,262 tons. The total decrease in these four countries amounts to 169,000 tons as compared with the previous quarter.

Stock Exchange Settlements.—A Stock Exchange correspondent writes:—The barren condition of Stock Exchange business during the current year has given rise to a constant ferment of dissatisfaction amongst a certain section of Stock Exchange members in London and the country exchanges at the refusal of the Stock Exchange Committee to re-establish fortnightly and monthly settlements. Since the reopening of the Stock Exchange in January, 1915, dealings have been for cash, and although periodical settlement days are fixed by the Stock Exchange Committee, these are simply for the convenience

of borrowers and lenders who have to pay and receive interest money on stocks and shares in respect of unsettled transactions at the end of July, 1914. It does not require any particular consideration to understand that the periodical settlement, either fortnightly or monthly, has the effect of stimulating speculative business. In bygone days it was always held in the Stock Exchange that members could not possibly live by investment alone, but that they were dependent for the luxuries, if not the necessities of life, upon the speculation facilitated and encouraged by the fact that bargains need be settled only twice a month. Out of that system there arose the well-known contango or carry-over practice, which, in brief, means that sellers are willing to lend their stock, or moneylenders to provide money, wherewith to finance such purchasers as do not wish to pay for what they buy. It was estimated—in the vaguest way, however—that when the war broke out there were engagements open in the Stock Exchange for speculative account running into something like two hundred millions of money. These have been so substantially reduced that the rump of the account is guessed to-day as being no more than about five millions, taken at the pre-war prices. Nevertheless, it is this oddment of the cold-storage account which stands in the way of a resumption of bi-monthly settlements. According to the temporary regulations of the Treasury, borrowers had the right to continue their loans for a year after the conclusion of Peace, or upon the expiration of the Courts (Emergency) Powers Act, whichever might be the sooner. It is assumed nowadays that the two terms will run concurrently, and as Great Britain is not formally at peace with Turkey, there is at least a period of 12 months ahead before the borrowers can be forced to complete engagements open at the end of July, 1914. It is argued by those who desire an immediate return to term-settlements that the fact of this cold-storage account need not stand in the way of resuming pre-war arrangements, but the view of the Stock Exchange Committee is that the resumption of bi-monthly settlements would inextricably complicate the position as it is governed by the rules affecting failures. It stands to reason that speculative business invites a much more risky element than dealing for cash does; and, if fortnightly settlements were re-established, in the course of which members failed to comply with bargains entered into from now onwards, they would also be unable to complete any commitments which they still had open in respect of the pre-war account. Various suggestions are put forward from time to time with a view to meeting the complexities of the position, for there is a strong feeling that Stock Exchange business would be greatly increased by a return to term settlements. The convenience of the public is also a matter to which due consideration must be directed, but, taking everything into account, the Stock Exchange Committee have arrived at the view, although it is not necessarily one which might not be modified, that re-introduction of bi-monthly and monthly accounts has to be regarded as impracticable until the pre-war speculative account is finally closed.

The Position in Mexico.—Three weeks ago an official announcement by the Mexican Government indicated that the payment of interest on the External Debt would be assumed on July 1st. Mail advices show why the expectation was premature. It appears that President Obregon directed the Finance Minister to deposit the proceeds of the increased export duty on oil at the Banco Nacional for this purpose, but the suspension of production by the American companies, as a demonstration against the increase of the duty, has cut off the expected revenue and so postponed the resumption. Alarming reports arrived last week of disturbances in the Tampico region, due to the unemployment caused by the suspension, and President Obregon's alleged order that the companies should compensate their workmen for their abrupt dismissal seemed likely to initiate a fresh stage in the dispute. Apparently, however, order has been restored; the Mexican Government has undertaken to police the district, and the American warships sent to Tampico have been withdrawn. The non-American oil companies have refused to join in the demonstration, and will probably profit considerably by the suspension of the American export. But the legality of

the increased duty is doubtful, inasmuch as it has been imposed not by Congress, but by Presidential decree. Still, in the absence of further disturbances, it is quite possible that Mexico may soon be sufficiently prosperous to begin to satisfy her creditors out of her general revenue, independently of what the duty may produce. But the action of the oil companies will probably tend to multiply the reports of impending revolution, and will help to delay the recognition of General Obregon's Government. And, in the event of a prolonged deadlock over the question of recognition, it seems doubtful whether that Government can maintain itself in power.

Cotton Spinning Dividends.—Many Lancashire cotton spinning companies take stock at the end of June, and Mr Frederick W. Tattersall, of Manchester, has prepared a summary of the announcements of 100 leading firms. Out of 76 mills which have a total paid-up ordinary share capital of £7,696,450, the results of which cover the period of three months ended June 30th last, 48 have not been able to make a distribution to shareholders, one has declared a dividend of 5 per cent., 14 10 per cent., one 11 per cent., two 12½ per cent., two 13 per cent., one 15 per cent., six 20 per cent., and one 24 per cent. per annum, which works out at an average per company of 4.82 per cent. per annum. For the previous quarter the same concerns paid an average dividend of 7.13 per cent. per annum, and for the three months ended December 31st last 19.49 per cent. per annum. The figures for the remaining 24 mills are for the first six months of this year. Nine firms have been unable to make a return to shareholders, three have paid 5 per cent., eight 10 per cent., one 13½ per cent., two 20 per cent., and one 25 per cent. per annum. The average per company is 7.22 per cent. per annum, which compares with 22.46 per cent. per annum for the last six months of 1920. The ordinary share capital of these 24 companies is £2,454,000. An analysis of the trading of the 100 companies for the first half of the year 1921 shows that the average dividend per company is 6.28 per cent. per annum, as against 22.52 per cent. per annum for the same concerns for the six months ended December 31, 1920.

English Sewing Cotton.—The depression in the textile trade is clearly reflected in the report of the English Sewing Cotton Company, Limited, for the year ended March 31st last. A year ago trading profits reached the record total of £794,100, but the report for the latest financial year shows a very severe drop, to £254,200, the lowest level touched for many years. Results since 1913-14 are set out below:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Trading profits	£ 376,365	£ 488,505	£ 468,733	£ 503,854	£ 598,105	£ 794,136	£ 254,242
Dep. and deb. int.	65,843	65,338	64,804	65,396	64,363	64,012	64,497
Net profit	310,522	423,167	403,929	438,458	533,742	730,124	189,745
Brought forward	100,079	120,862	174,029	177,958	191,416	193,563	358,608
Amount available	410,601	544,029	577,958	616,416	725,158	923,687	548,353
Preference dividend	50,000	50,000	50,000	50,000	50,000	50,000	50,000
Ordinary dividend	130,000	180,000	200,000	200,000	250,000	300,000	300,000
Reserves, &c.	125,000	140,000	150,000	175,000	231,595	415,307	415,307
Carried forward	105,601	174,029	177,958	191,416	193,563	158,608	198,353

* Includes £200,000 transferred from stock contingencies reserve.

In spite of the drop in profits, the ordinary dividend is maintained at 15 per cent., this being made possible by the transfer of £200,000 from reserve for stock contingencies. Two years ago the capital was doubled by the capitalisation of £1,000,000 of the reserve funds. Stock-in-trade stands £420,100 lower in the balance-sheet, at £1,324,700, being taken at cost or market value, whichever is the lower, and there is also a reduction of £245,200 in investments in War bonds and War Loans. Creditors are £305,700 lower, but debtors have increased by £172,000, and the American Thread Company's current account has risen from £30,600 to £166,800.

Edward Lloyd.—A heavy decline in profits is recorded in the report and accounts just issued of Edward Lloyd, Limited, for the year ended December 31, 1920. As will be seen from our table given below, gross profits have fallen from £223,033 to £119,876:—

	1913.	1915.	1916.	1917.	1918.	1919.	1920.
Trading profit	£ 152,363	£ 103,386	£ 123,953	£ 151,536	£ 177,941	£ 223,033	£ 119,876
Brought forward	23,629	39,234	39,304	37,195	39,923	52,690	10,977
Management exps., &c.	175,992	142,620	163,257	188,731	217,864	275,723	130,853
	9,869	16,191	23,937	24,183	40,549	5,121	7,201
Reserve, &c.	166,123	126,429	139,320	164,548	177,315	270,602	123,652
Preference dividend	20,000	20,000	20,000	20,000	20,000	20,000	20,000
Ordinary dividend	37,125	37,125	37,125	37,125	37,125	37,125	42,188
Rate	67,500	30,000	45,000	67,500	67,500	82,500	60,000
Carry forward	(11½ %)	(5 %)	(7½ %)	(11½ %)	(11½ %)	(13½ %)	(5 %)
	41,498	39,304	37,195	39,923	52,690	130,977	21,464

From the £130,977 carried forward from 1919 accounts £120,000 was transferred in 1920 to a "capitalisation reserve account." In September, 1920, the capital of the company was increased from £1,275,000 to £1,875,000 by the creation of 600,000 ordinary shares, which were allotted to ordinary shareholders by way of bonus. This and other changes will be found noted in the analysis of the balance-sheet, which appears in another column.

Southern Pacific Report.—The United States Government relinquished control of the American railroads on March 1, 1920, and the report of the Southern Pacific Company for the year 1920 therefore covers two months of operation by the Government. The figures for 1920 below include the operations of the line for the entire 12 months, regardless of the change in the form of control:—

	1919.	1920.	Increase or Decrease
Operating revenues	\$ 239,657,272	\$ 282,269,504	+ 42,612,232
Operating expenses	188,385,172	242,113,790	+ 53,728,618
Net operating revenue	51,272,100	40,155,714	- 11,116,386
Railway tax, &c.	11,963,690	14,905,009	+ 2,941,319
Operating income	39,308,410	25,250,705	- 14,057,705

The ratio of expenses to revenue was 85.77 per cent., having risen steadily from 62.18 per cent. for 1917. The net revenue for 1920 was 45.2 per cent. less than in 1917, in spite of the movement of 54 per cent. more traffic units with 3.9 per cent. less train miles. Average wages were increased 92 per cent. above the average for 1917. The increase of 28½ per cent. in operating expenses was largely due to higher wages and to increases in cost of fuel and other materials. A sum of \$20,490,420, being the estimated balance due from the Government under the guaranty, is taken into the income account. The credit balance of income account transferred to profit and loss is \$25,359,200. After payment of the 6 per cent. dividend and making certain adjustments, the surplus is increased by \$5,970,000 to \$157,976,300.

Transvaal Output for June.—The June statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 678,490 ounces, as compared with 687,776 ounces in May, and 715,957 ounces for June, 1920. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.
January	Fine Ozs. 787,467	Fine Ozs. 782,634	Fine Ozs. 714,182	Fine Ozs. 676,059	Fine Ozs. 670,503	Fine Ozs. 651,593
February	753,594	781,321	659,759	636,728	625,350	558,137
March	796,689	787,094	696,281	712,379	707,036	671,123
April	754,672	742,778	717,000	694,944	686,979	681,382

Total	176,522	177,174	183,147	187,827	190,634	189,050	186,407	184,173

The Tanganyika Trio.—Our mining correspondent writes:—Some surprise may have been occasioned on the part of people not familiar with the position by the publicity given in London to the affairs of the Union Minière du Haut Katanga, a Belgian company, whose shares command a high premium on the Brussels Bourse, but are not dealt in here. The explanation is that a good proportion of the capital, including "dividend" shares, is held by the Tanganyika Concessions; while for some time past the Zambesia Exploring Company, another concern started with great ambitions, has practically confined its energies to assisting in the financing of the Tanganyika. Thus the shareholders in two fairly large British undertakings are vitally concerned in the progress of the Union Minière. The latter holds a huge mineral concession in the Congo Free State, and during recent years has paid substantial dividends. Naturally, during the war the directors had to "gang warily," but after the evacuation of Brussels by the Germans accounts were published covering the five years ended December 31, 1918. A gross profit was shown of nearly 117,000,000f, of which, after the deduction of special appropriations, a divisible balance of 44,510,000f remained. A dividend of 150f per 100f share was declared, absorbing 37,500,000f. In 1919 the profits amounted to 30,237,000f gross, 13,429,500f net, and 50f per share was disbursed. The adverse rate of the exchange prevented this from being reflected in a distribution on the part of the Tanganyika Company. Last year's operations resulted in a gross profit of 15,740,000f; the surplus, after providing for interest, &c., was devoted towards depreciation. Appended is a comparison of the last three balance-sheets:—

ASSETS.	1918.	1919.	1920.
Plant, buildings, development, materials, & stores en route	61,953,700	97,463,800	163,469,730
Materials and stores	13,489,300	20,583,100	28,283,451
Securities	28,729,200	15,507,000	15,925,000
Products (ores and metals)	20,326,000	60,145,800	22,342,205
Cost of debenture issue			2,000,000
Sundry debtors	20,430,700	8,048,700	19,993,303
Cash	15,555,300	1,511,300	404,856
Statutory deposits	21,000	21,000	21,000
LIABILITIES			
Capital and share premiums	20,000,000	20,000,000	40,000,000
Statutory reserve		1,250,000	1,250,000
Special reserve		3,979,400	4,371,628
Ordinary depreciation fund	26,111,200	33,281,300	69,025,707
Extraordinary	18,880,000	25,880,000	
Debentures	15,000,000	20,000,000	60,000,000
Sundry creditors	35,465,100	84,427,900	75,323,620
Debenture interest, &c.	516,100	1,011,700	2,447,570

It will be seen that capital expenditure has been on a large scale, the most important item, or, rather, collection of items, having nearly trebled. Part of the money has been provided out of revenue through the depreciation accounts, as shown, part by the raising of further capital. Towards the end of last year 12,500 shares were issued at 800f apiece, the quotation on the Brussels Bourse being then 1,900f. Shortly afterwards 40,000,000f of 7 per cent. debentures were placed. An even greater expansion is now projected in order to permit of the conduct of mining and treatment operations on an extended scale, and to meet the peculiar position in which the company is placed by the terms of its concession. The present capital consists of 150,000 ordinary shares of 100f each, a like number of "dividend" shares, possessing the same rights, but having no par value; 20,000 debentures of 1,000f each carrying 4½ per cent., and 40,000 carrying 7 per cent. interest. Further shares of the first-named class are to be created and allotted in connection with the extension of the company's rights to 1990—their limit; then, to provide for development, plant, &c., 300,000,000f are to be issued over a period of six years—half in debentures and half in what might be termed participating preference shares. This is a simplified presentation: the actual scheme is elaborate and involved. Whether or not the Tanganyika Company takes up its proportion of the new shares, it will benefit substantially through the receipt of scrip gratis under its agreement with the Comite Special du Katanga, and also through the completion of the Benguella Railway, in which it owns a nine-tenths interest. Copper smelting was commenced in 1911, and attained an average of about 20,000 tons per annum. For the first half of the current year 13,030 tons have been produced from the direct smelting of rich ores

from four mines; a concentrator for the treatment of low-grade material has commenced running. With these works, supplemented by a leaching plant, the output is expected gradually to work up to 140,000 tons per annum. The ore in sight in the 10 mines in the south-eastern district is estimated at over 32,000,000 tons, containing about 2,000,000 tons of copper. Then there are the copper mines in the western district. Coal is being extracted and used locally, and the production of tin is increasing. Deposits of gold, cobalt, and uranium are also known to exist. Additional power is to be provided by two hydro-electric installations. Altogether, therefore, the Union Minière promises to be one of the "big things" of the mining world. The results of these activities in the shape of dividends necessarily depend largely upon the state of the metal markets.

Oversea Correspondence.

FRANCE.—BUDGET PROPOSALS—BANQUE INDUSTRIELLE DE CHINE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, July 12.

IN accordance with his promise, M. Doumer, the Finance Minister, last Friday laid on the table of the Chamber a summary of his Budget proposals for 1922. The object was, of course, that Parliament should be in possession of the Minister's financial proposals before rising for the summer recess, and thus be in a position to consider them during the holidays. A rough analysis of the new Budget Bill shows that it marks a return to the principle of a unified budget, and to the sound method of balancing expenditure with revenue, without having to resort to further borrowing. Budgetary unity M. Doumer proposes to realise by suppressing what has of late years been known as the Extraordinary Budget, and by abolishing the special accounts arising out of the financing of the war. The outstanding special accounts, it may be recalled, are now being liquidated, and should be entirely wound up by the end of the current financial year. The expenditure formerly included in the Extraordinary Budget has now, for the most part, been rendered unnecessary, and what still remains of it will be incorporated in future in the Ordinary or only remaining Budget, where the items concerned will appear in the form of a special credits section, which will form part of the estimates for each ministerial department, until it progressively disappears with the cessation of the causes of its creation.

The outstanding idea of M. Doumer's first Budget is that the national finances, and the public credit of the country, can only be replaced on a sound footing if the system of continually resorting to fresh national loans is abandoned, and the public expenditure reduced to its lowest possible figure, and met by revenue from taxation. From the beginning of next year, the Minister argues, all increase of the national debt must come to an end, and the only future loans must be merely for the conversion or consolidation of the existing national debt, with the exception of those for the purpose of raising money for the reconstitution of the devastated areas. The money required for these purposes will, of course, be due from Germany, but as it will be payable only by annual instalments, some kind of loans will be required, either in the form of direct issue by the sufferers themselves (such as the loans that have recently been issued by the combined collieries, the combined sugar concerns, &c.), or by the Crédit National, the organism that was specially created for the purpose a few months ago. Some form of credit operation may also have to be effected in connection with the sale to neutral countries of the German bonds placed in the hands of the Reparations Commission.

The estimates comprised in the new Budget are as follows:—

	Francs.
Expenditure	25,496,000,000
Revenue	25,514,000,000
Estimated surplus	18,000,000

The estimated expenditure in the Budget for 1921, which was voted on April 30th, amounted to 26,499,000,000f, so

that there is an apparent reduction in the new Budget of 1,003,000,000f. As a matter of fact, the real reduction of expenditure, so far as the estimates included in the recent Budget are concerned, amounts in round figures to 2,548,000,000f. The new Budget, for the first time since 1870, includes expenditure in connection with Alsace-Lorraine, amounting to 145,000,000f, while the increased amount to be found to meet the interest on the national debt, which it is obviously impossible to avoid, reaches a total for 1922 of 1,000,000,000f. The amount allocated for redemption purposes will also have to be increased by 400,000,000f to cover the sinking fund requirements of the last national loan.

On the revenue side M. Doumer estimates a yield of 3,300,000,000f from direct taxation, and 16,120,000,000f from registrations, customs, indirect taxation, &c., making together 19,420,000,000f. The estimate coming under the second of these headings is based on the yield from similar sources during the year 1920. Another 3,050,000,000f is expected from "exceptional resources," from which it is expected the financial year of 1922 will benefit in the same way, as last year suffered from exceptional expenditure arising out of the war. These "exceptional resources" will include the yield from the tax on war profits (including the proportion due from Alsace-Lorraine), and the revenue received from the sale of Army and other stocks. This, it is estimated, will bring the total revenue "in sight" up to 22,470,000,000f, leaving a balance of 3,000,000,000f to be obtained from new sources (although it is regarded as probable that the two Chambers, as the result of their examination of the Budget proposals, will insist on cutting down still further some of the estimates that will be placed before them). A certain amount of saving will also probably be effected owing to the expected continued fall in commodity prices, which will naturally benefit the Government as well as other consumers. In any case, it is regarded as unlikely that any proposals will be brought forward for the imposition of entirely new taxes. What is generally expected is that the Finance Minister will attempt to procure whatever extra money may be necessary by doubling, or at any rate substantially increasing the existing tax on turnover, which would be a comparatively easy operation.

Reports current in financial circles here indicate that there is a probability of American capital coming to the rescue of the Banque Industrielle de Chine, to which I referred last week. This bank was organised, it may be remembered, in 1913, with the aid of the Chinese Government, which subscribed one-third of the capital, and undertook by formal contract to "assist the bank in all operations that it might undertake in conformity with its objects." The aim of the Chinese authorities was to provide a means that would enable it to escape from the limitations imposed upon it by the International Financial Consortium, which has for so long possessed a practical monopoly over all financial and public works undertakings in China. The standing given to the bank from its close connection with the Chinese Government was substantially increased by the permission given to it by the latter to issue its own notes, which soon stood at a premium in China, and by its acquisition of certain important Chinese railway concessions. Under French management the Banque Industrielle de Chine became an important factor in extending French influence in China, in face of British, American, and Japanese rivalry.

Apparently, too great a measure of success led to the downfall of the institution. With so many advantages in its favour, the Banque Industrielle presumed on its good fortune. In order to attract business, it offered a higher rate of interest than its older rivals, and rapidly secured an enormous number of accounts, which represented something like 1,000 millions of francs in its Chinese branches alone. Risky speculations on an enormous scale in rice and other commodities eventually caused the British banks, who had formerly accorded large credits to their Franco-Chinese confrères, to call in their money, with the result that is now known. The bank's available funds were exhausted, and, finding it impossible to continue, it closed its doors. The situation of the Banque Industrielle de Chine was the cause of a long discussion in the Chamber on Friday, which arose in consequence of the announcement that some time ago, when the bank's

position became critical, a telegram was despatched from the Quai d'Orsay, signed by the then Premier, M. Georges Leygues, requesting the French Ambassador in London, Comte Saint-Aulaire, immediately to bring pressure on the Governor of the Bank of England and Mr Reginald McKenna, the chairman of the London Joint City and Midland Bank, for the purpose of inducing them to come to the rescue. M. Leygues, from his seat in the Chamber, denied all knowledge of this telegram, which M. Briand frankly admitted to have been signed and despatched by M. Philippe Berthelot, Permanent Secretary of the French Foreign Office (whose brother is the president of the Banque Industrielle de Chine). The incident produced exceptional excitement in the Chamber, but M. Briand courageously "covered" his very able subordinate, and insisted that the Government was prepared to stand or fall by the Chamber's decision in the matter. In the result, M. Briand received what was for all practical purposes a vote of confidence by a majority of some 50 votes.

The Bourse has suffered from depression in consequence of the dog days even more than from such disquieting events as the shaken credit of the Banque Industrielle de Chine. There has been general inactivity and a fall in values, because of the attempt in certain quarters to realise securities. The difficulties of the Mexican petroleum industry have provoked uneasiness, and further disquieting factors have been the fall in value of petroleum in Pennsylvania and the mobilisation of the British Fleet before Constantinople. It is worth noting that there has been a marked improvement in business in the great Paris shops since the beginning of the month, and the hope is expressed generally that there is a real improvement in the economic situation. French 3 per cents. are rather stronger at 56.50, as against 56.17. Banks have fluctuated, Banque de Paris finishing at 1,270, after having been quoted at 1,260 and 1,312, while l'Union Parisienne is at 800, after fluctuating between 800 and 840. In railways Nord-Sud remains depressed at 165, Omnibus rose from 619 to 640, to drop back at 607, Chargeurs Réunis, having paid a 20f dividend, is back from 590 to 550, and

Messageries from 215 to 205. Metallurgical undertakings are lower, Creusot falling from 2,145 to 2,130, and Acieries de France from 605 to 585. In mining securities Tintos have fluctuated from 1,440 to 1,420, and Boleo is weaker at 435.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—REPARATIONS TAXES—BANKS IN 1920 —EXCHANGE AND BOURSE—INDUSTRY—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, July 11.

THE Reichstag has adjourned until September, after hearing only a general statement as to the new financial reform. The more important tax Bills are not prepared, the yields are in most cases not yet calculated, and differences of principle in the Coalition parties, it is believed, prevent any clear definition of the new property taxes. The Chancellor's statement to the Reichstag on July 6th put the budgetary situation as follows:—Ordinary expenditure 48.5 milliard marks, of which 35.8 milliards for Federal purposes proper; extraordinary, 59 milliards, of which 26.6 milliards for execution of the Peace Treaty, the remainder going mainly on subsidies to the railways and posts and food-cheapening subsidies. The extraordinary expenditure, Dr Wirth promised, will be cut down as speedily as possible. The third (Reparations) part of the Budget, consisting of the fixed annual payment and the 26 per cent. on exports, is calculated at 3.3 milliard gold marks, estimated in the first year on the assumption that the foreign buying power of the mark will move towards its home buying power, at 42 milliards of paper marks. The occupation cost, for which 15 milliards have been provided in the 1921 Budget, is an unknown quantity. The principle of the new financial reform will be a fair equilibrium between direct and indirect taxation. Direct taxation proposed is: increase of the income-tax yield by improvement in assessment and control methods; an elaboration of the emergency levy (Reichsnoteopfer), a heavy increase of the tax of dividends and interest, a reform of the insurance tax, and new

taxes on motor-cars and on betting. Indirect: increase of Customs duties, coal, sugar, tobacco, and beer taxes; elaboration of the spirit monopoly, mineral water and match taxes, and establishment of an explosive monopoly. The reform of the emergency levy will be based on the fact that owners of real property have not been so heavily taxed as owners of paper-mark wealth; the method to be adopted will be annually recurring assessments, which will take into account the displacement of values caused by fluctuations in the value of the currency, this affecting also public companies, which so far under the levy have been taxed a uniform 10 per cent. The annual yield would be at least 7 or 8 milliards. The promised State participation in industry is to be achieved by taking a proportion of dividends. A post-war profits tax is fore-shadowed, which will take part of the increments of wealth since July 31 or December 31, 1919, here only very large increments being touched. From these taxes is expected 32 to 36 milliards revenue more than in 1921, and the total taxation yield will be 80 milliards. Of the new coal taxation Dr Wirth only repeated that it would take as much of the difference between home and world market prices as can be taken without injuring industry. Direct taxes in the coming years will bring 40.5 milliards, or 54½ per cent., of revenue. This programme, which naturally does not provide for the covering of all expenditure, estimated at 150 milliards, was severely attacked by German-National and German People's party spokesmen. It is, in fact, less precise than the partial semi-official statements earlier made. The new inflation wealth reaped by owners of real property through the rise in nominal values will be trebly taxed—by the amendment of the emergency levy, by the post-war profits tax, and by the existing triennial *Besitzsteuer*, which takes 10 per cent of increment of wealth.

Dr Wirth again protested against the sanctions as a cause of injury to trade, and therefore a threat to his reforms. Reports, in fact, agree that the Rhine Customs frontier is seriously damaging business. According to a report of the Rhenish Reichstag Deputy Erkelenz, a production decrease of 30-50 per cent. has been caused to some firms. In 90 Düsseldorf concerns, employing 50,000 workmen, the number of hours worked less than the normal has increased since March 6th four and a-half fold. Since February the quantity of goods loaded in Düsseldorf harbour has fallen to half, and the number of railway carloads to nearly a third. A report of the President of Düsseldorf county states that 200,000 out of 550,000 employees are working short time.

The private banks' reports for 1920 show the effect of inflation in an all-round increase of business, and also in largely increased profits. The dividends of the eight largest banks are increased. The gross and net profits (in millions of marks) and dividends are:—

	Gross.	Net.	Dividend.	Dividend, 1919.
Deutsche	713.0	185.0	18	12
Disconto	397.9	160.1	16	10
Dresdner	421.8	144.2	12½	9
Darmstaedter	263.0	58.5	10	8
Berl. Handelsges.	72.7	36.9	12½	10
Commerz und Privat.	210.0	66.8	12	9
National	110.7	46.5	10	7
Mitteldeutsche	73.5	16.6	10	8

Gross profits totalled 2,262,000,000 marks, or 1,429,000,000 marks more than in 1919, and nett profits 715,000,000 marks, or 454,000,000 marks more. The average dividend was 13.4 per cent., against 9.1 per cent. Capital at close of 1920 was 1,740,000,000 marks, showing an increase of 280,500,000 marks during the year. Capital and reserves (in millions of marks) at close of the year were:—

	Capital.	Reserves.
Deutsche	400	378
Disconto	310	140
Dresdner	260	80
Darmstaedter	220	47
Berl. Handelsges.	110	34.5
Commerz und Privat.	200	50.7
National	150	30
Mitteldeutsche	90	13.8

The Disconto and Dresdner Banks both announce increases of capital, in each case by 90 million marks. The liabilities of the eight banks at the close of 1920 totalled 63,346,000,000 marks, or 2,519 per cent. on their capital

and reserves of 2,514,000,000 marks. The banks' realisable assets mostly consist of Treasury bills, and these are classed as realisable on the ground that they may be promptly rediscounted by the Reichsbank. The Deutsche Bank report shows that 85.1 per cent. of liabilities are covered by assets classified as "fluid in the first degree," the Dresdner 70.2 per cent., the lowest being the National Bank with 44.7 per cent. The reports do not show what proportion of the bills are Treasury bills, but it is known that trade bills play a small and decreasing rôle. The clearings of the eight banks last year totalled about five billion marks; the three largest banks had each clearings of over one billion. The report for 1920 of the Deutsche Girozentrale, which is the central institution, founded in 1918, of the local Giro-Zentralen, or municipal union banks, shows also a large increase in business. Capital is to be increased to 55,000,000 marks. The Savings Banks in May experienced a decline of 200,000,000 marks in deposits; the nett increase of deposits in the whole first five months of 1921 was 2,650,000,000 marks, against 1,740,000,000 marks in the same months of 1920, and 3,250,000,000 marks in same months of 1919. The number of bankruptcies in the first half of 1921 was 1,573, against 447 in same half of 1920, and 4,490 in first half of 1914. The demand for industrial capital in June was 1,525,000,000 marks, against 1,179,000,000 marks in May. The total for the first half-year is 10,291,000,000 marks, of which 6,635,000,000 marks was for ordinary stock, 2,439,000,000 marks for bonds, and the remainder for preference stock. A Bill has been submitted depriving the private note-issuing banks of the right to dispose of their gold. These banks, the Bayerische Notenbank, Sächsische Bank, Württembergische Bank, and Badische Bank hold 55 million marks gold, and on the basis of an agitation for the sale of this gold, and for voluntary relinquishment of the right of issue, there has been heavy speculation in their shares, which stand much higher than Reichsbank shares. The new law compensates the banks for loss of power over their gold by increasing their tax-free issue right. In future the total issues may be 640,000,000 marks.

The Reichsbank statement for June 30th shows record pressure, caused entirely by State demands. The bank's holding of discounted Treasury bills increased by 15,173,359,000 marks to 79,607,790,000 marks, while private bills declined by 96,948,000 marks to 1,565,406,000 marks. Note circulation increased by 3,334,382,000 marks, the largest week's increase so far, to 75,321,095,000 marks; State deposits increased by 2,116,590,000 marks to 5,647,805,000 marks, and private deposits by 7,163,635,000 marks to 14,744,903,000 marks. "Kassenschein" circulation increased by 50,600,000 marks to 8,706,600,000 marks. Money continues to be very plentiful. Day money can be had in Berlin for 4½ per cent. The decline in reichsmark exchange has brought here foreign money, mostly American. The bourse during the past two weeks has continued active and firm. The outside public, disregarding the probable effect on dividends, and on the liquidation value of company assets of the State's intended taxes and participation in profits, is buying eagerly. The *Frankfurter Zeitung's* securities index shows a rise from 15,628 on June 25th to 15,885 on July 2nd, and to 16,632 on July 9th, the last figure being 85 per cent. above the level of January 2, 1920. Last week began with a frantic demand for stocks, mostly by outsiders. Leaders were the coal and iron stocks of the companies fused in Herr Stinnes' Rhine-Elbe Union, in particular the Deutsch-Luxemburg Company, but other Western metal stocks were also demanded; also shipping and shipbuilding stocks, while bank stocks were dull. The market was supported by numerous, mostly denied, rumours of fusions, but the American peace vote had no effect; also, despite expectations, no effect on the mark exchange, the dollar to-day selling at 78.45½, and sterling at 285.05. War Loan was to-day quoted 77.50, 4 per Cent. Federal 78.30, 3½ per Cent. 69.40, 3 per Cent. 76.10, Colonial 4 per Cent. 69.50, and Savings and Premium 80.25.

Prices are again rising. The *Frankfurter Zeitung's* monthly index shows for 77 commodities on July 2nd 135.4, against 127 (lowest since February, 1920) on June 4th, a maximum of 153 on December 1st last, 100 on January 1, 1921, and 9.23 before the war. On June the

food group rose from 127 to 144.5, textiles and leather from 70 to 79, and minerals from 109 to 115.3, while the miscellaneous group fell from 191.4 to 190.6. Of the 77 commodities 29 rose, 10 fell, and the rest remained unchanged. The price-rise must partly be ascribed to the fallen buying power abroad of the reichsmark; but the slackening in the world price-fall is elsewhere observable—the last Swedish and Danish monthly indexes show no change. The Prussian Ministry of Trade's reports on industry in June show a general buying activity on the part of the public, the invariable result of currency depreciation; but this is not yet fully reflected in industrial activity. In the textiles branches the demand and the condition of employment improved; in other branches, in particular the chemical, paper and machine, the activity caused by expectation of higher prices was counterbalanced by the sanctions, aggravated in the case of dyes by the manufacturing crisis abroad. In the electrical branches only the small-motor department showed an improvement. The improvement in the cotton, wool, and silk branches was marked.

The Zwangswirtschaft is approaching its end. A conference of food ministers decided in favour of abolishing Sugar Control on August 1st. The area under sugar is rapidly increasing, and is this year 77 per cent. of that of 1913-14. The price of that portion of the wheat harvest that remains controlled is fixed at 2,300 marks per metric ton, rye 2,100 marks, barley 2,000 marks, and oats 1,800 marks.

ITALY.—THE NEW GENERAL TARIFF.

(FROM OUR CORRESPONDENT.)

TURIN, July 10.

THE most important measure enacted by the past Giolitti Cabinet on the eve of its fall was the hurried passing by Royal legislative decree of the new general tariff. The decree bears the date of June 9, 1921, and was published in the official *Gazette* of June 30, 1921. Professor Alessio, the former Minister of Industry, was evidently bent on leaving his mark on fiscal legislation. A new general tariff was necessary, for the existing tariff of 1887 was growing obsolete. The great problem was—more or less protection? No one dreamed of a return to the Free-trade era of Cavour and his immediate successors. A Royal Commission had studied the problem, and published over 30 large volumes of special and general reports. Its findings were decisively protectionist. They proposed that the old system of a general tariff and of subsequent treaties of commerce with foreign countries with lower binding duties should be discontinued, and that in place thereon should be substituted a system, akin to French or United States examples of a double tariff; a higher tariff to be applicable to some nations and a lower tariff to States giving us the benefit of lower duties, both duties to be variable, at the pleasure of the Italian Government. The Protectionism in these proposals was too rampant to be acceptable to political parties. The present Alessio tariff maintains the old principle of a general tariff applicable to all countries which apply their general tariff to our goods, and of a lower tariff based on future treaties of commerce. Much will depend, therefore, on the stipulation of commercial treaties, but evidently the general tariff is to be a basis on which negotiations will be conducted. The general features of the new tariff are as follow:—(1) The tariff is applicable as from July 1, 1921, to all goods which do not come from countries with which Italy has a treaty of commerce in force. (2) The duties are payable in gold, i.e., at a rate of exchange which is every week fixed by Government, on the basis, presumably, of a mean of the exchanges with France, Switzerland, Great Britain, and United States. (3) To the principal duty there is to be added, in the great majority of cases, an additional duty, called increment coefficient (*coefficiente di maggiorazione*). For instance, "Horses," which bear the schedule number 1 of the new tariff, pay, if not less than 1.40 metres in height, 140 gold lire each. As, however, the increment coefficient is 0.5, we shall add another 70 lire, so that the whole duty will be 210 gold-lire, which, by the way, corresponds to-day to about 700 paper-lire.

(4) The additional duty is variable at the will of the

Government. If the Minister of Industry thinks that foreign competition is becoming too severe, he can put up the duty by a decree, and afterwards put the decree on the table of the House of Deputies, which, it is hoped, will accept the accomplished fact.

(5) The new tariff includes 951 schedules, whereas the old tariff contained only 472. The increase is partly due to technical variations and progress in the industry between 1887 and 1921, but is also, unmistakably, an indication of the more Protectionist tendency of the new tariff. With more numerous and refined distinctions between goods and goods, the clause of the more favoured nation will not work at all smoothly. The refinement in the classification of goods is directed against the peril—from a Protectionist point of view—that a lowering of a duty on a given class of goods in favour of a given country may be used by another country for claiming a decrease on other goods which happen to be in the same class. With more detailed schedules this stretching of decreases will not be so easy as in the past. The change of classification makes an exact comparison between old and new tariff more difficult. If all schedules resembled the first already cited ("horses higher than 1.40 metres"), the prospect for Italian consumers would not be bright. In the old tariff horses paid 40 gold-lire. Now they pay 140 lire principal duty, 70 lire additional duty, in all 210 lire, all in gold, equivalent to about 700 paper-lire. The increase in paper-lire is about seventeenfold. Fortunately the increases are not everywhere so high. But the instance given is sufficient to point out a fundamental mistake in the new tariff. The compilers evidently adopted the "increment coefficient" to enable the Government to counteract the influence of increased costs of production of Italian goods in relation to the assumed lower cost of foreign goods. But the payment in gold-lire has already the very same aim and effect. The payment in gold and the additional duty are bound to overlap, and to constitute, in most cases, a double charge on Italian consumers.

The schedules are so varied as to give an impression of decrease in the lower grades of goods, but the decreases are few, and comparatively unimportant in comparison with the increases in the higher grades. If the "principal" duty may appear lowered in some cases, this impression is reversed if we take account of the additional duty. Italian consumers, moreover, who pay duties in paper-lire and whose incomes, in not a few cases, have not increased in proportion to the depreciation of the lira, are apt to be hit by the gold duties even more severely than foreign importers from relatively appreciated countries. The Government says that foreign States, as, for instance, Great Britain, France, Spain, Czecho-Slovakia, have increased their tariffs even more, but the contemplation of worse cases will be a scanty comfort to Italian consumers.

SWEDEN.—THE COST OF LIVING—WAGES—FINANCIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 9.

EASIER conditions in the money market have warranted a further lowering of the discount rate, which is now 6 per cent., still a very high figure, and far too high in comparison with trade conditions. It is hoped, therefore, that we shall not have to wait very long until the next abatement takes place. Every quarter the Swedish Board of Social Welfare publishes an index of the cost of living, which is based on reports from 49 different places all over the country, and also on the expenses for a family of four with an annual income before the war of 2,000 kroner. The result obtained at the end of June last shows a considerable decline, as compared with March, there being a drop of 13 points, viz., from 249 to 236. On October 1st last year the cost of living in Sweden, according to this table, reached its highest level at 281, and since then there has been a decline up to now of 45 points. Largely contributing to this cheaper living, which on paper looks quite correct but may not be noticed to any marked degree by the public in general, have been cheaper prices for foodstuffs, fuel, lighting, clothing, and sundry expenses, whereas rents and taxes are unchanged, and prob-

ably will be so for at least a year ahead. As regards wholesale prices, there is no doubt that also in this country the previous constant falls have been checked. Thus, for example, vegetable foodstuffs, coal, hides, and leather have gone up, whereas there are slight set-backs in animal foodstuffs, agricultural necessities, metals, buildings materials, textiles. Prices for woodpulp have been stagnant. The average gives the same position for June as for May last. The Government has just granted another two million kroner for relief work in the northern parts of the country. Lately considerable criticism has been launched against the principle of unemployment support, as seriously retarding the downward progress of wages and costs. It is felt that unless Swedish industry materially reduces its working costs no place will be found for its products in the domestic or foreign markets. Thus far the iron industry claims 40 per cent. reduction in wages, as compared with last year, half of this being agreed upon already earlier this year. There will, of course, be strong opposition, but the claim seems justified. Notwithstanding the fact that considerable concessions have been made in prices for Swedish export pig-iron, no business is taking place.

A considerable depreciation has taken place during the first half of this year in shares of all kinds. It is estimated that this loss amounts to 725 million kroner, whereof 500 millions fall on industrial shares, 32 millions on traffic, and 192 millions on banking shares. Since the termination of the British coal strike there has been a slight improvement in sterling, and this has affected also other exchange rates, with the result that we see dollars, francs, and the other Scandinavian rates somewhat better. What will happen with German marks, which have also gone up a little, is an open question. There have been reports that German industry is falling off, but until we have some more substantial proofs of this statement it is better not to judge. The fact is, however, that for some months Germany has not been taking so much raw material from this country.

Letters to the Editor.

FIXED CAPITAL: RAILWAY AND OTHER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My attention has been called—*apropos* of your criticism of the Memorandum on the Railways Bill, issued by the National Federation of Iron and Steel Manufacturers, which appeared in your issue of July 2nd—to a letter from Mr Birkett in your issue of July 9th. Writing on behalf of the federation, Mr Birkett claims that the fact that railways cannot transfer their capital does not greatly differentiate them from other trading concerns. The matter is of some public interest, so with your permission I should like to say a word.

It is true that all trading capital is in some degree fixed. But the difference of degree between a railway and an ordinary factory is so great that it practically becomes a difference in kind. Physicists tell us that the laws which apply to the movement of water in the Atlantic Ocean do not apply to the movement of a single drop. And this is really analogous to the case for railways made in a few words in your article. I take up the balance-sheet of a manufacturing company with which I am connected. I find that the total capital is roughly equivalent to the value of "stock and works in progress," and further that the value of the output for the year is roughly three times the total capital. And 5 per cent. on the turnover means 15 per cent. on the capital. Compare this with a railway. Before the war it took the English railways nine years to turn over their capital once. In every £100 of capital about 75 per cent. was fixed and irremovable; about 20 per cent. was in rolling-stock, practically unsaleable, about 3 per cent. representing stores partially realisable. A profit of 65 per cent. on the amount of the turnover was equivalent to an average dividend of 4 per cent. Surely the resemblance to a factory is of the slightest.

As to the question whether "the only satisfactory test of efficient and economical management of a railway is the ability to earn a profit," let me give Mr Birkett another instance, in addition to your mushroom tunnel. Some 50 years ago an enterprising company built a rack railway over the Mont Cenis Pass, to connect the railway systems of France and Italy. Some years afterwards the railway administrations on the two sides of the Pass combined and made a tunnel. Naturally, the rack railway lost the whole of its traffic, and the cost of removing the rails was, I believe, greater than their scrap value. Did the fact that the mountain railway failed to earn a profit prove lack of efficient or economical management? Or was it not rather that the shareholders' money was matter in the wrong place?—I am, Sir, yours, &c.,

A STUDENT OF ECONOMICS.

London, July 11th, 1921.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I appreciate Mr Mason's courteous letter, and I feel that he will be doing a great public service by arranging for a conference to examine the highly important, but very difficult problem of stabilising the value of currencies.

It would help very much to the understanding of the position taken up by those who advocate the gradual return to the old gold standard if Mr Mason would state clearly in what manner he foresees the two main obstacles being overcome. These obstacles are:—

(1) The very large proportion of the total national income which would be required to pay the interest on debt if the money value of the national income were reduced by causing prices and wages to fall in the degree necessary in order to restore the gold standard. Taking the output of commodities to have been about 20 per cent. less in 1920 than in 1913, and taking into account the loss of interest on foreign investments sold during the war, one might estimate the national income for 1920 at 1913 prices at about £1,500,000,000, of which debt service would take 23 per cent. Is it possible that the nation can or will face such a burden, or does Mr Mason favour the writing down of debt by a capital levy?

(2) It appears, both from theory and experience, that a small reduction in currency and credit produces temporarily quite a large fall in prices, owing to the psychological effect in weakening confidence and retarding the velocity of circulation of money and bank deposits. There is then a partial recovery, which (if the policy of deflating currency still continues) will be followed by a further fall in prices. So that the policy of gradual deflation seems to mean a see-saw of prices, each dip going a little lower. Such a condition of affairs could not be conducive to enterprise or to that increased production of wealth which is the true means to pay our debts and to place our finances on a sound basis. Does Mr Mason dispute the bad effect of falling prices on trade and production, and if so, on what grounds?

Until clear and satisfactory replies can be given on these two points, I must continue to believe that the adoption of the tabular standard of values would be a sounder policy than the attempt to return to the old gold standard. I believe the adoption of the tabular standard would stabilise foreign exchanges more rapidly than any other policy.

Without venturing to criticise the interesting forecast of the probable movements of gold prices given by Sir James Wilson, I venture to remark that gold does not seem likely to prove a very reliable standard of value in the immediate future. The output of gold has been falling since 1912, and though a temporary increase of gold prices in U.S.A. is likely, owing to the accumulation of gold in that country, the gradual return of other nations to the gold standard would increase the demand for gold as currency, and would tend to make it more valuable (to depress gold prices), as happened in the years following 1873, when country after country demonetised silver and adopted the gold standard.—I am, Sir, your obedient servant,

London, July 13th, 1921.

THE CAUSES AND THE REMEDY OF DEPRESSION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The general expectation, since the beginning of this year, for a revival of trade, has not been realised, and the position at present seems to be a deadlock.

Many reasons have been, and are still, advanced as to the causes of the slump. Those most repeated amongst them are, that prices had reached too high a level, and that the world could not pay (or refused to pay) such prices; and yet it is obvious that the increase of values was the inevitable result of the supply of commodities being considerably less than the demand, and that the world was paying the very high prices.

The overseas trade of this country reached the following figures in 1920:—

Imports	£ 1,936,742,120
Exports	1,557,974,984
Total imports and exports	3,494,717,104

Taking into consideration that the above total figure was £905,176,150 in excess of the total overseas trade of 1919, and that the greater percentage of the 1920 trade was contracted in 1919—prior to the last rapid advance in prices—there is no doubt that the total overseas trade this year would have considerably exceeded £4,000,000,000, but this was not going to be accomplished.

The Treasury declared, in the autumn of 1919, its policy to be to reduce credit inflation and to restore an effective gold standard—without, by the way, having a free gold market.

The Chancellor of the Exchequer declared that:—"The extent of the advances made to trade was such as to endanger and reduce the amount of Treasury bills."

In short, a policy of general deflation was proclaimed, and forced upon the commercial world through artificial means of contraction of credit.

How disastrous the result of such policy has turned out to be, as regards the national finances, the revenue figures of the present financial year clearly show.

On the other hand, the effect of such policy upon trade is the present inevitable deadlock.

Shortage—or contraction of credit—creates forced sales, and the latter create panic and colossal losses, which, in their turn, create deadlock.

A glance at the statistics should convince the most enthusiastic deflationist that there is colossal shortage of commodities.

The ratio of production to consumption (i.e., the effective demand) is the true and solid factor determining prices. Any other procedure affecting prices is artificial, and therefore temporary.

The position, at present, is that, on the one hand, retailers and most of the wholesale dealers in overseas markets are short of goods; but, on the other hand, for the financial reasons explained above, the manufacturer, the exporter, and/or the importer is forced to sell at prices considerably less than the present cost of production.

I wonder if the authors of such untenable policy have yet realised that manufacturers and export merchants have lost, and are still losing, colossal figures for the benefit of the retailers, and so long as retailers can find

sellers giving goods away, are they or the wholesale dealers expected to place fresh orders for their requirements?

The revival of trade is bound to come, but it will not begin until and unless the present silly forced sales cease and confidence is re-established; and this can only be accomplished provided the pressure of finance upon commerce is relaxed.

The recent reductions of the Bank rate are clear indications of a reversal of the policy which was undoubtedly responsible for the present stagnation, colossal unemployment, and almost complete cessation of production of wealth. It should be borne in mind that credit (or currency), whether based on the gold standard or not, is mere token of real wealth—i.e., commodities—and that, therefore, they should continue to be instrumental for the production of such wealth.

If you take care of production, prices will take care of themselves. Until the supply of commodities counterbalances the demand, the true measure of the pound (£) cannot be re-established.

Contraction of credit stops production, and the latter, in the long run, enhances the value of commodities. Whether the purchasing power of a person, or a nation, is less or more, if there is shortage of goods, the price of such goods will reach famine level.

The writer has seen a certain quality of textiles being retailed in a foreign market in 1919 at 5s per yard, and in 1920 at 7s 9d per yard, at the day's rate of exchange of the respective countries, the pre-war value of such goods being 4d per yard! And yet the purchasing powers of both countries were, and are, at the lowest ebb.

REVIEWS.

"Statische Theorie des Geldes." By Georg Friedrich Knapp. Third Edition, Revised and Enlarged. (Munich) Dunder and Humblot, 45 marks.

The tiresome habit of rewriting a *magnum opus* is very prevalent just now, but this is not a case in point. The changes made in successive editions of this nominalist Bible are not so considerable as to make it necessary for an unbeliever to reread the book in its new form. The theoretical chapters are quite unaltered in this revised version.

In spite of the great stir which this work has made on the Continent since 1905, it is bound to remain comparatively unfamiliar in England. Its portentous armoury of new technical terms makes it a difficult book to read in the original and an impossible book to translate. This is a pity, because it results in our hearing a good deal, at second hand and indirectly, of an eccentric monetary theory which does not appeal to us, and hearing very little of the much more valuable work which Knapp has done in the historical field. The theory does not appeal to us because we fail to see the need of looking at economics through the spectacles of the jurist. We still talk unrepentantly of the "value of money," and believe that a shilling is not worth as much to-day as it was before the war. But if anyone would attempt to render into English the historical chapters of this book, he would be doing a public service, and might at the same time discover that Knapp the historian is much better appreciated in this empirical country than Knapp the nominalist.

The Universal Trading Code, reviewed in the *Economist* for June 25, 1921, on page 1376, can be obtained in London from Messrs Gay and Hancock, Limited.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
July 27. July 28.

For some reason or other the Stock Exchange got the impression that the Bank rate might be reduced to 5½ per cent., or possibly even to 5 per cent., on Thursday, with the result that gilt-edged stocks showed an appearance of buoyancy in advance of the announcement. Upon the decision being made known, the War Loan and a few of its immediate satellites eased off, but considerable strength continued to be shown by the newly-issued Colonial, Corporation, and similar stocks, while Home Railway prior-charge issues advanced in many cases. Business in most markets is better than it has been, various factors contributing. The hope of cheaper money, the expectation of settlement in Ireland, the conclusion of the industrial trouble in the coal, engineering, and allied trades, and the prospect of disarmament in the Pacific, have all played their parts in bringing about a less doleful feeling. There has been some improvement even amongst the speculative markets.

Foreigners are generally firm. The Paris Bourse was closed on Wednesday night for the rest of the week, and this had some little effect in checking activity amongst the inter-Bourse securities. Brazilians, however, are a harder market. Chinese have been steadily bought on the idea that the proposed conference between Great Britain, the United States, and Japan may lead to a reduction of armaments in the Far East from which China will benefit. Japanese dollar bonds have further advanced. French and German issues are better, and the Argentines came into demand towards the end of the week.

In the Home Railway market it is the "Heavy" group—which comprises North-Westerns, Midlands, Great Westerns, North-Easterns, and Lancashire and Yorkshire—which is the firmest of the moment. Rises have been secured by all these stocks. On the other hand, the Southern passenger, the Scottish, and the Underground sections are somewhat dull, from which the inference is drawn that it must be investors who are buying Home Rails, and that, regarded as speculations, the lower-priced stocks present little temptation. There is nothing doing in Grand Trunks, Mexican, or Argentine Rails. United of Havana gave way on the placing, privately, of a fair amount of debenture stock. The general tendency amongst South American Railway issues is heavy.

Rubber shares are decidedly better on a recovery to 10d per lb in the price of rubber, coupled with the statement that the United States is once more in the market as a buyer of the raw stuff. Several dozen price-improvements have occurred. The oil market continues under the influence of the political negotiations between Mexico and the United States in connection with the proposed new taxes on oil. The latest gossip is to the effect that Mexico has consented to postpone, *sine die*, the imposition of the fresh taxation to which President Harding voices strong American objection. Prices have been some-

what irregular, though keeping to the firmer side on balance. A number of textile shares are better, and in the shipping market a recovery in the price of silver, the metal, caused rises in P. and O. deferred and Indo-China Steamship. A number of banking shares are ex dividend this week. Hong-kong Banks have risen substantially, partly on the dividend announcement, but still more in consequence of the hardening of silver. There is not much doing in the insurance market. The speculative shares, such as Dunlops, Vickers, Maypole Deferred, and a few others, have hardened in sympathy with the better tendency in other parts of the Stock Exchange. New industrial issues are decidedly good, substantial premiums being established upon the Metropolitan Electric Extension debenture and the new debenture stock of the North Metropolitan Electric Company. The wireless group is quiet, while amongst catering shares Lyons stand out with further improvement, the company's new "A" shares being more particularly in demand.

Owing to a further rise in the price of gold, Kaffirs are a more cheerful market. There has been a little Continental demand, supplemented by Cape buying and support from the inner rings of London and the provinces. Without much business to back up the movement, it is doubted whether the rise possesses much staying power; but this remains to be seen. Chartered are harder, on the hope that General Smuts will take in hand the matter of coming to some settlement in regard to the inclusion of Southern Rhodesia in the Union of South Africa. Mexican silver shares came to the front with improvements owing to the strength of the metal, but the tin groups remain neglected. Several of the diamond shares have hardened, and Russians keep tolerably steady, while in the West African market the gold-producing shares command but little interest. The Stock Exchange, taken as a whole, has assumed a more cheerful complexion, and the improvement in prices has certainly played its part in contributing to the slight increase in the volume of business.

We are officially informed that Mr Adam Walker has been expelled from the Stock Exchange.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—

Amount previously recorded.... 129,061,459

NATIONAL SAVINGS CERTIFICATES.

5½ % Treasury Bonds.—Repayable at par on April 1, 1929. Issued at 97 per cent. Interest payable half-yearly on April 1st and October 1st. Principal and interest of the bonds are chargeable on the Consolidated Fund of the United Kingdom, while interest on bonds will be exempt from Corporation Profits tax. The bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Rights of exchanging their holdings for similar amounts of the new bonds, together with a cash payment, are offered to holders of the following securities on the terms indicated:—5 per cent. Exchequer bonds, due October 5, 1921, 5 per cent. National War Bonds, due October 1, 1922—a cash payment of £4 per £100 of bonds surrendered; 5 per cent. National War Bonds, due April 1, 1923, 5 per cent. National War Bonds, due September 1, 1923—a cash payment of £3 10s per £100 of bonds surrendered. Bonds will be in denominations of £50, £100, £200, £500, £1,000, and £5,000, and the interest will be payable half-yearly by coupon. The amount is not limited, and the bonds will be on continuous sale for an unspecified period. Full particulars of these bonds, together with comments, will be found in *Economist*, July 9, 1921 (see page 43).

Government of India Rupee Loan.—The subscriptions in India and London to the Indian Government 1921 Rupee Loan, which was opened on June 20th, amounted to Rs 2½ crores up to July 7th. The loan, which is in the form of 6 per cent. (free of Indian income-tax) five and ten-year bonds at par, is for an unlimited amount, and remains open until July 30th for cash subscriptions, and later for the conversion of 1921 and 1922 Indian War Bonds.

Tweedales and Smalley (1920), Limited.—Authorised share capital £1,250,000, of which 900,000 ordinary shares have been issued for cash and 10s per share is called up. The directors do not intend at present to make a further call upon these shares. The company was incorporated on February 20, 1920, and was formed to acquire for £1,257,112 in cash the business of Tweedales and Smalley, Limited, Castleton, Lancashire, makers of machinery used in cotton-spinning mills, established in 1891. The purchase includes £295,546, investments, £35,355 cash, besides book debts. It is stated that the company is booked ahead for orders at remunerative prices. During the war period the company was a controlled establishment. The auditors certify the pre-war standard of profit as £99,175, when the company was engaged in its ordinary trade of making textile machinery. No shares have been issued otherwise than for cash, and no shares underwritten, neither has a prospectus been issued inviting applications for shares. The company's accounts were made up to April 30th last, and disclosed a profit of £132,497 16s, out of which a year's dividend at the rate of 20 per cent. per annum has been paid, the balance of £43,000 2s 3d being carried forward. The directors are empowered to borrow by the issue of debentures, and it is stated that the borrowing powers have been exercised to the extent of £600,000. The above information is extracted from an advertisement which appeared in the Press, and it is issued in accordance with the regulations of the committee of the London Stock Exchange. It is stated that application to deal is being made to the Stock Exchange authorities. The cautious investor, however, should require further details as to the trend of past profits, the value of net assets, the cost (if any) of goodwill, also some light on the interest cost of the debenture issue, and further information about "investments" at £295,546 are needed. Are these investments "at cost" or market value?

Diamond Fields of Africa (D.F.A.) Exploring Company, Limited.—Incorporated under the laws of the Orange Free State. Authorised capital £110,000, divided into 880,000 shares of 2s 6d each. The company was registered in April, 1920, for the purpose of adopting an agreement made between John Dale Lace and Evlin Tyrrell Heally to prospect for diamonds, gold, silver, and other precious stones, &c. 680,000 shares have been issued, of which 200,000 shares represent the subdivision of 25,000 shares of £1 each upon which 3s 6d per share had been paid, 400,000 shares were issued as fully paid to the vendor, representing the consideration payable for the transfer of the options, underwriting commission, and services in connection with the promotion of the company. A further 80,000 shares were allotted as the consideration for the transfer of a further option acquired by the company. The company holds options upon properties totalling 33,807 morgen, about 71,500 acres, subject to payments amounting to £156 10s per quarter. This information is extracted from an advertisement inserted in the Press in compliance with the regulations of the Committee of the Stock Exchange, London. Application is being made to the Committee of the Stock Exchange for permission to deal in 400,000 of the issued shares of the company. A nebulous letter is inserted in the advertisement with reference to reports on the properties. We fail to find anything attractive in the proposition.

The Weston-super-Mare Gaslight Company.—Incorporated by Act of Parliament. The prospectus gives figures of "existing capital," which amounts to £135,775 stock and £46,510 of loan capital. This is an issue of £23,340 7½ per cent. perpetual debenture stock and £10,856 7½ per cent. preference stock at par. The preference stock is "redeemable" after a period of ten years at par at the option of the directors. The debenture stock will rank *pari passu* with existing debentures. Beyond a table showing that the quantity of gas made has increased from 73,510,100 cubic feet in 1893 to 343,235,800 cubic feet in 1920, no details are given in the prospectus as to the progress of the company. Surplus revenue is not stated, nor are we supplied with any figures as to liabilities and bankers' loans. Without this very necessary information we must fail to recommend the issue.

The Wood Street Cinema (Middleton), Limited.—Authorised capital £8,000, divided into ordinary shares of £1 each. This is an issue of the whole amount at par. The objects of the company are to take over an existing "picture house" and effect alterations and improvements. Apparently £300 is made on the sale of the property, and a further £600 in shares is allocated as promotion profits, in addition to incidental expenses. Except where an investor has full satisfactory knowledge of the directors and of local conditions, a subscription to this issue would be a leap in the dark.

Colombian Proprietary Gold Mines, Limited.—Letters of allotment for the recent issue of 60,000 ordinary shares of £1 each at par have been posted.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

BURMA CORPORATION.—Bawdwin Mines—Cable: No. 2 level—East crosscut 440 ft north, from 0 ft to 30 ft, nil; from 30 ft to 40 ft 8 ozs silver, 14 per cent. lead, 2 per cent. zinc; 2 per cent. cu.; from 40 ft to 45 ft 9 ozs silver, 7 per cent. lead, 2 per cent. zinc, 6 per cent. copper. Lead production for month of June, 3,295 tons gross; refined lead, 2,323 tons. Refined silver production, approximately 266,893 ozs. (Office note—Production seriously affected during June by a strike on the Burma Railways, which lasted practically the whole of May, and prevented supplies necessary for June reaching the smelter.)

MOUNT LYE.—From June 2nd to 29th inclusive, ore treated by concentrating plant, 5,187 tons; concentrates produced, 1,465 tons; ore smelted, 7,138 tons, being 4,970 tons from the Mount Lye mine and 2,568 tons from the North Mount Lye mine, also 1,511 tons concentrates. The converters have produced during the same period 455 tons of blister copper, containing—copper, 451 tons; silver, 14,315 ozs; gold, 280 ozs. Furnace in blast 670 hours. Flotation plant extensions completed; started running June 2nd; all parts are now running satisfactorily.

ROOBERG MINERALS DEVELOPMENT.—June:—Ore mined, 2,601 tons. Total ore accumulated for crushing at a later date, 7,397 tons. Tons treated:—Ore, £3,182; alluvial ground washed, 4,047. Concentrates produced 55 tons. Expenditure, including realisation charges and exploration, £5,991. Revenue, £5,997. Adjustment, nil.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY LIMITED.—A cablegram has been received from Burma reporting the total production of crude oil by this company and the Rangoon Oil Company, Limited, amounted to 69,020 barrels for the month of June.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during June amounted to 91,157 barrels, or approximately 13,022 tons, including 40,808 barrels from the properties of the St. Helen's Petroleum Company, Limited.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, July 6, 1921, amounted to 875 tons.

COMPANY MEETINGS, &c.

NATIONAL BANK OF NEW ZEALAND, LIMITED.

SATISFACTORY YEAR—INCREASED PROFIT.

The forty-ninth ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 15th inst., at 17 Moor-gate street, London, the Hon. William Pember Reeves (chairman of the company) presiding.

The secretary and London manager (Mr Arthur Willis) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, first dealt with the figures appearing in the balance-sheet, and stated that the reserve fund, if the proprietors approved of the directors' recommendations, would be increased to £1,040,000. Deposits stood at £8,296,000, as against £8,856,000 last year, a decrease of £560,000. The decrease was entirely in free deposits, while interest-bearing deposits showed a considerable increase due to the raising of fixed deposit rates in January last. The decrease in free deposits was caused by the general financial stringency at present existing in the Dominion. Bills payable and other liabilities, including provision for doubtful debts and depreciation of investments, showed an increase of £2,410,000. The figure this year was £4,130,000, compared with £1,720,000 in 1920. On the assets side coin, &c., showed a decrease of £656,000, the figures being £1,305,000, as compared with £1,961,000 last year. Securities stood at £2,136,000, against £3,595,000, as holdings in Treasury bills had been very much reduced. Advances had gone up to £10,560,000, an increase of £4,635,000. The total figures for the year were £15,654,000, as compared with £13,578,000 for 1920. Landed property and premises stood at £196,000, as compared with £140,000 last year. With regard to the profit and loss account, the gross profit at £645,000 was up by £134,000, and the net profit was £326,500, or an increase of £70,500 over last year's figures, after paying a bonus to the staff of £23,600. The figures of the previous year were exceptionally good, showing an increased profit of £70,000 over that of the previous year. That continued expansion of profitable business was very satisfactory. As to why it was not accompanied by a further addition to the dividend and bonus, substantial as those were, he would point out that their financial outlook this year had two very different sides.

DEPRECIATION OF INVESTMENTS.

On the one hand, they had a sound and prosperous business which had rapidly increased, and they had every prospect for the present of being able to employ all their funds fully, to say the least of it; on the other hand, the commercial and industrial position in New Zealand was not nearly so satisfactory as it had been, and while it had brought heavy demands for advances, it had also caused a sudden and sharp depreciation in the price of their New Zealand Government securities, and no less than £75,000 had been taken from profits and put to the depreciation of securities reserve. That was not pleasant, but their New Zealand bonds were excellent securities, which would mature in comparatively short periods. So far as they could see at present, there was no reason to suppose that they would be obliged to realise any of them at a loss. Ultimately, therefore, the sum now set aside against their depreciation should come back to their ordinary revenue. The taxation for which they had to provide was heavier than before. Moreover, there was a large sum in dispute under the head of excess profits duty.

COMMERCIAL AND INDUSTRIAL OUTLOOK.

The chief reason which made prudence especially essential in the allocation of the funds at their disposal was found in the changed commercial and industrial outlook both here and in New Zealand. The change for the worse in New Zealand affected the banks directly. Last year he had been able to point to a condition of great prosperity in New Zealand, but already there had been signs that that could not last, and he had warned them that the astonishing figures of the Dominion's trade then laid before them were the result of artificial conditions which could not continue. He had not foreseen that the financial and industrial difficulties now embarrassing business in the Dominions would come so suddenly and with such force. He would doubt whether the long history of commercial fluctuations—at any rate of those in time of peace—had shown anything much more rapid. For many years past more than nine-tenths of New Zealand exports had been products of the land. Lavish expenditure everywhere, both during the war when it was necessary and after the Armistice when it was not, had provided an artificial market for those products. The overdue and inevitable reaction, causing in the Old World a heavy fall in the demand for commodities, loss of confidence, and much unemployment, had suddenly begun seriously to interfere with New Zealand's principal markets. Coincident with the shrinkage of buying power in England, had come the action of English manufac-

turers, who had begun without warning to fill long-standing orders from New Zealand, with the result that her banks were loaded with bills and the Dominions flooded with goods.

HIGH IMPORT FIGURES.

High as the import figures for 1919 had been—over £30,000,000 sterling—they were more than doubled in 1920—an increase which no country could face without a shock at a time when the profits of its export trade were going downhill. It might be said that the New Zealand importers should not have plunged in the light-hearted fashion. Though it would have been a convenience to the banks if they had not, it must be pointed out, in fairness, that for something like five years previously they had found it most difficult to obtain even moderate supplies from British manufacturers. Many seemed, therefore, to have fallen into the habit of placing—at ever-increasing prices—orders more or less in excess of what they really required, doing that in the hope of securing at least a part of what they needed. Last summer had come the slump over here, and British manufacturers had found time to fill overseas orders. Current indents had been executed to the full. Orders two or three years old, regarded as obsolete by the importer, had also been fulfilled. Others, which were to be spread over months, had been sent forward in one or two shipments, until there was neither bond nor free storage in New Zealand ports adequate to hold the huge accumulation. What orders they could the New Zealand merchants had cancelled, but instances of unjustifiable repudiation had been extremely rare. Merchant and retailer were now engaged in the anything but easy task of disposing of their importations. As was inevitable, the wild rush of importing business had been followed by a corresponding pause. Ships had been going out to New Zealand in ballast, and the position in the Dominion would gradually be adjusted, though not, of course, without inconvenience and loss.

RESULTS ON NEW ZEALAND TRADE.

The extraordinary commercial episode, of which he had given the outlines, had affected their business very acutely. In the first place, from July of last year an unprecedented stream of bills on New Zealand had poured into their London office, and continued without ceasing until they were obliged to decline to take in bills at all except under credits or for collection. What had brought things to that pass was not merely the volume of bills here, but the fact that owing to transport obstacles and other checks of the New Zealand export trade money was not coming across from the Antipodes in anything like amounts sufficient to make good the depletion of their funds here. The position was gradually improving, but it would not be normal for some time. If the commercial difficulties of New Zealand were confined to a spasm of excessive importations, they would soon come to an end. Unfortunately, they were not. With the excessive imports had come a very serious fall in the price of exports, a fall causing in some cases the disappearance of any margin of profit. The trade figures for last year showed in the case of wool, their chief export, a drop in value of nearly 7½ millions. With the drop in wool, hides, skins, pelts, and tallow were also depressed. More serious, however, than the loss of those minor exports was the unsatisfactory state of the market for chilled and frozen meat. Last year the meat export had held its own well. For months past, however, prices had been so bad that in a good many cases producers were probably making nothing out of their shipments. The story of dairy produce was somewhat better. Upon the profitable sale of those three exports the financial stability of the Dominion depended. He needed, therefore, no excuse for pointing out that the freight charged for their transport from New Zealand to England was a very vital question. Freights now charged were such that unless they were reduced the growers would be unable to go on.

A WORD OF WARNING.

As to what the banks had been doing by coming to the assistance of the trading community in their endeavours to help the public, they had gone as far as prudence would allow. Two years ago he had been able to tell them that the financial position of the New Zealand Government was exceptionally strong. It was by no means weak now. Indeed, if they looked to the figures of the financial year ending on March 31st last, they saw much reason for congratulation, but in financial matters the outlook for the Dominion's Revenue Authorities was not altogether bright, and the New Zealanders would have to face heavy taxation to the accompaniment of falling revenue and decreasing trade.

New Zealand, after a quarter of a century of almost unbroken prosperity, had to face an industrial and commercial depression. Some of her difficulties were temporary; others might continue for a period still uncertain. The adverse balance of trade must put itself right shortly, and indeed was already doing so. Excessive freight charges must, and would, be modified. The fall in the Public Revenue could be met, to some extent, by economy. A much more difficult problem was the drop in prices of colonial produce. Wool showed perhaps the least satisfactory outlook; that of dairy produce, which until quite recently had been satisfactory, would possibly again improve. New Zealand's main strength was the possession of unusual natural advantages, and the industry and courage of a resourceful and educated population. The report and accounts were unanimously adopted, and the usual formal business was duly transacted.

BANK OF BRITISH WEST AFRICA, LIMITED.

TRADE CONDITIONS IN WEST AFRICA.

The twenty-seventh annual general meeting of the Bank of British West Africa, Limited, was held on the 14th instant, at the Cannon-street, Hotel, London, the Right Hon. the Earl of Selborne, K.G., G.C.M.G. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that 50 per cent. had been added to the paid-up capital, which now stood at £1,200,000, and, by reason of the addition of premium received on the new shares issued, they had increased the reserve by rather over 50 per cent. to £625,000. There was a considerable decrease in the current deposit and other accounts, which a year ago had reached a total of £11,800,000. The position disclosed in the balance-sheet was extremely liquid, the percentage of cash to the bank's liabilities to the public being 31.50, and if the Treasury bills were regarded as cash, the percentage was increased to 40. The falling off in business was also reflected in other bills of exchange, which had decreased by £2,000,000, and by the reduction in the loans and advances by £1,250,000. Premises and furniture account showed an increase of nearly £100,000. The directors believed that the premises were worth to-day more than the amount at which they stood in the books.

While the net profit was higher than it was a year ago, it was less in proportion to the increased capital, but it was only fair to say that they had not had that increased capital available for the whole year. They proposed to charge to the profits the whole of the stamp duty of £20,000 paid in respect of the new capital, and to apply £15,000, as they did a year ago, to the depreciation of premises and furniture, and £5,000 to the insurance fund. In view of the trade conditions universally prevalent, the shareholders would not be surprised to find that the directors had decided to recommend a dividend of only 8 per cent. for the year, as against 10 per cent. last year. The comparatively large sum of £19,000 had been added to the carry forward, bringing that item up to £50,180.

COMMODITY PRICES IN WEST AFRICA.

The trade conditions experienced during the greater part of the year under review had more than justified the note of warning he ventured to sound a year ago. The problem facing the West African Governments in regard to their revenues was not one which he was called upon to attempt to solve, but he ventured to hope that the programme of public works would be pressed forward with just so much or so little postponement as was actually dictated by insistent circumstances. Everyone connected with West Africa must recognise that the power to purchase depended upon exports, and it was clearly to the interest of manufacturers in the United Kingdom, as well as of the West African producer, that no impediments other than those which were unavoidable should be put in the way of West African trade.

West Africa had experienced all the severity of the slump, both in produce and in goods imported. The African could not obtain the cost price of the former, and could not pay the cost price of the goods he wished to purchase. The result was that little business was being done, and heavy losses must be faced by those who decided—and, in his judgment, wisely decided—to cut their loss and take what they could get for their commodities. Values to-day were no better than the cost of replacement. Some of their smaller customers were unfortunately placed, but where loss to the bank was anticipated or realised, provision had been made, and they believed that the worst had been passed.

THE OUTLOOK.

He was not going to attempt to prophesy as to the future. Many factors had to be reckoned with, including not only the inevitable depression following the artificial prosperity which succeeded any war, but the slow restarting of the international machinery of credit and transport, which the late war so thoroughly broke up. We had yet to see real peace established throughout Europe, and at home a better understanding between classes whose real permanent interests were identical, and not separate. When these objects were attained we should see international trade once more established upon sound lines.

During the year the capital of the company had been increased to £4,000,000 by the creation of 200,000 new shares of £10 each. Of these 100,000 (£4 paid) were issued at the price of £6 5s per share to the London County Westminster and Parr's Bank, the National Provincial and Union Bank of England, and the Standard Bank of South Africa. The premium of £2 5s per share, amounting to £225,000, had been added to reserve. This arrangement was entered into with the concurrence of Lloyds Bank, Limited, which institution held 37,500 shares. Of the total issued capital of the bank, therefore, over 45 per cent. was held by the four great Banks named. In conclusion, his Lordship stated that he had decided to pay a visit to the British West African colonies next winter.

Sir Owen Philipps, G.C.M.G., M.P., seconded the resolution, which was carried unanimously.

BANK OF NEW SOUTH WALES.

SATISFACTORY HALF-YEAR'S RESULTS.

The half-yearly general meeting of the Bank of New South Wales was held at the Chief Banking House, Sydney, on Tuesday, May 31, 1921. The chairman, the Hon. Sir Charles K. Mackellar, K.C.M.G., M.L.C., president of the bank, in moving the adoption of the report, said:

Gentlemen,—It is now my duty to move the adoption of the report and balance-sheet. At last half-yearly meeting I explained at some length the figures of the balance-sheet and the situation generally then. There has been comparatively little change in the former since then. Our efforts to get the business on to a steadier footing have been successful, and our customers now realise that while we are prepared to meet the legitimate requirements of trade and the operations of business generally, we are not prepared to go to unreasonable and imprudent lengths in support of their enterprises.

Since last half-year there has been an increase of £1,625,000 in deposits, but this is of a temporary nature, for, generally speaking, this portion of our business is stationary for the time being. We cannot expect otherwise when several of the channels of supply—wool, meat, metals are running sluggishly. Fortunately other channels have been running full—as wheat and butter.

Bills payable items are somewhat over £2,000,000 higher than at last half-year, which arises chiefly from the incidence of our selling operations on London. Owing to the stringency in London exchange we are dealing in drafts on the selling side rather than telegraphic transfers, hence the outstandings are heavier than when transactions are quickly cleared. I fully explained the exchange situation to you last November, and need only add that wheat and butter exports have enabled us to fairly meet the reasonable requirements of our clients, but we still have to do some rationing, and will have to do so until equilibrium is properly restored, which cannot be till the exports of wool and meat and metals can show better results.

ASSETS, ADVANCES, AND PROFIT AND LOSS.

The first line figures on the assets side are some £2,700,000 larger than at the September balance. The increase in the deposits partly accounts for this. After deducting in full maturing liabilities and special items, we continue to maintain about 10s in the £ for ordinary liabilities.

Aggregate advances to customers and others are only £250,000 higher than at last half-year, but are still largely ahead of March, 1920. I explained fully the position in November last. Without pressing unduly on our clients we are steadily but quietly working to get reasonable reductions in what we consider redundant figures. Mercantile requirements are gradually coming down and will go on doing so as excessive stocks are realised, and though the wool situation still makes pastoralists' income uncertain, signs are not wanting of a movement in our principal staple, which if it goes on will help the position very materially. In this respect we must be patient, for we have to face a very heavy hold over of wool from the war period, which will require very careful and judicious handling to get rid of.

In connection with profit and loss, you will notice that the board have recommended the payment of a bonus of 10s per share. This is a very special matter. Part of it is derived from exceptional profits made in one or two items during the half-year, and part from the carry forward which is larger than is really needed. But I wish to repeat that this must be viewed as a special exception to our recognised policy with regard to distributions of profit, which we still think is the most sound for the bank to pursue.

PROSPECTS.

Since the break of the drought the seasons have been generally propitious for the man on the land, and there are hopes of a good harvest next season and a fair prospect of flocks and herds being restored to something like pre-drought numbers. Prices, however, are rather on the down grade, and this must be looked for as one of the conditions of after-war adjustments. It is quite certain that trade generally will have to adapt itself to the changed circumstances—and all round similar adjustments will have to be made. If prices come down, the cost of production must, sooner or later, come down too. From this chair I have from time to time voiced the opinion of the board that economy in every direction should be the keynote of the country's policy, and never has it been more needed than now. If this is judiciously practised the sooner will the country get on to satisfactory economic levels, and the influence of the war become a thing of the past.

THE DISTILLERS COMPANY, LIMITED.

GOVERNMENT RESTRICTIONS ON LIQUOR TRADE.

CRUSHING TAXATION AND ITS EFFECT.

The forty-fifth annual general meeting of the Distillers Company, Limited, was held at Edinburgh, on the 15th instant, Mr W. D. Graham Menzies, chairman of the board, presiding.

The Chairman, after making sympathetic reference to the death of Mr Alexander McNab, who had been a director of the company for 33 years, said:—The profit for the year shows a drop from the previous year of £86,000. This, at first sight, may seem startling until it is remembered that last year's profits were exceptional, and that compared with 1919 the profits of 1921 are £80,000 better, so that we must not complain. The past year has also seen wages at their highest, with coal latterly at almost prohibitive prices, where procurable at all, while grain, our principal raw material, has shown a startling drop, thus making it impossible at all times to avoid loss in realisation of the products produced from the dear materials. It may be of interest for you to know that based on the same quantity of spirits produced during the last two years, the increased cost of fuel during last year was no less than £57,000, and of wages £69,000—amounts which we trust will be sensibly diminished during the current year.

UNJUSTIFIABLE RESTRICTIONS.

I would like to refer to one aspect of the trade which is deserving of consideration. During the war, as loyal citizens, we were content to put up with all sorts of restrictions, and even to taxation of our industry beyond a point which we knew it could reasonably bear. We put up with this for the sake of our country, which we wished to see emerge successfully out of the struggle for the world's freedom. Even for twenty months after the Armistice we have waited patiently to see what we were to get in the way of relief. We are now promised some remission of the restriction on the hours during which liquor may be sold, and have received some vague promise that a Licensing Bill is to be produced in the dim and distant future, whereby all the grievances of the trade, or such of them as the Prohibition party will permit to be removed, are to be met. Meanwhile, the consumption of liquor in this country is being rapidly killed except amongst those who can afford any prices, however high, and those who, under any conceivable circumstances will obtain what they want at whatever cost. Between these two sections lies the great mass of the population who neither can afford to pay the present exorbitant prices nor who desire to drink to excess, but yet feel the want of their usual stimulant. Do the Government really think that they are studying the best interests of the country by compelling abstinence of liquor through high duties and diverting into other channels the money which but for these high duties would be used for the legitimate enjoyment and sustenance of the body? Last Budget we refrained from pressing our demands that the duties on the liquor trade should be reduced to a reasonable basis, as we felt that the Chancellor of the Exchequer was in a difficult position, but when we see how doles are given here and there to placate certain interests, and money is still being squandered in needless extravagance, I think the time has arrived when the whole trade should unite with the moderate opinion of the country in demanding next year that these exorbitant duties shall cease and that the legitimate trade of the country shall not be strangled through excessive taxation.

I now beg to move the adoption of the report, which recommends that a dividend at the rate of 5 per cent. per annum, less tax, be paid on the preference shares, with a final dividend of 12s per share on the ordinary shares, which with the interim dividend already paid equals 10 per cent. per annum, free of income-tax—both dividends being payable on August 1st next—and that there be carried forward to the current year £108,994 5s 4d.

THE MANAGING DIRECTOR'S SPEECH.

In seconding the adoption of the report, Mr W. H. Ross, the managing director, said:—

I rise with much pleasure to second the adoption of the report, and to endorse what our chairman has just warned us will be the effect of the present high Excise duties on the legitimate consumption of Scotch and Irish whisky in these Islands. It seems monstrous to think that an article which we sell when new to our wholesale customers at 3s 6d per gallon should be subject, when cleared from bond, to a duty of 7s 6d per gallon, or 20½ times its original value. What industry could stand such an impost? If we compare the present rate of consumption with that which prevailed pre-war, we find there is a shrinkage of roughly ten million gallons per annum. No doubt the teetotalers will claim this as a direct benefit to mankind, and they may even admit that the Government have been more successful in reducing the consumption of liquor than what they themselves have been able to do with their prohibition propaganda. The electors of Scotland

have recently had an opportunity of declaring in no uncertain fashion what they think of prohibition. It is time, therefore, that the Chancellor of the Exchequer should realise that where taxation has the effect of strangling an industry he must readjust the taxation to the limits which that industry can bear, without regard to the moral effects on the community as interpreted by a minority of the population. It is sheer bigotry to claim that by restricting the rights of the individual and increasing the cost of the article consumed you are going to make a more sober nation. The experience of America has proved the contrary to be the case. You certainly will reduce the total consumption, but only amongst that class commonly described as the moderate drinkers, who never abused the privilege they previously enjoyed, while you leave the door open to the confirmed toper who, as the chairman has said, will spend his last sixpence before he will do without his whisky or beer. Surely the saner method, rather than try to crush all sense of moral responsibility from a man's life, is to endeavour to educate him to the moderate use of alcoholic stimulants by improving his surroundings and providing him with reasonable facilities for the enjoyment of his refreshment as and when he desires it. Such is the aim of a Scottish Bill which is at present being promoted by the trade for the improvement of the public-house, and in which I am taking a close personal interest.

A FICTITIOUS THEORY.

I have already referred to the decreased consumption of spirits in this country. So long as such reduction lasts, the manufacturers of all grades of spirits must take careful stock of the position, and see that over-production does not take place. I am aware that some buyers look upon over-production as a means of forcing down the price even to a non-paying basis, and that they benefit thereby. That is a fictitious theory. No doubt temporarily it may show a benefit to the customer, but in the end it must lead to the crushing out of the weaker manufacturer, and to a restriction of the output to such an extent as will inevitably increase the cost to a greater degree than if the production had been kept regular and within reasonable limits. I look forward, therefore, to our production for beverage purposes having to be curtailed, and unless we succeed in charging a higher rate of profit on the reduced quantity, our net manufacturing profit must suffer. Fortunately, this contingency has not been overlooked by your directors, and we are now possessed of certain other investments, the revenue from which should make up for any deficiency likely to arise on our staple product.

POWER ALCOHOL.

Only one word more and then I am done. A year ago I referred to what the company were doing in experimenting with a possible motor fuel to take the place of petrol should this article fall short of the demand. Your directors have never changed their opinion that as a competitor to petrol, any mixture containing alcohol would always be heavily handicapped by cost of production. Nevertheless, as an aid to making good the supposed petrol shortage, we have deemed it desirable to make such inquiries as were possible as to the means whereby the most economical alcohol can be produced. Three of your directors with other experts have visited various parts of the Empire in search of suitable raw material for production of such a product either on the spot where the material is cultivated, or for importation into this country to be converted into alcohol in our own plant at home. No action has yet been taken on their reports, as it is felt that owing to the reduced demand the necessity for an alternative motor fuel is not now so clamant. On the other hand, your directors have proved from practical experiments that such a fuel is feasible in the existing motor engine, and that as soon as the Excise regulations for dealing with this new product have been passed—which I hope will be in the course of the next few weeks—the way will be clear for putting on the market commercially to a limited extent the new fuel with which we have been experimenting.

The motion was carried unanimously.

UNION CORPORATION, LIMITED.

COMPANY'S INCREASED INTERESTS IN MEXICO.

The annual general meeting of Union Corporation, Limited, was held at Johannesburg on June 3, 1921, Mr M. McCormack presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net profit for last year of £199,074 compared with the higher amount of £237,917 for 1919, but came midway between that amount and the £145,380 of 1918. The income from dividends (the corporation's steadiest form of revenue) had

further advanced, but the year, unlike 1919, had been unfavourable for other profitable business. The falling off in profit, which he thought was moderate under the conditions which ruled, was due mainly to smaller share market operations and to writing off the greater part of the year's expenditure on prospecting, &c., in Mexico. While this amount was written off the exploration reserve account remained intact, and £40,000 was again placed to reserve account. A dividend of 2s per share, or £140,000, which was the average of the rates paid for 1918 and 1919, was distributed and £10,074 added to the amount carried forward. It was pleasing to note that in the past four years the corporation had accumulated out of profits £198,355, which appeared partly as reserves and partly as carry forward. In addition, as was stated in the report, the shareholdings at present market prices showed a very substantial surplus over the sum at which they stood in the accounts.

Since the reduction works of the Modderfontein Deep Levels were started in December, 1914, the company had produced gold to the value of £5,783,071, taking the metal at its standard price only. Adding to this the premium obtained since the South African gold mining industry was allowed a free market for its product, the total value realised on gold account was £6,220,861, and at the end of the last financial year the company had an unappropriated balance of £163,464. This was an excellent record for a mine with a capital of only £500,000.

During the year they had increased their interests in Mexico. Last autumn it was decided to restart operations at the La Fe Mining Company's property, but the break in silver caused the decision to be reversed. However, wages had come down considerably, and the question of resuming operations might soon again become one of practical politics. The San Francisco Mines of Mexico made a fair profit for its last financial year with the present small plant, but the drop in metal prices had produced small losses since. It was, however, reckoned that when the new 250-ton a day plant was in operation fair profits would be made even on the present price level.

The report and accounts were adopted.

OROVILLE DREDGING COMPANY, LIMITED.

GOOD PROSPECTS FOR THE FUTURE.

The tenth general meeting of Oroville Dredging Company, Limited, was held on the 13th instant, at River Plate House, London, Mr John A. Agnew presiding in place of the chairman (Mr F. W. Baker), who was indisposed.

Mr John A. Agnew, in moving the adoption of the report and accounts, said that the profit and loss account showed a net profit of £111,829, which indicated a very satisfactory position. Adding to this amount the balance brought forward from last year, and deducting the sum of £94,399 paid in dividends for the year, they had a balance to carry forward to the current year of £42,797, which was subject to excess profits duty and corporation tax. A careful study of the balance-sheet and those of the Pato and Nechi companies, in which they were so heavily interested, would afford the shareholders an infinite amount of satisfaction. Their holding in the Pato Mines had been increased to a total of 89,021 shares out of 100,000 shares issued. That the action of the board in acquiring at a very reasonable price the additional interest of 15,000 shares was justified was, he thought, clearly indicated by a study of the accounts of that company and realisation of the fact that its profits for the year under review approximated 100 per cent. of the issued capital. The actual profit, after writing off £26,153 for depreciation, was £98,759. If to this figure was added the balance brought forward from the previous year, £195,475, and deducting the dividends paid, £105,000, the Pato was shown as carrying forward £188,234 to the current year.

The excess profits duty position made it necessary for them to adopt a very conservative attitude in connection with the disposal of profits. The shareholders would be pleased to note that they held something like £110,000 in gold in hand or in transit, and in Treasury bills and cash. One very satisfactory feature about the company's work was the continuous confirmation they had regarding the estimates originally placed on the gravel. The general manager estimated that there was a further 12 years' life

for the Pato dredge. This figure applied exclusively to the area originally prospected.

The year's operations had been entirely satisfactory, and the outlook for the current year was such as to cause the directors to look forward to an equally successful result. So much was this the case that they had just declared an interim dividend of 1s per share, payable on the 27th inst., less the usual tax, and they had reason to believe that this would in no way interfere with the continued payment of the usual quarterly dividend of 9d per share.

Lord Brabourne seconded the adoption of the report and accounts, and the resolution was carried unanimously.

NECHI MINES COLOMBIA, LIMITED.

"VERY SATISFACTORY YEAR OF OPERATIONS."

The sixth annual meeting of Nechi Mines (Colombia), Limited, was held, on the 13th instant, at River Plate House, London, Mr John A. Agnew presiding.

Mr John A. Agnew, in moving the adoption of the report and accounts, said that the net profit for the year under review amounted to £140,003, which, added to the balance brought forward from the previous year of £62,197, made a total of £202,200. Out of the latter sum dividends had been paid amounting to £57,750, leaving £144,450 to be carried forward to the current year. One feature that he was sure the shareholders would note with some satisfaction was that at the date of the closing of the accounts there was represented in Government securities, in gold in transit and at the property, and cash, the sum of £140,747. The item of "sundry creditors" consisted principally of sums claimed to be due in the shape of income-tax, and was very much more than set off by the item "sundry debtors," which appeared at £56,938. The latter figure represented very largely advances made in Colombia in connection with the Constancia Mine, and the amount in question had, since the closing of the accounts, been greatly reduced.

A reference to Mr Prichard's report and to some figures set out in that of the directors indicated that they had had a very satisfactory year of operations on the Nechi property. In this, as in the Pato ground, the estimates of Mr Prichard as to the recoverable value to be won had been amply borne out. For the past year over 2,000,000 yards of gravel had been dredged over an average depth of 50.8 ft. The total field costs amounted to 11.71 cents per cubic yard, compared with 15.69 cents for the previous year. This fact, and the study of the interesting comparison quoted in Mr Prichard's report, indicated the excellence of the work carried out. In the general manager's report reference was made to the time estimated to be required to finish dredging the Nechi Company's ground. This applied to that portion of the latter which had hitherto been regarded as highly profitable, but outside this area there would be found a considerable yardage which, while not approaching in value that now being dealt with, would nevertheless yield a profit in dredging.

The position of the company regarding the claim of the Inland Revenue to excess profits duty was extremely difficult to define; it was bound up, so far as the all-important point of amount of capital invested was concerned, with that of the Oroville Dredging Company, Limited, and the two must be taken together. Meantime, the uncertainty compelled the directors to hold undistributed a larger amount of profits than would otherwise be the case.

The report and accounts were unanimously adopted.

CALCUTTA TRAMWAYS COMPANY, LIMITED.

NEED FOR FURTHER CAPITAL.

The ordinary general meeting of the Calcutta Tramways Company, Limited, was held, on the 11th instant, at 1 Queen Victoria street, London, Mr John G. B. Stone presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: The traffic receipts show an increase of 6½ per cent. with practically the same number of miles run, the passengers carried nearly 53½ millions, showing an increase of 6 per cent.

The result of the working is a gross profit of £240,389. After adding interest on investments, £7,886, deducting excess profits duty and Indian and English income-tax, and adding the amount brought forward, and deducting the debenture interest and dividends paid, £52,332, there remains an available balance of £189,076. This amount the directors propose to deal with by paying a final dividend on the ordinary shares of 3s 6d per share, absorbing £24,082, making, with the dividend already paid, 7 per cent. for the year free of income-tax (against 10 per cent. for the previous year); by the transfer of £40,000 to reserve for depreciation, increasing the total of that account to £144,619; by the transfer of £80,000 to taxation reserve account as a pro-

vision against excess profits duty and corporation profits tax; by the contribution to the staff provident fund of £2,403, carrying forward a balance of £42,591, subject to Indian super-tax, to be ascertained.

With the heavy increase in the cost of working it is no longer practicable to carry the public at existing fares, and a new scheme of fares is now under the consideration of the board, and will be brought into operation as quickly as possible.

The loss of revenue due to the strikes, coupled with the drop in the takings for the current year from other causes, have drained the company's available cash resources, already depleted by the overspent capital account, and further capital will require to be issued, the form of which will be considered by the board.

As regards our prospects for the current year, although our aggregate receipts to date show a considerable decrease, it is due to the heavy trade depression and to a variety of causes, all of which, in our opinion, are of a temporary nature. There are not wanting signs of improved trade conditions, which a good monsoon will help to develop, and to which our traffic will quickly respond.

The Chairman having replied to questions asked and suggestions made by Mr F. C. Rimington, the report and accounts were unanimously adopted.

WM. CORY AND SON, LIMITED.

COMPANY'S STRONG POSITION.

The twenty-fifth annual ordinary general meeting of Wm. Cory and Son, Limited, was held on the 14th instant, at the City Terminus Hotel, Cannon street, London, Sir A. C. Cory-Wright, Bart. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the past year's trading showed that, after making provision for general charges, maintenance and depreciation of plant, and interest on the company's debenture stock, and after allowing for the excess profits duty and corporation tax, there remained a balance of profit of £733,843 13s 3d, which, with the amount of £278,307 14s 9d brought forward from the previous year, made a total sum of £1,012,151 8s. The interest on the preference shares for twelve months, and the dividend on the ordinary shares of 5 per cent., paid last December, absorbed £186,819, leaving a balance of £825,332 8s available for allocation. It would be seen from the balance-sheet that the liquid resources accruing from reserves and undistributed profits revealed a financial strength unprecedented in the company's history, and was directly attributable to the conservative policy pursued by the directors over a period of many years. At the meeting last year he mentioned that, in view of the rapid development of oil fuel, they realised that the time had come when they could no longer confine their operations to the sale and handling of coal, and that, therefore, they had decided to avail themselves of an opportunity of becoming associated with a company formed principally for the purpose of supplying fuel oil for bunkers at all the main trading ports throughout the world. This company had now commenced its operations, and although at present in its infancy, there was little doubt that a steady and increasing business would develop. The agreement which they had entered into appointed them exclusive selling agents for the supply of oil fuel to one of the most important groups of producers, and, in the course of time, this was bound to prove of material advantage to this company.

Although the result of the year's trading would admit the pay-

ment of a dividend equal to that of last year, the directors felt that, in view of the unsettled condition of trade generally, it was the right policy to preserve the company's resources as far as possible, and they recommended that the bonus should be paid less income-tax, instead of tax free as last year.

The report and accounts were adopted.

CROMPTON AND CO., LIMITED. SATISFACTORY RESULTS—INCREASED PROFITS. COMPANY'S TAXATION BURDEN.

The eighth annual general meeting of Crompton and Co., Limited, was held, on the 14th instant, at Winchester House, London, E.C., the Chairman (Mr A. A. C. Swinton, F.R.S.) presiding.

The Chairman, in moving the adoption of the report, said the actual profits earned on trading during the year were exceedingly good, but from their trading profit they had to deduct a large sum necessary to write down their stocks to a safe figure. The expansion of their foreign and export trade during the year had been very noticeable. Profits in Australia and India particularly were very encouraging, but unfortunately the fall in the value of the rupee had sadly depleted their Calcutta profits. As in previous years, the profits shown in the accounts were after making provision for excess profits duty, corporation tax and income-tax. The excess profits tax had told very hardly on the company owing to the fact that their pre-war standard was not a good one, but that tax would come to an end with the accounts now submitted.

TAXATION'S DRAIN ON PROFITS.

The shareholders were aware that on any profits they made above the standard they had to pay 60 per cent. excess profits duty, then on the balance 5 per cent. corporation profits tax and 6s in the £ income-tax on what remained. In other words, on every £1,000 they earned over and above the standard the Government took £734, leaving them with £266. Excess profits duty on the figures before them was at the rate of 60 per cent., against 45 per cent. last year. It was therefore with a considerable amount of satisfaction that, notwithstanding those many and varied drains on the profits, they were able to show a net available balance of £66,291, against £52,878 last year. The directors proposed to carry to reserve £19,500, bringing the reserve up to £75,000, and to pay, with the interim preference dividend, a dividend on both preference and ordinary shares at the rate of 10 per cent. per annum, which was the same as last year, and to carry forward £18,370.

PROSPECTS.

This time last year the directors were in the fortunate position of having to turn away business, but the position to-day had entirely altered. It was true that they finished off the year at March 31st with a considerable amount of work in hand, but in the present condition of trade new business was extremely difficult to get. There were plenty of inquiries, but orders were not being placed. However, the settlement of the coal strike would undoubtedly relieve the position, and they were told that there was going to be a very distinct revival in trade.

The report was adopted.

GODFREY PHILLIPS, LIMITED. CHAIRMAN OPTIMISTIC OF COMPANY'S FUTURE.

The twelfth ordinary general meeting of Godfrey Phillips, Limited, was held, on the 11th instant, at Winchester House, Old Broad Street, London, Mr M. David Phillips presiding.

The Chairman said that the liabilities were reduced by about £600,000, the stock showed a reduction of over £900,000, and debtors an increase of £86,000. The directors much regretted that for the first time there was a balance on the debit side of the profit and loss account. The causes of the adverse result were the same as those which operated in a number of businesses in their own and other trades, and which were due to the very exceptional conditions which prevailed during the year.

In the autumn of 1919 they had made their purchases of the season's crops after a careful survey of the situation. The cost price of the goods so purchased, already very high, increased with the depreciation of sterling; then, with unprecedented suddenness, the volume of the trade diminished very largely, not only in Great Britain, but all over the world, due in the latter case to the fall in the value of silver and to the fall in the value of Indian rupees and French and Belgian francs. Consequently, the stocks which they purchased were likely to last them very much longer than was anticipated when the contracts were entered into. Then came the slump in prices. They had met the difficult situation, firstly, by selling part of their stock and, secondly, by writing down the cost price of their raw materials to market value. The

losses so incurred had been considerably lessened by the recovery of excess profits duty, but the relief so obtained was not sufficient to wipe out the losses sustained during the year.

With regard to the present prospects, the company was once more gaining ground, its business was increasing, its financial position was generally better, and its products were meeting with an increasing demand as it became recognised again that there were none better. Although he very much wished he could promise the immediate resumption of payment of dividends, such a procedure was impracticable while the deficit remained. Still, he was very hopeful that business in the future would prove more profitable. He could not promise that in 1921 they would earn sufficient profit to wipe out the adverse balance, but he hoped that before the end of the year they would be making a profit. They considered the slump over as far as their business was concerned, and that they had now turned the corner and were getting back into their stride.

The report and accounts were unanimously adopted.

	39,455,557

R. G. JAGUET, Accountant-General.

India Office, July 11, 1921.

Messrs Samuel Montagu and Co. write on July 14th as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,554,240, as compared with £126,552,890 last week.

A fair amount of gold came on offer, and was, as usual, taken for New York. The quotation for gold on Tuesday—namely, 113s 4d per fine ounce—was the highest since January 5th last, when it was fixed at 114s 10d per fine ounce.

Gold to the value of \$14,087,000 has been received in New York—\$7,545,000 from London, \$5,117,000 from France, \$1,000,000 from Australia, \$225,000 from Colombia, and \$200,000 from Uruguay.

Judgment was given yesterday in the Chancery Division on the important question as to whether a holder of Russian 5 per cent. bonds of 1906 or deposit notes issued under an ukase of the late Tsar (dated August 29, 1897) had any claim upon Russian gold roubles deposited in the Bank of England. Mr Justice Peterson decided that a holder of these securities had no such claim. It remains to be seen whether the matter will be debated in a higher court. Most of the gold which may come on offer in the world's markets will be destined probably for the United States of America. Hence any decision that may be made by the legal courts of that country with regard to Soviet gold will be awaited with special interest.

The following are the United Kingdom imports and exports of gold during the month of June, 1921:—Total imports, £4,950,818; total exports, £5,033,054.

SILVER.

The market has shown considerable strength during the week, largely owing to a demand from China arising out of the difficulties into which certain Eastern banking institutions had become involved. Until these are straightened out, some stringency in Chinese supplies of hard cash is but natural. Trade conditions themselves do not yet seem to warrant any serious inquiry for remittances to the East.

American silver operators have not been disposed to let out supplies with any freedom, and an appreciation of the U.S. dollar accentuated their action. Fortunately Continental and other quarters have provided our market with quite substantial amounts, and further assistance of this sort is to be expected. The rise yesterday to 37½d for cash and 37½d for two months' delivery was the result of the Indian bazaars sending buying orders upon a depleted market. These prices were the highest fixed since February 3rd and January 28th last respectively. The high rate, however, evoked sellers from the United States. Better news as to the monsoon may have stimulated Indian demand.

An appreciation in the value of the U.S. dollar can help in a double way to sustain the value of silver. It tends to enhance the cost of silver sales from that country, but it also raises the value of gold, and by so doing renders gold shipments from India more likely. Inasmuch as Indian sellers of gold often set off their gold sales by silver purchases, a demand is generated for silver, which naturally may stimulate the price.

The preliminary U.S. estimate of the world's production for 1920 is as follows (in fine ounces):—

United States	56,564,504
Canada	12,793,541
Mexico	66,516,354
North America (total)	135,874,399
Central America	2,700,000
South America	15,000,000
Europe	5,400,000
Australasia	1,200,000
Asia	7,000,000
Africa	1,300,000
Total for world	168,474,399

The Mexican production of 66,516,354 fine ounces compares well with 62,517,000 fine ounces in 1918 and 62,681,987 in 1919. As we have stated in previous letters, that of this year is not likely to be so good, owing to the closing down of lead-producing mines in that country.

INDIAN CURRENCY RETURNS.

	(In Lacs of Rupees.)	June 22, 1921.	June 30, 1921.	July 7, 1921.
Notes in circulation	16,994	17,176	17,222	17,222
Silver coin and bullion in India ..	6,925	7,106	7,150	7,150
Silver coin and bullion out of India ..	2,435	2,436	2,435	2,435
Gold coin and bullion in India ..	6,799	6,799	6,802	6,802
Securities (Indian Government) ..	835	835	835	835

The coinage during the week ending 7th inst. amounted to 3 lacs of rupees.

The stock in Shanghai on the 4th inst. consisted of about 36,700,000 ounces in sycee, 27,000,000 dollars, and 420 silver bars. No fresh news has come to hand.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.
July 9 ..	110 10	37½	37
11 ..	112 10	37½	36½
12 ..	113 4	37	36½
13 ..	112 9	37½	37½
14 ..	113 2	37½	37½
15 ..	113 4	37½	37½
July 21, 1915			22½
21, 1916			30½
20, 1917			39½
19, 1918			48½
17, 1919			54½
16, 1920			52½

NOTICES.

Cable advice has been received by the London office of the Commonwealth Bank of Australia that branches have been opened at Burnie and Devonport, both in the State of Tasmania.

Mr J. A. Stark (late assistant secretary of the Bank of England) has been appointed secretary of the London and Brazilian Bank, Limited.

The London Joint City and Midland Bank announce the opening of new branches at 15 High street, Ilfracombe, under the management of Mr A. J. Mason, and in Market place, Coleford, Gloucestershire, under the management of Mr C. V. Garrett.

The London office of the National City Bank of New York announces that the bank has opened a branch at 42nd street and Madison avenue, New York City. It has also absorbed the Commercial Exchange Bank, which formerly operated at 1,133 Broadway and 330 Bowery, New York City. Both of these offices are now being conducted as branches of the National City Bank of New York.

The London office of the Banca Commerciale Italiana will be 30 Threadneedle street, E.C.2, on and after July 18th.

After July 16th the address of Kenneth H. Rocky, London representative National Bank of Commerce, New York, will be 174-178 Gresham House, Old Broad street, E.C.2.

(a) Increased capital.

Reports and Notices.

Sir John Sutherland Harwood Banner, M.P., D.L., J.P., has accepted the position of chairman of the Imperial and Foreign Corporation, Limited, in the place of the late Rt. Hon. Lord Balfour of Burleigh, K.T., P.C., G.C.M.G., G.C.V.O.

The directors of the San Paulo (Brazilian) Railway Company, Limited, have elected the Right Hon. the Earl of Bessborough as chairman of the board, to succeed the late Right Hon. Lord Balfour of Burleigh, K.T.

BANKS.

BANCO NACIONAL ULTRAMARINO.—For the year 1920 the net profits were Esc.6,370,709, which includes Esc.266,041 brought forward. It is proposed to place Esc.700,000 to permanent reserve and Esc.400,000 to extra reserve fund. The dividend on working shares granted to staff absorbs Esc.55,049, and Esc.61,046 is placed to staff pension fund. A dividend of 20 per cent., free of Portuguese income-tax and transfer and stamp duties, is proposed (of which 12 per cent. has been paid), leaving a balance of Esc.354,612 to be carried forward. In 1919 the dividend was the same.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated July 14th, is as follows:—Pig-iron: Since our last report the position is practically unaltered. With the exception of two or three blast furnaces, which are being blown in in order to produce pig-iron for their steel works, it is not expected that blast furnaces will generally be re-started for some time to come, or until the cost of fuel and other requisites are reduced to a price that will enable pig-iron to be produced to meet the competition from other countries and until the present stocks of lower grades of pig-iron are disposed of. There is very little No. 3 Cleveland G.M.B. available, the actual selling price of which is 135s per ton, with 5s more for export. East Coast mixed numbers hematite still remains at 160s per ton for home consumption. Manufactured iron and steel: A small number of steel works have resumed partial operation to work off old orders, but here again fuel will have to be cheaper before a general re-start is made. Very little fresh business is doing. Steel ship-plates, home, £15; steel ship angles, home, £14 10s; iron bars, home, £16; steel rails, home, £14 net. Iron ore: There is no market at all in foreign ore.

Our Sheffield correspondent writes:—Arrivals of fuel have enabled a partial resumption of industrial activity, which will be further increased next week; but the position of trade generally is little better than it was before the strike, when severe depression prevailed except in a few branches. Evidences of an early revival in buying are still lacking, many of the export markets being almost dead. A slight improvement in India and the Far East is, however, being experienced. Makers of pig-iron have taken no steps in the direction of putting their furnaces into blast. This operation may be deferred until the outlook is a good deal better than at present. Steel billets have been reduced £2 per ton, and wire rods £3 per ton; but the new quotations are appreciably above those of Continental makers. Foreign wire rods can be bought delivered at £9 10s, compared with the British price of £13 5s. There is a similar disparity between the prices of foreign and British billets. The depression in the crucible and tool steel branches is more widespread than at any time in the history of the trade, and has been developing continuously for more than 12 months. Makers of all classes of steel are burdened with stocks of material bought at the highest point of the market. A moderate trade is being done in tools of various kinds. Coal is coming along in increasing quantities, but the output is not likely to be normal for a long time. Works are not ordering heavily for steam coal, whereas the railway companies are taking all that they can get. A brisk demand is reported for gas and small fuels. Owing to the hot weather the call for house coal is comparatively small.

Our Glasgow correspondent (writing on Thursday) says:—The week has been a very quiet one in all business circles, iron and steel ones particularly. This, owing to the advent of the annual summer trade holidays, which run from now on to about the end of the month. There are a few exceptions. For instance, the colliers are only to be off for a couple of days, resuming on Tuesday, their services being urgently needed for putting the mines in working order, but the large iron, steel, and shipbuilding yards will not be in general motion for a couple of weeks, if then. Much depends on the extent of the coal supplies, without which no progress can be made. It is reported that during the past three months—while the coal dispute lasted—some of the steel establishments looked substantial orders for material, including several lines for ship and boiler plates, and that the managements are anxious for a start, though it is recognised that contracts will require to flow more freely than is the case if the resumption is to be maintained. General engineering prospects are given as fairly encouraging, judged by the various inquiries afloat. Amongst the engagements placed in the last few days is one for a couple of powerful lathes with Messrs. G. and A. Harvey, Glasgow, and secured against strong American competition for a foreign Government. The money value is put at £20,000. Another favourable factor announced is an order for 13,500 tons of steel rails with Messrs. Guest, Keen, and Nettlefolds, for the Indian

State Railways, at £10 2s 6d per ton, which is 15 per cent. below the figure named by German competitors. Happily, the threatened trouble between the shipbuilding engineers and their men over the question of a reduction of wages has been settled to-day, through the operatives agreeing to the proposal. That will assure of a lot of hung-up work being proceeded with immediately. Unfortunately, however, an arrangement has not been arrived at with the joiners—the one black cloud hovering now over the local industrial horizon—and in consequence measures are again being taken for shifting steamers from the Clyde to French ports for fitting-out purposes. A large fleet of boats will have to be dealt with in this way, unless a means out of the deadlock is speedily discovered. A very light trade is passing in Scotch foundry iron, but there is an increase in the forward inquiries, which holders are not disposed to meet, as their stocks are low, with no prospect of an early revival in manufacture. Scotch ironmasters remain determined to keep their furnaces out of blast until supplies of fuel are not only plentiful but are also appreciably cheaper in price than they are, which, according to some estimates, would mean a reduction of about 40s a ton, a "cut" which, it can be taken, will not be willingly assented to by producers. They are still handling only limited quantities of all sorts, owing to the restricted outputs from the various collieries, where the men are as yet mainly concerned in restoring the working conditions. In many instances the repair operations will take months to execute. Quotations for all available coal are much stiffer than they have been over a long period. For domestic descriptions the terms are from 10s to 12s a ton higher than in pre-strike times, and for "industrials" 10s a ton dearer, and it need hardly be said that consumers are complaining bitterly.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The reduction in the prices of raw material at the colonial wool sales at Liverpool and Hull prepared users for a corresponding decline at the current series of London sales, and on the opening day things looked rather ominous. There was some improvement on the two succeeding days, however, and this partial rally has had the effect of stopping the fall in Bradford. Most firms are still waiting to see if any further change will be recorded in Coleman street, and the amount of business passing is so small that values are not being tested sufficiently to indicate whether current quotations are too

high. At the same time, the tendency all round is certainly towards lower prices, and the position to-day is decidedly in favour of the buyer, whether in tops, yarns, or pieces. Consumption is increasing, but most mills are merely engaged in working off arrears, and new business does not come forward in sufficient volume to encourage the hope that trade is on the mend. Spinners are doing a more or less hand-to-mouth business on home account, and the export markets are slow, with the single exception of Germany, to which country some fair weights of crossbred and mohair yarns are being sold. There is no real improvement in the piece goods trade, for what little new business is being booked is largely discounted by the sacrifices made on dear stocks, while the financial position is so disturbing that many sellers hesitate to part with goods until absolutely assured of the ability of the purchaser to meet the account.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The event of the week has been the opening of another series of Colonial sales, there being available 170,000 bales. The selection on the whole is good, the daily offerings providing a range of wools suitable to all requirements, and in both merinos and crossbreds leave nothing to be desired. What is wanted is competition, and one cannot but feel that the adverse financial position is telling its tale. As one Yorkshireman said the other day, "There is much wool but little money stirring." Buyers are to-day having to operate on a restricted scale, because they are in a worse financial position than they have been for the past twenty years. It is quite true that three bales of wool can be purchased at what was the price of one bale a good year ago, but it is difficult to sell the resultant tops, yarns, and pieces, and that is responsible for the present limited competition in Coleman street. There is nothing like the same keenness to buy that was in evidence last series, and at the same time one feels that many are waiting the opportunity to take up still cheaper wool if that can be had. One cannot but feel that even Germany has withdrawn a good deal of support after ruling and propping the market for the last three to four months. During the earlier part of the year America was a powerful factor in Coleman street in determining wool values; then Germany took America's place, and now both are distinctly quieter. Wool users in Germany must now be fairly well supplied with direct imports from South America, South Africa, and to some extent from Australia; but with combing machinery fully employed and practically all mills running full time—in some isolated cases even two shifts being run—consumption must be far greater than in the West Riding of Yorkshire or Northern France.

The opening was to a large extent disappointing but harmonised with what prevailed at Hull a week ago and at Liverpool three weeks ago. Many Bradford buyers forecasted that merinos would be down 7½ to 10 per cent., and that was the decline which actually took place. Since the opening a somewhat better buying spirit has developed, without prices being materially affected, these remaining in sellers' favour. Good wool can be had at a most useful price, and one regrets very much that the home trade is not better prepared for operating than is the case. Crossbreds have also suffered a further decline, 50's to 58's losing 5 per cent., while medium and coarse crossbreds are back almost to the lowest point yet touched. Prices will not have to fall much more than 5 per cent. to bring B.A.W.R.A.'s and importers' reserves into operation, but it is to be hoped that this will not take place. Not even buyers are

desirous of lower values, but nobody can fight against the law of supply and demand, and after all it is somewhat depressing after the spurt seen at the last London sales to find that prices have lost ground on average 10 per cent. The missing link continues to be the limited consumption on home trade account. Manufacturers cannot obtain good piece orders even though prepared to accept prices which show no profit on to-day's cheap wool and comparatively high conversion costs.

MANCHESTER, July 14.

In certain sections of the market the tone has been rather quieter, but inquiry has again been of considerable dimensions. Many sellers are now striving to secure more remunerative prices, but buyers are hesitating to go on at hardening rates. In cloth for India encouraging sales have been put through in bleaching and printing descriptions, but not much has been done in grey staples. Some merchants seem to be a little concerned at the agitation in our Dependency against foreign goods. No general buying has been recorded for China, but fair transactions have been mentioned in white goods and fancies. A steady business has been done for Java, Egypt, and Persia in a variety of cloths, and rather better reports have been received from the home trade. More machinery is being restarted in weaving districts, and unemployment is being reduced. Rates in American and Egyptian yarns have stiffened, and a fair business has been done in home counts. Export numbers have been sold more freely for China, and demand for India remains healthy.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

Though vegetable oils generally are a steady market, and values maintained, business continues on quite modest lines. Raw linseed oil is inclined firmer and dearer, but this is due, not so much to expansion of demand, as the refusal of crushers and others to take less money in view of present figures being under actual cost of production. A widening of demand is, however, expected later. Cotton oils are steady on scarcity, without much trade passing, crude oil being unchanged, and edible refined quoted slightly dearer. Palm kernel oil has been fetching more, but all other kinds are nominally unchanged.

A fair business has been done in Plate linseed at about 10s advance for named steamer on passage, with a firm tone ruling. The quantity afloat from Argentina has greatly increased, and as several steamers are loading, will probably still further increase and have an effect upon the market. That afloat for the U.K. is returned at 95,600 tons, and that for the Continent 63,000 tons. Indian linseed afloat is negligible being only 6,400 tons to the U.K. and Continent combined. Very little inquiry is experienced for Egyptian cotton seed, which, however, continues steady; new crop is already offering. Further business has been done in Manchurian soya beans to Hull at £13 5s, July-August loading. The imports of oilseeds and oilnuts to the United Kingdom in June were below the average, viz., 94,366 tons, against 118,876 tons a year ago, and 139,374 tons in May this year. For the six months, January-June, the aggregate is 630,759 tons, against 719,052 tons a year ago, a decline of 88,293 tons, equal to 12 per cent. Linseed at 210,203 tons was 20,000 tons better, but, owing to the extremely small imports from India, cottonseed at 175,664 tons was 62,617 tons, or 26 per cent., down. Oilnuts, at 209,500 tons, were 34,000 tons behind, largely on account of reduced palm kernel arrivals.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The Bermondsey hide market remained steady on Thursday last, although best ox in the heavy weights advanced ½d, making 9½d. Lights were unchanged, and alterations in cow, calf and wool skins were unimportant. The domestic hide market is, however, generally firm, and higher prices are recorded again in Manchester and Bradford. As there are tanners who take the view that the high price of hides is due to export demand, it is interesting to note that 73,053 cwt went overseas during the first half of this year, as compared with 43,654 cwt for the same period of 1920. The foreign hide market is also firm, and frigorifics are realising from 10d to 10½d. Dried skins are selling better in view of the improved industrial outlook. The American market is cabled as inactive, with heavy packers now selling at 13 cents.

Trade has not yet much improved in sole leather, and sellers have come to the conclusion that consumers have sufficient stock to carry out orders in hand. Tanners are, as a rule, firm on the question of price, although I hear of weak holders, who cut prices for big lots of bends. Offal is a slow seller, light shoulders and bellies only being wanted. The upper leather section remains quiet with a better tone. Kip curriers are in a better mood now that the big Government stocks are off the market, but still find the trade in wax butts and semi-chrome very slow. Box calf and glacé kid is wanted in small parcels, and prices are firm.

The shoe trade is improving, but until the demand sets in for heavy goods, full time generally will not be worked. The long spell of fine weather has also affected trade, and renewals of footwear must be necessary when it breaks up. The export trade shows a further serious decline, the value of footwear sent abroad during the first half of the current year being only £1,249,306, as compared with £3,313,343 for the first six months of 1920.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 87s 6d to 93s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.

"Ferrocete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 15.

The markets in some cases disclosed increased activity, as apart from home buyers being more in evidence, good absorption took place on Continental account. Prices were very steady to in many instances dearer.

SUGAR.—General stability governed this market, prices almost without exception being 6d per cwt higher on the week, and there was a good demand particularly with regard to white descriptions. Tate's cubes sold, 62s 3d to 63s 3d; granulated, 58s 6d to 59s; castor, 62s 6d to 63s; Lyle's granulated, 58s 6d to 59s; yellow crystals, 53s. American granulated, spot, sold, 58s 6d; white Brazilian, 53s 6d to 55s; ditto Mauritius, 53s 6d; crystallised West India, 44s to 50s 6d, as to quality; muscovado, 35s to 46s; Dutch granulated, prompt, 29s to 30s; Czecho-Slovakian ditto, 28s 6d, f.o.b. terms. Stocks in Cuba are nearly 1,000,000 tons in excess of last season.

COFFEE.—Spot market without new feature. Moderate quantities were offered at public sale, but only partially sold, as demand proved quiet. The better qualities, however, realised steady prices. Future delivery market quietly steady. July, sold, 42s 6d; September, 42s 6d; December, 43s.

COCOA.—Market quiet, though steady. Some fine Grenada sold, 56s. **TEA.**—During the week 51,200 packages Indian were catalogued, and received moderate support, at about previous quotations. The finer liquoring sorts fetched full recent rates, but inferior disclosed some irregularity. 20,400 packages Ceylon offered ruled generally weaker in value, mainly owing to inferiority of quality. Java sold firmly.

RICE.—Market active and strong. Two stars, Rangoon, spot, 21s 6d; afloat sold, 20s to 20s 6d; No. 1 garden Siam, afloat, sold, 20s to 20s 6d; No. 1 Saigon, 19s 6d to 20s; No. 1 A Burma broken, afloat, 15s 6d to 16s; No. 2 A, ditto, 15s 3d to 15s 6d; Siam C 1 broken, 15s; C 3, 14s 9d. Burma bran, July-August, quoted £8 10s ton, ex ship. Rangoon hand-picked beans, spot, sold, 14s 6d; Japanese peas, spot, 35s 6d cwt.

SPICE.—Pepper market fully steady, and fair black Singapore, spot, sold, 4½d; July-September steamer at 4½d; Aleppy, spot, 4½d; Tellicherry, 4½d; white Singapore, spot, 9½d; Muntok, ditto, 9½d; ditto, August-October, 9½d. Zanzibar cloves, spot, sold 10d; pimento at 2½d; flake tapioca, spot, 1½d; ditto July-September steamer, 15s; fair Penang seed pearl, spot, 21s; July-September, 18s 6d; small sago, spot, 27s; sago flour, July-September, 14s 1½d; desiccated coconut, fine and medium cuts, on spot, 54s; July-August, 50s. Ginger dull, unaltered.

FRUIT.—Market for currants continued quiet. Pyrgos, quoted, 50s to 52s; Vostizza, 89s to 91s. Smyrna sultan range from 140s to 152s. Dates steady. Siar, spot, 15s 6d.

JUTE.—Market advanced sharply owing to the first forecast of the Indian Government as to acreage sown, being from 35 to 40 per cent. below that of last season, and which in turn was on a comparatively small scale. Liberal trading ensued even at the higher rates in force. Native first marks, assortment, spot, Dundee, sold, £33; ditto subs. July, Hamburg, £28 5s; lightning subs, ditto, £22; heart subs, £17; and tops of ditto, afloat, £20. Calcutta hessians and twills dearer on the week, with sellers reserved.

HEMP.—Manila remained flat. J grade, July-September, sellers, £35; K ditto, £32 10s; L, £32; M, £28. New Zealand, fair, July-September, £33. No. 2 Benares, July-August, £17, sellers.

SHELLAC.—Market steady. T.N., spot, 300s; October, sold, 240s to 235s.

COPRA.—Market irregular, with fair transactions. F.M.S. Straits, August-October, sold, £31 15s to £31 5s and £32; Rotterdam, Ceylon, July-September, £33; South Sea, £30 15s. Palm kernels firmer, and July-September, sold, £22 7s 6d; August-October, £22 10s to £22 17s 6d.

RUBBER firm, on stimulating American advices, but eased later. Stocks on the week increased about 500 tons. Crepe, spot, sold, 10d to 10½d and 9½d to 10d; October-December, 11d, 11½d, and 11d; January-March, 11½d to 1s 0½d and 11½d. Sheet, spot, sold, 9d to 9½d and 9½d; October-December, 10½d, 9½d and 10½d. Fine hard Para, spot, quoted, 11d; cauchó ball, 7d.

OILS.—Linseed firmer. Spot, net, naked, 38s; September-December, 37s 3d. Rape quiet. Crude, spot, 52s; refined, 60s. Cotton firmer. Crude Egyptian, 40s; Bombay, nominal; common edible, 48s. China wood firm. Hankow, spot (barrels), 92s; and shipment, 66s. Coconut firm. Ceylon, spot, 56s; July-August, 50s; Cochin, ditto, 56s. Soya firm. Oriental, cases, July-August, 35s; barrels, ditto, 37s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 22s to 24s. Groundnut firm. English crushed, naked, spot, 45s; deodorised, barrels, £57. Turpentine dearer. American, spot, 112s; Rosin firmer. American, grade B, 16s; F, 16s 6d; G, 16s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum steady. American, spot, 1s 9½d; and water-white, 1s 10½d per gallon.

Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox and Co. (France) Limited. Deposits are received for fixed periods on terms which may be ascertained on application.

OILSEEDS.—Linseed: Market firmer, with active dealings. Calcutta, July-August, sold, £21 15s to £22 10s. Plate, spot, Hull, £20 10s; afloat, sold, £19 10s to £20 10s; June-July and July-August, sold, £19 10s to £20 7s 6d; August-September, £19 10s to £20 10s; September-October, £19 10s to £20 10s. Rapeseed firmer. Toria, July-August, £22 10s; real bold Ferozepore quoted £22; brown Cawn-pore, £21. Cottonseed dearer. Egyptian black, July, sold, £11 10s to £12; and white, £11 to £11 12s 6d. Bombay, afloat, Hull, sold, £10 5s to £10 7s 6d. Gingly firm. Chinese, July, Continent, sold, £25 5s to £25 10s. Castor, Bombay, June-July, £17, and Brazilian, £14, Hull. Ground nuts, Coromandel, machine-dried, July-August, sold, £21 15s; ordinary, £20 5s. Chinese decorticated, f.a.q., July-August, £22 15s per ton.

METALS.—Tin: The market continued active, irregular, and easier until last Tuesday, cash fluctuating down to £164 10s and since advancing to £166 5s, three months' to £168 10s. A quieter tone prevailed during the middle of the week, cash being registered at £165 5s to £167, and three months' at £166 to £167 5s. A decline occurred at Thursday's meeting. Cash changed hands at £166 to £165 10s, and since at £166 10s, late August £167, and three months' at £168 10s to £168, and again at £168 10s. At Friday's session a rather easier tendency prevailed. Cash changed hands at £166 to £165 5s, and three months' at £168 5s to £167 15s. English ingots quoted at £165. Copper tended slightly dearer at the week's commencement, with business in standard cash at £72 10s to £72 12s 6d, three months' £72 12s 6d. Values moved in a downward direction at Tuesday's market, these dates being done at £72 2s 6d and £72 5s respectively. Little change characterised movements during the middle of the week, dealings being on a smaller scale. At Friday's session rates were lower, the market being steady at the decline. Cash realised £71, late August £71 5s to £71 2s 6d, and three months' £71 5s. Electros £75 to £76, best selected £71 to £71, and strong sheets £107. Wire bars, £75 to £76. Lead steadier at £23 5s to £23 7s 6d. Spelter rather easier at £26 5s to £27, according to position. Antimony, English regulus, £37 to £40. Aluminium, home and export remain quoted at £150.

SOUTHERN PACIFIC CO.

REPORT OF THE BOARD OF DIRECTORS.

TO THE STOCKHOLDERS OF THE SOUTHERN PACIFIC COMPANY:

Your Board of Directors submits this report of the operations and affairs of the Southern Pacific Company and of its Proprietary Companies for the fiscal year ended December 31, 1920.

As stated in last year's report, the Federal Government, which took over the railroads and steamship lines of your company on December 28, 1917, relinquish control of such properties at 12.01 a.m., March 1, 1920. Your properties, therefore, were operated by the Director General of Railroads during the first two months of the year, and by your company during the last ten months of the year. In the following table showing the net railway operating income of the Southern Pacific Transportation System for the year 1920, compared with that for the year 1919, the figures for 1920 include the results from the operation of your properties for the entire year, regardless of the change in the form of control. To make the figures for 1919 comparable, they have been revised to include, in addition to Federal operations, \$1,457,689.84, corporate operating expenses, and \$2,433,617.90, war taxes, which, in the report for last year, were included in the deductions from Corporate income.

NEW YORK, N.Y., JUNE 23, 1921.

* Credit.

FEDERAL OPERATIONS.

The Director General of Railroads operated your properties during the months of January and February, 1920. The net income for those months amounted to \$4,809,574.25.

The following table shows the results of Federal operations during the whole period of Federal control—January 1, 1918, to February 29, 1920—compared with the standard return compensation payable by the United States Government for the use of your properties:

	Federal Income in excess of Standard Return	Standard Return in excess of Federal Income
1918	\$7,757,935 04	—
1919	—	\$4,394,355 44
January and February, 1920	—	3,173,713 78

* Federal Income in Excess of Standard

Return entire period of Federal control \$240,805 82

This result may be changed when the accounts between the Director

General of Railroads and the various corporations are finally settled.

The status of the accounts of your Company and its Proprietary Companies at December 31, 1920, with the United States Railroad Administration, incident to the period of Federal operations, is shown in the balance sheet. The net balance of \$1,695,262.66 due from the Government, as shown by such accounts, is made up as follows:

Due from Government on account of depreciation reserves and road and equipment retirements \$10,879,165 36

Less:—

Amounts advanced by Government for additions and betterments; expenses prior to January 1, 1918, and other corporate liabilities, in excess of cash, agents' and conductors' balances; revenues prior to January 1, 1918; balance due on standard return; and other corporate assets collected \$8,217,508 62

Agents' and conductors' balances at February 29, 1920 594,037 01

Book value of materials and supplies turned over by Director General on February 29, 1920, in excess of the book value of materials and supplies taken over by him on January 1, 1918 (subject to adjustment as noted below) 372,337 07

Balance due from Government \$1,695,262 66

Under the contract with the Director General he is required to return to the companies at the end of Federal control materials and supplies equal in quantity, quality, and relative usefulness to the materials and supplies which he received, or to pay for any deficiency at prices prevailing at the end of Federal control. Pending final settlements of the accounts, the book value of the materials and supplies returned by the Director General on March 1, 1920, has been temporarily credited to the Government's account. Owing to the high prices prevailing during, and at the end of, Federal control, the value of the materials and supplies returned by the Director General was considerably in excess of the value of the materials and supplies taken over by him; but as the quantity returned was less as a whole, there will be a considerable amount due from the Government on account of materials and supplies, instead of an amount due to the Government, as indicated by the foregoing statement.

GUARANTY PERIOD OPERATIONS.

As stated in last year's report, your company accepted, for itself and all its system lines, the guaranty offered by the Government under the terms of the Transportation Act of 1920, to the effect that the railway operating income for the six months period beginning March 1, 1920, should not be less than one-half of the annual compensation fixed in the contract made with the Director General of Railroads under the Federal Control Act, including additional compensation for use of additions and betterments.

One of the provisions of such guaranty was that there should not be included in operating expenses for maintenance of way and structures, or for maintenance of equipment, during the guaranty period, more than an amount fixed by the Interstate Commerce Commission. The Commission has not yet fixed the amount of such maintenance expenditures to be included in operating expenses, and in determining the results of operation and the amount due from the Government for the guaranty period as shown below, there have been included in maintenance expenses only the actual expenditures for maintenance during the guaranty period, and the known unaudited expenses attributable to such period.

AMOUNT DUE FROM U.S. GOVERNMENT UNDER ITS GUARANTY.

Amount of Government's guaranty for the six months' period from March 1 to August 31, 1920, being one-half of the annual compensation fixed in the contract of February 19, 1919, with the Director General, as changed by the Interstate Commerce Commission up to December 31, 1920 \$23,979,110 92

Net railway operating income for the above period as booked to December 31, 1920 3,488,683 42

Estimated balance due from the Government, as determined above, taken into the year's income account \$20,490,427 50

The amount of the Government's guaranty, as shown above, does not include any additional compensation for the use of additions and betterments, new equipment, and road extensions, as for computing such additional compensation were not available at the time the income account for the year was closed.

Under the Transportation Act the Interstate Commerce Commission is required, as soon as practicable after the expiration of the guaranty period, to ascertain and certify to the Secretary of the Treasury the amount necessary to make good the guaranty to each carrier, and on October 18, 1920, the Commission issued an order requiring each carrier which had accepted the guaranty offered by the Government to file a statement showing the amount due to the company by the Government under the latter's guaranty as computed by the company. In its order the Commission stated it had adopted no formula for computing the maintenance allowance for the guaranty period, and suggested that each carrier should prepare and submit for the consideration of the Commission such data in connection with the maintenance adjustments proposed by the carrier as the latter should consider proper. Since the close of the year your company has prepared and filed its claim in accordance with such order, and it is hoped that an early settlement will be obtained.

Following is a summary of operating revenues, operating expenses and net revenue from railway operations, showing the results of the results of transportation operations for 1920 compared with 1919 and 1918 under Federal control, and with 1917, the last year of private operation prior to Government control:

	1920	1919	1918	1917
Operating revenues	\$282,269,504 25	\$239,657,272 35	\$221,611,200 21	\$193,971,489 51
Operating expenses	242,113,790 06	188,385,172 35	162,722,371 84	120,631,822 82
Net revenue from railway operations	40,155,714 19	51,272,100 00	58,888,828 37	73,339,666 72
Operating ratio, per cent.	85 77	78 61	73 43	62 18
Total train miles	51,890,806	46,865,203	49,701,205	54,024,750
Traffic units (ton miles plus 3 times passenger miles)	22,010,457,900	20,108,015,285	20,836,032,009	20,876,908,397

The above table illustrates the constant and enormous growth of operating expenses since 1917, which is the result of changed conditions commencing with Federal control, the net revenue of 1920 being 45.2% less than 1917, despite movement of 5.4% more traffic units with 3.9% less train miles. Average railway wages were increased by governmental agencies, either during or subsequent to Federal control, to a figure 92% above the average for 1917. The expense of operating your property has been profoundly affected by the increase in prices of fuel, ties, lumber, and all other kinds of material used in operation. The net revenues of 1920 were further decreased through the failure to advance freight and passenger rates to cover added prices until the end of August, whereas the large wage award made by the United States Railroad Labour Board was retroactive from May 1, 1920. Expenses of 1920 were augmented through various agreements of a national character executed by the Director General late in 1919 establishing working rules under which compensation is allowed in excess of the value of services performed, and time and one-half punitive overtime is paid after 8 hours in various classes of service, including operation of freight trains where delay to such trains is rewarded by premium payments for overtime.

Since the return of your lines on March 1, 1920, the initiative of your organization has resumed effect, normal service has been restored, unfair rate relationships have been corrected and progress has been made in recovering diverted traffic.

Comparing 1920 with 1919, ton miles of revenue freight increased 8.53%; revenue passengers carried one mile increased 7%, augmented by increased tourist travel and large conventions on the Pacific Coast, and operating revenue increased \$42,612,232, or 18%. These results were adversely affected by a protracted strike of longshoremen of coastwise steamship lines extending from March until August (in which the demands of the strikers were successfully resisted) and an increasing diversion of transcontinental tonnage to the Panama Canal during the latter part

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—continued.

of the year. On the other hand, increased freight and passenger rates were authorized by the Interstate Commerce Commission to become effective August 26, 1920, the benefits of which accrued during the last four months of the year except that some of the states denied corresponding increases in intrastate traffic which (upon appeal to the Interstate Commerce Commission), with unimportant exceptions, have been more recently authorized.

The increase of \$53,728,617.71, or 28.52%, in railway operating expenses was largely due to higher wage schedules effective May 1, 1920, established by the United States Railroad Labour Board, to the national labour agreements before-mentioned, to increases in prices of fuel and other materials, and to the expense of moving 7.28% heavier passenger traffic and 9.90% heavier freight traffic than in previous year, the traffic volume of 1920 having been the greatest in the Company's history.

Maintenance of Way and Structures increased \$13,571,307.95, or 38.89%. Materials used in maintenance include 527.76 miles of new steel rail; 4,887,913 ties, equal to 1,704.89 miles of continuous track, and 3,316,915, or 578.46 miles of tie plates.

Maintenance of Equipment increased \$11,536,929.05, or 24.03%, the greater equipment mileage incident to heavier traffic necessitating more maintenance work, performed at higher prices for labour and material. Your Company shares with other railways the disastrous effect of under-maintenance of freight cars during Federal control. These cars were used by the Railroad Administration regardless of ownership and were operated principally upon other roads having no ownership interest in their proper maintenance, 87.5% of the Company's box cars being away from home when the roads were returned to private management. With the return of these cars to home lines in large numbers at the close of 1920 and in the early part of 1921, the great extent of their under-maintenance has been developed, and on June 1, 1921, with 80% of our cars on home lines, we find 10% of them are in bad order and require repairs, as compared with 4.6% out of service for repairs when the road went under Federal control at the end of 1917. The work of placing this equipment in proper condition must be undertaken during the current year, at very heavy cost.

Traffic Expenses increased \$1,234,045.92, or 54.68%, due to the higher price conditions affecting all expenses and to the restoration of traffic agencies and bureaus of information for the convenience of the public and to regain traffic diverted from the Company's lines during Government control.

Transportation Expenses increased \$23,947,467.13, or 25.67%, incident to an increase of 10.72% in train mileage required to move the greater traffic of 1920 and to the higher wages and increased cost of fuel and other materials. Because of restoration of car and train service of which the public have been deprived during Federal control and to the lack of which they were unwilling to submit when no longer urged by patriotic motives, there was a slight decrease of 0.71% in the average freight car load and of 3.89% in the average freight train load, but the passenger train load increased 7.46%. The gross ton mileage moved per pound of fuel (oil equated to coal on basis of four barrels of oil to one ton of coal) shows a slight decrease in freight service and an increase in passenger service. Compared with 1913 the more efficient use of fuel in 1920 is equivalent to a saving of \$5,478,000 and for the seven years 1914 to 1920, inclusive, the saving amounts to \$18,669,000.

Miscellaneous operations increased \$1,377,769.53, or 32.56%, allocating to dining cars, hotels and restaurants, the increases being generally offset by increased revenue received from these sources.

General Expenses increased \$2,010,912.07, or 32.96%, due to increased charges for Federal valuation work, increased accounting requirements incident to Government control and guarantee periods, and higher wage scales.

Item No. 23, Equipment Rents, shows an increase of \$4,874,856.86. This increase allocates to rentals received in 1919, but not in 1920, for ocean steamships leased to the United States Government; to increased rental payments made to the Pacific Fruit Express Company, in which this Company has a half interest; and to the omission during Federal control of rentals for equipment interchanged between railways.

60. Per cent. of net income on average amount of outstanding capital stock of Southern Pacific Co.	10.57	10.45	+ .12	1.15

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—continued.

The decrease of \$5,050,954.82 in Miscellaneous Operating Income (line No. 29) is due to the fact that this year's figures include only two months' operations of the California Fuel Oil Department, the property having been sold to Southern Pacific Land Company on February 29, 1920. There is, however, an increase in dividend income of \$1,000,000 on account of dividends received from Southern Pacific Land Company.

The decrease of \$40,201,372.03 in Income from Lease of Road—Standard Return (line No. 31)—is due to the fact that this year's figures include the standard return for the months of January and February only while the property was operated by the Government. This decrease is offset by the increase of \$20,418,249.07 in Net Railway Operating Income (line No. 20) and the estimated amount of \$20,490,427.50 in Miscellaneous Income—U.S. Government Guaranty (line No. 41).

The increase of \$1,014,964.39 in Income from Unfunded Securities and Accounts (line No. 39) represents interest on U.S. Government Certificates of Indebtedness, bank acceptances, and increased bank deposits, resulting principally from the sale of about \$8,500,000 of Liberty Loan bonds in January, 1920, and the unapplied proceeds of the sale in June, 1920, of \$15,000,000 of Series "E," Equipment Trust Certificates.

The decrease of \$220,222.37 in Other Miscellaneous Income (line No. 42) is the result principally of a decrease in the credit for lap-over items of revenue prior to January 1, 1918, due not only to the decrease in such items, but also to the fact that since the end of Federal Control such items have been included in the appropriate operating revenue accounts instead of in Miscellaneous Income, in accordance with regulations of the Interstate Commerce Commission.

DEDUCTIONS FROM GROSS INCOME.

The decrease of \$40,742.19 in Rent for Leased Roads (line No. 43) is the result, principally, of a payment made last year on account of rental for the year 1918.

The decrease of \$116,766.73 in Miscellaneous Rents (line No. 45) is the result, principally, of a decrease in the rental for pipe line for use of California Fuel Oil Department, the latter having been sold to Southern Pacific Land Company on February 29, 1920.

The increase of \$131,776.02 in Miscellaneous Tax Accruals (line No. 47) is the result, principally, of a general increase in the rate of taxation.

Interest on Funded Debt—Bonds and Notes (line No. 48) shows a decrease for the year of \$167,632.93. The interest was increased \$707,231.67 by the issue this year of the \$15,000,000 of Seven Per Cent. Equipment Trust Certificates, Series "E," and of the \$2,814,000 of Six Per Cent. Equipment Trust obligations issued in payment for equipment assigned by the Director General of Railroads. It was decreased \$619,135.11 by the conversion of Southern Pacific Company Four and Five Per Cent. Twenty-year Convertible Bonds; \$126,609.56 by the retirement of bonds through sinking funds, etc.; and \$120,109.93 by the acquisition of bonds by Southern Pacific Company and Proprietary Companies.

The decrease of \$223,763.41 in Interest on Unfunded Debt (line No. 50) represents principally, interest paid last year on funds borrowed for the purchase of Liberty Loan Bonds.

The decrease of \$122,903.13 in Amortization of Discount on Funded Debt (line No. 51) is the result, principally, of the conversion during the year of \$24,416,500 par value, of Five Per Cent. Twenty-year Convertible bonds into Common Stock, the unextinguished discount on such bonds having been charged to Profit and Loss.

The increase of \$239,443.83 in Other Miscellaneous Income Charges (line No. 53) is due to an adjustment made this year correcting an erroneous debit to "Expenses prior to January 1, 1918," made in December, 1918.

The dividends paid during 1920 were appropriated from the profit and loss surplus, and therefore do not appear in the Income Account. They amount to \$18,209,590.82 for the year, an increase of \$731,137.70. The increase is due to the dividends on stock issued against Five Per Cent. Convertible bonds retired. The figures for this year include \$316.00, and those for last year \$334.00, representing dividends on stocks of Proprietary Companies held by the public.

On December 31, 1920, the principal of advances to the Southern Pacific Railroad Company of Mexico amounted to \$38,709,747.41. The interest accruing on these advances has not been taken into the income of the Southern Pacific Company.

CAPITAL STOCK.

The capital stock of the Southern Pacific Company outstanding at the beginning of the year amounted to ... \$302,024,905 64

Issued during the year:
Common stock issued in exchange for a like amount of Five Per Cent. Twenty-Year Convertible Gold Bonds surrendered and cancelled... 24,416,500 00

Amount of Southern Pacific Company capital stock outstanding December 31, 1920 ... \$326,441,405 64

There was no change during the year in the capital stocks of the Proprietary Companies. The amounts outstanding December 31, 1920, were as follows:

Preferred stock ... \$29,400,000 00
Common stock ... 317,432,400 00

Capital stocks of Proprietary Companies outstanding December 31, 1920, were held as follows:

In hands of public ... 75,603 00
Owned by Southern Pacific Company ... \$346,456,800 00

Owned by Morgan's Louisiana & Texas Railroad & Steamship Company ... 300,000 00

Capital stocks of Proprietary Companies outstanding December 31, 1920, were held as follows:

In hands of public ... 75,603 00
Owned by Southern Pacific Company ... \$346,456,800 00

Owned by Morgan's Louisiana & Texas Railroad & Steamship Company ... 300,000 00

Capital stocks of Proprietary Companies outstanding December 31, 1920, were held as follows:

In hands of public ... 75,603 00
Owned by Southern Pacific Company ... \$346,456,800 00

Owned by Morgan's Louisiana & Texas Railroad & Steamship Company ... 300,000 00

(a) The outstanding capital stock and funded debt include capital stocks and funded debt of Proprietary Companies of the par value of \$346,756,800 and \$110,732,900.45, respectively, a total of \$457,489,700.45, which securities are owned by the Southern Pacific Company or by Proprietary Companies, or are held in sinking funds of Proprietary Companies. The cost of these securities is included in the investments shown above. Of the said amount, stocks of the par value of \$249,653,161, which stand charged on the books at \$232,932,667.41, are pledged against the issue of Southern Pacific Company stock and bonds. (d) Represents accrued depreciation on electric power plants and substations, general office building at San Francisco, wood preserving works, Sacramento rolling mill, oil storage plants, grain elevators, and similar facilities. (e) Represents principally interest on construction advances which have not been repaid.

FUNDED DEBT.		
On June 1, 1920, to provide for the construction and acquisition of new rolling stock, an equipment trust, known as "Southern Pacific Equipment Trust, Series E," was created and an issue of \$15,000,000, par value, Seven Per Cent. Equipment Trust Certificates authorized, all of which were issued during the year. The certificates are dated June 1, 1920, and mature serially in lots of \$1,250,000 on June 1 of each year from 1924 to 1935, both inclusive. In accordance with the terms of the trust all of the certificates were guaranteed by the Southern Pacific Company.		
The \$2,814,000 of Six Per Cent. Equipment Trust Notes to be issued in payment for the 1,000 box cars which the company was compelled to take over from the Director General, as explained in last year's report, were also issued during the year. As the purchase price of such equipment as finally determined upon only slightly exceeded the minimum purchase price, the difference was paid in cash, so that no further equipment notes are to be issued in connection with such equipment.		
The funded and other fixed interest-bearing debt of the Southern Pacific Company and of its Proprietary Companies, outstanding December 31, 1919, was as follows:		
Southern Pacific Company	\$167,608,760 00	
Proprietary Companies	444,479,931 73	\$612,088,691 73
Total outstanding December 31, 1919		
Issued during the year:		
Southern Pacific Company		
Seven Per Cent. Equipment Trust Certificates, Series "E"	\$15,000,000 00	
Six Per Cent. Temporary Equipment Gold Notes	2,814,000 00

Total	\$2,841,000 00	\$626,961,691 73

Brought forward		\$629,90
------------------------	--	----------

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—continued.

ADDITIONAL ROLLING STOCK AND FLOATING EQUIPMENT.
As indicated in last year's report, the following rolling stock, ordered to provide for increased requirements and to replace vacated equipment, was included in Southern Pacific Equipment Trust, Series E, created June 1, 1920:

72 locomotives
4,815 freight-train cars
50 passenger-train cars
140 electric cars

The total estimated purchase price of such equipment is \$22,500,000. Of this amount the sum of \$15,000,000 has been provided by the equipment trust certificates issued under the above-named trust, and the remaining \$7,500,000 will be provided out of the general funds of the company. A part of such equipment has been placed in service, and it is expected that the remainder will be delivered and placed in service during the calendar year 1921.

In addition to the above equipment there were delivered by outside builders or completed at company's shops during the year 3 locomotives, 16 passenger-train cars, 251 freight-train cars, and 4 electric cars, the total cost of which was \$971,000. Of the four steamships mentioned in last year's report, the freighter El Estero was placed in service November 24, 1920; the freighter El Isco, January 20, 1921; and the freighter El Lago, March 14, 1921. It is expected that the tank steamer Taniahua will be completed and delivered during the latter part of 1921. The contract price of these four steamers is \$7,430,000.

THE SUIT INVOLVING THE RIGHT OF THE SOUTHERN PACIFIC COMPANY TO OWN THE STOCK OF THE CENTRAL PACIFIC RAILWAY COMPANY

In last year's report it was stated that this case was pending before the Supreme Court of the United States on an appeal by the Government from a decision against it in the lower Court, and that it was expected that the case would be argued and submitted at the October Term, 1920. The case came up for hearing in the Supreme Court on April 17th, 1921; and, after full oral argument, was submitted on April 19th and taken under advisement by the Court. An early decision is expected.

CONTROVERSY ARISING OUT OF THE OREGON & CALIFORNIA RAILROAD'S LAND GRANT

This is an accounting suit brought in 1917 by the United States seeking to offset against the compensation of \$2.50 per acre, due the Company for the unsold lands, moneys received by the Company, in excess of \$2.50 per acre, by reason of past sales, leases and otherwise, as well as taxes levied since the forfeiture decision in 1913 and voluntarily paid by the Federal Government to the State of Oregon. This case is ready for trial and will probably be heard and decided in the United States District Court of Oregon some time during 1921.

SEPARATION OF CALIFORNIA OIL PROPERTIES—INCLUDING STOCKHOLDING IN ASSOCIATED OIL COMPANY—FROM RAILROAD PROPERTIES

At a meeting held December 1st, 1920, your board of directors adopted the following plan for the separation of the California oil properties—including the stockholding in the Associated Oil Company—from the railroad properties:
A new company, known as the Pacific Oil Company, was organized under the laws of the State of Delaware with a capital stock of 3,500,000 shares of no par value, and the Southern Pacific Company subscribed for the entire capital stock at \$15.00 per share. Of the \$52,500,000 so realized the new company retained \$8,750,000 as a working capital and expended the remainder, \$43,750,000, in purchasing from the Southern Pacific Land Company (the entire capital stock of which is owned by the Southern Pacific Company):

(a) About 250,000 acres of land owned by the Southern Pacific Land Company, situate in the State of California, of which about 25,000 acres are proven oil lands and the remainder lands heretofore withdrawn from sale as possible oil lands, together with existing field improvements and materials and supplies;
(b) 200,690 shares, par value, \$20,000,000 representing 50.48% of the outstanding capital stock of the Associated Oil Company.

Holders of the capital stock of the Southern Pacific Company registered as such on the books of the Company at the close of business on January 14, 1921, were given the right to purchase at Fifteen dollars (\$15.00) per share, payment to be made in full on or before March 1, 1921, one share of stock of the new company for each share of Southern Pacific Company stock so held.

The capital stock of the new company was fixed at 3,500,000 shares, to correspond as nearly as possible to the total number of shares of Southern Pacific Company stock outstanding together with the number of shares reserved for conversion of the company's 5% convertible bonds. Holders of \$38,329,500 of these bonds sub-

sequently exchanged their bonds for Southern Pacific Company stock, so that of January 14, 1921, there were 3,443,809 shares of Southern Pacific Company stock outstanding.

Southern Pacific Company stockholders, or their assigns, purchased an aggregate of 3,414,604 shares of Pacific Oil Company stock, thus leaving in the company treasury at this date 85,396 shares of such stock, which will be held subject to sue disposition as your board of directors may determine.

The carrying out of this plan has completely divorced the California oil properties from the railroad properties.

SOUTHERN PACIFIC RAILROAD COMPANY OF MEXICO

The value of the property damaged or destroyed from the beginning of the Madero revolution in 1910 down to December 31, 1920 (including that damaged or destroyed during the revolution against Carranza), now amounts to 5,421,326 pesos equivalent to \$2,710,663. While the company has been unable to make an collections this year on account of these depredation claims, the claims were checked during October, November and December, 1920, by representatives of the Government in connection with representatives of the Company and no serious objections were raised to the claims as originally filed. The Company has claim against the Mexican Government aggregating 15,935,586 pesos, equivalent to \$7,967,793, representing amounts due for freight and passenger service performed for rental of road and equipment, and for materials furnished to or confiscated by the various military authorities. About one-half of these latter claims have been filed with the proper departments of the Government, and the remainder are in the hands of our fiscal representative in the City of Mexico and are being filed as rapidly as the congested condition of the departments will permit. Since the inauguration of President Obregon on December 1, 1920, payments amounting to 128,690 pesos have been made on account of these latter claims, while additional claims amounting to 587,350 pesos have been approved for payment.

The Company has also filed claims aggregating 5,908,816 pesos, equivalent to \$2,954,408, for the cost of restoring the Alamos and Tonichi Branches and the main line from Acaponeta to Tepic, the operation of which was compelled to abandon in the spring of 1913. These claims are, of course, subject to correction when the lines are restored and again placed in operation and the actual cost can be determined.

The average miles of road operated during the year was 1,001.47 miles, and only such maintenance work was carried on as was found necessary for the operation of trains over those portions of the line open for traffic.

LOS ANGELES UNION TERMINAL COMPANY

The Southern Pacific Company has acquired the entire capital stock, \$3,250,000 par value, of the Los Angeles Union Terminal Co., in exchange for value of lands transferred to the Terminal Company and a part of the construction cost incurred. This enterprise occupies nineteen acres of land at Seventh Street and Central Avenue, being in the heart of the newer wholesale district, and at the intersection of the principal east and west retail street of the city and the lines of your company. The major part of the wholesale produce and fruit business of the city is carried on at this terminal, and in addition a number of important manufacturing and jobbing firms have their plants established there. Two six-story reinforced concrete buildings, with basements having rentable floor area of 846,000 square feet, or 19.5 acres, have been erected, and a third is under construction. The market section is of two-story concrete buildings, supplied in part with basements and with a rentable floor area of 405,352 square feet, or 9.3 acres. The completed buildings are at this time 98.8 per cent. rented. The terminal company is served exclusively by the Southern Pacific Company and its subsidiary the Pacific Electric Railway Company, the latter under agreement doing all the switching for both Companies. The enterprise is productive of a very large freight traffic for your company.

LOS ANGELES PUBLIC MARKET COMPANY

Your company has also acquired substantially all the stock of the Los Angeles Public Market Company owning fifteen and one-half acres of land at Sixth and Alameda Streets, one block from the site of the Los Angeles Union Terminal Company.

This property, formerly the site of the Los Angeles Produce Market until the produce business outgrew its facilities, is planned eventually to use for railway purposes.

At this time the buildings thereon are rented to 85% of capacity, the tenants including overflow from produce section of the Los Angeles Union Terminal Co., the terms of occupancy being such as to permit without delay the use of the property for railway purposes when needed.

PROPERTIES AND MILEAGE.—The transportation lines of the Southern Pacific Company, and of certain affiliated companies herein referred to as "Proprietary Companies," constituting the Southern Pacific Transportation System, operated at December 31, 1920, were as follows:—

DIVISIONS.	First Main Track.	Additional Main Track.	Sidings.	Ferries.	Water Lines.
A.—Mileage of lines operated by Southern Pacific Company:					
1. Owned by Southern Pacific Company:					
Rail lines.....	547.72	15.88	213.22	—	—
Water lines.....	—	—	—	—	4,400.00
2. Leased from Proprietary Companies:

* Includes 11'05 miles owned jointly with other companies, 4'37 miles leased from other companies, and 160'63 miles operated under trackage rights; and excludes 41'34 miles of owned lines leased to other companies.

In addition to the 11,099.07 miles above tabulated, the Southern Pacific Company solely controls through ownership of capital stock 854.34 miles of Affiliated Companies and 1,240.52 miles of the Southern Pacific R.R. Co. of Mexico, and jointly controls (through ownership of capital stock in equal proportions with the Atchison, Topeka & Santa Fe Railway Company) 534.42 miles of the Northwestern Pacific Railroad, and 59'65 miles of the Sunset Railway, and with Messrs John D. and A. B. Spreckels, 156.15 miles of the San Diego & Arizona Railway, a grand total of 14,054.16 miles.

GENERAL

Dividends on the capital stock of your Company were declared during the year, payable as follows:

1 1/2 per cent. paid April 1, 1920.....\$4,531,054.93
1 1/2 per cent. paid July 1, 1920.....4,531,303.17
1 1/2 per cent. paid October 1, 1920.....4,531,311.08
1 1/2 per cent. payable January 3, 1921.....4,615,611.64

Total.....\$18,209,280.82

On May 15, 1920, the Southern Pacific Equipment Company was organized under the laws of California, for the purpose of constructing and acquiring equipment for Southern Pacific Company and its affiliated companies. All the outstanding

capital stock of the new company is owned by Southern Pacific Company. Of the new equipment mentioned above the Southern Pacific Equipment Company is building 30 locomotives, 2,000 box cars, 1,000 stock cars, 1,000 flat cars, and 65 caboose cars. It is also building 1,000 of the 4,000 new refrigerator cars included in the Pacific Fruit Express Equipment Trust mentioned in last year's report.

Under the pension system put into effect January 1, 1903, there were carried on the pension rolls at the end of the year 1,022 employees. The payments to pensioners for the year amounted to \$465,566.63.

THE MONEY MARKET.

5 1/2 PER CENT.

ON Thursday, following cables announcing a reduction in the New York Federal Reserve Bank's rate of rediscount to 5 1/2 per cent., the directors of the Bank of England lowered Bank rate from 6 to 5 1/2 per cent., and the banks and discount houses reduced the rate offered on deposits, the former to 3 1/2 per cent. and the latter to 3 1/2 and 3 3/4 per cent. for call and notice money respectively.

The 6 per cent. Bank rate has been in operation for four weeks, and the period has been one of inflationary Government finance, resulting in superabundance of floating credits in the market and a weakening of the Bank of England's position. Thursday's change somewhat disorganised the money market, and short loan rates were adjusted to lower levels. In the discount market a disturbing factor was the keen demand for "additional" three months' Treasury Bills, which were still on offer at $4\frac{1}{2}$ per cent., and business in commercial bills was almost negligible. With an increased demand for Treasury Bills there is some hope of a reduction in the Government overdraft at the Bank, and a consequent increase in the efficacy of the new Bank rate, while the anomalous disparity between Bank rate and market rate, which has recently been increasing, is now rectified. The lower level may act as a stimulus to trade activities, and promote confidence amongst the business community.

	July 22, 1921.	July 15, 1921.	July 8, 1921.	July 1, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

The Bank Return showed a reduction of £6,000 in the gold stock and of £238,000 in the circulation, making the Reserve £232,000 higher. Government securities rose by £6,715,000, and Other securities by £4,663,000. Deposits were thus £11,594,000 higher, Public falling by £2,728,000, while Other rose by £14,322,000. The circulation of currency notes fell by £1,537,000 to £323,965,900, which includes £1,998,300 for notes called in, but not yet cancelled. The fiduciary issue is £274,017,600, which is £43,537,600 below the maximum.

The New York Federal Reserve Bank rate was reduced $\frac{1}{2}$ per cent. to $5\frac{1}{2}$ per cent. on July 21, 1921. It had stood at 6 per cent. since June 16, 1921.

The following table shows public income and expenditure for the week ended July 16, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	17,778	Supply Services	8,730
		Interest on Debt	1,619
		Sundries	655
		Reduction of Debt	5,300
		Added to Exchequer Balances..	1,474
	17,778		17,778

These operations decreased the National Debt by the sum of £5,300,078, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Min. £		Min. £
Public Departments Advances ..	+ 100	Treasury Bills	— 8,900
Advances by Bank of England ..	+ 4,750	Unemployment Insurance ..	— 1,050
National Savings Certificates ..	+ 100	Surrenders of Bonds, &c.	— 497
Treasury Bonds	+ 22		
Sundries	+ 200		
	+ 5,672		+ 10,447

Property and Income-tax, including Super-tax and Mineral Rights Duty, brought in £7,812,000, while Customs and Excise yielded £5,622,000 to revenue. Ordinary Receipts under Miscellaneous yielded £136,124, and Special Receipts £1,500,000. For the Unemployment Insurance Act of 1921 £1,050,000 was allocated. The floating debt was reduced by £3,465,000 to £1,363,946,000.

In the foreign exchange market the chief feature of the week has been the weakness in the dollar exchange, which from 3.62 $\frac{1}{2}$ on the 15th has fallen away, with slight variations, to a quotation of 3.58 $\frac{3}{4}$ on the 21st, and although the rate was slightly firmer yesterday morning at 3.58 $\frac{1}{2}$, there is no reason to assume that the lowest point has yet been reached. If, as we may perhaps assume, some revival in trade may now be looked for, its first indications will make themselves felt in heavier purchases of raw material, which will bring additional weight to the usual autumn drain. There have been rumours

that the German Government has been converting back into European currencies some dollars accumulated in anticipation of reparation payments, but if this is true, the effect on exchanges has been small. The quotation for futures has widened back again to $\frac{1}{2}$ cent. per month over spot. After being steady for the first three days of the period at about 46.45-50, the Paris rate weakened a little to 46.30 on the 20th, and a slight recovery on the 21st was followed by further weakness to just over 46.30 yesterday morning. In view of the extreme seriousness of the French financial position, which no amount of discussion or expedients has yet succeeded in reducing, and in the face of the almost complete certainty of further large issues of paper currency, it is surprising that the franc rate continues so firm. Brussels also shows a recovery in value on the week from 47.58 $\frac{1}{2}$ to 47.45, but there is still little improvement in the unexplained spread between the Paris and Brussels rate. Some indication of tendency is given in the future quotations, which for Paris is one centime per month below spot, for Brussels five centimes. Italy, after some depreciation and uncertainty, has recovered again, and ends the week only very slightly worse at 80, but there is a general feeling that, in view of Italy's economic difficulties, the lira is over-valued. Madrid and Switzerland have both moved slightly against us, from 28.20 to 27.80 and from 22 to 21.85 respectively. Amsterdam has moved up from 11.37 $\frac{1}{2}$ to 11.39 rather suddenly, owing to rumours of difficulties in that country, which, however, have not yet been confirmed. The three Scandinavian countries have again moved considerably in our favour. The Helsingfors rate, after recovery to 217, has again risen to 223. Portugal, after its recent rise in value, has again somewhat depreciated. After getting down again to nearly 270 the mark, as was to be expected, reacted sharply at the beginning of the week to 280. Since then, however, it has appreciated again in value to 275. It is possible that Germany in one way or another has completed its preparations for meeting the total reparation payments due by the end of August; but, in spite of hard work in Germany and increasing exports, there would seem little to justify an optimistic view as to the future of the mark. In Central Europe the Austrian krone continues to depreciate, the London quotation for Auslands-kronen being now about 2,700. On the 19th, when the rate for Inlandskronen was 2,997.50, the rate for Auslands-kronen was 2,600, showing a still further narrowing of the margin between the two rates. Polish business is restricted, and the rate is again somewhat higher at about 6,500. Prague also has depreciated from 275 to nearly 280, Bucharest from 255 to 265, and Belgrade from about 140 to about 142. Sofia, after its recent heavy depreciation, has recovered a little. Athens also is very slightly better, while the Constantinople rate shows a further rise to about 545. Among the South American rates, Buenos Ayres, Valparaiso, and Montevideo have moved somewhat in favour of this country, while Rio has appreciated slightly. The rupee and the yen are also somewhat higher. Silver, which had a dull week and depreciated in value, livened up again towards the close on a recrudescence in demand from India. Hong Kong remained unchanged at 2s 8d, but in Shanghai the price was pushed up somewhat in connection with the recent banking troubles, which now appear to be satisfactorily arranged as far as the Chinese public is concerned.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JULY 16, 1921.

Total spent	£ 305,494,187	Raised by revenue ..	£ 253,535,481
Inc. in balances	559,678	Net borrowings	52,518,384
Total	306,053,865	Total	306,053,865
ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

JULY 16TH.—Ulster Cabinet comes to London.

JULY 18TH.—Conversations between Premier and Mr De Valera. Ulster Cabinet returns. New heat wave. Finance Bill debated.

JULY 19TH.—Government defeated on Finance Bill amendment exempting co-operative societies from corporation profits tax. New Licensing Bill introduced. Dominion Premiers discuss question of preliminary conference on the Pacific question.

JULY 20TH.—Committee stage of Safeguarding of Industries Bill completed. Dockers' wages to be reduced.

JULY 21ST.—Bank rate reduced. Premier and Mr De Valera again confer. Debate on housing policy.

JULY 22ND.—Mr Valera returns to Ireland.

Thursday's reduction in the Bank rate to $5\frac{1}{2}$ per cent. caused an immediate improvement in the quotations of gilt-edged stocks. But in most of the markets the volume of business remains small.

The cotton market has had a quieter week, and demand for cotton goods for India has fallen off, owing to uneasiness about the monsoon and the political position in that country. Hours of work in the spinning section have been increased from 24 to 35 per week. Activity is increasing in the woollen mills in the Bradford district, but is concerned principally with arrears, new orders being scanty.

At the London wool auctions home users were little in evidence, the demand coming mainly from the Continent. Middlesbrough reports complete absence of pig-iron and iron ore business, but some steel works are resuming work on old orders. In the Sheffield district little improvement is recorded. The hide market is stronger, and shoe manufacturers busier. The oilseed markets have enjoyed this week a revival of demand.

We regret to hear, as we go to press, of the death of Mr A. J. Wilson, founder and editor of the *Investors' Review*.

SAFEGUARDS AGAINST PROTECTION.

In the present epidemic of tariff madness which is raging over the world, we should, one may suppose, in this country account ourselves fortunate that nothing worse is threatened than a much modified Bill for "safeguarding" minor industries. Many things have happened since this measure in its original crude and virulent form was first introduced into the House of Commons. Warned by the indirect admission of that once stout Free-trader, Sir Alfred Mond, that it was a Bill to raise prices, and would be of no use unless it did raise them, the opponents of a tariff system in this country bent their energies towards

securing substantial amendments. They have been ably assisted by Mr Baldwin, the President of the Board of Trade, who, as the Bill's unwilling stepfather, has displayed an icy indifference towards Sir Robert Horne's posthumous child. The result has been the insertion of substantial safeguards designed to prevent the provisions of the Bill from being used as a raw measure of price-raising protection. The amendments already inserted in Committee and promised for the Report stage will interpose real obstacles to the imposition of a 33 $\frac{1}{3}$ per cent. *ad valorem* tariff upon goods which we need in this country, either for direct consumption or as partly manufactured raw materials for our great industries. It has been said that the strongest safeguard between the consumers in this country and the imposition of a tariff system against imported goods is the traditional financial procedure of the House of Commons. No new duty can be imposed except by explicit resolution of the House. The unconstitutional attempt in the original Bill to turn the flank of this procedure by giving taxing authority to the Board of Trade has been defeated. The House of Commons remains, as always, the supreme taxing authority. That is the first and greatest safeguard against protection which has been restored to the people of this country.

There are others of much value. It will be recalled that in Part II. of the Bill, which we recently discussed, it was open to any industry to put up an *ex parte* case—to a Committee set up under the Bill of the Board of Trade—that unemployment in that industry was caused, or was likely to be seriously affected, by the practice known as "dumping" foreign goods. No provision was made for hearing evidence from other and more important industries, in which employment would be seriously affected by the imposition of a duty of one-third on the goods alleged to be dumped. Many examples have been given to show how intolerably and injuriously such a one-sided system of inquiry would have worked in practice. Makers of ship-plates in this country might have established a plausible case for a tariff simply because shipbuilders, to whom cheap imported ship-plates were a vital necessity, were not allowed a hearing. The case for a tariff could have been presented, but not the case against a tariff. After resisting amendments which were designed to set no limits to the scope of the inquiries into claims put forward in favour of tariffs, Mr Baldwin has undertaken to provide on Report for, at least, some measure of impartiality. These Board of Trade Committees are not, as was originally intended, to be equipped with impenetrable pro-tariff blinkers. They will now be instructed to take into account the effect of a tariff on employment in any industry which uses as material the goods for which tariff protection is sought. When, and if, for example, the makers of ship-plates seek to obtain a tariff of one-third against imported plates, the shipbuilders will be heard in opposition to the application. And so for other trades. The paper users will be heard against the protectionist claims of the paper makers, the steel rolling mills against the makers of steel ingots, and so on. That is a most valuable safeguard. It provides that before the Board of Trade can consider the case for a tariff to have been established, the opponents directly interested against the proposed tariff will

be fully heard. A further amendment has been accepted by Mr Baldwin to the effect that the Committee of inquiry, which examines applications for tariff protection, must satisfy itself that the industry in this country which seeks protection is conducted in a reasonably economical and efficient manner.

We have thus a series of safeguards which should secure the people of this country against the worst effects of this legislative effort to slaughter our trade in the sacred name of Protection. Of course, far the best service which the Government could do the country would be to throw the wretched Bill into the waste-paper basket. It is a bastard offspring born of the "political exigencies" of a Coalition. It has been condemned utterly by the banks, and by the great exporting trades of Lancashire and Yorkshire. But if our highly-organised and interwoven industries have to put up with the handicap of blundering political attempts to "safeguard" them from "dumping," it is as well that the handicap should be made as difficult as possible to impose. The more difficult the better.

The safeguards against its operation are now formidable. Those who seek to get tariff protection under it have first to prove that "dumping" exists on a substantial scale, causing or likely to cause serious unemployment. Dumping is defined to be sale below cost of production, which is in turn defined to be the wholesale selling price in the country of origin, less 5 per cent. It is this dumping part of the Bill which is the more important, because it is subject to no time limit; it is permanent until repealed. Next, the seekers after protection have to satisfy a Board of Trade Committee, composed of five reasonably intelligent and responsible persons, that a tariff of one-third *ad valorem* on imported goods will not create more unemployment in industries which use those goods as material of manufacture than it prevents in home manufactures of competing goods. Then the would-be subjects of special protection must prove that they themselves are efficient and economical in the management of their works. After the Committee has reported to the Board of Trade, the experienced officials of the Department will find themselves obliged to re-examine the whole case, to hear the views of opposing deputations, and generally to stand the racket of opposition from industries which may be indirectly and adversely affected. Finally, the case for protection, should the Board be persuaded to make an Order, has to be strong enough to face a debate in the House of Commons; no Order will have effect—except temporarily during a recess—until the House has confirmed it by financial resolution. We may confidently predict that there will be many claimants, but few successful verdicts. If one may judge from the attitude of the President, we conclude that the Board of Trade is not in love with this Bill. It will not lightly imperil its prestige by putting forward Orders for protection which, under fire of criticism in the House, may need to be withdrawn. It will walk very warily, realising that a single grave blunder will make a public mockery of its own Bill. Our firm hope is that the safeguards against protection have been made strong enough to prevent the Bill from coming into operation at all. This would be the best result of all; better, perhaps, than the abandonment of the whole measure.

THE RAILWAY RATES BILL THROUGH COMMITTEE.

ANOTHER fortnight has passed since our last reference to the Railways Bill. Since then the appointment of a second Committee to deal with the rates clauses, and the imminent approach of August 15th, have considerably hastened matters, and the last outstanding clause was disposed of on Thursday morning. The Bill emerges from Committee substantially in the form in which it passed second reading, the most important change being that the whole of the railways of Great Britain are now included in four groups instead of seven. Two of them, the Southern and Western, are so small in comparison with the remaining two, the North-Western and the North-Eastern groups, that it almost seems a pity that the Committee did not go further and combine the Southern and Western groups, and so make in the South and West of England a more adequate counterpoise for the big battalions to the north of them.

Though the Bill is substantially unaltered so far, it is by no means safe in harbour yet. For the Report stage downstairs in the House of Commons, which is expected to be reached on Wednesday next, a large number of new clauses have to be put down, and though intended to embody an agreement settlement, some of them may turn out not to represent entire agreement. Moreover, there is the House of Lords still to come, and their Lordships are apt to have opinions of their own on matters of this nature.

The Minister has under Section 12 obtained powers to make orders as to standardisation and common user of plant and facilities. They are less than the powers he asked for. They have no relation to the talk that has been indulged in by the Committee, and the statements that have appeared in newspapers to the effect that a Government department was depriving private enterprise of the right to manage its own affairs. They fall very far short of the powers possessed by the Government of the United States to control the private railways of that country. But if the Ministry of Transport is permitted to retain the services of competent technical experts they will doubtless be efficacious. Probably the Ministry will in practice advise and persuade, and only in the last resort attempt to issue orders. Part IV. of the Bill, dealing with wages and conditions of service and the establishment of what are practically Whitley Councils, and constituting on a permanent basis the Central and National Wages Boards, has gone safely through.

Part III. of the Bill (Railway Rates) maps out what might almost be called a revolution. In future there will be an expert Rates Tribunal which will fix not maxima, but actual standard rates and fares which the companies normally must charge, and which they have no power to alter. The standards are to be revised annually for the first three years, and thereafter at less frequent intervals. These rates are theoretically to be such as to secure to each group the aggregate pre-war net income of all the separate companies absorbed into the group within certain possible additions in the future. This sounds simple, always provided that putting up rates connotes increasing net revenue, a point on which there is much searching of heart in railway circles at the present moment. But, unfortunately, the bulk—it is commonly said to be 80 per cent.—of the goods traffic of the country has hitherto been carried not at standard rates, but at rates below, often very far below, the standard. The question how these exceptional rates are to be treated in future was the main subject dealt with by Grand Committee A. Broadly, it has been settled as follows:—Exceptional rates, not differing from the standard rates by more than 5 per cent., are to be swept away and not to be granted in future. The concession to the trader is not worth the complexity which they cause. Exceptional rates, not less than 5 per cent. and not more than 40 per cent. below the standard, may continue if companies and traders agree, and may, on condition of being reported to the Minister, be granted in future. The Minister can thereupon, if he thinks fit, refer the question of their reasonableness to the Rates Tribunal. He can also, on the application of competing water carriers, either coastwise or by canal, refer the question of the reasonableness of such rates to the Tribunal if he thinks that a *prima facie* case has been made out, that, having regard to the cost of running the railway service, the rates proposed mean competition carried to an unjustifiable extent. No exceptional rates exceeding the limit of 40 per cent. below standard can be either retained or introduced without the consent of the Rates Tribunal.

Clause 35 has rescued the railways from the dead hand of the Act of 1894; and they may now once more, having reduced a rate, put it up again to the old figure if the experiment does not succeed. There is one clause in the Bill which will be welcomed by economists and financial critics whose business it is to study and understand railway operation and railway accounts. Section 67 (Accounts Returns and Statistics) places on the companies a permanent obligation to render to the Minister such statistical returns as they have been required to furnish for the last year and a-half under the temporary powers contained in the Ministry of Transport Act of 1919. So it may be hoped that we have now heard the last of the

obscurantist talk that in railway matters, unlike all other business, cost accounting is first impossible, and, secondly, useless, and that rule-of-thumb is the true and only guide. The younger generation of railway men have long estimated this talk at its true value. But so long as the old school persisted in decrying the use of statistics, and endeavoured to prevent their universal introduction, it was difficult for the young men to acknowledge publicly the benefit which they knew they would obtain from them. Now that the returns are compulsory, their lips will be unsealed, and we may hope that within a few years serious criticism of the operation of the different groups in the light of comparative statistics will become possible. The traders can be trusted to discover and use their new weapon each time the Rates Tribunal revises the standard rates, and to insist that the maintenance of the standard revenue shall only be permitted to the shareholders on condition that the management is shown to be efficient and economical.

MARINE INSURANCE DIFFICULTIES.

It is one of the peculiarities of marine insurance that when the renewal of a steamer's policy is under negotiation the underwriter usually wants to force up the insured value of the boat, while the owner wants to lower it, the underwriter trying to make himself liable for a larger sum if the vessel is lost, and the owner trying to cut the underwriter's liability down. The reason for this paradox is that the rate of premium is always a percentage of the insured value, so that the total amount of premium paid to the underwriters is greater on a high valuation than on a low one, and out of this total premium the underwriter has to meet not only a claim for total loss if it should occur, but the cost of

1. Repairs after accidents.
2. General average.
3. Salvage charges.
4. Collision liabilities.

All these expenses have to be borne out of the one premium, and in order to make this premium as large as possible, it is to the underwriter's interest to keep the value of the steamer up. On the other hand, the owner, whether he pays on a high value or a low, receives in respect of most of his claims other than total loss exactly the same indemnity. Consequently he likes a lower insured value.

The history of "time" business in the marine insurance market is in the main a record of this struggle between owners and underwriters to force the value down and up, according to their different interests, and the weapon most popular with underwriters on their side of the contest is what is known as a "time agreement," by which the underwriters every year agree among themselves certain general alterations in values, undertaking that whenever an insurance is renewed the valuation shall be fixed in a definite agreed relation to that of the previous year. Thus, in one year all values must go up 15 per cent., in another they remain unchanged, in a third they are allowed to fall by 10 per cent., and so on.

Most underwriters set great store by these "time agreements," and believe that they are essential to profitable underwriting; but, like all artificial arrangements of this kind, they have their weak side, and sooner or later under stress of circumstance they collapse. Then the market is thrown into confusion, and competition between underwriters appears all the more violent for the restrictions hitherto imposed upon it. Such a collapse has happened in the last few months. The "time agreement" which was based on the enormously high values of the war period and of 1919 has given way in the new circumstances of 1921; the market is thrown open to competition; the insured value of steamers has had a sensational fall, and the total volume of premium paid under present conditions to underwriters for "time" insurance cannot be more than 60 per cent. of the corresponding sums paid last year. In other words, the fund of current premiums, out of which the underwriter must meet the cost of repairs, general average, salvage, &c., is being reduced by 40 per cent. or 50 per cent. As an illustration of what is happening, let us take the actual case of a small steamer

insured last year on a value of £75,000, and recently renewed on a value of £40,000, the rate of premium in both years being 6 per cent. The comparative position of underwriters in the two years is as follows:—

1920.			
Total Loss Liability.		Liability for Repairs, &c.	Premium.
£ 75,000		Unlimited	£ 4,500
1921.			
Total Loss Liability.		Liability for Repairs, &c.	Premium.
£ 40,000		Unlimited	£ 2,400

Here, with a smaller liability for total loss, underwriters receive 46 per cent. less in premium, and still carry the same unlimited liability for repairs, &c. This is the result of the death of the "time agreement."

In view of this remarkable collapse in the volume of premium, underwriters are naturally asking themselves what the end is to be, and whether, in the new state of free competition, they can hope to avoid disastrous losses. Memories of the days before the last "time agreement" came into force are not yet dead, and the figures of companies and underwriters in that period are not encouraging. In 1908, which was perhaps the worst year known to "time" underwriters in this country, the majority of independent marine companies made heavy losses, the figures of nine of them being as follows:—

1908 UNDERWRITING.			
	Premium.	Profit.	Per-
	£	£	centage.
British and Foreign	315,842	42,595	13.4
Merchants	203,490	3,641	1.8
Sea	300,691	7,987	2.6
	Premium.	Loss.	Per-
	£	£	centage.
London and Provincial	199,427	7,564	3.7
Maritime	219,763	21,058	9.6
Reliance	102,873	2,097	2.0
Thames and Mersey	378,818	35,333	9.3
Union	390,775	19,867	5.0
World	206,399	15,615	7.5

In this year, the last of really bad depression in the "time" market, one company out of nine made a decent profit, two scrambled home with a tiny margin on the right side, nine made losses ranging from 2 to nearly 10 per cent., and it is not probable that the experience of Lloyd's underwriters in the same period was much better.

Are the next few years to reproduce these deplorable results of the 1908 period, or will the market be able to emerge from the chaos into which it has been thrown by the death of the "time" agreement and readjust itself to the new conditions of business? It will not be an easy process, for it is characteristic of these agreements in restraint of competition that when they disappear they leave behind them a state of disorder and helplessness very difficult to overcome. That the agreement will be revived on the old lines in the near future is incredible. The old insured values of steamers were too far from their actual values to allow of it, and if any new agreement is devised, it must be framed on very different lines from the old. Indeed, it seems safe to say that "time" business can be put on to a profitable basis only in two ways:—

(1) By a rise in rates corresponding to the fall in values; or

(2) by a big reduction in the cost of repairs.

The first method will prove extraordinarily difficult, and at best can only gradually become effective; but if the industry of the country develops in the right way, the second improvement may come more quickly than is generally anticipated. How the total cost of repairs has varied from the highest level reached in the boom we do not exactly know; but in one important item there has already been a very welcome change. In 1913 the basic price of steel plates in England was between £7 and £8; in 1920 it reached its highest point of £24 10s; now it is £15. Comparing this high-water mark basic price with the present, we have a fall of about 40 per cent., and the decline in the actual cost of plates is, we believe, even greater. It is at least encouraging that this reduction should correspond roughly to the average fall in time premiums; but as the bill, it remains to be seen how far the a steamer's repair

To enable a comparison to be made with the prices which were obtained for rubber, we set out below the cost of production per lb over the past seven years of seven of the companies :—

Cost of Production per Lb.

	1913.	1914.	1916.	1917.	1918.	1919.	1920.
Anglo-Malay	s d	s d	s d	s d	s d	s d	s d
Consolidated Malay	1 0-38	0 10-45	0 8-12	0 8-21	0 10-25	0 9-21	0 11-07
Golden Hope	1 0-61	0 11-93	0 9-93	0 11-52	1 1-17	1 0-70	1 2-69
Highlands & Lowlands	1 2-18	0 11-23	0 9-90	0 11-87	1 2-87	1 0-81	1 2-11
Linggi	0 11-53	0 9-29	0 9-41	0 9-42	0 10-83	0 7-52	0 10-95
London Asiatic	1 0-73	0 9-54	0 9-04	0 9-51	1 2-06	0 10-83	0 11-68
United Serdang	1 7-95	1 1-50	1 0-60	1 3-96	1 1-88	1 0-85	1 2-22

If these are carefully studied and compared some interesting variations will be found. It is a measure, however, for some satisfaction to observe that conditions which led up to this high working cost have since changed. The rupee is again at a low level, and rice is at a much lower figure, and it is confidently predicted that these heavy working costs will not occur again.

The next table records the net profits after providing for all working expenses for this group of selected companies over a period of years :—

NET PROFITS after PROVIDING for all EXPENSES.

	1912.	1913.	1917.	1918.	1919.	1920.

Seremban	42,300	50,263	60,981	33,357	61,661	28,712
Shelford	45,027	22,471	51,257	41,080	64,991	18,376
Sungei Kapar	23,955	12,559	12,034	5,594	5,610	4,986
United Serdang	65,867	42,364	41,873	24,652	47,700	16,534
	72,596	112,813	216,765	76,878	107,726	98,225

This is a sad picture for shareholders to contemplate, and brings vividly home to our minds the speculative nature of growing commodities where the estimated demand is not sufficiently taken into consideration. How decline in the price of rubber has affected revenues may be judged from a statement made in the report of the Seremban Rubber Estates. The price realised for its crop was 1s 2.28d per lb, which is a reduction of over 11d per lb on previous years' figures. This resulted in a revenue decline of £48,000, and the resulting profits of £18,376 were carried forward to next year's accounts, dividends being passed. Our final table shows the trend of share prices during the past two years. Prices in 1914 are also shown for comparison :—

Name.	Prices of 1919.		Prices of 1920.		Price July 27, 1914.	Price Aug. 5, 1920.	Price July 12, 1921.
	H'gst.	L'wst.	H'gst.	L'wst.			
Anglo-Malay (£1)	3½	2½	3½	1½	4	2	1½
Chersonese (2½)	4/7	3/1	4/11	2/3	2/4	3/9	2/4½
Cons. Malay (2½)	14/1½	10/4½	14/7½	5/1½	7/4½	11/6	3/
Golden Hope (£1)	73/9	51/10½	85/7½	30/	1½	2½	1½

London Asiatic (2½)	11/4	6/1	8/3	3/1	5/9	4/9	3/6
Malacca (£1)	7½	4½	6½	1½	3	4½	1½
Rubber Est. of Johore (£1) ..	52/6	37/6	69/1	22/6	2	1½	1½
Selangor (£1)	25/7½	17/	30/11½	15/	4½	1½	1½
Shelford (£1)	42/6	28/	45/	20/	4½	8/7½	4/
Sungei Choh (£1)	26/1	19/4½	34/8½	22/	1½	37/6	9/9
Sungei Kapar (2½)	10/	7/6	12/6	4½	5/4½	8/7½	3½
United Serdang (2½)	16/10	11/2	17/	3/11	7/	5/10½	3/

The poor results achieved by rubber companies during 1920 has naturally had a depressing effect upon share valuations, and, as will be seen, prices have suffered severely. The marked difference between highest and lowest prices during 1920 shows how acutely the market has felt the depression. Holders of rubber shares may console themselves with the belief that it is a long lane that has no turning; but the arguments which would make us believe that the turning is in sight are not so convincing as might be wished.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

GUATEMALA.—Among other new fiscal arrangements determined upon by the recently-elected President, Señor Don Carlos Herrera, is a reorganised taxation system expected to bring in a considerably enhanced revenue "without in any way proving a heavy burden upon the community." At present practically all Government revenues are derived from import and export duties, the largest contributor being coffee, the export duty upon which has long been hypothecated to the service of the British debt. From time to time the amount of the duty has, however, been altered; thus, while in 1898 it was "irrevocably" fixed by law at \$1 silver, and under the contract made with the Republic's external creditors in 1895 it had been equally "irrevocably" fixed, for ten years, at \$1½ gold, in 1899 the Government violated its contract by reducing the coffee duty to \$1 paper; but in 1912 the export duty was re-established at \$1½ gold. Now it is decided to reduce the coffee tax to one-third of the amount, so that the trade in the commodity may be increased in amount. To make up for the expected loss in revenue from that source the Government is considering the introduction of an income-tax similar to that in force in the United States, with which country the bulk of Guatemala's trade is carried on. There are evidences that the whole of the economic arrangements of this small Central American State are, like those of Nicaragua, Santo Domingo, Honduras, and Panama, coming under the tutelage of the big Northern brother; a Publicity Bureau, in charge of an American, has been started at Guatemala City, to encourage foreign (that is to say, North American) investments in agriculture and the acquisition of land for coffee and other production. Revenues are still somewhat below the expenditure of the Administration, and a Financial Commission is about to render its report regarding the best means to alter this state of things; to rearrange the floating debt, which now exceeds 2½ millions sterling; and further taxation. Trade, meanwhile, is steadily improving in bulk; banks are showing favourable balance-sheets, and several contracts have been signed with foreign syndicates for additional railway construction in hitherto untouched districts, and for the re-opening of a canal in the Chiquimulilla district connecting the frontier of the State with that of El Salvador and with the port of San José. Satisfactory reports of fresh discoveries in the mining regions are also to hand.

PERU.—The adverse financial conditions that have prevailed in Peru since the end of 1920 show little sign of improvement, and the unusual step of temporarily suspending the payment of pensions has been resorted to as one means of lessening expenditure. While this decision is said to be in no sense of the word "political," it nevertheless demonstrates the fearlessness of the Executive in challenging unpopularity with the many pensioners—who abound here as in all Republican countries—for the sake of the State. This is not the first occasion upon which the President, Señor Don Augusto B. Leguía, has shown a rare moral courage and absolute independence of opinion in handling the financial interests of Peru. As a result of his attitude, he has had to re-form his Cabinet several times during this, his second, term of office. The new Ministry is said to be the strongest that has yet held office in Peru. Most of Peru's money troubles have been occasioned by severe fluctuations in exchange and the reckless gambling that has gone on in certain financial circles. The Government has done what was in its power to counter these speculations by declining to allow the cable and telegraphs to be used for the purpose. The imposition of heavier duties on cotton goods has also impeded business, while little or no raw cotton has of late left the country. Notwithstanding these and many other adverse factors, it is to be noted that, up to time of writing; not one financial house has been reported as

being in difficulties. Optimists aver that there is nothing in the situation to cause alarm, and that, if the present support accorded to the Executive continues, a speedy improvement may be looked for. It is also worth notice that the well-known British bank, the Anglo-South American Bank, not long ago opened another branch in the city of Lima, while a national institution, upon the lines of the Bank of France, is about to be established with a capital of 30,000,000 soles (=£3,000,000) to centralise the State revenues, including Customs receipts.

SANTO DOMINGO.—The benefits attaching to the financing of the smaller Latin-American States by their Northern neighbour are strikingly illustrated in the case of the negro State of Santo Domingo, sometimes known as the Dominican Republic. In 1903—the year of the inspired revolt of Panama against the parent country, Colombia—the United States took violent charge of the finances and trade of Santo Domingo, and have remained in control of them since. British interests, represented by the early loan of £750,000, made as far back as 1869, were brushed aside, and, notwithstanding the persistent objections raised by the Corporation of Foreign Bondholders, a most inequitable arrangement for settling British claims was in 1908 determined upon; owing to the discriminating policy then adopted towards British bondholders the Stock Exchange refused a quotation of the Santo Domingo Customs Administration Gold Bonds. During the 18 years that have passed under the domination of the United States the finances of the country have, however, undoubtedly improved. When the administration of the revenues was commenced the Republican Government's account was overdrawn to the extent of \$14,000, while all classes of the Civil Service were clamouring for their pay. To-day the revenues and expenditures balance, and for the current year a surplus is expected exceeding \$1,000,000. But the greater portion of the Republic's revenues are taken for the liquidation of its debts, incurred, for the most part, to North Americans, who hold not alone the largest proportion of the 5 per cent. Sinking Fund Gold Bonds of 1908, which are a first charge upon all the Customs of the State, but of the 1918 Loan also, the lenders taking good care that this amount should be paid back before the proposed termination of the United States General Receivership of Dominican Customs. But the State itself, according to advices to hand, is kept so poor that it has been compelled to arrest the greater part of the most urgent public improvements, the limited allotments allowed by the North American Controller being wholly insufficient for the purpose. There are two debts owed by the Dominican Government, the first, originally \$20,000,000, forming the prior lien upon the Customs; the other, which amounts to a little over \$4,000,000, represents payments due for damages during the public disturbances preceding 1916, and principally in connection with American-owned property. The liquidation of the first-named debt has progressed according to agreement, while one-half of the sum has already been repaid, the other half actually exists, or is secured. The second debt was to have been repaid at the rate of 5 per cent. of the principal and the interest each year, so that it would be liquidated in 20 years; such a rate of liquidation would entail a charge upon the revenues of \$400,000 a year; but owing to irresistible pressure brought to bear the Dominican Government has been obliged to allocate 30 per cent. of all Customs revenues over the amount of \$3,000,000 per annum to the liquidation of these bonds, which thus in a few years will have been entirely repaid. Execution of the Republic's public works, such as roads, sanitary installations, port and harbour improvements, &c., must wait. In one instance a sum of \$2,000,000 has already been laid out upon the construction of a highly important highway—from Monte Cristi to Santo Domingo via Santiago, Moca, La Vega, and Bonao—but this amount will in all likelihood be lost, as before the money can be found to continue and consolidate the work done this will have fallen into disrepair and have become useless. In other directions, where similar enterprise has been commenced and large sums of money have been spent upon grading and in some cases the putting on of the first layer of stones, the work will in a short time also be wasted.

Business Notes.

Supplementary Estimates.—There was issued yesterday a supplementary estimate for £62,210,497 for the Civil Services. The chief items are the following:—Railway and Canal War Agreements Liquidation £36,000,000, Corn Production Guarantee £19,400,000, Ministry of Labour £1,620,000, Emergency Services (purchase of coal) £1,275,000, Miscellaneous War Services (Foreign Office) £1,146,899, and a grant to the Empire Cotton Growing Corporation £928,715. The railway agreement item includes £31,500,000 as the first instalment (one-half) of the settlement of claims on the termination of control, the remaining £4,500,000 being required to meet deficiency in net receipts due to the prolongation of the coal stoppage. The Foreign Office war service item includes £655,300 for payments under agreements with American meat packers, and £350,000 for relief of prisoners in Turkey. In the Ministry of Labour item no less than £850,000 is for salaries, wages, and allowances. Already supplementary estimates have swallowed up a very large proportion of the surplus entered on paper in the Budget estimates, while since the Budget was introduced revenue prospects have, of course, been impaired by industrial strife.

The Banking Half-Year.—The statement of the weekly averages for June of the joint stock banks, set out in full elsewhere, shows one or two interesting changes, as may be seen from the comparative table below, which gives the weekly averages for each of the past six months for the nine English banks :—

(Million £'s.)

	Weekly Average.					
	Jan., 1921.	Feb., 1921.	Mar., 1921.	April, 1921.	May, 1921.	June, 1921.
Capital and reserves	115.4	115.6	115.6	115.6	115.8	115.9
Acceptances	88.4	77.5	69.4	63.0	63.0	57.7
Deposits (including undivided profits, &c.)	1,810.1	1,754.4	1,715.0	1,709.9	1,729.3	1,768.4
	2,013.9	1,947.5	1,900.0	1,888.5	1,908.1	1,942.0

	Weekly Average.					
	Jan., 1921.	Feb., 1921.	Mar., 1921.	April, 1921.	May, 1921.	June, 1921.
Coin, notes, balance at bank, and cheques in course of collection, &c.	256.2	247.4	244.8	249.6	250.3	265.1
Money at call	98.9	87.9	82.6	91.9	96.5	98.0
Investments	341.3	340.0	336.1	333.7	331.2	335.9
Discounts	361.9	328.9	282.1	275.1	304.0	346.2
Loans and advances	845.1	843.5	862.6	852.2	839.9	815.4
Cover for acceptances, pre-mises, &c.	110.5	99.8	91.8	86.0	86.2	81.4
	2,013.9	1,947.5	1,900.0	1,888.5	1,908.1	1,942.0

Deposits show quite a sharp upward movement, while acceptances are lower. On the assets side, bills discounted show a further large increase, presumably owing to purchases of Treasury Bills, while advances are again lower. Both cash and money at call are higher. Most of the banks have also issued their half-yearly balance-sheets, dated June 30th. We give below the combined totals of

the "big five," together with comparisons with the figures recorded six and twelve months ago:—

(Million £'s.)

	June 30, 1921.	Compared with Dec. 31, 1920.	Compared with June 30, 1920.
	£	£	£
Paid-up capital	59.2	+ 0.9	+ 2.6
Reserves	46.9	— 0.1	+ 2.1
Acceptances and endorsements	47.4	— 32.0	— 27.4
Deposits (including undivided profits)	1,620.1	— 13.5	+ 35.0
Total	1,773.6	— 44.7	+ 12.3
Cash in hand and at bank	253.6	— 20.6	— 9.6
Ratio to deposits	15.6 %	— 1.2 %	— 1.0 %
Money at call and at short notice	79.9	— 9.3	+ 2.5
Investments	303.2	— 3.5	+ 26.8
Discounts	331.9	+ 50.1	+ 174.3
Loans and advances	735.7	— 31.9	— 107.2
Premises and sundries (including cover for acceptances)	69.3	— 29.5	— 20.9

Deposits are slightly lower than at the end of 1920, but still £35 millions higher than a year ago. Treasury Bills are again presumably responsible for the large increases in bills discounted. Advances have not fallen so much in the past six months as in the second half of 1920, but the whole of the decline in acceptances has taken place this year.

Employment in June.—In June, the last month of the coal stoppage, unemployment, which had already assumed grave proportions, again increased slightly. In addition to the actual effects of the coal dispute, there was a three weeks' stoppage in the cotton industry. According to the *Labour Gazette* the percentage unemployed among members of trade unions from which returns are received rose from 22.2 at the end of May to 23.1 at the end of June. These figures, which exclude coal miners, "are by far the highest ever recorded by the department." Monthly movements in the trade union percentage over a number of years are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

End of—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
January ..	2.2	0.6	0.3	1.0	2.4	2.9	6.9
February ..	2.0	0.5	0.3	0.9	2.8	1.6	8.5
March	1.9	0.5	0.3	1.2	2.9	1.1	10.0
April	1.7	0.5	0.3	0.9	2.8	0.9	17.6*
May	1.9	0.5	0.4	0.9	2.1	1.1	22.2*
June	1.9	0.5	0.4	0.7	1.7	1.2	23.1*
July	1.9	0.4	0.4	0.6	2.0	1.4	..
August	2.0	0.4	0.5	0.5	2.2	1.6	..
September ..	2.3	0.4	1.3	0.5	1.6	2.2	..
October	2.2	0.3	1.1	0.4	2.6	5.3	..

December ..	2.6	0.3	1.4	1.2	3.2	6.0	..

* Excluding coal miners.

The percentage unemployed among workpeople insured under the Unemployment Insurance Act rose from 17.3 at May 27th to 17.8 at June 24th. The coal mining industry is excluded in calculating the trade union percentages; the Unemployment Insurance percentages include those coal-miners who were entitled to claim unemployment benefit under the Act, but not those who ceased work owing to the trade dispute. The total number of workpeople registered at the Employment Exchanges as unemployed at June 24th was approximately 2,178,000, of whom 1,549,000 were men, 478,000 were women, and the remainder were boys and girls. At May 27th the corresponding number was 2,122,000, of whom 1,469,000 were men and 497,000 were women. In addition to those unemployed, 490,000 males and 343,000 females were registered as working systematic short time at June 24th in such a manner as to entitle them to benefit under the Unemployment Insurance Act or the Out-of-Work Donation Scheme. At May 27th the corresponding numbers were 607,000 males and 580,000 females. The decrease between June 24th and May 27th, however, the *Labour Gazette* explains, is due to the fact that, owing to the dispute in the cotton industry, about 320,000 persons in that industry ceased to be eligible for the benefit. It is

calculated that in the first six months of the year 77,000,000 working days were lost by trade disputes.

Cost of Living.—The downward course of retail prices which had been somewhat rapid in the preceding months, was checked in June. According to the statistics of the Ministry of Labour, published in the *Labour Gazette*, the "cost of living" at the end of June was 119 per cent. above the level of July, 1914—the same percentage of increase as for the end of May. Movements in this figure for the past 18 months are tabulated below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.

1920.	Per Cent.	1920.	Per Cent.
January 1st	125	November 1st	176
February "	130	December "	169
March "	130	1921.	
April "	132	January 1st	165
May "	141	February "	151
June "	150	March "	141
July "	152	April "	133
August "	155	May "	128
September "	161	June "	119
October "	164	July "	119

June saw some reduction in prices of clothing, but retail food prices advanced from 118 per cent. to 120 per cent. above the July, 1914, level, eggs and potatoes growing dearer.

Lloyd's Register of Shipping.—The new edition of Lloyd's Register Book contains complete particulars of all the sea-going vessels of the world of 100 tons and upwards. It thus includes a full record of upwards of 33,000 steamers and sailing vessels. More than twenty-eight and a-quarter million tons of shipping are classed by Lloyd's Register. There are recorded in the Register Book (excluding vessels of less than 100 tons) 4,773 sailing vessels of 3,128,328 tons and 28,433 steamers of 58,846,325 tons, thus making a world's total of 33,206 vessels of 61,974,653 tons gross. The reduction in sailing tonnage since pre-war time—say, June, 1914—amounts to 852,000 tons, which is a much smaller decrease than any that occurred in the previous period of seven years. This is principally due to the increase which has taken place in the United States, the only country which has added to its sailing tonnage since 1914, apart from any ex-German tonnage allocated. Nearly 41 per cent. of the world's sailing tonnage is now owned in the United States. It should, however, be remembered that the figures for that country include a large proportion of sailing barges. The other countries which still have a considerable amount of sailing tonnage are the British Empire (482,000 tons), France (353,000 tons), Norway (213,000 tons), and Italy (183,000 tons). The percentage of sailing vessels to the world's tonnage is now 5 per cent. as compared with 8 per cent. in 1914, and nearly 22 per cent. in 1902. The tonnage of wood steam vessels owned in 1914 amounted to 1 per cent. of the total steam tonnage, whereas for the present year that percentage has risen to 3.9. Valuable statistics are given of sea-going steel and iron steam tonnage owned by the principal maritime countries. Apart from Germany, Greece is the only one which still shows a reduction in the tonnage now owned as compared with 1914. Notwithstanding the increased construction and the large amount of ex-enemy tonnage allocated to British ownership, and, of course, included in the figures, there are at the present time only 411,000 tons more owned in the United Kingdom than in 1914. The sea-going tonnage of the United States has increased by nearly 10½ million tons, an increase of 570 per cent. on the 1914 figures. The other countries in which the largest increases are recorded are:—Japan (1,421,000 tons), France (1,128,000 tons), Italy (950,000 tons), and Holland (736,000 tons). As in the case of the United Kingdom, the figures for France and Italy include a considerable amount of ex-enemy tonnage allocated to these countries. The figures for Germany conclusively show the change in the maritime position of that country. While in 1914 Germany ranked next to the United Kingdom with over 5,000,000 tons of sea-going steel and iron steamers, her total tonnage now

stands at only 654,000 tons. The United States percentage of the world's sea-going steel and iron steam tonnage has increased from 4.3 in 1914 to 22.7 in 1921. The relative position of some other countries has also altered to a large extent. In 1914 the United Kingdom owned nearly 44½ per cent. of the world's sea-going steam tonnage; the present percentage is just over 35½. Norway, which occupied the third place, is now sixth, while Japan, which was sixth, is now third, closely followed by France with only 17,000 tons less. Taken together, the Scandinavian countries—Norway, Sweden, and Denmark—show an increase as compared with 1914 of 505,000 tons. Summarising the totals, it will be seen that the present position of the sea-going merchant steel and iron steam tonnage, as compared with 1914, is as follows:—

	Tons.
Increase in the United Kingdom	411,000
Increase in the United States	10,477,000
Increase in other countries	6,311,000
Total	17,199,000
Loss to Germany	4,444,000
Ex-Austro-Hungarian tonnage	1,052,000
Total	5,496,000
Net world's increase	11,703,000

In 1914 there were 3,668 sea-going steamers each of 4,000 tons and above; there are now 5,209. The greatest increase has taken place in those of between 6,000 and 10,000 tons, their number having increased from 1,004 in 1914 to 1,784 in 1921. Other interesting statistics refer to sea-going steam and motor vessels of over 4,000 tons.

The Disposal Board's Achievements.—In a second report on the operations of the Disposal and Liquidation Commission, Sir Howard Frank, the chairman, states that the results are as follows:—

Sales of Surplus Stores:—	£
From Armistice to March 31, 1920	208,922,663
From April 1, 1920, to March 31, 1921	87,626,791
From April 1st to June 30, 1921	7,204,432
	303,753,886
Sales of Raw Material on Trading Account:—	£
From Armistice to March 31, 1920	226,712,640
From April 1, 1920, to March 31, 1921	51,747,663
(Sales of wool are included only to December 31, 1920, stocks having been handed over to the British Australian Wool Realisation Association, Limited, as on January 1, 1921.)	
From April 1st to June 30, 1921	110,567
	278,570,870
Grand total	582,324,756

The expenses of disposals, including commission, charges, and storage, handling, &c., of stocks in the store depots amount to approximately 5 per cent. of the proceeds of sale. About 88 per cent. of the total quantities notified as available for disposal to June 30th last have been sold. Large reductions in the staff of the Ministry of Munitions have been made in the last fifteen months, the total on July 1st being 7,543 as against 49,956 on April 1, 1920. Of the total staff on July 1st 76 per cent. were ex-service men, and about 5,200 were formerly industrial staff engaged in the custody, handling, &c., of stores.

Cotton Trade Hours.—Our Manchester correspondent writes:—The Master Cotton Spinners' Federation in Lancashire is a highly efficient organisation, and controls almost completely the spinning section of the cotton trade. In times of depression the policy of the federation is to curtail yarn production on an organised scale. So far back as last October it was decided by employers using Egyptian cotton to run the mills only 35 hours a week instead of the usual 48. In December the factories using American cotton began to work only 24 hours a week. This concerted action in the way of restricting output has been in force until the end of last week. This week, however, there has been a variation in the scheme. The short-time movement in the Egyptian section has been abandoned altogether, and it has been decided to extend the working hours in the American department from 24 to 35 a week. This decision has given considerable satisfaction

to the operatives, who naturally have suffered severely since the beginning of the year. The trade position at the moment scarcely warrants full time working, but in the opinion of the committee of the federation it is desirable that at the earliest possible moment individual members should have the right of working their machinery as they think fit.

Latest Rubber Developments.—The Rubber Growers' Association is receiving a good deal of support in its appeal to all producers of plantation rubber to assist in the formation of a Rubber Producers' Corporation, which shall have for its objects the practical control of the industry. This control would bestow the ability to fix the selling price of rubber, to regulate the opening of further rubber lands, to purchase or make advances on the rubber harvested by members of the Corporation, and to finance their rubber estates. It is not sought to exercise any function in regard to the management or control of the estates belonging to members of the corporation except in regard to the matters just mentioned. The nominal capital of the Rubber Producers' Corporation is to be £2,000,000 in 2,000,000 shares of £1 each, with borrowing powers up to an amount of £8,000,000, either by debentures or otherwise, of which a minimum of £3,000,000 is to be raised in the first instance. It is proposed to allot the ordinary shares to rubber plantation companies, or individuals owning plantations, on the basis of one share for each planted acre of rubber they possess. By this means it is hoped to obtain the adhesion of companies, British and Dutch, owning 2,200,000 acres (about two-thirds of the existing planted area), this minimum being deemed necessary to make the scheme effective, which can only be accomplished in a spirit of co-operation. It is estimated that about half the 2,200,000 acres is controlled in the United Kingdom, and the other half by Dutch interests and local producers in various Eastern countries. Briefly, therefore, it is suggested that British interests connected with the rubber industry should put up £1,100,000 of actual money, payable by instalments spread over a year, in order to carry out this scheme. The essence of the proposition resides in the following clause:—"The agreements to be entered into between the Corporation and its shareholders, and between the Corporation and the Dutch Corporation, shall be for a first period of five years, or until a resolution for the voluntary winding up of the Corporation is passed at a meeting of shareholders, at which 75 per cent. of the capital is represented." The Corporation will not go to allotment until the owners of at least 2,200,000 acres, inclusive of the Dutch Corporation membership, have agreed to come into the scheme. City gossip has it that some of the biggest controlling houses in Mincing lane have given their support already, but, as usual, it will be in the securing of the "tail" of the support, to adopt the cricket word, where difficulty may arise. Considering the position of the rubber industry, it is obvious enough that any considered scheme put forward for the purpose of benefiting rubber will receive friendly attention, especially when it is mooted under the auspices of a body like the Rubber Growers' Association. The people who have followed rubber, however, for the past half decade, and who know how difficult it is to reconcile the many interests which war against one another in the trade, admit doubt as to whether companies and other rubber producers will consent to tie up their freedom for five years, as provided in the paragraph set out above. Some companies have got forward contracts at quite good prices for this year and the whole of 1922. Others are in desperate straits for lack of money to carry on from week to week at this present time. Differences of local situation account for the fact that some estates, even now, can make a profit, whereas others are running at a heavy loss. It may be easily understood, therefore, that the comparatively well-to-do companies may hesitate to join the ranks of those which gladly welcome a scheme which promises some sort of relief to their present difficulties. To-day's outlook does not promise much improvement in the near future so far as statistics are concerned, because only last week the landings of rubber in the Port of London were 1,604 tons, against deliveries of 952 tons, thereby increasing the stocks by 652 tons on the top of the previous week's in-

crease of 720 tons. The present amount of rubber in stock is over 70,000 tons, an enormous amount considering the very moderate rate of consumption of the present day. The price of the material is still no better than 10d per lb, or thereabouts, and although the rubber share market in the Stock Exchange has taken a distinct turn for the better, and many shares show substantial rises as compared with those of a fortnight ago, it would be folly to encourage such hopefulness at the moment as would induce rubber shareholders to think that their troubles are nearly over, and that a brighter era is on the threshold. It would be a matter of sincere satisfaction to be able to offer rubber shareholders, thousands of whom are ladies and people who gave very much more for their shares than they could obtain for them to-day, the opinion that the industry is on the point of returning to dividend-paying days.

The Fishing Industry.—The way in which the fishing industry has been prejudiced and crippled by the late coal trouble is strikingly illustrated by the latest returns of the landings at the ports of England and Wales. In June the quantity fell to 576,625 cwts, as compared with 989,658 cwts in June last year, and the value, including shell fish, to £1,131,041, against £1,635,216. The average value of the wet fish landed rose, however, to 38s per cwt against 32s 3d a year ago and about 15s or 16s in pre-war days. For the six months January-June the aggregate was 4,156,388 cwts, valued at £8,555,469 (including shell fish, £284,815), against 5,217,464 cwts, and value £9,990,450 (including shell fish £302,370) in the corresponding period of last year. There has thus been a decline of over a million cwts in weight and of £1,434,981 in value. The average for wet fish over the six months works out at 39s 9d per cwt against 36s 10d a year ago. To the total weight cod contributed 30 per cent., haddock 20 per cent., and prime fish (soles, brill, and turbot) but 2 per cent. Owing to high working costs and unremunerative prices realised, large numbers of trawlers were laid up throughout the half-year, these being added to when the miners' strike came and cut off supplies of bunker coal. A proportion was, however, kept at sea by taking in bunkers at near Continental ports, but the high cost (round 80s a ton being paid) was scarcely justified in view of poor markets for the fish when landed. The lack of adequate rail facilities and the fact that fish in the inland towns is no longer a cheap food had no doubt much to do with the slackening of demand. One of the most urgent needs of the English fishing industry is improved means of distribution to the great industrial centres, together with considerably lower rates for transit. The fewer trawlers going out from Hull and Grimsby caused Danish, Dutch, and German fishing boats to divert their supplies to those ports. While it is a fact that these landings in May and June were about four times the usual monthly average, the aggregate for the six months at all ports of England and Wales was only 211,043 cwts and the value £452,735, and represents but 5 per cent. addition to the British caught fish, these figures not being included in those quoted above.

Polish Developments.—Though still without definite frontiers, and imperilled by the conflict in Silesia, the Republic of Poland is beginning to cope with its financial difficulties and to secure new outlets for its trade. Its first Treaty of Commerce, just concluded with Rumania, is based on the principle of reciprocal most-favoured-nation treatment conjoined with the utmost freedom of transport; and it gives Poland the option, for the 18 months following its signature, of acquiring land at Galatz and Braila as the site of a Polish free port. This will provide an alternative to Dantzig and facilitate overseas trade throughout the year. Further, on July 1st the Finance Minister, Mr Stoczowski, was able to inform the Parliament that considerable progress has been made both in cutting down expenditure and in finding new revenue. By levying new taxes and increasing old ones, coupled with the establishment of State monopolies, the revenue of 1921-22 should be about ten times in excess of that of 1920-21. (The expenditure for 1919-20 appears to have been about five times the revenue for that year.) The effect of the increased revenue during the first three months of 1921

(which closed the fiscal year) was to increase the value of the mark and stabilise the exchange; and the prices of necessities declined. Since April, however, the mark has fallen 60 per cent., partly owing to the Silesian crisis, and indirectly to the decline in emigrants' remittances from America and to the cessation of the export of timber and petroleum. The shortage of currency due to these two causes has been met by the purchase of foreign currencies, and this has further depressed the value of the mark. It is officially stated that the decline has been intensified by force sales of Polish currency by speculators, especially in Vienna, and by the employment of this currency to some extent by Germany to purchase dollars wherewith to pay reparation. But the depreciation of the mark does not mean that Poland is insolvent. No satisfactory estimate of the national wealth can be made at present, but her public lands alone are not much below three million acres, and, with the State forests, mines, railways, manufactories, and salt works, the public assets alone must far exceed the thirty milliards of marks which constitute her national debt.

Armstrong-Whitworth Results.—For the year ended December 31st last, profits of Sir W. G. Armstrong, Whitworth and Co., Limited, amounted to £675,180, to which must be added the balance brought forward of £1,049,899, making together the sum of £1,725,079 available for shareholders. Dividends absorb £803,750, and £921,329 is carried forward to next year's accounts. The ordinary shares secure a 10 per cent. distribution, less tax, against 12½ per cent., free of tax, up to 5s in the £1 for 1919, which, considering conditions generally prevailing in the engineering industry, must be regarded as satisfactory. The report states that "there is still a large amount of work in hand which has been delayed by industrial difficulties, and, in addition, some important contracts have recently been secured by the civil engineering and other departments." Turning to the balance-sheet, total assets are now recorded as £28,736,394. The company holds £1,380,000 three-year notes guaranteed by the Belgian Government, while investments and advances "at or under cost" amount to £5,394,697. In the usual column the balance-sheet will be found fully analysed.

Scottish-American Oil Report.—The first report and accounts of the Scottish-American Oil and Transport Company, Limited, from the date of its incorporation—October 28, 1919—to March 31, 1921, provides disappointing reading for shareholders. On a capital of £4,762,855 a profit of £42,076 was made, and of this sum £10,000 has been allocated in writing off office furniture, &c. In the report the directors give interesting details concerning the flotation of Tankers, Limited, and it is possible that at the first general meeting of the Scottish-American, which is to be held on July 27th, further information will be offered. The report briefly states that "under the terms of an agreement dated June 24, 1920, the Anglo-Persian Oil Company, Limited, assumed as from July 1, 1920, the technical and commercial management of the company." Perhaps further particulars of this agreement will also be forthcoming at the meeting. The balance-sheet is worthy of notice, specially the remarks of the auditors. Investments include "Southern Oil and Transport Corporation," at £2,792,075; the auditors inform us that these shares "are not quoted on the market, but, in our opinion, their present value is under cost." The company holds shares in Tankers, Limited, on which 10s per share has been paid. In this direction £750,000 has been invested, and there is a contingent liability of £750,000 in respect of these shares. The report, however, mentions that £1,125,000 has been paid up on these shares, and that there is £375,000 now remaining to be paid. Barges and tugs are valued at £296,141, but the auditors point out that "no depreciation has been provided." The auditors are certainly to be congratulated on the manner in which they have carried out their duties. It will be interesting to know what the preference shareholders of Tankers, Limited, will have to say about the proposals to vary the freight contract.

African and Eastern Trade Corporation.—In the thirty-first annual report and accounts of the African and Eastern Trade Corporation, Limited, reference is made to the scheme, since abandoned, for the fusion of interests with Lever Brothers, Limited. The ordinary shares were reduced to £4,000,000 and a new class of share called 15 per cent. cumulative preferred ordinary shares created. The report says that "since the purpose for which these shares were created no longer exists, your directors will shortly put before the shareholders proposals to cancel or convert them into ordinary shares. Provision has been made out of the reserve fund for claims for capital duty. In the meantime, none of the preferred ordinary shares will be issued." Net profits for the year ended December 31, 1920, amount to £854,499, to which has to be added the balance from last year's account of £191,473, making a total of £1,045,972. To investment depreciation account is allocated £300,000. On the ordinary shares a total dividend at the rate of 17½ per cent. is distributed, as compared with 30 per cent. in the previous year. But the ordinary paid-up capital is now £3,545,506, as against £2,455,366 on December 31, 1919. Investments are shown in the balance-sheet at £8,293,215, but it is not stated whether these are entered at cost. However, it must in fairness be pointed out that on the other side reserves, at £6,914,358, are a very substantial item, specially when it is considered that the total of gross assets is but £15,621,680. We analyse the balance-sheet in our usual column.

Nobel Industries.—Since the last report was issued, the title of this big combination has been changed from "Explosives Trades, Limited," to "Nobel Industries, Limited." Net profits to December 31, 1919, were £1,655,242. In the report and accounts just published net profits are recorded for the year ended December 31, 1920, as £849,996. But these figures convey a rather unfair comparison, as profits for 1919 were swollen by including certain receipts, from constituent companies, derived from trading in 1918. From this latter total, however, £22,923 must be deducted for interest accrued up to the period covered by the accounts, on the 8 per cent. seven-year secured notes subscribed for in November, 1920. The directors are wisely pursuing a conservative policy, for the report states that they "have been impressed with the paramount necessity, in the present industrial crisis and the uncertain financial prospects ahead, of conserving the resources of the company, and have accordingly decided to make no recommendation for the payment of a dividend on the ordinary and deferred shares, a course which they have no doubt will commend itself to the shareholders." In the balance-sheet investments are taken at cost, and amount to £21,146,446, but the report notes that "the market value of all quoted industrial securities held by the company or its constituents as at December 31, 1920, was approximately equal to their cost to Nobel Industries, Limited." Shareholders, however, cannot learn from the balance-sheet what proportion of the investment items represents "quoted industrial securities." The balance-sheet will be found analysed in another column.

Harper Bean.—The report and accounts of Harper Bean, Limited, to be submitted to shareholders at the first ordinary general meeting of the company to be held on July 25th, is in some respects a rather remarkable document. For the period covered by the accounts from November 7, 1919, to December 31, 1920, a loss of £129,847 is recorded. But in a new company, with a paid-up capital of £4,879,230, this should scarcely be sufficient reason to depress the £1 ordinary shares to the small value of 1s 9d. But the position disclosed in the auditors' certificate is not very reassuring. Unpaid calls amount to £1,121,052. Of this sum, £15,808 has been collected, but the auditors consider that calls in arrear are not "likely to be recovered in full." Again, they state: "Investments appear in the balance-sheet at cost, which, in our view, is greatly in excess of their present value," and that "loans" at £887,955 and sundry debtors

"cannot be considered entirely good assets." It would be interesting to learn something further about the "large number of fully-paid shares to be delivered up for cancellation." It is possible, however, that more light will be shed on these and other points at the general meeting. At least, shareholders should endeavour to have these points elucidated.

Three South African Companies.—Our mining correspondent writes:—During the past week the annual statements have been issued of a trio of "Kaffir" mining-financial undertakings. Although the companies are engaged in something approaching the same line of business, their reports tell very different stories. The South African Townships, Mining and Finance Corporation earned the substantially increased profit of £289,700—equivalent to nearly 30 per cent. upon its issued capital. No real comparison can be made between the results of 1920 and 1919, as during the last-named period the company absorbed six kindred concerns, incidentally changing its title—without, however, effecting a much-needed abbreviation. Earnings on the scale above indicated must be regarded as distinctly satisfactory. The dividend, however, remains at the increased rate of 10 per cent. paid for 1919. This, together with taxes and £12,800 written off the assets, will absorb £120,100, leaving about two-thirds of the year's earnings to be added to the carry forward, which now stands at £265,650. From the explanation given at the meeting, a full account of which is attached to the report, it appears that the conservative policy followed in the matter of the distribution is due partly to the aim of the directors to stabilise the dividends, but an examination of the balance-sheet indicates that the company has expanded its interests. Thus share investments now figure at £574,300, an increase of £118,700. The report, while giving full details as to the farms, townships, &c., owned, contains no schedule of shareholdings. This omission was to some extent made good at the meeting, the chairman supplying the information that, with the exception of a large block of Rezendes, practically all the Corporation's gold mining interests were in dividend-paying mines on the Far-Eastern Rand. The other principal shareholdings are in the South African Coal Estates (Witbank)—a recent amalgamation; the West End Diamond Mine, described as "highly payable," upon which a washing plant will be shortly erected; and the Leeuwpoot (African Farms) Tin Mines, which last year re-entered the dividend list with the rather liberal distribution of 15 per cent. South African Townships shares are quoted at par, thus giving a yield of about 10 per cent. The second concern is the General Mining and Finance Corporation. At one time several of the subsidiaries appeared to have good prospects, but the only two producing mines now in the dividend list are the Van Ryn and that rich little proposition the Meyer and Chailton. As to the Corporation itself, no distribution has been made since the modest 7½ per cent. paid in respect of 1910. The earnings of 1919 were cut into by a somewhat heavy loss on mining ventures; those of last year scored a marked improvement upon the results of 1918, the profits on realisations largely exceeding those of either of the two preceding periods—a rather remarkable feature, having regard to the experience of other like undertakings. But, of course, £53,900 does not go far on a capital of £1,875,000, even were there no other consideration. In the present case another and very potent consideration exists in the shape of a depreciation equivalent to 63 per cent. upon the holdings of stocks, shares and debentures. Moreover, the corporation has made advances to the tune of £352,800 to "mining and other companies"—which for all practical purposes may be taken to represent the Roodepoort United. The outlook for this company is described as "most critical," and altogether there would seem little prospect of the repayment of any appreciable portion of this huge indebtedness. It is to be hoped that the Corporation's latest venture, the Transvaal Silver and Base Metals—whose shares are not yet dealt in over here—may provide a measure of compensation for the disappointments in other directions. The case, however, is one where a drastic scaling down of capital seems inevitable sooner or later. The third of the trio—the Bechuana-

land Exploration Company—is a finance, land and investment concern; its interests centre mainly in Rhodesia, the Transvaal coming next. Last year the directors took advantage of the favourable conditions to effect substantial realisations, and largely as a result the assets show a marked contraction at £372,200. This amount works out at about 12s 6d per 10s share, now quoted at 9s 6d. The lion's share of last year's increased profits was written off the shareholdings; still, the slightly enhanced distribution of 10d per share may be regarded as conservative.

The Mexico North-Western Railway.—The third report of the receiver of this company, which is one of a well-known group incorporated in Canada, indicates a considerable improvement in the outlook, though the bondholders are warned not to expect an early resumption of payments or a rapid recovery. The line is working on the North from Juarez to Madera, and in the South from Chihuahua City to Rincon, and the Cumbre tunnel, blown up some years ago by insurgents, has been repaired and reopened. The central portion between Temosachic and Madera, closed since 1915, when 14 large bridges were destroyed by revolutionists, is under repair, and will, it is hoped, be reopened by October 1st. A trestle bridge on a timber branch, accidentally burnt last October, has been replaced by a switchback out of the insurance money, so the danger of its interruption by fire is at an end. The traffic is suffering through the depression in the timber market, both in the United States and in Mexico, and through the closing of mines caused by the fall in silver, and the earnings hardly balance the expenditure; but the mills at Pearson and El Paso have been partially at work throughout the past year, and must be kept going to avoid trouble with the authorities and local unrest. The timber on the company's property, though originally over-estimated, is extensive and valuable, and the estimate requires early revision. That on the 250,000 acres leased from the Terrazas possibly will all be used before the termination of the lease, which was paid for in advance. Claims for insurrectionary damages to the amount of \$7,000,000, U.S. currency, have been lodged with the Claims Commission, and the \$500,000 borrowed in New York in 1915 was paid off three years ago. The political outlook is improving, but the recovery must necessarily be slower for a company operating in remote and devastated Chihuahua than for the tramways and light and power companies of the Federal capital. Had the company not continued, in the face of great difficulties, to operate its lumber plants and its railway throughout the ten years of revolution, they would practically have ceased to exist. But peace will create a surplus on the normal earnings and a further development of the traffic. A meeting of the shareholders or bondholders would be useless at present, but it is hoped to hold one when the situation definitely improves.

Japanese Trade and Finance.—Latest advices from Tokyo state that with the half-yearly settlement over and the money borrowed for that purpose repaid to the Bank of Japan, the money market became quiet, and short money rates were weakened by the repayment of 20,000,000 yen Treasury bills due on July 15th. The price of rice rose suddenly to 30 yen owing to reduction of stocks caused by Government purchases. The high prices of cotton yarns are maintained, despite the inactivity of the export trade, for there is a growing demand from weavers, and stocks are comparatively scarce owing to the restricted production. Share quotations improved in sympathy with the improvement in the commodity markets. The market for silk yarn is dull, the high quotations for new yarns having checked inquiries from the United States. For the month of June imports were valued at 148,000,000 yen and exports at 107,000,000 yen. The note issue of the Bank of Japan stands at 1,053,000,000 yen, and advances and discounts are 66,000,000 yen.

Swiss Taxes on Coupons.—We are informed by the Union Bank of Switzerland that on June 25, 1921, the law regarding stamp duty on coupons received the assent of the Swiss Federal Assemblies. Coupons of Swiss securities are subject to tax, with the exception of securities issued by the Swiss Confederation, the Swiss Federal Railways, and the Cantons, if before the law entering into force they have been declared tax free. The coupons of foreign securities circulating in Switzerland and issued there or quoted on any of the Swiss stock exchanges, and interest from money deposited with Swiss banks are also liable. With regard to the percentage of the tax no distinction whatsoever is made between Swiss and foreign securities subject to the tax. The tax is 2 per cent. on coupons of bonds or debentures and on credited interest subject to the tax; 3 per cent. on shares, stocks, founders' shares, bonus shares, and bonus certificates; 6 per cent. on premiums of bonds drawn for redemption with a premium. After expiration of the so-called referendum limit—which extends to October 4, 1921—the Swiss Federal Council is to fix the date on which those provisions are to become effective.

NATIONAL ASSOCIATION OF MERCHANTS AND MANUFACTURERS.—A public meeting of business men will be held at the Mansion House on Tuesday, July 26th, at 12 o'clock noon, to consider the imperative need of increasing production and reducing expenditure. The principal speakers will be Mr. Walter Leaf and Sir Hugh Bell. The Lord Mayor has consented to take the chair, and he will be supported by Lord Aberconway, Sir Kenneth Anderson, Sir Charles Armstrong, Hon. R. H. Brand, Mr Henry Bell, Mr E. Clifton Brown, Mr J. Annan Bryce, Mr Laurence Currie, Mr H. Dawson, Mr H. W. Dillon, Mr F. C. Goodenough, Mr W. L. Hichens, Sir Charles Hobhouse, Hon. Lionel Holland, Lord Inchcape, Mr R. McKenna, Sir Charles Mallet, Mr F. C. Le Marchant, Sir Percival Perry, Sir Felix Schuster, Sir Richard Vassar-Smith, Sir Edward Ward, Mr Thomas Wiles, and others.

SUMMER SCHOOL OF CIVICS.—The inaugural lecture will be given by Professor Patrick Geddes, with the Mayor of Guildford in the chair, on Saturday, July 30th. Among the courses of lectures offered in the two following weeks (besides the standard courses on sociology, social philosophy, social psychology, and civics) will be new courses on social biology, art in social life, geography, and modern history. Full particulars may be obtained from Miss Margaret Tatton, Leplay House, 65 Belgrave road, Westminster, S.W. 1.

An interesting conference of well-known employers and trade union representatives is to take place this week-end at the residence of Sir Samuel Waring, Footscray, Kent, at which the subject to be considered is "Foreign Exchanges and their Influence on Industry." The gathering is one of the series of week-end conferences which have been arranged under the auspices of the Industrial League and Council, and, through the generosity of prominent personages in the commercial and industrial world, are being held at their country residences.

THE Oxford University Extension Delegacy has arranged a full programme for its twentieth summer meeting to be held at Oxford from July 28th to August 17th. The main subject of study will be the Place of Ancient Rome in the History of Civilisation. The inaugural lecture will be given by Sir Rennell Rodd, lately British Ambassador at Rome. In the Economic Section, lectures, conferences, and classes will be held on "The Efficiency and Control of Industry." Mr J. A. R. Marriott, M.P., will give the introductory lecture.

Oversea Correspondence.

THE UNITED STATES.—COTTON CROP FORECAST—RAILROAD OUTLOOK—BUSINESS FAILURES.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 2.

If the condition of the cotton crop fails to improve during the summer there will be an exceptionally small yield in this country. The Department of Agriculture's report places the condition of the crop on June 25th at 69.2 per cent. of normal as against 67 per cent. on May 25th, 70.7 per cent. a year ago, and 78.8 per cent. the 10-year average for June 25th. The area under cultivation, 26,519,000 acres, shows a decrease of 28.4 per cent. from last year's acreage of 37,043,000. This year's acreage, in fact, is the smallest since 1900, and never before has there been such a decrease from one year to another. The indicated yield of 8,433,000 bales would be the smallest crop of the last quarter of a century, nearly 5,000,000 bales less than last year's production and about 8,000,000 bales below the record crop of 1914. Not in a score of years has the condition of the growing crop been so low on June 25th as it was this year. All sections of the cotton belt have been affected. The poor condition, according to Government experts, is due to the late, wet spring and to the presence of the boll weevil in large numbers, particularly in Texas, Arkansas, Alabama, and Tennessee. Owing to unfavourable conditions in April and May and to various discouraging factors, notably the shortage of fertilizer and unsatisfactory prices for the staple, the abandonment of planted acreage has been greater than usual east of the Mississippi River, ranging from 5 per cent. in North Carolina and Mississippi to as high as 10 per cent. in Georgia, with 3 per cent. in Arkansas, but practically no change in Texas. West of the Mississippi the abandonment has been slight. The quantity of fertilizer used this year decreased 66 per cent. from the average amount used during the preceding four years, according to a supplementary report issued by the Department of Agriculture. So far as the prospective yield is concerned too much reliance should not be placed upon estimates based upon the June condition. A very marked change has sometimes taken place between the end of June and harvest time. Last year, for instance, the crop was estimated at only 11,450,000 bales on a June condition of 70.7 per cent., but improvement in condition during the summer brought the actual yield up to 13,366,000 bales approximately. Ordinarily such a bullish report would have caused a very pronounced rise in the cotton market, but the strengthening influence of this week's report as a market factor was largely offset by the unfavourable trade conditions ruling at present in this country and Europe, and also by the fact that there will probably be a surplus of about 7,000,000 bales of cotton in all positions in the United States to carry over into the new crop statistical year beginning August 1st.

The outlook for the railroads is now brighter than for many months past, although they are by no means "out of the wood" yet. Within the last week or so there have been some distinctly favourable and encouraging developments. As a result of recent conferences in Washington between administration officials, bankers, and railroad representatives, at which the very urgent need of immediate remedial measures was again emphasised, steps will be taken, it is understood, to effect an early adjustment and settlement of the respective claims of the carriers and the Government arising from Federal control and operation of the railroads during the war period. The Government has already paid to the carriers a substantial portion of the amount due to them under the guarantee provisions of the Transportation Act, but still owes a huge sum in claims, payment of which has been held up for various reasons since the railways were returned to private management and the guarantee period expired. According to Secretary of the Treasury Mellon, there is now available in the Treasury the sum of \$250,000,000 approximately to be used in the settlement of such claims, although a great deal more than that will probably be required to square the account. That amount, however, is expected

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

to be paid to the railroads in the near future, or at least a large part of it. The carriers, on the other hand, are heavily in debt to the Government for permanent improvements made to the properties during the period of Federal control. There is a wide difference of opinion as to amount of such indebtedness, but whatever it may be, as finally determined, the railroads are not likely to be required to meet that obligation until they are in a position financially to do so without danger of embarrassment. Present indications are that the carriers will be allowed to issue bonds to meet a portion, at least, of that indebtedness; in fact, plans to that end, it is said, are now being formulated.

Railroad earnings have taken a decided turn for the better. Complete results of operations during May are not yet available, but preliminary reports of earnings on 119 roads operating more than 150,000 miles show operating revenue of \$318,760,000 in that month, against \$322,598,000 in May a year ago, representing a decrease of only 1.2 per cent., while operating expenses of \$268,163,000 were 14.2 per cent. less. Net operating income for the month amounted to \$31,290,000, as compared with a deficit of \$6,512,000 in May, 1920, showing an increase in that item of about 580 per cent. Final returns for all the leading railroads of the country are expected to show a total net operating income of some \$38,000,000 for May, against a deficit a year ago of about \$11,000,000. Railroad loadings of freight for the third week of June showed a reduction of 8,256 cars from the preceding week and of 136,995 cars from the corresponding week a year ago, the decrease being attributed to lighter coal and ore shipments. Car loadings from January 1st to June 18th totalled 17,136,930 cars, against 19,827,872 in the like period of 1920, and 17,472,804 cars in 1919. The falling off this year, of course, reflects the depression in trade and industry.

The average reduction of 12 per cent. in railroad wages became effective yesterday on all the principal lines of the country, and involved about 1,500,000 employees. The various unions are still considering whether or not they will accept the reduction. A referendum vote has been taken by different classes of union labourers, but the result has been announced by only one, namely, the International Brotherhood of Firemen and Oilers, 95 per cent. of whose members voted against accepting the wage cut ordered by the Railroad Labour Board. Notwithstanding the referendum votes, final decision in the matter has been referred to a committee of five representing the 16 railroad unions affected. That committee has not yet reached or announced its decision; but the general expectation is that the wage reduction order will be accepted, under protest perhaps.

The record of business failures for the full calendar month of June and for the first half of the year presents some interesting comparisons. There were 1,329 failures in June, according to Bradstreet's, as against 1,338 in May, and 562 in June a year ago. Last month's number is the smallest reported in any month since last November, not quite 2½ times the number reported in June, 1920, but nearly three times that reported in July, 1919, which was the low point of monthly failures for about a third of a century. Liabilities of \$50,992,929 for June were also the smallest since November, but 56 per cent. above those of June, last year. Failures for the six months ending with June total 9,010, three times the total for the first half

being made to the Government of India to take steps to alleviate the exchange depression. But it appears fairly obvious that the Government is resolved to leave exchange alone, and that there will be no more unfortunate experiments, such as selling reverse Councils against the Gold Standard Reserve held at home.

The Imperial Bank of India returns for June 24th show that Government deposits increased by Rs. 1,320 lakhs. This increase gives some indication of the amount taken in during the first week that the new loans were open. There have been large purchases of these loans in all parts of India, and Bombay is understood to lead in the amounts subscribed by the big cities, although no official intimation has yet been received. There is plenty of money for investment in the city, owing chiefly to the slackness of trade, and our discount rate stands at less than 4 per cent.

At the end of the week ended June 22nd the total amount of notes in circulation was valued at Rs. 1,69,94,25,124. Bombay's holdings, as usual, were largest, amounting to Rs. 54,96,24,727. Calcutta followed with Rs. 47,79,35,638, and then came Rangoon (Rs. 19,96,24,139), Lahore (Rs. 16,66,12,704), and Madras (Rs. 15,41,98,333), Cawnpore and Karachi following. In regard to the Reserve, silver coin in India totalled Rs. 65,04,50,009, gold coin and bullion Rs. 24,35,44,363, and there was silver bullion under coinage to the value of Rs. 4,20,31,835. Bombay's holdings were respectively Rs. 23,07,97,470, Rs. 13,93,68,597, and Rs. 39,91,298. Calcutta had as much as Rs. 3,80,40,537 worth of silver under coinage. Securities, at purchase price, held in India amounted to Rs. 67,99,33,446, and held in England to Rs. 8,34,66,471. There was no transfer between the Paper Currency Reserve and the Indian branch of the Gold Standard Reserve during the week. The percentage of metallic reserve to circulation was 55.21.

HOLLAND.—PROPOSED INCREASE IN THE TARIFF—INDUSTRIES FAIR—DUTCH RAILWAYS—LIFE INSURANCE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, July 8.

HOLLAND is a Free-trading country, and opposition against the Minister of Finance's proposed Bill to increase the tariff of import taxes by 40 per cent. is very strong. At present the so-called "fiscal" tax is 5 per cent. The increase from 5 to 7 per cent. is apparently not very important, but it opens the door to further increases, and the fall in prices which is still going on, and which in itself points to a sounder state of affairs, will be checked quite unnaturally by a similar artificial measure. The feeling is general that, above all, energetic endeavours should be made to curtail Government expenditure, especially the war budget.

The decision that the fifth Industries Fair, which will be held at Utrecht from September 6th until 16th, shall be international, is also quite in keeping with the principle of Free-trade to which the majority of the people here adhere. The chairman of the Association for Industries Fairs in the Netherlands said in this respect, "A national annual fair was good, was necessary in past years. Circumstances have altered since, and it would be wrong, and it would testify to chauvinistic short-sightedness, if the foreigner were still refused admission to the annual fair. This participation is an incentive to competition, and this incentive is necessary if the Dutch manufacturer is to keep abreast of the times." An enormous permanent building has been erected, and the fact that Utrecht lies in the centre of the Netherlands renders it most suitable as a centre for such fairs. We hope that many English firms will avail themselves of the opportunity to attend the fair, where they can show their products and meet, on neutral ground, competitors and business friends from all parts of the world.

Although the receipts of the Dutch railways have increased by more than 30 per cent. (204,000,000 in 1920, as against 156,000,000 in 1919), the balance-sheet shows a loss in 1920 of 2,400,000. Consequently no dividend will be declared; for 1919 a dividend of 3 per cent. was paid. In future, after the necessary legislation has been passed

the Government will get considerable influence in the management of the railways, and, on the other hand, a guarantee of a dividend of 5 per cent. will be given. A very serious situation has arisen in the insurance world. Two important life insurance companies are practically insolvent, of which one, the Algemeene (General) is the largest institution here, with over 200,000,000 fl. insured capital. The other one is the Kosmos, with 100,000,000 fl. insured capital. Previously the Dordrecht, of the same size as Kosmos, went over to the Eerste Nederlandsche, a strong office which guarantees their policies. It first appeared as if this institution had also given financial assistance to the Algemeene (a combination of the boards took place), but this was not the case. An Emergency Bill has now come into force affecting both Algemeene and Kosmos. Extension of the field of activity to Central Europe, and investments in those countries to a larger extent than necessary, are among the causes of this débâcle. Also among fire insurance companies there are many weak companies, chiefly among the "war-babies," and a general feeling of uneasiness is prevailing, accentuated by the failure of the various companies combined under the title of "Concern Sorel," which had a phenomenal expansion during the war, and is now in the receiver's hands.

SWEDEN.—TIMBER PRICES—MONETARY CONDITIONS—NEW COMPANIES—LABOUR OUTLOOK.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 16.

THE co-operation between the Swedish exporters of timbers has ceased owing to the failure to agree on a joint price policy, and the market has therefore been left to the mercy of buyers. It is expected that there will be severe price-cutting before long as some mills are evidently very anxious to get rid of their goods. Prices for timber are now actually lower than before the war, and naturally producers are losing heavily. The money market is much easier, and the Stock Exchange has experienced a strong rise all round, there being hopes for a general revival of trade and a further lowering of the discount rate. It is deemed almost certain that the State Bank will undertake this step probably in connection with the launching of the new 100 millions kroner loan, which has been so much talked of. The last report of the State Bank is very satisfactory, inasmuch as there is a decline in notes circulation of 52 million kroner, or a decrease from June last of 49 million kroner. Domestic bills and trade loans also show a falling off of 28 million kroner. The amount of notes circulation in Sweden has been since 1913 as follows:—1913, June, 227 million kroner; 1915, 293 million kroner; 1916, 352 million kroner; 1917, 466 million kroner; 1918, 668 million kroner; 1919, 728 million kroner; 1920, 736 million kroner; and 1921, 679 million kroner. The depression in industry and trade is reflected in a marked decrease in the number of companies formed during the first half of this year, only 486 concerns being registered, as against 744 during the corresponding period 1920, with a total capital of 28.7 million kroner, as against 53 million kroner in 1920 and 25 million kroner in 1913. New formations refer principally to industry and commerce, whereas no new banking concerns and very few traffic undertakings were formed. The increase in capital during the first half of this year amounted to 74 million kroner fresh subscriptions and 13.7 million kroner bonus shares. The labour market is still very restless, and no agreement has been reached with the sailors or dockers. The latter have refused to entertain 20 per cent. lower pay and go on striking. A serious drawback is that in the mining industry, for instance, the present wages agreement runs until the end of the year, so that no change is possible until then. The same is the case with a number of railways, who are paying their employees war wages, with the result that their tariffs are killing all prospects of export. Many concerns are beginning to realise that the most serious time is in front of them, and are rather making preparations to shut down entirely instead of keeping on at a loss. Favourable, although for the season rather cold, weather is promising much for the crops, but the hay is reported to be a little short in growth.

NORWAY.—INDUSTRIAL CONDITIONS—GERMAN COMPETITION—BANK RATE REDUCED.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, July 6.

PERHAPS the greatest difficulty with which Norwegian industry has at present to cope is the competition with countries having a deranged exchange. Norwegian industry is met by this competition not only in the foreign markets, but also in Norway itself, and that even in articles that are specialties of Norwegian industry. Steps have been taken by the men of those industries to obtain protection; it seems, however, doubtful if they will obtain any results, and the consequences probably will be the stoppage of some of those industries until an improvement of the exchange position has taken place.

The seamen's strike now has been practically ended, and, excepting the tramp steamers, which will be separately dealt with, a reduction on the wages established in 1920 of 17 per cent. has been agreed to—12 per cent. reduction to be effected at once and 5 per cent. as from December 1st. All the strikers for whom employment can be found within four months to have the preference. The settlement is a compromise, with concessions from both sides.

So far, trade in all its branches is extremely dull. Still, despite the season, with its holiday-making, especially in England, hopes are entertained of an improvement soon in all branches of trade, because our own strikes are over, and, above all, the coal-strike in England is over, which made itself intensely felt in our country.

Hay-making now is going on all over the country. The dry and sometimes very cold and sometimes very hot weather with scorching winds to a great extent has destroyed the fair prospects of the early summer of a rich harvest. If plentiful rains do not soon set in there is a great danger of serious damage by drought both to cereals, potatoes, &c.

Exchange transactions continue at low-water level, with no marked fluctuation of prices. The amount of notes of the National Bank in circulation at the turn of the half-year was 418.4 million kroner. Normally, this should have been 460 million kroner. The decrease in circulation thus continues its downward advance—a sign both of stagnant trade and, to some small degree, of receding prices of commodities. Under these circumstances, the board of the bank decided to-day to reduce the bank rate of discount from 7 to 6½ per cent.; the private banks, as usually, followed suit.

At present a discussion is going on as to the margin of interest between the rate given by the banks for money deposited, and the rate at which they lend. The difference ordinarily is ½ per cent., but voices are raised for an increase to 1 per cent.—i.e., the depositors would get so much less. On the other hand, it has been argued that rather than increasing the profit accruing from differences in the rates of interest, the banks, to gather the means wherewith to meet losses and hard times, ought to try to reduce their managerial expenses, which are considered to have grown into far too large proportions. There, at present, this question rests.

Letters to the Editor.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Craies raises some interesting speculations in your issue of the 16th inst., and asks me some questions which I shall endeavour to answer.

He anticipates a considerable fall in prices and wages if the gold standard is restored. I doubt this as a direct result of restoration. Of course, we shall be able to buy our cotton and food cheaper from America, and a gradual fall in the cost of living and production is a good thing, and will stimulate trade and industry eventually. He fears that the burden of the debt service will be increased. I believe it will be lightened. Our credit will be improved by the resumption of specie payments, and therefore our ability to fund or refund the debt. A saving of 1 per

cent. in interest charge will save the country about 50 millions.

(2) It is true that falling prices discourage trade and production, but this was bound to take place, and had to take place to enable us to compete in the common markets of the world. To retard this painful experience by artificial means is to prolong the agony and hinder the ultimate recovery. I have already written at length on the advantages of the gold standard as compared with any scientific alternative. The gold standard will give stability to prices, and I have no fear as to there being plenty of gold available for monetary purposes. A gold standard does not entail a gold currency, but the re-establishment of equilibrium between gold and paper. That can be most easily and economically achieved by gradually reducing the paper, and that is what we desire. —I am, Sir, your obedient servant, D. M. MASON.

July 16th, 1921.

THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—After reading the recent correspondence in your journal on this subject, the average person's condition must surely be one of sheer bewilderment. Indeed, some of the statements made by the gold-standard revivalists leave one gasping. For example, in face of such crises as those of 1847, 1857, 1866, 1907 and 1914, Mr D. M. Mason, of the Sound Currency Association, deliberately asserts that the "gold standard has stood the test of time." Not only is this contrary to experience, but it is far nearer the truth to say that the so-called gold standard has never even stood the test of a single national crisis. Whenever a great political upheaval has loomed large the gold-standard system has had to be suspended. The mere shadow of the recent great war caused gold to disappear from circulation before even a shot was fired.

Mr Mason says that he pointed out to Mr Lloyd George in August, 1914, the effects which would follow from the issue of Treasury notes—namely, the hoarding and exporting of gold. Mr Mason confuses effects with causes to such a degree that he forgets his history. It is quite untrue to say that the Treasury notes drove gold out of circulation. The Treasury notes became necessary largely because gold had already disappeared. He admits that there was a panic in August, 1914, and the cause of the panic was the disappearance of legal tender. The Treasury notes were issued at the demand of the bankers themselves, who besought the Government's aid to save them and the country from bankruptcy, and one of the most contemptible features in these efforts to revive the pre-war monetary system is that many of those whose institutions were saved by these notes have been the first to revile the Government for having issued them. If gold fetishism did not render its votaries immune to reason one might hope that the events which have recently occurred would serve to cure them of their idolatry.

The deflation policy was first started, after the war, in the United States, and according to a recent address by the former Comptroller of the Currency, Mr J. S. Williams, its results have been the ruin of business in the richest and hitherto most prosperous country in the world. Deflation has caused the people of the United States greater losses than the whole of their expenditure during the war. We are in the same position, and suffering from the same lunatic policy. On the other hand, Germany, that has not been "taken in" by these silly claims of the gold-standard advocates, is to-day the most prosperous country in Europe—if not in the world. She has reduced her mark to the lowest point in her history, and she is purposely keeping it low in value by continuing to issue fresh notes whenever her foreign credit tends to raise its value. The result is that she is able to invade all the world's markets—whether protected by high tariffs or low tariffs—and she is underselling the manufacturers of all other nations; and she has only to continue this policy for the next five years and the bulk of the world's trade will be under her control.

The trouble with the gold standardites is that they will not face facts. Mr Mason talks of restoring the gold basis for our legal tender, but he does not indicate, nor has he the faintest notion of where the gold is to come

from to enable the banks to obtain a sufficiently safe basis for the currency and credit. No country in the world has ever yet been able to establish its legal tender and credit permanently and soundly upon gold. When Mr Mason talks about the gold standard having stood the test of time—in which he evidently refers to this country—he overlooks the fact that the real basis of our currency has been the national credit, and not gold. When gold fled we still had the national credit in the shape of the £18,500,000 Bank of England notes, which are issued against the national securities.

The great objection to the so-called gold standard is that it professes what it is incapable of performing. Gold can only be used to a very limited extent in the redemption of credit. Whenever the demands of industry rise beyond a certain amount the gold standard system is unequal to the occasion, and its effect is then to destroy trade and depress industry. The problem is merely one of quantity. If Mr Mason and his friends can discover new sources of gold supplies; if instead of having a ridiculous basis of, say, £100,000,000 of gold, on which to carry a super-structure of thousands of millions of credit, he can provide a sum more proportionate to the load it has to carry; if he can prove that with the increase of trade and business the supplies of gold will increase proportionately, he will then be in a position to urge his claims with rather more confidence than at present; but so long as things are as they are, the attempt to revive the gold standard is the most deadly menace to a revival of trade, industry, and employment that could possibly be engaged in.—
Yours faithfully,
ARTHUR KITSON.
12 St James's square, S.W., July 18th, 1921.

THE CHANGES IN THE VALUE OF GOLD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your issue of 9th instant contains an important, and, indeed, very interesting, letter from Sir James Wilson under the above heading; and I do not wish to argue any of the eleven points specified as reasons for changes in the value of gold; but I ask you to allow me to call attention to an omission which, in face of the eminent position Sir James Wilson has held in the management of Indian finance, seems strange.

Everyone who has followed the discussion on Indian finance during the past fifty years must recognise that Sir James quite understands that the value of gold is generally affected by a rise or fall in that of silver. But that reason is a glaring omission in his letter.

I notice that in July, 1911, I wrote: "Sir James Wilson shows that during the decade 1900-10 gold bought on the average 37 per cent. more and silver 38 per cent. less than in the eleven years 1867 to 1877."* That means that at that time there would, under the double standard, have been no change in the general level of prices. There was no misunderstanding in those days as regards reciprocal action in a rising or falling value of either metal, whilst they are not harnessed together so as to form a joint standard. But now, though so recently as in your issue of May 7th I alluded to the fall in the gold price of silver during the 25 years 1871-96 as having not far from doubled the value of gold, and also the rapid fall in the gold price of silver in six months of last year, 1920, from 89½ to 38½ as having caused the recent sudden and disastrous fall of prices in gold standard countries, Sir James Wilson ignores that reason for a change in the value of gold, and seems to reject the idea that the double standard gives a steadier standard of value than either the gold or the silver standard.—I am, Sir, your obedient servant,

WM. LEIGHTON JORDAN.

Royal Societies' Club, July 20th, 1921.

THE RAILWAYS BILL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent Mr M. S. Birkett writes:—"Railway receipts must inevitably be governed by the ability of the traders and the travelling public to pay, and any attempt to impose higher charges will defeat its own object by driving traffic on to the roads or by killing trade."

* "The Standard of Value," p. 254.

Railways are an industrial undertaking, and cannot reasonably be expected to kill themselves to save other industries.

As to the roads, if the real users had to purchase and pay for their permanent way, as the railways have, or even if all paid in proportion to the damage they do for the maintenance of the roads, we should not hear much about the competition of roads with railways for heavy traffic or long distances.

The war showed the futility of roads as compared with railways for carrying heavy traffic.—I am, Sir, yours faithfully,
E. H. B.

Books and Publications.

REVIEWS.

"Bankers' Credits." By William F. Spalding. (London) Sir Isaac Pitman and Sons, Limited. 10s 6d net.

SINCE the fall in commodity values the question of credits has become acute, and Mr Spalding's book appears at an opportune time. There has been so much mental stock-taking by bankers on this involved subject that its pages will be eagerly studied for guidance in avoiding the incautious and unseasonable advance. But, despite the resounding title of "Basic Principles," considerations of this nature have not been attempted. Again, a chapter dealing with the numerous irregularities in documents that come forward under credits would have been helpful in practice.

After briefly tracing the origin and development of the credit system, the author describes the various instruments evolved for travellers' convenience, such as circular letters of credit, circular notes, and travellers' cheques. The several types are well defined, and their functions lucidly explained. The remainder of the book is mainly devoted to the more important subject of mercantile credits, which facilitate the import and export of goods. On this subject the exposition is much less lucid, and appears to have become enveloped in the prevailing uncertainty of the minor oracles. Thus, instead of confusion being dispelled, it becomes more confounded through the author being misled by "fancy names" or local terms, drawing distinctions where none exist, and being induced to include absurdities such as "Payment on receipt credit" and "Payment against documents credit" as special types. Better to have grouped all such variations into one chapter under a comprehensive title instead of devoting separate treatment to each. Mr Spalding is timorous enough to head a chapter "Documentary Credits," although confident that the term is a misnomer, so that we hardly recognised our old friend the Bill Authority, known in America as the "Authority to Purchase." Excluding this document and the acceptance credit, practically peculiar to accepting houses, we are satisfied with the generic term, bankers' credit. According to the transaction or bargain it becomes confirmed or unconfirmed, open or restricted; it may call for drafts at sight, any usance, or no drafts at all; it may be issued in sterling or currency, be revolving or otherwise. In short, a bankers' credit can contain all the novelties mentioned and many more we know of without loss of identity, even when disguised as a "revocable export credit."

It is to be hoped that the next edition will see much rearrangement and revision. And then there would still be room for an exhaustive work on principles and practice of bankers' credits.

"The Fruits of Victory." By Norman Angell. W. Collins, Sons, and Co. 8s 6d net.

THIS is a sequel to "The Great Illusion," and will be welcomed by the many admirers of the latter. Mr Angell has a rare gift of putting things clearly, and in the first chapter of this book, on "Our Daily Bread," brings out with timely force the fact of the economic interdependence of the nations, and especially the helplessness of Europe and England without a supply of food and materials from other countries in exchange for their manufactured goods. The defects of the book, which are likely to rob it of much

of the effect that it might otherwise have produced, are due to the writer's passionate hatred of war, which leads him to over-state the evils that have arisen from its last and most terrible example, and to ignore anything that can be put on the other side of the account.

"Political Economy Club: Founded in London, 1821." Volume VI. Macmillan and Co. 1921.

As a rule, the affairs of private societies, such as clubs, whatever their objects may be, are not subjects for public comment. But the Political Economy Club may fairly be regarded as one of the exceptions to this rule. It has included among its members a considerable number of men of mark in politics and business, and in the study of the science of economics. David Ricardo is credited with its conception, though the idea seems to have been brought to fruition by Thomas Tooke. James Mill, T. R. Malthus, Colonel Torrens, and John Lewis Mallet were among the original members. The list of distinguished economists who joined the club at later dates includes John Stuart Mill, Henry Fawcett, Walter Bagehot, G. J. Goschen, W. S. Jevons, and Henry Sidgwick; and William Newmarch and Robert Giffen may be mentioned as examples of unusually able handlers of statistics in the solution of economic problems. There have also been a good many members of a type portrayed by Thackeray in "The Newcomes," where the Colonel's old Indian civilian friend, James Binnie, is a member of the club.

Mr Henry Higgs, the editor, has managed well with the materials available for the book, which were not too plentiful. Among the most useful of the documents which he obtained was an admirable memorandum of an address given at one of the dinners in 1905 by Sir John Macdonell, whose death the club has recently had to deplore. Sir John answered the question, What has the Political Economy Club done since 1821? by saying: "Just what political economy has done since that date." His brief but clear survey of the club's history may be summed up in his further statement that "For three-quarters of a century it has been a common meeting-ground of theorists and practical men. Each has profited by the experience of the other."

"The Labour International Handbook." Edited by R. Palmer Dutt, 1921. The Labour Publishing Company. 12s 6d.

THE first part of this book consists of "reviews of the leading issues of international affairs and foreign policy from a Labour standpoint," combining the characters of works of reference and of expositions of policy. As the former they contain much valuable information in facts and figures, chiefly abstracted from official publications, and covering the Peace Treaties, the constitution and activities of the League of Nations, the scope of other international organisations, official and voluntary, and statistics of trade, production, and finance—just the right kind of thing for the intelligent citizen, whatever his politics. More provocative of dispute, because sometimes of highly partisan colouring, are the inferences drawn from these facts. The editor's refreshingly candid admission that bias is inevitable, however, covers a multitude of sins; and the facts themselves, so far as we can judge, show a high degree of accuracy. The second part of the handbook gives brief accounts of the International Labour and Socialist movements, followed by synopses, containing much matter not easily accessible elsewhere, of the position of these movements in 44 different countries.

BARCLAYS BANK LIMITED

(with which has been amalgamated the London Provincial and South Western Bank Ltd.)

Head Office: 54, Lombard Street, London, E.C.3

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business. Traders interested in the Foreign Markets are invited to correspond with THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 27.	July 28.

The simultaneous reduction to 5½ per cent. in the Rates of the Bank of England and the New York Federal Bank came with no particular surprise to Stock Exchange markets, though both are welcome as being likely to quicken investment in gilt-edged securities. The Capel court market promptly quoted prices higher upon Thursday's reduction in the Bank rate. The improvement extended to British Government securities, including National War bonds and the 3½ per cent. War Loan, Corporation and Colonial stocks, Home Railway prior-charges, and a good many of the securities in the Indian railway list. Whether the change will have much effect upon general business in the Stock Exchange at this season of the year is a matter for some little doubt, though members talk hopefully of the outlook. The volume of trade throughout most of the markets this week has been small, though sentiment continues cheerful, and the optimist professes to look for a further reduction to the round 5 per cent. in the Bank rate before the autumn demand for money comes into play.

Movements amongst foreign bonds have been generally upward, with a fair demand for Chinese issues, Brazilians also remaining in favour. Japanese have improved substantially. Argentines are a better market, though in Chileans there is not much going on. German Threes have been fluctuating narrowly around 6½. The strength of French bonds is maintained, and Italians are better on the week.

The Home Railway market was prepared for reduction in the interim dividends on Midland, Great Eastern, and North Staffordshire stocks. A feature has been the heaviness in Undergrounds, due to advance apprehensions that the Underground Electric Income distribution would be influenced by the recent adverse movement of the American rate of exchange. A few of the lower-priced Home Railway stocks attracted attention, on the resumption of holiday traffic upon something approaching pre-war scale, but the coming decontrol of the industry is responsible for a caution which, in some cases, amounts to nervousness on the part of the public interested in the Home Railway industry. Mexican Rails have given way. Argentines, on the other hand, recovered after their heavy fall, the speculative investor taking the view that present levels discount a good deal of what is likely to happen in the near future in regard to dividends. United of Havana stock has further fallen, owing to the recent issue, privately placed, of debenture stock, and Brazilian railways, where they have moved at all, gave way further. Nothing of interest has occurred in Canadian railway stocks.

The rubber market revival was carried a little further during the earlier part of the week, but the statistical position has not consistently improved. As a consequence, fresh buyers held back. The market argument is that rubber itself, and the prices of rubber shares, have now got down to such levels at which there is not likely to be much further fall, though

this contention does not take into account the possibility of financial difficulties being disclosed by weaker concerns. The steps taken by the Rubber Growers' Association to promote a Rubber Producers' Corporation are deemed a bull factor. Amongst oil shares, something of a sensation was produced by a disastrous report issued by the Scottish American Oil Company. The shares were a very lively gamble last year, when the price rose at one time to 45s. They now stand at about 3s. 6d., and the meeting next Wednesday is likely to prove a heated one. Of the bigger shares, Mexican Eagles drooped upon vague news of a fire having broken out on oil lands in Mexico. There is also talk of the possibility of a rate war in oil becoming more pronounced. This affects all the shares in the better-class companies, and those of the Trinidad group are dull with the rest. Royal Dutch are moving violently, both up and down, according to the vagaries of speculation in Holland. The shipping market is better, with rises in the higher-priced stocks, but iron and steel shares gave way together with Vickers, on the closing-down of more works in the North of England. The Armstrong report, showing a falling-away of profits, caused the shares to weaken a trifle. British Dyestuffs, both ordinary and preference, are dull owing to the passing of the interim dividends. This was not entirely unexpected, and the textile market as a whole is inclined to be harder owing to the more favourable reports concerning the industry which continue to buoy the hope that the worst of the trade depression may be regarded as over. Hudson's Bay are steady on the maintenance of the usual 40 per cent dividend, and Egyptian shares of all kinds have been in demand in consequence of the brighter outlook for cotton, and the rising value of Egyptian land. Further gains have accrued to the leading tea shares. The cable market keeps steady, and Marconis are moving very quietly on the eve of the dividend announcement. Van Den Berghs rose at one time to a shade over 40s, on the hope of the long-expected bonus being declared. Speculative markets such as Dunlops have retreated into the background so far as any active interest is concerned. Harper Beans continue flat on the report issued this week. Brewery stocks are brighter on the proposed lightening of the liquor restrictions. Various Canadian industrials advanced in correspondence with the movement in the rate of exchange.

The Kaffir market is distinctly harder by reason of a further rise in the price of gold, which has touched £5 15s per oz, and thereby encouraged expectations of the lower-grade mines coming to a profitable point again. Considerable discussion is taking place in South Africa over the question of wages, but while the price of gold keeps up, the impression on this side is that miners are not likely to agree to any substantial reduction in their pay. The diamond market is firmer, because it is thought that a demand for diamonds is noticeable in the United States. Rhodesians are uninteresting, and amongst the tin shares the tendency has been to let prices fall owing to the setback in the price of the metal. What speculation there is amongst miscellaneous mining shares revolves round Russo-Asiatics, which are well supported by their usual followers. Australians are again buying Broken Hill shares, and this support serves to keep prices hard. The little Indian mining market has received no particular benefit from the recent rise in the price of gold. Mexicans are dull, and the other mining sections attract no attention worth mentioning.

The Stock Exchange Committee are being petitioned to bring pressure to bear upon the Treasury with a view to the reinstitution of fortnightly settlements. The committee have not yet officially considered the petition, but their attitude is known to be based upon the fact that as there is a pre-war account still existing, no reversion to fortnightly settlements can be attempted until this is cleared up. Under the temporary regulations, those who had stock open at the end of July, 1914, cannot be compelled to settle until a year after the conclusion of peace.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded....	128,977,209			
TREASURY BONDS.				
Total receipts April 1st to April 30th.....				£1,02,675
New series week ended July 16th.....				22,315
Total receipts to date				1,024,990
NATIONAL SAVINGS CERTIFICATES.				
Net Receipts into the Exchequer Week Ended July 16, 1921,				
April 1 to July 16, £2,030,000	100,000			100,000

To the Public—				
Broadstairs Gas Co., £12,500 7½ per cent. Deb. Stk. (red. at par Dec. 31, 1926, 1931, or 1936), iss. at par (July 16).....	12,500	12,500	1,250	11,250
Pullman Car Co., £500,000 8 per cent. Mt. Equipment Debts. at 98½ per cent, repayable at 102½ per cent. July 1, 1923 to 1948 (out of proceeds of this issue £118,500 outstanding 6 per cent. Debts. will be redeemed, making additional new capital £381,500 (July 19).....	381,500	375,777	38,150	337,627
Shropshire, Worcestershire, and Staffordshire Electric Power, £300,000 7½ per cent. 10-year Guar. Conv. Deb. Stock (red. at par, 1924-31), iss. at 97 per cent. (July 21).....	300,000	291,000	30,000	261,000
Total offered to public.....	674,000	679,277	69,400	609,877
To Shareholders only—				
Malayalam Rubber and Produce Co., 777,000 Shares, £1. with 13s 4d credited as paid up, the balance of 6s 8d being payable by instalments	777,000	259,000	25,900	233,100

1914.....	172,176,027	1914.....		512,522,633
		1913.....		196,536,980

5½ per Cent. Treasury Bonds.—Repayable at par on April 1, 1929. Issued at 97 per cent. Interest payable half-yearly on April 1st and October 1st. The bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Rights of exchanging their holdings for similar amounts of the new bonds, together with a cash payment, are offered to holders of the following securities on the terms indicated:—5 per cent. Exchequer bonds, due October 5, 1921, 5 per cent. National War Bonds, due October 1, 1922—a cash payment of £4 per £100 of bonds surrendered; 5 per cent. National War Bonds, due April 1, 1923, 5 per cent. National War Bonds, due September 1, 1923—a cash payment of £3 10s per £100 of bonds surrendered. Full particulars of these bonds, together with comments, will be found in *Economist*, July 9th, see page 43, also in our issue of the 16th inst.

City of York Local Bonds for Housing.—Issue of 6 per cent. local bonds at par. Applications are invited for an unstated amount of bonds, the proceeds of which will be "applied solely for the purpose of housing schemes approved by the Government." These bonds are a trustee security, and the bonds can be obtained "on terms which provide for repayment of the amount subscribed" in five, seven, or ten years. The general terms for the issue of these bonds are similar to other housing bond issues made under the authority of the Ministry of Health. While there can be no question as to the security offered both for repayment of capital and payment of interest, the difficulty of effecting sales of these bonds in case of some sudden need should be carefully considered.

Borough of Aylesbury Sewerage and Sewage Disposal Loans.—Tenders are invited for loans to be secured on the general district rate, and repayable by equal half-yearly instalments of principal and interest combined, or any other method which may be mutually agreed. The details are: For sewerage, £4,160 is required for 30 years; and for sewerage and sewage disposal, £4,286 is required for 15 years.

The Pullman Car Company, Limited.—Authorised and issued share capital £500,000, in £1 shares, all of which are fully paid. There are also outstanding £118,500 6 per cent. first mortgage sinking fund equipment debentures, which will be repaid on or before April 1, 1922, at 105 per cent., out of the proceeds of the present sale. This is an offer for sale of £500,000 8 per cent. first mortgage equipment debentures at 98½ per cent. These debentures are repayable at 102½ per cent., by 25 equal annual drawings, beginning on July 1, 1923, but the company has the right to purchase "at or below 102½ per cent." The debentures are now offered for sale by Messrs Erlangers, and have been purchased by them at 91 per cent. They are paying 2½ per cent. underwriting commission, and ½ per cent. overriding commission, together with brokerage and the cost of advertising, printing, and circulating this offer. These debentures will be secured by a trust deed in favour of Barclays Bank, Limited, as a specific first charge, subject to the existing charge to secure

the £118,500 outstanding 6 per cent. debentures on the rolling-stock and cars, equipment, and other fixed assets, on the new rolling-stock to be acquired by the company out of the proceeds of the shares issued in 1920 and of the present issue, and as a floating charge on the other assets of the company. Holders of the 6 per cent. first mortgage sinking fund equipment debentures will be entitled until July 25, 1921, to exchange their debentures for an equivalent nominal amount of 8 per cent. debentures. Holders will receive, per £100 bond, (a) £6 10s, being the difference between the price at which the 8 per cent. debentures are now offered for sale, and the redemption value of the 6 per cent. debentures, viz., 105 per cent., and (b) £1 8s, less income-tax, representing the difference between the amount of the coupon due January 1, 1922, to be attached to the scrip certificates to be issued in respect of the above exchange, and six months' interest, at the rate of 8 per cent. per annum to December 31, 1921. The Pullman Car Company was formed in 1915, to take over the business of the Pullman Company, registered in 1882, to provide and operate Pullman cars on various railways in Great Britain and elsewhere. Surplus assets are valued at £1,337,671, while assets to be specifically mortgaged for £500,000 of debenture amount to £1,216,343. Profits are given for four years from 1917. The table given shows a rapid growth of operating expenses. In 1920, with gross earnings at £192,000, a net profit of £65,776 was made, while in 1919 gross earnings were £148,000, yielding a net profit of £65,125. The prospectus is a clear statement of affairs, and the offer is a fair one in its class.

The Shropshire, Worcestershire, and Staffordshire Electric Power Company.—Incorporated by Act of Parliament, 1903. Authorised share capital £1,750,000, of which £500,000 has been issued and paid up. The loan capital consists of 5½ per cent. first debenture stock for £100,000, of which £94,350 is outstanding. There has been lodged with the Ministry of Munitions, and with the company's bankers £400,000 6 per cent. second debenture stock as security for advances, and there was a balance outstanding on December 31, 1920, of £36,052 of the purchase price of the Dudley Corporation Electricity Supply Undertaking, which is payable by instalments over a period of years. This is an issue of £300,000 7½ per cent. 10-year guaranteed convertible debenture stock, guaranteed as to both principal and interest by the British Electric Traction Company, Limited, at 97 per cent. This guaranteed convertible debenture stock will be "redeemable" at par on July 1, 1931, or by six months' notice at any time after January 1, 1924. It will be secured by a trust deed to be entered into between the company and the Union Commercial Investment Company, Limited, as trustees, constituting a floating charge on the undertaking, subject to the following prior charges:—(1) 5½ per cent. first debenture stock with sinking fund of 1 per cent. per annum, £100,000 (now outstanding £94,350). (2) Second debenture stock for £344,000 lodged as security for advances for construction purposes with the Ministry of Munitions. (3) A specific charge on the Dudley Electric Supply Undertaking in favour of the Dudley Corporation to secure the payment of £36,052, being the balance outstanding on December 31st last of the purchase price of this undertaking, which is payable by instalments. Gross revenue is given from 1914, but it would have been better, perhaps, if figures of net revenue had been offered. Revenue in 1920 from sales of current, interest, and dividends on investments, &c., amounted to £379,673; from this was deducted expenses of operation £310,593, interest and sinking fund on the issued first debenture stock, £6,490, interest payable to the Dudley Corporation £1,397 (total £318,450); leaving available a balance of £61,223 to meet the interest charges of £22,500 per annum on the present issue of debenture stock and £16,240 on the loan from the Ministry of Munitions for the present year, and thereafter a diminishing annual amount. The total assets as shown by the balance-sheet at December 31st last, amounted to £1,320,223. The amount ranking in priority to the present issue is £457,069, for which securities have been charged to an amount of £530,402, but part of the proceeds of the present issue will be applied to the reduction of this liability. At any time during the currency of the guaranteed debenture stock-holders have the option to exchange the same at the rate of £100 of debenture stock for £100 8 per cent. "A" ordinary shares and £20 of "B" ordinary shares of the company to be issued to them in satisfaction for the stock. The "A" ordinary shares will rank for a non-cumulative dividend in priority to the "B" ordinary shares to the extent of 8 per cent. per annum, and the "A" ordinary shares will participate thereafter share for share in any profits distributed after the "B" ordinary shares shall have received 8 per cent. dividend upon the amount paid up. The ordinary stock of the British Electric Traction Company, Limited, which unconditionally guarantees the payment of the principal and interest of the above-mentioned 7½ per cent. 10-year guaranteed convertible debenture stock, is quoted at round about £35½ for £100, which investors must take into

consideration. The offer is hardly suitable for small investors, its attraction depending upon the view taken of the probable value of conversion rights.

City Equitable Associated, Limited.—Authorised capital £1,100,000, divided into 1,000,000 8 per cent. participating preference shares of £1 each, and 100,000 ordinary shares of £1 each, of which 464,000 participating preference shares have already been allocated to the shareholders of the Greater Britain Insurance Corporation, Limited, and the City of London Insurance Company, Limited, and 60,000 ordinary shares have been allotted. There are now offered for subscription 250,000 of the above-mentioned preference shares at par. The prospectus states:—"After payment by way of dividend to the holders of the ordinary shares of a sum equal to the amount of the preference dividend, one-half of any surplus profits in each year which it shall from time to time be determined to distribute shall be divided among the holders of the participating preference shares and the holders of the ordinary shares rateably in proportion to the capital for the time being paid up." This is somewhat ambiguous. We are, however, informed by the company that the surplus will be equally divided between the two classes. The company has been formed to "consolidate the interests" of the City Equitable Fire Insurance Company, Limited, and the latter-named company unconditionally guarantees the 8 per cent. dividend on the preference shares issued at present. The guaranteeing company has had a profitable career, but the information given in the prospectus is scarcely sufficient to allow the investor to gauge the value of this guarantee. It may be that this undertaking will be successful, and in that event the participating rights would be of value, but it should be realised that the division of surplus profits is equally between possibly £1,000,000 of preference capital and £100,000 of ordinary capital. Without more precise information than that vouchsafed in the prospectus we cannot advise investment in this issue.

Broadstairs Gas Company.—Incorporated by special Act of Parliament, 1875. Issue at par of £12,500 7½ per cent. debenture stock, to be redeemed at par on December 31, 1926, 1931, or 1936, at the option of the purchaser. The authorised stock capital amounts to £103,000, of which there has been issued £76,952 (including premiums of £15,322), and the authorised loan capital £51,500, of which £21,450 has been issued. The net revenue of the company for the year ended December 31, 1920, was £4,218, while the interest on existing debentures and those about to be issued amounts to £2,035. Thus interest on the issue is well covered. The company is one which should make good progress under efficient management. An interesting feature of this prospectus is the option of repayment at various dates given to debenture holders. A good issue of its class, subject to the usual drawback of the possible difficulty of effecting sales of stock in case of need.

Malayalam Plantations, Limited.—Authorised capital £777,000, divided into shares of £1. This is a reconstruction scheme in connection with the Malayalam Rubber and Produce Company, Limited, in liquidation. These 777,000 £1 shares are credited as 13s 4d per share paid up, and the balance of 6s 8d per share is payable by instalments. This is an interesting variation of the various methods resorted to for raising fresh capital in the rubber-growing industry, and shareholders in the old company should give careful attention to the offer.

Welwyn Garden City, Limited.—Issue of £100,000 6 per cent. debentures, repayable at par on June 30, 1941. Some interesting details showing the progress made by this company are given in a circular. While the issue, considered purely from an investment point of view, may not be attractive, the objective aimed at by the company is deserving of the support of those who are willing and sufficiently opulent to help along an admirable scheme.

Government of India Rupee Loan.—The subscriptions in India and London to the Indian Government's Rupee Loan, which was opened on June 20th, have exceeded Rs. 26 crores up to July 14th, of which about Rs. 23½ crores were in the form of cash, including Indian Treasury bills, and the balance in the form of Indian War Bonds. The loan, which is in the form of 6 per cent. (free of Indian income-tax) five and ten year bonds at par, is for an unlimited amount. Subscriptions are accepted in cash or 1921 and 1922 Indian War Bonds, but cash subscriptions must be made not later than July 30th.

Tweeddale and Smalley (1920), Limited.—In the *Economist* for July 16th, on page 103, we reviewed the position of this company. The secretary now writes to inform us that there has been no debenture issue, and that "investments" referred to have been realised at a profit. A copy of the company's balance-sheet for the year ended April 30, 1921, has been forwarded to us, and we notice amongst liabilities the item, "Loans and interest to date" at £603,709. The company's shares are now included in the Stock Exchange lists of London and Manchester.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for week ending Wednesday, July 13, 1921, amounted to 814 tons.

UNITED OIL AND REFINERY COMPANY, LIMITED.—Throughput of refinery for June, 28,946 barrels.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

HAMBROS BANK OF NORTHERN COMMERCE, LIMITED.

BANK MAKING SATISFACTORY PROGRESS.

The ninth annual meeting of Hambros Bank of Northern Commerce, Limited, was held on the 21st instant, at 43 Bishopsgate, London, E.C., Sir Everard Hambro (the chairman) presiding.

The secretary (Mr J. H. Roscoe) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his address, said: The accounts cover a whole year's trading of the British Bank of Northern Commerce, Limited, which, on its amalgamation with Messrs C. J. Hambro and Son, became Hambros Bank of Northern Commerce, Limited, and this amalgamation at the date of the report had been in operation for five months. A special dividend of 17½ per cent. up to October 31st was declared to the old shareholders of the British Bank of Northern Commerce. Similarly, Messrs C. J. Hambro and Son took the profits earned by their firm up to that date. The profit and loss account therefore contains seven months' working of the British Bank of Northern Commerce, and five months' working of the joint concern. These profits, after paying all expenses amount to £346,932 17s 7d. From this has to be deducted income-tax, stamp duty on new capital, reserve for corporation tax, 17½ per cent. interim dividend already paid, and £100,000 to write down all our securities, other than 1922-1923 National War bonds, to market prices. We now propose a dividend of 5 per cent., leaving £73,787 to be carried forward.

REASON FOR CHANGE OF NAME.

Business has not been so active, but all things considered we are quite satisfied by the progress we are making. When the amalgamation was arranged, the question was raised whether the name "Hambros Bank, Limited," should be assumed. It was, however, decided in the negative, because it was intended to show through the union of the two names that the traditions of both institutions would be continued. During the past few months it has, however, gradually become clear that the retention of the words "Northern Commerce" is prejudicial to the bank's business in Southern and overseas countries, where the impression has been created that the international position of the bank has to some extent been narrowed down. Your board have therefore unanimously decided that, in the interest of the bank, its name had better be altered and abbreviated to "Hambros Bank, Limited."

The report and accounts were adopted, and a final dividend of 5 per cent. for the year, free of income-tax, was declared, payable on and after the 22nd inst.

At a subsequent extraordinary meeting the proposal to change the name to Hambros Bank, Limited, was approved.

EDWARD LLOYD, LIMITED.

INCREASED TAXATION BOTH AT HOME AND IN NORWAY.

PROSPECTS OF THE INDUSTRY.

The thirty-first ordinary general meeting of Edward Lloyd, Limited, was held on the 20th instant, at the head office of the company, 4-7 Salisbury court, Fleet street, London, Mr Frank Lloyd (chairman and governing director of the company) presiding.

DIRECTORS' REPORT.

The report of the directors for the year ended December 31, 1920, states that:—

The profits for the year, after allowing for capitalisation expenses, depreciation, making provision for bad and doubtful debts, estimated excess profits duty, income-tax, corporation profits tax and contingencies, amount to .. 119,876 7 10

making, with the balance brought forward from the previous year (less the amount capitalised) ... 10,976 16 0

a total of .. 130,853 3 10

Deducting:—
Interest on pension account, directors' and auditors' fees, head office and transfer office expenses .. 7,201 1 6

123,652 2 4

Dividend on the preference shares for the year to December 31, 1920 .. 42,187 10 0

Leaving as per balance-sheet .. 81,464 12 4

Deducting interim dividend on the ordinary shares at the rate of ninepence per share (free of income-tax), paid January 29, 1921 .. 45,000 0 0

There remains a balance of .. 36,464 12 4

The directors now recommend the declaration of a final dividend for the year on the ordinary shares at the rate of threepence per share (free of income-tax), making 5 per cent. for the year .. £15,000 0 0

Carrying forward to the next account .. 21,464 12 4

The profits for the year, after making provision for company expenses, show a decrease of £105,236 4s 9d, as compared with 1919.

CHAIRMAN'S SPEECH.

The secretary (Mr Robert B. Miller) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen, you will see from the report which has been in your hands for the last few days that the profits for last year show a falling off of £105,236 4s 9d as compared with 1919. This falling off is largely due to the increased taxation both here and in Norway, and to the provision we have had to make for the necessary repairs to the west wall of Riddham Dock.

TRADE DEPRESSION.

You will all know that the present time is a bad one for British trade generally, and our particular industry is feeling the result of the severe depression as acutely as most others. Under the circumstances, the directors do not feel that it would be prudent to recommend a further distribution of more than 1½ per cent. on the ordinary shares, making a total of 5 per cent. for the year.

The capitalisation of our reserves, foreshadowed at our last general meeting, was carried out last September, and our nominal capital thereby put into closer relation to the actual capital employed in the business. It is unfortunate that the present severe depression should have followed so closely the completion of that

operation, but we have every confidence in being able to make a reasonable return on the increased capital when things again become more normal.

With regard to 1921, the prospects are far from encouraging, the consumption of paper of all kinds having fallen off to an unparalleled extent, and the protracted coal strike has had the effect of still further curtailing the demand.

POSITION AND PROSPECTS.

In common with other industries, we are feeling the effect of the abnormal and varying rates of exchanges, and also the reduced demand for paper in consequence of the consumption by publishers of the heavy stocks they held at the close of last year. These stocks have now been brought down to a low level, and there are signs of a revival in the near future. Owing to our conservative policy in the past, we have every confidence in the company emerging in a strong position, and, as soon as the foreign exchanges have become stabilised, being able to meet competition from all sources as we have done in the past.

During the past year the men have thoroughly settled down to the three-shift system, and we have no doubt we shall soon make good the ground we have lost during the war compared with countries which were not so deeply affected as we were.

I must again thank our staff and employees, both at home and in Norway, for the excellent service they have rendered; their loyalty and goodwill are, if possible, even more appreciated in bad times than in good.

Mr Harry Lloyd seconded the motion, which was unanimously adopted, and a final dividend of 3d per share (free of income-tax) was declared on the ordinary shares, making, with the interim dividend already paid, 5 per cent. for the year.

The retiring directors, Mr F. N. Lloyd, Mr W. J. Whyte, and Lieutenant-Colonel John R. Garwood, D.S.O., were re-elected, and Messrs Turquand, Youngs, and Co. were reappointed auditors.

The meeting concluded with a vote of thanks to the chairman, directors and staff.

GENERAL ELECTRIC COMPANY, LIMITED.

SATISFACTORY YEAR—LARGE INCREASE IN PROFITS.

The annual general meeting of this company was held, on the 21st instant, at Magnet House, Kingsway, London.

Mr Hugo Hirst (chairman and managing director), in moving the adoption of the report and accounts, said that when in 1889 he assisted as one of the founders in the formation of the company, with a registered capital of £30,000, he little dreamt that it would be his good fortune to direct its affairs for 32 years. In spite of his most enthusiastic belief in the future of the electrical industry, he could not at that time have imagined that the company would grow into a world-wide concern, which would find it necessary to build its own home suitable for its own scientific purposes, including the hall in which that meeting was being held, and which served for the instruction and welfare of the employees. He trusted that good fortune would continue to favour the company within the walls of its new home.

CURRENT YEAR'S PROSPECTS.

The balance-sheet presented for the year to March 31st last was one of which they had every reason to be proud, but the four months of the new year which had just elapsed were casting a shadow over those results. He sincerely hoped that the slight improvement noticeable during the last week or two might continue, and that they might still create in the course of the remaining eight months a peak in the curve of the business which would counteract the dents and depressions created during the first four months. They were effecting all possible economies to help the company over a difficult period, and he was satisfied that as soon as this period was passed the future of the G.E.C. would be as happy and prosperous as the past. The net profit from all sources during the past year amounted to £796,148. Year after year certain writers and speakers—who imagined that they were doing a service to labour—pointed to the growth of the company's results as if it were wrong to progress, or as if the results were extorted at the expense of their manual workers. They either did not or would not understand that the results were due to joint efforts—that capital and the brain workers were doing their share as well. Labour would be told that the company had made £160,000 more profits, but no attention would be drawn to the increase in capital—£2,000,000 during the year—which was essential to obtain the increased yield. Out of the total profits only £539,000 would flow into the pockets of the shareholders, who, had they invested in British and Colonial securities the capital which they had invested in the G.E.C., would have had an income of at least £300,000 without risk of any kind. To secure to them the remaining £239,000 distributed among 12,500 shareholders they had been able to employ usefully 16,640 workpeople and staff. The company had paid to them in wages and salaries £2,864,000. In addition they had contributed another £2,000,000 of wages to workers in other industries spent on transport and on the raw materials required for their manufactures, and in this particular year they had contributed at least another £1,000,000 to the wages in the building trade alone; but the main benefit to all was that capital and labour had jointly created new values, and added to the much-needed wealth of the country some £8,000,000 or £9,000,000 in the past year.

KEY INDUSTRIES AND ANTI-DUMPING BILL.

Referring to the debates in the House of Commons upon the Key Industries and Anti-Dumping Bill, the Chairman said he noticed that the name of the General Electric Company was frequently mentioned in connection with the decision of the Government to include electric light carbons in that Bill. "Why should a powerful company like the G.E.C. be protected?" and "Look at the growth of the company" were some of the remarks made. Some people seemed to imagine that all the company's results were due to electric light carbons, and the Government had been accused of favouring the G.E.C. and assisting it to a monopoly. As a matter of fact the total capital invested in the carbon enterprise up to the outbreak of war was only £40,000, and the total losses incurred in that enterprise up to 1914, through no fault of their own but through the deliberate attacks of foreign trusts, was £78,000. They made no profit out of these carbon works during the war in spite of the great service which they rendered to the country, and the total accumulated losses to March, 1920, amounted to £115,000. Another industry with which they were connected—their Leamington glass works—had provided almost of equal value to the country as the carbon works, but it had not received the protection from the Government which was promised at one time. The financial results of these works owing to foreign competition had always been indifferent. Foreign trusts tried to acquire them before the war, but the directors would not part with them, as they preferred independence from the foreigner to additional profits, and their policy had been justified. Having referred to the company's activities in several departments, he said in conclusion

that they were well equipped to deal with all the demands that might come upon them, and nothing but the financial or social collapse of this country could stop the G.E.C. from obtaining its fair share of the world's work.

The report was unanimously adopted.

BRITISH MOTOR SPIRIT COMPANY, LIMITED.

CHAIRMAN OPTIMISTIC OF INDUSTRY'S FUTURE.

The fourth ordinary general meeting of the British Motor Spirit Company, Limited, was held on the 18th instant, in London, Mr Alfred Armitage, J.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profits of the Anglo-Texas Company, after deducting all operating and administrative charges, royalties, depreciation of plant and equipment, and American State and Federal taxes, amounted to £150,729 for the eleven months to December 31, 1920, which was at the rate of £164,432 a year. The sum of £67,908 was transmitted as dividend to England, and appeared to the credit of this company's profit and loss account, and the balance, amounting to £82,821, was held in reserve against expenses of development and depletion of oil resources.

The Louisiana Petroleum Products Company, in which they held a large interest, recently commenced operations on a commercial scale. The latest reports received from America stated that it was then refining 1,200 barrels of crude oil daily, and it was expected that within three months it would be working at its full capacity of 3,000 barrels. The holding of the British Motor Spirit Company, Limited, in this refining company had been increased from 40 per cent. to 85 per cent. of the common stock in addition to the whole of the preference shares. Referring to their oil production company, the Anglo-Texas Oil Company, he said that at the time they commenced operations the production was 1,000 barrels a day, and despite the natural fall in the output of the original wells the average daily production was well maintained. On one of the producing leases they took over three wells, all producers, but of the next two wells drilled, at least one was a dry well, and the other was only a small producer. These failures destroyed their earlier hopes, but further development enabled them to maintain an average daily production after allowing for stoppages of between 800 and 900 barrels, despite the natural fall in the output of the original wells. Some of their largest leases still remain to be developed. These might be regarded as reserve lands, but adjacent developments by other companies indicated that they were of increasing value. In the early months of the current year their production declined through an accident to the casing of the largest well, but fortunately when this was repaired its output was found not to have been affected, and it still continued to be a large producer.

INTEREST IN VALUABLE FIELD ACQUIRED.

More recently a two-thirds interest had been acquired on a lease on which drilling operations had been very successful. The first well came in with a very large production in May, and had to be choked down to 2,000 barrels a day, and the second well, which came in in June, was equally good—namely, 2,000 barrels. A third well was being drilled, and would shortly be completed, and there was sufficient room on the lease for a total of five or six wells. The lease was considered to be extremely valuable. A great advantage of this particular lease was that they now had a direct pipe-line connection between it and the refinery, thus ensuring a supply of the crude oil for refining purposes, and enabling them, when there was a glut in the market of crude oil to turn a large portion of their crude oil into finished products at the refineries, and thereby obtain cash payment for it. The oil lands which the company possessed gave it ample acreage for future development, although they might consider it advisable to buy or sell leases to suit the programme of their business.

THE FUTURE.

With reference to the future, he said it was very difficult at this moment to say what was going to happen as regards prices for crude oil and finished product, but he thought he had said sufficient about the operations of the company to show them that the production of crude oil, in spite of their earlier disappointment, had increased beyond all reasonable expectation, and although production in the future, as in the past, might be liable to fluctuation, they had every reason to believe that the general tendency would be in the upward direction. The highest prices for the different qualities of their crude oil ranged from 3.50 dollars to 3.75 dollars, but the present-day prices ranged between 40 cents and one dollar. They did not regard these prices as permanent; the general opinion was that in the future they would rise considerably. He thought shareholders would gather from his remarks that they had already made very satisfactory progress in development during the past year, the period in which this company had been developing and working its properties in America. Their production was four times greater than it was a year ago when they took over the first leases,

and their refinery was working satisfactorily. It only remained for them to see better prices for their commodities, and he thought they might safely gather from the reports they were receiving that there was a bright future in front of the company. The present depression in trade could not last for ever, and they might be thankful that already a better feeling prevailed, and when the revival in trade generally did come he did not doubt that oil would receive its share of the improved conditions.

Mr Edward Manville, M.P., seconded the motion, which, after a short discussion, was carried unanimously.

AMALGAMATED TEXTILES, LIMITED.

MORE ORDERS AND FULL TIME.

The first annual meeting of Amalgamated Textiles, Limited, was held on the 19th instant, Mr T. H. Morris, D.L., J.P., presiding. He said that the property consisted of the amalgamation of three well-known worsted spinning concerns, producing practically the whole range of worsted yarns for the manufacture of ladies' dress goods, men's wear, fancy worsted cloths, and all classes of hosiery. They were well equipped, long established, with a splendid reputation for high-class work, fully manned with excellent staffs, each with ample capital and considerable reserves, with no loans or charges on their properties, and no goodwill; all with large earning powers in normal times, and each showing a credit balance on the past year's results, notwithstanding that all stocks had been written down to the day's value on March 31, when the financial year ended. The coal strike had had the effect of stopping all production, and had enabled merchants and producers to dispose of a certain amount of surplus stocks which had cleared the way for new business to some extent.

The company was the largest firm of worsted spinners in the country. The labour position in the industry was satisfactory, no trouble having arisen, and an Industrial Council was doing good work in conciliation between employers and employed.

The board felt that each firm in the amalgamation should preserve its own individuality. Benefits of amalgamation must be gained by joint services and by comparison of methods of production, but the reputation of each firm for its own products must be preserved. In attempting to effect economies which amalgamation could produce, care was being taken to assist and not to hamper the enterprise and reputation of the three concerns. The directors were doing their utmost to safeguard the company's resources, making every preparation for more prosperous times, and therefore they felt that no dividend other than that on the preference shares could now be paid.

With regard to the future, the Chairman said that only that morning the board had received from one of its concerns in Yorkshire a letter which ended by saying: "We have had a very satisfactory post this morning—several nice lots of orders—so that we have arranged to go on full time to-day." Another of the factories went on full time on Monday. It was satisfactory to know, after having the mills closed down two or three days a week, and a large number of hands unemployed or on the smallest possible wages, that they were going back to full employment and full pay. He thought it would be the beginning of better times.

The resolution was carried, and it was unanimously decided that the name of the company be changed to Daniel Illingworth, Morris, and Co., Limited.

The proceedings closed with a vote of thanks to the chairman.

LOBITOS OILFIELDS, LIMITED.

HIGHEST PRODUCTION FIGURES IN COMPANY'S HISTORY.

The thirteenth annual ordinary general meeting of the Lobitos Oilfields, Limited, was held on the 18th instant, at Winchester House, Old Broad street, London.

Sir Archibald Williamson, Bart., M.P. (the chairman), who presided, said that the production of oil for the year 1920 was 97,296 tons, being the highest figure yet attained. The net profit earned was £52,026. In view of the slightly increased production, the diminution of profits would appear disappointing, but there were exceptional circumstances which accounted for it. The price obtained for the oil during 1920 was that fixed for a long contract made nearly four years previously, when market conditions were very different. The price had been remunerative during the earlier years, but owing to the high cost of production in 1920 the net results had been adversely affected. A new contract had become operative as from January 1, 1921, and under that contract they would receive a substantial increase on the price under the preceding contract. The prospects were such as to enable the board without hesitation to recommend the maintenance of the usual dividend for the past year.

Turning to the items of the balance-sheet, it will be noted that they had recommended an allocation to reserve fund on the present occasion, but they had continued their usual conservative policy

of making adequate provision for depreciation under the headings of equipment account and development account. They had also continued to write down the value of the tank steamer *El Lobo*, which now stands at a low figure.

There is a new item in the balance-sheet under the heading of "New Tank Steamers' Construction Account," on which account they had expended up to December 31st last £122,102. The delivery of the two 10,000-ton tank steamers had been retarded owing to strikes and other causes. They had chartered both steamers for a period of time, and the profits earned by them should enable the company to write them down to a moderate figure. Their other steamer had also been chartered for three years at a profitable rate.

He had previously called attention to the effect of the policy of withholding Government lands in Peru from exploitation. The Government was now studying a new petroleum law. During 1920 twelve new wells were put in the producing list, and two were abandoned, so that on December 31st last there were 163 producing wells. They had secured some important areas of land and oil rights in Colombia, which they believed might prove to be very valuable at no distant date. The company's production for the six months ended June 30th last was 50,183 tons. The figures for May and June were in each case the largest in the history of the company, and they hoped that they would be still further increased.

The report and accounts were unanimously adopted.

INTERNATIONAL TEA STORES, LIMITED.

GOOD YEAR'S BUSINESS AND RECORD PROFIT.

The twenty-sixth annual general meeting of the International Tea Company's Stores, Limited, was held, on the 21st instant, at Winchester House, Old Broad street, London, Mr. G. A. Tonge (governing director and chairman) presiding.

The secretary (Mr E. Davies) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—You will be glad to see that we have made a larger profit than in any previous year of the company's existence—namely, £275,508. This, I know, is only £2,000 in excess of that made last year, but you must bear in mind the fact that we have over 460 branches, and limit them as we may, we always have to carry huge stocks; consequently, when our balance-sheet was made up at the end of April everything had to be taken at whatever value it might have fallen to at the time. This meant a very drastic cutting down indeed.

Most of you know the very great drop there has been in nearly all food products, and with this loss in value I am sure you will agree with me that we have every reason to be highly satisfied with the result of our efforts. Our trade is considerably in excess of all previous periods.

Turning to the report, you will see that we brought forward from last year £41,808; this, together with the profit I have mentioned, amounts to £317,316, which enables us to pay our 6 per cent. and 7 per cent. preference dividends, 12 per cent. on our ordinary shares, to depreciate our fittings and fixtures by £20,000, to place a similar sum to reserve, and to carry forward £97,888, which is subject to excess profits duty and corporation profits tax.

Looking at the balance-sheet which you have no doubt studied, I do not think I have any comment to make, except to tell you that the freehold property, taken at £520,384, is undoubtedly worth a sum far in excess of this figure; a great deal of it was bought years ago, and would probably fetch several times what we gave for it.

With regard to the business generally, I have told you that the trade is showing a considerable increase, and we are making big efforts to manufacture as many as possible of the goods we sell. By doing this we not only get an increased profit, but we also ensure that the articles we sell are of the highest standard of purity and excellence.

The resolution was carried unanimously, and the usual formal business terminated the proceedings.

Messrs Samuel Montagu and Co. write on July 21st as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,556,570, as compared with £126,554,240 last week. The official Bank of England rate of discount was reduced to-day to 5 1/2 per cent. The fair amount of gold that came into the market was taken for New York. New York reports the arrival of \$3,264,000 in gold—\$1,500,000 from London, \$1,500,000 from France, and \$164,000 from Mexico. The wide range from which India draws its gold supplies is shown by the following rupee figures, which relate to the ports of Bombay and Calcutta (combined) from January 1st to May 31st this year:—

	Imports.	Exports.
	Rs.	Rs.
Aden ..	45,04,763

SILVER.

The tone of the market has been less robust. The unsettled conditions in China arising from recent banking difficulties had caused a good deal of local demand for hard cash, but it is reasonable to expect, now that encashment of the Banque Industrielle note issue seems to be assured, a return of confidence, and this naturally would be accompanied by a return of cash into the custody of the banks. Most of the buying orders have been to cover sales previously made in speculation; bear operators, however, are not now numerous. The scantiness of daily supplies has been the prevailing feature. So small were these on the 13th inst., and the three successive days, that the cash quotation did not change—a stability which

has not been recorded since October 15-18, 1919. The Indian bazaars have been inactive until to-day, when a recrudescence of demand, coupled with an improvement in the value of the U.S. dollar, brought about a rally in the price of cash silver of 1d from 37d recorded yesterday, the lowest quotation of the week. At the same time, the difference widened to 3d. We referred last week to two ways in which an appreciation in the value of the U.S. dollar could assist in raising the price of silver. There is also a possible third. Whilst the currency pound quotation of rupees is so much below their gold standard value, a rise in the value of gold consequent upon movements of the U.S. exchange tends to harden the sterling value of the rupee, and thus to render a remittance of silver from this market to India a more profitable transaction—in other words, the bazaars could afford to pay a better currency pound price for their metal. Chinese official figures as to the imports and exports of silver (given below) are of particular interest in view of the position of the silver market at the present time:—

(Value in Haikwan taels.)

Year.	Imported.	Exported.	Net Import.	Net Export.
1911 ..	61,082,957	22,776,955	38,306,002	..
1912 ..	45,098,297	25,849,645	19,248,652	..
1913 ..	55,711,490	19,743,126	35,968,364	..
1914 ..	16,498,744	30,121,693	..	13,622,949
1915 ..	20,717,506	39,099,820	..	18,382,314
1916 ..	37,088,320	63,766,446	..	26,678,126
1917 ..	27,507,292	48,490,390	..	20,983,098
1918 ..	36,124,229	12,629,302	23,494,927	..
1919 ..	62,093,707	8,968,418	53,125,289	..
1920 ..	126,354,388	33,715,410	92,638,978	..
Total ..	488,276,930	307,161,205	181,115,725	..

It will be observed that during 1914-1917 net exports were recorded instead of net imports, as in the years preceding. The grand total of the net exports for these four years is less than half the net imports of the following three years 1918-1920, and less than 90 per cent. of the net imports of 1920 alone, 92,638,978 Haikwan taels. The last-named figures represent the remarkable total of 112,575,000 fine ounces. The population of China is so large that the power of hoarding is very great indeed, but an importation of this size implies special conditions and a continuance of such an abnormal state of affairs cannot be regarded as likely. In this connection the statement recently issued by Mr B. Lenox Simpson, adviser to the Chinese Government, is enlightening:—“.....The statistical department of the Bank of China had just completed researches into the disappearance of silver coin by hoarding in Manchuria and in the metropolitan province of Chihli. They estimated that in each area from 10,000,000 to 15,000,000 silver dollars (£1,250,000 to £1,875,000) had been withdrawn and hidden since the coining of the Yuan Shi Kai dollar had commenced on a large scale in 1914, and that, therefore, in the 22 provinces there might be anywhere from 100,000,000 to 200,000,000 dollars (£12,500,000 to £25,000,000) in cash, which the restoration of confidence would draw out.” At the present price, £25,000,000 of silver would be equivalent to about 150,000,000 fine ounces.

Reports and Notices.

The address of the London office of the Imperial Bank of India is now 5 Whitlington Avenue, E.C. 3.

Mr Frank E. Searle has resigned from the board of directors of Messrs Edward Starr and Co., Limited, of Lloyd's, and is commencing business on his own account as an incorporated insurance broker, under the style of Frank E. Searle and Co., with offices at 23 Bucklersbury, Mansion House, London, E.C. 4. Telegraphic address, Elisearle, Cannon, London.

The approval of the Court has been granted to the reduction in the capital of the Manila Railway Company (1906), Limited.

Lieut.-Col. T. Gracey, D.S.O., R.E., has joined the board of the Bengal and North-Western Railway, vice the late Col. T. Gracey, C.S.I., R.E. Sir John Stratheden Campbell, K.C.S.I., C.I.E., has joined the board of the Rohilkund and Kunaon Railway, vice the late Col. T. Gracey, C.S.I., R.E. Mr E. A. Neville has joined the board of the Delhi, Umballa, Kalka Railway, vice the late Col. T. Gracey, C.S.I., R.E.

At a general meeting of Richard Thomas and Co., Limited, held on Tuesday, July 19, 1921, a resolution was passed that the appointment of Lord Bledisloe of Lydney as a director of the company be determined.

GOVERNMENT STOCKS, &c.

GUAYAQUIL AND QUITO RAILWAY COMPANY 6 PER CENT. PRIOR LIEN MORTGAGE GOLD BONDS.—The twenty-fifth amortisation of the above bonds took place on July 20th at the banking house of Messrs Glyn, Mills, Currie and Co., by public tender, the amount to be applied being £17,878 4s 3d. Tenders amounted to \$223,000, ranging from £189 to £245 per bond. Tenders at £189 15s and under were accepted in full.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the July instalment of the Debt Service, in accordance with the arrangement of May 25, 1912.

BANKS.

ALLIANCE BANK OF SIMLA, LIMITED.—Subject to audit, the profit for the year ending June 30, 1921, after payment of expenses, full provision for bad debts, depreciation of investments, &c., is Rs. 12,35,492. The amount brought forward was Rs. 3,13,931, making a total of Rs. 15,49,423. Deducting the interim dividend paid in December last, the sum now available is Rs. 11,42,891, which the directors propose to utilise, after payment of the preference dividend at the rate of 6 per cent., in payment of a dividend on the ordinary shares at the rate of 14 per cent. per annum, together with a bonus of 3 per cent., free of tax. It is proposed to transfer two lakhs to reserve and one lakh to pension fund. The balance to be carried forward is Rs. 3,31,154.

COX AND CO.—The balance-sheet to March 31, 1921, has just been issued. The total capital is £650,000, and reserve fund stands at £600,000. Current deposits, and other accounts amount to £17,770,632, and acceptances to £910,076, making total liabilities £19,930,708. The principal assets are cash £5,441,970, advances £6,148,850, bills receivable £2,794,857, and investments £2,128,977.

IMPERIAL BANK OF INDIA.—A balance sheet has been received from the central office of the bank, as follows:—"Profit from the period January 27th to June 30th, Rs. 58,14,792, which is disposed of as follows: dividend declared at the rate of 16 per cent. per annum, free of income-tax, absorbing Rs. 33,00,656; transferred to reserve fund, Rs. 10,00,000; transferred to pension funds, Rs. 5,00,000; carried forward, Rs. 10,14,136—total, Rs. 58,14,792."

STANDARD BANK OF SOUTH AFRICA, LIMITED.—Balance-sheet, March 31, 1921:—

MISCELLANEOUS.

ANGLO-PORTUGUESE TELEPHONE.—The report of Anglo-Portuguese Telephone Company for 1920 states that floating assets and liabilities in Portugal at close of year have been converted into sterling at the rate of 64 per escudo. Capital expenditure amounted to £121,367. Gross income was £48,046, less expenses £42,023, leaving a profit of £6,023, as against £29,797 for 1919. After payment of income-tax, £1,186, and providing for debenture interest and sinking fund, £6,100, the amount for disposal (including £8,828 brought forward) is £7,564. In November the company paid an interim dividend of 3 per cent., less tax, which absorbed £7,778, being £213 in excess of amount now available. The amount of corporation tax has not yet been ascertained.

CHILI TELEPHONE.—The gross revenue of Chili Telephone Company for the year to March 31, 1921, was £238,784, less gross expenditure in Chili and London £195,137, leaving a profit of £43,647, plus £19,843 brought in, making £63,490. The directors recommend a final dividend of 3s per share, free of tax, making 6 per cent., free of tax, for the year, placing £17,285 to general reserve, and carrying forward £16,504. Difference on converting liquid assets and liabilities in Chili at the lower rate of exchange was £12,785, and this amount has been debited to general reserve.

SCOTTISH AMERICAN MORTGAGE.—The net profit of the Scottish American Mortgage Company for year ended May 31, 1921, was £81,898. The directors recommend a dividend for the year of 12 per cent. (less tax), placing to surplus revenue account £2,348, making it £58,257. Owing to the greatly reduced prices for wheat and cotton, collections of interest have been less punctual than usual. It is anticipated that arrears will be collected. The balance on exchange, amounting to £16,685, has been carried along with other sums to contingent fund, which has been increased by £35,000.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Adjusted, April 30, 1921.							

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year ends December 31, Except where Stated.	Outputs.			Output Month June, 1921.	Increase or Decrease.	Output Six Months of 1921, Except Where Otherwise Stated in Brackets.	Increase or Decrease.	Dividends paid in Past 5 Complete Years.

* Half-year.

(1) Standard Bank of South Africa accounts for 15 months.

(o) Anglo-Portuguese Telephone.

(t) Harper, Bean.—Nov. 7, 1919, to Dec. 31, 1920. Interim dividend only.

malting, 45s 6d; No. 4 Canada Western, 47s; Canadian feed, 44s; American feed, 42s, all per 400 lbs landed terms. Pearl barley, £2 1/2 to £2 3/4 per ton. On c.i.f. terms a cargo of Dan-Bess-Kustendji expected loading, sold 45s per 400 lbs. Oats generally firm on spot, with a fair demand. English whites quoted 46s to 49s; the winter grey 32s to 35s, old 44s, per 336 lbs. Of imported, late, f.a.q., 32s 9d; clipped, 33s 6d; Chilean tawny, 33s 6d; No. 2 Canada Western, 35s 6d; No. 3 ditto, 34s 6d; New Zealand, 50s; Australian, 31s 6d, per 320 lbs, landed. On c.i.f. terms, and business resulted at irregular but generally firm prices, a fair firmly held. English spring, 65s to 75s; new winters, 55s to 60s, per 532 lbs. Chinese horse beans quoted £9 15s to £10 10s per ton. Peas also firm and in good demand. English maples, 95s; Duns, 65s to 68s, per 504 lbs; Japanese, 35s to 36s; and Tasmanian blue, 21s to 22s, per cwt, ex store. Oats, 36s; and meal firm.

Scottish quoted £26 to £27, and London made £23 to £24. American and Canadian rolled oats, £23 per ton. Lentils nominal. No. 1, split, 34s, and Egyptian 30s, per 100 lbs. Homeward freight markets displayed a fair amount of activity for grain cargoes, and rates were firm, especially for early loading. From the Gulf of Mexico tonnage was taken to U.K., July 31st cancelling, at 7s 9d per qr one, and 8s 3d two ports of discharge; 7s 1 1/2d August 7th, and 6s 9d August 15th, with 26 cents per 100 lbs to Antwerp/Hamburg range, August. Montreal paid 5s 10 1/2d qr U.K./Continent, July. North Pacific, 60s for wheat or flour cargoes and 65s to 66s 3d barley. River Plate section fairly active, especially for August-September loading, and steamers in this position were placed at 45s to 47s 6d as to cancelling date, India quiet, and 22s 6d quoted on dead weight to U.K./Continent. Out-ports, however, ruled stronger and tonnage scarce. Saigon rice

is worth 62s 6d to 65s, with 65s paid for Danly beans and/or wheat to U.K./Continent, while 65s is obtainable from Australia for wheat cargoes home. The Danube has been in strong request, and fixtures included July steamers at 35s to 30s, August 15th 29s, and August 31st cancelling 28s 6d per ton, U.K./Continent. South Africa inactive, and other markets nominally unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent, writing on Thursday, says:—Pig-iron: There is an entire absence of business in pig-iron for consumption either at home or abroad. The costs of manufacture are still too high to enable British ironmasters to compete with foreign pig-iron. The normal quotations remain as follows: No. 3 Cleveland G.M.B. pig-iron 135s per ton, and East Coast mixed numbers hematite 140s per ton, but no new business is reported. A few blast furnaces have been restarted to make pig-iron for consumption in firm's own steel works. Manufactured iron and steel: Operations are being resumed at some of the local steel works for manufacturing material against old contracts. There are no new orders being placed. Steel ship plates, home, £15; steel ship angles, home, £14 10s; iron bars, home, £16; steel rails, home, £14 net. Iron ore: There is an entire absence of business in iron ore as all works have large stocks, and are declining to take deliveries against contracts until they resume operations at their blast furnaces.

Our Sheffield correspondent writes:—The position of the local steel industry appears to be no better than before the strike. A considerable proportion of the open-hearth furnaces in the district restarted this week on orders which have accumulated during the past three months, but these only amount to two or three weeks' work, so that the course of business in the immediate future will be watched with great anxiety. Signs of revival in export buying are still wanting. Prices of British iron and steel material, although lower, are still substantially above European quotations. Steel billets have been reduced £2, and wire rods £3 in certain qualities, and £6 in one. There is a gradual deflation going on throughout products of steel, including tools. Makers, unfortunately, hold large stocks of material which were bought at the inflated prices of a year ago, so that reductions in selling quotations mean losing money. The demand for railway steel, whether for the home or overseas railways, has been phenomenally quiet for a long period owing to purchases at much cheaper rates on the Continent. The crucible steel trade is little if any better. A few orders are coming in, but foreign buying is quite negligible. Trade is falling off in files and most classes of hand tools, and there are loud complaints from the cutlery makers. So far as steam coal is concerned, the railway companies are the largest buyers, as they are building up their exhausted reserves. Not much is doing in export. Gas companies are also taking large tonnages. As regards house coal, the public, after getting in temporary supplies, are ordering with great caution. The rush is over. Slacks are going out of hand steadily, but the demand is less active, buyers holding off in the expectation of prices coming down. No blast-furnace coke is being produced.

Our Glasgow correspondent (writing on Thursday) says:—Industrial business has been practically wholly suspended in this

The Modern Burglar's Methods

High Explosives

IN the words of Sir Leonard Dunning, H.M. Inspector of Constabulary—"Crime is a profession which each year becomes better educated and better equipped."

The remarkable ingenuity and sound technical knowledge of practical mechanics displayed by the modern Burglar in present day safe robberies prove these words to be only too true.

The use of high explosive as a safe-breaker is one which has found much favour by the modern Burglar on account of its simplicity and effectiveness. The accompanying illustration shows the door of a "cheap" safe which has been blown to pieces by high explosives inserted in the keyholes.

In THE CHATWOOD SAFE, although the locks may be shattered by this method of attack, the security of the safe is in no way affected. Even in cases where the handle, locks and hinges have been entirely destroyed, the door has remained unopened and contents of the safe secure.

THE CHATWOOD SAFE

Since 1858

district for about a week back, and it is said literally that has been the experience in commercial lines. The trade holidays and enforced idleness in very many departments account for the situation. A moderate restart was made yesterday in some of the Ayrshire and Lanarkshire collieries, and the numbers working will now be daily added to, but adequate supplies from producers will not be up to the mark for a time to come. This will tell mostly against the reopening of the large steel and iron works, which, in fact, are not expected to be in running order before the advent of August. And shipbuilding and engineering must follow suit, and their off period therefore will also extend into next month. Rumour has it that constructors in steel and iron have fairly good order books on hand, but that they are in no wise disposed to hurry proceedings—until the coal outlook becomes defined. The existing scarcity of fuel is keeping prices very stiff and is limiting transactions to necessitous cases, chiefly the bunkering of steamers and the provisioning of gas and electricity works, and even in these connections buying is as much restricted as possible. All round everybody is crying out for cheapness in coal, without which it is affirmed general trade cannot be revived. The difficulty is to fix a common basis on which both parties can meet and deal. Yesterday there were sellers of Fife and Lanarkshire first sorts at from 40s to 45s a ton, figures that represent a decline of 10s a ton on those of ten days ago, but the quotations did not approve themselves to buyers. The latter decline as a body to commit themselves to a rate, but there are consumers who condescend on the essential terms as from 20s to 25s at the pit head. It will take a week or two to clear up and adjust the situation. On Monday a story got about that negotiations were proceeding for the amalgamation of various large and important English and Scotch steel-making interests, but the statement lacks confirmation or indeed support of a reliable kind.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The comparatively small amount of business passing in the home trade is reflected in the poor competition of home users in London, and as was the case in June, the colonial wool auctions are being mainly supported by the Continental demand. More machinery is being brought into commission in the consuming centres, though the increased activity in the mills is principally due to the working off of arrears, and the longer running hours will not be possible for many weeks unless new orders are forthcoming on a much larger scale. Some improvement may be expected from the reduction in the combing tariff, especially as wool has been held up in some instances pending the adjustment of the new scale of charges, but Germany is still a serious competitor in this section of the industry. In this connection it is worthy of note that while a considerable proportion of the Bradford combing plants is idle, most German combing establishments are fully booked up for at least six months ahead. The turnover is small, and quotations for tops are again easier. Users are only covering their immediate requirements, and the buyer appears to be master of the situation. A moderate amount of new business is passing in yarns, the home trade buying some fair weights of merinos, while crossbreds are in demand for Germany. In both cases, however, the business does not amount to a great deal. There is nothing new in the piece goods trade, but there is a little more movement in some directions, though at prices which leave no profit even on to-day's rates.

COLONIAL WOOL.

FROM A CORRESPONDENT.

The sales have been well attended throughout the week, and the buying spirit in evidence can still be described as fairly good. It is a fact that prices can now be considered as on average 7½ to 10 per cent. lower compared with the average prices of last series, but the offerings have been absorbed creditably, and that is the best feature of the auctions. Last Monday saw an increased number of Continental and Yorkshire buyers turn up, all of which has meant additional buying power, and as a result the sales have gone with a good spirit, with the Continental section most in evidence. Taking a survey of the clean scoured costs of the wools which are selling, it is patent to everyone that the raw material is at a most acceptable price, and any failure of trade revival cannot be laid at the door of the cost of wool. Business is still difficult in consuming centres, and apparently the textile industry of the West Riding is not nearly so comfortably situated as the mills in either France or Germany. The renewed large operations of the Continental section of buyers have given rise to a good deal of surprise, and there is reason for this. Evidence increases that trade is fairly good on the Continent, and in Germany in particular. The increased demand for pieces and bellies, all on Continental account, is very significant, and apparently these wools are all wanted for mule spinning, to produce soft full-handling fabrics which are still popular on the Continent as dress goods. Crossbreds are still

moving irregularly, and every quality from 50's downwards is cheap. The home trade continues to purchase 56's to 58's freely at last week's rates, but any movement at all in lower crossbreds is in buyers' favour. Faulty slipes are often 15 per cent. down, and this is all evidence of a very limited trade in the Huddersfield and South of Scotland manufacturing areas. Cape wools, too, are on average 10 per cent. easier, and the offerings here continue to be very limited.

I regret to say that trade does not show much sign of revival in West Riding manufacturing areas, although a few mills, now that coal is available, are running a full week. It is to be hoped that more will be doing at the piece end of the trade, which continues to be the most unsatisfactory branch. A new and lower combing tariff came into operation last Monday, the reduction on 58's and upwards being 1d, 56's ½d, and ½d on all qualities below. This, with the sensible reduction in wages which took place at the beginning of the month, must all tend to lower costs of production, this being wanted most. Lately a better inquiry has developed in Bradford on German account for tops and noils, both merino and crossbred, and prospects seem to indicate an improvement in the course of a few weeks. I understand that German combing establishments are busy, and that higher charges are likely. Better accounts continue to come to hand from the United States, where the textile industry is reported to be busy. Retail clothiers in this country continue to complain bitterly at the marked absence in the demand for new clothes, and that undoubtedly is the weakness of the textile position generally.

MANCHESTER, July 21.

The tone of the market has been quieter, and less business has been done than in recent previous weeks. In cloth for India demand has fallen off. This change is partly due to the uncertainty with regard to the monsoon season, and partly owing to some un-

easiness relating to the political situation in our dependency. Merchants have not sufficient confidence in the general prospects to anticipate their requirements further ahead. Occasional orders of moderate weight have been arranged for China, Java, and Singapore, and the general trade position in the Far East is improving. There has not been much activity for the Mediterranean or European outlets. The position of manufacturers remains very irregular, but many firms are steady in quotation as a result of having rather more work to go on with. Restricted operations have occurred in American and Egyptian yarns for home consumption, and spinners find it difficult to obtain any definite relief. Some fair lots have been booked in export yarns for Eastern markets.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The position in market hides grows stronger week by week, and although tanners profess to see trouble ahead, they still follow a rising raw material market. All hides sold in Bermondsey auction on Thursday again advanced, and heavies at 9½d to 9¾d, showed an advance of ¼d to ½d per lb on last prices. Cows also advanced in a similar ratio, heavies and lights making 7½d per lb. Calf were steady, and lambs sold from 1s 3d to 4s 10d, a fall of 4d per skin on the latter. The demand for foreign hides is not quite so lively; fregorifics are offered at 9½d, and a parcel of Leibig Colons have made 10½d. Drys are not selling well to the home tanner, but there seems a better demand for export. The American market seems easier, and heavy Chicago packers are now down to 12½ cents.

Business in leather seems falling off in view of the holidays; sales in bulk of bends are now only made where concessions are made in price, and it is feared that if the quiet holiday demand lasts for a month, the tanners' accumulations of sole leather may again depress the market. Upper leather is dull, although the outlook is regarded as better for box calf and glacé goat. Some amount of German chrome calf and patent is again being offered, and as the quality is good and the price low, it finds buyers. The glacé kid market is still unsettled, as some of the stock now being liquidated by the banks is selling still well below cost of production.

Shoe manufacturers are fairly busy, and in the Bristol district full time is being resumed in many cases. The home trade generally is of fair dimensions, but the difficulty of finding export markets is a very increasing one—even South Africa having placed an embargo on the imports of many kinds of footwear.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

Both imports and consumption of building woods have been light over the month, and the stocks in the country have not been decreased to the large extent desired by importers. Large quantities of timber on the spot have found their way through the

auction brokers' hands, and in many instances at prices that must have entailed heavy losses to sellers, though for special sizes prices have been maintained at the present low scale of values compared with those ruling last summer. Little f.o.b. business has yet been negotiated with Swedish wood exporters. The latter at a meeting held recently decided to lower their f.o.b. rates to a basis of £26 a Petrograd standard for unsorted red deals, and £16 for 7 in battens, but these are not yet sufficiently low to induce importers to operate, as Finnish and other European countries are quoting cheaper rates as well as the smaller Swedish exporters who are not in the union. At a later meeting of the Swedish wood manufacturers, it was resolved that they be not tied down to a minimum rate in their selling prices. The Canadian spruce market continues dull, and prices are more difficult to maintain, due, to a large extent, to the competition from the North of Europe. Stocks at the West Coast ports are still on the heavy side, with consumption only fair. The mahogany market both in Liverpool and London has continued to be of a dull character, with a tendency to lower prices. At a Liverpool sale held recently the brokers' minimum for African wood was reduced from 5d to 4d per foot super, and this had the effect of quickly disposing of a large number of Grand Bassam logs put up for auction. There is at present little market for small and inferior wood. The consumption of cedar is slow, and shipments are not recommended. Other furniture woods are in only moderate request. Stocks of teak, both of logs and dimensioned wood, are heavy, with consumption quiet. Native timber is also of an uninteresting character. Writing generally of the trade, native and foreign, there is a lack of confidence as to whether prices have touched bottom. The demand is of a hand-to-mouth character, and though conditions are expectedly better since the end of the dispute in the coal trade, the general industrial conditions of the country must improve before the timber trade again gets into its full stride.

LINEN TRADE.

BELFAST, JULY 20.

Flax.—The Irish markets were closed the greater part of last week owing to holidays, but any small lots offered were taken off the market at higher prices. On the Continent there is practically no change to report, and supplies are still very small, as fabricants will not scutch the straw in the present dry weather.

Yarns.—Since date of last report the market shows signs of improvement, and considering the holiday season, a fair amount of business has come to hand. This applies to both line and tow yarns. Demand for damask warps continues, and orders are being placed for forward delivery. Continental spinings are not much in evidence, prices as a rule being above the level of home yarns.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

The oilseed trade during the past few days has experienced a marked revival of activity, more particularly in linseed and linseed oil. The strong demand for Plate linseed towards the close of last week has been greatly accentuated both here and on the Continent by the drought and the giving out of the pastures, which have compelled cattle rearers and dairy farmers to make heavy calls for oilcake. Hence the urgent need of crushers for seed near at hand to meet the unexpected demand for the residual.

The result has been, taken with the strength in Argentina, a very firm market, and a considerable amount of business appears to have been put through at daily advancing prices, Plate linseed on spot

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox and Co. (France) Limited. Deposits are received for fixed periods on terms which may be ascertained on application.

and passage having appreciated fully 70s on the week to £23, with Indian seed correspondingly dearer in sympathy. The large quantities of Argentine linseed afloat or about to be shipped, though to be taken into account, have not proved an adverse factor. On the other hand, with the big demand for the cake product at a time when stocks are extremely low, it seems possible that supplies will be readily absorbed.

Raw linseed oil has followed the seed market, and has advanced strongly up to £39 per ton (London), and £37 10s (Hull) being paid for spot oil, with a fair business reported in the September-December position round £38. All round the tone is much more confident. On scarcity and dearer seed cotton oils have advanced, crude being up 40s, and edible refined 60s per ton on the week. Soyabean oil is also in better request, and quoted higher, while for crude rape oil sellers are demanding 80s, more than has been the price for some weeks past. Palm, kernel and groundnut oils meet with a steady inquiry, the latter fetching more money.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 87s 6d to 93s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

“Blue Tiers,” a fine-ground slow-setting cement, and “Red Tiers,” a fine-ground quick-setting cement, 3s per ton. “Ferrocete,” a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 22.

There was a fair amount of business in several directions, though in a general sense demand proved rather quieter, after the activity previously shown. Such articles as Rangoon beans and Japanese peas were in considerable request, both with regard to spot and forward positions, and firm features characterised the market. Continental buyers were again very much in evidence.

SUGAR.—The market continued to move on firm lines, and there was a good inquiry both on grocery and manufacturing account, with offers from most producing countries sparingly made. Tate's cubes sold, 62s 9d to 63s 9d; granulated, 59s to 59s 6d; pieces, 47s 6d to 50s; castor, 63s to 63s 6d; Lyle's granulated, 59s to 59s 3d; yellow crystals, 53s 6d. Crystallised West India sold, 45s to 51s 6d, as to quality; and muscovado, 38s to 46s. American granulated, spot, sold, 58s 6d; ditto, afloat, 30s, c.f. and i. terms. White Java, September-October, 22s 6d, c.f. and i. terms. White Brazilian, spot, changed hands at 53s 6d to 55s; and white Mauritius, 52s 6d to 54s 6d. Dutch granulated, prompt, 30s 6d, f.o.b. terms; and cubes, 35s. Czechoslovakian granulated, prompt, 29s, f.o.b., Hamburg. Cuban stocks amount to 1,440,000 tons, as compared with 445,000 same time last year.

COFFEE.—A steady tone prevailed, and the moderate quantities offered in auction met with fair support. Fair bold Mysore, sold, 12s 6d; Nairobi, 96s; Blue Mountain Jamaica from 197s to 192s 6d; Vera Paz, bold, 19s to 192s 6d. Future delivery market quietly steady.

COCOA.—Only a small volume of business resulted this week at about late rates. Fine Grenada, 56s; butter, 2s 1d per lb.

TEA.—In auction some 46,900 packages Indian were brought forward this week, and with better and well-distributed competition full to dearer prices were secured. The finer liquoring descriptions in particular sold well. 23,500 packages Ceylon met with but moderate support, and any alteration in values proved favourable to the buyer.

RICE.—Market firm, but general trade much quieter, buyers pausing after recent liberal purchases. Two stars Rangoon, spot, 21s 6d; afloat, 21s; No. 1 garden Siam, afloat, sold, 20s 6d; No. 1 Saigon afloat, 19s; No. 1 A Burma broken, June-July, 15s 6d; No. 2 A, 15s 3d; Siam C.1, broken, June-July, 14s 9d; C.3, 14s 3d. Rangoon bran, June-July, quoted £8 10s, ex ship terms; and Siam, July-August, sold, £8 5s, c.f. and i. terms. Rangoon beans, spot, hand picked, sold, 14s for 1920 crop, and 1919 crop 12s. Japanese peas, spot, sold, 35s 6d; crop 1920, July-August, 33s.

SPICES.—Pepper ruled steady, with moderate inquiries. Fair black Singapore, spot, sold, 43d to 44d; August-October, steamer, 44d; Aleppy, spot, 43d; Tellicherry, 5d; white Singapore, spot, 93d; Muntok, ditto, 93d; ditto, August-October, 93d. Zanzibar cloves, spot, changed hands at 11d; ditto, July-August, steamer, 11d. Pimento, spot, 23d; flake tapioca fair, spot, sold, 14d, all per lb. Fair Penang seed pearl, spot, sold, 21s; small sago, 27s; sago flour, August-October, 14s 6d. Desiccated coconut, fine cut, spot, sold, 55s; medium, 55s; halves, July-August, 53s. Ginger quiet, steady.

FRUIT.—The market for currants remained in a quiet state at late rates. New Cape sultanas, spot, quoted 100s to 135s, as to quality. Dates steady. Siar, spot, sold, 15s 6d.

JUTE.—The market assumed a much quieter tone this week, and though there was no undue pressure to sell, prices tended easier. Native first marks assortment, subs, June-July, steamer, sold, £27 15s to £27; lightning actuals, ditto, £22; ditto, subs, £21 10s to £21 5s; heart, subs, £16 15s. Calcutta hessians and twills steadily held, but only retail sales resulted. 10 oz, spot, 21s for hessians, and 8 oz, 19s 6d per 100 yards.

HEMP.—Manila remains dull and featureless. J grade, July-September, quoted, £36; K, ditto, £33; L, sold, £32 10s; and M, quoted, £27 10s. New Zealand nominal. Fair, July-September, £32. East India idle, unaltered.

SHELLAC quiet, and spot transactions were on the basis of 300s for T.N. standard. August, sold, 250s; and October, 230s.

COPRA.—Market ruled dearer in the early part of the week, but became easier and unsettled. F.M.S. Straits, August-October, Rotterdam, sold up to £35 2s 6d, then £33 15s; Ceylon, £36 to £35 10s; Cebu, £34 to £33; Java, £34 15s to £34. Palm kernels, August-October, done £24 to £23 5s.

RUBBER.—Market generally quiet this week. Plantation crepe, spot, sold, 10d to 93d; August-September, 10d; October-December, 10d to 103d; January-March, 113d. Sheet, spot, sold, 93d to 9d; October-December, 103d to 10d; January-March, 103d to 103d. Fine hard Para, spot, 11d; and ball, 63d.

OILS.—Linseed firmer. Spot, net, naked, 39s 3d; September-December, 38s. Rape firmer. Crude, spot, 54s 6d; refined, 61s. Cotton firmer. Crude Egyptian, 40s 6d; Bombay, nominal; common edible, 48s. China wood firm. Hankow, spot (barrels), 98s; and shipment, 66s. Coconut firm. Ceylon, spot, 58s; July-August, 52s; Cochin, ditto, 58s. Soya firm. Oriental, barrels, ditto, 39s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 22s to 24s. Groundnut firm. English crushed, naked, spot, 48s 6d; deodorised, barrels, £60. Turpentine irregular and easier. American, spot, 91s. Rosin firm. American, grade B, 16s; F, 17s 6d; G, 17s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum steady. American, spot, 1s 93d; and water-white, 1s 103d per gallon.

OILSEEDS.—Linseed: Market firmer, with active dealings, but irregular. Calcutta, July-August, quoted, £24 5s. Plate, spot, Hull, £22 10s; afloat, sold, £22 to £22 10s and £21 15s and £22; June-July and July-August, sold, £22 to £22 5s and £21 15s and £22; August-September, £22 to £22 5s and £21 15s and £22; September-October, £22 to £22 5s and £21 15s and £22. Rapeseed firm. Toria, July-August, £22 10s; real bold Ferozepore quoted £22; brown Cawnpore, £21. Cottonseed irregular. Egyptian black, August, sold, £13 1s; £13, and £13 2s 6d; and white, £12 12s. METALS.—Tin occupied moderate attention last Monday, the tendency of prices being easier, with business in cash at £165 to £164 10s; three months' £167. Selling pressure followed until the middle of the week, while these dates fluctuated down to £160 and £162 respectively, improving since to £162 10s. Thursday's market exhibited an upward tendency. Cash changed hands at £160 10s to £161, and three months' at £163. At Friday's session values advanced. Cash sold at £163 to £162 10s, August £163 to £163 10s, and three months' £164 to £165. English ingots, £162 10s. Copper: The market tended rather firmer at the week's commencement, standard cash being registered at £70 15s to £70 12s 6d, and three months' £71. A good business resulted on Tuesday at a lower range, cash declining to £70 2s 6d, three months' to £70 10s. Steadiness in general prevailed during the middle of the week, end of July being down at £70 2s 6d, and three months' £70 10s. At Thursday's meeting, cash sold at £70 7s 6d, early August, £70 12s 6d to £70 15s, and three months' at £71 to £70 17s 6d. At Friday's session the market favoured sellers. August dates realised £70 15s to £71, late September £71 5s, and three months' up to £71 5s. Electros, £74 10s to £76; best selected, £71 to £73; strong sheets, £105. Lead firmer at £24 to £23 12s 6d as to position. Spelter easier at £26 15s according to position. Antimony: English Regulus, £37 to £40. Aluminium: Home trade and export remain quoted at £150.

PRELIMINARY ANNOUNCEMENT.

CITY EQUITABLE ASSOCIATED LIMITED.

(Incorporated under the Companies Acts, 1908-1917.)

Authorised Capital - - £1,100,000

— DIVIDED INTO —

1,000,000 8 per cent. Participating Preference Shares of £1 each and 100,000 Ordinary Shares of £1 each, of which 464,000 Participating Preference Shares have already been allocated to the Shareholders of the Greater Britain Insurance Corporation Limited and the City of London Insurance Company Limited, and 60,000 Ordinary Shares have been allotted.

THERE WILL BE OFFERED FOR SUBSCRIPTION ON MONDAY NEXT, 250,000 8 per cent. Participating Preference Shares of £1 each at par

Guaranteed as to Capital and Dividend by the City Equitable Fire Insurance Company Limited.

PAYABLE AS FOLLOWS:—

On application - - - -	2s. 6d.	On 1st October, 1921 - -	5s. 0d.
On allotment - - - -	2s. 6d.	On 12th January, 1922 - -	10s. 0d.

Payment in full may be made on allotment and interest at the rate of 6 per cent. per annum will be allowed on such pre-payment.

The said Participating Preference Shares carry a fixed preferential dividend at the rate of 8 per cent. per annum on the capital paid up. After payment by way of dividend to the holders of the Ordinary Shares of a sum equal to the amount of the preference dividend, one-half of any surplus profits in each year which it shall from time to time be determined to distribute shall be divided among the holders of the Participating Preference Shares and the holders of the Ordinary Shares rateably in proportion to the capital for the time being paid up.

The dividend on the Participating Preference Shares will be payable half-yearly on the 1st January and the 1st July in each year calculated to the 31st December and the 30th June respectively. The first dividend on the Participating Preference Shares now offered for subscription will be payable on the 1st January, 1922, and will be calculated on the amount paid up from the respective due dates of the instalments to the 31st December, 1921.

The Articles of Association provide that upon a winding up the assets available for distribution among the Members are to be applied in the first place in payment of the capital paid up on the Preference Shares and all arrears of the fixed preferential dividend thereon, whether declared or not, up to the commencement of the winding up, and in the next place in paying the capital paid up on the Ordinary Shares. Any assets remaining are to be distributed as to one-half thereof among the holders of the Preference Shares rateably in proportion to the number of Preference Shares held by them respectively, and as to the other half among the holders of Ordinary Shares rateably in proportion to the number of Ordinary Shares held by them respectively.

Applications from Shareholders in the City Equitable Fire Insurance Company Limited and the Associated Companies will receive special consideration.

THE MONEY MARKET.

THE abundance of money continued in the early days of the week, but, thanks to heavy repayments to the Bank of England by the Government, as indicated in Thursday's statement, supplies of floating credits have become less plentiful. There have also been signs of a better supply of bills, and the discount market has also been affected by the increased demand for money, and rates are higher all round, the quotation for three months' bills yesterday being 4½ per cent. Business, however, was almost negligible pending the result of the tenders for Treasury bills. There was a good demand for £3,000,000 six months' Treasury bills placed by the New South Wales Govern-

ment on Monday at 5½ per cent., the bills being dated August 2nd, and on Thursday the Port of London Authority were successful with £1,000,000 in three months' bills, the average rate being stated to have been about 4½ per cent. The alteration in the French Bank rate has had practically no effect on the London market.

	July 29, 1921.	July 22, 1921.	July 15, 1921.	July 8, 1921.	Previous Rate and Date Changed.
Bank Rate	5½	5½	6	6	(Jly. 21, '21)
Banks Deposit Rate	3½	3½	4	4	(Jly. 21, '21)
Discount / Call	3½	3½	4	4	(Jly. 21, '21)
Houses / Notice	3½	3½	4½	4½	(Jly. 21, '21)
Treasury Bills, 3 months ..	4½	4½	4½	4½	..
Market rate (3 mths' bills) ..	4½	4½	5	5½	..

* Additional to those offered by tender the preceding week.

A substantial improvement in the Bank of England's position is shown in Thursday's return. The gold stock rose by £2,600, and the circulation by £565,600, making the Reserve £563,000 lower. But Government securities were reduced by £39,530,000, and Other by £4,274,500, and deposits were thus £44,413,000 lower, £1,562,600 coming off Public and £42,850,400 off Other. The proportion has accordingly risen from 11½ to 15½ per cent. The currency notes circulation expanded by £1,248,000 to £325,214,000, which includes £1,988,900 for notes called in, but not yet cancelled. The fiduciary issue is £275,275,000, or £42,280,200 below the maximum.

The Bank of France reduced its rate of discount from 6 per cent. to 5½ per cent. on July 28, 1921. It had stood at 6 per cent. since April 8, 1920.

The following table shows public income and expenditure for the week ended July 23, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	29,096	Supply Services	16,514
Taken from Exchequer Balances	495	Interest on Debt	2,234
		Sundry	449
		Reduction of Debt	10,304
	29,591		29,591

These operations decreased the National Debt by the sum of £10,303,910, and caused the following changes, which are reflected in our table of National Debt, given in another column:—

	Min. £		Min. £
Public Departments Advances ..	+ 12,300	Advances by Bank of England ..	- 22,500
Treasury Bonds	+ 3,700	Treasury Bills	- 1,318
		Unemployment Insurance ..	- 570
		National Savings Certificates ..	- 50
		Surrenders of Bonds, &c.	- 491
		Depreciation Fund	- 1,000
	+ 16,000		- 25,929

Customs and Excise added £12,416,000 to the revenue, and Property and Income-tax produced £7,056,000. Excess Profits Duties yielded £4,000,000, and Special Receipts under Miscellaneous £2,040,000. For the Unemployment Insurance Act of 1921 £570,000 was allocated. The Floating Debt was reduced by £11,285,000 to £1,352,661,000.

Business on the foreign exchange market has been much quieter again this week, and the movement of rates, with one or two exceptions, has been relatively restricted. Mainly as the result of Germany's preparations for reparation payments the florin rate moved up rapidly from 11.41½ on the 22nd to 11.66 on the 27th. Since then there has been a slight reaction, but yesterday the quotation still stood at 11.57. Future quotations for florins are now roughly the same as spot. Italy, too, has found it impossible to maintain its recent improvement, the quotation for the lira rising from 80.45 a week ago as high as 87½ on the 27th, with a recovery to 86½ yesterday. Disturbed political conditions and increasing intensity of depression, which has hit LARHOUSE & CO. and most other countries, is quite sufficient to account for this depreciation. Among the S

upward tendency has continued, the movement this week being most marked in Stockholm, which rose from 17.39 on the 22nd to 17.68½ on the 26th. Since then, however, there has been a recovery to 17.40. In Berlin the effect of the well-advertised credits from Holland and the States has soon spent itself, and the quotation has risen steadily from 273½ a week ago to 291 yesterday. Recent reports would suggest that export demand is here also beginning to slacken. The quotation for futures stands at about one mark per month under spot. The New York rate, after falling from 3.60½ on the 22nd to 3.57½ on Monday, has remained throughout the week round about this figure, and yesterday seemed a little stronger, the rate being quoted at 3.58. Much interest is shown at the very low rates for money now being charged in New York. The quotation for futures remains the same as a week ago at about ½ cent per month above spot. The Paris rate has risen from 46.25 to 46.70, a smaller movement than might have been expected in view of the increasingly serious reports of the French financial position, and the persistence shown by the French Government in its dangerous policy in Silesia. The Belgian rate has moved up in the same way, from 47.37½ to 48.25, and still shows no tendency to reduce the strangely wide margin between the French and Belgian franc. Through the recent discrepancy between money rates in Paris and London the quotation for French futures has moved for the time being to 3 centimes above spot, but with the change in the French Bank rate this position is not likely to be maintained. The Brussels rate for futures has at the same time narrowed to 2 centimes below spot. Spain during the week has been irregular, having moved up as high as 28.13. Yesterday, however, at 27.90, it was only 15 points above last week's quotation. Switzerland from 21.76 moved at first in our favour, probably, as in the case of Amsterdam and Stockholm, as the result of German activities, but has since gone back again to 21.80. Lisbon has recovered a little, from 7½d to 7¾d. Helsingfors has found it impossible to maintain its recent recovery, and is again depreciating rather rapidly. In Central Europe the depreciation of the Austrian "Auslandskrone" continues, the London quotation being about 3,000 as compared with 2,650 a week ago. The last available Vienna rate (Inlandskrone) was 3,375 on the 26th, when the London (Auslandskrone) rate was 2,800. Warsaw has also broken away again, being now up to about 7,700. Bucharest and Prague continue to depreciate, being now in both cases round about 280. Belgrade is also moving up more rapidly than usual, having reached 150, while Sofia remains more or less dead at about 450. Athens at 65.50 shows a slight tendency towards recovery, while Constantinople is unchanged at 550. The rupee at 1s 3½d is just a little firmer, and the yen also has moved up again slightly to 2s 8½d. Among South American exchanges both Buenos Ayres and Monte Video are slightly more expensive, as also are Rio and Valparaiso. A fairly strong demand from the Indian bazaars, following on the recent heavy purchases from China, has brought up the spot price for silver to 39½d, the highest quotation since January last. Supplies, however, are by no means scarce, and the large amounts of German silver reported to have arrived at New York show that there are other exceptional factors in the market, so that considerable caution is needed in judging the present outlook. As usual, the Hongkong and Shanghai rates have moved up with the rise in silver prices.

A SUMMARY OF NATIONAL FINANCE.			
FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JULY 23, 1921.			
Total spent	£ 324,781,081	Raised by revenue ..	£ 282,631,350
Inc. in balances	64,743	Net borrowings	42,214,474
Total	324,845,824	Total	324,845,824
ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure ..	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

JULY 25TH.—Scottish census shows increase of 2.5 per cent. in population. Corn Production Acts (Repeal) Bill debated in Commons.

JULY 26TH.—Commons debate on Civil Service. Income-tax Payers' Society formed. Mansion House meeting of merchants and manufacturers calls for retrenchment.

JULY 27TH.—Railways Bill at report stage. Speaker rules out road transport.

JULY 28TH.—House of Lords debate on economy. September 1st fixed as official date of the end of the war.

JULY 29TH.—Budget prospects debated in Commons.

Business on the Stock Exchange remains small, but the tone is fairly good. Speculation is absent, but investment stocks are well supported, and good-class new issues have been oversubscribed. The strength of bank shares has been a feature. Home Rails are weak.

Business in the Lancashire cotton trade has been on a small scale this week. There is a considerable falling off in the demand for cloth from India, but shippers to China are operating a trifle more freely. A slightly better tone is reported from the Bradford wool trade, though business is still very limited. The wool auctions, which closed on Thursday, showed a stronger tone at the finish. In the pig-iron market an entire absence of business continues, and the restarting of more blast furnaces is not expected. In the steel trade generally there appears to be little improvement to note. Several shipbuilding yards and large engineering works in the Glasgow district have made a partial resumption. The hide market remains firm. A lull has succeeded the recent great activity in the market for linseed.

Details of events and news in the principal markets from special correspondents will be found on later pages of this issue.

THE VOICE OF INDUSTRY.

THE overwhelming need for retrenchment has been a leading theme of the week. Ten weeks ago the leading bankers of the City of London issued an impressive and unanswerable manifesto emphasising and explaining the need for reduction in public expenditure and for the freeing of trade and industry from bureaucratic interference. That petition is followed up this week by an appeal on similar lines, signed by a comprehensive and imposing list of business men and business firms in every leading branch of British commerce and industry. This appeal reads as follows:—

"We, the undersigned merchants and manufacturers, and of the United Kingdom, desire to endorse the weighty and unanimous appeal by leading bankers issued on May 12th, and to insist with them on the need of dealing promptly with the perilous situation in which the country is placed.

"The appeal, which opens by recalling the petition of the merchants of the City of London addressed to the House of Commons in 1820, dwells on the parallel between the state of the country then and now.

"At the present juncture the following problems seem to call most urgently for attention:—

"An immediate and drastic reduction of expenditure is of vital importance.

"The freeing of our trade and industry from the trammels imposed by the war is not less essential.

"The interference with our commerce, whether by Parliament or by the Administration, must be stayed at once.

"But it is perhaps even more important that the inhabitants of this country should be impressed with the absolute need for greater industry and greater thrift, so that the wealth annihilated by the war may be restored. Such restoration can only be accomplished by earning more and spending less.

"By these means alone shall we be able to bear the burdens from which we suffer, to regain the foreign trade essential to our prosperity, and to contribute to the well-being, not only of our own country, but of all other countries on which we are largely dependent.

"We invite our fellow countrymen to join with us in impressing on the Government, on Parliament, and on the nation at large the paramount importance of these great questions."

In the list of signatories, the great staple industries—cotton, wool, and other textiles, coal, iron, and steel, machinery and engineering, shipbuilding, chemicals, building trades, railways, shipping, and import and export trades—are all represented by influential names. This appeal is the complement of the bankers' petition, and leaves his Majesty's Government with no excuse for mistaking the emphatic opinion of the whole business community on the all-important matters referred to.

With this appeal still on the top of his letter-basket the Chancellor of the Exchequer naturally displayed some diffidence in replying at a Mansion House banquet on Thursday night to the toast of Prosperity to the Public Purse. Sir Robert referred to himself as the most friendless mortal in the realm, and it was left to Mr McKenna to assure him that if in dealing with economy he would prove himself "ruthless, relentless, remorseless," the City would support him through thick and thin. The Chancellor's speech in the main was a conventional apology for the present scale of public expenditure, softened by the usual verbal recognition of the need for economy, and did not suggest any realisation of the strong position into which he is placed by the vigorous assertion of opinion of the business community, which surely places in his hand a sharp and powerful weapon with which to carry out the ruthless, relentless, remorseless economy for which Mr McKenna called. "From being the watchdog of the public purse," complained Sir Hugh Bell at a Mansion House meeting on Tuesday, "the Treasury has become the spendthrift of the public wealth." Many will refuse to accept the severity of this indictment, but few will quarrel with Sir Hugh's further comment that what the country needs

is a Chancellor who will make the Treasury a real and effective terror to spendthrifts.

The need for economy has also been the subject of debates in both Houses of Parliament this week. On Thursday Lord Buckmaster in the House of Lords said: "Little by little the truth is coming home to the people that the country is bleeding to death from excessive taxation," and continued, "any Government which takes in hand with courage, consistency, and with unflinching sincerity and truth the conduct of our administrative system and financial affairs at this moment would be a Government which every loyal citizen could honestly support." In the same debate Lord Gainford drew attention to the size of the bureaucracy. An economy debate in the House of Commons debate on Tuesday drifted into a discussion on the pay of Civil Servants, a difficult question which we discuss in a subsequent article. Altogether the week has shown the Chancellor with unparalleled clearness the strength of public opinion which he will have behind him in any earnest attempt at retrenchment. Will he make use of the opportunity?

THE CIVIL SERVICE.

BOTH in Parliament and in the Press we are in danger of giving up a great and beneficial principle which was, before the war, applicable to those in the public service. This was the doctrine of the responsibility of Ministers for the personnel, conditions of service and pay of their permanent subordinates. The Civil Service, as such, was immune from criticism because it was not permitted to reply to criticism. If Departments of State were inefficiently run, or spent too much money, the Parliamentary Chiefs, and ultimately the Cabinet, was held to be solely responsible. Seeing that they alone had the right to reply to criticism, and that they alone introduced and pushed through Parliament the legislation which the Civil Service was organised and staffed to administer, they alone were the proper objects of critical attack.

We have in this country not abandoned in theory the doctrine of Ministerial responsibility for the Civil Service, though in practice during recent years we have honoured it more in the breach than in the observance. The Civil Service itself is becoming more and more the whipping boy of popular criticism. Before the war the English bureaucracy worked quietly in its own way, administering unobtrusively the not very exciting affairs of the country, and coming little into combat with the man in the street. It was honoured as comprising the ablest, the most dependable, and the least corruptible officials of any body of public servants in the world. Then came the war, and driven by national necessity, the bureaucracy not only expanded enormously, but was compelled through the controls of transport, and food and drink, and everything else, to interfere very drastically indeed with the personal liberty and tastes of every man and woman in the country.

The Civil Service no longer moved unseen, in the mysterious backwaters of Whitehall; it was all around us, everywhere, all day long. It regulated the weakness of our melancholy beer, doled out food to us against coupons, and limited the height of our wives' boots. For the first time in its history England was consciously governed by a bureaucracy whose powers were unlimited, and England so detested the experience that it came to connect all its troubles with the emergence of bureaucracy from the old seclusion. England had been compelled to let an all-pervading genie out of its bottle, but the war being over, it determined to squeeze that genie back again at once, and to cork the bottle very tightly. The responsibility of Ministers was ignored. It was now the Ministers who had fallen out of sight, and the Civil Service which remained visible as an ubiquitous public nuisance. The present unpopularity of the Civil Service is due largely to the folly of Ministers who failed to realise (immediately after the Armistice) that the country was sick of being governed bureaucratically. The "controls" have outstayed the national need for them, and the Civil Service, which administers these controls under orders from the Government, sees itself condemned as if it were the author of them. It is the bureaucracy, and not the Government responsible for it, which is now surrounded by wolves howling for blood.

We are all agreed that the Government Departments are lamentably slow in getting rid of their war accretions. The Ministries of Shipping, of Food, and of Munitions, though called by other names, still support large and redundant staffs. As the expectant widow said of her slowly expiring husband, "I have even ordered his coffin, yet he won't die." A Government Department once created is, like Charles II., an unconscionable time in dying. But slowness in dissolution, however aggravating it may be to the burdened taxpayer, is less the fault of the bureaucracy than of the Ministers whose job it is to give the orders for coffins, and to see that they are filled. At any rate, the Ministers are responsible, and it is they who should be criticised. A Parliament or Press which attack the rank and file and demand that their pay shall be cut are barking up the wrong tree. They should attack the Government for not getting rid more rapidly of redundant Departments and for piling up legislation which involves the creation of administrative offices.

The Chancellor of the Exchequer this week, while paying lip service to the merits of the Civil Service, has introduced his economies at the wrong end. He has cut down the pay of the "commissioned officers," upon whom the efficiency of the service depends, while leaving the "rank and file" subject only to the automatic reduction in bonus due to the fall in prices. We do not for a moment suggest that the rates of pay and bonus of the rank and file are too high. They are not. The mischief is that there are far too many rank and file drawing pay and bonus. No one with some experience of business organisation who enters a Government office can fail to notice the amount of overlapping which goes on. There is far too much circulation of "jackets" for "observations" and far too little original work. No one is allowed to do original work until he is of comparatively high rank, so that the higher officials are much over-worked and many of the lower officials much under-worked. That small percentage of the Civil Service which fills the posts of Principal Clerks, Assistant Secretaries, and Permanent Secretaries—or equivalent ranks—is in most offices very greatly over-worked. It has no eight-hour day or ten-hour day. Yet it is this small percentage of the higher "commissioned officers" which has to bear the greater part of the burden of Sir Robert Horne's super-cut. It is to suffer from an automatic reduction in bonus in September of about 25 per cent.—due to the decline in the "cost of living" index number—and a further cut in what remains of the bonus of from 20 to 60 per cent. No one with a salary of £2,000 a year or more is to receive any bonus at all—this means a cut on the £2,000 a year man of £750, and on the £3,000 a year man of £500; and no salary is to be increased by bonus beyond a limit of £2,000 a year. The hardest worked and most responsible officials are to be most heavily reduced in pay.

No just comparison can be made between the higher officials of the Civil Service and the superior officers of banks, insurance companies, or commercial houses. It is futile to compare the £3,000 a year of a Permanent Secretary and the £8,000 or £10,000 a year—more in prosperous years—of an insurance manager. The higher ranks of the Civil Service are recruited from the Universities; the Civil Service is not a branch of commerce, but an educated profession such as law, medicine, or science. What we must ensure if the Civil Service is to keep up its high administrative efficiency is that the upper division shall continue to attract the fine flower of the Universities. No man who enters the Civil Service expects to become rich, but he should be able to look forward to the possibility of a competency equal to that of a moderately successful doctor or lawyer. The higher officials, now that Sir Robert Horne has cut their bonus and left them to bear the full weight of income-tax, will be distinctly worse off than their predecessors before the war. Few there be who reach £2,000 a year, a sum which (less income-tax) is not the equivalent of £800 in 1914.

There are 770 permanent Civil Servants with salaries of over £1,000 a year (exclusive of bonus), and upon this small body will fall the greater part of the saving of half a million which Sir Robert Horne expects from his super-cut. They will lose—with the super-cut and the automatic cut—from £300 to £750 a year each. The automatic cut in bonus, which will come into force in September, of about 25 per cent. is due to the drop in the

cost of living index number from 165 per cent. above pre-war to about 125 per cent. That will be universal throughout the Service, and will mean a saving of between 10 and 11 millions. As the index number falls so will the bonus continue to fall in the proportion of 1-26th of the basic bonus (March, 1920) for every five points in the index number. The bonus is revised every six months, so that there will be another automatic revision in March next. We are not in love with the bonus system. It was temporary in origin, and is very vulnerable to attack. It will be much better—as soon as the after-war cost of living has become more or less stabilised—to abandon the bonus system altogether and to revise the salary and pension scales of the Civil Service from top to bottom. This has been done for the Navy and Army, and the country has accepted the new rates as fair.

THE COURSE OF TRADE.

(BY A CORRESPONDENT.)

THE finish of the coal strike, together with the acceptance by the workers of several industries of a lower basis of wages is leading certain irresponsible prophets to predict a sudden revival of trade prosperity. We are bidden to cast pessimism on one side, and to look ahead for the golden edge which it is said is already lining our cloud of distress. Such statements are mischievous in the extreme. There can be no recovery until we clearly recognise, first, the reasons for the ills we suffer, and then endeavour to remove them.

We are to-day, in fact, comparatively poor, and, whatever our future may hold, we are pressingly concerned with the present. Our commercial fate depends on the speedy revival of our foreign trade, and this, in turn, rests simply on a competitive international basis. Standards of life disappear in the simple necessity to live, and to live we must produce at a price below that our competitors can offer. We have four basic industries—the textiles of cotton and wool, engineering, and coal production. The last of these determines the prices the other trades—and particularly engineering—must demand, or go out of business. It is admitted that the present price of coal is too high. It can be reduced only by increased production, as the chief cost rests on wages, and therefore at present the willingness of the miner to work harder seems to be a prime factor in the chances of trade recovery. Slackening demand for smaller coal, with a consequent awkward accumulation of stocks, may in time compel a lower price, but the process will be slow; it may, however, be expedited if the collieries have the courage to lower the price at once, and thus at one stroke prevent awkward accumulation of stocks, and at the same time assist in the general revival of industry. Especially useful would such a step be in the coking trade, and consequently in the restarting of steel production on a lower basis of cost, and therefore more capable of meeting foreign competition. In the engineering trades generally there is a more hopeful outlook, but the fixing of lower wages is insufficient itself; and if our competition is again to become effective in world markets labour must freely and openly accept a piecework basis. The tendency, though latterly in this direction, is still bitterly opposed by the extremist leaders, who though at present clouded over by the common-sense of the mass, have by no means given up the fight. It is just the measure of this return to sanity in economics which will determine the fate of the industry. If we can win, nothing will avail; but if, on the other hand, the decent worker insists on his extra skill and energy being properly rewarded, then our trade future is assured, and somewhat of the old prosperity may again be felt.

The position in the textile trade has altered little. Lancashire cotton depends mainly on the East. India is none too well off, and still suffers from post-Armistice repletion. China, where not starving, is harried by military bandits in the pay of rival politicians, who in the name of democracy are slowly squeezing the country to death. The price of raw material has touched bottom,

and the future may, from scarcity of cotton, see an increase, which, reflected in the final cost of material, will again check buying. Here we depend on good Indian seasons and the re-establishment in China of some sane and strong Central Government. We hear repeatedly of a better feeling in the wool textile industry, but it is difficult to find any reason for these prophecies. Certainly a proportion of manufactured material has gone into general consumption, but this country, as well as the European markets, is still choked with finished goods speculatively ordered and calmly returned when prices fell. Much of this is now offering at prices which are below the cost of manufacture to-day, even with the present cost of wool and the fall in wages fully taken into consideration. There can be no real alteration until the bulk of this material is absorbed. To a large extent manufacturers and merchants have composed their differences and shared their losses, but both have found an unexpected stumbling-block in the retailer, who, in the main, stubbornly refuses to cut his losses, even though such a course would re-start demand, and thus again make profits possible for him.

The exchange position in Central Europe, or, rather, the inability of the countries to export goods in return payment, has practically closed this market to fully manufactured textiles, and so accentuates the glut at home. The many fancy schemes devised to escape economic laws by a change of nomenclature are gradually receding from practical commercial life, as traders find that the essence of the change is simply an extension of credit without any real addition of security. Nor can there be any increase of security until the countries concerned settle down to work and to production. Poland appears to have ruined herself by insane military adventure, and lost what little chance she once had of becoming a great commercial State; and Greece, full of vague ambitions, is rapidly losing her friends and destroying her last vestiges of credit. In Czecho-Slovakia and the Balkan kingdoms there is more hope. There the great bulk of the people are peasants, and they are settling down with quiet determination to get back their old rude plenty. Out of their excess of production there seems some hope of a revival in trade for us, although there, from contiguity and knowledge of the people, competition from Germany will be fierce and concentrated.

Surely the time has now arrived when even our politicians must admit that we cannot get reparation from Germany and at the same time close our ports to her trade. Obviously, since we cannot be paid in raw materials, we cannot get the reparations without the trade, and therefore we should at once cease to limit freedom of trade by the futile expedient of surcharging German exports. We either get the exports and ourselves pay the surcharge or the trade ceases. In neither case do we benefit. The quickest way to restore trade is to remove the artificial barriers in its course; these barriers, proven useless, are fast becoming mischievous for the future. Why not admit a mistake everyone now realises, and start again?

It is regrettable that the industrial position in the United States remains so obscure. There is little life in their demands on us, and yet we must have their food products. The exchange position is the index of the difficulty, and we can see little prospect of a speedy change.

But have we done everything possible at home to set ourselves going again? Our immediate financial future seems to indicate further inflation, owing to the necessity of providing for the serious fall in the revenue returns. In spite of repeated warnings from the constituencies, the Government makes so little effort to reduce Departmental spending that people are beginning to wonder whether the State Socialists have not prevailed over the Prime Minister and persuaded him that England in future must in every detail be guided by a super-Civil Service, whose activities are to be bounded only by its appetite. To demand detailed reductions in this or that Department is useless; what we really want is a stern challenge to the very existence of any new Ministry or any new department of an old Ministry which had no pre-war use.

That is the true issue if we are to get back to economic sanity, and its proper settlement the chief factor in any hope of a return of industrial, and therefore of national, prosperity.

LABOUR AND COMMUNISM.

(BY OUR LABOUR CORRESPONDENT.)

In the days before the war the term "Socialist" lost its worst terrors as an abusive epithet. When Sir William Harcourt said "We are all Socialists nowadays," Socialism had become respectable; and people whose views were particularly obnoxious were referred to as "extreme Socialists," which is much like saying "extreme Christians," or "extreme anti-vaccinationists." It does not mean very much. But the Russian Revolution provided a new term—"Bolshevik," or as the working man would say, "Bol shevik." And nowadays those who stand to the left of one are denounced as Bolsheviks. It is a good word for the purpose. It is uncouth; it is foreign; and its meaning, if you happen to know it, leaves your mind a blank. Bolshevism is the modern bogey-man, and it has been dangled before the public by the Prime Minister himself as a warning against the British Labour movement.

The theory of Bolshevism may be good or bad, but in fairness to Lenin and Trotsky it ought to be said that it has no more to do with murder and other atrocities than the British Constitution has with the exploits of the "Black and Tans." Bolshevism accepts the Soviet form of government, excluding from the franchise those who are not regarded as workers. There is nothing new in the idea of the Soviet system; nor is the exclusion of a section of the community from the franchise a modern notion. Bolshevism stands for "the dictatorship of the proletariat." This resonant phrase in practice means the dictatorship of the conscious minority of the proletariat. Again, there is nothing new in the conception of a society governed by a minority. It has been the custom in the past, and, whatever our theories of government may be, the practice is general even to-day. But the Bolsheviks claim to be Marxian Socialists (though there are Marxians who vehemently deny that Bolshevism is Marxism), and what is really new is that the Bolshevik Marxian Socialists in Russia have seized the reins of government.

In every Labour movement there is a "left wing," and this section has in some countries gone Bolshevik, buoyed up by the apparent success of the Russian Revolution. There are real Bolsheviks in this country, who have formed themselves into the Communist Party of Great Britain. This party is affiliated with the Third International at Moscow, and its policy is determined by Moscow. Some months ago it applied for affiliation to the Labour Party, but the executive declined to accept it. The correspondence which passed between the two bodies was published in the executive's annual report, which was presented to the recent Labour Party Conference at Brighton, and the delegates upheld the executive's decision by an overwhelming majority. This is rather unfortunate for the Duke of Northumberland and the scare-mongers who appear to believe that the British Labour movement is honeycombed with Bolshevism, and financed largely from Communist sources.

The application of the Communists for affiliation was made apparently with the intention of capturing the political machinery of Labour. Really, of course, they have no use for the Labour Party, and members of the Communist Party have made bitter attacks upon it. The claim of the Communists that they were the means of securing Mr Ramsay MacDonald's defeat at East Woolwich is not without foundation, and had there been a by-election in East Leicester, as appeared probable when Lord Reading relinquished the Lord Chief Justiceship, the Communists would have brought out a candidate against Mrs Philip Snowden, the official candidate of the Labour Party.

Min. The Communists have undoubtedly increased in numbers, but their influence is negligible. During the past few months the atmosphere of unrest and the repeated promises of labour have provided as favourable conditions as the Communists are likely to get for the time being. But unrest, unemployment, and the Civil War have not created a wave of revolution, and the Civil War has not created a wave of revolution. The stoppage in the coal mines is remarkably free from outbursts of anarchy, and the Government truth is that British mentality which is now surrounded by wolve.

is an unsuitable soil for the growth of Bolshevism. The enthusiastic and often able young men who are the missionaries of Communism are bad psychologists, and they lack experience. British labour is not Bolshevik, nor is it likely to become so.

The chief ally of the Communists in this country is the Government. Its campaign of persecution is doing more for the Communist party than they themselves could possibly do by propaganda work. Obscure Communists have been charged with "sedition" and imprisoned. The Government's interpretation of "sedition" and its apparent fear that the speeches of Communists will win converts make it appear ridiculous. The Labour party executive has strongly protested against any limitation on the freedom of speech, not because it agrees with the views expressed by those who have been put upon their trial for "sedition," but because it regards the Government's short-sighted policy as an insult to the intelligence of the people.

The signs are all against any considerable increase in the numbers of the Communists if the Government would cease from acting as their publicity agent. On its industrial side the Labour movement is absorbed in conserving and consolidating its forces. For some time it is more likely to be occupied with its own internal problems than with anything else. On the other hand, the political side will become more prominent. There is a widespread view that more weight must be put behind the political movement. The Labour party has political possibilities, and so far from there being a reaction against Parliamentary activities, there is a growing opinion in favour of greatly increased Labour representation in the House of Commons. The questions which lie before the Labour movement, the present temper of trade unionism, and the attitude of labour towards politics indicate clearly enough that the general outlook of the movement is out of sympathy with Communism. If, however, Labour after the next election is under-represented in the House of Commons (as it is to-day), and if political action fails, the revival of industrial action may create circumstances in which Communism will gain converts. But the Labour movement is far less nervous about Communism than the Duke of Northumberland and the *Morning Post*.

STOCK EXCHANGE PEACE PROBLEMS.

(BY A CORRESPONDENT.)

THE Stock Exchange discussion as to whether it will be advantageous to return to fortnightly settlements is not carried on entirely from the point of view of members. In point of fact, all the arguments, both for and against, pray in aid the public interest, and it seems as though a genuine desire were felt in the Stock Exchange that the public should receive the benefit of the protection which the cash dealings afford, and, on the other hand, the greater facilities for flexible markets that would be established by reverting to the pre-war principle of fortnightly accounts. A private meeting of some 50 or 60 members was held early this week with the intention of setting up a small committee that should convene a representative gathering of members of the House, from whom should be elected an executive committee for the purpose of discussing the best methods of carrying on Stock Exchange business when the House becomes freed from the temporary regulations imposed by the Treasury. The chairman stated that the meeting was intended to be a purely Stock Exchange gathering, and asked that any non-members should not remain. The discussion, however, proved to be somewhat undetermined. Nobody seemed to have any clear idea of what was wanted, and the chairman fully pointed out that no intention was formulated of reaching any agreement which might conflict with the Stock Exchange.

of business which may be of greater benefit than that in force before the war. The fixing of September 1st as the date on which the war shall be officially declared at an end implies that the pre-war account which was open at the end of July, 1914, will have to be liquidated by August 31, 1922. The impatient in the Stock Exchange would desire to get back immediately to fort-

nightly settlements, contangoes, &c., irrespective of the moratorium account, but the Stock Exchange Committee take up the sound position, as already indicated, that members of the House ought not to undertake such fresh obligations as would be entailed by speculative accounts until such time as all the pre-war commitments were cleared up. Several members, brokers and jobbers alike, advocate the setting-up of a system akin to that which prevails in New York, whereby if a man wishes to carry-over stock he is required to put up a certain definite margin of cash. Members of the London Stock Exchange used to carry-over stocks and shares without provision of any margin, save in exceptional circumstances. This is derided as being an absurd and ludicrous manner of conducting business, inasmuch as no other branch of industry would think of carrying on speculative commitments without any sort of cash margin to protect the brokers and principals.

Mechanical difficulties in the way of obtaining and of passing on cash margins are obvious enough. But as these can be surmounted in Wall Street, the argument runs that they should not prove insuperable in London. Another point in connection with this suggestion is that a man, in providing margin for carrying-over stock, practically stamps his bargain as a gambling transaction, and to what extent this would bring the business under the shadow of the Gambling Acts is a matter that would require serious attention. It is frequently urged against the Stock Exchange Committee that, as a body, they are apt to follow the line of least resistance and the policy of *laissez faire*, from which experience the inference is drawn that they are not likely to take any definite steps yet in the way of consulting the House on the problem arising out of the return to pre-war conditions. With 13 months ahead in which the whole question can be explored and threshed out, it may well be that nothing practical will be attempted at present, but a good many members would like to see the matter thoroughly examined before the time comes when the Stock Exchange has the option presented to it of reverting to fortnightly settlements or of continuing the system of cash dealings. There is so much to be said on the one side and on the other that it is not surprising to find Stock Exchange opinion sharply divided, even amongst the most experienced members, and as it is a matter which concerns wide circles of the country, it may be reasonably hoped that the Stock Exchange Committee will lay their plans well in advance of the day when Treasury control shall cease.

Business Notes.

Public Trustee's Report.—The Report of the Public Trustee for the year ended March 31, 1921, records the acceptance during that period of 1,559 new cases of an aggregate value of £15,682,492. These figures are lower than in preceding years. The following table shows the business undertaken by the office since its inception:—

		£
1908 (3 months)	63 cases accepted, valued at	384,317
1908-9	381 " " "	3,133,523
1909-10	622 " " "	4,989,191
1910-11	877 " " "	6,548,641
1911-12	1,050 " " "	8,626,315
1912-13	1,364 " " "	12,067,535
1913-14	1,573 " " "	13,425,343
1914-15	1,543 " " "	11,623,425
1915-16	1,595 " " "	16,622,194
1916-17	1,811 " " "	16,544,193
1917-18	1,876 " " "	17,861,889
1918-19	1,767 " " "	17,191,413
1919-20	1,949 " " "	21,863,780
1920-21	1,559 " " "	15,682,492
Total	18,030	166,164,701

The year was "one of experiment upon the lines" down by Sir George Murray's Committee of Enquiry. A new scale of fees was introduced, with a view making the office self-supporting; but although, apparently, the yield of the new fees was very close to Simpkin's estimate, expenditure, "entirely through

ternal circumstances," exceeded estimates, and the year's working resulted in a deficit of £114,890, or nearly £12,000 worse than in the previous year. It is estimated that "if all the fees throughout the year had been received at the new rates, the deficit would have been reduced to approximately £60,000." Among the "external circumstances" producing the increase in expenditure were the rise in the Civil Service war bonus "far above all anticipations," the clerical re-grading scheme, common to the whole Civil Service, and a rise in maintenance charges, such as rates, lighting, heating, &c. Changes in organisation are recorded. A section has been built up for dealing exclusively with trusts and estates of small value. The special section which kept the records of landed property and mortgages has been broken up, and the post of legal adviser has been abolished. Largely as a result of such changes, the clerical staff has been reduced by 50 during the year. Mr Simpkin enumerates the following reasons why "the administration of trusts tends to become more and more difficult":—(a) The inadequacy of "fixed" incomes to present conditions and the consequent frequency of requests for the exercise of the trustee's discretion to advance capital—an anxious discretion under the best of circumstances. (b) The continued depreciation of investments. (c) The complexity of investments, caused partly by the numerous varieties of Government issues, partly by the fluctuations of foreign exchanges, and partly by the frequent readjustments of industrial capital. (d) The complications of income-tax, especially with regard to beneficiaries resident abroad. (e) The technicalities of estate management, including the enforcement and observance of the provisions of such measures as the last Rent Restriction Act.

Home Railway Dividends.—Some reduction in the interim dividends of the Home Railways was expected, and those so far declared show this anticipation to have been correct. The list below compares the midsummer declarations for the past five years:—

Name.	Mid-summer, 1917.	Mid-summer, 1918.	Mid-summer, 1919.	Mid-summer, 1920.	Mid-summer, 1921.
	Rates per Cent. per Annum.				
Great Central, 1881	4	4	4	4	4
Do 1889	4	4	4	4	4
Great Eastern	4	1	1	1	3
Great Northern, pf. ord.	4	4	4	4	nil
Do Cons. 6% "B"	6	6	4	6	nil
Lancashire & Yorkshire	3½	3½	3½	3½	3
London and N.-Western	5	5½	5½	6	5
	4	4	4	4	4
	2½	2½	2½	2½	2
	4	4	4½	4½	4½
			5	5	4
			1	1	1½

at last year's level. Prices have not moved very much on the announcements, the reductions being smaller in some cases than was expected.

Railway Statistics.—The railway statistics for the month of May issued by the Ministry of Transport clearly reveal the effects of the coal stoppage on traffic. The number of passenger journeys (excluding season-ticket holders) was 81,814,378, or 25.63 per cent. less than in March, but the passenger train-miles were reduced by no less than 43.20 per cent. As regards freight traffic, the total tonnage conveyed in May, 1921, showed a decline of 21½ million tons, or 75 per cent., compared with May, 1920, and the ton-miles worked a decrease of 70 per cent., made up as follows:—

(000's omitted).

Description of Freight.	Tons.		Ton-Miles.	
	May, 1921.	Decrease.		May, 1921.
		No.	Per Cent.	
General merchandise (including live stock)	3,684	2,376	39.21	328,031
Coal, coke, and patent fuel	1,417	14,822	91.27	73,819
Other minerals	2,057	4,101	66.60	95,985
Total	7,158	21,299	74.85	497,835
				69.75

Freight train mileage shows a reduction of 60.8 per cent. compared with May, 1920, but the decrease in coal and coke and other heavy traffics again seriously affected the operating results, although not to the same extent as in April. The average wagon and train loads were 3.72 tons and 103½ tons respectively, as compared with 5.45 tons and 134½ tons in May, 1920, and the net ton-miles worked per engine-hour were 360, as against 435½ in the corresponding month of last year. The new rolling stock completed and put into traffic during the month was 37 steam locomotives, 51 passenger carriages, and 2,160 wagons.

Coal Output.—The production of coal for the week ended July 16th in the mines of Great Britain was 3,927,500 tons, which compares with 2,354,900 for the week ended July 9th, the first week of resumption after the settlement of the dispute. For the week ended March 26th last the output was 3,660,000 tons, and for the following week 1,950,100 tons.

New Commonwealth Loan in Australia.—Particulars have been received in London by cablegram of a 6 per cent. loan, locally styled "The Diggers' Loan," of £10,000,000 about to be floated in Australia by the Commonwealth Government through the Commonwealth Bank. The lists will open on August 8th and close on September 5th. The price of issue 96, and the loan matures in 1930. The loan is for repatriation purposes and the payment of war obligations. Interest will be subject to Commonwealth income-tax, but free of State taxation. The following loans have already been issued in Australia by the Commonwealth Government, through the Commonwealth Bank, entirely for war purposes, for which, it may be mentioned, no loan has been floated outside Australia:—

The Peruvian Centenary.—On Thursday Peru celebrated the hundredth anniversary of the Declaration of Independence which followed the entry of her Argentine liberator, San Martín, into Lima, and was made a reality three and a-half years later by the definitive defeat of the Royalist and Spanish remnant by another liberator, the Colombian General Sucre, at Ayacucho. Special British and French missions are now in her capital, and their congratulations will be heartily echoed from Europe. Her century of national existence has been chequered, and often disappointing to her friends abroad. More than any other Spanish-American country she has suffered, at first from the lack of competent and conscientious administrators caused by Spanish tutelage, and repeatedly by the divisions among her small ruling class. Great prosperity has alternated with complete insolvency, and prolonged disturbance with periods of sound constitutional rule. Her wealth in nitrates was first developed by Chileans and then seized by Chile; her vast revenue from guano was partly misapplied by her Governments, but to a far greater extent misappropriated by their members, and her resultant bankruptcy in 1876 was followed by the long and devastating war with Chile, by constant fears of its renewal, and by a series of sudden revolutions, of which the latest took place in 1910. Happily there is reason to hope that it may be the last. President Leguía's rule seems to be firmly established, and his sweeping constitutional reforms are apparently both just in principle and successful in working. He is anxious to attract foreign, and especially British, capital and immigrants, and the outstanding and irritating difficulty with Chile over the lost provinces seems likely to be settled eventually by some form of foreign mediation. Since 1890 the country has been solvent, and the existing foreign debt is not excessive, judged by the standards of to-day. Two years ago the foreign trade had far surpassed pre-war figures; at present the country is suffering, like the rest of Spanish-America, from the lack of purchasing power set up by the war-made poverty of Europe. But this will pass, and the great development of Peruvian resources in sugar and cotton will be followed by an even greater development in coal, rubber, minerals, and possibly petroleum, a process in which a large share should be taken by British capital and British traders.

Taxation in the Dutch East Indies.—The necessity of meeting the growing deficits, writes a correspondent, has led the Dutch Government to alter considerably the scheme of taxation in the Netherlands East Indies. Changes in the income-tax are the most important, but the Customs and Excise duties are also affected. The Taxation of persons is extended to all classes of the inhabitants, and will in future vary from 1 to 25 per cent. of the net income. But the most important changes are those affecting legal persons. In their case the alterations are as follows:—The flat rate of tax on the net income has been raised from 4 per cent. to 6 per cent. The excess or super-tax rate which used to be levied on the amount by which the net income exceeded 5 per cent. on the share capital, has been raised from 8 per cent. to 10 per cent., though the rate of earnings which is allowed on the capital before the super-tax rate is applicable has been raised to 8 per cent. But in addition legal persons will in future be taxable on the amount by which the net income, after the deduction of the flat rate of tax, exceeds one-tenth of the capital invested. This third class of income tax rate is progressive, and is intended to replace the war profits tax. As the application of this new taxation will take time, there have been introduced temporary taxes on a series of products. In the case of rubber, chinchona bark, and quinine, a temporary expedient takes the form of an export duty. In the case of sugar, coffee, tea, and tobacco, the temporary taxes consist of progressive scales on the difference between the selling price and the cost price of the articles. In the case of the Customs duties, the new maximum rate is 12 per cent. *ad valorem*. Existing 10 per cent. rates are being raised to this figure, 6 per cent. rates to 10 per cent. rates, whilst articles formerly free are being taxed at 6 per cent. In addition to the export duties

already mentioned, copra, pepper, and coconut oil are made dutiable, whilst the taxation of oils and by-products is increased. The excise duties on matches, petroleum, benzine, &c., are also increased.

Clerical and Medical's Life Bonus.—A remarkable financial feat has been performed by the general manager and the directors of the Clerical, Medical, and General Life Office. The valuation as at June 30th last, on the severe basis of 2½ per cent. interest, has shown a surplus sufficient to maintain the rate of bonus paid to participating policyholders in 1911 and 1916. This is the more remarkable, seeing that the society has shareholders—the Employers' Liability Corporation—who take in dividends one-tenth of the surplus and, unlike its most serious competitors the London Life or the old Equitable, pays commission to agents for the introduction of business. Notwithstanding these two handicaps, the society has done what the old Equitable could not do—it has kept up its pre-war rate of bonus. Two factors have materially contributed to make this result possible. The mortality experienced has been very low indeed—low even for a society which has a very strong medical board and has always specialised in the selection of lives. During the past five years the claims by death, in spite of war losses and an influenza epidemic, have been no more than 65 per cent. of the amounts expected, and for the past 12 months have been less than half the amounts expected. The net rate of interest earned has been higher than at any time in the society's history; it has been more than 4½ per cent., against a rate assumed in the valuation of 2½ per cent. Depreciation, that great bugbear, was faced a year or so ago, when the long-dated securities were sold and short-dated bonds substituted for them. The great bulk of the Stock Exchange securities held are now redeemable at fairly short dates, and as they have all been valued at market prices, there is a hidden reserve of more than £200,000. In the course of the next ten years fully £150,000 will accrue to the funds as profit on redemption. The slight increase in the expenses is being gradually met by the increase in rates of premium which was put on in May of last year. We understand that the divisible surplus next October will be nearly £755,000, very little less than the £796,000 of five years ago or the £777,000 of ten years ago. The reserves, at 2½ per cent., are some £350,000 in excess of what they would have been at a valuation standard of 3 per cent. What has been done under the difficulties of war can scarcely fail to be maintained in peace; a life assurance society which has been able to keep its valuation rate unweakened and its bonus distribution unimpaired should have the brightest of prospects before it.

Hudson's Bay Report.—Considering the crisis that took place in the fur trade the results of Hudson's Bay Company for the year ended May 31st last are better than might have been expected. The fur trade resulted in a loss of £84,086, but other trading proved so satisfactory that the total of fur and trading profits is only £31,700 behind that of last year. Net land receipts were also a little lower, but the ordinary dividend is maintained at last year's rate of 40 per cent. This involves a reduction of about £50,000 in the carry forward. Recent years' results are summarised below:—

Year Ending	Net Land Receipts.	Fur and Trading Profits.	Total Net Profits.	Ordinary Dividend.
May 31—				
1909	175,476	80,391	255,867	260,000
1910	240,045	166,156	406,201	400,000
1911	548,512	159,966	708,478	400,000
1912	273,268	196,070	469,338	400,000
1913	589,926	228,324	818,250	500,000
1914	297,302	86,636	383,938	400,000
1915	2,697	30,641	33,338	nil
1916	24,652	266,662	291,314	200,000
1917	140,777	279,708	420,485	300,000
1918	367,841	315,964	683,805	400,000
1919	262,126	406,414	668,540	450,000
1920	174,276	331,757	506,033	400,000
1921	154,161	300,049	454,210	400,000

For the year ended March 31st last farm land sales were 178,301 acres for £624,117, an average of £3 10s per acre, compared with 276,629 acres for £970,878, an

average of £3 10s 2d for the preceding year. Sales of town lots amounted to £16,651, compared with £3,151. The balance-sheet, which is analysed in a later column, shows a big decline in "investments," and a substantial rise in the amount invested in the fur trade, while cash in hand is £132,477 higher. The report records that since the early part of the year fur prices have improved.

Gordon Hotels.—On Thursday the policy of the directors of the Gordon Hotels was approved by the shareholders at a general meeting, and Sir Francis Towle was re-elected to the board. It is difficult to see, on the information given, how shareholders could have taken any other course. But it is a great pity, perhaps, that shareholders and directors of the Gordon Hotels, Limited, cannot quietly adjust their differences at a series of round-table conferences. Valuable energy is being diverted from promoting the true interests of the undertaking to keep all the fire of internal dissensions. In the table which we give below we show how the company has fared over a period of years:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Trading profit	£161,665	£54,248	£100,969	£107,110	£174,542	£204,121	£138,882
8% notes accrd. int.	8,650	15,339	12,417	9,252	8,641	8,553	8,944
Debt interest	71,325	71,325	71,325	71,325	71,325	71,325	71,325
Net profit	81,990	Dr 30,416	17,227	26,533	94,576	124,243	68,018
Brought forward	4,927	6,891	9,210	35,743	24,170	30,838	
Preference div.	86,617	Dr 23,525	9,210	35,743	130,519	148,413	78,856
Ordinary div.	53,075	..	..	..	106,150	106,150	53,075
(3%)	28,950	..	..	..	..	..	..
Carried forward	4,592	Dr 23,525	9,210	35,743	24,169	42,263	25,781

* Dr 23,525 less £15,500 compensation for Hotel Metropole.

From 1905 until the war the ordinary dividend varied between 2 and 3 per cent., but ordinary shareholders have received no distribution for the past seven years. There are also 100 deferred shares of £10 each on which nothing has been paid since 1903. Preference dividends are now paid up to May 31, 1919, while the report states that "the directors have under consideration a scheme for dealing with the arrears of preference dividend so as to relieve the finances of the company of back payments which will in due course be submitted to the shareholders for their sanction." The balance-sheet will be found analysed in our usual column. The criticism of Sir Francis Towle's appointment strikes one as being somewhat premature. The test of his worth will be, after a fair trial, he is able to bring the undertaking into the dividend-paying lists. Then, we assume, no one will carp at his appointment or salary, except those who have objects in view other than the success of the concern.

Marconi International Marine.—The report of the Marconi International Marine Communication Company for the year 1920 shows that although there was a large increase in gross revenue, the net profit declined substantially owing "very largely to exceptional circumstances." These are stated by the directors to be losses on salaries paid in India owing to fluctuations in the value of the rupee, depreciation in Government securities and foreign currencies, resulting in a temporary loss of £67,600, and a decline in profits on foreign business of nearly £30,000, notwithstanding an increase of business. Moreover, "expenses of ship telegraph stations" have risen from £397,500 to £588,700. The table below summarises results for the past five years and for 1913:—

	1913.	1916.	1917.	1918.	1919.	1920.
Total revenue	£146,326	£270,230	£470,855	£563,445	£772,462	£933,811
Expenses, &c.	102,700	167,653	272,892	371,119	569,596	811,111
Interest	6,597	5,829	5,907	5,989	4,725	4,725
Balance	37,029	96,748	192,056	186,342	198,141	118,000
Rep. of debts	3,500	3,500	2,080	940	..	..
Reserve	..	17,347	50,000	..	..	..
Dividend	30,604	51,618	89,997	150,000	178,900	178,900
(10%)	(10%)	(15%)	(15%)	(15%)	(15%)	(15%)
Carried fwd.	6,068	51,279	105,418	141,760	161,890	48,000

The dividend is maintained at 15 per cent., but the carry forward is much reduced. The report states that on June 30th last Government securities and money remaining abroad had appreciated and the loss substantially diminished. An analysis of the balance-sheet will be found in the usual column.

Indian Mine Finance.—Our Mining correspondent writes:—In the hey-day of their prosperity, the boards of companies operating on the Kolar Goldfield consistently followed the practice of making share issues at substantial premiums for the purpose of providing for what was termed "capital expenditure." So far as the latter related to plant and machinery, or even to the sinking of a new shaft, the procedure followed might be considered warrantable. The deepening of existing shafts, and the opening-up of fresh levels to replace the ore extracted, cannot, by any stretch of the imagination, be properly regarded as capital expenditure. However, for a time all went well. The shareholders eagerly subscribed for new shares at a price well below the current market quotation, and the directors pocketed their commissions on the inflated dividends. Some few years ago, under changed conditions, a new spirit became evident; the leading concerns set aside large sums to reserve, or effected heavy writtings-off, towards covering outlay of the nature indicated. Of late, however, there has been a reversion to the former policy in a particularly unpleasant form. Last September the Nundydroog Company paid a dividend of 5 per cent.; in October the shareholders were electrified to receive a circular proposing reconstruction on the basis of an assessment of no less than 6s per 10s share. Much indignation was expressed, but the scheme went through; proprietors unable to put up the additional money, albeit by instalments spread over more than a year, simply had to forfeit their interest. Now, following closely on the heels of a market rumour, the directors of the Champion Reef Company intimate that in September they will submit a scheme of reconstruction, "the details of which are under consideration." The values in the lowest workings, it is stated, justify the prosecution of work at greater depth; but to meet the outlay the company's financial resources must be strengthened. Reference to the last balance-sheet, September 30, 1920, shows that at that date the company's surplus cash assets amounted to over £90,000. A dividend of 4d. per 2s. 6d. share was paid in February. Hence the case presents much the same features as that of the Nundydroog. It is probable that the general run of shareholders would prefer developments to be provided for out of earnings rather than that small distributions should be made and followed up by an assessment.

Spanish Tariff.—The current issue of the *Board of Trade Journal* contains the draft of the proposed new Spanish Tariff. This Draft Tariff is published for general information, and up to September 8th the Spanish Customs Board will be prepared to receive representations and petitions on the subject of the tariff proposals, which may be submitted in writing by industrial or commercial bodies, or private individuals, who may consider their interests to be affected by the proposals. At the end of the period the Draft Tariff, together with all representations received, will be reviewed by the Customs Board, who will, as soon as possible thereafter, submit to the Spanish Government the definitive draft of a new tariff. The Board of Trade propose to invite Chambers of Commerce and Trade Associations in the United Kingdom to submit to them any representations which those bodies may desire to make in the interests of the trade of their members, with a view to such representations as may appear to be necessary being made officially to the Spanish Government with regard to the proposed new tariff in relation to the trade of this country with Spain.

At a meeting of the executive committee of the Sound Currency Association on Thursday, it was decided to proceed with arrangements for the holding of an International Monetary Conference, to be organised by the association, in the late autumn, for the purpose of drawing up a programme of the steps which may be deemed advisable and necessary to rehabilitate the currencies of the various countries and to re-establish the gold standard.

Obersea Correspondence.

UNITED STATES.—FOREIGN TRADE—GOLD HOLDINGS—COTTON CONSUMPTION AND EXPORT—GERMAN CREDITS.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 15.

THE foreign trade returns, issued this week by the Department of Commerce, show that our exports in June increased somewhat over the small total for May, which was the lowest total of any month since January, 1916. June exports aggregated \$340,000,000, as against \$329,000,000 in the preceding month, and \$629,000,000 in June a year ago. Imports were \$198,000,000 compared with \$204,000,000 in May and \$552,000,000 in June, 1920. Both exports and imports have declined almost to the same extent from their high records. June exports were 63 per cent. below the highest monthly total, while imports were 64 per cent. below the high peak of last June. During the fiscal year ended June 30 our total foreign trade, exports and imports combined, fell off more than three billions of dollars, the decrease being about evenly divided between exports and imports. The following table shows at a glance the fluctuations in foreign commerce each fiscal year from 1913-14 to 1920-21 inclusive:—

	Exports.	Imports.	Excess of Exports.
1913-14	2,364,579,148	1,893,925,657	470,653,491
1914-15	2,768,589,340	1,674,169,740	1,094,419,600
1915-16	4,333,482,885	2,197,883,510	2,135,599,375
1916-17	6,290,048,394	2,659,355,185	3,630,693,209
1917-18	5,919,711,371	2,945,655,403	2,974,055,968
1918-19	7,232,282,686	3,095,720,068	4,136,562,618
1919-20	8,108,988,663	5,238,352,114	2,870,636,549
1920-21	6,519,365,734	3,666,769,537	2,852,596,197

According to an official statement from Washington, gold holdings in the United States on July 1st amounted to \$3,223,351,644, which establishes a new high record. From January 1st to June 20th imports of the yellow metal totalled \$338,420,725, and indications are that the figures will soon reach half a billion. Official statistics of imports since June 20 are not yet available, but it is known that receipts during the past three weeks have been heavy. The following table gives figures furnished by the Federal Reserve Board of the total gold shipments to the United States by European countries from January 1st to June 20, 1921:—

From—	Jan. 1 to June 20, '21.	From—	Jan. 1 to June 20, '21.
Austria	9,000	Portugal	20,892
Belgium	39,691	Russia in Europe	85,000
Denmark	3,161,497	Spain	3,123,880
France	70,441,038	Sweden	43,269,401
Germany	7,279	Switzerland	2,944
Greece	965,745	Turkey in Europe	253,731
Italy	102,285	U.K.—England	100,609,224
Netherlands	75,605,393		
Norway	1,532,100	Total Europe	239,229,160

In addition to the above total, North American countries sent \$32,550,580; South American, \$12,000,829; Asia, \$48,363,744; and Australia, \$6,333,537. Comparatively small amounts were received from New Zealand, the Philippine Islands, Abyssinia, British West and South Africa, and Portuguese Africa.

Notwithstanding the generally quiet state of trade in cotton textile lines, it is evident that the low prices of the raw material and of cotton goods have stimulated consumption of the staple. Census Bureau returns show that June consumption totalled 461,656 bales, representing an increase of 4.7 per cent. over May, and the largest monthly total since last August. As compared with June of last year, the decrease was 94,000 bales, or 17 per cent., owing to the fact that only 32,665,315 spindles were active, as against 34,457,464 in the corresponding month of last year. Consumption for 11 months, August to June inclusive, was 4,477,773 bales, compared with 5,894,611 bales in the like period of the preceding year, or a decrease of about 24 per cent.

The War Finance Corporation's recent advance of \$5,000,000 to the Staple Cotton Co-operative Association

of Memphis marks the adoption of a broader policy by the corporation in its efforts to aid cotton exporters in the present emergency. Heretofore the corporation has considered applications for assistance in exporting cotton only in cases where the cotton was actually exported under definite contracts of sale, or where the arrangements provided for prompt shipment against deferred payments; for future shipments within a reasonable time against either prompt or deferred payments, after arrival in foreign countries where goods were under definite contract for sale; or for prompt shipment to warehouses in foreign distributing points, to be held there on account of the American exporters and bankers for marketing out of warehouses. The advance to the cotton association mentioned goes beyond those limitations. Under the terms of the loan, the association agrees that, out of the 100,000 bales of long staple cotton pledged as security it will export within one year a quantity sufficient to repay the full amount of the loan out of the proceeds of export sales—the cotton to be held in American warehouses until the time is favourable for export. The advance approximates one-half of the present market value of the cotton, and will run for a maximum period of one year, although it may be repaid sooner as the cotton is exported and sold. The War Finance Corporation, through its managing director, Eugene Meyer, jun., has announced that it stands ready to assist other organizations, as well as cotton exporters and banking institutions, in the same way, provided the advances can be made upon a sound business basis, and provided, also, that the corporation may be definitely assured that the advances will be repaid from the proceeds of export sales within a year.

Germany is said to be negotiating with American bankers for credits in the United States, ranging from 30 days to one year, and totalling \$49,000,000, approximately. The credits, which are to be used for purchases of grain, cotton, and copper, and possibly to some extent in connection with reparations payments, involve different pieces of financing. Two banking groups, according to statements made in reliable quarters, are working on credits of \$5,000,000 and \$10,000,000, another group is handling a \$25,000,000 credit, and still another a \$9,000,000 credit. The syndicate considering the latter credit is understood to consist of the International Acceptance Bank, the Chase National Bank, the Bankers' Trust Company, and the First National Bank of Boston. The present negotiations are being carried on by the bankers, it is said, with the Getreide Einfuhr' Stelle. The credits, according to reports current here, are to be an obligation of that agency or department of the German Government, and endorsed by a syndicate of German banks, and are to take the form of acceptances which would be eligible for rediscount at the Federal Reserve banks.

FRANCE.—THE FINANCIAL OUTLOOK—FOREIGN TRADE—UNEMPLOYMENT—THE TEXTILE TRADES.

(FROM OUR CORRESPONDENT.)

PARIS, July 27.

ALTHOUGH the Chambers have both risen for the recess, the Finance Commission of the Lower House is steadily continuing its work, in spite of a temperature that has stood day after day in the neighbourhood of 100 degrees in the shade. The object of the Commission is to complete its consideration of the estimates by the time the holidays are over, so that the Finance Bill for the coming year may, if possible, be passed through all its stages in time to come into operation on January 1st. This is a counsel of perfection that has often previously failed to assume practical form, but the unusual spectacle of the Finance Commission doggedly continuing its work when even the catering staff of the Chamber has gone for its holidays has given rise to a widespread belief that this year, perhaps, what has hitherto been regarded as impossible may be accomplished.

M. Maurice Bokanowski, the energetic young financial

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

Resources over \$500,000,000

KENNETH H. ROCKEY, Representative,
17, Sherborne Lane, King William Street,
London, E. C. 4

authority who was recently appointed to the post of *rapporteur général* of the Budget Commission, is enthusiastically optimistic as to the future of his country from the financial point of view. "The financial situation of France, although at present apparently bad, may and will become excellent," he said, in the course of a chat I had with him last week. "We are determined, in spite of the heavy burden the country has to carry in consequence of the German onslaught, on a balance between revenue and expenditure. The really embarrassing factor is the Budget for the Liberated Regions; that is to say, the expenditure which must be repaid by Germany. I need not hesitate to say that the financial situation of France is dependent on the Germans carrying out their obligations under the Peace Treaty.

"Apart from the expenditure which must be recouped from Germany, our disbursements for 1922 will amount to 22,500,000,000, to which must be added 1,500,000,000 for expenditure in connection with the maintenance of our troops in Cilicia, Upper Silesia, and other regions. Of this total of 24,000,000,000, thirteen milliards, or more than half, will be spent on the discharge of our various debts. Before the war the French Budget totalled 5,000,000,000, and our national debt represented an annual charge of 1,000,000,000. It is clear, therefore, that French expenditure has increased from 4,000,000,000 a year to 11,000,000,000." M. Bokanowski insisted that, in spite of the accusation of reckless expenditure that is brought against the French in certain quarters, no people is more thrifty than they, in spite of the frightful increase in the cost of living, the fall of the franc to .35 of its former par value, and the fact that wages have been increased to three times their former scale.

The French foreign trade returns for the first six months of 1921 are now available, and indicate that, although they are still favourable on balance to this country, the falling off in both imports and exports during the past month has

been substantial. The comparative figures for the first halves of 1921 and 1920 respectively are as follows:—

	First Six Months of		Increase or Decrease.
	1920.	1921.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	6,366,668,000	2,488,606,000	— 3,878,062,000
Raw materials	13,160,529,000	5,139,928,000	— 8,020,601,000
Manufactured goods	6,664,505,000	2,778,904,000	— 3,885,601,000
Total	26,191,702,000	10,407,438,000	— 15,784,264,000
Exports—			
Foodstuffs	1,114,774,000	1,000,733,000	— 114,041,000
Raw materials	3,046,006,000	2,718,143,000	— 327,863,000
Manufactured goods	7,621,078,000	6,484,436,000	— 1,136,642,000
Postal parcels	474,365,000	596,543,000	+ 122,178,000
Total	12,256,223,000	10,799,855,000	— 1,456,368,000

For the first time the valuation in francs on which the above figures are based is made (*but only in respect of the figures for 1920*) in accordance with the official fixed scales for 1920. The Customs authorities point out that, owing to the recent substantial falls in commodity prices, which are now much lower than in 1920, it has not been possible to value the imports and exports for 1921 on the same basis as in the previous year. The figures for 1921 therefore are based on the fixed scale for 1919, which approximated very closely to the values now prevailing. The official scale for 1919, it is explained, involves a difference of only about 3 per cent., while if that of 1920 were applied the discrepancy would be equal to something like 27 per cent. Exact comparison between the totals for the two periods being rendered difficult owing to the fall in commodity prices, the Customs authorities have thought fit to publish, also for the first time, the comparative tonnage of the exports and imports for the two periods in question, which are as follows:—

	Tonnage During First Six Months of		Increase or Decrease.
	1920.	1921.	
Imports—			
Foodstuffs	3,326,785	1,636,479	— 1,690,306
Raw materials	17,584,057	13,618,110	— 3,965,947
Manufactured goods	1,219,768	802,687	— 417,081
Totals	22,130,610	16,057,276	— 6,073,334
Exports—			
Foodstuffs	479,956	667,231	+ 187,275
Raw materials	4,210,226	5,627,429	+ 1,417,203
Manufactured goods	823,934	1,019,354	+ 195,420
Postal parcels	9,365	11,938	+ 2,573
Totals	5,523,481	7,325,952	+ 1,802,471

When compared on a tonnage basis, French imports for the six months show a decline of only 27 per cent. as compared with the figures for the corresponding period of last year (23 per cent. of this representing the falling off in the imports of raw materials); while if the comparison is made according to values, the decrease is equivalent to over 60 per cent. Exports, on the other hand, show an increase of 1,800,000 tons in weight, but a decrease of 1,456,000 in value.

The real significance of the French returns, however, in their relation to the general slump in business throughout the world, is only to be noted when they are compared with those issued last month, setting forth the details for the first five months of the year. From those figures it was seen that whereas the imports into France for the first five months of 1920 had a value of 15,722,000,000, those for the corresponding period of 1921 had fallen to 8,683,000,000, a decline of 7,038 millions. The figures now issued indicate that the comparative decline in imports during the month of June alone was 8,746 millions, or more than that for the whole of the previous five months put together. Exports for the five months ending with May were 1,221 million francs in excess of those for the corresponding period of last year. The figures now issued show that the total French exports during June were to the value of 1,750,000,000, as compared with 6,429,000,000 for the corresponding month of last year.

French unemployment figures continue to show a steady decline. The number of unemployed in receipt of unemployment allowances from the 131 departmental and muni-

cipal funds throughout France is now 47,566, or a decrease of 518 as compared with the previous week. The number in receipt of unemployment allowances at the end of April was 84,810. Of the 47,566 workless people referred to, 31,429 were in the Paris area. To these figures must be added, perhaps, another 40,000, to represent unemployed who have no need of help from the public funds. It should also be added, as the Ministry of Labour is careful to point out, that the published figures do not include the number of workers on short time, nor those in districts where there are no unemployment funds. The latter contingency applies especially to the devastated regions, where the financial situation of practically the whole of the communes renders the organisation of local unemployment funds impossible. In such cases, men and women requiring relief through unemployment are succoured by the ordinary poor-law organisations, and thus escape inclusion in the statistics of the Labour Ministry.

The situation in the French textile industry is again causing alarm. Strikes have occurred in the Lille cotton area and the Roubaix-Tourcoing woollen centre, owing to proposed wages reductions. At Lille the strike was due to a proposal by the employers for a reduction in wages similar to that in the Vosges cotton area, where a cut of 15 per cent. has been made, in conformity with the reduction in the cost of living. The effect of this may be judged from the fact that the saving in one Vosges mill alone, where there are 40,000 spindles, amounts to 690,000 of a year. The same principle applied to the mills in the Lille district would mean, it is stated, a reduction in operating costs of about 24,000,000 of a year. The French woollen mills in the North are many of them working only from 16 to 24 hours a month, it is reported. Cotton mills in the Roubaix area have been idle 20 hours a week, and their output has been reduced to 50 per cent. of the normal. Lille cotton mills are working on an average 27 hours a week, and three-quarters of the linen mills from 18 to 24 hours a week, the rest being idle. In the Lyons silk area weavers are working from 32 to 40 hours a week, 35 per cent. of the looms being stopped. Dyers and dressers are working 12 hours a week, and 75 per cent. of the throwers are idle.

The market has been fluctuating considerably, and it was hoped that there would be a sensible recovery after the fifteenth, but the difficulties in Upper Silesia have aggravated the situation. Throughout the week there has been a series of erratic movements, caused in part through the drop in Mexican Eagles owing to fires in the wells near Vera Cruz. The French 3 per cents. were rather lower at 56.35, as against 56.50. Banks have fluctuated, Banque de Paris varying between 1270 and 1290, Union Parisienne between 800 and 788, and Crédit Mobilier between 425 and 420. Transports have shown a tendency towards depression; thus Metropolitan is back from 383 to 373, Nord Sud and Omnibus have remained unchanged at 165 and 607 respectively, while Chargeurs Réunis have dropped from 550 to 530, Transatlantique from 232 to 222, and Messageries from 305 to 280. Electrical undertakings have declined, Thomson falling from 840 to 790 and Telegraphie sans Fil from 800 to 730. Metallurgical undertakings are mostly weaker, Creusot standing at 2100, as against 2145, and Acieries de France being firmer at 605, as against 585; but St. Nazaire has dropped from 980 to 850, and Acieries du Nord and Est from 500 to 469. In mining securities, Tintos are weaker at 1423, after having stood at 1460, but Boléo is better at 315, as against 285.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

	July 22, 1921.	July 15, 1921.	July 24, 1913.
Capital of the Bank	2,500,000	182,500,000	182,500,000
Profits in addition to reserve	5,297,689	30,297,689	8,006,146
Reserve	105,750	22,105,750	22,105,750
Reserve of land	0.000	4,000,000	4,000,000

POLAND. — CROP PROSPECTS — DECONTROL — OIL CONVENTION WITH FRANCE — ITALIAN CAPITAL IN GALICIA — TRADE NEGOTIATIONS WITH CZECHO-SLOVAKIA — AUSTRIAN GOLD: INCREASE OF IMPORT DUTIES.

(FROM OUR CORRESPONDENT.)

WARSAW, July 22.

THE crop prospects continue to be excellent. It may be assumed that Poland will be able to feed her population without resorting to the import of foreign corn. According to the estimates of the Ministry of Agriculture, the yield of winter-sown corn will be by 100 per cent. greater than a year ago. Potatoes came up very well, and there are prospects for an increased crop of sugar-beet. Waste lands have disappeared completely in the central provinces, and only in the Eastern districts are uncultivated fields to be found.

On July 15th the system of food control, of maximum prices, &c., ceased to exist. The trade in food products — with the exception of sugar and alcohol — is now absolutely free. The Ministry of Food is being liquidated.

The oil convention with France has not yet been signed. This is principally due to some difficulties in drawing a line of demarcation between French and other companies which are exploiting the Galician oilfields. There are different undertakings which are French in name but in which German capital is interested to a large extent. The French Government has the intention of excluding those companies from the benefits of the convention, and this is one of the principal reasons of the delay in the signature of the agreement.

Lately Italian capital has entered the field in Galicia. The "Petroli d'Italia," which were pursuing hitherto drilling operations in Albania, have acquired oilfields in Western Galicia. For the exploiting of these deposits a special company has been founded. In Budapest a new undertaking — the "Napta Polania," with a capital of 100 million kronen — has been created. The Italo-Hungarian Bank is financing this new company.

Negotiations between Czechoslovakia and Poland for the conclusion of a trade agreement have been opened. The Czechoslovakian Minister of Commerce, Mr. Hotowec, has arrived in Warsaw, and is discussing with the Polish authorities the principal points of the future convention. The conclusion of an agreement with Czechoslovakia is of the greatest importance for the two countries, in consequence of their very intimate economic relations. As country of origin, Czechoslovakia ranges in the Polish trade returns second, and as country of destination third. As far as the iron industry is concerned, Czechoslovakia has already acquired a kind of monopoly of the Polish market.

From the 50 million kronen of the gold reserve of the Austro-Hungarian Bank, which had to be divided among the succession States, Poland has obtained 4,468,000 kronen. The bulk of this sum is composed of English sovereigns. The depreciation of the Polish mark has forced the Government to increase the import duties. These duties are calculated in gold and paid in paper marks, according to a varying agio. This agio has been actually fixed at 19.900 per cent. for luxuries, and at 14.900 per cent. for other articles.

JUGOSLAVIA. — EXPORT DUTIES — THE NEW GENERAL TARIFF — CONSTITUTION.

(FROM OUR CORRESPONDENT.)

BELGRADE, July 22.

THE Customs duties on exports are daily becoming more embarrassing for the export trade of Yugoslavia. The dearth of agricultural products which was manifested in Central Europe in the years 1919 and 1920 has sensibly diminished. Jugoslavian wheat has not a privileged position, even in Austria, and American wheat is a strong competitor.

The same thing obtains with regard to other products which Yugoslavia exports. Consequently duties on export must be reduced. Some reductions were made in February, 1921, and again on June 16th, the following articles being affected — horses, beef, pigs, meat, bacon, sausages, lard, lignit.

A new general tariff of Customs duties on imports was published on July 16th. It contains a minimum tariff for the countries which have commercial treaties with Yugoslavia, England, France, &c., and a maximum tariff for other countries. The minimum tariff is higher than the rates existing up to the present. By this new tariff the wood, iron, and textile industries are specially protected. The sugar, flour, beer industries are already sufficiently protected. A special tax of 10 per cent. *ad valorem* on "articles de luxe," already in existence, charged over and above the ordinary rates, still remains in force. Although national industries are thus sufficiently protected, they are not satisfied. The Government, however, taking into consideration the case of the consumers in the country, who, if tariffs were raised further, would consequently have to pay more for their requirements, and who suffer sufficiently already on account of high cost of living, decline to go any further in this direction.

The new Constitution was definitely voted on June 28th by a great majority. Thus Yugoslavia, the last of the new States in Europe, receives a Constitution which is the base for its political and economical development. The National Assembly rose for vacation at the end of June, and things are quiet, both politically and commercially.

Letters to the Editor.

THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—If Mr Arthur Kitson is bewildered by reading the correspondence on this subject which has appeared in your journal, I doubt whether anything I can state will be of much service to him. The subject is certainly very much alive, and although some of your readers may be a little wearied of the controversy, its importance is my excuse for again troubling you with this letter.

Mr Kitson takes exception to my statement that the "gold standard has stood the test of time," and points to the crisis of 1847, 1857, 1866, 1907, and 1914 as evidence to the contrary. No one has ever claimed for the gold standard that it will prevent crises from occurring, but, under its operation they are less likely to occur. Another thing to bear in mind is that a crisis may occur because of some defect in your banking system, and which has nothing whatever to do with the gold standard. There is no doubt room for improvement here, whereby greater elasticity would be provided and a crisis ren-

dered less likely to take place. Mr Kitson and other reformers might direct their attention to this aspect of the question in the event of a monetary conference being arranged.

Your correspondent exaggerates when he states that gold disappeared in 1914, before even a shot was fired. It is true that owing to a defect in our banking system, when the panic took place in August, 1914, the Bank Act had either to be suspended or a new credit instrument provided, such as the Treasury currency note. As a matter of fact, both were provided during the war, and on several occasions I have paid my humble tribute in the House of Commons to the skill with which Mr Lloyd George handled the crisis of August, 1914. But as Mr Kitson states, I pointed out to Mr Lloyd George the effects which would follow if no provision was made to gradually redeem the emergency paper money when the panic was over. No action was taken. On the contrary, the issue of Treasury currency notes was continued indefinitely, with the results which are only too well known, and to-day we are paying the price for that lack of foresight. It is a painful experience, and the deflation policy which was necessary has, no doubt, caused a great deal of inconvenience and loss to many people; but would Mr Kitson seriously have recommended any other? Mr Kitson forgets that it was the high prices and perilous heights to which everything had been forced by inflation which led to the comparatively small curtailment of credit on the part of the banks and other lending institutions. Your correspondent described the claims of the gold-standard advocates as silly, and that Germany has not been taken in by them. According to Mr Kitson, Germany has reduced her mark to the lowest point in her history, and is purposely keeping it low in value by continuing to issue fresh notes, and if she will continue this policy for the next five years the bulk of the world's trade will be under her control.

Does Mr Kitson seriously intend your readers to believe this? If so, Russia and Poland would be our most formidable competitors, and all this nonsense, I suppose he would call it, of economy, attempting to restore the £ sterling to its par value, should be placed on the scrap-heap, and a policy of unlimited printing of paper-money installed in its stead. When we have got the value of the pound down to that of a shilling, and enormously increased our debt, we would then, according to Mr Kitson, be in a position to control the bulk of the world's trade. I wonder who would look silly then.—I am, Sir, your obedient servant,

D. M. MASON.

July 25th, 1921.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Personal controversy is always disagreeable, and it gives me no pleasure to draw the attention of your correspondent Mr Arthur Kitson to the fact that Sir Thomas Gresham, who flourished in the time of Henry VIII., first adumbrated the fiscal law—known and respected for over 350 years as “Gresham's law”—that “the weaker currency drives out the stronger.”

Your correspondent actually says:—“Mr Mason confuses effects with causes to such a degree that he forgets his history (!). It is quite untrue to say that the Treasury notes drove gold out of circulation.”

Surely, Sir, the man in the street knows quite well that the £ note is daily quoted at about \$3.60 in American currency based on gold, whereas a golden sovereign is still intrinsically worth its exchange value—say, \$4.85 at par. Naturally no golden sovereigns are in circulation here.

With regard to Mr Kitson's assertion that Germany is the most prosperous country in Europe, possessing a paper mark of the real value of a penny, I would ask him if he suggests we should reduce our shilling to the real value of one penny, or should we go one better than Germany and reduce it to a half-penny? It could easily be done: a Government only requires a printing press with a sufficient quantity of paper and ink.—Yours faithfully,

G. S. PAWLE.

July 25th, 1921.

THE RAILWAYS BILL—STANDARD REVENUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The discussions in the Committee on the Railway Bill have raised very prominently its two most characteristic features, viz., rates and standard revenue. They are an essential part of a scheme which is an attempt at a compromise between nationalisation and unregulated management by the companies. It is a compromise to which in this country and in America people have been led by successive steps. At this stage it may be mentioned that in America a very minute and elaborate régime has been imposed upon the railway companies. That the Geddes Bill affords a remarkable similarity to the Transportation Act of 1920 will be manifest to everyone who has looked into the latter. That it bears particular kinship in its two features which we are about to scrutinise is also apparent. There is, however, one difference: that whereas the American Act has a long and continuous history behind it, the English Railway Bill affords no such clear background in the past. For an explanation of the Bill, therefore, the railway history across the Atlantic will afford a useful guide.

The principle of standard revenue has its fascination not merely on account of the ethical element, viz., justice to shareholders, but has its roots more firmly planted on economic soil. The need of encouraging private capital by the prospect of a reasonable return, in order to induce the necessary funds to be forthcoming, is more than apparent in a new country. But in England this need, though yet dimly realised, is bound to assume serious dimensions in the near future. As compared with Belgium, England has still an inadequate net of railways, and the importance of inducing capital in the railway industry ought not to be underrated. The question has of late, with the incursion of motor transport, been pushed into the background; but to those better acquainted with the transport industry it is more than clear that the motors cannot take the place of railways. The motor transport has not yet been made to pay its full share of the costs of the king's highways, and therefore still rests on an uneconomic basis.

The problem of a fair return is again intertwined with the problem of rate regulation. The whole rate structure in America is growing up on the basis of the ability of the railroads to supply the service, measured in terms of a return to their capital. The whole argument, to put it in a nutshell, is that more than a reasonable return is an unnecessary burden on the patrons of the railways; less than this means a check to the development of traffic, inasmuch as the necessary capital for extension and improvement will not be forthcoming. The explanation of this theory lies in an attempt to reconcile the interests of the shareholders with those of the public.

Although one will hardly find fault with the principle of standard revenue as enumerated above, one cannot honestly congratulate the Minister on its elaboration and development. The most trenchant criticism offered on Clauses 52 and 53 of the Bill appeared a few days ago in the *Times* under the signature of W. T. Layton. His objection, to summarise briefly, is that a plan which aims at obtaining standard revenue by a yearly or a periodical revision of rates is at once unsound and foredoomed to failure. But while this must be conceded as a grave defect of the principle as worked out in the Bill, it can hardly be suggested that the principle is unworkable. As it has been said above, the idea of standard revenue is not new in the world. Let us see how the difficulty to which notice has been drawn by Mr Layton has been met in America and in France, where also they are moving towards the adoption of this principle. A contingent fund as in America, or a common surplus fund (*fonds commun*) as in France, is a necessary complement of any scheme of this sort. In America half the excess over the income adjudged as fair is returned to a reserve fund of the carrier company, and the other half to a contingent fund under the control of the Federal Government. In France, likewise, the Government Bill proposes to create a *fonds commun*. The Commission of Finances, which examined the scheme, spoke of the utility of this fund in very apt language. At the cost of a little more space I reproduce it below:—

“It is then in several respects a problem of mechanics.

If the pressure of a waterfall is brought on the turbines directly and without any precautions, hardly any power is generated. During the dry season the force will be almost nil; on the other hand, during the rainy season the machinery will be inundated by excessive flow. A clever engineer who wishes to get the best out of the fall interposes between the fall and the machinery a reservoir to maintain a constant and regular flow to the turbines.

“In the same way, in order to obtain a uniform system of our railways, to avoid the sudden variations of tariffs, we must build up a reserve. This is what the proposed convention is attempting to do by creating *le fonds commun*.”

The stability of charges is a much graver consideration than the assurance of standard revenue. But to secure this stability is not impossible, or even improbable, without wrecking the Bill. To cast one's eyes back to the earlier outline submitted by the Minister, there were not merely faint glimmerings, but clear indications of an idea to establish a reserve fund. This could have served to ward off sudden fluctuations of tariffs.

There is still another objection to which the above clauses are exposed. However just it may be to assure a certain rate of return to the companies for a temporary period, it will be obviously absurd to fix this return permanently. The value of money is a varying thing, and it is uneconomic to fix it for all time to come. The American Act takes count of this factor, and provides for periodical revisions and adjustments by the Inter-State Commerce Commission.

I will defer my remarks on the question of exceptional rates until a later date.—Yours faithfully,

H. M. JAGTIANI.

London School of Economics, July 25th, 1921.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I thank Mr Mason for his replies to my two questions, and I venture to bring forward the following criticism thereon for his consideration.

Mr Mason admits that falling prices discourage trade, but believes that it is necessary to go through this painful experience in order to compete in the common markets of the world. In another passage he states that a gradual fall in the cost of living and of production will stimulate trade and industry. While it is a matter of every-day experience that the reduction of the price of any one article stimulates the demand for that article, it is a fallacy to deduce from this that a proportionate reduction of the price of all articles will stimulate demand. Trade is only the exchange of goods, and the same quantities of different kinds of goods would exchange for one another after a general fall in prices as before. Therefore a general price reduction would make no difference at all, except to inflict hardship and loss on those who had to discharge debts expressed in money, and to give unearned increment to those who had to receive such debts. “The real price of everything,” says Adam Smith, “what everything costs to the man who wants to acquire it, is the toil and trouble of acquiring it.” Our trade consists, roughly speaking, of obtaining food and raw materials in exchange for manufactures. We are cheap if we give good value in manufactures in exchange for what other nations send to us: this is what attracts food and raw materials to our shores. The experiments in deflation, with the view to restoring the gold standard, have so far made us actually dearer, for the fall in the price of what we buy (except certain food-stuffs) has been greater than the fall in the price of what we sell. As an illustration, the equivalent weights of cotton yarn and cotton cloth, which could be obtained in exchange for 100 lbs of middling American cotton at different dates, work out as follows:—

	QUANTITIES EQUIVALENT IN VALUE TO 100 LBS MIDDLING AMERICAN COTTON.		
	1901-5 Average.	Jan. 1, 1920.	July 21, 1921.
Yarn, 32's twist.....lbs	66 ..	55½ ..	48½
Cloth, 39-in shirtings (37½ yards 8½ lbs)	57½ ..	52 ..	35½

It would be very interesting if the *Economist* would give index numbers showing the relative movements in the

articles which we buy and those which we sell since April, 1920. It seems to me clear that it is a matter of complete indifference what the absolute price level is in any system of currency, provided that the prices of different articles are well adjusted to the labour of producing them, and that the price level remains steady. The cost of goods to the foreigner in his own currency is adjusted automatically through the exchanges. On the above grounds, I dispute most emphatically that there is any necessity whatever to make the country go through a period of suffering and unemployment in order to reduce the general level of prices and restore the gold standard. The only intelligible object in doing this is to give a premium to a limited class of creditors at the expense of the misery of the rest of the community.

The further fall in prices necessary to restore the gold standard cannot be less than the present premium on the dollar—or, say, 25 per cent.—and I believe the eventual fall would be greater, as the gold standard was reintroduced into other countries.

As regards the burden of debt, I venture to doubt whether a policy which admittedly leads to bad trade, and therefore to falling revenue, is likely to improve our credit. On the other hand, the fall in the money value of the national income, and therefore the increase in the proportion of it which must be taken for debt service, is a certain result of the deflation policy.

Mr Mason is correct in saying that a paper currency may be maintained at par with gold, by limiting the amount in circulation. It is equally easy to maintain a paper currency at par with an index number of prices, by which means greater stability would be attained, without the evils of bad trade and increased burden of debts.—I am, Sir, your obedient servant,

C. CRAIES.

July 25th, 1921.

TO THE EDITOR OF THE ECONOMIST.

SIR,—We see by his letter in the *Economist* of July 23 that Mr Kitson thinks the average reader of your correspondents' economic reasonings must be left in a condition of sheer bewilderment. And we heartily agree with him. But as the “average person” is the majority of persons—the majority that rules—it is to be regretted that your correspondents' teaching can only lead to gaping bewilderment.

Yet so it seems to be. Although the “inflationist” argument gets so great a show of support from the present obvious trade depression, no controllers of finance ever seem to see any salvation in it. At any rate, they seem helplessly to follow the “deflation” policy, though a little apologetically, owing to the fact that the policy can show nothing but trade depression resulting from its efforts. Neither side seems to take any notice of your suggestion that perhaps there has not been any deflation, or the learned bimetalist argument that all the trouble could be overcome by using the double standard of value. All these gentlemen seem to prove their case quite beyond any refutation by their opponents, yet no one seems any nearer agreement. In spite of their solemn predictions and mutual warnings, it seems the whole herd of advisers and advised must rush down the steep into the sea as if possessed of a “lunatic policy.” Whether we cling desperately to a quantity of gold or flounder in a German Ocean of marks that will purchase nothing, we seem impelled by some force we can neither understand nor control to go down to that poverty and toil which seems alone able to capture the world's trade.

In this confused controversy there seems to be one idea in common. The “deflationists” see that a standard of value should be as nearly an invariable one as possible. The bimetalists also think that the standard would be more invariable if it was the mean variation of two commodities. And the “inflationists” go to the logical conclusion that the standard would be still more invariable if it was the mean value of all commodities. But the difficulty seems to be to find what the mean is and to make prices keep to the mean when we have got it; these standards have been tried, and are still being tried, in one country or another, yet prices have never been invariable for a moment. We seem to need a greater light on how exactly a standard of value can control the level of prices.

May we suggest that possibly the price level does not depend upon quantity or value of currency at all? We seem to have heard it stated with great authority that value depends upon demand and supply; and if that is so, things that become more wanted or more difficult to obtain should surely become higher in price. If the supply of currency is short (?) its value should go up. The idea that the price level should, or could, be made invariable seems to us the most pernicious fallacy that has ever muddled the heads of economists.—Yours faithfully,

ALBERT AND PERCY WALLIS.

July 25th, 1921.

COST OF PRODUCTION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I think Mr Craies does not get really to the root of the objection of the workman—or his leader—to increasing output.

Habit, as he recognises in the latter part of his letter, is inertia rather than active force; it is leaving alone the forces in operation without bringing new forces into action.

Objection to increasing output on the part of the workman is partly resistance to selfish desire for undue gain by the employer, partly an unreasoning belief that what is bad for the employer is, *ergo*, good for the workman; that there is just so much work to be done in the world, and that the less the employer gets out of it the better it is for the workman, and the more he gets out of it.

In the world war there were large numbers of people who were temporarily lifted out of the old ruts of feeling, both among employers and workers, and those who were not lifted out of them were able to gorge themselves on the public purse, directly or indirectly.

It is the moral lift and the consequent outburst of intelligent and harmonious and unselfish effort that we want, quite as much from the labour side as from the employers'.—I am, Sir, your obedient servant,

July 19th, 1921. E. H. B.

Books and Publications.

REVIEWS.

"Prices and Wages." By Percy and Albert Wallis. P. S. King and Son, 1921. 25s.

IN 450 closely reasoned pages the authors of this work set out the fundamentals of their economic creed. They believe (1) that the value of everything is unalterably fixed by the "labour-time" required for its production; (2) that general changes in prices can only take place when there is a change in the labour-time required for the production of gold, or whatever else is the standard of value; (3) that laws of supply and demand are the follies of "the economists," to whom is ascribed the belief that cost of production has little or nothing to do with value; (4) that this doctrine, though, as the authors realise, it is more akin to that of Marx than any other, is in reality a prop of the "capitalist system." Incidentally we learn that capital is not the result of saving, and that in pre-war days we consumed annually practically the whole of our annual production. In support of this extraordinary picture of orthodoxy in unorthodox clothing walking hand in hand with pure heresy, an immense amount of evidence is adduced, but this sometimes has to be roughly handled before it will yield the appropriate deductions.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. August 10. ACCOUNT. August 11.

While the volume of Stock Exchange business has been comparatively small, the tone of markets is not unsatisfactory. The feature of the week has been the way in which new issues of good class were rapidly over-subscribed by the public. A month ago underwriters began to get a little shy of taking new obligations, owing to the way in which the public were postponing investment in new issues until after allotment, evidently with the intention of getting stock at a discount. To-day, however, the appetite of the investor, despite the holiday season, is eager for good securities offering a reasonable rate of interest. Nor have the latest stocks come into competition with those already existing. Investment is the order of the day, speculation being very passive.

The last day having passed for effecting conversion of National War bonds, Exchequer bonds, &c., into the new 5½ per cent. Treasury eight-year bonds, several of the prices of the short-dated Government securities went back, while the War Loan itself has been somewhat dull in tone. Victory Bonds and Funding Loan, however, are a better market, and once more the scrip stocks of such borrowers as Ceylon, New Zealand, India, and many of the Home Corporations show rises in reflection of the way in which the effect of the lower Bank rate is steadily working. Home Railway prior-charge stocks are included in the lists of those which the investor demands, and Indian Railway stocks advance with monotonous regularity day by day.

The Foreign market has seen a fair amount of buying of Brazilian bonds, while Japanese dollar stocks have vied with the weather in breaking records. Chinese bonds are firmer, though French and German issues hang back. There is, however, a fair amount of Continental demand for foreigners as a whole, and the market is not a bad one.

Home Railway stocks are lower, nominally on account of the reduction in dividends which have been announced; actually because the public are taking no interest whatever so far as fresh buying is concerned. There is a shade of nervousness perceptible amongst holders of Home Railway stocks now that the time for decontrol is so close at hand. Argentine Rails recovered on the hope that substantial increase in rate will be permitted to companies in the near future, but Canadians and Mexicans are practically unchanged, and the weakness of Brazilian rails, notably San Paulos, continues pronounced, the fall in the milreis accounting for the depression.

The rubber market is heavy again, owing to the obstinate refusal of the raw material to show any resiliency. Amongst oil shares, dealing has become so largely a professional affair that prices move up and down in violent fashion, to the

accompaniment of very meagre public business. The Scottish-American meeting on Wednesday, at which amalgamation with Tankers, Limited, was mooted, caused a fall in the price of the latter. English Oilfields are flat, owing to the lack of recent information obtainable in regard to the company. After many months of quietude, the banking share market is coming into its own, and a long string of rises in the shares of the London, Foreign, Colonial, and Indian banking issues testifies to the shrewd appreciation of the investor of the strength and security offered by such issues. The insurance market is neglected, and in shipping shares there is next to nothing doing, the market being a trifle sympathetic with the heaviness in iron, steel, engineering, and armament varieties, brought about by the continued closing down of important works in various parts of the country owing to trade depression. Trade conditions are also causing dullness amongst textiles. The brewery market is easier, owing to a Watney dividend that was regarded as disappointing. Cable and wireless shares exhibit little movement, and other sections of the miscellaneous market command attention which is more academic than practical.

The white labourers of the Rand have caused Kaffir prices to slip back, here and there, by reason of the vote which is now to be taken on the point of whether the proposed reduction in wages of 1s 6d per day shall be accepted by the whites on the Rand. In the dullness of Kaffirs, Rhodesians participated to a slight extent; diamonds have hardly moved. The recent activity in Russo-Asiatics has been followed by a certain amount of selling on the eve of the holiday. Tin shares are inclined to be easier, and Broken Hills went back a shade on a slackening of Australian support.

The Stock Exchange petition to the committee, asking for re-institution of fortnightly settlements, was duly presented earlier in the week. It has been decided to make no official notification on the subject, but the Stock Exchange understands that the committee have notified to the petitioners that the matter is receiving their careful consideration. By the official fixing of the date of Peace—Turkey or no Turkey—for September 1st, the necessity for complete liquidation, within a year, of the pre-war account is now formally established.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5½ per Cent. Treasury Bonds.—Repayable at par on April 1, 1929. Issued at 97 per cent. Interest payable half-yearly on April 1st and October 1st. The bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Full particulars of these bonds, together with comments, will be found in *Economist*, July 9th, see page 43, also in our issue of the 16th inst.

Port of Calcutta.—Issue of £1,000,000 7 per cent. debentures to bearer at par, repayable at par on July 1, 1951, but the Commissioners of the port reserve the power to repay at par any time after the expiry of 10 years from date of issue, on giving six months' notice. The loan is offered for subscription with the sanction of the Government of India, and is secured upon the tolls, dues, rates, rents and other charges authorised to be levied under Act III. of 1890 of the Council of the Lieutenant Governor of Bengal and amending Acts, and the issue ranks *pari passu* with other loans as a first charge upon the properties vested in the Commissioners of the port. The Commissioners undertake to purchase annually in the market from 1926, at a price not exceeding £100 per cent., debentures of the present issue to the extent of not less than 2 per cent. of the amount issued, for holding or cancellation. Payments will be made to a sinking fund for the redemption of the present issue in 30 years, and will commence in January, 1922. The Acts referred to provide for setting aside half yearly out of income, before making any disbursements, a sinking fund of such amount as will suffice to liquidate each loan contracted, such sinking fund to be invested in the name of two trustees in the securities of the Government of India, or in the debentures issued by the Commissioners under the Acts. The amount to the credit of the sinking fund on March 31, 1921, was £990,000 at an exchange of 1s 4d per rupee. The unimproved value of the properties vested in the Commissioners on March 31, 1921, was, at an exchange of 1s 4d to the rupee, £10,290,000, and the capital debt on that date amounted to £6,816,000, after deduction of £990,000, the amount to the credit of the sinking fund. This valuation does not include the value of the Strand-bank and Howrah foreshore lands. The table of income and expenditure could have been made more informative as to amount required for interest payments. Accounts for the year ended March 31, 1921, are not yet complete, but it is stated that the income will be approximately £1,800,000 and the expenditure £1,600,000, including provision for depreciation of securities amounting to £180,000. The issue is not without merit, but consideration must be paid to the political outlook.

The Eagle Oil Transport Company, Limited.—Authorized capital £5,000,000, all of which has been issued. There is an unpaid balance of £800,000 on ordinary shares, which is payable by December 31, 1921. This is an offer for sale of £3,000,000 12-year 7 per cent. notes, being part of an authorised issue of £5,000,000. The notes are issued at 98 for bearer and 97 for registered notes, and they are repayable at par on June 30, 1933, with the option to the company to repay on June 30, 1927, at 101 per cent., on giving three months' notice. The conditions of issue provide that the company shall not create debentures, "without providing that the notes shall rank as to principal and interest *pari passu* with or in priority to such debentures." It should, however, be noticed that "There are statutory ships' mortgages in favour of the builder for £297,000." The notes will be unconditionally guaranteed as to principal and interest by the Mexican Eagle Oil Company. From the noteholder's point of view the guarantee of Mexican Eagle Oil Company renders the financial position of the Eagle Oil Transport Company, Limited, of comparatively little importance. The Mexican Eagle Oil has an issued share capital of \$129,327,610 Mexican gold, while profits for the year ended June 30, 1920, exceeded £5,000,000. The prices paid by Messrs Higginson and Co. for these notes were 93 per cent. for registered and 94 per cent. for bearer notes. The financial reputation which has been earned by the "Eagle Oil" group of companies possibly justifies this issue, but the yield offered does not appear conspicuously attractive.

South Metropolitan Gas Company.—Incorporated by special Act of Parliament, 1842. Authorised share capital £8,011,999, of which £6,859,895 has been issued. The loan capital consists of £1,895,445 of 3 per cent. debenture stock, and £734,000 6½ per cent. debenture stock now offered at 97 per cent., repayable at par on September 15, 1931. The fresh capital is required for the purpose of repaying existing temporary debentures of £500,000 and bank loans, the additional charge upon the company's revenue being approximately £10,000 per annum. The security offered by the present issue is indicated by the amount of profit available for distribution among the shareholders, which is shown by the accounts, certified by the Board of Trade to have been as under:—Average for the five years 1910-1914, £319,101 per annum; average for the war period (1915-1918), £252,508 per annum; for the year ended December 31, 1920, £346,391 per annum. The company's property has been independently valued at £14,500,000. This is an attractive offer, and deserved the welcome it received.

The British Automobile Traction Company, Limited.

—Authorised capital £500,000, divided into 200,000 cumulative 8 per cent. participating preference shares and 300,000 ordinary shares, all of £1 each, of which 200,000 ordinary shares have been already issued. This is an issue at par of 200,000 preference shares. The participation rights consist of an "additional 2 per cent. up to 10 per cent. *pro rata* with holders of ordinary shares in proportion to the capital paid up on the preference and ordinary shares respectively in any distribution by way of dividend in any year after payment of a dividend for that year of 8 per cent. on the capital paid up on the ordinary shares." The company was registered in March, 1905, and operates the "British" omnibuses and motor coaches in London, Barrow-in-Furness, Buxton, Macclesfield, and Stockport. It also holds interests in associated companies, providing omnibus, motor-coach, and other transport services in other parts of the United Kingdom. The company's investments in these associated companies stood in the books at December 31, 1920, at £290,000, the average dividend yield for the past year being at the rate of over 11 per cent. An interesting table is given of profits and dividends, showing how the company has fared since 1913. The directors are to be complimented on providing intending investors with a copy of the balance-sheet of the company for the year ended December 31, 1920, in the prospectus, while the names of the directors may be taken as a favourable sign for future success if technical knowledge can ensure it. It should not be overlooked, however, that the question of public road service versus railroad service has not yet been satisfactorily settled on its financial side.

Associated Belting Companies, Limited.—Authorised capital, £350,000, divided into 350,000 ordinary shares of 10s each, and 350,000 10 per cent. cumulative preference shares of 10s each, of which 260,000 ordinary and 260,000 preference shares have been issued. This is an offer for sale of 180,000 of the above preference shares at 10s 6d per share. The Associated Belting Companies, Limited, was incorporated on June 19, 1920, and has since acquired the businesses of Geo. Banham and Co., Limited, Farnworth, Lancs, and Lewis and Tylor, Limited, Grange Mills, Cardiff. The total amount paid for the businesses was £260,000 in cash. There are no debentures or debenture stock charging the undertaking of the company at present. Surplus assets are valued at £263,950, exclusive of goodwill and patents. It should be noticed, however, that the value of mills has been estimated on the basis of to-day's building costs. Profits are shown in the aggregate for 4½ years, and these average £42,400 per year, while it is stated that the amount required to pay the preference dividend is £13,000 per annum. The Atlantic Trust, Limited, of Cardiff, purchased these shares at 10s each, and it is perhaps surprising to find that they are paying all the expenses of this offer, offering a brokerage of 2d per share, and willing to accept 6d per share profit. On the information offered it is difficult to determine the future prospects of the company, and there is a considerable element of speculation attached to a purchase of these shares.

The Malayan Rubber Loan and Agency Corporation, Limited.—Issue at par of £25,000 in terminable and convertible 10 per cent. first debentures to existing holders of shares and debentures, secured by a floating charge on the assets of the company. The company may redeem the debentures at £110 per cent. at any time on giving six months' notice, while holders are offered the right to convert during their currency, into fully-paid ordinary shares at the nominal par value. In the balance-sheet of the company for the year ended June 30, 1921, it should be noted that investments—the principal asset—at £162,653 are taken at cost, and although it is mentioned that this sum is "less amounts written off at date," the position is not clear, especially when in conjunction the auditors state in their certificate that "they are not in a position to assess their present value." This is, however, followed by the words "we have obtained all the information and explanation we have required."

Producer Gas Plants, Limited.—Authorised capital £100,000, divided into 50,000 10 per cent. participating preference shares of £1 each and 50,000 ordinary shares of £1 each. This is an issue at par of 50,000 participating preference shares. The participating rights and directors' profits are rather involved, and we quote from the prospectus as follows:—"Any payments available for dividend in any year after payment of the fixed dividend on the preference shares and a like dividend for such year on the capital paid up on the ordinary shares and after providing for the additional directors' remuneration hereinafter referred to, shall be divided as to 20 per cent. between the holders of the preference shares in proportion to the amounts paid up thereon respectively. The existing fully-paid ordinary shares and the additional ordinary shares shall be in *passu*, and shall be entitled to be paid out of the year after the said dividend payable on the pre-

ference shares a fixed dividend for that year at the rate of 10 per cent. per annum on the capital paid up thereon, and after providing for the directors' remuneration hereinafter referred to shall be entitled to the remaining 80 per cent. of the surplus profits of each year. Whenever in respect of any year the dividend of 10 per cent. per annum is paid on the preference and ordinary shares the directors shall be entitled to 5 per cent. of the surplus profits." Could not this have been explained in more simple language to the busy reader of the prospectus? The company manufactures a portable producer gas plant under its patents, which can be fitted to any standard petrol driven commercial vehicle without alteration to engine or chassis. The company was formed in 1917 to take over and develop the patents known as Parker Producer Patents relating to the principle of substituting producer gas in place of liquid fuel for internal combustion engines driving commercial vehicles, tractors, boats, &c. It is stated that 25,000 ordinary shares have already been issued, but after perusing the prospectus we are unable to find exactly what investors are getting for their money. What is the company paying for the patent? Is it a sound commercial proposition? Is the rate of dividend offered on the shares big enough to make an investment in such a speculative undertaking attractive? The intending investor should carefully turn these questions over in his mind before subscribing.

East Kent Road Car Company, Limited.—Authorised share capital £200,000, divided into ordinary shares of £1 each, of which 175,000 are issued and fully paid. This is an issue of 25,000 ordinary shares at par. The company was formed in 1916 to amalgamate a number of old-established East Kent omnibus undertakings. Past results are given for the last four years. The assets of the company are not set out in a very clear manner. We are shown the total expenditure, which is given as £256,840. Then we are informed that a depreciation reserve fund has been created, and this stands at £47,465. Are we to assume that the balance of £209,375 represents the net surplus assets, and that there are no further liabilities to people other than shareholders? With this exception the prospectus is a clear statement of affairs. The issue is suitable chiefly for the consideration of local investors.

COMPANY MEETINGS, &c.

GLOUCESTER RAILWAY CARRIAGE AND WAGON COMPANY, LIMITED.

SIR RICHARD VASSAR-SMITH ON INDUSTRIAL PROSPECTS.
WAGON REALISATION ACCOUNT AND TAXATION.
CORDIAL RELATIONS WITH EMPLOYEES.

The annual general meeting of the shareholders of the Gloucester Railway Carriage and Wagon Company, Limited, was held at the company's offices, Bristol road, Gloucester, on Monday, July 25th. Sir Richard V. Vassar-Smith, Bart. (chairman of directors), presided, the other members of the board present being Mr. M. F. Maclean, Lord Bledisloe, Sir F. Colchester-Wemyss, and Mr. John Macgregor (managing director).

15 PER CENT.

In their report the directors stated that the profit on trading, including the interest from investments and after making the usual provision for depreciation, was £43,903 12s 5d, and the disposable balance, after deducting the interim dividend paid February 1st last, was £82,771 3s. The directors recommended the payment of a dividend for the past half-year at the rate of 10 per cent. per annum (£26,250), less income-tax, making 10 per cent. for the year, and a bonus of 5 per cent., free of income-tax (£26,250), and that the balance of £30,271 3s be carried forward. The revenue account to May 31, 1920, included the surplus on part of the sale of the wagon-hiring branch of the company's business. As counsel now advised that this sale should be regarded as a capital transaction, the accounts had been adjusted accordingly.

WAGON REALISATION ACCOUNT.

Sir Richard Vassar-Smith, in moving the adoption of the report and accounts, first of all called attention to the reference in the report to the surplus on part of the sale of the wagon-hiring branch of the company's business. He pointed out that the company made a certain amount of money in the realisation of some of their wagons which were let on hire, which to May 31, 1920, amounted to £148,651. Of this amount, £100,000 had been placed to the reserve, and the remainder went into the profit and loss account. The company had, unfortunately, some litigation pending with the Crown with regard to the liability of the company to taxation in respect of that amount. The question had been before the Special Commissioners in London, who had given a decision against the company—that the money was liable to taxation. It was a very doubtful point. The company were advised by counsel that they had a very strong case, and so they proposed to take it before a judge. Therefore the question of taxation on that money was really in the balance at the present time. The company had the money, but whether they would have to pay a large amount in taxation upon it in the future remained to be seen. He hoped that they would not have to do so. The total amount of the wagon realisation account to May 31, 1921, including the £43,903, was £420,620, to the whole of which the question of taxation would apply. That money was in the possession of the company, either in the bank or in material, and it all belonged to the shareholders, except what the revenue authorities might take out of it, and, as he said, he hoped they would have nothing. The directors were now perfectly justified in carrying the £43,903 to profit and loss account; but, presuming the Inland Revenue authorities got their way over the wagon realisation account, it might, perhaps, cause the company to pay excess profits duty on a small amount of its profits. But, at any rate, supposing everything came to the worst, and the company had to pay corporation tax, income-tax, and excess profits duty, there would still be left a very substantial balance out of the £420,620. Sir Richard Vassar-Smith proceeded to refer to other items in the accounts, and also referred in sympathetic terms to the death of Mr. E. K. Little, one of the directors, since the last meeting of shareholders.

THE COMPANY AND THEIR EMPLOYEES.

The Chairman went on to refer to the subject of a partnership scheme which was put forward by the company in connection with their employees. Those of the shareholders who were cognisant with the working of the company would know, he said, that they had with a number of years a works committee of the men, who consulted fully, the managing director with regard to the work and so on, had gone on very satisfactorily. Mr. Macgregor, however, July 25 chairman's instigation had a meeting of the men,

at which he told them plainly the present position of things, and that really prices must be reduced considerably before the company could expect to obtain a fair share of orders. The men were very pleased at this confidence, and it was all done in a very friendly way. A scheme was formulated for making a closer partnership—he (Sir Richard) used the word "partnership" because, in effect, it would have been a partnership with the whole of the employees of the company. In a scheme of this nature they were always obliged to put down things which might arise—not necessarily to carry them out, but simply to consider them; and in this scheme, which was of a confidential nature as between the management and the men, there was a clause with regard to the trades unions which had been severely commented upon. There was also another clause with regard to the Federation of Employers, which was never alluded to at all. But, at any rate, the suggestion was in the scheme, that possibly the men might retire from their unions and the company, as employers, from the Federation of Employers. When he (the chairman) heard of it he was afraid—and the board agreed with him—that it was not altogether a right suggestion, and it was at once withdrawn as something which they could not carry out. He did not know that he had anything more to say on the subject than that.

The company's relations with the employees were very friendly, and he could say that his own relations with the leaders of trades unions were also very friendly. He met those leaders frequently, and he should like to say at once that the company had had a great deal of assistance from those leaders with regard to disputes in the works, which had not been many. He could tell the shareholders that he had received an assurance from all the leaders of the trades unions referred to that with regard to the output of the company—which was really the thing that mattered: the amount of work which was turned out—they would give the directors every possible assistance to enable them to determine what was the quantity of work they had a right to expect from the men.

THE FUTURE OF INDUSTRY.

Now, perhaps, the shareholders would like him to say one or two words about what he had in mind with regard to the future of industry generally. He was afraid, however, that he could not tell them very much. Since the last meeting of the company the country had been going through a period of anxiety and trouble such as, he supposed, had never existed before. All he could say about it was that he had gone through that period without any serious breakdown in any industry. The industries, although they were loaded with stocks and materials purchased at very high prices, had borne with one another, and received assistance from those who could give it, and they had been able to carry on—there had been no catastrophe of any sort. That had lasted now for from nine to ten months, and having lasted so long, he saw no reason why they should not consider that the foundation of industry was very much firmer than it was a year ago, or certainly at the time when the boom ceased. The boom ceased suddenly, and there was a tremendous slump. The industries of the country had survived it, and things were, he believed, on a much firmer footing than they were a year ago.

A BETTER FEELING.

The coal trouble, of course, hit things very hard—it caused a great deal of disturbance of trade and an enormous loss. That, he hoped, was past, and he thought he could say quite confidently that he believed of his own knowledge that there was a very much better feeling now with labour than there had ever been. The sound labour leader was coming back to his own; he was now enabled more or less to advise his constituents, and the extremist was put rather in the background. He (the chairman) really knew that there was a very much better feeling, and that the cost was coming down, and he hoped that by-and-by they might fairly look forward to a better and a normal time in industry and commerce. Of course, that entirely depended upon the goodwill, the co-operation, and the general feeling between the employers and the employed. There was evidence that that had begun, and he hoped it would continue, and that all concerned would work together for one common

cause, without the difficulties and the troubles which had been experienced in the past.

He knew it was a hackneyed statement now, but it was as perfectly true to-day as it was at the time of the Armistice: that we wanted increased production to make up the losses which we incurred during the war. We also wanted the most rigid economy in our expenditure. That applied to everybody, from the Government down to each individual who had anything to spend. It was only by increased production and economy that we could hope to put ourselves right, add to the wealth, and, he hoped, get back to the amount of wealth that we had before the war.

There were several schemes going on now for the purpose of promoting credit to disturbed countries in Europe, all of which were in a fair state of advancement, and he thought that before very long we should see a restoration of better conditions generally. We had not arrived at peace by a long way, for at the moment there were some very disturbing elements about; but he thought that we might hope that things would become more quiet, and that the system of credit to which he referred would enable a certain amount of work to be done. There was one thing he might add for the comfort of shareholders. What was wanted very much in many of those countries was reconstruction of railways, which involved the purchase of railway plant, and he thought that the first orders which would come to this country when they got settled in regard to those credits would be large orders for locomotives and rolling stock, of which the Gloucester Railway Carriage and Wagon Company should get its share.

Mr. M. F. Maclean seconded the adoption of the report, which was agreed to.

LORD BLEDISLOE AND RICHARD THOMAS AND CO.

Upon the proposition of Mr. A. Slater, seconded by Mr. R. J. Tucker, Mr. Maclean and Lord Bledisloe were re-elected directors. In putting this motion, the Chairman said a great many of the shareholders would have noticed in the Press a report of an outrageous meeting in connection with Richard Thomas and Co., Limited, at which Lord Bledisloe was asked to retire from the board. An explanation was given—at any rate the circumstances were all stated. What he (Sir Richard Vassar-Smith) would like to say was this: that they had not a more painstaking director on the board of the Gloucester Wagon Company than Lord Bledisloe, who had a thorough knowledge of the many things in connection with that company. Lord Bledisloe attended the meetings very regularly, he gave the Wagon Company the best of his experience and judgment, and he (the chairman) could also say he was very pleased that Lord Bledisloe was a colleague of his in another place, where he did equally well in the general interests of the company concerned. It seemed to him (Sir Richard Vassar-Smith) incomprehensible that a meeting such as that of Richard Thomas and Co., Limited, to which he referred, should have been called for the purpose of getting rid of Lord Bledisloe at the whim of the person in question.

Mr. Maclean and Lord Bledisloe briefly acknowledged their re-election. Lord Bledisloe said he very particularly appreciated the shareholders' renewal of confidence at the present time.

Messrs. Hudson Smith, Briggs and Co., chartered accountants, Bristol, were reappointed auditors.

Upon the proposition of Mr. Thomas, seconded by Mr. F. J. Billett (Liverpool), a cordial vote of thanks was passed to the chairman and directors and the managing director and staff of the company.

THE NATIONAL BANK, LIMITED.

A SATISFACTORY HALF-YEAR'S BUSINESS DESPITE DIFFICULTIES

The half-yearly general meeting of the National Bank, Limited, was held, on the 28th instant, in Dublin. Sir John Purcell, K.C.B. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: Well, needless for me to tell you that, owing not only to the unsettlement and trouble that has unhappily affected our dear native land during that time, but also to the universal financial stringency and other abnormal and economic uncertainties prevailing in Ireland, in England, and, as a matter of fact, over the whole world, it has been a period of very considerable anxiety to your directors to the end that there might be no failure on their part in the efficient and proper discharge of their duties to the bank and to its customers.

The difficulties to be contended with were many and serious. We had for three months a coal strike at the other side of the Channel—one of the most disastrous in the history of the country—involving stagnation and heavy losses in almost every class of business, and, as a consequence, a largely increased volume of unemployment all round on a distressing scale, and leading up to a deplorable economic situation. Because of all this our national industries, without exception, have been sorely damaged.

Indeed, at a recent meeting of the stockholders of one of the largest and most important trust companies of London, I heard the chairman describe 1920 as one of the blackest in our financial history, and this position, so far as my experience goes, still remained during the first six months of the year 1921. Nevertheless, notwithstanding all these drawbacks and unfortunate happenings and this atmosphere of depression—political difficulties, financial difficulties, industrial difficulties, and labour difficulties, which have had to be faced, we have, I hold, in this bank, managed to steer a safe course, and I venture to think the outcome of our operations over the half-year is by no means unsatisfactory.

BALANCE-SHEET ITEMS.

I proceed to give you the figures. There is no change in the "Paid-up capital." It remains at £1,500,000. The "Rest" has not been touched. As explained in paragraph 3 of the report, the heavy charges which fall upon the profits of the current half-year do not admit of any addition to that item. There is no change in the "special reserve." It still stands at £180,000. "Notes in circulation" have fallen by £1,095,000. This is due to the shrinkage of general business and to the continued Government restrictions upon the holding of fairs at which our notes were always largely used. "Deposit and current accounts" show an increase of close upon five millions and a-half. The figures of "Acceptances to bankers' drafts" are practically the same as 12 months ago.

Turn now to the assets side of the balance-sheet. "Cash on hand" is down by some £977,000. The explanation of this lies in the fact of the decrease in our note circulation. The item "money at call" (taken in conjunction with the National War Bonds) is larger by £2,373,000—due to a larger holding of Treasury Bills. "Government securities and corporation stocks, &c.," show a fall of £34,000, mainly due to repayments of stocks at maturity. "Advances on securities" have gone up by nearly three millions. "Bills discounted" show an increase of some £8,000.

It will be seen that the item "Bank premises" is increased by the sum of £61,000. This was due to the necessity for certain expenditure on the opening of new branches at Port Talbot (South Wales) and in Leadenhall street, London, and mainly also to the extension and improvement in the head office premises—Old Broad street—rendered necessary by the considerable growth of our business there.

In addition to large alterations in the Banking Hall, we have raised the building by two additional floors, and we now have a handsome structure entirely freehold in the best business part of the City. The freehold site value of the handsome building in question represents a very large sum, which constitutes a substantial amount of inner reserve running into some hundred thousands of pounds.

PROFIT AND LOSS ACCOUNT.

On reference to "Profit and Loss" account, it will be seen that our expenditure has gone up by £31,400. This is mainly due to the very large additions recently made to the staff salaries and bonus. We again, as in the previous half-year, provide £70,000 for taxation and contingencies, and we make full provision for bad and doubtful debts. Finally, we pay the usual dividend of 12 per cent., and carry forward £27,871 to the "Profit and loss new account."

It will be seen that our aggregate means stand at close upon 40 millions, an increase of nearly 4½ millions. Our liquid assets show a proportion of 57 per cent. as against our liabilities payable to the public on demand.

I venture to think that you will agree with me that we have legitimate grounds for being satisfied with the accounts which have been put before you. In all the circumstances, the general result is, I submit, good, and, though here and there, items may be less satisfactory than in previous half-years, yet we have, I hold, every reason to congratulate ourselves upon a good showing.

Six months ago I called attention to the fact that there was then a heavy depreciation in the values of our Government stocks, but that we had made adequate provision for the same by the utilisation of certain of our inner reserves, and, further, I stated that a comparatively small appreciation would cover any remaining deficiency, and this has now been practically wiped out. As I have previously explained, the question of appreciation or depreciation in the temporary values of these particular stocks does not, in any way, affect the return which we receive by way of interest.

TRADE CONDITIONS IN IRELAND.

Ireland's principal industry—farming—which for the past five years enjoyed unprecedented prosperity, is now, I am sorry to say, experiencing the inevitable reaction, and many adverse circumstances have occurred to render the present year one of exceptional anxiety to farmers. These factors have contributed to a sharp fall in prices, and this unfortunate position will, I fear, mean heavy loss to those who bought store stock at the high prices which prevailed last spring.

Trade again in Ireland cannot be described as satisfactory. Still, I am advised that traders are standing the strain well.

I am sorry to have to report that during the past half-year the bank has again been the victim of raids on some of their branches, resulting in the loss of some £6,000. These robberies, seemingly carried on, but, as I judge, without warrant, under the cloak of politics, have been, we are satisfied, the base and shabby acts of common thieves, and sure am I have not had the smallest measure of sympathy or approval of any one possessing a particle of genuine patriotic sentiment.

As the past six months have been anxious ones for your directors, so they have been for all the members of your staff; and, in concluding these remarks of mine, I, on my own part, and on the part of my colleagues—and I am sure I may include, too, the shareholders present—wish to pay a high tribute to the zeal, diligence and loyalty of all the members of our staff, male and female, high and low.

I ask leave to say one final word, which I know will have a ready echo in this room. It is this. I desire to express my fervent hope and prayer that the conferences held in this city, and in London, may eventuate in such a solution as will lead to the happiness, the prosperity, and the unity of the people of Ireland. This, I am sure, is the heartfelt desire of all of us.

The resolution was carried unanimously. The Earl of Kenmare, C.V.O., was elected a director, the usual formal business was transacted, and votes of thanks to the chairman, directors, and staff terminated the proceedings.

BANK OF ROUMANIA, LIMITED.

EXCHANGE RATES EFFECTS ON ROUMANIAN TRADE.

The ordinary annual general meeting of the Bank of Roumania, Limited, was held, on the 27th instant, at Winchester House, Old Broad street, London, Viscount Goschen, C.B.E., presiding.

The Secretary (Mr H. Locke) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—In rising to move the adoption of the report and the accounts for the year ending December 31st last, I must first refer to the regrettable death of the late Earl of Bessborough, who was our chairman for many years, and a member of the board of the bank for nearly a quarter of a century. His absence is keenly felt by us, and very much regretted. His death was followed within a few months by that of Mr Pyramé Naville, who had been connected with us for an even longer period.

Lieut.-Colonel Sir Albert Stern and Mr C. de Cerjat have been appointed by the board to the vacancies thus caused, and you will be afforded an opportunity at a later stage of re-electing them, should you so desire.

I assume that, as usual, you will take the directors' report and the balance-sheet as read. As you will see from the report, the trading accounts for the year, after deduction of the dividend of 5 per cent. paid in December last, and after making provision for bad debts, income-tax, &c., writing down investments in British Government securities to market value, and placing £2,000 to pensions fund, show a credit balance of £13,231 os. 9d.

QUESTION OF THE EXCHANGES.

This sum, in view of the unsatisfactory state of the exchanges, has been transferred to a contingency account. I am sure the shareholders will agree that, in view of the great development which may be looked forward to in Roumania, and in order that we may be in as favourable a position as possible to participate in this development, this is the wisest policy to adopt.

One of the principal reasons for the unfavourable state of the exchanges in Roumania is the fact that Roumania is a country where taxation has, so far, been extremely light, so light as to be almost a negligible quantity. This matter has recently received attention on the part of the Roumanian Minister of Finance, M Titulescu, who, in his recent Budget, introduced taxes on a scale comparable to this country. Most of these provisions have, I believe, now become law. When the full effect of these provisions is felt, the finances of the country should benefit considerably, and should be on a more satisfactory footing.

The rate of exchange when we made up our accounts on December 31st last was 280 to the £. This adverse rate, you will readily understand, severely affects the profits of a company such as ours having capital.

I am pleased to say that during the past year Roumania has made considerable progress towards the re-establishment of a normal trading system.

The working of petrol, which in 1919 was 917,276 tons, was with a number of 1,030,086 tons, as compared with 1,544,847 tons fully, the harvest was not as good as might have been had gone on, the area under cultivation was considerable.

July 25th, chairman.

ably below the normal. As regards the prospects for this year, practically all the area possible of cultivation is sown. A little damage has been done to the wheat by the recent heavy rains, but the maize crop has benefited considerably, and, although unfavourable reports were recently circulated, the latest advices received by us from Roumania are to the effect that, speaking generally, the outlook is very favourable, and I might add that in some quarters it is thought that the crop will be an exceptionally good one.

PROSPECTS.

Imports from Great Britain, which in 1919 were valued at £5,585,085, were, for the year 1920, £7,108,514. I am glad to say that Roumania shows an increasing capacity for absorbing British goods, which justifies the hope that in future she may become an important market.

The Roumanian State, during the year, successfully floated an internal 5 per cent. loan of one milliard of lei, the amount subscribed at our guichets being over 100,000,000.

The effect of the unfavourable exchanges still weighs heavily on the economic life of the country, and although the country in itself, from the fact of its being chiefly agricultural, is very prosperous, yet commercial and industrial affairs, owing to their dependence on foreign sources of supply for their requirements, are naturally very much hampered by the uncertainty of exchange. It is to be hoped that, with the possibility of bigger exports of grain, oil and wood in the near future, this exchange difficulty will gradually be overcome.

The resolution was carried unanimously, and the usual formal business terminated the proceedings.

STANDARD BANK OF SOUTH AFRICA.

SATISFACTORY POSITION—TRADE CONDITIONS IN SOUTH AFRICA

The hundred and eighth ordinary meeting of shareholders of the Standard Bank of South Africa was held, on the 27th inst., at Cannon street Hotel, London, Mr William Smart presiding.

The Chairman said: During the period under review we have absorbed the African Banking Corporation on terms which we consider advantageous to the shareholders of both institutions, and we are glad to welcome here to-day for the first time shareholders of the African Banking Corporation who have exchanged their holding in that institution for shares in this bank in terms of the amalgamation agreement.

Another event which will no doubt be of far-reaching importance to South Africa is the passing of the Currency and Reserve Bank Bill and the consequent establishment of the Central Reserve Bank.

The powers of the new bank are clearly defined and limited, and it will not enter into active competition with the commercial banks for ordinary banking business, but will have the sole right of issuing notes for 25 years. As soon as the Central Reserve Bank is in a position to issue these notes the right of issue by the other banks will cease.

The period for which the accounts are rendered has been full of difficulties and rapid changes. When the financial year opened the balance of trade was greatly in favour of South Africa. It therefore became necessary to raise the rates of exchange in an endeavour to assist in adjusting the trade balance. Partly as a result of these high rates of exchange, imports into South Africa then increased considerably, while the rapid fall in the price of wool and other produce reduced exports to a minimum. Thus in the space of a few months the position was entirely reversed, and it became necessary to again adjust the exchange rates to meet the drain on funds in London. The steps taken by the banks had this desired effect, and it may be added that during the last few months exports have steadily increased and are now in excess of the imports.

The immediate future is full of uncertainty. There are no magical avenues leading to prosperity, and this can only be achieved by thrift, industry, and a determination to produce supplies at a level which will enable this country to compete successfully with its rivals, otherwise trade will undoubtedly pass to foreign competitors.

BALANCE-SHEET ITEMS.

In the first place you will notice that the subscribed capital has increased by £2,666,660, to £8,916,660, and the paid-up capital by £666,665, to £2,229,165, consequent upon the issue of 133,333 shares in exchange for African Banking Corporation shares. This leaves a balance of £1,083,340 authorised capital available for issue when necessary. The reserve fund now stands at £2,893,335, the increase being consequent on the amalgamation. Notes in circulation started at £4,609,342, the increase being accounted for by the note issue taken over from the African Banking Corporation. Our deposits have increased from £52,624,150 to £57,285,172, due chiefly to the amalgamation, but as the fall of prices continues banking

deposits decline, and we shall probably see those figures at a lower level.

Turning now to the assets side of the balance-sheet, you will no doubt note with satisfaction the strength of our cash position, the total cash holding at March 31st being £10,221,077.

Our investments stood at £5,266,252, an increase of £583,063 on the figures for 1919. My predecessor in the chair last year foreshadowed the necessity of having to make provision for depreciation, and you will see from the profit and loss account that it has been necessary to provide out of profits no less than £200,000 in order to write down our investments to the market price as at the date of the balance-sheet.

Since then the value of our securities has materially improved, and I trust that it will not be necessary to make provision for depreciation in our next balance-sheet.

You will notice a new item under the head of "Investments," and that is our holding in the Bank of British West Africa. This represents our proportion of a block of shares purchased last year by the London County Westminster and Parr's Bank, the National Provincial and Union Bank of England and ourselves in terms of an agreement which we hope will provide for a closer working arrangement between the banks named to the advantage of all concerned.

From the profit and loss account you will see that the total net profits for the fifteen months to March 31st amount to £759,377, to which has to be added £210,446 brought forward from 1919. Out of this we have already paid two interim dividends up to June and December of last year, and it now remains for us to declare a final dividend for the three months to March 31st. This we recommend should be 3s 6d per share, being at the rate of 14 per cent. per annum, and in addition a bonus of 3s 1½d per share, which is equivalent to 2s 6d per annum, the same rate as for 1919.

I feel sure you will be satisfied with the strength of our position as disclosed by these figures. In conclusion, he moved the adoption of the report and accounts.

Sir David M. Barbour seconded the resolution, which was carried unanimously.

UNION BANK OF AUSTRALIA, LIMITED.

SATISFACTORY RESULTS OF THE YEAR'S WORKING.

The annual general meeting of the Union Bank of Australia, Limited, was held, on the 25th instant, at 71, Cornhill, London, Mr Henry P. Sturgis (the chairman) presiding.

The Chairman, after expressing regret at the death of his colleague, Mr W. R. Mewburn, said he thought the shareholders would agree with him that the result of the past year's working was very satisfactory. The profits allowed of their placing £20,000 in reduction of bank premises in Australia and New Zealand, adding £120,000 to the reserve fund, which now stood at £2,750,000, and declaring a dividend at the rate of 15 per cent. per annum, free of income-tax. The figures of the year under review, compared with those of a year ago, showed a decrease of £1,276,000. The increase in advances was principally caused by accommodation given to merchants to finance abnormal imports of goods in the latter half of last year, and was reflected in the decrease in bills receivable caused by the withdrawal of funds from this side. While the gross profits were higher by about £257,000, expenses were higher by nearly £200,000. Of this, £100,000 came under the heading of provision for income-tax and corporation profits tax, and remuneration of staff in Australia and New Zealand was about £70,000 higher, some £40,000 being due to the higher rate of war allowance granted to the staff during the period under review.

The exchange position in Australia, as in other parts of the world, had been difficult. While exports remained practically stationary, imports showed the large increase of £61,000,000, as compared with 1919, or 70 per cent. The financing of the abnormal imports imposed a heavy strain on the resources of the Australian banks in London. It became necessary to impose severe restrictions on drawings on London. This policy, though causing some inconvenience to traders for a time, was very necessary in the interests of Australasian trade generally. With regard to the present position, the proceeds of wool, wheat, and butter had afforded some relief, and the position had become easier. In view, however, of the depressed state of the markets for Australian produce generally, and the uncertainty existing in all markets, it was difficult to forecast when exchange conditions would become normal. The season throughout the Commonwealth during the year was excellent, and more or less normal conditions prevailed in the Dominion. Since the beginning of this year, trade in Australia and New Zealand had been less active. This condition and the lower prices ruling for Australasian products rendered the outlook for the

future somewhat uncertain, but in the immediate future he thought they must look for comparatively quiet trade throughout Australasia.

The report was unanimously adopted, and at an extraordinary general meeting it was resolved that the capital of the bank be increased to £9,000,000 by the creation of 100,000 additional ordinary shares of £15 each.

The Chairman stated that the directors had come to no decision as to when an issue should be made. They were of opinion that the business of the bank called for an increase of capital, and they considered that an issue should be made whenever the time appeared favourable.

THE BRITISH EMPIRE TRUST COMPANY, LIMITED.

ANOTHER SATISFACTORY YEAR.

The twentieth ordinary general meeting of the British Empire Trust Company, Limited, was held at Liverpool Street Hotel, London, on the 27th instant, Mr J. Davidson (deputy-chairman and managing director) presiding.

The Chairman said: We are pleased to be able to meet you again with a statement which shows that, after providing fully for depreciation, the profits enable us to recommend the payment of dividends of 5 per cent. on the preferred ordinary and 7 per cent. on the deferred ordinary shares, leaving £18,267 to be carried forward.

From the point of view of income the company's position is better to-day than at any previous time in its history, because our two main sources of income, viz., trusteeships, registrarships and secretariats and interest and dividends on investments have now reached higher figures than ever before.

Our income from trusteeships, registrarships and secretariats has increased steadily each year. I quote the figures for the last five years:—1917, £10,475; 1918, £10,873; 1919, £11,421; 1920, £12,344; and 1921, £14,481.

Interest and dividends on investments are naturally subject to fluctuation, but owing mainly to the policy of the board in continually writing down the investments to the lowest market prices, income from this source continues to increase, and is higher in the year under review than in any previous year. The income from this source for the past five years is as follows:—1917, £38,983; 1918, £47,061; 1919, £47,402; 1920, £52,651; and 1921, £65,693.

It has been necessary again this year to provide a substantial amount to write the investments down to the lowest market values. The intrinsic value of the securities, with a few exceptions, remains satisfactory, and no doubt much of the depreciation will be recovered in years to come, but the directors are convinced that the making of full provision for depreciation from year to year is the only sound policy, as it places the company's credit on an unquestionable basis—a matter of the first importance from the point of view of obtaining and carrying through future business.

BRITISH COLUMBIA ELECTRIC RAILWAY'S POSITION.

The British Columbia Electric Railway Company was affected in this manner. Before the war it was in the highest credit and its securities were regarded as safe and stable investments. The fares and rates which it was permitted to collect were sufficient to allow a fair return upon its capital, by which I mean "fair" having regard to the level of interest rates then prevailing, and it was, in consequence, always in a position to obtain additional capital to expand its services as required by the growth of the communities it served. But the increases in wages and cost of materials resulting from the war, intensified by the temporary reduction in population of the districts served, so increased the cost of operation that from 1914 to 1919 it was unable to pay any dividends on its preferred and deferred stocks. In 1918, the position having become absolutely impossible, the City of Vancouver agreed to allow the company to charge a 6 cent fare, and the authority to continue this charge has been extended to July 1, 1922. This right to collect a higher fare, the expansion of the population, and the return to more normal conditions generally, have enabled the company to resume the payment of dividends on its preferred and deferred ordinary stock, but as the right to collect the higher fare continues only for another year, the company's credit and the price of its securities both still suffer from uncertainty, which, as you know, perhaps as much as any other adverse factor, tends to kill credit. I am glad to say that the City of Vancouver, having in view that before long the company will have to extend its operations if the growth of the city is not to be retarded, entered into negotiations for the granting to the company of a revised franchise. The negotiations are practically completed, and we have recently received assurances on which we are entitled to place complete reliance, that the new franchise will be executed within the next few weeks. I cannot attempt, at this time, to review the terms of the new franchise, but they are such as to give me confidence that they will secure to the company such stability of income as should enable it to pay dividends in future commensurate with the rate of interest

which shareholders of such enterprises have the right to expect to receive, and will thus lead to the complete re-establishment of its credit. I can, therefore, confidently say that the prospects of the company are brighter than they have been at any time since 1914.

WINNIPEG ELECTRIC RAILWAY.

The conditions affecting the Winnipeg Electric Railway Company were very similar to those which I have just described. Owing to increased wages and costs of all kinds, the company had to discontinue payment of dividends on its ordinary shares in 1917. Since then it has been granted increases in rates, which have assisted in offsetting the increased wages and other operating expenses. Its net earnings since 1918 show substantial improvement, and it is steadily returning to its strong pre-war position. The following figures demonstrate the improvement which is taking place:—

The net earnings from 1918 to 1920 were as follows: 1918, \$1,221,428; 1919, \$1,323,623; 1920, \$1,881,503.

During the present year further substantial increases in earnings are reported month by month.

The Monterey Railway, Light, and Power Company, after suffering under eight years of revolutionary conditions in Mexico, is now in a much improved position as the result of more settled conditions and the rehabilitation of the currency of that country, which has had the effect of bringing the rate of exchange between Mexico and Great Britain back to normal. In consequence of this improvement the company has been able to submit to the debenture holders a scheme of reorganisation which, if approved by the debenture holders at a meeting called for July 28th, will enable the company to resume immediately some payment of interest to the debenture stockholders.

CANADIAN WESTERN LUMBER COMPANY.

The Canadian Western Lumber Company has had a remarkable recovery from the ill-effects of the war. Under the scheme of reorganisation sanctioned in 1914 the company was pledged to resume payment of interest on its first mortgage debenture stock as from January, 1922—that is, it was pledged to make the first payment of interest not later than June 1, 1922. I am pleased to say that it was found possible not only to resume interest payments on the first mortgage debenture stock on December 1, 1920—more than 18 months before the date anticipated—but it was also able, on June 1 last, to pay to the first mortgage debenture stockholders 5 per cent. in cash towards the arrears of interest due on that debenture. The company is now in a very strong position, and I have no hesitation in predicting that it will be able not only to continue without interruption payment of interest on its first mortgage debenture stock, but also that before long it will be able to pay to the holders of that stock the balance of the accumulated arrears of interest.

The only company with which we are connected which now gives us cause for anxiety is the Canadian Western Natural Gas Light, Heat, and Power Company, which supplies the City of Calgary and some neighbouring cities and towns with natural gas.

Mr Horne-Payne then briefly reviewed the history of that company and its present position, and concluded:

I beg to move: "That the accounts for the year ended April 30, 1921, and the reports of the directors and auditors thereon be received, and adopted."

Mr T. Blundell Brown seconded the resolution, which was carried unanimously.

NOBEL INDUSTRIES, LIMITED.

"SATISFACTORY TRADING RECORD FOR THE PAST YEAR."

The ordinary general meeting of Nobel Industries, Limited, was held, on the 29th instant, at Winchester House, E.C., Sir Harry McGowan, K.B.E., chairman and managing director, presiding.

The secretary (Sir Joseph Stamp, K.B.E.) having read the notice calling the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—When I last had the pleasure of addressing you a year ago I closed my speech with an expression of confidence that when we met again in 12 months' time we should have an equally satisfactory trading record to present to our shareholders. That expectation has been fulfilled, and it is clear from the balance-sheet now in your possession, the practical difference being that while the profits earned have been approximately the same as for 1919, we come to you to-day with our recommendation for the payment of no dividend on the ordinary shares. This, naturally, must at first be a disappointment to you, and I can assure you that it was with the greatest reluctance that your directors decided on this policy. The decision is due principally to the disastrous coal stoppage, now happily finished, accentuated by the unprecedented conditions obtaining during the past nine months. Most of our

factories have had practically no output during the coal stoppage, and for a long period several were closed down entirely. In view of the loss known to accrue from this cessation of business, and the consequent uncertain prospects for the ensuing months of this year, you will agree with the wisdom of the course taken by your directors in not recommending the payment of a dividend on the ordinary shares, and thus strengthening the position of the company by conserving its resources.

During the autumn of last year depression struck this country with almost cyclonic severity, and from a condition of affairs when it appeared as if the demands could not be satisfied, manufacturers in this country were faced with the almost impossible task of keeping their factories going. Almost in a night the demand ceased, and enormous stocks of commodities could not be moved at all. Some reaction was expected, but certainly few saw it coming with such suddenness. I am glad to tell you, however, that 12 months ago we decided to shorten our supplies of raw materials, with the result that at the end of last year your various companies were in a very healthy condition as regards stocks of materials in hand and commitments ahead. In point of fact, had there been no coal stoppage, by this time our stocks of the chief high-priced materials would have been worked off, and we should have been in a position to take advantage of the present lower costs of materials, and so have reduced our selling prices.

YEAR'S RESULTS.

Coming to the result for the year, we have received as dividends (after the companies have provided their own corporation profits tax) rather more than £1,200,000 before providing for income-tax, which, after deducting income-tax and our own expenses, leaves £850,000. This by no means exhausts the profits that have been earned by the companies, which in a number of cases are considerably in excess of the sums distributed. I might remark here that in comparing this result with last year's balance-sheet, some newspapers omitted to point out that the profit then shown, viz., £1,655,000, represented the results of two years, 1918 and 1919, and not of one year only.

After providing for the interest accrued on the new note issue up to December, 1920, we bring into the balance-sheet for the year £827,072, which, with the carry forward from last year, gives us a total of £1,057,461. When we have deducted from this amount the two half-yearly preference dividends, and made other provisions as detailed, we are able to carry forward a sum of £757,000. Surely an excellent result on the part of companies which, prior to the war, relied for a considerable percentage of their profits on the supply of war material for our own and foreign governments.

It has been asked by some shareholders whether we will undertake to declare an interim dividend in due course, but I can only say that we should not care at this juncture to raise any hopes in that direction, for we should prefer to be entirely free to be guided in our action by the course of events.

ECONOMIES.

From now onwards considerable economies in the working of our various businesses will gradually make their effects felt, thus enabling us to accomplish what we set out to achieve, viz., the strengthening of our industry by increased efficiency, or, in other words, the elimination of waste. By reason of lower cost, we shall thus be able to meet foreign competition, and we hope to go even further, and give the advantage to our customers in lower prices for our products.

You will have seen in the Press that there has been an inquiry under the Profiteering Acts into the activities of the company so far as the trade in explosives is concerned, by a Sub-Committee appointed by the Standing Committee on Trusts. The inquiry did not begin until the end of last year, and as the Committee's existence was brought to an end in May, they found themselves unable to make such a full examination as would have resulted in a really complete view of the matter in their report. We had supplied them with a considerable amount of information which was not referred to in their report, apparently because they had not had time to verify it. Where we furnished detailed costs of particular products specified by the Committee, in no case did it appear that the ratio of profit now being made was equal to that made before the war. It would, in our opinion, have been a more gracious act on the part of the Committee, and possibly even more judicial, if these facts had been mentioned by them, with the addition of any saving qualifications they might have desired, for we have no doubt that if those results had been reversed, the Committee would not have been prevented merely by the absence of opportunity to verify them from mentioning them in their report. It could have been shown that we were holding a proper balance between the interests of the consumers and our shareholders.

INDUSTRIAL INVESTMENTS.

Now, as to our chief industrial investments for which quotations exist. We are as convinced as ever of our wisdom in entering the transport industry in the direction in which it has been done.

One can visualise enormous progress, not only in this country, but in other parts of the world.

Dealing first with our investment in General Motors Corporation of America. It will be remembered that in my speech last year I informed you that we had become partners in General Motors Corporation to the extent of approximately \$25,000,000, and that the permanent financing of this and other capital outlay was then receiving our consideration. You will remember that soon afterwards the general financial position became very strained, and we, therefore, deemed it expedient to relieve ourselves of a considerable part of this obligation, which we did without loss to ourselves, so that by the time we made our note issue our own commitment was for 609,425 shares at \$20 per share, \$12,188,500. The ultimate cost, after allowing for exchange fluctuations, of this to us was £3,400,000. I can, without entering into any details, give you our assurance that our shareholders will derive substantial advantages from the net return on this investment.

Now a word on our investment in the British Cellulose Company. This is not a new investment of Nobel Industries, Limited, but was originally an investment of Nobel's Explosives Company, Limited, gone into by them during the war period, and therefore included in Nobel Industries when formed. The cost of our investment was just over £300,000, and you will therefore see that it is a relatively unimportant part of our total investments, which, I hope, removes a popular misconception as to the extent of our holding in that company; I may state, moreover, that our holding represents only 6.1 per cent. of the total capital. Doubtless many of you here will have seen the circular issued to the shareholders of the Cellulose Company at the beginning of June, which, I think, brings the position to date. Conditions over the past 18 months have been all against that company. They admit that they are many months behind their programme, but are still believers in their future prospects.

The Dunlop Company, in which we are interested, has also experienced the full effect of the depression in trade, but their prospects are now improving, and nothing has occurred to shake our faith in the future of that company. It might be interesting to our shareholders to know that if we decided to liquidate our Dunlop interests even at to-day's low prices our loss would be comparatively negligible.

Our investment in British Dyestuffs Corporation, which again is relatively small, having been acquired at a cost of slightly over £200,000, represents only 3.4 per cent. of their total capital. In view of the fact that the Government permitted the importation of German dyes, coupled with the depression in the textile trade, the British Dyestuffs Corporation have had a bad time, but their directors naturally expect that proper solicitude for the company's interests as against foreign competition will be shown by the Government.

COMPANY'S INVESTMENT POLICY.

We did not invest in these companies with an eye to capital appreciation or depreciation, but decided, after due deliberation, that these were companies in which we could hold permanent investments, not only giving us substantial revenue, but which would have most important trading effects in our whole scheme of operations. The largest remaining investment of a marketable character is our holding in Canadian Explosives, Limited, which continues to operate most successfully despite the adverse conditions.

I would emphasize that one should not be influenced too much by market quotations. Permanent investments such as we hold must be judged by their earning capacity, and not by their temporary market value. Nevertheless, it is satisfactory to be able to state that, if we take the market value at December 31, 1920, of all the industrial securities held by this company and its constituent companies, for which market quotations are obtainable, that value was fully equal to their cost to Nobel Industries.

PROSPECTS.

Now as to the prospects for this year and the immediate future. What are they? He would be a bold man to prophesy, but it is clear that the manufacturing companies in this country have lost three or four months' profits by the coal deadlock, and surely the experience of that stoppage would lead one to expect that we shall not see its repetition, and that we may reasonably look for a period of industrial peace. It is, to my mind, a matter of regret that something cannot be done to restore the commercial equilibrium of the world by re-establishing the buying powers of the stricken countries of Europe. Until this is done we cannot hope for a full restoration of the world's trade, and in particular of the great export trade upon which our own country is so dependent.

With regard to our own business, in view of all the facts, one must not be too optimistic as to the trading results for 1921, but you may accept my assurance that your company is in a sound condition, and I am hopeful that all the economies introduced will offset to a certain extent the loss of revenue brought about by the coal troubles and general depression.

The report was adopted, and the usual formal business transacted.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

Mr J. H. Batty (chairman of directors) presided over the thirty-third annual ordinary general meeting of the African and Eastern Trade Corporation, Limited, which was held on Thursday last, the 28th instant, in the banqueting hall of the Exchange Station Hotel, Liverpool. There was a full attendance of directors and shareholders.

The Chairman, in moving the adoption of the accounts and report, said there was no doubt in his mind that the potentialities of the corporation were unique. They might be going through troubled waters, but he believed they could look forward to the future with the utmost confidence. He had no wish to minimise the deplorable condition of trade this year, but was hopeful that there might be some recovery before the year was completed. In arriving at the results for 1920 no credit had been taken for excess profits tax. Whatever sum was recoverable would be brought into the accounts for 1921. Their directors had had a very anxious and trying time. Not only had they to face the extraordinary decline in produce prices, but they also had wide fluctuations in the exchange and depreciation in the value of the ordinary trading stock; and last, but not least, the decline in the volume of trade. After taking all these things into account, the directors hoped that the shareholders would appreciate the result achieved. It would still take some time for trade to resume its normal flow. There had been a stupendous swing from the height of prosperity to the depth of depression in the period they had just been through. His anxiety was most keenly directed to their national finance, which would give cause for the gravest anxiety in the early months of next year. Unless they had immediate relief from taxation, trade would continue to suffer, and there would be increased distress throughout the country. They must be allowed to retain the capital in their businesses, and a certain percentage of the profits was needed to finance new enterprises. Trade in West Africa had greatly felt the effects of the world-wide slump, and this was reflected by the serious decline of the imports from these colonies.

Mr Robert B. Miller seconded, and the resolution was unanimously adopted.

On the motion of the Chairman, seconded by Mr Robert B. Miller, a final dividend of 5 per cent., less income-tax, was declared on the ordinary shares of the company, making, with the interim dividend already paid, a total dividend of 17½ per cent., less income-tax, for the year.

The retiring directors, Messrs J. H. Batty, E. A. Beazley, A. A. Cowan, and Major-General W. H. Grey, C.B., C.M.G., were unanimously re-elected.

The directors' fees were agreed upon, and the auditors were reappointed.

H.E. PROPRIETARY (NEW), LIMITED.

COMPANY'S IMPROVED RESULTS.

The ordinary general meeting of the H. E. Proprietary (New), Limited, was held, on the 25th instant, at River Plate House, London, Mr F. H. Hamilton (the chairman) presiding.

The Chairman said that when a year ago the directors submitted the accounts for 1919 he was able to point to the fact that they showed a considerable improvement upon those of the previous year. In asking the shareholders now to approve of the accounts for 1920, he was glad to be able to state that they presented a further substantial increase in the earning power of the company. The various reserve accounts totalled about £58,500, or over 20 per cent. of the company's issued capital, and gave them a position of considerable strength.

PICCADILLY HOTEL SALE.

The outstanding feature of the year was the sale of their Piccadilly Hotel interest. A small proportion of their shares were sold last year, and the remainder about three months ago. The directors had received a number of inquiries from shareholders regarding that transaction in consequence of the advertising campaign which was made at the time of the issue of preference shares by the purchasers, Messrs. R. E. Jones, Limited. One or two of their correspondents were disposed to be critical. One of them quoted a statement that the buyers were buying at the bottom of the market, from which he deduced that the directors must be singularly ill-advised to choose that moment for selling. Naturally they had to deal with these questions with caution and some reservations as long as the purchase was not actually completed, and even now he would deprecate a detailed discussion in fairness to all concerned. It was not difficult, however, to show that the transaction, from the point of view of this company, was very advantageous. The price obtained of 20s.

for each rs share was, in view of all the facts, extremely good. Then they were naturally influenced by the fact that for the year ending July 31, 1920, they received dividends of 150 per cent. on the par value of the shares, which was equal to 7½ per cent. on 20s. When the Indian Government thought it worth while to pay 7 per cent. it could hardly be considered that 7½ was an extravagant return upon a London hotel of the luxury class. Moreover, the dividend in question was the largest that the hotel ever paid, and in their opinion the general conditions of business were certainly less favourable than those that obtained during 1919 and 1920.

St. James's Court, the shares of which were entirely owned by this company, continued to make excellent progress. The demand for good service flats was a steady one, and there was no reason to think that it would decrease. On the other hand, the supply was limited by the cost of building. It would be impossible to-day to build St. James's Court at a price which would yield a return of 3 per cent. on the cost, and there was no reason to think that that state of things would change appreciably. The board took a very sanguine view of the future of St. James's Court. They had during the year only distributed a small part of the profits earned by way of dividend, but a considerable sum, largely out of accumulated profits, had been spent in enlarging the restaurant, for which an outside licence had now been obtained, and in reorganising the kitchen arrangements.

INTERESTS IN OIL, STEEL, AND GOLD.

During the year the directors had given some attention to oil properties, and had acquired interests in the Apex (Trinidad) Oilfields, Limited, the Premier Oil Company, Limited, and the London and Midland Oil Company, Limited. In all those three companies they were associated with strong financial groups, and they had every reason to think that those investments would turn out satisfactorily. In the Channel Steel Company they were interested together with some of the most powerful colliery and iron masters in Great Britain. That company owned large areas

in Kent in which the existence of coal and large deposits of excellent ironstone had been proved. One day there would be a great industrial development there. The company's gold interests were extensive, and very promising, but an active policy had been ruled out during the past year. They owned the whole of the farm Klippoortje, on the far Eastern Rand, and they had a working arrangement for joint action when the time came with the owners of the adjoining farm Maraisdrift. In Klippoortje they had what was probably the nucleus of a great and profitable mine. With regard to their general policy the directors had in the past pursued a conservative line, and shareholders were feeling the benefit of it to-day. The position he had been able to disclose was a strong one, and their assets, in addition to being to a considerable extent productive and liquid, or semi-liquid, included many interests which, although dormant to-day, had great potential and speculative value. The directors had decided to pay a dividend of 5 per cent. in respect of last year's work, and had also declared a further dividend of 5 per cent. in respect of the current year.

The report and accounts were unanimously adopted.

THRELFALL'S BREWERY COMPANY, LIMITED.

SATISFACTORY RESULTS DESPITE TRADE SLUMP.

The thirty-fourth annual general meeting of Threlfall's Brewery Company, Limited, was held, on the 27th instant, at the Cannon Street Hotel, London, Major C. M. Threlfall (the chairman) presiding.

The secretary (Mr F. Cornwall) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: You will agree with me, I am sure, when I state that the trading result for the financial year under review is wonderfully good, especially when we take into consideration the depression—and in some cases stagnation—which has existed in the

industrial life of the country during the last 12 months. I think, gentlemen, in face of these difficulties our profits for the year are most satisfactory.

In accordance with resolutions passed in July and August last year, the amount standing to the credit of the reserve fund on June 30, 1920, has been distributed among the ordinary and preference shareholders by the issue of one fully-paid share for every two held by the ordinary shareholders, and a cash payment of 10s per share to the preference shareholders. In addition, 500,000 £1 ordinary shares were offered to the shareholders at a price of 25s per share, and over-applied for. I take this opportunity of expressing the regret of your board that the applications received from the preference shareholders and debenture stockholders could not be considered, as the ordinary shareholders alone applied for over 100,000 shares more than the number offered for subscription.

In the balance-sheet there is £125,000 standing to the credit of share premium account. This is the premium of 5s per share received on the issue of the new ordinary shares in October last. This additional capital will be usefully employed in the extension of the company's business.

During the year a number of licensed premises have been purchased, the results from which up to the present have fully justified the anticipations of the board. A large amount has had to be expended on decorations and repairs owing to the compulsory neglect to which the properties were subjected during the war and the 12 months following, because of the shortage of labour and materials.

Your directors feel—and we are sure you will readily agree—that we should again recognise the excellent and loyal work done during the past year by all our employees, and we have much pleasure, therefore, in acknowledging those services by allocating out of the profits the sum of £25,000 as a bonus.

Both the breweries at Liverpool and Salford have been enlarged and partly remodelled, so as to bring them right up to date and to provide for the increased demand which is being made upon them.

Properties are continually being offered to the directors, but it is our desire only to purchase those which will be beneficial not only to the company, but also to its customers. The public house is, in our opinion, the working man's club, and it is our endeavour to make the place as comfortable as possible, so that a man, after a hard day's work, may enjoy a rational amount of refreshment in cleanliness and comfort. The hours, of course, have been restricted owing to the existence of the Liquor Control Board. As this was only a wartime innovation, the time has arrived when the trade should be relieved from the inconveniences imposed by this body, and I am glad to say that under the proposed new Bill there now seems to be every prospect of these undue interferences with the rights of the working man being removed.

The resolution was carried unanimously, and some congratulatory remarks from shareholders terminated the proceedings.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

COMPANY'S STRONG POSITION—NEW CAPITAL TO BE ISSUED.

The fifty-sixth ordinary general meeting of this company was held at Cannon street Hotel, London, on Friday, the 29th instant, Mr C. E. Gunther presiding.

The Chairman said that the past year had been largely one of adjustment and tidying up of the exceptional position which remained as an aftermath of the war, and the directors sincerely hoped that they might now look forward to a more normal period of business. In the balance-sheet the stocks were on a thoroughly sound and healthy basis, so that they could enter the new period of working with confidence and every prospect of a continuance of successful trading. The strong position of the company, due to the conservative management of the past, justified the board in recommending, although the year's results had not been up to the earnings of previous years, that the final distribution should be maintained at last year's rate of 15s per share. The reserve fund, with the amount it was now proposed to add, and including the transfer of the insurance fund, would be made up to the substantial figure of £1,000,000.

REASONS FOR FRESH CAPITAL.

The heavy drain of taxation had depleted the company's cash resources, so that they had to look to the raising of fresh capital as a means of equipping themselves with the new plant and machinery required in order to convert the Fray Bentos factory into a frigorifico. Apart from this, in consequence of the higher costs and the general needs of the business, the amount of money locked up in stocks was greater than in pre-war times. The directors had accordingly decided to recommend that the capital be increased from £1,600,000 to £2,500,000 by the creation of an additional 180,000 ordinary shares of £5 each. It was proposed to offer to the present ordinary shareholders 120,000 shares at par in the proportion of one new share for each ordinary share at present

held, and as the ordinary shares were at present quoted at a substantial premium, the board had no doubt that these new shares would be readily taken up.

During their visit to the River Plate last year, Mr Follett Holt and himself made a special study of the question of taking up refrigeration at Fray Bentos, and it was decided to proceed with the scheme. The construction work was now well on the way, and it was expected that some time during the next working season they would be ready with an up-to-date equipment for the production of chilled and frozen meat. In all, Mr Follett Holt and himself visited and inspected 20 of the company's estancias, saw over 150,000 head of the company's own cattle, and were greatly pleased with all they saw, and especially with the marked improvement in the quality of the cattle.

The company's herds in Rhodesia had been maintained in good condition, and their steadily increasing stocks were being further graded with pedigree blood, both imported and locally purchased.

The company had acquired a suitable farm in Kent for the purpose of concentrating pedigree cattle for export to their overseas farms.

The sales of the company's different proprietary articles had been well maintained both here and through their Continental distributing centres, where their branches, reconstructed and reorganised, were now making good progress.

The report and accounts were unanimously adopted, and at an extraordinary general meeting the proposed increase of capital was approved.

OHLSSON'S CAPE BREWERIES, LIMITED.

TRADING UNDER DIFFICULT CONDITIONS.

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 27th instant, at Cannon street Hotel, London, Mr Herbert J. W. Jervis presiding.

The Chairman, in moving the adoption of the report and accounts, said that the actual balance of profit for the year amounted to £17,801, which, with the amount brought forward from the previous account of £55,595, made a total of £73,397. From this had to be deducted the dividend on the cumulative preference shares, leaving a balance at profit and loss of £61,897.

The results of the year's trading had been disappointing, and came upon the directors with something like a shock. Their money sales for the first nine months of the year showed a constant increase upon the corresponding period of the previous year, which had itself shown a considerable advance on its predecessors, so that up to the month of February the returns they had received gave them every evidence of a successful year's trading. From the turn of the year, however, business out in South Africa assumed a very different aspect. Labour troubles arose on every hand, strikes were constant in almost every industry, and the company's business itself was to some extent affected. The general spending power of the community seemed to be suddenly affected, and by the time the business year closed the rate of increase of sales, in money value, had dropped from 8½ per cent.—the increase up to December 31st—to 3½ per cent. at the closing of their accounts, on the corresponding period of the previous year, while the sales of their products in bulk had fallen some 4½ per cent. for the whole year, which, in relation to their increased overhead charges, inevitably reduced the amount of available balance.

Future prospects in many ways showed signs of improved trading results. Their beers were of the first quality, and gave every satisfaction. The South African beer had to bear a heavy excise,

which had been increased by 150 per cent. since the outbreak of war, although it was produced entirely in the Union, and from materials grown in the Union—with the exception of hops, which they had repeatedly tried to cultivate there—while wine, another native product, contributed nothing to the revenue. Trade conditions in the country generally were not at present in a flourishing condition, and there were vast quantities of produce waiting for the restarting of the British and European markets, and until some clearance took place there was not likely to be much improvement; but South Africa had ever been a country of surprises, and the depression of to-day quickly changed to the prosperity of to-morrow. The resolution was adopted, and a dividend of 6 per cent., free of tax, was declared on the ordinary shares.

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended July 27, 1921, the stock of coin and bullion showed an increase of £2,604 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended July 27, 1921.	Countries to which Exported.	Week Ended July 27, 1921.
Belgian Congo	44,558	United States	1,082,200
British South Africa	907,832	Sweden	690,076
British India	580,665		
Straits Settlements	11,652		
Other countries	800		
Total values of imports of gold	1,545,507	Total declared value of exports registered in the week	1,772,276

GOLD.

Messrs Samuel Montagu and Co. write on July 28th as follows:—

The Bank of England gold reserve against its note issue is £126,558,020, as compared with £126,556,570 last week. The fair amount of gold that came into the market was taken for New York. Gold to the value of \$6,495,000 has been received in New York—\$5,670,000 from London and \$825,000 from France. The monthly balance of Indian trade, including bullion and rupee paper, is still against that country. The total for June is minus 167 lacs of rupees, as compared with 200 in May. We append Chinese imports and exports of gold over a series of years—the value is in Haikwan taels:—

Year.	Imported.	Exported.	Net Import.	Net Export.
1911	4,023,530	2,490,648	1,532,882	..

Gold does not circulate in China as currency, but the ratio between gold and silver is a matter of keen interest, and also of practical concern, as is the case in India. The abnormal high value of silver that has obtained recently created the impression that gold was cheap, hence the people of China, including those in the lower classes, turned out their savings which they had stored in the form of silver, and invested in gold—usually in some form of personal adornment. This gold demand was particularly active in 1919, and the early part of 1920. As the value of silver fell, the demand for gold languished, and was at length converted into a disposition to sell and to replace the silver. In this way, from the Chinese standpoint (seeing that their currency is silver), a considerable profit was made over the operation. The statistics for 1920 reveal a heavy outward movement of gold during the latter part of that year.

SILVER.

Prices have advanced further this week, largely in consequence of demand for the Indian bazaar, which followed extensive purchases on account of China. A fair-sized shipment will be made by this week's steamer to Bombay. The cash quotation to-day—39 1/4d—is the highest since January 27, 1921, and the premium for cash delivery—1 1/4d—since March 15th last. The strength of the silver market at the present time is remarkable when we consider the high price silver has reached in India—about 105 per 100 tolas—and in the United States well over 61 cents per ounce. It is not as if there was a real shortage of supplies. The fact that considerable amounts of German silver are announced by Reuter as arriving at, or on the way to, New York (probably over 20,000,000 ozs), is against such a contention. Some 7,000,000 ozs are on the way to augment the visible stocks in China. No doubt, shrinking production is a factor in these high prices (it is certainly not keen demand for Eastern products). The chief reason, however, appears to be the wild speculation in exchange which has prevailed recently in China. The following appeared in the issue of the *Mexican Post* for July 4th last:—"It was officially stated yesterday that the decree abolishing the tax on all silver exported from the country will be repealed in view of the rise in the price of this metal in foreign markets. The measure in question was enacted when the silver situation became extremely acute due to the decline." The same journal states that the production, notwithstanding the shut downs and the labour decrease brought about by the mining companies, has not been appreciably less.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	July 7, 1921.	July 14, 1921.	July 21, 1921.

The coinage during the week ending 22nd inst. amounted to 9 lacs of rupees. The stock in Shanghai on the 23rd inst. consisted of about 34,300,000 ozs in sycee, 27,500,000 dollars, and 300 bars of silver, as compared with about 34,000,000 ozs in sycee and 26,500,000 dollars on the 16th inst. The Shanghai exchange is quoted at 3s 8d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

1921.	Gold.		Silver.		Date.	Silver.	
	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.			Cash, Per Ounce.

PERRY and Co., Limited.—The directors regret that they do not see their way to pay an interim dividend. Especially in view of the present state of trade, and also having regard to the necessity of conserving, as far as possible, the financial resources of the company, the directors consider it necessary to wait until the results of the complete year's trading are available before dealing with the matter.

GREAT CENTRAL RAILWAY.—The directors have resolved to pay the dividends for the half-year on all preference stocks down to and including the 4 per cent. preference stock, 1889, the same as before.

GREAT NORTHERN RAILWAY.—The directors announce that in view of the uncertain position of the railways they have determined to defer the declaration of a dividend on the ordinary capital until the end of the year. The warrants for interest for the past half-year on the guaranteed and preference stock will be posted on August 20th. A year ago 1 1/2 per cent. was paid on the ordinary capital, giving 2 per cent. on the preferred converted and 3 per cent. on the "B" stock.

NOTE.—The value of the gold output fluctuates each month in accordance with the amount of premium which may be declared to the Mines Department of Southern Rhodesia in that month.

OIL OUTPUTS.

THE COMMONWEALTH OIL CORPORATION, LIMITED.—Advice from Australia reports for the four weeks ended June 17, 1921.—Shale retorted 2,891 tons; crude oil produced 273,919 gallons. For the four weeks ended July 15, 1921.—Shale retorted 2,192 tons; crude oil produced 208,286 gallons.

Reports and Notices.

To succeed Mr Charles Hendry, who has been promoted to be one of the managers at the chief administration, the directors of the London and Lancashire Insurance Company, Limited, have appointed as their London secretary, Mr Archd. F. Rae. Mr A. J. Falkner has now been given the title of assistant London secretary. In succession to Mr Archd. F. Rae the directors have appointed M. C. M. MacEwing to the position of local manager at their Aberdeen branch.

The directors of the South Staffordshire Mond Gas (Power and Heating) Company elected Mr William H. Carder, F.C.I.S., as director in place of the late Sir Gilbert H. Claughton, Bart.

The directors of the Hull and Barnsley Railway Company have elected Mr Edward Watkin to be a director of the company in place of the late Mr George Blake Walker. Mr Watkin will continue to discharge the duties of general manager as hitherto.

At the meeting of the court of directors of the London Assurance Mr S. I. E. Crouch was appointed secretary to the corporation in succession to Mr C. A. Denton, who has recently retired after nearly 30 years' service.

We are informed that, consequent upon ill health, Mr George Chappell, general manager of the Royal Insurance Company, Limited, has tendered his resignation, to take effect as from July 31st. Mr Chappell has been invited to a seat on the board as from August 1st. To fill the vacancy the directors have appointed Mr J. J. Atkinson, at present deputy manager, to be the general manager of the company.

ASSURANCE COMPANIES.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.

The directors state that as the outcome of the valuation which has just been made at the close of the nineteenth quinquennium on June 30th last, the society is able to maintain the 2 1/2 per cent. valuation standard for all life assurances, both with and without profits, as well as for the annuity business, and will be in a position to repeat in October next the record scale of bonus paid to the participating policy-holders in 1911 and 1916.

LIFE ASSOCIATION OF SCOTLAND.—The valuation of liabilities as at April 5th last was made at three per cent. interest. The net rate earned during the five years to April 5th was £4 os 5d per cent. The surplus shown before adjustment for depreciation was £474,058, which was reduced to £124,395 when £349,663 had been written off securities. The directors have divided £93,989 among policy holders in classes A3, B, and B2. The bonus amounts, in class A3, to 15s per cent. for each of the two years to April, 1921. It is calculated that the depreciation of securities absorbed more than the whole of the profits of the first three years of the quinquennium. The shareholders' dividend is £1 2s 6d a share, less tax, for the current year.

MISCELLANEOUS.

BURBERRYS, LIMITED.—The directors have decided to await the accounts of the company for the year to March 31, 1921, before coming to any decision regarding the payment of the dividend on the preference shares due August 1, 1921. The proposed arrangements recently referred to in the Press for the re-organisation of the company's capital and the issue of debenture stock have not matured. It is anticipated that the accounts will be ready for presentation to the shareholders in October next, and the directors will then be in a position to give their views regarding the re-organisation of the company's capital.

EBBW VALE STEEL, IRON, AND COAL COMPANY.—The directors report and accounts for the year ended March 31, 1921, has just been issued. The directors state that the collieries as a result of the national coal strike, were idle from October 18 until November 4, 1920. Operations were suspended in February and March, 1921. The iron and steel departments were fully employed until the national coal strike in November, 1920, after which work continued intermittently until the close of the financial year. The company has for some years owned a moiety of the share capital of John Lancaster and Co., Limited, and Powell's Tillery Steam Coal Company, Limited, and in April, 1920, acquired the other moiety from Messrs T. Beynon and Co., Limited, by the issue of ordinary shares in this company, for which special provision was made in the resolution passed by the shareholders on June 19, 1918, and duly confirmed on July 4, 1918. The entire share capital of Lancaster's Steam Coal Collieries, Limited, was also acquired during the financial year. In April, 1920, the company acquired, partly for cash and partly by exchange of shares, practically the whole of the ordinary share capital of the Newport-Abercarn Black Vein Steam Coal Company, Limited. No portion of the profits from the last-named company has been taken into the present accounts inasmuch as the financial year of this company coincides with that of the Ebbw Vale Company. Notwithstanding the before-mentioned stoppages, the wages paid during the year in respect of the Ebbw Vale company's operations amounted to £4,168,015, as compared with £3,119,528 during the previous year. The balance of profits brought forward from last year was £16,301. Gross profits for the year amount to £633,247, and the net profit was £399,389. Preference dividend absorbed £84,000. The sum of £200,000 has been put to reserves. Dividend of 5 per cent. on the ordinary shares absorbs £125,000, and £6,690 is carried forward.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated July 28th, is as follows:—Pig-iron: There is an entire absence of business in the pig-iron market, as until the cost of fuel is materially reduced it is very unlikely that more blast furnaces can be put into operation in this district. At present there are seven furnaces working making iron for use in the steel works owned by the same companies. At the same time, Continental pig-iron is coming into Middlesbrough in large quantities at something like £2 per ton less than it can be produced here. Meantime nominal prices remain unchanged as follows:—Cleveland G.M.B. pig-iron, 135s. per ton, and East Coa. home consumption. local works have rest use up their stocks on and scrap, and it is doubtful to

say how long this may continue. Steel ship plates (home), £15; Steel ship angles, £14 10s; iron bars, £16; steel rails, £14 per ton net. Iron ore: Until blast furnaces can be restarted, there is no

Capital, Surplus and Profits
\$37,500,000

business possible in iron ore, but a few cargoes are coming in under exceptional circumstances. In the absence of business there are no prices mentioned.

Our Sheffield correspondent writes:—The position of steel generally fails to register any improvement, some branches being rather better fixed than before the strike, while others are worse off than ever. Foreign trade could not be more unsatisfactory. Most of the local companies have been losing money continuously since the beginning of the year. A few blast furnaces in the district have started up on foundry iron, but those producing hematite, with few exceptions, are standing until there is some demand from the steel makers, and this may not develop until next year. Manufacturers generally are holding off for some definite move in respect of coal and coke prices. Makers of special steels here are greatly concerned at the proposals in the new American Tariff Bill, as it imposes duties so heavy as will, to a large extent, shut out their alloy steels from the American market. For many years a good deal of the finest brands of Sheffield tool steel has been bought in the United States, on the strength of its unique properties. The trade has been dwindling of late, and the imposition of duties amounting to something like 50 per cent. will make the price prohibitive. Business is fairly stagnant in tools, cutlery, and electro-plate. The execution of a big Russian order for files, saws, and engineers' small tools has proved a blessing to a score or more local firms, among whom the work was shared. The demand for steam coal and cobbles is active, and a heavy tonnage of the former is going to the railway companies. Export trade is poor. Gas fuels are moving freely. Owing to quietude at the coke ovens there is not much call for slack. The call for house coal is smaller than had been anticipated. Owing to the hot weather, not much coal is needed, and consumers are holding off for cheaper rates.

Our Glasgow correspondent (writing on Thursday) says:—The industrial situation in the West of Scotland generally is gradually yet slowly getting again into working form. Several shipbuilding yards and engineering shops managed to make a partial re-start on Monday, and it is understood that at a number of other establishments steam will be got up on Monday first, which ends what is locally known as the Fair holiday period. Still a good many works will continue idle, as they have been, more or less, for at least a couple of months. Probably the most unpromising of any of the positions is that which holds in the pig-iron section. There is not a furnace in blast north of the Tweed, and no arrangements are in progress for re-lighting. To re-light a set of furnaces involves, it appears, an initial expense of thousands of pounds sterling, and owners advise that they are not prepared to face the responsibility in existing circumstances. They explain that, say, for foundry iron (such as exists in stock) they cannot command £10 a ton, and that that figure is not remunerative. With Continental (Belgian and German) material offering freely in our home markets at from £2 to £3 a ton less, they recognise that higher and payable rates for Scotch make is hopeless, and in that serious contingency they are insisting on substantial reductions in manufacturing costs, in which wages and coal play the most consequential parts. The belief here is that fuel is bound to see a lower level, but not likely the level that big consumers are panting after and will alone, they affirm, be satisfied with. A very delicate and difficult position has thus, it will be seen, been created, and how it is going to be adjusted is matter indeed for deep and weighty consideration. Such stock of iron as lies in makers' hands is being steadily absorbed for special purposes, and the contemplation is that soon not a ton will be in sight. The position in the steel trade is much the same actually—that is as regards the volume of trade—only if a demand were in some way to set in there is plenty of hematite iron at command to meet it. Of course, at a price and at the moment buyers regard quotations as too high—thanks again, it is said, to dear coal. Whatever may come of it, there is no doubt as to trade and business influences being concentrated in an effort to break down not only the current, but the forward standards of fuel—those applying to values and supplies; and it is a question whether the coal industry can satisfactorily bear the burden. That has to be seen. During the recent holidays it transpires a decent volume of orders for steel plates and sections were booked by steel producers, and in some connections it is intended to set rolling mills in operation, so as to clear these off. There have also been a variety of inquiries in circulation as to supplies of structural material; yet, taken all over, orders and inquiries do not constitute, it is stated by authorities, any reliable support to the conclusion hinted at here and there that trade is on the mend. Shipbuilders, so far as declared, are not handling any fresh tonnage, and they cannot get on with certain launched work because of the joiners being still on strike. There are no fewer than 50 steamers (20 new) lying rusting in the Clyde for the lack of overhauling and re-fitting labour. Coals more plentiful—sufficient for the restricted outlet—and values somewhat easier in tendency, particularly for lower grades.

CUMBERLAND IRON. (FROM OUR CORRESPONDENT.)

With fuel at its present price, the re-lighting of the Cumberland and Furness district furnaces on either ordinary or special hematite pig-iron remains impossible. There is no market for Bessemer mixed numbers at the officially quoted figure of £8 per ton, and the utmost that can be expected to happen this quarter, unless developments as satisfactory as they would undoubtedly be surprising were to take place, is that a few furnaces may be blown in to deal with an accumulation of orders for small lots of metal. Even

that prospect, however, is uncertain. It is quite clear that no large volume of business can come makers' way until iron is down to £6 per ton, and a lower figure is also mentioned. How fuel is to be brought down to the level at which iron smelters would buy it is a problem as yet unsolved. Presently, however, coal owners are to discover that they, too, are without a market for their wares. The first rush for coal is over, and this week there is such a glut of "smalls" that the price has been reduced from 38s to 31s per ton, while round coal for shipment to Ireland is 1s per ton cheaper at 40s per ton. As far as round coal is concerned, Cumberland collieries will be able to dispose of the greater part of the production. "Smalls" are in different case. Only when the normal number of furnaces on ordinary iron is in full blast can the output be absorbed, for then, of course, every coking plant is in full swing. It may be seen, therefore, that in a few weeks' time with the coking industry still idle the collieries themselves cannot work more than half time. When that unhappy state of affairs arises the way to a resumption of operations in the iron, steel, and iron ore industries may become plainer. The iron ore industry is hit the hardest of all. Many of the pits have not drawn metal since October, and few of them worked after January, a very considerable tonnage of Spanish ore having been imported meantime. This long period of unemployment is inducing a spirit of accommodation in the iron ore miners, and it is stated that they are on the eve of accepting a reduction of wages which would afford the ironmasters some little help. Obviously, wages cannot be based on the present selling price of ordinary iron for the reason that the iron cannot be sold.

COAL TAR PRODUCTS.

There are very few products for sale, as with the coal mines only just getting back to work, supplies for gas works and coke ovens are only beginning to arrive, and outputs of products are not yet very great. What products there find a fairly ready market, pitch being particularly well spoken of in anticipation of a resumption of shipping in the early autumn. Sellers are not willing to accept less than 80s per ton, and in some directions 90s is reported. The rubber manufacturing industry has shown distinct signs of recovery, and as a consequence the market in solvent naphtha has greatly improved. It is difficult to obtain supplies at under 3s per gallon. The market in carbolic acid is dried up, but cresylic acid is slightly better than when last reported at about 3s per gallon for pale quality, and 2s 8d for dark quality. Intermediate products are also improving, especially salicylic acid, aniline oil and salts, which are required on export account.

SULPHATE OF AMMONIA.—A very drastic reduction has been made in the price of sulphate of ammonia, and the quality of the material being placed on the market this season is also distinctly

Messrs. HODDER and STOUGHTON have pleasure in announcing Mr. OTTO H. KAHN'S NEW BOOK,

REFLECTIONS OF A FINANCIER

"MR. KAHN HAS HIS FACE SET TOWARD THE LIGHT."
Theodore Roosevelt.

A VOLUME of striking essays written by one of the greatest financiers in the world and introduced by a prominent Labour Leader. The author is well entitled to address a British audience, as from the outbreak of the Great War he threw his resources and capacities on the side of the Allies and was responsible to as great a degree as any other individual in influencing America to come in on our side. This volume makes a direct appeal to every class of worker—to the CITY MAGNATE, to the PROFESSIONAL and to the LABOURING MAN.

WITH AN INTRODUCTION BY THE
Rt. Hon. J. H. THOMAS, P.C., M.P.

Price TEN SHILLINGS and SIXPENCE Net. Postage 9d. extra.

HODDER AND STOUGHTON, LTD.,
WARWICK SQUARE LONDON, E.C. 4.

better. 25½ per cent. ammonia material has been fixed for sale for home agricultural uses at £14 6s for ground material, and £13 16s 6d for unground material, while 24½ per cent. material is being sold at £12 17s and 25 per cent. material at £13. These prices have already been productive of fairly substantial orders, and there is every indication that good business will continue.

MANCHESTER, July 28.

No special feature has presented itself throughout the market during the past week, and business generally has been on a very small scale. Fewer cables have been received from India, and the falling off in cloth demand for that outlet is attributed to the efforts of Gandhi, who is agitating for complete boycott of all foreign goods. Naturally that news has caused a certain amount of uneasiness in Manchester circles, but the position is not regarded as very serious. Only a few sales of cloth have taken place for our Dependency. There has been a tendency for shippers to China to operate a little more freely, but demand for that outlet could not be described as formidable. Recent advices, however, state that the position out there is improving daily. Not very much business has been done for the outlets of the Mediterranean, but Java and Singapore have purchased some moderate sized lots. American and Egyptian yarns have been practically neglected, and prices generally have tended to ease. Export numbers have been in request for India and China.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says:—Although business continues to be conducted on very restricted lines, the general tone of the market appears to be slightly better. The good demand in London on Continental account has off-set the comparatively poor competition from the home trade, and values of raw material are steadier than during the first week of the auctions in Coleman Street. This has had a steadying effect on the top market in Bradford, though the fact remains that average 64's can be bought at about 3s per lb, a figure at which the tops cannot be made out of wool bought in London. This has been a source of trouble for several months past, and in yarns, also, some spinners are accepting business at prices which cannot possibly cover the cost of production. In the circumstances all quotations are more or less nominal, and buyers do not hesitate to make the most of the very cheap sales that are reported from time to time. These cut prices, of course, exercise a depressing effect on the market, and there can be no lasting improvement until all firms resolutely oppose new business that is offered at prices which do not allow of a reasonable margin of profit. The lack of an adequate outlet abroad for yarns is still retarding development in this branch of the industry, but there is a fair amount of inquiry for botanics for the home trade. In the manufacturing section trade is "spotty," and most buyers are offering very low prices. There is a little more inquiry from South America for fancy worsteds, and Japan is open to do business at a price. Stocks of dear goods are still heavy, and fabrics for men's wear move very slowly.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The sales which finished on Thursday continued to show a fall maintenance of the better features which developed during the second week of the auctions, and the series ended better than the majority expected at the opening. It turned out that the cheapest wools were obtainable during the first week of the series, and the writer has always maintained that a firm finish makes for the well-being of the textile trade of all Europe. Recent experience has proved over and over again that a strong beginning and a weak finish has always been the precursor of declining values, but this time, although the trade is faced with a good four weeks' interval, I see no necessity for prices declining in consuming markets, or that trade should contract. It is quite true that some decent wool has been picked up at a most reasonable price, but as I have repeatedly said, traders do not regard to-day's standard of wool values as being the stumbling block to trade revival. On the other hand, firm and established prices cannot but inspire confidence, and make for the betterment of the entire industry. This should bring about the results desired, the firm finish sending buyers back to their respective centres feeling that the bottom has not yet dropped out of the wool market.

No better feature developed during the latter half of the auctions than the renewed buying on home trade account. One cannot but feel that Bradford topmakers in particular waited until they felt that crossbred wool was cheap, and at 5d to 8d per lb for the respective qualities, the raw material is indeed worth a buy. There certainly is more doing in tops and yarns of a crossbred character in Bradford, this notwithstanding the repeated wail of that market being quiet. No doubt it is disappointing when a comparison is made with normal times, but let confidence become established on the Continent and the Balkan States currency assume more settled proportions, and a big trade will be done both in single and two-fold yarns spun out of medium and coarse crossbreds. German merchanting firms are doing their utmost in this respect, and regrettable as it is, German houses are better able to handle this business than Bradford export houses, who will probably content themselves with doing business with the firms they supported in pre-war days. The time has not yet arrived for anyone to take undue risks, but at the same time I think that every consideration should be given to pre-war customers on the Continent, whose resources have not been materially impaired with the result of the war.

In the course of an official announcement regarding their future selling policy, the directors of the B.A.W.R.A. state that no new clip wool shipped after May 9th will be offered for sale in Europe before October, and so far as this market is concerned, therefore, official limits do not become compulsory till the October sales. From that date they may be expected to remain in force until April, 1922, because the sales of new clip wool until that date will probably consist entirely of wool shipped under guarantees provided for in the Australian Government's proclamation of May 9th.

ALEXANDERS DISCOUNT Co., Ltd.,

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

VEGETABLE OILS AND OIL SEEDS.

The great activity in linseed has been followed by a lull, buyers being disinclined to follow the market. Prices have, therefore, exhibited an easier tendency, though, generally speaking, the tone is firm and the level of values well sustained. Plate linseed on spot at Hull has commanded £23 and seed on passage £22 10s, while "for shipment" has hovered between £22 10s and £23. An unusual quantity of linseed is at present on its way to Europe, that for the United Kingdom being 130,000 tons, and that for the Continent 96,500 tons—in all, 227,400 tons, compared with 191,200 tons a week ago. Stocks here are short, and should supplies arrive with anything like regularity there seems every probability of their being readily absorbed and the effects on the market scarcely felt.

The demand for raw linseed oil has not been so pressing, and transactions but few. Values, however, are steady round £37 10s per ton naked, ex Hull mill, and £39 10s London, with £38 quoted at Hull for the last four months. All kinds of cotton oil have been in good request and Egyptian crude is slightly dearer. The improved oil demand has stimulated trade in cottonseed, both Egyptian and Indian being freely dealt in at higher prices. Very little is doing in soya bean oil, sellers, quotations being above buyers' ideas. Rape oil is in poor demand, and most other oils are quiet and consumers reserved.

Linseed cakes have continued in strong demand, and more inquiry is reported for cottons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains firm, and although tanners profess to see no economic reason for paying advances, yet they say they are forced to do this to keep going. At the Bermondsey auctions held on Thursday best ox sold from 7½d to 9½d, showing an advance of ½d on last prices. As high as 10½d is, however, being obtained in several provincial markets. Calf were also dearer, and advanced ½d to ¾d per lb, best selection making as high as 14d. Lambs were sold from 1s 3d to 4s 8d, and pelts from 2s to 3s each. A steady trade is passing in foreign hides, and prices in some cases show an advance. Spot sales of Leibig Colons are cabled at 11½d c.i.f. for export, and 9½d for Fray Bentos. Dry hides are selling moderately, and the position is rendered stronger by the fact that Germany has of late been a big buyer of this class of raw stock. The American position is better, and heavy Chicago packers are now quoted at 14 cents, and light native cows at 12 cents. The American House of Representatives have decided that hides and skins shall remain on the free list, so that we may continue to expect raids on our raw stocks when market conditions favour the American tanner.

The demand for sole leather has fallen off this week in view of the holidays, but tanners are very firm on prices. The demand for low-grade sole is still an unpleasant feature, as it shows there is a good deal of rubbish being worked up into what is now known as "stunt footwear." Upper leather is also quiet, and little is expected until after the holidays. German box calf and patent leather is coming freely into the market at prices well below British cost of production.

Business has been fairly brisk in shoe factories, as a fair number of holiday "rush orders" have been sent out. The export section is still very quiet, but in the opinion of experts the outlook is better.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 87s 6d to 93s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.
"Ferrocete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, July 29.

The markets for the chief part disclosed rather quiet features this week, though, in some directions, moderate absorption took place on Continental account.

SUGAR.—There was a fair amount of trade doing, white descriptions being again largely favoured, and the general tone of the market continued very steady owing to dry weather conditions in some of the beet growing districts of Europe. Of British refined, Lyle's granulated sold 59s to 59s 3d; yellow crystals, 53s 6d. Crystallised West India changed hands from 46s to 51s, as to quality; muscovado, 38s to 46s. American granulated, spot, sold, 58s 6d to 58s 7½d; ditto afloat parcels, 30s, c.f. and i. terms. White Java, August-September, quoted 23s, c.f. and i. Dutch granulated, prompt, quoted 31s;

Czecho-Slovakian crystals, prompt, 30s, both f.o.b. terms. Belgian crystals, October-December, sold, 20s 9d, f.o.b., Antwerp. Cuban stocks 1,435,006 tons, against 408,000 same time last year. Term dearer, December, sold, 17s.

COFFEE.—There was a good demand for all the better qualities, and full to dearer rates were secured, but inferior met a slow market. Gold bold Vera Paz, sold, 13s 6d. Future delivery market remained generally dull.

COCOA.—There was only a retail amount of trade effected during the week, but sellers adhered to steady asking prices. Butter, 2s 1d per lb.

TEA.—During the week 45,000 packages Indian were offered by auction, and with brisk and well distributed competition full to dearer rates were obtained, particularly with regard to common clean parcels. About 20,000 packages Ceylon were catalogued, and although general run of quality was by no means attractive, fair competition ensued at steady values.

RICE.—Market steady, but business pursued a rather quiet course. Two stars Rangoon, spot, sold, 21s 6d; afloat, Hamburg, 21s; No. 1 garden Siam, afloat, quoted, 21s; No. 1 Saigon, ditto, 19s 6d; ditto, long grain, 19s 9d; No. 1 Burma broken, afloat, 15s 6d; No. 2 A, ditto, 15s; Siam C 1, broken, 14s 9d; C 3, ditto, 14s 3d. Rangoon bran, forward, quoted, 9 per ton, ex ship. Rangoon beans, hand-picked, spot, sold, 14s; August-September, 14s 6d; Madagascar butter beans, spot, good white, sold, 20s; Japanese peas, spot, sold, 37s 6d; ditto, afloat, 35s 6d, c.f. and i. terms.

SPICE.—Pepper met with moderate support, and a steady tone prevailed. Fair black Singapore, spot, sold, 4½d; ditto, August-October, 4½d; Aleppo, spot, 4½d; Tellicherry, 5d; white Singapore, spot, 9½d; Muntok, 9½d; ditto, August-October, sold 9½d, 9½d, and 9½d. Zanzibar cloves, spot, sold 1s to 1s 2d; and to arrive, 1s 0½d to 1s 1½d. Pimento, spot, sellers, 2½d; flake tapioca, spot, fair quality, 2d per lb; ditto, August-October, steamer, London, sold, 16s. Fair Penang seed pearl, spot, 22s; Singapore, August-October, sold, 19s 4½d; small sago, spot, 27s; sago flour, August-October, done 16s. Desiccated coconut, fine cut, spot, sold, 55s to 54s 6d; medium, 54s 6d; halves, July-August, 52s 6d per cwt. Ginger quiet, steady.

FRUIT.—A quiet, but generally steady tone governed the market for currants. Pyrgos quoted 50s to 51s. Dates steady, and Siar, spot, sold, 15s 6d.

JUTE.—A quiet condition of affairs prevailed, spinners merely operating in order to satisfy pressing requirements, and prices disclosed a weaker tendency. Native first marks assortment, substitutes, July-August, steamer, sold, £26 15s to £26; lightning subs., ditto, £21 to £20 10s; and heart subs., £16 10s to £16. Calcutta Hessians and twills dull, unaltered.

HEMP.—The market for Manila kinds continued to move on firm lines, while influenced by cable advices as to the abolition of grades from J downward as from September 1st next. J grade, July-September, sold, £37; K, £33 10s; L, £33; M, £29. New Zealand quiet, but steadily held.

SHELLAC.—Market remained quiet, T.N., spot, 290s, August, 245s, and October 230s.

COPRA.—The market proved irregular throughout the greater part of the week though moderate transactions were effected. F.M.S. Straits, August-October, sold, £35 5s to £34 10s, £35 10s, Ceylon, July-September, £35 15 to £36 5s; Cebu, £34; F.M. Straits, August-October, Marseilles at £32 10s to £33 10s. Palm kernels, August-October, done, £23 7s 6d, £23 5s and £23 12s 6d.

RUBBER.—A quiet tone ruled during the greater part of the week, and prices were fractionally weaker. Standard plantation crepe, spot, sold, 9½d to 8½d; August, 9½d to 8½d; September, 9½d to 9½d; October-December, 10d to 9½d; January-March, 10½d to 10½d. Sheet, spot, sold, 8½d to 8½d; August, 8½d to 8½d; October-December, 9½d to 9d. Fine hard Para, spot, sellers, 11½d. Caucho ball, 6½d.

OILS.—Linseed irregular and easier. Spot, net, naked, 39s 6d; September-December, 38s 6d. Rape firmer. Crude, spot, 56s; refined, 64s. Cotton firmer. Crude Egyptian, 43s; Bombay, nominal; common edible, 50s. China wood firm. Hankow, spot (barrels), 95s; and shipment, 65s. Coconut firm. Ceylon, spot, 58s; July-August, 52s; Cochin, ditto, 58s. Soya firm. Oriental, barrels, ditto, 43s 6d. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 22s to 24s. Groundnut firm.—English crushed, naked, spot, 52s; deodorised, barrels, 62s. Turpentine easier. American, spot, 80s. Rosin firm. American, grade B, 16s; F, 17s 6d; G, 17s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum steady. American, spot, 1s 9½d; and water-white, 1s 10½d per gallon.

since June 30th, though it may be that additions to the market's holding have been more than counterbalanced by the maturing of bills in other hands. Perhaps the big reduction in the Government securities held by the Bank of England, shown in its return a fortnight ago, may only now be making its effect felt, and it appears that Mondays are likely to be awkward occasions this month, owing to small maturities of Treasury bills on those days. In the meantime, anticipations of ease owing to fresh inflation on a great scale, to be caused by the supposedly awkward position of Government finance, have not been realised. The Bank of England's Ways and Means advances have been reduced by 16 millions since the turn of the half-year, and the satisfactory sales of the attractive $5\frac{1}{2}$ per cent. Treasury bonds now on offer, and the receipt of over 12 millions from Germany on reparation and occupation. In fact, the country is not nearly as near to bankruptcy as some of its citizens seem to want to believe—even the destitution of the wealthy appears to have been exaggerated, judging from the unprecedented traffic to the grouse moors reported by the railways. The market rate of discount was nominal yesterday at about $4\frac{1}{2}$ per cent. pending the tender for Treasury bills.

	Aug. 12, 1921.	Aug. 5, 1921.	July 29, 1921.	July 22, 1921.	Previous Rate and Date Changed.
Bank Rate	$5\frac{1}{2}$	$5\frac{1}{2}$	$5\frac{1}{2}$	$5\frac{1}{2}$	6 (Jly. 21, '21)
Banks Deposit Rate	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	4 (Jly. 21, '21)
Discount Call	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	4 (Jly. 21, '21)
Houses (Notice)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	4 (Jly. 21, '21)
Treasury Bills, 3 months ..	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..
Market rate (3 mths' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

* Additional to those offered by tender the preceding week.

The Bank return shows decreases of £2,000 in the stock of gold, and of £1,135,000 in the note circulation, leaving the Reserve £1,133,000 higher. Government securities increased by £2,518,000, and Other by £3,826,000, and there was thus an increase of $7\frac{1}{2}$ millions in the deposits, of which nearly two went to Public and the balance to Other. The circulation of currency notes declined by £2,087,000 to £327,133,200, which includes £1,967,700 for notes called in, but not yet cancelled. The fiduciary issue is £277,215,500, or £40,339,700 below the maximum.

The Swiss Bank rate was reduced $\frac{1}{2}$ per cent. to 4 per cent. on August 11, 1921. It had stood at $4\frac{1}{2}$ per cent. since April 6, 1921.

The following table shows public income and expenditure for the week ended August 6, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	14,846	Supply Services	17,466
Taken from Exchequer Balances	928	Interest on Debt	6,667
Amount Borrowed	9,287	Sundries	919
	24,162		24,162

These operations increased the National Debt by the sum of £9,286,993, and caused the following changes, which are reflected in our table of National Debt, given in another column:—

	Min. £		Min. £
Public Departments Advances	+ 3,700	National Savings Certificates	— 350

Customs and Excise added £3,611,000 to the revenue, and Property and Income-tax produced £7,145,000. Special receipts under Miscellaneous yielded £500,000. The Floating Debt was increased by £8,260,000 to £1,363,586,000.

The past week in the exchange market has been one of many fluctuations, but of no very large volume of business. Interest has, as usual, centred in the dollar. Last week we had to report a sudden jump to 3.60; this was continued until actual dealings took place at 3.72 on Tuesday, a day of violent fluctuations, as the rate later dropped to 3.64. Since then a recovery took place, to be followed by subsequent weakness, and a further recovery to yesterday's quotation of 3.66 $\frac{1}{2}$. The movement would appear to have been caused partly by the realisation of dollars on reparation account, and partly by the offer of a fairly large line in London on private account. The coincidence of these two influences seems to have alarmed dealers in New York, who proceeded to cover up their oversold sterling position, with an effect altogether disproportionate to the actual business passing. The rate appears to be steadier at the moment, with the whole market watching carefully for any indications of operations on reparation account. Forward margins are unchanged. In Paris holiday influences appear to be more potent than political, and though there has been much movement of quotation the actual turnover has been small, with forward business very much quieter. Limits of fluctuation are 47.10 and 46.40, with a recovery to 46.78 yesterday. Future quotations have widened somewhat, and would appear to be governed more by the speculative outlook than the actual value of money at the two centres. Brussels at 48.17 has appreciated, probably as the result of actual transactions in reparation payments or in expectation of their near approach. The difference between the Belgian and the French rate has therefore narrowed considerably. Futures are unchanged. In Italy there have been a number of dealings, as the result of which 83.25 was quoted yesterday, which is slightly lower than last week, and the pressure of German sales upon the Dutch exchange, which we noted at last writing, has continued, raising the quotation slightly on balance to 11.78. Switzerland has hardly altered, being called 21.69, and the effect of the lowering of the Swiss Bank rate will be watched with interest. Scandinavians have been erratic, and on the whole weaker. Christiania, after rising to 28.65, has fallen back to 28.15, the same quotation as a week ago. Stockholm has declined to 17.40, and Copenhagen, after touching 23.45, yesterday stood at 23.00. The German mark has resumed its expected course, being 300 to a trifle over, no doubt in preparation for the end of August payments. Finland is higher at 240, and Vienna after its recent firmness has suddenly improved, without obvious explanation, to 2700. Warsaw has lost last week's improvement, and is quoted 7400. Prague shows little change at 287, and Budapest is slightly better at 1300. Belgrade and Sofia continue to improve, being quoted 150 and 425 respectively. Bucharest at 283 and Athens at 66 $\frac{1}{2}$ have not moved to any appreciable extent, although a weaker tendency in the latter has been created by the reported failure of attempts to raise a loan in this market. Buenos Aires and Valparaiso show little change at 44 $\frac{1}{2}$ and 35.80, Monte Video is 1d dearer at 42 $\frac{1}{2}$, and Rio has lost some of the recent improvement, being quoted 7 $\frac{1}{2}$ d. The Indian exchanges are slightly better at 1s 3 $\frac{1}{2}$ d to 1 $\frac{1}{2}$ d, and Yokohama has increased in value, being called 2s 11 $\frac{1}{2}$ d. Following a drop on Tuesday to 36 $\frac{1}{2}$ d for spot, silver has recovered to 37 $\frac{1}{2}$ d, and the China exchanges are called 2s 8 $\frac{1}{2}$ d for Hong Kong, and 3s 7 $\frac{1}{2}$ d for the Shanghai tael.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO AUGUST 6, 1921.

	£		£
Total spent	369,484,280	Raised by revenue ..	314,135,061
Dec. in balances	213,888	Net borrowings	55,135,331
Total	369,270,392	Total	369,270,392
ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure ..	974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000

Surplus* 176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

AUGUST 6TH.—Government releases all interned or imprisoned members of Dail Eireann.

AUGUST 8TH.—Supreme Council meets in Paris to discuss Silesian problem. Railway Bill debate. M.P. dies in the House.

AUGUST 9TH.—Railways Bill passes third reading. Sir Wm. Plender appointed independent chairman of National Coal Board.

AUGUST 10TH.—Japan accepts November 11th as date for Washington Conference. Safeguarding of Industries Bill debated.

AUGUST 11TH.—Reply received from Mr De Valera. Report stage of Safeguarding of Industries Bill completed.

AUGUST 12TH.—Mr Lloyd George leaves Paris. Silesian question referred to League of Nations.

A very restricted volume of business has been passing on the Stock Exchange this week, and in the latter days investment stocks developed an easier tendency.

Cotton markets have had a quiet week. Buyers are hanging back in the expectation of lower prices. Trade expansion in Europe is held back by political uncertainty. From the wool trade quiet progress of business, with some expansion in consumption, is reported. Cables from Australia indicate encouraging demand for the raw material. The pig-iron trade is encouraged by prospect of lower coal and coke prices, but these will have to fall further before makers of Cleveland and hematite can generally resume. Steel works are reported short of orders, and there are few signs of any substantial revival. In the hide market quotations have advanced again, and the boot trade is now reported to be fairly busy. In the markets for vegetable oils and oilseeds a fair trade is reported.

Details of market movements and news from special correspondents will be found on later pages of this issue.

STABILITY IN EXCHANGE.

WITH the quotation for sterling in dollars jumping 8 cents in a day, the handicap on trade and finance imposed by the present instability of the exchange market has been once more brought home to the business community, which already knew quite enough about it. Everyone agrees that the chaos wrought in the exchange market by the currency and credit debauch in which all the Governments of the

world have indulged since 1914 is one of the greatest difficulties in the way of the resumption of international trade, and we are all seeking for light on the subject of a remedy. It was thus with a feeling of expectant hopefulness that we turned to an Appendix on the "Problem of the Exchanges" to the Final Report on the Cost of Living, just issued by the Joint Committee on the Cost of Living appointed by the Parliamentary Committee of the Trades Union Congress. The Report itself was a little disappointing. It expended many pages on denouncing profiteering, a subject which, in the present attenuated condition of industrial profits, seems to be rather ancient history; and though its criticisms of industrial inefficiency, owing to unenlightened management, may well be studied by our organisers, nationalisation, public ownership, and public regulation of the economic system—all the items of which a patient public is most heartily tired—are still the chief dishes in the menu when the time comes for practical proposals. Nevertheless, we hoped for new light on the exchange problem, because it is one to which Labour leaders, being free from tradition and prejudice, should bring a fresh mind to bear; and also because the Appendix on the subject is from the pen of the Committee's very able secretary, Mr Arthur Greenwood. He quotes freely from Professor Cassel's memorandum on World Monetary Problems addressed to the International Financial Conference held last year at Brussels, and lays stress on the need, first emphasised by the Professor, for the "establishment of rates of exchange comparable with real purchasing power parities." Unfortunately, when we try to arrive at the purchasing power of money in any two countries as a basis for arriving at the true parity between them, we are faced at once by the difficulty of assessing purchasing power. For example, this Report gives about 30 pages to an examination of the Ministry of Labour's cost of living Index Number, and comes to the conclusion that it was in September last 28 points too low. Mr Greenwood treats the Government's proposed 33 $\frac{1}{3}$ per cent. tariff for dealing with collapsed exchanges with all the scorn that it deserves, observing that it will tend to depress the purchasing power of foreign currencies and accentuate the present evil. He proceeds to show that the problem which confronts the Government (which he seems to hold responsible for the exchanges of the world) is that of the stability of the exchanges, to be arrived at through (1) a new equilibrium and (2) minimising deviations from it. "To secure equilibrium every nation should, under international agreement, take every possible step to deal with its financial position. In some cases external assistance will be necessary, but whatever measures are necessary, the accounts of European nations must be made to balance." Again quoting Brussels, Mr Greenwood effectively points to the burden of armaments as producing fresh inflation, but the removal of this burden clearly would not be enough, as is shown by the example of Austria. It is easy to say that "accounts must be made to balance," but it is not so easy to see this reform happening. To secure the prevention of abnormal deviations from the purchasing power parity, Mr Greenwood, following Dr Bruins and Professor Cassel in their observations put before the Brussels Conference, maintains that Germany and other countries with outstanding external

floating debts, in the shape of paper money exported, or debts on current account, should fund these debts, which, again, is more easily said than done; and that artificial restrictions on foreign trade should, by international agreement, be abolished or reduced to a minimum. "The British Government, instead of pursuing a policy of restrictions, should take the initiative in convening through the League of Nations an International Conference, with a view to ensuring the utmost freedom and equality in international trade."

But if Mr Greenwood throws no new light on the exchange problem, he gives us plenty on the mind of our Labour friends. For he tells us that "the measures herein suggested are simple and sufficient," so that he really seems to think that it is quite easy to make all the nations balance their Budgets, all the foreign holders of notes and other forms of external floating debt consent to their being funded, and all the nations agree to free and equal trade. And at the end of a report which demonstrates to its own satisfaction that the Government cannot even produce a cost-of-living Index Number that is within 28 per cent. of accuracy, he apparently expects the Government to set about doing these "simple and sufficient" things at a time when it is, on his own showing, blundering hopelessly in its own fiscal policy. Now we begin to see why keen minds like Mr Greenwood's delude themselves into a belief that nationalisation is going to produce welfare for mankind. If they can really believe that it is quite simple and sufficient to point out that certain things are desirable, and tell a Government which has proved its own incapacity to do them, to carry them out—if they can swallow this camel, then nationalisation goes down easily. But if actually taken, it seems likely to produce violent indigestion.

Even if the measures suggested by Mr Greenwood were adopted, it does not quite follow, as he tells us it does, that "the problem of the exchanges would be solved and normal international trade would be resumed." The productive power of many countries, our own included, is still below normal, and in some cases external help will be needed not only to balance Budgets (in which case it should be given most cautiously), but also to set industry and agriculture going with the old activity. This help can only be given to the extent required if we have a great surplus of goods to lend to those who need them, and we question whether this Report on the Cost of Living will tend to produce the spirit that will give us that great surplus. Something, however, is being done, as the letters in last week's *Economist* from Berlin and New York showed, to provide Germany at least with foreign credits; and this week a Reuter telegram from Hamburg has announced the purchase of the Renner Tanning and Dyeworks Company by the Forestal Land, Timber and Railway Company, an English concern, hitherto chiefly interested in Argentina. The attitude of the United States towards foreign trade is obviously of the highest importance to the question of exchange. At present America is sitting on a mass of gold, dreading the inflation that it would produce if allowed thus to work its own cure, and setting up a new tariff to keep out foreign goods. With much more excuse—since Protection is with her a cherished plaything—she thus follows our own Government's sagacious action in making economic confusion worse confounded. Criticism of this attitude, however, seems to be active on the other side of the Atlantic. The "Guaranty Survey" of July 25th, published by the Guaranty Trust Company of New York, observes that "the United States has become the leading creditor nation, and as soon as foreign Governments are prepared to pay interest on their indebtedness we shall be entitled to receive more than \$500,000,000 annual interest payments from abroad. While this amount may be offset in considerable degree by tourists' expenditures, freights, insurance, &c., the balance is bound to be in our favour, even though no part of the principal is paid. A change in the relation of our exports to our imports or the reinvestment abroad of large capital sums must be expected if Europe's debt to us is to be liquidated. While it is true that the date of such liquidation may be temporarily postponed through the extension of credits and the adoption of similar devices, it is, nevertheless, true that the debt must be paid eventually in goods, or not at all."

OVERSEAS TRADE IN JULY.

THE July trade returns are perhaps as good as could reasonably be expected. They show British exports about £5 millions higher than in June and re-exports £2½ millions better. Imports, on the other hand, are some £7½ millions lower than in June. Thus the adverse balance on the published merchandise figures is £15 millions better than for June. When the comparison is made with July, 1920, the result is deplorable; the more so, because July, 1920, saw British exports at their highest peak and the import excess for the month down to a level that would have been unusually low, even in pre-war times. It should, therefore, be remembered that last month's figures are compared with an exceptional and not an average month of last year. The comparison of the figures for July and the seven months ended July 31st with those for the corresponding periods of 1920 reads as follows:—

	MONTH OF JULY.		Inc. or Dec. in July, 1921.	
	1920.	1921.		
Imports	£ 163,126,786	£ 80,757,174	£ 82,369,612	% 50.3
British exports	137,451,904	43,172,399	94,279,505	68.8
Re-exports	17,848,479	9,361,556	8,486,923	47.3
Total exports	155,300,383	52,533,955	102,766,428	66.2
Excess of imports over total exports	7,826,403	28,213,219	20,386,816	+ 260.5

	SEVEN MONTHS ENDED JULY 31.		Inc. or Dec. in 1921.	
	1920.	1921.		
Imports	£ 1,195,819,350	£ 652,348,038	£ 543,471,312	% 54.7
Exports	774,918,788	412,067,426	362,851,362	46.9
Re-exports	153,739,527	59,047,245	94,692,282	61.7
Total exports	928,658,315	471,114,671	457,543,644	49.3
Excess of imports over total exports	267,161,035	181,233,367	85,927,668	32.0

In spite of the increase in the import excess contributed by May, June, and July, this balance for the seven months is still nearly £86 millions lower than a year ago. But, obviously, the happy anticipations of what the real balance would be in 1921, which were aroused by the experience of the first three months, must be soberly revised. Here are figures showing how the balance has changed month by month in the present year:—

	EXCESS OF IMPORTS OVER EXPORTS (MERCHANDISE).		Change in Balance in 1921.	
	1920.	1921.		
January	52.0	14.2	..	- 37.8
February	61.8	20.6	..	- 41.2
March	45.8	18.0	..	- 27.8
April	40.5	21.5	..	- 18.9
May	26.8	36.0	..	+ 9.2
June	33.7	42.8	..	+ 9.1
July	7.8	28.2	..	+ 20.4
	267.1	181.2	..	- 85.9

In the seven months export figures exports of British manufactures are down this year from £640.6 millions to £355.9 millions, a drop of £284.7 millions, or nearly 44 per cent. To this drop cotton yarns and manufactures contribute £131 millions, woollen and worsted yarns and manufactures £47 millions. In quantity the cotton piece goods exported were almost exactly half the amount exported from January to July, 1920, while in quantity yarn exports were not very much less than two-thirds of last year's January to July total. In exports of the raw material class the seven months show a drop of £66.7 millions, of which coal alone is responsible for nearly £47 millions. The drop in imports is distributed thus:—

	IMPORTS, JANUARY-JULY.		Decrease in 1921.	
	1920.	1921.		
Food, drink, and tobacco	Mill. £ 450.2	Mill. £ 344.1	Mill. £ 106.1	% 23.5
Raw materials and articles mainly manufactured	476.2	152.1	324.1	68.0
Articles wholly or mainly manufactured	267.5	154.0	113.5	42.3

After making the fullest allowance for the dramatic fall in prices—especially cotton—the decline in imports of the

raw materials of British industry remains very striking, and it would seem inevitable that if and when industrial demand shows a really substantial recovery imports of many important raw materials will have to be on a heavy scale. This does not improve the immediate outlook for the moment in the visible trade balance.

A measure of the slump in overseas trade is furnished by the figures of shipping engaged in such trade. In January to July of this year the tonnage cleared with cargoes was 16,506,979 against 21,643,942 and 38,864,368 respectively in the corresponding periods of 1920 and 1913. However, tonnage cleared in July, 2,806,316 tons, shows some improvement on the June figure of 1,993,656 tons. Statistics of the volume of trade issued by the Board of Trade show that the total tonnage imported in June, 1921, was practically the same as in June, 1920, but in June of this year the import of coal amounted to 1,391,000 tons, as against none in June, 1920. Iron ore and scrap showed a decline of 677,000 tons. Exports in June, 1921, show a marked decline, amounting to 2,850,000 tons, or 87 per cent., compared with the corresponding month of 1920. The practical cessation of coal exports accounts for 2,266,000 tons of the decreased tonnage.

Imports of gold coin and bullion in the seven months were £28.1 millions, as compared with £26.2 millions in the same period of 1920, while exports were £35.2 millions (of which £33 millions went to the United States), against £46.2 millions. Taking gold and silver together, imports have been much the same as in 1920 and exports £11 millions less. The July returns contain figures showing the direction of British overseas trade in the first half of the year, which we propose to discuss in a further article. Some details of import and export values in July and the seven months of this year and last are appended:—

	IMPORTS (Value C.I.F.).		Seven Months Ended July 31.	
	1920.	1921.		
I.—Food, Drink, and Tobacco—				
A. Grain and flour	22,313,880	9,584,365	116,421,424	77,299,902
B. Feeding stuffs for animals	513,851	508,888	5,288,889	3,686,090
C. Meat	13,975,771	10,573,983	84,623,761	85,180,151

NITRATE POSITION AND RESULTS.

THE year 1919 caught nitrate-producing countries between two stools. The war demand was over, the peace-time demand for nitrogenous fertilisers still in abeyance. The year 1920 opened with great optimism in the nitrate industry, and a return to normal consumption was hoped for. Highest hopes, however, were disappointed, the nitrate industry being impeded by the development of acute trade depression and erratic exchanges. Nevertheless, when profits of producing companies for 1920 are compared with the disastrous 1919 figures, it will be seen that much improvement took place in 1920. A number of nitrate companies have recently issued reports and accounts for 1920, and we tabulate below net profits, dividends, reserve allocations, &c., for a number of these in 1920 and 1919 respectively:—

	Net Profits.		Ordinary Dividend.		Reserve, Deb. Redemption, &c.		Carried Forward.	
	1919.	1920.	1919.	1920.	1919.	1920.	1919.	1920.

With two exceptions, the companies in this table made a striking recovery in 1920, Anglo-Chilian, in particular, showing large profit figures. This company, before paying a 25 per cent. dividend, against 15 per cent. a year ago, places £25,000 to renewals account and £150,000 to depreciation and general reserve account. The report also states that "revenue has borne the cost of all repairs and maintenance of the railway, rolling-stock, and moles." On the whole, the balance-sheets show some improvement. The latest balance-sheet positions of the various companies are analysed below:—

LIABILITIES.

	Share Capital.	Debentures and Loans.	Creditors.	Bills Payable.	Reserves.	Profit and Loss.

If 1920 disappointed the optimists, the early months of the present year produced a severe crisis in the industry. While supplies increased rapidly, consumption, instead of returning to normal, became stagnant. Stocks accumulated alarmingly and prices fell fast. In February a pool was formed comprising all the chief holdings of stocks in Europe with a view to stabilising prices and saving a débâcle. The collapse of the American market diverted unexpected supplies to the European market, and of the million tons or so in the hands of the pool Messrs Aikman, Limited, estimate that only 100,000 tons were sold in the first six months of the year. The development of this crisis in the industry was naturally reflected in the share market, and quotations of nitrate-producing companies' securities are very much lower than a year ago, as will be seen from the following table, which gives prices, dividends, and yields for the companies whose profits have been listed above:—

PRICES, DIVIDENDS, and YIELDS.

Company.	Share.	July 24, 1919.			July 22, 1920.			July 29, 1921.		
		Price.	Div.	Yield.	Price.	Div.	Yield.	Price.	Div.	Yield.

(c) £5 shares.

The outlook to-day is dominated by the existence of huge stocks, while consumption will hardly recover until general trade recovery sets in. The following statistics relating to supplies and deliveries are given by Aikman (London), Limited, in their half-yearly report:—

	1914.	1919.	1920.	1921.
	Tons.	Tons.	Tons.	Tons.
Deliveries in Europe and Egypt for six months ending June 30th	1,494,000	453,000	661,000	490,000
Deliveries in Europe and Egypt for twelve months ending June 30th	1,984,000	..	861,000	706,000
Deliveries in United States for six months ending June 30th	295,000	384,000	671,000	82,000
Deliveries in United States for twelve months ending June 30th	553,000	1,521,000	794,000	644,000
Deliveries in Other Countries for six months ending June 30th	47,000	67,000	167,000	43,000
Deliveries in Other Countries for twelve months ending June 30th	92,000	115,000	227,000	84,000
Shipments to Europe and Egypt for six months ending June 30th	831,000	62,000	555,000	509,000
Shipments to Europe and Egypt for twelve months ending June 30th	2,025,000	415,000	950,000	1,233,000
Shipments to United States for six months ending June 30th	310,000	114,000	798,000	213,000
Shipments to United States for twelve months ending June 30th	547,000	1,223,000	997,000	696,000
Shipments to other countries for six months ending June 30th	41,000	57,000	153,000	27,000
Shipments to other countries for twelve months ending June 30th	87,000	128,000	227,000	66,000
Production in Chile for six months ending June 30th	1,455,000	909,000	1,183,000	834,000
Production in Chile for twelve months ending June 30th	2,822,000	2,236,000	1,927,000	2,135,000
Visible supply for Europe and Egypt at June 30th	416,000	178,000	317,000	832,000
Visible supply for United States at June 30th	84,000	21,000	216,000	230,000
Visible supply for other countries at June 30th	11,000	19,000	19,000	1,000
Stocks in Chile at June 30th	754,000	1,500,000	1,248,000	1,368,000
Total supply in sight at June 30th	1,265,000	1,718,000	1,800,000	2,431,000

Although some degree of stability is assured by stocks being so largely concentrated under one control, the position remains an anxious one for nitrate producers, and numerous oficinas in Chile have been closed down. Messrs W. Montgomery and Co. estimate production in the first six months of the present year at about 830,000 tons, against 1,456,000 tons in the first half of 1914. Attempts are being made to arrange a scheme under which production and shipments from Chile may be resumed on a limited scale. The holders of European stocks have held a meeting this week, and are understood to be communicating certain proposals to the Nitrate Association in Chile and the Chilean Government. Naturally, the Government of Chile, which depends largely upon the export duty for its revenue, is intimately interested in the matter. Obviously, however, the prospects of shareholders are mainly governed by the movements of consumption, and these in turn depend on general economic revival. A report published this week by the Department of Scientific and Industrial Research gives interesting statistics bearing on the nitrate position. It is shown that the world's resources in nitrogen products have doubled since 1912. But the report also forecasts a doubling of the American consumption of fixed nitrogen within seven years.

THE GREAT LAKES.

PROVIDENCE has given to the United States not only the largest agricultural, mineral, and water-power resources among the nations of the world, but has endowed it with the most wonderful system of inland waterways, with the Mississippi and its tributaries, and with the Great Lakes. These open the vast territories of the Republic and facilitate and encourage their rapid development.

The Great Lakes are situated midway between Canada and the United States and between the Atlantic and the Pacific. The western end of Lake Superior reaches almost exactly to the centre of the United States. The Lakes are connected among themselves, and they are connected with the magnificent St Lawrence River, with the Hudson River, on which New York is situated, and with the Ohio and Illinois rivers, the mighty tributaries of the Mississippi. In addition, they are connected with the Ottawa River, on which lies the capital of Canada. The waterway formed by the St Lawrence and by the Great Lakes extends from the Strait of Belle Isle to Duluth, a distance of more than 2,000 miles. According to the report of the United States Commissioner of Corporations on Transportation by Water, the Great Lakes have an area of 95,645 square miles, an area which is only slightly smaller than that of the United Kingdom. According to Tarr and McMurtry's geography, the Great Lakes, which are extra-

ordinarily deep, contain one-half of the fresh water on the earth's surface; and the Lake Superior alone, though much smaller than the Caspian Sea, is the largest body of fresh water on the globe.

The great importance of the North American lakes is due not only to the fact that they open up the United States and Canada to the centre, but also to the fact that about their shores are to be found the most valuable and the most extensive agricultural and mineral resources in the world. Towards the west of Lake Superior lie the great grain-growing States Minnesota and North Dakota and South Dakota, and on the other side of the border are Manitoba, Saskatchewan, and Alberta. About the Lakes are to be found the most important grazing grounds, which abound in livestock of every kind. To the north of the Lakes lies highly mineralised and largely industrial Ontario, which contains almost half the population of Canada. Towards the south are the gigantic American coalfields, by far the largest in the world, and around the coal-pits are to be found the principal manufacturing centres of the Republic. Towards the west of Lake Superior occur by far the most important iron ore deposits, which supply the great iron and steel industries of the United States with their raw material.

The Great Lakes lie not only in the centre of the North American continent, but also in the centre of trade and industry. The natural resources of the Central and Western States of the Republic and of the Central and Western Provinces of Canada are the greatest and richest in the world, and their exploitation has only begun. Directly on the shore of the Great Lakes are situated some of the most important towns of the United States and of Canada, such as Chicago, Detroit, Cleveland, Buffalo, Milwaukee, Rochester, Toledo, Erie, Duluth, Toronto, Hamilton (Ontario), Kingston. In easy access by water are Pittsburgh, Montreal, and Quebec. At enormous cost New York has been placed in connection with the Lakes by means of the Erie Canal. The fabulous growth of the principal towns on or close to the Great Lakes is due to the fact that these occupy the centre of the continent, and that its most valuable natural resources are to be found around their shores. Comparing 1850 with 1920, Chicago has grown from 29,963 inhabitants to 2,701,705, the population of Detroit has increased from 21,019 to 993,678, that of Cleveland from 17,034 to 706,836, that of Buffalo from 42,261 to 506,775, that of Pittsburgh from 67,863 to 588,193, that of Milwaukee from 20,061 to 457,147, that of Rochester from 36,403 to 295,750, that of Toledo from 3,829 to 243,164, while Duluth, which had only a few huts in the middle of the last century, is now one of the most important ports in the world, with a population of 98,917. The towns on the Canadian shore have grown in a similar manner. The Great Lakes have brought about the stupendous growth of the towns mentioned. Had it not been for the Lakes, Chicago and other leading towns of the centre and the west of North America would still be unimportant villages. The rapid development of American agriculture and stock-raising and of the American mines and manufacturing industries would have been impossible, for transport by railway would have proved too expensive. The great coalfields about Pittsburgh and the great iron ore fields to the west of Lake Superior are separated by a distance of 1,000 miles. English experts had expressed the opinion that the United States could never develop an important iron and steel industry, because the distances dividing the coal and iron deposits were too great. They had not allowed for the possibility of improving the Lake ports and the waterways connecting the Lakes, which allowed heavy materials to be carried at the lowest rates in the world.

The shipping on the Great Lakes has rapidly increased from a small tonnage to nearly 3,000,000, and the freight traffic has grown to gigantic proportions. There are two particularly important links on the Lake route—the Sault St Marie Canal, which connects Lake Superior with the other lakes, and the Detroit River, which connects the southern end of Lake Huron with Lake Erie. The movement of freight over the Sault St Marie Canal shows the following expansion:—

	Net Tons.
1881	1,567,741
1890	9,041,213
1900	25,643,073
1910	62,363,218
1916	91,888,219
1919	62,235,542

During recent years the commerce on the Detroit River link has shown the following increase:—

	Net Tons.
1902	44,260,506
1910	73,526,602
1916	100,907,279
1919	73,091,328

It will be noticed that the traffic along the two vital links of the chain of lakes is far greater than that of any port or that of the Suez Canal as regards the quantity of goods handled. The Suez Canal traffic reached its maximum in 1912 with a net tonnage of 20,275,120 tons. In the opinion of many competent observers the Lake traffic, though gigantic, is only at its beginning.

If we wish to visualise the position of the Great Lakes in the economy of North America and of the world we should compare the situation over there with that of districts with which we are familiar. Montreal, lying far up the St Lawrence River, occupies a position very similar to London. Whereas, however, the estuary of the Thames extends only to a very few miles, Montreal is separated from the sea by more than 1,000 miles, and the territory on either side of the St Lawrence below Montreal is exceedingly rich in natural resources of every kind. London owes its great position to two factors—its situation on an estuary and to a busy industrial hinterland. But while the natural and industrial resources which are within reach of London are comparatively small, those at the back of Montreal are absolutely unlimited. The greatest agricultural, industrial, and mineral resources of the world are concentrated about the Great Lakes. The Lakes reach to the very heart of the American continent, and, branching out in every direction, open it to the traffic of the world. They constitute another and a greater Mediterranean inasmuch as the natural and industrial wealth about the shores of the Great Lakes is infinitely vaster than that which is to be found in Southern Europe, Northern Africa, and about the Black Sea.

Hitherto the Great Lakes have been inland lakes for all practical purposes. Their connection with the Atlantic by way of the St Lawrence and of the Erie Canal and the Hudson River on the one hand and with the Gulf of Mexico by way of the Canal which leads from Chicago to the Illinois River and to the Mississippi on the other hand has been unsatisfactory. These approaches have been usable only for comparatively small ships, notwithstanding the improvements recently made. The Americans feel very keenly the necessity of cheapening their inland transport. An agitation has been started which aims at improving the connection between the Great Lakes and the St Lawrence River to such an extent as to enable sea-going ships of about 10,000 tons to go directly up to Chicago and Duluth and to make the towns in the centre of the continent important seaports. Mr Herbert Hoover, who is not only an eminent organiser, but also an eminent practical engineer, stated in a recent address that such an improvement would lower the cost of carrying wheat to Liverpool very greatly, that it would reduce the cost of carrying it to the sea-border from about 12 cents per bushel to 1 cent or 2 cents per bushel. He favours the development of the lakes-to-ocean route, because it would not only benefit the American farmers and other exporters of bulky materials, but because it would abolish congestion on the railways and in the port of New York. The project of making the interior of North America accessible to sea-going ships up to 10,000 tons is difficult and costly. The Great Lakes are not situated on the level of the sea, but they are basins which rise towards a considerable altitude. Hence they can be connected only by means of canals provided with locks, and they would necessitate the raising of the water level and the deepening of shallows. Still, in due course this great scheme will no doubt be carried out to the vast benefit of all North America, of Montreal, which ought to become another and greater London, and of the world.

THE FEDERATION OF CENTRAL AMERICA.

EARLY in the present year the representatives of the four Republics of Guatemala, Salvador, Honduras, and Costa Rica signed a Pact at San José, the capital of Costa Rica, uniting themselves "in a perpetual and indissoluble union," to be known as the Federation of Central America. A special article in the Pact provided that Nicaragua (which separates Costa Rica from Honduras and Salvador) should be free to join the Federation on expressing her desire to join. Owing to the Government of the United States viewing with approval the consolidation of the five States into a single Federal Republic, the Treaty which at first hindered Nicaragua from at once signing the Pact has been modified, and the Federation is an accomplished fact. There will in future be one President, presiding over a territory of about 174,000 square miles, which contains a population of between four and five millions, in place of five Presidents; one Senate and one Assembly, in the place of five, with a corresponding reduction in the number of diplomatic officials maintained abroad. The relative importance of the five States and the development of their foreign trade are shown in the following table:—

	Popula- tion.	Area. Square Miles.	Imports.		Inc.	Exports.		Inc.
			1901.	1912.	Per cent.	1901.	1912.	Per cent.
Guatemala.....	2,200,000	48,300	£52,000	£1,964,000	130.5	£1,504,000	£2,631,000	74.9
Honduras.....	700,000	46,250	347,000	863,000	148.7	515,000	616,000	20.0
Salvador.....	200,000	7,200	523,000	1,355,000	160.0	875,000	1,769,000	102.2
Nicaragua.....	800,000	49,200	460,000	*600,000	30.4	696,000	*1,000,000	43.7
Costa Rica.....	500,000	23,000	763,000	2,072,000	171.5	1,002,000	2,048,000	104.3
Total.....	4,400,000	173,950	2,945,000	6,854,000	133.0	4,592,000	8,064,000	75.6

* These values are probably much lower than the actual ones, not available.

The table shows that although Costa Rica has the smallest area except Salvador, the value of her imports in 1912 stood highest of the five States. Guatemala stood second, Salvador third, Honduras fourth, and Nicaragua fifth. The value of the exports in 1912 by Guatemala placed her first, Costa Rica being second, Salvador third, Nicaragua fourth, and Honduras fifth. From the *percentage* increases in the values of the imports it is seen that Costa Rica made the most rapid progress in the eleven years, followed by Salvador, Honduras, Guatemala, and Nicaragua. Costa Rica and Salvador also stood first and second in the increase of their exports, Guatemala being third, and Nicaragua fourth. The value of the total imports (£2,945,000) of the five States in 1901 added to the value of the total exports (£4,592,000) gave a total trade value of £7,537,000, which rose to £14,918,000 in 1912, showing a total increase in the eleven years of £7,381,000, or very nearly double the amount. In addition to rich agricultural resources the new State possesses very valuable minerals, including gold, silver, platinum, copper, iron, lead, zinc, antimony, nickel, and mercury. The bulk of the trade of the Republics has naturally been done with the United States, but the United Kingdom has done a considerable and increasing trade with the five States, as is shown in the following table:—

U.K. Imports from	Guatemala.	Honduras.	Salvador.	Nicaragua.	Costa Rica.	Total of the Five States.
Average 1909-1913.....	£294,000	£5,400	£87,800	£95,300	£1,221,300	£1,703,800
Average 1914-18.....	163,800	800	96,700	47,100	1,198,200	1,506,600
1919.....	315,300	1,000	122,900	119,900	1,589,500	1,969,600
1920.....	280,700	12,300	233,400	101,300	1,068,500	1,686,200
U.K. Exports to						
Average 1909-13.....	302,200	110,600	334,600	220,800	225,900	1,194,100
Average 1914-18.....	228,600	70,500	305,000	137,000	124,400	865,500
1919.....	398,000	72,300	249,900	167,700	112,400	1,000,300
1920.....	895,300	329,700	685,100	438,100	584,800	2,933,000
TOTAL TRADE.*						
1913.....	707,700	129,900	449,000	367,100	1,570,700	2,924,400
1919.....	720,500	73,300	314,500	290,100	1,083,300	2,481,700
1920.....	1,194,100	345,800	922,800	557,800	1,666,800	4,684,300

* Including re-exports.

The table shows that until 1920 the value of our imports from the five States exceeded the value of our exports to them; that our imports from Costa Rica were more valuable than from any of the others, Guatemala coming second to Costa Rica, and Honduras standing fifth. It also shows that we sent goods to Guatemala and to Salvador that exceeded in value those we sent to Costa Rica, but that Costa Rica did the most valuable trade with us in 1920 owing to the high value of our imports from her. In 1913

our principal imports from the five States were coffee (£1,210,200), bananas (£681,000), unrefined sugar (£38,500), mahogany (£25,400), dyestuffs and dyewoods (£6,100), and small amounts of rubber and hides. Our principal exports in 1913 were as follows:—

U.K. Exports to	Guatemala.	Honduras.	Salvador.	Nicaragua.	Costa Rica.	Total.
Cotton manufactures, piece goods.....	£131,100	£65,800	£155,600	£118,100	£61,800	£532,400
Do other manufactures.....	30,000	16,000	29,800	21,300	17,400	114,500
Bags and sacks.....	34,000	?	21,800	13,500	13,800	103,500
Machinery.....	20,400	?	22,500	5,200	15,900	64,000
Iron and steel manufactures of	11,500	3,700	10,800	9,100	28,500	63,500
Cotton yarn.....	35,900	?	27,400	?	?	63,300
Woolen and worsted manufactures.....	9,300	3,100	6,500	10,100	23,400	52,400
Implements and tools.....	14,200	?	3,700	3,700	3,900	25,500
Soap.....	?	?	?	19,500	3,200	23,100
Parcel post.....	11,700	9,700	7,400	3,200	12,900	44,900

Other exports of our produce and manufacture comprised chemicals and chemical preparations (£7,300), medicines and drugs (£4,100), biscuits and cakes, confectionery and jams, beer and ale, candles, china and earthenware, and painters' colours.

Business Notes.

Reparation Payments.—In reply to a Parliamentary question, the Financial Secretary of the Treasury has issued the following statement showing the reparations payments made by Germany up to April 30, 1921:—

I. APPROXIMATE STATEMENT by the REPARATION COMMISSION OF DELIVERIES MADE by GERMANY from NOVEMBER 11, 1918, to APRIL 30, 1921.

	Total. Gold Marks.	Received by this Country. Gold Marks.
Receipts in cash.....	99,334,000	.. nil
Deliveries in kind—		
Ships.....	270,331,000	.. 190,816,000
Coal.....	437,160,000	.. nil
Dyestuffs.....	36,823,000	.. 8,421,000b
Other deliveries.....	937,040,000	.. 6,210,000
Immovable property and assets not yet encashed.....	2,754,104,000	.. 450,000
Totals.....	4,554,792,000	.. 205,897,000
Say.....	£284,500,000	.. £13,000,000

II. DELIVERIES UNDER THE SCHEDULE OF PAYMENTS of MAY, 1921.

- Bond for 12 milliard gold marks, dated July 1, 1921.
- In cash or three months' bills, one milliard gold marks (as the first two quarterly payments of the fixed sum of two milliard gold marks a year prescribed by the Schedule of payments).

III. CASH RECEIPTS OF THE TREASURY TO DATE.

	£
(1) Proceeds of the sale of ships.....	7,000,000
(2) Proceeds of the sale of dyestuffs.....	238,000
(3) Cash received from the Reparation Commission....	4,875,000

Total..... 12,113,000

Of the above the sum of £5,499,620 has been appropriated in aid of the Vote for Advances for German Coal Deliveries, 1920-21, and the balance, £6,613,380, has been or will be paid to the Exchequer as "Miscellaneous Receipts" on account of the cost of the British Army of Occupation up to April 30, 1921.

IV. RECEIPTS UNDER THE GERMAN REPARATION (RECOVERY) ACT, 1921. To the 9th instant..... £341,000

Of a total of £284,500,000, this country's share is £13,000,000, of which £12,113,000 was actually received by the Treasury up to April 30th.

National Savings.—The fifth annual report of the National Savings Committee (White Paper Cmd 1427, price 1d) records the results of the Committee's work in 1920. During that year the money raised by the sale of Savings Certificates was £44,785,311, as compared with £79,013,499 in 1919. The decrease is attributed in large part to general trade depression and unemployment. The total number of Savings Certificates sold from their first issue in February, 1916, to December, 1920, was 440,441,390, representing a cash value of £341,342,077. The total amount repaid (excluding accrued interest) was £61,404,669, of which £31,829,879 was repaid in 1920, as compared with £19,864,618 repaid during 1919. The amount remaining invested on December 31, 1920, was £279,937,408. The report records "the contributions of investors through the Post Office and Trustee Savings Banks to State securities since the outbreak of war." The total of these contributions, including the net proceeds

of Savings Certificates, amounted to approximately £22,814,000 during 1920, making a total of £589,663,000 since the outbreak of war. These contributions reached high-water mark at £179,403,000 for the year 1918.

The Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that the drought continued throughout July in practically all parts of the country, though in the North and South-West of England and in Wales there was some rain in the last week or 10 days. The corn harvest began early, some winter oats being ripe before the end of June. In most districts, except in the North and the later districts in Wales, cutting had begun by the third week of July, and harvest was in full swing at the end of the month. Half the corn had been carted in many Southern districts, most of the oats and a fair proportion of the wheat being safely in stack before the end of July. In the North a few fields had been cut, and a general start with the harvest was expected early in August. The crops are standing well to the binder, so that reaping can be done quickly. The ears of wheat have filled well and the crop has ripened evenly, with the result that rather better yields are now expected than a month ago. The later crops of barley and oats, on the other hand, have deteriorated during July. Barley and oat straw is very short, except for the autumn-sown crops, and in some cases the binder could not be used for reaping on this account. On the average, yields of both these crops will be light, though those sown early in the spring are fairly satisfactory, and winter crops are generally good. Beans are turning out much worse than was anticipated a month ago. In many districts winter beans have been damaged by fly, and almost everywhere spring crops have suffered very materially. Prospects for peas have also deteriorated. In many districts the haulm has been shrivelled by the hot sun, and the pods have filled badly, and maggots have done some damage. In all parts of the country the prospects of the potato crop are worse than at the end of June. On damp soils they have done moderately well, but on the lighter lands they have made little growth, and are tending to die off prematurely. In some cases sprouting is already noticed. Early varieties have given very light crops, the tubers being small. There are some good plants of mangolds, where they were sown early, but these are backward, as growth has been slow. Thin and patchy plants are very common, however, and poor crops are expected. Turnips and swedes are not so unsatisfactory in Wales and the North of England as in other parts of the country, but even in these more favoured districts there are many patchy fields, and yields will be poor. Later sowings failed to germinate, or were eaten off by fly and are failures. Haymaking was finished very early, there being few districts where all the crop had not been secured by the middle of July. The hay was stacked in good condition, there being practically no rain while the crop was being gathered. Throughout the month pastures have remained very short of grass, and were generally scorched. In a few districts, however, the rains of the latter half of July induced some growth and changed the colour of the fields. Owing to the shortage of grass store, stock have required hand feeding in some districts, and generally milking cows have needed good supplies of corn and cake. Cattle and sheep have suffered where water has been scarce, and have often lost condition, but where there has been a good supply of water they have not done badly. The yield of milk has fallen off. As a rule, sheep have stood the drought better than cattle, and hill sheep have done fairly well. The drought has affected the growth of hops, which are not so vigorous as usual. Young plants have suffered most, and have turned yellow. The older hops in well-managed gardens have stood the dry weather fairly well. The crop of apples has been still further reduced, as many have fallen from the trees, but generally an average crop is expected. The apples are smaller than usual. The yield of pears will be light, and plums are practically a failure, though light crops will be gathered in some districts. The supply of labour has been ample for farmers' requirements. Owing to the shortage of roots and the light crops of corn, which are standing well, less temporary labour than usual has been required.

HARRISONS & CROSFIELD, LIMITED.

ISSUED CAPITAL £1,844,986.

The Bank Statements.—The figures of weekly averages for the month of July issued by the joint-stock banks are printed in full on a later page. Below we give a table comparing the monthly totals for the month of the nine English banks with those of previous months:—

(Million £'s.)

	Weekly Average.					
	Jan., 1921.	Mar., 1921.	April, 1921.	May, 1921.	June, 1921.	July, 1921.
Capital and reserves.....	115.4	115.6	115.6	115.8	115.9	115.9
Acceptances.....	88.4	69.4	63.0	63.0	57.7	52.2
Deposits (including undivided profits, &c.).....	1,810.1	1,715.0	1,709.9	1,729.3	1,768.4	1,785.4
Total liabilities.....	2,013.9	1,900.0	1,888.5	1,908.1	1,942.0	1,953.5
Coin, notes, balance at bank, and cheques in course of collection, &c.....	256.2	244.8	249.6	250.3	265.1	252.1
Money at call.....	98.9	82.6	91.9	96.5	98.0	103.6
Investments.....	341.3	336.1	333.7	331.2	335.9	336.3
Discounts.....	361.9	282.1	275.1	304.0	346.2	372.6
Loans and advances.....	845.1	862.6	852.2	839.9	815.4	812.2
Cover for acceptances, pre-mises, &c.....	110.5	91.8	86.0	86.2	81.4	76.7
Total assets.....	2,013.9	1,900.0	1,888.5	1,908.1	1,942.0	1,953.5

The increase in deposits, which brings the total to within £25 millions of the highest this year, has been accompanied by a further small decline in acceptances. The decrease in cash of £13 millions has been partly offset by an addition of £5½ millions to call money, while discounts are over £26 millions higher, owing largely, it may be presumed, to heavier purchases of Treasury bills, and to a small extent perhaps to an increase in the volume of commercial bills.

Coal Output.—The production of coal for the week ended July 30th was 4,587,300 tons, which compares with 4,334,000 tons for the previous week, and 3,935,200 tons for the week ended July 16th. The total production for the first seven months of the year is 72,947,900 tons, as against 142,408,900 tons for the corresponding period of 1920. In the week ended July 31, 1920, the output was 4,565,200 tons.

Civil Service Salaries.—The Select Committee appointed to examine the Estimates, finding their appointment too late to permit of effective work in that direction, turned their attention to the increases that have lately taken place in Civil Service salaries. Their report issued this week (White Paper 293, price 1d) sets out a number of figures of high-grade salaries, and comments as follows:—"It appears that the reduction of the bonus in the case of the lower-class official is automatic on a fall in the cost of living, but that the bonus paid to the higher-class official, being an executive act of the Government, may continue for a considerable period after each fall. From the evidence it would appear that in addition to the granting of a war bonus increases in salaries have also been made. In these circumstances, and in view of the financial stringency at the present time, it appears to your Committee that the moment chosen to make large increases in salaries was most inopportune." The general tone of the comment will meet with general agreement. But it should be remembered that economy in the Civil

Service should be achieved, not by underpaying the best men, but by reducing the numbers in receipt of salary. The Committee conclude by recommending that a Committee on Estimates should be appointed at the earliest possible moment in the next session of Parliament. Answering a question about this report in the House of Commons on Thursday, Mr Chamberlain said: "It is not without very grave consideration and deep regret that I find myself differing with a Committee of this House. I will do everything in my power to expedite the publication of the evidence and put it in the hands of members at the earliest possible moment. May I give the House one illustration of what I mean? The report says that 'the witness stated that a Civil Servant was required to work a seven-hours' day.' The answer of the witness was, 'A higher division man is eligible for eight weeks' holiday if he has 10 years' seniority. He is also required to work a seven-hours' day. The real facts are that he neither gets the full holiday nor works a seven-hours' day; he works a greatly longer day.' I submit respectfully to the House, and even to members of the Committee, that the answer as summarised in the report is not a fair representation. I will take steps immediately I leave the House to expedite the printing of the evidence, and my earnest prayer to the House is that they will be good enough to read it."

The Silesian Deadlock.—An agreement on the partition of Upper Silesia has so far proved impracticable. The Supreme Council, or, rather, its Committee of experts, has to draw a line ensuring that the great German metallurgical establishments of the so-called "industrial triangle," of which the angles are respectively at Beuthen, Gleiwitz, and Kattowitz, shall none of them be cut off from their normal sources of coal and raw material, and at the same time complying with the desire of the Polish "islands" in the triangle to be joined to Poland. Possibly the framers of the Treaty expected that the results of the plebiscite would involve no more than the trimming of a Polish fringe on the east and south of the whole region; but the figures of the voting by districts, first published last week in Paris, show that of the seven districts in the so-called "triangle" four urban areas—Beuthen, Kattowitz, Königshütte, and Gleiwitz—declared for union with Germany by majorities of three, four, and even five to one, two rural areas for Poland by more than six to five, and the seventh, Zaborze, for Poland by a small majority. Lines had been suggested dividing the province, of which those nearest to a fair compromise left some districts with Polish majorities to Germany, while transferring others with German majorities to Poland; but on Tuesday, at Mr Lloyd George's suggestion, the experts were again set to work to draw a fresh line more in accordance with the wishes of the localities, and thus cut into the "industrial triangle," which in France is regarded, more correctly, as an archipelago. This line is not yet revealed, but the British representatives apparently concede nearly the whole of the "triangle" to Germany, while the French wish to assign it, all but Gleiwitz and Zaborze, to Poland. The British line will apparently go far to satisfy the requirements mentioned above; the French case seems to be based partly on the "historical rights" of the Polish population collectively, partly on the fact that the Poles are permanent residents, and the German voters largely outvoters and practically strangers, and partly on the broader considerations (not visibly contemplated by the Peace Treaty) that to take account of the needs of industries developed by Germans in a Polish region means the encouragement of German "penetration" elsewhere, and that the "triangle" under German sovereignty may be made into an arsenal and munition factory for a German war of revenge. A solution suggested in Paris is an Allied "condominium" over the industrial region with "corridors" to Germany, and to such German sources of supply as may fall to Poland. But the whole question was referred on Friday morning to the League of Nations, and so, for the present, the difficulty is shelved.

Indian Import Duties.—Our Manchester correspondent writes:—There is a disposition in Lancashire trade circles to revive the agitation against the Indian import duties

Last Tuesday there was a meeting in Manchester of spinning and weaving employers, and representatives of the operatives, when the state of affairs was discussed, and it was decided to seek an interview with the members of Parliament for textile constituencies. It is understood that a deputation will go to London next Thursday. There is a distinct fear of our trade in manufactured cotton goods with India being lost unless something is done. The Bombay mills are exceedingly busy and earning big dividends, whilst in Lancashire depression prevails. It is not likely that the British Government will be prepared to meet the protests from Lancashire by granting any concessions, but it is recognised that when the General Election comes candidates for Lancashire constituencies will be very closely questioned as to their attitude on this subject. It is suggested in some quarters that a commission should go to India and discuss this matter with the leading organisations in our Dependency, and it is stated that such a deputation would be welcomed abroad.

Uruguayan Loan in New York.—It is announced that on Monday last a syndicate of New York bankers, headed by the National City Company, offered for subscription in New York $7\frac{1}{2}$ million dollars 8 per cent. bonds of the Republic of Uruguay at 98 $\frac{1}{2}$. These bonds, which are dated August 1, 1921, are to be retired on or before August 1, 1946, through the operations of market and sinking funds. The Republic will advance \$75,000 each quarter during the first five years of the loan to purchase bonds in the open market up to 100; any unused funds to revert to the Government. During the second five years of the loan the maximum price will be 105, and thereafter until maturity the balance of the issue will be purchased in the open market or drawn at 105 until the entire issue shall have been paid off. The loan was over-subscribed.

Danish Limited Companies.—The Danish Statistic Department has just published the first official survey of Danish limited companies, based upon the first proper registration of such companies. The following figures refer to January 1st of the present year. On that date there were on the register a total of 4,636 Danish limited companies, with an aggregate capital of 2,325,000,000 kr. The Danish capital claims a large share, as will be seen from the following table:—

	Number of Companies.	Capital Paid up. Kr.
Copenhagen	2,731	1,735,000,000
Provincial towns	1,376	506,000,000
Rural districts	529	84,000,000
	4,636	2,325,000,000

The larger companies, with a capital of 1,000,000 kr or more, number 466, and account for more than three-fourths of the aggregate capital of all the companies.

Latvian Leather.—An order has been published in the official Latvian Government organ, *Valdības Vestnesis*, dated July 26, 1921, according to which all restrictions hitherto existing in respect of the sale, purchase, transport by land or waterways within Latvia of tanned or untanned hides have been rescinded. This order to come into force 14 days after the date of its publication in the said official gazette. Three months after the aforesaid date the export abroad of tanned or untanned hides will be permitted without special licence on payment of the undermentioned Customs duty, which is calculated in francs gold per kilo, and which is payable in Latvian currency subject to the observation of the regulations laid down by the Minister of Finance. The duties are as follows:—(a) Ox, cow, and horse hides, francs 0.80 gold per kilo on dry hides and francs 0.40 gold per kilo on wet hides. (b) Calf hides, dry, francs 1.00 gold per kilo; wet, francs 0.50 gold per kilo. (c) Sheepskins, dry, francs 0.40 gold per kilo; wet, francs 0.20 gold per kilo. (d) Goatskins, dry, francs 0.60 gold per kilo; wet, francs 0.30 gold per kilo. (e) Manufactured leather: (1) Chrome, chevreau, chevrete, lining skins (calf and sheep), and white glove leather, francs 1.50 gold per kilo; (2) sole leather, inter-sole leather, belly leather, and upper leather, francs 0.50 gold per kilo. If

the hides, skins, and leather mentioned under letter (e) have been imported from abroad in a raw state, and have undergone the process of manufacture in Latvia, the export duty payable thereon is as follows:—Hides, skins, and leather appearing in par. (1), francs 0.25 gold per kilo; those appearing in par. (2), francs 0.10 gold per kilo.

Rubber Shareholders.—We have received from Mr H. McD. Morison, of 9 Drapers' gardens, E.C. 2, a letter urging the formation of a Rubber Shareholders' Association. "There is at the present time in contemplation," he writes, "a scheme formulated by the Rubber Growers' Association for the control of the industry; this scheme has been the subject of approval and of criticism by various interests, but there has been no opportunity even for consideration of the scheme by shareholders as a class and as a distinct body. One of the first objects of the proposed Association would be to ascertain the views of individual shareholders with regard to this scheme to collate and consider these views and to act in accordance with the results. It is clear that, to be effective, such an association must be supported by a large body of shareholders; it must be able to represent shareholders' opinions at company meetings, and the only way in which it can do so is by using collectively the votes of its members. An association such as is proposed would not be in opposition to directors, agents, managers or other servants of the company, but it would be in a position to insist that the requirements of the proprietors were carried out." Rubber shareholders who favour the formation of such an association are invited to communicate with Mr Morison, stating the companies in which they hold shares and the amount of such holdings.

Electrification in Czechoslovakia.—A scheme involving the construction of a barrage 70 metres in height at Stechovice, near Prague, has been submitted to the Minister of Public Works. This barrage, situated 30 kilometres south of Prague, would produce over 250 million kilo-watt-hours a year, and would save Czechoslovakia 60,000 waggons of coal. The realisation of this scheme would cost from 250 to 300 million crowns. It is stated that all the organisations concerned in Central Bohemia, notably the Chamber of Commerce at Prague, the Agricultural Board, the Federation of Czechoslovak Industries support the project, which has attracted the attention of many foreign engineers and financiers. The electrification of Central Bohemia and the improvement of the Vltava as a waterway will completely alter the economic situation of that region. The first essential to economic development in Czechoslovakia is the increase of national output, especially as regards agricultural produce. With this end in view a scheme, it is suggested, should be drawn up for the rational utilisation of the hydraulic resources of the country, and the realisation of the barrage scheme at Stechovice would mean a considerable advance in this direction.

Bass, Ratcliff, and Gretton.—A decline in net profits is shown in the report of Bass, Ratcliff, and Gretton for the year ended June 30th last. Gross trading profits were still higher at £1,158,200, but general expenses increased by over £63,000, and miscellaneous revenue brought in £46,000 less. The table below compares results for the past four years and for 1913-14:—

Year ended June 30.	1914.	1918.	1919.	1920.	1921.
	£	£	£	£	£
Gross trading profit	749,607	771,896	890,294	1,113,121	1,158,172
Expenses	455,611	463,416	568,151	817,546	880,771
	293,996	308,480	322,143	295,575	277,401
Sundry revenue	143,153	207,086	232,693	282,965	236,894
Balance forward	64,593	68,120	61,570	60,080	61,970
	501,742	583,686	616,406	638,620	576,265
Deb. interest	80,800	80,800	80,800	80,800	80,800
Bad debts and invest. deprec.	34,266	65,766	24,646	43,450	29,980
Prof. dividend	68,000	68,000	68,000	68,000	68,000
Ord. dividend	204,000	204,000	217,600	224,400	224,400
Rate	15 %	15 %	16 %	11 %	11 %
Reserve, &c.	50,000	103,550	165,280	160,000	100,000
Carried forward....	64,676	61,570	60,080	61,970	73,085

The appropriation for bad debts and reserve for doubtful debts and investment depreciation is much smaller, £100,000 is again carried to reserve, but £60,000 which was set aside a year ago as provision for income-tax is not required this year. This enables the ordinary dividend to be maintained at 11 per cent., free of income-tax, and an increase of over £11,000 to be made in the carry forward. The balance-sheet shows increases of £337,100 in creditors and of £70,800 in debtors. Stocks are valued at £2,489,900, or £739,600 more, but there is a decline of £535,400 in investments. Goodwill and trade marks remain unchanged at £800,000.

Rylands and Sons.—The report of Rylands and Sons, Limited, the Manchester firm of manufacturers and warehousemen, shows a net loss for the half-year ended June 30th of £1,263,300, as compared with a profit of £254,000 for the corresponding period of 1920. Against this loss there is to be set a claim of £283,800 in respect of excess profits duty to December 31st last and £917,100 for estimated excess profits duty recoverable for the past half-year. These two items, together with £117,500 brought forward, give a credit balance of £55,100 at profit and loss account. It is proposed to transfer £250,000 from reserve and pay preference dividend and the usual 10 per cent. dividend on the ordinary shares, and to carry forward £193,100. The reserve fund will be reduced to £250,000, and there is an insurance contingency fund of £350,000. The cash item amounts to £127,000. The directors attribute the company's heavy loss to the unprecedented fall in values of stock-in-trade. The latter stands in the balance-sheet at £2,642,300, as compared with £3,301,400 six months ago. Losses under heavy contracts, all of which have been cleared or provided for, are said to be also partly responsible.

Furness, Withy, and Co.—The report of Furness, Withy and Co. for the year ended April 30th last shows a sharp decline in profits from the previous year's high level, although the figure of £782,900 is higher than that earned two years ago. The following table compares results since 1907-8:—

	Total Profit.	Depreciation.	Reserve, &c.	Dividends.	Ord. Rate.
	£	£	£	£	%
1907-8	327,825	114,742	..	153,851	5
1908-9	267,075	114,897	..	166,361	5
1909-10	332,992	145,417	..	163,302	5
1910-11	440,732	179,603	50,000	220,620	7 $\frac{1}{2}$
1911-12	653,207	240,000	125,000	270,620	10
1912-13	756,141	350,000	125,000	270,620	10
1913-14	620,928	350,000	..	270,620	10
1914-15	653,548	350,000	15,000	268,431	10
1915-16	1,386,960	350,000	300,000	463,125	20
1916-17	*787,564	350,000	200,000	456,250	20
1917-18	645,077	200,000	..	452,500	20
1918-19	747,661	..	300,000	452,500	20
1919-20	1,004,821	500,000	..	452,500	10
1920-21	782,944	300,000	..	452,500	10

* After payment of two years' Excess Profits Duty.

Profits are shown "after providing for taxation," but no profit and loss account is published with the report, nor do the directors vouchsafe any information as to the year's operations. The dividend and bonus of 5 per cent. each are paid free of income-tax. Two years ago the ordinary capital was increased from £2 millions to £4 millions. The balance-sheet shows a reduction of £2,853,400 in creditors, which include bills payable and provision for taxation, while debtors are lower by £2,096,100, and there is a decrease of £681,300 in cash and Treasury bills.

Anchor Line Results.—Two years ago Anchor Line (Henderson Bros.), Limited, had a very bad year, but in 1919-20 there was a substantial recovery. The report for the year ended April 30th last, just issued, shows a falling off in net profits, though the figure is well above the low level touched two years ago. The table appended compares results for a number of years:

lowing details showing for the first six months of 1921 the total share capital of the new companies issued, the total amount of new capital issued by existing companies, and the total amount of new obligations and bonds issued:—

(In Millions of Francs.)

Categories.	New Companies.	Incr'ses of Capital.	Obligations and Bonds.	Total.
Banks and credits fonciers	10.0	102.0	1,200.0	1,312.0
Assurance	14.5	25.7	3.2	43.4

Various	7.7	37.9	37.5	83.1
French co.'s operating abroad ..	23.5	35.2	80.3	139.0
Foreign companies	7.6	19.0	15.6	42.2
Totals	480.9	1,172.0	3,845.7	5,498.6

The most striking feature of this table, at the first glance, is the enormous proportion of "obligation" or debenture issues, which confirms the observation as to the preference of investors, in these days of falling prices and industrial stagnation, for securities yielding a fixed rate of interest.

The reduction of the Bank rate to $\frac{5}{2}$ per cent. and the absence of any forthcoming heavy issues before, at least, the autumn has encouraged a large proportion of the professional element on the Bourse to predict a substantial revival of business during the present month. The past week has amply justified this prediction, and boursiers once more are induced to admit that at last business has begun to look up. The Rente has remained unchanged, but Spanish Externals, Japanese Fours, and Chinese Fours and Fives have all risen appreciably, as have also Russians, on the political news. Banks and transport descriptions have shared in the general advance, and so have metallurgical shares and collieries. Tintos, although at one time slightly higher, closed again at 1,425. Oils have fluctuated considerably, but closed at practically same figures as at the beginning of the week. Sugars, on the rise of the staple from 165, the price at which it stood a few weeks ago, to 256, have been lively, and Say in particular has been the subject of much discussion, in consequence of the complaint which has been laid against it and other refiners by the Beet Sugar Growers' Association, who allege that they have been guilty of reaping enormous illicit profits.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

	Aug. 4, 1921.	July 28, 1921.	Aug. 7, 1913.

GERMANY.—BALTIC STATES—UNION PROSPECTS—AGREEMENTS—ESTHONIA—LATVIA—LITHUANIA.

(FROM OUR CORRESPONDENT.)

BERLIN, August 8.

SINCE the establishment of their *de facto*, and in part internationally recognised, independence, the Baltic States, including Finland and Poland, have held several conferences with the aim of a common policy. Talk of a military, political, and economical union has been prevalent; but so far the conferences have resembled those held during the war by Sweden, Denmark, and Norway; that is, they have considered free collaboration rather than any even loose form of federation. This is natural. All five States have the strong common interest of military preparedness to resist reconquest by Russia, Red or White; but, otherwise, except for Finno-Esthonian sympathies based on similar origin and on language affinity, there is little in common, and there are strong elements of disunion. Esthonia, Latvia, Lithuania, and Poland have all Irredentist questions with their nearest neighbour; Poland's international methods threaten dangerous commitments for the Allies; and Finland, on the basis of her higher culture, settled government, and established economical system, is inclined to regard the four possible Allies as greater liabilities than assets.

Collaboration, however, has been established to a certain extent, and progress is still being made. In Reval a meeting of the Finance Ministers of Esthonia, Latvia, and Lithuania was held, at which it was provisionally agreed to abolish the common Customs frontiers, to unify railway rates, to help one another's transit trade and navigation, and to conduct banking, insurance Bourse affairs, foreign concession policy, and weights and measures (metric system) on similar lines.

Of the three new South Baltic countries, the natural economical conditions of Lithuania seem to be best, but of late the greatest progress towards settlement has been made by Esthonia. Unlike Latvia, Esthonia is not hampered by a great unemployed industrial population. Through making the first peace with Russia, Esthonia outstripped Latvia, and also Finland, in the race for transit trade, and to this is owed a great deal of business activity in Reval. The land question is acute. The great proprietors, mostly German nobles, have been practically entirely expropriated, and in general estates are limited to 100 hectares. The division of the expropriated estates does not seem to have been skilfully carried out, and in principle it is challenged on the ground that the small proprietors have not the skill, machinery, and livestock necessary for intensive farming.

Esthonia's first regular Budget, submitted in May, totalled on both sides 6,762,440,300 Em, the deficit being 1,129,779,200 Em, of which 756,607,200 Em was to be met by increase of note circulation:—

	REVENUE.	Em.
Ordinary	4,507,376,900	
Extraordinary	2,255,063,400	
	6,762,440,300	

	EXPENDITURE.	
Ordinary	4,821,632,700	
Extraordinary	1,940,807,600	
	6,762,440,300	

As passed by the Budget Commission in July, the total was 6,328,441,722 Em. Of revenue 1,468,273,900 Em comes from taxes, and 3,039,103,000 Em from State undertakings. Among taxes, Customs yield 394,997,000 Em, income-tax 402,300,000 Em, taxes on business and industry 206,085,500 Em; and stamp duties 139,847,400 Em. Nearly half the State undertakings revenue (1,250,210,000 Em) comes from the spirit monopoly; railways yield 700,000,000 Em, Posts 221,000,000 Em, and State trading and industrial concerns 460,799,000 Em. Of expenditure, 1,528,527,500 Em is for defence, 342,194,300 Em for interest on debt, 928,240,000 Em for Communications, 282,660,000 Em for the Interior, 275,986,600 Em for the Ministry of Trade, 271,370,900 Em for Education, and 235,084,000 Em for agriculture. Extraordinary revenue, in which appears the above-mentioned note emission, includes various State-held moneys and the foreign exchange reserve. Extraordinary expenditure includes 646,575,000 Em for extinction of debt, and 324,554,300 Em for defence, the remainder being mostly for special outlay by the Ministries of Communications, Trade, and Finance. The income-tax was reformed in June, and now rises from 5 per cent. to (on incomes over 900,000 Em) 40 per cent. In July the Budget Commission reported that note-printing had for the time being ceased, as current revenue was sufficient. The foreign debt, as reported to the Budget Commission on July 6th, is: to Finland, 10,000,000 Em, repayable by December 1st; to the American Help Committee for grain, \$27,714,600, payment date June 30th last; to the United States Government, \$12,213,377, repayable in 1922-24; to France, 13,145,304; and to England, £200,000. The interest on the small home debt is only 10,000,000 Em.

In the spring Esthonia introduced a new import tariff, which reduced the duties on fuel, raw materials, and farm and industrial machinery, and some other goods; and increased, from twofold to eightfold, the rates on luxuries, including luxury foods. In March the wood export duties were fixed at 40s per standard of 165 cubic feet, pit-props and paper-wood at 20s per Gothenburg standard of 180 cubic feet, squared timber 12s per load of 50 cubic feet. Esthonia's foreign trade, largely transit, is developing. In second half of 1920 flax worth 350,060,860 Em was exported. Chief imports were:—Food, 142,471,896 Em; raw materials, 111,742,108 Em; and chemicals and dyes, 111,742,108 Em. Trade this year in Em was:—

	Exports.	Imports.
January	99,745,694	(not available)
February	35,603,134	328,878,447
March	72,238,864	311,000,989
April	105,807,297	481,238,226
May	456,770,908	452,770,908

May was the first month with a favourable balance, due mainly to export of 253,354,580 Em of paper and pulp, mostly to Russia. In earlier months paper exports played a small rôle. With the exception of textiles, industrial production in 1920 was considerably greater than in 1919, paper production increasing 66 per cent., wood wares 454 per cent., leather 120 per cent., and spirits 1,250 per cent.

Latvia since June has had a new Cabinet, with M. Mejerowitz (Foreign Minister in the former Cabinet and an Agrarian) as Premier and Foreign Minister, and with a more Nationalistic policy than its predecessor. The anti-Semitic and anti-German movement is strong. Under a pending Land Bill the State will compensate the expropriated owners at the values of 1920, which, reckoned in gold, is about one-tenth of the pre-war value. Foreigners will be required to sell their land within three years to Lettish citizens. Plans for a reform of the currency are under way.

Industry is still almost entirely suspended. The population of Riga has fallen to 170,000, and the invasion of the land by industrial workmen, without skill or capital, hampers agriculture. A Free Ports Bill has been passed, Libau and Windau, as practically ice-free, being preferred. Plans for three Commercial Treaties—a general Treaty,

and Treaties with Germany and Sweden—have been prepared by a Government Commission. The last-published monthly foreign trade reports show no great change:—

	Imports.	Exports.
May, 1921	596,830,854	165,395,199
June,	558,039,022	162,918,494

The amount of transit goods carried in June was 166,491 puds. Latvia in the middle of this year had 1,145 industrial undertakings, with 21,306 employees, 24 undertakings belong to the State, and 443, employing 9,740 workmen, are situated in Riga. The number of industrial employees in Riga before the war was four or five times as great.

Lithuania's trade draws much advantage from the retention of the mark currency, established during the German occupation. The circulation is about one milliard marks. The Russian currency has almost entirely disappeared. Only in the country around Vilna, still occupied by Polish troops, is there a currency crisis, this being caused by the Polish mark's depreciation. The peasants of this district sell their surplus food to Latvia, usually (as the Lettish rouble is far below the German mark) on barter lines. The last completed Lithuanian Budget for 1920 showed 671,500,000 marks revenue. A new statement by the Finance Minister shows that the actual revenue was only 411,000,000 marks, and expenditure only 422,000,000 marks. Customs brought 113,500,000 marks, and monopolies (flax, &c.) 229,000,000 marks. The expenditure of the Communications Ministry was 69,656,887 marks, Interior 23,141,943 marks, Education 22,153,843 marks, Agriculture 16,632,996 marks, and Finances, Trade, and Industry 15,266,789 marks. Lithuania owes 100,000,000 marks to Germany and \$5,000,000 to the United States, but the latter debt is guaranteed by American Lithuanians. Three American-Lithuanian companies are working at the revival of industry and international trade.

Lithuania last year had a favourable trade balance. Exports and imports were respectively 542,900,000 marks and 428,728,000 marks. Of exports, 84 per cent. were flax and wood; of imports, 72 per cent. were finished goods. Exports classified as raw and half-finished materials totalled 474,100,000 marks. Imports of food were 41,200,000 marks, boots and leather 47,500,000 marks, textiles 105,000,000 marks, and clothing 18,500,000 marks. A satisfactory settlement of the Vilna question would materially improve Lithuania's business prospects, in particular as a transit country, as through that city run the main railways to all parts of European Russia.

INDIA.—FINANCIAL POLICY AND INDIAN OPINION—THE NEW LOAN.

(FROM OUR CORRESPONDENT.)

BOMBAY, July 22:

ONE of the most important events of the past three weeks was the meeting between the Viceroy and members of the Marwari Association of Calcutta. The Marwaris dealt with a number of points—mainly commercial—which Lord Reading considered on the spot. It was pointed out that the Marwari community takes an important part in trade and industry in the whole of India, but, in their opinion, they were not adequately represented on civic bodies. There was a grumble against the Government's railway policy and the ruling of tariffs, a plea for further repre-

sensation on the board of the Imperial Bank of India, and a deprecation of Governmental action regarding exchange. The most important point of the Viceroy's reply to this deputation was his assertion, regarding the last subject, that he was inclined to agree with them, and his assurance that both in the matter of exchange and the provision of credit facilities the Government would not take action without consulting Indian opinion, and particularly the views of Indian business men.

The new Government of India Loan is making very good progress. The total sales up to the 19th instant, including the subscriptions received in London, total Rs. 30,15,99,500. This presidency easily leads the way, and has taken nearly 14 crores of this amount. Our purchases are over a crore a week. The above total includes over three crores of 1921 and 1922 War Bonds converted into the new loan. Gold for export is arriving in Bombay from up-country stations. Ready silver stands at Rs. 101/4, and has been fluctuating somewhat during the past fortnight. The profit of the Imperial Bank of India for the six months ended June 30th last—a sum of Rs. 58,14,792—is everywhere regarded as satisfactory. Since my last letter a French Chamber of Commerce has been established in Bombay with the object of developing economic relations between France and the West India and the Persian Gulf. Mons. R. Vadala, the French Consul here, was the founder.

AUSTRALIA.—CENSUS RESULTS—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, July 2.

THE Commonwealth Government has published a preliminary return of the census, showing that the population of Australia on April 4th last was 5,419,702, or an increase of 969,721 during the past 10 years. From the detailed registration returns published annually, it appears that the excess of births over deaths during the 10 calendar years 1911 to 1920, inclusive, was 778,644, so that the excess of arrivals over departures was approximately 191,077. As, however, the number of those who left Australia to take part in the war exceeded the number of those who returned by 73,503, the excess of ordinary immigrants over emigrants for the 10 years was approximately 264,580, practically the whole of which took place during the four years 1911 to 1914, inclusive. A feature of the annual figures has been the increase in the proportion of the six metropolitan cities, which at a recent date contained about 42 per cent. of the total population of Australia, against 38.05 per cent. at the 1911 census. This points to a comparative absence of progress in country population and production, an inference which is confirmed by other statistics. It is hoped, however, that the increased attention given to country settlement, both by returned soldiers and others, during the last year or two will remedy this state of things and lead to renewed progress. The preliminary census return in New Zealand shows a total of 1,216,974, or an increase of 208,506 in 10 years. The total for Australia and New Zealand together is thus approximately 6,636,676, against 4,546,520 in 1901, or an increase of 2,090,156 in 20 years.

The Commonwealth Treasurer has announced that the revenue and expenditure for the year ended June 30th (exclusive of loan transactions) will result in a slight surplus, the expenditure being about 65 millions, and the revenue slightly more. Exact figures will not be published for some time. The revenue has been swollen by a windfall in the shape of heavy Customs receipts from exceptionally large importations during the 12 months, but for which there would have been a deficit on the year's operations. A credit balance of about 5½ millions was brought forward 12 months ago, and this will now be slightly increased by the surplus for the past year. The Treasurer takes credit for having spent less than the Budget estimate, but it is to be noted that estimates of expenditure are usually drawn up to leave a margin in excess. The expenditure of 65 millions for the past year compares with 50½ millions for the preceding year, 1919-20, the increase being partly due to higher amounts payable for interest, sinking fund, repatriation of soldiers, and other expenditure consequent

upon the war, and partly to the tendency of ordinary expenditure to increase. The repatriation expenditure is partly charged to revenue, and partly against loans.

JAPAN.—FOREIGN TRADE—HALF-YEAR'S BALANCE—SPECIE HOLDINGS.

(FROM OUR CORRESPONDENT.)

TOKYO, July 5.

CONTRARY to the hope entertained in the more optimistic circles of Japanese commerce, the end of the half-year's foreign trade leaves a somewhat swollen unfavourable balance. To an already high figure the month of June added a further 38,993,000 yen, making the total adverse balance for the six months no less than 223,001,000 yen. June's export trade reached a total value of 108,051,000 yen, against 183,249,000 yen for the corresponding month of last year, a decline of 75,198,000 yen. The value of import trade, on the other hand, amounted to 147,044,000 yen, as compared with the 218,522,000 yen for June last year, the decrease amounting to 71,478,000 yen. As compared with last year, Japan's total loss of trade during the first six months of this year thus amounts to some 1,381,387,000 yen, of which 563,458,000 yen represent exports, and 817,929,000 yen imports. The total trade of the half-year may be summarised as follows:—

	January to June, 1920. Yen.	January to June, 1921. Yen.
Exports.....	1,138,275,000	574,817,000
Imports.....	1,615,747,000	797,818,000
Total.....	2,754,022,000	1,372,635,000
Adverse balance	477,472,000	223,001,000

As to exports of bullion during the period, there were none, while imports amounted to 111,000,000 yen, as compared with exports to the amount of 1,642,000 yen for the same period of last year, and imports to the value of 49,209,000 yen.

Japan still maintains her embargo on exports of gold. The national specie holdings, which totalled no more than 353,000,000 yen before the war, now amount to 2,158,000,000 yen, of which 854,000,000 yen belongs to the Government and 1,194,000,000 yen to the Bank of Japan. Of the total some 964,000,000 yen is in England and America; but it is noticeable that the inflow of gold to Japan has been steady during the past two years.

SPAIN.—FIVE MONTHS' FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

MADRID, August 7.

THE statistics for Spain's foreign trade for the first five months of the current year have only just been officially published. According to these, the value of Spain's imports and exports compares as follows with the figures for the two previous years:—

Imports.	1919.	1920.	1921.
	Pesetas.	Pesetas.	Pesetas.
Live stock	1,059,830	6,963,144	1,950,890
Raw materials	164,576,740	159,764,981	189,453,802
Manufactured goods.....	104,071,521	226,834,197	285,155,132
Food stuffs	65,758,763	137,040,130	163,713,384
	335,466,854	520,602,452	640,273,208
Gold in bars and coin	848	4,897,600	78,840
Silver	100,449	674,410	379,691
Total	335,568,151	536,194,462	640,731,739
Exports.	1919.	1920.	1921.
	Pesetas.	Pesetas.	Pesetas.
Live stock	491,038	664,550	794,864
Raw materials	78,697,104	93,414,265	59,807,348
Manufactured goods.....	126,524,115	127,507,529	92,585,424
Food stuffs	247,772,373	210,357,935	144,907,812
Gold in bars and coin.....	387,150	3,092,400	1,320,840
Silver idem.....	3,955,790	3,195,760	5,811,209
Total of exports.....	556,229,540	438,232,439	305,227,497

Without taking into account the movement in metals, Spain's foreign trade has fallen by 24,180,075 pesetas during the first five months of 1921, as compared with the same period in 1920, but, on the other hand, was 49,415,172 pesetas higher than in the corresponding period of 1919.

SWITZERLAND.—RAILWAY CRISIS.

(FROM OUR CORRESPONDENT.)

GENEVA, July 31.

THE high value of Swiss currency in comparison with that of all the four neighbouring countries, combined with the possibilities of alternative traffic routes, creates a serious crisis in the railway system of Switzerland. The following figures for the Federal railways show the abnormal state of affairs:—Gross receipts—1919, 341.75 millions; 1920, 394.03 millions. Working expenses—1919, 290.89 millions, or 85.5 per cent. of gross receipts; 1920, 358.33 millions, or 91.9 per cent. of gross receipts. In spite of considerable increases of freights and fares, the net profit is not sufficient to pay the interest on outstanding bonds; it is the taxpayer who will have to take charge of the difference.

Letters to the Editor.

POST-WAR TROUBLES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent, dealing with the above subject in your last issue, evidently has not observed my letter in your issue of July 16th, under the same "nom-de-plume" as he himself adopts, whereby I tried to show the "causes and the remedy of depression."

Will your correspondent be good enough to say whether the remedy shown in my letter is not the only practicable one to rectify the "frightful muddle"? And if not, why not?

I agree that it is useless to talk of "greater industry and greater thrift" when the means are not there. It is, however, equally useless asking business men to give us a "complete inventory of the wealth annihilated by the war," as it is obvious that "the goods actually produced during war-time" are the wealth so annihilated.

The position is, that we have created a colossal National Debt to carry on the war without, of course, producing or acquiring, as yet, exchangeable commodities to counter-balance or to justify such debt. Hence the increased values of commodities, or the depreciation of the currency.

It is of no use saying that our business men have created nearly 8,000 million pounds' worth of "fictive credits," when it is common knowledge that the whole of the nation is responsible for the creation of same by tacitly agreeing, in 1914, to fight German militarism.

It appears that, in the opinion of your correspondent, the cause of the present "muddle" is the so-called "fictive credits"—i.e., the war debt—and that the abolition thereof will remedy matters. But why does he not tell us how this is going to be done?

I venture to suggest that the only way to bear now and eventually pay off the heavy burden of our internal and external war debt and the interest thereon is either:—

1. To buy and sell on the level of prices ruling, say, at the end of 1919; or,
2. To buy and sell six times the quantity of goods that we exported and imported in 1913 at the prices ruling then.

As it is impossible to accomplish the latter proposition (at any rate, for some generations), it seems to me that the first proposition is the only sane and logical remedy. The problem seems to be in a "cul de sac" in the minds of our "armchair economists." They refuse to see the simple fact that practically the whole of the manufacturing countries created the so-called "fictive credits" during and on account of the war, and that until such "fictive credits" are paid off in goods it is simply preposterous to expect a low level of prices for commodities.

The policy advocated by the "Cunliffe Committee" simply means that such "fictive credits" must be paid on

the basis of the gold standard—i.e., we must produce six times more quantity of goods at a given time compared with pre-war days, and we must find markets for such quantity! *It cannot be done.*

The sooner the Government and the financial world face the real facts and act accordingly the better will be the chance of averting the colossal economic disaster which is hanging over the country.—Yours faithfully,
Manchester, August 8th, 1921. OBSERVER A.

TO THE EDITOR OF THE ECONOMIST.

SIR,—“Observer’s” letter seems to me to leak in consequence at every pore.

By what logical process does he manage to detach debts from assets in his light-hearted way? We are rich, he thinks, because we still have large assets, regardless of our enormous debts. Our 8,000 millions of debt is composed of fictive credits—scraps of paper—by means of which 400 million pounds are extorted from us annually, he thinks!

Surely if I borrow large sums of money to enable me to meet unavoidable though crushing demands, and am unable to repay the sums borrowed, I cannot complain because the lenders demand interest on their loans.

I am not out to defend war finance in detail; doubtless there were grave errors; but the simple process of calling debts “fictive credits” and wiping them out seems unsatisfactory; regarded from the lowest point of view, the plan would prevent our getting any more credits, “fictive” or otherwise.—I am, Sir, yours faithfully,
August 8th, 1921. E. H. B.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your correspondent “Observer” has a grip of the present financial situation, which, indeed, is summarised pretty completely in the Cunliffe Report. But why coin a new word—“fictive” credit? When any Government or any individual borrows money, the immediate effect of such action must necessarily be a fictitious prosperity on behalf of the borrower. You borrow £100,000; your bankbook shows £100,000 to your credit, which you immediately begin to spend. It is only when interest becomes due or repayment is demanded that the borrower feels the draught. As long as the borrower can keep on borrowing more than he has to repay in principle and interest, this fictitious prosperity must continue.

Everybody knows these facts, and there is nothing for the business man or any other man to shut his eyes to.

Your correspondent demands an abolition of this fictitious credit. There can be only two ways: either by redeeming it or repudiating it. You can do the latter at once by going into the Bankruptcy Court; but if you have been grossly extravagant in your spending, it would probably take years of patient effort and unremitting toil to redeem the past. Which course does your correspondent recommend?—Yours faithfully,
August 7th, 1921. G. S. PAWLE.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Our letter to the *Economist* of July 30th was intended to point out the great confusion that has come into our economic reasoning upon currency and trade; and the various correspondents to your issue of August 6th might all have written their letters with intent to emphasise our view in the most dramatic manner possible.

Two gentlemen kindly offer to enlighten our bewilderment, but it will be noticed that their views of our error are diametrically opposed to each other. Mr Craies admits that we argue correctly from our assumed premises, but that one of our terms is ambiguous, because “token currency” is not like other commodities in exchange, as its supply “is absolutely under control of the State.” Mr Craies and his school of disputants would seem actually to think that the State really distributes currency in the way which is so humorously suggested by your correspondent, “Economist in Wonderland,” whose letter we recommend to Mr Craies’ careful consideration.

We imagine the State only issues currency of any kind against security or value received, and if financiers will not

produce the required goods or securities the State cannot issue that currency—they do not really control it. And financiers are not likely to take the responsibility of supplying currency (credit) against security if they think that security will fall in value while their liabilities to the State remain unchanged. The whole problem is to find the real value of those goods or security against which a like value of credit may be issued.

Mr Cook's view is much more like our own, and he gives a historical sketch of price movement to show a connection between quantity of money and prices. No one will, we think, doubt that there is some connection between the supply of money and level of prices, but our difficulty was to know "how exactly" that connection fixed the price level. It is the want of exact knowledge we want to point out. Take Mr Cook's period from 1873 to 1896, when money was in short supply; did prices gradually drop? We find they went up considerably about 1883, and went very high indeed in 1890; and while they were falling from then to the low point in 1895 the world's supply of gold had gone up by £12,000,000 a year. This does not agree with a fall of prices exactly, and leaves it questionable whether it is exactly the quantity of gold that matters, or some other quality—say, its cost.

Then comes your correspondent "Observer," who supports our view of the chaotic condition of economic reasoning by "our business men" pretty forcibly. He further tells us we must abolish fictive credit if we would be saved; but, alas! he does not tell us "how to do it."—Yours faithfully,

ALBERT AND PERCY WALLIS.

Westacre, Kettering, August 6th, 1921.

Books and Publications.

"The Evolution of World-Peace." Essays arranged and edited by F. S. Marston. Oxford University Press. 9s 6d net.

WHEN history is limited to the details of warfare and of politics, it is apt to make for pessimism as to the future of mankind. The broader views taken in this volume give a sounder basis for hope. It contains 11 lectures, delivered last August at the Summer School at Woodbrooke; one is introductory; six deal with the movements towards unification in the past—the spread of Hellenism through Alexander's conquests, the Roman Empire and its effects on legal and social conceptions, the failure of Pope Innocent III. to establish control by the Papacy, the work of the Dutch merchants in developing international law and of Grotius in formulating it, the influence of the French Revolution outside France, and the resettlement of Europe after Waterloo. These are severally described by eminent authorities with a wealth of learning which may have strained the assimilative powers of their hearers. Then Mr Marston shows how fertile the last half of the last century was in international agreements which were not strictly political; and in other bonds of union: Mr Whelen sketches the multifarious activities of the League of Nations, and Mr H. G. Wells and Miss Eileen Power—of whose contributions the substance had appeared previously—deal respectively with the actual barriers to international intercourse and with the need for the inclusion in school text-books of the social and economic sides of history. The book should be useful to all students of world-politics.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. August 25. ACCOUNT. August 26.

In a week in which holiday influences have again had the upper hand, business in the stock markets has been of a similar character to last week. Prices remained fairly steady for the first few days, but there was a marked dullness in quotations towards the end of the week. Once again recently-issued Corporation and Colonial stocks were the most sought after amongst investors, and prices again rose in many cases. On Wednesday and Thursday, British Government securities gave way a little, selling of Consols on Continental account, it is stated, causing a further weakening in the quotation, while Conversion Loan and 5 per cent. War Loan were also lower. Last week's active demand for South American bonds, especially Brazilians, subsided, and the latter came on offer as a result of the further fall in the exchange. Towards the end of the week, however, there was a mild rally. Argentine bonds have been fairly firm, with a few rises here and there. News that the Federal Government had been asked for assistance in respect of the over-due July coupons had little effect on the State of Para issues. Chinese and Japanese issues are a little higher, and Mexican Fives have been in demand. Reports from Mexico state President Obregon expects to have available 7½ million pesos for external debt service by October. In the Home Railway market, the approach of decontrol is viewed with pessimism in the market, and the public seems to prefer to await events before doing business. The Scottish group has naturally been depressed by the passing of dividends by the Great North of Scotland, by the Highland, by the Caledonian, "in view of the excessive cost of labour and the continued depression in trade," and by the Glasgow and South-Western, on account of "the action of the Ministry of Transport in withholding a large sum due." An exception to the general dullness of the railway market has been the Underground group, Underground Electric Income bonds being quite firm. In the foreign railway market, Argentines were weak at first, but steadied later in the week, while Mexican Railway issues have moved up.

The Industrial section has been almost stagnant. There has been a little quiet buying of bank shares. An advance in P. and O. Banking was followed by a sharp relapse. Shipping shares were quiet, but fairly firm, and breweries were unchanged. Forestal Land shares were in demand, on the acquisition by the company of the capital of Renner and Co., a German tanning and dyestuff firm. The rubber share market

has again been very quiet. We refer in another column to the proposal to form an association of rubber shareholders. Tea shares, on the other hand, have been quite active, and a considerable amount of business has been done. The oil share market has been idle, and with a little liquidation in evidence, prices have been inclined to recede.

Business in the mining section has been small, but there has been a good tone, and prices, on the whole, have been very steady. Many Kafir issues were marked ex-dividend on Thursday, and the lower prices attracted buyers.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

COMPANY MEETINGS, &c.

EAST AFRICAN ESTATES, LIMITED. LARGE AREA OF COMPANY'S PROPERTY READY FOR SUB-LEASING.

The fourteenth ordinary (adjourned) general meeting of East African Estates, Limited, was held, on the 10th instant, at the registered offices of the company, Carlton House, Regent street, London, the Rt. Hon. the Earl of Plymouth (chairman of the company) presiding.

The secretary (Mr Wm. Beaumont) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I move the adoption of the report and accounts for the year ended June 30, 1920, and in doing so I regret to have to say that Lord Cobham—chairman of the board until about 18 months ago—has felt obliged to resign his seat on the board. He has done so owing to failing health, but the company is fortunate in having on the board his son, Major Lyttelton, who is continuing the active interest in the concerns of the company which Lord Cobham has always evinced.

I have to express the board's regret at the unavoidable delay in presenting the report and accounts.

It has always been the practice of the board to give all material information in their annual reports, and it will be noticed that this policy has not been departed from on this occasion.

THE ACCOUNTS.

With regard to the accounts, I should like to remind you that the very valuable property which is held under a long lease from the Government is included in the balance-sheet at a nominal figure of £1. It is impossible at present to estimate the true value of such a property. In drawing attention to the satisfactory nature of the assets of the company I would point out that, in addition to investments, taken at their market value, sundry debtors (less creditors), stock in hand and in transit and the Entebbe mortgage (since paid off), totalling £29,466 14s 4d, there was in cash and at call the large sum of £145,687 2s 1d.

There is an adverse balance in the profit and loss account, owing to a great extent to the board's policy of writing off administrative expenditure, which might reasonably, in a company of this character, be charged to capital account. The intention of the directors has always been, and is, to develop portions of the property with a view to sub-leasing plantations. The war greatly interfered with the development of the estates and sub-leasing, and in some respects the spade work commenced before the war had to be gone through again after the cessation of hostilities. As a further explanation of this I would remind you that all work had to be stopped during the war owing to the absence of labour. As the shareholders will recognise, the land, having been left alone, had to be reclaimed and the absence of labour made good. The Government recognised this by giving us three years more in which to spend the required amount of development under the terms of our lease.

Excluding the four months' trading, all the expenditure of the company has been in respect of development or experiment, in pursuance of the board's policy. As far as the coast plantations are concerned, it can be said that the experimental stage is reaching its close, and there should be nothing in the very near future to prevent the achievement of the main object of the company—namely, letting and sub-leasing land based on successful experiment.

Owing to the scarcity of Government surveyors there has been unusual delay in the surveying of the company's land. This was unavoidable, as only Government surveyors could be employed, but I am pleased to say that nearly one-half of our coast concession has been surveyed, and the whole of the Taveta concession (100,000 acres) was completely surveyed by the Government last year. We are, therefore, in a position to deal with this concession whenever a favourable opportunity arrives.

Experiments are being carried out on the Taveta concession with various tropical products. So far the reports are satisfactory. This land, in the opinion of all experts who have inspected it, is a valuable property.

With reference to the building site at Likoni, which is considered a great asset of the company, the architects' plans are now before the Government for sanction, and it is hoped to get an early decision. It will be remembered that Likoni is the land abutting on the harbour opposite Mombasa, which, from every point of view, presents great attractions as a residential district. We have no doubt of the necessity and demand for houses on this site, Mombasa having become very much congested.

CURRENCY PROBLEM.

The currency question has added no little to the difficulties of the board. It will be remembered that the rupee exchange value before the war was 1s 4d. By March, 1920, it had risen to 2s 8d. For some reason the Government stepped in and stabilised the rupee in East Africa at 2s. Unfortunately for East Africa, very soon after the stabilisation the Indian rupee dropped to about its pre-war figure, where it now remains. After a good deal of hesitation on the part of the authorities, the currency has been placed on a permanent basis, florins having taken the place of the stabilised rupee. From reports we have received from East Africa labour is adjusting itself to pre-war rates, which should in future reduce our costs.

The directors were hopeful of the commercial department, which commenced in February, 1920. Unfortunately, the department started just at the end of the boom in trade, which was followed in East Africa by great financial stringency, intensified by the currency difficulty. Our managing director visited East Africa at the end of 1920. He rapidly saw the undesirability of continuing the department, and immediately gave instructions for its liquidation. All orders given in England were cancelled, and his prompt action has prevented the company losing a considerable sum of money.

You will be pleased to note that part of the premiums received on the new issue of shares has been used to write off all intangible assets in the last balance-sheet and the expenses of the new issue.

Mr Herbert Guedalla seconded the motion, which was carried unanimously.

Major the Hon. J. C. Lyttelton then proposed that the retiring directors (the Earl of Plymouth and Mr Herbert Guedalla) be re-elected.

Mr M. R. Margesson seconded the resolution, which was carried unanimously.

On the motion of Mr. Margesson, seconded by Sir Owen Thomas, M.P., the auditors (Messrs Downes, Munns and Co.) were reappointed, and the proceedings terminated.

EBBW VALE STEEL, IRON, AND COAL COMPANY, LIMITED

CHAIRMAN OPTIMISTIC OF COMPANY'S FUTURE.

RESULTS OF GOVERNMENT INTERFERENCE IN INDUSTRY.

The fifty-fourth ordinary general meeting of the Ebbw Vale Steel, Iron and Coal Company, Limited, was held on the 9th instant, at the Cannon street Hotel, London, Sir Frederick Mills, Bart. (chairman and managing director), presiding.

The secretary (Mr Bertram Northgraves, A.C.I.S.) read the notice convening the meeting, and the report of the auditors was read by Sir William B. Peat.

The Chairman, in moving the adoption of the report and accounts, after apologising for the delay in holding the meeting, said: Last year, although the recital was a little out of place, I explained to the shareholders that the company had purchased Messrs Beynon's interest in John Lancaster and Co., Limited, and Powell's Tillery Steam Coal Company, Limited; that we had purchased the entire share capital of Lancaster's Steam Coal Collieries, Limited; and also practically the whole of the ordinary share capital of the Newport-Abercarn Black Vein Steam Coal Company, Limited.

The directors are still satisfied with these purchases; they have every reason to suppose that they were made in the best interests of the company, and that in the years to come we shall reap the benefit of extensions which were entirely along the lines of the policy pursued by the company for many years past.

BALANCE-SHEET ITEMS.

Passing now to the balance-sheet, it will be observed that the ordinary share capital is now fully paid, the difference of three-quarters of a million between this year's figure and last being accounted for by the part payment of the colliery shares I have just alluded to. These shares were issued at a premium, which is added to premium on shares account. The debenture loan, by reason of the redemption of a somewhat larger sum than was actually due—advantage having been taken of the very low price at which the stock stood in the market—is now below a million pounds. This is a very small amount for a company with well over ten millions of surplus assets.

A new item is that of the note issue of £3,000,000, issued at a discount of 1½ per cent. Only half of the total was issued to the public, and bore an underwriting and over-riding commission of 5½ p.m. The other moiety of the total was taken firm

by the subsidiary companies at the price of issue, without commission.

Turning to the assets side of the balance-sheet, it will be observed that the expenditure during the year on collieries and works, after deduction of property sold, is in the neighbourhood of a million. The extensions include, of course, the two new large glass furnaces, one of which was set to work a year ago, and the other is nearly completed; the coke ovens, the last batch also nearly completed; the alterations to the steel works; and a large number of items of improvement in the collieries, particulars of which I recorded last year. The investments are increased from £408,133 to £2,810,184, due, of course, to the acquisition of the shares in the associated collieries.

STOCKS ON HAND.

The item "stocks on hand" requires more than a passing remark. The total amount of over a million and a-half pounds is considerably in excess of a reasonable amount, even for the enlarged operations of the company, and one that must be considerably reduced as opportunity serves. The increment is mostly in iron and steel stocks, and was brought about by the practically sudden stoppage of demand for iron and steel. Before arriving at the figure which appears in the balance-sheet, a very large sum was written off values in order to bring them well within the description of "cost or market price." Moreover, it is proposed to allocate a sum of £150,000 to meet any possible reductions in value that have taken place since the date of the balance-sheet. It is impossible for me at this moment to prophesy what is going to happen in the iron and steel markets of the world, and therefore it is impossible to say whether these stocks can be realised to fetch the sums at which they will now stand in the

company's books. I can only express the opinion that I think we have made adequate provision for any fall in the markets that is likely to take place, and you may rest assured that this item will engage the careful attention of the board until it is reduced to more manageable dimensions.

The other item in the balance-sheet calling for special comment is the amount remaining unpaid by the purchasers of our seven-year notes, which was £127,500 at March 31st, and has since been reduced by £75,000. There remains at the moment a sum of £52,500 to be paid, plus interest, and your directors feel that in the present state of the money market no good purpose would be served by unduly pressing for the payment of the balance.

GOVERNMENT INTERFERENCE AND ITS RESULT.

In my speech to the shareholders last year I ventured, in endeavouring to forecast the future, to say that:—

"All we require is a minimum of interference from Government Departments, a fair field and no favour, and I am convinced we shall be able to conduct this vast undertaking to the satisfaction of the public, the comfort and well-being of our workpeople, and to the reasonable profit of the shareholders."

Ladies and gentlemen, we have had none of the ingredients enumerated and necessary to produce such a result. Almost immediately after our annual meeting I was constrained to observe in a public statement relating to other affairs that it was obvious the world was no longer going to be content to pay £25 a ton for steel, and very shortly afterwards the bottom dropped out of the iron and steel markets of the world. Then came the demand of the colliers of this country for a share of the very high prices the Government was compelling our Continental friends to pay for British coal. Whatever may be the rights and wrongs of the colliers' demands, whatever may be the justification for the

Government's demand of famine prices for coal, the result of these two movements was disastrous. At the point of the bayonet the colliery workpeople were given terms which defeated their own ends. The output of coal, instead of going up by leaps and bounds, as was expected and promised, went down. The bottom of that market fell out as suddenly as had that of the Iron and Steel market, with the immediate result that the colliery undertakings of this country were compelled to pursue an inglorious and unprofitable policy of part-time, accompanied by enormous costs, until eventually the Government itself became frightened, and dropped the industry as it were a hot brick.

This disastrous proceeding—the result of Government interference—was quite naturally followed by a cessation of work, caused by the inability of the colliery owners to pay anything like the rates of wages current in the first three months of the year; and while the Government was compelled to repay the colliery owners the losses sustained from December to March, there were a great many items of expenditure in such a company as ours which were irrecoverable from that source.

On top of the national dispute, Ebbw Vale and some of the associated companies had difficulties of their own, because it must be remembered that from motives of patriotism Ebbw Vale became a munitions centre during the war; we should doubtless have consulted our own financial interests better by refraining from taking the part we did, but I, personally, do not regret our attitude. The effect, however, was, as I say, to constitute Ebbw Vale a munitions area, and I much regret to have to say that undue advantage of that fact was taken by several of the trades union representatives by demanding and obtaining, at frequent intervals, terms and conditions from the Government departments which we opposed, and which would never have been granted had we not been a munitions area. It was felt that it would be unwise to issue a balance-sheet and to recommend a dividend while our own disputes remained unsettled, and in recommending to you to-day to pay a dividend of 5 per cent. we recognise that while this policy may appear to the shareholders to be unduly conservative, we might perhaps have been compelled, by any further continuance of the disputes, to have refrained from declaring any dividend on the ordinary shares of the company.

NEED FOR INDUSTRIAL PEACE.

Now, as to the future, it is, of course, not only impossible, but exceedingly unwise, to attempt any forecast. Suffice it to say that all classes of the community must begin at the beginning. The collier and the agricultural labourer are, in effect, the beginnings of industry. Both these must be got to work before industry as a whole can be set going. Without cheap coal there can be no other industries such as we have been accustomed to during the last hundred years, and without cheap iron and steel there can be no shipbuilding, engineering and allied trades. I believe the heart and the patriotism of the British working classes are both undoubted, and that they recognise that the harmonious working together of both capital and labour is essential to their own peace and welfare as it is to the progress of the country as a whole.

Notwithstanding the shock your financial resources have received by what amounts to a practical cessation of output for close on nine months, it must be observed that you hold a remarkable property, developed for a number of years at vast expense, with a great sphere of usefulness before it. You possess the essential raw materials for the natural industries of the country; you possess a great organisation, and I still feel justified in saying, as I did last year, that if we can have a minimum of Government interference has been a fair field and no favour, we shall render you a good account (acres) of improved opportunities that will thus be accorded to this company.

A favourable solution was carried unanimously, and the usual formal Experimenting has been transacted, a vote of thanks to the chairmen, and the staff terminated the proceedings. This land, in the valuable property. With reference to considered a great asset of DEN BERGHS, LIMITED. before the Government for the decision. It will be remembered that the Government's decision, on the harbour opposite MY general meeting of Van den Berghs, on view, presents great attractions, and I am sure that the Hon. Lord Ebury, chairman of no doubt of the necessity and Mombasa having become very n

The secretary (Mr A. G. Hales) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, referred first to the loss the company had sustained in the death of the late chairman, Sir Herbert Mackworth Praed. Proceeding, he said that the accounts showed that the capital had been increased by £1,500,000, while one of the associated companies on the Continent had made a further issue of capital to the extent of about £5,000,000, the total capital placed with the public by the company and its associated companies on the Continent now amounting to the enormous sum of £6,750,000. The notes issued by the company in 1915 and 1916 had now been practically redeemed, but the associated company in Holland had made a new issue of notes to the extent of £1,250,000, redeemable in 10 years. The policy of expansion, to which the late chairman had referred at the last meeting, had again been followed up to an even greater extent than in former years. The Fulham factory had been further enlarged, and its capacity very materially increased. On the Continent further acquisitions had been made by one of the associated companies in Scandinavia, Belgium, &c., and the purchase of a considerable business in France had recently been completed. The figures in the balance-sheet relating to the floating assets and liabilities reflected the great increase in the volume of the company's trade, and in their inter-relationship revealed a sound financial position. In view of the large trade which the company was doing, they were compelled to carry large stocks. It was a matter of common knowledge that during the closing weeks of last year an unprecedented drop in the prices of all sorts of commodities had occurred, and especially in those used in their business. The directors, however, were of opinion that the carry forward, together with the other reserves, would be sufficient to offset any depreciation, and moreover, those stocks had now been practically all consumed, the goods manufactured therefrom having been sold at prices greatly exceeding the market prices of raw materials prevailing at the time of such sales.

THE PROFITS.

As to the balance of profits shown, the directors had alluded in the report to the difficulty of settlement accumulated through the interruption of communication with the Continent during the war. There was also the excess profits duty to settle. They were advised that it was not possible to allocate accurately the results to each of the past seven years, and that was the reason why the profits for the 1½ years were shown together with the balance of profits from previous accounts. The balance of profit brought forward—£1,482,707—was subject to excess profits duty and contingencies, and the greater part of it was not available for distribution. It had been stated in the Press that the profits for the 1½ years only amounted to £110,000, but it would be seen from the explanation he had given that if the contingencies referred to were deducted from the carry forward shown in the previous accounts, the profit for the period under review must be greater to that extent. The directors admitted that the accounts must be far from clear, but that was solely due to the fact that both the previous and present accounts had been largely based on estimates. The directors were taking all steps possible to ensure that the next accounts should show results as definite as in pre-war days.

THE FUTURE.

As to the future, taking into consideration the great drought, and the consequent high prices of butter and milk, it looked as

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank).

ESTABLISHED 1889.

Head Office: HELSINKI (Helsingfors), FINLAND.

Capital and Reserves - Fmk. 240,000,000.00
Deposits and Cheque Accounts (31/5/21) - Fmk. 1,200,000,000.00

123 BRANCHES AT ALL IMPORTANT BUSINESS CENTRES IN FINLAND.

Telegraphic Address: Kansallispankki.

though they would have an increased sale for their margarine and condensed milk. The crushing mills connected with their business were fully occupied, the refineries turned out all the oils required, and the margarine factories were working at high pressure. The condensed milk company of Holland was turning out large quantities of condensed milk, the bulk of which was consumed in this country, and the soap trade was increasing and showed satisfactory results.

Speaking generally, he thought they might say they were doing fairly well. He thought he ought to make some reference to the strike which occurred at Fulham last year. This lasted for six weeks, and was eventually settled satisfactorily. Since then amicable relations had been established, and the joint works committee, which was an outcome of the strike, was working satisfactorily, both as regarded employers and employed.

Their margarine was being placed on the market in excellent condition, notwithstanding the abnormally hot weather through which they had recently been passing, and was meeting with much acceptance. Their "Blue Band" margarine was especially appreciated, and was receiving nothing but praise both from the trade and the consumer.

Mr Jacob Van den Bergh seconded the resolution, and after some questions had been answered it was put to the meeting and carried unanimously.

TILBURY CONTRACTING AND DREDGING COMPANY, LIMITED.

STRONG FINANCIAL POSITION.

At a general meeting of the Tilbury Contracting and Dredging Company, Limited, held on July 28, 1921, Colonel Richard Lionel Hippisley, C.B., chairman of the company, said:

"I am glad to be able to say that your Company has more than maintained the satisfactory position which was reported to you at the last General Meeting, and what is worthy of special attention in the Accounts now before you is that, notwithstanding the depression which has prevailed in the business world during the last year, its business and profits continue to improve and the financial position as shown by the balance-sheet is still further strengthened.

"Special mention may be made of the great improvement in the working of the Maidstone Quarry. The profits derived from the largely increased output are considerably in excess of those of any previous year.

"It is interesting to compare the Company's financial position now with that at the date of its reconstruction in 1906. While the Capital has remained unaltered the total assets have increased from £358,791 to £804,910 in 1921, Reserve for Depreciation of Plant from £70,800 in 1906 to £160,200 in 1921. Total Creditors from £79,340 to £338,442, Excess of Assets over Creditors, after allowing for depreciation, from £208,651 to £306,268. This last item shows that the value of the Shareholders' interest in the Company's Capital and Reserves, after meeting all outstanding liabilities, is approximately 150 per cent. of the issued Capital. Your Directors consider the position actually better than shown by these figures, for the reason that they are based upon continuous and liberal depreciation applied to the whole of the Company's assets, a large amount of which assets are at pre-war cost.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, August 3, 1921, amounted to 630 tons.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during the month of July amounted to 93,421 barrels, or approximately 13,346 tons, including 42,912 barrels from the properties of the St Helens Petroleum Co., Limited.

R. G. JAGUET, Accountant-General

India Office, August 11, 1921.

Messrs Samuel Montagu and Co. write on August 11th as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,564,510, as compared with £126,563,335 last week. A fair amount of gold came on offer, and was taken for the United States of America. It is reported from New York that gold to the value of \$3,600,000 has been received there from London. It is reported that a Bill has been introduced in the Argentine Congress to permit the exports of gold to within 50 per cent. of the circulation. Argentina now has a gold reserve of 81 per cent. Bankers and commercial men have been urging for almost a year the removal of the restrictions on gold exports. The price of gold in India during the week ending July 16th last touched Rs. 33.2 per tola, and that for sovereigns rose to Rs. 20.9; that is to say, a premium of 105½ per cent. upon their legal tender value. The steps by which the European States created by the Great War evolve a currency system linked with gold are of absorbing interest. No less will be developments connected with it. In each of these cases the printing of stability in exchange can be achieved until this easy mode of finance is placed. The young and vigorous Czechoslovakian currency u fund has jewels worth towns—say alt. can become must

atly depreciated currencies of Russia, Austria, and Italy. In each of these cases the printing of stability in exchange can be achieved until this easy mode of finance is placed. The young and vigorous Czechoslovakian currency u fund has jewels worth towns—say alt. can become must

before the war, and here were coined the golden ducats familiar from the plays of Shakespeare. Its archives date back to 1630. When the Austro-Hungarian Empire collapsed, the Hungarians carried away all moveables, and destroyed all else. The building has now been restored and new machinery installed. The new currency is to consist of crown, 50-heller, and 20-heller pieces. The advantage of employing gold as the most suitable basis of currency throughout the world has been clearly established. The report that the coinage of silver will shortly be resumed by the Petrograd Mint does not conflict with it, for it is not conceivable that commerce can be transacted between Russia and the rest of Europe with any degree of ease unless its currency be again linked with gold, whatever may be the metal employed for use within its borders. Turning from Europe to the Far East, the Produce Exchange at Dairen has decided, as from October 14th next, to base its transactions upon gold (the Japanese yen) instead of silver, as heretofore. This action has been brought about by the circulation in Manchuria of yen notes secured by gold to a much larger extent than those secured upon silver. The currency, however, of the congeries of States called China still remains silver. Until that country is more cohesive and the Government more effectively centralised, a movement toward a gold standard is retarded, though eventually a serious attempt to change from a silver to a gold basis may be regarded as assured.

SILVER.

Silver maintains its reputation for waywardness. Prices remained steady until the 8th inst., when the Indian bazaars became sellers, and a fall of ½d ensued in the price. This reversal of policy was followed by a sharp fall in the Shanghai exchange of 2d, succeeded, on the 9th inst., by one of 1½d in the silver quotation here for cash delivery, and of 1½d in that for two months, supplies being exceptionally plentiful, and buyers shy. Assisted by some buying on account of China, the price has recovered to some extent, but the tone of the market is nervous. In the absence of support from the Indian bazaars, sellers can only look to China to relieve them of their stock. Orders from this quarter are so subject to speculation that reliance can be placed upon any particular course being continued from one day to another. This renders the future uncertain, especially now that the market here is not likely to lack supplies, from the Continent or elsewhere.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	July 14, 1921.	July 22, 1921.	July 31, 1921.
Notes in circulation	17,354	17,429	17,556

Gold coin and bullion in India	6,802	6,805	6,805
Gold coin and bullion out of India ..	834	835	835

The coinage during the week ending 31st ult. amounted to 7 lacs of rupees. The stock of silver in Bombay on the 5th inst. consisted of 2,400 bars. The stock in Shanghai on the 6th inst. consisted of about 32,700,000 ounces in sycee, 27,000,000 dollars, and 670 silver bars, as compared with about 34,200,000 ounces in sycee, 27,000,000 dollars, and 840 silver bars on the 30th ult. The Shanghai exchange is quoted at 3s 6½d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

1921.	Gold.		Silver.		Date.	Silver.

Reports and Notices.

Mr Wm. Petrie Nicholls has been elected a deputy director of Spillers Milling and Associated Industries, Limited. Mr W. P. Nicholls is the son of Sir William Edgar Nicholls, governing director and chairman of the company.

GOVERNMENT STOCKS, &c.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders have received the August instalment of the Debt Service in respect of the half-year ending December 31, 1921.

RAILWAYS.

THE BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.—Holders of debentures (bonds to bearer) of this company amounting to £152,000, and falling due on August 18, 1921, are notified that the directors, with the sanction of the Secretary of State for India in Council, are prepared to renew such debentures at 99 10s per £100 (10s discount) for a further period of two years, with interest at the rate of 6 per cent. per annum, provided the holders of the said debentures intimate their acceptance of this offer and send their bonds to

MINES.

BURMA CORPORATION, LIMITED (Incorporated in India).—On the invitation of the board in Rangoon the following gentlemen representing large interests in the corporation have agreed to act as an advisory committee:—Sir Henry Strakosch, Sir John Mann, Mr John A. Agnew, Mr A. Chester Beatty, Mr F. A. Govett, Mr Herbert Guedalla, and Mr James C. Prinsep. On the recommendation of this committee, Mr P. E. Marmion, lately manager of the Swansea Vale Spelter Company, Limited, has been appointed by the board general manager in Burma, to succeed Mr R. G. Hall, whose agreement is expiring shortly. Mr E. P. Mathewson, an engineer and metallurgist of great reputation, has also been engaged to visit the mine and consult with Mr Marmion as to the general lines of policy to be adopted.

MISCELLANEOUS.

MITCHELLS AND BUTLERS.—The report and balance-sheet for the year ended June 30, 1921, shows a net profit, after making all provisions and reserves, of £430,089, which, with £235,764 brought in from previous account, makes £665,853 for disposal. The preference dividends amount to £30,000, and the ordinary dividend of 10 per cent. for the year absorbs £161,471. The sum of £100,000 is put to reserve, making it £450,000, and £236,735 is carried forward to next account. The board state that these results may be looked upon as satisfactory, taking into consideration the acute industrial depression prevailing during the last six months of the financial year, and the additional onerous duties imposed upon beer, wines, and spirits, by the Budget of April, 1920. On May 1st the Midland Brewery was closed down, and the whole of the brewing operations of the company were then concentrated at Cape Hill Brewery, from which it is anticipated much more economical production will result. This year it will be noted the board does not recommend the appropriation of a sum from the profits to the employees' superannuation fund, as the total amount of that fund exceeds £112,000. It is intended at present to pay pensions out of the company's current profits, and to treat the superannuation fund—which is outside the assets of the company—as a reserve to meet abnormal circumstances.

WELSCH LIGHT CO.—The directors' report for year ended March 31, 1921, has just been issued. They have to report that the prolongation of the failure to fulfil pledges for the safeguarding of key industries and prevention of dumping has led to the ill effects foreshadowed in their last report. As the result of unrestricted imports of foreign goods produced and sent to this country under conditions of labour and exchange extremely adverse to British industry, sales have diminished, stocks have inevitably accumulated, and values have fallen. It must be added, with regret, that, as a necessary consequence, large numbers of trained hands have had to be discharged from employment. The pending Safeguarding of Industries Bill—a less comprehensive measure than that introduced by the Government in 1919—is still under the consideration of Parliament. After writing down the stock as at March 31, 1921, to meet the depressed market conditions, the profit and loss account shows a net profit of £13,134, subject on the one hand to liability for corporation profits tax and, *per contra*, to any claim the company may have for repayment in respect of excess profits duty. To this sum of £13,135 has to be added the balance carried forward from last year, amounting to £21,344, making a total of £34,479. A dividend of 5 per cent. is paid for the year on the ordinary shares, absorbing £12,896, and £21,583 is carried forward.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

English new Dunns 64s to 68s, old maples 93s to 100s, blues 90s to 110s per 504 lbs. Oatmeal firm and occasionally dearer, with small supplies of imported. Scottish quoted £26 to £28, London made £23 10s to £24 10s, flaked oats £27 to £28, and rolled oats £23 10s to £24 per ton. Offals tend dearer and middlings quoted £14 to £15 5s per ton. In the chartering market the demand for grain freights shows a falling off, and rates ruled easier. River Plate inactive and nominal at 40s. Up river to U.K./Cont. August-September heavy grain. Montreal grain paid 5s 9d, and Gulf 6s 9d to 6s 6d qr U.K., 24 cents per 100 lbs Antwerp/Hamburg range. Wheat from North Pacific ruled at 62s 6d, with 63s 9d paid for barley cargoes home. Easterns quieter. Bombay/Karachi 32s 6d dead weight. Kohlschlag rice done 65s U.K./Cont., and Dalry beans 70s picked ports U.K. A considerable business transpired in wheat cargoes from Australia at 75s to 72s 6d October-November loading at usual ports to U.K./Cont. Maize from South Africa quoted 42s 6d, while heavy grain from the Danube remains dull and weak at 27s 6d to U.K./Cont. end September cancelling. Other markets nominally unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated August 11th, is as follows:—Pig-iron: It is estimated that there are now seven blast furnaces blowing on the North-East Coast producing basic pig-iron for local steel works. Although there has been an appreciable fall in the prices of coal and coke, the price of the latter will have to go considerably lower before makers of Cleveland and hematite pig-iron can resume except at a heavy loss. Consequently they are not resuming operations meanwhile. The stock of Cleveland No. 3 G.M.B. foundry pig-iron is exhausted, and the price is nominally 135s per ton. There is a stock of East Coast hematite for which 160s for home consumption and 140s for export is asked. Manufactured iron and steel: Steel works have resumed, but are short of orders. Foreign pig-iron is being partially used. Steel ship plates, £15; steel ship angles, £14 10s; iron bars, £16; steel rails, £14 net. Iron ore: Business in imported ore is still dead. Various prices have been named. Best Bilbao Rubio is reported as having been offered as low as 25s, c.i.f. East Coast.

Our Glasgow correspondent (writing on Thursday) says:—The industrial and business positions here can hardly be said to have improved on the week, though in some instances (associated with iron and steel) there has been rather more stir in production, and, generally, there have been rather more inquiries floating about. But in the latter relation, which is the more important of the two, it cannot be said that the inquiries have so far resulted satisfactorily for manufacturers either in the raw or finished positions. Buyers seem intent in their approaches to feeling their way in the matter of prices, deliveries being apparently of secondary consideration, for they are rarely named. It is taken for granted all round that quotations for steel and iron products will before long be appreciably reduced, but the real extent is the point on which dubiety exists, and which concerns dealers. This, it is recognised, depends on the course of things in the coal market. The tendency there is weakish, and already terms have fallen by, for good fuel, about 20s a ton at, say, 35s. But consumers do not regard the drop as sufficient, and are aiming at, at least, 25s, above which figure they contend profitable business cannot be done and the desired expansion in trade brought about. And there is no doubt as to that; but mine-owners assert that even at 35s a ton they have reached the non-paying level, and that a lower rate spells ruin for the industry and a closing down of pits. It remains, therefore, that a very serious contingency has arisen, one that will tax the best wits of the experts to handle and adjust satisfactorily. This much, according to authorities in the various interests concerned, is evident: that, come what may, and in the first place, ship-owners will not contract for new steamers on the current basis of costs, and that shipbuilders will not construct, and steelmakers will

not run their mills at present rates of remuneration, far less lower, unless they are assured of equivalent concessions on all products that enter into their manufacture—and this brings us back to the basic fact that there is only coal to work upon, and seemingly a deadlock as to that. The few rolling mills running this week have been solely engaged in finishing-off old orders, which are not being replaced. Shipbuilders continue to be much inconvenienced by the strike absence from the yards of the joiners, and this has necessitated the discharge of several hundred hands since Monday. A number of blast furnaces will blow in next week, and will be in a position to deliver No. 1 foundry by the beginning of September. Ironmasters say that the relighting will not be a profitable operation, and is only being entered on so as to retain their hold on certain home and foreign markets. Locomotive engineers, partly because of a scarcity of certain steel sections, have been obliged to restrict their working week from five to four days. But it is reported that there are some good inquiries on the carpet. Black sheets makers, who have been going short for months, feel a development of demand from India and the Far East generally. Tube makers also find conditions more hopeful, and bolt, nut, and rivet makers are the turn better employed. But the majority of the works in these branches—sheets and subsequent—draw the bulk of their huge products from the Continent, principally Belgium. These imports cover angles, bars, hoops, files, blooms, and miscellaneous fittings. The landings this week at East Coast ports include 7,800 tons of pig-iron, 3,000 to 4,000 steel blooms, and 3,000 bars (not tons). In the last week or two Belgium has been stiffening up her quotations for everything, and is not disposed to guarantee deliveries with the promptness common only recently, which suggests that she is getting filled up with orders, cheap ones particularly. Yet a bit of ground has to be travelled before an equilibrium in values on the Continent and here can be established. There are pounds of difference to overcome, and the equalisation will be at our expense whatever the means adopted.

Our Sheffield correspondent writes:—So far as the principal local industries are concerned, there is no evidence of the great revival of trade which a couple of months ago the Prime Minister assured the country was at hand. The position is quite as flat as before the strike, and it is questionable whether the reaction is not still in operation. Foreign business in steel is going to the Continent, including valuable orders from India. Some of the plants which were started up after the strike have been closed again or put on short-time for the want of work, and staffs at the large establishments are being gradually reduced, an operation which involves the discharge of officials who had held responsible positions for years. Engineering branches report that few new orders for heavy machinery are coming in. The only active branch at the moment is that supplying colliery tools and equipment. The crucible steel trade is almost at a standstill, and it is feared that several consuming countries abroad can now supply their own needs in the ordinary grades. Special steels have never been so quiet before in the overseas markets, and there is only a moderate inquiry at home. Leading business men are endeavouring to persuade the American Government to modify in its new Tariff Bill the prohibitive duties on imported high-speed steel, which at present prices amounts to about 2s per lb. If the proposals stand, it will be impossible to sell the Sheffield material in America. Coke used for melting crucible steel has just been reduced 17s per ton, but the new price is still double the pre-war figures. A steady increase in buying of steam coal is reported, and the railways continue to take a large tonnage, but the export trade is disappointing, and little is doing in slacks and household fuel. Prices of the latter are 3s 6d per ton more than before the strike. Not much progress is being made in starting coke ovens.

MANCHESTER, August 11.

The market during the past week has been very quiet. Buyers are anticipating lower prices, and orders are being held back. Until there is a change of sentiment in this respect there is little probability of increased activity. In cloth the most promising outlook is China, and fair orders have again been booked in grey and white shirtings, sheetings, and fancies, whilst moderate support has been given by shippers to Java and Singapore. Some advices from India are rather better, but only a small trade has been done. If the monsoon rains continue to do well, there is some expectation of freer buying next month. The uncertain political situation in Europe and the Near East prevents any expansion in trade. Goods suitable for home consumption have not attracted much attention. American yarns for home use have been dull of sale, and prices are easier on the week. Supplies are more than sufficient to meet the requirements of users. Export demand for India has fallen off somewhat, but business continues to be done for China in twofold quantities. Irregular operations have occurred in Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—While there is really no change at this centre, things are no worse. Overseas cables report a very firm market for raw wool, and this compels topmakers to adopt a firmer attitude. There certainly is a

reasonable business passing in a quiet sort of way, and average 64's tops are still worth 36d, and a warp 64's 38d to 39d. There is also a marked scarcity of Cape tops, which are saleable at fully as much as Australian. A reasonable trade is going on export account, and some good orders have been received from Germany for 1-24's and 1-30's crossbred yarns. Full market prices have been made, and this is hoped to be the beginning of a big trade in these super and demi lustre yarns, which assumed big proportions before the war. We think that consumption shows a little expansion, and prospects point to more doing after the holidays. News from the Cape also indicates more doing in mohair, and prospects generally can be regarded as better. Yarn spinners are running longer hours, and while manufacturers do not report any important change, there is more disposition to sell old stocks and quote tempting prices for future business.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

News from Australia indicates a firm market, with an encouraging demand for wool. According to private cables received, the sales are going somewhat better than expected, and both home and Continental buyers are operating fairly extensively, while even American houses are purchasing the best merinos, because they know they cannot do without them. It seems somewhat ridiculous that the United States should impose import duties upon raw materials, for United States mills can no more do without the best merino wool grown in Australia than the farmers in the country can do without sunshine to ripen their crops. That is, if the manufacture of the best classes of worsted goods is to continue, and after all such goods remain the most popular in every English-speaking market in the world. It is really amazing the hold that good merino fabrics have upon the general public, and value for value the finest and best wool in the world is the cheapest. Nothing would suit B.A.W.R.A. better than to see American buyers come into the market and secure the highest classes of merinos, for if they paid no more than what English and Continental buyers are prepared to pay, their competition would stimulate the entire trade. It almost looks as if there is a speculative buy of merinos in Australia; any way, the sales are going well, competition is broadening, and recent prices have moved in sellers' favour.

During the past week the Right Hon. F. W. Massey, New Zealand Premier, has visited Bradford. He received a very hearty welcome, and has been greatly impressed with the wool industry of the West Riding. There is no doubt that in the manipulation of crossbred wool Bradford spinners and manufacturers are past masters, and what is wanted is a development of trade, when cross-breds would soon arise from the dust. Every speaker at the public meeting emphasised the desirability of getting rid of every shred of control, for the trade is well able to work out its own salvation without any interference whatever from any outside authority. Great sympathy was expressed by actual consumers themselves with Australasian wool growers that the present standing of the raw material should be so unsatisfactory, but economic laws are operating, and will continue to do, no matter what is done. Mr Harry Dawson, as usual, hit the nail on the head when he said that cheap wool was a rare good thing for the countries that were poor to-day. Cheap wool meant cheap clothing, and cheap clothing would help to bring prosperity back again. This is what everybody has felt all along, and although it affords no pleasure to anyone at the consuming end of the trade to learn that New Zealand pastoralists last year had to sell their clips at a loss, it is by no means the first time that they have been called upon to do this, and surely after the piping times which they have experienced for the past 20 years, they can stand one or two seasons of low values.

AUSTRALIAN WOOL SALES.

Messrs. Dalgety and Co. have received the following cable from their Melbourne branch, dated August 10th:—"3,500 bales of wool offered and practically all sold under good general competition. Prices are unchanged as compared with the closing rates of last series."

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

The market for linseed oil continues to have a firm tone consequent on a good demand both on home and export account, spot oil again advancing to £38 per ton naked ex Hull mill. Forward positions, in sympathy with the strength of seed, are at a substantial premium, £39 being quoted for September-December delivery, and £39 10s for January-April. The United States, which has imported comparatively little Argentine linseed to supplement the domestic yield, has of late been a ready buyer of English

National Provident Institution.

linseed oil, and a good deal depends upon the extent of that country's need to import further.

Cotton oils are in rather better supply, and a fair trade has been done in crude, which, after a slight reaction, has firmed up again, with other grades practically unchanged. A steady business is also reported in crude soya bean, palm kernel and ground nut oils values, however, being little altered.

Plate linseed eased off somewhat last week, and a fairly substantial trade was put through at the decline at £22 to £22 10s for September-October shipment, since when a firmer tone has developed. Spot and near are steady in view of the great shortage of stocks, and the apparent ability of the market to absorb the large quantities afloat. Egyptian cotton seed has been in good request at somewhat higher figures, and a steady trade has also been done in Bombay. For soya beans £16 has been paid September-October shipment to Hull. Very little indeed is passing in rape seed, which is engaging most attention from Continental buyers. Palm kernels are very firm, and dearer to buy.

The demand for linseed cakes has slowed down, but a good trade is now being done in cotton cakes.

SILK TRADE.

The report of Messrs Chabrières, Morel and Cie, dated Lyons, August 6, 1921, reads as follows:—We confirm our advice July 7th. Since then, our market has been fairly active, and prices for silk have advanced steadily: they are to-day higher by 10 to 25 francs than a month ago. The demand from America which for several months past had governed our market has abated in July, and the transactions effected during the period under review have been mostly for European manufacturers. The latter, who have gone through difficult times during last year, have allowed their stocks of raw silk to run down almost to nil. They have lately taken some orders, and are reactivating some of their idle looms. At the same time, the stocks of piece goods have been largely disposed of, and are now quite moderate, both in the hands of manufacturers and of jobbers as well as of retail dealers: a general policy of abstention from purchases, the effects of which are now being felt, had indeed followed the accumulation of stocks during the boom period of 1919, and the general position of the piece goods trade is once more perfectly sound. Our manufacturers are now facing serious difficulties in securing the silk which they urgently need, ready parcels or prompt deliveries being very scarce. It is strange that whilst the crop of 1921, including the stock carried over in Japan, will be fully equal to that of 1920, the available supplies of silk on the consuming markets are not by any means large at present. The stocks in America are only moderate, and the stocks in Europe have seldom, if ever, been smaller. There are only very few parcels of Asiatics on their way to Europe, so that a scarcity of silk on our side is bound to be felt during a few months to come, the more so as flatures in Italy have been largely contracted for. The question is whether Japan can take advantage of the situation to gradually dispose of its holdings, and at the same time maintain its prices. Asiatic markets are quiet, and remain on a higher basis of prices than those ruling on this side. Eastern exchanges have been comparatively steady during last month. There is a good inquiry on our market for China flatures, as well as for Cantons; the demand for crapes has pushed the latter up to the parity of the best Italian silks. Levant silks are comparatively advantageous and in good demand, but their production is very limited. Italian silks are practically sold out until November, their sale having been helped by the decline of the lira. There is a distinct improvement in the demand for thrown silks.

LINEN TRADE.

Flax.—The Irish markets remain small, as farmers believe they will get better prices by waiting. Any lots offered were bought up at unchanged prices, but selection was poorer. On the Continent supplies are small, and practically no scutching is being done at the moment. Now that the weather has become cooler and more suitable for scutching, the scutchers will likely resume work, and larger supplies will shortly be placed on the market.

Yarns.—The better feeling experienced this past few weeks has been well maintained, and an increasing number of yarns have changed hands. Such spinners as have cleared their stock are now holding out for a margin on any yarns that have to be produced, and a good many cases are reported of advances having been paid.

Weavers.—The improvement noted last week continues.

Merchants.—The better tone noticed recently has been maintained this week, and there appears to be a welcome tendency for business passing to expand. The quantities are not large, but all things considered they must be accepted as fairly satisfactory for this season of the year. There is more inquiry for linen handkerchiefs.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hides again advanced at Thursday's auctions held in Bernadonsey, best ox selling from 7½d to 10½d each, an advance of ½d to ¾d on last prices. Calf were also dearer, lights making up to 15d. Tanners are very sure at the advance in hides, and attribute it to the export demand mainly from Germany. At all events, the export of British hides is still increasing, the total weight this year to the end of July being 86,104 cwts, valued at £278,641, of

which quantity Germany took 24,206 cwts, valued at £55,974. In July, 1920, exports weighed 4,134 cwts, rising to 13,087 cwts for July last. A steady trade has been done this week in imported hides, fregoric being quoted on spot at higher figures. The American market is calmed firm, with best packers offered at 14 cents.

Trade in leather has been uneven this week, some merchants reporting good business, others a dull time. Bends of 12-14 lbs have been in request from manufacturers and repairers, and tanners are very firm on prices. Rough dressing leather has somewhat improved, and the supply of rough split butts for export has got very low. Upper leather is slow, but once the holiday season is over, sellers anticipate a good demand, as stocks of finished boots and shoes are now low.

The boot trade is now fairly busy, and in addition to the regular lines of boots suitable for winter wear, makers of sports and football boots are full of orders. Exports of footwear to the end of June this year were valued at £1,375,081, as against £4,072,584 for the same period of last year—a very serious fall indeed.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 8½d to 9½d per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.

"Ferrocete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 12.

A fair amount of business was carried through in the chief commodities during the week, though in some directions prices disclosed some irregularity. In those markets where rates moved to an appreciable higher level, profit-taking ensued and exercised a weak influence. There was a good inquiry, particularly on continents account for beans and peas, also rice, and increased strength governed these markets.

SUGAR.—With a falling-off in general demand, only a comparatively small amount of business resulted, but prices maintained a steady level. Tate's cubes sold, 6½d to 6½d; granulated, 6½d to 6½d; castor, 6½d to 6½d; pieces, 4½d to 5½d. Lyle's granulated, 6½d to 6½d; yellow crystals, 5½d. Crystallised West India sold in retail quantities at from 4½d to 5½d, as to quality. Good to fine muscovado, 4½d to 4½d. American granulated, spot, sold, 5½d to 5½d; afloat, spot, 3½d to 3½d, c.f. and i. White Java, September-October, quoted 2½d, c.f. and i. Dutch granulated, prompt, 3½d; cubes, 3½d, f.o.b., Amsterdam. Czechoslovakian, granulated, prompt, 3½d; cubes, 3½d, f.o.b., Hamburg. Belgian crystals, October-December, 2½d, f.o.b., Antwerp. White Brazilian, spot, sold, 5½d to 5½d. Mauritius quoted 5½d. Terminal market quiet, steady.

COFFEE.—Market firm to dealer, and the fair quantity offered in auction this week aroused good competition, particularly the finer qualities. Fair to fine bold colour Costa Rica, sold, 12½d to 13½d; fair to good bold Vera Paz, 12½d to 13½d; Matagalpa, 11½d to 11½d; Guatemala, 11½d to 11½d; East India, bold, 9½d to 11½d. Future delivery market quieter. September, sold, 4½d.

COCOA.—Market very quiet, with only retail transactions at previous rates. Cocoa butter steady at 2s 10d per lb.

TEA.—Offerings of Indian in auction this week totalled 51,300 packages, which met good competition. Good to fine ruled fully steady, while low medium and common sold with marked freedom at higher quotations than those ruling prior to the holidays. 25,200 packages Ceylon were eagerly competed for at firm rates, with common again in sellers' favour.

RICE.—Market firm, with a fair amount of business effected. Two stars, spot, sold, 24s; ditto, afloat, 23s 3d. No. 1 garden Siam, afloat, and August-September, 24s. No. 1 Saigon, afloat, 21s 6d to 22s. Burma brokens not offered. Siam, broken, firm. C. 1, August-September quoted 16s 3d, and C 3 15s 9d. Bran steady. Rangoon, August-September quoted 19 per ton, ex ship. Beans firm. Rangoon hand-picked, spot, sold, 14s to 15s 9d; August-September, 14s 6d to 16s 6d. Madagascar, good, all white butter beans, spot, sold 36s for

new crop, and 32s 6d old. Japanese peas dearer. Spot, 46s; crop 1920. August-September, sold, 40s to 41s.

FRUIT.—The market for currants, also Valencia and sultana raisins ruled quiet but steady. Dates steady. Siam, spot, 15s 6d.

SPICE.—Pepper steady, but trade moved quietly. Fair black Singapore, spot, 4½d; ditto, August-October, 4½d. Aleppy, spot, 4½d. Tellicherry, 5d. White Singapore, spot, 9½d. Muntok, ditto, 9½d; August-October, 9½d. Pimento, spot, 2½d. Zanzibar cloves, fair quality, on spot, sold, 1s 3d to 1s 3½d. Tapioca firmer. Fair flake, spot, sold, 2½d; ditto, September-November, steamer, 17s; fair Penang seed pearl, spot, 23s; August-October, London, 22s, and Hamburg, sold, 23s. Sago flour, August-October, sold, 16s 6d to 16s 9d. Desiccated coconut, spot, fine and medium, sold, 54s to 54s 6d; halves, August-September, 54s.

JUTE.—There was a fair amount of business in force, but after advancing a subdued tone set in. Native first marks assortment, spot, Hamburg, sold, £31 to £32; ditto, spot, Genoa, £33 to £34; ditto, substitutes, old crop, August-September, £26 15s to £27; lightning assortment, spot, Dundee, £25 10s; ditto, dock, Hamburg, £25 5s; ditto, subs, old, August-September, £22 12s 6d to £22 10s; heart subs, ditto, £16 to £16 10s. Hessians steady. 10 oz Calcutta, spot, London, sold, 21s; 8 oz, 19s. A twills, August-September, sellers, 70s; B ditto, spot, sold, 58s; ditto, August-September, sellers, 60s. Salts, August-September, sellers, 49s; sugars, ditto, 69s; flour, spot, 77s 6d per 100 bags.

HEMP.—A quiet and featureless condition of affairs governed this market. J grade, August-October, quoted, £38; K, £35; L, £35; M, £31. New Zealand fair, August-October, £34 10s. Italian more or less nominal.

SHELLAC.—Market steady, but spot trade quiet. Fair T.N., spot, 300s; August delivery, sold, 270s to 260s; October, 272s 6d to 267s 6d, 270s and 260s.

COFFEE.—A quieter tone ensued, and prices, while irregular, ruled lower. F.M.S. Straits, August-October and September-November, Rotterdam, sold, £38 to £34 12s 6d and £35; Ceylon ditto, August-October, London, £38 10s to £36; South Sea Islands, £37 to £34; Cebu, £37 to £34. Palm kernels easier. August-October, sold, £24 5s to £23 and £23 7s 6d.

RUBBER.—Market generally quiet and featureless. Standard crepe, spot, sold, 8½d to 8½d; September, 8½d; October-December, 9½d to 9½d; January-March, 10d. Sheet, spot, sold, 8½d; October-December, 9½d to 9½d; January-March, 10d. There was a moderate trade done in undergrades, including specky browns at 6½d to 6½d, and darks 5½d to 6d. Wild, steady quiet, and fine hard Para, spot, quoted 7s; soft fine, 15s; with Caucho ball, 7d. Stocks of plantation in London warehouses amount to 71,523 tons.

OILS.—Linseed irregular, with a quieter demand. Spot, net, naked, 39s; September-December, 38s. Rape firm. Crude, spot, 56s; refined,

64s. Cotton firm. Crude Egyptian, 43s 6d; Bombay, nominal; common edible, 53s. China wood firm. Hankow, spot (barrels), 100s; and shipment, 71s. Coconut quiet. Ceylon, spot, 56s; August-September, 53s 6d; Ceylon, ditto, 58s. Soya firm. Oriental, barrels, ditto, nominally 45s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 25s. Groundnut firm. English crushed, naked, spot, 53s; deodorised, barrels, 63s. Turpentine easier. American, spot, 69s. Rosin firm. American, grade B, 16s; F, 17s 6d; G, 17s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum steady. American, spot, 1s 9½d; and water-white, 1s 10½d per gallon.

OILSEEDS.—Linseed: Market fairly active, but irregular. Calcutta August-September, sold, £23 17s 6d to £24 5s. Plate, spot, Hull, £21 afloat, £21; July-August, sold, £20 15s to £21; August-September £23 and £21 5s; September-October, £23 to £22. Rapeseed quiet. Toria, July-August, sold, £22 10s to £22 5s; real bold Ferozepore quoted £22; brown Cawnpore, £21. Cottonseed firm. Egyptian black August, sold, £14 5s to £14 10s; and white, £13 15s to £14. Bombay August-September, £12. Ginglyly easier. Chinese, August-September, Continent, sold, £29 5s to £28 15s. Castor, Bombay, July

ALL INVESTORS SHOULD POSSESS "THE 100 BEST INVESTMENTS"

August, sellers, £19, and Brazilian, £15 10s. Hull. Ground nuts, Coromandel, machine-dried, July-August, £28; ordinary, £26 10s. Chinese decorticated, f.a.q., July-August, £27 15s per ton.

METALS.—Tin occupied fairly good attention, while values moved in an upward direction until last Tuesday, cash fluctuating to £152 10s and three months' to £164 10s. Selling pressure prevailed during the middle of the week, these dates fluctuating to £159 and £161 5s respectively. Prices again relapsed at Thursday's meeting. Cash realised £157 down to £156 10s, while since registered at £157 5s, late October £158, and three months' £160 10s to £158 15s. At Friday's session the downward tendency was prolonged. Cash changed hands at £155 10s to £155, late October, £156 15s, with three months' fluctuating to £156 10s. English ingots, £155. Copper continued in quiet request, no desire to sell being shown. At the week's commencement standard cash changed hands at £70, three months' £70 10s. Little alteration characterised movements until Wednesday, when a few warrants "three months" sold at £70 10s to £70 12s 6d. At Thursday's market cash sold at £70 2s 6d to £70, early September £70 5s, and three months' £70 10s to £70 7s 6d. At Friday's session rates were rather easier, the market being steady

at the decline. Standard cash sold at £70 to £69 15s; three months', £70 2s 6d. Electros, £74 10s to £76; best selected, £69 15s to £71 15s; strong sheets, £103. Wire bars, £74 10s to £76. Lead easier at £23 10s to £23 2s 6d, as to position. Spelter lower at £25 10s to £26 2s 6d, according to position. Antimony, English Regulus remains at £37 to £40. Aluminium, home trade £115; export, £125.

BASS, RATCLIFF & GRETTON, LIMITED.

REPORT OF THE DIRECTORS

TO BE PRESENTED TO THE ORDINARY SHAREHOLDERS
at the **THIRTY-FIFTH ANNUAL GENERAL MEETING**,
TO BE HELD AT THE OFFICES OF THE COMPANY, BURTON-ON-TRENT,
On Thursday, the 18th August, 1921, at 12.30 o'clock.

DIRECTORS:

COL. JOHN GRETTON, M.P., *Chairman.*

COL. ROBERT F. RATCLIFF.
MAJOR H. F. GRETTON.
P. W. RATCLIFF.

GERARD A. CLAY.
JOHN LAMBRICK.
CLAUDE N. BURT.

The Directors submit to the Shareholders the Balance Sheet of the 30th June, 1921, and Profit and Loss Account for the year ending on that date, showing a Profit, before charging Interest on Debenture Stock, of £484,314 18s 7d, which, with £61,969 19s 3d brought forward from the previous year, makes a total of £546,284 17s 10d. Of this amount £210,000 has been appropriated to the payment of Interest on Debenture Stock, Dividends on Preference, Stock and an Interim Dividend of 3 per cent. on the Ordinary Shares, leaving a balance of £336,284 17s 10d. Out of this it is proposed to declare on the Ordinary Shares a further Dividend of 8 per cent. (£163,200), making 11 per cent. for the year free of Income Tax, payable on the 1st September, 1921, to place £100,000 to the Reserve Fund (which will then amount to £800,000), and to carry forward to the next account the balance of £73,084 17s 10d.

The Directors again consider that they have made sufficient provision for contingencies which may be reasonably foreseen. The retiring Directors are MAJOR H. F. GRETTON, and MR P. W. RATCLIFF, who offer themselves for re-election.

The Directors recommend that MAJOR THE HON. EVAN BAILLIE be elected a Director of the Company, and a resolution accordingly will be submitted to the Annual General Meeting.

The retiring Auditors, Messrs COOPER BROTHERS & Co., are eligible and offer themselves for re-appointment.

BURTON-ON-TRENT,
8th August, 1921.

By order of the Board,
D. BURRELL, Secretary.

Copies of the *Economist* may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birchin lane; Barker and Howard, East India avenue, and 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709).

THE MONEY MARKET.

IN spite of the large addition to the market's resources caused by the fresh creation of credit by the Bank of England for the use of the Government, as shown by the Bank return, money has still been far from abundant. On Monday the market was only able to repay part of the large sum then due to the Bank, and on Thursday there was a strong enough demand to threaten fresh borrowings, though they were not actually necessary. Discount rates remained firm, apprehension being expressed as to the possible effect on the supply of cash of the German

reparation payment. If this payment enables the Government to make a large reduction in outstanding Ways and Means advances, it seems safe to expect that the market may be severely pinched.

	Aug. 19, 1921.	Aug. 12, 1921.	Aug. 5, 1921.	July 29, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

The Bank return showed an increase of £26,000 in the stock of gold, a decrease of £1,329,000 in the note circulation, and a consequent increase of £1,355,000 in the Reserve. Government securities expanded by 7½ millions, while the market's repayment reduced the Other by 1½ million. There was thus an addition of nearly 7½ millions to the deposits, more than the whole of which went to Other, Public being nearly a million lower. There was a reduction of £3,892,000 to £323,241,000 in the circulation of Currency Notes, this total including £1,955,500 for notes called in, but not yet cancelled. The fiduciary issue is now £273,335,500, or £44,219,700 below the maximum.

The following table shows public income and expenditure for the week ended August 13, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	17,558	Supply Services	6,910
		Interest on Debt	1,019
		Sundries	1,061
		Reduction of debt	8,547
		Added to Exchequer Balances..	921
	17,558		17,558

These operations reduced the National Debt by the sum of £8,547,170, and caused the following changes, which are reflected in our table of National Debt, given in another column:—

Treasury Bonds	Min. £	Public Departments Advances	Min. £
Advances by Bank of England	+ 7,500	Treasury Bills	- 5,900
National Savings Certificates	+ 350	Surrenders of Bonds &c.	- 1,374
Sundries	+ 254	Depreciation Fund	- 800
	+ 10,654	Unemployment Insurance	- 315
			- 18,711

Customs and Excise added £4,090,000 to the revenue, and Property and Income-tax produced £5,877,000. Special receipts under Miscellaneous yielded £3,529,559. The Floating Debt was reduced by £9,540,000 to £1,354,046,000.

There has been a change of interest during the past week in the exchange market from dollars, which have been much quieter, to German marks, in which fluctuations have been extreme and violent, with a large business. In dollars, the extreme limits have been very much closer, the highest rate being about 3.67½, with a sharp fall, on commercial demand here, to 3.64, and a subsequent rise to yesterday's figure of 3.66, at which the market was steady, with no very large dealings. The forward quotation is slightly weaker in tendency, and margins are consequently slightly narrower. Paris has continued quiet, with a firm undertone, and yesterday was quoted at the highest point, 47.40. Brussels has depreciated in sympathy with Paris to 48.30, and the difference between the two centres has narrowed still further. Italy, after fairly active dealings, shows a considerable rise during the week, the quotation at the moment of writing being 85, while Amsterdam is unchanged, in spite of the keen demand for sterling there, and considerable offerings of florins in this centre, which at times were incapable of acceptance. Switzerland was slightly easier at 21.64, while the general tone for Scandinavians has been weak. Christiania, although it has been lower, was quoted 28.20, Stockholm 17.18, and Copenhagen 22.40, following a dip to 22.10 on Wednesday. With regard to marks, these were offered in large

volume, principally from Scandinavia and Holland, and to a less extent from Switzerland and France. The quotation rose rapidly to 342 on Tuesday, to be followed by an almost equally rapid decline to 320, and subsequently 308, at which it closed on Thursday. Yesterday the weakness continued, but less acutely, and dealings were taking place at 306. The immediate future of the rate would seem to depend on whether the August reparation payments have now been fully provided for, or whether a balance is still to be remitted. The demand for forward German marks at present levels is fairly large, the quotation being about 2 points per month below spot. In the smaller exchanges, Finland continues to rise, and is now 248, Vienna has lost last week's improvement, and is quoted 3,100; Warsaw, after a slightly higher quotation, is worse, at 8,100; while Prague has depreciated to 300. The Hungarian crown, in sympathy with the other Balkan currencies, has fallen to 1,400; Belgrade is called 157, and Sofia round about 420. Bucharest, after being higher, closed at 298, and Athens is unchanged at last week's quotation. Buenos Aires at 44½ and Valparaiso at 36 are both higher on the week, while the Uruguay dollar continues to improve, and is now 43½d. Rio rose during the week to 8½d, but was slightly weaker at the close at 8d. Following the rise in silver to 38½d, Indian rupees have been in rather firm demand, especially for forward; the spot quotation is firm at rs 4½d to rs 5d. Yokohama was slightly easier at 2s 7½d, and the Hongkong and Shanghai tael have improved respectively to 2s 9½d and 3s 9d.

A SUMMARY OF NATIONAL FINANCE. FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO AUGUST 13, 1921.

Total spent	£ 378,474,147	Raised by revenue ..	£ 331,693,289
Dec. in balances....	192,697	Net borrowings	46,588,161
Total	378,281,450	Total	378,281,450

ESTIMATES for YEAR 1921-22.

Ordinary Receipts..	£ 1,058,150,000	Ordinary Expenditure	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000

Surplus* 176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

AUGUST 13TH.—Final meeting of Supreme Council and Inter-Allied Finance Conference in Paris. New Spanish Cabinet formed.

AUGUST 14TH.—Text of Government proposals for Irish settlement and Mr de Valera's reply published.

AUGUST 15TH.—Irish railway dispute settled. Sharp decline in mark exchange.

AUGUST 16TH.—Meeting of Dail Eireann opens in Dublin. Premier makes statement in Commons on Silesia, Greece, Turkey, and Russia. Safeguarding of Industries Bill read a second time in House of Lords. Death of the King of Serbia.

AUGUST 17TH.—Mr de Valera reiterates refusal to accept Government's terms. Lords carry two amendments against Government in debate on Safeguarding of Industries Bill.

AUGUST 18TH.—Dail Eireann in secret session. Commons debate on Imperial Conference. House of Lords amend Railways Bill, and read a third time, but drop amendments to Safeguarding of Industries Bill. Price of petrol reduced.

AUGUST 19TH.—Premier's statement on Ireland.

In the stock markets, excitement has been provided this week by a collapse in oil shares. The only other features have been the strength of foreign bonds and Argentine railway stocks, and the volume of business remains at a holiday level. The complete absence of new capital issues continues.

Business in the cotton markets is slow, with Indian demand poor. But the monsoon news is satisfactory, and more activity in this quarter is looked for next month. In the wool market, there is rather more activity, though the home piece trade leaves much to be desired. Wool values, however, are firmer, and consumption maintains its recent improvement. The resumption of pig-iron production proceeds very slowly indeed. In most branches of the steel industry business is stagnant. In Glasgow, a better feeling prevails, owing to the settlement of labour disputes in the shipyards, and to the news that one of the largest steel works in the district is about to resume. Quotations in the hide market are still rising, and the shoe trade reports improvement in home demand. In the market for vegetable oils and oilseeds an easier tone prevails.

Details of events and news in the principal markets from special correspondents will be found on later pages of this issue.

GROPING FORWARDS.

With good reason Mr Asquith described the Prime Minister's review of the position, made during last Tuesday's debate on the Consolidated Fund Bill, as the most satisfactory statement yet received on the international situation since the Armistice. Mr Lloyd George very frankly put before the House the differences in point of view which made it impossible for France and Britain to agree on the subject of Silesia—"there was always the complication of that element of security." Full allowance was made for French feeling on this point, but most of us will agree with the Prime Minister that the British view on this point was more far-sighted. It remains to be seen how soon and how effectively the Council of the League of Nations can settle the question, but it is at least something gained that the Supreme Council is no longer to bewilder the world by trying to deal with it by means of makeshifts which decide nothing. In the meantime the Polish insurrection has been "liquidated," the Allied authority is reasserted, an agreement has been reached concerning the despatch of reinforcements, if necessary, and, in answer to a question asked by Sir Philip Magnus, the Prime Minister replied* that, in spite of their not being members of the League of Nations, the Germans will be in exactly the same position as the Poles in the matter of putting their case before the League. That Greece and Turkey should be left to fight out the question of Asia Minor was an inconsistency which Mr Lloyd George defended with his usual amazing dexterity as not only the only but the best course, because war "does in the end teach a respect for facts." Does it? It has taught him to be responsible for a Safeguarding of Industries Bill, the best that can

* As reported by the Times, but not by Hansard.

be said of which is that it seems likely to be a dead letter, and to impose economic "sanctions" on Germany which were from the first obviously a farce, and are now to be abandoned, being admitted by himself to be "irksome and injurious." Mr Lloyd George spoke with more convincing eloquence on other effects of war—this country with a debt of 8,000 millions, a heavy burden of pensions, and with millions of unemployed because our world-customers are impoverished by the war; France, with her richest provinces still devastated, unable to balance her Budget in spite of all her industry and thrift; Italy in the same case; distress in Austria; in Russia the problem of 35 millions dying from starvation, with the gaunt spectre of pestilence and the danger that it may sweep over a Continent too exhausted by war to resist it. "The Disarmament Conference at Washington comes not an hour too soon; and even that will not suffice, unless there is a constant vigilance of federated nations throughout the world, whatever form that federation may take, to make sure that ambition, folly, and greed shall never again plunge the world into this quagmire of wretchedness." After these evidences of sweet reasonableness on the part of the Prime Minister—so very different from the temper in which he appealed to the country in 1918—the House was little surprised to hear a Coalition Unionist, Colonel Moore-Brabazon, urging that we should no longer look on Germany as an enemy; though when he waxed eloquent on the necessity of the revival of Central Europe in the interests of British trade and prosperity, Colonel Wedgwood suggested that he should "come over to this side."

Thus there seems to be at last some hope that the long-delayed date of the official outbreak of peace may find public opinion in this country, even as represented by the politicians who so often play to the lowest instincts of the gallery, earnestly eager for real peace and all that it means; and with the appalling conditions in Russia to remind our revolutionary hotheads of the consequences of upsetting even a faulty economic system before a new one is ready to work in its place, there is perhaps a chance that the world may really settle down to try to bring back prosperity by work and thrift and the other copybook virtues which have lately been flouted as Victorian shibboleths. It is surely high time. The Chancellor of the Exchequer—who later in the debate reviewed the country's financial position—told the House once more that if the estimated revenue is realised there will still be 78 millions, against 80 as originally expected, for debt redemption. He admitted, however, that the E.P.D. will certainly be below estimate, and seemed to be doubtful about Miscellaneous Receipts, though he stated that a very substantial sum will come in on reparation account. But for next year the prospects are such as to call for drastic action. "In order to make the accounts balance, we shall have to reduce expenditure by at least £130,000,000"; but the answers received from the departments to the Treasury circular of last May, which called on them to provide for an aggregate reduction of 113 millions, only indicate definite reductions of 50 millions, with a "probability" that when complete returns have been received we shall achieve a reduction of 70 millions, leaving 60 more still

to be cut off. Under these pressing and unprecedented circumstances, the Chancellor very properly claimed that the House needs help, and justified the appointment of an outside committee. Its composition had already been announced at question time as follows:—Sir Eric Geddes, chairman, Lord Inchcape, Lord Faringdon, Sir Joseph Maclay, and Sir Guy Granet. It is a strong team, with a great task before it. The House of Commons, very naturally, resents its appointment very seriously as unconstitutional and derogatory to the dignity of Parliament. It is certainly most unfortunate that this dignity, already much impaired by the manner in which the Government has treated the House, should have to be further discredited. But the question of the balancing of the nation's Budget and relief from the burden of taxation which takes the heart out of industry is clearly so urgent and important that no measures which can assist its solution can be forgone. The House of Commons has talked and talked about economy, but has not voted in the right way at the right time, and it has only to thank its own failure when it finds itself reinforced by five gentlemen from outside. If their advice and suggestions are effective—as there is at least some reason to hope—public opinion, with its shrewd instinct for practical advantages, will emphatically endorse the Government's action. For we have to remember that the economies demanded are based on estimates of revenue which are by no means certain to be fulfilled. All over the world the same problem faces the peoples of checking the expenditure of Governments and relieving the weight of taxation. Mr Beauchamp, chairman of the Bank of New Zealand, told the meeting of shareholders, held on June 17th, that during the year ended on March 31st last the advances in New Zealand had increased by no less than £10,500,000, of which, roughly, £2,000,000 was caused by income-tax payments. When prosperous communities can only meet the taxgatherer's demands with the assistance of their bankers on this scale, it is more than high time to call a halt.

THE DIRECTION OF OVERSEAS TRADE.

THE quarterly statistics published in the latest Board of Trade returns showing for the first six months of the year the origin of imports and destination of exports, provide some interesting comparisons with previous years. The official figures are classified in two groups only—foreign countries and British Possessions. In the tables below we separate European from other foreign countries and show, first of all, the balance of trade with Europe, the United States, Other Foreign Countries, and the Dominions for the first half of each of the years named in the table—

	JANUARY TO JUNE.			
	1914.		1919.	
	Excess of		Excess of	
	Imports	Exports	Imports	Exports
Europe	Min. £ 294	Min. £ 1379	Min. £ 2315	Min. £ 1074
U.S.A.	345	..	620	..
Other Foreign Countries	54	..	596	..
British Possessions	66	..	171	..
	61.1	..	326.7	..

The most striking feature here is the change that has occurred in our trade with the Continent, there being a surplus of imports from Europe in the first six months of 1921, whereas in the two previous years there was a very heavy excess of exports. Gratification at the reduction in the adverse balance with the United States is tempered by the fact that allowance has to be made for the heavy decline in prices as compared with last year. Moreover, later figures will show that the proportionate decline in exports to America has been almost as great as that of imports.

Several Continental countries have reversed the balance on merchandise account during the past six months as

compared with the corresponding period of 1920, as may be seen from the table below:—

	FIRST HALF-YEAR.	
	1920.	1921.
	Excess of Exports.	Excess of Imports.
	Million £.	Million £.
France	63.4	2.8
Belgium	15.5	4.7
Sweden	0.1	3.4
Denmark	3.6	15.1
Netherlands	11.0	2.1

Both France and Belgium, and especially the former, show a remarkable change, for which the coal stoppage is doubtless partly responsible.

The next table shows imports from Continental countries in the first six months of each of the past six years and of 1921:—

From.	IMPORTS—JANUARY TO JUNE.						
	(000's omitted.)						
	1914.	1916.	1917.	1918.	1919.	1920.	1921.

	148,778	92,316	74,985	88,066	90,674	220,097	143,060

As compared with last year, there is a heavy decline all round, with the exception of Denmark and Holland. The drop in imports from France and Belgium is not so heavy as in some cases, and in the case of Germany the figure is practically unchanged. As compared with 1914 the decline in the total is heavy, if allowance be made for the change in values.

The next table gives imports from other foreign countries:—

From.	IMPORTS—JANUARY TO JUNE.						
	(000's omitted.)						
	1914.	1916.	1917.	1918.	1919.	1920.	1921.

Other countries	11,865	17,559	22,024	19,555	28,589	34,143	30,793
	120,619	228,167	236,605	348,516	368,506	499,350	254,455

This year's figures are all smaller, with the exception of Uruguay, which has sent us slightly more. The comparison with 1914 is very different from that of the previous table. Imports from the Dominions are shown in the next table:—

From.	IMPORTS—JANUARY TO JUNE.						
	(000's omitted.)						
	1914.	1916.	1917.	1918.	1919.	1920.	1921.
Canada	9,899	25,384	27,310	44,566	48,243	33,974	23,051
Australia	21,431	19,165	41,750	33,083	54,173	59,906	41,997
New Zealand	16,068	18,398	16,153	17,201	23,989	25,795	29,438
India and Ceylon	22,615	40,826	42,294	50,089	64,582	68,528	29,970
South Africa	7,179	6,743	7,145	6,825	11,741	13,558	9,302
Egypt	11,858	16,221	22,674	35,949	23,850	51,170	12,153
West Africa	3,394	6,986	7,685	8,293	12,213	19,367	5,709
Mauritius	302	2,442	230	2,872	4,537	4,556	4,401
Straits Settlements	7,134	8,685	8,530	9,240	9,172	10,090	3,751
Malay States	1,338	2,517	5,117	1,193	3,771	4,216	1,823
West Indies	1,373	2,817	2,846	2,658	5,651	8,831	3,707
Other Possessions	3,896	5,536	7,145	7,633	9,978	13,701	9,512
Total	106,487	153,719	188,809	215,602	261,899	313,887	174,176

New Zealand is the only exception to the general decline from last year, while heavy reductions are shown by India and Ceylon and Egypt. In the case of the latter the drop in the price of cotton has no doubt played a

very large part. Exports to the Continent show a much larger contraction than imports:—

To—	EXPORTS—JANUARY TO JUNE.						
	(000's omitted.)						
	1914.	1916.	1917.	1918.	1919.	1920.	1921.
France	14,364	47,406	55,416	62,573	75,060	75,869	20,849
Italy	7,437	9,738	13,278	14,286	11,711	21,775	9,485
Switzerland	2,084	1,919	3,164	2,608	7,231	6,493	2,407
Spain	3,686	3,720	2,677	2,049	4,955	8,264	8,591
Portugal	1,600	2,164	1,729	1,710	2,804	5,115	1,864
Belgium	6,507	108	133	45	3,424	28,111	9,646
Germany	18,890	..	..	..	3,424	10,711	6,958
Austria-Hungary	2,188	495	22	652	2,623	7,247	2,446
Roumania	1,573	..	..	..	1,540	2,491	3,394
Turkey (Europe)	1,833	25	92	402	3,410	7,039	2,446
Russia	8,505	8,895	15,156	109	2,634	5,087	1,886
Sweden	3,757	3,207	1,261	977	8,970	20,985	4,644
Norway	3,543	5,134	4,380	1,680	11,069	14,848	5,919
Denmark	2,995	5,059	3,809	980	16,342	15,576	4,265
Netherlands	8,127	12,035	9,731	7,136	11,743	22,345	12,910
	88,940	99,935	110,848	95,207	182,791	253,465	97,462

Roumania provides the only exception, with a slight increase, while France and Denmark record the heaviest declines.

Exports to other foreign countries do not show so severe a contraction:—

To—	EXPORTS—JANUARY TO JUNE.						
	(000's omitted.)						
	1914.	1916.	1917.	1918.	1919.	1920.	1921.
United States	17,769	17,456	19,179	15,090	10,607	42,282	23,184
Cuba	890	977	1,046	1,051	834	2,557	2,461
Mexico	159	160	355	339	624	1,567	2,896
Argentina	9,645	6,857	6,214	7,487	9,190	18,260	16,332
Brazil	4,034	2,885	3,436	4,170	4,711	9,784	6,404
Chile	2,569	1,863	2,145	3,491	2,848	3,390	3,574
Peru	706	468	786	806	823	1,872	1,628
Uruguay	1,127	967	1,027	1,450	1,561	2,543	1,881
Japan	5,146	3,633	2,592	4,985	14,594	14,691	9,621
China	8,445	5,279	4,135	7,887	7,135	18,601	14,691
Turkey (Asia)	2,877	205	254	605	2,674	9,352	751
Other countries	13,745	12,580	15,090	17,644	18,145	35,852	31,131
	67,342	53,035	56,259	60,508	64,137	160,474	112,867

Exports to South American countries have kept up fairly well, and, taking price changes into consideration, probably show some increase in volume. In the case of Chile an increase in the value figures is shown. Exports to the Dominions are compared in the next table:—

To—	EXPORTS—JANUARY TO JUNE.						
	(000's omitted.)						
	1914.	1916.	1917.	1918.	1919.	1920.	1921.
Canada	9,580	8,755	9,121	6,577	6,271	21,170	10,255
Australia	17,711	17,040	10,148	10,538	13,924	24,336	24,898
New Zealand	4,689	5,801	3,618	3,291	4,665	9,378	8,332
India and Ceylon	36,676	27,870	29,541	29,291	28,239	86,056	60,749
South Africa	10,830	10,937	9,383	10,333	9,906	22,423	16,306
Egypt	4,935	5,531	7,257	13,079	7,492	20,389	8,466
West Africa	3,931	3,010	3,501	4,401	5,118	11,354	5,830
Straits Settlements	2,612	2,454	2,161	3,288	2,611	7,381	4,924
West Indies	1,233	903	1,099	808	797	2,222	2,078
Other British Possessions	6,979	6,557	8,212	9,512	8,905	18,819	15,728
British exports to Possessions	99,176	88,838	84,041	91,118	87,828	223,528	158,566

Australia has taken more, and in the case of New Zealand, South Africa, and the West Indies the decline is small. Heavier reductions are shown for Canada, India, Egypt, and West Africa.

The final table gives re-exports:—

RE-EXPORTS JANUARY TO JUNE.

cost of steel, caused mainly through dear fuel and slack labour, the world will consume little more than 30,000,000 tons of steel this year. But the world wants vastly more than this tonnage. Colossal railway and other steel-using schemes have been held up since 1914. Vast constructional works have been delayed. Renewals and repairs have fallen far into arrears. For more than four years the chief steel plants were engaged on munitions. Not only so, but much machinery and other steel work was destroyed. For more than two years since the armistice most of our steel plants have operated far below full capacity. For seven years most ordinary steel wants have stood neglected. The tonnages of steel diverted from commercial to war purposes, or lost through war-time damages or after war-time industrial dislocations, since 1914, by the steel-producing countries, have not been less than the following:—United States, 90,000,000 tons; Germany, 75,000,000 tons; Britain, 30,000,000 tons; France, 20,000,000 tons; Russia, 10,000,000 tons; Belgium, 10,000,000 tons; other countries 25,000,000 tons.

Some idea of the world's steel requirements may be gathered from these figures. A few months ago the Brazilian Minister of Industry gave particulars showing that his State alone required 16,000,000 tons of railway steel and 14,000,000 tons of other steel. And Brazil produces no steel for herself. She has to import the whole. What a glorious trading avenue this opens! Or take British India. Just before the war it was stated that India needed another 30,000 miles of railway, with all the necessary equipment—a mileage equal to the entire and dense network of our British home railways. To-day the need is greater. Still more new mileage is wanted, and the existing railways need abnormal renewals. China wants vast railways. So does Africa. So do nearly all the Latin-American Republics. Central and Eastern Europe will call for enormous quantities of steel as soon as financial matters are smoothed out.

For this huge potential trade in steel, what is the competition? Ignoring temporary and artificial factors, let us glance at the permanent and fundamental points in the steel-trade problem. The United States is the biggest productive country. She holds the most ore and coal, and has the most plants. But she has such a big home market, and labours under such great shipping handicaps, that, in ordinary times, she cannot export very much heavy steel. And it is export trade in which we are chiefly interested. It is not the American home trade, but the foreign trade that interests us. In this line America is badly placed. Her ore is deposited 1,000 miles from her coalfields. Her iron and steel works, on account of the coal, are between 400 and 500 miles from seaboard. Her ports are at enormous distances from most foreign markets. She has coal and ore which are easily mined, but these natural advantages are more than neutralised by her long haulage distances.

Then there is Germany. Germany beat us before the war mainly by means of export bounties. But export bounties are not allowed under the terms of the Peace Treaty. Besides, Germany has lost one-third her productive capacity by the reversion of the Lorraine. Germany is still one of the world's three chief steel countries, but in Germany the ore and coal supplies are far apart, and the works are far from seaboard.

Against these natural and economic disadvantages, Great Britain has her ore and coal supplies, her furnaces and shipping ports, all practically side by side. Whilst in Germany the average haul for raw materials to furnaces, and for finished goods to ports, is 150 miles, and whilst it is over 500 miles in America, it is less than 30 miles in the little United Kingdom. On top of this we have the very best coal and the very best ore. We have a unique, inherent manufacturing and metallurgical skill. We have the widest experience of foreign markets and customs. We have the most Colonies needing steel. We have the most ships to carry raw materials inward and finished goods outward. Our resources are by far the best in the world—so far, at all events, as exportation is concerned. Our trading opportunities are glorious and golden. If only we will shake off our indolence and stupidity, and economically develop our resources and take our opportunities, we shall once more get the lion's share of international trade.

BRANCH SHOP COMPANIES.

ABOUT two months ago we reviewed the reports of a number of companies engaged in the retail shop trade in London, and the figures showed that net profits had already started to decline. In the following article we propose to examine the accounts of several shopkeeping companies whose business is run on the principle of a number of branches with centralised management. In all kinds of retail trade the year 1920 was a very difficult one. It will always be remembered for the severe decline in wholesale prices which set in in the early summer, and although it may be argued that many retailers did not bring down prices to the consumer in anything like the measure which the drop in wholesale prices would appear to justify, it nevertheless has to be remembered that a great bulk of the stocks offered to the public in 1920 were purchased when wholesale prices were at their highest, and had to be disposed of at a smaller profit or at a loss, or else written down very severely in the balance-sheets. Our list of companies is a miscellaneous one, but all are well known companies, and will require no introduction. In the first table we show the dividend record since 1910:—

	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920
Bobby and Co.	%	%	%	%	%	%	%	%	%	%	%
Boots (Eastern)	12	12	12	12	12	10	10	12	12	12	12
Charles Baker and Co.	nil	5	7	6	3	7	8	8	12	25	10
Home and Colonial ("A")	nil	20	20	20	25	30	30	30	30	30	15
Hope Brothers	5	6	6	6	5	4	6	8	10	15	10
International Tea Stores	7	8	8	9	10	7	10	12	12	12	12
Lipton	6	6	6	6	nil	nil	7	12	12	12	12
Maynards	10	10	10	10	10	20	40	50	50	50	20
Maypole Dairy (Ord.)	100	200	212	162	100	100	25	125	100	100	37
Park's Drug Stores	nil	nil	nil	4	6	4	7	10	10	10	10
Pim Bros.	7	7	7	7	7	9	10	12	12	12	12
Plummer, Roddis	5	5	6	8	5	5	7	8	10	15	10

* Free of income-tax.

As would be expected, no increases in distributions were made, and one or two drastic reductions will be observed, but it should be added that some of the lower dividends are paid on larger capital. This is particularly so in the case of Maynards, Maypole Dairy Company, whose deferred capital was increased from £1,233,300 to £2,158,300, and Home and Colonial Stores, whose ordinary capital rose from £100,000 to £400,000. The reason for most of the other reductions can be clearly seen from the next table, which gives net profits for 1913 and from 1915 to 1920:—

	1913.	1915.	1916.	1917.	1918.	1919.	1920.
Bobby and Co.	£19,458	£23,461	£30,058	£29,595	£32,249	£51,136	£44,400

Pim Bros.	18,366	24,718	27,726	29,472	23,445	34,725	27,449
Plummer, Roddis	20,787	16,997	22,635	20,351	22,111	36,887	16,852

* Eighteen months.

The decline in aggregate profits as compared with the year 1919 amounts to close upon £500,000, or 20 per cent., but the total is more than £800,000, or 77 per cent. higher than in 1913. The largest decline is shown by Lipton, and this the directors explain as being due partly to the unprecedented falls in the value of commodities, the company's large turnover necessitating the holding of considerable stocks which were from time to time affected by these reductions, and to losses on overseas trade, and on the company's tea and rubber estates. Only three companies have recorded an increase in profits, the largest being that of the Home and Colonial Stores, a company which can show a very steady record of profits throughout the war period. A sharp decline in profits is shown by Hope Bros., despite a large turnover. The chairman stated at the annual meeting that the rate of gross profit had been less, the company being compelled to place orders some months in advance of requirements, and when goods were delivered they had to offer them at the current market price.

The next table shows the principal balance-sheet items:—

	Total Liabilities.	Re-serves.	Leases, Property, &c.	Stock in Trade.	Goodwill.	Cash & Investments.
	£	£	£	£	£	£

Plummer, Roddis	512,421	61,000	196,308	135,117	50,000	3,178

* Includes goodwill.

Only two companies in the list failed to separate goodwill in the accounts from the property item, namely, Lipton and Pim Bros. Maynards wrote off the remainder of the item a year ago, and Hope Bros. have reduced theirs by £15,000, but in all other cases no change has been made. In some instances, notably Home and Colonial and International Tea Stores, the amount still stands rather high in proportion to the total assets. It is as well to remember, however, that with a company of this description goodwill must always be a valuable asset. The book value of stocks does not show, with one or two exceptions, the decline which might have been expected.

In the final table we give share prices and yields:—

Description.	Share.	Present Amount.	Price July 30, 1914.	Price July 31, 1915.	Price July 31, 1916.	Price Aug. 16, 1921.	Present Yield.

The market has not been very active, and in most cases prices are slightly lower than they were a year ago. The yields with a few exceptions, however, do not run unduly high, taking the class of business in which the companies are engaged into consideration. The outlook, however, is sufficiently obscure to damp the potential investor's ardour in respect of this, as of many other sections of the industrial market.

Business Notes.

Employment in July.—Although unemployment remains serious, July showed distinct improvement in a number of industries. In some cases, particularly iron mining and pig-iron manufacture, work continued to be almost entirely suspended, and in others, including iron and steel and tinplate manufacture and the textile trades, unemployment and short time working were general. In the pottery trades, where a rapid recovery was made, and in agriculture and the building trades employment generally was fairly good. According to the *Labour Gazette*, the percentage unemployed among members of trade unions from which returns are received fell from 23.1 at the end of June to 16.7 at the end of July, and the percentage unemployed among workpeople insured under the Unemployment Insurance Act fell from 17.8 at June 24th to 14.8 at July 29th. The coal mining industry is excluded in calculating the trade union percentages for June; the Unemployment Insurance percentages for June include those coal miners who were entitled to claim unemployment benefit under the Act, but not those who ceased work owing to the trade dispute. The Trade

Union percentages month by month for a number of years are shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.											
End of—	1913.	1916.	1917.	1918.	1919.	1920.	1921.	1913.	1916.	1917.	1921.

* Excluding coal miners.

The decline in wages continued in July. The *Labour Gazette* states:—"Changes in rates of wages, reported as having come into operation in July, in the industries for which statistics are compiled by the Department, affected over 3,600,000 workpeople, of whom less than 5,000 received increases. The net effect of all the changes was a reduction in weekly full-time wages of about £1,070,000."

Cost of Living.—According to the statistics compiled by the *Labour Gazette*, the cost of living rose 3 points between July 1st and August 2nd. The downward movement, which had been unbroken since November, 1920, was checked in June, and gave way to this slight rise in July. How the official cost-of-living figures have moved month by month since January, 1920, is shown below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.					
1920.			1921.		
Per Cent.	1st	Per Cent.	1st	Per Cent.	1st
January	125	January	165	January	165
February	130	February	151	February	151
March	130	March	141	March	141
April	132	April	133	April	133
May	141	May	128	May	128
June	150	June	119	June	119
July	152	July	119	July	119
August	155	August	122	August	122
September	161	September	161	September	161
October	164	October	164	October	164
November	176	November	176	November	176
December	169	December	169	December	169

As regards food alone, the average increase, as compared with July, 1914, in the cost of the pre-war working-class dietary rose from 120 per cent. at July 1st to 126 per cent. at August 2nd. Milk, butter, eggs, bacon, and cheese became dearer, but meat, sugar, and potatoes were cheaper.

Iron and Steel Output.—Statistics issued by the National Federation of Iron and Steel Manufacturers show that the production of pig-iron in July amounted to only 10,200 tons, compared with 386,000 tons in March and 750,600 tons in July last year. The production of steel ingots and castings amounted to 117,200 tons, compared with 359,100 tons in March and 789,900 tons in July last year. At the end of July, 15 blast furnaces were in operation, compared with 109 immediately before the coal stoppage and 299 last July. The following table shows the production of pig-iron and steel in each month from January, 1919:—

	Pig Iron.		Steel Ingots and Castings.	
	1920.	1921.	1920.	1921.
January	Tons. 665	Tons. 754	Tons. 493	Tons. 493
February	645	464	798	483
March	699	386	840	359
April	671	60	794	70
May	739	14	846	6
June	726	1	845	3
July	751	10	790	117
August	752	..	709	..
September	741	..	885	..
October	533	..	544	..
November	403	..	505	..
December	683	..	747	..
	8,008	..	9,057	..

(000's omitted.)

Of the pig-iron produced in July 3,300 tons were basic, 2,600 tons foundry, 600 tons forge, and 3,700 tons of "other qualities."

Cotton Trade Depression.—Our Manchester correspondent writes:—Early in July there was an improvement in the Lancashire cotton industry. Manufacturers of cloth restarted looms, and at the end of that month the Master Spinners' Federation decided to bring to an end organised short time. Since the beginning of August demand has fallen off to a very serious extent, and the ground recently gained by spinners and manufacturers has now practically been lost. In weaving, looms are being stopped owing to the absence of work, and there is some talk of spinners resorting to organised short time again. The matter will probably be considered early in September. The slack state of affairs is partly due to the anticipation of lower values. Recently raw cotton rates have been fairly well maintained on unfavourable crop advices from the United States, but in yarn and cloth a falling market is now being experienced, and buyers believe that they can do better by waiting.

American Cotton Consumption.—Some interesting figures have been published this week relating to the exports of raw cotton from the United States during the season which ended on July 30th, writes our Manchester correspondent. The shipments to Great Britain amounted to 1,749,000 bales, against 3,326,000 bales in the previous twelve months. The decline in the takings reflect the trade depression in Lancashire, and the smaller consumption is due to the large amount of short time in the mills. Particulars with regard to Germany are rather striking, and it is stated that the shipments from America during the past twelve months totalled 1,325,000 bales, as compared with only about 420,000 bales in 1919-20. It is evident that Germany, despite her financial position, has been able to arrange imports on a free scale, and according to recent letters spinners in Germany are very busy. The takings of France do not show much change, the exports for the past year being 577,000 bales, against 584,000 bales in the previous twelve months.

Local Housing Loans.—The second report of the Ministry of Health relating to the year ended March 31st last (Cmd. 1,446, 2s), shows that up to that date the amount raised for housing purposes by 540 local authorities by means of housing bonds, Local Stock issues, &c., was as follows:—

	£
Housing Bonds	17,150,537
Saving Certificates	9,441,471
Local Stock	29,126,068
Mortgages of rates	14,709,325
	70,427,401

Among the smaller local authorities these efforts had to be supplemented, and during the year 1920-21 loans from the Local Loans Fund amounting to £58 millions were made on behalf of local authorities, with a rateable value of less than £200,000. Apart from loans for housing purposes, loans amounting to £21,885,451 were sanctioned during the year to local authorities in England and Wales, as compared with £14,819,055 in the previous year. The largest item was £5,386,191 for settlement of ex-Service men on the land, as compared with £5,432,248 in the previous year.

Enemy Debts.—The Board of Trade makes the following announcement:—The attention of British subjects resident in this country who have pre-war debts owing to them from branches outside Germany* of German undertakings whose head office is in Germany, is drawn to the fact that, apart from their remedy against the branch, they may be entitled to claim payment alternatively from the head office through the Enemy Debts Clearing Office. In the event of there being any doubt as to recovery of such debts from the branch, British creditors will be well advised to file a claim against the head office with the Enemy Debts Clearing Office, Cornwall House, London,

S.E. 1. It is essential, however, that any such claims should be received by the Clearing Office before September 30th.

Trade with South Africa.—Mr W. G. Wickham, His Majesty's Senior Trade Commissioner in South Africa, is at present in this country on an official visit, and is prepared to interview at the Department of Overseas Trade, from September 1st to September 16th, firms who desire to obtain information as to trade possibilities in the Union of South Africa. London firms who are desirous of consulting Mr Wickham should communicate immediately with the Department of Overseas Trade, 35 Old Queen street, London, S.W. 1, quoting the reference 3092/T.G., and indicating briefly the subject on which the interview is desired. Mr Wickham will subsequently visit some of the principal industrial centres of the United Kingdom.

Transvaal Output for July.—The July statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 689,555 ounces, as compared with 678,490 ounces in June, and 736,099 ounces for July, 1920. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.
January	Fine Ozs. 787,467	Fine Ozs. 782,634	Fine Ozs. 714,182	Fine Ozs. 676,059	Fine Ozs. 670,503	Fine Ozs. 651,593

Total	177,274	183,147	187,827	190,634	189,050	186,407	184,173	182,933

The Outlook in Mexico.—President Obregon seems determined to show that Mexico can recover without recognition by the United States. It is now announced that payment of interest will be resumed in October on the City of Mexico Loan of 1889, guaranteed by the Federal Government, and on the External Loans of 1899, 1904, and 1910—that of 1913 being passed over for the present, as issued unconstitutionally by Huerta. The capital of these four loans, apart from the arrears of interest accumulated since the default in 1914, amounts to about £29,500,000, and a half-year's interest to about £647,000. The interest is to be paid out of the proceeds of the increased export duty on oil, which has apparently not cut off the export, as was predicted by the American oil interests. But, besides this source of revenue, it is stated by the *Financier* of August 16th that the retrenchments now taking place, chiefly in the Civil Service, will save some \$36,000,000, or about £3,600,000, annually—which is about two-fifteenths of the whole estimated expenditure for 1921. If these figures can be depended on, the prospect is encouraging; but the arrears of interest, amounting to some £9,000,000, can hardly be disposed of except through the long-predicted loan from American financiers, which will not come until Washington recognises President Obregon's Government; and even then the terms will be onerous. Moreover, Mexico is suffering, like other Spanish-American countries, from the diminished purchasing power of Europe. Still, the business outlook appears hopeful, and the efforts made to attract the attention of American commercial and financial interests are apparently meeting with some response. A statement issued by the Equitable Trust Company of New York from its agent in Mexico City—Mr John B. Glenn,

who has had 16 years' experience of the country and was U.S. Consul in Mexico City from 1910 to 1917—reports that the situation has never been so promising since the overthrow of President Diaz. Revolutionary outbreaks have ceased; the people are sick of warfare; business conditions have been improving; trains are running according to time-table, and through services are in operation from the capital to New Orleans and St Louis; railroad congestion will soon be relieved by increased rolling-stock; American business men are visiting the country and opening up trade relations; the Government is strong, friendly to the United States, and actively promoting internal reforms; and the oil clause of the Constitution will not be applied retrospectively, so that the fears of the American oil companies will be allayed. But President Obregon cannot sign a treaty unless authorised by Congress, which will approve no treaty pending recognition by the United States. We gather that his policy is to remove all American apprehensions, and thus to lead up to recognition.

The Rubber Situation.—A Stock Exchange correspondent writes:—Efforts are being made in the rubber market, in spite of the holiday season of the year, to reach some common ground of agreement upon which the producers could consent to act together. The recent scheme propounded by the Rubber Growers' Association, upon which we commented last month (*Economist*, page 139), forms a standard around which the various interests can meet. Apparently insuperable difficulties stand in the way of the effort for harmonising differences. Ceylon, for instance, can claim that on some of the Cingalese estates rubber can be produced at a price which, even at the present figure of 8d per lb for rubber, shows a meagre profit. Certain of the Chinese producers are able, by the aid of cheap labour and food, to state a similar case, but most of the British, and many of the Dutch, companies are working at a loss, and it would seem as though nothing could save a number of rubber-producing concerns from bankruptcy unless something is done to save them. On the other hand, rubber companies more amply supplied with funds are inclined to the view that they can probably tide over the present crisis, and that, when the turn comes for the inevitable improvement in rubber trade conditions, they will be in a particularly strong position from having been able to weather a storm that has wiped out a good deal of competition. The question at issue is, bluntly, whether the rubber industry shall be allowed to drift into such a condition as will involve the complete insolvency of the weaker rubber companies, or whether any plan can be found, here and now, whereby the situation could be saved for all. The Rubber Growers' Association proposes a further drastic restriction of output. On this head there is a very general agreement. Many, if not most, of the groups would be willing to suspend tapping up to the point at which the output would be limited to a quarter of its normal production. The scheme further proposes that there shall be one central agency established for the disposal of the rubber that comes out of the estates, and that all the producers who agree to the present scheme should bind themselves to accept its provisions for the space of five years unless exceptional circumstances arise. Five years is felt by many to be too long a period for such an arrangement to run, but a more weighty objection is that which attaches to the central selling agency. Sales of rubber at present are conducted through many firms of brokers in various parts of the world, brokers who make their living out of the business, and who, naturally enough, feel a reluctance to hand over to a single agency this particular source of their income. Briefly, then, this is the position as it stands at present, and the energies of those connected with the financial, as well as the practical side of the business, are bent to discover some solution which will dissolve the difficulties and enable all the producers to meet upon the common ground for restriction of output and the control of sales. The Stock Exchange has taken up the matter, and some of the firms in the exchanges of Throgmorton street and Mincing lane have been obtaining assents to the proposal for the establishment of a Rubber Shareholders' Association. Anyone

who looks carefully into the matter will see, however, that a *sine qua non* for a practical scheme of control is the provision of capital whereby rubber outputs can be diverted from a free market, and stored away until such time as even the present small demand throughout the world will be obliged to pay a higher price than that which rules under the present scheme of uncontrolled selling to a body of well-organised buyers.

The Marconi Report.—The gross profits of Marconi's Wireless Telegraph Company for the year 1920 show a sharp decline, but a year ago £590,000 for damages for breach of contract was included. After deducting this item from the previous year's total, however, gross profits for 1920 at £564,800 show a decline of £383,200, as may be seen from the following comparative summary of results:—

	1913.	1916.	1917.	1918.	1919.	1920.
Gross profits	£ 246,682	£ 486,650	£ 540,185	£ 766,263	£ 1,538,040	£ 564,838
Expenses	124,319	168,217	156,350	168,125	317,300	267,156
Net profit	122,323	318,433	383,835	597,938	1,220,740	297,682
Pref. dividend	42,500	30,000	42,500	55,000	117,500	30,000
Ord. dividend	150,000	183,403	244,537	305,912	617,824	391,567
To reserve	..	32,470	100,000	150,000	..	..
Balance	Dr 70,777	72,560	Dr 3,202	87,026	491,416	Dr 123,885
Brought forward	146,726	307,546	380,106	376,760	463,786	944,452
Carried forward	76,549	380,106	376,904	463,786	955,802	820,567

The directors state that there has still been no settlement with any of the Government departments in respect of claims arising out of the war, and no credit has been taken in the accounts for them. They further explain that a large amount of business was done with foreign countries, and in consequence of the unfavourable rates of exchange which obtained during the year, substantial sums of money have been retained abroad on deposit or invested in foreign government securities. "At the end of December, when the company's accounts were closed, foreign currencies showed a very considerable depreciation, materially affecting the profit and loss account for the year." The ordinary shares get 15 per cent., and the preference shares 12 per cent., the balance forward being reduced by £123,900. A year ago a 25 per cent. dividend was distributed on the ordinary shares, 22 per cent. on the preference, and in addition a bonus of 5s per share on both classes was paid without deduction of tax. The balance-sheet shows an increase of £2,751,400 in the general reserve, presumably from the premium on the last issue of shares, the ordinary capital having been raised by £1,385,700. Investments and loans are up by £1,824,800, and shares in associated companies and patents have increased by £1,018,300. The latter item stands at £2,941,500, a footnote stating that shares in associated companies are of a par value of £3,488,800. The auditors mention that they are unable to form an opinion as to the value of the item. Marconi ordinary shares are quoted at 1½.
