Queensland Loan in New York.—Queensland has this week floated a loan of \$12,000,000 in New York. The loan bears interest at the rate of 7 per cent., and was issued at the price of 99. Cabled news indicates that the issue was successful. In view of recent controversy over Queensland legislation, the news of the issue of a loan in New York caused little surprise in the City. According to a cable from Sydney which appeared in yesterday's *Morning Post*, Mr Theodore, Premier of Queensland, stated in the Brisbane Parliament on October 12th:—"The Government intended to offer the Imperial Government first call upon the loan, Queensland accepting sterling in London for dollars, and would arrange that the loan be invested in London and drawn upon as required."

Lancashire and Inter-Allied Debts.—This week the directors of the Manchester Chamber of Commerce have passed a rather important resolution. The board has had under consideration the effect of the Inter-Allied War Debts upon the trade depression and unemployment. After discussion at some length it was decided to adopt the following resolution for submission to the Government:—"That this board urges upon the British Government the expediency of endeavouring to arrange for the cancellation and/or remission (wholly or in part) of Inter-Allied indebtedness arising from the war as one of the most practical steps which can be taken to ameliorate the existing chaotic condition of foreign exchanges, which, in their opinion, is largely responsible for the prevailing stagnation in trade and consequent unemployment."

Cotton Cloth Exports.—Our Manchester correspondent writes:—"At the beginning of last year the Board of Trade started to publish particulars relating to the exports of cotton cloth in square yards instead of linear yards, and since then Manchester merchants have been much confused, as it has not been possible to compare satisfactorily the figures with preceding years. Strong repre-

sentations have been made to the Board of Trade in favour of both sets of statistics being issued, but up to now it has not been possible to get the Government to meet the wishes of Manchester. The Chamber of Commerce has not allowed the matter to drop, and in order to get over the awkward position of affairs details have recently been secured from the Customs authorities in linear yards of the exports during the six months ended June 30th. Some comparative figures, therefore, are now available, and it is of interest to mention that for the period referred to linear yards are given as 1,301,913,300, and square yards 1,211,021,700. It is apparent from the particulars supplied that the average width of cloth shipped from Great Britain is about 33½ inches. Certain markets abroad absorb comparatively wide goods, these being Germany, the Netherlands, Belgium, France, and Switzerland; but, on the other hand, narrow widths are sent chiefly to Bombay, China, the Dutch East Indies, Turkey, the Argentine Republic, and Egypt. It is hoped that from the beginning of next year the Board of Trade in the monthly returns will give the shipments in both linear and square yards.

The Fate of Upper Silesia.—With a strict impartiality secured by every imaginable provision, the Select Committee appointed by the League of Nations has produced a scheme for the partition of Upper Silesia in accordance as far as possible with the wishes of its people taken by communes, as expressed at the plebiscite last March. The exact particulars are not yet announced officially, but according to the forecasts, Poland is to receive not only Pless and Rybnik, as was expected, but the eastern half of the so-called "industrial triangle," including Königshütte and Kattowitz, together with the rural section of the Beuthen district, and also the eastern parts of Tarnowitz and Lublinitz, in the north-east of the Province; while Gleiwitz, Hindenburg (or Zaborze), and Beuthen town form the German share of the "triangle." Racial minorities are inevitably left insulated among alien majorities, but their rights are safeguarded by provisions of which the operation will be under the supervision of the League. The industries of the region are also protected for a term of years against severance by the new political frontier from their present sources of supply of coal (or water), most probably electric power, and possibly even of their workers' food, and also, it would seem, against interruption of their transport; and these provisions are to be made effective by a committee consisting of Poles and Germans, with a neutral chairman, and responsible to the League. The only puzzling feature of the arrangement is the assignment to Poland of Königshütte, and on this the Commission is said to have had much difficulty in reaching a decision. The district as a whole opted for Germany in March by a majority of three to one; but several of its communes gave Polish majorities, and the local steel industry will depend in the near future on Pless and Rybnik for its coal. In the rural communes the Polish majority votes are the outcome of nationalism; in the industrial districts, where they are comparatively rare, they are said by the Polish labour leaders who have been before the League Committee at Geneva to be due partly to resentment at the long hours and low wages in Silesia as compared with Westphalia. In Germany the decision has been received with dismay; partition, it is contended, was not contemplated by the Peace Treaty, and will ruin the industrial region. The reparation payments are said to be endangered, and the mark has fallen very heavily. It remains to be seen what the safeguards are exactly; but it seems quite possible that, however carefully they may be devised, nationalist "patriotism" or racial hatred may find means of evading them. However, the scheme looks as if it might be workable; it has been constructed with great care and much labour, witnesses have been heard from both sides, the Committee that produced it comprised the representatives of four absolutely disinterested Powers—Belgium, Brazil, China, and Spain; no member had previously spoken on the question; the expert sub-committee which went through all the evidence afresh, was Swiss; the text of the Treaty has been strictly followed, and the League

and the Supreme Council have practically accepted the decision in advance.

Anti-Trust Legislation in Norway.—We have received from the Department of Overseas Trade a sketch, translated from a Norwegian newspaper article, of the legislation devised by the Royal Commission appointed in 1916 to check the abuses of Trusts and cartels. Presumably a Bill embodying it will be submitted to the new Storting. The Commission finds that cartels, usually in the form of price agreements, exist in more than 30 trades or groups of trades concerned with food, clothing, timber, paper, matches and cellulose, building, steel and iron goods, goldsmiths' work, the electro-chemical industry, oils and colours, printing and bookselling, cinema films, hairdressing, watchmaking, banking, insurance, and sea transport; and that Trusts also exist and are developing. But it holds that total prohibition would be ineffective—the State should aim merely at protecting the public. The chief check proposed is publicity, secured by a system of registration and reports to a council of five members, holding office for an indefinite period, and appointed by the Crown. Unfair modes of competition will be prohibited—e.g., boycotting, exclusive agreement, and the elimination of competitors by sales below cost price. Where these checks fail, the Commission will have power to regulate prices, and even to require the sale of goods held back; such goods may be acquired by the State or municipal authorities by compulsory purchase at an official expert valuation. In extreme cases, monopolist organisations may be dissolved—companies by the decision of a court of law, cartels by the Crown. It is not stated whether the reports to the Commission are to be made solely by the companies and cartel syndicates, or also by Government inspectors, nor whether the officials of the organisations are to be compelled to give evidence on oath; but, assuming that the publicity expected is really attained, it will be far more effective in a small country like Norway than it could be in Great Britain or the United States. The other provisions of the proposed legislation are more or less paralleled in Canada and Australia. In Canada, a Commission of Inquiry may be appointed on the application of six citizens; in Australia, provision is made both for special inquiries and for investigation by a permanent body, the Inter-State Commission; but the Norwegian proposal is more comprehensive through the wide power it gives of fixing prices without an appeal to the law courts, and even in cases where the prices are kept up merely by a tacit understanding between the vendors. The traders' criticisms are yet to be heard. Commissions are far from infallible, and State action is not favoured by recent experience; but "if the State can fix a minimum wage, it can also fix a maximum price." A simpler method of dealing with monopoly prices might be the temporary suspension of the import duty on the commodity in question. But it is possible that this might extinguish the weaker among the native producers, and so lessen the probability of future competition. Free-trade, the most effective of all weapons, is apparently not contemplated; and the weapon of publicity seems the most effective of those to be provided by the scheme.

U.S.A. Rubber Trade.—Exports of rubber goods from the U.S.A. for the fiscal years ending June 30th have been as follows:—

Year ended June 30,	1915.....	\$
" " "	1916.....	14,767,513
" " "	1917.....	35,153,374
" " "	1918.....	31,105,075
" " "	1919.....	33,343,181
" " "	1920.....	43,856,782
" " "	1921.....	69,226,716
" " "	1922.....	59,565,572

The first half of the fiscal year 1921 gave promise of a record total for the year, the half-year figures being roughly 42,000,000 dollars, but the second half (January-June, 1921) only added another 17,000,000 dollars. The markets showing the least decline were in North America, including Canada, Mexico, Central America, and the West Indies. Mexico, in fact, showed an increased demand. The greatest decline was in the South American markets, but this, as in other countries, was partly due to

lower prices. A considerable reduction was made, for example, in tyre prices in the early summer. Beside the world-wide causes of declining trade, overstocking at high prices, restricted credit, and low exchanges, there is the additional factor of increasing foreign competition, and American manufacturers of rubber goods will have to meet this with greater vigilance than heretofore. Exports of motor-car tyres constitute about 55 per cent. of the total exports of rubber goods, but it is admitted that British competition is becoming more severe in the British Colonial market, whilst the French tyre makers are trying hard to extend their sales in South America. American manufacturers hope to meet this competition successfully through the high quality which they claim for their goods, and also by an extension of their special "tyre service" in garages and tyre stations, offering accessories and repairs, which they have found so successful in their home trade. On the other hand, the policy of offering mileage guarantees and adjustments appears to be declining in favour—at least, so far as the export trade is concerned. The American makers are expecting great things, in the way of increased export trade, from their special type of straight-side cord tyre, since they are now exporting cars fitted with these straight-side rims and tyres in increasing numbers. The U.S.A. Department of Commerce, which has lately been reorganised and expanded, is to co-operate vigorously with the rubber goods manufacturers in extending trade.

Greek Currants.—Burlumi's Annual Report on Currants states that last season's Greek crop was 89,000 tons, as compared with the estimate of 90,000 tons given in the last annual report. This crop of 89,000 tons is lowest yield since 1900. Exports from Greece for the 1919-20 and 1920-21 seasons were distributed as follows:—

To—	1919-20.	1920-21.
	Tons.	Tons.
United Kingdom	70,000	55,000
U.S.A. and Canada.....	28,000	16,500
Holland and Germany	6,000	12,500
France and other countries	6,000	3,500
	110,000	87,500

The new crop is estimated at 125,000 tons. At the beginning of last season "the prospects of a successful season appeared rosy," but prices began to fall owing to poor demand and exchange depreciation, and the fall was accentuated in November last, when the Food Minister reduced the price of his stocks from 75s to 45s per cwt. The report continues:—"The market continued flat and lifeless all through the winter months, buyers adopting the hand-to-mouth policy for their requirements. Early in March a syndicate of speculators bought the entire Government stock of currants, some 7,000 tons, at an average price of 30s per cwt duty paid, and this event infused some life into the article. The major part of these old currants were exported to Germany, Holland, and America. A better tone prevailed, but prices remained practically stationary all through the spring and summer months, with occasional fluctuations within narrow limits. The season ended disastrously, as the fall in prices has been severe, thereby causing incalculable losses to the dried fruit traders generally." The privileged company distributed for the year ended August 22, 1920, an ordinary dividend of 34.50 drachmas per share, equivalent to a little over 12½ per cent., while founders' shares received 34.50 drachmas per share, equivalent to 5 per cent.

A Nitrate Agreement.—Messrs Henry Bath and Son inform us that news has been received by cable from Chile that a definite agreement has been signed between the Nitrate Producers' Association and the pool, under the terms of which the association withdraws its recent selling prices of 14s per quintal f.a.s. Chile, for delivery to March 31, 9s 9d April, and 9s 3d May-June, 1922, and substitutes the following:—10s 6d October, 11s November, 1921-April, 1922, 10s 9d May, 10s 3d June. At the same time, the association undertakes to compensate the pool and other buyers of association nitrate from June, 1920, by reimbursing to them a minimum of £1,500,000 (in proportions to be decided by the President of Chile), which will be collected from producers on all new association sales at the rate of 1s 8d per quintal on quantities

shipped to March 31st, 1s on shipments in April 1-June 30, 1922, and 4d for July 1, 1922-June 30, 1923, the latter rate to continue for a longer time, if this is necessary to make up the minimum amount. Upon this news Messrs Henry Bath and Son comment:—"Now that the association has fixed 11s per quintal for season shipment, consumers will have faith in the maintenance at least of the new and much-reduced scale of European prices lately introduced by the pool, which is materially below the f.a.s. parity, and as an earnest of this it may be mentioned that the pool has sold about 100,000 tons since the reduction first came into force on the 3rd instant."

The Clerical, Medical and General's Valuation Report.—Three months ago the directors of the Clerical, Medical and General Life Assurance Society announced that they would be able to maintain in the 1921 distribution of profits their rates of bonuses to participating policyholders of 1911 and 1916, while retaining the severe standard of 2½ per cent. in their calculations. We have now before us the detailed valuation report, showing how this remarkable result has been achieved. The chief factors in the production of a surplus have been a considerable increase in the net rate of interest earned on the funds and a very favourable mortality experience. Depreciation did not fall to be dealt with in the bulk at the valuation because the society during the past two years has been cutting its losses, selling its depreciated long-dated investments, and shifting over to short-dated securities redeemable at par or a premium. The amount written off for depreciation and losses on realisation was £291,651, and the funds then amounted to £6,940,603. The book value of the redeemable securities is now £212,000 below the redemption value; over three-quarters of this amount will fall into the divisible profits of the next ten years. The net interest earnings, after deducting tax, were £4 6s 2d last year, as compared with £3 16s 7d in the previous year, and is the highest net rate which the society has ever earned. The mortality experienced has been very light indeed. During the five years ended June 30th last covered by the valuation the death claims, including war casualties, were only 65 per cent. of the amount expected, and last year the death claims were no more than 48 per cent. of the expectation. The net result is a fund of £6,940,603, and liabilities of £6,243,187 on the severest basis of calculation known to actuarial science. The reserves set aside are reckoned to exceed by more than £330,000 what would be required on a 3 per cent. valuation basis. The total profit, including interim bonuses, was £756,244, of which the directors have decided to distribute £754,850. The participating assured receive nine-tenths, and the amount now divisible among them is £645,537. Since the losses in the funds due to war depreciation had been cleared out of the way the assets have increased in value by £66,574; a contribution of £45,000 has also come to hand from the Employers' Liability Corporation (the owners of the society's share capital) under the agreement of last year. A life assurance society which can weather a world war in this fashion is evidently proof against any conceivable financial tempest.

Indian Mines Finance.—Our mining correspondent writes:—"The scheme of reconstruction on the part of the Champion Reef Gold Mining Company, foreshadowed as far back as July, was approved by a considerable majority at the meeting held this week. It is certainly framed on drastic lines. In place of every four existing 2s 6d shares the holders are to be offered one 10s share, credited 4s paid; in other words, there is to be an assessment equivalent to 60 per cent. It is not surprising that some of the shareholders commented upon the onerous nature of the demand; what is perhaps a little surprising is that others queried whether the £150,000 contemplated would be sufficient. To this question the chairman replied that the board were guided by their experts, both at home and in India. Provision of the amount in question depends, of course, upon the whole of the shares being taken up. It is for those interested to decide whether they are disposed to risk so considerable a sum on the chances of the future. It is true, of course,

that developments in the bottom levels of the Champion Mine are hopeful so far as values are concerned, although the ore bodies are narrow; also that good values are being obtained at a corresponding depth in the adjoining Ooregum Mine. But are the profits likely to be such as to return the additional capital with adequate interest? Another point around which considerable discussion centred consisted in the reason for reconstruction, seeing that at the date of the last balance-sheet—September 30, 1920—the company had considerable cash resources on hand, stated by one speaker at approximately £170,000. This, however, is a misapprehension, there being liabilities to the tune of £68,000. The chairman took the line that the disappearance of the balance was fully accounted for by the failure of the gold yield during the current year to reach the expected total. The explanation scarcely carries conviction. Doubtless the issue of the accounts for 1920-21 will be awaited with much interest for light on this matter.

Transvaal Output for September.—The September statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 691,096 ounces, as compared with 711,526 ounces in August, and 682,173 ounces for September, 1920. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

NUMBER OF NATIVES EMPLOYED at the End of Last Eight Months by Members of the Witwatersrand Native Labour Association and Contractors.

	Feb., 1921.	March, 1921.	April, 1921.	May, 1921.	June, 1921.	July, 1921.	Aug., 1921.	Sept., 1921.
Gold mines....	171,518	174,364	172,826	170,595	168,152	166,999	169,008	171,912
Coal mines.....	14,697	14,906	14,908	14,510	14,704	14,688	14,446	14,244
Diamond	1,612	1,364	1,316	1,302	1,317	1,246	1,207	1,219
Total	187,827	190,634	189,050	186,407	184,173	182,933	184,661	187,375

The Russo-Asiatic Surprise.—At the time of the return to Moscow, some two months ago, of Mr Leslie Urquhart, chairman of that big combine the Russo-Asiatic Consolidated, there appeared every prospect that the negotiations with the Soviet Government for the return of the company's properties, which had been initiated in May, would be carried to a successful conclusion. On the strength of this prospect a lively little gamble took place in the shares. For some weeks past the price has been sagging away, indicating that there was "something wrong somewhere"; nevertheless, the news as to the rupture of the pourparlers came distinctly in the nature of a surprise. The reasons for this drastic step are set out with the utmost clearness and in great detail; they will not fail to carry conviction. In brief, agreement was reached as regards 18 out of the 27 clauses in the draft agreement, and "in certain other clauses but slight disagreement existed." The trouble arose in connection with a proposed supplemental agreement with the so-called "All-Russian Council and Professional Unions," a department and organ of the Soviet Government to which workers of both sexes and all classes are compelled to belong. As unfortunately happens to some extent in our own country, the extremists are in control, and the stipulations of this organisation with respect to wages, conditions of employment, the provision of food, clothing, &c., at cost were so tyrannical in their nature, and so hopelessly impracticable, as to render operations out of the question. Mr Urquhart's conclusion is that, "as long as the Communist party controls the Soviet Government, the Third International, the Che-Ka, and the professional unions, any one of these instruments of the Communist party may render in-

operative any agreement which may be come to with the Soviet Government." There can be no doubt that in the prevailing political conditions in Russia—of which the document under discussion provides a trenchant exposure—the Russo-Asiatic has taken the correct course in resuming its position as a claimant against the Bolshevik Government. Sooner or later Russia will return to sanity. Meantime, it is satisfactory to learn that the information as to the condition of the combine's properties is reassuring, and that its relations with its employees continue harmonious.

Harrisons and Crosfield.—The report of Harrisons and Crosfield, Limited, the well-known merchants and promoters of rubber and tea plantation companies, shows a substantial decline in profits for the year ended June 30th last. The directors point out that owing to the very heavy fall in the prices of rubber, tea, and nearly all classes of merchandise in which the company deals, and to violent fluctuations in exchange, business has been carried on in the face of adverse conditions. "From the stocks held large amounts have consequently had to be written off..... The stocks stand in the balance-sheet at replacement values." Below is a summary of results since 1913-14:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Net profit.....	£ 134,269	£ 154,251	£ 187,181	£ 212,190	£ 200,571	£ 249,204	£ 164,466
Brought forward.....	23,873	42,345	42,290	37,340	37,530	36,147	37,873
Preference dividend ..	158,148	196,596	229,471	249,530	238,101	285,351	202,339
Prof. ord. div. (10 %) ..	27,500	32,035	39,875	33,000	36,165	37,230	37,800
Management shares ..	30,000	30,000	30,000	30,000	37,500	80,000	100,000
Reserves &c.....	30,030	37,500	52,500	60,000	37,177	45,344	5,941
Deferred ord. shares ..	35,118	54,771	69,756	74,000	41,024	24,922	14,073
Carried forward.....	35,530	42,290	37,340	37,530	36,147	37,873	44,525

The full dividends of 6 and 10 per cent. are paid on the preference and preferred ordinary shares respectively. The deferred shares get 7½ per cent., whereas last year £59,982 was paid on a capital of £182,966. The management shares get £5,941 on a capital of £25,000. The balance-sheet shows an increase of £140,100 in the property item, and of £145,412 in investments. The report states that "the investments show some considerable depreciation as compared with their cost to the company; but market prices have for some months been largely nominal, and the directors believe that the investments will again show appreciation over the balance-sheet figures when the present crisis is passed." Stocks are £35,000 lower and debtors have fallen by £229,700, while cash stands at £25,000 as against £104,200. Creditors are £319,600 higher at £553,600. A detailed analysis of the balance-sheet will be found elsewhere in this issue.

The Salvage and Towage Company, Limited.—The committee appointed at the annual meeting of the Salvage and Towage Company, Limited, has now made its report, and it is hoped that "the loss shown in the balance-sheet of £28,000 will be very considerably reduced." Many recommendations are made, and the report concludes:—"The speculative nature of this company's work is such that, taking into account the doubtful prospects of trade generally, the restriction in overseas traffic, and the enormous drop in the value of shipping, we are unable to make any reliable forecasts as to the future." This company was registered in October, 1919, and has an issued share capital of £800,000 in £1 ordinary shares, dealings in which have lately taken place at 6s each. The report mentions that the assets of the company "should be worth" considerably more than the present market value of the shares. The prospectus which was issued at the time was a reasonable statement of affairs, and made no extravagant claims.

British Empire Exhibition (1923).—Up to October 1st of this year guarantees, chiefly from London firms, to a total of approximately £450,000 (including the Government guarantee) have been secured. The purpose of the guarantee fund is to provide security upon which advances for the construction and organisation of an exhibition for fostering Imperial trade can be obtained from the bank until such time as revenue begins to accrue. A sum of £1,000,000 is required in all.

A HUNGARIAN-BRITISH Chamber of Commerce has recently been established at Budapest under the auspices of the Hungarian Government and of the British High Commissioner for Hungary. The chairman is Count Albert Apponyi.

An address will be delivered to the members of the London Chamber of Commerce on "The Petroleum Problem as Affecting British Industry," by Mr A. Beeby Thompson, O.B.E., M.I.Mech.E., M.Inst.M.M., F.G.S., on Monday, October 17th, at 2.30 p.m., Mr Stanley Machin, J.P. (president), in the chair.

RUBBER SHAREHOLDERS' ASSOCIATION.—A public meeting will be held under the auspices of the Rubber Shareholders' Association, Limited, at the Great Hall, Cannon street Hotel, E.C., on Wednesday, October 26th, at 12 o'clock noon, when the policy of the association will be explained and discussed.

Oversea Correspondence.

THE UNITED STATES.—COTTON CROP—GAIN IN RAILROAD INCOME—ARGENTINE LOAN AND OTHER NEW ISSUES.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 3.

THE condition of the cotton crop as on September 25th, according to the Government report made public to-day, is the worst ever recorded, being estimated at 42.2 per cent. of normal, as compared with 49.3 per cent. a month ago. The present condition is 12.2 per cent. below the lowest previous record as of that date, while the decline during the month of 7.1 points compares with an average loss of 5.3 for that period. The deterioration, attributed principally to the ravages of the boll weevil, brings the indicated yield, as officially estimated, down to 6,537,000 bales, as against last month's estimate of 7,037,000, representing a loss during the past month of virtually half a million bales. The prospective crop compares with last year's actual production of 13,439,606 bales, and will be the smallest since 1887. The Department of Agriculture's statement that there will be no top crop and little middle adds to the bullish character of the report, for that means that the production will probably be less than 50 per cent. Further improvement in the crop, it is added, is not possible, and any change before picking is likely to be for the worse. Premature ripening has hurried picking, and the crop is now probably half gathered. The Department remarks that nothing more can be expected from undeveloped bolls; in short, the entire crop is now in sight. The South, it is figured, still holds about 5,000,000 bales of last year's crop, which, added to this year's crop, as indicated by the Government's latest report, would give a total of only 11,500,000 bales approximately of unsold cotton, or about 2,000,000 bales less than last year's yield. A wild cotton market preceded and followed the publication of the report. Just before the issue of the report, December advanced to 21.95 cents, or 15 points above the season's previous high record. The list soared 119 to 130 points above last Saturday's close, broke violently to the extent of 150 to 195 points, or about \$5 to \$10 a bale, and then recovered some 40 to 90 points before the close, when details of the supplementary report had been digested. It is a rather singular fact that the immediate effect of the report upon the cotton cloth markets was negligible. Prices of gray goods to-day were not influenced one way or the other.

The railroads made a much better showing for August than in any month for more than a year, so far as net operating income is concerned. Reports filed with the Interstate Commerce Commission by 178 of the 203 Class 1 carriers show total net operating income of \$85,653,000. It is believed that the returns yet to be made by 25 roads will bring the aggregate up to \$90,000,000 approximately. The net operating income for July, according to revised figures, was \$69,298,521.

A Bank Statement that any Man or Woman can Understand

THE CORN EXCHANGE BANK

NEW YORK

Statement of October 1, 1921

The Bank Owes to Depositors \$197,119,192.76

A conservative banker always has this indebtedness in mind, and he arranges his assets so as to be able to meet any request for payment.

For this Purpose We Have:

[1] Cash \$33,146,579.15

[Gold, Bank Notes and Specie] and with legal depositories returnable on demand.

[2] Checks on Other Banks 15,441,125.47

Payable in one day.

[3] U.S. Government Securities 58,210,372.28

[4] Loans to Individuals and Corporations 33,346,349.06

Payable when we ask for them, secured by collateral of greater value than the loans.

[5] Bonds 21,369,032.31

Of Railroads and other corporations, of first quality and easily saleable

[6] Loans 48,050,227.39

Payable in less than three months on the average, largely secured by collateral.

[7] Bonds and Mortgages and Real Estate 877,656.50

[8] Twenty-four Banking Houses 3,884,036.91

All located in New York City.

Total to Meet Indebtedness \$214,325,379.07

[9] This Leaves a Surplus of \$17,206,186.31

Which becomes the property of the Stockholders after the debts to the depositors are paid, and is a guarantee fund upon which we solicit new deposits and retain those which have been lodged with us for many years.

OUR listed resources, enumerated in this statement do not and can not include those assets of friendliness and helpfulness which this bank has in the personnel of its board of directors, its officers and employees. These are assets which pay dividends to our patrons in service and satisfaction.

*The Corn Exchange Bank Supplies Banking and Trust Service
Only Through Its Forty-six Offices Located in Greater New York*

On the basis of \$90,000,000, the carriers would show earnings of a little more than 5 per cent. on the property valuation tentatively fixed by the Commerce Commission for rate-making purposes. In order to have earned 6 per cent., as contemplated by the Transportation Act, net operating income of \$104,000,000 would have been necessary. The good exhibit made for last month was again due to economies and the decrease in wages, rather than to a gain in gross earnings, which, as a matter of fact, were 8.8 per cent. below those for August, 1920. Total operating expenses showed a decrease of about 44 per cent., as compared with August of last year, a portion of that decrease being represented by the 12 per cent. reduction in wages, which became effective July 1st. Furthermore, large sums in back pay to workers greatly increased operating expenses in August, 1920. The extent to which maintenance and repair work has been deferred is indicated by the fact that there are now some 374,000 bad order cars, or about 16 per cent., in need of repair on the various railroads. Before the war the number of such cars was only around 5 per cent., and later it increased generally to about 7 per cent. The large total in need of repair will necessitate heavy expenditures as traffic increases. As maintenance and repair work is paid out of current earnings, such expenditures will cut heavily into future revenues. It is evident, therefore, that railroad managements, in an effort to reduce operating expenses to a minimum, have undertaken only such work as was absolutely necessary to the safe operation of the lines.

The Interstate Commerce Commission has made public its tentative plan for the consolidation of all railroads of the United States into 19 groups or systems for rate-making purposes, as contemplated under the Transportation Act of 1920. Public hearings are to be held in the near future, at which representatives of the carriers and shippers will be given an opportunity to present their views before the Commission submits any final recommendations to Congress in the matter. The consolidations suggested by the Commerce Commission are based on a report made some time ago by Professor William Z. Ripley, of Harvard University, and efforts have been made to preserve, so far as possible, the identity of large systems as they now exist; but various modifications of the tentative plan are expected to be made as a result of the hearings. While much interest is being manifested in the contemplated groupings or consolidations, the discussion is purely academic, and it will probably be a long time before any definite steps are taken to put into actual effect such a plan, the adoption of which is not made obligatory by the Transportation Act.

The past week has witnessed purchases and public offerings by bankers on a larger scale than heretofore of railroad equipment trust notes which had been held by the Railroad Administration since 1920. The different issues were offered for subscription at prices yielding from 5.50 to 5.85 per cent., and met with an excellent response from investors. The really significant fact established by such offerings is that investors have readily absorbed high-grade securities of that kind at prices affording yields below 6 per cent. for the first time since the armistice. Recent offerings of new securities also included \$50,000,000 two-year 7 per cent. notes of the Argentine Republic, priced for public subscription at slightly below par, to yield investors approximately 7.20 per cent. That new financing, it is understood, was arranged to establish a dollar credit in the United States, which, in the opinion of Argentine authorities and of the bankers here who underwrote the notes, will materially improve business conditions in the South American Republic, and will tend to promote international trade with this country by bringing about more normal conditions in Argentine exchange.

FRANCE.—REPARATIONS AGREEMENT—MATERIAL FOR DEVASTATED AREAS—PAYMENT—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 11.

THE agreement that was signed at Wiesbaden last Thursday between M. Loucheur and Dr Walther Rathenau, respectively Ministers for Reparations for France and

Germany, is regarded here as the most important and significant incident that has occurred since the signing of the Treaty of Versailles, so far as the direct relationship of France and Germany is concerned. The agreement consists of a memorandum, in which are set forth the principles of the convention, and of an appendix, in which the details are worked out. The first article of the former provides for the constitution in Germany of a private company or similar organisation "charged with the duty of carrying out the delivery of material and materials that may be demanded by French victims of devastation, constituted in groups in forms to be subsequently determined by the French Government." It is specially stipulated that the material so furnished is to be applied only to the reconstruction of the devastated regions. In the Appendix to the Memorandum Germany undertakes to deliver all material that France may demand, up to the limits of her capacity for production, and subject to the satisfaction of her own domestic necessities and to the quantities of raw materials at her disposition, as from October 1, 1921. The agreement provides that the total value of the reparations in kind thus furnished by Germany to France, between October 1, 1921, and May 1, 1926—a period of just over 4½ years—shall not exceed 7,000 million marks gold. The products specified in Appendices 3, 5, and 6 of Part VIII. of the Treaty of Versailles (shipping, coal, dyestuffs and chemical drugs) are excluded from the new agreement, but their value is to be included in the total of 7,000 million marks gold just mentioned. "The price of current material and of articles manufactured in series will be determined by the arbitration committee, and applied to French orders to Germany, unless the parties agree to enter into direct relations with each other." "The price of special material, such as machinery or manufacturing plant, will be fixed by direct agreement between the party ordering and the party supplying." The total value of the material Germany is called on to furnish for the special requirements of the devastated regions (that is, in addition to the coal, &c., directly provided for in the Peace Treaty itself) is limited to 1,000 million marks gold per annum.

No payment in cash will be made by France in respect of the materials furnished under this agreement, the value of which will be deducted from the amount owing to France by Germany in respect of reparations. The materials required by the victims of German devastations will be ordered through the medium of a French organisation which will correspond to the German organisation on the other side, and the value of the goods so ordered and delivered will be credited to Germany as against the amount she owes to France for reparations. France is not limited, however, to ordering and receiving materials up to the amount of what her share in the German reparation payments for any one year may be. If she orders more than the equivalent value of her share, the surplus will be carried forward and set off against future payments. Under the agreement now in force, for instance, the amount Germany is required to pay to the Allies as a whole in 1922 is 3,200 million marks gold, of which France is entitled to 52 per cent., or 1,664 million marks gold. Should France, during that year, order and receive from Germany materials to the value, say, of 2,100 million marks gold, or 436 millions more than the amount of her 52 per cent. share, she will be debited with only 1,000,000,000 marks gold of this amount, she will receive the balance of her share of 1,664 million marks gold (or 664,000,000 marks gold) in cash, and the debit balance of 436,000,000 marks gold will be carried forward to the next year's account. In sum, France would in these circumstances receive value in cash and kind during 1922 to the extent of 1,100 million marks gold over and above her 52 per cent. share in the year's instalment due from Germany during that year (representing, at the present rate of exchange, a benefit to the French Treasury of something like 3,300 million francs), which as matters would work out, would constitute a veritable payment in advance.

It has been agreed, used figu. that the prices of the materials furnished by in no case be higher

than French domestic prices for similar merchandise, after taking into consideration French Customs duties (on the basis of the 1914 tariff, multiplied by a certain coefficient) and the cost of transport as far as St Quentin (which has been selected as the basis of calculating transport cost, in virtue of the fact that it is the administrative centre of the devastated area through which all the materials covered by the Wiesbaden agreement will pass).

The advantage to France of the Wiesbaden agreement may be summed up in the fact that it will enable the restoration of the devastated regions to be accelerated by at least two years. France will also be able to avoid the greater part of the difficult and costly task of having to find money for the restoration in question, and will be able to devote herself to the development of her natural resources and the many important national works, such as the electrification of her railways, the improvement of her roads, the revolutionising of her telegraph and telephone systems, the carrying out of the great combined navigation, irrigation, and power scheme based on the transformation of the Rhone into what will probably be one of the most important transport arteries of Europe, &c., &c. She will also by this agreement be able to obviate much of the inconvenience that she would otherwise experience from the delay that will occur in carrying out the mobilisation of the German war indemnity bonds when the latter have to be transformed into liquid cash for the benefit of Germany's creditors. Moreover, by devising such means for securing payment in kind—and in advance—from Germany during the difficult earlier years of the indemnity term, France apparently has been able to place herself in an obviously superior position to the rest of the Allies, so far as the reparation payments are concerned, and can now feel much less nervous than has hitherto been possible in regard to the possibility of Germany declaring herself insolvent. Finally, the conclusion of this direct agreement between the two countries whose mutual antipathies have been a danger to Europe for over half-a-century is regarded here as offering a substantial guarantee for the maintenance of peace.

In addition to the principal agreement, referred to already, four supplementary agreements were also signed at Wiesbaden concerning respectively the restitution of industrial material, railway rolling stock, animals, and coal removed from France by Germany during the war. Under the first of these it is decided that the restitution of industrial material as provided for under Article 238 of the Treaty shall come to an end on December 6, 1921, and that after that date Germany shall retain in her possession all misappropriated French industrial material installed in her territory which its legitimate owners have not asked to be restored to them by that date. In substitution for the material thus abandoned by its French owners, Germany has agreed to deliver during the eight months following the signature of this new agreement 120,000 tons of other new or second-hand material, selected by France from the stocks and depôts of the German Government. Germany agrees further to recognise herself debtor in respect of such industrial material to the sum of 158,000,000 marks gold, with interest at the rate of 5 per cent. from December 7th next. The capital and interest of this debt will be repaid in five equal annuities from May 1, 1926. As regards railway material, Germany undertakes, in addition to the rolling stock already restored to France under Article 238 of the Treaty, to hand over without delay 6,200 French railway carriages and goods wagons in good serviceable condition, 4,500 newly-built vehicles (including 500 40-ton 18½-metre wagons on bogies) of standard French type. With the delivery of these additional vehicles Germany will be considered as having satisfied the stipulations of Article 238 of the Treaty as regards rolling stock.

Activities on the Bourse have been still further slackened this week owing to the prospect of the issue of fresh capital, and there has been a general drop in prices owing to the realisations of holders. It is now known that the Crédit National is not only issuing its capital at 6 per cent., but is also adding the attraction of a lottery scheme. The Alsatian group of industrials that are also coming into the market are making their appeal to the public on a basis of 6½ per cent. exempt of all taxation. French 3 per Cents. have again dropped from 56.10 to 55.70. Banks

have again declined, Union Parisienne dropping from 825 to 805 and 814, and Crédit Lyonnais from 1,435 to 1,415. Transports have fluctuated, Nord remaining at 850, P.L.M. falling from 760 to 745, and Midi improving at 724 as against 711. Shipping has continued depressed, and has showed some further decline. There has been extensive realisation in electrical undertakings, and Thomson is back at 830 after 845. The same is true of metallurgical undertakings. Mines have also shared in the downward tendency.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913, are as follows:—

CANADA.—THE GRAND TRUNK APPEAL—THE ELECTION CAMPAIGN—GRAIN MARKETING—FEDERAL FINANCES—AMERICAN TRAFFIC FOR CANADIAN RAILWAYS—THE TREND OF BUSINESS.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 28.

THE announcement that the Grand Trunk shareholders have decided to appeal to the Privy Council has not excited any surprise in Canada, and persons of good experience and judgment are to be found who think the appeal has a reasonable chance of succeeding. Ex-President Taft made considerable alterations in his final judgment from the original draft, and the case which he sets up for equitable treatment is exceedingly strong. For some years past there has been raging in Canada a controversy over the system of the hearing by the Judicial Committee of the Privy Council of Canadian appeals. A strong and growing body of opinion regards this right as an archaic badge of Colonial subservency and demands its abolition, arguing that if Canadian legislatures are good enough to make laws for the country, Canadian courts should be good enough to interpret these laws. But they meet with determined opposition from people who favour the retention of the legal powers of the Privy Council, and regard them as a most vital link between

the units of the Commonwealth. Undoubtedly, if the Judicial Committee sitting in London were to give a decision unpopular in Canada, the opportunity would not be lost by the critics of the Privy Council.

The date of the general election has not been definitely announced, but it will probably be held either on November 28th or December 5th. However, both the Premier and the Liberal leader, Mr Mackenzie King, have opened their campaigns, and Mr Crerar, the Progressive leader, is expected to make a start next week. In his opening speech, delivered to a Western audience in his home town, Mr Meighen devoted considerable time to the tariff question, but the most important part of his speech lay in a pronouncement upon Governmental policy in regard to the grain trade. Last session Government supporters from the West asserted in Parliament that there existed gross abuses in the grain trade, at which the trading companies, organised by the farmers, connived, and by which they profited, and the Government appointed a Royal Commission of Inquiry. The members of the Winnipeg Grain Exchange and the farmer's companies joined forces in applying for an injunction to restrain the Grain Inquiry Commission from holding further sessions. Their counsel took the ground that the grain trade was not enumerated in the British North America Act as a subject for Dominion jurisdiction, that it was a matter for provincial control, and that, therefore, the legislation passed by the Federal Parliament in connection with it was *ultra vires*. Nor, it was contended, did the Inquiries Act, by virtue of which the Commission was appointed, give the Federal Government power to investigate the grain trade. Mr Justice Curran, of Manitoba, granted the injunction, and the Commission had to cease operations. The Government, whose plans had been considerably upset by this unexpected move, have appealed, and the case will eventually go to the Privy Council. But if the appeal fails, and the grain trade is declared to be within the provincial sphere, all the legislation under which it has been carried on for the past thirty years will be null and void. Its organisation will be in the melting pot, and new plans will have to be devised. Mr Meighen, however, knows that the problem is of vital interest to the Western farmer, and evidently thinks the Federal Government is within its rights. In his latest speech he announced that if returned he would establish a new marketing system on the basis of a voluntary pool, not merely for wheat, but for all the principal grains. It will be handled by a Government board, and will follow roughly the plan adopted by the Canadian Wheat Board during the war years. It would not seek any monopoly, but would merely offer the farmer an alternative method to the present channels. This announcement opens up a wide vista of possibilities. An inevitable corollary will be State control of banking credits, or a Federal Bank, and obviously if the Government of Canada can make a success of the grain trade, it will be faced with demands to extend its beneficent activities to other spheres of business.

The position of the Federal finances is far from satisfactory. Owing to a change sanctioned last session in the methods of collecting income-tax, which brings in the major portion of it during the early months of the fiscal year, the real situation is somewhat obscured, and the revenue returns are much less satisfactory than they look. While there was a decrease of about 13 million dollars in the net debt during August, it has increased during the past twelve months by no less than \$90,465,652. The fall in Customs returns is very marked and illustrates the futility of depending upon a tariff for revenue. In the five months of the present fiscal year, which ended August 31st, collections from Customs amounted to \$43,833,613, as against \$84,839,868 for the corresponding period of last year. This decline suggests the possibility that Customs returns for the whole fiscal year will be cut in half, and show a total decrease of \$100,000,000. The Finance Minister anticipated a decline of \$30,000,000, and the other sources of revenue show not the slightest sign of being able to make good the deficiency. The deficits on the National Railway system show little sign of abatement, and it is quite certain that during the coming winter the Federal Government will have to disburse con-

siderable sums either in public works or direct doles for the relief of unemployment.

It is an ill wind that blows nobody good, and this year the high rate of exchange in the United States against Canada, which is such a source of grievance to the Canadian traveller and merchant, has brought some welcome grist to the mill of Canadian railways, particularly the C.P.R. The exporter of grain and other commodities in Wisconsin, Minnesota, and the rest of North-Western States has discovered that by shipping his stuff down the Canadian routes he can settle the bills for the major part of his freight charges in Canadian funds, and make a handsome saving of the extra sum which he would have to pay for the privilege of patronising his own railways. Most of this American traffic has been coming from ports on the Great Lakes to Port McNicoll on Lake Huron, whence the C.P.R. convey it to Montreal. The other Canadian lines have also benefited, and this new traffic has proved a perfect godsend in a year when domestic trade is exceptionally bad. But it has caused a tremendous strain upon the port facilities of Montreal, which has this autumn been visited by a record number of grain ships. Elevator accommodation has been taxed to the limit, and the Department of Commerce was in the end compelled to restrict the influx of American grain. Obviously, it is now to the interest of the American railways to see exchange between the two countries brought near to a parity, and it is not improbable that they are joining in the pressure now being exercised from many quarters for the postponement of the Fordney Tariff Bill.

There have been some indications recently of a more hopeful nature regarding the future in industry and business. Some industries which have already faced drastic readjustments see a possibility of a resumption of a greater measure of activity. By reducing the costs of their raw materials and labour, they feel they are able to market their products at a price which the public can afford to pay. Two large agricultural implement firms in Ontario have lately announced a general reduction in the price of implements ranging from 15 per cent. to 30 per cent. It is hoped that the farmers, who have resolutely declined for months past to buy new machinery, will now begin to purchase, and the two firms are planning to resume manufacturing on a fair scale. The mining industry in Northern Ontario shows some signs of revival, and retail business in the rural districts is more or less active in meeting the usual autumnal needs of the farming community. The railroads have lately made substantial voluntary reductions in the rates on grain, which encourage the movement of the crop to the seaboard. The stock markets have relapsed into dullness, and many securities have fallen into complete lethargy. Nor is there any activity in the Canadian bond market, but in a month when Mr Meighen has been pleading that Canada must maintain her economic independence by keeping up her tariff, various Governments and authorities have borrowed over \$60,000,000 in the United States.

POLAND.—THE NEW FINANCIAL PROGRAMME— INCREASED PRODUCTION—EXCHANGES.

(FROM OUR CORRESPONDENT.)

WARSAW, October 8.

MR MICHALSKI, the new Minister of Finance, explained his financial programme in his speech on October 4th before the Diet. He gave a very dark picture of the financial situation of the country. "The roof is burning over our heads," he said; "the catastrophe is nearer than is generally believed." The Budget deficit is steadily growing. For 1919 it amounted to 1.7 milliards, for 1920 to 52.8 milliards, and during the first eight months of this year it has reached already 103 milliards. Probably for the whole year it will be hardly kept below 180 milliards. The relation of revenue to expenditure is as one to ten. During the first eight months only 11 milliards have been collected by the tax-gatherer, while 101 milliards have been expended by the State. The production of paper money has risen from 6 milliards in January of this year to 13 milliards in June, and to nearly 18 milliards

in September. The Minister's new programme may be divided in two parts: an economic and a financial one. As far as economic policy is concerned, increase of production is his principal aim. He demands a temporary suspension of the eight hours' day. The increase of the hours of labour from eight to ten should be left to the discretion of the employers and of the workmen. In connection with this it may be interesting to quote the results of an inquiry published recently by the Polish League of Labour, according to which the Polish workman works 23 days less than the German and 28 days less than the English. This is due to the great number of holidays which exist in Poland. Mr Steczkowski frequently drew attention in his speeches to the Agrarian Reform Bill's depressing influence on the productivity of agriculture. The landlords who were kept in an uncertainty as to the moment of expropriation of their estates avoided all investments, and in consequence the agricultural production could not be increased in accordance with its productive capacity. The execution of this reform entailed also an expenditure which was beyond the resources of the Government. Mr Michalski demands a change of the methods which have been hitherto applied by the Rural Board, and a revision of the Agrarian Bill. He is opposed to all measures which are hampering free trade. With the exception of the tobacco monopoly, all other monopolies must be abolished.

The financial programme of Mr Michalski can be classified under two heads: economy and taxation. It is generally known that Poland suffers from an overdevelopment of bureaucracy. According to Mr Michalski, Poland, with 30 million inhabitants, has 400,000 officials, while England, with a population of 44 millions, is administered by a staff of 312,000 civil servants. Poland has 21 Ministers and 25 under-secretaries, while the respective figures for France are ten and four. "If we continue to administer the country in such a manner," said Mr Michalski, "the bankruptcy of our State is unavoidable, and the increase of taxes and tariffs cannot save us from such a fate." A reduction of the number of officials is the first step which must be taken. Special Committees of Economy, composed of one member of the Diet, one representative each of the Ministry of Finance and of the Board of Control, have been formed already, and will shortly start their work. Motor cars, which hitherto were freely used by all higher officials, will be abolished, with a few exceptions; the number of legations abroad will be diminished. The new Minister claims also for himself the right of veto of all credits demanded by the other Departments. Economy, however, is insufficient alone to put the Budget of the country into equilibrium. An increase of taxes is necessary for covering the great deficit. The two predecessors of Mr Michalski were in favour of a forced loan. They did not take, however, the decisive step in this direction, and the measure, which was only a menace to all capitalists, did very much harm by the uncertainty which it produced. Mr Michalski considers this forced loan as inopportune at the present moment, and he replaces it by a capital levy. This tax will be prepared with great haste, and the new Minister hopes that in the course of this year during four weeks 80 to 100 milliards will be gathered. It may be feared that in this respect Mr Michalski is rather too optimistic. About 100 to 120 milliards paper marks are now in circulation in Poland, and 30 milliards abroad. If we take into account the fact that payment by cheques is without any real importance here, it is difficult to imagine how a capital levy of 80 to 100 milliards can be collected in such a short interval.

A great increase of all other taxes is projected. In this respect, however, Mr Michalski intends to base his system on the most simple and primitive methods. In this respect he is certainly right. Experience has shown that the country does not possess a financial administration which can successfully cope with complicated financial problems. The distribution of income which has passed to a great extent into the hands of speculators is equally a great obstacle, which renders an even and just distribution of taxes very difficult. The income-tax, which was introduced two years ago, has given results which are not very encouraging. In the Budget for this year it is estimated that the revenue from the income-tax will

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits ... 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS,
CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

amount to 7,275 millions. During the first four months 103 millions, or 1½ per cent., have been collected. It is difficult to imagine that during the rest of the year the remaining 98½ per cent. will be gathered.

The tax system of the country is suffering from another evil. The taxes are paid in a paper money which is steadily losing its value. One million marks, which one year ago enabled the Government to maintain 200 civil servants during one month, is now not sufficient for paying their salaries for five days. For the taxpayer the burden of taxation becomes every day lighter, but the State is suffering from it in kind. Mr Michalski proposes that the rate of taxes should vary with the fluctuations of the currency. A system of this kind existed in Russia after the Napoleonic wars from 1812 to 1839. Paper money was during this period legal tender, not according to its nominal, but according to its real value.

By economy and taxation Mr Michalski hopes to stabilise the rate of exchange. Only after having achieved this aim he intends to decrease the amount of marks in circulation. Stabilisation must precede deflation—that is his programme of currency reform. In the future the issue of bank-notes will be put into the hands of a joint-stock bank formed with the help of national and foreign capital.

It is too early to pass a judgment on the whole programme. One thing, however, can be put already to-day to the credit of the new Minister. Instead of speaking of vague generalities, as his predecessors, he presented a clear and carefully-thought-out programme. It has been favourably received by almost all parties. Only the Socialists attack him very vehemently for his campaign against the eight-hours' day.

Industrial and agricultural production has increased in comparison with last year by 17 per cent. in coal mining, by 40 per cent. in the salt industry, by 75 per cent. in agriculture, by 80 per cent. in the iron industry, by 50 per cent. in the textile industry, and by 34 per cent. in the sugar industry. Polish factories are employing actually 340,000 workmen, against 260,000 a year ago.

Quotations of the Polish mark have moved spasmodically during the last four days. The English pound, which last week reached 26,000, is quoted now at 17,000. All other exchanges have moved in the same direction, as shown by the figures below:—

	English £.	American Dollars.	French Francs.	German Marks.
September 28	...	6,800	485	57
October 5	23,500	6,200	445	51
October 7	19,300	5,000	355	42

SWEDEN.—CHANGE OF GOVERNMENT—RUSSIAN GOLD AND KRONA EXCHANGE—LIVING COSTS LOWER.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 10.

THE political crisis has not yet been definitely solved, but in all likelihood its outcome will mean a return of the Socialist Cabinet which sat before the one which has now resigned. The task which is set before the new Government is a huge one. In one respect the position here is identical with that in England. The first measures must be directed towards solving the unemployment problem. Secondly, industry needs assistance to surmount its

immediate troubles. The high position of the Swedish krona is worrying exporters beyond description. An explanation of the abnormally high position of the Swedish currency, which becomes still more unnatural if the turnover of the country's exports and imports are taken into consideration, is found in the Russian gold exports. The Soviet gold is carried over to Sweden for eventual exchange into dollar and sterling values. It remains in the big banks here, where the Soviet is said to have enormous amounts deposited, Sweden being evidently considered a quite safe place. In the trade between Sweden and Soviet Russia there is a deadlock at present pending a new Treaty. The Soviet leaders are placing much hope on the new Socialist Government, trusting to obtain concessions and to become ultimately recognised. Statistics show a drop in the cost of living of 2 per cent. during the last quarter, and a similar reduction in wholesale prices up to September 1st. Nearly all classes of commodities show a reduction, whereas taxes are stationary and rents higher. The housing question has in some parts of the country become easier, but in general there is no change. It is taken for granted that top rents have now been reached, and the next year will show a substantial decline. The building trade is stagnant in view of the approaching winter season. It is expected that the coming Socialist Government will prevent further export of tonnage from Sweden, about 70,000 tons having been transferred already. The crops are this year excellent. The wheat harvest alone has realised about 300,000 tons. The total consumption of wheat in Sweden is about 400,000 tons annually, and consequently 30 per cent. will have to be imported. A general revision of wages is going on, and employers have given notice of termination of trade agreements affecting over 300,000 workmen. It is expected that there will be a great many conflicts at the end of the year when the terms are to come up for discussion.

SWITZERLAND.—SWISS SHAREHOLDERS AND GERMAN ASSETS.

(FROM OUR CORRESPONDENT.)

GENEVA, October 12.

THE latest depreciation of the German mark is causing fresh unrest among the shareholders and bondholders of the Swiss mortgage banks with so-called gold mark assets in Germany. The German Government undertook last year to guarantee these societies at the rate of 20 centimes for each mark, on condition that the Swiss creditors did not ask for the return of their money for 15 years to come. With the present depreciation of the German mark the German debtors of gold marks in Switzerland have to pay an annual interest of 30 per cent. These Swiss assets are chiefly first-class mortgage loans on buildings in towns. There exists in Germany a very complicated legislation for the protection of tenants, the effect of which is that rents for flats are as a rule on the pre-war basis, so that the owner of a house who is a gold mark debtor of a Swiss bank is materially incapable of paying interest on five times the original debt. Where the debtor is a manufacturer the case may be simplified. It is generally considered that the extraordinary rise in the quotations of German securities which has taken place in the German stock markets during the past few weeks will in many cases counterbalance the depreciation of the German currency for the Swiss pre-war shareholder. The pre-war share of a company which has not considerably increased its capital can easily be sold at present in Germany at a premium of 2,500 per cent. of its face value. Unfortunately, the bulk of Swiss investors took care to purchase, not shares, but bonds of German companies.

SPAIN.—INTRODUCTION OF FOREIGN STOCK—MOROCCO EXPENDITURE.

(FROM OUR CORRESPONDENT.)

MADRID, October 2.

In answer to a question put by the Minister of Finance, the Spanish Banking Association has pronounced it to be inexpedient to close the door entirely to the importation of foreign stock, because it is in Spain's interest to maintain her creditor position in relation to other countries.

The association advises the repeal of the Royal decree of 1916, which prohibits the introduction of foreign stock into Spain. At the same time, if this Royal decree should be rescinded, the Spanish bankers consider that some measures of restriction ought to exist to enable the Direction-General of Debt to know the amount and class of stock introduced with a view to preventing anything that might be to the national disadvantage.

Spain's activities in Morocco in the present year have already cost 65.60 millions, as compared with 49.83 and 36.18 millions in the corresponding periods of 1920 and 1919 respectively.

Letters to the Editor.

A NEW TAX SYSTEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I would like to reply shortly to the interesting questions raised in the review, appearing in your current issue, of my paper, "The Taxable Capacity of a Nation."

The proposed production tax—at the current rate—would be deducted by the payer from all annual interest and fixed contractual payments. Such payments represent that part of taxed production which is distributed in the form of lease rents, debenture and preference share and loan interest, and long-term service agreements for fixed salaries, &c. The balance of taxed production would fall to be equitably divided between all those members of the several classes of co-operators who are entitled to share in production in a form other than by fixed contractual payments.

These represent, of course, the main body of co-operators, including wage-earners, salary-earners except fixed contractual, principals, and the owners of capital employed except fixed contractual. No specific deduction of production tax would be made from such payments, which represent a distribution of already taxed production. I suggest that the different classes of co-operators will find themselves better able to agree on the equitable division of this balance of taxed production without the intervention of the Government. At present the Government attempts the thankless and invidious task of regulating the amounts of individual incomes by means of levying disproportionate tax burdens, a task which must fail if only by reason of the vast detail and complexity involved. But the urgent need is to stop at once the present process of industrial exhaustion by saving the nursery of industrial capital from destruction by the tax-gatherer under our present misconceived system of taxable capacity. This is a matter upon which the nation should be wisely instructed and guided.

Production—the artificial supply of all required for man's wants—cannot itself be a loss: hence the apparent assumption in my paper that there is always a profit is correct. The kind of accounting loss which could arise would be due to the fall in value of assets held by an undertaking and to expenses represented by payments made to others than the co-operators. Such an undertaking might also have paid annual interest and rent and wages and salaries which would be included in the accounting loss. The principal would be bound to pay the production tax at the current rate on the annual interest and rent and wages and salaries. Part of this he would recover by deduction from the fixed contractual payments. No production tax would be specifically deducted by the principal in paying the wage-earners and salary-earners, except fixed contractual, but the payment of these co-operators for their services to an undertaking—unable to make any payment for the services of the other co-operators, i.e., the principal and capital, except fixed contractual—must evidently be a lean one. The accounting loss—excluding payments to co-operators—might be carried forward over a period of, say, six years, if necessary, to be set off against future available production.

The question is asked, Would the payments to lawyers for business collected be part of the net produce or not? The answer is, I expect, would be. Those receipts of a lawyer's paper money have not been taxed twice because the

payments made by a business to a lawyer would be allowed as a deduction in computing the production of that business. Again, if a man receives £900 instead of £1,000 as his reduced share or salary under the new scheme, and proceeds to use it by paying domestic servants, doctors, gardeners, and lawyers for their services to him, these various services exercised in supplying that man's wants are taxed in the following way:—The recipient of the £900 will himself have to pay a tax of 10 per cent. on the total effective wages of his domestic servants and gardeners. This will operate no doubt to cause him to reflect whether he can afford to continue to enjoy so much domestic satisfaction of this kind. An alternative may be that his staff will agree to accept less pay, but this will be a matter for arrangement with him. The fees paid to the doctors and the lawyers will be taxed in the hands of the doctors and the lawyers.

I have not overlooked the fact that if the principle of a production tax is adopted, then not only will the income-tax and super-tax go by the board, but also all the indirect taxes should go, too. I did not wish to "bite off" too much at one time. If, however, the just and simple principle of a production tax is once adopted, I see no reason why it should not become the sole instrument for raising the whole amount of the necessary national revenue. It is probable that, even now, a tax at the rate of 15 per cent., or 3s in the £, would enable all the troublesome Customs and Excise duties to be dropped, with much administrative saving and great benefit to the country. I believe the scheme is complete and wholly logical, and that it deserves full examination.—Yours, &c.,

London, October 13th, 1921.

P. D. LEAKE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—If the country desires to discourage extravagance and speculation, and to encourage the saving of money for sound industrial enterprise, the remedy is not far to seek.

Maintain—or even raise—the rate of income-tax and super-tax, grant liberal allowances for a reasonable standard of maintenance and education, and allow a large rebate on savings invested in sound industrial undertakings.

Every company wanting to raise money or to obtain a market for its shares would need to get itself on the list of such. Executive officers would decide in the first instance, but a right of appeal to the Courts could be allowed, and powers given to the Courts to order such reconstruction as might be necessary.

Sums placed to a specially constituted reserve in any sound industrial business should be allowed a similar rebate, provided that no application should be considered until accounts were presented in such a form as to leave little or no room for evasion, and that fraud could be penalised by the refusal to allow any such application for a term of years.

All individuals claiming rebates on savings invested and all businesses claiming a rebate on profits passed to the special reserve would have to show in their accounts the whole of their operations on capital account, as well as revenue, in such a way as to ensure that money so passed to capital account was not afterwards made available for distribution. This would incidentally involve that all persons claiming the rebate would have to pay tax on casual profits.

Some small respectable firms might at the commencement be unable to obtain rebates for want of a proper system of bookkeeping, but the stimulus given to improve this would be a real advantage to them and to the country.

There seem to be great possibilities in such a scheme, apart from the relief of taxation.—Believe me, &c.,

October 9th, 1921.

H. O. C.

THE TRADE BOARDS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue dated September 24th there was a contribution from your Labour Correspondent upon "The Trade Boards," and I should appreciate the hospitality of your columns to make a few observations thereon, and to state in equally concise terms the point of view of employers.

It must first of all be conceded that the Trade Boards Act of 1909, when applied to certain "sweated" industries, achieved very satisfactory results. At the time the only doubt expressed was the introduction of the principle of State regulation of wages, which, if not conducted on proper lines, might have serious effects on industry. It is frequently necessary to give a little poison to cure a disease, but to increase the dose means disastrous effects on the patient. The complaint against the Trade Boards began when it was realised that the passing of the Amending Act of 1918 gave unlimited power to the Minister of Labour to apply the Trade Board to any "unorganised" industry. An industry may be unorganised for many reasons. Speaking for the distributive trades, we can only say that the alleged unorganised state of distribution is due largely to the fact that the trades still give unlimited scope for the ambition of the individual; every salesman hoping to become a buyer, every buyer a manager, and every manager a director. The big merchants of to-day are men who have mostly risen through every department of their business. Given these advantages, the efficient and ambitious employee does not desire any coercive restrictions from outside organisations, or anything which will tend to produce a levelling-up in position or remuneration.

Under the Amending Act of 1918, the Minister of Labour applied the Trade Boards to such industries as the dressmaking and light clothing, the hat, cap and millinery, toy trades, corset trade, and many other small manufacturing and "making-up" trades. The Ministry then turned its attention to the distributive trades, and threatens distributors with any number of Trade Boards up to fifteen.

It will be obvious from this brief outline of the application of the Acts that large stores, such as Messrs John Barker and Co., Limited, Harrods, Limited, Selfridge and Co., Limited, and Wm. Whiteley, Limited, &c., &c., may be affected by minimum rates of wages fixed by from 25 to 30 Trade Boards covering the manufacturing, making-up, and distributing side of their business. Nor is this all, for a Trade Board has power to make recommendations on many matters apart from wages, and it is possible to foresee varying sets of regulations being issued by the Home Office for different departments of the same business.

A modification of the Minister's proposals to one Trade Board for the distributive trades, or at the most three, was at one time acceptable to the great majority of employers in the distributive trades, but this the Minister turned down, on the plea that he could not legally define these Boards under the Act.

It would be interesting to summarise briefly the employers' objections:—

1. The large number of Trade Boards proposed for small and comparatively unimportant industries and trades does, in some cases, and will ultimately in all cases, lead to chaos in administration and to discontent amongst employees employed in different departments through wage rates being varied at different times.

2. That employers will be involved in heavy non-productive costs in order to keep the staff side of their business within the law.

3. That recently the tendency has been for Trade Boards not to fix minimum rates, but standard rates.

4. That in many cases the rates decided have been arrived at without complete consideration of the economic factors governing the trade concerned.

5. That when it is not possible for the employers and the employees' representatives on the Board to reach agreement, the ultimate decision is left in the hands of the appointed members who represent the Minister of Labour, who are usually excellent people who have no technical knowledge of the trade concerned.

6. That the application of the Trade Boards Acts to industry and commerce adds considerably to the burden of the taxpayer, and is a very costly method of achieving the desired end.

Your correspondent suggests that minimum rates are not laid down by an external authority, but by representatives of the trade itself, but, as in the case of certain Trade Boards recently, it has been the appointed members who have made the decision after a long period of discussion.

and disagreement, and in one case the rates were sent to the Minister for confirmation after the whole of the employers' side had left the room.

It is recognised that labour would have a just cause for grievance if there was no alternative proposal which would achieve the object much more economically, and with no irritating effects on trade. Employers who demand the abolition of the Trade Boards without stating a constructive alternative do lay themselves open to the charge of a desired return to "sweated" conditions. Employers themselves must be protected against the employer who, given the liberty, would return to the old conditions. The powerful body of distributors which I represent, and also a considerable number of other National Organisations of Employers, have definitely accepted the decision that the Government should be called upon to pass into law a National Minimum Wage Bill, upon the lines proposed by the National Industrial Conference of representatives of employers and employees, which was convened by the Government, and addressed by the Prime Minister in the spring of 1919. This proposal is only one of the many which the Government have very carefully shelved, with the result that the organisation of that Joint Conference on a permanent basis has fallen through.

The proposal is that a Royal Commission should be established to report at the earliest possible moment upon—

(a) The method whereby the cost of living index figure issued by the Minister of Labour is at present obtained, and propose a method whereby a more truly indicative figure can be secured, based upon the standard of life, and the general rates appertaining at the end of the war.

(b) Fix a minimum wage, or wages, below which no male or female employed in any industry in a given district should be paid.

If this proposal were adopted a definite minimum rate for an adult male worker of 21 years, and a female worker of 21 years, would be fixed, and all higher rates would continue to be fixed as at present in accordance with experience and efficiency by mutual agreement between employer and employee. A definite standard of life would be secured, employers would know exactly what they had to face as absolute minima, and would be able to estimate their cost of production or distribution so accurately that they could contract well ahead, and be sure of delivering the goods. The uncertainty in this direction is one of the principal causes of our inability to revive trade rapidly. When the new cost of living figure was determined, it would then be definitely embodied in an Act of Parliament, and the minimum rate in a given district would rise or fall by a certain fixed amount per week for each five or ten points rise or fall in the cost of living.

It is difficult for anyone outside the trades affected to appreciate what this State interference in industry involves. The writer in one week received a visit from, and valuable time was occupied with, four different representatives of the Ministry, who it happened were making similar enquiries about the same proposed Trade Board. Time and expense both of employers and of the State are involved in the large number of preliminary conferences which are apparently necessary before a Trade Board definition can be made and the representatives of the two sides selected. Even when the selection of representatives is made, it is very often of an arbitrary and unrepresentative character. In these times drastic economy is needed in every branch of life, the cutting of State expenditure to the last penny, and the costs of production and distribution to the lowest point per cent. We have to overhaul, and possibly slaughter, some of the drastic social experiments which a grandmotherly Government imposed upon us during the days of national prosperity before the war.

Surely it is worth while to examine the alternative to the Trade Boards if a reasonable standard of life can be secured by other means. It is admitted that the alternative set out above has many difficulties which have to be overcome, but in any case it can be done with far less cost to the State, and with greater benefits to those employed in industry.—I am, Sir, yours, &c.,

T. ERNEST JACKSON (Secretary)

(Incorporated Association of Retail Distributors).
125 Pall Mall, S.W. 1, October 5th, 1921.

PAYMENT OF INDEMNITIES AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—This subject, which Mr Alfred E. Leaf very properly deals with as including repayment of debt, calls for very clear thinking, and I believe it will be found that his reasoning is faulty.

In the second paragraph of his letter he shows that to pay our debt to the United States we must export commodities or services to that country either directly or indirectly. When, however, later on in the paragraph he says that "the object is to cancel some debt owing by the traders of America indirectly to us," I think he must really mean that the object is to cancel some debt owing to her traders by us, for it is obvious that a debt owing by them would only be increased if we sent them more goods. If I am correct in my supposition his explanation of what takes place in the instance he deals with is correct.

But I cannot believe that leading statesmen and organs in the Press hold the view that in such a case unemployment would be caused, and it has no bearing on the real issue at stake, which is whether, as other countries owe us a much larger sum than we owe the United States, our receipt of the indemnities and debt repayment will cause unemployment here, bearing in mind that some portion would be a set-off to our payments to America.

Mr Leaf shows quite rightly how the set-off would be made, so that indirectly we should pay what we owe to the United States "by the exports of our debtor countries, France, Italy, Germany, &c." When, however, he says that the proceeds will reach our shores in the form of raw cotton, &c., he again makes a curious slip, as, of course, when we pay a debt previously incurred we shall not receive anything in return.

This, however, is a minor matter, the real point being that exports which would normally have gone from Great Britain would have gone from France, Italy, Germany, &c., instead, so that unemployment for our own people seems the inevitable result of the payment of indemnities, &c., to us. Even were we to limit such payments to the amount due to the United States from us, the fact would still remain that every such payment, made in effect as a free gift to the United States, would tend to restrict the demand for similar goods to be supplied indirectly by us. Even, therefore, if it be agreed that we should still want to send in raw materials to the United States, so that the proceeds might "reach our shores in the form of raw cotton, wheat, and other foodstuffs," it must be remembered that we should be doing so in the face of acute competition in a market which our debtors were being forced to keep heavily supplied.

I am convinced that the sound course for us will be to remit all war debts due to us, leaving other nations free to adopt whatever course seems politic with regard to debts due to them. Statements that have appeared in the Press show that a feeling is growing up in the United States to remit such debts. Their difficulty is probably as great as ours, and the dignified way will be to leave them to solve it for themselves. If they decide to require repayment, they, too, will have to face the situation, which, I agree with Mr Leaf, seems odd, but which I am convinced for them and for us is an odd fact "that the payment of debt to a nation should be a disaster." The reinstatement of devastated areas in France, Belgium, &c., is quite another matter.—I am, Sir, yours faithfully,

MARK B. F. MAJOR.

London, October 13th, 1921.

THE EXCHANGES AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I be permitted to make the following suggestions for dealing with unemployment, and the present industrial situation:—

1. Reduce the Bank rate to 5 per cent., and keep it there.

2. Abolish the restriction on the issue of currency notes. If the automatic check which the gold standard provides against inflation is thus given up, we must have some other method of regulating prices. I suggest, therefore, that—

3. Every important industry should be compelled by

law to form itself into a kartel, governed by a joint body of employers and employed, on the lines of the Whitley Councils, but with statutory powers. These kartels to be co-ordinated in a Central Council.

4. By means of these kartels control prices of everyday commodities right through to the ultimate consumer, with full publicity as to the average costs of production, profits, wages, &c.

5. Adopt Professor Cassel's suggestion for an International Conference on the question of the exchanges.

This question of exchanges is perhaps more important than anything else at the present moment.

I have just received a verbatim report of the evidence given before the American Tariff Commission on behalf of the pottery trade. Mr Burgess, the witness for the American potters, in his evidence, said as follows:—

"It has been definitely stated that on all pottery sales the German manufacturer is required by his Government to add 150 per cent. to the price at which he would otherwise be willing to sell to the American buyer, and that the Government in turn levies a tax of 90 per cent. on this added 150 per cent."

This means that the German Government gets a revenue of about 134 per cent. on all the export trade. At that time the mark had not depreciated to anything like its present figure, and as recently instructions have been sent to the various kartels to increase their export prices in correspondence with the recent depreciation of the mark, there is no question that the German Government is getting a huge revenue on the export trade, and notwithstanding the 150 per cent. tax, they can still undersell us.

This shows how absolutely futile it is to suppose that merely by a reduction of wages in this country we can meet the German competition, for they have this 150 per cent. or more to play with. Therefore one of the first things that ought to be done is to tackle this question of exchange.

This policy of the Germans is quite intelligible, and if by this means they can equate their budget I am not so sure about the crash so confidently predicted by our economic professors and financiers. If we can find some means of regulating the exchanges, thus depriving them of their anticipated revenue, the German Government will be checkmated; they would have to give up their policy, and I think would be compelled to deflate, in which case they would go through all the difficulties from which we are now suffering.—Yours faithfully,

T. B. JOHNSTON.

Fishponds, Bristol, October 12th, 1921.

Books and Publications.

REVIEWS.

"The Political Economy of War." By A. C. Pigou, Professor of Political Economy in the University of Cambridge. Macmillan. 8s 6d net.

By a curious oversight Professor Pigou has taken as his title one that was used by Mr F. W. Hirst for a book published early in the war. This work is much more comprehensible by the ordinary reader than the monumental tomes that the Professor has hitherto given to the world, and it need not be said that his subject is of the highest importance, and is elucidated by wide knowledge and earnest thought. Among the titles of its chapters are "Resources Available for War," "Government Commandeering," "Taxes v. Loans," "Finance by Bank Credits," "Price Control," "The Aftermath in Currency and Exchanges," "The Aftermath of Internal Debt"; and these and other subjects are discussed with a fullness that makes the book a noteworthy addition to economic literature. The Professor is occasionally somewhat dogmatic, as when he says that "when a man knows that out of every extra £1 that he succeeds in making the Government will take 5s 5d, he will tend to stop working a little sooner than he would do otherwise." This may be true often—perhaps generally; but many men are still at work who would have been in a position to retire if it had not been for the high taxation, which has obliged them to prolong their years of labour. The subject of a capital

levy is dealt with at length, and the Professor produces as convincing a case as can be made for it.

"Recollections." By Sir Charles Macara, Bart. (London) Cassell and Co., Limited. 7s 6d net.

THE book market is notoriously flooded with reminiscences and recollections, but Sir Charles Macara's long and prominent identification with the cotton industry serve to make parts at least of this volume of interest to the student of affairs. As president of the International Cotton Federation, Sir Charles has laboured on behalf of the industry in many countries, and relates many interesting experiences. A lifelong Free-trader, Sir Charles has by no means surrendered his faith in these days of fashionable compromise. He denounces the key industry and anti-dumping campaign as "the most recent, and certainly the most insidious, of the attempts to infuse life into Protection, that political snake-in-the-grass which we all imagined had been effectively scotched in 1910." Sir Charles combated Mr Joseph Chamberlain's campaign from the start, and retains his belief that a departure from Free-trade would imperil the great Lancashire industry. He is optimistic with regard to the future of the industry, and remarks: "Tariff Reform is an appeal to timidity. It does not fit the temper of Lancashire."

"History of the New York Times, 1851-1921." By Elmer Davis. Published by the New York Times.

THE history of a great newspaper is always interesting. The story that Mr Davis writes to celebrate the seventieth year of the *New York Times* and its quarter of a century under the management of Mr Adolph Ochs is no exception to the rule and loses nothing in the telling. Newspaper enterprise in America differs, perhaps, in some respects from newspaper enterprise in this country. But English readers cannot, at any rate, fail to read with interest of the many great "scoops" (or "beats," as our American friends call them) achieved by the *New York Times*. Their attention will also be aroused and held by the record of the way in which this famous journal championed the Allied cause in the great war, and from its embryo days, the League of Nations. According to statistics given the paper's circulation has increased over fifteenfold since 1896. This is a notable achievement. But circulation figures will interest the average reader less than the manifold stories of newsgathering and the sidelights on contemporary events which Mr Davis's readable volume contains.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.

October 27.

ACCOUNT.

October 28.

Business in the Stock Exchange shows more than ever a disposition to concentrate in the market for purely gilt-edged stocks. The movement is somewhat restricted, in that it has scarcely reached Home Railway prior-charges and Indian Railways, but the various British Government issues, together with those of the colonies and home municipalities, attract increasing attention. The War Loan has been over 90 during the past few days, the rise being assisted by the fact that the stock will be quoted ex dividend in 10 days' time. Various new issues, such as those of Ceylon and New South Wales, have gone well. The action of Queensland in going to America for a 7 per cent. loan, at 95 net, aroused lively attention. The result of this excursion is not considered to be favourable enough, from the point of view of the Colony, to render probable the extension of the practice to other Colonial borrowers, of whom some had been approached, it is said, by American financiers during the past few weeks.

German bonds have given way on the mark going to 550 to the £. Japanese dollar securities, together with others of similar class, fell back on the movement in the New York exchange. Brazilians have been hesitating, and Argentine bonds move narrowly. The observance of the Jewish Day of Atonement on Wednesday provided a noticeable lull in Stock Exchange business, more particularly in foreign bonds. Developments in connection with the loans that are to be raised in America by some of the South American States are watched with interest.

Home Railway stocks continue to crumble, there being no public demand to meet the automatic realisations which go on daily, for the account of executors and of holders who are becoming weary of their investments in this market. Grand Trunks have dropped on pressure to sell by proprietors dismayed at the prospect of another protracted period of waiting before anything definite is likely to become known of the appeal which the company has lodged against the recent decision of the arbitrators. Argentine railway stocks are flat, by reason of the uncertainty in regard to the question of freight charges, while other foreign rails show acute depression by reason of the passing of the interim dividends on Leopoldina preference, Antofagasta ordinary, and the reduction of the distribution of San Paulo ordinary. Taltal shares gave way in sympathy with Antofagastas, and the nitrate market is dormant, the recent spark of animation in this section having been quenched by public indifference.

After the meeting of the Rubber Trust shareholders, a slight recovery occurred in the price of the shares, and this served to strengthen the list as a whole, though it cannot be said that there is any accession of general support. The oil market, after its profound flatness, rallied from the worst. Numbers of small buying orders were received from people who hold shares at considerably higher prices, and who regard the present as affording an opportunity to average their more expensive purchases. The Trinidad issues were pro-

minent in the recovery in the medium-priced group, but the whole market moved down again on Thursday's exchange demoralisation. The shipping market is undistinguished save by a fall in Royal Mail, with a certain contraction of willingness to take other shipping shares offered for sale. Banking and insurance markets are equally quiet. Better reports from the textile industry served to create a little improvement in some of the leading cotton and thread descriptions. The tobacco share market is a trifle easier. The iron and steel group reflect, in their dullness, the depression produced by most of the reports and dividend declarations that are now forthcoming.

Amongst new issues, County of London Electric debentures, after giving way to 2½ premium, recovered a full point. Peter Walker and Sons' shares were left with underwriters to the extent of nearly 90 per cent., and, on the opening of the market, the shares, 8s paid, were offered at nothing. This was followed by a recovery to about 4s discount. The debentures, which were said to have been subscribed by the public, stand at 2½ discount. Mersey Power debenture stock stands at a premium of about a point, and the new Clyde Valley second preference, where a market started in Glasgow before it began in London, are quoted at a small discount, the underwriters having been left with 25 per cent. of their liability. Several new issues are projected in the near future, and the appetite of the public for sound stock is by no means satiated by the liberal manner in which fresh emissions have recently been provided.

Cable stocks and shares are amongst the few that show strength on the week. Dunlops preference dividends have been passed; the company's report is anxiously awaited, and market anticipation looks for a possible cutting in half of the ordinary share capital under a reorganisation plan. The passing of the Army and Navy Stores interim dividend sharply depressed the price, and this had its effect upon other shares in the Stores industry, though Lipton's are something of an exception to the prevailing heaviness.

Further falls in the price of gold have caused Kaffirs to give way in most sections of the market. Shares in the producing companies, the deep levels, the development and land concerns are equally affected, and neither Paris nor the Cape appears anxious to afford any kind of support. Diamond shares hold up fairly well; the market in these is, of course, extremely limited. Russo-Asiatics gave way abruptly, on the chairman's announcement that it is impossible, under present conditions, to enter into trading relations with the Soviet Government. Columbian Mining shares experienced a brisk rise on very vague rumours as to developments on the company's gold-producing area. West African Tin shares are weaker. The Mexican mining market is practically stagnant. Esperanzas fell back, on the latest cable from the property, but a little bear purchasing served to rally the price. The Broken Hill and other sections of the Mining markets show no new points of interest.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Series B 5½ per cent. Treasury Bonds, issued at 98 per cent., payable on application. Repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. The first dividend will be paid on April 1, 1922. Principal and interest are chargeable on the Consolidated Fund of the United Kingdom, and interest will be exempt from Corporation Profits Tax. Bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. These bonds may be registered free of cost in the books of the Bank of England or of the Bank of Ireland.

New South Wales 6 per Cent. Inscribed Stock, 1930-1940.—Issue of £3,000,000, at 95½ per cent., interest payable May 1st and November 1st. Six months' interest payable May 1, 1922. Principal repayable at par on November 1, 1940, the Government of New South Wales having the option to redeem the stock in whole or in part, at par, on or after November 1, 1930, on giving three months' notice. The loan is raised for public works and services and for other purposes. Interest and principal of New South Wales Government Debentures and Inscribed Stock issued and payable in London, the property of persons not domiciled in New South Wales, are not subject to any taxes of that State. This is a trustee investment, and subject to geographical considerations, an attractive issue of its class. The loan was quickly oversubscribed.

Rosario Drainage Company, Limited.—Authorised share capital £494,000, of which £489,200 has been issued and is outstanding. Debentures have been authorised for £700,000, and exclusive of the present offer, £407,970 has been issued. This is an issue at 90 per cent. of a further £200,000 7 per cent. prior lien debenture stock forming part of a total authorised issue of £250,000, of which £33,750 has already been issued. This prior lien debenture stock is limited to a total issue of £250,000, and is secured by trust deeds in favour of the River Plate Trust, Loan, and Agency Company, Limited, constituting the prior lien debenture stock a first floating charge on the company's whole undertaking and property, and ranks before £374,220 of other debenture issues. It will be redeemed by means of a cumulative sinking fund of 1½ per cent. per annum, and the stock will be all redeemed by July, 1941, at latest, either by drawings or purchase at a price not exceeding 105 per cent. The company was formed in the year 1897 to take over and operate a drainage and sewerage system in the City of Rosario de Santa Fé, in the Argentine Republic, under a concession granted by the Municipality of that city dated December, 1896. The prospectus states that "the company's income is derived from a rate on all house property within the drainage area, for the payment of which the owners of the properties are responsible. The company has the right to avail itself of the *Via de apremio*, or right of summary process employed by the Municipality for the collection of rates, but the company has agreed to waive the *Via de apremio* as soon as the Municipality has obtained the passing of a law prohibiting the transfer of property (not being vacant lands) whilst any drainage rate in respect of the properties remains unpaid." A useful table of profits and results is given from 1913, and subject to reasonably stable political conditions, there is no reason why revenue should not be sufficient to show a substantial margin over and above the proposed and existing interest and sinking fund charges.

National Benefit Assurance Company, Limited.—Authorised capital £500,000. On the shares of various denominations issued, £128,283 has been paid up, while £119,068 remains as uncalled capital. This is an issue at par of 125,000 9 per cent. first cumulative preference shares of £1 each, the proceeds being partly required to provide deposits with Governments of certain colonies and foreign countries in which the company proposes to carry on business. The shares rank for dividend and capital repayment in priority to £10,000 6 per cent. preference, £364,000 ordinary, and £1,000 founders' shares. But these are authorised amounts only, the total paid up being as stated above. Established in 1890, the company now transacts all classes of insurance. The prospectus states that "a dividend of 10 per cent. has been paid on the ordinary shares for each of the past 23 years; dividends for the last four years being paid free of income-tax, the equivalent being £14 5s 8d per cent. gross." Income from premiums and investments are given from 1912. But a statement like this cannot be considered a satisfactory substitute for actual past profits. Total assets are given as £1,697,913. It is, however, difficult to understand why these figures are offered instead of a clear balance-sheet. In December, 1919, when

26,000 ordinary shares of £5 each were offered, we pointed out that "it is possible that the undertaking is in a sound position, but the prospectus would have been more attractive if a balance-sheet or clear statement of the financial position had been given." On the figures contained in the prospectus before us, it is impossible to gauge the value of the shares.

Southend Waterworks Company.—Issue of £50,000 7 per cent. debenture stock at par, to be redeemed at par on September 29, 1936. The company was incorporated by special Act of Parliament in 1879, and serves an area of approximately 160 square miles, with an estimated population of 135,000. The gross rental value of Southend-on-Sea (a portion only of the company's area of supply) is approximately £879,820. The issued share capital of the company amounts to £832,812, and loan capital stands at £200,252. An interesting table of meter rents, profits and dividends is shown from 1909. The issue is well secured, both as to capital and interest, but regard should be paid to the smallness of the issue, and the consequently restricted market.

New Delabole Slate Quarries, Limited.—This is an offer for sale at par of £7,500 10 per cent. first mortgage debenture stock, free of income-tax up to 6s in the pound, being part of a total authorised issue of £15,000. The stock will be secured by a trust deed constituting a first specific charge upon what is apparently a 21-years lease and some "other assets." It is "redeemable" on October 1, 1930. The offer for sale states that "applicants for debenture stock will obtain as a bonus one fully-paid share of 10s with every £10 debenture stock." Intending investors, before subscribing to these debentures on the terms set out in this offer for sale, should ask themselves the following questions:—(1) What is the value of the 21-years lease which is offered as security; (2) what was the actual cash purchase consideration for the granting of the lease (if any); (3) what is the past financial record of this particular quarry, and why is it not set out in the offer for sale; (4) what is the authorised and issued share capital of the company; (5) why is it necessary to offer a 10s ordinary share to each subscriber for a £10 debenture; (6) and finally, why is the offer for sale undated?

Odams Press, Limited.—Authorised capital £1,500,000, of which 513,007 8 per cent. cumulative preference and 522,180 ordinary shares have already been issued. This is an issue at par of 225,000 10 per cent. cumulative "A" preference shares of £1 each, ranking after the 8 per cent. preference issue. The printing business of Odams, Limited, was founded in 1847, and was amalgamated with its "offshoot," Odham Brothers, Limited, in 1898. Odams Press, Limited, was incorporated in 1920, and the businesses of Odams, Limited, and John Bull, Limited, were acquired. The company owns some well-known publications. Net profits are shown from 1913. According to a statement in the prospectus, net surplus assets are valued at £1,231,400, which compares with a total issued capital of £1,260,187. But in net assets is an item of £390,334 for copyrights. According to the Stock Exchange Supplementary List for Thursday, October 13th, dealings were being effected in the £1 eight per cent. cumulative preference shares at prices between 15s 9d and 17s 6d per share, while the £1 ordinary shares are marked 10s 3d-9s 7½d. This is a speculative proposition with a high yield of interest, which carries with it the full proportionate risk of capital.

Chilean Loan in New York.—The Anglo-South American Bank, Limited, has received the following cable from its Valparaiso branch, dated October 7th:—"The Government has authorised the Chilean Minister at Washington to accept a proposal by New York bankers for a loan of 25,000,000 pesos gold of 18d and \$10,000,000 (U.S.), which will be principally used for the payment of expenses in connection with the electrification of the railways. We understand that bonds of this loan are for five years, and carry interest at 8 per cent., and that they are being offered at 99 per cent."

Associated British Commerce and Industry, Limited.—We are informed that particulars have recently been filed at Somerset House showing the increase of the capital of this company to £250,000, divided into 150,000 10 per cent. cumulative participating preference shares of £1 each, 50,000 ordinary "A" shares of 10s each, and 75,000 ordinary "B" shares of £1 each. 50,000 of the participating preference shares and 50,000 of the ordinary "A" shares have been subscribed and paid up. The objects of the company set out in the memorandum and articles of association include those of general trading, merchant banking, underwriting, and issuing.

Municipality of Pelotas.—We are informed that Messrs F. J. Lisman and Co., of New York, are offering £100,000 Municipality of Pelotas 5 per cent. Sterling Loan of 1911 unconditionally guaranteed by the State of Rio Grande do Sul.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE SOCIETY.

SOCIETY'S POSITION AND PROSPECTS.

The ninety-seventh annual general meeting and the extraordinary general meeting for the declaration of the nineteenth bonus of this society were held at the chief office, 15, St. James's square, London, on the 14th instant, Mr Francis E. J. Smith (chairman) presiding.

Mr Arthur Digby Besant (general manager and actuary) read the notice and the minutes of the last meeting. The annual report, which had been circulated amongst the proprietors, was taken as read.

The Chairman, in moving the adoption of the report and accounts, said the new assurances amounted to over £1,170,000 net. A few years ago they congratulated themselves when they exceeded a million. Last year they exceeded a million and a-half, but that figure included a belated crop of life assurance belonging to the years of the Great War. During the past 12 months they had had to face abnormal trade conditions, and therefore new business of nearly a million and a-quarter was a very fine achievement. Interest receipts had grown by £34,843, and the premium receipts by £7,134. The growth in the interest income was remarkable. In a single year the net yield, after deduction of tax, had risen from £3 16s 7d to £4 6s 2d. In normal times they used to measure variations of interest in pence. This year they could measure it in shillings.

The mortality claims were very light—only 48 per cent. of the sum expected—and that was a record. The expense ratio was £16 7s 2d, a rise of 3s 7d. There was also a welcome appreciation of nearly £65,000 in the investments. The surplus income of the year's transactions amounted to over £500,000, far the largest increase in the history of the society, the previous highest total in any one year having been £311,000. The Life Assurance Fund was thereby raised to within £60,000 of seven million pounds. This was a fitting prelude to the quinquennial report.

The report was unanimously adopted.

An extraordinary general meeting was then held to declare the 19th bonus. Mr F. E. Smith again presided, and in the course of his address said: We stand alone among the 2½ per cent. offices in maintaining our valuation and our bonus, and welcoming new with-profit entrants.

A year ago we were doubtful if we could maintain the 2½ per cent. basis of valuation for our non-profit business, but for 30 years a 2½ per cent. valuation rate has been the sheet anchor of our business here, and the secret of its success, and the present board would have been loath to undermine the work of the late Sir John Mowbray as the chairman, and of Mr Newbatt and Mr Whittall his actuaries. Fortunately, the last year of the quinquennium has been extremely profitable as you have just heard, and we have found ourselves in the gratifying position of once more being able to make the entire valuation of our liabilities on a 2½ per cent. basis.

The liability under our contracts, after making a substantial reserve of nearly £35,000 for immediate payment of claims, and the permanent reserve of £50,000 required by our constitution, works out as set out in the valuation report at just under 6½ millions, and we are left with a realised surplus of over £697,000, which, added to the interim bonuses paid, becomes over £756,000 for the quinquennium. This is a marvellous result considering that our war claims and our losses on securities in this quinquennium alone have exceeded £400,000. You may well ask how this has been done. The explanation is very simple. It is a literal fact that the foundation of our achievement lies far back in the past. I cannot, of course, be certain what will be the net rate of interest earned in the next quinquennium, but we are to-day earning 36 shillings net above our valuation rate of 2½ per cent.

I now beg to move in the somewhat quaint language which has stood us in good stead for nearly 100 years: "That the accounts and calculations now produced, and the report of the directors declaring a total divisible surplus of £754,850 in respect of the five years ending June 30, 1921, be received by this meeting and recorded."

The resolution was carried unanimously.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.

COMPANY'S SOUND POSITION—PROSPECTS OF THE INDUSTRY.

The twelfth ordinary general meeting of the Rubber Plantations Investment Trust, Limited, was held, on the 10th inst., at the Cannon street Hotel, London, Mr H. J. Welch (the chairman) presiding.

The Chairman, after referring in detail to the accounts and to the properties owned by the trust, said: Before closing, I should draw your attention to the improvement in one respect of the financial position of the trust. If you deduct the amount of the

liabilities from the assets shown in the balance-sheet (excluding properties and investments) you will see that the trust's liquid position at March 31st last was over £200,000 better than at the date of the previous balance-sheet, the deficit of over £180,000 having been converted into a surplus of £20,000. In addition to this surplus there is included under the expenditure on properties a sum representing our estates' working capital and advanced expenditure on account of 1921 of over £250,000. Although our liquid resources are not as good as we should like, the position is better than it has been for some years. In view of rumours which have been circulated to the contrary, I perhaps should state that the board see no necessity for raising any further capital in the near future. The planting programme, which was originated in better times, has been countermanded, and the board are only sanctioning such fresh plantings of a small extent which, in their opinion, are proved to be economically justified, having regard to expenditure already incurred. In such times as these, and with such incalculable factors affecting the future of all industries, we regret we cannot give you any reliable forecast for the current year. The great bulk of our crops has yet to be realised, and we have no forward sale contracts at present outstanding. I may say, however, that, taking all the circumstances into account, the board are not dissatisfied with the position up to the present. . . .

During the past year the rubber plantation industry has encountered the most serious crisis in its history. In common with the majority of other industries in all parts of the world, we have had to face an excess of stocks and falling prices.

WORLD RUBBER STOCKS AND CONSUMPTION.

Among the questions which all producers of crude rubber would like to have answered are: What stocks actually exist and how much are they in excess of the world's normal requirements? What will be the total production and consumption for 1921? What is the future potential production from existing sources of supply, and what is the future potential consumption? Unfortunately, the industry is very inadequately supplied with reliable statistics, and all estimates have to be considered with great reserve. Recently I have personally made an extended and detailed investigation of the figures relating to the production and consumption of crude rubber and the increase in the "visible" stocks existing. I have examined them with great care with the object of forming an opinion of what policy should be adopted by the trust and by other companies of which I am a director. Part of the results of this investigation and of the opinions I should otherwise have expressed here this morning were published in the Press so recently as September 2nd last, in a letter from Harrison and Crosfield, Limited, to which I refer any shareholders who may not already have perused it. Shortly, it may be said that the known facts do not justify the extreme pessimism which existed when that letter was published. The industry of rubber production now rests upon the surest of all foundations—the permanent, unavoidable, and growing needs of the whole world for its product. It is estimated that over £150,000,000 is now invested in it, and probably not less than £400,000,000 in the rubber manufacturing industry. Their present depression is similar to that existing in most other industries, and is concurrent with the deepest and most widespread depression in trade and finance in living memory. The fact that even in this bad year the rest of the world, outside America, will in all probability collectively consume at least the same quantity as in 1920 is very encouraging, and I do not accept the suggestion that the shortage of consumption in America this year will amount to so much as 70,000 tons. Owing to the restriction of output which has taken place, there is good reason to anticipate that the world consumption of crude rubber this year will at least equal the production.

RUBBER CONSUMPTION DEFINED.

In connection with the consumption of rubber, perhaps attention may usefully be drawn to the fact that the term "consumption" may have different meanings. Producers generally refer to it as the rubber sold in any given period to manufacturers or dealers, and which ceases to form part of the "visible" stocks. Other meanings are also given to it. The real consumption, however, is the amount of rubber actually used up by consumers over any given period. If, as many believe, the consumption by actual use of rubber has not been much reduced as a consequence of the trade and finance conditions, then the increase of the "visible" stocks of crude rubber may be partly caused by the depletion to an abnormal extent of manufactured articles, and this may have a rapid effect upon the position of "visible" stocks as soon as prices rise and trade improves. Personally, for what it is worth, I may say, after a careful consideration of all the facts and estimates available to me, that, in my opinion, the surplus stocks of crude rubber as compared with the world's needs are much less than is generally supposed, and that in all probability the stocks of manufactured rubber goods in the hands of manufacturers, distributors and consumers are now comparatively low.

POTENTIAL PRODUCTION AND DEMAND.

Questions are often asked as to the future potential production from existing sources of supply, and as to the future potential world's consumption of crude rubber. As to the future production of plantation rubber, it is sometimes stated that it will shortly amount to 500,000 tons per annum. This estimate, however, refers to production in six years' time, and assumes an average production of 344 lbs per acre from all rubber in bearing, which is greater than the average yet attained. With regard to the world's future potential consumption, I think there is considerable danger of this being underestimated. During the present year the raw rubber content of the goods actually worn out will doubtless be greater than the total amount of raw rubber used by manufacturers. The great development of the use of motor-cars in America and their potential development in other places of the world is a very encouraging factor. I will not trouble you with the figures, but in 1920 the total number of cars registered in America exceeded those registered in 1918 by 50 per cent., and this year it is estimated that no less than 1,500,000 new cars will be built there. During the first eight months Ford's alone turned out 680,000 new cars. Against these figures, however, must be set the natural wastage of American cars, estimated at about 750,000 for this year. The continued growth of the use of the motor lorry in America, in this country, and elsewhere, is also exceedingly promising. In this connection, too, one might mention the new Peachey process for vulcanising rubber at ordinary temperatures with inexpensive and non-corrosive chemicals, which will permit the use of rubber in hundreds of directions not possible until this discovery was made. Another promising feature exists in the development which it taking place of the use of unvulcanised rubber in various forms, which I am told for many purposes will prove cheaper and more effective than vulcanised rubber. The principal adverse factors, in my opinion, do not include over-planting, having regard to the world's needs. The real trouble is the general trade and financial depression affecting the world's purchasing powers. In these days, when the opinion of the wisest of men upon the cause of the depression of trade and finance is of little value, it would be foolish of me to attempt to predict how long these depressed conditions will continue, and, consequently, how long they will affect the rubber market. When trade revives, however, and credit and the circulation of goods become more normal, in my opinion, the excess stocks will be liquidated, and the whole production of the present planted area will find a market at a reasonable profit for average estates.

THE REMEDY.

The shareholders may ask, what is the remedy for the present position? My answer is, restriction or complete cessation of tapping, organised and unorganised, and well-thought-out efforts to increase the demand by new uses or the development of existing uses. In our opinion, it would be a grave error for companies to increase outputs or to postpone restriction, otherwise advisable, because of the recent small rise in the price of rubber and the better tone in the share market. "Safety first" should be the motto for all companies who wish to survive, and until it is fairly clear that the recent renewal of demand will be continuous and increasing, and that prices will be remunerative, producers should continue to adopt a conservative and cautious attitude as to output.

To conclude, it is obvious that, in considering the record, the present position, or the prospects of the trust we cannot ignore its relation to and dependence upon the great industries in which it is directly interested, and also upon the fundamental and world-wide movements of trade and finance. Irrespective of efficiency of management, all our efforts, plans, and forecasts may be affected, disastrously or beneficially, by what may be called the underlying tidal movements of these larger interests. For some time we and our industries have been suffering from an ebb tide in trade and finance, which has brought universal calamity. But the tide must turn. Some most competent observers believe it has already done so. Its progress toward a full tide of prosperity may be long and slow. But as we have suffered in the common adversity, so I think we may reasonably hope to benefit from the general prosperity of the incoming tide. The Chairman concluded by moving the adoption of the report and accounts.

No questions were asked by the shareholders, and the resolution was carried unanimously.

COMPAGNIE ARAMAYO DE MINES EN BOLIVIE.
(ARAMAYO MINES IN BOLIVIA COMPANY.)

MR F. A. ARAMAYO ON COMPANY'S POSITION AND PROSPECTS.

The first ordinary general meeting of the above-named company was held, at 15 Quai de l'Île, Geneva, on October 5, 1921. Mr F. A. Aramayo, chairman of the company, presided. A quorum being present, the Chairman spoke as follows:—

Gentlemen,—It is with great satisfaction that I have the honour

to preside at this general meeting of our company, which takes place for the first time in Geneva.

It is my duty to begin by recording that our company was incorporated on August 3, 1916, with a capital of 50,000f Swiss fully paid, and that on August 4, 1916, by a new general meeting duly convened the agreement entered into between the Compagnie Aramayo de Mines en Bolivie and the Aramayo Francke Mines, Limited, domiciled in London, was approved in accordance with which agreement the latter company ceded to the Compagnie Aramayo de Mines en Bolivie all their assets and liabilities in exchange for 598,000 shares fully paid of Compagnie Aramayo de Mines en Bolivie.

That in consequence of this transaction the capital of the Compagnie Aramayo de Mines en Bolivie was raised from 50,000f to 15,000,000f by the issue of 598,000 shares of 25f each, to be handed over to the shareholders of the old company in payment of their assets.

That the delivery of such assets was interrupted by circumstances of the war and the opposition of the British Government, and that it is only after protracted claims and negotiations on the part of the board of directors that at the end of December, 1920, the Compagnie Aramayo Mines en Bolivie managed to enter in legal and material possession of the properties of the Aramayo Francke Mines, Limited.

Since the incorporation of the company and until the end of December, 1920, the capital of the Compagnie Aramayo de Mines en Bolivie consisted exclusively of the sum of 50,000f paid up in cash at the time of its formation.

The accounts referring to this portion of the capital of the company, namely, a balance-sheet and a profit and loss account, have been made up to December 23, 1920, and deposited at the seat of the company more than eight days before to-day's meeting.

Presently I will ask the secretary to read the report of Messrs. Tribe, Clarke, Painter, Darton, and Co., chartered accountants, of London, referring to these accounts, which will be the object of your first resolution.

GENERAL ACCOUNTS.

Now, referring to the general accounts, I have the honour to state that every shareholder has received, together with the notice convening the meeting, a balance-sheet showing the state of affairs on January 1, 1921, with the financial result obtained by the Aramayo Francke Mines, Limited, during the year 1920, all the properties of the said company, which is now dissolved, being actually incorporated with those of the Compagnie Aramayo de Mines en Bolivie.

As you will have had occasion to see by the report, the balance-sheet closed on December 31, 1920, which has been sent to us by the local administration in Bolivia, shows as the result of the year a profit of 5,621,366f 70c (£249,838 10s 5d), against 9,480,543f 75c (£421,339 18s 5d), corresponding to 12 months of the previous financial account, which covered 19 months. This result has been modified as shown by the profit and loss account by various other entries, reducing the net profit of the year to 5,275,967.08f (£234,487 8s 6d). The shareholders would have some difficulty in understanding the exact position of affairs if we were to give them to-day a great number of comparative figures as we have been in the habit of doing in the past, and one of the principal reasons is that the variable exchange between Bolivian, English, and Swiss money leads to confusion. Besides, the agenda for the day is a long one, and it is preferable that all details should be left, as they are, at the disposal of any shareholder who may wish to look into them. In order that the balance-sheet may be more easily understood, we must inform the shareholders that the floating accounts, such as stock, credits, and debts, have been calculated at the rate of 22.50f Swiss per pound sterling, which was the current exchange at the end of the financial year, while the fixed assets, such as mines and landed properties, remain at the parity of 25f per £1, as well as the capital of the company, such having been the parity of exchange at the moment of the sale agreement.

It will be sufficient for the present to state that the sale of black tin, wolfram, copper, and bismuth amounted to 10,253,381.43f (£455,705 16s 10d) still left an appreciable profit during the year 1920, the great fall in the price of metals having only been felt during the latter part of the year, but the valuation of stocks at reduced prices to close the accounts has absorbed the greater part of the profit obtained. It is only the sale of mineral, sulphide, and cement of silver amounting to £281,040 1s 4d, added to interest, differences in exchange, and other minor accounts, which have given the result which the balance-sheet shows. It must also be borne in mind that the writing off of the value of stocks which existed in Germany, to which our auditors refer, has absorbed the sum of 1,145,901.65f (£50,928 10s 3d), which they represented in the previous balance-sheet, without counting the corresponding profit, which is also lost for the present.

METAL MARKET POSITION.

It was only during the last quarter of the year that the want of activity of the metal market became apparent, prices gave way, and

a great accumulation of minerals followed. Then we took all the necessary precautions to reduce work in the mines and limit the expenses in order to meet the crisis. But this operation was not realised without serious protest on the part of the working population, a great many of whom are born in our establishments and deeply attached to the mines as their only support. The situation is still unimproved, the price of metals continuing at their lowest, and the cost price remaining high on account of the necessity of keeping up exploration work and supporting our mining population, while the production remains reduced, and it is but prudent to proceed cautiously. Besides, we remain responsible for any claims which may be made in England in respect of the agreement for purchase by this company of August 4, 1916.

In these circumstances, if we add to the net profit of the year 5,275,967.08f (£234,487 8s 3d), the balance of 10,789,962.84f (£479,553 18s 1d) brought down, less dividends paid, amounting to 2,686,905f (£119,418), there remains the sum of 13,379,024.92f (£594,623 6s 7d) as balance of the present account of profit and loss.

Your board proposes that the interim dividends paid by the old company be confirmed, that the sum of 600,000f (£26,666) be passed to statutory reserve in order to complete the 10 per cent. of the capital provided by the articles of association, and to carry over the balance of 12,779,024.92f (£569,117 8s 1d) brought down from the previous year.

QUESTION OF BONUS.

Consequently, gentlemen, if your board of directors does not propose to declare at once a bonus in proportion to the apparent available balance of profit, it is not only on account of the measures of prudence already recommended, but also that we have great development works in hand, such as the Telamayu plant, including an important branch of railway, and, above all, that the capital of the company, as well as most of the balance of profit and loss account, is invested in the great stock of minerals, merchandise, machinery and implements required for the regular working of the business of the company, and that it is more advisable thus to proceed than to recur to the issue of debentures. Under the circumstances we prefer to await the end of the present crisis, and we ask you to leave us the choice of the right moment to renew our interim dividends, which we hope will not be now too long delayed.

I will later on request the secretary to read the auditors' report, which will be the object of your second and third resolutions.

In deference to the wishes of the English shareholders, your board proposes in future to issue a leaflet with the report and accounts, giving the principal items in sterling, so that the figures of the balance-sheet may be compared with past accounts.

PRODUCTION AND DEVELOPMENT WORK.

Before proceeding to the vote, allow me to give you some information of the general course of our mining affairs. The production of black tin during the year 1920 amounted to 2,011 tons, compared with 2,236 of the year before. The production of wolfram was totally stopped, and that of bismuth reduced by 57 tons. The production of silver in export ores, sulphide and cement amounted to 973,038 ounces, against 701,554 ounces the year before. During the first six months of the present year the output of black tin has been reduced by 52.5 tons compared with the same period of the previous year, and that of bismuth by 25.27 tons, but the production of silver has been increased by 72,860 ounces, or nearly 15 per cent.

Concerning the development of the mines, I have the pleasure to inform you that it has continued satisfactory. During the year 1920 we have run 3,883 metres in preparatory work. During the first six months of the present year we have completed a new gallery 207 metres long at the 150 level of the Chocaya mine. There remains 143 metres more to develop in depth before coming to the level of the Socavon Oploca, which has drained all this mining region, and if the mineral continues as hitherto the life of the mine will be assured for many years. We may reasonably hope for the renewal of good results when the metal market revives, and we shall want it, because salaries, transport, materials, and, above all, taxes, have increased in such proportion that it is impossible to produce at present prices.

The motion for the adoption of the report and accounts was put to the vote, and declared to be unanimously carried, as also the motion for the re-election of the auditors.

CHAMPION REEF GOLD MINING COMPANY OF INDIA, LIMITED RECONSTRUCTION OF CAPITAL.

An extraordinary general meeting of the Champion Reef Gold Mining Company of India, Limited, was held, on the 10th instant, at Cannon street Hotel, London, to consider resolutions for the voluntary winding up of the company with a view to its reconstruction. Sir J. D. Rees, Bart., K.C.I.E., C.V.O., M.P., presided.

The Chairman, in the course of moving the resolutions, said: For 27 years the history of this mine has been one of uninterrupted prosperity. The directors derive some comfort from the fact that the prospects in depth are reported to be encouraging, though we cannot, in the immediate future, provide out of profit for the large expenditure necessary for further developments underground and for other connected expenses.

It is additionally unfortunate that, just at the time when there is great general depression, our returns of gold should have fallen, mainly due to the restriction of the stoping area following upon the heavy rock-bursts at the end of last year, the effects of which are, of course, being particularly felt during the months of this year.

In these circumstances, as soon as we were convinced that we could not carry on without more money, we announced the fact to the shareholders. As regards the board, we wish now, as always, to share and share with our shareholders, and we have decided to reduce the sum of £3,000 hitherto divisible among the directors to £1,500. We also think that another director should be appointed for the further immediate representation of the shareholders. The impression evidently prevails, and even in well-informed quarters, that shareholders are asked under the scheme to provide 6s per share. The fact is that they are asked to put up 1s 6d per each share of 2s 6d, which does amount to 6s in respect of four shares of 2s 6d each or one share of 10s, into which the shares are now to be converted.

It is essential for the future success of the mine that development operations underground should be actively pursued, and considerable work has to be done upon the surface. The present available resources of the company are quite insufficient for these purposes. The company has a dividend-paying record of 26 consecutive years, and we have not raised any capital for 18 years. That is because the mine has been so rich that we have been able to supply what was required for capital purposes and development out of appropriations from the returns from the mine.

We believe that the fall in the gold returns to be only a temporary phase in the history of the mine, and we look forward with confidence to the results to be attained if the necessary development is provided for. Indeed, the monthly returns have been slowly creeping up since March last.

As to our actual proposals, there are, of course, alternatives to reconstruction. You might raise money by issuing debentures or preference or ordinary shares, but under present financial conditions in the market we could not get the money without such underwriting as would make it a far more expensive proposition than the reconstruction which we recommend for your approval. Then we think you will agree that there is a very considerable advantage in keeping the nominal capital of the company within moderate dimensions. Reconstruction, no doubt, does bring pressure to bear, but the point we have to consider is the general interests of the company as a whole, and that the shareholders as a whole approve of our recommendations is evident from the exceedingly large number of proxies which we have received in favour of the scheme. We propose to revert to the 10s share, which denomination is now usually adopted upon the Mysore field. For every four half-crown shares now held, one 10s share, credited with 4s as paid up, will be allotted to existing shareholders, leaving a liability of 6s upon each 10s share, which is equivalent to an assessment of 1s 6d on each half-crown share now held. Shareholders will also be given an opportunity of applying for allotments of additional shares, which may not be taken up—if there be any such—by those who have a right to take them up. We propose to call up this money by easy instalments—is on application, nothing further until March of next year, when 2s will be due; and then two instalments of 1s 6d each at intervals of three months.

Mr Edgar Taylor seconded the resolutions, and after some discussion they were carried, and the proceedings terminated with a vote of thanks to the chairman.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £60,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Oct. 17th-Oct. 22nd, were opened on Oct. 14, 1921, and the total amount applied for was £127,825,000. R. G. JAQUET, Accountant-General.

India Office, October 11, 1921.

Messrs Samuel Montague and Co. write on October 13th as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,595,530, as compared with £126,595,285 last week. Of the considerable amount of gold which came on offer (including part of last week's double shipment), only a small proportion was acquired for India. The remainder was taken for the United States. The arrival of gold to the value of \$8,029,000 is reported from New York, \$5,000,000 from France, \$1,144,000 from India, \$800,000 from Egypt, \$985,000 from London, and \$100,000 from Holland. The following are the figures relative to the United Kingdom imports and exports of gold during the month of September, 1921:—Imports, £4,038,107; exports, £5,490,466.

SILVER.

The market has not been active during the week, partly owing to the incidence of holidays in India, China, and the United States. The principal buying came from China, where the stocks, though ample for legitimate trade, have not sufficed to provide for the sudden calls which may be made on account of the large speculative commitments that are made from time to time. All the operations on China account have not been to buy—there have also been sales. India, too, has transacted business both ways. The Continent has been a good seller. The sudden depreciation of the American dollar was not accompanied by important sales of silver from that country, as might have been expected. A strong bullish feeling exists in the States as to the prospects of the market. The following figures indicate the quantity of United Kingdom

silver coin shipped to West Africa which may be available for reduction in quality from .925 to .500 fine:—Total amount of Imperial silver coin issued to West Africa from 1872 to 1919, according to last report of Royal Mint, £8,320,405; repatriated coin, £162,791; net issue, £8,157,614. Imperial silver coin repatriated by the West African Currency Board since 1913 up to the present time, approximately £1,500,000; balance, £6,657,614. This sterling amount, if repatriated, could be converted into .500 fine coinage with a surplus of 10,289,000 fine ounces. We are informed from New York that purchases by the U.S. Treasury Department under the Pittman Act up to September 29th total 73,475,866 fine ounces. The production of Mexico now appears to be on a firm basis. That for the current year may prove to rival that of 1911-12, which was returned as 80,175,250 ounces. The full effect of the improving production has not been felt because of the large amount of new coins which had to be minted when the redundant paper currency ceased to possess legal tender. We understand that so many silver pieces have been put into circulation that the Mint is refraining from fresh coinage. The stock in Shanghai on the 8th inst. consisted of about 25,000,000 ounces in sycee, 24,000,000 dollars, and 1,690 silver bars, as compared with about 25,000,000 ounces in sycee, 24,500,000 dollars, and 2,340 silver bars on the 3rd inst. The Shanghai exchange is quoted at 4s 1d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

	Gold.	Silver.		Silver.
	Per Ounce.	Cash, Per Ounce.	Forward, Per Ounce.	Cash, Per Ounce.

NOTICES.

Barclays Bank, Limited, announce the opening of a sub-branch on Tuesday, October 18th, at Cattle Market, Chester, under the management of Mr W. G. David.

On and after October 17, 1921, the address of the Sumitomo Bank, Limited, will be 67 Bishopsgate, E.C. 2.

Reports and Notices.

Mr B. J. Redman has resigned his position as director and chairman of the Rock Investment Company, Limited.

Sir Vesey Holt, who is now chairman of the Anglo-American Debenture Corporation, Limited, has been elected chairman of the Railway Debenture and General Trust and the Railway Share Trust and Agency Company, and Mr R. S. Guinness will act as deputy chairman of the three companies. Sir Reginald MacLeod, K.C.B., Mr L. E. Chalmers, and Mr T. G. Scott have joined the board of the Anglo-American Debenture Corporation, and Mr Alfred Shepherd and Mr Owen H. Smith have been elected directors of the Railway Debenture and General Trust and the Railway Share Trust and Agency Companies. Mr A. H. Wynn has been appointed manager and Mr A. Waller Hall and Mr T. Morris joint secretaries of the three companies. The offices of the Anglo-American Debenture Corporation will be transferred from 20 Birch Lane, E.C., to 3 Bank buildings, Lothbury, E.C.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4 1/2d, being the moiety of the fifth fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1921.

BANKS.

ALLIANCE BANK OF SIMLA.—The profit and loss account for the year ended June 30, 1921, shows gross profit for the year, after making full provision for bad and doubtful debts, writing down investments and allowing for rebate on current bills, of Rs.47,94,394; expenses of management at head office and branches absorbed Rs. 35,58,902, the balance being net profit for the year, of Rs.12,35,492. The dividend and bonus on the ordinary shares is 17 per cent., free of tax, for the year. Transfer to reserve against depreciation of Government paper and other investments amounted to Rs.2,00,000 and transfer to staff pension fund to Rs.1,00,000, leaving balance to be carried forward Rs.3,31,154. The authorized capital of the bank is Rs.3,00,00,000. Issued and fully paid, Rs.88,87,500. Reserve fund, Rs.42,00,000. Reserve against depreciation of Government paper and other investments, Rs.11,00,000.

ANGLO-SOUTH AMERICAN BANK, LIMITED.—At the meeting of the shareholders of the bank, to be held on the 25th inst., the directors will submit the accounts for the year ended June 30, 1921, showing a profit, including £393,116 9s 7d brought forward, of £1,136,291 3s 3d. They will recommend that £275,102 2s be applied to the payment of a final dividend of 9s per share, less tax, payable on the 31st inst., making a total distribution for the year of 15 per cent.; that £150,000 be added to the reserve fund, making the total amount thereof £4,000,000; that £50,000 be applied in reduction of bank premises account; that £25,000 be added to the staff pension and guarantee fund; that £50,000 be applied in payment of a bonus to the staff, and that the balance of £402,785 7s 4d be carried forward. The transfer books of the company will be closed from the 15th to the 29th inst. inclusive.

BANCO NACIONAL ULTRAMARINO.—The first interim dividend for the year ending December 31, 1921, will be paid on and after October 10, 1921, of 6 per cent.—i.e., 5.40 escudos per share of 90 escudos. Coupon No. 19 of bearer shares must be lodged at the London office of the Banco Nacional Ultramarino, 278 Throgmorton street, between the hours of 11 a.m. and 2 p.m. (Saturdays excepted), three clear days for examination prior to payment, and will be paid at the current rate of exchange of the day, less income-tax at 6s in the £.

SINO-SCANDINAVIAN BANK.—According to advices received from Peking, the Chinese Government has granted a special charter for the Sino-Scandinavian Bank, with a nominal capital of \$10,000,000 and a minimum paid-up capital of \$2,500,000. The bank has the right to issue paper currency. Mr Chang Tien-tao, former Minister of Agriculture and Commerce, has been elected president, and Mr Harold Skappel (Norwegian) vice-president. It is expected that the bank will be soon open for business in Peking, Shanghai, and Hongkong.

INSURANCE.

GENERAL REINSURANCE.—We are officially informed by the General Reinsurance Company, Limited, that the two calls of 5s per share, payable on the 15th inst. and on January 15th next respectively, not being required, have been cancelled, and a circular to this effect is being issued to the shareholders. The directors announce that an agreement has been concluded with "Tariff Reinsurances, Limited," with a view to a material reduction in the working expenses. Henceforth the offices and staff of "Tariff Reinsurances, Limited," will be shared by this company, and the management of the business, other than marine, will be transferred to them. The arrangement provides for effective direction by the board of all matters pertaining to the company, and in addition to the economy effected a considerable extension of business is anticipated.

MISCELLANEOUS.

AFRICAN CITY PROPERTIES TRUST, LIMITED.—The directors have declared an interim dividend of 6d per share on the ordinary shares for the half-year ended June 30, 1921, payable, less income-tax, at the rate of 4s 3d in the £, on November 1st next. The transfer books will be closed from Tuesday, October 18th, to Tuesday, November 1st, both days inclusive.

ALBY UNITED CARBIDE.—We have received a communication from the company with reference to a statement from Norway which has appeared in the press relative to negotiations for a certain scheme of reconstruction of the Alby United Carbide Factories, Limited. They desire to point out that preliminary arrangements have now been arrived at for the transfer of the Odda assets to the English Syndicate, who have purchased the control of the Tyssefaldene Power Company, and had, originally, made proposals for the reconstruction referred to. As soon as these preliminary arrangements are completed it is the intention of the directors to call the shareholders together and to submit the proposals to them for their consideration and approval.

GRAMOPHONE COMPANY.—The report and accounts for year ended June 30, 1921, show that the result of the trading is a credit balance of £26,191, to which add War contingency fund, £46,048; reserve fund for equalisation of dividends, £50,000; and balance from last account, £152,564. From which the following must be deducted—Debt interest, £15,000; debenture sinking fund instal-

ment, £7,800; directors' remuneration and tax, £5,978; dividend on preference shares for the year ended June 30, 1921, £5,000; dividend of 10 per cent. and bonus of 5 per cent. on ordinary shares for the year ended June 30, 1920, £112,500; leaving a balance of unappropriated profits of £128,453. The paid-up capital now stands at £1,190,000, as compared with £850,000 last year, £340,000 having been received in respect of the "B" ordinary shares. In addition, £85,000 has been received on account of the premium payable on such "B" ordinary shares. The amounts standing at the credit of War contingency fund and reserve fund for equalisation of dividends in the last account have been transferred to the credit of the profit and loss account, showing unappropriated profits of £128,453 as at Dec. 31. The directors recommend that out of such unappropriated profits there be paid a dividend of 6 per cent. on the 750,000 ordinary shares, less income-tax. The total assets of the company, as shown by the balance-sheet (irrespective of patents, trade marks, and goodwill), and of the foreign branches and factories at June 30, 1921, amounted to £1,948,989. Deduct—Liabilities and debenture stock, £453,496; leaving net tangible assets of £1,495,493. Depreciation at adequate rates has been written off buildings, machinery, plant, office furniture, and fittings. The whole of the stock has been written down to market values at the date of the balance-sheet.

SULPHIDE CORPORATION.—Four weeks ended September 24th:—"9,189 tons of ore and 1,861 tons of slimes were milled at the Central mine, producing 1,922 tons of lead concentrates (including 225 tons from the de-leaching plant), which assayed 44 ozs silver, 62 per cent. lead, together with 3,230 tons zinc concentrates, assaying 11 ozs silver, 6 per cent. lead, 47 per cent. zinc per ton. At Cockle Creek 3,505 tons of lead concentrates and purchased ore were smelted, producing 1,875 tons lead bullion for treatment in the refinery. The refinery products were 1,415 tons soft lead, 121,350 ozs silver, and 94 tons antimonial lead."

BURMA CORP.—Burmese—Bawdwin Mines—Lead production for the month of Sept. 3,876 tons gross. Refined lead production, 2,534 tons. Refined silver production approximately, 234,102 ozs. Base bullion produced, but not refined, during month, 430 tons, containing approximately 41,000 ozs silver.

THE BROKEN HILL PROPRIETARY COMPANY.—Report for four weeks ending Aug. 17, 1921: Coke ovens: The average number of ovens in operation throughout was 151, and the production for the period was—Coke, 19,657 tons; tar, 221,746 gals.; sulphate of ammonia, 344 tons. Blast furnace department: Nos. 1 and 2 furnaces produced 9,835 tons and 14,036 tons of pig iron respectively. No. 2 furnace—a new weekly record of 3,715 tons attained. Open hearth plant: Production, although curtailed by lack of adequate hot metal, totalled 23,322 tons. Blooming orders. Merchant mills: The production was 18 in-mill, 6,873 tons; 12 in-mill, 2,280 tons; 8 in-mill, 1,478 tons. Shortage of steel at the 18 in-mill prejudicially affected its output. Rod mill: Production amounted to 2,158 tons. Steel and direct metal foundries: The output totalled 404 tons and 558 tons respectively of castings. Iron Knob: The tonnage of iron ore shipped to Newcastle amounted to 44,132 tons. Melrose Quarry: Shipments of limestone amounted to 7,762 tons. Tare: 959 tons of limestone were shipped to Newcastle.

The "ALL-IN" POLICY

affords the Householder the most complete cover yet devised.

The method of covering household risks by a diversity of Insurance is wasteful, to say the least. By covering all your household risks by the "All-in" Policy, you are economising in the true sense of the word—£1 per annum (Minimum Premium, 7/6) will cover practically every serious risk in respect to the contents of your home. List of risks and full particulars post free. Address:—"All-in" Policy Ltd.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

other information will be found in our Produce Market Section.

OIL OUTPUTS.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during September amounted to 97,119 barrels, or approximately 13,874 tons, including 49,628 barrels from the properties of the St. Helens Petroleum Co., Limited. Production effected by strike.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, October 5, 1921, amounted to 1,747 tons.

BRITISH BURMAH PETROLEUM CO., LIMITED.—A cablegram has been received from Burmah reporting that the total production of crude oil by this company and the Rangoon Oil Co., Limited, for the month of September amounted to 74,940 barrels.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions continue favourable for agricultural pursuits, and autumn cultivation is making satisfactory progress. Ploughing is well advanced, and rain is now needed to soften the seed-bed and assist germination. General market conditions continue depressed, and trade almost at a standstill, while prices display an easier tendency for all cereals. Native wheat is still coming forward in excess of the consumptive demand, and prices have again fallen sharply. Good milling qualities are selling at 47s to 48s 6d per 504 lbs delivered, while inferior sorts are almost unsaleable. Imported descriptions also move off slowly, though best Manitoba grades attracted more attention at the decline, the greatest loss being on near at hand parcels. No. 1 Northern Manitoba quoted 58s to 59s, No. 1 red winter 53s, No. 2 hard winter 54s, Australian 57s, all ex ship, and Egyptian feed 50s, landed per 480 lbs. Visible supplies in the United States show a slight decrease, which, however, will probably be more than made good by an increase in Canadian figures, while the quantity afloat continues on a fairly liberal scale. The United States crop has been officially reduced by 13,000 bushels, but there are prospects of an increase in the winter wheat acreage. Crop news from other exporting countries remains favourable, so that the outlook with regard to future supplies must be considered as satisfactory by European importers. Flour again experienced a quiet trade, and prices disclosed further weakness in sympathy with the recent sharp declines in wheat. London straight run now quoted at 59s, town households 57s, patents 62s, All English straights 52s per sack delivered. Country straights ranges from 42s to 44s per sack delivered London. Imported descriptions dull and easy. Manitoba export patents 61s, straights 56s, Kansas top patents 58s, Australian 53s, and Chinese 50s per 280 lbs ex store. Business continues difficult on c.i.f. terms, and rates continue weak. Canadian patents October seaboard quoted 54s-55s, straights 50s, and Kansas top patents 55s to 56s, and Aus-

tralian held for 51s 280 lbs. Maize dull owing to selling pressure of forward parcels, but a steadier tone prevailed at the close. Plate ex ship quoted 31s, ditto landed 32s 3d, yellow South African 32s 6d, and white flat ditto 34s 6d, both landed per 480 lbs. On c.i.f. terms business remains at a standstill, and with free offers of La Plata descriptions, prices were on a lower basis, though steadier later. Parcels of Plate November-December sold 32s 6d. Cargoes arrived done 32s 6d, November-December 33s. Barley steady with a fair demand for choice samples of new English malting, which realise up to 80s, with lower grades down to 50s; grinding sorts range from 40s to 50s per 448 lbs. No. 3 Canada Western ex ship 35s, No. 4 ditto landed 34s 6d, Canada feed landed 33s 6d, and American feed ditto 33s per 400 lbs. Parcels of superior Californian afloat sold at 38s per 448 lbs, c.i.f. terms. Oats remain extremely dull, and rates easy on lack of demand, but imported steadier later. English ranges from 27s to 31s per 336 lbs. Of imported, Plate f.a.g. 25s 6d, ditto landed 27s, Chilean tawny 26s to 29s, No. 2 Canada Western 31s, No. 3 ditto 30s, and Canada feed nominally 29s per 320 lbs. Oatmeal lower, but a good business passing at the decline. English all cuts £19 10s to £20 10s, ordinary Scottish £20 10s, American £20 to £20 10s, and flaked oats £23 10s to £24 10s per ton. Millers' offals dull. Broad bran £8 10s to £9 5s, ordinary £7 15s to £8 5s, middlings in good demand at £11 10s to £11 15s ton ex mill. Beans inactive. English winters 47s to 51s, springs 54s to 63s per 532 lbs. Peas neglected. English Duns 54s to 60s, Maples 65s to 74s per 504 lbs. Imported difficult to move at lower prices. Homeward grain freights continue weak, with chartering on a limited scale. River Plate upper ports nominally 20s October to U.K./Cont., and 22s 6d November. American Northern Range ports paid 4s per quarter U.K./Bordeaux-Hamburg range, 5s 3d Mediterranean, not East of West Coast Italy, and 22 cents per 100 lbs Greece. North Pacific nominally 50s. Eastern markets stationary. Bombay nominally 30s on dead weight, while Australia paid 58s 3d new season's wheat to U.K. Danube grain quiet at 17s ton U.K./Continent, and 5s less Mediterranean. South Africa is represented by 3s for maize home, but easy thereat. Other markets quiet and without new feature.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-22.	1920-21.	1919-20.	1918-19.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 13th, is as follows:—Pig-iron: There is still no sign of revival in the market for pig-iron. Even with the present severely reduced output, makers are obliged to put some iron into stock. No. 3 Cleveland G.M.B. is quoted 120s, and East Coast hematite can be bought as low as 125s per ton. Manufactured iron and steel: No improvement as far as steel is concerned, buyers holding back in expectation of lower prices. Steel ship plates, £14; steel ship angles, £13 10s; iron bars, £14; steel rails, £12 10s net. Iron ore: Consumers have plenty of stock, and there is no disposition to buy anything.

Service that counts

Anything that comes within the province of Banking is included in the Service offered its customers by The Merchants Bank. If you want disinterested advice on any business subject or first-hand information concerning trade conditions in any part of Canada—this Bank is in a position to help you.

A banking service of practical value to your business.

The Merchants Bank of Canada

Total Assets - \$190,367,409
LONDON OFFICE - 53, CORNHILL.

Our Sheffield correspondent writes:—The outlook in the iron and steel trade has become brighter. British pig-iron and semi-steel has now a chance in the market owing to the evening of foreign and home prices, and British makers are now beginning to book orders. For some qualities of material the home prices are within £1 a ton of Continental quotations, and their material is superior in quality and reliability. There is rather more confidence in local trade circles, although no increase of work is apparent up to the present time, and only a fourth of the productive capacity of the district is in operation. Huge shops of vast quantities of plant are idle most of the week. Those traders who are confident that the worst of the depression has been seen only expect a partial revival during the next three, or even six, months, as the state of the exchanges prohibits buying in the Continental markets. Any improvement is likely to be confined to British colonies and dependencies and South America. The steady deflation of prices at home is a hopeful feature of the situation. The members of the Sheffield mission which recently visited the United States with the object of persuading the American Senate to modify the excessive duties on steel contained in the new Bill, have returned, and report the success of their efforts. The whole of the clauses of the Bill are to be re-written and the duties modified, and any alteration of the existing tariff is postponed until February, and possibly May. Hostile feeling to increasing tariffs has been roused to such an extent, however, amongst the American public that the measure may be dropped altogether. The continuance of the warm weather militates against the demand for home coal. Buyers are holding off for lower prices. Inland consumption of steam coal is only small, and does not show any sign of expansion. Export trade is quiet and business in small fuels steady. There is a fairly good home and export demand for coke.

Our Glasgow correspondent (writing on Thursday) says:—The week is closing with a quiet and rather anxious tone ruling in most industrial circles, but particularly in those associated with coal, iron, and steel. There are threats of active trouble (over wages' questions) with the miners and the shipbuilding engineers and wrights, who all, without doubt, are being called upon to face some very drastic pay reductions between now and the end of the month. In the existing state of employment conditions a big strike should be unthinkable. And yet this seems possible. There is time enough for a way to be found out. Presuming that matters are satisfactorily fixed up—and that can only be by a cutting down of costs and a cheapening of materials—there would be ground, it is affirmed in informed quarters, for hope of trade expansion. Such evidence as is available does not quite justify this conclusion—that is to say, there is no rush of actual business to report in any connection; but during the week there has been a marked improvement in inquiry in relation to export trade. These inquiries indicate that there was business of a kind behind, and which will come along in due course, provided that values harmonise with buyers' views. And they are tending closer that way every day. It is rumoured that a further substantial "cut" in steel quotations is being negotiated, and concessions in black sheets, bars, pig-iron, hematites, &c., are spoken of as certain. The inquiries referred to mainly related to steel plates and sections, bolts, nuts and rivets, tubes, corrugated sheets (largely for India), textile machinery, oil-consuming engines, wire work, valves, cranes, and structural sections, as well as plant. It should be added that authorities are satisfied, from the tenor of their correspondence, that practically all outside (export) markets are short of stocks and that customers are growing nervous as to getting in before the tide turns. That fear is making not a little progress at home. Then the current course of events on the Continent is not so distinctly in favour of steel and iron producers there as was the case lately. There are still substantial quantities of material being landed in the Clyde and in the North from Germany and Belgium; but these countries are not as free sellers of half-finished stuffs as they were, for the very good reason that they have over-committed themselves and cannot now give the deliveries necessary to business. These little elements collectively represent a change in our favour, which, if carefully handled and nursed, may ere long be translated into something tangible. Steel mills here and there in Lanarkshire have been able to make a re-start on plates and sections this week. Although no shipbuilding yards have added to their order books, many establishments are fairly busy on old contracts, and have a goodly lot of keels to lay down, while ship repairers are pretty well employed. As has been indicated, machinery builders (in specialties) are busy, with reasonably good prospects. It will be nothing short of disastrous if the slightly more favourable indications visible fail to materialise from a breakdown of working co-operation in the coal, shipbuilding, and marine engineering branches of industry.

THE COTTON TRADE.

MANCHESTER, October 13.

The market during the past week has continued to present a firmer tone, and the larger inquiry has been well maintained. Business, however, has been patchy, and spinners and manufacturers have not been able to make any general progress. Despite the boycott of foreign goods in India, rather more cloth sales have occurred for Bombay and Calcutta, and demand tends to broaden. Operations for China have been irregular, but standard makes and fancies have attracted a fair amount of attention. Some of the minor outlets of the Far East, such as Java and Singapore, have given moderate support. Less activity is now showing itself for

Egypt, but some useful lines have been booked for the Levant. Heavy goods for the home trade are being adversely affected by the open weather. There is still a tendency to re-start idle looms. A fair business has been done in home American yarns at irregular rates. Demand in export bundles for Eastern markets keeps up fairly well. Egyptian spinnings have been rather quieter.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The all-round advance in wool values was not unexpected in the consuming centres, though few users are able to suggest any adequate explanation of the keen demand for raw material. Apparently home trade buyers are making the running in Coleman street Wool Exchange, and the strength of that market is reflected in a very strong tone here. Compared with a week ago, topmakers' quotations have been advanced from ½d to 1d in the case of low and medium qualities, 1d to 2d in fine crossbreds, and 2d to 3d per lb in merinos. In some cases quotations are purely protective, and there is no doubt that the higher values are checking business. Firms are operating with the greatest caution, and the opinion is freely expressed that values are again on an entirely artificial basis. In some quarters it is feared that a reaction will set in in the course of a few weeks, in which case confidence which was gradually returning will be severely shaken. The market, to-day, however, is exceedingly strong, and 4s 3d is regarded as the ruling price for a good warp 64's top. Spinners are busy on orders recently booked, and it is a matter for extreme regret that the Labour representatives on the Industrial Council have refused to sanction the employers' request to be allowed in certain cases and for a limited period to work "protected" persons 5½ hours a week instead of the 48 hours agreed upon some time ago. Spinners have offers of good export business, but unless they can give prompt delivery these orders will be lost to this country. There are signs of a slight improvement in the piece goods trade, but manufacturers are quite unable to do business on to-day's prices for yarns. Stocks, however, are being liquidated at rather better prices than those paid in recent months.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The opening of the eighth series of London sales last Tuesday revealed a very strong situation, there being an advance in practically all qualities of wool with the exception of slipped crossbred wools from New Zealand and faulty carbonising Australian merinos. The initial sale revealed an exceedingly satisfactory market, and epitomises what has taken place in manufacturing circles during the interval. There was a particularly big attendance of buyers, all of whom seemed to have thrown on one side all reserve. The good selection of merinos, no doubt, helped materially to call forth the best buying power of the trade, and when 3½d is paid for grease combing wools from West Victoria, it is evident that the days of high values are by no means past. Several lots made from 29d to 3½d, and it is doubtful if these wools would have made above 23d last July. This all indicates what a great change has come over the situation, and that the various sections of the trade are prepared to buy the best classes of merinos, apparently having an outlet for them. In the case of Queensland scoureds, the highest price paid last series was 3½d, whilst last Tuesday 38d was realised several times. The knowledge that there are available big quantities of faulty carbonising wools may have had something to do with these selling at no more money, but I think that this is primarily due to the greatly depreciated value of the mark and franc, compelling Continental buyers to put their sterling into those wools which are moving most freely. Then the drought at Verviers may also be another adverse factor. Apart from this, the advance in merinos was 10 per cent., with all sections active buyers. In the case of crossbreds, the most conspicuous feature was the extraordinary call for Australian and New Zealand half-breds, these advancing 10 to 15 per cent. Medium and coarse qualities appreciated 5 to 7½ per cent., the very fact of all descriptions of crossbreds advancing showing a radical change in this class of staple. In the case of slipes and scoured crossbreds, the advance was not so marked, though we certainly think that fine half-bred lambs went the turn in favour of the seller. The opening revealed a very satisfactory state of affairs, and indicated that a changed spirit has come over the entire trade.

I see that Messrs. H. Dawson and Co. call attention in their opening circular to the "undoubted nervousness regarding the stability of values for next year's commitments," due largely to the "fall in the value of the mark and the general disquietude regarding German finance." I share these views entirely, it being significant that the revival of trade in Yorkshire manufacturing circles is due entirely to the export demand for semi-manufactured materials. That is the disturbing factor. The improvement has not extended to the piece end of the industry, and very few extra looms have been got to work. That is the worst feature of all, and those doing trade with Germany need to be careful. Everybody will regret very much to see a collapse in Germany, but after the experience of this country last year firms in this country cannot afford to run risks, and therefore caution should be exercised. Some of those doing German trade have already found themselves involved in loss, and as the present position in that country reflects upon others on the Continent, particularly further East, a word of warning may be all the more necessary.

AUCTION OF B.A.W.R.A. WOOL AT HULL.

The Committee of London Wool Brokers announce that, by instructions of the British-Australian Wool Realisation Association, Limited, a public sale of about 35,000 bales Australasian wool will be held at the Metropole Hall, West street, Hull, on Thursday and Friday, November 3 and 4, 1921, at 10.30 a.m. The sale will be conducted on behalf of the Committee of London Wool Brokers by Messrs. H. Irwell and Co., of 24 Coleman street, London, E.C. For this auction the prompt will be 21 days, to meet the requirements at present existing at this port. The wools will be on show at the National Avenue Wool Sheds, and the Albert Dock, Hull, from the morning of Monday, October 31st, until time of sale. Catalogues to be obtained on and after Monday, October 21st, from the office of the Committee of London Wool Brokers, 3, and Aust-street, Hull, and at the warehouses.

LINEN TRADE.

BELFAST, October 12.

FLAX.—The Irish markets were well supplied last week. The quality of flax offered is unchanged, and all bought up at firm prices. On the Continent there is no change to report, the upward tendency of value seems to have stopped, and some of the flax offered last week was unsold.

YARNS.—Demand is well maintained, and very considerable quantities passed into manufacturers' hands, both lines and tows. Prices, on the whole, stiffer. Contracts will, in many cases, take a considerable time for delivery. A few Continental orders are coming in, but exchange still bars the way.

WEAVERS.—There has been a stronger market for cloth this week than in any period since the improvement was first noted. Unfortunately, whilst this better demand has affected the majority of manufacturers, there is still poor business in some sections of the industry, notably for those looms affected by the competition of aeroplane stocks. With the gradual disappearance of these stocks and the lower level of prices, better trade should not be far off for these looms.

MERCHANTS.—Orders in all lines are coming in freely. Damasks at present are making best showing, but most other lines in general housekeeping goods are in good demand. In canvas, holland, and buckrams more business has been received, and stocks are moving off more freely. All orders placed are for prompt delivery. Sheer linens have been booked in some cases for several months ahead.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Raw linseed oil has been a very fluctuating and irregular market, with prices for prompt and near delivery ranging between £28 10s to £31 and over, ex Hull mill, with a premium of 20s for January-April. A good business, however, has been done for both home consumption and export, the low level of values apparently forming sufficient inducement to many who have been holding off. Demand having been satisfied and speculative holders anxious to take profits, prices have taken an easier turn. Plate linseed, after a period of firmness, has again lost the advantage, and at Hull spot and afloat was on Tuesday down to £15, with October-November quoted £16.

Cotton oils have been in moderate demand, and in sympathy with lower seed values prices are inclined easier. Soya bean, rape, and palm kernel oils are cheaper, but ground nut and castor oil values are about sustained.

The imports of oil seeds and oil nuts in September give the highest monthly total this year, viz., 187,657 tons, against 75,019 tons in September last year, the increase of over 112,000 tons being due to the heavy arrivals of linseed (88,381 tons), cotton seed (43,437 tons), and nuts and kernels (33,175 tons). The aggregate for the nine months January-September is 1,016,094 tons, an increase of 19,868 tons over a year ago. Linseed, chiefly from Argentina, totalled 368,549 tons, against 260,270 tons, and cotton seed 283,404 tons, against 334,495 tons. Nuts and kernels at 303,350 tons were 29,000 tons down.

Advices from Alexandria state that the arrivals of cotton seed at that port in the cereal year ended August 31st were 340,150 tons, the quantity exported 267,400 tons, and that used for local consumption 66,500 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hides were a shade weaker at Bermondsey sales on Thursday, and heavies at 10½d were an ½d down as compared with last prices. Cows followed suit, and showed a drop of ½d. Calf held firm, and heavy grades advanced ½d, lights being unchanged. The foreign hide market is firm, and tanners are still in the market for South Americans; frigorifics of September kill are quoted at 11d c.i.f., and Anglos, September kill, at 11d for the Continent. Liebig's have sold as high as 12½d, re-weights ex store. The American position is cabled as strong, with best heavy packers at 14½ cents, and light cows advanced to 12½ cents.

Trading in sole leather has been rather quieter this week, following on the hectic time at the Shoe and Leather Fair. The demand is still running on 12-14 lb bends of the cheap grades, and anything from dry hides which looks cheap finds a buyer at once. Cheap shoulders are also wanted of 7s 9d iron substance, the conclusion being that the demand for cheap footwear is still a feature of the position. Upper leathers are wanted in low grades for the

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue notes in Formosa, conducts general Banking Exchange Business, and takes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox and Co. (Limited). Deposits are received for fixed periods on terms which may be ascertained on application.

same reason, and glacé at about 1s a foot seems very popular. Imports of upper leather for the first nine months of the current year have dropped to £3,364,263 from £10,634,376 for the corresponding period of 1920.

The shoe trade is improving, and it is stated that several manufacturers took enough orders at the Shoe and Leather Fair to keep them employed for a few months. Exports of leather boots, however, for the first nine months of the current year have dropped to £1,722,070 from £5,396,861 for the first nine months of 1920, the greatest fall being in the South African demand.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van for motor loads to site, 8½d to 89s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 76s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.

"Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 14.

General quietness governed the markets throughout the week, export requirements counting for little owing to the question of rates of exchange, while buying on the part of the home trade was largely measured by wants of immediate necessity.

SUGAR.—Only a moderate amount of business was effected on balance, and prices without exception are lower on the week. Tate's cubes sold, 55s 9d to 56s 9d; crushed, 53s; granulated, 50s 6d to 51s; castor, 53s to 53s 6d; pieces from 37s to 42s, and whites up to 47s; Lyle's granulated, 50s 6d to 50s 9d; yellow crystals, 45s 6d. West India crystallised varies from 40s 6d to 45s, as to quality; muscovado, 34s to 37s; American granulated, spot, sold down to 49s; ditto October, steamer, 21s 6d, c.f. and i. terms. White Java, spot, sold, 48s to 47s 6d; white Mauritius, 45s to 45s 6d, as to sample. Belgian crystals, October, sold, 19s 6d; and November-December, 18s 9d, f.o.b., Antwerp. Fine Czech-Slovakian granulated, first week November, sellers, 20s, f.o.b., Hamburg. Dutch granulated, prompt sellers, 23s, f.o.b., Amsterdam. Terminal market quiet, and sales include white, December, at 18s 10½d; March and also May, 18s 7½d to 18s 6d.

COFFEE.—A steady tone governed the spot market, and a fair inquiry was experienced, especially for the better descriptions. East India, fair to good bold sizes, sold, 115s 6d to 120s; Vera Paz, ditto, 121s to 130s. Future delivery market generally steady, and moderate transactions this week include December, at 50s 6d to 50s 3d; March, 51s to 51s 6d and 51s 3d.

COCOA remains in a quiet state, but price changes were not of much importance. Cocoa-butter, spot, quoted 1s 10d per lb.

TEA.—Indian sales during the week embraced some 36,200 packages. Brisk competition prevailed for all the finer liquoring parcels, but inferior changed hands quietly, and for these slightly easier prices had to be accepted in order to clear. 17,500 packages Ceylon aroused active biddings for all the better qualities at firm rates, while under-grades fetched steady rates.

RICE.—Market very dull, and prices lower during the week where business transpired. 2,000 tons No. 1 garden Siam, arrived, steamer "Mangalore," sold, 16s 10½d; and 1,300 tons Siam C.3 broken ditto, at 10s c.f. and i. terms. Forward positions purely nominal. Beans quiet. Rangoon, arrived, sold, 8s 6d, c.f. and i.; and afloat, sold, 9s to 8s 3d, c.f. and i. Madagascar butter beans, all white, spot, sold, 20s for new crop and 14s old import.

SPICE.—Pepper generally quiet, and forward positions weaker. Fair black Singapore, spot, 4½d; ditto, October-December, steamer, sold, 3½d to 3½d; Aleppy, spot, sellers, 4½d; Tellicherry, 5d; white Singapore, 8d; Muntok, ditto, 8½d; ditto, October-December, sold, 7½d to 7½d. Zanzibar cloves, spot, 1s 4d; October-December, steamer, 1s 2½d. Pimento, spot, sold, 2½d. Tapioca quiet, steady. Fair flake, spot, sellers, 1½d per lb; ditto, September-November, steamer, 15s; fair Penang seed, spot, 19s 6d. Sago flour, September-November, steamer, 15s 4½d; October-December, 15s 3d. Japanese farina, September-November, 27s. Desiccated coconut dull. Spot lots, sold, 46s; near steamer, 44s; and October-November, 46s. Ginger slow, but steadily held. Japanese limed, spot, 45s. Nutmegs steady, quiet.

FRUIT.—The market for currants, though generally quiet, ruled steady in value. Pyrgos quoted 48s to 52s; Amalia, 52s to 54s; Patras, 56s to 64s; Vostizza, 70s to 80s. Sultanias steady, and new Smyrna, fair, sold, 108s to 110s; good to fine, 120s to 135s; choice, 140s. Figs steady. New layers, 120s to 135s; lacouns, 17s to 18s. The first auctions of the season regarding Valencia raisins were held on Tuesday last, when 385 tons were offered. About half this quantity found buyers. There was a good demand for the finer qualities at firm rates, but inferior went off rather slowly at a decline of 3s to 4s per cwt, as compared with recent private values. Quarter boxes, sold, fair, 125s to 130s; good, 132s to 140s; fine, 141s to 152s; and choice, 157s to 165s, with seedless, 170s to 175s; choice, 235s; rather quietly. Fine clusters went at 155s to 170s; choice, 235s; and some fancy trays, 265s, with seedless, 70s. Dates in steady request. Khedrowie, spot, sold, 22s, and Siar, 17s 6d.

JUTE.—A generally quiet tone ensued this week, though a slight advance in the early part was subsequently recovered, while

reserved offers came to hand from Calcutta. Native first marks assortment, spot, Hamburg, sold, £33; lightning assortment, same position, at £29; bottom numbers of native first marks, spot, Dundee, £29; top numbers of ditto, spot, Barcelona, £38; heart subs, old crop, afloat, Hamburg, £20 10s; ditto, on spot, Hamburg, £22; native first marks assortment, old crop, substitutes, October-November, Hamburg, £31 10s; lightning subs, ditto, £27 10s; new crop first grade assortment, October-November, Hamburg, £35; lightning grade, ditto, £30. Calcutta hesians and twills quiet. 10 oz by 40, spot, London, sold, 28s; 8 oz, ditto, 23s; A twills, spot, quoted 84s; and B, 73s.

HEMP.—The market for Manila kinds ruled steady though quiet, and sales include J grade, October-December, at £40; K ditto quoted £38; L, £37 10s; M, £33 10s. New Zealand firm, and fair quality. October-December, sold, £37 10s.

SHELLAC.—Market steady, quiet. T.N., spot, 330s; October, sold, 335s to 330s; and December, 330s. A.C. garnet, spot, quoted 290s; G.A.L., ditto, 270s.

COPRA.—Market presented quiet features, and prices were irregular and easier. F.M.S. Straits, August-October, sold down to £28; September-November, £28; and October-December, £28. Ceylon, September-November, quoted £30; South Sea Islands, ditto, to London, £27; Cebu, ditto, to Hamburg, £27. Palm kernels, November-January, Liverpool, sold, £18 15s to £18 2s 6d.

RUBBER.—Market quietly steady. Standard Plantation crepe and sheet, spot, sold, 9½d; November-December, 9½d to 9½d; and January-March, 10½d to 10½d; with April-June, 10½d to 11d, and 10½d to 10½d. Fine hard Para, spot, 1s 1½d; ball, 7½d.

OILS.—Linseed easier. Spot, net, naked, 29s 6d; November-December, 29s; January-April, 30s. Rape quiet. Crude, spot, 54s; refined, 58s. Cotton quieter. Crude Egyptian, 47s; Bombay, nominal; common edible, 56s. Chinawood: Hankow, spot (barrels), 72s; and shipment, 68s to 69s. Coconut easier. Ceylon, spot, 53s 6d; October-November, 47s; Cochín, ditto, 54s. Soya easier. Oriental, barrels, ditto, 42s. Japan fish quiet. September-October, cases, 22s to 23s. Cod quiet. English, spot, 27s to 28s. Ground-nut quiet. English crushed, naked, spot, 55s; deodorised, barrels, 67s. Turpentine easier. American, spot, 67s 6d; October-December, 68s 3d; January-April, 69s 6d. Rosin steady. American, grade B, 17s; F, 17s 9d; G, 17s 9d; K, 18s 6d; WW, 23s; French, F/G, 16s; H, 16s 6d; WW, 19s 6d; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market unsettled, and demand very slow. Indian largely nominal. Calcutta, afloat, sold, £16; September-October, £17, value. Plate, spot Hull, £15; afloat, sold, £14 10s to £14 15s; September-October, sold, £14 15s; October-November, £15 5s; November-December, £16 5s to £15 15s; January-February, nearest, £16 5s. Rapeseed weak. Toria, October-November, quoted £19; real bold Ferozepore quoted £19; brown Cawnpore, £18 5s. Cottonseed quiet. Egyptian black, October, quoted

International Banking Service

THE Guaranty Trust Company of New York offers a complete and direct banking service to all parts of the world.

Its chief functions and facilities are:

Opening current and deposit accounts
Dealing generally in foreign exchange and collecting foreign bills

Issuing documentary credits and discounting approved acceptances

Issuing letters of credit and travellers' cheques
Supplying credit information to responsible firms and companies

Buying and selling foreign and domestic securities for customers' account

Safe-keeping of securities
Acting as executor and trustee under wills, etc.

The Company issues a series of booklets which explain the wide range of its services and also contain commercial and financial information of current interest.

A list of "Publications of Current Interest" will be sent on request.

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XCIII.

SATURDAY, OCTOBER 22, 1921.

No. 4,078.

£13 10s; and white, £13 Bombay, December-January 1921. Gingly quiet. Chinese, September-October, Continent, £30. Castor, Bombay, September-October, £21. Ground nuts quiet. Coromandel, machine-dried, October-November, Hull, £26; new crop, December-February, Continent, £26; Chinese decorticated, f.a.q., ditto, Continent, £27 to £28 per ton.

METALS.—Tin: The market manifested a quiet tone at the week's commencement, forward positions being rather firmer. Cash changed hands at £156 to £155 15s, and three months' £157 15s to £158 10s, settling down at £158. A slightly steadier feeling prevailed until Wednesday, with dealings on a moderate scale, when the above dates were registered chiefly at £156 and £158 10s respectively. At Thursday's meeting cash sold at £155 15s, end November £157 5s to £157 10s, and three months' at £158 5s to £157 17s 6d. At Friday's session, cash changed hands at £155, late December, £156 10s to £156 15s, three months' at £157 15s to £157 5s, and again at £157 15s. English ingots £154 to £155. Copper generally steady, but quiet, with business in standard cash last Monday at £69 10s to £69 7s 6d, and three months' £70 10s to £70 7s 6d. Little change characterised movements until the middle of the week, cash realising £69 7s 6d, three months' £70 7s 6d. Values declined at Thursday's meeting, the chief business being con-

fined to late November at £69 5s, and three months' at £70 5s to £69 10s. At Friday's session, cash sold at £68 middle of November £68 10s down to £68 2s 6d, and three months' at £69 5s to £68 15s. Electro, £76 10s to £76 10s, strong sheets £103. Wire bars £75 10s to £76 10s. Lead firmer at £23 17s 6d to £23 10s, as to position. Spelter steady at £26 10s to £26 17s 6d. Antimony: English regulus quoted at £37 to £40. Aluminium unchanged.

The Great Alternative

Saner Politics or Revolution.

By LEONARD J. REID, M.A.

PRESS OPINIONS.

"His indictment of the criminal folly of Bolshevism is most effective."—*Morning Post*.

"A sound and rational contribution to political controversy. . . . We recommend every thinking politician to read it."—*Saturday Review*.

"To unsettle and troubled Liberals we would heartily commend it. It is a finely suggestive discussion of certain vexing questions with the solution whereof Liberalism is vitally concerned."—*Liverpool Daily Post*.

"Studiously moderate."—*Economist*.

"Sane and thoughtful writing."—*Daily News*.

"An able plea for a great New Liberalism."—*Scotsman*.

NEW ZEALAND

A Wealthy Country, Splendid Climate, Fertile Soil, Plenty of Water.

An Ideal Country for the Farmer, the yield of grain and percentage of lambs being phenomenally high. New Zealand, a country as large as the United Kingdom, with a population slightly over one million, exports annually products up to the value of Thirty Millions Sterling.

NEW ZEALAND IS RICH IN COAL, IRON, TIMBER, GUM, GOLD AND SILVER.

Total yield of minerals, over One Hundred and Thirty Million pounds.

The Government has advanced over Twenty-One-and-a-Half Million Pounds to Farmers and Workers, at a low rate of interest, for Improvements and Buildings, and is empowered under the new "Housing Act" to set apart Crown Lands and make advances up to One-and-a-quarter Million Pounds annually for the same purpose.

Railways (3,000 miles), Telegraphs and Telephones (216,742 miles of wire) are State owned and operated.

To those desirous of making a home in the new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw, Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

Full information is supplied free by

* Additional to those offered by tender the preceding week.

The Bank return bears the marks of further creation of credit. The stock of gold was reduced by £4,500 and the circulation by £929,500, so that the Reserve was £925,000 higher. Government securities increased by £14½ millions and Other securities by £6 millions, so that deposits were £21½ millions higher, more than the whole of which went on to Other, Public being reduced by a quarter of a million. The circulation of currency notes was reduced by £988,900 to £312,603,700, which includes £1,850,146 for notes called in but not yet cancelled. The fiduciary issue is £262,803,500, or £54,751,700 below the maximum.

The State Bank of Sweden reduced its rate of discount from 6 to 5½ per cent. on October 19, 1921. It had stood at 6 per cent. since July 5, 1921.

The following table shows public income and expenditure for the week ended October 15, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	13,404	Supply Services	8,830
Taken from Exchequer Balances	128	Interest on Debt	2,564
		Sundries	558
		Reduction of Debt	1,580
	13,532		13,532

These operations decreased the National Debt by the sum of £1,580,576, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 1,140	Treasury Bills	- 11,525
National Savings Certificates	+ 200	Depreciation fund	- 660
Bank of England Advances	+ 9,500	Surrenders of Bonds, &c.	- 721
Public Department Advances	+ 1,750	Exchequer Bonds repaid	- 715
		Sundries	- 915
	+ 12,590		- 13,671

National Savings Certificates to the extent of £500,000 were issued for housing. Property and Income Tax yielded £3,577,000, while Customs and Excise brought £4,764,000. Exchequer bonds amounting to £750,000 were repaid. Receipts from sales of Treasury bonds amounted to £1,140,000.

FOREIGN EXCHANGES.

There has been no respite to the difficulties of the foreign exchange situation, marks and dollars again presenting the chief problem. After its sensational rise of a week the mark continued to move up with increasing cordity, until, when on Monday the rate for a time reached about 750, it seemed for the time that the collapse had completely broken bounds. After this leap, however, there came a somewhat steadier tendency, and the rate closed for the day at about 715. Between Monday and Thursday the rate fell steadily to about 588, yesterday morning an upward tendency was again wing, and the rate at 615 was some 73 marks higher than the previous week. For the time it is impossible to hazard a guess at the future. Germany itself the holders of German marks abroad have been roughly frightened, and any sudden acceleration of action as happened recently, or any move on the part of the parties of the Right would almost certainly cause another rush to sell. On the other hand, it now seems clear that, as Germany is said to have met already by deliveries in kind the £15 million gold odd which fall due for reparation payments on November 15th, there will be no pressing reparation problem for some months to come. In addition, the recent collapse would already appear to have had some effect in making the Powers concerned consider very seriously the effect of their reparation claims, while there is always some possibility of an attempt to steady the German position in the interests not of Germany, but of the world as a whole. The spread between spot and future marks is about two marks per month. New York, which on the 14th stood

at 3.87, rose steadily to 3.94½ on the 17th, and after a reaction to 3.92 on the following day has moved up again to 3.96 yesterday morning, almost entirely from pressure from the other side. The reason for this rapid appreciation in the value of sterling remains obscure, there being, beyond the falling off in our imports, little to explain the movement, except the growing tendency in America to easier banking conditions, and so to a certain amount of inflation. It is possible that Mr Lloyd George's unemployment schemes, which have apparently been misunderstood in America and have been unfavourably criticised there, may do something to weaken this growing confidence in sterling. Forward rates are very slightly wider at ¼ cent per month over spot. In sympathy mainly with the mark, and partly perhaps as the result of continued Budget troubles, the Paris rate has moved up from 53.27½ to 54.05 yesterday morning, after being 54.47½ on the 18th, while Brussels has risen from 53.90 to 55.05, showing a considerable widening in the spread. Forward rates for one month are one centime in Paris and 10 centimes in Brussels, showing a slight widening of the margin on the week. Italy, which on the 18th was over 100, has also recovered a little to 99½, but is still more than 1½ lira above last week's quotation. Among neutral exchanges Amsterdam, on very heavy selling of shares in the early part of the week, moved somewhat sharply against us, but has risen again to 11.58½, slightly above last week's quotation. Switzerland, however, which yesterday was 21.55, has reversed its recent movement and gone in our favour again, partly owing to a slowing down in the German demand for Swiss francs, and partly owing to the heavy despatch of coupons to Switzerland for encashment. Spain at 29.80 is some 90 points higher, and Portugal has depreciated to 5½d, and, with renewed political troubles, may go lower. Among North European rates, Christiania at 30.55 is slightly better, but Stockholm at 17.02½, and Copenhagen at 20.67½, have moved well in our favour. Helsingfors, however, at 250 has appreciated somewhat. In Central Europe Vienna Auslands Kronen at 6,600 show a reaction after the recent collapse. The latest available rate for Inlands Kronen was 10,000 on the 17th, when the London rate was 7,150. Warsaw at 16,500, however, is again worse, in spite of the Polish acceptance of the Silesian settlement. Prague at about 370 shows a further rise of some 15 kronen. Belgrade is again some 30 dinar higher at 265, in spite, or perhaps as the result, of new exchange regulations which are not yet properly understood on this side. Bucharest, after rising to above 550, shows at 545 a slight movement towards recovery. Sofia remains nominally unchanged at 525. Budapest is some 500 kr higher at 3,000, while Athens, after its recent slight recovery, is again up to 90½. Contrary to expectation, the rupee has had a sharp relapse to about 1s 4½d as the result, it is suggested, largely of the collapse of the mark, which is bound to have an unfortunate effect on India's exports to Germany. At the same time, offerings from India, resales by China, and the effect of Germany's position on China also, has brought a rapid fall of about 2d in the price of silver, although it is not expected that this downward movement will go much further at present. Hong Kong and Shanghai have got cheaper in sympathy, and the price of yen is also slightly lower. In South America, Rio is decidedly cheaper, Montevideo and Buenos Ayres unchanged on balance, and Valparaiso slightly dearer.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO OCTOBER 15, 1921.

Total spent	£ 552,289,591	Raised by revenue ..	£ 488,186,724
Dec. in balances	509,093	Net borrowings	63,593,774
Total	551,780,498	Total	551,780,498
ESTIMATES for YEAR 1921-22.			
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

OCTOBER 15TH.—Threat of U.S. railway strike.

OCTOBER 17TH.—Parliament reassembles. Resignation of Sir Eric Geddes announced. Mark drops from 564 to 750. General Pershing at Westminster Abbey. Irish Conference adjourned. London coal prices reduced.

OCTOBER 18TH.—New Government formed in Portugal. Viscount Grey at Mansion House on League of Nations. Chancellor of the Exchequer dines with City bankers.

OCTOBER 19TH.—Government proposals on unemployment announced by Premier in Commons. Lord Weir addresses British Engineers' Society.

OCTOBER 20TH.—Text of Silesian award issued. Motion to admit women to limited membership of Cambridge University defeated.

OCTOBER 21ST.—Irish Conference resumed.

The stock markets have had a week of nervous excitement, disturbance being caused by the demoralisation of the mark, wild rumours in the oil market, and heavy liquidation by British and Dutch holders of securities. Gilt-edged stocks, however, have held their ground fairly well, and the end of the week saw some improvement in the tone in markets where the decline had been most severe.

Activity in the cotton markets has been checked by the easier tendency in raw cotton rates and the decline in the Eastern exchanges. Home trade is held back by the unseasonable weather. In the woollen manufacturing industry home trade remains unsatisfactory, but the value of the raw material is well maintained. 'Topmakers' quotations remain firm. Little improvement is reported from the iron and steel trades. Drastic cuts in steel quotations have been made, but have not so far produced a revival of orders. The hide market is slightly weaker. Tanners are holding out for higher prices. In the shoe trade orders are held up by the fine weather. The markets for vegetable oil and oilseeds have been quiet and depressed.

Details of news and movements in the principal markets from special correspondents will be found on later pages of this issue.

REMEDIES AND LIMITATIONS.

The most hopeful point about the Prime Minister's speech on trade and unemployment is that it completely disappoints those who looked for a promise of a patent Government panacea for the economic ills of the country. It is a distinct gain that the days of illusory promises are past. The make-believe atmosphere of 1918—when Ministers on the hustings promised to establish the permanent reign of universal prosperity—is dissipated, and it is surely a first and necessary stage towards the

practical handling of economic problems when the Prime Minister, instead of appearing with Aladdin's lamp in his hand, devotes a large portion of his speech to the limitations of the capacity of a Government to revive trade or cure unemployment. A certain flamboyancy in Mr Lloyd George's description of the preparations that the Government had already made against a rainy day may be pardoned on the ground of political exigency. Nor could it be expected that he would draw public attention to the contributions which his Government have made to present economic troubles through such ill-considered measures as the Safeguarding of Industries Act and the Reparations (Recovery) Act. "Trade recovery," said the Prime Minister, "is what we have got to look to for the ultimate solution of unemployment. That does not depend on Governments. I will give the measure in which these things do depend on Government, and I will give it quite sincerely. Here, in the main, there is nothing that can be done by this House, or any other House, upon which trade recovery in the main depends." It is with these limitations in mind that the Government's actual proposals for providing relief and encouraging trade must be judged. These proposals fall under several heads. The export credits scheme, which has so far proved a dismal failure, is to be amended and extended. It is proposed that the Government shall guarantee exporters to the extent of 100 per cent., with recourse on the trader for 57½ per cent. The scheme is to apply not only, as before, to impoverished Continental countries, but to other foreign countries and British Dominions as well. A maximum is to be fixed for the amount of credit established for each individual firm. The next measure consists of the proposal to guarantee the payment of interest and principal in respect of borrowings by Dominions, Colonies, foreign Governments, public bodies, or corporations, where the Government are satisfied that the proceeds are to be "applied towards the carrying out of any capital undertaking or in the purchase of articles to be manufactured in the United Kingdom, required for the purposes of any such undertaking." The Government is to provide a sum not exceeding £25 millions for the purpose of such guarantee. Further proposals are concerned with the more immediate question of relief of distress. A sum of £10 millions is to be allocated towards assisting works of relief already undertaken. Money will be allocated for forestry, land drainage, and roads in respect of which negotiations are pending with local authorities. A fund is to be established to grant relief to the dependents of unemployed workers, while in necessitous areas, where the Guardians find it impossible to cope with the difficulties, a Government loan is to be made to enable them to tide over the emergency. A sum of £300,000 is to be added to the grants already made to enable ex-Service men to emigrate to the Dominions.

Even in the absence of multitudinous details which remain to be filled in, it is easy enough to riddle these proposals with criticism. It may, for instance, be argued that the degree of Government expenditure or liability immediately to be incurred merely adds to the difficulties of the situation; that the export credits scheme, with its committee to fix the limit of credits for the individual firms, will not work

smoothly; and that there is danger in compelling those who raise loans here to spend the proceeds within the United Kingdom or in tampering in any other way with the new capital market. Many other weaknesses in the proposals will be obvious to the careful observer. But it must, at least, be recognised that no Government at this juncture could refuse to spend money on immediate relief, and, as regards the wider schemes, the Prime Minister himself has fairly warned the country of the limited results that can accrue. They do not, and cannot, go to the root of the matter. The crux of the trade problem, as Mr Lloyd George pointed out, lies in the united endeavour of worker and employer at home to put goods on the market at a competitive price, and still more in the harmonious efforts of statesmen to provide the world with a real peace and a sense of security that the world has looked for in vain since the Armistice. As regards the former, it is satisfactory to find Mr Clynes propounding the doctrine of a fair day's work for a fair day's pay. "The fallacy of diminishing the quantity of goods produced," said Mr Clynes, in following the Premier, "in the belief that the less work one man does the more work is left for another, must give place to a standard of production consistent with the certainty of attracting markets to take what we have to sell..... Scarcity is the shield of the profiteer, and the workman is just as bad a profiteer if he deliberately refrains from doing a fair day's work for a fair day's pay." As Lord Weir has pointed out this week in a speech to the British Engineers' Society, reduction in wages does not in itself of necessity bring about lower production costs. What a lowering of production costs essentially entails is that for every week's wage paid a fair week's work is done. To find Lord Weir and Mr Clynes emphasising this point with equal energy on the same day surely may be taken as a sign of hope that at the domestic end of the problem hard truths are at last being faced. As regards public retrenchment, also, Mr Lloyd George's words suggest a new and more adequate recognition of the urgency of the question. The extent of the new liabilities now to be faced enormously enhances that urgency. If, as the Premier foreshadowed, the Government proves itself courageous enough to come forward with ruthless economy proposals, it is to be hoped that the House of Commons, whose record on economy is notoriously bad, will on this occasion rise above the temptation to obstruct them piecemeal.

But if real and lasting progress is to be achieved, no degree of advance towards solving domestic problems can be effective unless accompanied by harmonious effort in the international sphere. The Premier's peroration was eloquent of the crying need for peace and stability, and for a clearing away of bickerings and racial suspicion. "Let us," he said, "get out of the atmosphere that if you talk about a German without a frown on your brow you are not a patriot." With his departure for the Washington Conference drawing near, Mr Lloyd George will find in the sensational fluctuations of the German mark an arresting reminder that the urgency of the European problem is increasing, and that the need for concerted international effort to restore security and confidence is beyond the power of expression even in his most brilliant perorations.

THE GROWTH OF FOREIGN TRADE OF THE BRITISH EMPIRE.

In a previous article* we have seen that in 1912 three of the chief European countries showed a higher value of foreign trade per head of their populations than that done by the United Kingdom. Among the chief countries of the British Empire there are also three, viz., New Zealand, Australia, and Canada, that showed higher values than the £29 10s 6d per head of its population shown by the United Kingdom. But as in the case of the countries of Europe, so also in the case of her colonies, the United

Kingdom largely profited by carrying an immense proportion of the overseas trade of her outlying Dominions.

TABLE SHOWING the ACTUAL and PERCENTAGE INCREASES in the FOREIGN TRADE of the CHIEF EUROPEAN COUNTRIES and of OUR DOMINIONS in 1912 OVER 1901.

European Countries.	Actual Increase.	Per Cent.	British Dominions, &c.	Actual Increase.	Per Cent.
United Kingdom	473,703,000	54.5	British India	159,700,000	97.5
France	331,700,000	76.6	Canada	143,600,000	180.6
Germany*	260,100,000	24.8	Australia	65,200,000	70.8
Holland	242,300,000	77.8	British South Africa†	42,900,000	64.3
Belgium†	232,300,000	84.4	New Zealand	19,300,000	78.1
Italy	131,400,000	104.5	British West Africa..	17,400,000	220.2
Denmark	32,200,000	63.0	British West Indies..	7,400,000	56.1

* Increase in 1912 over 1907.

† Increase in 1911 over 1901.

‡ Increase in 1912 over 1904.

The great percentage increase (104.5) in the value of Italy's foreign trade in 1912 upon that of 1901 was largely due to the timely check to her ambitions in the direction of colonial expansion, which led her to concentrate on the development of her internal resources. None of the other chief countries of Europe showed so rapid a development, although, as we see from the table, both Canada and British West Africa made more rapid progress. The trade of British India almost doubled in value, and that of Australia approached the percentage increase seen in the cases of France and Holland, the percentage increase of New Zealand's trade (78.1) being even higher, whilst that of the fertile West Indies exceeded even the percentage increase of the United Kingdom. The very rapid increase in the foreign trade of our tropical possessions in West Africa has lately come to a standstill, and the warning uttered by the Earl of Selborne, as chairman of the Bank of British West Africa, deserves the serious consideration of the Colonial Office. He said, "Everyone connected with West Africa must recognise that the power to purchase depended upon exports, and it was clearly to the interest of manufacturers in the United Kingdom, as well as of the African producer, that no impediments other than those which were unavoidable should be put in the way of West African trade."* The removal of the export duty upon West African produce has become of urgent importance.

TABLE SHOWING the GROWTH of the FOREIGN TRADE of CANADA from 1901 to 1912.

CANADA.	Popula- tion.	Im- ports. Min. £.	Ex- ports. Min. £.	Total Trade. Min. £.	Per Head of Population.								
					Im- ports.			Ex- ports.			Total Trade.		
					£	s	d	£	s	d	£	s	d
1901	5,371,000	39.1	40.4	79.5	7	5	7	7	10	5	14	16	0
Average, 1902-1906 ..		52.2	45.7	97.9									
Average, 1907-1911 ..		86.5	59.8	146.3									
1912	7,343,000	142.3	80.8	223.1	19	7	7	11	0	1	130	7	8

Whilst the population of Canada increased by 1,972,000, or 36.7 per cent. upon that of 1901, the value of the imports rose by 264 per cent., and that of the exports by 100 per cent. The percentage increase of her total trade was 180.6, or nearly three times that of 1901. The value of her total trade per head of her population rose from £14 16s to £30 7s 8d. Whereas the value of her exports slightly exceeded that of her imports in 1901, in later years the reverse has been the case, and in 1912 the exports were not much more than half the value of the imports.

TABLE SHOWING the GROWTH of the FOREIGN TRADE of AUSTRALIA from 1901 to 1912.

AUSTRALIAN COMMONWEALTH.	Popula- tion.	Im- ports. Min. £.	Ex- ports. Min. £.	Total Trade. Min. £.	Per Head of Population.								
					Im- ports.			Ex- ports.			Total Trade.		
					£	s	d	£	s	d	£	s	d
1901	3,774,000	42.4	49.7	92.1	11	4	8	13	3	5	24	8	1
Average, 1902-1906 ..		39.7	55.2	94.9									
Average, 1907-1911 ..		56.0	71.3	127.3									
	4,750,000	78.2	79.1	157.3	16	9	3	16	13	1	133	2	4

Between 1901 and 1912 the population of the Commonwealth rose by 976,000, or 25.8 per cent. Her imports and exports increased by 84.3 per cent. and 59.15 per cent. respectively, and her total trade rose from 92 millions to 157 millions, or at the rate of 70.8 per cent. Until 1912 the value of the exports was much higher than that of the imports, but in that year the value of the imports per head of the population was within a few shillings of that of her exports.

* See page 106 of the *Economist*, July 16, 1921.

TABLE SHOWING the GROWTH of the FOREIGN TRADE of NEW ZEALAND from 1901 to 1912.

NEW ZEALAND.	Popula- tion.	Im- ports.	Ex- ports.	Total Trade.	Per Head of Population.								
		Min. £.	Min. £.	Min. £.	Im- ports.	Ex- ports.	Total Trade.						
					£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.		
1901.....	773,000	11.8	12.9	24.7	15	5	8	16	13	3	31	18	11
Average, 1902-1906		13.1	15.4	28.5									
Average, 1907-1911..		17.4	19.5	36.9									
1912	1,020,000	21.0	23.0	44.0	20	11	9	22	11	0	43	2	9

From 1901 to 1912 the population rose by 247,000, or 24.2 per cent., the value of the imports rose by 78 per cent., and that of the exports by 78.3, the exports being each year rather higher than the imports. The value of the total trade per head of the population rose from £31 18s 11d to £43 2s 9d, and stood third to the values of Holland and Belgium, considerably exceeding the values of Australia, Canada, and the United Kingdom.

TABLE SHOWING the GROWTH of the FOREIGN TRADE of the BRITISH WEST INDIES from 1901 to 1912.

BRITISH WEST INDIES.	Popula- tion.	Im- ports.	Ex- ports.	Total Trade.	Per Head of Population.		
		Min. £	Min. £	Min. £	Im- ports.	Ex- ports.	Total Trade.
					£ s d	£ s d	£ s d
1901	1,578,000	6.9	6.3	13.2	4 7 6	4 0 0	8 7 6
Average, 1902-1906		7.2	6.3	13.5			
Average, 1907-1911		9.2	8.3	17.5			
1912	1,700,000	11.0	9.6	20.6	6 9 5	5 12 11	12 2 4

It will be seen that the value of the imports rose more rapidly than that of the exports, the percentage increases in the eleven years being 59.4 and 52.4 respectively, and the value of the total trade per head rising from £8 7s 6d to £12 2s 4d.

TABLE SHOWING the GROWTH of the FOREIGN TRADE of BRITISH WEST AFRICA from 1901 to 1912.

BRITISH WEST AFRICA.	Popula- tion.	Im- ports.	Ex- ports.	Total Trade.	Per Head of Population		
		Min. £.	Min. £.	Min. £.	Im- ports.	Ex- ports.	Total Trade.
					£ s d	£ s d	£ s d
1901	16,207,000	4.6	3.3	7.9	0 5 8	0 4 0	0 9 8
Average, 1902-1906		5.7	5.0	10.7			
Average, 1907-1911 ..		9.4	8.9	18.3			
1912	20,500,000	12.6	12.7	25.3	0 12 3	0 12 5	1 4 8

Whilst the increase in the population of British West Africa was at the rate of 26.5 per cent., the value of her imports rose by 174 per cent. and of her exports by 285 per cent., the increase in the value of her foreign trade per head of the population being from 9s 8d to £1 4s 8d, an amount considerably exceeding the value of the total foreign trade per head of our Indian Empire.

TABLE SHOWING the GROWTH of the FOREIGN TRADE of BRITISH INDIA from 1901 to 1912.

BRITISH INDIA.	Popula- tion.	Im- ports. Min. £.	Ex- ports. Min. £.	Total Trade. Min. £.	Per Head of Population.		
					Im- ports. £ s. d.	Ex- ports. £ s. d.	Total Trade. £ s. d.
1901	294,317,000	72.9	90.9	163.8	0 5 0	0 6 2	0 11 2
Average, 1902-1906		92.2	112.2	204.4			
Average, 1907-1911		114.9	132.3	247.2			
1912	317,000,000	152.3	171.2	323.5	0 9 7	0 10 10	1 0 5

In the eleven years the population of British India increased by 23 millions, or 8 per cent., the value of the imports by 109 per cent., that of the exports by 88.3 per cent., and the value of the total foreign trade per head of the population rose from 11s 2d to £1 0s 5d.

British South Africa in 1904 comprised the four self-governing colonies of the Cape, Natal, Orange Free State, and the Transvaal, which were united by the South Africa Act of 1909 into the Union of South Africa, and of Swaziland, Basutoland, the Bechuanaland Protectorate, and Southern and Northern Rhodesia. The growth of the trade of British South Africa is shown in the following table:—

BRITISH S. AFRICA.	Popula- tion.	Im- ports. Min. £.	Ex- ports. Min. £.	Total Trade. Min. £.	Per Head of Population		
					Im- ports. £ s. d.	Ex- ports. £ s. d.	Total Trade. £ s. d.
1904	6,980,000	35.7	31.0	66.7	£ s. d.	£ s. d.	£ s. d.
Average, 1904-1907		32.8	39.8	72.6	5 2 4	4 8 10	9 11 2
Average, 1908-1911		34.3	53.2	87.5			
1912	8,200,000	43.0	66.6	109.6	5 4 11	8 2 5	13 7 4

The population was estimated in 1901 at 6,980,000. It rose to 8,200,000 in 1912, showing an increase of 1,220,000, or 17.5 per cent. The exports are far more in

value than the imports, and the value of the total trade in 1912 per head of the population was £13 7s 4d. The resources of British South Africa are being rapidly developed, and her place in the list of countries supplying other lands with agricultural and pastoral products will soon rival her position as the producer of gold and precious stones.

THE POSITION OF THE AGRICULTURAL WORKERS.

(BY OUR LABOUR CORRESPONDENT.)

WHEN the Government, with the inconsistency to which the public has become familiar, swept away the Agricultural Wages Board, which a few months previously it had made "permanent" by legislation, it was generally realised, at any rate in Labour circles, that the farm workers were in for a bad time. The Wages Board had given them a new sense of security. Wages were improved and hours of labour reduced. Broadly speaking, the policy of the employers was determined by the most enlightened section, and consequently the operations of the Board resulted in manifest benefits to the land worker. And though there were a large number of farmers who were bitterly opposed both to legal wage machinery and trade unionism, nevertheless the employers as a whole were becoming accustomed to the working of the Wages Board, if they were not actually reconciled to it. Then the Government, in order to get rid of the subsidy to the farmers, suddenly decided that both the guarantees and the Board were to be abolished. It was urged that conditions were such that without the protection of the Board the standard of life of the farm workers would be beaten down. The Government, however, refused to retain the machinery which it had created, but the Minister of Agriculture was put up to say that the industry could have Conciliation Committees which were "just as good" as the real article.

These Committees are now at work in many areas, and are turning out much as the Labour critics anticipated. The new Committees consist of representatives of workers and employers, without the "appointed members" who formed part of the Wages Board and the District Wages Committees. They may cover either a larger or a smaller area than the District Committees which they have displaced. There appears to be a tendency in some districts for the farmers to press for smaller areas, and thereby to break up the country amongst a larger number of bodies. The policy behind this tendency is to destroy the possibility of national wage rates and to revert as nearly as possible to individual bargaining.

The functions of the Committees when fully stated have an air of importance. A Conciliation Committee may agree upon rates of wages for any class of persons employed in the district or in any part of the district for which the Committee is formed. It may fix special rates of wages for special classes of workers. It may provide for the exemption, on account of special circumstances, of particular workers from the rates agreed upon. It may agree upon the period for which rates of wages shall operate. It may deal with hours and conditions of labour. Briefly, a Conciliation Committee may do what any body of representatives of employers and workers set round a table may do—agree upon wages, hours, and conditions. What, however, on the face of it, gives a real importance to the Conciliation Committees is that, if they so decide, agreements arrived at may be submitted to the Minister of Agriculture for confirmation. If the Minister confirms an agreement, he will then cause the particulars to be advertised in the district to which it applies, specifying the date from which the agreement will become operative. When an agreement has been confirmed and published, the wages and conditions laid down in it become applicable to all farms in the district when the agreement comes into force.

Superficially, the machinery of the Conciliation Committees bears a certain resemblance to that of the Agricultural Wages Board or a Trade Board. But whether the Minister of Agriculture takes the steps outlined above depends upon the Conciliation Committees. A Committee which has arrived at an agreement must by resolution decide to submit it to the Minister for confirmation, and it is obviously possible for the farmers' side of a Committee

* See the *Economist*, page 330, August 27, 1921.

to thwart any such decision. Moreover, there is no central body co-ordinating wages and other agreements, and there may, and probably will be, under this system a multitude of wage scales in operation in the country, most of them bearing no relation to each other or to the employers' ability to pay. Nor when agreements have become operative is there any responsibility upon the State for enforcing them, as there was in the case of the Agricultural Wages Board, and as there still is in the case of the Trade Boards. Lastly, in districts where an agreement has been put into operation, it is possible for an individual worker to contract out of it. If a farm worker is content with a lower wage, or accepts a lower wage in order to keep his job, or because he is afraid to ask for more, he and his employer may evade the intention of the agreement. It is obvious that this provision strikes at the root of district agreements and collective bargaining, and is a menace to trade unionism. The Conciliation Committees, it will be seen, are working under conditions which militate against successful working, as no doubt they were intended to do. Already there is evidence that the provisions for the registration of agreements will remain almost a dead letter, and that it will be difficult to secure agreements.

The operation of the legal minimum wage came to an end on October 1st, and where new wages agreements were not reached by that date the farmers were entitled to pay what wages they chose. In some parts of the country, as for example, Cheshire, Durham, Lincolnshire, and Nottinghamshire, the Wage Board rates are continuing to be paid pending early meetings of the Conciliation Committees, though an understanding in this sense is not binding. In other cases, the employers have formulated demands for lower wages and longer hours of labour, which, in the majority of cases, have not been accepted by the men. In a few instances agreements have been arrived at by the two sides. There are some places, such as Merioneth and Montgomery, where there will be no agreements at all, as the farmers have flatly refused to work on Conciliation Committees. There is at present confusion in the agricultural industry.

This confusion does not augur well for the landworker. There is a prospect of widespread reductions of wages, judging by the new suggested rates which are being put forward by the farmers. Before the Wages Board came to an end there was a minimum wage in most districts of 42s for a 48-hour week. In Bedfordshire and Huntingdonshire the employers have proposed a wage of 38s for a week of 50 hours. The Berkshire farmers have offered 36s for a 50-hour week, from October 1st to December 1st, and will not agree to the registration of the agreement. In South Cambridgeshire the farmers have proposed a wage of 37s 6d a week for the next two months. The offer made by the Devonshire farmers is that the farm workers should be paid 39s per week of 51 hours. Herefordshire employers propose a reduction by instalments, and offer 39s for 50 hours during October and thereafter 36s per week. The Wiltshire farmers have laid it down that 36s per week is their final and only offer, and that under no circumstances will any agreement to which they are parties be registered. It will be seen from these typical cases that the wages offered range from 36s to 39s for a longer working week. The increase in working hours means, in effect, a further reduction in wages. It may be noted that many of the offers made by the employers hold good for very short periods, which suggests that further reductions of wages and increases of hours are contemplated in the near future.

The dice are loaded against the agricultural workers. Trade unionism amongst land workers has peculiar difficulties, and notwithstanding the great strides which have been made during the past few years, the agricultural unions do not possess the influence which many unions in other industries enjoy. The harvest is over, and the demand for labour is not strong. There are a good many land workers at present unemployed, and as they are not covered by the Unemployment Insurance Acts, their position is desperate. In such circumstances it is impossible to avert drastic wages reductions. There is little doubt that the wages in agriculture will be driven below the pre-war level. A wage of 36s is roughly the equivalent of 16s before the war. Even if allowances and perquisites are added, the

wage remains miserably low. Now, though the farmer has become free from any restrictions, and may therefore offer what wages he chooses, he cannot compel his workers to accept them. They may, if they are so disposed, betake themselves to the towns. The migration to the larger centres of population was, of course, a marked feature in the years before the war. The agricultural worker, owing to his experience during the war, whether in the Army or on the land, is far different from the land worker of pre-war days. He will either seek occupation elsewhere or remain on the land as a discontented and unwilling worker.

It is unfortunate that the farm workers must suffer as a result of the narrow-mindedness of the farmers. Agriculture, the largest industry in the country, is the only one which has not realised the advantages of collective bargaining. In the manufacturing and transport industries national agreements are common, and in 1919 the National Industrial Conference representing employers and workers unanimously recommended to the Government the passage of legal minimum wage legislation to cover all workers. The country has nothing to gain by inadequate wages, and if the general public were aware of the policy which is being pursued by the farmers, the latter would receive very little support. The Labour view is that the farm worker is paying the price, as he has always done, for the inefficiency of agriculture. A full inquiry into the industry would be a good thing.

THE RAILWAYS ACT: EXCEPTIONAL RATES.

(BY A CORRESPONDENT.)

THE public mind has been much agitated on the question of exceptional rates. In France, the Commission of Public Finances which examined the advisability of making a departure from the principle of equilibrium between receipts and expenditure, in recognising exceptional rates, made the following pertinent remarks: "Nothing can be laid down with absolute rigidity; and it is certain that an 'automatism' applied too sternly, not only to machines but commercial transactions, will falsify the very function of an industry. Excellent as a principle for fixing general tariff, it can be harmful if applied too rigorously to the transport services which have demanded 'special' rates from the very commencement. We are, therefore, constrained to recognise them." No thinking man will question the reasonableness of the above statement. The necessity of exceptional rates has therefore been fully and readily recognised by the Act.

Controversial ground is only reached when the question arises as to the measure of control that the Government should exercise over exceptional rates. The companies contended that they were the best judges of their interests, and that if they agreed with a trader to grant him exceptional rates the Government ought to have no voice. There are, however, obviously many reasons why an independent tribunal like the Rates Tribunal should have a final say in the matter. Foremost amongst these is the relativity of charges between traders. Cases of this sort are met by the provisions in the Act of 1888, against "undue preference." But the trading community is not satisfied as to its effectiveness. Such cases are hard to prove in a court of law. It is difficult to prove that any two cases are alike "in respect of the same or similar circumstances." The trading classes had for a long time, therefore, demanded the institution of an impartial body.

Curiously enough, when it had been created they joined hands with the companies in demanding that no reference be made to the Rates Tribunal in the making of exceptional rates. But we have not to go far to search for an explanation. An exceptional rate is made for the benefit of some traders; those that are favoured by it will naturally desire no searching examination of any outside body. One cannot resist the impression left on the mind that, while the small trader clings to the protection offered to him by an independent tribunal, the powerful trader disdains its intervention and advocates freedom to the companies. The large trader hopes to gain by this freedom, whereas the weaker one goes to the wall. On this point, American railway history supplies us with a parallel, and confirms us in our opinion that the large trader stands by the companies in their demand for full freedom for

manipulating rates, with the object that he will be able to bring pressure upon them for a reduction of charges in his favour. By the way, it may be mentioned that the railway companies in America had ultimately reason to thank the Commission for protecting them from extortionate demands of large corporations. Although the forces of trading corporations in England have never been comparable to those in America, the lesson which the American railway companies learnt may not be wholly lost to their sister organisations in England.

There is, besides, a question of discrimination between markets, which needs careful consideration. Exceptional rates often give rise to unnatural distribution of industries. Such rates ought therefore to be submitted to stringent control. The results of granting exceptional rates ought to be reckoned in a broader light than the mere choice of railway companies.

By this control the traders have everything to gain rather than to lose. Until to-day the complaint has been just the other way: that a Governmental body is more accessible to pressure for lower rates than the railway companies. No one can deny that the thoroughly scientific arrangement of exceptional rates by the German Tariff Commission went a long way in helping the export trade of that country. There should be no fear that the Rates Tribunal will not recognise a necessary amount of elasticity by permitting exceptional rates where necessary.

The above reasons are sufficient to warrant a strict control over exceptional rates. To these may be added the difficulty of estimating the income to be derived from exceptional rates, if the companies are left alone to manipulate them as they please. Unless the tribunal can approximately calculate the income from exceptional rates it will be at a loss in fixing the standard or class rates, so as to make the aggregate income from the two sources equal to the standard revenue. The remarks of the Rates Advisory Committee in this connection may be borne in mind. ".....but from the time that the principle is accepted that the rates generally are to be so fixed as to secure the railways a specified net revenue, the whole trading community is interested in proper provision being made that an individual trader or one or more classes of traders do not obtain advantages at the expense of the general body.....there is no corresponding advantage to the general body of traders in seeing traffic transferred from one railway to another by reduced rates being charged to certain traders or classes as well able to pay the class rates as those who do not participate in the reduction. It is, therefore, of importance that the new tribunal shall keep a jealous eye upon exceptional rates in all cases where there is any ground for suspecting that the reason for granting the proposed exceptional rates is competition with an adjoining railway company or group."

The compromise of the companies with the Government as reflected in the amended Clauses 35, 36, and 37 are certainly more satisfactory than the attitude which the companies adopted at the beginning. The upshot of this compromise is that all exceptional rates 5 per cent. below the standard rates will cease to operate; the other existing rates may continue by agreement with the trader; in future exceptional rates shall not be less than 5 per cent. or more than 40 per cent. below the standard rates. As for new exceptional rates, they may be fixed by the tribunal on the application of traders; they may be made and continued by the company, unless suspended by the tribunal. Any variations in exceptional rates continued or granted by the company may be made if the reduction is not more than 40 per cent. below the standard rate, unless the exceptional rate has been fixed by the tribunal. There is no material difference between the original clauses as were submitted to Committee A and B and the amended clauses except in the right of a company to fix new exceptional rates. A company can now put into operation a new exceptional rate without getting a formal sanction or waiting a prescribed period. This was conceded in order to make a special rate come into operation promptly. To our mind the American and the French method, which is also the one as proposed by the original clauses, is more logical. It is always best to determine the reasonableness of such a rate in advance, unless exceptional circumstances warrant an immediate grant.

Harm may have been done to a shipper who has been discriminated against, before the tribunal suspends this rate. A railway company ought to satisfy the tribunal before it fixes a new exceptional rate.

It will not be proper to leave the problem of exceptional rates without so much as alluding to the provision that no exceptional rate more than 40 per cent. or less than 5 per cent. below the standard rate will in future be allowed unless permitted by the Rates Tribunal limit. The upper limit of the difference between an exceptional rate and a standard or class rate is justified on the principle of "net additional cost." By this is meant the cost to the railway company of merely handling the goods, apart from the expenditure which is constant and regardless of the amount of traffic, e.g., interest charges on capital invested. Every railway manager does, in fact, submit the reasonableness of an exceptional rate to this test. It may be presumed that the remaining 60 per cent. of a standard rate is the average "net additional cost" in England. In America a provision which nearly approaches this is, that no rate should be allowed as will not compensate for the services rendered. The lower limit of 5 per cent. is presumably based on the ground that a rate which is only 5 per cent. below the standard rate is not wanted by trade necessities as making any difference in the cost of an article to either the shipper or the consumer, but is an outcome of artificial differences between shippers or markets.

GOVERNMENTS AND THE REVIVAL OF TRADE.—II.

(FROM A CORRESPONDENT.)

"Does it help to increase the purchasing power of the impoverished countries?"

In a former article it was suggested that this is the crucial test to which all schemes for reviving foreign trade should be brought, and that, according as they stand the test, they should be adopted or rejected. There are in the air at present many suggestions and proposals for Government action which must be either ineffective or actively mischievous, and the first step to be taken by Governments and their advisers is to winnow them out. In a matter so complicated as this, all kinds of remedies are certain to be put forward, and there is a danger that the man who shouts the efficacy of his panacea loudest will get it accepted, irrespective of its true merits. The surest way of killing the unsound schemes is public discussion, and in this article it is proposed to set out a few of the things that Governments will be asked to do, but cannot, in our opinion, do with advantage.

1. *They cannot stabilise the exchanges by direct action.* It ought not to be necessary to emphasise this point, but even among business men and merchants whose daily trade is with the exchanges there survives a notion that something can be done by the Governments, through an international currency or similar device, to prevent exchanges from fluctuating, and to fix them at the desired point. The Brussels Conference laid it down that every Government ought to abandon artificial measures which conceal from the people the true economic situation, and, more expressly, that attempts to limit fluctuations in exchange by imposing artificial control on exchange operations are futile and mischievous. That is undoubtedly true. The problem of the exchanges cannot be solved by a frontal attack, and temporary expedients designed to prevent them from moving with the balance of international indebtedness only stave off the evil day, and make it all the more evil when it does arrive. The history of the war and the transition from war to peace put that fact beyond dispute.

2. *It is not possible for Governments to remedy the mischief by diverting the course of trade and trying to make new markets take the place of old.*

There seems at present to be rather a strong current of opinion running in favour of some heroic cure of this kind, some swift transference of our energies from Europe to distant lands within or without the Empire. Europe, the argument runs, is effete and hopeless; let us turn our eyes away from it, and regard the glorious possibilities of Africa, Australia, and Canada. There lies the hope of the future—not in the war-stricken regions of an im-

poorish Continent. A correspondent of the *Times* recently put this argument into concrete form as follows:—“The pre-war trade world has passed, and British trade policy is compelled to an entirely new orientation. England cannot subsist by lending Australian wool, New Zealand mutton, Uganda cotton, and Welsh coal to industrial Europe in the hope of ultimate interest and sinking fund payable in competitive German rails, Belgian cement, Austrian piece-goods, and French wines. Surely it is wiser to lend Sheffield rails, Gravesend cement, Manchester piece-goods, and Birmingham wire to Africa, in the certainty of continuing and increasing dividends of complementary raw cotton, hides, flax, sisal, coffee, oil-seeds, maize, and rice.”

Developing his argument, the correspondent proposed a loan of £1,000,000,000 to the Dominions, in convertible notes, to enable them to develop their resources, and declared that within six months there would be no unemployment in any of the basic industries, and within ten years the Empire would be a complete and self-sufficient economic organism.

This is exactly what a Government cannot do. It cannot unwrite the history of centuries or pull trades up by their roots and bed them out in the soil of its own choice. The trade we did with Europe before the war amounted to nearly £200,000,000 per annum; there is no possibility even of unfettered private enterprise replacing that trade by sales of corresponding size to the Dominions within ten years; there is absolute certainty that if Government tries to force all this trade towards the Dominions it will waste a good deal of money and make a botch of the whole business. We are far too closely tied up with Europe to turn our backs on it, and we must not allow any Imperial enthusiasm or political interest to mislead us into making the experiment.

3. Our Government cannot do any good by trying to control the course of investment.

As the Imperialist wants to remedy things by Government control of trade, so apparently the Socialists are itching to do good by Government control of new investments. They seem to be taking as their war cry “stop foreign investments,” on the principle that any money invested abroad robs the working man of employment at home. This demand for protection is no more reasonable than the cry for protection in other forms, and it is based on altogether mistaken notions of the form investment at present is taking. The trouble is not that British capitalists are sending too much of their money abroad, but that conditions abroad are frightening them into keeping their money at home. If our fundamental thesis is correct that the key to better employment lies in foreign trade and increased purchasing power of our customers overseas, then to tell the capitalist that even when he can invest abroad with safety, he must not do so, is simply to perpetuate the present evils. We want international communications to be opened up, not choked.

4. Governments cannot set things right simply by adopting a scheme of export credit insurance or credits without recourse.

As an adjunct to other wider reforms a Government scheme of insurance may have considerable value, but the advocates of this proposal have pitched their claims far too high, and the belief they have encouraged that credit and insurance can do everything is highly dangerous. Credit insurance does not, in the language of advertisement, touch the spot. It has been carried on in the past, and is still carried on by private enterprise, with varying degrees of success, but there is no branch of insurance in which the selection of risks has to be made with greater judgment and caution, and more offers of business have to be refused by the careful underwriter. The Board of Trade's present scheme is on a comparatively small scale, and hedged about with stipulations hitherto considered essential to that prudent underwriting which ought to mark even a Government scheme of guarantee. Before insurance can be satisfactorily carried on there must be a certain standard of security, without which neither Government nor individual can afford to launch out. That standard has in most of the countries with which we are directly concerned not yet been reached, and until it has been reached the usefulness of credit

insurance must be limited. To start a machinery for guaranteeing credit, non-selective, comprehensive, Government-aided, while the fundamental evils remain and the credit itself grows constantly worse, is simply to pour water into a leaky bucket. A guarantee does not turn a bad risk into a good one.

5. Our own Government, at any rate, cannot safely interfere between employer and employed for the reduction of wages.

It is generally admitted now that, however distasteful the step may be, the level of wages in this country must be lowered to reduce our cost of production, and lessen the difference between our own industries and those of the foreign countries. But the change should be left to the ordinary course of negotiation, since Government intervention breeds suspicion and tends to delay instead of speed. The mistrust with which the Prime Minister is to-day regarded by Labour is due very largely to his past interference between masters and men, the promises given hastily and never redeemed, and the part which he is believed to have taken during the past 18 months in stiffening the backs of employers against their own workmen. At the present time, the less our politicians have to do with disputes over wages the better.

6. It is not possible to exert much direct influence on the exchanges by cancelling our Allies' war debts to ourselves.

To cancel a big international debt which people believe will be paid must materially affect the exchanges, but unless there is a serious prospect of payment, cancellation can bring little relief. Wiping out German indebtedness to the Allies would have an enormous influence on exchange, because all present calculations are based on the belief that reparations will be exacted. As nobody believes that we shall exact payment from our Allies, the act of cancellation as between ourselves and our Allies in Europe, though the political effect of it would probably be admirable, could do little directly towards restoring the Continental exchanges.

7. No Government acting alone can solve the problem of bad trade.

This is perhaps the most important consideration of all, and one that is apt to be overlooked. The task of bringing order out of chaos, which is the condition precedent of a permanent trade revival, cannot be accomplished by the United States or by Great Britain or by France, and no legislation that any one of them may enact can restore the prosperity of the world or of any single country in the world. At a time when our Prime Minister is introducing the Government Bills for helping trade, this truth ought to be constantly emphasised. To restore trade, we must have the co-operation of all the great Powers of Europe, and we must shape our policy in such a way as to make co-operation possible. The difficulties are far too great for any but concerted action, and on the concert of the Great Powers hangs not merely the recovery, but the survival of trade, even at its present miserable volume.

STOCK MARKET TROUBLES.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE slump in Stock Exchange securities has affected practically every market in the House, with the exception of that for gilt-edged issues. The reason why these latter have escaped from the effects of the crisis is that investment attention confines itself so exclusively to the best-class stocks that there is a continual demand to counteract the realisations which take place. In no other parts of the Stock Exchange is this the case. The weakness is most evident in those departments where speculation has been all too popular during the past few years. Another cause, however, for the flatness comes into the picture in the shape of sales to meet obligations, open at the end of July, 1914, which will have to be discharged by the beginning of August next. The fixing of the official date for the end of the war happened to come at a most inopportune moment for those who still carry pre-war liabilities in the shape of stocks and shares continued at the end of July, 1914. During August, the holiday month, those who were nursing “cold storage” stock were content to do little or nothing in the direction

of reducing their commitments. In September, however, the continued chaos in foreign exchange and the growing difficulties surrounding unemployment, together with the outlook for trade throughout the world, combined to start a selling movement that has been gathering fresh impetus with every successive drop in prices. The Stock Exchange Committee called for a return of pre-war loans and outstanding stocks which had not been discharged or closed, and, although the list of stocks was limited in a manner which rendered the return very inconclusive, the step gave the signal for efforts to be made in the direction of clearing up some of the pre-war legacies. Financial trouble has developed already. The Stock Exchange has learnt, with profound regret, of difficulties that are known to have befallen some of the leading City firms. Part of the open accounts has been arranged, but the knowledge that there must be others to follow is a menace to every market concerned. The falls in Home Railway stocks, for instance, Argentine Rails, Grand Trunks, Mexicans, and certain others, have been extremely heavy during the past seven years, nor has there been, throughout the period, any chance for the stale bulls to get rid of their stock on the periodical rises which have occurred. Some of the Argentine issues touched their pre-war figures, and two or three in the Home Railway group were similarly fortunate, but the bulk of the stocks enumerated have shrunk steadily, until the gaps between to-day's prices and those of 1914 are literally enormous, as a few examples suffice to illustrate:—

Stock.	Prices		
	July, 1914.	Now.	Fall.
Great Eastern	45½	26	19½
Great Northern Deferred ..	48½	24	24½
Great Western	113½	63½	50
Hull and Barnsley	57	36	21
Lancashire and Yorkshire ..	80	45	35
South-Western Ordinary ..	111	55	56
Brighton Preferred	120	58	62
North-Western	125½	65½	60
Midland Deferred	68½	39	29½
North-Eastern	120½	68½	51½
South-Eastern Ordinary....	70	35	35

Grand Trunk first preference at 15 is 76 points below the end-July, 1914, making-up price, and the second preference at 7 is 65 points down. Trunk ordinary, which was worth 13½ then, now stands at a nominal 30s. Great Western of Brazil shares at 1½ compare with 8½ when war broke out, and Leopoldina at 17 is not much more than one-third of its pre-war level. Mexican Firsts from 104 have dropped to 35, the Seconds from 65 to 24. The list might be extended almost indefinitely, and, although the Stock Exchange throughout the past two or three years has claimed that the rump of the pre-war account is comparatively trifling, in days of a financial slump the legacy takes on formidable proportions. Had the markets been active and buyers plentiful, as they were 18 months ago, the liquidation of the account, even at substantial losses, could have been effected without great difficulty, but in these latter days it is difficult to sell stock at all in many of the markets. The holders, therefore, faced with the certainty that they must close their accounts within the next nine or ten months, are throwing out other securities in order to provide cash against their liabilities. With the trade gloom so deep many people decline to hold ordinary shares of any sort. A position has arisen in which everybody wants to sell at the same time, and the demoralisation of foreign exchanges, particularly the mark in Germany, seems to be the last or, at all events, the penultimate straw that has broken the back of the Stock Exchange markets. The days will come, of course, when financial affairs begin to mend, but it is useless to cry Peace in markets which at present seem to be far removed from peace. To attempt selling now of any stock which has so much as a sporting chance in the future is to add fresh burdens to a position already over-loaded with trouble. It is safe to say that there are many stocks to-day standing at prices which time will show to be most unduly depressed; but candour compels the admission that it is no easy matter to indicate what can be regarded as likely to appreciate most quickly when the present fury of liquidation shall have blown itself out. That the flatness may go too far is manifest from the manner in which prices, in some markets, rapidly rally

directly the immediate pressure to sell is withdrawn. The better tendency, however, confines itself more to sentiment than to buying orders. The fundamental troubles of the stock markets are not removed by an improvement from the worst in oil or Kafir shares.

Business Notes.

Employment in September. — The *Labour Gazette* reports that employment during September showed further improvement in some trades, but was still generally bad. The percentage of unemployed among members of trade unions from which returns are received fell from 16.3 per cent. at the end of August to 14.8 per cent. at the end of September. How the percentage stood in 1913, and how it has moved month by month for the past five or six years, is shown by the following table:—

	TRADE UNION UNEMPLOYMENT PERCENTAGES.											
	1913.	1916.	1917.	1918.	1919.	1920.	1921.					
End of—	%	%	%	%	%	%	%

* Excluding coal miners. † Revised figure.

The percentage unemployed among workpeople insured under the Unemployment Insurance Act fell from 13.15 at August 26th to 12.2 at September 30th, but these calculations exclude those persons who have removed their unemployment books after exhaustion of benefit. The total number of workpeople registered at the employment exchanges as unemployed at September 30th was approximately 1,405,000, of whom 1,078,000 were men and 229,000 were women, and the remainder were boys and girls. In this connection it should be noted that at that date about 366,500 persons who had exhausted their unemployment benefit had ceased to register at the exchanges. In addition to those unemployed, 177,000 males and 145,000 females were registered as working systematic short time at September 30th in such a manner as to entitle them to benefit under the Unemployment Insurance Act. At August 26th the corresponding figures were 218,600 males and 189,200 females. There were also 41,400 persons working systematic short time whose benefit was exhausted, compared with 13,600 at August 26th. The Prime Minister stated in the House of Commons, on Wednesday, that the total unemployment figure for men, women, boys, and girls is 1,750,000. Changes in rates of wages reported as having come into operation in September affected over 2,040,000 workpeople, of whom nearly 1,680,000 sustained decreases, while over 360,000 received increases. The net effect of all the changes was a reduction in weekly full-time wages of over £240,000. Since the beginning of 1921 changes in rates of wages reported to the Department have resulted in a net reduction of over £3,800,000 in the weekly wages of nearly 6,600,000 workpeople, and a net increase of over £25,000 in the wages of about 150,000 workpeople.

Cost of Living.—According to the calculation of the *Labour Gazette* the cost of living figure fell 10 points in September, and was at October 1st 110 per cent. above the level in force at July, 1914. How the percentage has moved in 1920 and 1921 is shown below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.			
1920.	Per Cent.	1921.	Per Cent.
January	125	January	165
February	130	February	151
March	130	March	141
April	132	April	133
May	141	May	128
June	150	June	119
July	152	July	119
August	155	August 2nd	122
September	161	September 1st	120
October	164	October	110
November	176		
December	169		

As regards food alone the fall was even greater in September, the food cost percentage declining from 125 per cent. to 110 per cent. above July, 1914. A cheapening is reported in retail prices of meat, bread, butter, cheese, sugar, and potatoes.

The World's Harvests.—The Statistical Bureau of the International Institute of Agriculture at Rome has published the yields of the 1921 harvests of the principal countries of the Northern Hemisphere, with the exception of Russia and the Serb-Croat-Slovene State, from which we have compiled the following table:—

	1921.	Inc. or Dec.
	1,000 Tons.	% on 1920.
Wheat	67,832.5	+ 5.6
Rye	18,105.9	+ 27.0
Barley	19,391.0	+ 5.5
Oats	39,390.1	- 15.8

The yield of wheat in Germany at 2,623,500 tons shows an increase of 18 per cent. over 1920, of rye at 6,608,000 tons is 33 per cent. more, of barley at 1,792,900 tons is 0.4 per cent. less, and of oats at 4,715,700 tons shows a decline of 3 per cent.

Receipts from Germany.—In answer to a question in the House of Commons on Tuesday relating to money received by the British Exchequer from Germany, the Financial Secretary to the Treasury replied as follows:—"The sums received by this country up to the 30th ultimo under the Financial and Reparation Clauses of the Treaty of Versailles (including cash received from the Reparation Commission, the proceeds of the German Reparation (Recovery) Act, and the proceeds of the sale of ships and dyestuffs, amount to (1) £5,444,000 in repayment of the advances under the Spa Coal Deliveries Agreement, and (2) £38,704,000 on account of this country's claim of approximately £50,000,000 for cost of occupation. A further sum of £4,368,000 is receivable in respect of ships sold. A considerable part of the sums received from the Reparation Commission are held, subject to adjustment of the final settlement of the question dealt with in the Financial Agreement signed at Paris on August 13th last. Germany has also defrayed the cost of the British section of the Inter-Allied Rhineland High Commission, and part of the local mark expenditure of the Army of Occupation, and the Inter-Allied Commissions of Control. It will be seen that nothing has yet been received on account of Reparations (which ranks after the cost of occupation), but a Royal Commission under the chairmanship of Lord Sumner was appointed on August 15th last, to make recommendations for *ex gratia* awards to individuals within a total of £5,000,000, to be provided out of the first receipts by the Treasury of the United Kingdom on account of reparation. The claims of merchant seamen or their dependents for compensation for suffering and damage caused by enemy action will be dealt with by this Commission."

The Fate of Upper Silesia.—The recommendation of the Council of the League of Nations, published on Friday, corresponds fully with the forecasts summarised in our issue of last week. It will become operative one month

after the delimitation of the frontier has been completed, by which time the Joint Commission charged with its enforcement and responsible to the League of Nations will have been set up. The political frontier divides the industrial triangle precisely as was expected, but the industries are safeguarded during a period of 15 years from dislocation. The German State Railways in the plebiscite area are to be administered by a Joint Commission and preserved as a single system; the systems of water and power supply, in the absence of special agreements to the contrary, are to remain intact; the Customs barriers at the new frontier are not to interfere with the transit of coal, raw material, goods finished or to be finished, or other produce of the respective zones of the plebiscite area, or with the movements of their inhabitants between them. The German mark is to be the only legal currency in the area, and the branches in it of the German Reichsbank are to be maintained. These last two provisions, however, are modifiable by agreement between Germany and Poland. The labour unions and the workers' insurance system are also preserved from interruption during the transition period. With goodwill among the subordinate officials on both sides the safeguards should be effective, but the German attitude has not, so far, been encouraging. There is no doubt, however, that the decision is final.

The Bulgarian Loan Settlement.—It is understood that the holders of the Bulgarian loans of 1892 and 1909, which were issued in London, have agreed to a settlement of the arrears of interest since 1915 on the same lines as that effected with the French holders of Bulgarian bonds, who have accepted payment in French francs; and the date of payment and other particulars will be announced shortly. The sum requisite for the first payment has been remitted by the Bulgarian Government. The remainder, judging from the settlement with the French bondholders, should follow before the end of the year.

Greek Politics and Finance.—The visit of the Premier and the Foreign Minister of Greece to Paris has intensified the rumours which for some time have been current of fresh and startling developments in the situation in Asia Minor and in the Greek kingdom. The Greek campaign in Asia Minor has failed; the cost of continuing it is prohibitive; the army and the people are becoming weary of it, and Crete is said to be almost openly in revolt. The Ministry recently obtained a vote of confidence, but was only supported by 227 members out of a total of 371, and the whole of the Venizelist party and some other groups abstained. Negotiations have been proceeding for some time between a French emissary and the Kemalists at Angora, and they may result in a proposal by France, stating a revision of the Peace Treaties, to restore Myrina and Thrace to Turkey, together with the control of the Dardanelles and Bosphorus, subject to guarantees of their free passage by the shipping of all nations, and also to give the Porte a free hand with regard to its Customs duties, now under international control. In return, it is stated, the Porte will grant special privileges to France in Asia Minor, including the control of the Baghdad Railway. It seems to be hinted that King Constantine will be required by France either to support this programme or to abdicate, and it is clear from other indications that his position is insecure. The other Entente powers, and the representatives of the Turkish bondholders, will have a good deal to say whenever such proposals are put forward; meantime, the financial situation of the Greek kingdom is described in Paris as alarming. According to a correspondent of the *Temps*, the whole of the finances of Greece at present are insufficient to meet the service of the national debt—though it is impossible to see how the figures given are arrived at; and the underspend states that the Greek Government has same of the deficit by repeated borrowings from the National Bank, and that the Governor of the Bank is now on his way westward in order to attempt to raise a loan on his way terms in Holland or in London. All these

alarming rumours may be considerably discounted, though no doubt there are French "expansionists" who have an interest in circulating them and in supporting them by exaggerating the financial difficulties of the Greek Government, and who would gladly see them come true. But it may be pointed out that the holders of the Greek external loans have no special cause for alarm. These loans, it is hardly necessary to remark, are stringently secured on certain assigned revenues controlled by an International Financial Commission; the yield of these revenues last year was the highest on record, and according to the figures for the first seven months of the present year, published in the *Economist* of October 8th, the actual receipts this year are largely in excess of the estimates under the Law of Control, and in the aggregate are greater than those for the corresponding period of 1920—a decline in the Piræus Customs revenues being more than counterbalanced by the increased yield of the remainder. Financially and politically the situation in Greece is doubtless critical, but there seems no reason to suppose that it will seriously affect the bondholders.

Cotton Trade in Japan.—Our Manchester correspondent writes:—The Overseas Trade Department of the British Government has just received a report from Messrs E. F. Crowe and G. B. Sansom on the cotton industry in Japan. Last March about 50 companies were in operation, the number of spindles working being 3,043,775. It is stated that the average production during the year was 13.37 ounces per ring spindle per day, against 11.7 ounces in the previous year. Of the 141,184 operatives employed 35,289 were women or girls. The working hours were 19½ per day (double shift), and the mills on an average worked 25½ days per month. At the current rate of exchange the wages paid were equal to about 3s 7d per day for males and about 2s 6d per day for females. At the end of last year the looms in Japan numbered 44,040, and were owned by 30 companies. The daily output is given as about 47 yards per loom, the number of operatives being 47,000, of which 39,000 were women. The average wages were about 3s 9d per day for men and 2s 9d per day for women and girls. Compared with the cotton industry in Lancashire many more workpeople have to be employed in both spinning and weaving to attend to the same amount of machinery. Although wages are low labour is not really cheap.

Japanese Trade and Finance.—Cabled advices from Tokyo stated that bank deposits have recently displayed a decreasing tendency. Payment of subscriptions to the new Exchequer bonds, heavy tax gathering, and increasing demand upon the rice crop fund have stiffened the money market. Exchange banks have been obliged to call in short loans. The Tokyo Stock Exchange is dull, speculations being less since the news of the Emperor's illness. The price of rice rose early in the month on speculation, but has relapsed on an improvement of crop prospects. The cotton yarn market is firm, but other commodity markets are dull, and the silk yarn market is experiencing a lack of inquiry. The note issue of the Bank of Japan, on October 15th, was 1,126,000,000 yen, as compared with 1,066,000,000 yen a year ago, while discounts and advances on that date were only 78,000,000 yen, against 193,000,000 yen on October 15, 1920.

Argentine Railway Results.—The "big four" Argentine railway reports are now available. The two following tables show the dividend records of the companies since 1914-15, and a comparison of receipts in the past two years:—

Company.	1914-15	1915-16	1916-17	1917-18	1918-19	1919-20	1920-21
B.A. and Pacific, ord.	% nil	% 1	% nil	% nil	% 2	% 5	% nil
Do 5% 2nd. non-cum. pref.	£2/16/6	5	1½	5	5	5	nil

Central Argentine ..	9,763,755	9,746,664	3,164,808	1,966,865	32.41	20.19

We hope to devote an article in a future issue to a detailed examination of the results.

Uruguayan Railways.—The year ended June 30, 1920, was the best in the history of the Central Uruguay Railway Company of Monte Video and its three extension systems, but results for the year ended June 30th last are very disappointing. There was a slight decline in the gross receipts of the combined system, but expenditure increased by 20.8 per cent. and net revenue was 42.1 per cent. lower at £374,635. Results of the combined system for the past nine years are shown below:—

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
1912-13	£ 1,243,393	£ 669,008	£ 574,385	53.81
1913-14	1,103,229	622,727	480,502	56.44
1914-15	946,767	562,684	384,083	59.43
1915-16	1,088,956	669,208	419,748	61.45
1916-17	1,178,602	771,433	407,169	65.45
1917-18	1,542,320	1,010,288	532,041	65.50
1918-19	1,792,804	1,219,680	573,113	68.03
1919-20	1,892,902	1,245,944	646,958	65.82
1920-21	1,879,630	1,504,995	374,635	80.07

Tariffs have been revised, the new rates having come into force on the parent line on January 1, 1921, and on the extension lines on March 15th and May 15th for passengers and goods respectively. The profit on exchange in making remittances from Monte Video to London was returned a year ago as £184,123. For the past year, owing to the depreciation in the exchange, there is a loss of £25,742 under this heading. The fuel bill at £507,496 shows an increase of £96,914. The average issue price of coal was £6 19s 6d per ton, as against £5 6s 1d. The general manager states in his report that oil fuel was used to a limited extent during the last four months of the financial year, and the consumption per engine mile as compared with coal was 35.6 per cent. less. The separate figures for the main line and the extensions for the past year are shown in the following table:—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
Central Uruguay ..	£ 1,277,953	£ 1,210,035	£ 67,918	94.69
Eastern Extension ..	302,486	139,634	162,852	46.16
Northern Extension ..	165,017	78,383	86,634	47.50
Western Extension ..	134,174	76,944	57,230	57.35

There is an increase in the ratio of expenses to receipts in each case, but the rise is most pronounced for the parent line, the ratio a year ago being 75.93 per cent. In order to meet the fixed and other charges of the main line company £100,000 is transferred from the general reserve fund, and after paying the 5½ per cent. preference dividend a balance of £37,504 is carried forward, as against £74,174 brought in. A year ago the ordinary dividend was raised from 6 to 7 per cent. The Eastern Extension pays 7½ per cent. on the ordinary share capital as against 9 per cent. last year, and the Northern Extension pays 5 as against 8 per cent.

Scottish-American and Tankers.—The proposed scheme for merging the Scottish-American Oil and Transport Co., Limited, into Tankers, Limited, is briefly as follows:—(1) Surrender of shares of Tankers, Limited, held by the Scottish-American, upon which £1,271,515 has been paid up in cash, leaving £224,385 owing, which latter amount is "to be forfeited by Tankers." (2) Tankers £1 ordinary shares to be reduced "to a denomination of 5s each," and 4,771,455 ordinary 5s shares of Tankers to be allotted fully paid to the Scottish-American. (3) Present restriction on voting rights of preference shareholders in Tankers to be removed, and on a poll to have three votes

for every share. (4) And finally the chartering contract to be cancelled. Approximately, Scottish-American shareholders will get one 5s share in Tankers for each one of their existing £1 ordinary shares. These proposals may give rise to some discussion and variations may be suggested, but the broad principles laid down appear to be a reasonable way of settlement of the trouble. In the balance-sheet of the Scottish-American Oil and Transport Company, Limited, for the year ended March 31, 1921, investments in the Southern Oil and Transport Corporation are given as £2,792,075. The auditors, however, in their report pointed out that "the investments appear in the balance-sheet at cost. The shares held in Southern Oil and Transport Corporation.....are not quoted in the market, but in our opinion their present value is under cost." Now that the companies are undergoing a process of reconstruction a little more light on the matter appears to be desirable. If the scheme goes through, the Anglo-Persian Oil Company, Limited, will act as managers "under a modified contract determinable on either side at short notice."

Labour Trouble on the Rand.—Our mining correspondent writes:—A rather disconcerting sequel to the apparently amicable arrangement between the Transvaal Chamber of Mines and the Miners' Union in July last, took the shape of the discovery that the ballot showed a very narrow majority in favour of the acceptance of the scheme. Cables to hand from Johannesburg this week intimated that certain of the labour organisations desire to repudiate the settlement; the executive had decided upon an immediate strike ballot, although the date for the return of the papers had not yet been fixed. While the resolution was communicated to the Chamber of Mines without any supporting arguments, it transpired that the workers contend that although the retrenchment applies also to officials, their salaries have not been reduced, notwithstanding the decrease in the cost of living. Following this general item came the threat on the part of the white workers at the East Rand Proprietary, to come out as a protest against the employment of a non-unionist. Finally, a demand has been put forward on the part of a certain class of engine-drivers, who were excluded from the stabilisation agreement, which holds good until the end of the year. While naturally exerting some adverse effect upon the share market, these threats of a fresh outbreak of labour trouble were taken rather philosophically. Indeed, in some quarters the view was expressed that a strike would be an absolute "bull point" for the Transvaal gold industry. It is an open secret that the white personnel is largely in excess of actual requirements for superintending the work of the natives. That such a condition of affairs should exist, and that no serious attempt should be made to deal with it, constitutes a striking illustration of the extent to which South African mining is subject to influences other than economic. But in the event of a strike, of course, the employers would be placed in a position to frame re-engagements according to their actual needs. The case seems one in which the workers concerned would do well to realise when they are well off. The East Rand trouble has found an easy solution in the resignation of the recalcitrant official.

Mexican Corporation's Revised Agreement.—This undertaking, which was floated by the Camp Bird group, holds a large interest in the Tezultlan copper and the Fresnillo silver properties—the former equipped with treatment works. Under the original arrangement, 37½ per cent. of the profits of the copper concern were to go to the Mexican company through which it is held, and 62½ per cent. to the mine-owners. In the case of the Fresnillo, 60 per cent. of the profits were to be taken by that company and 40 per cent. by the Mexican Corporation. As consideration for the provision of certain additional reduction plant, which will raise the treatment capacity to 75,000 tons per month, it has been agreed that the Corporation shall retain 20 per cent. of the net earnings until the extra expenditure has been amortised, the remaining surplus being divisible equally between the two undertakings until \$5,000,000—including the estimated cost of the plant—has been paid. The estimated cost of the plant is \$150 million marks. Plans are on foot for

excess of \$800,000—has been received by the Mexican Corporation, when the old arrangement is to be resumed. The new mills should be installed by the beginning of December, and the general manager looks for profits of \$75,000 per month on the basis of silver at 62½ cents per fine ounce. Recent developments on the copper property are reported to be favourable. The capital of the Mexican Corporation is £1,000,000 in £1 shares, recently rather a poor market at about 5s. Large blocks of the shares are held by the Camp Bird and the Santa Gertrudis companies, whose shareholders may consequently be expected to keep a watchful eye upon the progress of affairs. Crushing with the first unit was started at the Fresnillo in August last.

The Foreign Trade of Russia.—We are informed that the British Agent at Moscow has reported to the Department of Overseas Trade that as the result of a special agreement with the Commissariat for Foreign Trade of the Russian Soviet Government a company known as the "Russian Export and Import Company" (Rossiskoe Eksportnoe-Importnoe Tovareeshchestvo) has recently been formed in Moscow to do business with foreign countries on behalf of the Soviet Government on a commission basis. The founders of the company were formerly leading merchants in Moscow, and were in close business relations with important British and foreign firms. The formation of this company, which is the first step towards removing the foreign trade of Russia from the direct management of the Commissariat for Foreign Trade, is for the purpose of exporting Russian produce abroad and importing foreign goods into Russia. The goods offered to the company for disposal abroad include flax, goat skins, horsehair, bristles, caviare, and scrap iron. Particulars of these goods, as well as details respecting the composition of the company, can be obtained on application to the Department of Overseas Trade.

Mersey Docks and Harbour Board.—In the accounts of the Mersey Docks and Harbour Board for the year ended July 1, 1921, just published, attention is drawn to the fact that the coal dispute and "consequent serious trade depression fall within the period covered by these accounts." Receipts for the year amounted to £3,322,395, of which "rates and dues" yielded £2,156,890. Amongst expenditure, interest absorbed £1,175,519, and the engineers' department needed £787,355; rates and taxes took £308,520, while £55,405 was carried to the sinking fund account. The total of vessels paying harbour rates and lights in 1921 amounted to 15,813,126 tons, which compares with 16,521,373 tons for 1920. In 1913 total tonnage is given as 18,433,269 tons.

Polish Banks Progress.—Our Warsaw correspondent writes:—Polish banking is rapidly developing. In 1920 18 new joint-stock banks, with a capital of 436 million marks, were opened. Actually there are in Poland 55 joint-stock banks, distributed as follows:—

	Number of Banks.	Number of Branches.	Subscribed Capital. Million Marks.	Reserve. Million Marks.
Former Russian Poland	29	116	998.5	373.3
Former Prussian Poland	13	50	552.5	240.6
Former Austrian Poland	13	42	483.6	94.2
Total	55	208	2,034.6	708.1

Before the war there were in the three parts of Poland only 21 Polish banks, with a capital of 200 million marks. The Polish banks have taken an active part in financing industrial and commercial undertakings, but they are not able to supply the country with the necessary volume of credit. Their deposits increase much more slowly than the prices of raw materials, and this entails a capital famine, from which the whole country is suffering. There is a very marked tendency among the Polish banks to extend their activity beyond the limits of the country. Thirty branches are situated abroad, in Paris, New York, Antwerp, Rotterdam, &c. A new credit institution has been recently founded in Warsaw with the purpose of financing electrical undertakings. This "elektrobank" on almost 150 million marks. Plans are on foot for

opening a Polish-Brazilian bank for fostering the trade relations between the two countries. Recently a group of American Poles belonging to the Europe-America Exchange Corporation has acquired the Polish Industrial Bank in Poznan (Posen).

London Housing Bonds.—We are officially informed that the total amount of registered 6 per cent. Local Bonds for Housing issued by the London County Council was £3,955,605, and the amount outstanding is £3,954,370. Now that the list of applications is closed, "the Council has obtained the permission of the Stock Exchange Committee for these bonds to be dealt in on the London Stock Exchange." The bonds are transferable by deed, the books being kept at the offices of the London County Council, in multiples of £5, and the stamp duty on transfers is paid by the London County Council.

Federation of British Industries.—The Grand Council of the Federation has decided to recommend to the annual general meeting of members the appointment of Colonel O. C. Armstrong, D.S.O., to the position of president of the Federation in succession to Sir W. Peter Rylands, who has held the office for two years. After a distinguished military career Colonel Armstrong became in 1909 a managing director of Messrs William Beardmore and Co., Limited, and in 1914 resigned this position to become chairman of Messrs Greenwood and Batley (Leeds), which post he now holds. Colonel Armstrong has been vice-president of the F.B.I., chairman of the British Engineers' Association, and chairman of the Mechanical Engineering Group of the F.B.I.

International Monetary Conference.—The Executive Committee of the Sound Currency Association have fixed December 6th and 7th as the dates of the meeting of the International Monetary Conference to be held in London. Among those who have already signified their intention of being present are representatives for the United States, France, Italy, Holland, Germany, Austria, and Mexico. It is anticipated that delegates—appointed either by the several Governments or by banking and similar institutions—will be present from practically all countries. The London Chamber of Commerce has appointed a delegation composed of Sir James Martin, Lord Farrer, and Mr Henry Ruffer. Among others who have already accepted invitations are Professor Irving Fisher, Dr Rathenau, Dr Ludwig Von Misses, and Professor Schumpeter. Communications should be addressed to the Hon. Secretary, Mr F. C. Goodall, 115 Cannon street, London, E.C.

SIR EDWARD MOUNTAIN, chairman of the Eagle Star and British Dominions Insurance Company, will open a debate on "The Difficulties on Export Trade and Its Relation to Foreign Exchange, with Suggestions for Overcoming Them," at a meeting of the Royal Colonial Institute, to be held at the Cannon street Hotel on Monday next, October 24th, at 4 p.m. Sir Godfrey Lagden, K.C.M.G., chairman of the Council, will preside.

Overseas Correspondence.

UNITED STATES.—TRADE MOVEMENTS—MONEY RATES—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 7.

FURTHER and rather marked improvement in the credit situation has been a noteworthy feature of the past month. In the cotton-growing regions, liquidation of credit has been made possible by the pronounced advance in the price of the staple, which has carried practically all contracts above 20 cents a pound. At the same time, improvement in wholesale and retail trade has resulted from the increased ability of the farmer to settle his accounts, both with banks and with dealers. The greater

abundance of funds in the cotton-raising districts is being reflected, especially in larger wholesale trade. On the other hand, the advance in prices, not only of cotton but of some other agricultural products, has had certain indirect results. The textile industry has not purchased cotton freely at the new price level, but such mills as possessed a stock of low-priced cotton have secured a considerable volume of orders for goods. In the grain-growing sections the output has continued to move steadily to distributing points, and has also been exported in large amounts. The grain movement, in fact, has been practically the heaviest on record. An extensive movement of livestock has also taken place, but, unlike grain, prices have declined in consequence. While attention has been concentrated largely on the agricultural side of business developments during the past month, manufacturing has also continued to show an encouraging improvement in many lines. The advance in the iron and steel trade—first noted during August—was sustained in September in some lines, particularly in pig-iron and light products, such as wire and sheets, prices of which advanced further.

A steady increase in the numbers of men employed has also occurred. In this connection, the gratifying change for the better in the railroad situation is particularly noteworthy. Following favourable earnings statements for preceding months, Class I. carriers have reported a further substantial gain in net operating income for August, amounting to about \$90,000,000 for the month, as against a deficit of \$155,000,000 in August of last year. The increase last month was due principally to the reduction of 44 per cent. in operating expenses; gross receipts showed a loss of nearly 9 per cent. compared with those of August, 1920. Textile manufacturing has been well sustained during the past month, and the boot and shoe industry has been more active. There is still, however, considerable hesitancy on the part of distributors to place forward orders, although a larger seasonal increase in certain lines of wholesale trade, together with replacement orders, have resulted in advances. The fact that building contracts have reached a record figure for this year promises larger employment in that field during the coming months. Somewhat easier money rates have resulted from the gradual liquidation in the East and South and in one section of the North-West. The Boston and Philadelphia Federal Reserve Banks have lowered their discount rate to 5 per cent., following recent similar action by the New York bank, and this week the reserve bank at Minneapolis reduced its discount rate from 6½ to 6 per cent. The shrinkage of bills held has been a natural result of the easing in the credit situation.

Commodity prices generally advanced slightly during September, according to Bradstreet's index number as of October 1st, which is \$11.1879, representing an increase of nine-tenths of 1 per cent. over September and the fourth successive gain shown in the general price level from the low point touched on June 1st. Compared with October 1st a year ago, prices are 33.7 per cent. lower, but they are 22.1 per cent. above the level set on August 1, 1914.

FRANCE.—THE FINANCE COMMISSION AND BUDGET ESTIMATES—STATE CONTROL—LIGUE DE LA REPUBLIQUE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 18.

THE Finance Commission of the Chamber, which has been busily engaged throughout the Parliamentary recess, as I indicated recently, in considering M. Doumer's Budget proposals for 1922, yesterday took the drastic step, on the eve of the reassembly of Parliament, of referring back the whole of the Finance Minister's proposals for reconsideration. It may be remembered that M. Doumer's estimates involved a deficit of 2,500,000,000, which he proposed to meet by doubling the tax on turnover. The Finance Commission, on October 4th, passed a resolution declining to agree to any additional taxation, and insisting that the estimated deficit must be got rid of by a drastic cutting down of expenditure all round. The printing of the detailed esti-

mates, for submission to the Chamber, was ordered to be suspended meanwhile, until October 15th, to enable the Government to present revised and reduced estimates. In the interval, M. Briand and the War Minister, M. Barthou, have both appeared before the Commission in support of the argument that, so far from reducing the Foreign Office and Army Estimates, it is absolutely necessary, in the interests of the country's foreign policy, that these shall be increased by 30 million francs in respect of the French civil administration in Syria, and by 4,413,000 for additional troops.

In view of the resumption of the Parliamentary session to-day, the various other Ministerial departments presented their revised estimates of expenditure yesterday. Reductions ranged from 20,800,000 by the Ministry of Finance, and of 17,000,000 by the Ministry of Marine, down to 2,700 by the Ministry of Public Works. In view of the enormous difference between the reductions effected and the estimated deficit that must be met either by a further national loan or by additional taxation, the Commission unhesitatingly decided that the reductions that had been made were entirely inadequate. For some appreciable time the Commission was evidently inclined to adopt a proposal brought forward by M. Herriot, who moved that the Government should be called on formally to put forward reduced estimates that would meet the situation, under penalty of having the question laid before the Chamber with a request that the latter would allot the responsibility for the deadlock. After reflection, however, the Commission decided that it might be exceeding its powers in addressing such an ultimatum to the Government, and as an alternative it adopted a similar course to that taken under almost parallel circumstances in 1887, during M. Goblet's premiership.

On that occasion the Budget Commission called upon the Government to make substantial reductions in its estimated expenditure, which the Government, as on the present occasion, refused to do. The Commission consequently sent the Budget proposals back to the Chamber, which took the same view as the Commission, and placed the Goblet Cabinet in a minority. In similar fashion the Finance Commission yesterday forwarded, through its president, a brief letter to M. Briand, as the head of the Government, in which, after pointing out the insufficiency of the reductions already made, it declared that much more serious cutting down must be accomplished, and asked the Premier to cause fresh proposals, that will enable a balance between revenue and expenditure to be arrived at, to be laid before the Commission by next Friday. What the outcome will be it is, of course, impossible to say. The situation is complicated by the fact that M. Briand is leaving for America on October 29th to attend the Washington conference on disarmament, but much may be accomplished during the next ten days to ensure that the Chamber will be able, in accordance with the expectations of the Finance Commission, to begin the discussion of the Budget proposals early in November.

There are growing evidences that the widespread discontent which is felt throughout France against practically every form of what is known here as "etatism" is at last beginning to take something like definite shape. Hitherto the general dissatisfaction at the failure of the State to carry on the railway, telephone, postal, and other public services in a business-like manner has been voiced, as a rule, by the Chambers of Commerce and other representatives of the trading community, while the defence of State control in such matters has been almost entirely carried on by the politicians, and particularly by those belonging to the groups of the Left. The continual worsening of the public services controlled by the State, however, has now become such a serious factor in the economic organisation of the country that there is a growing call even among the politicians for a return to private administration, or at least for the "effective industrialisation" of the public services. By the latter term is meant not necessarily a return to private ownership, but that, in the case of the postal services, for instance, such an important department of the State's activities shall be placed on a similar basis to that of any other great industrial organisation, with an autonomous budget, independent of the rest of the nation's financial arrangements. Simultaneously the

movement which began some time ago for decentralisation throughout the country as a whole, and the placing of departments, cities, towns, and communes in a position of greater independence of the central authorities, more or less on the lines of the local government system in vogue in Great Britain, is also showing steady progress.

One of the most striking evidences of these tendencies is afforded by the programme of the new "Ligue de la République," an organisation headed by MM. Herriot (the Mayor of and one of the Deputies for Lyons), Painlevé (the former Prime Minister and an eminent mathematician), and other well-known men, which has been formed for the purpose of grouping several of the parties of the Left into a new fighting combination. This programme urges, among other things, that the reconstitution of the devastated area must not be allowed to become a source of wealth for the speculating class; that the national finances shall be placed on a healthy footing by the establishment of sincere budgets, the abandonment of financial expedients, the settlement of debts between the Allies, &c.; that greater elasticity should be imparted to the French banking system. In administrative matters the League urges that every commune should be given the maximum of autonomy compatible with the national unity; that the country should be divided into "regions answering to the maximum of affinities and of interests," and governed by regional assemblies; that the industrialisation of the public services should be effectively and rapidly carried out; that administrators of all ranks should be rendered effectively responsible, and that the powers of the Conseil d'Etat should be enlarged in the direction of safeguarding the rights of the individual as widely as possible.

Perhaps the most remarkable evidence of the revolt of the French public against State control is to be found in an article published this week in one of the great daily papers from the pen of M. Louis Deschamps, who was M. Clemenceau's Postmaster-General. M. Deschamps, when in office, developed many important plans with a view to placing his department on a business-like footing, but realised that no real reform is possible under the present system. In the article in question he appeals for the removal of the French telephone services from State control, and their placing in the hands of an independent private organisation. "The State is incapable," he says, "of changing its methods," and he expresses the opinion that if a referendum were taken on the question the French business community would unanimously pronounce in favour of the reform he suggests.

There is little to say this week about the Bourse. The franc has certainly been to some extent influenced by the weakening of the mark, the factor of speculation entering largely into what has occurred. French 3 per Cents. have remained at 55.70. Petrol shares are roughly where they were last week, Royal Dutch being virtually unchanged at 18,900, and Mexican Eagle being at its previous price of 205. Tintos remain unchanged despite the suppression of the interim dividend, Boléo is back from 391 to 276, and Penarroya from 1,005 to 973. Shipping descriptions are heavy, the Compagnie Transatlantique being back at 253 and Chargeurs Réunis at 536. Information from the ports is to the effect that there are very few bookings. In electrical undertakings Thomson-Houston remains depressed at 837.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—SILESIAN DECISION—MARK COLLAPSE — LEVY ON INDUSTRY — EXCHANGE AND BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 17.

THE League of Nations' decision concerning Upper Silesia has had a disastrous effect upon Germany's home condition and Reparations prospects; the manner in which the matter was handled in the last week is having a still worse and wholly unnecessary effect. On the first point, the inevitable damage from the new frontier, may be quoted the estimate of the Prussian Ministry of Trade. Of Upper Silesia's coal, says this estimate, 86 per cent., or 42.5 per cent. of all German coal lying within 1,500 metres of the surface, will be lost. Of Upper Silesia's actual coal production, 64 per cent. will be lost, or, on the basis of normal (1913) production, 28,000,000 tons annually. The mines remaining to Germany have been already heavily exploited, and their production will decrease from year to year. The zinc industry will be entirely lost. Of Upper Silesia's zinc ore production, 85.6 per cent. and of the zinc smelting works all will go to Poland. In 1913 Upper Silesia supplied 60 per cent. of Germany's zinc and 17.1 per cent. of the world's. Of Silesia's lead production, 75.4 per cent., or 27 per cent. of all Germany's, will, together with the silver therewith, be lost. Of the Upper Silesian iron and steel production, which in 1913 produced 2,680,000 metric tons, 63 per cent. will be lost.

That Germany as an industrial country and an exporter (i.e., payer of Reparations) will be irretrievably damaged, no matter what elaborate economic conditions are devised by the League of Nations, is sufficiently clear. One would think that this was a sufficient catastrophe for both Germany and the Reparations claimants. Apparently it was not. The collapse of the Reichsmark exchange is considered by some people here to be due to the blunders of the League of Nations. The condition of German finances required imperatively that if a decision unfavourable to Germany was to be come to, the paraded secrecy of the League should be a real secret, so that the necessary crisis should come and be got over as quickly as possible. For months past it has been known that an unfavourable decision might cause the Wirth Cabinet to resign, that the taxation reform would be imperilled, and that a formal repudiation of the May Ultimatum conditions, causing probably more sanctions and a general upheaval, might be the result. For a month past the public interested in German marks, including Germans them-

selves, has been nervous to the point of panic. It was a vital interest that marks should not be thrown wholesale on the exchange markets. Had the League of Nations kept its counsel until the end, and then made its judgment formally, the panic might have come; but no crisis is ever as bad as it is expected to be, and the mark collapse might not have occurred, or might have lasted only a few days; for nobody believes that even if Dr Wirth disappears all the solid substance of Germany will disappear also. The League of Nations spoiled this relatively bearable prospect by a policy of half-revelations, communiques, and hints; but as Berlin was left without any official news upon which it could act, the acute crisis was postponed, and a state of permanent, daily aggravated crisis has been substituted. That is a summary of German history in the past week.

The new and worst fall of mark exchange is entirely due to this vicious policy. Before the 12th the mark, after a heavy enough fall, had had some days of stability at around 120 to the dollar. The new collapse began immediately after the precise but unofficial news of the Silesian decision. Foreign holders and Germans alike started to realise in panic, and the result (so far) is that the mark to-day touched 195 to the dollar. Near the close of January the rate was 57. Nothing in Germany's commercial payment balance, but only dread of the great Wirth crisis, caused the last fall. To realise fairly the recklessness of the way in which the Silesian question has been handled, one must know what this mark collapse means. It means certainly (unless there is a great and speedy mark recovery) a doubling or trebling of the Budget, including the Reparations, which, however they are paid, must be ultimately expressed in paper marks. The revolution in taxation by which alone, if at all, the new expenditure can be met can take place only slowly, so that the current deficit will be enormously increased. The Wirth taxation plan, which left the sufficiently large deficit of 50 milliards, must now be considered as dead as the Erzberger plan, and for precisely the same reason: that the values basis on which it was built has summarily disappeared.

After becoming Chancellor, Dr Wirth calculated the reparations liability at about 50 milliard paper marks. That was on the basis: 14 paper marks equal one gold mark. To-day the paper mark is down to a fiftieth of a gold mark, and the paper mark burden on the Budget is increased threefold. The normal State expenditure is affected in the same way. Cost of living and of materials, and salaries and wages are rising more rapidly than even after the great mark collapse of January-February, 1920. The Federal Statistical Department's commodities index shows a rise from 1306 in May to 2067 in September. Since July the rise has been 45 per cent. These rises took place before the first mark drop had had time fully to influence prices, and before last week's collapse took place at all. The cost of flour had risen 100 per cent. since May, of colonial and textile wares over 100 per cent., of leather nearly 200 per cent. The price of raw cotton has risen since its low point of the year from 18 to 80 marks a kilo. The prices of rolling mill materials have risen just 100 per cent., and as soon as the fallen exchange fully affects imported ores must rise very much higher. The higher wage movement is insistent, and must be satisfied. For instance, in the metal industries a 170 per cent. increase is demanded. Only a few weeks back the Government was obliged to raise official salaries by an average of 30 per cent.; this was when the cost of living was 36.2 per cent. less than now. The State finances must bear the new burdens, but taxes will long be collected on the old price basis.

That Dr Wirth's financial reform is doomed is beyond doubt. The price rise has made it meaningless. The reform included considerable increases of indirect taxes assessed by weight and measure: sugar, beer, spirits, the tea and coffee duties, and so on. With the mark prices of these goods soaring the proposed rates become absurdly low, and the rates must be raised again. The income-tax (not amended in the Wirth reform) is also doomed, for it is highly progressive, and the present rates on nominally increased, but in reality not increased, earnings will be unbearable. Only a year back the rates had to be cut down because of the fall in the value of

money. For the proposed property taxes the old difficulty which killed the emergency levy and the wealth increment tax comes up again; with nominal wealth increasing rapidly the taxpayers (bondholders excepted) will escape the intended incidence, and Herr Wirth's plan to reassess every three years is futile as long as certain kinds of property are doubling in nominal value every few months. The prospect, therefore, is an increase of the Floating Debt at an accelerated rate, which, as the money market cannot take up the flood of Treasury bills, means a new aggravation of the inflation. In all this picture there is, or ought to be, nothing new. It is what happened in Austria, and what, given certain initial factors, must happen anywhere. One must ask, therefore, why no attempt at all was made to handle the Silesian question in a way which could not cause a mark collapse and a new price revolution; and why, if Silesia had to be partitioned and ruined, the damage was not confined to the inevitable minimum?

The Wirth Cabinet, one must say, has done everything possible to avoid this new catastrophe. Progress was being made in the agreement with industry without which no reparations can be paid. Before the Reichswirtschaftsrat now lies a Bill imposing a Forced Loan on Industry and Real Property. This Bill organises industry and trade, including agriculture and houseowning (here treated as a branch of industry), into a single Credit Association, which is made responsible for raising a certain, not yet stated, sum for reparations aims. All concerns in each branch of industry proper will form a group or several groups; agriculture and houseowning will form numerous locally organised groups, and each group will raise money for the State. The Credit Association, and with it the single concerns which are its base, will have a claim on the State for capital, interest, and outlay on organisation, and the president of each group will issue to every individual or corporate member a bond, which the Government will accept in payment of ordinary taxes. Foreign property in Germany, but not foreign or German-owned property abroad, will be obliged to contribute. The sum to be subscribed by each contributor will be assessed by a committee in his particular group.

The Bourse last week was undetermined; the *Frankfurter Zeitung's* index only shows a rise from 26,716 to 27,096. To-day saw a new buying storm, with great rises, and also a revived foreign tendency to buy German bonds, 3 per cent. rising from 79 on last Bourse day (13th) to 80.50. War Loan was 77.50, 4 per cent. 71.10, 3½ per cent. 64, Savings and Premium 79.50, and Prussian 4 per cent. Consols 63.

ITALY.—BANKING SITUATION—CLOSING OF SHIP YARDS AT TRIESTE.

(FROM OUR CORRESPONDENT.)

TURIN, October 10.

The following figures of the four big ordinary banks reveal interesting movements in the first half of 1921:—

Inc. or dec.	- 33%	- 36%	- 36%	- 4.7%	- 32%

As not all the items of the balance-sheets are comprised in the above statements, the totals do not balance. But the main trend is clear enough. Deposits have continued to increase. The circular cheques are diminishing, though this sort of cheque—i.e., those accepted by the banks at the moments of issue—is the most popular and practically the only sort of cheques freely accepted in Italy. The ordinary cheque is regarded with suspicion.

On the assets side, cash, secured loans, and debtors' accounts are diminishing, to the advantage of discounts and investments. This means a lessening of liquidity, but was perhaps inevitable owing to the prolonged economic crisis and difficulties of sales by merchants and producers.

The unfortunate policy of subsidies to shipbuilding, of which I wrote recently, has had a new development. When Ministers used to pledge the Government responsibility with royal decrees, Signor Alessio, Minister of Industry, wrote, as it seems, a letter to the Free Shipping Company of Trieste (Navigazione Libera Triestina), amounting to a promise to pay 267 millions lire as a subsidy to the construction of 18 steamships. The basis of subsidy was the hypothesis that ships cost 1,600 lire per d.w. ton to build. The company says that a year ago, when the binding letters were sent, the 1,600 lire basis was very favourable to the State, as prices quoted by other shipbuilders were higher. Signor Belotti, the present Minister of Industry, observed that the letters of his predecessor were not binding for the State, as they were unconstitutional, and offered to revise the stipulation, so that the State should pay a subsidy proportional to the actual cost of construction, not to the theoretical basis of 1,600 lire. After prolonged discussions the company closed its works, and the workers struck against the company in a so-called protest against reduction of wages. The company plead the impossibility of building ships under the new situation of costs and prices. Public opinion was persuaded, however, that the company resorted to the closing device so as to force the Government to maintain the promised subsidies; and many think that the workers' strike was a sympathetic move to the same end. The strike was accompanied by the usual skirmish between Communists and fascisti, which are spicing bitter at Trieste. After a keen struggle, Governme- at company found a compromise, in virtue of which of subsidy will be paid according to the effective cost, ascertained by inspection of books, and the cost of experts, provided that the said cost does not exceed a maximum sum of 1,455 lire per d.w. ton. At 253 mise saves to the Exchequer a minimum of 58 millions. From this incident the opposition to legislation remains and by letters has gained new ground. If remains between the State and Free Shipping Trieste C to be brought before the Parliament, as was last week, pre-war days, its defects would have pointed out by some member. A discussion followed, and the loss to the Exchequer would be less great.

NORWAY.—PAPE (the wood pulp) STRIKE E

(FROM THE LEAGUE OF NATIONS.)

AFTER seven weeks of s not. The VIDENT.) sumed in the wood pulp were reduced by 3 kroner per krone from February 15th next required in Germany was 5,760,180 835 35,090,171 3,703,979 165,460,312 467,545,129 80,176,135 574,463 571,719 4,000,000 8,407,444

Socialist group, the Communist group, and the Agriculturalists, or what may be termed the Country group. The most salient feature in the struggle is the question of total prohibition of the importation of the stronger grades of wines and of brandies. The Storting just dissolved passed an Act to that effect; the Conservative-Liberal group have pledged themselves, if they obtain a majority of the House, to repeal that Act at once; whereas the other parties, on the whole, are disposed to maintain it.

Trade remains bad, and the trade balance is adverse—to a great extent the result of the strike in the pulp, paper, and timber trades. The exchanges are breaking fresh records against this country, though the very last days indicate an improvement.

Letters to the Editor.

GERMANY'S EXPORT POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—When a statement begins "It is well known," "It is notorious," "It is definitely stated," one may conclude that the statement, if not untrue, is at least disputable. Your correspondent, Mr T. B. Johnston, quotes Mr Burgess, the witness for American potters before the American Tariff Commission:—"It has been definitely stated that on all pottery sales the German manufacturer is required by his Government to add 150 per cent. to the price at which he would otherwise be willing to sell to the American buyer, and that the Government in turn levies a tax of 90 per cent. on this added 150 per cent."

The first part of this statement is merely inaccurate. The German Government does (through the foreign trade boards) require that when home sale prices (at a given exchange) are much lower than the prices of foreign-produced goods, the exporter shall add to his export price a supplement which roughly makes up the difference. The supplement is not 150 per cent. on the home price; it varies enormously according to the exchanges.

The second part of the statement is entirely incorrect. The German Government never levied any export tax except the export tax first imposed in May, 1920, varying between 2 and 10 per cent., the tax being assessed (not as Mr Burgess imagines) on the export price supplement, but on the whole export price. In consequence of the mark exchange recovery of early 1920 these export duties were entirely abolished on many classes of goods, and very much reduced on others. Owing to the new mark fall their reimposition, or increase, has been decided on. According to the last official publication the export duties on "fine ceramics" are entirely abolished, and those on earthenware are reduced to 2 per cent.

Mr Johnston's calculation that 134 per cent. is levied on all export trade is necessarily also incorrect. It is surprising that Mr Johnston talks about Germany's "huge revenue on the export trade," when he can get the facts from the German Budget. German exports in 1920 totalled 69,524,476,000 marks. At 134 per cent. the "huge revenue" from export taxes would be about 93 milliards, which is almost exactly double the whole German revenue from all sources whatsoever. Equally surprising is that Mr Burgess, defending his native pottery industry against dumping, should heap up "definite (untrue) statements" to prove that the German Government is doing quite impossible things in order to raise German pottery prices to foreigners.—Yours faithfully,
YOUR BERLIN CORRESPONDENT.

REAL WAGES IN GERMANY.

SIR,—In your issue of September 10th your Berlin correspondent repeats the assertion—which one hears quite often—that the real wages of German working men are higher now than before the war. I think the figures which he quotes should be taken with a great deal of salt—e.g., he quotes from the pamphlet on "Index Figures," published by the *Frankfurter Zeitung*, that wages of 10 groups of workers have risen from 100 in 1914 to 1103 in

July, 1921, but he fails to quote the statement following these figures (fifth edition, page 27): that "it would be erroneous if one would conclude from these figures that the income of workers has risen. In reality the rise is much less, in consequence of the reduction of working hours from about ten to eight, also on account of the 'stretching' of work which has become necessary in many industries, and which means a considerable reduction of income for the majority of workers."

As to the cost of living, it is difficult to understand how the Government's cost-of-living figure of 1045 for the end of July, 1921, against 100 in 1914, can be correct when the *Frankfurter Zeitung's* figure of wholesale prices is 1695. It is true that the Government's figure includes rents, which, on the average, have probably not risen more than 50 per cent. Assuming that rent amounted in 1914 to 20 per cent. of the cost of living (which surely is a high percentage), and that rents have risen 50 per cent., and all other items 1,500 per cent., one would arrive at a figure of 1230. I presume that the Government's figures are based on "official" prices of commodities which are or were rationed; but in many cases such prices are merely theoretical, as sufficient quantities can often be obtained only at much higher prices. Furthermore, according to a publication of the German labour unions on "The Economic Position of the German Workers" (quoted in Varga, "The Crisis of the Capitalistic System," page 40), wages have risen from 1914 to the end of 1920 from six and a-half to nine times, while the cost of living has risen during the same time 15½ times. Also, my own observations, as well as those of other people who have been in Germany recently, indicate that the standard of living, at least in those German families in which there is only one wage earner, has declined very materially as compared with the time before the war.—Very truly yours,
ALFRED LEVINGER.

New York, September 26th, 1921.

STABILISATION OF EXCHANGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The damage caused to trade by "acrobatic" exchanges has formed the theme of floods of eloquence, and from time to time financial conferences have laid down the conditions of stability in exchange rates. Nevertheless, it is difficult to detect that there exists anywhere in the world a really consistent financial policy calculated to extricate us from the present confusion.

There is a good deal of loose talk as to the necessity of cancelling inter-allied debts in order to stabilise exchanges, but it is not likely that these debts affect exchange rates when no payments are being made on account of principal or interest.

The world needs a strong lead, and circumstances throw the duty of leadership upon the United States and upon Great Britain, who owe it to humanity to co-operate closely in putting the financial machinery of the world in working order.

The strictly conditional offer of total or partial cancellation of debt, or of funding on favourable terms, would afford a very strong inducement to countries with depreciating currencies to make the necessary effort and sacrifice to balance their Budgets, and to stop the dilution of their currencies and restore their credit.

The comparatively favourable financial position of the United States and of this country makes it practicable to stabilise the commodity value of the \$ and the £, and to fix and maintain a new parity between the two currencies, thus creating a centre of stability with which other currencies may be related, as recommended by Professor Gustav Cassel.

So soon as any "low exchange" country had succeeded in stopping the printing press and in stabilising the purchasing power of its currency, new parities with the \$ and the £ (based on the then purchasing power parities) could be fixed. These new parities might be maintained by the mechanism of an "exchange standard" in the same way that the sterling price of the rupee was maintained from 1899 to 1916. That is, while the currency might remain inconvertible, the Government would be prepared to sell bills on New York and London at rates varying within narrow limits. The conditions of success would be (a) the provision of sufficient

\$ and £ credits (on suitable security) to enable the country in question to meet any temporary adverse balance of indebtedness; (b) the proper control of the internal price level so as to prevent the adverse balance of indebtedness becoming unmanageable.

The question of the German exchange is the veritable storm centre. The mark fluctuates violently, but is always quoted at a fraction of its true purchasing power parity, because of the necessity under which the German Government is placed to secure allied currencies at all costs in order to meet the instalments of the indemnity, and because the world at large and the Germans themselves distrust Germany's financial position. If the money payments can be commuted for deliveries of materials for capital works in Allied countries, as already arranged by France, a great step will be taken to restore confidence and to make the external value of the mark conform more closely to the internal value. Supposing the present activity in production to be maintained, a point may be reached at which the German Government can balance its Budget—formidable as the task appears—and then only can the internal depreciation of the mark cease.—I am, &c., C. CRAIES.

London, E.C., October 20th, 1921.

PAYMENT OF INDEMNITIES AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am obliged to Mr Major for his criticisms of my letter of October 3rd. I have, however, no corrections to make, nor am I conscious of any curious slips. I think he has confused the indebtedness of individual traders to one another with the indebtedness of Governments to one another; it is quite possible for an American trader to owe a debt to an English trader, although the English Government be heavily in debt to the American Government. I quite agree with him as to the desirability of clear thinking on these matters, which, after all, are not very complicated.

As to leading statesmen and leading organs in the Press, let me quote from a speech by Mr Winston Churchill at a luncheon given to him by the Manchester Chamber of Commerce on June 8th last, reported in the *Manchester Guardian* of the following day:—"But in so far as goods from Germany come here, not as a result of natural trade between two countries, but a mere payment of a debt, undoubtedly they would exercise a depreciating influence on domestic industry and hamper in a serious manner our export trade..... Some day these simple truths will penetrate the minds of a great nation, and on that day they will, if they be wise, endeavour, as part of a gigantic operation, beneficial to all, to reduce the mutual indebtedness of nations to limits which are not incompatible with healthy trade, normal exchanges, and decent labour conditions." Our late Free Trade Member was expounding the blessings of the Key Industries Bill, of which Parliament was delivered after a much-closed labour a month or so later. The leader-writer in the *Manchester Guardian* of the same date, commenting on the speech, said: "Some day or other the nations will wake up to the necessity of cancelling the part, if not the whole, of the enormous obligation, including the indemnity, which can only be paid by complete derangement of the internal and external mechanism of their trade." This policy has been urged on many subsequent occasions, the latest is to be found in the issue of October 15th. The simple truths have now penetrated the Board of our Chamber of Commerce, which is beseeching the Government for mutual cancellation of State debts. The *Times*, also, is in a state of terror lest floods of cheap German goods should deluge our land, submerging every factory in the country.

May I examine this proposal of cancellation? Let us suppose that Mr Major has taken up £5,000 of War Stock redeemable on a certain date. He receives a letter from my Lords Commissioners of the Treasury informing him that they lent him £5,000 to Arcadia, that this country is in a very poor way, and they desire to cancel her debt if Mr Major will agree to forfeit his claim for repayment. If Mr Major assents, I have nothing more to say. He has my admiration as a benefactor—of Arcadia. But if, as is easily conceivable, Mr Major declines to fall in with this proposal, and the Govern-

ment then proceed to cancel the debt of Arcadia, I decidedly object, and I object because when the date for redemption of Mr Major's loan comes due my descendants will be taxed in order to raise the £5,000.

When we were the greatest creditor nation in the world whom did we forgive? I hope we shall never even hint to the United States that they might cancel our debt. We may want their aid again. On the other hand, while it is true that Arcadia's debt is not worth to-day 20s in the pound—perhaps not five—still, with patience, her condition may improve, and it would be something to receive the interest. As regards late enemies, they should pay every farthing; but we must give them time. We have fought a great war, and our great-grandchildren may not see the final liquidation of the resultant international indebtedness. Nature is a great restorer, and I am told already a bounteous harvest has been reaped in portions of the devastated area. And is not the payment of a substantial annual tribute, spread over many years, by our defeated enemies the best guarantee of peace?—Yours, &c., ALFRED E. LEAF.

Manchester, October 18th, 1921.

A NEW TAX SYSTEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With further reference to the review of my paper, "The Taxable Capacity of a Nation," by "A Taxgatherer" in your issue of October 8th, the definition of production as profit is correct. It is said the meaning of the term "production" is limited to creation of values. That is so, and this means profit. The accounting term "cost of production" must be construed by reference to the question, Whose production? Production—the artificial supply of all required for man's wants in the existing system of society—is profit. But that production arises, generally, at different points or undertakings. The one shilling loaf of bread supplied to the householder is wholly profit, though not to any one undertaking. Part of this profit arises out of the work of the farmer, and other parts arise out of the work done by the miller, the merchant, the baker, and others. The term "cost of production," therefore, has reference always to cost at some point of partial production represented by a particular undertaking.

No specific deduction of production tax would be made by the owner of a business from wages and salaries (except those fixed under long-term contracts), but it is clear that if, owing to the imposition of a 10 per cent. production tax, there is less to divide among the co-operators, then each class must share fairly in what there is to divide. Suppose that there were no taxes of any kind on income, and that 100 represents the production of a certain undertaking. The owner of such a business and those who co-operate with him therein would have no uncommon difficulties in agreeing upon the division of that production. If, then, the production is reduced by taxation to 90, why should there arise any greater difficulties in agreeing upon its fair division? In considering the proposal for a production tax, one must clear one's mind of the present income-tax methods. There is no reason to think that owners of businesses will be unjust to those who co-operate with them. Those co-operators, including wage-earners, who under the present system are receiving no more than their just share, need fear no reduction under the new system. An employer is no more likely to pay less than a fair wage than he would be if there were no taxes. His capacity to pay wages must, however, be ultimately limited by the production arising at the point represented by his business. It would not, therefore, be a question of asking in what proportions, and at what rates, should an employee bear any part of the tax. All such ideas must be banished. The question of his share of taxed production should be settled directly between him and his employer, not, as now, between him, his employer, and the Government.

Production tax would be deducted at the current rate from all interest paid on British Government securities. No tax would be levied by the British Government on interest paid by Indian, Colonial, and foreign Governments. Such interest is a proper subject for taxation

by the Indian, Colonial, and foreign Governments, and, in course of time, as taxing systems are developed all over the world, it will no doubt be so taxed. This may seem somewhat startling, but it is perfectly equitable, and it is necessary to face the fact that we cannot continue to tax production arising in other countries.

In order to provide the capital required for maintaining and increasing industry and employment, the big incomes must be restored, because it is from them only that savings can flow freely as capital into industry. It is estimated that a production tax at 10 per cent. will yield an amount practically equivalent to the yield of the present income-tax and super-tax. No repayment or relief to individuals will be needed, because all questions of payment to individuals will be dealt with by agreement amongst the co-operators in each industry. This means agreement between the employee and his employer.

Admittedly there should not be taxation without representation, and representation means reasonably effective representation. It has been shown that there is now no effective representation for those who pay the taxes levied in their present form. The half-million taxpayers with the bigger incomes should pay proportionately bigger taxes, but only in proportion to their bigger incomes. This should secure equal protection for their larger property. If they are disproportionately taxed, the great source, or nursery, of industrial capital is being destroyed.

The branch of the system dealing with domestic satisfactions is strictly logical. When taxes are to be raised, it is unnecessary for that purpose to inquire whether they fall upon luxuries or necessities. Taxation for revenue should not be complicated by an endeavour to use it as an instrument for guiding and reforming the nation. As a matter of convenience, but not of equity, it is proposed that where the furniture, jewels, clothing, &c., of an individual are worth less than £200 they should be exempt from the production tax. A capital value of £200 would give an annual value of £10—and a 10 per cent. production tax would yield £1. This might be the lowest annual sum worth collecting. There would, in the majority of cases, be no need for special valuations to be made, because insurance values might be taken.

The production tax would, it is thought, cover every item of income arising in the United Kingdom, no matter how various the sources of that income. All fixed annual interest, including the interest element in annuities, would suffer deduction of the tax. Clerical and collegiate stipends would also be charged, in hands of the payers, as production. A commission agent's business is a point of production, and the principal would have to render an annual account. Ground rent is part of the annual value of capital represented by land, and would suffer deduction made by the occupier when paying the ground rent. Fixed interest on investments would suffer deduction of tax. Dividends on ordinary shares, &c., would be paid out of taxed production, and so would be net, and not liable to any further tax.—Yours, &c.,

London, October 18th, 1921.

REVIEWS.

"A History of the Peace Conference of Paris." Vols. 4 and 5. Edited by H. W. V. Temperley. Published under the auspices of the Institute of International Affairs, by Henry Frowde and Hodder and Stoughton.

THERE can be very little doubt that the Institute of International Affairs, through the generosity of Mr Lamont and the industry of Mr Temperley, have succeeded in producing what will in times to come be accepted as the standard contemporary history of the Peace Conference. The sixth and last volume has still to appear; the fourth and fifth deal chiefly with the Treaties of Peace with the minor enemies of the Allies. Chapters are contributed by Colonel Peel on Reparation and Finance in the Austrian, Hungarian, and Bulgarian Treaties; by Professor A. A. Young, of Harvard, on Commercial Policy in the Treaties in general (a vigorous chapter this, and more outspoken

than some others); by R. W. Seton-Watson on Czecho-Slovakia; and by the editor on Hungary, the Treaty of London, and the principles underlying the peace terms as a whole. Enemy debts, minorities, the Plebiscites and Disarmament are among the special subjects separately treated, and the Appendices to the fifth volume contain an addition to the collection of documents which is perhaps the most useful feature of this History. General Smuts' note on Reparation, with special reference to pensions and separation allowances, is reprinted from Mr B. M. Baruch's book on the making of the Reparation Sections. A very serious injustice will be done to the reputation of General Smuts if this document continues to be reproduced and circulated without any explanation of the circumstances in which it was prepared.

"The Industrial State." By M. D. Stocks, B.Sc. Collins Clear Type Press, 1921. 4s.

This book is far above the average of its kind. While there is nothing in it which should prove a stumbling-block to the continuation school pupils for whom it is primarily intended, the book should appeal to wider circles of students and citizens who do not know all they might about the making of the industrial States in which they live. Mrs Stocks begins her survey with mediæval conditions. She has painted an admirable miniature of the manor and the guild, and goes on to sketch the break-up of these institutions, and the transition through Tudor paternalism and new finance and new trade of ever-widening range to the industrial revolution and its legacy of problems. She is optimistic in view, and believes that the benefits which the great societies created by the last century have brought in their train are more permanent than the appalling messes consequent upon their creation, which after generations, busy making worse messes of their own, are hard put to it to clear up. There are things left out of the book which we would have expected to see put in; but that is not surprising in view of the immense amount of ground covered by these 300 vividly written pages.

"A Short Fiscal and Financial History of England, 1815-1918." By J. F. Rees, M.A. Methuen and Co. 1921. 6s.

THIS is a badly-needed book. In the now considerable number of text-books dealing with nineteenth century history comparatively little attention has been paid to the public finance of the period. Mr Rees writes of the struggles of the first half of the century to bring order into the chaotic and cumbersome tariff which was a legacy of war taxation. He brings out how tremendously early progress towards Free-trade was impeded by the immediate loss of revenue consequent upon each remission of duties, and by the absence since the war of any compensatory income-tax till Peel apologetically reintroduced it in 1842. From the completion of Free-trade till the present time we see the rival claims of social reform and military expenditure making the lot of successive Chancellors of the Exchequer anything but a happy one. Mr Rees has told his story well. At times it is a little difficult to see the wood for the trees. But Mr Rees is as right in not ascribing to the history of financial policy a systematic character which is in truth lamentably conspicuous by its absence, as he is in his courageous refusal to draw superficial analogies between the end of the Napoleonic war and the present juncture.

BANKERS AND BANKING CREDITS.

A YEAR ago, in commenting on the banking figures for the twelve months ended June 30, 1920, we headed our article the "Extension of Banking Credits," and began it by observing that we still had to use this title in commenting on the general features of the banking year. This time we might once more have used the same heading and the same first sentence, since the figures of our table show that there has, in fact, been an increase of nearly 20 millions in banking credits, as indicated by the total of current and deposit accounts; but the increase is so small as compared with those recorded in previous years that it seems hardly worth while to lay much stress on it. It really does seem, at last, that we have arrived at something like stability in the matter of bank deposits, though he would be a bold prophet who would assert with confidence that the long-expected reflux may now be about to take place. In view of the uncertainty surrounding the position of Government finance, there is at least a possibility that a good deal of official kite-flying will be necessary during the period that is before us, to say nothing of all the schemes of credit expansion which are in course of preparation in Whitehall with a view to meeting the unemployment problem.

In view of all that has been said in recent months for and against the policy of deflation, and the good or evil which its champions and opponents have alleged it to have produced, it is interesting and rather amusing to find from the figures that we have before us—which are those published by the English banks which produce balance-sheets at June 30th—that there has actually been no deflation at all, but a slight expansion in inflation, in so far as it is measured by the volume of the deposits of the ordinary joint stock banks. In the matter of currency note circulation there has, of course, been a considerable decline, and it is also notable that the bankers' clearing figures indicate a reduction in the turnover of cheques and other credit instruments. These symptoms, however, are rather an indication of reduced velocity of circulation than of actual reduction of bank credits, and seem to bear out the view that the trade depression and the extent of unemployment have been produced to a much less extent than is usually believed by any measures that may have been taken to produce deflation and restriction of credits. Credits, in fact, have not been restricted in so far as they are measured by the balances against which the general public is entitled to draw, but the public has not been drawing so much because the consuming public has been on strike, both at home and abroad, and the public has consequently been producing and distributing less. In the Bank of England's figures, a market, and considerable evidence of restricted credit. As compared with June 30, 1920, there is a reduction of £46,000,000 in the aggregate of the Government and other securities held by the Bank of England with a corresponding increase of £45,000,000 in the Public and Other Deposits, which include the deposits of banks with the Bank of England. Of course, safe to draw any very definite conclusions from the figures of the Bank of England's balance-sheet, especially at periods of a half-year, by many baffling cross-currents. It may be observed that during the year our figures the Bank of England's deposits have been expanded by £9,000,000, of which £6,000,000 went into the reserve fund. Amid all these complications, it is difficult to see what has or has not happened to the volume of legal tender and bank of England which is now the basis of the system, or as near an approach to stability as we can get. But we append the following table of the Bank of England's figures, leaving such conclusions from them as may be drawn.

BANK OF ENGLAND.
(Million £'s).

	June 29, 1921.	Comparison with—					
		July 1, 1914.	June 30, 1916.	June 27, 1917.	June 26, 1918.	July 2, 1919.	June 30, 1920.
Rest	3.2	—	—	—	—	—	—
Public deposits	15.3	1.7	3.9	2.8	2.4	9.2	0.4
Other deposits	131.7	77.1	256	65	2.8	35.3	44.3
Govt. securities	61.2	50.2	190	15.9	9.5	37.5	28.9
Other securities	85.8	36.1	1.5	14.1	15.0	2.3	17.4
Notes issued	145.0	88.1	67.0	71.6	61.9	40.1	9.8
Total coin & bullion	128.4	88.3	66.9	61.5	63.1	39.8	10.5
Note circulation	123.0	99.3	93.1	89.6	75.4	49.1	9.0
Gold and silver in banking depart.	1.8	0.2	—	0.7	1.2	0.3	0.7
Reserve	17.8	11.0	26.2	18.8	12.2	9.3	1.5
Proportion	12.4%	2.8%	16.4%	10.4%	6.4%	2%	3.8%

When we look at the figures supplied by the joint stock banks themselves, we are led to the conclusion that much of the increase in the Bank of England's deposits must have appeared in accounts other than those of its banking customers, for the figures show that the aggregate decrease in the "cash in hand and at the Bank of England" of the banks in our table amounts to only 10½ millions. It is thus evident that the official endeavours to restrict credit have been successful in the case of the Bank of England, but have had rather less than no effect with regard to the other banks, which, with a slightly smaller cash basis to work on, have actually made a small addition to their deposit liabilities. The following table shows the increase in deposits of the joint stock banks included in our table year by year at June 30 during and since the war:—

INCREASE IN DEPOSITS.

	June 30, 1915.....	1966
"	" 1916.....	445
"	" 1917.....	81.1
"	" 1918.....	282.5
"	" 1919.....	406.2
"	" 1920.....	105.5
"	" 1921.....	19.8
		1,136.2

As compared with the gargantuan increase of 406 millions recorded in the year ended June 30, 1919, the 19.8 millions achieved during the twelve months under review is so minute that it may almost be described as a triumph of the deflation policy, and those who criticise our banks for continuing, even to this small extent, the process of credit expansion, must remember how very difficult a task it was to bring back the credit-using public to a state of more or less sanity after it had been demoralised by the debaucheries of the war years and the monstrous abuse of our credit system, which was then necessitated by bad war finance. It is very much easier to get the industrial and commercial public into the habit of thinking that credit is to be had for the asking, and will be given freely to anybody who thinks that he is going to be able to make profitable use of it, than to teach them, when once they have been obsessed with this delusion, that unlimited expansion of credit leads inevitably to economic chaos, and that credit is a commodity of which there is only a certain amount to go round. This task our bankers have evidently accomplished with an amount of success which was, perhaps, quite as great as was good for the welfare of the country. Between the extreme courses urged by the academic theorists who wanted to go on restricting credit and currency until we had brought back sterling to its old relation to gold—whatever might be the consequences to the commercial community in the meantime—and the practical men of business who wanted the tap of fresh credit to be kept flowing in all its war-time abundance—whatever might happen to prices—the banks have adopted the good old British system of a *via media*, gradually reducing the pace at which new credit was to be had until they have brought the increase down to an almost negligible figure. They have been assisted in doing so by the fall in prices, but to a much smaller extent than would at first sight appear, because in prices

ANY FACILITY AFFORDED FOR THE TRADE WITH
PARTS OF SOUTH AND EAST AFRICA, THE UNITED STATES OF
AMERICA, AND THE CONTINENT OF EUROPE.

has not been produced by active production, accompanied by active consumption and a consequent lessening in the demand for credit owing to the decreased money value of the goods that are held in stock, but by the buyers' strike, voluntarily and involuntarily, which for some time made goods less easy to sell the cheaper they got, because buyers were still holding off in the hope of a further fall. Thus the fall in prices very slowly affected the demand upon the banks for credit, and for some time was chiefly effective in weakening the position of producers and distributors who had to rely on the banks for help in the face of a trade deadlock such as had never been experienced since modern banking had been fully developed. It will be remembered that June 30th, which ended the year which we are reviewing, also ended the coal dispute, with its disastrous consequences to our trade position and to all our manufacturers and merchants on whose activities it depends. It may thus be hoped that the period which we are now reviewing closed the time of worst anxiety for the bankers. Since then there has been a very welcome improvement in the market for investment securities, an improvement so marked that for the first time since the war began subscribers to a security issued by the British Government have been able to snatch a small profit on their investment. This change in the position must have enabled the banks materially to lighten the burden of investments which had been forced upon them by the

war. In fact, an examination of the figures given in our tables shows that while the item of "discounts, loans, advances, &c.," has risen by 58 millions, there was a decrease of 33½ millions in the investments held. As will be seen from the following figures of the nine English banks which publish monthly statements, the process of reducing investments has made further progress since June 30th last:—

(Million £'s.)

THE OUTLOOK FOR BRITISH BANKING ABROAD.

FOR the British banker abroad, as for his *confrères* at home, the year 1921 will pass into history as one of black memories. Even the most fortunately situated has been unable to claim that he has passed unscathed through the depression and the stress which has been the inexorable aftermath of the war.

The British banks operating abroad may be divided into two broad classes, the problems of each of which differ alike in their nature and complexity. In the first class we have the great overseas banks maintaining London offices, but whose business almost wholly lies outside this country, generally in one country or in one group of countries, such as the Canadian banks (Canadian by constitution, but essentially British in characteristics and tradition), the Australian, New Zealand, and South African banks, and the powerful institutions operating in the Eastern Hemisphere, in Egypt, and in South America. For all these banks the problem has been and is practically an intensified form of conditions which have had frequently to be faced before. The world-wide depression caused by the collapse of inflated prices, the weight of over-valued and unsaleable goods and raw materials, and the subversion of the customary standards in granting credit even to the strongest, are merely a repetition of problems often encountered and capable in time of solution. Such exchange difficulties as have arisen have been simple, with a remedy obvious and not impossible of application. The large losses encountered have been well within the compass of the reserves so freely made in the fat years, and the future holds no special terrors, but envisages a period of consolidation and internal tuning-up. One present difficulty will continue, for it will take some years to repair the ravages of the war in *personnel*. The rising staff on whom the burden ten or twenty years hence will fall has been largely depleted of its most promising material, and until the juniors now coming forward have trained in and matured, managers will be faced with perhaps one of the most serious difficulties with which they can be called upon to deal. Their task will, however, be simplified by the prospect of an absence of any call for extension or development on a large scale for a considerable period, which will afford them some respite from the constant anxiety as to where the bearer of to-morrow's burden is to come from.

The second category of banks comprises those institutions the vast bulk of whose business is at home, but which, for a number of reasons, have decided to

open branches or subsidiary banks abroad, chiefly in France, Belgium, and Spain, and more recently in Switzerland. The conditions which apply to these weigh with even greater force upon those banks whose business lies in the Near East and to the outposts established by such institutions as the British Trade Corporation. Here the problem has been much more complex, and though time may ultimately prove to be the only solution, it cannot be said that any clear light upon the future has yet appeared. As with their fellows further afield, losses have figured largely in the operations of the closing year. Conditions which brought about the failure of the Banco de Barcelona and the withdrawal of the advance posts planted by American bankers in Europe, have not passed over them without leaving their traces. Were the problem one of depression and impaired credit alone it could be faced with equanimity. But in the outlook which confronts them the feature which most largely looms is exchange, and that not the exchange of the London market, but of the Continental Bourses, where the violence of the fluctuations is only equalled by the madness which dictates it. With natural commercial business practically dead the highly salaried Continental arbitrageur has to fly to speculation to justify his existence, and though British banks abroad may not themselves have gone to excess in this direction, it will be easily realisable that having perforce to work in such markets the risk of serious loss must be always present to those who have to take the responsibility in the eyes of London. Added to this is the constant spectacle of the dwindling in intrinsic worth each day of the valuta which have to be dealt in, while the whole unorganised opinion of Europe's bankers, who realise the greatest root of the evil, stands by and observes powerless the ceaseless stream of notes outpoured from the printing press. It is in such a field and with such a prospect that the British banker on the Continent of Europe must face the future to-day.

It cannot be said that the outlook is such as to encourage complacency. Without doubt such banks in the eyes of their promoters serve a useful purpose, but for all their value up to now as a factor in rebuilding a desolated Europe they might as well stay at home.

And yet these banks may have in their service the men capable of saving the financial future of Europe, which is so grievously threatened. Backed by the prestige of their home associates and the immense potential power they wield, if applied with full force to

the proper spot, the local knowledge and experience of the British banker on the Continent of Europe should be able, rising superior to the extraction of profit from the passing tourist, to evolve the scheme which will alleviate Europe's present troubles, and by its soundness convince even the politicians that the problem is not insoluble. It is such an outlook that confronts them for 1922.

THE HIGHER EDUCATION OF BANKING.

(BY A BANKING CORRESPONDENT.)

No excuse need be made at the present time for reverting to a subject the importance of which has been made so clearly apparent by the events of the last few years and by the part which our banking system is now being called upon to play. The standard of education, which is equivalent to the standard of efficiency, of bank staffs comes up periodically for discussion in the Press or receives a pious benediction in the chairman's speech at some meeting of bank shareholders, and is once more allowed to be quietly forgotten. The old axiom that efficiency pays, though acceptable as theory, appears distasteful as a practice, and British banking, always conservative, seems reluctant to realise that new conditions will require a better qualified and broader visioned *personnel* than was sufficient in the past. The banks are now committed to the broad field of international business, and if they are to take the leading place at which they aim no effort should be spared in assisting their staffs to qualify themselves for the new part they will be called upon to take in our national life.

What, then, is meant by the higher education of the aspiring young banker, and what does it involve? There is, of course, no limit to the education desirable, but we may confine ourselves at present to whatever is beneficial in fitting him for whatever work he may be called upon to perform in his profession, not only in the narrow sense of an efficient machine, but with a broad knowledge of men and affairs which will enable him to fill the highest posts which banking has to offer.

Real difficulties undoubtedly must be encountered in attempting to achieve this ideal, and the co-operation of the banks on certain principles, if not absolutely essential, would be of immense value. In the first place, sound and fairly uniform educational qualifications could be demanded from applicants for clerkships in order that a certain standard could be assured, which would justify the efforts towards continuing the educational development of the individuals. Further qualifications after entering the banks should also be insisted on, not on the present take it or leave it principle, but along agreed lines and with the assistance and sympathetic encouragement of the banks. Many courses of study are now placed before the ambitious bank clerk, all no doubt excellent, but lacking not only direction of aim but the all-important official stamp of recognition. Nor is the good work of the Institute of Bankers overlooked, but here, again, although it may have the blessing and financial support of the banks, the candidate for institute honours must feel, that, though he may be supposed to pass the various examinations, his actually doing so will pass unnoticed and unrecognised. At best it seems a negative interest.

If our great banks could be induced to co-operate and agree to some defined course of educational training, not only giving it passive approval, but actually recognising it in their scheme of advancement, a great step forward would be achieved on the purely scholastic side of the problem. What this part of the banker's education should embrace need not be catalogued. The difficulty is not to know what to include, but rather what to exclude, and by carefully considered supplementary courses it would be possible to place before the more ambitious facilities for such education as only those fortunate enough to belong to the Universities enjoy.

It may be argued that all this study wants time and energy, and that the banker's life is too busy, his hours too long to permit him to continue an academic education. At the present time this is the deciding

argument with many a young man who possesses the natural abilities and desire for further culture, but from force of circumstances must resign himself to becoming one of the minor cogs in the machine.

The remedy lies in the hands of the banks. They are saved the trouble of themselves providing the educational facilities, but the responsibility of providing the means, the time, and the encouragement must remain theirs.

On them also must fall the duty of seeing to the practical business side of the training provided for the staffs, and the real success of any scheme will greatly depend on the intelligent grafting and balancing of educational and technical training.

The difficulties are not insuperable to powerful and wealthy institutions, and we venture to believe that the results would fully compensate for trouble and cost involved. But it must be tackled in a spirit of broad sympathy. The idea that the rank and file are to be turned into good machines and discouraged from all initiative or individuality must go by the board. The gulf between the manager and clerk must be bridged by a spirit of helpfulness and mutual confidence to enable the process of selection to be carried on to best advantage. Each bank, according to its size and the nature of its business, could doubtless adopt a system best suited to its needs. Some form of educational staff, whose duties would be to organise and personally supervise staff training, might be created for this purpose. Such a department need not depend on the bald and often unintelligent staff reports at present in use in many banks, but would be able from personal knowledge to select the stronger and assist the weaker.

Scholarships could with advantage be included in any scheme, and it is pleasing to note that this is already being recognised by certain banks, who have now granted such facilities in connection with their foreign business. Such scholarships need not be confined to the foreign field. They might be extended to include such course as economics, commerce, &c., and be made available for those who show special aptitude for any particular branch of study. The time required for any special study need be no obstacle, as the benefit accruing to the bank must be evident, and any dread that men after training themselves at the bank's expense would seek more remunerative employment elsewhere could be easily countered by suitable recognition of the qualifications attained.

Did space permit much more could easily be said regarding the ways and means by which the higher education of the mass of bank officials might be achieved. The first step, however, is for the banks, their staffs, and the whole trading community to realise how much it is in their interest that the matter should be seriously taken up.

It ought not to be necessary to emphasise how vital a matter this is for the banks, whose stock-in-trade is not confined to their capital and deposits, but includes to a very great degree the efficiency and goodwill of every member of the staff. The present indifference to the welfare of the staffs and leanings towards cheap labour must give place to a real feeling of genuine co-operation and mutual dependence between every official, from director to junior. That the great body of bank employees must welcome any chance of improved status is beyond doubt. Of the thousands of men who have chosen this calling a very large proportion would gladly welcome the opportunity for a higher education, which through force of circumstance had been impossible, while a considerable number, whose talents under existing conditions remain unrecognised, would qualify to take a leading part in the financial world. Bank clerks must also be alive to the fact that the demand for University men is steadily growing in most large businesses, and as these men naturally enter the field with undoubted educational advantages, they usually find little difficulty in overshadowing their less fortunate fellows. Indeed, so pressing is the subject of the higher education from the staff's point of view, that one is surprised that joint action has not already been taken through their Guild or otherwise.

Once the trading public realise that they also are keenly interested they will throw their weight of opinion in the scales. The advice of the banker is often sought, and not only on subjects which can be directly brought into the category of bank business. He is expected to be a limitless fount of information and judgment. Flattering as this may be to the present bank oracle, we feel sure he will be the first to admit that, given the opportunities, he could greatly increase his value to both employer and customer, and take an ever-increasingly important part in the home and foreign trade of the country. When we are so intent on the cry of "Anti-waste," let us see to it that we make the best of our human material.

THE AMERICAN BANKING POSITION.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 7.

WITHIN the past year, and especially during the last four or five months, the general banking situation in the United States has shown remarkable improvement, as will be seen from a comparison of the principal items of this week's combined report of the 12 Federal Reserve Banks with the figures for the corresponding date in 1920. Total gold reserves of the system, for instance, now stand at \$2,732,599,000, a new high record, representing an increase of \$736,275,000 since last October. Bills and acceptances on hand, aggregating \$1,440,191,000, are \$1,661,170,000 less than a year ago, and Federal Reserve notes in actual circulation have been reduced from \$3,322,123,000 to the present total outstanding of \$2,482,313,000. The ratio of total reserves to deposit and note liabilities combined has advanced in the 12 months from 42.9 per cent. to 69 per cent., the latter being the highest point reached this year, while the ratio of gold reserve to Federal Reserve notes in circulation, after setting aside 35 per cent. against deposits, is 92.2 per cent., as against 46.9 per cent. a year ago. Other striking changes will be found in the following combined statement of the 12 Federal Reserve Banks for the week ending October 5th, as compared with the report at the corresponding date in 1920:—

FEDERAL RESERVE STATEMENT.

Ratio of gold reserves to F. R. notes in circulation, after setting aside 35 % against deposit liabilities	*46.9%	92.2%	
* Calculated on basis of net deposits and Federal Reserve notes in circulation.			

While the Federal Reserve system, as a whole, is in a far stronger position than it was last autumn, as a result chiefly of the enormous influx of gold from all parts of the world and the heavy decreases in note circulation and rediscounts, further improvement in various directions must take place before banking conditions in this country generally can be called really comfortable. Many member banks are carrying burdens which are gradually becoming lighter, but are still heavy. The process of readjustment from wartime conditions and of thawing out frozen credits has made greater progress in the East than in other sections, as is indicated by the comparatively higher reserve ratios of the New York, Boston, and Philadelphia Federal Reserve Banks and by the recent further reduction in their discount rate to 5 per cent. Discount rates of other banks still range from 5½ to 6 per cent., while for many months the Minneapolis Federal Reserve Bank maintained a 6½ per cent. rate until this week, when it was lowered to 6 per cent. In agricultural sections, particularly in the West, liquidation has proceeded slowly, and is still less than bankers had expected or would like to see accomplished. Farmers in that section of the country are hard pressed, and banks are being called on to assist them, but the problem is a difficult one, especially since the prices of many farm products are said to be unremunerative. Farmers quite generally complain that after deducting freight charges and production costs, there is not much left for them at current market quotations. The Federal Reserve Bank at Kansas City has just decided to make no reduction in its local discount rate of 6 per cent. because of the recent expansion in loans, a decline in its reserve ratio, and indications that there is likely to be little, if any, liquidation in coming months. Reports from Kansas City are to the effect that since fully 60 per cent. of this year's wheat crop has left the farms of the South-West, not much additional liquidation can be expected from wheat areas, since the remainder is likely to move in moderate volume and be absorbed in current expenses and obligations of farmers. The abundance of corn, it is pointed out, is increasing loans—temporarily, at least—since farmers are feeding it to cattle. In the area served by the Kansas City Federal Reserve Bank the cotton crop is so short that it is of little help in effecting liquidation, even at the higher prices for the staple. The accumulation of wheat in elevators in that section is also absorbing credit. There seems to be little prospect of any material improvement in the banking situation in the West and South-West until demand for livestock, corn, wheat, and other products revives. The sharp advance in the price of cotton, on the other hand, has greatly improved the financial and economic situation throughout the South, with the result that capital, long tied up, is beginning to be released, and cotton growers and others in that section are gradually paying off their obligations and calling to a less extent upon banks

for assistance or extensions of former loans. Actual liquidation in the South has not yet assumed large proportions, apparently, but it is being reflected in the statements of Southern Federal Reserve banks, and is expected to make greater progress in the near future. The Richmond Bank's reserve ratio is now 48.1 per cent., against 43.7 per cent. last week, that of the Atlanta Bank has advanced from 40.9 per cent. to 41.7 per cent., and the Dallas, Texas, Federal Reserve institution shows a gain from 39.7 per cent. to 41.4 per cent.

The banking position at this centre, as indicated, has become exceptionally strong. It is much sounder also, since the recent and timely adjustment of the affairs of two well-known New York financial institutions—one of the first magnitude, and the other of no mean size—whose commitments in South American and various other enterprises, undertaken some time ago, did not materialise as expected, and placed them eventually in a most uncomfortable, if not critical, position. On the highest authority it may be stated there are no weak spots among large financial houses here that are causing bankers any serious concern or deep anxiety. Nevertheless, they are still confronted with big problems, the solution of which will probably require considerable time. Many merchants and corporations as well as agricultural interests are leaning heavily upon financial institutions, and the administration of the affairs of more than one corporation is virtually in the hands of bankers, because readjustment and liquidation have by no means been completed. As a matter of fact, conditions, though greatly improved, are not as rosy as the bank statements, taken alone, might seem to indicate. Reserves, it is true, have rapidly piled up. The credit tension has relaxed. Money rates have declined, and commercial paper of the better sort is now being discounted on somewhat more favourable terms generally than in recent months. But money is not easier in the sense that it has become really plentiful, or that bankers are prepared or willing to lend substantial sums, especially for the longer

periods. Many banks are still heavily indebted to the reserve institutions, and are carrying "unliquid assets," which must, and doubtless will, be thawed out eventually, and as progress is made in that direction money is likely to become easier and more plentiful at various centres.

There is a marked unanimity of opinion in financial and business circles that, as one authority remarks, "the Federal Reserve banks have rendered enormous service to the country in the emergency through which it has been passing, because confidence in their solvency and ability to meet a crisis has been sustained. If that confidence had been lost chaos would have ensued, and the losses of the country would have been enormously greater. That confidence could not be retained if the banks were conducted upon any but sound banking principles."

The necessity of providing, through private enterprise, some permanent machinery for financing foreign trade by granting long-term credits has repeatedly been pointed out by many authorities during the past year, and is again being emphasised. At this week's convention of the American Bankers' Association, for instance, it was stated that "if such financial machinery be not developed and made ready to function in accordance with the dictates of business-like vision and prudence, it may be expected that insistent demand will recur for Governmental handling of such matters, with unavoidable appeal to class interests and accompanying expense to the general taxpayer." In many quarters it is felt that the future prosperity of the United States depends very largely upon the expansion of its foreign trade to take care of its surplus products. And yet it is a singular fact that while efforts have been made to set up necessary and adequate machinery for long-term credits, not much, outside of the Government's activities, has actually been accomplished in that direction, either because of an unfortunate and short-sighted policy of aloofness which some interests have pursued and are still pursuing, or for other reasons. The most striking instance of the

failure of such efforts is found in the case of the proposed Foreign Trade Financing Corporation, the organisation of which with a capital of \$100,000,000 was undertaken months ago. It is understood that only about one-quarter of that sum has actually been subscribed to date, although no official figures have become available. One reason given for the delay in that undertaking is that the banking laws in many States did not permit State-chartered banking institutions to invest in stock of such corporations. In most of those States enabling legislation has now been passed, or legal technicalities overcome. Future developments in this connection, therefore, are awaited with much interest.

Bankers here are conservatively optimistic regarding the future, and look for continued improvement in the general financial, industrial, and railroad situation, but that improvement is likely to be gradual.

BANK SHARES.

THERE is much reason why holders of bank shares should in general be well satisfied with their position when they observe the general trend of affairs in the investment world. Banks no doubt have their share of anxieties and difficulties in these troublous times. The gravity of the trade depression has, as is shown on other pages of this issue, tended to bring deposits down and decrease the demand for credit accommodation. It has also brought embarrassment to many customers of the banks in industrial and commercial circles. Recently, too, money rates have been on the decline—a movement usually taken to be unfavourable to bank profits. The year now in progress may see some general decline in bank earnings, but it may be expected with some confidence that the comparative smallness of such declines will be such as to arouse envy in the hearts of those who hold shares in almost all types of industrial concerns. The great banks emerged from the war with their power strengthened. The stress of post-war difficulties will not bring them down. One important feature of the investment world in the present year, moreover, is very much in favour of bank shareholders. In recent times, year by year, the necessity for writing down investments has been a great drain on bank profits. This year has seen at last a check to the long-continued depreciation of gilt-edged securities. We are now near enough to the end of the year to predict that the great joint-stock banks will not be compelled to lay aside at December 31st any considerable sums on account of gilt-edged depreciation. They may, however, deem the moment ripe for substantial additions to reserve funds.

The latest accounts of the British joint-stock banks are analysed elsewhere in this issue, and the fortunes of banks operating from London in various parts of the world are also the subject of separate articles. But the following table, showing net profits and dividends for the past five years of leading overseas banks with head offices in London, provides the investor with a bird's-eye view of the recent trend of events:—

Name of Bank.	Year Ended.	Whole Year's Net Profits and Dividends.

There are exceptions as regards last year; but, as a general rule, the story is one of continued and substantial progress.

On the whole, the bank share market, which boasts of a very decorous type of *clientèle*, has maintained a steady course. There have at times been little bursts of support for shares of certain leading overseas banks, followed usually by reaction. But fluctuations have never been sudden or severe. The following table shows movements in the past year for the shares of the banks mentioned in the first table. Movements in the shares of the Bank of England and of the "Big Five" English banks are given for comparison:—

Share.	Am't of Share.	Paid up.	Price July 30, 1914.	Price Sept. 30, 1920.	Price Sept. 30, 1921.	Yield.
Bank of England	Stock	100	247 1/2	168 1/2	182 1/2	5 1/2
Barclays Bank, "A"	4	4	..	6 1/2	6 1/2	6 1/2

While Bank of England shares have gained 14 points, and the shares of each of the "Big Five" are a little higher than a year ago, it will be seen that the general tendency in the case of the overseas banks has been downwards. Present yields on the latter type of share range from 5 1/2 per cent. in the case of the Bank of Montreal to 9 per cent. on the Eastern bank shares, while a return of over 8 1/2 per cent. can be obtained on the shares of the Anglo-South American. These yields are calculated on latest dividends, which may, of course, be altered next year. Although it is not perhaps possible to predict with as much confidence as a year ago that bank dividends will be maintained—especially in the case of the overseas banks—yet the market presents very reasonably good opportunities for the investor. The high degree of security offered by the English joint-stock banks should make a stronger appeal, than it appears to, to the small investor, especially since he now has the choice of shares upon which there is little or in some cases actually no liability. A concluding table gives a list of bank shares on which the liability is small or non-existent:—

ESTABLISHED 1810

THE MECHANICS & METALS NATIONAL BANK

OF THE CITY OF NEW YORK

Capital, Surplus and Profit \$27,000,000.

Through years of banking service the Foreign Department of this Bank has established intimate relations with all the principal cities of the world. A full range of foreign trade transactions is covered by a specialized service; and customers are assured of prompt attention and painstaking endeavour in the performance of any service entrusted to this Bank.

If the investor selects an overseas bank share on which liability exists, care should be taken to ascertain the exact nature of the liability. So far as the great joint-stock banks of the United Kingdom are concerned, it is difficult to picture any circumstance under which a call would be made on partly-paid shares; but the bare existence of the possibility of a call should guide the small investor's steps for preference to those shares on which the liability has been wholly or nearly wiped out.

CZECHOSLOVAK BANKING.

(BY A CORRESPONDENT.)

THE tasks with which the Czech banks after the disruption of Austria were faced were by no means easy. Although within the Austrian Monarchy their importance had been, of course, considerable and steadily increasing, they were more or less provincial institutions, which now found themselves called upon to play a far more important part both in international and national finance. They had, at least during the first period after the revolution, to provide for the needs of the new State and to finance its extensive industry.

After five years of the war the economic resources of the country were exhausted, the currency was depreciated, and State credit undermined, while the new era brought with it a whole series of social tasks and problems entailing unusual financial demands. In addition to this the banks were called upon to co-operate with the State in establishing an independent currency for Czechoslovakia, distinct from that of former Austro-Hungary.

Immediately on the establishment of Czechoslovak independence, therefore, the Czech banks increased their capital and funds and strengthened their organisation so as to meet, at least partially, the great demands made upon them. The possibility of entering into direct relations with foreign countries, especially with France, England, and America, led many banks to seek the co-operation of foreign capital. In 1919 the Zivnostenska Banka, which is the most important Czechoslovak concern, raised its capital first to 160, then to 200 million crowns. The sphere of action of this bank embraces nearly all native industries. The bank holds also a large block of shares in the well-known Skoda Works. The Bohemian Industrial Bank raised its capital to 75 million crowns in 1918 and in the following year to 150 million crowns, a portion of the new capital being subscribed by a Dutch financial syndicate; the Prague Credit Bank increased its capital in 1918 to 50, in 1919 to 75 millions, the new issue of shares being taken up in part by a Franco-Dutch syndicate, which has four representatives on the board of directors. A considerable block of shares of the Bohemian Union Bank, which has 120 millions of paid-up capital, is held by the Banca Commerciale Italiana, Milan, and Lazard Frères, Paris and London.

Similarly the rest of the Czech banks increased their capital, in most cases substantially.

To facilitate commercial relations with foreign countries several banks have established branches abroad. Thus, the Zivnostenska Banka has branches in Austria, Poland, and Italy, the Prague Credit Bank in the Balkan States and Poland, the Bohemia Czechoslovak Banking Corporation in Paris and New York, the Bohemian Industrial Bank in Paris, &c. For the same purpose three Prague banks, the Czechoslovak Agrarian, Bohemian Union Bank, and the Prague Credit Bank, have founded the Commercial Association of Czechoslovak Banks, a joint stock company, with its headquarters in Berlin and a branch in Hamburg. The share capital of 25 million marks has recently been increased to 50 million marks.

As regards the branches of the Viennese banks, most of them have already been converted into independent Czechoslovak concerns or were incorporated with the existing establishments. Thus, for example, the Credit Institute for Commerce and Industry (Kreditanstalt für Handel und Gewerbe) is now amalgamated with the Bohemian Discount Bank, and the new firm is now styled the Bohemian Discount Bank and Credit Institute with headquarters at Prague. The branches of the Mercur Bank have been taken over by the Czech Commercial Bank, founded in 1920, with a paid-up capital of 50 million crowns. The Czechoslovak branches of the Wiener Bankverein will be taken over by the General Czechoslovak Banking Union with a capital of 55 million crowns. The new concern is being founded by the Wiener Bankverein, Vienna, the Moravian Agrarian and Industrial Bank, and Banque Générale de Belge, Brussels. The branches of the Landerbank have recently been absorbed into the Bank for Commerce and Industry, formerly Landerbank, with a capital of 80 million crowns. The new bank was founded by the Landerbank, Vienna, the Czechoslovak Agrarian Bank, Prague, and the Banque de Paris et des Pays Bas, and has for its president M. Jules Cambon. The branches of the Anglo-Austrian Bank will, in the near future, be taken over in a similar manner, and with the help of English capital by the newly-formed Anglo-Czech Bank. In Slovakia a General Slovak Credit Bank, with 50 millions of capital, is in process of formation, and in due course it will take over the Slovak branches of the General Magyar Credit Bank (Magyar altalanos hitelbank).

At the time when Czechoslovakia was established as an independent State, Bohemia, Moravia, and Silesia contained 28 joint stock banks, of which 17 were Czech and 11 German. Their total paid-up capital amounted to 551.4 million crowns, the share of the Czech concerns being 412.8 millions, as compared with 138.6 millions of the German banks. On January 1, 1920, the situation was as follows:—The paid-up capital of all banks amounted to 914.6 millions, and the reserve funds to 349.5 millions. Of these amounts 721 millions (78.8 per cent.) of paid-up capital and 281 millions of reserve funds (78.2 per cent.) belonged to Czech concerns. The respective figures for the seven German banks and two banks which are under joint Czech and German management were 193.6 millions (21.2 per cent.) and 68.1 millions (21.8 per cent.) respectively. The total increase of paid-up capital amounted, therefore, to 263.2 millions, or nearly 66 per cent.

At the end of 1920 the total deposits in the Czechoslovak banks and the Czechoslovak branches of Viennese banks amounted to 2,521 millions, as compared with 2,068 millions at the end of the first banking quarter of 1920 and 1,484 millions at the end of 1919. The amounts of deposits in savings banks were estimated at about 6 milliards, or twice as much as in the commercial banks.

All the principal banks are members of the Prague Clearing House, whose activity is steadily increasing. In 1920 it comprised 32 banks. The business transacted by the Clearing House in 1919 and 1920 amounted to 11.87 and 41.53 milliards respectively, this being an advance of 29 milliards in the short period of one year.

The amount of paid-up capital and the results of the principal banks for 1920 were as follows:—

(In Million Czechoslovak Crowns.)

	Paid-up Capital.	Reserve Funds.	The Last Dividend. %
Zivnostenska Banka.....	200	101.1	12
Bohemian Industrial Bank....	150	45.0	8
Bohemian Union Bank	120	65.0	12
Moravian Agrarian and Indus- trial Bank	120	71.7	9
Bohemian Discount Bank and Credit Institute	100	71.1	12
Prague Credit Bank	75	53.4	12½
Czechoslovak Agrarian Bank ..	60	26.3	6½
Bank of Bohemia	60	12.5	7
Czech Commercial Bank	50	8.3	8
Agricultural Credit Bank.....	50	33.1	10

On the whole, the banking situation during the last three years which have elapsed since the formation of Czechoslovakia may be described as favourable. Capital is required by the numerous branches of industry, and banking enterprise is thus provided with fresh scope for its activity. Help is being given to existing establishments to increase their capital, and new groups are being formed for the purpose of cheapening output by standardising production or restricting working expenses. Even before the war, the highly developed industries in Bohemia, Moravia, and Silesia absorbed large quantities of capital. Moreover, it must be remembered that the manufactures in Czechoslovakia are designed chiefly for export, and both price and quality must be fixed with a view to meeting foreign competition. Hence arises the necessity for developing it still further, and excellent opportunities are thus offered for placing new investments. In this respect the banks are displaying the utmost energy. They are interested in the industries of the country, not only by providing them with credit, but also by initiating and participating in industrial undertakings. As they hold large blocks of shares, they often nominate their own representatives on the board of directors of those concerns which they control. The banks have also, as a rule, their own commercial departments, which dispose of the products of those industries in which the bank is interested.

EASTERN BANKING AND TRADE.

(BY A CORRESPONDENT.)

EASTERN banking is so intimately connected with the foreign trade of the various countries that it may not be out of place to summarise some of the main factors with which the bankers have had to contend in the principal countries of the Far East. The period, October, 1920, to October, 1921, has been an exceptionally trying one for all engaged in Eastern banking and commerce, and as the Chinese, Japanese, Indians, Javanese, Filipinos, all were caught by the universal trade depression, the story of the banking is closely allied with that of trade. Most Eastern nations, and a good many of those who trade with them, seemed to think that the great era of prosperity which arose out of the war would go on for ever. In many instances, despite repeated warnings from the banks, over-trading was rampant, with the inevitable consequence that when a heavy decline in the demand for Eastern products and manufactures set in, all markets were badly affected. The export trade from the Far East came almost to a standstill, with the natural corollary that the wherewithal to pay for European imports disappeared, and merchants in all centres were soon resorting to the banks to carry them over the bad times. Requests for the extension of bills were numerous; loans and advances to enable dealers to meet their more pressing commitments until better times prevailed were required from the bankers, and in many cases facilities had to be given for storing incoming cargoes for which markets had vanished.

Japan was amongst the first to suffer from the cumulative effects of the depression in the world's markets. During the war years, and for some time after, there had been a phenomenal expansion in her foreign trade, and when the break came she was caught with large stocks of imports. These have been gradually going into consumption, and although the export trade is reviving slowly—mainly owing to the increased costs of

production in Japan—there are signs that the worst of the difficulties have now been surmounted. Nevertheless, Japan has received a financial shock, from which it will take some years to recover.

China, too, has not been happy. Up to May of last year trade was booming and very large profits were made. Then the European and American markets, already overstocked with China produce, fell away badly. Credit was curtailed, and exports from the East declined rapidly, leaving the Chinese with large stocks which soon depreciated heavily in value. The fall in exchange, which in normal times would have helped the producer, proved of little benefit, as the fall in prices in both the European and American markets outpaced the decline in exchange. The position in the import trade has been equally serious. Deliveries in many instances were belated, and goods arrived just at the period when markets were full of unsold goods. As with Japan, it has taken time to overcome the temporary embarrassment this caused, but as we write the outlook is brighter, stocks are gradually moving off, and the demand for European produce shows gratifying signs of revival.

With India the position has been no less grave. She has had the same hardships in the matter of trade to face. The heavy balance of trade in her favour entirely disappeared during the trade slump; the stabilisation of the rupee on a 2s basis has been rendered temporarily impossible, and, like China, she has had to face political troubles of a more or less grave nature. Ordinarily, the fall in the rupee exchange would have been in favour of Indian exporters, but the unprecedented rates of exchange ruling in Europe have made it practically impossible for purchasers on this side to take much interest in Indian produce. On the other hand, Indian importers have had their troubles. Many of them last year had placed large orders in the expectation of paying for them on the basis of a high rupee exchange, and when the goods arrived they were face to face with the fact that 40 or 50 per cent. more was required in local currency to meet their commitments. In the circumstances, much trouble was caused by the refusal of some Indian exporters to recognise the validity of their contracts with European shippers on the higher exchange basis. To bring all parties to reason has required much skill on the part of the banks. The severe decline in prices has seriously affected both importers and exporters, and it has taken many months of careful watching and prudent finance by the banks in order to surmount the troubles with which all have been faced.

Both Java and the Philippines have been similarly affected, though in their case exchange has not been so serious a proposition. The falling off in the demand for their produce from the United States, the Netherlands, and the United Kingdom, however, has militated against the prosperity of merchants in those countries, while in the case of Java the decline in the price of sugar caught speculators and genuine traders alike.

Of Persia one can say little. The position there is uncommonly difficult, and the extremely unsettled state of the country, together with the very unsatisfactory political state, makes both trade and finance a matter of anxious care.

To sum up, then, the conditions under which the banks have had to work are these. The products of the East have been confronted with overstocked markets, falling exchange and declining prices in Europe and America. This has had an adverse effect on the purchasing power of India, China, Japan—in fact, of all Eastern countries, and in dealing with such a situation the Eastern bankers, naturally, have been obliged to proceed with caution. The needs of their financially embarrassed clients have had to be considered in the light of their duty to their depositors and shareholders.

For the rest, they have had to contend with the usual kaleidoscopic movements in the price of silver, which, in turn, have been reflected in the exchange quotations of the silver-using countries of the East. As is well known, the exchange quotations for the Shanghai tael and the Hong Kong dollar rise and fall more or less automatically with the quotation for

silver on the London market. The average price of silver for the year 1920 was 61.59d per standard ounce, the highest quotation being that recorded on February 11, 1920—89½d, and the lowest that on December 10, 1920—38½d. The highest quotation for the Shanghai tael was 9s 3d, and that for the Hong Kong dollar 6s 2d, the lowest being 3s 10½d and 2s 11d respectively, while the average for the tael for 1920 was 6s 0.86d and for the dollar 4s 3.59d. Silver during the early part of this year depreciated, and brought down exchange with it. In fact, if we compare the rates on March 1, 1921, with those ruling on March 1, 1920, we find a fall of 57 per cent. in the value of the Hong Kong dollar and of 63 per cent. in the value of the Shanghai tael. On the other hand, the depreciation in the Indian rupee, which may be ascribed almost entirely to the collapse of the Indian export market, in the same period fell only 50 per cent. Since March there have been many variations, and though not always upward, yet for some time past silver has been remarkably steady, and the price now is considerably higher than in the first quarter of the year. With the cash price of the metal at 42½d per ounce standard, the quotation for the Hong Kong dollar is 2s 11d and the Shanghai tael 4s 2d, and the demand from China during the last few weeks has been large. To some extent, this is due to the usual laying in of stocks of the metal for the China New Year; but it is also a good augury of improving trade.

There has been considerable improvement, too, in the value of the Indian rupee, all of which points to a welcome trade revival in that country.

That the Eastern banks are able to show such good results as are apparent from their last balance-sheets is, in the circumstances, remarkable. As will be seen from tabulated figures elsewhere, large increases are shown in total deposits, and while the depression of trade is reflected in the large cash balances held, the extent to which the banks have assisted traders in tiding over bad times is evidenced by the large amounts under the headings of bills discounted, loans and advances, &c. However, notwithstanding the heavy demands on their resources, the banks' balance-sheets, in most cases, reveal an extremely liquid position.

The enhanced value of merchandise of all kinds obvi-

ously entails greater calls on their resources than in pre-war years, and for this reason most of the Eastern banks have found it incumbent upon them to increase their capital; the National Bank of India, the Mercantile Bank of India, the Hong Kong and Shanghai Banking Corporation, and the Eastern Bank, all have added to their capital by the issue of new shares, the premium on which, incidentally, has appreciably strengthened their reserves. Considering the anxious period of trade depression and stringent financial position through which we have been passing of late years, it is very satisfactory to note that profits in all cases have been increased and correspondingly higher dividends paid as compared with 1914. Just how the dividends compare with that year will be seen from the following table:—

	1914.	1920.
Hongkong and Shanghai Bank (subject to tax) ..	36½	64*
Chartered Bank of India, Australia, and China (free of tax) ..	14	20½
National Bank of India (free of tax) ..	12	20
Mercantile Bank of India (subject to tax) ..	8½	16
Eastern Bank (subject to tax) ..	5	9

* Taking the \$125 shares at 2s per dollar.

During the past year the ranks of the Eastern banks have been swollen by the addition of the P. and O. Banking Corporation, Limited, and the Imperial Bank of India, the latter representing an amalgamation of the three Presidency banks of Bengal, Bombay, and Madras. The Imperial Bank, although having an office in London, will not, in the ordinary sense, compete with the exchange banks, but, to the extent that it will conduct business on behalf of its own constituents, it may conceivably attract business that has hitherto come the way of the older institutions. The bank came into being on January 27th last, so that it is early yet to state what will be the precise effect of its operations. Its paid-up capital is Rs. 5,57,62,000, and reserve Rs. 3,83,55,000. The P. and O. Banking Corporation has an authorised capital of £5,000,000, of which £2,500,000 is paid up, and from its first nine months' business to March 31, 1921, has succeeded in writing off the whole of its preliminary expenses and made a net profit of £99,725, out of which has been paid a dividend of 5 per cent. per annum, less tax.

FOREIGN BANKS WITH LONDON OFFICES AND BRITISH BANKS TRADING ABROAD.

BANKS with offices in London trading in foreign countries may be classed under two headings, namely, British companies with offices in London and abroad, and foreign banking institutions with branches in London. English joint-stock banks which have opened branches on the Continent or have affiliated Continental concerns are not included in the section.

First for notice comes the little group of British overseas banking companies formed during the past few years as a result of our more intensive foreign trade development policy. Many of these undertakings are now rendering some account of themselves, and it will be interesting to observe in the next few years the extent to which they can justify their existence. In January last the British Trade Corporation announced a profit of £141,901 for the year ended December 31, 1920, as against £102,592 for the previous year. This corporation has branches at Batoum, Belgrade, and Danzig. The British Overseas Bank, although actually having no branches abroad, has substantial interests in foreign countries, and accounts submitted in December of last year showed profits for "the period" ended October 31, 1920, of £199,744, while the British Italian Corporation for the year ended December 31, 1920, recorded a profit of £62,927. The Anglo-Baltic and Mediterranean Bank revealed a profit of £24,232 at the end of last April. The British-American Continental Bank, with an authorised capital of £2½ millions and £313,590 paid up, failed to make headway against adverse circumstances and closed its doors. Satisfactory progress is reported by the British Bank of Northern Com-

merce, Limited, which, on its amalgamation with Messrs C. J. Hambro and Son, became Hambros Bank of Northern Commerce, Limited, this amalgamation at the date of the report having been in operation for five months. The chairman of the bank recently pointed out that "the retention of the words 'Northern Commerce' is prejudicial to the bank's business in Southern and overseas countries, where the impression has been created that the international position of the bank has to some extent been narrowed down. Your board have therefore unanimously decided that, in the interest of the bank, its name had better be altered and abbreviated to 'Hambros Bank, Limited.'" A scheme for dealing with its holdings of Russian securities was proposed to the shareholders of the British Bank for Foreign Trade, and it is hoped that this has been carried through.

To turn to the second group. During its past financial year the paid-up capital of the Comptoir National d'Escompte de Paris has been increased from 200 to 250 million francs. Special attention is paid to its seaport branches at Marseilles, Havre, and Bordeaux with a view to foreign trade business. In conjunction with the National Bank of Commerce in New York and the First National Bank of Boston, the French-American Banking Corporation was formed. The Société Générale pour Favoriser la Développement du Commerce issues some interesting statistics and charts of its progress. These show that in 1900, with a called-up capital of 80 million francs, a profit of 5 million francs was made, while in 1913, with an increased capital of 250 millions, profits improved to over 24½ million francs. These,

however, fell to 10½ millions in 1914, but from this date profits continued to climb, until in 1920 the high-water mark of 26½ millions is recorded. The Crédit Lyonnais reports interesting developments in Algeria and Tunis, also in Geneva and Mulhouse. Amongst the Crédit Lyonnais' network of world-wide affairs we note that specific mention is made of progressive movements in London, Turkey, and Spain. With the exception of its London branch the Société Générale de Crédit Industriel et Commercial apparently confines itself to French banking affairs. The Crédit Foncier d'Algérie et de Tunisie, established in 1881, is comparatively a new arrival in this country. A perusal, however, of its report shows that the directors have not only extended

its operations to most parts of Algeria, Tunis, and Morocco, but even to Gibraltar and Malta.

The Credito Italiano has just opened offices in Berlin and Paris, in addition to its recent activities in Switzerland, Austria, and China, while its great rival concern, the Banca Commerciale Italiana, shows but little slackening of its enterprise abroad, mainly developed through auxiliary undertakings in Austria, Roumania, and Bulgaria, in addition to its widespread connection in America.

The following table displays the position of Continental banks with offices in London. The figures are taken at the par value of exchange:—

CONTINENTAL BANKS.

The Société Belge de Crédit Industriel, an undertaking established in 1904 with branch offices in London and Geneva, shows a called-up capital of 4,800,000f, and profits of 1,398,000f in 1920, as compared with 1,196,000f in 1919. But Belgian activities in foreign countries are undertaken on a much bigger scale by the Banque Belge pour l'Etranger, which is affiliated with the Société Générale de Belgique. This concern has established either branches, agencies, or connections in London, Paris, New York, Cologne, and Bucarest, and also in Egypt, China, and Spain. Moreover, it has further interested itself in founding at Sofia the Société Franco-Belge Kouyoumdjisky and Co. Another overseas Belgian concern worthy of mention is the Banque du Congo Belge, which is well supported at home by representative Belgian banking institutions.

The Banco Nacional Ultramarino, with head office in Lisbon and branches extending throughout Portugal and its colonies and Brazil, extends operations to British India and Belgian Congo. In recording an increase in its profit and loss account figures for 1920, the Swiss Bank Corporation points out that "commercial banks can look back on a prosperous year, although they have felt, and will continue to feel, the reflex action of the crisis in their customers' businesses." A significant action on the part of the Bank of Athens is recorded in its report.

In the previous year 5 per cent. of net profits was distributed to its staff, and this year it is stated that 657,000 drs is devoted to this purpose out of profits; during the year four new branches have been opened, namely, at Manchester, Port Said, Adrianople, and Argostoli.

The Bank of Roumania, considering the financial condition prevailing in that country during the period covered by the accounts under review, made surprisingly good progress. After paying a dividend of 5 per cent. and making provision for bad debts and pension fund, a comparatively substantial credit balance was carried forward. In July last Viscount Goschen, presiding at the annual meeting of the bank, pointed out that "the effect of the unfavourable exchanges still weighs heavily on the economic life of the country, and although the country in itself, from the fact of its being chiefly agricultural, is very prosperous, yet commercial and industrial affairs, owing to their dependence on foreign sources of supply for their requirements, are naturally very much hampered by the uncertainty of exchange." The Russian banks are still omitted from our lists, and are likely to be until the Russian Soviet Government shows a better appreciation of world trade credit.

The next table shows the position of Asiatic banks with offices in London:—

(Continued from page 643.)

That there are vast possibilities in connection with banking developments in China may be judged from the numerous banking institutions which are now represented at Shanghai. This country has the Hong-kong and Shanghai Banking Corporation and the Chartered Bank of India, Australia, and China. The United States, a powerful coming competitor, has seven, namely, the International Banking Corporation, Asia Banking Corporation, Chinese-American Bank, Park-Union Bank, Philippine National Bank, Equitable Trust Company, and the American-Oriental Bank. It should be mentioned that the Chinese-American Bank is operating under a Chinese charter, while the Park-Union Bank partly represents Canadian interests. The French are represented by the Banque de l'Indo Chine. The Russo-Asiatic Bank was organised under an agreement between Russia and China, but is now largely a French company,

with head office in Paris. The principal Japanese banks are the Yokohama Specie Bank, Bank of Chosen, and Bank of Taiwan. The Sino-Italian Bank operates under a Chinese charter, and is a new institution. The Banque Belge pour l'Etranger represents Belgian capital. There are two Dutch banks, Nederlandsche Indische Handelsbank and the Nederlandsche Handel-Maatschappij.

A study of the reports of Japanese banks shows that they are mainly reflections of the disturbed commercial conditions prevailing in the East. It is, however, of interest to note the method employed by the Japanese Government to combat the general trade depression which overtook the country. Relief funds were provided by the Government, acting principally through the Bank of Japan. This bank in turn advanced 50 million yen to the large semi-official banks to enable them to avoid calling in loans from smaller banks.

The principal items extracted from balance-sheets of South American banks are given in the next table:—

SOUTH AMERICAN BANKS.

	£ 30,768,406	£ 31,462,471	£ 169,538,996	£ 168,355,026	£ 68,828,105	£ 69,116,986	£ 10,738,637	£ 7,107,762	£ 145,835,556	£ 147,366,864

Foremost among South American banking institutions comes the Anglo-South American Bank. In an excellent statistical table of its past financial record from 1914 the remarkable growth of this concern can be traced. In 1914, with a paid-up capital of £2,250,000, profits are recorded as £379,056, which is in marked contrast with profits for 1921 of £743,175 on a paid-up capital of £4,366,700. This bank mentions the establishment of an interesting connection between Belgium and South America in its report. The Anglo-South American wishing to be represented in Belgium decided that the best way would be to acquire an interest in an existing bank. The directors accordingly purchased 25,000 shares in the Banque Générale Belge out of an issue of 50,000 new shares of 500 each, at a premium of 150f per share, which premium has been added to the reserve fund. The capital of the Banque Générale Belge is thus raised from 25 to 50 million francs, while the reserve fund stands at 17 millions.

The balance-sheet of the Anglo-South American includes also the results of affiliated companies in South America, viz., the British Bank of South America, Limited, and the Commercial Bank of Spanish America, Limited. The Banco Espanol del Rio de la Plata continues to establish fresh branches both in South America and in Europe, and announces its intention to open a branch at Antwerp in the near future. The London and Brazilian Bank has now its own office at Manchester, and it is a significant sign of the alertness of many of our older banking institutions to learn that the London and Brazilian intends to extend its articles of association to enable the bank to act as executor or administrator. The London and River Plate Bank, with its British offices in London, Bradford, and Manchester, and its close association with Lloyds Bank and the National Bank of Scotland, is showing itself to be fully alive to present-day conditions.

Our final table shows American banks and trust companies which have offices in London:—

UNITED STATES BANKING AND TRUST COMPANIES.

(\$5 = £1.)

In London, offices of the Guaranty Trust Company of New York are now open in Lombard Street, Kingsway, and Pall Mall; and Liverpool, Paris, Brussels, Antwerp, Havre, and Constantinople are now covered by its European section, and through its membership

of the Federal Reserve system extended credit and rediscount facilities can be obtained. And also worthy of notice are the many activities of the National City Bank of New York, which, like the International Banking Corporation, has interests by way of offices or agencies in most of the great cities of the world.

AFRICAN BANKS.

The statistics given at the end of this and of the three following articles show the growth of banking business in the overseas Dominions, so far as can be traced from the figures of the banks which have branches or head offices in London. The figures are taken from a summary table which appears on a later page. As in the case of Australasia, heavy imports into South Africa have resulted in financial stringency, and there have been unusually heavy demands on the banking facilities of the country. In a recent report on economic and financial conditions in South Africa, Mr W. G. Wickham, British Trade Commissioner in South Africa, writes that for many months the position has been critical. General nervousness has led to incessant rumours as to the solvency of many important firms. There have been many bankruptcies, but these have been confined to small country stores and Indian dealers. The premium in favour of remittances to London not only induced importers to put funds in London, but it led to heavy sales of stocks and mining shares. This in turn involved dislocation through depreciation of the value of securities, and the putting of speculative holders in difficulties. Trading losses have been very heavy, as many importers have been unable to finance their excessive imports and have had to get rid of stocks at any price. "The tightness of money at the latter end of 1920 and in the early part of 1921 has caused enormous inconvenience and limited *bonâ fide* enterprise. It has proved very much more difficult to borrow money and obtain overdrafts against good security for sound development purposes during that period than it was a little while previous to obtain advances for purely speculative objects."

The most important banking event of the year, so far as South Africa is concerned, was the formation of the Central Reserve Bank, under the Currency and Reserve Bank Act. The new bank will not enter into active competition with the commercial banks for ordinary banking business, its principal function being the issue of currency notes, the sole right of which it will be given for 25 years. As soon as it is in a position to issue these notes the right of issue by the other banks will cease. The existing banks, the Government and industrial, commercial, and agricultural interests are represented on the board. The capital of the new bank is £1,000,000, and under the terms of the Act every South African Bank must hold stock in the Reserve Bank to the equivalent of 5 per cent. of its own capital. The commercial banks are compelled to deposit large reserves with the Reserve Bank. In respect to demand liabilities 10 per cent. of the total has to be provided, and in the case of time liabilities, including interest-bearing deposits, the proportion is 3 per cent. After

the first three years the proportion of reserve against demand liabilities is to be increased to 13 per cent. The chairman of the National Bank of South Africa, in his speech at the annual meeting at the end of June, stated that to comply with these obligations his bank had at once to deposit about £2,500,000, and foreshadowed that, in view of the new conditions, it will be impossible in future to extend banking facilities to small communities, and that possibly some of the smaller branches may have to be closed.

At the meeting of the Standard Bank of South Africa the chairman, after welcoming the shareholders of the African Banking Corporation, which had been absorbed during the year, pointed out that when the financial year opened the balance of trade was greatly in favour of South Africa. "It therefore became necessary to raise the rates of exchange in an endeavour to assist in adjusting the trade balance. Partly as a result of these high rates of exchange, imports into South Africa then increased considerably, while the rapid fall in the price of wool and other produce reduced exports to a minimum. Thus in the space of a few months the position was entirely reversed, and it became necessary to again adjust the exchange rates to meet the drain on funds in London. The steps taken by the banks had this desired effect, and it may be added that during the last few months exports have steadily increased and are now in excess of the imports."

The Bank of British West Africa, in which an interest was acquired last year by the Standard Bank of South Africa, the London County Westminster and Parr's, and the National Provincial and Union, showed an increased profit, but the chairman pointed out at the meeting that West Africa had experienced all the severity of the slump, both in produce and in goods imported. The African could not obtain the cost price of the former, and could not pay the cost price of the goods he wished to purchase. The result was that little business was being done, and heavy losses must be faced by those who decided to cut their loss and take what they could get for their commodities. Two Egyptian banks—the Anglo-Egyptian Bank and the National Bank of Egypt—are included in the table, the former having its head office in London. The accounts have naturally been affected by the abnormal conditions in the cotton market, the country's principal product. The chairman of the National Bank of Egypt, at the meeting held in Cairo in March, claimed, however, that "the general financial situation of the country is fundamentally sound."

The table below shows a sharp decline in deposits, accompanied by substantial decreases in cash, investments, and discounts and advances.

AUSTRALASIAN BANKS.

The last season in Australia was a good one, but while exports showed little expansion, imports in 1920 increased by no less than £61 millions, or 70 per cent., as compared with 1919. The financing of these abnormal imports imposed a considerable strain upon the ordinary machinery and on the resources of the Australian banks in London, and the exchange situation became very difficult. In the end, severe restrictions were placed on drawings on London, a policy which, though apparently unavoidable, caused considerable inconvenience to traders. Exports of wool, wheat, and butter, however, eased the situation later on, but, owing to the fall in prices and the smaller demand for Australian products, the exchange position has not yet become quite normal. From the table below, which summarises the principal balance-sheet items of the Australian and New Zealand banks for a number of years past, it will be seen that the steady growth in deposits since 1913 has received its first check. The latest decline in deposits is comparatively a small one, and is not general, for some of the banks recorded slight increases, and the declines mostly occur among the New Zealand banks. Advances, on the other hand, show an exceptionally large increase, and this applies equally to Australia and New Zealand. This is a result of trading requirements arising from heavy importation, as well as of the support given, directly and indirectly, to Government borrowings. These disproportionate movements in deposits and advances were accompanied by the depletion of London balances. The deposits of the Commonwealth Bank of Australia, whose figures are not included in the table below, show a decline owing to a decrease in Commonwealth Government balances, but savings bank deposits and Government and municipal securities have considerably increased owing to the taking over of the Queensland State Savings Bank last December. The figures of Australian trade below go some way to explain the disturbance which arose in connection with the exchange:—

	Imports.	Exports.	Excess of Imports.	Excess of Exports.
	£	£	£	£
1915	68,526,833 ..	60,519,678 ..	8,007,155 ..	..
1916	81,081,220 ..	73,363,394 ..	7,717,826 ..	..
1917	61,650,159 ..	80,795,439 ..	..	19,145,280
1918	76,596,770 ..	80,735,820 ..	..	4,139,050
1919	85,876,584 ..	133,480,167 ..	..	47,603,583
1920	147,257,075 ..	134,307,517 ..	12,949,558 ..	..

The large excess of exports in 1919 resulted in the accumulations of credit balances in London in the spring of 1920, and the British Government at the same time was making payments in advance for wool

and other purchases. The heavy imports into Australia during 1920, especially in the second half of the year, depleted London balances, and as the exports had already been partly paid for in advance by the British Government, there was not a corresponding amount of fresh payments to Australia. According to our Melbourne correspondent, the heavy volume of imports into Australia has been partly due to the unexpected rapidity with which British and American manufacturers executed orders which Australian buyers had been led to believe could not be completed until much later dates. The buyers, under this impression, had placed orders with more freedom than if they had expected to receive the goods early.

The position in New Zealand has been more stringent than in Australia; New Zealand wool suffered from the same slowness in the market as Australian cross-bred wool, and as New Zealand had no wheat for export, it missed the benefit which Australia gained from that source. At the last meeting of the National Bank of New Zealand the Hon. W. Pember Reeves, the chairman, referred to the heavy imports, much of which arose from the carrying out of orders by British manufacturers with unexpected promptitude. Current indents had been executed to the full. Orders two or three years old, regarded as obsolete by the importer, had also been fulfilled. Others, which were to be spread over months, had been sent forward in one or two shipments, until there was neither bond nor free storage in New Zealand ports adequate to hold the huge accumulation. This, naturally, had affected the business of the banks very acutely. From July of last year an unprecedented stream of bills on New Zealand had poured into the London offices, and continued without ceasing, until the banks were obliged to decline to take in bills at all except under credits or for collection. In a report on commercial conditions in New Zealand issued this week, Mr R. W. Dalton, the British Trade Commissioner in New Zealand, points out that a factor which has contributed to the increase in the banking figures has been the flotation of Government loans. Since 1915 a population of a little over a million has been successfully called upon to subscribe loans amounting to close upon £50 millions.

The principal features in the table below, apart from the decline in deposits, are the large increase in discounts and advances, and the sharp reduction in investments. The number of banks has been reduced to 15 by the absorption of the London Bank of Australia by the English, Scottish and Australian Bank. A cable received this week announces an amalgamation between the Bank of Queensland and the National Bank of Australasia.

CANADIAN BANKS.

CANADA has not escaped the grip of the world-wide economic depression, but in reading the figures presented below it must be remembered that the year 1920, which, roughly speaking, is the period to which they refer, saw a continuance, for some months at any rate, of the trade activity that marked the previous year. By the time the end of 1920 was reached business depression had become prevalent, and the trade figures for the year ended January 31, 1921, show a very remarkable change in the balance. This is brought out by the following comparison:—

	Twelve Months Ended Jan. 31, 1920.	Twelve Months Ended Jan. 31, 1921.	Increase or Decrease.
Imports	970,779,210 ..	1,305,593,895 ..	+ 334,814,685
Exports	1,291,013,187 ..	1,263,321,401 ..	- 28,791,786

The aggregate trade, measured by the value figures, increased largely, but the trade balance swung in very remarkable fashion against Canada, an export surplus of \$320 millions in 1919-20 being changed in 1920-21 to an import excess of \$42 millions. The value of Canada's field crops in 1920 was estimated at \$1,636,664,000, against \$1,452,437,000 in 1919. Mineral production was also on a high scale. At the meeting of the Canadian Bank of Commerce Sir John Aird said: "From such information as we can obtain the total value of the mineral production of Canada for 1920 is probably \$200,000,000. The production of coal, asbestos, and zinc has been larger than in any previous year." The approach of the depression, which has since developed, was not unforeseen by the Canadian banks and their directors. The year 1920 saw the demand for credit approaching its peak, and, as in other countries, the demand taxed banking resources to the utmost. But that the bankers kept their heads in this stressful period is shown by the speech of Sir Vincent Meredith at the meeting of the Bank of Montreal in January:—"Having in view the probability of a gradual recession in prices, your directors," he told the shareholders, "took early action to restrict credits to legitimate requirements, believing such a policy to be in the best interests of our clients as well as calculated to preserve the financial stability of the country. Credit," continued Sir Vincent, "not merely in Canada but elsewhere, rests on an inadequate basis, and should be contracted in conformity with the declension in commodity prices." Measured and orderly deflation was Sir Vincent's prescription, and the bank's general manager, Sir Frederick Williams-Taylor, developed the same theme, as follows:—"With reference to current loans in Canada, your directors have felt impelled for many months past, in the bank's

and the country's best interests, to follow the policy found essential in every other country, and keep within bounds our advances to merchants and manufacturers. This policy is in accordance with the views of the Dominion Government, and has been followed, more or less closely, by all Canadian banks. Naturally enough, exception has been taken in certain quarters to such restriction; but, as a rule, our customers have recognised the necessity of checking overtrading and further expansion in such times as we are now facing. There has never been a period in our experience when requests for advances for purposes out of the ordinary have been so numerous. It is safe to say that had credit been granted freely and banking resources become tied up, a serious condition would have resulted in this country."

If the composite figures presented in the table at the bottom of this page are read in the light of the above remarks, it will be seen that in one main aspect the experience of Canadian banks in 1920 resembled those of Great Britain. The policy of restricting advances to cases of demonstrable legitimacy failed, owing to the overwhelming demand for accommodation, to produce any great fall in the volume of bank credit.

The strong demand for credit rendered the conditions favourable from the point of view of profits, and shareholders in Canadian banks can look back with much satisfaction at their recent experience. The accounts for the current year must, of course, be expected to reflect to some extent the slump in business activity. The banks are, however, well fortified to meet the difficulties of the situation. They have built up strong positions, and it may be said that the strength and elasticity of the Canadian banking system is an important asset to the Dominion in facing the economic problems of the moment.

Canadian banks are paying an increasing attention to the West Indies. The Colonial Bank, in which the Bank of Montreal has acquired a large interest, has, of course, a large business in that quarter. Between them, the Colonial Bank and the Royal Bank of Canada have branches in every West Indian colony. These branches have been slightly increased in number during the past eighteen months, and during that time the Canadian Bank of Commerce has entered the West Indian field, and has established branches in Jamaica, Trinidad, and Barbados. Canadian banks are, therefore, interested in the agreement signed in 1920 between Canada and the West Indian colonies, with a view to fostering trade between them. The year 1920 saw a large increase in the value figures of West Indian trade. Imports rose from £5,254,126 in 1919 to £8,376,912 in 1920, and exports from £5,085,615 to £10,313,282.

A General International Banking Business conducted at all Branches of the Bank

INDIAN BANKS.

THE event of the year in Indian banking has been the launching of the Imperial Bank of India, which began its operations on January 27th. This bank was formed by merging the Presidency Banks of Bombay, Madras, and Bengal, and an official announcement was made to the effect that 100 branches would be opened in India outside the Presidency towns and other places where branches of the old Presidency banks already existed. According to the first report of the new bank, which covers the period to June 30th, 12 of these proposed branches had either already started business or were about to open. At June 30th its capital was Rs. 10,65,73,000, of which Rs. 5,47,68,250 had been paid up, while reserves amounted to Rs. 3,71,21,480 and total deposits to Rs. 92,36,38,952. News from India indicates that the bank has made a good start on the road towards fulfilling the purposes for which it was formed. It was not created to compete with existing Eastern banks, and will probably not provide serious competition in ordinary lines of business. It will, on the other hand, render valuable services to the Indian Government finance, and should, if present hopes are fulfilled, prove a decided economic asset to the country; especially if, with its network of branches, it succeeds in attracting deposits from the Indian public at large, thereby assisting to diminish the extent to which hoarding is practised.

It will be seen from the table presented below that in the year under review the four exchange banks whose figures are tabulated increased their capital and reserves by over £3 millions. The premiums on new issues have been applied to strengthening reserves. How the profits disclosed in the latest reports compare with those for the previous year is shown below:—

	1919.			1920.		
	Net Profit.	To Reserve.	Dividend Rate.	Net Profit.	To Reserve.	Dividend Rate.
Chartered	£ 447,348	£ 200,000	20½%	£ 676,771	£ 235,000	20½%

* Free of income-tax. † Including bonus of 2 per cent. free of income-tax.

The figures reveal the fact that 1920 was a year of very prosperous results. It must be remembered, of course, that the year covered by these accounts opened before the boom period was over and closed before the general trade depression developed in full force. But the year had its difficulties, and much unsettlement was caused by the dramatic fluctuations in the exchange value of the rupee. The rupee began the year at about 2s 4d, reached 2s 11d in February, and by the end of December had fallen to 1s 5½d. Early in the

current year it declined further. Some light on this apparent failure of the measures advocated by the Currency Commission is thrown by an examination of the trade figures, which show that India's large export balance of 1919 was in 1920 turned into a formidable import excess—a swing over of most disturbing suddenness and extent. In view of the unsatisfactory nature of the exchange position, another strong committee has been appointed to review the Indian currency and exchange problem in the light of certain recent happenings. The report of the original committee said:—"If a great and rapid fall in world prices were to take place, a new element of disturbance would be introduced. The costs of production in India might fail to adjust themselves with equal rapidity to the lower level of prices, and Indian exports might suffer to an extent which would endanger the maintenance of exchange at the level which we propose. In that case it would be necessary to consider the problem afresh, and take the measures which might be required by the altered circumstances." The "new element of disturbance" has certainly been introduced, and fresh investigation of the problem appears to be required.

Apart from the capital increase referred to above, the features of the figures in the appended table are a fall of over £7 millions in cash and investments together, a large increase in the notes issued, and a drop of more than £4 millions in deposits. Discounts and advances, it will be seen, were slightly higher on the year. It must, however, be remembered that the comparison with previous years is somewhat vitiated by the official fixation of the rupee at 2s, which took place during the year under review.

As regards the current year, it would be unreasonable for shareholders to expect the maintenance of profits at last year's high level. Trade depression has reigned throughout the year, and the internal position in India is not free from disquieting factors. Moreover, the monsoon has not been unsatisfactory. It is to be hoped that the epidemic of cancellation of contracts which went so far to disturb Anglo-Indian trade conditions will not be revived. The position of the banks has recently been strengthened, and shareholders' fears need not extend beyond a possible decline in dividends from their recent high level. It may, in passing, be noted that the latest dividend rates of all four banks whose figures are aggregated below are well in advance of the rates paid immediately before the war.

The Alliance Bank of Simla has opened an office in London.

In August, 1920, 200,000 new shares of £10 each, of which 100,000 (£4 paid), were allotted in equal proportions to the London County Westminster and Parr's Bank, Limited, the National Provincial and Union Bank of England, Limited, and the Standard Bank of South Africa, Limited.

The profit and loss account for the year to March 31, 1921, showed that after providing for current charges, rebate, and bad and doubtful debts there remained a net profit of £139,803, which, added to the balance of £30,377 brought forward, made an available sum of £170,180. The dividend for the year at the rate of 8 per cent. absorbed £80,000, £5,000 was added to insurance fund, £15,000 to premises and furniture, and £20,000 to payment of stamp duty, leaving £50,180 to be carried forward.

BRITISH FINANCE, 1914-1921.

The result of Investigations and Materials collected by a Committee of the British Association, co-ordinated and brought up to date by

A. H. GIBSON,

Fellow of the Royal Statistical Society, Fellow of the Institute of Bankers.

Edited by A. W. KIRKALDY, M.A., B.Litt.,

Dean of the Faculty of Economics and Commerce, University College, Nottingham.

This record should prove of inestimable value, not only to contemporary investigators, but to economists, bankers, etc., for many generations to come. It sums up work that was commenced in 1915 by a Committee organized by the British Association. Throughout the war period this Committee accumulated a considerable mass of information as to the financial arrangements of the Government, and the course of events connected with Currency and the Exchanges, and the whole has been co-ordinated and brought up to date by Mr. A. H. Gibson, a well-known authority on banking matters, who was responsible for many valuable suggestions to the Government. Mr. Gibson has put into clear and chronological form a very great amount of information, some of which might have been lost, and most of which would have been very difficult to obtain. It is all in this volume readily available and easy to understand in its full significance.

"No praise could be too high for the volume on British Finance, and it is impossible in a brief review even to suggest the wealth of material . . . which has been so skilfully worked together to make this volume."—*G*

The net profits for the year ended December 31, 1920, after providing for bad and doubtful debts, and including £96,430 brought forward from last account, amounted to £356,638.

From this sum was deducted £60,000, being the interim dividend of 8 per cent., less income-tax, on the "A" and "B" shares paid for the half-year ended June 30, 1920. The directors added £50,000 to the reserve fund, £15,000 to the officers' pension fund, and wrote £20,000 off freehold banking premises. They recommended a further dividend on the "A," "B" and "C" shares of 8 per cent., less income-tax, for the second half of the year (making 16 per cent. for the year), leaving a balance of £127,638 to be carried forward.

Australian Mutual Provident Society

Estab. (A.M.P.) 1849.

The Largest British Mutual Life Office.

Some Figures from the Seventy-second Annual Report as at 31st December, 1920.

ORDINARY DEPARTMENT.

NET NEW BUSINESS. 28,600 Policies Assuring £10,512,136 with Annual Premiums of £331,086.

DEATH CLAIMS. £1,249,457, Including Bonus Additions of £408,809. This is 53 per cent. of the "Expected."

MATURITY CLAIMS. £923,781, Including Bonus Additions of £245,035.

THE ACCUMULATED FUND (Including Industrial) has increased by £2,720,753, and amounts to £43,847,952.

WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £13,160,000.

THE SURPLUS (after strengthening the Basis of Valuation by the application of £285,485) is £1,452,193, of which £1,324,193 is being distributed. This will provide Reversionary Bonuses of about £2,273,000. In addition, £12,209 was paid as Interim Bonuses.

THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent. except for the small section of ordinary Whole-life Policies issued prior to 1891, for which 3½ per cent. was employed.

THE EFFECTIVE RATE OF INTEREST, after deducting Income Tax, was nearly £5 3s 8d per cent. There is, therefore, an Interest Margin of over 2 per cent.

THE EXPENSE RATE (excluding Taxes) was only 12.5 of the Premium Receipts.

THE TOTAL ASSURANCES Issued in 72 years amount to £207,019,782, of which £110,207,146, or over 53 per cent., are still in force.

JOINT-STOCK BANKS OF IRELAND.

BANK OF IRELAND.

The net profits of the bank for the half-year to June 30, 1921, after meeting all charges and providing for bad and doubtful debts, interest due on deposits, and rebate on bills not at maturity, amounted to £259,544, to which must be added the sum of £42,460 brought forward from the last account, making a total of £302,004. Out of this amount the governors and directors appropriated £90,000 for depreciation of investments and other contingencies, and having transferred to the rest £50,000, recommended that a dividend at the rate of 12 per cent. per annum, less income-tax, be declared for the half-year, which absorbed £116,308. There then remained a surplus of £45,696 to be carried forward.

NATIONAL BANK, LIMITED.

The report presented to the meeting, held on July 28th, states that the profit and loss account for the half-year ended June 30, 1921, including £27,714 brought forward from December 31st last, shows a balance of £160,871 available for distribution. The board have declared a dividend for the past half-year at the rate of 12 per cent. per annum, or 12s per share (£10 paid)—30th instant. The dividend absorbs £63,000, leaving a balance of £97,871 to be dealt with. During the half-year there have been further large additions to staff salaries, and pensions, and increased bonuses thereon, allowances, &c. The increase in salaries and bonuses alone forms an additional charge on this half-year of £20,000. The directors have had to make provision for increased taxation under the Finance Bill and for contingencies; and a sum of £70,000 has been set aside for the purpose. A sum of £6,083 has also had to be provided for, on account of losses at certain branches by reason of robberies by armed raiders. £27,871 has been carried forward to profit and loss new account.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

(With which is affiliated the British Bank of South America and the Commercial Bank of Spanish America.)

The report to be presented to the meeting to be held on October 25 states that the net profit, after making provision for all charges, rebate, &c., amounts to £743,175, which, together with £393,116 brought forward, makes a total of £1,136,291, of which £183,404 was absorbed by the interim dividend paid on April 19th last. There is now an available balance of £952,887, of which the directors recommend that £275,102 be applied to the payment of a final dividend of 9s per share, less income-tax, payable on the 31st instant, making a total distribution for the year of 15 per cent.; 150,000 be added to the reserve fund, making the total amount thereof £4,000,000; £50,000 be applied in reduction of bank premises account; £25,000 be added to the staff pension and guarantee fund; £50,000 be applied in distribution of a bonus to the staff in recognition of their services during the period under review, in such form and manner as the directors may determine; and that the balance of £402,785 be carried forward—£952,887.

BALANCE-SHEET—June 30, 1921.

IONIAN BANK,

LIMITED.

LONDON. GREECE. EGYPT.

The only British Bank or Financial House in Greece, originally established in London and the Ionian Islands in 1839, subsequently incorporated by Royal Charter in 1844 and registered under the Companies Acts in 1883. The Bank now has branches and correspondents throughout Old Greece, the Ionian Islands, Macedonia, and the Islands recently rejoined to Greece; and is therefore able to offer special facilities to all firms having business with that country.

In Egypt the Bank's principal office is at Alexandria; but it also has Branches at Cairo and throughout the cotton-growing districts, and specialises in all operations connected with the moving of the cotton crop.

For information as to terms of business, &c., apply to the

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. | ACCOUNT.
 October 27. | October 28.

Stock Exchange markets have passed through a week of violent fluctuation and excitement. Nervousness has been given full play. The demoralisation of the market, heavy liquidation on behalf of Dutch and British holders of securities, and the wildest rumours concerning developments in the oil industry, have served to keep the markets in a state of high tension. It may be that business was not greatly benefited by the fluctuations. The recorded number of bargains in the Stock Exchange every day remains roughly about 4,300, as an average. Possibly rather less than half the bargains actually transacted are marked in the Lists. Gilt-edged stocks hold their ground better than most, and the end of the week found a rather better tendency in some of those markets in which the slump had been felt most acutely a few days previously.

The flood of gilt-edged issues has been stayed to some extent, but the five-million Commonwealth 6 per cent. loan at 96 has made its expected appearance. The War Loan remains a little under 90, and a feature is the way in which National War Bonds have been advancing in price, owing to their steady absorption by money which continues automatically to accumulate in the hands of trustees and others. In the foreign market, the demoralisation of the market led to German Threes coming on offer at 2½ before the price recovered to 3¼. Almost without exception, foreign bonds have fallen, in some cases fairly heavy blocks of stock coming in from the Continent, where Holland is said to have been especially hardly hit by the shrinkage in the value of German currency. Hundreds of the "dollar" stocks have fallen with the rest, in consequence of the mounting of the pound in relation to the dollar. It was not until Thursday morning that any kind of improvement from the worst became manifest amongst foreign bonds generally. As it is, Mexicans are substantially lower on the week.

Further falls in Home Railway stocks came about as the result of mild pressure to sell in a market where nobody wants to buy. The Government's unemployment proposals are deemed to be favourable to the railways, inasmuch as they may permit the raising of a moderate amount of fresh capital on reasonable terms. Grand Trunks continue their downward course, and Mexican Rails sagged in consequence of the fall in Mexican Government bonds. Argentine Railway stocks fell away, on dismal reports from the Buenos Ayres Great Southern and Buenos Ayres Western companies, though the Central Argentine results are regarded as fairly satisfactory. Brazilian Railways are flatter than ever; many of the foreign railway stocks in which there is but limited market have shed several points with scarcely any stock changing hands.

The outlook for rubber appears to be brightening, without, however, bringing into the field a sufficient number of fresh buyers to have any noticeable effect upon prices. The oil market provided the hub of the fiercest excitement, Mexican Eagles and Royal Dutch being rushed down on sales, or attempted sales, of lines of shares. The Dutch holders have evidently been trying to realise their Royal Dutch, while alarmist rumours regarding the Mexican oilfields assisted the bears in hammering down the price of Mexican Eagles. As the selling blew itself out, however, a calmer tone supervened, and prices closed the week above their worst. The scheme for amalgamation of the Scottish-American with the Tankers Company led to Scottish-American losing a few more pence. Trinidad shares remain under the influence of the general market conditions, and Russian oil descriptions have shown no recovery from the weakness that overtook them upon the breakdown of trade negotiations between the Russo-Asiatic Company and the Soviet representatives.

Shipping shares have fallen in consequence of a reduction in the Royal Mail dividend. Dunlops, after being extremely flat after announcement that the three preference shares will not receive their dividends for the current year, recovered a trifle upon the notification that in any reorganisation scheme the shareholders are not likely to be asked to put up more

money. The stores and catering group is a little less weak than some of the others, and textiles gave way only to a moderate extent. A few of the nitrate shares have been inclined to stiffen, but the movements in this market are mixed. Forestal Lands dropped, on obvious liquidation. Hudson's Bays held their ground with noticeable firmness. The cable group is almost solitary in showing strength, although the wireless shares participated in the general depression. Amongst brewery stocks, the new Manchester Breweries debentures fell to 5 discount, and the new Peter Walker shares to 3s for the shares 8s paid. With other new issues, the tendency has been irregular. The County of London Electric debentures hardened to 4½ premium. Joshua Hoyle debentures gave way to 1½ discount, although the underwriters have had the opportunity offered them of cancelling their obligations if they cared to hand over the latter to the issuing house. The tobacco market is helped by the announcement that the British-American Tobacco is to receive rather over a million pounds in respect of its German claims. Banking shares tend to droop, by reason of the fear lest trade depression will make its effect felt upon profits, although dividends are expected to be maintained. Little interest has been taken in insurance shares, and the prices have varied but slightly on the week. The iron and steel market is almost uniformly weak, rumours of fresh labour trouble being rife, although they are regarded as scarcely likely to materialise at a time when unemployment is so widespread.

Various reasons have conspired to bring about fresh weakness in Kaffirs. Gold has been down at one time to less than five guineas per ounce. It is also said that, on some of the mines, labour difficulties have arisen. After a period of acute flatness, the market rallied, the process being encouraged by an improvement in De Beers and some of the other French-held shares. The copper group, however, is lower, and in none of the base-metal mining departments has there been any advance towards better prices. Malayan tin shares came on offer and Indian gold shares have fallen in sympathy with others in the miscellaneous mining market.

Nigeria Government 6 per Cent. Inscribed Stock, 1936-1946.—Issue of £3,000,000 at £97 per cent. The loan is secured on the general revenues and assets of the Government of Nigeria, and the proceeds will be devoted to construction of railway, harbour, and other public works. The principal will be payable at par on October 15, 1946, by a sinking fund of not less than £1 per cent. per annum, to be formed in this country under the management of the Crown Agents, who are appointed trustees, but the Government of Nigeria will have the option of redemption at par on or after October 15, 1936, on giving six months' notice. The Crown Agents are to be commended upon the excellent table of revenue and expenditure and imports and exports, which appears as an inset in the prospectus. It is, however, a pity that this was not included in the advertised announcement. The prospectus states that "the revenues of the Colony of Nigeria alone are liable in respect of the above stock and the dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the stock or of the dividends thereon, or for any matter relating thereto (Act 40 and 41 Vict., c. 59)." A trustee stock.

Indicators, Limited.—Authorised share capital £35,000, divided into 33,500 7 per cent. cumulative preferred participating shares of £1 each, and 30,000 ordinary shares of 1s each. All the ordinary shares and 18,173 preferred shares have been issued. This is an offer for subscription of the balance of preferred shares, amounting to 15,327, at par. After payment of the 7 per cent. preferred dividend, the balance of surplus profits is to be equally divided between preferred and ordinary shareholders. All shares have equal voting powers. The company was incorporated in May, 1919, with a capital of £24,000, as a private company, to acquire certain patent rights, which it is hoped will bring in a substantial revenue from advertisers. The vendors of the patent rights have or will receive in satisfaction of assignment £10,000 in preference shares, 30,000 ordinary shares, and £1,000 in cash, which is a satisfactory arrangement from the vendors' point of view. It is intended to apply for a Stock Exchange quotation. The issue may appeal to some opulent investor as a speculative risk, but it is unsuitable for the small investor.

The Town of Dudley Gas Light Company.—Incorporated by Act of Parliament, 1853. Issue at par of £32,880 7 per cent. redeemable debenture stock, to be redeemed at par on September 1, 1931. The authorised capital of the company is £100,000, of which, including premiums, £93,773 is issued and paid up. Of the authorised loan capital of £50,000, exclusive of the present offer, £14,000 has already been issued. The output of gas, which in 1913 was 190 million cubic feet, had risen last year to 243 million feet. The net revenue of the company for the year ended December 31st last was £12,812, and as interest on existing loan capital, including the amount of the present offer, will amount to but £2,939, these debentures must be considered well secured both as regards capital and interest. But regard should be paid to the difficulty of finding a ready market for such a small total issue of stock with no Stock Exchange quotation.

Chester Music Hall (1921), Limited.—Authorised capital £25,000, in ordinary shares of £1 each. This was an issue of the whole capital at par. The company has been formed to acquire the Chester Music Hall, and to reconstruct the building to render it suitable for a cinematograph theatre. The property has been independently valued at £27,587. This it is to take over for £30,000, of which £27,500 is payable in cash and the balance in shares. The vendor obtained the property for £27,500. Although the music-hall is still running, no statement of actual receipts and expenses appears. In the place of these, however, we are informed that it is estimated to make £8,473 per annum, which, on a capital of £25,000, is a handsome return, which may, or may not, materialise; and even though the directors have experience in the industry, the proposition must be looked upon as highly speculative.

Matlock Cinemas, Limited.—Authorised capital £15,000 in shares of £1 each. Applications invited for 7,000 shares at par. The company has been formed to build a cinematograph theatre, and £500 is to be paid for an option upon a site to the promoters. The directors and their friends are apparently taking 8,000 shares firm. Estimated profit, as usual in cinema prospectuses, do not appear to err upon the moderate side. These are reckoned to be at the rate of £5,000 per annum, which, on a capital of £15,000, is optimistic. However, the directors have agreed to accept no remuneration until a dividend of at least 10 per cent. has been paid. A speculative proposition, suitable for those who have faith in the business capacity of the directors.

The Turf Commission Agency, Limited.—Authorised capital £10,000, in ordinary shares of £1 each, of which it is stated that "1,000 shares are already issued and paid for in cash." Applications are now invited for 9,000 shares at 20s each. This company claims to be "the first public limited liability company formed for the purpose of carrying on a Turf commission agent's business." The advertised prospectus informs us that "no part of this issue has been underwritten,"

and that there are "no promotion profits," and, further, that "no shares will be issued other than for cash." Preliminary expenses are estimated at £750. This is certainly a novelty in the way of company promotion, but the position of a "Turf commission agency" in the eyes of the law is somewhat complicated at present. The statement that bad debts "will be entirely eliminated" fails to convince us, and as a business proposition, we must strongly advise our readers to leave the issue severely alone.

English Electric Company of Canada, Limited.—Authorised capital \$2,000,000 8 per cent. cumulative preferred shares (par value \$100), and 30,000 common shares, with no par value. This was an issue at par of all the 8 per cent. cumulative preferred shares, with a bonus of 40 per cent. common stock. Provision is made for redemption at 110 per cent. on any dividend date after 60 days' notice.

COMPANY MEETINGS, &c.

HARRISONS AND CROSFIELD, LIMITED.

BOARD'S CONSERVATIVE POLICY.

CHAIRMAN ON THE POSITION AND PROSPECTS. RUBBER AND TEA INDUSTRY.

The thirteenth ordinary general meeting of the shareholders of Harrisons and Crosfield, Limited, was held, on the 21st instant, in the Council Room of the Rubber Growers' Association (Inc.), 38 Eastcheap, London, Mr Charles Heath Clark, chairman of the company, presiding.

The secretary (Mr E. C. Cleveland-Stevens, D.Sc.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: Ladies and Gentlemen,—A year ago, when I presided over our meeting, acting for our chairman, Mr George Croll, who was then absent owing to illness, I quite expected that I was doing so for the last time. Unfortunately, Mr Croll's illness has proved of longer duration than any of us at that time imagined was at all probable, and, as he wished meanwhile to resign his chairmanship of the company, his colleagues have thought it best to act in accordance with his expressed desire, and, in view of his unexpectedly prolonged illness, have accepted his resignation of the chairmanship. As the other members of the board pressed me to continue to act as their chairman, I have consented to resume my old position for the present. At the same time, I am sure you will be glad to know that Mr Croll is getting better, and that the doctors have confidence in his complete recovery at no distant date.

THE PAST YEAR.

The past year has been the most anxious and difficult that I remember in the history of our business. We have not only had to contend with an altogether unprecedented "slump" in the prices of the produce in the production of which we are mainly interested, but, in addition, on the merchant side of our business, which is a very important part of our commercial activities, we have had to face enormously heavy depreciation of stocks, aggravated by the inability of customers to take up and pay for consignments ordered. This has, unfortunately, been a common experience of the export business of the country. We have also encountered further difficulties connected with violent fluctuations in exchange, which have rendered business in many directions practically impossible to transact. Having faced very heavy losses from these and other causes, and having written down the stocks in our balance-sheet to replacement values, we have, I think, no need to be ashamed of the final result, as shown in our profit and loss account for the year.

THE BALANCE-SHEET.

Dealing with the figures in the balance-sheet, the only change in the capital of the company is an increase to the extent of 7,020 deferred ordinary shares taken up by deferred ordinary and management shareholders.

The reserves stand at £473,000, as against £439,000 last year, and constitute a very important source of strength to the company when passing through times like the present.

The sundry liabilities have been reduced to the extent of about £260,000 since a year ago. We owe more to the banks, but have reduced mortgages on our properties by about £24,000, and the amounts owing to sundry creditors and depositors and on bills payable to the extent of £418,000. The amount of our bank overdrafts will always be liable to considerable fluctuations, as the advances on produce in process of shipment from the East are naturally affected by the shipping facilities which may be available for the time being.

On the assets side of the balance-sheet, you will see that there is an increase of about £140,000 under the heading of freehold and leasehold property. This increase is not the result of fresh purchases by the directors during the year under review, but is the consequence of our having paid for commitments previously entered into.

The items of plant, machinery, furniture, and fixtures call for no special comment.

Stocks show a reduction of about £35,000 as compared with a year ago, and are taken at replacement value, so that we should not have to anticipate further heavy losses in the current year such as we have written off from the profits of the past year.

Under the next three headings the outstandings are reduced as compared with those of a year ago. Loans to companies are £39,000 less, bills receivable are £70,000 less, and sundry debtors are £229,000 less, the reduction of the last two being the direct outcome of the stagnation in trade.

The only remaining item to which I need call special attention is that of our investments, which amount to £1,413,000, an increase of about £145,000 since a year ago. The book values have not been changed, but remain at "cost or under" as in previous years. As stated in the directors' report, the value of our investments, if measured by the Stock Exchange quotations, in cases where there are such quotations, would show a considerable amount of depreciation. But as you are probably aware, owing to the present crisis these quotations have for some time past been in most cases of a purely nominal character, and do not reflect intrinsic values. Having regard to the favourable basis upon which our holdings were originally acquired, the directors have no doubt that the depreciation is of a temporary character, and will disappear whenever the industries with which we are connected recover from the present crisis.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, including the amount brought forward from the previous year, the balance at credit of the account is £202,339 18s 8d. The dividends already declared amount to £157,814 12s, leaving an available balance of £44,525 6s 8d, which the directors recommend should be carried forward to the current year. It has been our custom to recommend further dividends on the deferred ordinary and management shares, but, under the present uncertain conditions, we think it wise to conserve the resources of the company, and to make no further distribution of profit among the holders of those classes of shares. I shall, in consequence, have later on to ask your attention to a few remarks in regard to the alteration in the articles of association which it is necessary to make in order to provide, in the future, some alternative remuneration for the management of the company's business.

THE STAFF.

Throughout the year, and in the difficulties and anxieties that it has brought us in common with the business world generally, I have had the most loyal and effective assistance, not only from my colleagues on the board, but also from the company's staff both at home and abroad. I feel that the difficulties, in which we are all sharing, have brought us nearer together than ever before in the determination to overcome them, whatever they may prove to be, and I am sure that no effort will be lacking on the part of any of us that can tend to the future prosperity of the company.

THE OUTLOOK.

You will no doubt expect me to make some reference to the prospects of the immediate future, both of our own company and of the industries of rubber and tea in which we are so largely interested. As regards our own outlook, it was never more difficult than it is at the present time to speak with any degree of certainty. Our interests are world-wide, covering America, Australia, and Japan, as well as Ceylon, India, and Malay States, the Dutch Indies, and the Continent of Europe, and they are of necessity so bound up with the world's changes and uncertainties as to make all forecasts more than usually liable to error, but I am hopeful—more hopeful than I was two or three months ago—that we have "touched bottom," and that the company's business will not prove so difficult during the present year as at one time appeared likely.

You will recognise the fact that, although we have a large and valuable merchant business, our prosperity is closely allied to that of the rubber and tea industries, and that we have consequently a vital interest in the prospects of both. My colleague, Mr Welch, in his speech at the general meeting of the Rubber Plantations Investment Trust, has recently dealt at length with many of the considerations and circumstances surrounding both industries at the present time, and, as I am largely in agreement with the views he then expressed, I shall not weary you with any prolonged examination of the position to-day.

THE TEA INDUSTRY.

The position of the tea industry has undoubtedly much improved during recent months. The fall in the value of the rupee has in itself largely reduced the production costs, and this has, in the cases of all the estates with which we are concerned, been accompanied by all possible economies in management and working. The market price for tea have somewhat improved also, so that at

present the majority of tea companies are no longer making heavy losses, and the statistical position shows material improvement.

The probable world's production of tea in 1921 will be, I think, round about 600 million pounds, as against a probable consumption of about 700 million pounds; and, during the past six months, the stocks in the United Kingdom have been eaten into just about to the extent of 50 million pounds.

It is a very remarkable fact that the consumption in our own and other markets should, during the past two or three years, have increased to an extent permitting the absorption of 700 million pounds of tea, although the great Russian market, which in pre-war days took nearly 200 million pounds per annum, remains practically closed, as well as other smaller outlets. It would appear that, when business with these countries again becomes possible, the demand must go beyond the present limits of production. At the same time, it would appear wise for tea producers to remember that that time has not yet arrived, and that, until it does, it may be possible in any season to produce a greater quantity of tea than can be marketed at a profit. Should, however, the necessary discretion in this respect be exercised by producers, and no big rise in the value of the rupee take place, prospects appear to be distinctly brighter.

THE RUBBER INDUSTRY.

The rubber industry has been, and still is, passing through a very grave crisis, owing partly to the increased production of the past two years, and still more, I think, to the financial stress and general "slump" in the trade of the world. It is, however, one of the world's great industries, and an industry which is growing in importance every year. To-day the raw product is the chief commodity which the British Empire sells to America, and any improvement in its price tends to strengthen our exchange with the United States.

I very much doubt whether the actual consumption—by which I mean the using up of rubber—has ever been going on faster than during the past year. I think that what has happened is that, owing to the abnormal financial and trade conditions, the actual consumption has been provided for very largely from the invisible stocks in the hands of manufacturers, wholesale dealers, and shopkeepers throughout the world, and that there has only been taken from the first-hand producers of raw rubber just sufficient to make up the difference between what was available from the invisible stocks and the actual consumption, leaving the balance of the year's production of raw rubber to accumulate and increase the stocks in London and other ports.

As a result of the restriction, voluntary and involuntary, it appears probable that the total production of raw rubber this year will not exceed 280,000 tons, and that the amount of raw rubber bought by manufacturers during the same period will be about 250,000 tons. I think it is safe to conclude that, by the end of this year the invisible stocks, both of raw and manufactured rubber, will have been used up to the fullest extent possible, and that next year the demand for raw rubber must again be fully equal to the actual consumption and amount to not less than 300,000 tons, and very possibly to 350,000 tons.

The motor industry accounts for about two-thirds of the consumption. It is estimated that, just previously to the war, there were about two million cars running; that in 1918 the number had increased to between seven and eight million; and that to-day it has reached a total of 12 million. This gives us some idea of the progress achieved in seven years, and of the way in which the world's real need for rubber has increased and is increasing. I know of no source of rubber consumption that can be said to be declining, but, on the other hand, there are constantly new uses being added to those already in existence, and I have no doubt as to the ultimate soundness and value of the rubber-producing industry.

To assist in meeting the crisis, the Rubber Growers' Association has done a very great amount of work, for which they deserve the best thanks of all those who have financial interests in the production of rubber. If it had not been for their taking steps to organise restriction, the position would have been much worse than it is, and I cannot help hoping that it may be possible for that association to take the lead once more in organising some simple form of temporary restriction which would assist the industry to recover more rapidly from the present extreme depression. If any large percentage of producers would agree to a cessation of tapping for a period of three months, it would force the present first-hand stocks of rubber rapidly into consumption, and if, as I believe, the demand will steadily improve, the whole industry might be once again upon a paying basis.

GENERAL TRADE SITUATION.

The outstanding feature of general trade remains what it was when I addressed you a year ago, and half the world is still starving for the production of the labour of the other half, which in its turn is starved because it cannot market the products of its labour. The means of exchange are either altogether lacking, or of

such doubtful stability as to render business more or less impossible. For any real recovery, "peace and goodwill" at home and abroad must be the necessary foundation, leading to co-operation, mutual service, and the breaking down of all unnecessary barriers and restrictions in the exchange of goods and services. It appears now that we cannot be far from the time when the necessity of the position will compel Governments to recognise that international action to secure the opening up again of the channels of the world's commerce is the first essential of the world's industry and the life of all industrial peoples.

On the motion of the Chairman, seconded by Mr H. Eric Miller, the balance-sheet, made up as at June 30, 1921, and the reports of the directors and auditors were adopted.

Messrs George Croll and H. Eric Miller were re-elected directors of the company, and Messrs Price, Waterhouse and Co., were reappointed auditors, to hold office until the next general meeting.

At the close of the ordinary general meeting, an extraordinary meeting of shareholders was held, at which a resolution was passed altering the provisions contained in Article 92 of the articles of association.

A hearty vote of thanks to the chairman and directors terminated the proceedings.

COLTNESS IRON COMPANY, LIMITED. MR RUSSELL ON POSITION OF IRON INDUSTRY. NECESSITY FOR CHEAPER PRODUCTION.

The annual general meeting was held on Friday, the 14th instant, within the registered office of the company, 138 West George street, Glasgow.

Mr Robert Russell, the chairman of the company, who occupied the chair, said that the report before them showed that the past year had been a very poor one as compared with 1920, but considering the unprecedented time through which we have passed, this year's result may be regarded as not unsatisfactory.

PROFITS.

The gross profit, after taking credit for the amount estimated as recoverable under the Finance and Coal Mines Acts, amounts to £111,013, as against £248,032 in the previous year. After writing off £48,823 for redemption and depreciation, and bringing in £1,000 for appreciation in the value of the special reserve fund investments, there remains a net profit for the year of £63,190, as against £195,222 in 1920.

This year we have set aside to meet the expenses of re-lining of blast furnaces, &c., £3,000, and after deducting this sum and adding the amount brought forward from the previous year of £16,762, there is a balance left of £76,953.

Interim dividends have already been paid on the first and second preference shares, and on the ordinary shares, amounting to £28,625, leaving a balance of £48,328, which the directors recommend should be dealt with as follows:—

- (1) In payment of dividends on the first and second preference shares for the second six months of the year, £12,875.
- (2) In payment of a further dividend of 3 per cent. on the ordinary shares, absorbing £15,750, thus making a total distribution of 6 per cent. on the ordinary shares for the year, leaving a balance of £19,703 to be carried forward.

The Chairman stated here that in the last financial year, i.e., ended July 31, 1920, large profits were made, and consequently provision had to be made in the accounts to meet the Government's claim on the amount of the excess over the standard profit. This year, 1921, the profit being much under the standard, the company, on the other hand, has a claim against the Government on the amount of the deficiency under the standard profit.

QUESTION OF INCREASING CAPITAL.

He regretted that owing to the extraordinary bad state of trade during the year they had been unable—the first time for several years—to add anything to the ordinary reserve fund out of which the money required for the development and extension of the company's business had been derived, and said that the shareholders would, of course, understand that from time to time opportunities occurred of adding to the properties of the company which could not, in their interests, be allowed to pass, and while it was fortunate that hitherto the successful operations of the company had enabled the directors not only to pay satisfactory dividends, but to provide most of the money required for these additions, they may have to consider soon whether, and to what extent, this money should now be found on a permanent basis.

BLAST FURNACE DEPARTMENT.

With regard to the blast furnace department, which includes the bye-products plant, these were idle for more than half of the

year, and were still idle, with, he regretted to say, no immediate prospect of their being restarted owing to the price of coal and other raw materials, as well as labour and railway charges being still too high to permit of pig-iron being sold at an economic price. They could easily understand the serious effect of so much capital being unemployed.

He said he took this opportunity of saying that the effect of the introduction into Scotland fully two years ago of the system of three shifts per day in place of two, as has always been the case at the Scottish iron works (owing to the small production as compared with English furnaces) was to further handicap the Scottish works in their competition with England.

A Scottish coal-fed furnace produces only about one-fourth of the tonnage of pig-iron of an English coke-fed furnace. It is thus evident that the latter, with their large production, are in a position to make some profit when Scottish works are losing.

The production of pig-iron per person employed at the English furnaces is about double what it is in Scotland, and it was his opinion that if the production of pig-iron was to be successfully carried on in Scotland it would be necessary that everything possible be done by both employers and employed to reduce costs.

THE COLLIERIES.

As to the collieries, these were idle for about four months. The stoppage in April, May, and June was a most unfortunate one for all concerned, the loss caused thereby being very great, due to the injudicious orders given by the Miners' Federation that no safety men, such as enginemen, stokers, and others, were permitted to work.

In consequence of this state of matters, their loss of output for the year was nearly 300,000 tons. He was pleased, however, to inform them that the company's collieries were now nearly all back to their normal condition.

He also remarked that the present high cost of production would continue until there is a greater demand for coal, which will not

come about until the price is much reduced, and that could only be effected by greater production per annum per person employed.

To enable iron and steel works and other industrial concerns to resume operations, the cost of production must be reduced. At the meeting two years ago he said: "I wonder if there is any miner who can truly say that it is any hardship to have to work eight hours per day." He was of the opinion that the repealing of the seven hours per day Act was an urgent necessity.

KINGSHILL COLLIERY.

With regard to their new Kingshill Colliery, the output is now fully 9,000 tons per month, but with increased demand for coal the underground workings are now capable of yielding double this quantity.

There is still a good deal of capital expenditure required to fully equip the surface works, and they were handicapped here for want of houses for the workmen, but as yet there was no indication of the County Council moving in the matter.

COMPANY'S FOUNDRIES, BRICKWORKS, AND ALQUIFE MINES.

With regard to the foundries, at present they were practically at a standstill in both the iron and steel foundries. Any demand there is for steel castings is being secured by foreign competitors at prices much lower than we can produce at, and the only hope they had of securing work was that their workmen accept lower wages and work longer hours.

The brickworks had been fully employed all the year.

As to Alquife Mines, there was a small loss on the year's working.

We would have made a large profit, but owing to the continued failure of the railway company to transport ore in adequate quantities from the mines to Almeria the shipments were gradually reduced during the first half of the year. The railway company suspended the transport of ore entirely on January 29th last, consequently mining operations ceased on February 15th. Negotiations have been

carried on with the railway company, but nothing definite has yet been arranged.

The stock of ore at the mines has been gradually accumulating, until there are now 250,000 tons representing a large sum of money, and which he would be glad to see converted into cash.

WARWICKSHIRE COALFIELD.

With regard to the Warwickshire Coalfield, during the last year, owing to strikes, he said nearly six months' work was lost, a very serious state of matters for their large developing Coventry Colliery.

This place he said has suffered more than any other part of their business, due to the war causing high costs of sinking and of all machinery and plant, also high wages. The shortage of workmen also has greatly retarded development.

At the present time, consequent upon the recent miners' strike, which brought about the stoppage of other industries, the demand for coal is less than we can produce. The output is now equal to about 10,000 tons per month, but with more house accommodation for the workers this could soon be increased.

The capital already expended is capable of dealing with an output of about 30,000 tons per month, but when the output gets beyond that, some additional expenditure for screening plant and a washery, &c., will be necessary.

The underground capital expenditure yet required is for permanent pit bottom arrangements and haulages.

At present the cost of working is much above the selling price, and this will continue to be the state of matters until the output is at least double what it is now. I am glad to say the quality of the coal is excellent.

FIRST DEBENTURE DRAWING.

In December next the first debenture drawing of £15,000 will take place, but owing to the unavoidable delay caused by the war and strikes in opening up the colliery only a small sum from royalties has accumulated to meet this, and the amount must, therefore, be provided otherwise.

The directors' report and balance-sheet as at July 31st last were adopted, and the retiring directors, Mr J. Hamilton Houldsworth and Mr Thomas Russell, were re-elected.

The auditors (Messrs Kerr, MacLeod, and Macfarlan) were re-appointed, and the usual vote of thanks terminated the proceedings.

RUBBER SECURITIES, LIMITED.

CHAIRMAN OPTIMISTIC OF THE INDUSTRY'S FUTURE.

The 12th annual general meeting of this company was held on the 19th inst., at the offices, 7 Martin's lane, London, Mr W. Arthur Addinsell, the chairman, presiding.

The Chairman, in the course of his address, said that the absence of profit and dividend would occasion no surprise, having regard to the vicissitudes of the rubber industry in the last year. By far the largest proportion of the company's holdings was in companies with particularly small capitals, thoroughly well and economically managed in the East, and capable of giving a good account of themselves, given normal conditions within the next year or two. In addition to undistributed profits, the majority of the companies concerned had substantial liquid assets. The book value of the investments at the date of the balance-sheet was £92,148, and the market value showed a deficit of £370, since increased to £5,453, compared with the surplus of £42,863 a year ago.

It was a great disappointment that rubber producers had not been able to agree upon any means of remedying the situation. When so many were apparently anxious to achieve the same result, it seemed almost incredible that ground for united action could not be found.

FALLACY OF LONG FORWARD SALES.

There was a tendency amongst some producers to sell forward the crops of the next year or so at current prices, on the ground that it secured a certain and regular income to meet estate expenditure. No doubt such sales showed profit on present cost of production; but that cost represented the effect of drastic reduction of expenses by the discharge of coolies, reduction of wages, temporary reduction of European staff salaries, and, in many cases, complete cessation of highly necessary work such as cultivation, thinning out, drainage, and measures against pests and diseases. But when trade and industry improved, increasing the demand for raw rubber, and raising its price to (say) 6d per lb, there would be a rush for labour, substantially increasing rates of pay; European salaries must return to the normal, and when the price was 1s 2d or over, the F.M.S. export duty would be reinstated. Further, freights would be increased, and estates in the Dutch Colonies were threatened with higher local taxation. Thus sales made at prices below normal average cost of production for delivery 12 to 15 months ahead might quite possibly result in loss. Moreover, forward contracts, particularly over long periods, encouraged the deplorable prevalence of speculation in rubber. He understood that the large majority of the transactions taking place in Mincing lane daily formed dealings on behalf of so-called "bulls" or "bears." Most of all, he was concerned by the fact that, in the efforts to place the industry on a sound basis again, the shadow of forward contracts had militated against combination of producers for common action. He did not hold out any hope that the company would be able to pay a dividend next year, but he was strongly of opinion that 12 months hence the market would have improved, so decidedly that the majority of the companies in which they were interested would feel that they had weathered the storm.

The report and accounts were unanimously adopted, and the usual formal business was transacted.

NOTE.—Agot Estimate as in House of Commons, Paper No. 89 of 1921.
Treasury, October 17, 1921.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £60,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Oct. 24th-Oct. 29th, were opened on Oct. 21, 1921, and the total amount applied for was £84,160,000. Tenders for Monday to Friday bills at £99 is 3d, about 8 1/3 per cent., and above in full. Saturday bills at £99 is 6d and above in full. The average rate of discount was £3 13s 8 3/8d per cent.

The following table shows Treasury Bills by tender outstanding:—

The amount to be offered next week will be £60,000,000.

Messrs Samuel Montagu and Co. write on October 20th, as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,595,820, as compared with £126,595,530 last week. A fair amount of gold came on offer, and was practically all taken for the United States of America. Gold to the value of \$7,431,000 is reported as having been received in New York—\$4,000,000 from London, \$2,350,000 from France, \$881,000 from Egypt, and \$200,000 from Germany.

CURRENCY.

The Financial Adviser to the Egyptian Government writes as follows in his note on the 1921-22 Budget:—"In 1919 the lack of fresh supplies of silver compelled the Government to resort to the issue of currency notes of small denomination. These immediately took the place of the silver coin, which disappeared entirely from circulation.....Since the end of 1920 the general contraction of purchasing power has taken effect on the circulation of token coinage, and not only has nickel coin begun to flow back to the Treasury, but silver coin has also reappeared in circulation. It will probably be feasible to withdraw the small currency notes and replace them by silver coin in the near future.....The total amount of silver in circulation, so far as this can be estimated, is as follows:—Silver—British and Egyptian, £713,100; Maria Theresa dollars, £186,700."

SILVER.

During the week the market has betrayed some uneasiness. For some time past China has borne the weight of carrying supplies, the Indian bazaars having ceased to be buyers. Cessation, therefore, of purchases from the Far East was bound to be disquieting. A reversal of the attitude of Chinese speculators, who changed from keen sellers to active buyers of sterling, brought about a fall in the China exchange, and deprived the silver market of its main support. The cash price fell 1/2d on the 18th instant, and a further 3/4d next day. Bear covering has had some share in checking the decline. To-day Chinese demand was resumed, and a sharp recovery took place of 1/2d. The week has been characterised by three notable events—a collapse of the German exchange, a heavy fall in the sterling value of the rupee, and a sharp drop in exchange with China. It is difficult to avoid the conclusion that these occurrences were connected. It is probable that the difficulty of carrying out contracts made on German account for the purchase of goods from India and China may have unsettled the exchanges of these countries. The following forecast in the issue of the *Times of India* dated October 1st last confirms the above view:—"The recent rapid fall in German exchange from 300 marks per £ sterling to 460 is disconcerting in view of Germany's vast international obligations, and may have an adverse effect on Bombay and Calcutta's reviving export trade with that country." In any case, the setback in rates from the East shows the danger of speculation in exchange (whether guided by intelligent anticipation or not) in times so prone to the entry of unexpected factors. The collapse of the German exchange had a result upon these other exchanges similar to a pinprick in a toy balloon. Trade alone is the decisive factor in exchange, whatever temporary effect may be caused by sentiment or speculation. We are informed that the rumour as to some replacement by Japan of its small emergency war notes by silver coin may be well founded, but the movement would most likely be gradual, and there is always a possibility that the fineness of the coin may be lowered. Japan holds a stock of silver—the amount of which is not known. It may be that the assent of the Japanese Parliament would be necessary before the matter could be put in hand. The amount of small notes outstanding is about 230,000,000 yen.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 20th, is as follows:—Pig-iron: There is no immediate prospect of any more blast furnaces going in under present conditions. Coke is still too dear. Cheaper coke and cheaper rail transport of raw materials to the blast furnaces are imperative necessities. The sale of pig-iron is so small that even the present reduced output of foundry iron can hardly be marketed. Prices are as follows:—No. 3 Cleveland G.M.B. pig-iron, 120s; export, 125s per ton. East Coast mixed numbers hematite, 125s per ton. Manufactured iron and steel: Further cuts in steel prices have not brought out any new business. There are not even enough orders to keep those works going which had restarted after the coal strike. One large steel works has had to close down again. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £14; steel rails, £10 10s net. Iron ore: Business is quite insignificant. Consumers' ideas are some shillings below those of sellers. Best rubio nominally 27s 6d per ton, c.i.f.

Our Sheffield correspondent writes:—The state of the local industries continues much the same as heretofore, and speaking generally, there is no relief to the depression. Some branches have, in fact, lost further ground. While the outlook is believed to be brightening, no increased work has yet come to Sheffield. Other districts are, however, more favoured in this respect, as good orders are being booked for tin plates, galvanised sheets, and several black country products, and it is fair to assume that the improvement will extend and eventually reach Sheffield. Inquiries are on hand for iron and steel works plant for India, and an order for a dozen locomotives for South America has been placed in Newcastle. The local railway departments continue exceptionally quiet in tyres, axles, and springs. The home companies have only bought on a hand-to-mouth basis for a very long time, and still refuse to place period contracts. A lot of Indian and South American work which formerly came exclusively to this country has lately gone to Belgium and Germany. A drastic cut in British quotations for steel of all kinds, ranging from £2 10s to £4 per ton, brings the home prices nearly level with Continental. The reduction has not yet stimulated buying, as neither home nor foreign material seems to be wanted just now. That foreign competition has been scotched, however, seems to be taken for granted. A number of steel materials have now dropped to one-half the highest prices recorded during the war period. Wire rods are only a third of the record. British foundry pig can now be bought delivered at rather less than £6, or the same price as Belgian, but of more reliable quality. Business is quiet for all classes of hand tools, there being little overseas trade in any part of the world. Cutlery and silver plate makers are experiencing a slight revival of buying for the Christmas season trade, but business is far from good. Prices are falling in all kinds of goods made from metals. Quietude pervades all branches of the fuel market. The protracted summer weather is encouraging householders to hold off from buying in order to force down prices. Generally speaking, the domestic cellars are empty, and a sudden cold snap might cause a rush of orders creating scarcity. The industrial demand for coal fails to expand, while exports

tend to shrink. Short time is being worked at numerous qualities. The proposal of the Government to extend the guarantee of credits on export trade has been well received here, and people are confident that it is likely to help materially in the restoration of our overseas trade. Foreign and colonial buyers need longer credits now than the manufacturers are able to finance, and for that reason valuable orders have had to be turned down even in cases where the financial stability of the buyers was satisfactory.

Our Glasgow correspondent (writing on Thursday) says:—The week has been notable for an all-round break in the market prices named by makers for leading sections in iron and steel manufactures. The cuts range from £2 to £4, being the most substantial intimated since the reaction from the inflation of last year set in. At a joint meeting of English and Scotch steel producers last Friday, it was agreed to fix quotations for angles (as from Monday) at £12 10s a ton, a drop of 30s; joists at £10 10s, a drop of £3; tees at £11, a drop of £3; round bars at £12, a drop of £2; boiler plates at £16, a decline of £4, and ship plates at £12 10s, a drop of 30s a ton. These figures, however, did not meet with general acceptance, and finally angles and ship plates were called £10 10s a ton so far as English makers are concerned. This handicap of £2 a ton against Scotch makes is expected to divert business to south of the Border; but no doubt if buying sets in Scotch producers will meet the situation. It is reported that a Welsh firm of steel-makers is reducing prices more drastically than above indicated, and that as a consequence they have already booked orders for over 20,000 tons of ship plates. Rumour has it that the firm alluded to is offering heavy rails at £11, a concession of £3, and billets at £10, a drop of 30s. Manufactured copper has been lowered by £2 a ton at £10 10s, and black sheets by 30s at £13 15s for ½ inch, delivered Glasgow or equal. Crown bars are back to £14 per ton. Scotch hematite unchanged at £7 10s; Scotch foundry No. 1, £7 10s; No. 3, £7 5s. Both raw and manufactured material producers advise that the new quotations are without exception below cost, and cannot possibly be maintained for any length of time. The one remedy in their view is a big reduction in costs, to which cheaper coals and lower wages, they contend, must mainly contribute. It is too soon yet to say how the new list quotations will operate; but so far they have had no effect on demand. All steel and iron producing works are experiencing a very quiet time, and a lot of machinery has been thrown idle since Monday. Not a few authorities are hopeful, however, that the situation now created will speedily make for a betterment in matters industrial.

MANCHESTER, October 20.

A quieter feeling has prevailed in the market than recently. Activity has been checked by the easier tendency in raw cotton rates and the fall in silver and the decline in Eastern exchanges. Buyers in all quarters have been disposed to adopt a waiting policy pending more settled conditions. The turn of events is very unfortunate, as at the end of last week there were indications of an increasing trade. Only sorting-up lots have been sold in piece-goods for India. Occasional lines of fair weight have been booked in standard goods for China. The Near Eastern outlets have given less support. Fancies have attracted moderate attention for some of our colonies and the United States. The home

trade is being adversely affected by the unseasonable weather. A slow feeling has prevailed in the yarn market. Prices have given way in sympathy with the decline in the raw material. The turnover has been very disappointing. Less demand has been met with in export yarns.

urgent orders are in the hands of Yorkshire spinners of fine yarn. Merino wool is, of course, needed for these, and it is felt that if larger offerings were made, it would tend to check any further rise in merino tops. Such facts as these need to be kept in mind by B.A.W.R.A. We are satisfied that higher values are undesirable, both in the interests of the home and Continental trades. Manufacturing conditions at home and abroad, measured by the purchasing ability of impoverished Continental nations, do not justify higher values. Anything of a combing character in merino wools has maintained the opening level. Crossbreds, too, have sold steadily, but faulty merino wools, as well as slipes, have met an indifferent reception, and are no dearer than last series. Capes do not show much rise, these wools missing Continental competition. However, the auctions as a whole have made good progress, and it is to be hoped that the present buying spirit and level of values will remain to the finish.

With regard to the necessity or otherwise of increased offerings in London, it needs to be recognised that at the present time the question is one of some difficulty. Obviously the position of home trade and Continental buyers are not exactly identical, and it is not surprising that the latter appear to entertain some doubts about the stability of merino values, particularly if larger quantities are offered. The depreciation in the German currency has made it necessary for all sections of the trade, both at home and abroad, to be very cautious, and it will need the best co-operation of all sections and B.A.W.R.A. to solve the problem as to how much merino wool shall be offered in this country.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Markets throughout the week have been quiet and depressed, and scarcely without exception prices have been pronouncedly on the down grade. Raw linseed oil, in sympathy with seed and in the absence of an effective demand, steadily declined to £25 at Hull and £26 London for prompt and to December delivery, with 20s premium quoted for January-April. At these figures, representing a decline of at least 60s on the week, some business was done, and this, and the reports of American inquiries, induced a steadier feeling later, and some appreciation in value, Thursday's closing price at Hull being £26 10s for spot to December. Nevertheless, the undertone is far from firm in view of the large surplus of unsold seed and the favourable reports regarding the growing crops in Argentina and India. Very little trade has passed in Plate linseed, which has been done at as low as £13 for on passage to Hull, per s.s. "Gambia River," the lowest figure recorded this year and for a long time past. Up to £14 5s for October-November and £14 15s for November-December has, however, been paid.

Cottonseed oil has fallen off in value, and demand has for some days been on restricted lines, at from 30s to 40s reduction. Prices of cotton seed have further receded, Sakellaridis, for October shipment, now offering at £11. New crop, Bombay, has been done at £8 spot and for shipment. Palm kernel oil is lower, as are also rape and Soya bean oils. Consumptive demand seems to have dried up. Oil cakes of all descriptions are in very poor demand, and quotations have again been materially reduced, without, however, attracting trade.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The Bermondsey hide market was slightly weaker on Thursday, and declines of 1/4d to 3/4d were registered, thus bearing out my prophecy of a week or two ago that prices had reached their summit. Best-ox made round about 10 1/2d and lights 8 1/2d. Cows showed a similar reduction, and calf were also a shade weaker. The increase in values has checked the home demand for foreign hides, but Liverpool reports the clearance of the remainder of the Liebig Colon hides at 12 1/2d ex store. Brazils are wanted, and trading has been done in dry B.A.'s at 11 1/2d. All other classes are firm, with stocks moderate. The American market is cabled as strong, with heavy best packers advanced to 15 cents.

Tanners are not at all happy in regard to the position, and, on the whole, are holding out for higher prices, although here and there I know of offers of big blocks of bonds at below marked quotations. Low grade sole leather is still the best selling line, and holders of first selections of 10-12 lbs average are getting anxious owing to lack of demand. The prolonged fine weather checks the demand from the repairers, and this affects the tanners of low-grade stock rather badly. Pinned offal is a moderate sale, but the demand seems here to be running on cheap stock, although there is a demand from makers of best welted shoes for high-grade bellies. The sale of the Government E.I. rough kips is progressing steadily, but there is a poor demand for direct shipment. Rough dressing leather is advancing in price, and tanners of split hides have put their prices up by about 5s per hide.

Business in upper leather is only moderate, the lower grades being most popular. Glacé kid is wanted from 8d to 14d per foot, and supplies are sorgetting low.

Theally 27s 6d ps only moderately well employed, and orders held up owing to the fine weather. The export winding away, and until the exchanges can uselessly to look for much improvement.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 83s 6d to 89s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 76s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 21.

Most of the markets for raw material wore a very drab appearance during the week, slackness of demand from home manufacturers coinciding with the almost closing down of business on export account, owing to the state of rates of exchange in general, but that of the German mark in particular.

SUGAR.—After showing general quietness at opening, business became more extended as prices for case sugars were reduced 6d per cwt, and bags 4d to 4s. Tate's cubes, sold, 55s 3d to 56s 3d; crushed, 51s 9d; nibs, 52s 3d; granulated, 49s 9d to 50s 3d; icing, 53s 14d; ditto, in drums, 52s 9d; caster, 52s 3d to 52s 9d; pieces, 36s to 44s. Lyle's granulated, 49s 9d to 50s; yellow crystals, 44s 9d. Crystallised West India, sold, from 37s to 42s, as to quality. Muscovado ranges from 32s to 37s. American granulated, spot, sold, 48s; ditto, October, steamer, 20s 6d, c.f. and i., U.K. White Java, spot, 46s 6d; ditto, September, steamer, 19s 6d, c.f. and i. Belgian crystals, October, 18s 6d; November-December, 18s, f.o.b., Antwerp. Czecho-Slovakian granulated and crystals, November, 20s; cubes, 23s, f.o.b., Hamburg. Dutch granulated, prompt, 22s; cubes, 27s, f.o.b., Amsterdam. Brazilian basis 80 per cent, November-December, sold, 10s 3d, c.f. and i. A fair amount of business resulted in the terminal market at easier rates. Raw basis 96 per cent. November, old terms, sold, 14s 7 1/2d to 13s 6d; ditto, December, 14s 6d to 13s 9d; March, sold, 14s 7 1/2d to 14s. White, November, sold, 19s to 18s 7 1/2d; December, 18s 7 1/2d to 18s 1 1/2d; March, 18s 1 1/2d. Cuban stocks stand at 1,169,600 tons, against 309,400 same time last year.

COFFEE.—A steady tone prevailed on the spot, and there was a fair inquiry for all the finer qualities. Common, on the other hand, sells quietly. East India good smalls, sold, 106s; middling, 112s; bold, 119s; bold Nairobi, 90s to 110s 6d; bold Toro, 103s 6d. Future delivery market quiet and easy. December, sold, 47s 9d to 47s; March, 49s to 48s 3d; May, 49s 7 1/2d.

COCOA.—Market still quiet, but there is no appreciable change to note in prices. Small transactions effected this week include fine estate Ceylon, and which is now scarce, at 85s per cwt. Butter quiet, steady, at 1s 10d per lb.

TEA.—During the week the larger quantity of 51,000 packages Indian were offered in auction. There was brisk competition for all the finer qualities at full prices, but inferior and plain teas sold quietly even at a further slight concession. 18,410 packages Ceylon catalogued elicited fair support at about previous rates, allowing for general inferiority of quality.

RICE.—Market still very idle, and quotations for the main part nominal. Rangoon, two stars, spot, 19s; No. 1 garden Siam, afloat, 17s 6d. Siam C.I., broken, October-November, 12s, and C. 3, 11s. Rangoon beans steadier. Hand-picked, afloat, steamer, sold, 8s 6d to 9s, as to position; December-January, quoted 12s. Madagascari butter beans, all white, new crop, spot, 19s to 20s; old ditto, 12s. Japanese peas quietly steady.

SPICE.—Pepper market generally quiet. Fair black Singapore, spot, 4d; October-December, steamer, sold, 3 1/2d to 3 3/4d; Aleppy, spot, quoted 4 1/2d; Tellicherry, 5d; white Singapore, spot, 8d; Muntok ditto, 8 1/2d; ditto October-December, sold, 7 1/2d to 7 3/4d. Cloves firm, and Zanzibar, spot, sold, 1s 4d to 1s 4 1/2d; October-December, steamer, 1s 2 1/2d; pimento, spot, done 2 1/2d; flake tapioca, spot, 1 1/2d per lb. Flake tapioca, October-December, London, quoted 15s; fair Penang seed pearl, spot, 19s; October-December, 18s; small sago, spot, 27s to 28s; sago flour, September-November, sold, 14s 7 1/2d to London; and October-December, 14s 6d. Desiccated coconut, flat and spot, sold, 44s 6d to 44s; October-November, 42s 6d. Ginger quietly, steady. Nutmegs and mace without new feature.

FRUIT.—At public sale, 368 tons Valencia raisins were offered, and while good to fine met with brisk support at 3s 10 1/2d to 4s per cwt advance, all the commoner qualities ruled quite neglected. Quarters, ordinary to fair, sold, 129s to 135s; good to fine, 139s to 158s; choice, 161s to 167s; halves, 120s; seedless, 80s to 112s. Muscatels bought in. The market for currants is steady, with fair general inquiries. New Pyrgos sold, 48s to 50s; Patras, 56s to 64s; Vostizza, 70s to 84s. Sultanias steady. New Smyrna, spot, 108s to 130s; choice, up to 140s; Cape, new, 90s to 100s. New layer figs, 125s to 138s; lacouns, 160s to 175s. Dates in fair demand, and firm. Hallowee, spot, 34s; Khredrowie, 22s; Siar, 18s.

JUTE.—Market very quiet, and where business resulted buyers claimed the advantage regarding any alteration in prices. Native first marks assortment, old crop, subs, October-November, Hamburg, sold, £30 10s to £29 10s; lightning subs, ditto, £26 5s to £25; heart subs, ditto, quoted £19 10s; heart subs, top numbers, spot and near steamer, Dunkirk and Antwerp, sold, £21; and lightning subs, afloat, ditto, £28. New crop first grade, October-November, quoted, £33 10s; lightning grade, £29. Hessians slow, 10 ounce, spot, 28s 6d; 8 ounce ditto, 23s 6d. A twills, spot, 83s 6d; B ditto, 72s 6d.

HEMP.—Manila quiet and a shade easier on the week. J grade, October-December, quoted, £39; K, £37; L, £36 10s; M, £31 10s. New Zealand dull of sale. Fair quality, October-December, quoted, £36 10s, and high points, £38 10s.

SHELLAC.—Market quiet. T.N., spot, 325s; December, sold, 322s 6d to 317s 6d.

ISINGLASS.—At periodical auctions there was a good demand, but rates disclosed irregularly. Brazilian lump declined 3d to 4d per lb; tongue, 3d to 4d dearer; honeycomb firm; West India, 2d to 3d easier. Penang and also Bombay fully steady. Saigon, 5d to 1s per lb down. Brazilian lump, 3s 6d to 4s 8d as to quality; tongue, 2s 7d to 5s 6d; Saigon, long leaf, 15s 6d to 17s 6d; Karachi leaf, 3s 2d to 4s 2d per lb.

EGG PRODUCTS.—Market remained quietly steady. Prime liquid yolk, spot, 105s per cwt; albumen, spot, 2s 11 1/2d per lb.

MENTHOL.—Spot, 25s, sellers; Japanese peppermint oil, spot, 4s 9d; aniseed, 2s 3 1/2d; Japanese slab camphor, spot, 3s 11d; Chinese, 3s 10d; crude, spot, 3s 5d, all per lb. Japanese wax, spot, 107s 6d cwt.

COPRA.—The market continued very quiet at irregular and lower rates. F.M.S. Straits, August-October, September-November and October-December, sold, £28 5s to £27 10s, £28, and £27 5s; Ceylon, October-December, London, £28 15s; South Sea Islands ditto, £26 5s; Cebu, September-November, Hamburg, sold, £26 15s to £26 5s. Palm kernels, October-December, sold, £18 to £17 10s and £18.

RUBBER. after being steadier, assumed a quieter tone. Standard crepe and sheet, spot, sold, 10d to 10 1/2d; November-December, 10 1/2d to 10 3/4d; January-March, 10 1/2d to 10 3/4d; April-June, 11 1/2d to 11 3/4d. Fine hard Para, spot, 1s 1 1/2d; ball, 7 1/2d.

OILS.—Linseed easier. Spot, net, naked, 27s 3d; November-December, 26s 3d; January-April, 28s. Rape quiet. Crude, spot, 52s; refined, 56s. Cotton quieter. Crude Egyptian, 45s; Bombay, nominal; common edible, 56s. Chinawood: Hankow, spot (barrels), 70s; and shipment, 68s. Coconut easier. Ceylon, spot, 53s; October-November, 46s; Cochin, ditto, 54s. Soya easier. Oriental, barrels, ditto, 38s. Japan fish quiet. October-November, cases, 22s to 23s. Cod quiet. English, spot, 26s to 27s. Ground-nut quiet. English crushed, naked, spot, 54s; deodorised, barrels, 64s. Turpentine easier. American, spot, 64s 6d; November-December, 65s; January-April, 66s 9d. Rosin lower. American, grade B, 16s 6d; F, 16s 9d; G, 17s; K, 18s; WW, 22s; French, F/G, 15s 9d; H, 16s; W, 16s 6d; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4 1/2d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market easier, and demand very slow. Indian largely nominal. Calcutta, afloat, value £15; October-November, £16 10s. Plate, spot, Hull, £13 2s; afloat, sold, £13 15s to

£13 5s; October-November, £14 10s to £14; November-December, £14 15s; January-February, nearest, £14 15s. Rapeseed weak. Toria, October-November, quoted £18s; real bold Ferozepore quoted £18; brown Cawnpore, £17. Cottonseed quiet, and easier. Egyptian black, October, nominally £11 10s; and white, £11. Bombay, December-January, sold, £8 5s to £8, closing £9 5s. Gingly quiet. Chinese, September-October, Continent, £28. Castor, Bombay, October-November, £19. Ground nuts quiet. Coromandel, machine-dried, October-November, Hull, £22; new crop, December-February, Continent, £21; Chinese decorticated, f.a.q., ditto, Continent, £23 to £24 per ton.

METALS.—Tin was a firmer market last Monday on covering, while cash changed hands at £155 to £157 10s, three months' £158 to £160, but prices moved in a downward direction until the middle of the week under fairly free offers, which were steadily absorbed, these dates declining to £156 15s and £159s 2s 6d respectively. A rather firmer tone prevailed at Thursday's meeting, cash realising £157 2s 6d to £157 10s, early November £157 5s to £157 15s, and three months' £159 5s to £159 15s. At Friday's session a firmer tone prevailed. Cash changed hands at £157 10s to £158 5s; middle of December, £159 10s, and three months' £160 10s to £161, relapsing to £160, while since done at £160 15s. English ingots, £157 to £157 10s. Copper continued lower until last Tuesday, standard cash relapsing to £65 17s 6d, and three months' to £67. The tendency was better during the middle of the week, sellers being reserved. Early November sold at £66 10s, three months' £67 10s. At Thursday's meeting cash changed hands at £66 5s, late November £67, and three months' £67 10s. At Friday's session, standard cash realised £66 2s 6d; early December, £66 15s to £66 10s, and three months' at £67 10s to £67. Electro, £73 to £75; best selected, £67 to £69; strong sheets, £101. Wire bars, £74 to £75. Lead steady at £24 to £23 15s as to position. Spelter rather lower at £26 7s 6d to £26 15s, according to position. Antimony: English regulus, £37 to £40. Aluminium: Home trade quoted at £120; export, £125.

The "Economy" Typewriter

The reason why the Royal is economical, right through from its first cost to its second-hand trading price, is because the machine is designed on original lines in every respect, and not developed from previously existing types.

Every working part has been the subject of endless thought and experiment, consequently the finished product is a triumph of original mechanical and practical efficiency.

Test the even spacing, the clear writing, the perfect visibility, the speed and ease of handling—compare the work—you will find the Royal stands alone in perfect work, adaptability, and durability.

You can easily prove this by visiting us or letting us demonstrate the machine in your own office—we charge nothing.

"Compare the Work."

The Great Alternative

Saner Politics or Revolution.

By LEONARD J. REID, M.A.

PRESS OPINIONS.

"His indictment of the criminal folly of Bolshevism is most effective."—*Morning Post*.
"A sound and rational contribution to political controversy. . . . We recommend every thinking politician to read it."—*Saturday Review*.
"To unsettled and troubled Liberals we would heartily commend it. It is a finely suggestive discussion of certain vexing questions with the solution whereof Liberalism is vitally concerned."—*Liverpool Daily Post*.
"Studiously moderate."—*Economist*.
"Sane and thoughtful writing."—*Daily News*.
"An able plea for a great New Liberalism."—*Scotsman*.

17th October, 1921.

ordinary bills still small, sellers have been able to make their own terms, though some buyers have refused to work below 3½. In fact, the stagnation of trade has at last affected banking profits. No important change is expected in the situation before the Treasury's money position alters.

	Oct. 28, 1921.	Oct. 21, 1921.	Oct. 14, 1921.	Oct. 7, 1921.	Previous Rate and Date Changed.

Market rate (3 mths' bills)	3½	3½	4½	4½	..

* Additional to those offered by tender the preceding week.

The Bank return showed a slight reduction in the stock of gold, and an increase of £231,700 in the circulation, the Reserve being £235,200 lower. Government securities were increased by £7,860,000, and Other securities fell by £4,212,500, so that deposits rose by £3,436,100, £4,696,300 going on to Other, while Public were reduced by £1,260,200. The circulation of currency notes was reduced by £1,028,300 to £311,575,500, which includes £1,837,800 for notes called in, but not yet cancelled. The fiduciary issue is £261,787,600, or £55,767,600 below the maximum.

The following table shows public income and expenditure for the week ended October 22, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	25,804	Supply Services	14,070
		Interest on Debt	4,707
		Sundries	635
		Reduction of Debt	4,717
		Added to Exchequer Balances ..	1,671
	25,804		25,804

These operations decreased the National Debt by the sum of £4,716,736, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 2,739	Treasury Bills	— 30,661
National Savings Certificates ..	+ 350	Public Department Advances ..	— 2,075
Bank of England Advances	+ 27,000	Depreciation fund	— 500
Sundries	+ 450	Surrenders of Bonds, &c.	— 380
	+ 30,139	Other Debt	— 365
			— 33,981

National Savings Certificates to the extent of £875,000 were issued for housing. Property and Income-tax yielded £2,863,000, while Customs and Excise brought in £15,521,000. Receipts from sales of Treasury bonds amounted to £2,739,459.

FOREIGN EXCHANGES.

The position on the foreign exchange market has been as difficult as before, and the outlook is no clearer. The only satisfactory feature to be recorded is a growing recognition of the necessity for reconsideration of the whole question of inter-Allied debts and of Reparation, for until this has taken place an approach towards stability would seem hardly possible. The mark, after remaining steady for the whole week somewhere between 650 and 660, took a sudden jump on the 27th to 710, and yesterday morning had risen to 725, afterwards falling to 700. At first sight this further depreciation would seem inconsistent with the return of the Wirth Government, but the probable reason is the movement of the great industrialists towards the Right, and the improbability of the reconstructed Government being able to obtain the help from them originally promised in raising the foreign currencies required for the spring reparation payments. The spread between spot and future marks, at 1½ marks per month, is ½ mark narrower than a week ago. The dollar has moved erratically, but the rate now begins to show a slight tendency to weaken again. With the causes, however, of the recent movement still so obscure, it is quite impossible at present to make any forecast. From a quotation of 3.94½ on the 21st, the rate fell on the following day to 3.92½, but rose again steadily to

3.96 on the 25th, only to fall back again quietly to 3.92½ yesterday morning. At ½ cent over spot for one month, ½ for two, and 1½ for three, the rate for futures was unchanged on the week. One reason perhaps for the recent strength of the dollar rate may be seen in the September trade returns, which show a very striking diminution in exports, especially to Great Britain. Paris at 54.20 ends the week practically unchanged, after having been down on the 26th to about 53.90. A settlement, although not a very convincing one, would appear to have been reached as to the Budget deficit. Trade returns continue to show a satisfactory decrease in the adverse balance, but the heavy falling off in the import of raw materials suggests that the pressure for purchase will be very heavy when trade revives. At 55.35, as compared with 55.25 a week ago, the Belgian franc shows a slight depreciation as compared with Paris. Forward rates in Paris are 3c per month discount, as compared with 1c a week ago, in Brussels 9c premium as compared with 10c last week. The lira, after moving round about that figure, was yesterday at 100 slightly better than the previous week. Switzerland, which on the falling off of buying from Germany, rose from 21.20 on the 21st to 21.80 on the 25th, has fallen again rapidly, with the rise in the mark, to 21.30 yesterday. Amsterdam, mainly on continued liquidation in Holland, has declined on the week from 11.57 to 11.53½. Madrid at 29.62½ shows a slight improvement; Lisbon, as the result of the revolution, is still weaker at 5½d. Among the Northern countries, Christania at 29.82½ is again rather better, while Stockholm at 17.14½ has gone more rapidly in our favour than for a long time past, and Copenhagen at 20.66 has also somewhat depreciated. Helsingfors at 25½, after being somewhat better, is practically unchanged on the week. In Central Europe Vienna, in spite of renewed promises of help from ourselves and France, and in spite, also, of a new Government, with promises at last of effective financial reforms, has depreciated still further, the London rate (Auslandskrone) being quoted yesterday at 8,000, a new record. On the 24th, the last date for which figures are available, the Vienna (Inlandskrone) rate was 14,425, as compared with a London rate on that day of 7,250. Budapest, as the result of recent troubles, has moved up to 3,000, while Warsaw again, in spite of the Silesian settlement and a real improvement in general conditions, has again depreciated to 17,000. Prague at 380 is again higher, as also is Belgrade at 275, although this shows an improvement on the figure of nearly 300 on the 26th. Bucharest has risen again from 535 to 590, and Sofia is also considerably higher at nearly 600. Athens at 80½ is slightly better, but Constantinople shows a sudden and, up to now, unexplained rise from about 760 to nearly 860. In spite of expectations, the rupee at just over 1s 4½d is again slightly lower, and the position remains obscure, the speculative element still predominating. The yen has remained practically unchanged. Silver has been subject to considerable speculative movements, and dropped heavily during the earlier part of the week. A slight recovery, however, has brought up the price to 40d, as compared with last week's figure of 40½d. The Hong Kong and Shanghai rates have moved in sympathy, being down respectively to 2s 9½d and 3s 11d. Among the South American rates, Buenos Ayres has moved ½d against us to 44½d, as has also Rio to 8½d. Montevideo and Valparaiso, on the other hand, are slightly cheaper.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 to OCTOBER 22, 1921.

Total spent	£ 571,699,589	Raised by revenue ..	£ 513,991,168

EVENTS OF THE WEEK.

OCTOBER 22ND.—Ex-Emperor Karl advances into Hungary. Bulgarian Minister for War assassinated. Mr Arthur Henderson speaks at Southampton. German Cabinet decides to resign.

OCTOBER 23RD.—Ex-Emperor Karl repulsed before Budapest. Lord Grey at Birmingham.

OCTOBER 24TH.—League of Nations Union asks public for one million. Miners' Federation submit proposals to Government on depression in coal industry. Meeting of Irish Peace Conference. Announcement of Committee appointed by Colonial Secretary to inquire into rubber position in British Dominions. Karl captured.

OCTOBER 25TH.—Sir Robert Horne in House on export credit schemes and economy.

OCTOBER 26TH.—Underground companies propose extension of London traffic system. Mr Asquith at Tunbridge Wells. New German Cabinet formed, with Dr Wirth as Chancellor. Mr McKenna addresses bankers at Chicago. Conference of Ambassadors in Paris to decide future of ex-Emperor Karl.

OCTOBER 27TH.—Germany formally accepts Upper Silesian decision.

Stockmarkets have been a little better this week, gilt-edged stocks being helped by the glut in the money market. The recent stream of forced selling appears to have been stemmed.

In the cotton industry there are indications that in some distributing centres dealers are growing short of stocks, but buyers remain nervous. The strength of the raw material remains the feature of the wool trade, and is responsible for supporting Bradford quotations. Spinners of hosiery yarns are active, and consumption of low qualities is increasing. Though the demand from the home trade remains poor, the piece goods trade is improving. In the coal trade household descriptions are in better demand, owing to the colder weather, but steam coal business is still on a restricted scale. Little actual change is reported in any branch of the iron and steel industry, though in some directions encouragement is derived from the prospect of work on the four battleships ordered by the Government. The London hide market is a trifle weaker, and there has been some falling off in leather business. The boot trade is moderately well employed on small orders. In the market for vegetable oil and oilseeds some improvement in tone is noticeable.

Details of news and movements in the principal markets from special correspondents will be found on later pages of this issue.

THE SUBLIME AND THE RIDICULOUS.

SENSITIVE nerves have received once again their weekly quota of shocks in the shape of an attempt by ex-Emperor Karl to regain the throne of Hungary, and a lively threat of a breakdown in the Irish negotiations. Fortunately Karl's mad escapade proved little more than a nine hours' wonder, but the affair serves once more to illustrate the complete failure of statesmen to create an atmosphere of security in Europe in which economic recovery can hope to proceed. The progress of the Irish negotiations has been placed in jeopardy by the foolish intervention of extremists on both sides—by Mr de Valera's telegram on the one hand, and on the other by the intransigence of Ulster stalwarts in the House of Commons. The Prime Minister has undoubtedly pursued the only possible course in deciding to test the strength of this group on Monday by a direct vote, the result of which, we hope, is not in doubt. Whether the obstacle created by Mr de Valera's indiscreet reference to freedom from allegiance can be as easily surmounted is a different question. But it is at least a favourable omen that Mr Lloyd George has not yet abandoned his intention to attend the Washington Conference in person. Cables from the United States suggest that there is an increasing chance that the agenda of the Conference will be expanded to include the main problems of international economics and finance. Contributions to the discussion of two of these problems have been made this week in Chicago, by Mr McKenna, chairman of the London Joint City and Midland Bank, and at Tunbridge Wells by Mr Asquith. Both developed the same theme, namely, that two of the first requisites for an approach towards international recovery are a revision of the Reparations Agreement, and the cancellation by the United Kingdom of the war debts of her late Allies. On the latter subject Mr Asquith said:—"The first thing is to get rid, as between Allies in the late war, of their indebtedness the one to the other. I do not like to use such an expression as a bad debt, because that seems to imply some doubt as to the solvency of the person who is responsible. But it is not a good asset. Wipe it off the slate. You will be none the worse in the long run. It is a speculative, shadowy, contingent possibility, to put it at the highest. Get rid of it, and set free these nations from the burden which hampers, and necessarily hampers so long as it is a contingency, their industrial development and their financial future." Mr Asquith may be over-sanguine as to the immediate effects of debt cancellation, but the step which he advocates is one that we have consistently urged. According to the cables of his Chicago speech, Mr McKenna said, "As to the amount due to the United Kingdom, I am not only not sanguine of receiving it, but if it were within my power I would cancel it.....I don't say the same of the American debts. These must be accepted in the form of commodities, as that is the only way in which foreign debts can be paid if they are to be received at all." Britain's war debt to America, in any case, is regarded by every shade of responsible opinion on this side as a definite obligation, and one which the country is perfectly capable of meeting by hard work and an increase in the supply of goods and services for export. In his second memorandum on the world's financial problems, published in full

this week by the *Manchester Guardian Commercial*, Prof. Cassel dwells at length in one section on the responsibility of these huge debts for the uncertainty prevalent in Europe to-day. To the Professor's main arguments we hope to refer next week.

From the sublime to the ridiculous is a short step. While experts have been discussing these vital problems the House of Commons, by question and answer, has been dragging to light a new batch of absurdities in connection with the Safeguarding of Industries Act. In this matter, as Mr Will Thorne remarked, "we get more nonsense every day." So far no more than the first part of this unhappy measure, that relating to so-called key industries, has come into operation. It was a part which the House accepted with very little discussion. Members were assured that the future safety of the Empire depended upon the establishment or maintenance in this country of certain essential or key industries, and the schedule loosely defining what they were was adopted without amendment. The Board of Trade was charged with the duty of compiling lists of goods which came within the descriptions in the schedule. We have already criticised those lists, but our criticism was mild in comparison with that which the House of Commons now hears every day at question time. The President of the Board bluntly and truly states that he has no option except to administer the Act as it is written; the absurdities are no fault of his. If members of Parliament now come along and say that they had no such intentions, the only reply is that they should have expressed more exactly what they wanted done, or should have left the Board of Trade some discretion in interpretation. The Board has none at all, and the referee who has just been appointed has none at all; both are charged mainly with the duty of administering the Act. If we get, as we do, more nonsense every day, one consolation is that it makes the fatuity of the Act more unmistakably recognisable to the public.

By question and answer in the House we are learning what are some of those essential or key industries upon which in a future war the safety of the Empire will depend. They are, among other surprising things, the glass eyes of dolls and the blown glass ornaments which hang on Christmas-trees; they include toy magic lanterns and other children's playthings, in which figure thick pieces of distorting glass, miscalled lenses; they include the tungsten wire in an electric lamp bulb, though not the bulb itself; a flat shaving glass may enter our ports without creating a national peril, but if the mirror be curved ever so slightly the foundations of the State tremble. Finally, and perhaps most ridiculous of all, lactose, which is used in the preparation of infants' foods, may come in duty free if it be crude and impure, but the lactose that is refined, and of the best quality, and best suited to building up the bodies of future defenders of the Empire, must pay a duty of 33½ per cent. As the days pass the absurdities will multiply, but they will have hard work to surpass the present inglorious eminence of lactose.

All this trouble, and the further troubles that are to come, have arisen through the insistence of the House of Commons upon the withdrawal of all discretion from the Board of Trade. This is one of the dilemmas of Tariff legislation. If it is to be workable at all, large discretionary powers must be placed in the hands of bureaucrats, and the moment such powers are largely conceded abuses tend to creep in. All the absurdities arising from the attempts to administer the Act may be amusing, but unfortunately their humour is tainted with grimness, since their effect is to trammel and congest business at the very time when encouragement of trade is the chief national requirement, and the object of other legislative efforts of the Government.

EXPORT CREDITS.

WHILE the new proposals for stimulating our export trade are under discussion, it is well to see what lessons can be drawn from the practical results of the schemes which have already been in the field. The first edition of the British export credit scheme has been in operation since September, 1919. Under this the Board of Trade was empowered to grant credits to British

exporters "in connection with the export of goods wholly or partly produced in the United Kingdom," to Finland, Latvia, Estonia, Lithuania, Poland, Czecho-Slovakia, Jugoslavia, Roumania, Georgia, and Armenia. The total sum authorised for such purposes was £26,000,000, available up to September 8, 1925. Results were disappointing, the accepted explanation being that importers were deterred from using it by the conditions as regards security imposed by the Board of Trade, while British exporters wanted a guarantee against loss rather than a credit. A second edition was therefore prepared, and has been in operation since June. The main innovations were: (a) that powers were added to "give guarantees" in connection with export transactions; (b) that the scheme was made applicable to the British Empire.

The working of the scheme really depends on the Board of Trade regulations. According to these Bulgaria, Austria, and Hungary were added to the list of foreign countries, but as regards British Dominions it was stated that "it is not proposed for the present to apply the scheme to British India, Ceylon, or British possessions in the Far East" (this for an interesting reason is referred to later).

As regards guarantees, these were divided into two classes: (a) Guarantees to exporters. In dealing direct with exporters the British Government was to guarantee up to a maximum of 85 per cent. of the invoice value of the goods, but to have recourse against the exporter for a half of any loss incurred by the Government, after taking into account the sum actually repaid by the importer, plus the value of the security (if any) which he put up. That is to say, supposing that the invoice value of the goods was £1,000, and that the Government guaranteed the maximum 85 per cent., or £850, then if the importer put up security which the Export Credit Office accepted as worth £400, and if in addition he repaid £250, there would be a deficit of £200. For half of this deficit, namely, £100, the Government would have a claim on the exporter. (The exporter would, of course, also lose the balance of 15 per cent. not covered by the Government guarantee; but this was supposed to represent his profit.) (b) Guarantee to banks. In addition to the above provisions for direct guarantees to exporters, the regulations provided that where business was proposed by banks or credit associations the Government could guarantee up to 70 per cent. against an agreed premium.

Without going into details, it may be said that the administrative regulations were settled after careful consultation with representatives of the business interests concerned. The scheme was, in fact, given the maximum of elasticity, and it is hard to imagine how any Government scheme for assisting ordinary export trade transactions could have been better devised. Yet, in spite of the increased elasticity and the extension to the British Empire, it has quite obviously failed to achieve substantial results. Figures of total credits granted or sanctioned are given in a Business Note.

From this two main conclusions appear to follow. First, no specially created Government Department can improvise the experience or machinery for quickly assessing the credit of any particular foreign importer. This is necessary for handling the business of normal commercial credits. Such business, therefore, is better left to private organisations which have gradually acquired through long years of personal contact and experience the necessary powers of discrimination. The Export Credits Department, with its Advisory Committee, has very wisely tried to protect the Government from non-commercial risks, and as a result its scrutiny of each case has involved such delay as to make business very difficult.

Secondly, except in comparatively few cases, the present stagnation is caused more by lack of purchasing power than lack of credit facilities. To help merchants abroad to acquire goods for which they cannot pay will involve the Government in loss, and actually retard the recovery of sound conditions. The reasons for the exclusion of India from the second edition of the Export Credits Scheme afford a good illustration of these dangers. A large number of Indian merchants were refusing to take up Manchester goods which they had ordered before the fall in the value of the rupee. Manchester exporters were wisely refusing to make further shipments until these goods had been absorbed. If the Government scheme had been used at that stage a very unsound position would

have been created. The extension of the scheme to Portugal has created similar difficulties. The main need, therefore, is action which can create purchasing power in the importing countries, and which in this or possibly other ways will help to convert bad risks into good ones.

To satisfy such a need was essentially the object of the International Credits Scheme of the League of Nations (the ter Meulen Scheme), which aimed not at helping exporters to get rid of manufactured goods, but at restoring the productive power of the impoverished countries. It is, therefore, of importance to follow its practical development. The details of this scheme are now generally known* and for the present purpose it may be briefly summarised as follows. Its main idea is that: (1) The importing Government in each case should create special bonds which it would loan to its own nationals, who would then be able to deposit them as security for foreign credits for the import of raw materials and other primary necessities; (2) that these bonds should have a real value for foreign creditors, inasmuch as they would be secured on revenue producing assets, the gold value of which would have been assessed by an International Commission to be appointed by the League of Nations. The constitution of the International Commission would be such that its endorsement would command universal confidence, while, acting under the authority of the League of Nations, it would be in a specially strong position to guard the interests both of the creditors and of the borrowing Government.

Since the appointment of Sir Drummond Fraser as organiser for this scheme at the end of March, administrative details have been elaborated, and negotiations opened with all potential importing and exporting countries. We notice that Sir Drummond has this week interviewed President Harding. But the practical results to date are again disappointing. Except in the case of Austria, no country has yet applied for the right to issue bonds, and though these negative results are by no means final, certain conclusions are inevitable. (a) The difficulty of devising any satisfactory form for Government intervention in the business of normal commercial credits is again illustrated. The Governments concerned are unwilling to pledge their assets for the sake of assisting private importers, while the latter dislike the idea of having to apply to a Government Department for the securities. It is felt that the procedure would inevitably be too slow for normal commercial transactions. (b) In all the countries concerned (the Central and Eastern European States) public finance is in a far worse condition than private business. It would be impossible, without radical reforms in public financial administration, to put any reliable gold value on revenues collected in the local currency. It is doubtful whether many of these countries are yet ready to take the necessary steps.

The conclusion, in fact, reached by the organiser's office, and endorsed by the Finance Committee of the League of Nations, is expressed as follows:—"At the

* Full details are available in the explanatory pamphlet published by the organiser's office, International Credits, Trafalgar House, Waterloo place, S.W. 1.

present stage no great improvement can be expected as a result solely of providing special facilities for private commercial credits. Private traders and manufacturers of substance are apparently getting without difficulty the limited credits which they can safely handle under existing conditions. It is, therefore, necessary to ask, What is required to improve these conditions? It appears, then, that the results of the Export Credit Scheme and of the ter Meulen Scheme lead to the same conclusions, which may be summarised as follows:—(a) Machinery for stimulating the business of short term commercial credits by Government intervention is not likely to be effective. Nor is this the main requirement at the present stage. (b) On the other hand, the difficulties disclosed would not apply to Government support for special investment credits or loans for capital expenditure, directed to improve underlying conditions (transport, productive capacity, &c.). This is the real requirement at the present stage. (c) As regards the Central and Eastern European States, any assistance should be made conditional on a reform in public finance. How far the new proposals of the British Government, or the ter Meulen Scheme, can be used to meet the requirements disclosed by these conclusions will be considered in a subsequent article.

THE GOVERNMENT AND UNEMPLOYMENT.

(BY OUR LABOUR CORRESPONDENT.)

THE proposals of Sir Alfred Mond's Committee on Unemployment and the plans put forward by Mr Lloyd George complete the Government's programme for dealing with unemployment. The Cabinet Committee's published proposals related mainly to the assistance to be given to local authorities and the conditions attaching to the receipt of Government aid. The Government contribution to local schemes of work is dependent upon local authorities who directly undertake such schemes paying not more than 75 per cent. of the local rates of wages for unskilled workers to those for whom employment is found. This means that in many places workpeople employed on local schemes will be receiving less than Boards of Guardians are being driven to provide for out-relief in respect of unemployed men and their families. The absurdity of the Government's proposal is illustrated by the provision that these conditions do not apply to local schemes which are being put in hand on behalf of local authorities by private contractors, who would pay the standard rate of wages prevailing in the locality. The Government's policy regarding local schemes has created a good deal of dissatisfaction amongst both employed and unemployed workpeople.

The Government's new proposals are on a larger scale. The plan to which Labour criticism has been particularly directed is the Unemployed Workers' Dependents' Fund. This fund is to be raised by a compulsory levy upon workers and employers coming under the Unemployment Insurance Acts, assisted by a grant from the State. Men will pay 2d per week, and women, boys, and girls a penny a week.

To these contributions the employers will add an equal amount, and the State will add 3d per week in the case of men and 2d per week in the case of women and young persons. The levy is to operate for six months, and benefits will be paid in respect of the wives and children of unemployed insured persons. A married worker will receive 5s per week in addition to the 15s payable under the State insurance scheme, and 1s for each child, up to a maximum of four. A married man with four children will therefore receive under the new scheme an additional benefit of 9s per week during the time he is eligible to receive the ordinary State benefit, and when he exhausts the latter, the former will also cease.

It is clear that whatever may be the ultimate effect of schemes for the revival of trade, there will for some time—and perhaps for a considerable time—be a large number of people out of work, and for them provision must be made. The levy scheme is the only new proposal which the Government has advanced dealing with the maintenance of unemployed persons, and there is general opposition to it in Labour circles on the ground that it is inadequate and unjust.

In the first place, those who benefit under the scheme will, in all, receive their ordinary unemployment pay plus a sum varying from 1s 9d per week, the maximum benefit being 24s per week. But this sum is clearly insufficient to maintain a family even on the lowest scale of subsistence, and in consequence respectable citizens will be driven to seek assistance from the Poor Law. It is to be remembered, as Mr Lloyd George admitted in the House of Commons, that savings are being gradually exhausted. Money has been withdrawn from savings banks, and particularly from co-operative societies, in order to supplement the State unemployment benefit. To-day thousands of married men are now at the end of their resources, and notwithstanding the additional benefit from the Unemployed Workers' Dependents' Fund, they must appeal for out-relief to keep the wolf from the door. Recourse to the Guardians, quite apart from the unjustifiable burden which it places on local rates in the case of unemployed workers, is regarded as an unsuitable method of relieving hardship directly due to a trade depression.

Exception is taken to the levy scheme, because it does nothing for those unemployed workers who do not even receive the State benefit. The outstanding case is that of the agricultural workers. The Prime Minister told the House of Commons the other day that "there are some districts where there is a good deal of agricultural unemployment manifested." Workers in agriculture do not come within the scope of the Unemployment Insurance Acts, and the unemployed land worker is in a more desperate plight than those who will become eligible for benefit from the new fund. The scheme is defective also because the Bill does not have regard to the fact that a considerable number of workers have persons dependent upon them who are not their wives or children. The Government's proposal, therefore, is not sufficiently comprehensive to include those who are in dire need of assistance.

Further, though the expenditure necessary in respect of other parts of the Government's programme will be raised from the community as a whole, including both insured workers and their employers, the levy scheme has been singled out as a proposal for which special contributions are to be laid on those who are required, whether as employers or workers, to make what are now substantial contributions to the Unemployment Insurance Fund. Many employers at the present time, though their factories are at work, are losing heavily, and a further charge upon the business of 2d per man per week can only result in restricting employment.

From the workers' point of view the proposal is particularly iniquitous. The scheme is not, in point of fact, an insurance scheme. The characteristic of insurance is that the contributor will, in certain circumstances, receive benefits. But under the Government's scheme a substantial majority of the workers who pay the levy cannot in any circumstances become eligible for benefit, as the benefits are confined to the dependents of married workers. The scheme is, therefore, one which imposes a tax on a section of the community. And unfortunately those who pay the tax are not in a position to do so.

The people who will be required to pay the levy are workers who have already suffered reductions in wages. A very large number of them are working short time, and therefore receiving less than full wages. Moreover, a considerable number are trade unionists who are paying additional trade union levies in order to assist their unemployed fellows. It is not generally recognised that but for the supplementary out-of-work pay distributed by the trade unions, the burden of out-relief would have been considerably larger than it is to-day. In view of what has been done by the unions, and the contributions that their members are now making to supplement the meagre benefits of the State Insurance scheme, the Government's levy is regarded as a mean proposal. The total amount which the contributions of workers, employers, and the State are expected to reach during the six months the Act is to be in operation is £5,500,000, of which the State will contribute something over two and a-quarter million pounds. It is certain that this sum will be raised with far less hardship than the million and a-half pounds to be raised by levies upon the employed insured workers. Mr Clynes, speaking as chairman of the Parliamentary Labour Party, in the debate on the Government's Bill, expressed the general view when he said that it was not a measure "that the Labour Party could listen to with patience as being anything like a substantial contribution to the relief necessary to meet the bitterness of the on-coming winter."

Another of the Government's proposals—and one to which the Federation of British Industries subscribes—is that of the emigration of ex-service men. Mr Lloyd George pointed to the fact that £637,000 had already been expended on a scheme under which 60,000 ex-service men have settled in the Dominions. It is clear that the assistance given was not very substantial, and at the same rate the new proposal to devote £300,000 to this purpose will mean the emigration of about 28,000 men. The scheme, therefore, is not an heroic measure from the point of view of unemployment. But the main objection to it is that the Dominions have their own unemployment problem. The available evidence shows that at the present moment the Dominions are unfavourably disposed towards the immigration of new settlers, except perhaps, settlers with capital! This part of the Government's policy cannot be deemed to be more than window-dressing.

The capital criticism which is made by Labour is that the Government's policy does not touch some of the underlying factors in the present situation. These factors, it is true, call for international action, for obviously questions affecting the German indemnity, inter-Ally debts, national finances, and the foreign exchanges, are matters which require consideration by all concerned. But it is also true that whatever may be done by means of export credits, guarantees, and public works, the world situation will not be permanently improved until some of the leaks are stopped. Our present policy is directed to improving the pumps in order to keep the ship afloat, rather than to the more important work of stopping up the holes. The Labour movement regards the unemployment situation as a manifestation of a disease which has its roots on the Continent, and it would have welcomed a declaration by the Government that immediate steps were to be taken to deal with the larger problem.

CARDIFF SHIPPING SLUMP.

(BY OUR CARDIFF CORRESPONDENT.)

THERE is no shipping centre in the United Kingdom where investors have been so badly hit by the world depression in trade as they have been at Cardiff. Two years ago new capital was subscribed to shipping companies with the violence of a torrent, and the registrations of new companies followed on the heels of one another with unprecedented rapidity. The greater part of the capital came from people who knew little or nothing about the business of shipowning, or of the conditions which determine the profitable or the unprofitable employment of tonnage, but who had been fascinated by tales of fabulous fortunes made overnight by others, and who were deceived by the illusion that the bubble would carry them also to wealth

and prosperity before it burst. Thus, for instance, in June, 1919, over 30 new companies were floated in Cardiff with a registered capital of between £3 and £4 millions, while by the end of that year some 50 or 60 more concerns were registered, involving the public subscription of several more millions. The boom was then at its height, and there were indications that it might continue. Very few, however, of the more experienced of the local shipowners acquired tonnage under these conditions of inflation; they sold far more vessels than they bought; and for what they sold they got prices ranging up to £30 per ton deadweight for vessels which they had built or bought second hand before the war on a basis of from £5 to £7 per ton. It was the shipowner's clerk, the ship store merchant, or the speculative capitalist who had previously been engaged in other industrial or commercial pursuits who led the way, took command of the market, and gave direction and stimulus to the boom. The event has justified the wisdom of the old and punished the daring recklessness of youth and the inordinate cupidity of speculative capitalists.

It is now common knowledge how the shipping bubble burst in the summer of 1920, and how these new tramp shipowning companies were involved in an economic landslide of unexpected suddenness and of unexampled magnitude. It may, however, be of interest to give a few illustrations of how the slump in the market prices of tonnage, in the rates of freight, and in the volume of overseas carrying trade has depreciated the share values of the collier class of tonnage on the Cardiff Stock Exchange. The most disastrous case is that of the Western Counties Shipping Company. This concern began its career in a very modest way with the ownership of one vessel bought in 1915 at a cost of £42,300. In 1919, however, the management launched out into big scale shipowning, absorbed the Runciman-Moor Line of 13 steamers at a cost of £1,804,000, and in February, 1920, the fleet of the Sutherland Steamship Company of Newcastle, consisting of 11 steamers for £1,825,000, and at one leap emerged from obscurity into the position of the largest shipowning company in the Bristol Channel. To finance these deals the capital powers of the company were increased to £3,500,000, of which £2,500,000 was issued in £1 ordinary shares and £1,000,000 in 6½ per cent. five-year debenture stock. Both the share capital and the loan capital were over-subscribed, and just before the purchase of the Sutherland fleet the shares were at 2s 6d premium. The whole undertaking has now collapsed; every penny of the share capital, one fears, has been lost; and of the total debenture capital of £1,000,000 it seems at the moment doubtful whether more than £400,000 (inclusive of £200,000 redeemed early this year) will be returned to the debentureholders. In the financial year ending December last the company made a gross profit of £800,000, but the default of a charterer involving the loss of £45,000, the expenditure of £170,000 in repairs, and the redemption of debentures and mortgages to the tune of £350,000 left the company with depleted resources at the beginning of the present year, and it had not the funds available to comply with the provision of the trust deed requiring the payment in advance of one year's insurance, amounting to £170,000.

The deed was altered so as to enable the company to pay the insurance money in instalments, but this arrangement only delayed the collapse, and a few months later Sir Arthur Sutherland took repossession of his fleet as a security for an undischarged liability of £325,000 in respect of the mortgage arranged at the time of the sale of his fleet, and the debenture-holders appointed a receiver. By this time practically the whole of the fleet had been laid up, and it has since been eating itself away. Sir Arthur Sutherland disposed of his own tonnage on the Baltic Exchange at an average price of about £5 10s, compared with the price of £24 10s per ton d.w. paid for it in February, 1920, while on October 12th last the managers of the Western Counties informed their shareholders that it had been found impossible to formulate a scheme of reconstruction, and that the only course open was to wind up the company. The management, however, has not yet exhausted its resources. It states that after protracted negotiations with the Government of Czechoslovakia a proposal has been made to purchase the fleet from the receiver, and run it as a trading line in conjunction with that Government which, it is alleged, has expressed its willingness to take 65 per cent. of the capital, if required. To carry through this scheme the managers propose the formation of a new company, with a capital of £450,000, which, it declares, is sufficient to purchase the remaining 15 vessels of 94,000 tons, and to provide adequate working capital. It remains to be seen what support will be given to this proposal, but the fleet is still in the hands of the receiver, and the Court has not yet given its permission to sell.

Another case is that of the Maindy Shipping Company, formed in 1915, with a capital of £25,000, and with a single vessel acquired for £36,250. This concern did very well for some years, but after the Armistice it extended its interests so considerably that its last balance-sheet, issued for the 12 months ending last March, showed tonnage assets valued at over £1 million. This company financed its operations mainly through bank loans. Its total issued capital was only £200,000, but on March 31st there was an overdraft of £411,655. The trading profits of the concern had increased year by year, and even in the last financial year they amounted to £161,321, with a fleet of eight steamers of 41,370 tons d.w. Early last year, partly out of its own reserves, and partly by new capital, the company formed a subsidiary concern known as the Maindy Transport Company, owning three steamers and trading mainly in general cargo between the Mediterranean and Antwerp. The total advances to this company amounted to £216,000. The bankers were secured by the fleet of the Maindy Company, but that fleet stood in the balance-sheet on March 31st at over £20 per ton, although the current market price of similar tonnage had fallen to considerably less than half that. Pressure was brought to bear on the company by the bankers, and by realisations the overdraft was reduced to £296,000. In these circumstances the management have informed the shareholders that they do not feel justified in advising them to subscribe any further money for the existing company, but they suggest the formation of a new company with a capital of £100,000 to repurchase

the fleet at current market prices. As it now stands the fleet consists of seven steamers of a total deadweight of 37,510 tons, in addition to which the company hold as security a charge on the four steamers of the Maindy Transport Company, bringing the total tonnage to 43,210, the market value of which the managers assess at approximately £330,000, or £7 12s per ton for a fleet with an average age of 3½ years. Against this there is a bank overdraft of £296,000, which will be increased to £306,000 on the delivery to the Maindy Transport Company of its fourth steamer. Subject to satisfactory guarantees, it is intended that the new company shall carry this overdraft, but the managers consider that with an additional £100,000 new capital their resources will enable them to reduce the bank loan and provide the necessary working capital. Meanwhile, the value of the shares of both the Maindy Shipping and the Maindy Transport is problematical, and the loss in capital is approximately between £350,000 and £400,000.

There are a large number of other companies with overdrafts considerably in excess of the current market value of the tonnage held as security for them, and out of a group of 43 shipping £1 shares not included in the official list only four are to-day quoted at a price over 10s, while approximately 20 of these shares are quoted at prices ranging from 3s to 1s, and virtually unmarketable even at these low figures. Moreover, the market value of 53 Cardiff shipping companies with a combined issued capital of roughly £10 millions, is to-day less than £3 millions. The outlook contains no indication of an improvement; on the contrary, it is the general opinion that the process of recovery will be an extremely slow one, and that in any case it will never reach a point sufficiently strong to carry the weight of the present over-capitalisation. Drastic reconstruction is inevitable, and the probable basis of reconstruction, where that will be practicable, is figured at about 25 per cent. the value of the original capital.

ARGENTINE RAILWAYS.

ABNORMAL circumstances were in a large degree responsible for the remarkably favourable results achieved by the Argentine "big four" railways in the year 1919-20. The grain traffic in that year was quite exceptional, and the companies also benefited largely from favourable exchange. It was not to be expected that these results could be repeated, and the reports for the year ended June 30, 1921, which have recently appeared, look, perhaps, even worse than they really are, because they compare with a year of swollen earnings. In 1920-21 exchange moved unfavourably, working expenses were high, and the companies were not allowed to make the additions to their tariffs which they believed themselves entitled to make under the provisions of the Mitre Law. The reduction in dividend rates, as compared with the previous year, and the dividend records of the companies in recent years are shown below:—

Company.	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
B.A. and Pacific, ord. ...	% nil	% 1	% nil	% nil	% 2	% 5	% nil
Do 5% 2nd non-cum. pref.	5	5	1½	5	5	5	nil
B.A. Great Southern ..	5	4½	4	2	3	7	4
B.A. Western	5	5	3	2	4	7	4
Central Argentine, ord.	5	5	2	2	2	6	4
Do deferred	5	nil	nil	nil	2	6	4

B.A. and Pacific pays no dividend, either on its ordinary shares, which received 5 per cent. last year, but nothing between 1916 and 1918, or on the 5 per cent. 2nd non-cumulative preference shares. The Great Southern and B.A. Western both pay 4 per cent., against 7 per cent. a year ago. Central Argentine ordinary shares receive 4 per cent., against 6 per cent., and the deferred shares, on which 6 per cent. was distributed last year, repeat the blank experience of the years 1915 to 1919. The financial results leading to the wholesale dividend reductions are summarised in our second table.

	Pacific.	Southern.	Western.	Central.
Gross receipts	£ 6,853,624	£ 8,732,527	£ 4,145,130	£ 9,746,664

Inc. (+) or dec. (-) in carry forward	-647,161	-13,437	-47,123	+21,136

The Pacific figures are very doleful, and of the four lines the Central has come best out of a trying year. It will be seen that in order to pay their 4 per cent. dividends both the Western and the Great Southern have to draw very largely upon their reserves. It must, however, be remembered that both these companies added large sums to reserve a year ago. The Western placed £698,943 to reserve a year ago, and this year draws out £500,000, while the Great Southern, which this year draws on reserves for £550,000, last year set aside more than twice that sum, namely £1,230,733. The year's rise in working expenses and decline in gross receipts are analysed in subsequent tables, the first of which shows how various classes of traffic fared in comparison with the previous year:—

	Passenger Train Traffic.			Goods, Merchandise, and Live Stock.			Total (Including Miscellaneous).		
	1920-21.	Inc. or Dec.	%	1920-21.	Inc. or Dec.	%	1920-21.	Inc. or Dec.	%
B.A. Pacific	£ 1,297,905	+ 27,252	+ 2.1	£ 5,255,580	- 1,292,044	- 24.6	£ 6,553,485	- 1,346,603	- 20.4
B.A. Gr. Sthn.	3,270,449	+ 235,312	+ 7.2	4,867,101	- 838,253	- 17.2	8,137,550	- 602,941	- 7.4
B.A. Western	217,318	+ 29,685	+ 13.7	3,146,429	- 1,550,822	- 49.3	3,363,747	- 1,521,134	- 45.2
Central	12,500,201	+ 171,561	+ 1.4	7,133,081	- 164,241	- 2.3	19,633,282	- 1,389,673	- 7.1

Passenger train traffic receipts were comparatively good, especially on the Great Southern and the Central, the fall being due in every case to goods traffic, poor crops and port troubles being adverse factors. We next show how gross receipts have moved in recent years:—

PERCENTAGE CHANGES IN TOTAL GROSS RECEIPTS.

	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
B.A. Pacific	-10.7	-7.0	+1.6	-5.0	+19.2	+19.0	+20.8	-15.4
B.A. Great Sthn.	-16.8	-9.6	+12.3	+3.3	+1.8	+25.6	+20.1	-8.4
B.A. Western	-13.0	-0.3	+7.6	+1.7	+14.8	+30.3	+41.0	-21.1
Central Arg.	-6.6	-5.0	-0.3	-8.5	+17.8	+12.0	+41.1	-0.2

The continuous rise in gross receipts for the three previous years gives way to a universal fall, most serious in the case of the Pacific and Western, but almost negligible in the case of the Central. It will be seen, however, from the next table that the Central, while maintaining gross receipts in so creditable a manner, could not avoid participation in the general advance in the ratio of working expenses to receipts.

RATIO OF EXPENSES TO RECEIPTS.

	1913-14.	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
B.A. and Pacific	62.63	61.70	61.16	65.68	65.30	71.51	69.69	85.68
B.A. Great Sthn.	58.56	60.44	57.04	64.06	76.16	77.96	69.19	81.33
B.A. Western	58.82	59.67	58.22	66.88	75.68	75.08	69.48	90.88
Central Arg.	58.54	58.43	64.53	68.71	73.93	84.60	67.66	79.82

On the past year the Western and Pacific show the largest rises in the expense ratio. Compared with the last pre-war year, the ratio of expenses to receipts has risen for the Pacific by 23.05 per cent., for the Great Southern by 25.77 per cent., for the Western by 32.06 per cent., and for the Central by 21.28 per cent. These figures illustrate very clearly the difficulties of the past year.

Our next set of statistics show how the main classes of expenditure contributed to the general increase:—
(00's omitted.)

	Running Expenses.			Maintenance.			General and Miscellaneous.		
	1919-20.	% of Revenue.	% of Expend.	1919-20.	% of Revenue.	% of Expend.	1919-20.	% of Revenue.	% of Expend.
Pacific	£ 3,527,030	43.0	3.8321	£ 559,159	8.9	1.5958	£ 589,371	7.1	520.8
Great Southern	3,889,818	41.8	4.6802	536,178	8.4	1.9501	852,212	8.9	733.9
Western	2,050,439	39.0	2.7282	84,812	2.0	0.2371	354,967	6.7	361.5
Central	4,228,413	43.3	5.0218	515,173	5.1	2.0037	641,516	6.7	754.1

From these figures it is clear that the main advance in total expenditure comes under the heading of running expenses. Two items, fuel and wages, are mainly responsible. The Great Southern had to pay away about £547,000 more in salaries and wages than in the previous year, and the Central about £600,000, while the Pacific report states: "Our wages bill has been raised by over a million sterling during the last two financial years; by one-and-a-half millions during the last three years; and by £1,700,000 since the end of 1916-17." Fuel cost the Great Southern £318,000 more. The Central and Great Southern both increased their rate of maintenance expenditure per mile of road, as will be seen below:—

MAINTENANCE EXPENDITURE PER MILE OF ROAD.

	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	Average
Pacific	£ 226	.. 248	.. 295	.. 451	.. 414	.. 278
Southern	256	.. 254	.. 367	.. 464	.. 507	.. 314
Western	249	.. 312	.. 422	.. 662	.. 602	.. 339
Central	260	.. 376	.. 426	.. 525	.. 606	.. 375

There is no getting away from the generally unsatisfactory nature of the 1920-21 results, and it cannot be said that much improvement is suggested by the traffic returns for the 16 weeks, July 1st to October 22nd, which are given in our final table:—

	Gross Receipts.		Net Receipts.	
	Amount.	Inc. or Dec.	Amount.	Inc. or Dec.
B.A. Pacific	£ 1,979,000	- 129,000	£ 233,000	- 38,000
B.A. Great Southern	2,375,000	+ 8,000	235,000	+ 24,000
B.A. Western	1,265,000	+ 67,000	158,000	+ 24,000
Central Argentine	2,858,000	- 498,000	..	..

Unless the Argentine Government concedes to the companies permission to raise tariff rates, shareholders must look forward to another year of bad results. By the clause in the Mitre Law, which allows the railways to earn 6.8 per cent. on their capital—a rate of earning which none of the companies even distantly approached last year—the companies would seem to be entitled to raise rates to the extent which they desire. In August last the Argentine Director-General of Railways actually gave the desired permission, but his action was repudiated by his Government, and although negotiations are still going on, the deadlock has not as yet been removed. Lord St Davids, who was in the Argentine in the summer, gave to the B.A. and Pacific meeting on Monday a powerful résumé of the companies' case. He suggested that the Argentine attitude was due partly to the fact that the prosperous railway figures of 1919-20 were misleading. The great Argentine railways, which have played so great a part in the development of the country, have been built and run by British capital. The credit of these railways, as Lord St Davids put it, "is just as important to the Argentine ordinary citizen as is the credit of this Government." The failure to grant justice to the British investor in the Argentine would deal a serious blow at Argentine credit in London; and this aspect of the question should alone be sufficient to cause the Argentine Government to come speedily to a fair arrangement with the railway companies. But even if such an arrangement is speedily reached, shareholders must temper their expectations by remembering that an important part of the companies' current financial year has already passed under unfavourable circumstances.

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

PERU.—The information sent from Lima last month to the effect that the Government of Peru had laid before Congress a Bill for the establishment of a State bank, with a capital of £10,000,000, is merely a repetition of the news published exactly a year ago from another source to the effect that Señor Fuchs, the then Minister of Finance, had presented a report to the Chamber on the institution of a national bank on the lines of the Bank of France. On that occasion the proposed capital was placed at £3,000,000, or, say, 30,000,000 soles. It was suggested that the bank would centralise the State revenue, including customs' receipts. It may be remembered that last May the Government issued an official decree with the object of regulating the banks' rate of exchange, such ordinance containing, among other stipulations, the following provisions:—(1) Banks to retain in the country all capital subscribed since the coming into force of the measure; this measure to apply also to cash in savings' banks; (2) banks to be compelled to retain and apply the money deposited for national work; (3) an inspector to be appointed to supervise the carrying-out of this measure; (4) the banks in agreement with the inspector to fix the rate of exchange. It is not known whether these regulations will apply to the new State bank, but it is presumed so. Foreign banking in Peru has in the past been successful, but since the war some of the foreign-owned institutions have done less well. The German Bank (Banco Alemán Transatlántico), for instance, has had to face a very critical situation, the depositors being informed at the time of the Armistice that while their account showed a total of £510,000, there was available no more than £190,000 to meet their claims. British banks, on the other hand, have carried on a safe and cautious business, the opening of the Lima branch of the Anglo-South American Bank, in July, 1919, in order further to develop commercial relations between the United Kingdom and Peru, having proved in every respect justified. One of the soundest factors in the position of the institutions—the Anglo-South American Bank and the Banco del Perú y Londres—is the close working arrangement existing between them, the present manager of the first-named institution having previously been sub-manager of the other. Towards the end of 1918 the banks taking part in the Government Loan of £P3,000,000 were authorised to make use of the London institutions—the London City and Midland Bank, the London County and Westminster Bank, and Lloyds Bank—as places of deposits to a total amount of £600,000, to be applied to the negotiation of exporters' drafts, and of the drafts offered such banks by the Treasury. The relations existing between British monetary establishments and the Peruvian Government have always been happy, and those institutions stand high in the esteem of the commercial community.

PARAGUAY.—The long-standing depression in Paraguayan trade and commerce is showing few signs of relief, and the paper-money of the country continues to depreciate; to-day it stands at a ratio of 16 to the Argentine paper peso. The Republic depends very largely for its prosperity upon cattle-raising, the export of skins and hides figuring prominently in its business. In practically all of the South American States cattle-breeding has proved less successful than usual this year, the demand for both frozen meat and dried hides having fallen away—probably but temporarily. Another considerable Paraguayan export is the yerba maté, which grows in that favoured land as nowhere else in the world. Even there, however, depression prevails, the shipments of the herb having shrunk very heavily. Exports to the State's chief market, North America, have dwindled from a value of \$1,623,813 in 1920 to \$980,357 in 1921, while the whole of the country's trade with its northern neighbour shows a decline from \$3,058,296 to \$2,188,148 over the same period. Recognising that the economic future of the Republic lies largely in its meat-producing trade, the Government are paying special attention to this form of industry, and are passing legislation covering the free entry of machinery, equipment, and supplies for buildings.

and organisation of additional plants. Moreover, there is to be granted total exemption from export taxes on products, and by-products of these industries, as well as from shipping, navigation, port and dock taxes existing now or in the future, with the one exception of the freight-handling charge on Government wharves. Certain laws will have to be recognised by foreign interests coming into the country, such as keeping their accounts in the National language, which is Spanish, and possessing a legal domicile in the Republic.

CHILE.—While the electrification of the Chilean State Railways is expected to bring about considerable economies in the operating of the lines, commencing with that between Valparaiso and Santiago, optimism does not apparently extend to the belief that these costly undertakings can be made to pay their way. Each succeeding year sees the deficit steadily augmenting, while local critics unhesitatingly pronounce the whole administration of the State Railways to be "scandalously inefficient." It would seem that the idea mooted was to sell out the whole of the systems to a British syndicate, upon much about the same lines as the arrangement entered into with the Peruvian Corporation in January, 1890, the agreement with that company being originally for a long term of years. In the case of Chile, it was proposed to form a company under British auspices, with a capital of £10,000,000, which should take over the railways on lease and grant a loan to Chile of £4,000,000 or £5,000,000 for the purpose of purchasing railway equipment, the greater part of which would naturally have been bought in the United Kingdom. Subsequently negotiations ensued for the supply of a large amount of British railway material for the Chilean State lines against the issue of Chilean Government bonds. It is now just one year since these proposals were discussed, and it was hoped that an arrangement could be arrived at. The Chilean Senate passed a Bill authorising the President to contract a loan of £7,775,000 gold, or its equivalent, to bear interest at the rate of 8 per cent., the whole of the amount to be devoted to the railways. Negotiations went on simultaneously with bankers in London and New York, and in February of this year the Minister of Finance said that if the money were raised it would be repaid with a fund created by the setting aside of 15 per cent. of the gross revenues of the railways involved. A week or so ago it was announced that the Chilean Minister at Washington had accepted a proposal made by a New York banking house to grant a loan for 25,000,000 pesos gold, of 18d (equals £1,875,000) and \$10,000,000 (U.S.) (equals £2,000,000 at par), while the contract for the electrification of the railways would be awarded to Messrs The Westinghouse Electric International Company, at a cost of \$10,000,000. The bonds of \$100 bearing interest at 8 per cent. have been offered in New York by Messrs Blair and Co. at 99, the amount being \$9,500,000.

Business Notes.

Export Credit Figures.—In a written answer in Tuesday's "Hansard" Sir P. Lloyd-Greame gave the following details of the credits already granted under the export credit scheme:—

Countries in Respect of which Credits Have Been Granted.	Advances and Guarantees Sanctioned. £.
Finland	19,354
Baltic Provinces	101,250
Poland	120,246
Czecho-Slovakia	774,445
Yugo-Slavia	280,806
Rumania	1,575,630
Austria	105,656
Bulgaria	55,380
Hungary	354
Portugal	311,100
New Zealand	617
Australia	8,150
Cyprus	470
	3,353,458

It will be seen that of advances granted and sanctioned to date Rumania and Czecho-Slovakia account for more than two-thirds. The classes of goods for the export of which credits have been granted are also set out in Sir P. Lloyd-Greame's answer. The principal items are cotton goods and manufactures £769,966, woollen goods and manufactures £735,875, flax £730,000, coal £339,025, iron and steel and manufactures thereof £270,334.

Coal Output.—The production of coal from the mines of Great Britain in the week ended October 15th amounted to 4,237,600 tons, as compared with 4,287,900 tons in the previous week. The weekly output since the end of the dispute has been as follows:—

Week ended—	Tons.	Week ended—	Tons.
July 9th	2,352,700	September 3rd	4,141,900
July 16th	3,935,200	September 10th	3,939,800
July 23rd	4,334,200	September 17th	4,161,700
July 30th	4,592,500	September 24th	4,273,100
August 6th	3,623,200	October 1st	4,118,200
August 13th	4,536,600	October 8th	4,287,900
August 20th	4,327,800	October 15th	4,237,600
August 27th	4,101,700		

In the week ended October 16, 1920, output was recorded at 4,611,600 tons.

The Finances of Egypt.—During the war the annual reports on Egypt, which were a feature of the administration of Lord Cromer and his immediate successors, were discontinued, to be resumed last year by Lord Allenby. That for 1920 has now been published,* and may be read in conjunction with the note of the Acting Financial Adviser, Mr E. M. Dowson. Following the model stereotyped by Lord Cromer, the present report starts with a useful political and general summary, in which the opportunity is taken of resuming the relations between Great Britain and Egypt. Then follow chapters on finance and other Government activities, and the book concludes with a similar report by Sir Lee Stack on conditions in the Soudan. During the war the Government of Egypt and certain classes in the country made huge profits, which have been estimated at over 150 millions sterling, or 70 per cent. more than the Egyptian national debt. The irony of the situation, however, is that the Government has not been in a position to tax private profits except indirectly, and only to such an extent as enabled it to balance the increased expenditure due to the increased cost of materials and services. The Financial Adviser gives a table to show that the expenditure (including loss on investments) during the seven years 1914 to 1920 has exceeded revenue by two million pounds. In that period Egypt met 99 per cent. of her expenditure out of revenue. "Thanks to the armed protection accorded to Egypt by the Allies and her own co-operation therewith.....Egypt emerges from the most destructive war in the world's history with a slight adverse balance on the operation of her public finances, several years' arrears in upkeep of public works, negligently increased taxation, and considerably increased national wealth." The year under review, however, has been one of severe trial to her administrators. Egypt's external trade depends as to over 90 per cent. on the cotton plant. Not unnaturally, therefore, when cotton rose from 57 dollars a kantar (of 99 lbs) in September, 1919, to 187 dollars in February, 1920, and declined to 20 dollars by February of this year, commerce and public finance suffered severe perturbations. The estimates for 1920-21 provided for a revenue—very nearly realised—of 40½ millions of pounds, and an expenditure as follows:—

	£.
Recurring	32,616,920
New works, &c.	5,654,080
Loss on purchase and distribution of food, &c.	2,000,000

But the Government found itself forced, by the want of food for the large towns and the supposed necessity of safeguarding the fuel supply, to enter the market as heavy purchasers of flour and coal. The slump in prices found them large holders of these commodities, which had to be realised at losses of close on 9 millions and 6½ millions

* Report by His Majesty's High Commissioner on the Finances, Administration, and Condition of Egypt and the Soudan for the Year 1920 (Cmd. 1487).

respectively, with the result that total expenditure at 53 millions has exceeded revenue by some 13 millions. The reserve fund at the end of March, 1920, stood at 16 millions, and after meeting the above deficit, at 3 millions by the end of March, 1921. The revenue for the year 1921-22 is estimated at £36,701,000, and the expenditure at £38,682,000, leaving a deficit of £1,981,000 to be made good by a further draft on the reserve. Even this result has been obtained only by a most drastic reduction in expenditure. The authorities are thus seen to be alive to the needs of the situation, but they will require all their courage and resource, for the latest accounts of the cotton crop place it at a figure lower than any since 1890. This is bound to react disadvantageously on Government finances. But, as the Financial Adviser remarks, with the approval of Lord Allenby, the financial position is fundamentally healthy, and with prudence the threatening danger will be averted. A satisfactory feature is the importance that is being attached to scientific research on practical questions. The report of the Governor-General of the Soudan tells of a quiet, uneventful, progressive and prosperous year. The results of the year's working, compared with previous years, are, in thousands of Egyptian pounds:—

	Revenue.	Expenditure.
1917	2,195	1,902
1918	2,775	2,336
1919	2,993	2,721
1920	4,392	3,532

The Budget for 1921 is estimated to balance at £3,500,000, and a useful reserve fund of over one million sterling has been accumulated.

Payment of Bets by Cheque.—The decision of the House of Lords in the case of Briggs v. Sutters is important to all who indulge in betting transactions, and is interesting to bankers. It will be remembered that some time ago the Court of Appeal in the case of Dey v. Mayo decided that where a cheque is drawn by the loser of a bet in favour of the winner, and the winner pays the cheque into his bank, who collect for him in the ordinary course, the loser may then sue the winner for the amount of the cheque, unless he knows that the winner's bank is collecting merely as agent for the winner, and not as a holder for value, or a holder in due course. The basis of this decision was that Section 2 of the Gaming Act, 1835, gave the loser a right to sue as stated whenever he had paid the money to the "holder" of the cheque. The Court of Appeal said that "holder" meant anyone in lawful possession of the cheque except (a) the payee himself, and (b) a mere agent for the payee, known to be such. These two exceptions must, they thought, be made, because at common law a loser who has paid cash can never recover from the winner, and they assumed that the Parliament of 1835 had no intention of altering that state of affairs, but merely intended to protect holders for value and losers who had paid to such holders. The House of Lords have now decided that these exceptions are wrong; they point out that as a matter of history, in 1835 a loser who paid cash could recover from the winner; it was not until 1845 that his right to do so was abolished. The result of the case is, therefore, that whether the cheque is to bearer or order, whether crossed or not, and whether collected by the payee or his bank, the drawer of the cheque can sue for the return of his money as soon as he has paid the cheque. Unless Parliament intervenes actions by and against bookmakers in respect of their transactions during the past six years are likely to be numerous, and their position is an unenviable one. The decision also affects other species of gaming—e.g., at card games. No bookmaker can now accept a cheque safely; on the other hand, the acceptance of cash may lead to a prosecution under the Betting Houses Act. Altogether the position is an absurd one. Two logical courses seem open to Parliament. Either to make all betting a penal offence, wherever and whenever transacted, or pass an up-to-date Act repealing all the existing gaming acts, and safeguarding the position of those who bet within certain definite limits.

American Cotton Crop.—Our Manchester correspondent writes:—Early this week the Census Bureau of the United States Government published its third report on the amount of raw cotton ginned this season, particulars being given up to October 18th. The amount stated was 5,477,000 bales, against 5,755,000 bales a year ago, 4,929,104 bales in 1919, and 6,811,000 bales in 1918. The figures were not quite so large as expected, and on the report being published prices advanced in Liverpool and New York. It has been contended by authorities throughout this season that the crop has been marketed very quickly, and that henceforward the ginning returns will be very small. At the beginning of this month the Government estimated the crop, according to the condition reports issued, at about 6,500,000 bales, exclusive of linters. In trade circles it is now believed that the output will be quite 8,000,000 bales. During the last week or two there has been more difficulty in maintaining the recent rise in values. It is evident all the bad news relating to supplies has now been circulated, and things cannot get worse. A great deal now depends upon the trade demand as to whether current rates will be maintained.

Rubber and Its Outlook.—An audience of between five and six hundred people, including ladies, gathered at the Cannon Street Hotel, on Wednesday morning, to hear the programme of the Rubber Shareholders' Association, as unfolded by Mr D. F. L. Zorn, a member of the Stock Exchange. The Stock Exchange was well represented; Mincing Lane also sent a strong contingent. The chairman made an admirably lucid speech, which was followed with keen attention, and in the subsequent discussion various minor points were cleared up. The programme includes the formation of a rubber manufacturing company; the provision of propaganda funds, firstly of money and secondly of rubber; restriction of output and forward sales, and a Council of various interests for reviewing rubber matters from time to time. These various proposals were carefully discussed, and the meeting dispersed with the feeling that, at last, something definite is likely to be done for the assistance of the sorely tried rubber industry. Now that the excitement aroused by the meeting is over, the association will settle down to work which is bound to be onerous, a good deal of it difficult, and all of it upheld. The trouble will be to steer between extremes. There are some theorists who advocate a doctrine of the survival of the fittest, but this will not commend itself to thousands of shareholders in companies that cannot be put into the front rank. On the other hand, numbers of the weaker brethren are in need of more money, and reorganisation in times like these, when cash is hard to obtain, savours of a counsel of despair. It will take time and money to get the industry settled once more on its legs. The most promising item in the programme is the first, viz., the formation of a manufacturing concern which shall be able to push the sale of rubber, for all kinds of purposes, into industrial circles that at present are innocent of the produce. The rubber-producing companies are asked to contribute the necessary money on an acreage basis. Here is a plan which carries with it the elements of a businesslike proposition. Of course, it will take time, probably a long time, to establish a factory, or warehouse, as a nucleus from which there shall radiate information and interest

in regard to rubber-made goods. Business experience would seem to be vital to this essential part of the scheme. There are other industries that will strongly object to being jostled by rubber competition with their products, and the association will have a hard time in popularising its goods unless it is fortunate enough to secure the services of exceptional men. That such can be found there need be little doubt. The mere fact of there being a body of something like 50,000 people interested in rubber shares is in itself a firm foundation upon which to work for the spreading of the rubber trade. The shareholder, for instance, is likely to look kindly upon the suggestion that he should use rubber floorcloth if this could be offered him at a price, and with a guarantee of durability, that would compare favourably with the present linoleum. All such progress, however, must of necessity be slow. Rubber shareholders will have to make up their minds to a period of transition before they can expect any definite return to prosperity. It may be fairly assumed, however, that share values have got down to levels at which proprietors are not likely to want to liquidate their holdings unless for special purposes. The meeting of last Wednesday may mark that turning point in the flatness of rubber shares which it has seemed from time to time would never be reached. While only a confirmed optimist would look for any immediate improvement in prices, or in the condition of the rubber industry, it is not unreasonable to see in the present state of affairs a gleam of brighter hope for the future than has been apparent for many months past.

Liquor Control Profits.—A White Paper (Cmd. 1493, price 1d) on the Acquisition and Direct Control of Licensed Premises contains a statement of assets and liabilities as at March 31, 1921, and a profit and loss account for the year ending on that date. The trading profits of the year amounted to £149,709, as compared with £203,299 in the previous 12 months. These figures are arrived at "after meeting all ordinary recurrent charges, depreciation of plant, furnishing utensils and stocks, and writing off the cost of improvements not estimated to add to the realisable value of the properties." From trading profits are deducted sums of £764 for depreciation of leasehold properties, £884 for preliminary expenses incidental to acquisition, £7,361 for London office expenses, and £1,879 in respect of various insurance payments. The actual net return on capital is £138,820. The charge for interest on Exchequer and other balances absorbs £32,321, leaving £106,499 accruing, as result of the year's operations, to the Exchequer towards the replacement of capital cost. Up to March 31, 1921, the aggregate amount accruing to the Exchequer since the commencement of the control undertakings is £541,835, or rather more than 40 per cent. of the capital employed. The White Paper concludes:—The present statement is the last for which the Central Control Board (Liquor Traffic) will be responsible, as under the terms of the Licensing Act, 1921, the existence of the Board is terminated. The Act, however, safeguards the public interests represented in the four State management undertakings by providing that, until Parliament otherwise determines, the Secretary of State and the Secretary for Scotland respectively may continue the schemes of State management instituted by the Board, and by transferring to and vesting in these new authorities the property at present vested in the Board or their trustees.

The Sea Fisheries.—The quantity of wet fish landed by British fishing vessels at the ports of England and Wales in September was 1,036,703 cwts, which, though 330,000 cwts below September last year, is the highest monthly total so far this year. The recovery made from the effects of the coal strike, with its severe limitation of bunkers, is shown by the fact that the August and September landings were each roughly 50 per cent. better than July. For the three months July-September, the third quarter of the year, the landings of wet fish aggregated 2,654,362 cwts, and had an estimated value of £3,544,207, giving an average of 26s 8d per cwt against 29s in the corresponding quarter of last year.

tember the average was only 24s 1½d, compared with 38s 1d per cwt in June during the period of scarcity and high costs of running the trawlers. The comparison of the quarter's average with a year ago, when all costs were very high, shows that prices have been fairly well maintained, and that with a 50 per cent. reduction in wages and bunkers, trawl-fishing has again reached an economic basis, and is, generally speaking, a profitable proposition for those vessels in commission. During the quarter landings by foreign fishing vessels, a marked feature during the dislocation caused by the coal stoppage, have dropped to the average of the first quarter, the September total being only 14,614 cwts. The quantity brought to port by British vessels in the nine months January-September is a long way behind a year ago—viz., 6,809,670 cwts, against 8,694,947 cwts, a decline of 1,885,277 cwts; the value being £12,221,559 (including shell fish, £409,423), against £15,168,132 (including shell fish, £441,683), a decrease of £2,946,573. Approximately half the wet fish was landed at Hull and Grimsby. Undoubtedly more fish would be caught and brought to market were it possible to dispose of it, and this can only be accomplished, and employment given to hundreds of fishing trawlers now idle, by an improvement in the means of distribution. To this end efforts are being made to induce the railway companies to restore pre-war facilities, which consisted, in the main, of special express fish trains, and the payment of carriage forward. At present fish is sent by passenger train at unnecessarily high rates, while enterprise is further stifled by the companies insisting on payment of their charges in advance. Much interest has been manifested at the Humber ports in Danish motor-boats fishing with seine nets. These boats formerly landed their catches at German ports, but find it more advantageous to come to Hull and Grimsby, the exchange, among other things, being in their favour. Their operating costs are small, and they have been commercially successful where larger boats have not. It has been suggested that they will ultimately supersede the big trawlers, but this is seriously doubted by Hull owners, who point out that they are "fine weather" vessels, and totally unsuited to the Icelandic and White Sea fisheries, and equally incapable of withstanding the heavy weather which the steam trawler encounters in the North Sea at certain seasons of the year.

Fifty Years of British Life Assurance.—Our insurance contemporary, the *Review*, has issued for 1921 its Life Chart, which shows graphically the development in the premium income of life offices during the 50 years, 1871-1920. Fifty years, a brief moment in the world's history, though a large slice out of a man's life, has witnessed a very great change in that branch of insurance business which is at once the most necessary and the most directly human. What our ancestors did without it we find it difficult to imagine. They rebuilt London after the Great Fire—there was then no fire insurance—out of the savings in their stockings. But when a young man dies untimely, his stockinged hoard must be lean; there is small provision for widow or children in them. In its development the most necessary branch of insurance has strangely been the slowest. In 1871 there were 62 companies doing ordinary life business, and the largest premium income enjoyed by any one of them was £536,899. In 1920, in spite of amalgamations, there were 86 offices, among which the largest premium income (ordinary) of any office was the Prudential's £8,800,748. It was not until 1890 that any life office collected annually a million pounds in premiums, and 10 years later there were no more than two—the Prudential and the Scottish Widows. In 1910 there were five "millionaire" life offices, and in 1920 no less than 13 sharing between them a premium income of over 25½ millions. The biggest 13 offices in 1871 had collective premiums of £3,833,132. We see, therefore, from this rough summary that the expansion in life business has been much greater during the last 10 years than in the previous decade, and greater during the first 10 years of the twentieth century than in the course of the last 30 years of the nineteenth. Of late, the growth in life assurance and in premium incomes has been accelerated by the falling off in the value of money; the future of most of us calls for a larger provision in depreciated currency than in pre-war sterling.

The Situation in Portugal.—The revolution of last week in Lisbon is the outcome of the impatience of the Democratic party, and of sections more or less outside party politics, at the failure of successive Ministries to fulfil their promises of decreasing the cost of living, and of producing a Budget made to balance by drastic retrenchment, especially in the Civil Service, and an adequate increase of taxation on the rich. For two years there has been no Budget; the latest available forecasts of the deficit for the current year vary from nearly six millions sterling to more than seven millions, taking the escudo at the current rate of exchange, and the population is only about seven millions. The External Debt, apart from the war debt to Great Britain of £18 millions, exceeds £36,287,000; the Internal Debt in June, 1920, at the present rate of exchange was £26 millions; the floating debt, on the same basis, nearly £16 millions. Since then the floating debt has been largely increased, and attempts were recently made to obtain a loan in London. Some months ago there were rumours of a loan from Belgian banks, but they were said to be under Monarchist influence, and a contract was all but concluded with an agent of certain American financiers, but the then Government rejected it because it stipulated that the proceeds should be spent entirely in the United States. Doubts were popularly entertained of the good faith of the emissary, and it was even rumoured that the whole transaction was a manoeuvre of speculators in exchange. The cost of living, formerly low, is now stated to be the highest in Western Europe; the late Ministry, having only a bare majority in the Parliament elected last summer, accepted the support of a reactionary group, rewarding it by Civil Service appointments, and, it is alleged, by illegally favouring the Disestablished Church. The efforts of the Granjo Ministry at financial reform were checked, like those of its predecessors, by obscure intrigues, and its chief declined to "be a Dictator." Revolutionary movements had been kept down for some weeks, but on October 20th a portion of the Army and Navy forced President d'Almeida to dismiss the Ministry, four of whom were murdered. The troops held in readiness to suppress the rising joined it, and the new Government, headed by Colonel Coelho, was accepted by the President and the people without further bloodshed. It contains several ex-Ministers, it is supported by Labour, it denounces the murders, and has arrested Senhor Granjo's murderers; it claims to be outside party, and promises to succeed in the task in which its predecessors have failed. The great cities and the rural districts are quiet, and the despatch of a British and a French cruiser to Lisbon secures foreign residents against danger. The outlook is very uncertain, but the revolution has had little effect, either in London or Paris, on the quotations of the External Debt. Under the arrangement of 1902 it is secured as to about eleven-twelfths on Customs duties, the remainder on the tobacco monopoly, so that its holders have no immediate cause for alarm.

The Anglo-Dutch Year.—It is pleasant to turn from the almost monotonous list of rubber company trading losses to what are under the circumstances decidedly satisfactory accounts of the Anglo-Dutch Plantations of Java, Limited, for the year ended December 31, 1920. In the table given below we set out the profits available for distribution and dividends paid during the past four years, together with the amount of issued share capital:—

	1917.	1918.	1919.	1920.
Share capital	£ 1,163,216	£ 1,286,780	£ 1,286,780	£ 1,930,170
Net profit	81,615	89,317	215,350	147,186
Brought forward	48,483	71,937	58,311	48,475
Available for distribution	130,098	161,254	273,661	195,661
Paid in dividends	58,167	102,943	225,187	144,763
Rate per cent.	5	8	17½	10 on old shares 2½ on new shs. 50,898
Carried forward	71,937	58,311	48,475	

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits ... 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

The capital reserve, which stood at £1,448,675, has been drawn upon during the year, £643,390 having been capitalised and issued as bonus shares. Thus the capital reserve account now stands at £792,232, while investments at cost on the other side are given as £1,303,991. Details of these investments are further supplemented by the interesting information that "the value of these investments at middle market price on the date of the balance-sheet was £1,306,375." The rubber crop amounted to 2,559,004 lbs, as compared with 2,105,195 lbs in 1919, and 1,389,332 lbs in 1918. Records of the tea crop show that 2,083,831 lbs were obtained in 1920, against 2,322,301 lbs in 1919, and 1,862,123 lbs in 1918. Cost price of rubber f.o.b. Batavia works out at 1s 0.039d per lb for 1920, an advance on the figure for 1919, which amounted to 10½d per lb, while selling price is given as 1s 6½d per lb for 1920, as compared with 1s 8d for the previous year.

Copestake, Crampton, and Co.—The report and accounts for the year ended June 30th last of Copestake, Crampton and Co., Limited, warehousemen and lace manufacturers, of London and elsewhere, have just been issued, and reveal a total trading loss of £73,776. In presenting the accounts to shareholders, "the directors wish to express their regret and disappointment that the trading should have resulted in a loss," the reason for which is mainly ascribed to "the unprecedented fall in values." The report continues:—"Under the agreement for sale to the company, the company have claimed from the vendor a proportion of the loss in respect of the period from July 1st to October 12, 1920." This sum amounted to £21,126, and has been paid by the vendor. Net losses for the year are in the circumstances reduced to £52,651. In the prospectus which was issued as recently as last October, past profits, before charging excess profits duty, were stated to be as follows:—

Year ended June 30, 1917	£ 116,974
" " 1918	279,671
" " 1919	234,006
" " 1920	299,853

In commenting upon the prospectus at the time of issue, we pointed out that "the property and plant is taken over at independent valuations, but these are presumably valued on the basis of to-day's abnormal costs.....Stock values are at the high peak of prices. The big profits of the past few years cannot be regarded as normal figures."

The first ordinary meeting of the present session of the Institute of Actuaries will take place on Monday next, 31st instant, at 5 p.m., at the Hall of the Institute, Staple Inn. Mr E. H. Lever will submit a paper entitled "An Investigation into the mortality experienced by life tenants under reversions, with some conclusions drawn therefrom."

THE 168th session of the Royal Society of Arts will be opened on Wednesday, November 2nd, at 8 p.m., when Mr Alan A. Campbell Swinton, F.R.S., chairman of the Council, will deliver an experimental address on "Wireless Telegraphy."

Oversea Correspondence.

THE UNITED STATES.—RAILROAD SITUATION— FURTHER WAGE REDUCTION PROPOSED— FREIGHT RATES—STEEL CORPORATION'S UN- FILLED TONNAGE — GOVERNMENT CROP REPORT.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 14.

DEVELOPMENTS this week seem to foreshadow reductions in railroad rates, but whether or not the downward revision will be general remains to be seen. One thing, however, is certain: according to competent authorities, no extensive lowering of rates can or will be made unless at the same time measures are agreed upon which will assure a corresponding reduction in operating expenses, especially wages. There is a marked unanimity of opinion that lower rates would help to revive trade and industry, and relieve the unemployment situation, which has become so serious in this country. Railroad officials themselves recognise that, notwithstanding a heavy loss in traffic, economic readjustment necessitates a reduction in railroad rates. The chief obstacles to such a reduction, as one official points out, are that the carriers are powerless to reduce wages, and to change working conditions imposed on them by the Government, which are responsible for the continued high cost of operation; and that the decrease of 25 per cent. or more in traffic compared with 1920 has greatly depleted their revenues. The situation confronting the railroads is well summarised by the head of one of the biggest systems when he says that their property investment (fixed by the Interstate Commerce Commission at \$18,000,000,000 for rate-making purposes), "lies largely unproductive, because the industries, the farms and citizens remain unemployed, or are working for only part of the time, or only part of their plants. New capital expenditures for road, equipment, and improvements are at a minimum; maintenance expenditures have been reduced through severe retrenchments, which recognise safety alone in making repairs to road-bed, cars or stations; and employees have been reduced in number since last Fall about 600,000, or over 25 per cent. We likewise see that dividends have been reduced, and in some cases suspended, so that hundreds of thousands of our citizens, and the institutions of saving, learning, charity, insurance, &c., which are dependent on the dividends derived from railroad stocks, have had to share in the business depression." This has resulted, he points out, from a loss of traffic which has brought many Eastern railroads down to the figures of 1912, and which, combined with heavy wages and taxes, shows a return of only about 3 per cent. per annum earned in the last 12 months on the amount invested in the property, notwithstanding the mandate of the Transportation Act, which entitles the carriers to rates that would produce a return of up to 6 per cent. While the railroads showed net operating income of about \$90,000,000 for August, as against a deficit of some \$155,000,000 in the corresponding month of last year, that result was accomplished chiefly through a drastic curtailment of maintenance and other operating costs—a policy that cannot be continued indefinitely if the lines are to be kept in proper condition, and adequate transportation facilities are to be provided.

At their Chicago conference to-day railway executives of the United States proposed an immediate further reduction in wages of all railroad employees, with a similar lowering of freight rates at the same time. It is understood that a petition will be filed with the Railroad Labour Board requesting that wages of all train service employees be reduced sufficiently to eliminate all the increases granted by the Labour Board in July, 1920—which would mean a further reduction of approximately 10 per cent.—and that the wages of all other classes of railroad labour be cut to "the going rate for such labour in the several territories where the carriers operate." The official statement, issued after the conference, declares that, with the approval of the Commerce

Commission, the benefit of such wage reduction will be passed on to the public in the reduction of existing rates. Railroad managements are not disposed to try any more experiments. For that reason they have refused to lower freight rates in the hope or expectation that perhaps increased traffic will protect them from the loss incident to such a reduction. In short, they are not in a position to take any such risk. Just what course the labour unions will now take is, at the moment, uncertain. It is also impossible to foresee what will be the effect of the railroads' move for a further reduction of wages, especially in view of the fact that about 80 per cent. of the union employees have already, through a referendum vote, authorised a strike rather than accept the 12½ per cent. reduction which became effective on July 1st of this year, that reduction having been authorised by the Labour Board. Thus far that strike vote has not been taken very seriously—probably because of the large number of men who are idle, and who could be called on to fill the places of strikers. It is conceivable, however, that the latest developments may precipitate a more or less general walk-out, unless Government authorities can effect a satisfactory readjustment of wages. The situation is complicated and rendered more acute by this week's decision of the Labour Board authorising the railroads to open negotiations with the unions for the restoration of piecework, which has been prohibited by one of the rules of the shop crafts' national agreement entered into under the former Railroad Administration. That decision is very gratifying to railroad managements, but is unsatisfactory to union shopmen, who have strenuously opposed a return to piecework.

Much importance is attached to the United States Steel Corporation's report, showing an increase of 28,744 tons in unfilled orders during September. The total amounted to 4,560,670 tons on September 30th, as against 4,531,926 tons on August 31st, and the increase is the first gain in bookings reported since July, 1920. In many quarters it is felt that the improvement indicated marked a definite turn for the better in the steel industry. Another development which promises to have far-reaching effect in relieving the unemployment situation is the action of the Steel Corporation in authorising its subsidiaries to expend \$10,000,000 for extensions, improvements, and repairs to the various manufacturing plants. This will provide work for thousands of idle men. If other large corporations follow the lead of the Steel Corporation, as seems likely, the number of unemployed will be greatly reduced in the near future.

The latest Government crop returns make a generally unfavourable exhibit. Every important crop, with the exception of beans and buckwheat, is smaller than a year ago, although it should be noted that 1920 was a bumper year. Compared with last year's harvests, corn shows a decrease of 2 per cent., wheat 5.8 per cent., oats 2.9 per cent., barley 19 per cent., all cereals 10 per cent., hay 13 per cent., potatoes 20 per cent., apples 54 per cent., tobacco 34 per cent., cotton 51 per cent., and peanuts 11 per cent. As a well-known authority remarks, "such a unanimity of reduction in yields from the preceding year has rarely been witnessed before in the country's history." Reduced areas and unfavourable weather conditions are given as the reasons for the lower yields. The smaller production, furthermore, is not offset by higher prices; statistics of farm prices as of October 1st show that white potatoes and apples are the only products that are commanding higher values per unit than a year ago.

FRANCE.—REVISED ESTIMATES—INCIDENCE OF TAXATION—LOTTERY BONDS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 25.

It may be taken as a promising indication that M. Briand's recent speech in the Chamber, in which he replied to some of the more pessimistic of the numerous interpellations that have been dealt with during the initial sittings of the reassembled Chambers, has acted as a

tonic to the country. The Premier stated plainly that there is now no fear of any possibility of aggressive action on the part of Germany, and that her disarmament, as a matter of proved fact, is really proceeding satisfactorily. These two statements have had the effect of removing much of the very real nervousness that has been felt throughout France since the Armistice, and of giving rise to more confidence in the future than has perhaps been felt by the mass of the French nation since the war ended. Another helpful passage of the Premier's speech was the stress he laid on the benefit that may be expected to accrue to France from the Franco-German agreement recently concluded between M. Loucheur and Dr Walther Rathenau, with which I dealt recently. It is to be noted that much of the antagonism to such a policy that was originally felt by French manufacturers has already disappeared, and that the belief is growing here that the Wiesbaden agreement may eventually be found to constitute the real corner-stone of the reconstitution of not only the devastated area, but also of France as a whole.

The conflict that has been in progress between the Finance Commission of the Chamber and M. Paul Doumer, the Minister of Finance, in regard to the Budget proposals for 1922 has now been settled, and there seems to be a likelihood that the Budget Bill for the coming financial year will now receive the approval of the Finance Commission, and will come before the Chamber in the near future. M. Doumer's Budget proposals, it will be remembered, left a deficit between revenue and expenditure of 2,500,000,000, which the Minister proposed should be met by doubling the tax on turnover. The Finance Commission, on the other hand, insisted that not only should there be no increase in taxation, but that the whole of the departmental estimates should be drastically cut down, to the extent required to get rid of the estimated deficit. As the result of much strenuous work, M. Doumer to-day presented revised estimates to the Commission, the net effect of which has been to reduce the estimated deficit to 1,200,000,000, or less than one-half the original figure. Most of this modification, however, as will be seen, has been achieved not so much by reducing projected expenditure as by increasing existing taxation. M. Doumer's new Estimates show a direct reduction of departmental expenditure amounting to 151,000,000 (including "cuts" of 107,000,000 in the Army Estimates and 25,000,000 in those of the Ministry of Health).

The bulk of M. Doumer's efforts, however, have been devoted to increasing the estimated yield from income-tax and other sources. He estimates that, by suppressing the existing right of income-tax payers to deduct from their current year's income the amount paid in income-tax in the previous year, he will be able to extract another 200,000,000 from that source, while he proposes to obtain another 191,000,000 by increasing the duties on crude oils, by readjusting Customs duties and by creating a right of control over raw materials entering the country. He proposes to obtain a further 377,000,000 as the result of modifications of other existing taxes, and, as the outcome of a new valuation of the probable yield from the tax on war profits, he now anticipates 500,000,000 more than he had previously estimated from that source. The net deficit of 1,200,000,000, which he estimates will remain after allowing for all this reduced expenditure and additional revenue, the Minister proposes shall be met by increasing the tax on turnover from 1.1 per cent. to 1.60 per cent. As an alternative, in the event of this proposal not finding favour with the Finance Commission, he proposes that a balance shall be brought about by extracting from the Estimates those items arising directly from the war and meeting them by a special loan, instead of out of current revenue.

A careful examination made by M. François Latour, Rapporteur of the Budget for the Department of the Seine as to the relative incidence of taxation for that Department for the rest of France, in so far as taxation on

income is concerned, brings out, according to the Rapporteur, the very striking fact that the Department of the Seine bears under this heading one half of the taxation of the country. The figures that he quotes are as follows:—

	1920.	
	Department of Seine.	Total for France.
	Francs.	Francs.
General tax	513,444,000	740,391,000
Tax on industrial and commercial profits..	208,158,000	456,926,000
Tax on agricultural profits.....	327,000	9,144,000
Tax on wages and salaries	47,203,000	86,411,000
Tax on non-commercial professions.....	5,890,000	13,992,000
Total	775,022,000	1,306,864,000

He argues from this analysis that the incidence of this direct taxation on income is grossly unfair, and draws attention to the uneasiness that he states is felt among the ranks of the agricultural class that is most highly privileged, and he quotes a communiqué recently issued by the National Confederation of Agricultural Associations to the effect that "the present delegates were unanimous in drawing attention to the grave danger of statistics and figures which, for the most part, are incomplete, and the interpretation of which is difficult and often gives rise to very serious error." The communiqué goes on to point out that many of the newly-voted agricultural taxes have been impossible to collect for the reason that it has only been materially practicable to issue the necessary papers to a few of those who should have been taxed. The Finance Ministry are fully aware of the unsatisfactory situation, and a memorandum has been submitted to the President of the Republic in which it is hoped to take special steps to make the recovery of the new taxes possible. The Minister argues notably that watertight compartment between departments must be suppressed.

The subscription lists for the six million new Six per Cent. 500 francs lottery bonds of the Crédit National were opened yesterday. This, it will be remembered, amounts to three milliards of francs, the bonds being issued free from all present and future taxation, both as regards interest, prizes and lottery drawings. The advantages thus offered are of obvious importance in view particularly of the present financial uncertainty that prevails. From the standpoint of negotiation the Crédit National bonds, which may be almost regarded as State funds, have also the advantage that they are easily realisable. The bonds carry two special lottery "prizes" of 500,000 francs each per annum, while the other prizes are distributed equally among the six blocks of a million 500 franc shares. By this means there is one lottery prize a year for every 833 bonds of 500 francs. The special condition that has hitherto never prevailed to this extent has already resulted in a very ready response on the part of French thrift. It may be added that the total to be distributed in prizes each year, apart from the two special lots of 500,000 francs, amounts to 13 million francs. The price of issue is 498f 50c, and the bonds are redeemable, at the latest, in 15 years.

The Bourse has not shown any great signs of brilliance, and it was only towards the end of the week that there were some sign of slight improvement. It is conceivable that this improvement may persist for some slight period, because the amount of speculation at the moment has been so greatly reduced that there is little reason to fear any violent liquidations. Furthermore, in view of the persistent dropping during the last week there have been several cases of advance sellings that will involve fresh purchases. Moreover, as has been repeatedly pointed out in the *Situation Economique et Financière* and elsewhere, money will be tight for some considerable time owing to the numerous issues of fresh capital. The French Three per Cents. mark a slight decline at 55.60, as against 55.70. Banks, after dropping earlier in the week, returned to figures approaching their former level, the Banque de Paris being typical in falling from 1320 to 1285, to finish at 1299. Railways have been irregular and weak, P.L.M. dropping from 755 to 750, Nord from 842 to 831, and Midi from 715 to 705. Shipping has been depressed, Chargeurs Réunis losing 10 points at 525, and Messageries 5 points at 211.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—CABINET CRISIS—EXCHANGE MEASURES—BOURSE—"CATASTROPHE BOOM"—FOREIGN TRADE—COAL.

(FROM OUR CORRESPONDENT.)

BERLIN, October 24.

THE Cabinet crisis is likely to be solved before this appears. The attempt, begun before the Upper Silesian decision, to create a Cabinet on a broader party basis than that of the last Coalition, seems to have failed owing to the refusal of the German People's Party to agree to negotiation with Poland as required by the Entente Note. The attitude of the Centre, Dr Wirth's own party, without which the return of the old Coalition, and probably the formation of a different Coalition, is impossible, is not yet clear. The Cabinet resignation in the form which it has taken seems unnecessary. The form and motives of the resignation threatened between the May ultimatum's acceptance and the Silesian decision were radically different from the present resignation. In May Dr Wirth not only promised to do his best to fulfil the ultimatum terms, but also declared his belief in fulfilment, on condition that industrial Upper Silesia was kept; if any material part of the industrial district was lost he would resign. The implication was that a resignation for such reasons would be accompanied by a declaration that he no longer felt able to execute the Reparations agreement. This declaration has not come, and although (whether Dr Wirth returns as Chancellor or another politician takes his place) a formal protest will certainly be made against the Silesia decision, it is not clear that the official attitude to Reparations will be formally changed. The present question at issue between parties is merely negotiations or no negotiations with Poland.

The question of regulation of foreign exchange dealings is again to the fore. Freedom to purchase or sell exchange was restored in September, 1919, and a rapid fall in the

mark followed, and did not terminate until February, 1920. This first great fall was ascribed mainly to legitimate purchasing of foreign currency by importers who had until then been rationed; but as import of food and materials on a great scale had to come, it is not clear that the exchange fall could have been prevented. The experience of other countries has in general been that the withdrawal of freedom to deal in currencies has not prevented exchange declines, and some countries have relaxed, others entirely abolished, restrictions. A new restricting Bill, not yet officially published, but in the newspapers, provides that purchase and sale of currency and coupons by non-merchants must be carried on through banks, which must report such deals to the Taxation authorities. This Bill is opposed by business men as injurious to trade, and by non-business men on the ground of unfair differentiation. In present conditions "legitimate" export and import trade is primarily an exchange speculation, and if the Bill becomes law the merchant could freely enrich himself by exchange deals in guise of trade deals, while the non-merchant could only do so under difficulties. The Foreign Trade Boards of the wood, chemicals, coarse pottery, railway car, salt, and some other exporting branches have decided only to licence exports that are invoiced in foreign currencies. This system was last year partially enforced with little success; then, as now, it was enforced when the mark was at a very low point. After very rapid falls, a recovery usually comes, and the recovery of March-May, 1920, led to numerous bankruptcies because business men failed to sell their foreign currency bills for the expected quantity of marks. That official bodies should compel business men to follow (in principle) the amateur stock gamblers' rule of buying at the top is one of numerous instances of the confusion prevailing on questions of exchange.

The Bourse last week continued very active, and prices rose almost all round, this despite the fact that the foreign exchanges at the end of the week were much lower than at the beginning, when the top point was reached. This does not mean that the Bourse has emancipated itself from the exchanges, but only that the public, which has hitherto bought stocks when the mark exchange was actually falling, is now buying them in expectation of a further fall, which would bring a further stock rise. The stock quotations index (*Frankfurter Zeitung's*), therefore, on a week which saw a mark recovery had the big rise of from 27,096 to 30,569 (lowest of 1921, 13,493 on March 5th; figure of January 2, 1920, 9,141). The Bourse week has now only three days, of which the middle one is not a full Bourse day, as on it are officially quoted only the "variable papers," which include most active stocks. The 17th witnessed considerable buying by foreigners, the foreign purchases extending for the first time for weeks to bonds, so that the favourite Federal 3 per cents. had a sharp rise. Owing to the eagerness of the public to acquire solid security for their depreciating marks, stocks have been driven far above their dividend value; stocks paying 25 or 30 per cent. sell at 1,000, 2,000 or more. While in general it is the "liquidation value" of a company's assets that attracts, the highest stock prices are brought by expected "Bezugsrechte"—right to acquire shares in new capital issues on favourable terms. These issues must take place in increasing numbers, because of the increasing disparity between turnovers and capital. Commodity prices are now 20-fold up, and where production and the ratio of profit are the same as before the war, a company's profits would be 20 times as great as before the war. As average company capitalisation has only about doubled (for all companies, from 14 to about 29 milliards), the average profit ought to be about tenfold up. Though higher taxes and the larger share taken by Labour (according to Privy Councillor Deutsch from 76.7 per cent. of the sum of wages, taxes, and profits in 1908-17 to 84.9 per cent. in 1919-20) prevent such high rise, the conditions mentioned sufficiently explain the present high dividend percentages, usually varying between 20 to 40, and occasionally rising to 60 and even more.

Last week Silesian stocks were irregular, Kattowitz, Laurahuetten, and Hohenlohe having small drops, and Oberdorf, Caro, and Bismarckhuetten having large gains.

Potash stocks were also undecided. Shipping stocks, which gained much in the former week, kept their gains. Petroleum stocks rose by as much as 600 per cent., and western heavy industry papers by as much as about 250 per cent.; iron and steel papers by 500 per cent., and some textiles and metal stocks by over 1,000 per cent. To-day, without any new exchange influence, there was a fresh wild buying movement.

The "Catastrophe Boom" in business is continuing. The home public, buying goods for the same reason for which it buys stocks, and helped by foreigners, has almost cleared out the retail houses; shopkeepers ration the remnants among claimants, refuse to quote prices for new orders until the limits of the price-rise can be seen, and often refuse to take orders at all. The buying by foreigners for export has taken great dimensions, and it means a heavy loss to Germany as a whole (though not to the individual trader), as measures nominally in force since December, 1919, to prevent "Deutschlands Ausverkauf" are not effective. So while Germany still pays the full world-market price for imports, part of her production is passing abroad at a fraction of the world-market value. A plainer *reductio ad absurdum* of the growing foreign belief in the commercial efficacy of a low exchange could not be devised. These conditions would involve a passive foreign payment balance even if the world-market value of exports equalled the world-market value of imports. The foreign trade report for July in comparison with that for June is:—

Imports.....	19,249,400 double centners, value 7,580 million paper marks.
Exports.....	15,581,837 " " " 6,208 " "
Imports.....	18,235,783 " " " 6,409 " "
Exports.....	15,089,919 " " " 5,433 " "

Details for July are:—

(Millions of Paper Marks.)

A slight improvement appears in Ruhr coal production. The output in 26 working days of September was 7,853,871 tons, daily average 302,072 tons, against 8,068,065 tons in 27 days, average 298,817 tons, in August. Output is still behind that of February, the last month of extra half-shifts, which produced 8,174,606 tons in 24 days, average 340,609 tons, and materially behind that of September, 1913, with output of 9,696,397 tons in 26 days, average 372,938 tons. The number of miners and other employees is 550,052.

CANADA.—CROP CONDITIONS—BUSINESS CONDITIONS—FEDERAL REVENUE—FIRST SURPLUS ON NATIONAL RAILWAYS—THE GENERAL ELECTION—THE TARIFF ISSUE—BANK NEWS—UNEMPLOYMENT—UNITED STATES FISCAL POLICY.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 12.

The value of the western wheat crop has been seriously diminished by the continuance of the inclement weather, which interrupted threshing operations at the middle of September. The weather continued damp, there was no wind or sun to dry the land and grain, and in many districts the latter blackened in the fields. The quality

and value of a large quantity of grain has been reduced, and as prices have been falling the returns which will accrue to the western farmer from the 1921 crop will be much less than was expected a month ago. However, its disposal is putting money in circulation, and as the farmers have to make their winter purchases, business is enjoying a welcome fillip. The northern area of Saskatchewan has enjoyed a bumper crop, and as it has fared better in the matter of weather than adjacent regions, extensive orders are coming into the cities from its merchants. On the whole, there is a brisk western demand for groceries, drygoods, and hardware, and as wholesalers are unloading their stocks, they are able to place new orders with manufacturers. Toronto wholesalers report a good demand for boots and shoes, and clothing of all kinds. In the Maritime provinces, where the harvest has been poor, and the fishing industry is labouring under difficulties, retail trade is only fair, and wholesale trade is reported light. Some manufacturing firms are finding sufficient orders to permit resumption of operations on a larger scale. The stock markets, however, remain depressed and unsettled, and any slight improvement that is recorded is almost immediately followed by a setback. The new plan of collecting the income-tax at an early date in the year puts an artificial glow upon the Federal financial statement for September. It sounds admirable that the current revenue should show a gain of more than 4½ million dollars over the returns for September, 1920, and that the net National debt, which now stands at \$2,332,668,903, should register a decrease of 12 million dollars during the month. The explanation, however, lies in the fact that while income-tax in September, 1920, only yielded \$103,770, this year it was made to yield \$8,272,803. Yet a large part of this increase was swallowed up by a decline in customs returns from \$13,973,207 to \$8,418,185. There was a slight fall in excise returns, and inland revenue sank from \$8,565,953 to \$6,268,195. Ordinary expenditure has been cut during the month from 21 to 17 million dollars, and in the extraordinary account 7 million dollars less was spent on soldiers' settlement schemes. During the first six months of the fiscal year, which expired September 30th, the revenue only declined from \$219,905,211 (the 1920 figure) to \$210,001,046, but as the income-tax returns in the second half will be comparatively small, the final figures on March 31st are likely to bear a worse aspect.

At last a faint ray of comfort has come to the Government from the National Railway system. For the first time since their co-ordination into a unified system the State railways, in which the Grand Trunk proper is not yet included for statistical purposes, showed in the month of August not net profits, a distant dream, but a surplus of gross earnings over operating expenses. The actual figures are as follows:—

Gross earnings.....	\$10,536,461
Working expenses.....	10,489,230
Surplus.....	47,231

In view of the election, the Governmental Press are making the most of this unexpected result, but there is an explanation which decidedly lessens its value. By a strange turn of fortune the depreciation of the Canadian dollar in New York, which embarrasses Canadian traders and travellers, is proving a godsend to the Canadian railways. American exporters in the North-western area of the U.S. have discovered that they can effect large savings by shipping their produce to seaboard, and importing goods via the Canadian routes, and as a result the Canadian railways are reaping a rich harvest from traffic of American origin in a year when domestic trade is very poor.

With Parliament dissolved on October 4th, and the date of the polling fixed for December 6th, the general election is now in full swing, and all the parties are engaged in active political operations. The Premier and Mr Mackenzie King have both been campaigning in the Maritime provinces, and Mr Crerar has been speaking in the West. Mr Meighen, both in his election manifesto and his speeches, has made plain his intention of making the

election a single-track contest upon the tariff issue.

The Progressives insist that the Canadian National Railways must be kept in the hands of the State, and the system given a fair trial under a reformed management. On the other, Mr R. Lemieux, an influential politician, and other French-Canadian Liberals, have come out flatfooted in favour of Lord Shaughnessy's plan for a partnership between the Government and the C.P.R. The Liberal party as a whole is hostile to public ownership, and it is noticeable that the *Montreal Star*, a Conservative paper which has persistently opposed the State system, and often speaks the mind of the financial interests of Montreal, is maintaining a strict neutrality during the campaign.

The bank statement for August shows a reduction in current loans of \$10,000,000 for the month, and a total contraction of nearly 200 million dollars in commercial loans since the peak of inflation was reached in September, 1920. Assets are now \$300,000,000 less than a year ago. In the past year circulation has been reduced about 44 million dollars, and demand and foreign deposits have fallen by 113 and 85 millions respectively. The decrease of 15 million dollars in saving deposits during August is the result of the industrial depression and unemployment, but savings deposits are still 18 million dollars higher than a year ago. The Government of Ontario has now decided to follow the example of Manitoba and enter the banking business on a limited scale in connection with its agricultural credits scheme. It will open sub-Treasury branches, which will accept deposits from the public at 4 per cent. Authority for this step was secured last session, but the Government has no intention of embarking on a general banking business. The deposits will be used primarily for financing short and long-term loans for agricultural development, but any deposits not required for this purpose can be invested in provincial or Dominion bonds or school debentures. Six offices will be opened in the immediate future.

The unemployment situation is still anxious, and immigrants have been coming into the country in large numbers all summer. As soon as the harvest is over the workless contingents in the towns and cities will be swelled by discharged harvesters. The Federal Governments are proceeding with new public works at some points, and are offering to share part of the expense of others with provincial and municipal authorities.

Fiscal legislation at Washington affects Canada's fortunes so seriously that it is being carefully watched. The Emergency Tariff which shut out so many Canadian products expires on November 27th, and meanwhile there is little prospect of an immediate passage of the Fordney Bill which was to take its place. Canadians are hopeful that sufficient opposition will develop within the Republican party to prevent its enactment in its present form, and would experience great relief if it was dropped. On the basis of the trade returns for 1920-21 the Fordney Bill set up duties on \$172,417,955 worth of products which were on the free list on the Reciprocity Agreement of 1911. The latest news is that there is a prospect of the emergency tariff being extended till February.

POLAND.—THE FINANCIAL REFORM BILL—CAPITAL LEVY—POLISH BANKS—LEASE OF THE FORESTS OF BIALOVIESHA—EXCHANGES.

(FROM OUR CORRESPONDENT.)

WARSAW, October 20.

Two days after his inaugural speech, Mr Michalski put before the Diet a Financial Reform Bill, which has already passed the first reading. The Bill contains the following stipulations:—(1) The Cabinet is authorised to abolish all civil and military departments which are causing too heavy expenditure; (2) the Cabinet's decisions, which entail payments by the Treasury, or monetary obligations for the State, cannot be put into execution without the consent of the Minister of Finance; (3) the Minister of Finance is authorised to lease all Government undertakings to foreign or home concerns. Only a lease of the State railways and of factories working directly

for the defence of the country cannot be effected without the consent of the Diet. (4) The Act of December 18, 1919, relating to the eight-hours day is modified. An increase of the working hours from eight to ten is left to the free discretion of employers and employees; (5) the forced loan prepared by Mr Michalski's predecessors is to be replaced by a capital levy; (6) the penalties for the export of foreign currencies, and of Polish marks without a licence, are increased to five years' imprisonment, and the fines to 10 million marks; (7) the Minister of Finance is authorised to conclude at home and abroad agreements which are intended to put the currency on a firm basis.

Some measures in the direction of the realisation of this programme have been already taken. Official motor-cars have disappeared, with a few exceptions, from the streets; the Polish Embassy in Athens has been abolished, and so on. Mr Michalski's Capital Levy Bill is now being discussed by the Financial Committee of the Diet. The assessment to the capital levy will be made according to the following plan:—The ground tax in agricultural districts will be increased in the former Congress Poland 300 times, in the former Austrian Poland 350 times, and in the former Prussian Poland 750 times. The proprietors of houses in the towns will pay a capital levy varying from 20 to 100 times the amount paid as property tax in 1920, according to the different districts. The taxes from industrial and commercial undertakings will be multiplied 20 to 70 times. Joint stock companies will pay a levy of 15 per cent. on their whole capital. Buildings, machines, &c., acquired before 1920 will be assessed not according to their original price, but their value will be multiplied from five to twenty times. Tenants in the towns will pay twice the rent for 1921. Proprietors of motor-cars contribute to the levy one million marks for motor-cars of more than 15 h.p., and 750,000 for smaller cars.

The characteristic feature of Mr Michalski's plan consists in the fact that the assessment is based on what the Minister has called "external appearances." This is certainly a very primitive method, but experience has shown that the country is not yet ripe for a more complicated system. A second innovation of Mr Michalski's plan is the co-operation of local authorities in the collection of the levy. The financial authorities are fixing the amount of the levy paid by the proprietors of rural holdings and estates not individually, but for the whole village. The parish is responsible with its whole property for the collection of the tax which is distributed among the individual members. For covering the expenses the parish receives 2 per cent. of the collected amount. The levy from the tenants in the municipal districts is gathered equally by the local authorities, who keep 25 per cent. for their own use.

According to the report of the Polish Union of Banks, 18 new credit institutions, with a capital of 436 million marks, have been created in 1920. Actually the banks are distributed as follows:—

	Number of Banks.	Branches.	Subscribed Capital. Million Polish Marks.	Reserve.
Former Russian Poland	29	116	998.5	373.3
" Prussian Poland	13	50	552.5	240.6
" Austrian Poland	13	42	483.6	94.1
Total	55	208	2,034.6	708.0

Of the 208 branches 30 are situated abroad. There is a marked tendency among the greater banks to open branches in the United States, Holland, France, and Belgium.

The Government intends to lease the forests of Bialoviesha to a foreign concern. The Ministry of Finance, which is conducting the negotiations, has received, according to the *Kurjer Polski*, three offers from an English, a Dutch-Swedish, and a German group belonging to the Stinnes concern. The former Minister of Food, Mr Grodriecki, has left Warsaw for London, with the object of bringing the negotiations to an end. In the case of a conclusion of the agreement, the Polish Government would receive, according to the reports of the Press, an advance of one million English pounds. The forests of Bialoviesha occupy an area of 90,000 hectares. The

Laro, and Bismarck

quantity of timber in this district is estimated at 34 million cubic metres.

The foreign exchanges continue to move spasmodically, as shown by the figures below:—

	English £.	American Dollars	French Francs.	German Marks.	Austrian Kroner.
October 11th	19,400	5,100	365	42.00	172.50
" 13th	15,500	3,850	300	31.00	..
" 15th	17,000	4,400	335	33.00	184.00
" 18th	16,000	4,250	300	22.50	..

A pronounced downwards tendency of the exchanges is noticeable. Since the end of last month the English pound has declined 10,000 points, the American dollar by 2,550 points. The German mark has lost more than 50 per cent. of its value. This rise of the Polish mark, accompanied by the announcement of the capital levy, had a very depressing influence on the quotations of all securities. Industrial and mining shares have declined by 25 per cent., and it is generally believed that the movement will continue in this downwards direction. The quotations of banking securities alone have been maintained.

SWEDEN.—NEW CABINET'S PROPOSALS—FINANCIAL AND COMMERCIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 17.

SINCE my last report the country has received its second Socialist cabinet, consisting of most of the members which sat in the earlier Socialist Government. It is generally considered that the portfolio of finance is in good hands with M. Thorson back in charge, and it will no doubt require his energy and skill to bring the ship of State back to its bearings again. The first measure of the new Government was to announce its programme, the main features of which will be no increase in import duties, no encouragement of fresh inflation, temporary protection against abnormal foreign competition, probable measures to improve the sale of Swedish products in foreign markets, particularly Eastern Europe. The announcement says further that proposals are expected shortly from the committees which during the previous Socialist régime were entrusted with the investigation of the socialisation problem, industrial democracy, and control over the trusts, and that a lively discussion will no doubt follow on these proposals. For the third time during the intense depression the State Bank has lowered the discount rate to 5½ per cent., and the private banks are following suit. Practically all interest in business is centred on the exchanges. The German Reichsmark is going down at a terrific pace, and has lost all support. The general idea is that it will go down to the level of Austrian crowns or even Polish marks. To-day it changed hands in the open market at 2.35, or perhaps even lower in some instances. No doubt the new position in Upper Silesia will be indirectly felt in Sweden. Sweden has for years been an important supplier of iron ores to the Upper Silesian works. This industry is stopped for the moment, miners are idle, and shipping berths empty. Other foreign exchanges have all gone in the opposite direction. Meantime, commerce between Germany and abroad is severely hampered. The German works, as soon as the exchange moves adversely, stop the execution of all orders and raise prices. This is done from one day to another, often three or four times, and is the reason why so many Swedish firms refuse to deal with Germany. There was an improvement in foreign trade during August last, there being an export surplus of almost 10 million kroner. Particularly conspicuous are timber and paper, whereas machinery and other manufactured articles are insignificant. On the whole there is no improvement in industry, and will not be so until the new agreements have been settled after the new year. It is feared that the coming winter will be the hardest one experienced. In the North the woodcutters will be out of employment, as the yards are crowded with stocks of timber sufficient for another season at least. The Swedish sugar trust has decided to lower its dividend to 6 per cent. The production of sugar is expected this year

to exceed the home consumption by 70,000 tons, but hopes for cheaper sugar seem likely to be disappointed. The benefit will go to the beetroot growers who by State agreement are entitled to fixed prices for their products.

JUGO-SLAVIA.—EXCHANGE AND BOURSE—INTERNAL AND EXTERNAL LOANS.

(FROM OUR CORRESPONDENT.)

BELGRADE, October 12.

THE rates of foreign exchange on the Belgrade Bourse have been rising continuously and rapidly during the past few months. On June 1st the cheque on London was 128, on July 1st 140, on August 1st 158, on September 1st 168, and on October 1st 215. The currencies of Western Europe—i.e., French francs, Swiss francs, and Italian lire—show a similar increase. The currencies of Central Europe, with the exception of the Czecho-Slovakian crown, are, on the contrary, decreasing in value. Thus the German mark fell in Belgrade from 53 on June 1st to 49 on October 1st, the Austrian crown from 5.57 to 2.49 dinars per 100 crowns for the same period. Here it is not thought that the dinar is falling in sympathy with the mark or the crown. The rise of the Czecho-Slovakian crown seems to prove that the currencies of Central Europe are not necessarily bound together, and that with an increase of national production and with a good financial policy it is possible to improve the value of a currency without considering depreciating currencies of neighbouring countries.

The fall of the dinar is due to a bad harvest, which does not give sufficient surplus for exportation. Many merchants had counted on a fall in the price of foreign currencies in the autumn in consequence of heavy exports. Their hopes have been sadly disappointed. Not only have actual exportations, now at their minimum, to cover present imports, but they have to cover also those previously effected in the spring and summer which were not paid for at the time. Jugo-Slavia is an agricultural country, and a good or bad harvest is a factor which decides the fluctuation of rates. Altogether, the fall of the dinar has caused a great unsettlement, and energetic measures are required to arrest this fall.

The first measure has been to control the sale of foreign cheques to stop speculation. After having allowed complete liberty in the month of August, the Government returned to restrictions on September 23rd. Only authorised banks may buy or sell cheques. Exporters of cereals, cattle (livestock), meat and grease, leather and skin, wood, dry or conserve fruits, and eggs, have to hand over to the Government one-third of the foreign money which they receive from the sale of their goods. The export of foreign money is prohibited except for travellers, who may take with them 3,000 French francs or that equivalent in other money. The purchase of foreign bills is allowed to importers without limit as to amount, but they must engage to import merchandise to the amount of the bills bought.

Another measure which has been considered in connection with improving the value of the dinar is an external loan. The Government has requested and obtained from the Deputy Chamber permission to commence negotiations. Proposals from certain foreign groups have already been received. It appears that the Minister of Finance himself will go to London to examine the possibilities of such a loan.

A third measure relates to the clearing up of the public finances. The projected Budget for 1922, in its original form, foreshadowed an expenditure of seven milliards of dinar, as against receipts of five milliards. Means are now looked for to make up this deficit so as to avoid borrowing further from the National Bank. Some relief has been found in the issue of the 7 per cent. interior loan of 500 millions. The subscription lists opened on September 1st, and will close October 15th. It has been announced that up to date 300 millions have been subscribed by the public. Several days remain which may sensibly increase this figure. In any case, the Syndicate of the Jugo-Slav Banks has undertaken to subscribe any unsubscribed balance. This loan will be employed for the construction of new railways and the improvement

of those already existing. Consequently this expenditure will not appear in the ordinary Budget. All these measures, when carried out, should improve the value of the dinar.

Letters to the Editor.

A NEW TAX SYSTEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring again to my recent paper on this subject, the arguments contained therein are not intended to be advanced on behalf of the rich landlord or the retired capitalist. They are put forward with the desire to assist in the restarting of industry, and thus on behalf of all those interested in industry. One of the co-operators in industry is capital, and without a free and continuous flow of capital for renewals and extensions industry cannot be maintained and increased. It is industry, and industry only, which provides employment.

For this reason I have suggested it is a fatal mistake to pull down and destroy the big incomes. The owner of capital which is earning, say, £50,000 a year pays, to-day, in British income-tax and super tax alone about £28,000. Ten or twelve years ago he paid about £2,800, or one-tenth of that amount. At that time the owner of this capital retained, therefore, about £25,000 more in his hands than he can retain now, and this £25,000 was almost certainly re-invested in industry; the reason being that capital is never idle. Nowadays, the £25,000 additional taxation upon this particular capital-earning goes into the Exchequer, and is used for Government expenditure of various kinds. Industry has lost the benefit of the money required for maintenance and extensions which would have been supplied by the re-investment of this large sum. And is not this being repeated in thousands of cases all over the country?

The true foundation of taxable capacity is undoubtedly production—the artificial supply of man's wants—that is to say, profit arising out of the co-operation of human effort and capital. Wherever production is found, it has some capacity for taxation without doing serious harm to our great industrial system. It has been suggested to me that a business with a revenue amounting to £10,000 a year might find its production total £8,000. A 10 per cent. tax would be £800, which might be hundreds a year more than is now payable on the annual profits and on the salaries of the staff. That might be so, but I think there is something wrong with that business.

Supposing the amount of £10,000 revenue is accounted for by materials and other expenses £2,000, wages £7,000, annual profits and the salaries of staff £1,000. If this represents the fair average results of the business, the present income-tax payable might amount to no more than a couple of hundred pounds. A 10 per cent. production tax, however, on the total of the wages, annual profits, and salaries of staff would be £800. But again I say that there must be something wrong with that business. It is not paying its shot. If it cannot contribute, in common with other sources of production, to the needs of the country an amount equal to 10 per cent. of the annual value arising out of the human effort and services of the capital engaged in the business, the business is not worth carrying on. The co-operators, if they cannot make it do better, should turn their attention to something more profitable.

I am assuming, of course, that all the co-operators in that business have given good and efficient service in return for their shares, whether these be in the form of wages, salaries, or profit to principal, and that the division of the production between them is on a fair basis. It is possible, no doubt, that the business may be badly organised, or run on uneconomic lines, and if the imposition of a 10 per cent. production tax should help to bring that fact to light, it would, in that respect, be in no way detrimental to the real interests of anyone connected with the concern.—Yours, &c.,

London, October 26th, 1921.

P. D. LEAKE,

REAL WAGES IN GERMANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Alfred Levinger's criticism of my figures (not my assertion), showing that (at the time my article was written, September 5th) German real wages were higher than before the war, is based on several confusions of principle.

The chief confusion is between the real wage and the real income, which later in Mr Levinger's letter appears as confusion between the real wage and the standard of living. Mr Levinger complains that while I gave figures from the *Frankfurter Zeitung* to show that the real wage had risen, I did not quote this newspaper's comment that one must not conclude that the income of workers had risen, the reasons being the reduction of working hours from about ten to eight, and the "stretching" of work which had become necessary in many industries.

These two factors do indeed diminish the real income and the standard of living, but not the real wage. The nominal wage in the indexes used is a time wage, and the real wage calculated therefrom must be a time wage. "Stretching" means rationing work in bad-trade times between a too-numerous working staff, so that employees work only part of the day, or on less than six days a week. This is partial unemployment, and it has nothing to do with the real wage, though it diminishes the nominal income, and, therefore, the real income, and thereby lowers the standard of living. Mr Levinger's personal observation that the standard of living has declined since 1914 may therefore be correct, if he observed families whose wage-earners were only partially employed.

Mr Levinger's other arguments are equally erroneous. He says that "it is difficult to understand how the Government's cost of living figure of 1045 for the end of July, 1921, against 100 in 1914, can be correct when the *Frankfurter Zeitung*'s figure of wholesale prices is 1685." Mr Levinger should know that in a time of rapidly rising prices, wholesale indexes always keep ahead of cost-of-living indexes. The best instance is that while the price of American cotton at Bremen rose from 17 marks a kilo in April to 87.40 marks on October 17th, the price of cotton yarn rose only from 85.90m to 118.123m (October 15th), and the price of cotton cloth from 6½-7m to 14½-15½m, while the price of cotton goods in Berlin retail houses has so far hardly risen at all. Coffee is an entirely imported product, governed (apart from minor world-market price movements) by the mark exchange. The mark exchange since the beginning of April has fallen from 62 to 167 to the dollar, and the price of coffee imported to-day would be nearly three times as high as in April. But the retail (cost-of-living) price of coffee has risen since April only from 23 to 28 marks. These figures sufficiently explain what ought not to need explanation.

Mr Levinger next provides his own cost of living index figure of 2130 in preference to the German Government's 1045. He does this without any statistical basis whatever, but on the basis of certain propositions, which he introduces with the word "Assuming." Surely he must know that indexes are not compiled in this way.

YOUR BERLIN CORRESPONDENT.

PAYMENT OF INDEMNITIES AND UNEMPLOYMENT

TO THE EDITOR OF THE ECONOMIST.

SIR,—Whether there is confusion of thought on Mr Leaf's part or on mine does not, I think, seriously affect the main point of difference between us on this matter of payment of indemnities, so it will be sufficient for your readers to judge between us for themselves.

Failing, as I still do, to see that the confusion is on my part, notwithstanding a real desire to understand Mr Leaf's position, it seems to me that the views of leading statesmen and leading organs in the Press quoted by him are thoroughly justified. I am glad that we are in agreement in hoping that our country will not ask the United States to cancel our debt, and as far as I can see at present, in the absence of agreement on the part of our creditors, we cannot refuse to pay our home debt.

That being so, Mr Leaf is no doubt already being taxed

to pay off the debt with interest, so that if he happens to hold any of the National Debt, he is helping to pay off the debt to himself. I feel that it is unfortunate for him and for myself too, as taxpayers, that it appears it will be necessary for us to bear the whole burden of repayment of the debt we owe without any assistance from the repayment of debt to us, but if I am right in my reasoning it will be the lesser of two evils, as long as the incidence of taxation is equitable according to the capacity of the individual to bear it. In that case it will be distributed over the whole nation, and those who do not pay out of accumulated wealth will have to do so by means of work.

As, on broad lines, the principle of a living wage is accepted, the result will be more or less remunerative employment for all willing to work, but no doubt also a reduced standard of comfort for all measured by the amount of the taxation, instead of unemployment for a large section of the community, and much lighter taxation for the remainder, because of the virtually free gifts of goods and services our debtors were being forced to send to us.

A working nation would be a strong nation, and that fact, coupled with the goodwill which would be the gradual outcome of growing and mutually advantageous trade with late enemies, would be the best guarantee for the world's future peace, whereas I am convinced that the payment of a substantial annual tribute by our defeated enemies would be a sure source of growing illwill towards us, containing, therefore, a standing menace of future war.—I am, Sir, yours faithfully,

MARK B. F. MAJOR.

London, October 24th, 1921.

GERMANY'S EXPORT POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your Berlin correspondent takes exception to the remark made by Mr Burgess before the American Tariff Commission, viz., "it has been definitely stated that on all pottery sales the German manufacturer is required by his Government to add 150 per cent. to the price at which he would otherwise be willing to sell to the American buyer, and that the Government in turn levies a tax of 90 per cent. on this added 150 per cent."

That there is this 150 per cent. added on to all pottery sales for export is without question, as Mr Burgess's evidence was confirmed by other witnesses who are dealing with these matters in the everyday course of their business. The explanation may be this: German industries are now organised into Cartels, and these Cartels are grouped under the Economic Council at Berlin. It is conceivable that the "supplement" which your correspondent admits is imposed by the German Government to make up the difference between the home price and the price of foreign produced goods works out in the case of America at 150 per cent., and has been fixed at this figure by the Economic Council. That this is possible is borne out by facts within my knowledge. I sent a representative over to the last Leipzig Fair to find out the conditions ruling in Germany. This gentleman had been for over 30 years before the war an importer of German goods, and during that period had attended nearly every Leipzig Fair; consequently he was well acquainted with the German manufacturers. He reported that in the pottery trade German workers' wages were* ten times what they were pre-war, that the cost of living was not quite nine times—figures which agree closely with those given by your Berlin correspondent recently. He further stated that articles which he used to import pre-war in large quantities for three marks per dozen were then 75 marks, or 25 times as much. As wages had gone up only 10 times, it is fair to assume that the German manufacturer could have sold at a reasonable profit at 10 times his pre-war price, for wages form by far the greatest factor in the cost of production, and as land, buildings, machinery, plant, &c., would be at the pre-war figure, the German manufacturer, if he got ten times his pre-war price, would be doing quite well. That is to say, he

* April, 1921.

could have sold these articles, which cost 3 marks per dozen pre-war, at 30 marks, but the price he was asking was 75 marks, which happens to be exactly 150 per cent. over the price at which he might reasonably be supposed to be able to sell. The exchange then was about 240 marks, and at the price of 75 marks these goods could have been sold for about 6s in England, or double the pre-war price of 3s. Our costs in England have gone up about three times, so that a 3s article will now cost about 9s. The German manufacturer, therefore, was in a position, notwithstanding he was getting 25 times his pre-war price, to undersell us by 33½ per cent.

Mr Burgess gives various examples in his evidence which pretty well bear out the above. For instance, plates which were sold pre-war in Germany at 3.50 marks per dozen, for both home consumption and for export, and which are now sold for home consumption at 49.50 marks†, can, after adding this 150 per cent., and, in addition, duty and freight, be landed in America at \$2.88, whereas the closest selling price of a similar American product is \$3.90 per dozen.

So whether you call it a "supplement" or a "tax," it comes to the same thing—that there is an enormous margin brought about by the depreciated exchanges. Your correspondent denies that the Government taxes this. It may possibly be that the Budget shows no such tax specifically, but again I say it may be collected through the Economic Council at Berlin. At any rate, it is quite incredible to suppose that the German Government would allow the German manufacturers to pocket this enormous unearned increment on their total export sales, and Mr Burgess's statement that 90 per cent. of this goes to the Government (in some way or other) may well be correct.

Mr Burgess is a very able man, and was for many years the American Consul at Stoke-on-Trent. He has recently been engaged on an exhaustive report on the pottery trade in Japan for the American Government; he is therefore a man of authority, and is not likely to make a statement which is not substantially correct.

I would point out to your correspondent that it is not a question of what the 1920 Budget shows, nor even what the Budget 1921 may show, as complicated arrangements like the above necessarily take time before their full results are apparent. How big it is possible for this revenue to be may be gathered from the figures given by your correspondent, Germany's exports in 1920 totalling 69,524 million marks.—Yours faithfully,

T. B. JOHNSTON.

Fishponds, Bristol, October 24th, 1921.

OCEAN FREIGHTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest the article contained in your issue of September 17th, entitled "Index Numbers of Shipping Freights," from which I quote the following: For example, "One sees at once reflected the strong position of the North Atlantic United Kingdom Conference."

It will interest you to know that the ocean rate of freight at present on our shipments of provisions to all United Kingdom ports is 75 cents per 100 pounds, whereas we can ship to practically every port from Bordeaux north to Christiania for 50 cents; in fact, a little while ago the Wilson-Ellerman Line offered to carry freight for us from New York to Christiania, via Hull, for 50 cents, while to Hull proper for 75 cents.

Of course, this may be a very good thing for the shipping companies, but is it desirable for the consuming public in the United Kingdom to pay a 50 per cent. higher rate of freight for their provisions than the people on the Continent?

Furthermore, if this state of affairs is to continue, will it not transfer the entrepot trade, for which London, Liverpool, and Hull have been noted for years, to Antwerp, Rotterdam, Hamburg, and Copenhagen, which, from a British standpoint, we should think was far from desirable?—Yours truly,

GEORGE MARPLES.

Chicago, October 6th, 1921.

† August, 1921.

GOVERNMENTS AND THE REVIVAL OF TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of October 22nd "a correspondent," under the title of "Governments and the Revival of Trade," criticises a letter that I wrote to the *Times* suggesting that a loan of £1,000,000,000 to the Dominions to enable the Empire to complete its main arterial transport system would solve to a large extent the present problem of unemployment. Your correspondent says:—"This is exactly what a Government cannot do. It cannot unwrite the history of centuries or pull trades up by their roots and bed them out in the soil of its own choice." Surely the war has unwritten the trade history of centuries and has washed away the soil from the roots of much of our pre-war trade. If those trades are to survive, clearly their roots must be quickly re-planted. He then proceeds to state that:—"The trade we did with Europe before the war amounted to nearly £200,000,000 per annum." This is of course true, but as the result of the war the whole of this trade has to be reconsidered. The purpose of exporting to Europe was, is, and always must be, to obtain in exchange an import more desirable to the country than its equivalent export. As the result of the war, either in form of reparations from enemy Powers or interest on loans to Allies, England is in a position to import from Europe—with the exception of Scandinavian timber and Barcelona nuts—everything desirable that Europe can produce in excess of its own consumption. What possible room, therefore, can there be left for any important export from England to Europe? To attempt to force such an export is merely an absurd attempt to pay again for something which we have already paid for. A very large proportion of the pre-war imports from Europe was in the form of goods competitive with British industry. All that portion of our European trade which was represented by an exchange of English manufactures for European manufactures could have been short-circuited and eliminated from the total—possibly with benefit to both parties. We have lost our importing power from America, which before the war arose from our position as America's creditor, and are now faced with the necessity of exporting to America without being able to call any equivalent import in exchange. These two fundamental changes in our international trade position force us to concentrate at once upon the utmost possible extension of our trade with Asia, South America, and especially the British Empire. Extension of trade with the British Empire is the easiest line, because the Empire has achieved by one clumsy method or another some semblance of parity of exchange. It has this special advantage that if, as the result of competition between one portion of the Empire and another—reinforced, probably, by protective tariff systems—a manufacturing function is transferred, say, from Lancashire to Sydney, the displaced Manchester operative can move to Sydney without reducing the man-power and economic strength of the Empire as a whole.

A vital feature of the present position is not—as your correspondent suggests—the question of our turning our back on Europe, but the obvious fact that Europe has turned its back on us—a common human phenomenon where the relation between debtor and creditor is concerned.—Yours faithfully,

EWART S. GROGAN.

52 Draycott place, S.W. 3, October 27th, 1921.

REVIEWS.

D. A. Thomas, Viscount Rhondda. By His Daughter and Others. (London) Longmans, Green, and Co. 21s net.

In this volume Viscountess Rhondda and her collaborators present us with an intimate study of one of the most interesting careers of our times—a career in which immense business success was strangely contrasted with political failure. Mr David Evans, in a chapter on the coal industry, says:—"The story of the business life of D. A. Thomas.....is during the quarter of a century that followed his return to Cardiff to all intents and

purposes the history of the South Wales Coalfield." His record as a coal owner, Mr Evans continues, "resumes the industrial development of the period; illustrates the movement of capitalism towards combination, as well as the struggles between Capital and Labour that marked the transition. To Labour in South Wales D. A. stood for capitalism as no other man did." This man of comprehensive views was raised by his personality and unflagging industry and determination to a position in which he bestrode the South Wales coal industry like a colossus. But in politics, though for many years he devoted the whole of his energies to Parliament and platform, he never attained any office until Mr Lloyd George appointed him Food Controller in 1917. Of his administration there Mr J. R. Clynes and Sir W. H. Beveridge contribute important chapters. Elsewhere we are reminded of his fundamental belief in a stout advocacy of Free Trade. The biography is not lacking in little human glimpses of the man. "Jevons on the Coal Trade," was his Bible, but "such novels as 'The Adventures of Sherlock Holmes'" strongly appealed to him. He "skimmed" over most of the daily newspapers and the weekly reviews, but regularly read the *Economist* through. "Lord Rhondda," his private secretary writes, "simply loved statistics, and would spend long hours in the night preparing figures for some scheme or other." Then in another glimpse, we find him devouring 12 oranges at a sitting, smoking 15 large cigars a day, and consuming nearly a whole bottle of port. That from this he suddenly changed into a non-smoker and complete teetotaler is typical of the amazing will power and virility that made him what he was. "He was the happiest man I have ever known," are his daughter's concluding words.

"The Accounts of the Corporation of London for the Year ending March 31, 1921." (London) Charles Skipper and East.

This is a volume of accounts consisting of 321 pages, rendered annually by the Chamberlain of London (Treasurer). It contains much information interesting to the student of municipal affairs. The City's cash account comprised in this volume is the 288th of the series extant. The accounts earlier than A.D. 1633 were believed to have been destroyed in the Fire of London, until the discovery among the Corporation Archives of two years' accounts of the time of Queen Elizabeth. There are many quaint things to be found in these accounts. Apart from any question of interest on the capital represented, or of expired capital outlay on the structure, the Monument proves to be an income-producing property; the fees received amount to about £1,600, and the annual expenses, including repairs, to £860. The City Green Yard, on the other hand, yields in fees only £56, while the expenses, including "forage," amount to nearly £500. By the way, what is the City Green Yard? "Examination of rats" is a necessary item of expense in connection with the Administration of the Port of London Public Health Act, 1891. But to pass to weightier matters, the aggregate balance-sheet shows that loans outstanding total upwards of £10,000,000, and sinking fund investments against these amount to £1,771,648. These investments are valued at cost. The question arises—is it desirable for public authorities to retain in hand sinking fund investments? A sounder plan is to apply the annual sinking fund instalments to reduce the loans, either by purchase of the loans in the open market or by repayment of drawn bonds.

"Aspetti Sociali ed Economici della Guerra Mondiale." Achille Loria. (Milano) Vallars. 1921.

In this little volume the distinguished Professor of Economics at Turin combines a Teutonic industry and learning with a Latin vigour and terseness. It covers the whole field: the causes of the war, its effects, present and future, on currency, production, commerce, distribution, population, religion, morals, and social structure, and predicts that after a sharp reaction Central Europe will be dominated by industrialists instead of as hitherto by the landed and banking interests, while the industrialism of Western Europe will be modified in favour of Labour. Of the mass of purely economic matter discussed the treatment is

excellent; with much of the rest most Englishmen will profoundly disagree. Like his German models, Signor Loria is obsessed with the bogey of British "Imperialism." He ascribes the war (and all other social changes) to purely economic causes; the rate of profit was declining, so the great European nations sought new colonies and markets, and their capitalists invested in armament firms, and all this led up to the explosion, the guilt of which rests primarily with the landlords and bankers of Central Europe. We note with satisfaction that Professor Loria's information on economic subjects comes largely from our own columns, but he sometimes (notably in the case of Fiume) misinterprets it amusingly. On colonial questions he writes like a German, and his hopes of the League of Nations are small. But his work is a learned and stimulating exposure of the folly and destructiveness of war.

"Consumers' Co-operative Societies." By Charles Gide. Translated from the French by the Staff of the Co-operative Reference Library, Dublin. (Manchester) The Co-operative Union, Limited. 1921. 7s 6d net.

Co-OPERATION in some of its forms has been prominent in the recent economic development of Ireland, and for these and others a great field is open in the new Dominion which we hope to see established. This excellent translation, therefore, comes appropriately from Dublin. It is the first version in English of the standard work on the most fully developed part of the co-operative movement, written by the leading authority on it, a Professor of the University of Paris, and the editor has brought it up to date by the modification at his suggestion of one chapter which in the original contains much matter interesting almost exclusively to French co-operators, and by the occasional addition of brief and illuminating notes. It covers the whole field of consumers' co-operation, from that elementary form of society which enables its members to obtain their groceries at reduced prices to the more comprehensive associations, chiefly found in England, which supply all the needs of their members, up to housing and insurance, and sometimes aim at controlling their raw material by the acquisition of land. Professor Gide gives interesting and impartial accounts of the sources of friction within the movement—among them the antithesis between the interests of the societies and their employees, that between the purely economic associations and those which, as in Belgium and Italy, are distinctly political, the French conflict between the distributing and the producing societies, and the question of the place of the movement in social reform. His views are moderate and his tone judicial, and his work is indispensable to all students of social science.

"Législation Ouvrière et Prévoyance Sociale en Suède." Official 1921. (Stockholm) Swedish Government Publication.

This full and valuable summary of Swedish social and labour legislation was published on the occasion of the Stockholm meeting of the International Labour Bureau in July last. A preliminary section describes the natural resources of the country and the condition of the workers. Industry of all kinds now employs some 600,000 persons, transport work some 80,000; but, thanks to the use of machinery, agriculture (dealt with in a separate work in English) has progressed greatly both in extent and in yield. Labour and insurance legislation (the latter with a special branch for fishermen) seem well advanced; the eight-hours days is in force with certain exemptions, and real wages are higher than in Great Britain and the United States. In social legislation it may be noted that each illegitimate child is under an "adviser," who sees that the father fulfils his obligations. The inefficient "Göteborg system" of controlling the sale of alcohol has been replaced everywhere by the "Stockholm system," the sales being restricted to companies whose dividend is limited to 5 per cent., the excess going to the State, and the local authorities appointing a majority of the directors. Off-licences are confined to these companies; on-licences may be leased by them annually to restaurants, but only a limited quantity may be supplied, and only with food. Even of port and sherry the allowance per person is only about a quarter of a pint, and of spirits half that amount. For a household the normal allowance is four

litres monthly, and it may be suspended in case of abuse. Considerable provision is made for the study of social science. The book deserves the attention of all students of sociology.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
November 15.

ACCOUNT.
November 16.

VARIOUS reasons have conspired to infuse a rather firmer cheerful tone into the Stock Exchange markets this week. The easiness of money contributes to the steady investment in gilt-edged stocks. The capture of Karl removed a possible cause for fresh anxiety in Central Europe. The exchange position is not quite so bad as it was, and what is perhaps more important than anything else, the stream of forced selling, from all parts, has been turned off. There was a little discussion in advance as to the possibility of a fall in the Bank rate on Thursday last, but no reduction was anticipated. Markets were chilled by the Irish development, and gilt-edged stocks affected by the news that £20,000,000 Local Loans 3 per cent. stock was to be issued at 52.

National War Bonds have been in demand, and rose to prices which invited selling, with the result that a reaction from the

Liverpool Foreign Branch - 42, Castle Street, Liverpool.
Manchester Foreign Branch Corner York St. & Fountain St., Manchester.

best occurred in the market. The War Loan became ex dividend on Wednesday morning, and the deduction of £2 10s from the price led to little nett change. The Stock Exchange Committee have given permission for dealings to take place in dollar bonds of the United Kingdom three-year 5½ per cent. convertible gold notes, due 1922, and ten-year convertible gold bonds due 1929. Amongst the scrip stocks, the feature is the way in which Union of South Africa has risen to 1½ premium.

Mexican Government bonds are flat, in consequence of the breakdown of negotiations between Mexico and the United States in regard to recognition of the former by the latter, provided that Mexico will sign the treaty insisted upon by the United States as a preliminary to such recognition. German Threes have been a better market, and from 2½ there was a rise to 3½ before the price gave way a little. Brazilians are heavy, and in other South Americans no particular changes occurred, the Chinese list being also unusually quiet. Norwegian Sixes have risen to go on the approach of the first coupon date. Scandinavians generally are higher, owing to purchases based on the rate of exchange.

The Home Railway market, after acute weakness, rallied in sympathy with the firm tone which became apparent throughout the markets on Thursday. Undergrounds gave way, on the new capital proposals. Grand Trunks have sagged, and Mexican Rails fell back in company with Mexican Government bonds. Heavy falls occurred in Brazilian rails by reason of the drop in the value of the milreis. Argentine railway stocks are heavy, in spite of this week's meetings, at which the chairmen spoke with caution, but held out hopes for the future. It is noteworthy that in this market the prior-charge stocks are steadily diminishing in price week by week.

The rubber market is quiet, and the meeting of the Rubber Shareholders' Association on Wednesday had no effect upon quotations, successful as it was from the point of view of arousing interest, amounting to something like enthusiasm. The oil market fluctuated a good deal, though within narrow limits. Discussion centres upon the question of what dividends the Shell and Mexican Eagle companies will declare at the end of this year. The textile market is firm, in consequence of the brighter trade prospects that open in the North. Shipping shares are not particularly good, the Royal Mail dividend reduction still being a factor of depression. A number of insurance shares are lower, the market explanation being that people are selling what they can, in order to raise money for living and taxation purposes. Shares in the various stores and hotels lean to the lower side. The banking market is quiescent, though the tone gives promise of slightly better prices were there to be any moderate amount of support on the part of the public. The iron, coal and steel list further declined, on the argument that companies must be doing very badly, considering how grave are the unemployment conditions, but armament shares are a little firmer, now that the orders for the new battleships are placed. There is nothing doing in brewery stocks. Electrical manufacturing shares are distinctly flat, but electricity supply issues keep firm, and the new County of London 7 per cent. debenture stock, which came out at 94, has risen to 5 premium.

The Kafir market is a shade better. Some of the quarterly reports to hand this week, notably that of the City Deep, showed satisfactory results, and caused a little bear covering. Diamonds also are firmer, although De Beers are subject to spasms of weakness, as rumour toys with the idea that the company may pass the next dividend on its preference shares. Mexican mining descriptions are out of favour, owing to other Mexican developments, and Broken Hills are hesitating, because the Proprietary company has passed its usual quarterly dividend. The tin groups are stagnant, while Russo-Asiatics have eased off a trifle.

The Stock Exchange will be closed on Tuesday next, for the usual November 1st holiday.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Series B 5½ per cent. Treasury Bonds, issued at 98 per cent., payable on application. Repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. The first dividend will be paid on April 1, 1922. Principal and interest are chargeable on the Consolidated Fund of the United Kingdom, and interest will be exempt from Corporation Profits Tax. Bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. These bonds may be registered free of cost in the books of the Bank of England or of the Bank of Ireland.

Commonwealth of Australia 6 per Cent. Loan, 1931-1941.—Issue of £5,000,000 registered stock, at £96 per cent., repayable in London on March 1, 1941, the Government having the option of redemption after March 1, 1931, on giving three months' notice. The proceeds of the loan will be used to meet Treasury bills in London, and to meet reparation and other expenditure arising out of the war. The prospectus states that "Commonwealth of Australia debentures and stock issued and payable in London and the interest thereon, the property of persons not domiciled in Australia, are not, and will not, be subject to any taxes, duties, or levies in Australia." The stock will be registered and transferable in any amount by deed, free of stamp duty, at the Commonwealth Bank of Australia, London. Interest is payable half-yearly on March 1st and September 1st, by dividend warrants. This is a trustee stock.

The Pearson and Knowles Coal and Iron Company, Limited.—Authorised share capital £2,500,000, of which £1,608,500 has already been issued. This is an issue of £1,000,000 7½ per cent. first mortgage debenture stock at £97 per cent. The 7½ per cent. first mortgage debenture stock will be secured by means of a trust deed, and the stock will constitute (a) a specific first mortgage upon the properties of the company; (b) a debenture creating a first charge upon the properties of Rylands Brothers, Limited, and a first floating charge upon its undertaking and assets; and (c) a first floating charge upon the whole of the undertaking and other assets of the company, including investments in its allied companies. The trust deed also provides that no other charge shall be created to rank in priority or *pari passu* with the

floating charge created in favour of the trustees, except for the purpose of securing bankers' advances made in the ordinary course of business. It is also provided that each year the company will pay to the trustees for the debenture stockholders a sum equal to 3 per cent. of the debenture stock now offered, which will be applied in the purchase of stock if obtainable below £102 10s per cent., or in redeeming stock by drawings at £102 10s per cent. Any stock not redeemed before January 15, 1951, will be paid off on that date at par. The company has the option to pay off stock outstanding on January 15, 1926, or any subsequent date, at six months' notice at £102 10s for every £100 stock. The company was registered as a limited company in 1874, but the history of its business dates back to 1846. It owns ironworks at Warrington and collieries at Lower Ince and Coppull, together with all the shares of Rylands Brothers, Limited, and of the Wigan Junction Colliery Company, Limited, the whole of the ordinary share capital of the Partington Steel and Iron Company, Limited, and £210,100 of the total issued capital of £218,600 of the Moss Hall Coal Company, Limited. Total assets available for the security of the issue are valued at £3,617,700, which sum includes £930,000, the estimated proceeds of the present issue. Land, buildings, and plant, however, only represent £853,655 of this amount, while the item "investments (mainly in allied companies)" is given as £522,408. The basis of valuation is not mentioned, whether at cost or market value. Trade and other liabilities of the Pearson and Knowles Company on June 30, 1921, amounted to £598,716. There are also contingent liabilities, an estimate of which does not appear. Profits are given from 1912, but these are shown in table form before "providing for depreciation, National taxation, and interest on borrowed money." This is a fair offer in its class, subject to the usual industrial risks.

The Union Bank of Australia, Limited, has issued 100,000 new shares of £15 each. The price of issue of the new shares is £9, of which £4 represents premium and £5 is in respect of capital, the remaining £10 per share being callable only in the event of and for the purpose of the bank being wound up. The new shares are offered at this price to those shareholders who were registered holders of shares in the bank on October 17, 1921, in the proportion of one new share for every five existing shares held. This appears to be a reasonable offer which shareholders should accept.

The Anglo-Burma Oil Company, Limited.—Authorised capital £500,000, divided into ordinary shares of 2s each. Up to the present 200,070 shares have been issued for cash, 1,000,000 to vendors as part payment for properties, 3,000,000 are now offered for sale at par, and 799,930 shares are to remain unissued for the present. In this "offer for sale" it is stated that the company was registered in 1910, and began business in 1921. It has acquired, through the purchase of the share capital of the New Indian Petroleum Company—a private company registered in India—certain oil rights on lands which "adjoin the properties of the Burmah Oil Company, Limited, and are near those of the British Burmah Petroleum Company, Limited, which are under operation." The intending investor must assume from the information given in this "offer" that these properties are undeveloped "well sites." He might also ask himself the question how it came about that the Burmah Oil and British Burmah Petroleum both failed to acquire rights over this neighbouring territory. Properties have also been acquired in Trinidad. The purchase price of the shares in the Indian company is £120,000, of which £60,000 is payable in cash and the balance in shares. It should be noticed, however, that some part of the assets of the company is subject to a mortgage of £35,000. The purchase price of the Trinidad properties is £121,000, of which £81,000 is payable in cash and the balance in shares. It is stated that after certain payments have been made "£137,000 for working capital" will remain, which appears to be a small amount for converting oil rights into profitable commercial propositions. It is pointed out that if the production of oil was an estimated figure at so much per barrel, "profit would be equivalent to £300,000 per annum." This, if realised, would be a handsome return on £500,000 of capital. It may be observed that the British Burmah Oil Company, on a share capital of £994,579, made a net profit of £330,310 for the year ended July 31, 1920. This, of course, was one of the boom years. The price paid by the present vendors of these 3,000,000 2s shares is 2s per share, plus a commission of "14 per cent. on the nominal amount of the shares subscribed," and they (the vendors) have entered into a number of underwriting contracts paying a commission of 5 per cent. and an over-riding commission of 2½ per cent., "and are also paying all other expenses in connection with this offer." We cannot recommend this proposition on the merits of the prospectus.

Under the present circumstances in the industry the risk involved in investing in ordinary shares of a new and comparatively small oil company is great, however attractive the proposition may appear on paper.

Worsnop and Co., Limited.—Authorised capital £60,000 of which £42,903 has been issued. This is an issue of £20,000 7½ per cent. seven-year notes at par, repayable at £102 10s per cent. on August 1, 1928. The company can redeem the notes at £102 10s at any time on giving three months' notice. During their currency holders are entitled to exchange "at par" for preference or ordinary shares. The company was formed in 1896, and manufactures motor lamps. It is quite true, as the prospectus points out, that "war-time profits are not a reliable criterion of peace-time trading," and we fully appreciate the excellent pre-war dividend record on ordinary shares, but we consider that intending investors in these notes are entitled to more information on post-war working results than that offered in the statement of affairs in front of us. We are told nothing as to how note-holders would rank in claims upon assets, nor the authorised limit of note borrowings. But mention is made of "mortgage and debenture" for £5,500. The net assets are given as £51,798, but what part of these are tangible and what part represent "patents, registered designs, and trade marks," which appeared in a prospectus issued in 1919 as £5,000? Further, intending noteholders should ascertain what is the total amount of authorised debentures and mortgages which can be issued. These, be it remembered, would, if specifically secured, be prior claims upon assets. It is not stated if application is to be made for a Stock Exchange quotation. We consider the prospectus an unsatisfactory statement of affairs.

Exchange Cinema and Restaurant Company (1921), Limited.—Authorised capital £120,000, divided into 80,000 10 per cent. cumulative participating preference and 40,000 ordinary shares, all of £1 each. This is an issue of all the participating preference shares at par. After the preference shares have received their 10 per cent. and the ordinary have received 20 per cent., the preference are entitled to a further dividend "at such a rate as shall absorb 20 per cent. of the balance of divisible profits." The company, according to the advertised prospectus, has been formed to acquire the assets of a private company, "including the freehold premises known as the Exchange Cinema, Northampton." The purchase consideration has been fixed at £100,000, of which £40,000 is payable in ordinary shares and the balance in cash. The premises have been valued independently at £115,177, and it is stated that the "preference share capital is therefore covered nearly one and a half times by the estimated value of the assets." It should be, however, realised that building costs are on the fall. The statement of past profits is not lucid, and the auditors' certificate of gross receipts is not a satisfactory substitute for the usual statement of past profits which we expect to find in a clear prospectus.

Walton Vale Picture House Company, Liverpool, Limited.—Authorised capital £17,000, divided into ordinary shares of £1 each. This is an issue at par of 16,500 shares. The company has been formed to acquire a site in Liverpool with the object of erecting a cinematograph theatre. The purchase price of the site has been fixed at £2,500, payable in shares. "The vendors are also to receive, together with the other first directors, 100 fully-paid-up shares" in respect of their work as promoters. Profits are estimated at £6,240 per annum before paying interest on mortgage. It is stated that each of the directors is subscribing in cash for £500 of shares, and each director has further undertaken to be "responsible for placing an additional 2,500 shares." The proposition is unattractive.

Westralian Mines Development Syndicate.—The remaining 67,000 shares of 2s each have been offered to shareholders in the proportion of one new share for every four ordinary shares held. According to the *Stock Exchange Official Intelligence* for 1921, this company was registered in 1915, and "no dividend has yet been paid."

Odams Press, Limited.—We are informed that the recent issue of 10 per cent. cumulative "A" preference shares has been over-subscribed. Letters of allotment will be posted in due course.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

(a) Also 50% in f.p. ordinary shares.

CALCUTTA TRAMWAYS.—The directors have decided not to make usual interim distribution on ordinary shares, but to leave the question of dividend to be considered after the results of the year's working have been ascertained.

BEVERIDGE DREDGING (No Liability).—A refund of 6d per share has been declared, payable on November 10th.

THE BROKEN HILL PROPRIETARY COMPANY.—Referring to the declaration of a dividend for the November quarter, which in the ordinary way would have been payable on November 16th next, the directors have, after careful consideration, reluctantly decided to pass the declaration on this occasion until they can more clearly ascertain the position as to the prospects in the immediate future of the iron and steel industry, having regard to the keen outside competition at present existing.

The North Western of Uruguay Railway Company announce that the balance at the credit of the net revenue account for the year ended June 30, 1921, does not admit of the recommendation of a dividend on the 6 per cent. first preference stock of the company.

The Park Gate Iron and Steel Company have decided not to declare an interim dividend, as the works were stopped for four months during the coal strike, and owing to the high cost of coal and wages have since only partially restarted.

OIL OUTPUTS.

COMMONWEALTH OIL CORPORATION.—For the four weeks ended October 7th: Shale retorted, 2,956 tons. Crude oil produced, 272,573 gallons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, October 19, 1921, amounted to 1,507 tons.

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

THE CHAIRMAN ON FINANCIAL AND ECONOMIC CONDITIONS.

TRADE AND FINANCIAL POSITION IMPROVING.

SOUTH AMERICAN INDUSTRIAL SITUATION.

RESULTS OF BANK'S YEAR.

The thirty-third annual general meeting of shareholders of the Anglo-South American Bank, Limited, was held, on the 25th instant, in the Great Hall of Winchester House, Old Broad street, London.

Mr Robert John Hose (the chairman of the bank) presided. The secretary (Mr E. E. Hayes) read the notice convening the meeting and the auditors' report.

The Chairman said: Ladies and Gentlemen,—The past year has been one of reaction both in commodities and in securities, but although something has been effected towards restoring the general level of prices nearer to that which existed before the war, it cannot, unfortunately, be said that the movement has been an entirely healthy one. The unsatisfactory conditions referred to 12 months ago still remain in operation, though it is true that in some directions they are somewhat less prominent than before. Wholesale prices of commodities have fallen sharply, and this has had some effect upon the general cost of production of goods both here and abroad. The fall in retail prices, however, has been comparatively slight, and the reduction in the actual cost of living, so far as it can be gauged, has been small compared with the fall which has taken place in wholesale prices. As a consequence, it has been found impossible equitably to reduce wages to any great extent, but something has been done in this direction. amongst others, to cheapen production, which, it will be generally agreed, must in the long run tend to the benefit alike of labour and capital, producer and consumer.

While production costs have been reduced the fall has not been such as to place the chief industries of this country in a much better position to compete with the foreigner than they were 12 months ago, and the present process of a gradual reduction in working costs must continue for some time before this very essential position is reached. It seems useless continually to insist upon the necessity for greater individual output, for the lesson is only too evidently a very hard one to learn, but time will show that this is the prime solution of our present difficulties, and that upon it depends the prosperity not only of the country itself, but of each individual member of the community.

EXPENDITURE AND REVENUE IN BELLIGERENT COUNTRIES.

This however, is only one side of the problem, the other, which is almost as important, being the impoverished condition of most of the countries which a few years ago ranked amongst our principal customers. Apart from the United States, there seems to have been little real attempt in most of the belligerent countries to bring about an equilibrium between the State expenditure and revenue, and the deficit has, in most cases, continued to be made good by a more or less constant resort to the printing press. This policy has been followed very consistently abroad, and especially in Germany, where the degree of monetary inflation is now approaching to danger point. So long as this policy is adhered to there seems to be little hope of a real recovery in trade, for in this respect countries are in much the same position as individuals, and the continued increasing debt, whether by note issues or other means, gives no encouragement for the opening up of business operations, either directly or by means of the provision of credits.

Little progress has been made with the various credit schemes which have been propounded from time to time both in this country and in America, largely for the reason indicated above, but attention may be called in passing to a point which may not be without its significance for the future, and that is the renewed discussion of various schemes in the United States recently, and also the increased attention which is being given to the problem of dealing with the war debts. For the time being these latter are largely in abeyance, in that no immediate interest payments are being made, but when the time for these payments arrives another complication will have been introduced into the situation, which, as matters stand, will act as a further bar to the restoration of freer trade between the nations. The problem bristles with difficulties, and requires the greatest amity for its solution; but the position seems to be one which calls for concerted action by those countries possessing the financial resources and the necessary experience for using them to overcome what are undoubtedly the greatest economic difficulties which the civilised world has yet been called upon to face.

However, as I have said, some progress towards normality has

been made during the year, and it can only be hoped that the process of a reduction in working costs which set in some months ago will steadily progress, and that with the additional aid of economy, national and individual, the war waste from which the world at large is still suffering will gradually be made good.

As to this latter, there are many signs that individual expenditure has been curbed during the past few months, and, as is always the case, the movement has come about rather from necessity than inclination. Indeed, it is this curbing of individual expenditure that is partly to blame for the recent stagnation in trade, but although the first effects may be unfavourable, it cannot be questioned that the circumstance of itself constitutes one stage upon the return road to prosperity.

GOVERNMENT EXPENDITURE AND TAXATION.

Government expenditure has also been somewhat reduced during the year, but economy in this direction still leaves much to be desired, for in the third year after the conclusion of hostilities our national outgoings are again considerably in excess of our revenue, quite apart from the exceptional payments which arise from time to time for the redemption of maturing loans. The Chancellor's anticipations have been falsified, partly as a result of the prolonged coal strike, and, as a glance at the revenue returns will show, the general yield of taxes is falling far short of expectations—a remark which applies with particular force to income-tax, excess profits duty, and corporation profits tax. In spite of this fact, however, it is the general experience that the burden of taxation at the present time is more than the country can bear, and there is the danger that, if continued on the present scale, it will deprive industry of so great a proportion of its productive capacity as to seriously curtail its power to trade. Furthermore, this question of taxation is an important factor in the regulation of prices. High municipal rates undoubtedly tend to an advance in retail prices, and a heavy income-tax as certainly leads to the raising of manufacturers' and wholesale prices. A real reduction in local and in Governmental expenditure is therefore essential, and this necessity will become much more pronounced in the future, when the time comes for meeting the interest on our debt to the United States Government.

BANK RATE.

One important factor both in the financing of the Government's requirements and also in the furtherance of trade has been the reduction in the general value of money in the London market. During the whole of the latter half of 1920 the Bank rate stood at 7 per cent., and this rate was maintained until the end of April last, but since then the quotation has been three times lowered, by ½ per cent. on each occasion, bringing the rate down to 5½ per cent. Other rates have followed the course of the official minimum, and traders have consequently been able to obtain temporary accommodation on much more reasonable terms, both by means of short advances and by the discount of commercial drafts. During the last few weeks the fall in rates in the open market has been accelerated, with the result that a very wide margin now exists between Bank rate and outside quotations. It is true that to a large extent the fall in rates has been of a somewhat artificial character, having been due almost entirely to the greater degree of inflation involved by the financing of the Government's requirements, but so long as this condition of inflation exists, and so long as its evils have to be contended with, it seems only reasonable that advantage should be taken of the position to assist trade operations on sound lines and so to bring a further factor to bear in the rehabilitation of our foreign commerce. The policy of high rates was instituted partly in order to stem the increasing speculation in stocks and commodities. So far as the former are concerned, the action seems to have been entirely successful, while it has been little less so in the case of commodities, and in view of this fact the recent downward movement in the value of money would seem to have been very largely justified.

ENCOURAGING POINTS FOR THE FUTURE.

The future is difficult to forecast, for so many of the forces on which the business outlook depends are in a state of flux, but there are a few encouraging points to which attention may be called.

One of these is the fact that the stocks of goods produced on a high price basis have been steadily reduced in many directions. In order to effect this, many commodities have been sold at a loss, and this has adversely affected the immediate financial position of the industries concerned. In the long run, however, the result must be beneficial, because once these stocks of high-priced commodities have gone into consumption, it should be possible to stimulate manufacture on the lower levels now ruling, both as regards raw material and wages, and the price of goods should gradually be brought nearer to a level which, of itself, will tend to widen the area of demand.

AMERICAN LOANS.

One circumstance which may have an important influence upon trade prospects is the increasing tendency which has been shown by America to finance the requirements of the foreign borrower. During the war period the greater part of the very large loans made by the States to the Allied countries were arranged, not directly with the American investor, but under the aegis of the American Government, and with the end of 1918 such operations practically terminated. During the last few months, however, loans have been issued in New York for three of the South American States, while the Queensland Government has recently borrowed in the same market, and there is talk of a similar operation on a substantial scale for the Government of Mexico. This may appear to constitute a poaching upon the preserves which from time immemorial have seemed to be set aside for this country, but a frank view of the situation suggests that, for the time being, London is ill-prepared to lend with the old freedom of pre-war days, and that the intervention of the United States as a lender abroad is to be welcomed as tending to the abatement of the present widespread credit difficulties, and to the speedier restoration of the machinery of international trade.

Yet another favourable point in the general trade outlook is the improvement in conditions recently reported from various parts of South America. The copious rains which have recently fallen in Argentina, following the period of prolonged drought, have greatly improved the crop outlook there, and this should place the country in a better position to absorb the large quantities of goods imported during recent years, and thus clear the way for a renewal of more active trade relations with this country. Similarly, in Chile, the removal of the nitrate deadlock is promising of an improvement in general business in that country during the current year, while Peru stands to gain substantially from the recent recovery in the price of cotton. In all these cases, however, the stocks of imported goods are still at a high level, and it must take some time before they are moved into general consumption, and longer still before replacement orders are received in any important volume.

CONDITIONS IN ARGENTINA.

In common with all other countries, Argentina has suffered from the effect of deflation in values. Exports of foodstuffs have in the aggregate fallen off considerably, and values have been adjusted to the lower prices ruling, but the contraction in trade has been less apparent on the import side. Official figures for the year are not yet available, but, according to the Presidential Message read in Congress in May last, the estimated value of Argentina's exports for the 12 months ended December 31 last amounted to \$1,007,000,000 (gold) as compared with \$1,031,000,000 (gold) in 1919, or a decrease of \$24,000,000. The import figures, on the other hand, show an expansion of no less than \$197,000,000 (gold), amounting to \$853,000,000, against \$656,000,000, and the balance of trade in favour of the country therefore amounted to only \$154,000,000, as compared with \$375,000,000 in the previous 12 months. Taken by themselves, these figures are not unfavourable, in view of the general depression the world over, but from the recent movements in exchange, and other indications, it is evident that the trend of trade during the last few months has moved steadily against Argentina.

For instance, the revenue returns covering the period from the commencement of the present year up to the end of September last show that the receipts of the Buenos Ayres Customs House during the nine months amounted to \$147,000,000 (paper), as compared with \$170,000,000 (paper) in the corresponding period of the previous year. The contraction in trade has naturally had an adverse effect upon the Government finances, the Argentine national revenue being principally derived from import and export duties. In view of the falling off in the receipts from these sources, the draft Budget for the current year contained proposals for certain new taxes, the principal of which was a projected tax on incomes, from which a revenue of about \$35,000,000 (paper) was expected. The passing of this Budget, however, has been postponed from time to time, the Government introducing successive "twelfths" of the 1920 Budget for the purpose of regulating the national income and expenditure, and it was recently decided to continue the provisions of the 1920 Budget throughout the present year.

For the time being, therefore, the revenue will apparently be derived in the main from the tobacco and stamp taxes, in addition to the ordinary import and export duties, but it is expected that the proposal for a tax on incomes will be again brought forward in the Budget for 1922.

GOLD MOVEMENT AND EXCHANGES.

The stock of gold coin held by banks at June 30, 1921, amounted to \$39,457,182 (gold); that at the Caja de Conversion to \$466,476,969 (gold); and that at the Argentine Legations abroad to \$4,123,157 (gold).

The Emergency Laws passed in 1914, whereby the Caja de Conversion suspended the delivery of gold coin against the receipt of the equivalent value of currency, are still in force, as is also the prohibition of exports of gold decreed by the same laws. Consequently no gold has gone out of the Caja de Conversion during the year. There has been considerable agitation in favour of the reopening of the Caja as a means of stabilising exchange, but up to the present the Government has not seen its way to agree to this measure. The circulation of currency is practically the same as a year ago, at \$1,362,563,973, and, the gold holding being also unaltered, the proportion remains at about 78½ per cent.

In view of the falling off in exports and the increase in imports during the year 1920, referred to above, and the further contraction in trade which has since occurred, it is not surprising that the exchange value of the Argentine dollar should have weakened considerably during the period. In February of last year the sterling value of the Argentine dollar touched the record high point of 73d, but by the end of December in that year the quotation had dropped back to 51d, and in May last the rate fell to 40½d. From that level there has been a more or less sustained advance, and towards the end of September the quotation recovered momentarily to 47½d, on the announcement that arrangements had been made for the issue of a \$50,000,000 (U.S.) loan in New York for the Argentine Government, but the quotation has since fallen back slightly, the current rate being about 44½d.

Another factor which has accounted very largely for the fall in exchange has been the repatriation of Argentine securities. This movement has been in progress for some years past, but it reached its height during the early part of last year, the heavy discount on French, Belgian, German and other exchanges permitting the realisation of securities held in those countries at very favourable prices for the sellers.

POSITION OF THE BANKS.

That some progress has been made in the direction of deflation is indicated by the position of the local banks, the deposits, as is shown in the following table, having contracted moderately during the twelve months:—

	June 30, 1921. \$ (Paper).	June 30, 1920. \$ (Paper).	June 30, 1919. \$ (Paper).
Deposits	3,431,559,954	3,486,533,471	2,882,366,053
Advances	2,521,268,389	2,327,347,944	2,011,457,342
Cash holdings.	1,090,001,523	1,190,638,708	951,842,289

From the above it will be noted that the deposits are still considerably in excess of those reported at June 30, 1919. The cash holding shows a substantial decline on the twelve months, but there has been a further increase under the head of advances. The following table shows the position of our own bank at the end of June in each of the past three years:—

	June 30, 1921. \$ (Paper).	June 30, 1920. \$ (Paper).	June 30, 1919. \$ (Paper).
Deposits	136,970,384	105,418,842	78,234,641
Advances	111,286,257	92,249,226	80,223,061
Cash holdings.	60,734,040	51,093,321	27,066,082

The Clearing House figures for the year 1920 were considerably higher, the total movement being \$43,339,000,000 (paper), as compared with \$33,664,000,000 (paper) for 1919, but there has been some reaction during the first half of the present year, the aggregate for that period being \$18,785,000,000, against \$22,173,000,000 for the corresponding period of 1920. In the total movement for the six months ended June 30th the Banco de la Nacion naturally took first place, with an average of 20.26 per cent. of the aggregate, the Banco Español coming second with 10.25 per cent., and our own bank third, with 7.61 per cent. Taking the figures of this bank and the British Bank of South America together, the proportion is 12.32 per cent., which places our affiliated institutions second only to the Banco de la Nacion in this respect.

Money at the present time is cheap in Argentina owing in part to the large sums which are awaiting remittance abroad at better exchange rates, principally to New York, and in a lesser degree to London.

The credit statistics are less favourable than a year ago, the amounts involved by commercial and private failures throughout the Republic during the year 1920 aggregating \$57,800,000, as

compared with \$30,000,000 in 1919. In 1914 the total was \$430,000,000. This adverse movement has made further progress since, the total for the first seven months of the present year being \$83,900,000, which clearly demonstrates the extent to which the country is feeling the universal trade depression.

We will now proceed to examine the principal branches of Argentine trade in some detail.

CEREALS.

The price of cereals dropped substantially between September of last year and April of the present year. In the latter month wheat was quoted at \$15.80 per 100 kilos, but from that time up to about a month ago quotations steadily recovered, owing to the adverse weather conditions and, in particular, the prolonged drought, which at one time threatened serious consequences to the crop. Early last month wheat had rallied to \$18.40 per 100 kilos, but the coming of the rains has led to a renewed weakening in the market, and, as may be gathered from the following table, current quotations are not far from the lowest touched during the 12 months:—

	Oct. 20, 1920. \$ (Paper).	Oct. 20, 1921. \$ (Paper).	Highest Level Touched. 1920-21. \$ (Paper).	Lowest Level Touched. 1920-21. \$ (Paper).
Wheat	25.00	14.35	25.00	14.10
Linseed	22.20	16.60	25.00	13.45
Maize	8.60	7.35	11.20	6.75
Oats	10.20	7.60	10.30	7.00

According to the latest Government estimates, published on August 10th last, the quantity of wheat available for export was 1,262,000 tons, that of linseed 152,000 tons, and that of maize 2,028,000 tons. The outlook is somewhat obscure, but it may be hoped that, in spite of the heavy fall in prices which has already taken place and the prospect of a further decline if the new crop turns out as well as expected, Argentina may still be able to dispose of her wheat and maize at a favourable level, even though this should be less remunerative than at one time seemed probable.

With regard to flour, the exports for the present year to the middle of September amounted to 35,390 tons, as compared with 169,634 tons in the corresponding period of 1920, the reduction having been caused by the fall of prices in North America, which enabled that market to outquote Argentina.

MEAT AND SUGAR.

The fall in the price of livestock, which was apparent towards the end of last year, has steadily continued. The situation has been further aggravated by the depreciation in the value of wool, which has brought about huge offerings of sheep for slaughter. Supply to the freezers has much exceeded demand, more especially as the freezing companies are working on reduced orders on account of the falling-off in the abnormal demand created by the war.

The production of sugar in the Republic in 1920 amounted to 198,100 tons, as against 291,400 tons in 1919 and 126,800 in 1918. At the beginning of May of this year the factories commenced harvesting and crushing, conditions being reported as excellent. The recent severe frosts have, however, done some damage to the plantations, and an appreciable shrinkage in the estimated yield is now expected, one authority foreshadowing a maximum crop of only 160,000 tons.

WOOL, HIDES, AND WINE.

The exports of wool during the present season compare favourably with those of the previous year, shipments recently having been on an important scale. The prices secured, however, have been extremely low, varying from \$2.50 (paper) per 10 kilos for coarse wools to \$8.50 per 10 kilos for fine wools, which quotations compare with about \$5 and \$23 respectively a year ago. The stocks held at the Central Produce Market in Buenos Ayres at September 14th last amounted to 9,726 tons, against 21,137 tons a year ago. The exports for the season 1919-20 amounted to 305,524 bales (of 420 kilos), as compared with 283,066 bales in the previous season, while shipments from October 1, 1920, to September 5th last totalled 282,423 bales. The export movement was helped by the removal in January last of the export duties on wool, washed and unwashed.

Shipments of hides to the United States were facilitated by the high premium on the U.S. dollar, but the total exports last year showed a considerable reduction as compared with 1919. The number of salted ox hides shipped in the first eight months of the present year was 1,385,097, as compared with 1,425,889 in the same period of the previous year, and that of dried ox hides 495,793, against 725,047.

The Argentine Republic to-day holds fourth place amongst the wine-growing regions of the world. The production of the country during the past year amounted to 7,200,000 hectolitres, as against 6,071,000 hectolitres in the previous year. There is a surplus from previous years, which, together with this year's abundant harvest, has resulted in an excess supply of wine in the country, for which reason the fall in prices which set in during the latter part of the year 1920 still continues. The current price on wagon in Mendoza is 32 cents per litre, as compared with 53 cents last year and 38 cents in 1919.

BUTTER, QUEBRACHO, AND OIL.

Exports of butter during 1920 amounted to 608,720 cases, being practically the same as in the two years preceding. For the period from January 1st to September 15th last the quantity was 601,665 cases, as against 393,105 cases shipped during the same period last year. Great Britain is the principal market for Argentine dairy produce, and it was estimated at the end of April that the British Government had some 50,000 tons of butter on hand, but, owing to the recent drought in Europe, a great amount of that stock has been disposed of. The outlook at the moment is reported to be very favourable for the dairy industry.

The exports of quebracho extract from January 1st to August 31st last amounted to 75,690 metric tons, comparing with 87,084 metric tons in the corresponding period of last year.

Steady progress is reported in the operation of the State petroleum field at Comodoro Rivadavia, and the output is on an increasing scale. A company controlled by several of the railways has commenced operations on a large scale in the field. The Anglo-Persian Oil Company, and other companies representing Belgian, Chilean, Argentine, and German capital, are opening up, chiefly in the Comodoro Rivadavia district.

ENGINEERING AND METAL MARKETS.

We have just received the following cable from our manager at Buenos Ayres:—

"The engineering and metal markets report that constructional work for the present is going slowly, although there are several important contracts pending. The English metal markets are at present out of competition through inability to supply, and the North American markets are similarly placed owing to exchange rates. The greater part of our steel and iron imports are coming from Belgium and Germany, the latter offering exceptionally low prices and direct shipment. Steel, which was worth 18 cents gold per kilo a year ago, is now obtainable at 6 cents per kilo from Germany. Crop prospects continue promising throughout the Republic. It is believed that the recent Government statistics regarding cereal stocks remaining for export exaggerated the total, the balance actually available being much less than reported. Hides continue firm, and, given an improvement in exchange, good business is anticipated. The money market remains quiet, and there is little demand for capital. Owing to the forthcoming Presidential election, the political situation is obscure, but, as is frequently the case, this event may interfere with the course of general business."

URUGUAY.

As was indicated when I last addressed you, Uruguay, where prosperity had reigned for some years past, was commencing to feel a change in conditions, which was reflected in the fall in the exchange value of the Uruguayan dollar from the high level of 76d to about 57d. During the past 12 months the reaction has been accelerated, and not only has the balance of trade in favour of Uruguay entirely disappeared, but an adverse balance has taken its place. The following is a comparison of the figures for the years ended June 30, 1920, and 1921:—

Year Ended	Imports.	Exports.	Excess of Exports (+) or Excess of Imports (—).
June 30th.	\$	\$	\$
1920.....	117,625,425	126,106,114	+ 8,480,689
1921.....	104,252,260	75,335,063	— 28,917,197
Decrease....	13,373,165	50,771,051	..

In the above table exports are given at real values, as shown in the official return, but the value of imports is taken on a basis 140 per cent. in excess of the official figures, which approximately represents the position at current prices.

In accordance with this position, the exchange value of the Uruguayan dollar has further depreciated, the lowest level being touched early in May last, when the sterling rate fell to about 38½d. A recovery afterwards set in, which was largely helped by the issue of a Uruguayan Government loan in the United States

for \$7,500,000 (U.S.), and the quotation is now in the neighbourhood of 40½d.

FALL IN EXPORTS AND WOOL DEMAND.

The falling-off in exports was largely attributable to the reduction in the demand from the United States, owing to the passing in that country of the Fordney Tariff Bill. As a result of this large stocks of wool remained on hand, especially of the inferior classes, but the fall in exchange to a large extent has brought its own remedy, having stimulated the demand for the better-class wools on European account. Sales of merinos and fine crossbreds have been fairly steady during the last few months, and the stocks of these in the country have now been practically exhausted. Partly owing to the unfavourable weather conditions, traders have sold ewes for slaughtering, and the next shearing is expected to produce less wool than in previous years. The severe winter and the absence of rain have adversely affected the camps, and importers of pedigree animals have suffered heavy losses, traders showing no disposition to purchase fine stock owing to the uncertain outlook and the scarcity of funds. Livestock on the camps at present is in a rather poor condition, and the freezing establishments have considerably reduced their killing, purchasing only the best classes of cattle, and these at low prices. During 1920 395,302 animals were sold to the freezing establishments, these having a total value of \$27,659,281, while, in addition, livestock to the value of \$8,812,463 was disposed of to local slaughterers. In 1919 the freezing establishments absorbed stock to the value of \$43,489,530, but the sales to local slaughterers were on a smaller scale than last year, the total value being \$7,789,434.

The import trade of the country has been passing through a difficult period. Large orders were placed in Europe and North America some months ago, before the heavy fall in exchange, and the recent depreciation of the Uruguayan dollar has placed obstacles in the way of these goods being taken into stock. As a result, a considerable congestion of goods has arisen at the ports, which has only been partially overcome at the present time.

The political situation remains satisfactory, and there have been very few labour troubles during the year. The reduction in output of the freezing establishments has naturally led to a considerable increase in the number of unemployed, and public works have been instituted by the Government with the object of providing work.

The Budget for 1921-22 showed a deficit amounting to about \$6,000,000, and a scheme for increased taxation was proposed, including a general income-tax, by which means it was hoped that the greater part of the estimated deficit would be met. This proposed new taxation, however, has not yet been passed into law, and for the time being the question appears to have been shelved, the disparity between the Government's revenue and expenditure for the current year having been met by the loan in New York already referred to.

CHILE.

With world markets dislocated and industry marking time, it is only in the natural order of things that Chile, primarily an exporter of raw materials, should have experienced a financial set-back during the past year. The principal factor in this reaction has been the falling-off in the exports of nitrate, a matter to which I will refer in greater detail later on; but Chile, like other South American countries, has also suffered from over-importation during preceding years, and from the exchange depreciation which has naturally arisen from these two circumstances.

Trade statistics are by no means complete, but such figures as are available show very clearly the falling-off in the value of Chilean exports during the period covered by the bank's financial year. The figures for the last half of 1919 are not obtainable, but a comparison of the value of Chile's principal exports during the three half-years ended June 30th last is given below:—

	1921. Jan. to June. \$ Gold.	1920. July to Dec. \$ Gold.	1920. Jan. to June. \$ Gold.
Nitrate	204,845,000	243,753,000	214,675,000
Copper	21,626,000	17,787,000	70,584,000
Cereals, &c.	13,162,000	11,038,900	21,439,000
Borax	18,353,000	13,736,000	9,495,000
Wool	5,609,000	5,905,000	22,210,000
Iodine	9,358,000	4,325,000	3,662,000
Hides	109,000	1,299,000	2,959,000
Frozen meat	2,292,000	5,057,000	2,465,000

The returns showing the total value of imports and exports are published by the Customs Authorities in Chile for complete calendar years only. The figures for the first six months of 1921

are not yet available, but those for 1920 and for the three years preceding are as follows:—

Year.	Imports. \$ Gold.	Exports. \$ Gold.	Excess of Exports (+) or Excess of Imports (—). \$ Gold.
1917.....	355,077,027	712,289,028	+ 357,212,001
1918.....	436,074,065	763,622,512	+ 327,548,447
1919.....	401,324,195	301,458,084	— 99,866,111
1920.....	455,078,934	778,885,230	+ 323,806,296

The values are in Chilean gold pesos of 18d, the figures of imports being based on invoice prices and those of exports on local market prices.

From the above it will be seen that in 1920 Chile enjoyed a favourable balance of trade amounting to nearly \$324,000,000 gold, as compared with an adverse balance of about \$100,000,000 gold in the previous 12 months, but, on an analysis of the figures, we find that, whereas in the first half of 1920 the exports exceeded the imports by over \$260,000,000 gold, the excess of exports in the six months ended December 31st was only \$63,000,000. This latter period covers the first half of the bank's financial year, and the adverse tendency in trade which was then appearing has since been accentuated with a marked effect upon the position of Chilean exchange. Quite apart from the actual trade figures, it must be remembered that there is a large amount of foreign capital invested in the country, and that the Chilean Government's external debt, which at the end of 1920 amounted to £28,350,732, has since been increased by the issue of the loan in the United States early in February of this year for an amount of \$24,000,000 (U.S.).

EXCHANGE SITUATION.

These charges involve heavy remittances abroad for interest, &c., and, when their effect is considered in conjunction with the trade position, the heavy fall in the exchange value of Chilean currency during the year is by no means surprising. The extremes touched during the Bank's financial year were 13½d on July 2, 1920, and 6½d on May 10th last, showing a fall of 50 per cent. in a period of 10 months. In August last the rate dropped to 6d, but in the past few weeks a substantial recovery has occurred, reflecting, in the first place, the improvement in the nitrate outlook arising from the new agreement between the Nitrate Producers' Association and the Nitrate Pool, and, in the second, the increase in Chile's balances abroad, resulting from the new loan recently issued in New York.

A further factor in the exchange situation during the year has been the large increase in the Treasury bills in circulation. These were issued principally as advances to nitrate producers against stocks in hand. These Treasury bills, which bear no interest, circulate as currency, and the total in issue at June 30th last showed an increase of nearly \$53,000,000 (paper) as compared with June, 1920. This increase has been offset to the extent of \$13,000,000 by a contraction in the note issue of the Caja de Emision, but on balance the total paper currency of the country increased during the 12 months ended June 30th last from \$289,460,000 to \$329,203,000 (paper).

EXCHANGE RATES AND SPECULATION.

As is often the case when exchange movements are detrimental to the general interests, the fluctuations have again been attributed largely to speculation, and the action of the Chilean Government in changing the method of quoting exchange, which was instituted in April last, was attributed in part to a desire to control this tendency. A consideration of the figures of bank deposits, however, suggests that speculation, if it has existed, has had no unfavourable effect upon the exchange position during the past year, but rather the reverse, and, in demonstration of this, it is sufficient to quote the figures for deposits in gold (including foreign currencies) in the banks at May 31st last and at June 30, 1920. They are as follows:—

	\$ Gold of 18d.
June 30, 1920	247,824,000
May 31, 1921	188,701,000
Decrease	59,123,000

This comparison indicates that some £4,450,000 sterling, bought as a speculative investment at high rates, was sold with the fall, thus checking the downward tendency in exchange, and it is probable that but for these sales and those made against the Government loan floated in the United States in February last, very much lower rates would have been touched.

As regards the currency deposits, the official returns show that the total for the whole of the banks in Chile at the end of May last amounted to \$877,755,000 (paper), as compared with \$817,868,000 (paper) at June 30, 1920, while those of our own Chilean branches in

the same period increased from \$79,013,000 (paper) to \$116,245,000. In other words, while the currency deposits of the Chilean banks as a whole increased by 7.3 per cent., those of our own branches showed an addition of about 47 per cent., indicating that the bank has well maintained its place in the general business of the country.

NITRATE INDUSTRY.

As is well known, the nitrate industry has been passing through a serious crisis during the year. Large quantities of the fertiliser were bought at the top of the boom, and held for higher prices, which, owing to the general reaction in values the world over and the competition of other fertilisers, have proved to be far beyond the inclination or the capacity of buyers to pay. Consequently, the stocks accumulated have been reduced to only a comparatively small extent, and, in order to prevent a flooding of the market with nitrate at a time when the demand was small, an arrangement was concluded by some of the principal nitrate-importing houses in this country to pool their stocks of the fertiliser, and to fix selling prices of the same. In order to assist the operations of this Nitrate Pool, the Producers' Association undertook not to sell any of the new nitrate under 14s per quintal, f.o.b., until April 1, 1922. Many attempts were made and many schemes evolved for an arrangement between the association and the Pool whereby the 14s agreement might be annulled, so that nitrate might be put on the market at a price acceptable to consumers, and at the same time fairly remunerative to most of the producers; but for a long time these were unsuccessful, and the result has been that for many months past sales by the nitrate companies have been on a negligible scale, with the natural results of reduced profits, a contracted output, and increased unemployment amongst the native population. In order to carry on their business even on a reduced scale, many of the companies have obtained large advances from the Government at low rates of interest, and, on the other hand, the Government revenue has been greatly reduced owing to the smaller exports of nitrate, on which the revenue so largely depends.

BRIGHTER PROSPECTS UNDER NEW AGREEMENT.

This interruption to the normal flow of business in Chile's principal product has naturally led to serious financial and commercial difficulties, but I am glad to say that the outlook for the present year seems to be distinctly brighter, owing to the agreement which, as was announced a few days ago, has been concluded between the Nitrate Producers' Association and the Pool. Under this arrangement the former body is released from its undertaking to maintain nitrate at 14s per quintal, the consideration being the payment by the association to the Pool and others of a minimum indemnity of £1,500,000, which would be collected by a contribution ranging from 1s 8d per quintal down to 4d per quintal on all newly sold nitrate shipped from Chile between the 1st of the present month and June 30, 1923. Following this arrangement, fixed selling prices for the association have now been established, which will remain in force up to June 30th next, after which the association will be at liberty to fix the quotations at any level they may think fit. For the current month the selling price is 10s 6d per quintal, rising to 11s for the period November to April, and falling again in June, 1922, to 10s 3d. These quotations, we think, should give the nitrate producers a fair rate of profit and enable them to compete with sellers of other fertilisers. In these circumstances, a substantial increase in the consumption of nitrate abroad may be looked for, which will not only have a favourable effect upon the finances of the producers concerned, but will greatly improve the Government's revenue receipts, reduce unemployment, and tend to a recovery in general financial and commercial conditions in the country.

The figures of the last nitrate year are given below, but it should be noted that these do not show the effect of the crisis through which the industry has been passing:—

Nitrate Year.	Production. qq.	Export. qq.	Stock in Chile at end of year. qq.
1919-20	42,549,379	47,977,483	27,548,464
1920-21	47,263,030	44,581,079	29,536,929

Of the amount exported to June last, about one-half has not been sold, and as a result there now appears to be a supply on hand in Chile and elsewhere equal to a full normal year's consumption—a fact which must be borne in mind, even in conjunction with the reduction in selling prices above referred to.

COPPER.

In common with the copper industry throughout the world, the miners in Chile have suffered by the present depression, and although the low exchange has enabled small producers of good-grade ores to resume working on a moderate scale, the total exports of the fine copper have steadily declined, the figures for the year ended June 30, 1921, being 66,584 tons, against 78,968 tons in the previous 12 months.

In addition to the other adverse circumstances which have affected Chile during the year, we have unfortunately again to report that labour troubles have been very much in evidence, especially in the coal-mining and shipping industries, and this has further aggravated the situation. It is greatly to be hoped that the Government will take a clear and long-sighted view in dealing with these labour problems, which, for the sake of the country's prosperity, call urgently for firm handling.

In view of all the circumstances, it is not surprising that commercial failures in Chile have been far more numerous than usual, and, had it not been for the action of the leading banks in uniting for the support of several large firms, the results would have been very much more serious. In this connection, however, it may be hoped that the events of the year will, in the long run, make for sounder business conditions in the future.

PERU.

Peru has also suffered from the world-wide fall in values, which has been particularly marked in its principal commodities—sugar, copper, wool, and cotton. So far as cotton is concerned, however, there has during the last few weeks been a strong rally from the lowest points touched, owing to the partial failure of the American crop and the anticipated poor yield in Egypt.

The latest available statistics of Peruvian trade are those for the year ended December 31st last, and these are distinctly favourable when compared with those of some other countries. According to the official returns, both imports and exports showed an increase, the former being valued in 1920 at £17,956,758, as compared with £12,203,840 in the previous 12 months, the exports totalling £35,322,226, against £26,899,422. The balance of trade in favour of Peru for the 12 months ended December 31st last thus amounted to £17,365,468, as compared with £14,695,582 in the previous 12 months. The figures for the first half of the present year are not yet to hand, but from the general indications it is clear that trade has fallen off considerably, and this supposition finds support in the returns of Customs revenue, which show that while the receipts from import duties during the half-year ended June 30th last marked a slight increase as compared with the previous six months, those derived from exports were reduced by over 70 per cent., the totals being as follows:—

	Yield of Import Duties. £p.	Yield of Export Duties. £p.
July 1 to December 31, 1920 ..	1,090,639	1,074,483
January 1 to June 30, 1921	1,112,746	317,009

The fall in values has naturally found reflection in financial conditions generally, and particularly in exchange, which has dropped steadily during the 12 months. In September, 1920, the discount on sterling, as compared with Peruvian currency, was 22 per cent., but in February of the present year sterling rose to par, and towards the end of the following month a premium of 12½ per cent. was touched. Since then there have been considerable fluctuations, and at the end of September the quotation was down again to 4 per cent. premium. This drop in the external value of Peruvian currency, and the fall which occurred at the same time in local prices of commodities, placed importers in a position of considerable difficulty, and many small merchants were unable to take delivery of goods ordered from Europe and the United States, with the result that the Peruvian ports became congested with merchandise, which is only now being slowly liquidated and at very reduced prices.

RESULT OF DROP IN PERUVIAN EXCHANGE.

As a result of these conditions, imports for some time past have been on a negligible scale, with a necessarily adverse effect upon that part of the national revenue which is derived from import duties. The receipts have also suffered as a result of the fall in prices of sugar and cotton, the export duty on these commodities being regulated by a sliding scale based upon market prices. At the quotations ruling a short time back cotton paid no export duty at all, while that on sugar was very slight, and it is feared that a number of sugar businesses, whose properties were acquired at very high prices, could scarcely bear any additional taxation at the present quotations of the commodity. These circumstances have evidently been under the consideration of the Government, and, in his inaugural speech to Congress, President Leguia hinted at probable changes in taxation which, it was understood, would involve a revision of the Customs tariff and the institution of a tax on incomes. At present, direct taxation in Peru is practically non-existent, but it seems probable that this may be altered in the near future.

Owing to the falling off in the national revenue, no great improvement works have been instituted during the year, though a small amount of railway and road construction has been completed.

NEW YORK DEPOSITS MOVED TO ENGLAND.

An interesting operation was recently carried out, by means of which the Government secured a substantial profit on exchange, which has been used in part further to strengthen the security for the note issue. Until recently the deposits were held in New York to the amount of about \$13,000,000, but these were transferred to London during the year at a rate of \$3.75 to the £, giving the Peruvian Government an exchange profit of approximately 23 per cent. Of this profit, £1600,000 was used for general financial purposes, and, more particularly, for the defraying of the expenses of the recent centenary festivities, while the remainder was added to the currency reserve, with the result that the note issue is now guaranteed to the extent of about 50 per cent. by gold deposits in Lima and the balance by sterling deposits in London.

The Government have in view an important project embracing the reconstruction of the port and harbour of Callao, the administration of Customs, and various sanitation works. Negotiations have been proceeding in New York for the raising of a loan based on the Customs revenue for the financing of these various undertakings. It is believed that these negotiations will be successful, and that the scheme may involve the complete rearrangement of Peru's finances.

The political situation, thanks mainly to the active measures adopted by the present administration, has continued satisfactory, though labour difficulties have made their appearance in various parts of the country. In many cases, however, a reduction in wages has been accepted by the workmen, which has partially offset the difficulties caused to Peruvian producers by the fall in the selling prices of their commodities.

Little progress has been made in the development of the oil reserves of the country, owing, in a large measure, to the present defective state of the laws on the subject. It is understood that this matter will receive the early attention of Congress, and it seems probable that, so soon as the necessary conditions and guarantees have been obtained, important foreign organisations may take an interest in the exploration and development of the oil-bearing territories of the country.

The recovery in the price of cotton, already referred to, if maintained, should have a very favourable effect upon the financial position of the country, and in the circumstances the outlook for the present year seems to be decidedly encouraging.

MEXICO.

Conditions in Mexico during the past year have not altogether fulfilled the promise of 12 months ago. The accession of General Alvaro Obregón to the Presidency was generally welcomed by business interests, but it soon became evident that the Socialistic tendencies had become too deep-rooted under previous Administrations to be easily altered. An illustration of this was afforded during the year by the passing of a Labour law in the State of Vera Cruz, under which all commercial and industrial concerns had to turn over 50 per cent. of their profits to their employees and labourers, the law to be retro-active as from 1917. Attempts were made to secure the passing of similar decrees in other States, but it now seems to be more generally realised that such legislation could only result in a general closing down of factories, and it is hoped and believed that the law will be repealed.

Labour and transportation troubles have been very prevalent during the year, and have seriously hampered general business activities. As regards the railways, the rolling-stock has been allowed to get into a very bad condition, and operations were also rendered difficult at one time by a shortage of fuel. Further, owing to the very large imports during the spring of this year, the amount of freight offering for transport was exceptionally large, and the result was a state of congestion at Vera Cruz and all other ports of entry, where from 30,000 to 40,000 tons of merchandise were lying on unsheltered wharves and even in the streets for a period of months awaiting relief in the transport situation. The national railways, however, have just placed a large order for engines, and provided no new complication arises, the railway situation should shortly be relieved. Owing to the fall in prices which occurred during this period of congestion, there has been the usual disinclination to take delivery of goods when they have at last become available, and these circumstances, in combination, have led temporarily to a credit situation which, although not alarming, needs very careful watching.

Considerable progress was made in the oil industry during the year, and new productive fields were opened up, but owing to the attitude of the Government in the matter of taxation, large interests practically closed down in order to bring the question to a head. We are glad to say, however, that, although not finally cleared up, the position in this connection now seems to be rather brighter. The fall in prices, too, has naturally had an adverse effect upon the industry, and the same factor has operated in the case of the mines. Mexico's chief metallic products include silver,

lead, and copper, all of which have fallen heavily during the past 12 months, without a corresponding contraction in production costs. Despite the fall which has taken place from the high level of a year or so ago, however, silver still commands a substantial premium on the pre-war price, and, notwithstanding the high working costs, affords a reasonable profit to the Mexican producer.

Generally speaking, it may be said that the industrial, commercial, and other enterprises of the country are still passing through a somewhat difficult period, which is probably the inevitable result of inexperienced attempts at reconstruction, but it may be hoped that this will prove to be transitory, and that Mexico will emerge from her difficulties financially sounder and potentially prosperous.

FRANCE, SPAIN, AND U.S.A.

In France progress towards more normal conditions has also been slow. The national expenditure has been maintained at a high figure, while, on the other hand, the revenue from taxation has fallen well below the Budget estimates, partly owing to trade depression and partly to the difficulty of collecting the newly-created income-tax from certain classes of taxpayers. Various loans have been issued in order to meet the Budget deficit, and for the purpose of repaying advances from the Banque de France to the Government, the total of which was reduced during the year by 1,200 million francs, the amount outstanding at June 30th last being 25,000 million francs. A satisfactory point to be noted is a reduction in the note circulation of the Banque de France during the 12 months from 37,643 million francs to 37,422 millions.

The foreign trade situation has improved considerably, for whereas in 1919 there was an import surplus of 25,000 million francs, and in 1920 one of 15,000 millions, the figures for the first six months of the present year show a small surplus of exports over imports.

On the whole, however, the exchange value of the franc shows a further depreciation. In July, 1920, the quotation was about 45.00 to the pound, and early in January of the present year high level was touched at 61.50. From that point there was a fairly steady fall in the quotation to 46.25 in June, but by the end of September the rate had risen again to 53.25.

Generally speaking, the trade situation has been affected by the large stocks of merchandise which were accumulated some time ago when prices were at about their highest. The heavy fall in the markets for all materials has brought with it a great depression in trade, as a result of which many houses have resorted to the *Règlements Transactionnels*, i.e., legalised private arrangements with creditors.

The work of reconstruction in Northern France is proceeding only slowly, and has so far been largely financed by loan issues. Main attention appears to have been given to the reconstruction of factories and to the restarting of the coal industry, the output of the damaged mines having been now restored to one-half of the pre-war figures.

SPAIN.

Spain has also suffered a severe commercial and financial crisis during the year, and exchange has been affected by the change in trade conditions, a favourable balance of 270 million pesetas in 1919 having been converted into an adverse balance of 178 million pesetas in the following year, which reactionary movement has been still further accentuated during the past few months. These various circumstances tended to undermine financial confidence, and a severe banking crisis occurred towards the end of 1920, the effects of which are still apparent. The difficulties mainly centred around the Banco de Tarrasa and the Banco de Barcelona. The first-named institution was supported by the Spanish and "foreign" banks acting in concert, which formed guarantee funds to a substantial amount in favour of the Banco de Tarrasa, our institution participating to the extent of 500,000 pesetas. The difficulties, however, subsequently proved to be more widespread, and towards the end of December the Banco de Barcelona suspended payment.

The year has been characterised by the introduction of a very onerous system of taxation of foreign institutions, which is not calculated to stimulate the movement towards financial and commercial recovery in the country, of which, we are glad to say, there are indications at the present time.

Unfortunately Spain has become involved in war with the Moorish tribes of the Riff, and it is impossible to foresee the financial consequences of the conflict, but it will undoubtedly increase the heavy deficit in the national Budget which has been characteristic in Spain for some years past.

U.S.A.

In the United States, also, the year has been one of reaction, as is sufficiently indicated in the trade returns, which show a considerable diminution both in imports and exports as compared with the previous 12 months. In one respect, however, the United

States is different from many other countries, in that she still enjoys a substantial export surplus, and in view of the favourable position in which the country has been placed by the events of the past few years, she has been able to lead the way in carrying out the policy of deflation. There can be no doubt that the United States must play an important part in the restoration of international trade relations, and in this connection it is encouraging to note the increasing tendency of the American capitalist to invest in foreign securities. Generally speaking, the year has not been altogether satisfactory from a financial standpoint. The stimulus given to the export trade during recent years has naturally led to a certain amount of unsound business, and to somewhat heavy financial losses, but the general position is too strong for these to have had more than a passing effect.

In this brief review I will not attempt to cover in detail the immense field of America's natural products, but mention should be made of the heavy fall in the price of cotton in the early part of the year and of the sharp recovery during recent months which has resulted from the partial failure of the crop.

REPORT AND ACCOUNTS: EXTENSION OF INTERESTS.

A year ago reference was made to the acquisition of the greater part of the share capital of the British Bank of South America, Limited, and it may be mentioned that, in the interval, we have slightly increased our shareholding in that institution, so that we now hold 99½ per cent. of the total capital. This accounts for the small addition to our own capital during the 12 months, shares in this bank having been issued to old shareholders of the British bank in exchange for their holdings in that institution. I am glad to say that the results of the working of the latter institution during the year ended December 31st last was entirely satisfactory. The profit was approximately the same, and the dividend was maintained at the rate of 15 per cent. on the share capital.

The accounts of the Commercial Bank of Spanish America, Limited, in which we now hold 479,496 shares of £1 each out of a total issued capital of £500,000, show a net profit for the year ended June 30th last of £70,453, as compared with £67,682 in the previous 12 months. After paying a dividend of 7 per cent., as formerly, a portion of the surplus profit is employed in writing down capital to present values, and a small sum is added to the reserve fund.

The Banco de A. Edwards y Cia., in which, as you know, we hold a 60 per cent. interest, also secured satisfactory results in the first half of the present year, the net profits for the period amounting to \$1,443,000 (paper), as compared with \$1,426,000 (paper) in the six months ended December 31st last. After paying a dividend for the period at the same rate as that on which our purchase was based, namely, 14 per cent. per annum, the reserve funds were increased by \$600,000 (paper) to a total of \$3,600,000 (paper).

INTEREST IN THE BANQUE GENERALE BELGE.

As mentioned in the report, we have during the year secured an interest in the Banque Générale Belge, in concert with the Société Anonyme Bunge, under which title the business of our esteemed friend and co-director, Mr Edward Bunge, is now carried on. By the arrangement, a more direct channel has been formed for the execution of the foreign business of the important Belgian houses with which Mr Bunge's name is associated, and we hope that this will lead to the substantial advantage of all concerned. For several years the question of securing a direct representation in Belgium has been under our consideration, in view of the importance of the international trade between that country and the various parts of the world—Argentina in particular—where we have branches. For many reasons, however, we have thought it preferable to secure the co-operation of an institution already established in the country rather than to establish branches of our own, and we therefore welcomed the opportunity of securing an important share-holding in the Banque Générale Belge, which will, we believe, result in the mutual development of business. The bank was founded in 1860 as a private firm, under the name of Messrs A. de Lhoneux, Linon et Cie., and in 1901 it was converted into a limited company. The family of de Lhoneux, to whom it had previously belonged, continued to be represented in the management, and to-day Mr A. de Lhoneux is one of the vice-presidents. The capital of the bank amounted to 25,000,000f, and by the new arrangement this was increased to 50,000,000f, 50,000 new shares of 500f each being issued, of which one-half were subscribed by your bank, and the balance by the Société Anonyme Bunge, at the price of 650f per share. At the time of this acquisition the shares were quoted in the market at about 700f, but immediately the announcement was made they advanced in price, and are to-day quoted at 750f, or 100f above the price at which our investment was made. The published reserve funds now amount to 17,000,000f, and the balance-sheet, made up to Decem-

ber 31, 1920, showed current and deposit accounts at 205,069,681f, the cash in hand and at the Banque Nationale being 33,249,548f, and the bills receivable 30,513,281f. The results for the period to June 30th last have not yet been published, but we are glad to be able to say that these are quite satisfactory.

BRITISH OVERSEAS BANK.

The first report of the British Overseas Bank, in which we have a financial interest, was distinctly satisfactory, the profit for the period ended October 31, 1920, amounting to £199,744. After paying the fixed dividend at the rate of 6 per cent. per annum on the "A" ordinary shares, £49,016 was set aside to various accounts, and £81,486 was carried forward, subject to income and corporation profits taxes. The available profits would have been sufficient for the payment of a dividend on the "B" ordinary shares, which we, in common with other banking institutions, hold, but the directors of the British Overseas Bank decided, and, we think, very wisely, to give first attention to strengthening the reserve items in the accounts, a policy of which, I am sure, we shall reap the benefit in the future.

The net profits of the Banco de la Provincia de Buenos Ayres for the year ended December 31st last showed a substantial increase over that for the preceding year, the total being \$8,740,206 (paper), as compared with \$6,917,508 (paper), and we received a dividend of 8½ per cent. on our investment in that institution, as compared with one of 8 per cent. in 1919.

As regards our own branches, progress during the year has naturally been retarded by the adverse conditions generally existing; but when all the circumstances are taken into account, we have every reason to be satisfied with the business done. Naturally, however, there has been contraction in various directions, the period under review comparing with almost "boom" conditions during the greater part of the previous 12 months.

ACCOUNTS.

Last year, in referring to the increase in the figures of our balance-sheet, I remarked that this might in part prove only transient. The sudden and intensive change in business conditions during the past year and the fall in values of commodities have already caused a considerable shrinkage in many items of our balance-sheet, and the most important one of current, deposit, and other accounts has fallen from £58,458,000 to £49,473,000. This total is still nearly £8,000,000 in excess of that for the year ended June 30, 1919, and the contraction during the past twelve months is due, in the main, to the withdrawal of special accounts which at the time of their inception were known to be of a temporary character, though the general contraction in values the world over has also had its natural effect upon the figures. In regard to other items, you will note that our bills payable, including sight drafts, have shrunk very considerably, as was to be expected in the circumstances. On the other hand, our advances have increased from £26,245,000 to £27,180,000, and, when one bears in mind the extent to which all banks have been under the necessity of assisting their customers as far as was possible, consistent with safety, one cannot but regard this increase as very reasonable. The aggregate of the cash in hand, first-class investments, and bills receivable exceeds 36½ millions, which represents about 61 per cent. of our liabilities to the public under all heads. The proportion is rather less than that of a year ago, but, having in mind the contraction in our liabilities during the 12 months, I think it will be regarded as showing an ample margin.

I reminded you last year that we were undertaking very considerable rebuilding operations both in this country and at our branches abroad; one result of this is that the bank premises account now stands in our books at some £483,000 more than last year, and it will in due course show a further increase. We adhere to the opinion expressed at the last meeting that these purchases and rebuilding operations will, in the long run, prove very remunerative investments, not only because they provide us with ample accommodation for the conduct of our business at various important points, but also on account of the income which will be derived from those portions available for letting.

PROFIT AND LOSS ACCOUNT.

The profit and loss account shows a diminution in the gross profits of about £88,000, and the expenses an increase of £234,000, so that after allowing for rebate of interest on bills, &c., the net profit is reduced from £1,024,156 to £743,175. Those who are acquainted with the condition of trade during the period covered by our accounts and the low rates of exchange at which our profits have been remitted home, will not have been surprised to see this falling-off in profits as compared with last year, but although reduced, the total is larger than that for any previous year, even allowing for the fact that we have received from the British Bank

of South America net dividend of £105,000 for the twelve months. I am glad to say, too, that the rates of exchange now ruling in the South American markets are above the lowest touched during our financial year. As regards expenses, the increase was inevitable, being very largely due to salaries and allowances, which had to be raised in order to meet the rise in the cost of living during the early part of the year, not only here, but abroad. We also have an increase in our staff, which this year numbers about 300 more than 12 months ago. This is a matter which we have well in mind, and careful consideration is also being given to the cost of living statistics with a view to making a suitable reduction in allowances when the proper moment arrives. I am sorry to say, also, that the increase in our expenses has been in great measure due to taxation, and in this connection it is a striking fact that the Government have during the past year received from our institution in income-tax, corporation tax, and excess profits duty a sum which largely exceeds the amount that is being paid to you as shareholders by way of dividend.

STAFF MEMORIAL AND SPORTS GROUNDS.

The alterations which are now being made in our head office premises have delayed the completion of an object which we have long had in mind—namely, the erection of a permanent memorial to those members of our staff who lost their lives during the recent war. The memorial itself is in being, and will, I hope, be placed in permanent position before the end of the present year. In view of the number of our shareholders, it will be impossible to send out a general invitation to the ceremony, but I should be very pleased to respond to any applications for accommodation which may reach me from those who would like to take a personal part in this tribute to our honoured dead.

In accordance with what is now becoming a general practice amongst the larger business institutions, we have recently opened a sports ground for the use of our staff, this being situated on the riverside at Teddington. The ground is well suited to its purpose, there being splendid facilities for all outdoor games, including water sports, while indoor entertainment and general accommodation is provided by the two houses on the property which formed part of our purchase. I regard the ground as an excellent investment, both from the financial and general business standpoints, for I think it should maintain and stimulate that spirit of *esprit de corps* amongst the staff which is essential to efficient working.

Gentlemen,—I have the pleasure to move the following resolution, and after it has been seconded by Sir Robert Harvey, I will ask any of you who may have any remarks to make kindly do so. The resolution is: "That the report and balance-sheet, as distributed, be adopted, and that a final dividend of 9s. per share, less income-tax, be and is hereby declared payable on the 31st instant."

Sir Robert Harvey (vice-chairman): Ladies and gentlemen,—I have great pleasure in seconding the chairman's proposition. The resolution was then carried unanimously.

Mr C. E. Gunther: I have much pleasure in moving, "That Mr Edward Eton Barclay, a retiring director in accordance with the articles of association, be and is hereby re-elected."

Mr H. W. Patrick: I have much pleasure in seconding that. The motion was put to the meeting and carried.

Mr A. Naylor: I beg to propose, "That Mr Charles Eugene Gunther, a retiring director in accordance with the articles of association, be and is hereby re-elected."

Mr A. G. Gumpert: I beg to second that.

The resolution was unanimously approved.

Mr Russell then proposed, "That Messrs Price, Waterhouse, and Co. be and are hereby reappointed auditors for the year ending June 30, 1922, at a fee of £750."

A shareholder seconded the proposition, which was unanimously approved.

TRIBUTE TO STAFF.

Mr T. Woodsend: The resolution I am about to submit to you is one which affords me very special pleasure, because I have lived many years in South America and know how there may grow up in one's mind a certain sense of detachment from the central office unless, periodically, those who work at so great a distance from home receive the stimulus of an expression of appreciation for what they have accomplished. The past year has been one of commercial depression such as, I think, has never been experienced in our time, and the setback has been the more serious because it succeeded a boom in trade almost, if not quite, equally unprecedented. Small wonder, then, if some men were unable to adapt their minds to the prevailing conditions, and to realise sufficiently what was the probable course of events. But that the continued efforts of our staff should, in such a year,

have resulted in a net profit equal to three-fourths of the earnings of the previous 12 months and in excess of those of any previous year, is, I feel, an eloquent testimony to the sagacity of our staff as a whole, and I feel confident that you will be so entirely in conformity with me that you will adopt this resolution with acclamation. I propose, "That the best thanks of this meeting be offered to the staff abroad and at home for their services during the past year," and when it has been seconded I will ask Mr Wells, our general manager, and Mr Cartwright, our manager at Mendoza, who is at present home on furlough, to respond.

Mr A. de Lantsheere: I have the greatest pleasure in seconding that resolution.

The resolution was carried with acclamation.

MR WELLS' REPLY FOR THE STAFF.

Mr William E. Wells (general manager): It gives me the greatest pleasure to respond on behalf of the staff, both at home and abroad, to the very kind remarks just expressed by Mr Woodsend. It is especially gratifying to hear such words from one of Mr Woodsend's experience and knowledge of South America and its conditions. From my residence of some 20 years in South America as an officer of the bank, I can assure you that my colleagues there, as well as those in North America, on the Continent, and at home, always greatly appreciate the kindly references to their services made at the annual general meeting of our bank. I have spoken before of the spirit of loyalty which actuates the members of our staff abroad, and I can say the same of those at home, with whom I have come still more closely into touch during recent years. All have at heart the interests of the great institution we have the honour to serve, and with all confidence, I can assure you that there will be no lessening of effort on our part in the future. Once again I thank you, Sir, on behalf of my colleagues for the kind remarks contained in your resolution, while to the directors I desire also to express our indebtedness for the leadership which has given prosperity to our institution and all concerned in its working, and to the shareholders our grateful thanks for the manner in which this resolution has been received.

Mr H. S. Cartwright (manager of the Mendoza branch): Mr Chairman, ladies and gentlemen,—The kind vote of thanks which you have passed yet another year will be read by men spread over the greater part of South America, on whose behalf, in particular, I speak in support of what our genial general manager has just said. You have been assured by Mr Wells of the devotion of your staff to the bank, and, except to say that their enthusiasm has in no way abated, I shall not enlarge upon this now, but rather emphasise the cause of it. One does not have to look far for this, for, in addition to a natural loyalty to the bank, it is fully realised by the staff that the welfare of each one of us is entirely bound up with the welfare of our institution. And one of the requisites for prosperity is whole-hearted co-operation with our directors, each one of us according to his ability, and each pulling his full weight. We are proud to feel that in this manner we have a direct stake in the bank. From the cordial reception you have given to this vote it is evident that you do not regard it merely as a very formal part of the yearly proceedings, but as something genuinely felt, and it will afford me no little pleasure so to inform my colleagues in the Argentine, and elsewhere, on my return there by the next outgoing boat. In their name, ladies and gentlemen, I thank you.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Señor Don Agustin Edwards: Ladies and gentlemen,—It is very late in the day to make a speech, but I think that this meeting could not possibly rise without one of the shareholders proposing a vote of thanks to the chairman and the board of directors. It is not mere custom which prompts me to propose this vote of thanks; it is a real and sincere appreciation of the work done by the chairman and the board of directors, and also of the fact that this great institution of the Anglo-South American Bank was born in my own country many years ago. It is sufficient to consider the figures of the past few years to realise what the work of the chairman and the board of directors of this bank has been. When we see that the capital since 1914 has been doubled, that the reserve fund has nearly trebled, that the current, deposit, and other accounts are sevenfold what they were in that year, we realise that all this could not possibly have been achieved without the greatest efficiency on the part of the chairman and the board of directors, and on the part of our staff. We realise that the directors of this bank have had to steer through the most difficult times within the memory of man, and we are glad to see that, in spite of all this, our institution is prosperous in the hands of those who are at present at the head of its affairs. I believe that the board have been following a policy which has laid the foundations for the future greater prosperity and the further development of this bank. Therefore, in the vote of

thanks which I am about to propose, I not only refer to the actual services rendered to the institution, but also to the wise and far-seeing policy which the board are pursuing. I now beg to propose: "That the very hearty thanks of this meeting be accorded to the chairman and directors for their services during the past year, and particularly to the chairman for his services in the chair to-day."

SIR HARRY BRITTAIN ON CONDITIONS IN CENTRAL EUROPE AND THE BALKANS.

Sir Harry Brittain, M.P.: Ladies and gentlemen,—I am very pleased to be able to associate myself with my esteemed friend Señor Don Agustin Edwards in most heartily seconding this resolution. As a very considerable shareholder, both directly and as a trustee, I particularly appreciate this opportunity of seconding this vote of thanks. We are exceedingly fortunate in our board of directors, and especially so in our chairman, and I am sure we could not have our affairs in better hands. As a member of Parliament, and therefore interested in such matters, I sincerely congratulate our chairman on one of the most statesmanlike speeches on finance to which it has ever been my privilege to listen. I should like for only half a minute to refer to points raised by Mr Hise in his speech from the point of view of conditions in the belligerent countries. I spent practically the whole of the time of the Parliamentary recess since August on a visit to the Balkans and to Central Europe, and, of course, everything that the chairman has told you to-day is absolutely true as to the difficulty of trade in those countries. I found throughout the whole of the Balkan States, and throughout Central Europe and

Czecho-Slovakia, that never did the name of this country stand higher than it does to-day, and I also found that the people of those countries were more than ready to trade with England than with any other country in the world. They were, however, prevented from doing so by this unhappy difficulty of exchange, with its rapid fluctuations, making it impossible for orders to be given. It is by our export trade that we stand or fall, and I cannot help taking this opportunity of putting forward the humble suggestion that there is no question of more paramount importance at the present day than this question of exchange, and that an attempt should be made to stabilise the foreign exchanges. I know the question bristles with difficulties, but I should imagine that the combined acumen to be found among the great banking institutions of London will enable a solution to be found. Let me again say that it is with the greatest possible pleasure that I support the resolution so ably proposed by Señor Don Agustin Edwards. I am sure the resolution will have the unanimous approval of all the shareholders.

The resolution was carried with acclamation.

The Chairman: Ladies and gentlemen, on behalf of my colleagues and myself, I thank Señor Edwards and Sir Harry Brittain for what they have said—perhaps a little too flattering regarding myself, but none the less extremely kind. I thank you very sincerely for your kind reception of this resolution, and we hope that, notwithstanding the trials through which we may yet have to go—for I do not think we as a country are by any means completely out of the wood—we may on a future occasion meet you with a balance-sheet no worse than that which we present to-day.

The proceedings then terminated.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

RAILWAY TARIFFS IN THE ARGENTINE.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held, on the 26th instant, at River Plate House, Finsbury circus, London, Sir Albert Bowen, Bart. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report, said that in view of the unsatisfactory conditions prevailing during the year, the gross receipts at £8,732,000 did not compare very unfavourably with the previous year, the decrease amounting to £807,259. The net receipts showed the enormous reduction of £1,570,000, accounted for principally by the large growth in working expenditure. Practically every department of the railway working had contributed to this increase in expenditure, the main items of increase being in salaries and wages and in fuel.

The Chairman then dealt with the question of tariffs and the provisions of the Mitre Law. He could not do better, he said, than quote the words of his predecessor (Mr Jason Rigby) in his remarks from the chair in 1908. Mr Rigby said: "As regards the general effect of the new law (the Mitre Law), I think there is every prospect of its meeting the object it has in view, that is, the unification of railway interests and the closer and more satisfactory relationship between the railways and the Government," and that "it should prevent unfair competition on the one hand or unreasonable tariffs on the other," and "secure to the existing railways the benefit which should accrue to them as the result of their many years of patient pioneer work in opening up the country."

The Argentine Government, the Chairman continued, would think anyone mad who suggested to them the repudiation of the interest on their foreign debt, as Argentines were justly proud of the fact that through all their vicissitudes they had always faithfully carried out their engagements. It was the more strange, therefore, that the present Government could contemplate with apparent equanimity what appeared to the directors as the partial repudiation of the obligations they undertook to foreign railway shareholders under the Mitre Law, on the strength of which enormous amounts of British capital had been laid out in their country. The whole future progress of the Argentine Republic depended upon the extension of the railway system to the enormously rich undeveloped districts far away from the existing lines, and to what country could they look to find the money for those necessary extensions if their treatment of existing capital was not fair and generous. They had received a cable from their local committee giving the latest information, which stated, among other things: "As regards tariffs, we still have hope that justice will be done." The report was unanimously adopted.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED.

GOVERNMENT'S INTERPRETATION OF THE "MITRE LAW."

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 24th instant, at Winchester House, Old Broad street, London. Viscount St Davids, P.C. (chairman), presided.

He said the report was an extremely bad one—of that there was no doubt. The only merit he could claim, as a director of the company, was that he gave the shareholders fair warning last November, when most people thought that the prospects were bright. Further, he told them last February, when things had more developed, that the year, in his judgment, would be a bad one—and he then detailed his reasons for the judgment he had formed. Three main factors in recent years had unfavourably altered the prospects of the company—fuel, the decrease in agriculture, and the great rise in wages. Last year fuel was costing the company famine prices, but to-day it was much cheaper. After amplifying this, he said that during the present year they ought to economise on fuel and stores to the extent of about half-a-million compared with last year, and next year they would have cheap fuel for the whole of the year; but the saving would not, he thought, be so great as half-a-million. Speaking of the decrease in agriculture, he observed that cattle ranches—which in some parts had replaced the cultivation of grain—were no good to the railways. They now noted a tendency in the other direction, and for the first time in many years they had this year 4 per cent. more under agriculture—and perhaps that percentage would prove higher. As to the cost of labour, there was no sign of diminution. Since 1917 the cost of labour to their company had gone up by £1,700,000—a prodigious charge. Without an increase in rates it was obviously impossible for any company to meet such a charge.

Referring to tariffs, he said under the "Mitre Law" the railways were allowed to earn 6.8 per cent. on its capital—that was to say,

on the whole of the capital, debenture, preference, and ordinary. If their company earned 6.8 per cent. on their capital they would be earning 12 to 14 per cent. on the ordinary. Before there could be any increase in tariffs the law provided that the Government must approve of the increases as being just and reasonable. Last summer the position was unsatisfactory. They and other railways were levying certain rates, as was believed they had the right to levy, but grave doubts were raised by the Government. He (the chairman), therefore, went out, with the result that when he left the country he believed the whole matter was settled. But on reaching Lisbon he received a cablegram that the decision of the Director-General of Railways had been repudiated by the Government, and that he (this official) had no authority to act for the Government. Whether legal or illegal—and he believed many of the increases were legal—they were ordered by the Government to withdraw them at once by *force majeure*. Their representatives had withdrawn all those increases sanctioned last August by the Director-General of Railways. As to the current year, crop prospects were most satisfactory. But they had the great increase in wages and the prospect of further increases in six months' time. Unless there were an increase in tariffs, it would be impossible for the company—good or bad crops—to present a satisfactory report for the current year. He felt the Argentine Government had been misled by the apparently good results of the previous year. Further, he would remind them of the immense services rendered to the country by the railways. What would be the result to the country if the railways were impoverished? The stock of the company was held by a large number of small capitalists. Their stock was now quoted at about 30—a tell-tale figure, evidencing that they were not sucking the country dry. The credit of the Argentine railways was the credit of the Government, and it was to their advantage that the company's credit should be high. This question of the tariffs should be settled equitably and justly—and at once. He appealed to the Government to give him that justice, and to give it him soon.

The report was unanimously adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED.

QUESTION OF INCREASED RATES AND FARES.

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 27th instant, at River Plate House, London, Mr C. H. Pearson presiding in the absence of Sir Joseph White Todd, Bart.

The Chairman read Sir Joseph's speech, in the course of which he said that while the past year's results, under all the circumstances, had not been unsatisfactory, they had proved, in a measure, disappointing, more especially if viewed from the standpoint of what the first six months had induced the directors to hope might reasonably be anticipated from the second half of the year. On the income side of the account the outstanding satisfactory feature was the expansion in passenger traffic. To summarise the results, the net earnings were £1,198,000 less than in the previous year, accounted for, in the main, by £600,000 paid away in higher wages, £297,000 in dearer fuel and other working stores, and £49,000 in higher reserve fund provisions—a total of £946,000 out of the £1,198,000. The reserve funds now aggregated over £4,000,000. During the year they had expended £701,000 on capital account.

Dealing with the increased rates and fares which the company had put into force, he described in detail the steps which had been taken by the company, and referring to a resolution issued by the Minister of Public Works declaring the increases which had been granted to the railways as null and void, and ordering the withdrawal of such increases by all companies interested, he said that up to the present the Central Argentine had not complied with that resolution, because they did not consider that it legally affected them. They had throughout scrupulously complied with the Laws and Decrees governing the operation of railways in the Argentine, and would continue to do so, feeling as they did that under those conditions justice must eventually prevail. That, at any rate, had been his invariable experience. On the face of the Mitre Law many millions of pounds had been invested in railway enterprises in the Argentine, and that enactment was passed on the principle that in an agricultural country, where there must of necessity be ups and downs in revenue, an average of three years should be the foundation for measuring income, and it was impossible, therefore, to believe that the present or any future Argentine Government would fail to comply with its side of a contract entered into by two contracting parties. In a word, he, for one, was very far from despairing that better counsels would soon prevail—for one reason, if for no other, and that was that the interests of a prosperous country were identical with those of its railways.

The report was unanimously adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED.

POSITION OF BRITISH-OWNED RAILWAYS IN THE ARGENTINE.

The thirty-second ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 25th instant, at River Plate House, London, Sir Henry Bell, Bart. (the chairman), presiding.

The secretary (Mr Robert Graham) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that there had been sudden and severe variations in exchange which had affected trade all over the world, but the principal reason for the bad showing was that they had been impeded in their efforts to secure promptly rates which would enable them to earn the profits to which they were entitled under Law 5,315—the Mitre Law—or even to cover the cost of the services rendered to the public in Argentina. Thus they could only show the miserable result that, after taking into net revenue half a million from reserve and the balance brought forward, they could pay but 4 per cent., carrying forward £37,973.

Proceeding, the Chairman explained the bearing of the Mitre Law, and also the attitude now being adopted by the authorities in the Argentine. The Government in the matter of tariffs had assumed the position of both plaintiff and judge, and had awarded the penalty that the railway companies should refund all the increased rates and pay a fine of 60,000 dols. All the increased rates had been withdrawn temporarily, but the company had given notice that certain of them would be collected as from November 1st next, and the board were taking proceedings in the Courts with regard to the fine.

It had been urged that instead of applying for increased rates the railways should search for means to reduce working expenses. That comment might be of value if the companies were supported in their efforts to effect economies, though he felt sure that a reaction against the constant additions to the expenses of the railways would shortly set in, while it was clear that the recent refusals to allow adequate rates would have the most hurtful effect not only on the companies but on many thousands of railway employees. It must soon be evident to the Argentine authorities, and the people, too, that they were killing the goose that laid the golden eggs.

Though the past year had been cheerless, they could look forward to better times, even if not in the immediate future. The tariff question was the important adverse factor, but he was not without hope that they would receive the reasonable treatment they had a right to expect.

The report was unanimously adopted.

ERINOID, LIMITED.

REVIVAL AFTER TEMPORARY SETBACK.

SURMOUNTING TRADE DEPRESSION.

The sixth annual general meeting of Erinoid, Limited, was held, on the 27th instant, at the Institute of Chartered Accountants, Moorgate place, London, E.C., Mr Andrew Binnie, the chairman, presiding.

The secretary (Mr A. E. Parker) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—After five years of progressive prosperity we have had a severe setback—so severe that only a sound company could have survived and surmounted it. The reasons for this setback are given in the report, and the accounts are also drawn up so as to show what has happened. If you will look at the profit and loss account you will see that the trading profits are £16,717 as compared with £70,136 in 1920, and the former figure is on the assumption that stocks had remained on a stable footing. Even on that footing there is a serious drop in the profits, which is entirely due to the decrease in sales arising out of the general depression in trade. In 1920 the sales touched an average of £20,000 per month, equal to £240,000 per annum. In October, 1920, they were £27,000, and in the week after the last shareholders' meeting in 1920 £5,500. It was only in mid-December that business cracked, cancellations of orders poured in, and we had the lowest week (£1,400) we had had for many years. The monthly average up to August, 1921, dropped away to about £6,000, but in September last business began to revive. The sales rose to £11,000 for the month, and I anticipate they will be still better for the month of October. If the sales continue even on the present footing we ought to have a very good year indeed, having regard to the drastic way in which we have written down stock.

THE COMPANY'S BUSINESS MANAGERS.

As the accounts show, the really serious matter has been the drop this year in the value of finished stocks and raw material, and the loss on forward contracts, for which we have provided in the accounts. We were placed last year in a serious dilemma with

OFFICES IN ALL THE CHIEF COMMERCIAL CENTRES

orders pouring in and our raw material almost exhausted. Either we had to abandon manufacture and wait upon events or contract forward so as to cover the orders. Our business managers, Messrs Cleeve Bros. and Co., are shrewd people with wide experience of the market in milk products, and they are far and away the largest shareholders in the company. In view of the figures I have given you they thought it best to go right ahead. I think that, under the circumstances, most manufacturers would have done the same thing. In September and October they contracted to meet an increasing demand on a rising market, and sales at a rate of over £300,000 per annum means a vast quantity of raw material. Remember also that in this particular market you must contract ahead or you cannot contract at all.

Our managers could not foresee that a series of strikes, threats of strikes, and ill-judged taxation would bring business to an abrupt standstill. Let me add that in giving you this information there is no desire on the part of the directors to make a scapegoat of the managers or to shelter behind them. It is only right that you should know that the losses are not the result of speculative or ignorant buying by directors not in touch with a special market, but the considered policy of a great business house who for many years have known this market from end to end, and who had been having a perpetual struggle to get supplies. Messrs Cleeves have done well for us for many years and will do so again, and I do not think any of us wish to be wise after the event and to turn round on them now. As investors know, there are few enterprises which are not in the same boat.

GOODWILL AND CUSTOMERS.

It is one of the evils of business that while the large manufacturer, who can be shot at, has to carry out his contracts in times of depression and in falling markets, his customers make a practice of cancelling their orders. We could not insist on the orders being carried out, but we hope and believe our forbearance has added to the goodwill of the company and strengthened its connection.

CONSERVATIVE FINANCE.

The ample reserves built up in prosperous years enable us to face the situation. We have not minimised it, but have made a drastic cut so that we start the new financial year with a clean stock. You will appreciate that the stock is not brought in at its selling value, but at the reduced cost of manufacture. This leaves the usual margin of profit for the current year. If we had taken the stock at its selling value we should not have had to write down the large sum we have, but it is better to give the new year a good start. As we sell the stock we get the profit; we also get the cash. As the stock is all paid for, the proceeds, after paying current wages and expenses, are applicable to reducing the bank loan.

SHAREHOLDERS AND RIVALS.

We have been criticised by one shareholder because in the accounts we have not separated the stock from the book debts. That is quite a legitimate criticism, but it is the criticism of a shareholder who looks at these things from only one point of view. I may say that the accounts are modelled on those of a well-known manufacturing company of high repute. In lumping together stock and book debts, the object is not to give too much information to possible rivals or to customers as to the stocks we hold. That is precisely the information keen business people would like to get hold of. Moreover, the directors are aware that there are some small shareholders who are only on the register to get information. A former shareholder was the London agent of a German rival, and the... who are only here on a watching brief for other... an indication of the position, I

100, Savings Banks,
Dividend 2

may, however, add that the book debts are very much more than sufficient to meet the creditors and the bills payable—how much more I need not say. In any case, the greater part of the floating liabilities at August have since run off. We have no serious commitments, and the bank loan is reduced by £6,000. As you can see, we had recourse to our bankers in order to pay for raw material, and have given them a debenture by way of security. This, however, is only a temporary measure. With sales at the present rate and debts to come in, the loan should be quickly paid off.

As you have no doubt noticed, we have realised the War Loan and cut our loss. From the point of view of excess profits taxation it was desirable to face this loss now rather than later, as 60 per cent. of the loss is recoverable. At the same time, we are saving interest.

With regard to the factory at Yate, to which I referred last year, we were unable to get possession of the property at the time when it would have been of use to us, and I need hardly say that we are dropping that development for the present and are not taking up the property.

The reserve of £123,000, which we have applied to writing down the stocks, is made up of last year's figure, plus the premium on new shares and excess tax recoverable. At the time the issue was made the shares were standing in the market at 18s, and in view of the business we were then doing it seemed only fair to issue them at a premium. We, of course, deplore the sequel, but possibly it is some consolation to know that without the premium we could not have so successfully faced the unprecedented fall in values all round and put our house in order.

PROPOSED FRENCH COMPANY.

The question of foreign tariffs has also engaged our attention. Although the bulk of our purchases of raw material were made in France, the French Government has recently increased the tariff on Erinoid five and a-half times. That is not a tariff to raise revenue, but a prohibitive tariff designed to prevent imports. Other countries would meet a similar attack on their industries by retaliation; for example, by a prohibitive tariff on French fancy goods, and so compel fair trade. We in this country are taught to console ourselves by the supposed corresponding increase in invisible exports, and the most we can hope for by way of retaliation is a polite letter of protest. We have, therefore, to seek other means of regaining this trade, and we have been negotiating with a view to setting up a French company. According to the reports we have had conditions are favourable. If we are able to formulate a suitable scheme we shall give the English shareholders an opportunity of participating, but it will no doubt be an advantage to have a substantial part of the capital held by our French customers or in influential French hands. The setting up of a French company would enable us to transfer to France plant and machinery which might otherwise have to be idle, and also enable us to realise its value. Incidentally this shows how tariffs may be used to divert employment from one country to another. Different countries have different panaceas. The remedy in England is to increase taxation.

ECONOMIES AND DIRECTORS' FEES.

In view of the general depression of trade we have taken various steps to effect economies, but we are not restricting these measures to our employees alone. Last year, when we were so prosperous, the shareholders were good enough to increase the directors' remuneration. We propose this year to go back to the previous figure. The shareholders in the past have been very largely friends of the directors and the managers, and have backed them up in a way which adds to our regret at the unfortunate result of the past year. However, the current year opens with the most promising returns. As we were among the last to feel the depression of trade so we are the first to benefit by a revival, and considering the general conditions our trade is remarkable. There are still other fields to open up for the use of Erinoid, and there is no doubt as to the demand for the material. As to foreign competition, I may remind you of our close association with Messrs Cleaves, the largest milk producers in the United Kingdom. That puts us in a position to procure supplies of raw material at competitive prices, which, naturally, will be more favourable to us than to any foreign rivals buying abroad on a depreciated currency.

The Chairman concluded by moving the adoption of the report and inviting remarks and questions.

RESOLUTIONS CARRIED UNANIMOUSLY.

Mr F. W. Beck, seconded the motion, paid a high tribute to the services of Messrs Cleaves and stated that by cancelling contracts on generous terms they had gained the goodwill and good feeling of a large number of customers. They had suffered a setback which was a great loss to the company had before it a very bright and promising future. In reply to Mr H. B. Beck, the Chairman stated that would

arise from the establishment of a French company, and stated that they were not afraid of competition on the Continent, especially as their material was better than any other.

The resolution for the adoption of the report was carried unanimously, as were the resolutions re-electing Mr Binnie as a director and re-electing the auditors.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED. SATISFACTORY YEAR'S RESULTS.

The twelfth ordinary general meeting of the Kern River Oilfields of California, Limited, was held, on the 26th instant, at Kingsway Hall, Kingsway, London, Mr William Ivey (the chairman) presiding.

The secretary (Mr Reginald H. Young, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman said that the report now submitted was even better than that of a year ago, which he had then described as the best in the history of the company. Their operations in Trinidad and in Rumania and the commencement of a more vigorous policy in Mexico were already bearing fruit. In 1920 the distributable profit was £175,654, whereas in the past year it amounted to no less than £384,454. In 1920 they paid a dividend of 17½ per cent., and this year they were paying 20 per cent. on a much larger capital, together with a special bonus of 20 per cent. Their capital was £1,200,000, and their properties stood at less than 25 per cent. of that figure. The amount of £662,966 spent on subsidiary companies to date in no sense represented the true value of those undertakings, which were worth a very much larger sum. The total of the cash assets of the Kern and St Helen Companies was £1,134,566. With regard to the Kern production, they had been able so to arrest the natural decline in production that last year they had arrived at a figure which showed a decrease of just over 1 per cent. only. To-day he was able to point to another record in that respect. Kern 33 and 19 had actually increased their production during the past year to such an extent that there was an increase of 1.03 per cent. over the 1920 figures.

With regard to the new leases during the last few weeks, the shareholders had seen news in the papers which must have been very pleasing to them. The Montebello field had really been a very great success, and also a source of much worry. In the Taylor and Puma Briana they had wells which had given a very good production, but unfortunately their near neighbours had been able to offset those wells, and so prevent their getting a long-established production such as they had had on the Macleod field. In spite of that, those two were excellent properties. Last, but not least, they had the Eggleston well, which was the subject of an announcement a short time ago, when it "blew in" with a production of 2,000 barrels of 28.7 gravity oil a day and 20 million cubic feet of gas a day. He did not wish shareholders to run away with the idea that the production was still 2,000 barrels per day. It was round about 1,000 barrels. The important point was the effect on their other properties adjoining, which totalled over 800 acres.

The report and accounts were adopted.

Reports and Notices.

Mr David Abramag having resigned his position as general manager of the General Reinsurance Company, Limited, has been elected a director of the company.

Mr T. McNeil, formerly agent of the Canadian Pacific Railway Company at Liverpool, has been appointed Liverpool general agent, with offices at Royal Liver Buildings, Liverpool, and Mr R. E. Swain has been appointed Liverpool passenger agent, with office at the same address.

At a meeting of the directors of Nobel Industries, Limited, held on October 27th, the board appointed Colonel G. E. Stanley-Smith, D.S.O., as a director in place of the late Sir George Smith.

We are authorised to state that Mr Hugh Sutherland has resigned from the board of the British Magachewan Gold Mines, Limited.

Mr Albert W. Claremont has accepted the seat on the board of directors of Rolls-Royce, Limited. Mr H. Royce has joined the company as buyer at their Derby works.

GOVERNMENT STOCKS, &c.

CITY OF CONSTANTINOPLE MUNICIPAL 5 PER CENT. LOAN, 1909.—A meeting of the holders of these bonds will be held at 8 Bishopsgate, E.C., on Thursday, November 3, 1921, at 3.30 p.m. in the afternoon, when the present position with regard to this loan will be fully explained.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the October instalment of the Debt Service in accordance with the arrangement of May 25, 1912.

RAILWAYS.

ARGENTINE GREAT WESTERN.—Report of company for year ended June 30, 1921, states that company has received from B. A. and Pacific Company and has distributed following amounts:—Interest on first debenture stock, £68,000; second debenture, £68,000; five per cent. debenture, £180,000; interim dividend of 2½ per cent. on preferred stock, £53,125—total, £369,125. Directors propose to pay a balance dividend of 2½ per cent. on preferred stock, making 5 per cent. for year, but are unable to pay any dividend on ordinary stock in consequence of the B. A. and Pacific Company not having paid any dividend for year on its second preference stock.

BENGAL DOOARS.—Report for year to March 31, 1921, states that capital expenditure amounted to £4,579. Net earnings (less Indian tax) were £37,053, plus gain by exchange £9,843. Amount available was £69,974, less 3 per cent. interim dividend paid on ordinary stock, leaving £57,974. Directors recommend final dividend of 3 per cent. on ordinary stock (subject to tax), carrying forward £45,974.

BANKS.

NATIONAL CO-OPERATIVE BANK.—The following official notice was issued on Tuesday, October 25th:—"Owing to the receipt of numerous notices of withdrawal in respect of deposits, following upon the failure of Farrow's Bank and to the present unfavourable conditions generally, it has been deemed impossible to develop a profitable business in the near future. The capital of the bank is provided by an issue of bonds to the amount of £100,000, and this is fully subscribed; £90,000 of this is uncalled, and as the net liabilities of the bank are under £15,000 there is an ample margin after paying the holders of current and deposit accounts in full. Nearly all the bonds are held by a wealthy man, whose bankers very recently reported that they consider him quite good for his engagements." According to the *Bankers' Almanac* the directors are Messrs Robert Hughes (chairman), Sidney Parry, A. H. Mackmurdo and Frederick Temple (managing). The manager is Mr J. Spink, and the secretary Mr W. G. Newman. Registered on August 29, 1912, the company has an authorised share capital of £100 in £1 shares, and in addition there are 5 per cent. redeemable bonds of £5 each for £100,000. After providing for bond interest, profits, if any, were divided among the customers of the bank. The suspension of the National Co-operative Bank does not in any way concern the banking department of the Co-operative Wholesale Society, Limited, which latter undertaking points out that it has never had any association with it.

THE BANK OF TAIWAN.—The report of this bank for the half-year to June 30, 1921, shows that the gross profits for that period amounted to 54,716,443 yen, from which should be deducted current expenses, &c., 51,580,383 yen, making a net profit of 3,136,060 yen. The sum of 1,440,488 yen was brought in from last account, making 4,576,548 yen available. Reserve fund has been strengthened by 700,000 yen, while bonus takes 125,000 yen, and dividend of 10 per cent. per annum absorbs 2,250,000 yen, leaving 1,501,548 yen to go forward to new account. Extracts from the president's speech at the meeting held in Tokyo on September 1, 1921, are presented with the report.

BAKER, DUNCOMBE, AND CO., LIMITED.—Balance-sheet, September 30, 1921:

LIABILITIES.		ASSETS.	
16,000 fully-paid "A" shares of £5 each	80,000	Investments—£50 National War Bonds, £765,000	755,000
4,000 fully-paid "B" shares of £5 each	20,000	Bills discounted (including re-discounts)	10,940,000
Reserve	125,000	Loans on security and sundry accounts	235,450
Liability on deposits and loans and bills re-discounted (including rebate and sundry accounts)	11,801,740	Assets to the value of £11,779,400 are held by bankers and others as cover for liabilities per contra	96,290
		Cash in hand and at bankers	12,026,740
			12,026,740

* Note.—As from October 21, 1921, £100,000 of this reserve has been capitalised and converted into 16,000 fully-paid "A" shares of £5 each, and 4,000 fully-paid "B" shares of £5 each.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions during the past week proved more favourable as regards agricultural operations, and although more moisture is needed generally, recent heavy rains have softened the ground and facilitated ploughing, so that prospects are more hopeful for a full wheat acreage. The present low prices, however, are not very encouraging to farmers, and in some districts it is reported that less wheat is being laid down than usual. Trading in native wheat shows no improvement, though prices were a shade steadier in sympathy with the better tone for imported. Suitable milling grades rule from 45s to 49s, with inferior samples down to 38s per 504 lbs, free on rail. Imported descriptions were somewhat irregular, and after opening at 2s 9r easier, subsequently recovered the decline. No. 1 Northern Manitoba quoted 55s, No. 2 hard winter 53s 6d, and Australian 55s per 480 lbs, all ex ship to arrive. On c.i.f. terms business is still more or less at a standstill with regard to cargoes, the small inquiry being chiefly from Continental and Mediterranean ports, and a cargo of Australian shipping or shipped was sold to Italy at 51s 6d, Pacific October-November at 51s, and Argentine December at 52s 6d per 480 lbs. Limited dealings occurred in North American parcels at irregular rates. Shipments continue on a fairly liberal scale, and large quantities continue to arrive in Europe. Visible supplies in North America are increasing, while crop prospects in Argentina, Australia, and India remain favourable and point to liberal surpluses being available for export in the near future. The flour trade remains dull, and prices were reduced by 2s per sack for both home milled and imported descriptions. London straight run quoted 56s, town households 54s, patents 59s. All English straights 49s per sack delivered. Country straights 38s to 42s, free on rail London. Of imported, Canadian export patents rule at 58s, straights 52s to 53s, Kansas top patents 55s, and Australian 50s per 280 lbs ex store. There is scarcely any inquiry for forward parcels, and further concessions appear necessary in order to stimulate demand. Kansas top patents November seaboard nominally 46s, Canadian patents ditto 46s, Canadian straights ditto 42s per 480 lbs. Offals quiet and easier. Broad bran quoted £8 to £9 5s, ordinary ditto £7 15s to £8 5s, and middlings £11 to £11 5s per ton ex mill, bags included. Maize opened dull but subsequently became steadier, though demand proved quiet. Plate, also yellow round African, quoted 30s 6d, and white flat African

32s per 480 lbs, landed terms. There was rather more doing in cargoes at easier rates, but prices since displayed a firmer tendency. Two cargoes of La Plata, afloat, sold at 29s, while parcels of ditto, November-December, sold from 30s to 31s 3d. White and yellow South African maize meal, October, sold to Glasgow at £7 5s per ton c.i.f. Barley dull and featureless. English malting ranges from 44s to 70s as to sample, and grinding sorts 36s to 42s per 48 lbs. Of imported No. 4 Canada Western 34s 6d, Canada feed 31s, and American feed 31s, all landed, per 400 lbs. Oats were a shade steadier, but without improvement in demand. English varieties range from 27s to 31s per 336 lbs. Of imported, Plate, f.a.q., 26s 3d, ditto, clipped, 27s 6d, Chilean tawny 25s to 28s, and Canadian 30s to 31s per 520 lbs, all landed terms. Oatmeal easier. English quoted £19 to £20, ordinary Scottish £20, American £20, English rolled oats £21 to £22, flaked £23 to £24 per ton. Beans quiet. English Springs 54s to 64s, and Winters 46s to 50s per 532 lbs. Chinese horse beans £9 to £10 ton, ex store. Peas steady. English Maples 62s to 70s, Duns 52s to 58s per 504 lbs, New Zealand blue 24s to 26s, and Dutch blue 25s to 27s cwt. Lentils quiet. No. 1 split 34s to 37s, and Egyptian 29s per 100 lbs. Homeward grain freights quiet apart from fair chartering from North America. River Plate upper ports to United Kingdom-Continent, October-November, nominally 18s 9d, November-December 20s ton, Montreal to United Kingdom 45 3d qr, Continent 17 cents per 100 lbs, and Mediterranean, not East of West Coast Italy, 5s 3d to 5s 6d, with similar cargoes from Northern Range ports at 4s, 15 cents, and 5s respectively. Nitrate ports paid 38s 9d to United Kingdom-Bordeaux-Hamburg range. India quiet, and 25s indicated on dead weight January, and 40s Madras Coast kernels. There has been a fair amount of business from Australia on the basis of 52s 6d West Australia, January, to United Kingdom-Continent, and old crop, November, at 52s 6d South Australia to United Kingdom, with Indian options at 37s 6d ton.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated October 27th, is as follows:—Pig-iron: The outlook is still dark. The cost of production is above the selling price, but the reduction of cost is a slow process. Further "cuts" in the selling price will have to be made before buyers have sufficient confidence to place substantial orders. Prices are—No. 3 Cleveland G.M.B. pig-iron, 120s per ton, with 5s extra for export; East Coast mixed numbers hematite, 120s per ton. Manufactured iron and steel: The position is unchanged. There is inquiry, but very little business. Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £14; steel rails, £10 10s net. Iron ore: Prices are barely maintained. Very little inquiry and few orders. Best Rubio is nominally 27s 6d per ton c.i.f.

Our Sheffield correspondent writes:—Depression still overhangs all branches of the steel trade, chiefly owing to the absence of overseas orders. Rather more orders than lately are coming in from India and several Colonial and foreign markets, but they are insignificant in value, and amount to very little in the aggregate. Preparations are being made to put into operation a large steel furnace, otherwise the number of local furnaces in commission remains at about a third of the whole. Sheffield is receiving a large share of the work connected with the building and armament of the four new battle-cruisers. Three-fifths of the armour and a number of guns will come to the city, and there will be other work in the shape of castings and forgings for the machinery, hand tools, &c. Business in tool steel continues negligible, and the position will be worsened by the accumulation of hundreds of tons of such material from war stores which the Government propose now to dispose of. In the lighter industries orders are generally on a hand-to-mouth basis, and short time at the works is universal. The house coal market has shown considerable improvement as the result of the colder weather, but the public still refuses to stock its cellars for the winter, and expects lower prices. Business in steam coal, both for home and export, continues on a restricted scale. A good number of inquiries are on hand for forward deliveries, but these fail to mature at present. Competition between the different coalfields is developing, and the high railway freights are a more important factor than formerly in the placing of coal contracts. Most of the gasworks, being well stocked, are not ordering much. The market for small fuels is decidedly firmer, owing to the shorter time which the pits are working. Coke is moving freely, with prices unchanged.

Our Glasgow correspondent (writing on Thursday) says:—Shipbuilding and engineering circles in the Clyde area have been a good deal exercised this week over the placing of the Admiralty's contracts for war vessels, with which rumour has been busy for a time past. Some little uncertainty still exists as to the exact disposition of the work, but it may now be accepted that three boats have come to this district, one each to John Brown and Co., Clydebank, to Fairfield, Govan, and to Beardmore, Dalmuir. In the last-named instance the order is confined to a hull construction, the engine having been allotted to an English firm. But all the same, it is calculated that Beardmore's (in the form of heavy plates, castings, and armaments) has received the lion's share of the total allocations. Experts estimate that the Scotch bookings will involve a value of over £24,000,000, and lead to the re-employment ultimately of between 15,000 and 20,000 hands. Not immediately, however, and at the outset only gradually, for there is much detail in the early operations—notably in the laying of the great keels—that must be faced and executed before construction can be actively proceeded with. And it follows that not much visible progress will, therefore, be made in the respective yards this year; but all the same, a gradual absorption of manual labour will be in progress, and the ranks of the unemployed should thin out, though nothing heroic in that relation can for a season be looked for. Probably the first evidences of improvement will become manifest in the steel trade, which, once the drawings are in order, must proceed with the rolling of plates, angles, and special sections, of which an enormous tonnage is needed. How the volume will be distributed remains to be seen—because of the steelmaking and shipbuilding combines which obtain in Lanarkshire, but these should not adversely affect the workers. Outside of any business which may have been transacted in connection with the Government work, nothing of consequence has been done in iron or steel since Monday. It is rumoured that North of England producers have managed to sell several lots of steel plates here at two guineas a ton below the latest Scotch list rate, £12 10s. In reliable quarters the statement is not entertained, for it is understood that Scotch makers, while opposed to the cutting policy of North of England competitors, are prepared to meet the same and hold their own market. So far the only outcome of the most recent reduction in

steel prices—which gave makers a "free hand" in the export market—has been the receipt of an increased number of inquiries for a variety of manufactures—as to the terms on which producers are prepared to act. Some orders have gone through, but really nothing of significance. As to the home and export demand generally, the one thing evident is that buyers are not yet apparently satisfied that in respect of conditions bottom value has been touched, and that the point has not been reached when forward contracting can be safely entered into. On the other hand, manufacturers decline to commit themselves to deliveries any distance ahead. Consumers decline to look at crown bars at £14, and accordingly mills are running intermittently. Black sheet makers are experiencing a continued expansion in foreign demand, particularly that from South America. There has been some talk in the last day or two of prices being lowered by 10s a ton on the different gauges. Scotch hematite pig-iron has been reduced 2s 6d at £7 7s 6d; Scotch foundry No. 1, 5s at £7 5s.; and ditto No. 3, 5s at £7. The state of affairs in the coal trade is serious, more so than it has been for 50 years. Buyers are moving for lower prices, and coalmasters are shutting down collieries for the reason advanced that it is impossible to make ends meet at existing quotations.

CUMBERLAND IRON.
(FROM OUR CORRESPONDENT.)

The Cumberland and North Lancashire hematite pig-iron trade is still in a bad way, and demand is now actually quieter than it was five or six weeks ago, users being more averse than ever from placing business until they are convinced that prices have touched rock bottom. A furnace has been damped down this week, a second may be similarly dealt with in a few days, and there will remain in operation then only seven furnaces. Half of the make is low phosphorus iron for high-class steel manufacturers in the Midlands and in Scotland who cannot do without it, but are ordering only from hand to mouth, and the other half is for local steelmakers engaged in rolling railway material. The outlook is far from reassuring, and indeed smelters are now resigned to a very quiet state of affairs until the second or third month of next year. By that time it is hoped that there will be such a reduction of values as will enable consumers to come into the market and do business on a fairly large scale. Makers, of course, recognise that prices will have to come down, and not a few of them believe that the day is not far distant when ordinary hematite pig-iron will be selling at £5 10s per ton at works, but costs are too high at present to induce them to yield any further concessions, and Bessemer mixed numbers continue to be quoted at £6 8s 6d per ton at works. The steel trade is dull, such orders as makers at Workington and at Barrow possess representing little more than a few weeks' rolling. The output at Workington is principally basic steel rails, and because of this there is a better prospect than there otherwise would be of operations on the present scale being maintained for the remainder of the year.

With so few furnaces in blast no large production of native ore at the hematite iron ore mines is needed, and scarce half a dozen pits are working. Employment in the iron ore field is so intermittent that the men are chafing at the insistence by their leaders upon wages being calculated upon the basis of ordinary iron at £7 per ton, and in some districts the miners have suggested that it would be preferable to accept a lower scale and obtain more regular work.

How dull the coal trade is may be judged by the fact that only three collieries are working full time, and two of these have in operation batteries of coke ovens making for the local furnaces. The Irish demand is poor, and household and industrial needs are negligible. There are mountains of small coal all over the district, for which no use can be found until the condition of the iron trade is such as to call for a full production of the local coke. Continental orders for 8,000 tons of coke have been obtained by two plants, but this business will vanish as soon as East Coast makers care to meet the competition.

TAR PRODUCTS.

(BY A CORRESPONDENT.)

During the past month there has been very little doing in tar products. Pitch is quite a nominal market, and now ranges from 55s to 65s per ton. Many of the South Wales briquette makers are still receiving deliveries under old contracts, and consequently are not interested in the market. Carbolic acid does not pay to extract at 1s 6d per gallon for crude and 6d per lb for crystals. Outputs are very small, and one would have expected that by this time this factor would have had some effect on the market and brought prices up to a profitable level. Cresosote is a steady market up to about 8d per gallon. Supplies are not large, and as soon as they increase it is difficult to see how even current values can be maintained. The same state of affairs is to be noted in connection with solvent naphtha, which is quoted at 3s per gallon, three times the pre-war price. This material is being sold forward very freely, and the trade is not looking for any rise. Indeed, as soon as outputs increase a considerable decline in values must be expected. Business in intermediate products has been fairly good, although buyers are only covering their immediate requirements, but, on the other hand, although foreign business is small, there are a good many inquiries about the market. Salicylic acid is 1s 4d per lb; Beta naphthol 2s 6d per lb; Resorcin 5s 6d per lb; aniline oil and salts 1s 7d and 1s 8d per lb respectively. Production of sulphate of ammonia is still on a small scale, and no difficulty is experienced in placing everything produced, particularly in foreign countries. The export price is in the neighbourhood of £16 10s per ton, but home quotations have been increased and are now as follows:—For November delivery, 4 ton lots and over, £15 8s per ton for neutral quality, in fine friable condition free

from lumps, containing 25½ per cent. ammonia, or £14 5s per ton for ordinary quality containing 25½ per cent. ammonia. December deliveries are quoted 5s per ton extra.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The continued strength of the raw material market is supporting prices in this centre at a level which would not otherwise be justified by the actual amount of business. Current rates, especially in the case of merinos, tend to restrict trade to the covering of actual requirements, but in spite of this there is a fairly good turnover, and the demand for spot merinos is in excess of the supplies. Some improvement is noticeable in the demand for crossbreds, and in this connection it is worthy of note that there is a growing demand for medium qualities in the United States. The activity of spinners engaged in the production of hosiery yarns is also contributing to an increased consumption of low qualities, and this is one of the most satisfactory features of the trade at the moment. There is a little more inquiry for botany weaving yarns, though present rates are too high for most manufacturers, who assert that the prices for cloth are greatly below cost based on to-day's quotations for yarn. The piece-goods trade, however, is gradually improving, and the higher prices of wool, tops, and yarn are helping to eliminate the extremely low prices which have been taken for stock lots. The demand from the home trade, however, is still very poor, and it is hoped that something will be done in the near future to assist firms who are burdened with dear stocks, and whose credit is curtailed. A scheme with this object in view is being discussed. Fifty men engaged in the wool textile trade, with the support of the banks, have agreed to take up £1,000 fully-paid shares, and to supplement the share subscription by entering into a guarantee to the amount of £20,000, thus making available a capital of £1,050,000. So far only the preliminary details have been discussed, but it is thought that the scheme will be brought into operation for the benefit of firms in need of financial assistance.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

There has been a very good week in Coleman Street Wool Exchange, the catalogues submitted finding buyers prepared to operate quite readily. One cannot but feel satisfied with the state of the market, there being practically no "soft spots" anywhere. The Continent has operated during the closing week of the series far more extensively than anyone ever expected, France, Germany, and Italy apparently being partially prepared to face adverse exchange rates. No matter what may be the feelings in regard to Germany on account of the war, the fact must be recognised that her purchasing power is going to be a strong factor in promoting the prosperity of the wool textile trade in this country as well as France, and the sooner exchange rates become more normal the better it will be for everyone connected with the trade from raw wool to the finished fabric. Great Britain and France can no more do without Germany's assistance than we can have wool without sheep. German manufacturers are wanting a big weight of wool, but the purchasing of sterling is a problem of so serious a nature that, in face of the forthcoming reparation payment, many feel that for the time being they cannot do otherwise than buy sparingly.

The offerings in Coleman Street this week have been very much as usual, comprising a very limited supply of merinos and a surplus of crossbreds. This has again furnished Bradford with the opportunity of buying liberally, and crossbreds have moved exceedingly well. On one or two nights prices have been paid which were not forthcoming during the opening week of the series. The sales are finishing with prices for both merinos and crossbreds at the highest point of the series, the bulk of the wools being easily a good 10 per cent. dearer than they were in September.

After the hubbub of last week, when buyers turned down the offer of B.A.W.R.A. to submit an additional 15,000 bales of merinos, that body has made a statement to the effect that a colossal weight of wool is going to be put upon the market between October 1st and the end of the year. We very much doubt the ability of the trade to lift and finance 1,000,000 bales of wool. However, if the trade clamours for more wool, by all means put it on the market. We are strongly against any higher prices for merinos, and both growers and B.A.W.R.A. are prepared to sell stocks at to-day's rates. We have never been able to see eye to eye with the demand of a certain section of the trade for bigger offerings of merinos, and unless we are greatly mistaken, wool combers have sufficient stocks of wool to keep their combs running full time

for some weeks, for arrivals are now pouring into consuming centres in sufficient weight to keep machinery fully occupied. Those in close touch with the trade know the reason for the recent demand for an extra quantity of merinos this series, and we say frankly that the weight of wool in sight cannot be cleared without the financial strength of the trade being severely taxed. Some topmakers were seriously caught with prices falling, and have again been caught in the advance, and cheaper wool is wanted. We dare say that the home piece trade would have stood a far better chance of improvement with tops at 3s than 4s 3d, but apparently there is a demand for wool at the latter basis, and we take it that when that demand falls off prices will do the same.

MANCHESTER, October 27.

The conditions prevailing in the market during the past week have not been favourable to a large turnover. Buyers are nervous as to future prices, and much uncertainty exists owing to the unsettled political situation. There are indications, however, that in some distributing centres dealers are in greater need of the replenishment of stocks. Only a miscellaneous business has been done in cloth for India. Occasional lines have been booked for China, chiefly in white goods. The minor outlets East and West have not been at all active. A little improvement continues to show itself in the home trade section. It has been a slow week for spinners of American and Egyptian yarns, and prices have been very irregular when tested. Orders in export yarns have been given out unevenly.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

The better tone prevailing in the timber trade, to which we referred in our report of a month ago, has shown still further improvement since. This firmer tendency is due largely to the fact that the heavy stocks of imported building woods (the cause of the slump in the summer) have dwindled down to moderate dimensions. A large amount of f.o.b. buying has been done with Finland and Sweden for winter requirements, but not of such considerable magnitude as to depress the market with an unwieldy stock. Indeed, so small were importations before August (due to shippers' high views) that the amount of sawn softwoods imported up to September 30th is less than half of that received during the first nine months of 1920.

Shippers of Swedish prime Upper Gulf stocks are asking about £22 for 3 x 9 unsorted deals, and £15 for battens, best Gothenburg shipments being quoted at £24 for deal sizes. Finnish shippers are accepting £3 to £4 less for deals. Though the market has firmed up for Swedish productions, the sales still leave shippers little, if any, profit; and, owing to the poor prospects of the future, production has been seriously curtailed and wages reduced.

The bad conditions of industry generally have not been conducive to a large consumption, yet spot prices have firmed up in sympathy with f.o.b. rates. The large building schemes in all parts of the country have been the mainstay of the trade, though already there is evidence of more caution amongst local authorities to build at present high rates of labour and building material other than wood. The packing-case makers particularly are quiet, and a good source of consumption is thereby restricted.

A feature of the month's trade has been the arrival of cargoes of Russian timber both from the White Sea and Petrograd, and still further cargoes are expected from Archangel before the close of navigation.

Freights have been steady over the month, with a tendency to firmness, accentuated during the past week or so by the restriction of high deck loads, which come into force on the 1st proximo. For medium-size cargoes Upper Gulf of Bothnia to London rates are about 8s a Petrograd standard of 165 cubic feet.

The furniture wood market is suffering from a quiet demand. Stocks of mahogany logs in first hands have been heavy, but auction sales in Liverpool and London have had the effect of clearing considerable parcels, though many lots have been withdrawn from auction through buyers not coming up to sellers' ideas. For mahogany cut wood prices are fairly well maintained. The demand for American furniture woods and Japanese oak are still moderate.

In the native timber market good descriptions of oak, ash, beech, and other woods find a responsive market, but inferior timber is difficult of sale. Of pitwood the poor conditions of the colliery trades prevents any business of a remunerative character.

CHEMICALS.

The report of Sir S. W. Royle and Co., Limited, of Manchester, dated October 26th, states that, although the improvement in demand noted a month ago has not been fully maintained, a steady volume of business has been passing during October, and consumers have also been taking increased quantities against contracts. So far the new import regulations do not appear to have affected prices, which have on the whole remained steady. There has been some falling away in the export demand for sulphate of copper, whilst business for home account has been only small, and concessions have been made in price. Green copperas is unchanged. Acetic acid and acetate of lime have been in steady request, and prices well maintained. Some heavy importations of acetate of soda have been pressed for sale, but the forward position is firm. Stocks of acetates of lead are not large; but the demand has been small. Some good business has been passing in nitrate of lead. There are fair stocks of carbonate of potash on this side, and prices are firm, Continental makers showing a disposition to ask higher figures. Caustic potash is in steady request, and price well maintained. Supplies of Montreal potashes are ample. The demand for yellow prussiate of potash has fallen away somewhat, but price has remained firm. Prussiate of soda maintains its position, and stocks are firmly held with little offering from the Continent. White powdered arsenic has been receiving more attention, and supplies being short, price is higher. Tartaric acid has been moving steadily for both early and forward delivery with values very firm. Cream of tartar also has been in fair request, but stocks are ample. The demand for citric acid has fallen away, and price is easier. Bichromates have been quiet, and values are lower. Chlorates are available only in small lots and are dearer. Oxalic acid has been little called for. Borax and boracic acid are unchanged, although foreign supplies of the former are being offered at lower figures to arrive.

LINEN TRADE.

BELFAST, October 26.

FLAX.—The Irish markets are still being well supplied, and all fibre offered was bought at unchanged prices, although in some markets growers at first held for higher prices, but eventually sold. On the Continent there is very little change to report as the market has become steadier. Germans are still buying in the low end, which will keep prices firm in this class in the meantime.

YARNS.—While transactions during the week have not been so numerous, the market is firm. Tow stocks are in very small compass, and in these there is practically no competition on the

When the Fire Bell rings! . . .

WHEN it is considered that within an hour of the ringing of the Fire Bell the hundred-years-old records of a firm—records that cannot be reproduced—may be reduced to ashes, it is astonishing that the average purchaser of a Safe does not first obtain the fullest details regarding the degree of Fire protection afforded.

Numerous authentic cases are on record which afford conclusive proof of the unique Fire-resisting properties of THE CHATWOOD SAFE.

One notable instance occurred during the bombardment of Alexandria, when THE CHATWOOD SAFE, containing securities to the value of £250,000, was buried in a mountain of stone which had been reduced to lime by the tremendous heat and remained in this position during two weeks.

It was only possible to carry out excavations by continuously pouring water upon the molten debris, but when the Safe was eventually rescued the contents were found to be in perfect condition.

A banking service of practical value to your business.

The Merchants Bank of Canada

Total Assets
LONDON OFFICE

part of foreign spinners, whose prices even at the present exchange are higher than local yarns. The committee in charge of production have allowed a slight increase, viz., one-eleventh, making the maximum six-elevenths of a 48 hours week. Not a large number of mills will take advantage of this.

WEAVERS.—The activity noted in last week's report continues, but is checked to some extent by the upward tendency of the market. Orders have again been placed over a wide range of goods, including damasks and dress linens. Some orders of importance are held in abeyance, owing to manufacturers being unable to accept prices ruling during the month of August. If prices can be kept at the present level a steady demand for all classes of goods is likely to result.

MERCHANTS.—Merchants have received considerable new business during the past week, covering damasks, napkins, fancy goods, and handkerchiefs. All orders placed are for early delivery. Conditions show marked improvement.

DRESS LINENS.—Repeat orders have been placed during the past week for coloured linens in medium and heavy weight qualities from U.S.A. and other markets. The advance in cost of yarns and deliveries required make business somewhat difficult to arrange.

VEGETABLE OILS AND OILSEEDS.

FROM OUR CORRESPONDENT.

A rather better tone has on the whole prevailed in the market this week, prices of both linseed and linseed oil having rallied from the severe setback of a few days ago. The advances in Argentine options have had a steadying effect on linseed quotations, which have about recovered the ground lost, though buyers, on reports of larger acreage under seed in Argentina, are somewhat reserved. The market has also benefited from a revival in the demand for linseed oil, in which a large business has been done spot and forward at from £28 to £29 (London and Hull). The Continent is reported a buyer to a limited extent, while America is again taking quantities for near shipment. Shipments of seed from Argentina this year to all destinations already exceed 1,000,000 tons, and she has still seed to ship. World values it is recognised will be governed by the amount of the old crop still left and the result of the growing crops.

In the absence of demand cotton oils have reacted seriously and are £4 to £5 per ton lower on the week. Crude Egyptian ex Hull mill has fallen to £38, and edible refined to £44 10s. Egyptian cottonseed has rallied somewhat from the recent slump, but business is on restricted lines. Soya bean oil is easier, as is also ground nut oil. Palm kernel and rape oils are about unchanged and demand small.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

Although there was a slightly weaker tone in the London hide position this week, alterations in price were not important. Best heavy ox made 10½d and light 9½d, the change as against last rates being fractional in one class. Best cows made from 8d to 8½d, and were ½d down. Calf in heavy weights were firm, but lights at 15½d to 16d were from 1d to 1½d down. Wools were steady at 3s 3d to 6s 6d, and hogs sold from 2s 10d to 7s 3d each. Business in imported hides is reported quieter, although tanners are buying fregorifics at about late rates. Few hides sold at last week's auctions in Mincing lane, and prices obtained were no guide to the actual market position, as much of the stock was stale and imperfect. American cables report the Chicago position as strong, with heavy packers now selling at 15½ cents, an advance of a cent on last prices.

Merchants report a falling off in leather business, and in some directions bends are accumulating in tanners' hands. The demand is mainly for medium and heavies, and tanners are very firm on prices for these selections. Cheap bends constitute the main demand, whilst heavy shoulders and bellies are in many cases now cleared from the market. Upper leather is dull, and curriers are very slack. Waxed kips hang fire owing to the prolonged fine weather, and semi-chrome kips do not seem wanted in view of the amount of cheap chrome side offered. Glacé kid in medium selections is selling fairly well, and British glacé kid tanners seem well employed, doubtless on account of the small quantity of leather arriving.

The boot trade is fairly well employed on small orders, and of late retailers have been sending in orders for heavy goods. Prices are considered to have reached bottom, and makers are very firm on quotations.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 77s 6d to 83s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. F 7a on above prices for the following special brands:—
"Blue Tiers," a fine-ground sl.
"Tiers," a fine-ground quick-setting.
"Ferrocete," a cement prepared by specialists in ferro-concrete construction, 10s per ton.

ment, and "Red er ton.
requirements of cks to the ton),

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 28.

With one or two exceptions the various markets continued extremely quiet, as demand on export account is still very meagre, owing to the question of rates of exchange, while home trade buyers are largely content to restrict their purchases to wants of immediate necessity.

SUGAR.—With sustained inquiries, especially for refined descriptions, business during the week was of fair dimensions, and a very steady tone governed the market. Tate's cubes sold, 55s 3d to 56s 3d; crushed, 51s 9d; granulated, 49s 9d to 50s 3d; caster, 52s 3d to 52s 9d; pieces, 38s to 45s. Lyle's granulated, 49s 9d to 50s; yellow crystals, 44s 9d. West India crystallised sold more freely, from 38s to 43s, as to sample. American granulated firmer, with spot sales at 48s 3d to 49s. White Java, spot, nominally 47s 3d; white Natal, sold, 43s 5d to 44s; W.S.R. granulated, prompt, quoted 22s, f.o.b., Amsterdam. Czech-Slovakian granulated and crystals, October, 20s; first week November, 19s 9d; cubes, October, 25s, f.o.b. Belgian crystals, ready, sold, 19s 3d; ditto, October, 19s 1½d; and November-December, 18s 9d, f.o.b., Antwerp. Brazilian, basis 96 per cent., November-December, sold, 14s 3d; and basis 80 per cent., ditto, at 10s, c.f. and i. terms, United Kingdom. Terminal market steady. March, raw, sold, 14s 6d; white, November, 18s 9d to 19s 6d; December, 18s 7½d to 19s 4½d; March, 18s 6d to 19s 1½d. Cuban stocks total 1,163,438 tons, against 306,666 tons same time last year.

COFFEE.—The market, on spot, ruled quiet, though really fine qualities realised steady prices. Nairobi, small common to fine, sold, 59s 6d to 89s 6d; common to fine bold, 80s to 120s. Fair bold Colombian sold, 102s. Future delivery firmer. Small sales include December at 45s 9d to 47s 9d, and March, 47s to 49s.

COCOA.—The fair supply of 9,700 bags offered in auction met with slow support, and only a restricted part sold at mostly slightly easier rates as compared with those ruling recently in the private market. Trinidad, good red, sold, 58s. Grenada, good to fine red, 52s to 55s; fair, 50s to 51s; fine bold showy red, Ceylon, 90s; fine St Lucia, 54s; Samoa, 84s. Butter sold quietly at 1s 10d per lb.

TEA.—The supply of Indian brought to auction this week totalled 43,000 packages. Brisk competition prevailed in which the commoner kinds participated, and a very firm tone ensued, prices in some cases ruling distinctly dearer. 18,000 packages Ceylon were also well competed for, and prices realised were on the firm side for all descriptions.

RICE.—Market still very quiet, and during the week only retail sales were effected. Two Stars, Rangoon, spot, 19s 6d; garden Siam, afloat, 20s. Burma No. 1, A, broken, October-November, 15s. Siam C.I., broken, ditto, 12s. Bran quiet, and Rangoon, October-November, quoted 12s 5d per ton, ex ship terms. Beans steady. Rangoon, hand picked, afloat, sold, 9s 6d; October-December, 10s 3d. Madagascar butter beans, all whites, spot, new crop, 20s to 21s, and old, 12s. Japanese peas, November-December, quoted 35s, c.f. and i. terms.

FRUIT.—There was a fair trade doing in currants during the week, and market disclosed a very steady tone. New Pyrgos sold, 49s to 50s; Amalia, 52s to 54s; Patras, 56s to 64s; Vostizza, 70s to 84s. A better demand prevailed for sultanias. Smyrna, medium to good, sold, 117s to 120s; fine, up to 145s. Figs steady. Layers range from 125s to 140s; lacouns, 160s to 175s. Dates in fair request, and Khredrowie sold, 24s; Siar, 18s. Valencia raisins have been in good demand, and really fine lots are now scarce. In auction, 47 tons offered, and mostly sold. Halves, 115s to 123s; quarters, 135s to 145s; seedless, 107s to 111s. Muscatels quiet at the high rates still current. In auction, clusters sold, 172s 6d to 192s 6d; loose, 145s to 155s; seedless, 90s; and trays, 200s to 217s 6d.

JUTE.—A dull and easier market resulted this week, though sellers were not unduly pressing. Native first marks assortment, old crop, subs, October-November, sellers, £27 10s; lightning subs, ditto, £24; heart subs, £17 15s; new crop, first grade, October-November, £29; lightning, new, £25 10s. Calcutta hessians and twills very slow, and prices lower on the week. 10 oz hessians, spot, 27s; October-December, 26s; 8 oz, spot, 22s; October-December, 21s. A twills, spot, 83s; October-December, 82s; B, spot, 70s; October-December, 68s.

HEMP.—Manila descriptions continued very idle, and market conditions nominal. J grade, October-December, quoted £38; K, ditto, £36 10s; L, £36; and M, £31 10s. New Zealand idle. High point, fair, October-December, £37; and fair, £35.

SHELLAC.—Market generally slow. T.N., spot, 340s; October, sold, 320s to 335s; December, 317s 6d to 323s 6d.

COPRA met with quieter support, but the undertone of the market proved steadier. F.M.S. Straits, October-December, Rotterdam, sold, £27 10s to £29 7s 6d and £27 15s; Ceylon, October-December, London, quoted £29; South Sea Islands, ditto, £27; Cebu to Hamburg sold, £28 10s to £27 5s. Palm kernels unsettled. October-December, also November-January, Liverpool, sold, £17 10s to £18 17s 6d and £18.

RUBBER steadier, with a fair demand. Standard plantation crepe and sheet, spot, sold, 9½d to 10½d; November-December, 10d to 10½d; January-March, 10½d to 10½d; April-June, 11d to 11½d. Fine hard Para, spot, 1s 2d; ball, 7½d. London stocks of plantation amount to 68,806 tons.

MENTHOL.—Spot parcels were disposed of at 24s; ditto, afloat, 18s 6d, c.f. and i. terms. Japanese peppermint oil, spot, quoted 4s 8d; aniseed, 2s 3½d. Japanese slab of camphor, spot, 4s 3d per lb. Japanese wax, spot, 105s; forward, 90s per cwt, c.f. and i. terms.

EGG PRODUCTS.—Market very quiet, but sellers adhered to previous asking prices. Prime liquid yolk, spot, sold, 105s per cwt; and albumen, spot, done, 2s 11½d per lb.

OILS.—Linseed irregular. Spot, net, naked, 27s 6d; November-December, 27s 3d; January-April, 28s 3d. Rape easier. Crude, spot, 50s; refined, 55s. Cotton quieter. Crude Egyptian, 45s; Bombay, nominal; common edible, 55s. Chinawood: Hankow, spot (barrels), 68s; and shipment, 67s. Coconut easier. Ceylon, spot, 48s; October-November, 45s; Cochin, ditto, 54s. Soya easier. Oriental, barrels, ditto, 37s. Japan fish quiet. October-November, cases, 21s. Cod quiet. English, spot, 25s to 27s. Groundnut easier. English crushed, naked, spot, 53s; deodorised, barrels, 64s. Turpentine firmer. American, spot, 69s; November-December, 69s 3d; January-April, 70s. Rosin dull. American, grade B, 16s 6d; F, 16s 9d; G, 17s; K, 18s; WW, 22s; French, F/G, 15s 9d; H, 16s; WW, 18s 6d; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market firmer, with an improved demand, though easier later. Indian largely nominal. Calcutta, afloat, value £16; October-November, £17 10s. Plate, spot, Hull, £14 10s; afloat, sold, £14 to £14 10s; October-November, £15 to £15 5s; November-December, £15 5s to £15 10s; January-February, nearest, £15 15s. Rapeseed irregular. Toria, October-November, sold, £17 5s to £18; real bold Ferozepore quoted £18; brown Cawnpore, £17 10s. Cottonseed quiet. Egyptian black, November, nominally £10 15s; and white, £10 5s. Bombay, December-January, £8 15s. Gingly quiet. Chinese, September-October, Continent, £27. Castor, Bombay, October-November, £18 5s. Ground nuts quiet. Coromandel, machine-dried, October-November, Hull, £21; new crop, December-February, Continent, £20; Chinese decorticated, f.a.q., ditto, Continent, £23 to £24 per ton.

METALS.—Tin: The market manifested a quiet tone last Monday, standard cash realising £158 10s to £158 5s, and three

months', £160 15s. Selling desire followed, while prices eased by the middle of the week, values of these dates moving down £155 10s and £158 respectively. A firmer tone prevailed at Thursday's meeting. Cash changed hands at £156 5s to £156 10s, and three months' £158 10s to £159. At Friday's session a quiet tone prevailed and rates tended rather easier. Early November changed hands at £157 10s, and three months' at £159 5s to £158 10s. English ingots, £154 10s to £155. Copper: After remaining steady during the first part of the week, the standard market declined by Wednesday under less reserve on the part of sellers, cash being done at £65 5s, and three months' at £66 7s 6d. At Thursday's meeting cash advanced to £65 10s, three months' being sold chiefly at £66 10s. At Friday's session cash registered £65 15s, early December £66 5s, and three months' £67 to £66 15s. Electrodes, £72 to £74; best selected, £66 to £68; strong sheets, £101. Wire bars, £73 to £74. Lead steady at £24 to £23 15s, as to position. Spelter lower at £25 17s 6d to £26 10s, according to position. Antimony: English regulus, £37 to £40. Aluminium: Home trade quoted at £120; export, £125.

TALLOW.—Messrs Colchesters and Woolner write on October 26th as follows:—The tallow market continued quiet during the week, with a fair demand for inferior sorts, while the better kinds were selling slowly. At to-day's auctions there was a little more competition, and prices were quoted 2s lower for fine sorts only. Shipments of tallow from Australasia in September amounted to 6,800 tons. At auction to-day 401 casks tallow were offered, and 151 were sold. Quotations are:—Australian mutton: Fine, 50s; good to fair, 49s to 46s; dull to dark, 45s to 37s 9d; hard, 49s. Australian beef: Fine, 48s; good to fair, 46s to 43s; dull to dark, 42s to 37s; sweet, 50s. Present shipment from Australasia:—Mutton, fair coloured, 48 degs., 48s; and mixed, 43½, c.i.f., London, 46s. The market letter is lower, tallow, 1s; stuff, 2s. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 3d; melted stuff, 25s per cwt. Quotations are:—Town, 39s net cash, naked, ex works. Country: Frail casks, 38s home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 40s 6d to 38s 6d. Bone fat: White, none; pale, none; benzine, 30s; melted stuff, 32s, f.o.b.

THE MONEY MARKET.

FIVE PER CENT.

THE New York Federal Reserve Bank having reduced its re-discount rate to 4½ per cent., the Bank rate was on Thursday lowered to 5 per cent. Thus the basis of money rates remains higher in the debtor than in the creditor market, and at the same time Bank rate is more in touch with actual conditions here. Bankers' deposit rates were reduced to 3 per cent., and the maximum charge for weekly loans came down to 3½ per cent. On the other hand, the Treasury was able, earlier in the week, to pay

The "Economy" Typewriter

The reason why the Royal is economical, right through from its first cost to its second-hand trading price, is because the machine is designed on original lines in every respect, and not developed from previously existing types.

Every working part has been the subject of endless thought and experiment, consequently the finished product is a triumph of original mechanical and practical efficiency.

Test the even spacing, the clear writing, the perfect visibility, the speed and ease of handling—compare the work—you will find the Royal stands alone in perfect work, adaptability, and durability.

You can easily prove this by visiting us or letting us demonstrate the machine in your own office—we charge nothing.

Branches and Agencies in all cities from Land's End to John o' Groats.

off some Ways and Means Advances, owing to an increase in the sales of Treasury bonds; an increase which is likely to be maintained. Thus money has been intermittently easier to lend than it was last week, and the discount rate, after rising to $3\frac{3}{4}$ per cent., ended the week steady at $3\frac{3}{4}$ per cent., buyers being in hopes that increased offerings of Treasury bills by tender would keep the rate firm for the present. The supply of commercial paper is steady though still small, and the market was discussing the possibility of its being increased by the creation of bills endorsed by the Government under the Export Credits Scheme.

* Additional to those offered by tender the preceding week.

The Bank return showed a slight addition to the stock of gold, and the note circulation increased by £1,225,500, the reserve being £1,220,800 lower. Substantial repayments by the Government were reflected in a reduction of £30,632,200 in Government securities, and other securities fell by £1,290,600. Deposits were thus £33,136,400 lower, other being reduced by £35,853,200, while Public rose by £2,716,800. The circulation of currency notes was increased by £2,079,600 to £313,655,070, which includes £1,830,400 for notes called in, but not yet cancelled. The fiduciary issue is £263,874,700, or £53,680,500 below the maximum.

The New York Federal Reserve Bank rate was reduced $\frac{1}{2}$ per cent. to $4\frac{1}{2}$ on November 2, 1921. It had stood at 5 per cent. since September 21, 1921.

The following table shows public income and expenditure for the week ended October 29, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	13,728	Supply Services	9,079
		Interest on Debt	1,296
		Sundries	780
		Reduction of Debt	2,398
		Added to Exchequer Balances ..	175
	13,728		13,728

These operations decreased the National Debt by the sum of £2,397,987, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 10,930	Bank of England Advances ..	- 22,750
National Savings Certificates ..	+ 150	Depreciation fund	- 600
Public Department Advances ..	+ 5,800	Surrenders of Bonds, &c.	- 434
Treasury Bills	+ 4,628	Exchequer Bonds Repaid	- 250
Sundries	+ 130		
	+ 21,636		- 24,034

The chief items of revenue were Customs and Excise, which yielded £4,711,000. Property and Income-tax brought in £1,877,000, and special receipts under Miscellaneous yielded £2,816,009. A noteworthy feature of the return was the £10,930,000 which came in from sales of Treasury Bonds. Exchequer Bonds amounting to £250,000 were repaid. Treasury Bill sales exceeded the maturities by £4,647,000. Advances by the Bank of England were reduced by £22,750,000, leaving £51,000,000 outstanding, but advances by Public Departments were increased by £5,800,000.

FOREIGN EXCHANGES.

Interest in the foreign exchange market has again centred on the mark and dollar. From 68 $\frac{1}{2}$ on the 28th, the mark has risen with rapidly increasing momentum to about 945 early yesterday morning, after which the rate steadied again somewhat for the time. Since last week the only outstanding features have been the disappointment of the very exaggerated hopes which the Berlin

market apparently placed on the recent visit to London of Herr Havenstein, and the fact that nothing has been settled in respect to the surrender of foreign currencies by the industrialists. The main explanation for the rapid rise would appear to be the break in confidence both at home and abroad, so that the rate now is quite out of touch with real conditions, and may be driven rapidly in either direction by almost any reports. On the whole, it would appear that the quotation is higher than is justified. The rate for futures remains unchanged at $1\frac{1}{2}$ marks per month below spot. The dollar, after its fall to 3.91 $\frac{1}{2}$ on the 28th, moved up again to 3.93 $\frac{1}{2}$ at the end of the month, to fall back on the 2nd to 3.91 $\frac{1}{2}$, after which it has risen again to 3.94 $\frac{1}{2}$ yesterday morning. The future quotation has widened $\frac{1}{2}$ per cent. to $\frac{3}{4}$ per cent. per month above spot. The cause for the recent improvement in the value of sterling remains as mysterious as ever, and New York, where the strength lies, can offer no convincing explanation. It is true that the normal autumn drain came much earlier this year, and one view is to assume that this has been surmounted, and that we are now at a point usually only reached in early spring. Against this, however, is to be set the fact that comparatively few cotton bills have yet come forward, and though our demand this year is smaller, and at much lower prices, and though our imports in general are much reduced, the weight of these will surely tell sooner or later. On the other hand, there is to be set the undoubtedly growing interest shown by America in foreign securities, and the recent flotation in New York of several foreign loans, together with the flattering, but somewhat surprising, confidence shown in our general economic outlook. It would appear that New York is in the anomalous position of being both long and short of sterling—short in the case of those who have been caught by the recent rise, long in the case of those bankers who have old positions at a rate of about \$4, and would very much like the rate to reach that point in order to get out. The only conclusion to be drawn from these varying influences is that the prospect for the time is quite obscure, and that any forecast is more than ever dangerous. Paris, although above the best during the week, shows at 53.45 a good improvement on the 54.10 quoted on the 28th. At the same time, the thorough unsoundness of the French budgetary position, and the threat which it involves of a renewed period of inflation, is becoming increasingly realised on this side. Brussels at 55.15 shows a recovery of only about 20 centimes. Paris rates for futures remain unchanged at 3 centimes per month above spot, while Brussels has widened 1 centime to 10 centimes per month below. Italy shows a recovery to 97 $\frac{1}{2}$, Madrid to 29.12, while Amsterdam and Switzerland, the former partly on continued selling of stock, and both as the result of further German demand, have also moved against us. In the Scandinavian group, Norway, where the recent election results have been a steadying feature, is getting the benefit of an improvement in the timber trade, and shows a marked recovery to 28.85; Sweden is little changed; Denmark has slightly depreciated, and Helsingfors has recovered from 252 $\frac{1}{2}$ to 232 $\frac{1}{2}$. In Central Europe, the effect of the mark's collapse is shown in the further rapid fall in the Austrian krone, in spite of the announcement of an advance of £500,000 by Great Britain and France, the London (Auslands)krone rate being yesterday 10,500. On the 31st the Vienna (Inlands)krone rate was 17,400, as compared with a London rate of 8,750. Budapest has remained stationary, and more or less nominal at 3,150. Prague is again rather higher at 420, and Belgrade, in spite of its new exchange regulations, has now gone above 300. In Roumania, where conditions, through the difficulties of export and the hopeless overstocking of all markets, are going rapidly from bad to worse, rates have again moved up very rapidly, from about 590 to 725. Athens at 95 is also about 5 points higher. Only in Sofia at 600 and in Warsaw at 11,000, as compared with 17,000 a week ago, is any improvement shown, in the latter case through the feeling that the new Administration may at last give the real economic recovery of the country a chance to make itself felt. In South America, Buenos Ayres is a little dearer, Montevideo unchanged, Rio has gone slightly in our favour, and Valparaiso more sharply. In the East, the rupee at 1s 4 $\frac{1}{2}$ d,

a little cheaper than a few days ago, is unchanged on the week, while Yokohama is also about the same at 2s 5 $\frac{1}{2}$ d. Silver, after an unsteady week, has ended about $\frac{1}{2}$ d lower. There has been practically no Indian dealing, and although shipments to that country have been large, somewhat less purchases from China. The uncertainty of financial conditions there has been again emphasised by the omission to provide interest on some smaller American loans. Hongkong and Shanghai rates are rather lower.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO OCTOBER 29, 1921.

	£		£
Total spent	582,854,401	Raised by revenue ..	527,719,466
Inc. in balances	1,344,116	Net borrowings	56,479,051
Total	584,198,517	Total	584,198,517

ESTIMATES FOR YEAR 1921-22.

	£		£
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,530,000	Special Expenditure	65,705,000
Total	1,216,680,000	Total	1,039,728,000

Surplus* 176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

OCTOBER 30TH.—M. Poincaré arrives in London.
OCTOBER 31ST.—Vote of censure on Government Irish policy rejected by 439 votes to 43. American Ambassador speaks on Washington Conference.
NOVEMBER 1ST.—First Parliament in Malta opened by Prince of Wales. Stock Exchange holiday.
NOVEMBER 2ND.—Sir Robert Horne in the House on Budget prospects. Fresh collapse of German mark. Labour gain 44 seats at Municipal polls. Mr McKenna makes statement on Inter-Allied Debts to American Press.
NOVEMBER 3RD.—American Ambassador at Liverpool on political and industrial peace. Bank rate reduced to 5 per cent. Premier cancels passage to Washington. Marks touch 850 to £.
NOVEMBER 4TH.—Disarmament debate in Commons. Mark at 950.

The Stock Exchange was closed on Tuesday, as is customary on November 1st. Business has been on a larger scale, and the reduction in Bank rate to 5 per cent. produced a stronger tone. Gilt-edged stocks have advanced, the Bank rate decision being supported by another favourable influence in the shape of the quick success of the Local Loans issue. Russian bonds scored and held gains on the Soviet declaration with regard to recognition of pre-war debts.

From the cotton markets dull days and general nervous-

ness are reported. In the woollen markets the continued firmness of the raw material is helping holders of piece goods to sell at better prices, while a fair business is passing at Bradford in semi-manufactured goods. Prices of Cleveland pig-iron have been cut this week, but the movement towards normal production is very slow. The recent reductions in steel prices have so far failed to stimulate demand, but more confidence in the future is felt as prices approximate to those of foreign competitors. The weakness in the hide market continues, and the demand for sole leather is quieter. The position of the vegetable oil and oilseeds market has improved.

Details of news and movements in the principal markets from special correspondents will be found on later pages of this issue.

POLICY AND PRINCIPLE.

MR LLOYD GEORGE received from the House of Commons on Monday the vote of confidence that he wanted, and succeeded in defeating the motion of censure moved against his Irish policy by the handsome majority of 439 to 43. It is generally agreed by those who listened to the debate that the Prime Minister's speech was highly impressive, and there is little doubt that the policy of conciliation for which he pleaded is popular in the country, and would win handsomely at a General Election. Englishmen—at least, the majority of Englishmen—are sick to death of war and bloodshed; they do not want war abroad, and they do not want war at home. All that they ask is an opportunity of setting their house in order with as little disturbance as may be, and living at peace with their neighbours on both sides of them. With this public temper the speech of the Prime Minister and the present policy of the Government accord well. The alternative held up to the House of Commons—a long civil war, heavy casualty lists, guerilla fighting, great sweeping campaigns through the countryside of Ireland, big demands for money to carry on a new war at the moment that the financial burden of the last is pressing us most heavily—all these possibilities are so appalling, that Englishmen would make almost any sacrifice to avoid them. The spirit of war has been allowed already to survive too long, and the whole nation, outside a very small section, is anxious, above all things, to see the spirit of peace informing our policy not merely in the United Kingdom, but throughout the world.

And yet, though the present policy of the Government towards Ireland is in the main the right one, and the policy of the die-hards who moved the vote of censure is wrong, the honours of Monday's debate in a sense remained with the die-hards. They are fighting for a principle which, right or wrong, they have consistently fought for, and no one can doubt that the views they express in public are the views that they really hold. On the other hand, the Government and the Prime Minister, while earnestly denying any change of opinion or of policy, come forward with a plan that is in flat downright contradiction to the whole of their past policy and their old speeches, and proclaim with eloquence and enthusiasm the virtues of a scheme that with equal eloquence and equal enthusiasm they were denouncing but a few months ago. Sir Frederick Banbury

and other speakers were able to quote against them speeches in which they had protested against Dominion Home Rule; speeches in which they declared that there could be no truce until the Sinn Feiners had laid down their arms; speeches in which they had proclaimed "in a voice of thunder" that the rebels were on the run and the situation well in hand. There is no reconciling these two views, no possibility of believing that without a fundamental change of opinion any man can honestly hold them both.

The citation of these contradictory policies and statements is something more than a debating point. It indicates the cardinal weakness of this Government, and illustrates that lack of moral authority which impairs their success not merely in the treatment of Ireland, but in the handling of every problem that they are called upon to solve to-day. In almost every sphere of government the Prime Minister's policy, from the declaration of the Armistice up to the present moment, has been marked by the same weakness. He has allowed his own principles and opinions to be subordinated to the popular mood, and shaped his policy at the dictation of his own keen sense of what the public at the particular moment happened to want. In foreign affairs and in finance the evil effect of his contradictory policies has been obvious, for in both his opportunism has brought him into a situation in which it is almost impossible to do the right thing.

At the present time we can watch the effects of his opportunist policy working themselves out in the sphere of international trade. In 1918 the popular cry was "Make the Germans pay," and the Prime Minister, recognising its popularity and overlooking its dangers (which must have been clear to him, as they were to all thinking men), adopted it, and made it the keystone of his campaign. To-day we are suffering from a breakdown of trade and a collapse of the foreign exchanges such as the world have never before experienced; and it is obvious that the greatest stumbling-block in the path of recovery is the existence of the claims for reparation which threaten to drain German beyond the hope of recovery. Already the indemnity cry is less popular than it was, and although it is still the fashion in public speeches to blink the unpleasant facts, it is pretty clear that before long reparations, to which the public at present is indifferent, will become definitely unpopular. There are signs in the Prime Minister's speeches that he is not unconscious of the change in public opinion, and that he is getting ready to reverse the policy which he proclaimed so ardently three years ago. We would, in fact, be prepared to prophesy that within the next two years he will have given up for good the hope of further reparation payments to Great Britain, and while declaring that his opinions and his policy are unaltered, will be scoring oratorical triumphs with the most excellent arguments for not pressing our claims too hard against the German people.

It is to be hoped that this change of policy, which sooner or later is certain, will come quickly, but how much better would it have been if the Prime Minister had had the strength to face opposition and take the right line in the beginning, even when it was unpopular. If instead of pursuing war in Ireland he had made to Sinn Fein two years ago the offer that he is making to-day, not merely would months of agony have been avoided, but the difficulty of getting the plan accepted in Ireland would have been infinitely less. If the trade of Europe and the exchanges of Europe had not been deranged in the beginning by the policy of exacting the last farthing from our former enemies and reducing them to the point of exhaustion, the present expensive and troublesome schemes for relieving unemployment and reviving trade would probably have been unnecessary, and the prospect of a recovery for the world would certainly be far brighter. Instead of pursuing a definite principle fallacies are adopted because they are popular, and discarded only when they lose their popularity. The Prime Minister will always threaten to resign rather than sacrifice principle if he knows that he has a good solid majority behind him. What the country wants is the pursuit of principle, even though it carry with it danger of unpopularity and loss of office.

EXPORT CREDITS.—II.

THE essential features of the new Government proposals fall into two distinct classes: (A) Extra facilities for short-term commercial credits for consumable goods; (B) special encouragement for loans for capital expenditure.

Under the first heading the main points are the extension of the Export Credits Scheme to all countries, the increase of the maximum Government guarantee to 100 per cent. (without, however, reducing the exporter's ultimate liability), and the power to grant to approved firms "floating" guarantees, within the limits of which they may conclude particular transactions at their own discretion. The last feature is a distinct improvement in machinery; but, for the reasons stated in the previous article (*Economist*, October 29th), it is improbable that the extended facilities will lead to a great increase in business, unless the whole policy of administration is to be changed at the cost of sacrificing ordinary principles of commercial prudence.

On the other hand, the measures for encouraging loans for capital expenditure represent a distinct advance. The measures referred to are: (i.) The extension by two years of the period for credits under the old Export Credits Scheme (*i.e.*, up to September, 1927); (ii.) the new provisions of the Trade Facilities Bill authorising the Treasury to guarantee loans for capital undertakings up to a total of £25,000,000, on the condition that the proceeds are mainly spent in this country.

Here the Government is undoubtedly on the right lines. It is constructional work—for improving transport and productive facilities—of which the world has been starved during the last seven years. At the same time, such expenditure, if carried out in countries whose economic development has been postponed or destroyed by the war, will increase their productive capacity and trading facilities, and thus increase their effective demand for consumable goods. Further, the encouragement given to the British iron and steel industries will stimulate demand in the home market, and thus improve employment in other trades. Lastly, Government intervention in propositions of this kind, each of which requires long and careful preparation, is a much more practical proposition than in the business of commercial credits, which requires quick decisions from day to day, and depends largely on personal factors.

The obvious limitations to the Scheme are:—

(1) It cannot be effective unless British costs of production are reduced. This is mainly a matter for the industries themselves to settle; but one vital factor—taxation—is under Government control. The paramount need is economy in Government expenditure, to provide a relief in the burden of taxation sufficient to encourage new enterprise.

(2) The amounts made available are too small to effect any fundamental improvement. But here Sir Robert Horne has indicated that, if the first results are satisfactory, Parliament will have an opportunity of voting extensions.

(3) The proposals as put forward by the Government are not directly aimed at attacking the fundamental cause of the present trouble—the European situation. Mr Lloyd George referred only in general terms to the necessity of international co-operation. It was disappointing to find Mr Asquith deprecating exaggeration of the importance of the European demand.

It is, therefore, necessary to re-emphasise this point. Not only did Europe before the war take more than a third of our total exports, but if Europe is unable to buy her normal share of Chilean nitrate, Indian tea and hides, Malay rubber, Australian wool, Egyptian cotton, &c., the purchasing power of these other customers of ours must be proportionately reduced. It is this aspect of the matter which is forgotten by those who argue that it is useless to worry about Europe, and that we must look for salvation in developing new outlets in the British Empire. New outlets are, indeed, necessary, because many of our pre-war channels are for ever closed; but even if we could preserve a monopoly for British products in the British Empire, how could the requirements of the sparsely-populated regions which require development replace in

the world's markets the demand based on the needs of hundreds of millions in Europe?

This is one side of the picture. The other is that, so long as the European countries, and particularly Germany, continue to pay their way by printing new currency, disparities between internal and external values are maintained, and the whole foundations of trade are disturbed by the unreal export prices thereby made possible. At the same time, as a result of the payments which have to be made on account of Reparations, the flow of German exports is further intensified, without creating an equivalent purchasing power for imports.*

In fact, Europe, on the one hand, is consuming and importing too little, and, on the other, is exporting what she does export (mainly through Germany) against an inadequate return. In both ways fundamental disturbances are set up in our own trade.

Looked at from the above point of view, the paramount requirement, for any real recovery, is a rearrangement in the form of German reparation payments made conditional on a simultaneous reform of German public finances. As this matter is outside the scope of the plans now under consideration it is not further dealt with here. But its overriding importance must never be left out of mind.

Apart from this, the main requirements are, first, that productive capacity, transport and trading facilities should be improved in the other countries of Central and Eastern Europe, so that these countries can balance their trade once more without an abnormal restriction on their imports; secondly, that their Governments should balance their Budgets, and cease meeting deficits by reckless printing of new currency.

This is the best way to seek stability of exchanges, and that improvement in underlying conditions, without which, as shown in the preceding article, no extended facilities for commercial credits are likely to be of any value.

Obviously, the new proposals of the British Government can be turned in this direction if the guarantees are given to "Reconstruction" loans for the new European States, and if the offer of these facilities is used as a lever for enforcing internal financial reforms in the borrowing countries.

Here is the place for the ter Meulen scheme. If, for example, the British Government guarantee is withheld unless security is given in the form of ter Meulen bonds, that will necessarily involve a reform in the public finances of the borrowing country, for it will be impossible to issue these bonds unless there is some substantial guarantee that the inflation of currency is to be limited. Without this no gold value could be assigned to revenues collected in the local currency. For this purpose there must be power not only to control the pledged revenues under certain circumstances, but also to enforce the necessary preliminary agreement with the borrowing Government as to the adoption of suitable financial reforms. If this control is in the hands of a Commission deriving authority from the League of Nations, this may overcome possible objections by the borrowing country, while, from the point of view of the lenders, political difficulties, which would otherwise arise, would be avoided. This is the real argument for using the machinery of the ter Meulen scheme.

To sum up. The new Government proposals are to be welcomed as a start in the right direction, but they admittedly only cover a small part of the field. Reforms of taxation at home and a regulation of German reparation payments and inter-Allied debts are necessary to complete an adequate Government programme. As far as the present proposals go the maximum effect will be obtained if they are directed to loans for constructional purposes in disorganised European countries, to be given against proper security only (*e.g.*, ter Meulen bonds), and conditionally on financial reform.

Although, according to the Government proposals, as explained in the debate on the Trade Facilities Bill, it will be within the power of the Advisory Committee, which is to be appointed, to control the granting of guarantees in the manner recommended above, it is obviously unfair to throw on this Committee the onerous task of initiating

* The full effects of this are not yet apparent in the German trade returns, because till now sales of German marks to speculators abroad have given Germany a temporary and artificial purchasing power.

policy in this way. So far as the Government proposals give any guidance, the Committee can only look to the commercial soundness of the propositions put before them, and their probable immediate effect on employment in this country. Under these circumstances, and as the amount which can be guaranteed is a very small one, it is almost inevitable that the wider questions of improving European conditions and the world economic situation will be left out of consideration. This is a serious defect, and it is to be hoped that the Government will undertake responsibility for a more definite policy in this respect. Though Europe can only be put right by the international co-operation for which the Prime Minister pleaded, it is the British Government which must give the lead.

OUR INDEX NUMBER.

AFTER a slight rise in August and September, wholesale prices, as reflected in our Index Number, have sharply reacted in October, and the total has fallen to 4588, the lowest point touched since September, 1916. The latest figure compares with 4924 at the end of September, a decrease of 336 points, with 7175 at the end of October, 1920, and 2565 at the outbreak of war. As will be seen from our usual table below, all groups show a decline as compared with the previous month, the fall being most pronounced in cereals and meat:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Fertilisers, Oils, &c.).	Total.	Percentage Change.

Both foreign and home grown wheat prices show a very sharp decline. In the case of the former it is largely due to the disclosure of larger wheat reserves in the United States and favourable crop prospects in the Southern Hemisphere. Other cereals are lower, while flour has been reduced from 59s to 55s. Potatoes are lower, beef and mutton have eased a little, and there has been a larger decline in pork. Among subsidiary foodstuffs, butter has risen, but this has been more than offset by a further reduction in sugar.

In the textile group, there has been a reaction in cotton prices, after September's sudden advance, but quotations are still well above the end of August level. According to Messrs Robert Barbour and Brother, Limited, the ginning figures published at the beginning of the month showed an excess on those of the previous year, in spite

of an estimated smaller crop. "Prices for yarn and cloth have not followed to anything like the same extent the decline in cotton, but this is not to be wondered at when it is remembered that spinners and manufacturers have for long enough been working on margins actually below or barely covering the cost of production." Wool prices have moved up again a little, and silk shows a further advance, but hemp and jute have declined. In their monthly report, Messrs Hindley and Co. state that the rise in September in manila hemp was due to American buying, which has now quietened down, though opinion in America is to the effect that the reaction is only temporary.

No change is shown in quotations for pig-iron and iron bars, but further cuts in steel rails have reduced the price to £10 10s per ton, which compares with £14 per ton at the end of September. Coal prices are easier, but in the minor metals the only change of importance is a sharp drop in copper. In the miscellaneous group, timber, oilseeds and tallow have fallen, but rubber is a shade higher.

We show below how the present indices of each of the groups compare with those of the end of July, 1914, the latter being taken as 100:—

End of—	Cereals & Meat.	Other Food	Textiles.	Minerals	Miscellaneous	Total.
July, 1914	100	100	100	100	100	100
Dec., 1914	124	117	82	103	124	109
June, 1918	220	220	294	186	250	238
Dec., 1918	226	222	293	186	241	236
June, 1919	231	227	284	202	247	241
Dec., 1919	249	250	396	247	263	287
March, 1920	261	260	484	269	309	325
June, 1920	261	263	415	278	281	305
Dec., 1920	233	229	209	261	230	231
March, 1921	209	206	167	216	203	198
June, 1921	203	188	158	210	185	188
Sept., 1921	193	195	204	189	178	192
Oct., 1921	166	194	190	176	173	178

Last month's decline in cereals and meat has put that section down to 66 per cent. above pre-war level, while other foods are still nearly 100 per cent. higher. The increase of 78 per cent. in the total compares with 225 per cent. at the end of March, 1920, and 131 per cent. at the end of 1920.

SHIPBUILDING, COAL, AND OIL.

"PAST records might be searched in vain," says the *Annual Report of Lloyd's Register of Shipping*, "to discover a period in which so many adverse conditions have combined to the disadvantage of the shipbuilding industry. An immense volume of shipping was added during the past three years to the mercantile marines of the Allied and neutral nations, and a large number of ex-enemy vessels became available for international commerce at a time when employment for tonnage was decreasing." Particulars of new tonnage classed by the society during the last seven years are given as follows:—

Year.	Steam. Tons.	Sail. Tons.	Total. Tons.
1914-15.....	1,289,827	5,796	1,295,623
1915-16.....	789,688	521	790,209
1916-17.....	1,371,915	4,210	1,376,125
1917-18.....	2,552,607	16,517	2,569,124
1918-19.....	3,760,806	40,415	3,801,221
1919-20.....	4,186,882	66,641	4,253,523
1920-21.....	3,229,188	15,943	3,245,130

In view of the circumstances described in the passage quoted above, and of the great trade depression, the large decline in 1920-21 is easily understood. As regards uncompleted tonnage as at June 30th last, the report says:—"The society's returns indicate that vessels totalling 4,235,511 tons gross were being built in the world under the inspection of *Lloyd's Register*. This figure, however, includes about 704,000 tons on which work was suspended from one cause or another, so that the tonnage actually under construction at that time was approximately 3,531,000 tons gross. Unfortunately, this total is altogether illusory as a criterion of building activity in the near future, for there is a great falling off in the numbers of new orders, in evidence of which it should be noted that

the number of plans for new vessels passed by the society during the 12 months ended June 30, 1921, has dropped to 433 proposals, representing a tonnage of 1,651,650. This decline has been followed in recent months by further reductions on so extensive a scale as to indicate a slump in orders for new tonnage without precedent in the history of the society." A feature of the figures given in the report is the large increase in the tonnage of shipping using oil instead of coal. This increase is shown by the following:—

Date.	Vessels Burning Oil Fuel. Gross Tons.
July, 1914	1,310,709
" 1919	5,336,678
" 1920	9,359,334
" 1921	12,796,635

The turnover to oil in the last two years is very remarkable. The great industrial significance of this change is brought out in the following paragraph:—"Some impression of the industrial significance of the change will be obtained when it is realised that the consumption of coal, in the case of the steamers now in existence which are fitted for oil fuel, would represent something approaching 20,000,000 tons per annum, or about 8.7 per cent. of the quantity of coal brought to the surface in the United Kingdom during 1920." At first sight, it might appear from these figures that the increase in the steamers fitted for oil fuel has meant a corresponding diminution in the demand for British coal for marine navigation purposes. This impression, as our Cardiff correspondent points out, is entirely erroneous.

"Reference to the statistics given in the Board of Trade returns," he writes, "shows that the expansion in the supply of oil-driven tonnage has had very little effect on the demand for bunker coal at British ports. In the nine months ending last September the total volume of the tonnage cleared with cargoes from British to foreign ports was 50 per cent. less than the tonnage cleared in the corresponding period in 1913; the reduction in the quantity of coal supplied as bunkers for the use of vessels engaged in the foreign trade was 56 per cent. In September last the reduction in the tonnage cleared was 29 per cent.; that was precisely the percentage decrease compared with September, 1913, in the supply of bunkers. The shipments of coal from the United Kingdom to foreign coaling depôts have declined proportionately to a greater extent than the decline in the supply of bunkers at home ports; but although the official statistics are not detailed enough to enable us to determine the extent to which, if any, oil has displaced coal at those depôts, it is very doubtful whether they discredit the inference drawn from the published bunker statistics at United Kingdom ports. What is not generally realised is that it is in the American coasting and lake trades that, apart from the tonnage employed in the overseas carriage of petroleum in bulk, liquid oil-driven steamers are chiefly employed. Of the 12½ million tons of vessels burning oil fuel approximately between 9 and 9½ million tons are American-owned vessels, and in so far as these vessels are engaged in the American coasting service they may be regarded as potential consumers not of United Kingdom, but of American coal. Their coal-consuming capacity must be treated as a form of home consumption just as the coal supplied for the use of steamers engaged in the coasting trade of the United Kingdom is treated as a form of home consumption in this country. The error, however, must not be committed of assuming that the home demand in the United States has been reduced by a quantity equal to the fuel-consuming power of these oil-driven vessels. As a matter of fact, the output of coal in the United States last August was equal to the average monthly output in 1913, and about four million tons more than the average monthly quantity in 1914. Liquid fuel may supplement, but it can never displace coal, even for marine navigation, except within certain limits, for the output of oil is not one-tenth that of coal. Moreover, under normal conditions, its price is not as steady nor its supply as reliable and if we are to judge the future from the basis of existing knowledge of the available supplies of coal and oil the prospects are that an increasing quantity of oil will be obtained from coal by distillation, and that this process will lead eventually to a still greater demand for coal."

THE INTERNATIONAL LABOUR CONFERENCE.

(BY OUR LABOUR CORRESPONDENT.)

THE third annual meeting of the International Labour Organisation, which is now being held at Geneva, recalls the foundation of this international machinery under the Peace Treaty. It was, at the time, regarded as a considerable step in advance when in Part XIII. of the Treaty of Peace international recognition was given to the claims of labour to humane treatment. The International Labour Organisation which was set up was entrusted with two duties. It was to establish humane conditions of labour in all lands and to institute and apply a system of international labour legislation, subject to the necessary safeguards. Secondly, it was to undertake "the collection and distribution of information on all subjects relating to the international adjustment of conditions of industrial life and labour." The Peace Treaty, in fact, legalised, so to say, the efforts of the International Association for Labour Legislation which for 20 years before the war had been engaged in similar work.

Of the need for a branch of the League of Nations devoted to these objects there can be no doubt. As M. Albert Thomas, the Director of the International Labour Office, has pointed out, "all the contracting States, inspired both by considerations of humanity and by fear of unfair competition, undertook to secure better and, as far as possible, equal conditions for all the workers of the world by the adoption of uniform Draft Conventions or Recommendations." Yet up to the present the achievements have not been commensurate with the needs. Nevertheless, something has been accomplished, in spite of the real difficulties inherent in the international regulation of labour conditions. Unfortunately, the leading States in the world have not lived up to their obligations. This country, for example, has not ratified the Washington Convention relating to hours of labour, though the British Government supported it at the Washington Conference. It has, indeed, gone further, and suggested to the International Labour Office that the Washington Convention dealing with hours of employment should be revised. It desires a Convention "retaining those provisions of the Washington Convention which have proved generally acceptable in the light of recent experience, and omitting or modifying those which may appear to be too inelastic for the varying needs of the different industries in the respective countries." Labour critics suggest that this change in attitude is due to the weakened power of trade unionism as a result of the trade depression. The attitude taken by France with regard to the question of agriculture—the main subject for discussion at the present conference—has destroyed the possibility of any Convention affecting agricultural workers. Notwithstanding these difficulties there is little doubt that the International Labour Organisation has been the means of securing the adoption by many countries of legislation for the improvement of industrial conditions.

The first International Labour Conference was held at Washington in 1919, when the chief subjects on the agenda were hours of labour and women's employment. Last year the second conference concerned itself entirely with the question of an international seamen's code. This subject is clearly one where international standards are desirable; but it is complicated by the existence of widely varying national standards and by racial considerations. The suggestion for an eight-hour day for seafarers was defeated because the vote of the British Government's delegate was cast against it. This year the main item on the agenda at the Labour Conference refers to hours of labour in agriculture. It is undeniable that an international Convention on this question must be a task of extraordinary difficulty, owing to the variety of land systems in the world, the different methods of agriculture in vogue, and the existence of differing standards at the present time. Owing, however, to the opposition of the French, the subject has been withdrawn from the agenda, as there was not the necessary two-thirds majority for its retention, though other agricultural questions are to be discussed.

Other subjects which are to be discussed are the prohibition of the use of white lead in painting and the disinfection of wool infected with anthrax spores. Both

questions are clearly of interest to workers. The Washington Conference two years ago made recommendations in favour of prohibiting the employment of women and young persons on certain lead processes, and strictly regulating the conditions of employment in other processes. The Geneva agenda merely carries the subject a stage further. In view of the possibility of lead poisoning many Governments have regulated the use of lead, and the average person would assume, especially with the knowledge that substitutes for lead paint have been in use for some time, that there would be no obstacle to an international agreement on this issue. The white lead manufacturers, however, have for some time been carrying on an insidious propaganda in the hope of preventing the prohibition of the use of white lead in painting. And it is by no means certain that they will not succeed.

There is, however, a likelihood that steps may be taken to deal with the question of anthrax. Workers employed in industries using wool and hair are liable to the disease. Notwithstanding regulation in this country the number of cases has increased, and a Departmental Committee, which reported three years ago, recommended the compulsory disinfection of the raw material, and an experimental disinfecting station has been built under powers conferred by the Anthrax Prevention Act of 1919. It would be a distinct gain if the International Labour Conference drafted a Convention on the lines adopted by the British Government.

But with the withdrawal of the item on the agenda dealing with hours of labour in agriculture, the Geneva Conference has lost one of the chief items of interest. It is, to say the least, unfortunate that Britain and France in different directions have taken action which might torpedo the International Labour Organisation. No doubt it can continue the useful work of collecting and collating information, a task which it is well fitted to perform; but the International Labour Office will lose its real value if every attempt to establish international minimum standards is to be defeated. The case for such standards is overwhelming; the countries who would gain most as a result of international regulation are countries like Great Britain, whose present standards are in advance of those of most other countries. The truth is that international labour legislation is suffering from the prevalent reaction. Organised Labour regards the coolness—one might say the hostility—shown by the British Government towards international labour regulation as part of a general policy, the effect of which is to destroy the workers' standard of life, or at least to postpone the improvement of working conditions.

The non-fulfilment of the Government's undertaking to give effect to the unanimous recommendations of the National Industrial Conference of 1919, the sudden determination to decontrol the coal industry; the abolition of the Agricultural Wages Board, the neglect of the unemployment problem, are all linked together in the minds of many workers, and, taken in conjunction with the Government's attitude towards international labour legislation, suggest an unwillingness on the part of the Government to honour its lavish promises, if not an actual attack upon present standards. The result will be to drive labour back upon its own resources. Efforts will be made to perfect the trade union machinery for the purpose of securing both national and international agreements. Already there are amongst the workers in many industries international organisations which aim at securing, if not uniform, at least approximating standards as regards hours and conditions of employment, the adoption of a common policy, and machinery for common action and mutual support. The miners, transport workers, and textile operatives, for example, have international federations, and though their influence is as yet relatively small, they have the advantage over the International Labour Organisation that they are under the control of the workers themselves. There can be little doubt that these international federations are growing in importance, and that they will in time become factors of some weight in the world.

This is not to say, however, that workers' organisations will cut themselves adrift from the International Labour Organisation, any more than that in this country Labour will set aside Parliamentary effort; but trade union action

will be increasingly developed as a second line of attack. The danger which confronts the Labour movement is the temptation on the part of the "left wing" to resort to direct action in desperation, owing to obvious failure of national and international government to make good promises solemnly made. The real way to avoid this danger is through effective constitutional machinery. The obvious thing to do as regards the International Labour Organisation is for Governments to utilise it to carry out the spirit of the "Charter of Labour," which was incorporated in the Peace Treaty itself and embodied in the Covenant of the League of Nations. Otherwise, the International Labour Organisation becomes a fraud.

AUSTRALIAN BASE METAL MINING COMPANIES AND LABOUR.

(BY OUR MINING CORRESPONDENT.)

THE question of the relations between capital and labour in Australia, as exemplified by the mining companies and their employees—a question to the fore on various occasions during the past few years—has just received fresh prominence in connection with several of the important base metal undertakings in which British investors are largely interested. Thus in their report to June 30th last the directors of the Broken Hill South remark that, "unless costs of production are very considerably reduced, the industry at Broken Hill, when relying upon production from crude ore as distinct from old tailings dumps, is in a precarious position with lead below £25 per ton." Both in the report and at the annual meeting of the Broken Hill Proprietary stress was laid upon the urgent importance of the absence of friction. Finally, that well-known copper and gold proposition, the Mount Morgan, after long and abortive endeavours to come to an arrangement as between itself, the miners, and the Government, has applied to the Arbitration Court for a new award granting a 20 per cent. reduction of wages. The facts of the case are quite simple. Under present conditions the cost of producing a ton of electrolytic copper amounts to fully £95 per ton; the market price is less than £75. This necessarily entails a drastic curtailment of operations. Even a wealthy company cannot indefinitely continue turning out a product at £20 below the market price. The poorer undertakings retired from the contest long ago; the few still at work are those which, besides being in a fairly good financial position, are assisted by the incidental recovery of gold, which now commands a substantial premium. The labour attitude is that if an industry cannot provide the wages and operate under the conditions laid down by the Federal Arbitration Court, it should be allowed to die. No regard is paid to economic factors, or to the interests of those whose enterprise has permitted the industry to be founded and developed. Labour seldom regards the capitalist as having any rights at all. Still, it might pause for a moment and consider whether its present policy is leading.

The news that the Arbitration Court has granted the award above mentioned, subject to a Government subsidy of 11d per man per day suggests that the logic of hard facts is now beginning to receive recognition. It is to be hoped that the spirit will spread; the refusal of the miners to return to work on the terms specified, however, scarcely encourages optimism.

As regards the undertakings which have come into prominence within the past week, the Broken Hill South is a reorganisation of a highly-successful no-liability company, which possessed a much smaller capital. Almost from the start the new undertaking experienced the "slings and arrows of outrageous fortune." Owing to labour troubles, milling was suspended in April, 1919, and at the end of the following July a large portion of the surface plant was destroyed by fire. The last dividend was 7½ per cent. in March, 1919, making a total of 15 per cent. for the financial year. Thanks to cash surpluses received in connection with the production of preceding periods, the accounts to June 30, 1920, showed a profit of £13,606, the whole of which was appropriated for expenditure on plant. In addition, £30,400 was written off special reserve. Last year the revenue again benefited

from legacies of the past, but after providing for debenture interest, administration, and the expenses due to the stoppage, there was a deficit of £56,700, which wiped out all save a small amount of the balance brought forward. Depreciation on plant (£55,200) and debenture redemption (£13,300) were met out of special reserve. Expenditure on plant reconstruction during the past three years has totalled £285,650. Like other companies in the same category, the Broken Hill South has acquired large interests in allied undertakings; the latest balance-sheet shows "shares at cost £392,300." The bulk of this amount is represented by 200,000 shares in the Associated Smelters and 150,000 in the Electrolytic Zinc Company of Australia. Following on the award of Mr Justice Edmunds, the strike at Broken Hill, which had been in progress for something like 18 months, came to an end in the autumn of 1920. A heavy decline in metal prices occurred almost simultaneously. Nevertheless, the company, in common with certain other Barrier undertakings, "decided to work on a restricted scale in order to alleviate the distress amongst the workers consequent on the strike."

In recent years the scope of the Broken Hill Proprietary Company has undergone great change and expansion, chief attention being devoted to the exploitation of the Iron Knob quarries in South Australia and the establishment of an iron and steel works near Newcastle, N.S.W. During the past 20 years, to go no further back, dividends ranging from 11s to 2s per share have been paid annually. In January, April, and July last distributions of 9d per share were announced—or at the same rate as for 1920—but the directors now intimate that owing to the uncertain outlook for the iron and steel industry they consider it inadvisable to declare the dividend due in November. The announcement came as a disagreeable surprise, and was accompanied by a fall in the price of the shares. Unfortunately, the accounts give no indication as to what proportion of the company's income is derived from the new activities, and what from the old. The report to May 31st last, the full text of which has just come to hand, shows a gross working profit of £695,200, as against £850,600 for 1919-20 and £1,010,950 for 1918-19. The amount written off for depreciation—£161,750—is more than double the allowance in respect of the preceding period; in the meantime £1,236,400 of capital outlay has been incurred. On the other hand, reserve gets £250,000 instead of £500,000. Of the reserve total of £1,315,000, no less than £1,145,000 is invested in the company's business, plus £150,000 in the shares of the Broken Hill Associated Smelters. On the date of the balance-sheet the net liquid assets amounted to £1,739,000; the issued capital was £2,455,050, while the outstanding balance of the original 6 per cent. debentures figured at £746,900, and on the 7 per cent. bonds offered in October, 1920, £1,189,500 had been received. It will be recollected that this issue, with 420,000 shares at 45s, was made for the purpose of carrying out extensions to the steel works. The company is heavily mulcted in taxation, but stands to benefit from the tariff proposals which at the date of the report were before the Commonwealth Parliament.

The Amalgamated Zinc Company, which has just provided its shareholders with an agreeable surprise in the shape of the announcement of a 1s dividend, occupies a somewhat different position from that of the companies referred to above, being purely a treatment concern, although it has also acquired large interests in associated undertakings. The last preceding distribution was 1s in April, 1919. The half-year to December 31st embraced only six weeks' work, and resulted in a loss of £16,650. The equalisation reserve was drawn upon to make up the deficiency. From the cabled summary of the report to June 30th it transpires that although the accounts show a profit instead of a loss, it is very small, and practically the whole of the dividend will be provided out of the reserve, which, on December 31st last, stood at £335,700—for the most part locked up in shares. However, the net liquid assets at the date of the latest report stood at the substantially increased figure of £94,600. The directors observe that in deciding to make a distribution they have been influenced partly by the length of time

which has elapsed since the last, and partly by the fact that the company has the necessary cash available from the realisation of dump material paid for and charged to working costs but not treated. An important factor in the position of these Broken Hill undertakings is their ability to dispose of their zinc concentrates to the British Government under the 10 years' agreement made towards the close of the war. Strangely enough, the Board of Trade has hitherto displayed great reluctance in providing home smelters with such concentrates. Shipments are, however, now to be made.

Business Notes.

Supplementary Estimates.—A Supplementary Estimate (White Paper, No. 238, price 3d) has been issued for £8,022,000 in connection with the Government's schemes to relieve unemployment. Of this sum, £330,000 goes to the Colonial Office for purposes of overseas settlement, £2,192,000 to the Ministry of Labour as the State contribution to the Unemployed Workers' Dependents Fund, and £5,500,000 to the Ministry of Health for general unemployment relief. A Memorandum accompanying the estimate states:—"The present proposals will further involve the following expenditure either from savings on existing Votes or on future Votes:—Unemployment Grants Committee in 1922-23, £630,000; State contribution to the Unemployed Workers' Dependents Fund in respect of the period after March 31, 1922, £670,000; State contribution as employer in respect of soldiers or sailors or State employees, £115,000; acceleration of Government works and contracts, £563,000. In addition to the above sum, a further sum will be available from the Road Fund for expenditure by the Ministry of Transport on roads to relieve unemployment in necessitous areas, if necessary, to the extent of £2,000,000. The sum which will be immediately provided by the State for unemployment will thus be £12,000,000." Further Supplementary Estimates for the Civil Services and the Army have also been issued for £212,100 and £6,720,000 respectively. Under the former head the Colonial Office asks for £50,000 for "Rhodesia extraordinary war expenditure," "oil exploration in Papua," "expenses of arrangements for the internment in Australia of certain Germans and Austrians resident in the Tanganyika territory." The Home Office wants £62,100 for State liquor undertakings, and the Foreign Office £100,000 for famine relief in Russia. The Army's requirement of an additional £6,720,000 is explained in a White Paper (243, price 2d) as "arising out of the coal stoppage."

Repayments to United States.—According to New York cables, the British Government has completed this week the repayment of \$300,000,000 borrowed in the New York market in 1916. The final instalment repaid this week amounted to between \$51,000,000 and \$52,000,000.

Inter-Allied Debts.—Evidence of the growth of responsible financial opinion in favour of what Mr McKenna describes as the "selfishly-wise" policy of reducing or cancelling the war debts owed to this country by Allied nations is provided by the passing of the following resolution on Wednesday by the British National Committee of the International Chamber of Commerce:—"The British National Committee of the International Chamber of Commerce having met and considered the question of Inter-Allied Debts, resolves to bring before the British Government the desirability of negotiations in order to obtain the benefits which, in the opinion of the British National Committee, would accrue if the debts of the Allied nations to Great Britain incurred as a consequence of the war were either reduced or cancelled on terms to be agreed." The resolution was proposed by Dr Walter Leaf, chairman of the London County Westminster and Parr's Bank.

The Company invites communications from British Manufacturers desirous of developing business in the above countries.

The Liabilities of Russia.—The refusal of the Brussels Conference to advise the grant of credits for famine relief unconditionally has drawn a very limited recognition of its liabilities from the Soviet Government. While repudiating any national obligation to pay debts "contracted through long centuries," it takes into account the circumstance that the creditors of Russia, especially in France, include many small holders as well as great capitalists, and promises to "consider its obligations," provided that the Powers accord it recognition, and also respect the territorial integrity of Russia. And it asks for an international Conference to discuss the position and to draw up a definite Treaty of Peace. [The Russian External Debt, so far as it is now in question, apparently begins with the year 1822.] One motive for this new departure presumably is that the position of Russia will have to be considered by the Washington Conference; another, perhaps more potent, is the conviction recently avowed by Lenin, but anticipated for some months by outside observers, that the effort to force Communism on the nation has failed. In his remarkably frank speech to the All-Russian Congress, reported this week, Lenin declares that the campaign against "capitalism" has been a disastrous failure, and must be terminated by a "strategic retreat." The levy of agricultural produce on the peasantry has been unsuccessful, and the workers in nationalised factories are deliberately idle. Russia must temporarily return to capitalism, with the aid of foreign employers and technical experts, who will compel the "workers" to work. Hereafter, when the country has recovered, the proletariat will choose between Communism and Capitalism. The reception of the offer in Great Britain and France is decidedly cool. Lord Curzon's official reply, indeed, states that the Soviet Government has taken the only path to economic co-operation with other nations, but asks whether the offer covers State debts only, or also comprises municipal and railway loans, claims by foreigners for property confiscated or damaged, and borrowings during the war by the Tsar's Government. This, indeed, is the first question asked by every critic of the proposal. The total of the pre-war State debts is just under £738 millions, apart from the direct State railway debts of slightly over £45 millions; the railway bonds with State guarantees and certain other railway bonds with apparently less specific security amount to more than £40 millions, the Land Banks' bonds to £101 millions, but it is doubtful if these latter are properly obligations of the State, and few are held abroad, except possibly in Sweden and Holland. The municipal loans known in London amount to more than £15 millions. Besides all this there is the war debt to the Allies, about £850 millions, and the foreign holdings in the internal war loans. It is clear that, whatever the Soviet Government may promise, it cannot even begin performance for many years to come. And it is very doubtful whether the real power has not passed from it to the Third International and the Counter-Revolutionary Commission.

France and Turkey.—The agreement concluded between M. Franklin-Bouillon, representing the French Government and the Kemalists at Angora, is ostensibly much less comprehensive, and also less alarming, than the forecast of it noticed in these columns a fortnight ago. Peace is concluded, the prisoners on both sides are to be delivered, the Turco-Syrian frontier (already modified last

spring by mutual agreement) is to be readjusted, and the troops on each side are to retire accordingly. The rights of racial and religious minorities are confirmed, and the new frontier is not to interfere with the access of semi-nomad populations to their usual pasturage or markets—a matter conspicuously disregarded recently in regard to Albania and in the adjustments following on the Berlin Treaty, which led up to the Dulsigno crisis in 1880. Alexandretta, of which probably about half the population are Turks, is included in Syria, but is to be subject to special administrative provisions, and the official language is Turkish. The Baghdad railway runs close to the new frontier, and largely on the Turkish side; but France is to control the whole of the Syrian and Cilician section, from a point near the eastern end of the Taurus tunnel, as far as Nisibin. Until trains are running through the tunnel—and even afterwards for all commerce except that from Central Europe—the natural access to the railway lies, not through Constantinople, but through Mersina and Alexandretta, the latter very much the better harbour. The Agreement confirms French claims to "economic expansion" in Cilicia, a region of which the potential value is indicated by the extensive German preparations for its development before the war. It is to be hoped that French influence will be able to secure that the provision securing the rights of minorities, especially the Armenians, shall be carried out. A secret convention is said to have been signed at the same time, providing, among other things, for a delivery of arms to the Kemalists and for the contingency of hostilities with King Feisal of Mesopotamia. But such provisions could hardly be consistent with the present relation between France and her Allies in Europe.

Egyptian Cotton Crop.—This week the Egyptian cotton crop for this season has been officially estimated at 3,300,000 cantars. The forecast is worse than expected, and compares with a yield for 1920-21 of 4,876,000 cantars. The estimate has caused some surprise in Lancashire, as so far this season the receipts at Alexandria are 1,504,000 cantars, against 818,000 cantars a year ago. The largest crop ever grown was in 1913-14, when the output was 7,684,000 cantars. The acreage for the current season is 1,286,000 feddans, as compared with 1,828,000 feddans last year.

Some Gilt-edged Yields.—A Stock Exchange correspondent writes:—The striking success of the issue of the twenty million pounds Local Loans stock, the lists being closed well in advance of the full allotted time, is one more illustration of the readiness of the public to absorb sound stock. What stockbrokers find nowadays is that people send lists of shares, industrial, mining and others, which they instruct their brokers to sell for whatever can be obtained, irrespective of the original cost, which, of course, in most cases was much higher than the present value. The money lost is written off, and the shareholders make no secret of their firm determination to remain in the future in the paths of safety and first-class security. Experience in connection with Canadian railways, Argentines, Brazilians, and too many home industrials has been a bitter one, and it will take time before the recollection of the losses incurred can be obliterated. Even now, when gilt-edged stock seems to be so abundant, it is not always so easy to find the exact stock which the buyer would prefer, and every day it happens that investors send to the markets asking for particular issues of which they find there is none on offer. It may be useful to set out, as we have done on previous occasions, a list of securities in the gilt-edged market that are obtainable at the present time, giving the flat yields, and also on redemption. The list may be prefaced by the observation that the War Loan at 87½ pays 5½ per cent. on the money, or £5 19s per cent. allowing for redemption in 1947 at 100. This makes a useful criterion against which to compare other stocks, it being furthermore added that the interest on the War Stock is paid free of tax at source:—

Description.	Int. Due.	Date of Red.	Price.	Yield.

S. Australia 4 %	1 J. and J.	1940-60	70½	5 15 6	6 0 0

The high yields offered by Queensland issues are due to political considerations. With short-dated stocks and bonds, it is manifestly needful to take the redemption yields only, as the quotations are governed by the dates of repayment more than by the rates of interest carried by the securities.

Monthly Bulletin of Statistics.—It may be remembered that the Bulletin of Statistics previously published under the auspices of the Supreme Economic Council was taken over by the League of Nations. The Bulletin is intended primarily to register industrial and commercial fluctuations, and only such figures have been selected as are considered to constitute reliable indices. Owing to the economic changes which have resulted from the war certain indices which were normally quoted before the war, as, for instance, the figures of marriage rates, have lost their validity, whereas others, previously of minor interest for most countries, as, for instance, rates of exchange, it is pointed out, have now become of first-class importance. The most interesting figures contained in the present issue are those for price movements, and these show that there has been an almost unusual slackening in the decline in prices in many countries. Messrs Constable and Co., Limited, are the authorised agents for this publication in this country, and the price is 1s 6d per copy.

Chinese Banking and Trade Development.—In a report on the commercial situation in China in June, 1921, issued by the Department of Overseas Trade,* interesting information is given about the formation last year of the Chinese Banking Group. This combination is headed by the Bank of China, and comprises 27 of the leading native banks. "The combined amount of the authorised capital of these banks is over \$150,000,000, and their paid-up capital and reserves are returned as being about \$65,000,000." It is pointed out that, "whilst it is not impossible that jealousy and suspicion of the foreign Consortium had some influence in deciding the native bankers to form this association, they undoubtedly recognise also the need of binding themselves together for mutual protection against official exactions and oppression, and they have already shown their strength by refusing further financial support to the

* General report on the Commercial, Industrial, and Economic Situation of China, (London) H.M. Stationery Office. 1s 9d net.

Government except on terms dictated by themselves. If this association can be brought to realise the expediency of working in co-operation with the Foreign Banking Groups forming the Consortium it may ultimately be destined to play a leading part in the reorganisation of China's finances." Two loans have already been made by this group to the Central Government, one of \$6,000,000 for railway development, and one of \$2,500,000 for the erection of a Mint at Shanghai, which latter loan is the outcome of a proposal by the Associated British Chambers of Commerce in China for the establishment of a central Mint at Shanghai. It was thought by these Chambers of Commerce that such an institution "would materially improve China's currency, and would ultimately lead to the substitution of a standard national dollar, in place of sycee, as the medium of trade throughout the country." Foreign merchants and bankers consider that the Chinese Government should accept some measure of foreign control over the Mint operations, which undoubtedly would secure more confidence outside China. The scheme introduced last year for the reorganisation of China's domestic loans is being pressed forward, and though the intention to write down the nominal face value of certain bonds has aroused unfavourable criticism in various foreign quarters, Chinese holders are inclined to be content. The writer of the report is optimistic on future trade prospects, and is of opinion that the Chinese "are rapidly assimilating Western customs and Western modes of living," and that in the development of this process "there will be a demand for every description of foreign machinery and mechanical appliances, which should keep British manufacturers busy for many years to come."

The Vegetable Oil Industry.—At a time when it is difficult to discern signs of trade improvement, it is somewhat encouraging to find that in at least one branch of home industry there has been a marked advance in the third quarter of the year, viz., in the exports of vegetable oils and allied products. In order to show this clearly the Board of Trade figures for each month are given as under:—

	Vegetable Oils—		Soap.	Candles.
	Unrefined.	Refined.		
	Cwts.	Cwts.	Cwts.	Cwts.
1921—				
January	130,360	78,540	54,166	2,672
February	76,620	46,500	40,821	1,632
March	86,960	15,260	50,856	2,294
April	110,900	15,260	53,344	3,660
May	106,140	11,700	51,413	3,774
June	123,780	8,060	64,221	3,583
July	139,680	4,180	91,336	8,111
August	164,160	6,540	99,639	5,464
September	239,000	14,200	90,489	7,341

In the first six months the figures were a long way behind those of the corresponding months of last year, but in the third quarter a good deal of the leeway was made up. Exports of refined vegetable oils for the nine months aggregated 58,880 tons, against 69,134 tons in the same period a year ago, and refined oils 10,112 tons against 11,254 tons. Should present conditions be no worse, there is every probability that last year's totals will be exceeded when the twelve months are completed. The substantial increases in the exports of soap and candles in July, August, and September will also be noted. These two articles have, however, experienced a serious decline compared with either last year or the pre-war year 1913. The United Kingdom soap exports in January-September total only 596,285 cwts, whereas in the same period last year they were 1,599,589 cwts and in 1913 1,359,716 cwts; while candles at 38,531 cwts compared with 220,093 cwts in 1920 and 190,448 cwts in 1913. Paints and varnishes exported are also behind, but not in the same degree. In the nine months the United Kingdom had imported 368,549 tons of linseed, and judging from the seed to hand and shipped there seems a possibility that the total for the year will approach half-a-million tons, and that a similar quantity will be received by the Continent; in all, a million tons, equivalent to 340,000 tons of oil. This altogether apart from cottonseed, soya, and oilnuts, which provide soft oils used principally for edible purposes and in the margarine and soap industries.

The Progress of Latvia.—The Republic of Latvia seems to be progressing satisfactorily towards economic development and social stability. According to the Riga correspondent of the *Paris Temps*, the Constituent Assembly, besides accepting a thoroughly democratic constitution, has passed the law establishing a peasant proprietary by breaking up the great estates held by the "barons"—Russian subjects till the Revolution, but in race German. The doctrine of "the land for the people" was so fully accepted by the Assembly that the opponents of the law had to dwell mainly on the probable reduction of the yield under peasant proprietors. Apparently the large landowners receive compensation, and are allowed (as a compromise between the Socialist and the moderate members) to retain from 50 to 100 hectares (about 125 to 250 acres) according to the former extent of their estates. The holdings, as far as possible, have been left in the possession of their actual tenants, who now become their owners; but it is stated that 30,000 landless peasants have been provided with land. Co-operative societies were comparatively well developed before the Revolution, and the State is protecting them against a possible control by reactionary or other influences, which might draw down the peasants into "debt slavery," by organising them, including the agricultural credit banks, into a single system under Government supervision. State aid is being granted, and it is hoped will raise production to its pre-war level. Latvia, again, expects hereafter to become the chief channel of the overseas trade of Northern and Central Russia; her railways, partly Russian and partly Western in gauge, are to be extended and combined in one system with those of Estonia and Lithuania, under a joint board representing all these States, and Customs formalities at the inter-State frontiers are to be suppressed as far as possible; indeed, there are indications of a coming Customs union. It is hoped to raise a loan in Western Europe, but the prospects of this at present are not hopeful. The State has been admitted into the Postal Union, and its representatives, with those of Estonia and Lithuania, have been in conference this week with representatives of the Russian Government on the railway and postal service with Russia.

Japanese Trade and Finance.—Cabled advices from Tokyo state that since the middle of October the demand for short money by the exchange banks fell off, but the general tone of the money market remained firm, bankers being cautious, and towards the end of the month discount and short loan rates hardened. In view of the years of dear money stock exchange quotations showed a tendency to decline. The rice market was rather weak, as also was the market for cotton yarns owing to increased production. Silk yarns, on the other hand, were steady. On October 31st the note issue of the Bank of Japan was 1,225,000,000 yen, as compared with 1,192,000,000 yen a year ago, discounts and advances being 187,000,000 yen, against 243,000,000 yen at the end of October, 1920.

South Africa Trade.—A cable received by the Standard Bank of South Africa states that in October the Union of South Africa imported approximately £3,832,000 and exported approximately £4,980,000. The exports included £2,983,000 native gold. A cable from the Cape Town office of the National Bank of South Africa says that the shipping figures of Union ports for the eight months ended August compared with the like period of 1920 indicate a decrease in overseas cargoes landed of 417,300 tons, or 32 per cent., and an increase in tonnage shipped of 603,800 tons, or 34 per cent. Import values declined by £23,250,000, while exports declined £21,500,000. The wholesale trade generally is dull. Johannesburg reports considerable inquiry for soft goods, with which the market is inadequately supplied owing to cautious buying during the past months, there being a shortage in some lines. On the Commercial Exchange the volume of business is small. In the opinion of the community, however, the general position is improving gradually.

City Life Assurance Company.—The position of the City Life Assurance Company cannot be regarded as satisfactory. In 1920 the new assurances amounted to £3,293,364, and in 1919 to £2,767,007, amounts which largely exceed those of most of the strongest life offices in the country. The assuring public is not discerning; British life offices as a class are so strong that security in life assurance is taken for granted without examination. We are not concerned merely with the high rate of expenses and commissions; that is inevitable when a comparatively small company suddenly launches forth into millions of new assurances. In 1919 the ordinary life premium income was £182,645 and the total expenses and commissions properly chargeable against it were £127,410; last year the premium income was £243,461 and the expenses and commissions £140,022. What is much more important is that a substantial part of the "assets" in the balance-sheet—£202,585 in 1918, £261,748 in 1919, and now £297,748 in 1920—consists of "purchase of business and extension expenses," an item which it would be flattery to call "goodwill." Some of it appears to be expenses of management and commissions carried to the balance-sheet instead of being charged against current income. If "assets" such as these appear in the balance-sheet it will surprise no one to learn that the actuarial valuation made up to December 31, 1918, will reveal a substantial deficiency. We have not yet the figures. We understand that the valuation report was not deposited with the Board of Trade until last month, more than two years late. Much correspondence has passed between the company and the Board, and we may hope that it will be possible to include this correspondence as well as the valuation report in the annual Blue Book which is due to be published in March next. The Board of Trade has no powers to deal with a life office which shows an actuarial deficiency; it cannot do more than call public attention to the facts. In the report for 1920 the directors of the company state that "measures have been taken which already go far towards eliminating the deficiency," and that an annual valuation is to be made in future. In the interests of policy-holders, we hope that these "measures" will prove ultimately effective. There is a big gap to be filled up between liabilities and realisable assets; the sum of £110,563 has already been borrowed against the security of the assets, and there is a contingent liability (not taken into the accounts) of £30,000 in respect of a guarantee for which securities have been deposited. The situation is bizarre. There are scores of excellent life assurance offices in this country—some of them set the highest standard known to the world—and yet last year there were to be found, by the activity of agents, 8,814 people to take out life policies for £3,293,364 in the City Life Assurance Company.

British North Borneo.—The net profits of the British North Borneo (Chartered) Company for the year ended December 31, 1920, were £226,800. These, Sir West Ridgeway pointed out at the half-yearly meeting of the company, were £117,000 higher than "the surplus achieved in the record year immediately preceding the war." In a lengthy but interesting speech the position of the company was critically reviewed, and the outlook for the current year discussed, but a considerable portion of the speech was devoted to the activities of the Anti-Slavery and Aborigines Protection Society. Some further light was thrown on the balance-sheet item of investments, amounting to £700,920, which were valued "at cost." "The market value of our investments," the chairman said, "at December 31st last was approximately £585,276, showing a total temporary depreciation of £115,643," but he pointed out that the reserve of £368,351 could be used for the purpose of writing these investments down if necessary. Sir West Ridgeway's speech on future prospects was somewhat gloomy in tone, and some financial critics may see inconsistency in the painting of so dark a picture and the declaration of a dividend of even 3 per cent. At the same time, it must be admitted that some present-day boards of directors, with the same results before them, would have

decided on a higher distribution. And to what extent the company should assist rubber-growing concerns within its territory is also a problem for shareholders to ponder over. These are questions, of course, quite apart from the Imperial aspect of the company's progress.

United Dairies.—The sixth annual report of the United Dairies, Limited, for the year ended June 30th last shows that on a paid-up and issued share capital of £3,451,241, a profit of £356,186 was earned, which compares with a share capital of £3,281,336 and profits of £279,668 for 1920. The ordinary share dividend of 12½ per cent. is maintained, and a slightly larger amount carried forward to next year's accounts. The principal item in assets is investments and loans in and to other companies at £3,337,268, which, the auditors point out, "are taken at or under cost price." During the year the subsidiary companies have consolidated their London wholesale milk business under the title of London Wholesale Dairies, Limited, and that of the "provincial creameries" under the title of United Dairies (Wholesale), Limited. The fact that the ordinary £1 shares are now quoted at approximately 22s 6d per share may be considered an indication that holders (who, we presume, are in many cases vendors of their businesses to the company) have faith in the future progress of the undertaking. The balance-sheet will be found analysed in another column. In connection with the purchase of new businesses 362,842 shares have been (or will be) issued.

Gold Fields Rhodesian Development.—Our mining correspondent writes:—In these times, when the passing even of preference dividends is quite a frequent occurrence, it is something for a company in a distinctly speculative line of business—mining and finance—to be able to maintain its distribution, albeit at the moderate rate of 10 per cent. Some half-a-dozen years after its incorporation this company, which is an amalgamation of a concern of the same name with the Rhodesia Exploration and Development Company, was under the necessity of writing off half its capital owing to depreciation in share interests. Dividends were then commenced with 5 per cent. in respect of the year ended June 30, 1917. Since that period the rate has ruled at a steady 10 per cent. Last year's net profit of £114,100, although £13,800 below that of 1919-20, is within a comparatively small sum of what is required to provide the dividend above referred to. Moreover, the net cash assets amounted to £268,000, representing fully one-fifth of the issued capital. The company's largest interest is in its subsidiary, the Shamva Mines—over 300,000 shares. This, of course, is a large, low-grade Rhodesian proposition which has made substantial distributions, the rate for the past two years being 7½ per cent. per quarter. Its prospects are described by the consulting engineer as "Satisfactory." Less prosperous undertakings in which large interests are held are the Falcon and the Planet-Arcturus. Crushing at the latter commenced in June, 1920, and to the end of the financial year 55,000 tons of ore yielded an average of about 48s, at a cost equivalent to 40s 3d per ton. The ore reserves payable under present conditions represent two and a-half years' supply. A new acquisition takes the shape of 1,500 shares in the De Beers Consolidated.

Hungarian Debts.—The Board of Trade announces that the Administrator of Hungarian Property (Cornwall House, Stamford Street, London, S.E. 1) has licensed direct communication between British creditors and Hungarian debtors with regard to the adjustment of accounts or settlement of pre-war debts, or debts arising out of pre-war transactions or contracts, due by Hungarian nationals. If a direct settlement is negotiated, the draft of the agreement embodying the terms must be submitted in duplicate to the Administrator for his approval, and such approval in writing obtained before any such agreement can be entered into. The Administrator has also licensed communication in writing between British debtors and Hungarian creditors with regard to pre-war debts or debts arising out of pre-war transactions or contracts, with the sole object of ascertaining par-

ticulars of indebtedness between the parties, provided that no proposal or suggestion is made for the payment or settlement of such debts except through the Clearing Offices, and that the party so communicating shall retain true copies of such communications and the original replies thereto and hand the same to the Administrator on demand at any time.

SIR CHARLES ADDIS, K.C.M.G., president of the Institute of Bankers, will deliver the inaugural address at a meeting of the Institute in the hall of the Goldsmiths' Company, Foster Lane, E.C., on Tuesday, November 8th, at 5.30 p.m.

A PAPER on "India and Some Problems" will be read by the Rt. Hon. Viscount Chelmsford before the Royal Colonial Institute in the Edward VII. Rooms, Hotel Victoria, on Tuesday next at 8.30 p.m. The Rt. Hon. the Marquis of Crewe will preside.

THE Commercial Travellers' Benevolent Institution (founded 1849) appeals for donations. With only £4,000 a year from investments, it has to find over £16,000 per annum to meet the payments to 500 annuitants, of whom over 400 are widows. Donations may be sent to the secretary at Dauntsey House, Frederick's Place, Old Jewry, London, E.C. 2.

THE Political Economy Club, founded in 1821 by the exertions of Thomas Tooke (author of the London Merchants' Petition), with the co-operation of Malthus, Ricardo, James Mill, and others, celebrated its centenary on November 2nd. Lord George Hamilton presided, supported by many members of the club, and the guests included the President of the Board of Trade, Lord Haldane, Lord Ernle, Lord Askwith, Mr. Hilton Young, Sir Maurice de Bunsen, Sir Charles Addis, Sir Donald Maclean, Sir Frederick Macmillan, Mr. Henry Bell, and the Hon. George Peel.

Oversea Correspondence.

FRANCE.—REVISED ESTIMATES—YIELD OF TAXATION—WIESBADEN AGREEMENT—GERMAN WORKERS AND DEVASTATED VILLAGES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 1.

A FURTHER step towards assuring a balance for the Budget for 1922 was taken on Thursday, when the Finance Commission of the Chamber took under consideration the latest of M. Paul Doumer's revised proposals, details of which were published in the *Economist* last week. The Budget proposals, as finally (apparently) revised by the Minister of Finance, came before the Commission in the following form:—

	Francs.
Ordinary expenditure.....	21,753,000,000
Extraordinary expenditure	3,200,000,000
	24,953,000,000
Revenue from ordinary resources.....	19,778,000,000
Exceptional revenue	3,550,000,000
	23,328,000,000

thereby indicating a deficit of 1,600,000,000f, exclusive of the supplementary credits that will have to be voted, if the additional allowances of 700,000,000f granted to public officials in recognition of the high cost of living (which was suppressed in principle as from December 31st next) is to be continued, as the Finance Minister proposes.

M. Bokanowski, the *rapporteur général* of the Commission, brought forward a proposal at last Thursday's meeting to the effect that the ordinary Budget should be made to balance from the normal and permanent revenue, and the extraordinary Budget by means of the exceptional revenue that may be counted upon (from the liquida-

AKTIEBOLAGET UNIONBANKEN I FINLAND.

tion of war stocks and the tax on war profits). As these sources of revenue must disappear before the beginning of 1923, M. Bokanowski argued that they should be replaced, from the end of 1922 onwards, by the levying of new taxation to the extent of 1,800,000,000f. In opposition to these suggestions, M. Raiberti again brought forward a motion that had previously been discussed by the Commission, which was based on the principle that a balance must be brought about without having recourse either to additional taxation or to any further national loan. M. Raiberti proposed to meet the deficit by stricter methods of collecting the existing taxes, plus the postponement of certain amortisation arrangements until such time as France has recovered her power to produce. The Minister of Finance, for instance, in recognition of the fact that the tax on war profits is payable in scrip of the Rentes, has estimated that under this heading it will be possible during the year to extinguish debt to the extent of 1,500,000,000f. M. Raiberti proposed to the Commission that authority should be given for the Rentes in question to be replaced by short-term bonds, which would enable practically the whole of the deficit to be met. The Commission had no difficulty in recognising the value of a Treasury operation of this kind to enable the difficulty of the moment to be got over, and M. Raiberti's proposals were adopted.

The Commission decided, further, to recommend the insertion in the new Budget Bill of clauses that will have the effect, if rendered practicable, of largely increasing the yield from existing taxation by improved methods of collection. Other clauses were decided upon which will have for their object the prevention of frauds of the kind which are known in the United States as "income-tax dodging," and which have been particularly prevalent here, especially in connection with persons who derive a portion at least of their income from bearer bonds. As will be seen, the Commission has rejected the Finance Minister's proposal to wipe out the estimated deficit by increasing the tax on turnover from 1.1 per cent. to 1.60 per cent. It has also modified certain of the Minister's revised proposals, in which he urged the raising of further money by putting increased pressure on certain categories of income-tax payers. It is now generally believed that no serious difficulties will arise over the passage of the Budget Bill through the two Chambers, and there are hopes that, in view of the satisfactory manner in which the Finance Commission has handled the problem, its progress both in the Chamber and the Senate, will be much more speedy than in previous years.

As time goes on and the real potentialities of the agreement concluded at Wiesbaden between Messrs. Loucheur and Rathenau, respectively French and German Ministers for Reparations, become more fully realised, there is a growing tendency to recognise the enormous value that instrument may prove to have in connection with the economic restoration of both nations. A striking instance of this is to be found in the interview which a deputation, representing both French and German trades unions, has had with M. Loucheur. This deputation was composed of delegates from the Union Syndicale Française des Techniciens de l'Industrie, du Commerce et de l'Agriculture, of the corresponding German organisation, and of other German trade union bodies. The deputation was introduced to M. Loucheur by M. Marcel Laurent, the

assistant general secretary of the French C.G.T., who laid before the Minister the general terms of an agreement that has been drawn up between the French and German organisations with a view to the reconstitution of 11 given villages in the "red zone," or devastated area, in the Somme region, in the neighbourhood of Chaulnes.

Before their interview with the Minister in Paris, the combined French and German delegates paid a visit to the sites of the villages in question, which are amongst those that suffered the most terribly from the war. German delegates, who were headed by Herr Silberschmidt, a member of the Reichstag, and secretary of the German federation of building trade unions, were deeply impressed by what they saw, and expressed their intention of urging their fellow-countrymen to make every possible effort to assist in reconstructing the devastated area. As the result of their visit, a programme was outlined that will leave the sufferers and their architects full control over the reconstruction plans. On having these plans laid before them, with explanations as to what is necessary to enable them to be carried out, the Germans will send the necessary materials and labour direct from Germany, for application on the spot. The 11 villages selected as a beginning comprised 750 houses, with 3,740 inhabitants before the war, and their reconstitution will require the labour of about 2,500 men. The deputation informed M. Loucheur that they propose to avail themselves very largely of the stipulations of the Wiesbaden agreement. By arrangement with the Minister, the delegates agreed to meet again next week for the purpose of going further into details for carrying their plans into execution.

Apart from the fact that, as has been announced during the week, one single village in the devastated area has succeeded in bringing about its own reconstruction, it may be taken for granted that so far the thousands of villages in the war zone that were for all practical purposes destroyed during the hostilities, remain to-day in the same condition as they were when the armistice was proclaimed three years ago. The vast majority of the inhabitants who have returned to what was left of their village homes are still living in cellars or in half-ruined rooms above ground, in the hope that sooner or later some means will be found to enable their houses to be rebuilt. Most of the cities and larger towns are better situated, as they comprise a larger proportion of houses that were intact when hostilities ceased, but even in these cases the situation to-day is far worse than most people in other countries imagine. If the streets have been cleared of the debris, and many of the ruins have been definitely swept away, little or no rebuilding has yet been done for lack of the necessary funds. Even at Rheims, where a loan was issued some months ago for reconstitution purposes, funds are still urgently needed, and it was stated a day or two ago by the mayor that reconstruction is practically at a standstill for this reason. It is reported in financial circles here that negotiations are in progress between a group of Canadian bankers and the municipality of Soissons for the issue of a loan of \$10,000,000, for the reconstruction of that city. Other similar loans are also spoken of.

The Bourse this week has remained dominated by the absence of purchasers, which has resulted in keeping the market heavy. French Three per cents. have fallen from 55.60 to 53.85 as the result of sales, stated to be due to insurance companies realising to meet their obligations in connection with the Printemps fire. Banks were rather heavier, though they recovered somewhat on Thursday. Thus Banque de Paris dropped back from 1,199 to 1,185, to recover to 1,202; Union Parisienne moved similarly from 797 to 782 and 798, and Crédit Lyonnais from 1,395 to 1,385 and 1,410. Transports have been irregular. P.L.M. have remained unchanged at 750, Nord rose from 831 to 838, and Midi dropped from 705 to 703. Shipping slightly improved, Chargeurs Réunis advancing from 525 to 530, Transatlantique remaining unchanged at 244, and Messageries rising from 211 to 217. Electrical undertakings are on the whole better, Thomson rising from 825 to 845, and Havraise d'Énergie Électrique from 346 to 355, but Téléphones dropped from 618 to 610. Metallurgical undertakings are generally better, slight advances being recorded in most cases. Mines have been irregular,

Tintos dropping from 1,435 to 1,415, while Boléo remained scarcely changed at 358, as against 355.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—POLITICS—REICHSBANK AND LOAN BUREAU—EXCHANGE AND BOURSE—BANKING FUSION—EXPORT DUTIES—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, October 31.

THE new Wirth Cabinet last week received a Reichstag vote of confidence by 230 to 132. This majority is due to support by the Democrats and Independent Socialists, as against the German Nationals, People's Party, and Communists; but neither of the first two parties is formally behind the Cabinet, which is a Centre and Moderate Socialist coalition, without a stable majority. The Cabinet's prospects are bad. The new decline in the currency's buying power and foreign exchange has deranged Estimates taxation plans, and calculations of the Reparation payments burden in paper marks. The Government has had to increase the salaries and allowances of 13 classes of State employees by between 25 and 30 per cent., the annual salary in the highest class being now between 53,000 and 80,000 marks. All other State liabilities, except interest on the Debt, must also increase. Dr Wirth's first speech since he again became Chancellor shows no clear programme. He promised to do something for the ruined petty rentier class. His tone sharply differed from that of his earlier speeches. In earlier speeches he did not follow preceding Chancellors in protesting against the Versailles Treaty as the chief source of evil; this time, in the manner of Dr Fehrenbach, Herr Schiedemann, and the other Chancellors, he denounced the Treaty as "the witches' hammer of European destruction policy"—which means that the Silesian decision has killed his faith that the Versailles Treaty and the Reparations ultimatum conditions might be fulfilled. The Central Association of Banks has declined an invitation to London

from the Sound Currency Association, on the ground that the recommendations of experts would be ignored by the Governments. This decision is condemned by some newspapers.

The Reichsbank statement for October 23rd shows further inflation. After entirely ceasing in the first quarter of this year (owing to easy placing of Treasury bills), and after being relatively small in the second quarter, inflation proceeded headlong in the third quarter, and is still continuing. Money is still abundant, but it is going into industrial stocks. The statement shows a decline of discounted Treasury bills to 91,271,206,000 marks, an increase of private discounts to 1,416,646,000 marks, and a decline of State deposits to 3,405,156,000 marks, and of private deposits to 9,982,091,000 marks, and an increase in note circulation by 416 millions to 88,144,195,000 marks. Kassenschein circulation fell by 104.7 million marks to 7,322,900,000 marks. The report for 1920 of the Darlehnskassen (Loan Bureau founded in August, 1914) shows outstanding loans on December 31st of 35,526,134,440 marks, which is 10.6 milliard marks more than at the close of 1919. This year the total of loans (which are secured on securities, wares, &c.) has heavily declined. Federal revenue between April 1st last and October 20th is reported at 23,075,568,000 marks (of which 5,797,827,000 marks was from the emergency levy), while 48,528,748,000 marks and 35,691,000 marks were respectively raised by increasing the floating and funded debts. Expenditure totalled 71,639,959,000 marks, of which 8,370,766,000 marks was a subsidy, making up the deficit on State undertakings, mainly railways and posts. The sum of discounted Treasury bills, which make up nearly the whole floating debt, was 214.85 milliard marks.

The violent bull movement in stocks continued up to and including to-day. A good summary of its character I take from the *Bergwerks-Zeitung*, of Essen. "An opposition between the professional speculators and the public may be observed. The professional speculators are nervous. Their anxiety increases in measure as the foreign exchanges rise. They will not follow this (bull) movement.....because, according to experience, the collapse may come any moment. But each time the fear of the professionals is proved baseless. Also the undecided movements of the dollar and other exchanges have not brought the stock rise to an end. The security markets have made themselves independent of the exchanges.....an army of small and very small persons, who formerly bought only investment papers, rush to the stock market after they have been told that 'something may be made out of stocks.' " In the past, I may comment, stocks rose only as long as the mark exchange fell, and *vice versa*; and if in the last fortnight, during which the mark exchange has held, stocks have risen more than ever, that can only be due to the public belief that it is safe to anticipate a further mark exchange fall. A mark exchange recovery of any dimensions would beyond any doubt cause a drop in stocks. Last week the Berlin Bourse had to be closed on yet one more day (Friday), but wild unofficial buying continued, and the Leipzig, Hamburg, and other provincial Bourses reported exceptional rises, one stock in Leipzig rising on a single day by 1,500 per cent. on its nominal value. The *Frankfurter Zeitung's* stock and bonds index for the 28th shows 38.510 against 30.569 on the 21st, 9.141 on January 2, 1920, and 6.387 on September 1, 1919, so that the average quotation has risen about sixfold in two years. Last week shows the biggest individual rises recorded, some being of over-1,000 per cent. Shipping stocks led, Hansa gaining 201 per cent., the Hoesch metal stock rose 400 per cent., one mining coal company 660 per cent., and the Hannover Car Company 730 per cent. Upper Silesian stocks rose partly, it is stated, owing to French purchases. The bank stock market was governed by a report, since confirmed, of fusion between the Darmstadt Bank (Bank für Handel und Industrie) and the National Bank. This is the first fusion between banks of first rank, the only preceding fusion of importance being between the Commerz-und Discontobank and the Mitteldeutsche Privatbank. The new fusion is in the loose form of a "Gemeinschaft" for 99 years. The aim for choosing this form is apparently to save the great expense of a complete fusion, estimated in stamp duties, &c., at 250,000,000. The Darmstadt Bank has formed

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

KENNETH H. ROCKEY, Representative,
Gresham House, Old Broad Street,
London, E.C. 2

a great many local branches; the National Bank has pursued the opposite policy, but in the last few years has entered into close relations with industry. The main motive of the fusion is apparently to decrease operating expenses. The Darmstadt Bank will raise its capital by 130,000,000, the National by 100,000,000, with for the first bank a further capital issue of 25,000,000 and for the second 50,000,000, of which only 25 per cent. will for the present be paid up, and will meantime be dividendless. Quotations of Federal Loans to-day were:—War Loan 77.50, 4 per cent. 70.25, 3 1/2 per cent. 64.60, 3 per cent. 84.75, Colonial 4 per cent. (no business done; preceding quotation was 95), and Savings and Premium 79.25. On the 26th 3 per cent. was 81.10, so that this loan has continued to rise.

The Government has been obliged to restore the export duties on most of those wares for which the duties were last year abolished, and to raise the duties on other wares. The export duties were first imposed under a law of December 20, 1919, aimed at checking the "Selling out of Germany" (exchange dumping). As this could only be done by compelling the producer to charge foreign buyers more than he charged natives, "social export duties" were imposed on most goods, in order that the State might reap some of the exporter's enforced extra profit. The social export duties were first imposed on May 10, 1920, at rates of from 2 to 10 per cent. By that time the mark exchange had recovered, and German home prices were near or above foreign. As this checked export, the duties were either reduced or abolished. The new mark exchange drop has again created a great difference between the export and the home price; hence the re-enforcement or increase of the duties. The new duties vary up to 10 per cent. In the new schedule no export duties are imposed on re-export of certain foreign goods of which the import price must (world-market gold price fluctuations being ignored) be as high as the export price. Most home agricultural products bear the whole 10 per cent., mineral and fossil products and mineral oils mostly bear between 1 and 8 per cent., and soap, paraffin, &c.,

5 to 7 per cent. For chemicals and dyes the rates vary much. A few products are free, and the maximum (10 per cent.) falls on oxalic acid, calcium, nitre, phosphates, &c. Woollen yarn bears 4 per cent., woollen cloth and knitted goods 5 to 6 per cent., cotton yarn 3 per cent., cotton cloth 5 per cent., leather 3 per cent., boots 6 per cent., rubber wares and furniture 6 per cent., cellulose, print paper, and cardboard 7 per cent., pig-iron 5 per cent., and machines (new) 4 to 5 per cent. These duties take for the State only a small proportion of the extra profit gained by the exporter from the mark decline; but experience has shown (1) that the mark movement may any day be reversed, (2) that if it is not reversed the home production cost will heavily rise, in both of which cases very high export duties could not be borne.

Prices are already rapidly rising. The "Eisenwirtschaftsbund" has raised pig-iron as follows:—Hematite to 2,700m per metric ton, foundry iron No. 1 to 2,200m, foundry iron No. 3 to 2,124m, Siegerland steel iron 1,903m, Spiegeleisen 2,021m, Luxemburg foundry iron 1,675m, ferro-manganese 80 per cent. 7,550m, ferro-manganese 50 per cent. 5,750m, and ferro-silicium 2,950m. The new prices are between 418m and 2,600m a ton over the old. These increases have been made necessary partly by higher coal prices and wages, but mainly by the circumstance that Swedish, Spanish, and French ore prices are all more than 100 per cent. higher than in the early part of the year. The commodity price rise continues, especially in leather and wood.

ITALY.—DECREASING NOTE ISSUES AND LIRA DEPRECIATION—TRADE BALANCE—AGRICULTURAL PRODUCTION.

(FROM OUR CORRESPONDENT.)

TURIN, October 27.

A RECENT official statement shows how the note issue in Italy has decreased this year. The following are the most up-to-date figures:—

	(In Million Lire.)		
	State.	Commerce.	Total.
December 31, 1920	10,742.7	8,988.9	19,731.6
April 30, 1921	9,601.2	8,677.0	18,278.0
June 30, 1921	8,722.2	9,436.6	18,158.8
August 31, 1921	8,351.7	9,489.9	17,841.6
September 10, 1921	8,440.0	9,438.0	17,878.0

To the above figures there are to be added two items: 1,867 million lire of State notes (currency notes of 5 and 10 lire) and 277 million lire of small 1 and 2 lire notes. The last account for the State notes relates to April 30, 1921. The total issued is less by almost two billion lire than at December 31, 1920, and the decrease is wholly due to issues on State account, industry and trade being apparently relying in increasing ratio on the bank of issue's aid. Perhaps the economic crisis and the difficulty of sale are forcing companies and private business men to search for banking accommodations; but it is probable that under the disguise of commercial circulation are comprised discounts of Exchequer bills or other loans on State paper.

Notwithstanding the reduction of notes issued, foreign exchanges go up by leaps and bounds. Sterling, which at June stood at 73.51 lire, had risen to 84.30 at July 31st, to 93.55 at September 30th, and is to-day oscillating about the 100 limit. Dollars went up from 18 to above 25 lire. We are approximating to the maximum of 100 and 30 lire respectively, reached about January and February, 1921. The figures for international trade would not seem to warrant such an evil course, as they are undoubtedly better than last year. For the first five months of the year they are as follows:—

	(In Million Lire.)		
	Imports.	Exports.	Difference.
1913	1,522.8	1,039.6	483.2
1919	7,093.9	1,635.5	5,463.4
1920	6,337.5	3,137.5	3,200.0
1921	6,528.0	2,677.6	3,850.4

The adverse balance is much greater than in the last pre-war year, but the lira has in the meantime greatly depreciated. As for the 1920 and 1921 comparison, it is to be noted that the 1920 and 1921 are, owing to

technical reasons, calculated on the basis of 1919 official values. As in 1920 the real values were much higher than the official values, the real adverse balance must be taken as notably higher than the apparent one. In 1921, however, the experience was inverted: the official 1919 values are probably a little higher than the real values, so that the real adverse balance may prove to be less than the official figure. In short, it is extremely probable that the present adverse balance is less than in 1920, and so the figures do not provide any reason for the foreign exchanges going from bad to worse.

Perhaps a partial explanation of the depreciation of lira exchange may be found, on the lines of the quantitative theory of money, in the fact that the same or slightly less quantity of paper money is performing less services. The economic crisis has diminished the wages paid and the transactions done with the aid of money. And so the present total of 17,878 million lire (exclusive of 1, 2, 5, and 10 lire currency notes) may be a more redundant quantity than the 19,731 million lire of December 31, 1920.

Probably this theory is true, as far as relates to commercial and industrial activity. But in agriculture the latest statistics published by the Department of Agriculture seem to point to better yields:—

	1912-1913.	1920.	1921.
	Tons.	Tons.	Tons.
Wheat.....	5,197,200	3,846,600	5,120,000
Rye.....	136,900	115,300	130,000
Barley.....	218,300	127,800	240,000
Oats.....	545,400	351,600	550,000
Rice.....	487,300	451,200	470,000
Indian corn.....	2,546,400	2,268,300	2,400,000
Beans.....	456,400	259,500	400,000
Potatoes.....	1,671,000	1,422,300	1,500,000
Beetroot.....	2,085,800	1,199,900	1,500,000
Hemp.....	84,100	97,800	100,000
Flax.....	2,660	2,300	2,500
Wine.....	4,633,900	4,229,400	3,300,000
Silk cocoons.....	34,100	29,700	30,660

With the conspicuous exception of wine, all other agricultural products are doing better than in 1920, and the figures of 1921 are a symptom of a return to the pre-war normal conditions. If we reflect, moreover, on the deep-rooted distrust of the farmers toward Government requisitions and maximum prices, we are led to believe that the figures for 1921 are more understated than the 1912-1913 figures, when no one dreamed that statistical reports would be utilised against the agricultural interest. It does not appear, therefore, that paper money is very much less in request than a year ago for economic transactions. Perhaps, in common with all Europe, Italy is suffering from the widespread fear that the State will not be able to restore the equilibrium in its Budget, and new paper issues will be in future inevitable. If so, only a severe policy of economy and retrenchment will at length reverse the present downward tendency of the lira.

NORWAY.—ELECTIONS—DROUGHT—EXCHANGES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, October 29.

THE elections for the new Storting, which is to assemble in January, 1922, have now been finished. The reduction of the age of suffrage from 25 to 23 years, and the adoption of proportional representation, had been expected to swell the Socialist representation. But the reverse has occurred. At the last election the Socialists returned 51 members; now, with the considerably increased number of candidates, they get only 37 seats. The Conservative-Liberals in 1918 returned 50 members; this year 57 members, while the newly-formed party, the Agrarians, number 17 members, who, on the whole, may be reckoned as Conservative-Liberals.

The continued dry weather is becoming disastrous. In the country districts the farmers have to carry water from far away for the cattle. Electric light establishments and mills driven by water-power have had to stop, thus adding to commercial and industrial difficulties. The foreign exchanges are daily improving to some extent, but there is a very long way to go before a normal state is again established. The note circulation of the Bank of Norway continues to decline.

SWITZERLAND.—THE EXCHANGE PROBLEM.

(FROM OUR CORRESPONDENT.)

GENEVA, October 31.

A CONFERENCE of leading bankers is taking place to-day in the financial department of the Swiss Confederation, to discuss the exchange problem. I understand that the proposal of Government control of dealings in Swiss francs by foreign holders of deposits with Swiss bankers is practically unanimously rejected. The failure of Government control over exchange is generally admitted. On the other hand, everybody is convinced that the embargo on foreign loans still existing in this country must be abolished as soon as possible. It is essential not only to abolish the possibility of introducing new foreign loans on Swiss stock markets, but that the Swiss Government should even offer Swiss loans to countries with depreciated exchange in Eastern Europe. Such loans must not only be dependent on purchases of Swiss goods by the debtor, but Swiss francs must be placed at the disposal of the debtor country.

There is a further proposal of premature redemption of the Swiss loans made during the past few years in the United States in order to create a stronger demand for dollars in the markets of this country. It is believed that as soon as the dollar is as high above par in Geneva as it is in London, hoarding of Swiss francs, by Germans especially, would be regarded as useless. It is not to be supposed that the first attempt to facilitate foreign credits in the Swiss money market after seven years of interruption will have an immediate success. But it is generally admitted that the granting of liberal credits, not only to foreign buyers of Swiss goods but to every foreigner who is worthy of credit, might reduce the foreign value of the Swiss franc.

Letters to the Editor.

GERMANY'S EXPORT POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of October 29th, Mr T. B. Johnston makes further misstatements. In his earlier letter, published on the 15th, he said (quoting Mr Burgess): "On all pottery sales the German manufacturer is required by his Government to add 150 per cent. to the price at which he would otherwise be willing to sell to the American buyer, and that the Government in turn levies a tax of 90 per cent. on this added 150 per cent." (From himself): "The German Government gets a revenue of about 134 per cent. on all export trade." Both statements are inaccurate, as I showed.

In his second letter, Mr Johnston says it is "conceivable" that the 150 per cent. "has been fixed at this figure by the Economic Council." Export prices are not fixed by the Economic Council, but by the Foreign Trade Boards (*Aussenhandelsstellen*). His suggestion that the 134 per cent. "may be collected through the Economic Council" is equally incorrect, because no duties or taxes are collected through the Economic Council.

Mr Johnston says, "Whether you call it a 'supplement' or a 'tax' it amounts to the same thing." It does not; Mr Johnston's statement (see the first quotation above) is that the supplement and the tax are entirely different things. Mr Johnston says, "It is quite incredible to suppose that the German Government would allow the German manufacturer to pocket this enormous unearned increment." As a matter of fact, the German Government does allow it, exacting only an export duty, which never exceeds 10 per cent.

In the *Amliches Handbuch der Aussenhandelskontrolle* (1921) is given the text of the law governing the matter, and a full schedule of the export duties, which never exceed 10 per cent. Since I last wrote, some of these duties have been increased. The new schedule appeared in the *Reichsanzeiger* of October 29th; but again no duty exceeds 10 per cent. The new duties on pottery (with the exception of one which is 10 per cent.) are between 5 and 8 per cent.—Yours faithfully,

YOUR BERLIN CORRESPONDENT.

SLIDING-SCALE INTEREST.

TO THE EDITOR OF THE ECONOMIST.

SIR,—After the many excellent letters that have appeared in your columns on the country's financial and currency difficulties, I feel very diffident in offering any suggestions. There is, however, one possible means of alleviating—I would not say solving—they which I have not seen put forward in your paper or elsewhere.

It has been proposed to regulate the currency of the country on the basis of an index number, and one of the main advantages given in support of this suggestion is that it would prevent the hardship caused to fixed income holders by the rise in prices which seems inseparable from trade activity under the present system. Without criticising this proposal—which, however, may certainly be said to be of a revolutionary nature—it appears to me that the case of fixed income holders could be met by the issue of an irredeemable or a long-dated Government loan, the interest on which is regulated by an index number—i.e., is increased by rising prices and reduced by falling prices. Such a loan would, I think, prove a very attractive investment for trustees, and for all persons who are endeavouring to make provision for their old age or for their children, as in such cases an ensured income proportionate to the cost of living is the vital factor. It would also apparently ensure Government against an increase in the real burden of its debt, as at all times the rate of interest would approximate to the same amount of commodities.

The index number would, of course, have to be fixed by a method clear to everyone and free from any question of interested motives; but this should not be difficult. There may be other difficulties, but they have not occurred to me. The sliding scale is now a recognised feature in wages, and there seems no reason why it should not also be applicable to interest.

If, as seems possible, such a loan were successful in funding an appreciable amount of floating debt and in transferring short-dated loans into a long-dated one, it would appear that the worst of Government's embarrassments would be for the present met without further inflation.—Yours faithfully,

Madras, September 21st, 1921.

Books and Publications.

REVIEWS.

"Ministère du Travail. Commission Centrale d'Etudes Relatives au Coût de la Vie. Compte Rendu des Travaux, 1920." (Paris) Imprimerie Nationale. 1921.

THIS elaborate official Report on the cost of living in France is based on the work of eight separate expert central committees, whose reports are subjoined, and whose information comes from 20 local committees of inquiry. They deal respectively with food, housing, certain raw materials (including coal, iron, and timber), manufactures, transport, trade, monetary and credit problems, and income and consumption, while a ninth committee has laid down the statistical lines of the investigation. Thus the book is a mine of information for economic students and historians. The remedy suggested for high cost of living is, as might be expected, more production and more export, using the increased manufac-

turing plant called into existence by the war. Of the means of increase specified the most notable are the analysis and reorganisation of industrial production on the effort-saving lines adopted in the United States, the provisional introduction of foreign or "colonial" (i.e., coloured) labour, encouragement of population in rural districts—which supply the towns with their workers—by State aid to mothers and children, export credits, and the funding of the floating debt. How these measures are to be paid for is outside the scope of the Report, and Customs barriers, as might be expected, are scarcely mentioned at all.

"Principles of Government Accounting and Reporting." By Francis Oakey, C.P.A. (New York and London) D. Appleton and Co. 25s net.

This is a work of particular interest and value to those concerned with the accounting methods of Governments and municipalities. It is one of a series issued under the auspices of the Institute for Government Research of Washington, an association of citizens already responsible for upwards of a dozen other useful publications. The institute subjects each of the more important technical branches of public administration to careful study with a view to making known those principles and practices which should lead to efficiency and economy in the conduct of public affairs. This book is perhaps rather unnecessarily wordy; though it is difficult to suggest any one of its 18 chapters which could be dispensed with. It contains 561 pages, but considerable numbers of these are occupied by useful recommended forms. There are here to be found many sound maxims. For instance, on the subject of what is called "fixed property": "It is when the costs of replacements that represent the year's proportionate burden are made out of the proceeds of sales of bonds that a policy is entered upon which will result in the accumulation of heavy debt and impose heavy interest charges, and finally may result in cutting off entirely the borrowing power." The science of accounting and its proper use is woefully neglected by Governments and municipalities, and the need of more attention to this matter is increasing every day. Mr Oakey has rendered a public service in compiling this volume. He has successfully handled a very extensive and complex subject, and is to be congratulated on his work.

"The History of the Canadian Bank of Commerce." By Victor Ross. Vol. 1. Toronto: Oxford University Press. Obtainable from Mr Humphrey Milford, London, 52s 6d, net.

A READER expecting to find in this substantial volume only a bald record of the foundation and more important changes in the usually uneventful career of a bank will be agreeably surprised in turning over these pages. Mr Ross has succeeded in giving us a thoroughly interesting book, the first few chapters of which amount to practically a history of early banking in Canada. Of particular interest at the present moment are details of the needy colonial Governments in North America, who flooded the land with paper currency which steadily decreased in value as the volume of output increased. "Do you think," argued one of the delegates in Congress when the revolution was in progress, "that I will consent to load my constituents with taxes when we can send to our printer and get a wagon load of money, one quire of which will pay for the whole?" The story of the origin of the pioneer undertaking—The Halifax Banking Company—introduces us to the early days of the Cunard family of shipping fame, and reveals a glimpse of the romance of commerce. The pages describing the founding of the Bank of British Columbia and the gold discoveries on the Fraser River are full of vivid incidents, as is also the history of the other representative banking institutions which were eventually merged into the Canadian Bank of Commerce.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
November 15.

ACCOUNT.
November 16.

ONE day this week the Stock Exchange marking boards recorded over 5,000 bargains, and as it may be safely assumed that not more than one-third of the transactions are marked, the achievement is worth noticing as a possible indication of business broadening out in some of the markets. Gilt-edged stocks are by far the most popular. The Local Loans subscription list closed on Tuesday afternoon, instead of remaining open, as it might have done, until yesterday, and a small premium was promptly established on the new scrip. This had a strengthening effect upon other issues. The War Loan has already begun to recover part of its interest deduction. Other British Government stocks remain a good market. As previously noted, the Stock Exchange seemed to take little interest in the possibility of a fall in the Bank rate, but when the announcement of 5 per cent. came on Thursday morning, it produced volleys of cheers, and a mild exhilaration round the House.

Russian Government bonds hold most of the improvements scored by reason of the overtures made by the Soviet Government in regard to adoption of pre-war obligations, although the move is regarded as little more than a step in the right direction. German bonds have continued weak, and French bonds, moving within narrow limits, show a disposition to droop, owing to the competitive attractions of the new loan now being offered in France. South Americans are better. Chinese gave way to a slight extent on the news that China had failed to meet an obligation which has fallen due in New York. Mexicans are lower.

Home Railway stocks are not favourably affected by the extensive plans advanced by some of the railways in connection with electrification schemes. These have failed to bring in any fresh buyers, and the possibility of further capital which will be required to finance the works, even with assistance from the Government, tends to keep people away from the market. No improvement has occurred in Grand Trunks or Mexicans. Argentines, however, show a recovery after their serious falls, though it cannot be said that any particular recovery has occurred in Brazilian or other foreign rails where the shrinkage has been equally severe. United of Havana is a brilliant exception, the price gaining several points upon declaration of a 4 per cent. dividend, with a satisfactory carry forward.

Rubber shares mark time, the price of the raw produce failing to show improvement. Amongst oil shares, the tendency remained cheerful for the greater part of the week. There is not much public business doing, but, on the other hand, the acute flatness produced by forced liquidation is over for the time being, and now attention is concentrated upon the probable dividends which will be declared by the Shell and Mexican Eagle companies next month. The fall in the Bank rate is hailed as a bull point for the market. Dividend declarations by

some of the industrial companies are not stimulating. Both R. E. Jones and Dent, Allcroft and Co. have passed their dividends, the shares being weak in consequence. Reduction of dividend and absence of stock-bonus on P. and O. deferred led to a drop of some 50 points on the day when the announcement was made, other shipping shares being dull in sympathy. A number of coal, iron, and steel shares are better, in consequence of the more reasonable tone adopted by Labour in regard to wages. It is commonly declared in the Stock Exchange that cheaper coal is of the first consequence in promoting a revival of trade, and any step which tends to this end is welcomed with general satisfaction. The textile market is better, on Manchester support, most of the leading shares being harder on the week. Coats gave way, although the dividend and bonus were up to expectation. Tobacco shares have weakened, on offer of stock from America. A few banking issues improved, while the insurance market is extremely quiet. Shares in the catering, stores, and hotels groups are inclined to be heavy. Twenty of London Electric debenture stock, issued at 94, has risen to 7 premium, this being the principal feature amongst new issues. Underwriters of the Pearson and Knowles 7½ per cent. debenture issue received about 50 per cent. of their subscription.

The Kasfir market is moving on quiet lines. Here, again, the sense of liquidation enables prices to maintain a fairly even level, and with advances in De Beers, the tendency of Paris is held to have recovered stability. Russo-Asiatics have advanced, the Soviet Government's proposal. Mexican mining shares attracted a little business, though prices scarcely moved. Tin shares are again heavy, in consequence of conditions in the metal market. The only feature amongst West Africans has been a sharp fall, and partial recovery, in the shares of the Goldfields of Eastern Akklim, the company having encountered water difficulties. Chartered advanced briskly on Thursday, it being said that General Smuts has been asked to include the whole of Rhodesia in any scheme for linking that colony with the Union of South Africa.

The Stock Exchange was closed on Tuesday for the customary November 1st holiday.

1914	174,808,840	1913	196,536,980

Series B 5½ per cent. Treasury Bonds, issued at 98 per cent., payable on application. Repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. The first dividend will be paid on April 1, 1922. Principal and interest are chargeable on the Consolidated Fund of the United Kingdom, and interest will be exempt from Corporation Profits Tax. Bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. These bonds may be registered free of cost in the books of the Bank of England or of the Bank of Ireland.

Local Loans Stock.—Issue of £20,000,000 at £52 per cent. bearing interest at £3 per cent. per annum, payable quarterly on January 5th, April 5th, July 5th, and October 5th. The stock is redeemable at par at any time by resolution of the House of Commons on one month's notice being given in the *London Gazette*, and it is transferable in any sums which are multiples of 1 penny. It will be inscribed in the books of the Bank of England and of the Bank of Ireland, and will be consolidated with the existing Local Loans Stock. Principal and interest are charged upon the Local Loans Fund established under the control of the National Debt Commissioners, and, if such Fund is insufficient, upon the Consolidated Fund of the United Kingdom to the extent of any insufficiency. It can be obtained as (1) inscribed as "transferable in the Stock Transfer Books," or (2) registered as "transferable by deed." It may be converted into Stock Certificates to Bearer (in denominations of £50, £100, £200, £500, £1,000) with interest coupons attached, and such Stock Certificates may be reconverted into stock, without payment of any fee. Transfers and stock certificates are free of stamp duty. This is a trustee security yielding a flat rate of £5 15s 5d per cent., and is a gilt-edged security of the highest class. The issue was quickly oversubscribed.

Thomas De La Rue and Co., Limited.—Authorised share capital £2,000,000, in ordinary shares of £1 each, of which 640,000 shares have been issued, and are fully paid. The authorised loan capital consists of £260,000 4½ per cent. first mortgage debenture stock and £1,200,000 8 per cent. convertible mortgage debenture stock. Of the latter debenture stock, £800,000 is now offered at 98 per cent. It is repayable at 105 per cent. on December 31, 1946, or earlier, by means of a cumulative sinking fund, beginning in 1922, which can be applied in purchase or drawings. The total authorised sum of £1,200,000 will be secured by a trust deed, constituting a mortgage on property and plant, and a floating charge on other assets, but the deed is subject to a "fixed and floating charge" to secure the first debenture stock of £260,000, of which £216,290 is at present outstanding. Repayment of capital and interest is jointly and severally guaranteed by Charles Goodall and Sons, Limited, and J. A. Weir, Limited, each of which companies will specifically charge their property. The stock carries with it the right to convert into ordinary shares of the company on a basis set out in the prospectus. The balance of £400,000 debenture stock "can only be issued for securing loans to or liabilities of the company, whether absolute or contingent." In this "offer for sale" it is stated that this issue of £800,000 debenture stock "is to provide the purchase price for acquiring the whole of the share capital in the old-established business of Charles Goodall and Sons, Limited, playing-card manufacturers and stationers, and all the ordinary shares of J. A. Weir, Limited." The purchase price payable by De La Rue's for the whole of the share capital in Goodall and Sons and J. A. Weir is respectively £201,050 and £394,000 in cash. An independent valuer's report shows that properties are worth £1,835,000, while total gross assets amount to £2,867,675. Liabilities are given as £1,066,722, which reduces the net surplus to £1,800,953. Investments are taken "at cost," and amount to £157,914. There is, however, an additional item, "Investment in branch undertakings," which is stated as £67,236. Combined profits of the three undertakings are given for the past five years, but these have been arrived at before providing for debenture interest, interest on loans, depreciation of plant, buildings, leases, and investments, directors' remuneration, income-tax, corporation profits tax, and excess profits duty, although "exclusive of interest received on money on deposit and investments." The present vendors paid 93½ per cent. for the issue, but the company bears "the charges in connection with this offer." The vendors, however, pay underwriting commission of 2½ per cent. and an overriding commission of ½ per cent. The valuer's report gives the "present fair value" of the property, while the plant is considered on the basis of "present fair value.....as a going concern," although one small item at £170,000 is valued on the basis of "a forced sale." We have indicated the principal points in this prospectus about which the shrewd investor will have to make himself perfectly clear before accepting the offer.

Commercial Bank of Australia.—The remaining 252,023 ordinary shares of 10s each are offered to holders of ordinary and preference shares in the proportion of one new share for every three shares held on October 25th, fractions being excluded. The shares are offered at £1 per share, and one half of each instalment is to be deemed to be on account of premium. Application may be made in excess of the *pro rata* allotment.

West African Gold Mines and Estates, Limited.—Authorised capital £300,000, divided into shares of 2s. each, of which 1,054,300 have been issued. This is an offer to shareholders of a further 200,000 shares at par. The company was registered in December, 1900, and according to the "Stock Exchange Official Intelligence" for 1921, "no dividend has yet been paid," while at June 30, 1918, there was a debit balance of profit and loss account amounting to £2,978.

roul, Damascus, Hamah, Homs, Saida, Tripoli and Zahle, in order to secure to our subsidiary the advantages of the rights and privileges previously belonging to our establishment in this part of the East. The cession of these branches naturally entails the transfer of our local *clientèle*, our record and our organisation, together with the advantages and obligations of agreements, leases, and conventions. The consideration which we are to receive for this cession is the sum of 5,500,000f, represented by shares of the Banque de Syrie of 500f nominal each. These shares will form part of a new issue to be created as an increase of the existing capital of that institution, and will rank for dividend as from January 1, 1921. We ask you to be good enough to approve this scheme of arrangement, and to confer upon the committee full powers in order that it may execute all conventions relating to the realisation of the said arrangements to the best advantage. The affairs of the new bank have assumed great importance, and it has been able to distribute for the year 1920 a dividend of 8 per cent. on its shares.

THANKS TO STAFF.

Gentlemen, in conclusion, I am convinced that I shall interpret your sentiments in addressing our warmest thanks to the Direction Generale in Constantinople, to our managers in London and Paris, and of our various branches, as well as the staff of all grades, for the efforts which they have made, and which have allowed the results which we put before you to be arrived at. The staff of the bank in Asia Minor have on many occasions been face to face with a difficult and at times dangerous situation, and I shall ask you to address to them a special message of sympathy and encouragement.

Are there any questions? If not, I beg to move: "That the report and accounts be received and adopted."

M. le Baron de Neufelize, C.V.O.: I have much pleasure in seconding that.

The resolution was carried unanimously.

The Chairman: I have now to propose: "That this general meeting of shareholders hereby authorises the committee to transfer to the Banque de Syrie the branches of the Imperial Ottoman Bank at Aleppo, Alexandretta, Beyrout, Damascus, Hamah, Homs, Saida, Tripoli, and Zahle, in consideration of the price of 5,500,000f, payable in 500f-shares of the Banque de Syrie, to be issued as fully paid, and ranking for dividend as from January 1, 1921. That this meeting approves the agreements already established on this basis, and confers full powers on the committee to assure the realisation of the said agreement to the best advantage."

M. Charles de Cerjat seconded the resolution, and it was unanimously approved.

The Chairman: I beg to propose: "That Messrs le Comte Frédéric Pillet-Will, the Earl of Bessborough, C.M.G., and the Earl of Chichester, O.B.E., be and they are hereby elected members of the General Committee."

Lord Oranmore and Browne, K.P., seconded the motion, which was passed unanimously.

The Chairman: I have now to propose: "That Messrs le Baron Henri Hottinguer, le Comte Frédéric Pillet-Will, and General the Hon. Sir H. A. Lawrence, K.C.B., be and they are hereby re-elected members of the General Committee."

This was seconded by Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E., and carried unanimously.

The Chairman: That concludes the business, gentlemen.

VOTE OF THANKS TO THE CHAIRMAN, COMMITTEE, OFFICERS, AND STAFF.

Mr A. Hood: My lord, may I be permitted to propose a vote of thanks to you as chairman, to the committee, the officers, and staff of the bank both at home and abroad? We have heard what you have said about the Earl of Bessborough and Sir William Young. We on our side would like to express our regret at the loss we feel at not having them with us to-day. And it hardly needed any hint from you, my lord—to me, at any rate—that we should express our sympathy especially with the staff in Asia Minor, for they must have had a dreadful time, and we, as shareholders, wish to extend to them our most sincere sympathy. I hope somebody will second this resolution most heartily.

Mr J. Rosselli: My lords and gentlemen, I have great pleasure in seconding the resolution proposed by Mr Hood. I feel sure that we are all indebted to the staff, as Mr Hood has said, and to those working for us in the East.

The vote was unanimously accorded.

The Chairman: I am sure we are much obliged to Mr Hood and Mr Rosselli for having proposed and seconded this resolution. I can assure you that we appreciate the sentiments that you have expressed, and we will certainly convey to our staff in Asia Minor feeling which you have been good enough to express, and which I am sure will be an encouragement to them in what have really been very difficult, arduous,

COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

A SATISFACTORY YEAR, DESPITE DIFFICULTIES.

The seventeenth annual general meeting of this bank was held on the 2nd instant, at 9 Bishopsgate, London.

Mr L. H. Kiek, who presided, in the course of moving the adoption of report and accounts, mentioned, as indicating the growth of the business, that the total figures of the balance-sheet aggregating £4,726,000 compared with £3,392,000 last year and with only £1,730,000 on June 30, 1919. The gross profits for the year were £72,000 more than those of the preceding year, and would have been still larger but for the necessity of writing off bad debts, which, in conditions such as had been experienced shareholders would readily concede even the most careful management could not entirely avoid. On the other hand, expenses had also largely increased, partly through the additional cost of maintaining their new branches in Colombia. Including the amount brought forward, there was a net available profit of £89,613. They were placing £2,750 to reserve, increasing it to £77,750; writing off £35,030 in respect of depreciation in sterling value on capital employed in branches abroad; paying a dividend of 7 per cent., less income-tax, on the old A shares, and at the same rate on the new A shares as from September 1, 1920, placing £3,100 to pension fund; and allocating £5,000 for distribution among the staff as a bonus; leaving £11,610 to be carried forward. The chairman of the Anglo-South American Bank had, as recently as last week, dealt so exhaustively with the general conditions affecting business in South America that there was little of special interest that could be added on the subject on the present occasion.

"CAUTIOUS BUT WELL-CONSIDERED DEVELOPMENT."

In such countries as Colombia, where transport, already slow in normal times, had broken down under excessive strain, the difficulties of the situation were naturally greatly aggravated. Thus they would find almost every sea or river port throughout the South American Continent during the first half of this year congested with merchandise—especially manufactured goods—either awaiting long-delayed clearance at Custom House or accumulating in dock and warehouse—a melancholy but only too eloquent testimony to the dramatic change from abnormal and feverish activity to depression and stagnation. Everywhere, of course, this sudden reaction had produced a dislocation of exchanges and a financial strain, the more acutely felt in countries still largely dependent for their prosperity on a ready sale of one or two staple products, the demand for which had temporarily ceased. With such conditions prevailing throughout their territory, he need hardly point out that the period covered by the report had been an extraordinarily trying one for the board and management at home and abroad. In the circumstances they might express reasonable satisfaction at results which enabled them to maintain last year's dividend, after adequate provision for bad debts and writing off capital depreciation at certain branches where the exchange position had necessitated that course. The increased volume of business handled, to which the balance-sheet testified, further showed that, while "safety first" had necessarily continued to be their main consideration, they had not been deterred by these trying conditions from adhering to their programme of cautious but, they trusted and believed, well-considered development. He could assure the shareholders, from his recent personal observation—having from the end of July last year until early in June this year been engaged in a journey comprising the whole of the vast territory covered by the organisation of the controlling institution, the Anglo-South American Bank, and its affiliations—that this policy was greatly welcomed and appreciated by the best elements in the countries where they operated and where the credit and prestige of the Commercial Bank of Spanish America, as an integral part of the Anglo-South American Bank organisation, had steadily increased and was now firmly established.

Having reviewed in some detail the conditions prevailing in the countries in which the bank was established, the Chairman said it would be futile, in the present precarious state of international and political and economic conditions, to attempt any prediction as to the immediate future of business in those countries.

They did not expect any definite improvement in, say, Venezuela or Colombia, Guatemala or Ecuador, except through a genuine revival of trade and industry throughout Europe and the United States. All they might say at present was that here and there the continuous fall in prices of produce had been arrested, and that, for instance, coffee and cotton were again selling at prices which had enabled planters to move their produce. The resulting relief had enabled stocks of imported goods to be marketed—often, it was true, at heavy sacrifice. Circumstances had, during the war, given opportunities for trading with these countries to others, especially the United States, and latterly the American banking and investing community had entered the

sts by more freely granting loans to South American Governments; but the experiences and observations of his long journey had only confirmed the view that, given settled labour conditions at home and industrial peace instead of constant strife, if we but maintained true to our traditional policy of sound trading, fair dealing, good workmanship, and a respect for and sympathetic consideration of the Latin-American point of view, we should do our own against any foreign competition. The report was unanimously adopted.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED.

INCREASED PASSENGER AND DECREASED GOODS TRAFFIC.

The ordinary general meeting of the Argentine Great Western Railway Company, Limited, was held on the 2nd inst., at Winchester House, Old Broad street, London, the Right Hon. Viscount St Davids (the chairman) presiding.

The secretary (Mr J. T. Dillon) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: This particular railway of ours is a leased line between the Buenos Ayres and Pacific, and really depends upon the fortunes of the Pacific. You may ask what would have been the effect if, instead of our line having been leased, it had been worked on our own account. Well, I am able to tell you with very great confidence that the results would have been quite as bad for you, because the cost of labour has gone up enormously in the Argentine. I have spoken of this on other occasions. It is not only that the wages of the individual worker has been increased, but that by Government regulations the railways now have to employ men whom of their own free will they would not

employ—people they consider unnecessary. Then the cost of fuel is the other great item.

Turning to the results of the past year, you will see that on our line the goods traffic decreased by 156,000 tons—that is, something over 10 per cent. The passengers increased by about 12 per cent., but from passengers we only receive gross about 2s per head, while on goods we receive something like 10s per ton, so you see the increase in passengers is nothing as a set-off to the decrease in goods. Gentlemen, there is one other item I ought to mention. On our investments there is a depreciation of 19.20 per cent. That depreciation is somewhat less than the depreciation was a year ago.

Now, you will ask me about the outlook for the current year. Well, on our own system the outlook is to this extent satisfactory—that the condition of the vineyards is satisfactory, that there is plenty of water for irrigation, and—what I am told is a very strong bull point—that there are 500,000 tons of wine in stock. I leave to gentlemen who are more expert than myself on wine matters to say whether it is possible for the residue of the 8,000,000 people to drink 500,000 tons of wine between now and next May.

Gentlemen, I have told you what the good points are as regards our own particular traffic, but, speaking generally, we must depend, as all other Argentine railways are depending to-day, upon the action of the Government as regards freights. Our new year began on July 1st; we are working under most unfavourable circumstances, with heavy increases of working expenses and without any increase in our tariffs. Unless the increase in the tariffs comes, and comes soon, it is impossible that the results of the present year can be in the least satisfactory. Gentlemen, I beg to move the adoption of the report and accounts.

The Hon. Charles N. Lawrence seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

BAHIA-BLANCA AND NORTH-WESTERN RAILWAY COMPANY, LIMITED.

PATAGONES BRANCH SOLD—OIL STRIKE.

The thirty-second ordinary general meeting of the members of Bahia-Blanca and North-Western Railway Company, Limited, was held on the 3rd instant, at Winchester House, Old Broad Street, London.

The Viscount St Davids (the chairman), who presided, said in the course of his speech: The principal thing that has happened in the past year which concerns our own particular line is the sale of the Patagones branch. It was an unfinished branch. We had to break off the work some years ago, when we stopped our capital expenditure, and the line was about 40 miles short of the town of Carmen de Patagones, at which we were aiming. Carmen de Patagones is a very flourishing little town, with a good deal of irrigation, and a great deal more land that might be irrigated. There is no doubt that if this branch were finished it would be a satisfactory branch. However, there are other places where we could spend the money to greater advantage than on finishing that line, although it would be a good line. In these circumstances we sold the line to the Buenos Ayres Great Southern, who are engaged in finishing it. We were paid what the line cost us, and we were paid by a bond which we have handed over to the Pacific Company to settle our indebtedness with them, so that our floating indebtedness has been put an end to. As regards the prospects of our own line, when I was in the Argentine there was a severe drought, and it looked at one moment as if the crops might be lost, but the rains came in time, and I believe there is considerably more land ploughed on the Bahia-Blanca system than there was last year, which is a very satisfactory point. There is one other thing that will be of interest to you. You will no doubt all have heard that three of the Argentine railways—the Southern, the Western, and the Pacific—engaged together in an attempt to obtain oil at Comodoro Rivadavia, down in the south of the Argentine, and since our meeting the other day we have received further news. We had found oil before; we had been getting a certain amount of oil, and we had struck an extraordinarily good gas well; but on November 1st we received a cablegram stating that a new well had reached oil, and it was producing 84 tons a day after the flow had been controlled. That, of course, is a very satisfactory feature and very gratifying.

The report and accounts were adopted unanimously.

THE ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.

QUESTION OF TARIFFS.

The ordinary general meeting of the Assam Railways and Trading Company, Limited, was held, on the 2nd inst., at Winchester House, Old Broad Street, London.

The secretary (Mr S. Maclean Jack) having read the notice convening the meeting and the report of the auditors,

Mr Sydney S. Hawkins, A.M.I.C.E., who presided, in moving the adoption of the report and accounts, said that the result disclosed was not good, but for that Lord Ribblesdale prepared the shareholders at the last general meeting when he told them that, owing to various troubles culminating in a strike, the expenses of the company had been largely increased. The large increase in expenditure was the actual reason for the poor result obtained during the year. The board had not been able to improve the earnings side of the railways account as much as had been hoped. The revised tariff, asking for the same percentage increase as all Indian railways, had been submitted to the Government of India for approval, but they understood it was not to take effect until April 1, 1922. In the previous year, also, they had been able to make up profits considerably from the exchange. In the year under review exchange had not been so much in their favour. The actual earnings of the year were admittedly not sufficient to pay the full amount of the dividends, but there were certain outside recoveries in hand, among them £15,000 recovered from the Inland Revenue under the "Stevens v. Boustead" decision, which had been previously paid in the form of income-tax, and, with other sums, this had enabled the board to bring into account £21,621, and to recommend the usual dividends to all classes of shares. With regard to the new timber concessions and colliery leases, a 30-year concession of the former had been granted and signed covering blocks which contained very valuable timber, while the Government of India had granted them not only the Lekhapani colliery lease, but a lease of additional coal areas known by the name of Tipangpani. These should prove an asset of the very greatest value. Thanks to the financial arrangements made towards the end of last year the company was now in a fairly strong financial position. In conclusion, he wished to say that while the "B" shareholders should not be that their dividends might not

have to be reduced in the present difficult circumstances, so far as the board could see at present, there was no reason to suppose they would not be able to maintain the preference dividends. Mr G. Turner, M.E., seconded the motion, which was carried unanimously, and the usual formal business terminated the proceedings.

BRITISH NORTH BORNEO (CHARTERED) COMPANY. YEAR'S RESULTS AND PROSPECTS.

The seventy-seventh half-yearly meeting of the British North Borneo Company was held, on the 1st inst., at River Plate House, London, Sir West Ridgeway presiding.

The secretary (Mr Harrington G. Forbes) read a report which showed that progress had been made in almost every branch of the administration, particularly in development, forestry, education, land settlement, medical organisation, &c.

The Chairman, in moving the adoption of the report and accounts, said they were eminently satisfactory from every point of view. The net profit was £226,800, which was not only the largest net profit ever recorded by the company, but was £117,000 greater than the surplus achieved in the record year immediately preceding the war. When they considered the set-back which the company, in common with all undertakings of trade and commerce, experienced in consequence of the great war, they must realise that British North Borneo must have wonderful powers of recuperation to have secured so handsome a profit so soon after its termination. The net profit was not due to some accidental and unexpected windfall, but was brought about by an increase in receipts under nearly all the usual headings of revenue. The chief increases had been in Excise and Customs, a clear indication that the population of North Borneo was generally in a very prosperous condition. Altogether the total revenue of the country in 1920 had amounted to over £425,000, an increase of £91,000. The total expenditure showed an increase of £36,632, but having regard to conditions prevailing it was gratifying to find that the increase amounted to that figure only as compared with the increase in revenue of £91,000. From the balance-sheet they would see that £14,340 of certificates of indebtedness had been redeemed, reducing the liability to £130,916.

One of the heaviest drags on the wheel of industry in North Borneo—the exceptionally high cost of rice—had now been removed. Advances to companies for guaranteed dividends had been reduced by £37,924, and the board were confident, having regard to the future of the rubber industry, that with patience of they would sooner or later receive every penny of the sum of £89,117 now standing in the balance-sheet as outstanding dividend advances. The investments at the end of 1920, £700,919—included £371,420 of War Stock, and £29,616 of colonial and foreign bonds; it also included £100,000 in the British Borneo Timber Company, and £52,182 in the Cowie Harbour Coal Company.

CURRENT PROSPECTS.

As to the current year, there was no gainsaying the fact that the revenue of 1921 was going to fall very far behind 1920. All the rubber companies within their territory were struggling to maintain themselves, and in some cases the assistance of this company had been evoked. He would not venture to prophesy as to what the future might bring forth, but he would express the hope that with the co-operation of the Government the troubles which depressed the industry might disappear within the next 12 months.

In addition to the trials and difficulties of the rubber industry, here continued to be considerable depression in trade generally throughout the East, and from the report shareholders would see that the board had good reason for being somewhat cautious as regards the current year, though he had no doubt that there would be a handsome surplus. What caused the board most anxiety was the general depression in all branches of industry throughout the world, and more particularly in the Eastern Colonies. The board were still in the dark as to the probable effect of the general unpropitious circumstances on the territory of the company, and were not satisfied that something might not be done locally to ameliorate the situation. For that reason, with some reluctance, he had agreed to pay another visit to the territory.

Under all the circumstances disclosed they would understand that the board would not be justified in distributing a dividend such as the profit disclosed in the balance-sheet would justify. They had come to the conclusion that it was their duty to recommend no more than a dividend of 3 per cent.

Before he concluded his remarks he would like to say a word on the attacks which had been made upon the company by the Anti-Slavery and Aborigines' Protection Society. The attacks had been based on the belated evidence of three disgruntled witnesses, and the Secretary of State, Lord Milner, had been quite satisfied that they were not justified. The board would be quite glad of the co-operation of the society in the improvement of the comparatively wild tribes of the interior, and of the company's recently acquired territory on the Dutch border. As to the attack against the company which had appeared in the pages of a certain American magazine, all he could say was that Sandakan had been cruelly libelled. Whether they would take further steps for the vindication of their reputation was a matter for consideration. There was nothing rotten in the State of North Borneo. He trusted that in his desire to discourage the optimistic hopes and expectations based on the splendid results of 1920 he had not induced shareholders to take a despondent view of the situation, because that was far from his intention. He believed the clouds which darkened the sky would soon pass away.

The report was adopted.

CURRENT RATES IN NEW YORK.

The Irving National Bank of New York cable the following money and exchange rates in New York:—

	Oct. 6, 1921.	Oct. 13, 1921.
--	---------------	----------------

feature. Prices rose until 41½d and 40½d were quoted on the 29th ult. for cash and for forward delivery respectively. Cash silver fell to 40½d on the 1st instant. The premium for prompt delivery rose to ¾d on the 31st ult., but has since receded to ½d. The shipments to China this week are very large indeed. We are informed on excellent Dutch authority that no German silver is known to have been pledged with the Dutch banks. We also hear that no steps have yet been taken in Holland to reduce the quality of the coinage, though authorisation was granted. The reason for not making the change is probably because the price of silver has been on the downward grade. In 1919 the Bank of the Netherlands was asked by its Government to retain all silver coin tendered in payment. In February, 1921, however, paying out in silver coin was resumed. *Financial America* announces that on October 22nd last 1,000,000 ounces of silver were purchased by the Director of the Mint, making the total purchases under the Pittman Act 79,377,866 ounces up to that date.

INDIAN CURRENCY RETURNS.

No coinage was reported during the week ending 22nd ult. The stock in Shanghai on the 29th ultimo consisted of about 23,300,000 ounces in sycee, 24,500,000 dollars, and 1,460 silver bars, as compared with about 23,400,000 ounces in sycee, 24,100,000 dollars, and 1,990 silver bars on the 22nd ultimo. The Shanghai exchange is quoted at 3s 10d the tael. Statistics for the month of October are appended:—

(a) Also bonus of 53% in shares. (b) Increased capital. (c) Tax free.

(c) 35 per share on old capital and 25 per share on capital as it now stands.

ALLEN, ALLEGRO, and CO. announce that, owing to the continual fall in value, the directors being further hindered by depreciation of stock, they are unable to recommend an interim dividend on the 7 1/2 per cent. cumulative first preference shares.

ALLEN and CO.—The directors have decided not to pay any interim dividend on the ordinary share capital for 1921. The interest on the same in 1920 was 7 1/2 per cent.

B. JONES announces that, owing to the business having been seriously affected by the general commercial depression, and particularly the coal strike, and to the necessity of writing down stocks, payments of final dividends on the preference ordinary shares are deferred.

THE NIGER COMPANY, LIMITED, regret that, owing to the continued depression in trade, they do not feel justified in declaring a dividend on the 8 per cent. cumulative preference shares at present. In April last a similar announcement was made.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Reports and Notices.

Mr Oscar Berry, F.C.A., C.C., has been elected deputy-chairman of the Commercial Education Committee of the London Chamber of Commerce. He was also elected to serve on the governing body of the City of London College, as a representative of the London Chamber of Commerce.

The transfer books of the United Dairies, Limited, will be closed from November 5th to the 19th (inclusive).

We regret to announce the death on the 19th ultimo of Mr J. C. Nicholson. Mr Nicholson had been associated with the Maritime Insurance Company for a great number of years, and filled the position of secretary of the company for the past 24 years.

GOVERNMENT STOCKS, &c.

BULGARIA 6 PER CENT. LOAN OF 1892.—The committee of holders of Bulgarian bonds, acting in conjunction with the Council of Foreign Bondholders, recommend the acceptance of the following arrangement for the liquidation of the coupons and of the bonds drawn for redemption corresponding to the period January, 1916, to July, 1923, inclusive, as shown below:—Coupons and drawn bonds due January and July, 1916, and January, 1917, payable forthwith; due July, 1917, and January, 1918, payable on November 1, 1921; due July, 1918, payable on December 1, 1921; due January and July, 1919, payable on January 15, 1922; due January and July, 1920, payable on July 14, 1922; due January and July, 1921, and January, 1922, payable on January 15, 1923; due July, 1922, and January and July, 1923, payable on July 14, 1923. The above payments to be made in French francs, converted into sterling at the sight rate of exchange on Paris on the day of presentation (less income-tax). Coupons and drawn bonds due January, 1916, July, 1916, and January, 1917, which have been in British ownership since October 1, 1915, may be deposited on the above-named terms with the Imperial Ottoman Bank (Coupon Office, 25 Austin Friars, E.C.), between the hours of 11 a.m. and 2 p.m. (Saturdays excepted), duly listed on forms which can be obtained there, and accompanied by the declaration of ownership attached to the form. Lists of the bonds drawn for payment since November, 1915, may be inspected there, but are not available for distribution. Coupons and drawn bonds must be left seven clear days for verification.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to August 31st (new style, January 14th to September 13th), 1921:—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross receipts, August, 1921	Drachmæ, 6,052,883.38	Drachmæ, 7,172,990.25
Do do 1920	6,506,630.27	4,362,540.20
Estimated receipts for eight months (Law of Control)	19,266,666.67	7,133,333.33
Actual receipts for 1921, eight months	45,551,232.42	38,941,967.40
Actual receipts for 1920, eight months	42,739,212.27	38,437,048.90
Difference between estimated and actual receipts for eight months	1921 + 26,284,565.75 1920 + 23,472,545.60	+ 31,808,634.07 + 31,303,715.57

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49½ per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. The products of the sales of naxos emery have been paid in paper drachmæ since August, 1920. In the case of the Piræus Customs, the receipts in gold are included in the above statement at par.

SALVADOR GOVERNMENT LOANS.—The trustees of the 6 per cent. sterling bonds and 7 per cent. funding bonds of the Salvador Government announce that since the meeting of April 28th last they have been, and still are, in active correspondence with the Government of Salvador and with the trustees' agents in Salvador with reference to the non-payment of interest. The trustees understand that the Government of Salvador is endeavouring to carry out a financial operation in the United States which would almost inevitably affect the interests of the British bondholders, who will be advised as soon as definite information is obtained.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the sixth fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1921.

RAILWAYS.

INTER-OCEANIC OF MEXICO.—The report for the year ended June 30, 1921, states that "no change has taken place since the date of the last report in regard to the position of the company's railway and its leased lines; these are still being retained by the Mexican Government, who have not rendered any accounts. Under these circumstances the directors are not able to present any revenue statement

for the twelve months ended June 30, 1921, nor any balance. The report shows that debit balance on June 30, 1921, was £1. This does not include provision for the liability (if any) on the company towards the Vera Cruz Terminal Company under agreement of April 6, 1908, the position with regard thereto remaining the same as at the date of the directors' last report.

CORDOBA CENTRAL.—The report for year ended June 30, shows that net receipts amounted to £294,535, as compared with £683,798 for 1919-20. After payment of fixed charges there is balance of £256,790, which has been added to the amount standing in the balance-sheet at the debit of net revenue at increasing the total debit to £653,553. The year's operations seriously affected by labour troubles, which caused frequent interruptions and suspensions of traffic with a consequent loss of revenue involved the company in heavy expense.

BANKS.

COMMERCIAL BANK OF SPANISH AMERICA.—Report for the year ended June 30, 1921, shows net profit, after making allowance for rebate, &c., of £70,453, plus £19,160 brought in. Dividend of 7 per cent. on 260,075 old "A" shares, less tax, and cent. per annum on 238,583 new "A" shares, payable, less from September 1, 1920, placing to depreciation in sterling value capital employed in branches abroad £35,030, to reserve (increasing it to £77,750) £2,750, to staff pension fund £3,100 to staff £5,000, carrying forward £11,610.

LONDON JOINT CITY AND MIDLAND BANK, LIMITED.—Average weekly position during October, 1921:—

NATIONAL CO-OPERATIVE BANK.—With reference to our notice last week, Mr M. Sidney Parry writes to us pointing out that he is no director of this bank, having resigned that position nearly two years ago.

RUBBER.

BRITISH NORTH BORNEO COMPANY.—The report for the year 1920 shows a profit of £226,806, which, with £190,323 brought forward, makes £417,129 available. In paying 3 per cent. for the year, which will absorb £56,000, the directors state: "Shareholders will no doubt be disappointed that with such satisfactory results from the year's operations and the greater trade activity during 1920, so small a dividend is proposed." The directors explain that at the close of 1920 a severe depression in trade set in, and has continued in an acute form ever since. The directors feel bound to conserve their resources as much as possible.

JONG LANDOR.—The report for the year ended June 30, 1921, shows a loss on working of £9,444. This has been transferred to profit and loss account, which, after sundry adjustments, shows a credit balance of £3,278, which is carried forward. The report states that "the heavy scale of expenditure on the estates, which was forced on producers by high wages, and loss incurred in the supply of food-stuffs to labourers, continued during the opening months of the year, but as the year progressed it was possible to effect considerable savings on the estates, while lower freights and warehouse charges have also helped to reduce working costs. These reductions will have full effect during the current year, and on the basis of actual expenditure during the months of July and August, it is hoped that the estates will now be worked without any appreciable loss."

NORTH LABIS (JOHORE).—The rubber crop harvested during year ended June 30, 1921, amounted to 362,700 lbs, against 501,715 lbs in previous year. The net profit amounts to £3,755, to which is added £17,916 brought forward, making £21,671, out of which £1,500 goes to taxation reserve, and £20,171 is carried forward. The average net sale price, including the estimated value of the unsold portion of the crop, was 1s 2.15d per lb. The cost of production f.o.b. at port of shipment, including depreciation, was 0.03d, against a corresponding cost of 10.41d per lb the previous year. The increase is due to the smaller crop harvested. The estate is reported to be in good order throughout. The restriction of crop enabled a large reduction to be made in the labour force, which is now entirely Tamil. The crop of rubber which could be harvested with daily tapping for the year to June 30, 1922, is estimated by the manager at 575,000 lbs. It has been decided, however, to continue alternate daily tapping, and restrict the crop for the present to 50 per cent. of the normal.

TANGOR RUBBER ESTATES.—The accounts for the year ended June 30, 1921, show a trading profit of £5,528 and a net profit of £2,208, to which has to be added £2,944, making £5,152 available. The directors state that: "In view of the present condition of the rubber

market, the directors propose to carry the above amount forward to next year. The company will be entitled to a refund of excess profits duty paid. Owing to the restriction of crop for the first half-year in accordance with the R.G.A. scheme, and to the existing market conditions, the crop for the current year may be estimated on a conservative basis at 275,000 lbs. About 60 tons, all grades, January-December, 1922, have been sold at the equivalent of 10½d per lb, ex warehouse, Java. 30 tons, all grades, sold under previous forward contracts at 1s 10½d per lb, ex warehouse, Java, are deliverable during the current year. Although the market position is such as to cause anxiety to those concerned in the rubber industry, it will be seen that this company's cash resources are sufficient to meet the future with confidence."

TANJONG MALIM RUBBER.—The profit for the year to June 30, 1921, after providing £8,000 for taxes, amounts to £17,644, to which has to be added the balance brought forward from last year, £15,938, making a total at credit of profit and loss account of £33,583. In view of the very unfavourable conditions at present affecting the rubber-growing industry, the directors do not recommend the payment of a dividend, and they propose that the balance of £33,583 is to be carried forward. The yield of rubber during the year was 1,340,388 lbs, being 476,986 lbs less than in the previous year, and 9,612 lbs short of the restricted estimate. Of the year's crop 452,289 lbs were shipped to Europe, and realised an average gross price of 10.28d per lb, while 887,399 lbs were sold in Singapore, chiefly under forward contracts made in 1919, at the equivalent of 2s 2.45d per lb gross. The combined average gross price for the whole of the crop is thus 1s 8.97d per lb. The labour force at June 30, 1921, numbered 1,976, as against 1,977 at the close of the previous year. Health conditions have been satisfactory.

MISCELLANEOUS.

ASSAM RAILWAYS AND TRADING.—Report for year ended March 31, 1921, states that capital expenditure amounted to £11,877, making £813,572. Gross earnings were Rs.15,88,178, an increase of Rs.1,08,358, and expenditure Rs.12,59,699, increase Rs.2,11,249. Output at collieries amounted to 274,909 tons, and sales to 293,111 tons. Profit amounted to £87,045. There has been brought into account £21,621, representing recoveries of income-tax, &c., made recently. After payment of debenture interest and allowing for all preference dividends, there remained £17,498. Directors recommend final dividend on "B" stock of 3 per cent., making 5 per cent. for year, leaving £2,498 to be carried forward subject to excess profits duty (if any).

CEYLON TIMBER AND RUBBER.—The registered offices of the Syndicate have been transferred to 20 Eastcheap, E.C., and the Anglo-Ceylon and General Estates Company, Limited, are now the agents and secretaries. Arrangements have been made with that company for the immediate financial requirements of the syndicate, pending the issue of debentures, which will be made at a later date.

GEO. H. HIRST AND CO.—The net profit for the year ended August 31, 1921, amounted to £94,334, to which is added £12,166

brought forward, making £106,500 available. The fixed preference dividend absorbed £7,587, and the fixed preferred ordinary dividend took £12,800. Final dividends on preferred ordinary and deferred ordinary shares absorbed £36,000. The sum of £20,000 is put to reserve, leaving £30,113 to go forward to new account.

NEW TRANSPORT COMPANY, LIMITED.—Proposals are put forward for a clearing-house for goods transported by road, in a circular issued by the New Transport Company, Limited, of 168 Regent Street, London. It is proposed to form a separate company, to be called the New Transport Clearing-Houses (London), Limited, with a capital of £400,000.

S. AND W. BERISFORD.—The net profit for year ended September 30, 1921, after providing for income tax and corporation profits tax, amounts to £26,011, which, together with balance brought forward, makes £67,438 available. Preference dividend absorbs £4,500, and ordinary dividend of 12½ per cent. for year amounts to £18,750. Directors' remuneration was £1,453. The sum of £41,562 is carried to new account.

TECKA (ARGENTINA) LAND.—The report for the year ended June 30, 1921, shows a credit £20,732, after adding £13,292 brought forward there is a credit of £34,024. A dividend of 7 per cent., less income-tax, absorbs £14,000, carrying forward £20,023.

WELDON'S, LIMITED.—We are informed that a provisional agreement has been entered into between representatives of Weldon's, Limited, and interests represented by Sir William Berry, Bart., and Mr Gomer Berry. The main points of the agreement are—(1) Dividends on preference shares to be increased from 5 to 6 per cent.; (2) ordinary shareholders to receive a cash bonus of 5s per share, free of tax, and each ordinary share to be converted into a preferred ordinary share carrying interest at the rate of 14 per cent. per annum, which rate is guaranteed for seven years by Messrs Berry; (3) the capital to be increased by the creation of 100,000 deferred shares of 1s each, to be taken up by Messrs Berry, which shares will carry one vote per share. Other matters are dealt with in the proposed agreement, and on the whole the offer appears to be a generous one.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated November 3rd, is as follows:—Pig-iron: Makers have reduced their prices of pig-iron this week. No. 1 and No. 3 Cleveland G.M.B. foundry are now 115s and 110s per ton respectively. Although this may not stimulate demand, it is a step in the right direction. The movement toward a normal output is very slow indeed, and we shall not see a full resumption this year. Fuel is still much too dear. Although East Coast mixed numbers hematite is quoted 120s per ton business could no doubt be done at a little less. Manufactured iron and steel: Recent "cuts" in steel prices have not brought out any buyers, but prices are gradually nearing those of our foreign competitors. Steel ship plates, home, £10 10s; steel ship angles, £10; iron bars, £14; steel rails, £10 net. Iron ore: Imported foreign ore is a very poor market. Nominally the price of best Buxio may be called 27s per ton c.i.f.

Our Sheffield correspondent writes:—A fair amount of confidence in the revival of trade sooner or later is found in local industrial circles, although not justified by the amount of work on hand or coming through. In the finished branches the volume of business appears to be contracting, while the position of the steel melting departments remains much the same as before. Recent reductions of price have failed to stimulate the buying of steel billets and other semi-material. The effect of such movements appears to be to create expectations of further cuts, and to hold off the market. It is thought that a lot of work will be placed when users are fairly satisfied that prices are stable. Acid billets have been reduced £1, and stand at about half the figures current a year ago. Continental steel is now out of market so far as this district is concerned, as nothing is to be gained in respect of price by buying out of country. At the same time, they are not ordering at home. Complete stagnation prevails in the high-speed steel branch, and with vast quantities from Government stores being unloaded there seems no prospect whatever of an early recovery. The production of a rustless iron is now occupying the attention of the metallurgical laboratories of Sheffield, and several firms are marketing the material which it is expected will eventually supersede for many purposes such tarnishable metals as copper, brass, nickel, and aluminium. The main obstacle to its general adoption is the price factor, as it costs three times as much as ordinary steel. Business with Central and Eastern Europe is limited to such oddments as are indispensable to the carrying on of the buying countries. Very little steel of any kind is being sent to the Continent. Importers of German finished goods report lengthy delays in deliveries. While there is more activity in the house coal department, the tonnage dealt with is far below the average at this period of year. The demand for steam coal for inland consumption shows little, if any, expansion; many pits are working only three and four days a week, and there is considerable selling pressure. Export business is small. A number of enquiries for forward business are coming in, and the outlook for the future seems rather better. The reduced output is relieving the slump in small fuels, stocks of which are less, and prices rather firmer. There is a fair home and export demand for coke,

Our Glasgow correspondent (writing on Thursday) says:—In the last few days a rather better feeling has manifested itself in manufactured iron and steel trades circles. The tendency is not pronounced, and is not general, and is almost entirely confined to the matter of inquiry. It is something gained that makers and consumers of steel especially have got more intimately together than they have been for months over the question of prices, over the fixing of a common basis on which contracts may be placed. The latest "cuts" in quotations have given a measure of satisfaction to buyers, but trouble has arisen over the fact that under the new list the Scotch market is handicapped in competition with the North of England market by about £2 a ton, more particularly for plates. This serious difference is obstructing the placing of orders here. Many conferences have been held on the subject, but they have so far failed to bring the two markets to a common understanding as to values. The difficulty to an arrangement lying in the way is the existence in England of a number of companies not members of the steel trade combination which have been, and are, picking up the cream of such business as is offering—at lower figures than those recognised by the combine. The English branch of the association is prepared to fight the outside opposition to the bitter end, but that is a policy which does not meet with approval north of the Border, and what will come of the differences is hard to say. But for this contretemps it is felt that there would have been more real business in progress this week, for, according to rumour, shipbuilders and engineers are preparing to enlarge their stocks of sectional material. One or two of the larger bridge-builders and structural engineers advise that influential inquiries are on circuit, and would almost certainly be secured here if those concerned were accorded the price advantages ruling in the South. Of course, that remains to be seen. It is a favourable point in the outlook that the bolt, nut, and rivet trade should again be developing activity, and that a revived demand for black and galvanised sheets is in evidence from Australia, India, and Rangoon. Tube-makers are more fully employed, and bar iron makers, who have been very badly off of late, are booking some fair orders on export account. Founders are not doing well, and that is telling against the position in pig-iron, on which there are about 18 furnaces blowing. Prices are lower this week—No. 1 foundry by 2s 6d a ton at £7 2s 6d, and No. 3 by 2s 6d a ton at £6 17s 6d. Scotch hematite stands round £7 5s. Continental competition in iron and steel is off a bit, is less in force than has been the case for months; and it appears that Belgian producers have sold their output well into next year. This, if correct, should not be without favourable effect on the situation in the British market. Official figures show that 14 vessels of

MANCHESTER, November 3.

We have experienced a dull market throughout the past week. Buyers seem to have lost all confidence, and no contracts of weight have been arranged. There is nervousness as to future prices, political events, and finance. Cloth inquiry for India has been very restricted, although according to some reports there is a possibility of the boycott of foreign goods being broken down at an early date. Miscellaneous transactions have been put through for China, chiefly in bleaching descriptions. Isolated sales have occurred for Java and Singapore. Very little has been done for the Near-East or South America. Home trade buyers have been cautious. Owing to the absence of support cloth prices are easier. All kinds of yarn have been sluggish, and spinners have been weak when tested. Only odd lots have been sold in both home counts and export descriptions.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The announcement of a reduction in the Bank rate to 5 per cent. was received on 'Change to-day with general satisfaction. It is taken to indicate a gradual return to more normal conditions, and in view of the general financial stringency, every move in this direction is very welcome. Quite a fair amount of business continues to be done in raw wool and semi-manufactured goods, and although the piece-goods section of the industry is still under a cloud, it is a fact that the present firm tone in the wool market is helping holders of pieces to sell at better prices. The unfortunate thing is that in the majority of cases the prices paid for cloth are well under to-day's replacement values, and current prices of yarn are tending to check inquiry from manufacturers of coatings. On the other hand, there is a very good demand for hosiery yarns, and most spinners have sold the whole of their production for at least two months ahead. While spinners do not show much disposition to place contracts with topmakers for forward delivery, there is a brisk business in spot lots of tops, and prices remain very firm. Both merinos and fine crossbreds are in short supply here, and tops are going into consumption as they leave the combs. This, combined with the strength of the Colonial markets, helps to maintain values in this centre, in spite of the restricted business in cloth. Yarn prices are steady, and as spinners are now well employed, many firms are holding out for prices more in keeping with the cost of the tops. There is a steady trade in home-grown wools at firm rates, but the local mohair trade is quiet. Small sales of alpaca continue to be reported from Liverpool, but prices do not vary to any extent.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The recent auctions in Coleman Street can be regarded as having passed off satisfactorily. In spite of any adverse criticisms which may be made, the results are a fairly reliable indication of the state of trade. It is hard to conceive that any section of the trade would purchase liberally for three weeks on end if they did not want the wool, and we fully expect values at the Hull sale to be on a parity with the rates realised in London. There is no disguising the fact that wool consumption is steadily increasing. That is the only conclusion which one can come to after a survey of the conditions in Coleman Street Wool Exchange. The most satisfactory feature of all was the large operations on home account. We understand that a recent census of stocks has been taken by one of the leading wool trade associations, and by which the somewhat alarming fact was revealed that stocks of merino wool and tops in Bradford were no more than sufficient to run machinery a month, if that. There is no wonder at the call for fine wool being so persistent, and the desire expressed for bigger quantities to be catalogued in the hope of seeing prices ease; but between now and December 22nd there should be sufficient merino wool catalogued in England and the Colonies to fully satisfy all possible requirements.

The future of wool values is being keenly discussed in manufacturing centres, interest in the matter being intensified by the fact that the home trade has been seriously caught short in practically all qualities. It is well known that several Bradford topmakers have been caught by selling for October-December delivery at around 3s. Bradford made a mistake last February to July in not purchasing much more freely when values were low, it being a fact that even 70's tops were made out of wool bought at last April series at 2s 5d, and spinners 64's were purchased in July which have come in at 2s 10 1/2d. This is a level at which all top-

ALEXANDERS DISCOUNT Co., Ltd.

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

makers would like to get in to-day, but there is no prospect of being able to buy on that level, or even in the near future. The matter of supreme concern is the state of the home trade manufacturing industry, and the apparent total inability of woollen merchants and export houses to sell pieces in harmony with to-day's market prices for merino wool. The ideas of wholesale houses will have to alter considerably if they are to resume business with manufacturers, and while they have been able to obtain all the pieces they wanted at slump prices, this giving away of stocks cannot last for ever. The time must come when the price of the fully-made article must bear some relationship to the cost of wool, and the sooner the better. I am strongly inclined to think that the missing link to-day is with the retailer, and not until his prices come into line with replacement values can the public be expected to buy wearing apparel at all liberally. As already said, notwithstanding the poor state of the home piece trade, consumption is fairly heavy, and likely to remain so. I expect a development of consumption on the Continent and America, notwithstanding exchanges are so bad in Europe.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

A better position has developed in the market generally, and in regard to linseed oil in particular, in which there has been a steady recovery, business in spot to December being done round £28, with 10s premium paid for January-April. The tone of the market is fully steady, and a moderate trade appears to have been done for export, though the home demand is still only poor. The steadiness of oil has had a strengthening effect upon Plate linseed, values of which are appreciably higher for spot and near. Crushers, however, have their oil commitments pretty well covered, and show little disposition to buy more seed at present figures, or until the position with regard to the Argentine surplus clears and the industrial outlook improves.

A feature of the past day or two has been the sharp advance in Egyptian cottonseed in sympathy with Alexandria, over £14 now being asked for seed loading or November shipment. Bombay has also substantially advanced, £9 10s being paid for seed afloat to Hull. The oil product has consequently benefited, crude Egyptian having recovered 50s a ton. Soya bean oil is about 60s cheaper to buy, but rape is unchanged. Palm kernel oil is steady and dearer. First pressure castor oil has been reduced 20s per ton.

The end of the open weather has stimulated the demand for oilcakes. A good trade is reported in linseeds at 10s advance, and cottons are also firm and in good request. Meals, however, are neglected.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market was again weaker on Thursday, and at the Bermondsey auctions best ox made from 9d to 10 1/2d, a drop of about 1/2d to 3/4d on last prices. Cows sold from 7 1/2d to 8d; light calf at 13 1/2d, all showing reductions on recent rates. One class of best light calf dropped 2 1/2d per lb, in fact. Tanners have held for some time that prices were on an artificial basis, but the reaction has set in sooner than was expected. So far foreign hides do not show any substantial drop in value, but tanners are getting chary of forward booking in view of the home position. The American position is still cabled as strong, with some classes showing a tendency to advance. Best packers are still offered at 15 1/2 cents, and native cows at 12 1/2 cents.

The demand for sole leather has been decidedly quieter this week, the demand still running on low-grade bends. Tanners in some cases are already meeting the market, and offers have been made of blocks of bends at lower rates. American sole leather is arriving in fairly large quantities, and is again competing with domestic tannages.

Upper leathers are still a dull sale, and in such leathers as box calf and glaced kid no offers seem low enough. Kid at 6d to 7d per foot is wanted, and it is difficult to see what class of shoes some of the rubbish is going into in view of the oncoming of bad weather.

There is a better tone in the boot and shoe section, and retailers are placing more orders than has been the case for some time. The break in the weather is an important factor, and repairs are already having plenty of the "stunt" rubbish in boots for patching up, many specimens hardly paying for the leather and labour used.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 77s 6d to 83s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 4.

There was rather more tone about several markets during the week, buying in some cases being on an extended scale, with a steady level of prices, though the question of rates of exchange still forms a barrier to anything like general improvement.

SUGAR.—A moderate amount of business was effected, chiefly in white descriptions, and values on balance disclosed little or no alteration. Tate's cubes sold, 55s 3d to 56s 3d; crushed, 51s 9d; granulated, 49s 9d to 50s 3d; caster, 52s 3d to 52s 9d; pieces, 36s to 44s 6d. Lyle's granulated, 49s 9d to 50s; yellow crystals, 44s 9d. Crystallised West India sold from 38s to 42s 6d, according to sample. American granulated, spot, sold, 49s; prompt, 21s 6d; November, steamer, 21s 3d, c.f. and i. terms U.K. White Java, spot, sold, 47s; ditto, November-December, quoted, 19s 6d, c.f. and i. Belgian crystals, spot, sold, 47s 6d, November-December, 19s 3d, f.o.b., Antwerp. Czech-Slovakian granulated, December held for 19s 9d, and cubes, 24s 6d, f.o.b., Hamburg. Brazilian basis, 96 per cent., November-December, sellers, 14s 6d and ditto 80 per cent., 10s, c.f. and i. terms. Terminal market ruled quiet. December, raw old terms, sold, 14s 3d to 14s, white, December, 18s 9d to 18s 6d, March, 18s 6d, May, 18s 7 1/2d. Cuban stocks amount to 1,152,200 tons against 293,700 at same time last year. Stocks in the three chief ports of the United Kingdom, 71,000 tons against 116,500 at corresponding period last year.

COFFEE.—The market remained steady with a moderate demand for the finer and which are in very small supply, but inferior grades meet with but slow patronage. Offerings at auction this week were by no means attractive. Future delivery market stronger, while influenced by stimulating foreign advices, but eased later. March, sold 49s 9d to 48s 9d; May, 50s 3d to 49s.

COCOA.—Market still very quiet and featureless. Only retail sales were effected at recent prices. Butter steady at 1s 10d per lb.

TEA.—During the week 44,020 packages Indian were offered, and all the finer qualities received fair attention at generally late rates, medium being a shade easier, but inferior cleared with more freedom at a full range. Fair competition was accorded the 12,900 packages Ceylon brought forward, and rates on balance disclosed no material alteration.

RICE.—The market is steady, with reserve shown on the part of shippers, but with buyers equally indifferent actual trade is reduced to a minimum. Two stars, spot, quoted 18s 6d. Broken kinds more or less nominal. Rangoon beans dull. Afloat parcels quoted 9s for hand-picked. Madagascar butter beans, all white, on spot, 20s to 21s. Peas nominal.

SPICE.—Pepper, after ruling steady, assumed a very quiet tone. Fair black Singapore, spot, sold, 3 1/2d; ditto, October-December steamer, 3 1/2d to 3 3/4d; December-February, 3 1/2d to 3 3/4d; Aleppo, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, 8d; Muntok, ditto, 8 1/2d; December-February, sold, 7 1/2d to 7 3/4d. Zanzibar cloves steady, quiet. Fair, on spot, sold, 1s 8d; October-December steamer, 1s 6d to 1s 5 1/2d; pimento, spot buyers, 2 1/2d. Tapioca dull. Fair flake, spot, sold, 14d per lb; ditto, October-December steamer, London, 14s; fair Penang seed pearl, spot, 19s; October-December, 17s 6d; smallsago, spot, 27s 6d; sago flour, October-December, sold, 13s 3d; desiccated coconut, spot, sold, 42s to 43s 6d. Ginger steady. New Jamaica firm. Fine bold, plump, sold, 177s 6d.

FRUIT.—With sustained inquiries for currants a fair business resulted, at full rates. New Pyrgos, sold, 49s; Patras, quoted, 54s to 62s; Gulph, 55s to 65s; Vostizza, 70s to 84s. Sultanias met a steady market. Smyrna, medium to good, 117s to 125s; fine to choice, 130s to 145s. Layer figs, quoted, 115s to 138s; lacouns, 150s to 175s. In auction 333 tons Valencia raisins offered attracted good support, and medium to good cleared at 3s to 4s per cwt advance. Really choice lots very scarce, and these marked a rise of 7s to 10s. Common very slow of sale. Half-boxes, sold, 118s to 124s; quarters, 138s to 148s; and extra fine, up to 172s. Seedless, 107s to 125s. Dates held firmly, and Siam, on spot, sold, 18s. Almonds meet a firm market.

JUTE.—Market steadier inclined, and more interest was shown this week by Dundee and continental spinners. Native first marks assortment, spot, Hamburg, sold, £30 10s; ditto old crop, substitutes, October-November, £27, to Hamburg; lightning substitutes, old, ditto, £23 10s; new crop first grade, October-November, £29; and new grade of lightnings, ditto, £25. New Heart grade, October-November, quoted £18 15s; and old ditto, £17 10s. 10-ounce Calcutta hessians, spot, 27s; 8-ounce, 22s; B twills, spot, 68s.

HEMP.—The market for Manila remained in a quiet state, and prices in some cases proved weaker. D grade, October-December, held for £53; E, £49; G, ditto, sold, £39 10s; J, sellers, £38; K, £36 10s; L, £35 10s; M, £31 10s. Streaky one, £45; two, £43; three, £39. New Zealand quite idle at the moment. High point, fair spot, £42; fair, £38; and October-December, £37 and £35 respectively. Italian nominal.

COPRA was dealt in quietly, and rates moved against sellers. F.M.S. Straits, October-December, Rotterdam, sold, £28 5s to £27 10s. F.M.S. Straits, October-December, Marseilles, £27 10s

National Provident Institution.

Three good points

in favour of a Life Assurance policy.

1. It will show you a good return for your money.
2. It will give you no anxiety as to depreciation.
3. It will enable you to save Income Tax.

Full detailed particulars will be sent post free on application to—

48, GRACECHURCH STREET, LONDON, E.C.3.

Telephone: 1773 Avenue.

LONGMANS, GREEN & CO., 25, PATERNOSTER ROW.

The Subscription List will be closed on or before the 10th day of November, 1921, for Town, and the following day at Noon for the Country.

The permission of the Committee of the Stock Exchange to deal in the Debenture Stock now offered for Sale will be applied for, and application for an official quotation be made.

THOMAS DE LA RUE AND COMPANY, LIMITED

(Incorporated under the Companies Acts, 1862 to 1893.)

SHARE CAPITAL, £2,000,000

In 2,000,000 Ordinary Shares of £1 each, of which 640,000 Shares are issued and fully paid.

AUTHORISED LOAN CAPITAL

£260,000 . . . 4½ per cent. First Mortgage Debenture Stock.
£1,200,000 . . . 8 per cent. Convertible Mortgage Debenture Stock.

OFFER FOR SALE

OF

£800,000 8 per cent. Convertible Mortgage Debenture Stock at 98 per cent

Repayable on the 31st December, 1926, at 105 per cent. or earlier by means of a Cumulative Sinking Fund commencing in 1922. The Sinking Fund will be applied in the purchase of Stock in the open market at or below 105 per cent. up to and including the year 1927, when the conversion rights mentioned below shall have ceased, and thereafter will be applied in the purchase of Stock in the open market or by drawings at 105 per cent.

The Stock, which will form part of an authorised Issue of £1,200,000, will be secured by a Trust Deed constituting a Mortgage on the Freehold and Leasehold Lands and Buildings and other immovable property of the Company, and a floating charge on its remaining assets subject only to a fixed and floating charge to secure the sum of £260,000 First Debenture Stock of which £16,250 is at present outstanding.

The repayment of Capital and the payment of Interest and Sinking Fund will be jointly and severally guaranteed by Charles Goodall & Sons, Ltd., and J. A. Weir, Ltd., each of which Companies will respectively charge their freehold and leasehold lands, buildings, and other immovable assets by way of specific charge and their remaining assets by way of floating charge to secure such guarantee.

Power is reserved for the Company to purchase the Stock in open market and to repay at 105 per cent. the whole or part to be selected by drawings by giving six months' notice in writing on any interest date after December, 1927. The Stock will carry with it the right to convert into Ordinary Shares of the Company on the following basis:—

Up to and including 31st December, 1925, . . . £112 10s. Stock for 100 Shares at £1 each.
From 31st December, 1925, to 31st December, 1927, . . . £125 Stock for 100 Shares of £1 each.

The Trust Deed provides that the balance of £400,000 Debenture Stock which is not entitled to the above Sinking Fund can only be issued for securing loans to or liabilities of the Company, whether absolute or contingent. Part of these will be used in place of certain charges in favour of the Company's Bankers and others referred to in the Accountant's Certificate.

THE BRITISH, FOREIGN AND COLONIAL CORPORATION, LIMITED,
B.F.C. House, Gresham Street, London, E.C.2,

will receive applications for the purchase from them of the above £800,000 Debenture Stock through their Bankers.

LONDON JOINT CITY AND MIDLAND BANK, LIMITED,
Threadneedle Street, E.C.2, and Branches,

at the price of 98 per cent., payable as follows:—10 per cent. on Application; 40 per cent. on Acceptance; 48 per cent. on 15th December, 1921.

Interest will be payable half-yearly, 1st January and 1st July. £1 5s. (less income tax) per £100 Debenture Stock will be paid on the 1st January, 1922, in respect of interest to that date.

Yield £8:3:3 per cent., without profit on redemption.

The following is taken from a letter from Mr. A. G. Gronow, Managing Director of Thomas De La Rue & Co., Ltd., addressed to the British, Foreign & Colonial Corporation, Ltd., dated 22nd October, 1921.

The object of the issue is to provide the purchase price for acquiring the whole of the Share Capital in the old-established business of Charles Goodall & Sons, Limited, playing card manufacturers and stationers, and all the Ordinary Shares of J. A. Weir, Limited, the proprietors of the well-known paper mills at Kilbagie, Scotland.

The House of DE LA RUE was established over a hundred years ago, and from the first was engaged mainly in the engraving and printing of Bank Notes, Postage and Revenue Stamps, and from 1853 onwards has executed practically all of this work for the Indian Government and from time to time for the whole of the British Empire. To-day the Company also manufactures playing cards, coloured labels, advertising material, railway tickets, etc., and it owns and manufactures the famous "Onoto" Fountain Pen. The Company's Freehold and Leasehold works, which are amongst the most important in the United Kingdom, are situated in Bunhill Row, London, E.C., are equipped with every modern convenience and the latest types of printing machinery. The Company has Branches in Paris and New York, and selling Agencies in all important centres of the world.

CHAS. GOODALL & SONS, LIMITED, was founded in 1820 and from small beginnings its trade in the famous "Goodall Playing Cards" developed throughout the world. Its Works are modern and well equipped and there is ample room for expansion. For many years this Company has been the largest manufacturer of Playing Cards in this country.

J. A. WEIR, LIMITED, Paper Makers, was established in 1870, and owns two Paper Mills in Scotland of the most modern type, producing the highest grade of paper. The freehold sites occupy 32½ acres, with valuable water rights, and the Mills are in every way suitable for producing the bulk of the paper, cardboard, etc., required by the combined Companies.

I have made a careful study of the plant and works of Thomas De La Rue & Co. Limited, Goodall's and Weir's, and have no hesitation in saying that their equipment is in almost every case up-to-date, and that a considerable portion of the machinery is of a special type which shows a distinct advance on anything procurable on the market by competitors. By co-ordinating the manufacturing and sales organisations of these Companies, their output will be largely increased and savings of some £20,000 per annum effected in overhead and administrative charges alone.

The combined organisation will be producing practically the whole of the Playing Cards manufactured and sold in this country, as there is only a small amount of competition in the cheaper variety imported from America.

With regard to the production of paper money, for which class of work Thomas De La Rue & Co., Ltd., are particularly well equipped, I would emphasise that there is no foreign competition in tendering for British Empire contracts.

The purchase price payable by De La Rue's for the whole of the Share Capital of Chas. Goodall & Sons, Limited, and for all the Ordinary Shares in J. A. Weir Limited, is respectively £201,050 and £394,000 in cash.

As shown by the Accountants' Certificate, the surplus assets over liabilities of the combined Companies is £1,800,032, to which has to be added the proceeds of the present Issue of Debenture Stock, less the purchase price of the Shares of Goodall's and Weir's. After making these adjustments the surplus assets will amount to £1,925,902, showing the present Offer of Debenture Stock covers nearly two-and-a-half times, without placing any value on the goodwill—while is considerable in view of the age and standing of the Companies.

The average yearly profits of the combined undertakings over the last five years, as shown by the Accountants' Certificate, amounted to £196,771 13s. 1d. sufficient to cover the interest on the £800,000 Debenture Stock nearly three times, but I have no hesitation in saying that as a result of the unified control of the three businesses, and after putting into execution the various economies now contemplated, these profits ought to be doubled within the next few years.

THE NORMAL PRE-WAR RATE OF PROFIT FROM DE LA RUE'S BUSINESS, ALONE, WAS ABOUT 2100,000 PER ANNUM, THE AVERAGE FOR THE LAST 30 YEARS BEING OVER 499,000.

The Company should also derive considerable advantage from the working arrangement, based on interchange of work it has entered into with Warrilows, Limited, which has extensive works in Birmingham and carries on a business similar and in many respects complementary to De La Rue's.

Orders on hand are well above the average of previous years.

71, FLEET STREET,
LONDON, E.C.4., 20th October, 1921.
To the Directors of THE BRITISH, FOREIGN AND COLONIAL CORPORATION, LIMITED,
B.F.C. House, GRESHAM STREET, LONDON, E.C.2.

GENTLEMEN.—In accordance with your instructions I have attended the various Works and Offices of

Messrs. Thomas De La Rue and Company, Limited,
Messrs. Charles Goodall and Sons, Limited,
Messrs. J. A. Weir, Limited,

and have surveyed the various Freehold and Leasehold Land and Buildings belonging to each Company, the present fair value of which is

£237,140 0 0
I have also prepared detailed Inventories of the Plant, Machinery, Engines, Boilers, Electrical Installation, etc., the present fair value of which as a Going Concern is

£27,860 0 0
In addition to the above Messrs. Thomas De La Rue and Co., Limited, are the proprietors of Freehold Land, Buildings and Plant at Walthamstow, which on a forced sale should realise, together with certain Debentures now in process of realisation, approximately

£170,000 0 0
Making a combined total of One Million Eight Hundred and Thirty-five Thousand Pounds

£1,835,000 0 0
I am, Gentlemen, Yours faithfully,

ROBT. H. RUDDOCK, Auctioneer and Valuer.

The Full Text of the above-mentioned letter from Mr. A. G. Gronow, as well as the Chartered Accountants' Certificate, and the valuation of Mr. Robert H. Ruddock, together with full particulars of the Offer for Sale, and Forms of Application may be obtained from:—

THE MONEY MARKET.

THE demand for short loans increased daily until Thursday, when the Bank lent a small amount. The general rate for weekly fixtures was 3½ per cent., and by Thursday the same was being paid for old day-to-day loans, while lenders of fresh money occasionally obtained over 4 per cent. for it. The cause was the public demand for new Treasury Bonds, which, as anticipated, has proved more than temporary. Though the supply of commercial paper was no greater, the discount rate rose as money

became short, and on Thursday morning Treasury bills changed hands at 4 per cent., though afterwards the tendency was weaker.

	Nov. 11, 1921.	Nov. 4, 1921.	Oct. 28, 1921.	Oct. 21, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

The Bank return showed a sensible improvement. There was a slight addition to the gold stock, and the circulation was reduced by £730,200, so that the reserve was £740,800 higher. Government securities were reduced by £19,642,000 and Other by £79,100, making deposits £18,996,300 lower. Other being reduced by £20,638,700, while Public expanded by £1,642,400. The Proportion has risen from 15½ to 18½ per cent. The circulation of currency notes was increased by £463,000 to £314,118,000, which includes £1,813,600 for notes called in, but not yet cancelled. The fiduciary issue is £264,354,400, or £53,200,800 below the maximum.

At the meeting of the Court of Directors of the Bank of England, on Thursday, it was agreed to recommend to the proprietors in April next that Mr Montagu Collet Norman, the Governor, and Mr Henry Alexander Trotter, the Deputy-Governor, be re-elected Governor and Deputy-Governor respectively for the ensuing year. The re-election of Mr Norman to the governorship for the third year in succession is a fitting recognition of the ability with which he has fulfilled his onerous duties in a very difficult period.

The Danish Bank rate was reduced ½ per cent. to 5½ per cent. on November 5, 1921. It had stood at 6 per cent. since July 5, 1921.

The following table shows public income and expenditure for the week ended November 5, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	12,333	Supply Services	10,322
Amount borrowed	6,343	Interest on Debt	9,525
Taken from Exchequer Balances ..	924	Sundries	378
	20,225		20,225

These operations increased the National Debt by the sum of £6,342,790, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 26,055	Bank of England Advances ..	- 26,500
Nations' Savings Certificates ..	+ 300	Depreciation fund	- 300
Public Department Advances ..	+ 30,000	Surrender of Bonds, &c.	- 409
Sundries	+ 122	Other Debt	- 14,491
	+ 56,457	Treasury Bills	- 7,166
			- 49,465

The principal items of revenue were Property and Income-tax £4,115,000, Customs and Excise £4,518,000, and Special Receipts under Miscellaneous £2,035,765. The receipts from National Savings Certificates exceeded the maturities by £300,000, but the sum of £650,000 in National Savings Certificates was issued for housing. The large total of £26,035,000 was received from sales of 5½ per cent. Treasury Bonds, and there was a net reduction of £14,491,183 in Other Debt. Advances by the Bank of England were reduced by £26,500,000, leaving £24,500,000 outstanding, but £30,000,000 was advanced by the Public Departments, making the outstanding amount £192,758,000. Treasury Bill maturities exceeded by £7,166,000, bringing down the amount outstanding to £1,116,000. The net reduction in the floating £3,665,000.

VIGN EXCHANGES.

been the centre of interest in an From a c...ure of 92½ idly to...ffer th

was a rapid reaction to 92½, the closing rate, however, being higher at 97½. Since then the movement has again been rapidly upward to 1,170 yesterday morning, after which there was some recovery to 1,100. No new features are necessary to account for this further depreciation, which is the result of well grounded fears for the future both by people in Germany and holders of marks abroad. At the same time, should this outlook be in any way modified by a change of attitude on the part of the Allies, we may expect an almost equally sudden fall, as the present quotation is not justified by the position of Germany and the amount of inflation at the moment. The temporary reaction on Wednesday appears to have been due in part to the arrival in Berlin of Sir John Bradbury and other members of the Reparation Commission, in part to the enforcement of new regulations, under which all exchange deals must be made direct with banks, who must report each transaction. The rate for futures has moved up 1 mark to 2½ marks per month. Francs, apart from a slight recovery on Wednesday in sympathy with marks, have depreciated steadily from 53.45 to 54.37½, while the Brussels rate has moved up more rapidly from 55.17½ to 56.85. It would seem already that these movements are already influencing French opinion, and making some at least realise that the fate of French currency is very closely bound up with that of the mark. The rate for futures in Paris has widened one centime to four centimes per month, while that for Brussels remains unchanged at ten centimes. The quotation for the dollar has moved within relatively narrow limits, with, on the whole, a distinctly firm tendency, the rate early yesterday morning being 3.94½ as compared with 3.93½ on the 4th. During the morning, however, it weakened to 3.93½. The rate for future dollars has narrowed again from ¾ to ½ cent per month over spot. There may be added to the general factors mentioned last week, none of which alone are powerful enough to explain the present movement, the further one that America is buying an increasing amount of Egyptian cotton for its own needs at a time when we are taking a much less than normal amount of American cotton. After showing a rapid recovery from 96.55 to not much over 93.50, the Italian rate has hardened again to 96½, and the tendency at the moment would appear to be an upward one. Switzerland from 21.15 has moved irregularly, mainly under the influence of the mark, to 20.87½, and Amsterdam has similarly moved against us from 11.40 to 11.38. In the northern group, Helsingfors, after being as low as 200, stands at 207½, a considerable improvement on the 232 quoted last week. Stockholm has moved up from 17.03 to 17.14, and Copenhagen is some 35 points higher at 21.35. Christiania, on the other hand, has continued to fall, and now stands at 27.95, as compared with 28.90, a more rapid recovery than might have been expected. In Central Europe the London (Auslands-) krone rate on Vienna, after moving up from 11,000 to as high as 14,000 on the 9th, is now a little steadier at 12,000, but there would seem no reason why the present débâcle should not continue. On the 7th, the last day for which rates are available, the Vienna (Inlandskrone) quotation was 23,250, as compared with a London rate on the same day of 11,500. Warsaw, which improved somewhat during the week on reports of a loan obtained in France, is again at 13,000. Budapest has depreciated rapidly, and is now well above 4,000. Prague, on the other hand, at 365, shows a considerable recovery from the 420 quoted a week ago, presumably on rumours of an external loan. Belgrade also, which rose to 375 during the week, is back again at 300, and here, too, reports of an external loan shortly to be concluded have played their part. The most remarkable movements have been in the case of Roumania, which from 840 on the 4th, and 850 on the 7th, dropped on the next day to 625, and after that to 450. Since then there has been a rapid upward movement again to over 600. Bulgaria has been moderately steady, but nevertheless has moved upwards to 650. Athens at 95 is just a little better than before, and prospects of peace in Asia Minor seem slightly brighter. Constantinople at 725 has been fairly firm. In the East the rupee has moved against us, from 15 4¼d to 15 4½d, after falling to 15 4¼d. Yokohama has been steady at 25 5½d. The

silver market has been very quiet, with no Indian business, and very little demand from China, and the price is ¾d lower than before. Shanghai is 1d down, Singapore ¾d. In South America, Buenos Ayres has moved against us nearly ½d, and Monte Video is also ½d higher. Rio is down from 8½ to 7 21-32, Valparaiso up to 37.10 from 35.10.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 to NOVEMBER 5, 1921.

Total spent	£ 603,079,501	Raised by revenue ..	£ 540,678,043

EVENTS OF THE WEEK.

NOVEMBER 5TH.—German and Austrian rates of exchange reach new high level. Reparation Commission decide to visit Berlin.

NOVEMBER 7TH.—Government refuses freedom from competition for Lord Ashfield's scheme of Underground development. Lord Peel appointed Minister of Transport.

NOVEMBER 8TH.—Cabinet Council on Irish problem. Sir Charles Addis' address on monetary problems as president of the Institute of Bankers.

NOVEMBER 9TH.—Prime Minister at Guildhall. Sir Robert Horne's statement in the House on the Budget outlook.

NOVEMBER 10TH.—Parliament prorogued. Ulster Cabinet arrives. Prime Minister sends statement of proposals for Irish peace to Sir James Craig. Mr McKenna says opinion in United States is against cancellation of Allied debts. London County Council Tramways Committee propose return to 1d fares for present 1½d. Mining Association urge railway companies to reduce coal traffic rates.

NOVEMBER 11TH.—Armistice Day. Ulster's decision conveyed to Premier.

Following on last week's reduction in Bank rate to 5 per cent., the stock markets show more or less general

improvement. Funding, Victory, and Conversion stocks have improved, while Home Rails and Argentine rails picked up a little. The improvement spread to the rubber and oil share markets.

Limited business and curtailment of production are reported from the Lancashire cotton trade. In the woollen industry spinners record a fair business. The demand for tops is a little easier, but there is a slight improvement in the piece goods trade. British prices for iron and crude steel are now on terms with foreign, but business is clogged by the heavy importations from the Continent in recent months. Enquiries for steel are larger, but actual business is very slow. Conditions, however, give hopes of some revival before long. Glasgow reports are decidedly more cheerful. Home demand for coal is slack, but export business a little better. In the hide market prices have dropped further, and the demand for sole leather has fallen flat. The week has been quiet in the markets for vegetable oil and oil-seeds.

Details of news and movements in the principal markets from special correspondents will be found on later pages of this issue.

THE RAINBOW AND THE FOG.

In spite of a number of fitful attempts, few gleams have succeeded this week in breaking through the fog that enwraps us—either the physical fog through which the Lord Mayor wended a weary way to the Law Courts on Wednesday, or the political and economic variety. At the Guildhall banquet on Wednesday night the Prime Minister boldly assumed the rôle of linkboy, but unfortunately his tinder-box could only produce a few sparks of hope—hope that the Washington Conference "will be the greatest event the world has seen for 1900 years," hope that the Irish Conference would bring peace, and hope that trade was now definitely on the mend. In these hopes we share devoutly. After the devastating effects of the great war it should, if the world were ruled on common-sense lines, be inconceivable that statesmen should fail to find some guarantee against its recurrence and against the ruinous preparation which the apprehension of its recurrence entails. Mr Lloyd George likened the Washington Conference to a "rainbow across the sky." We hope that home events will permit him to take a hand in securing that the rainbow ends in the land of happiness and sunshine. As regards Ireland, the Prime Minister was unfortunately unable to record any tangible progress. It would appear that extremists on both sides still bar the way to settlement. Sir James Craig and his Ulster Cabinet have been summoned to London, and pre-war memories are revived by the reiteration of the time-honoured Ulster policy of "no surrender." But it is comforting to remember that in the present state of public opinion the old cry of "Ulster will fight" will be met with no resounding echo that "Ulster will be right." Public opinion is not primarily interested in the discrepancies between the ambitions and prejudices of Ulster and Sinn Féin. What they look for is adjustment of the differences, and a sinking of the prejudices in the common pursuit of peace. Mr Lloyd George's third hope, respecting signs of trade revival, is perhaps rather more firmly founded than

that this steady recovery in the value figures has taken place over a period when commodity prices have been falling rapidly. In October, imports at £84.7 millions were £2.4 millions less than in September, and for the month just past the visible import excess on the merchandise figures was down as low as £12.1 millions—a figure that would not have been anything out of the way in a normal pre-war month. Another welcome feature of the October figures is a recovery in the *entrepot* trade, the value of which was £1.8 millions better than in September. The value figures of imports and exports for October and the first 10 months of this year and last are compared below:—

MONTH of OCTOBER.				
	1920.	1921.	Decrease in October, 1921.	
	£	£	£	%
Imports	149,631,058	84,741,852	64,889,206	43.4
British exports	112,295,474	62,265,379	50,030,095	44.5

TEN MONTHS ENDED OCTOBER 31st.				
	1920.	1921.	Decrease in 1921.	
	£	£	£	%
Imports	1,650,812,939	912,467,645	738,345,294	44.6
British exports	1,119,573,510	580,926,690	538,646,820	48.1
Re-exports	196,592,042	88,025,282	108,566,760	55.0
Total exports	1,316,165,552	668,951,972	647,213,580	49.0
Excess of imports over total exports..	334,647,387	243,515,673	91,131,714	27.3

The visible merchandise import excess of £12.1 millions in October compares with balances of £23.3 millions in September, £27.2 millions in August, £28.2 millions in July, and nearly £36 millions in June.

In these days of critical depression it is more useful to observe movements in the trade figures from month to month than to draw comparisons, even quantity comparisons, with a year ago. If certain leading British exports for October and September are compared, it is seen that the latest figures provide some encouragement with regard to important industries. Cotton yarns and manufactures were exported in October to the value of £16.5 millions, as compared with a figure of £13.3 millions for September. In September 265 million square yards of cotton piece goods were exported; in October 342 million square yards. The figures denote a welcome improvement. Take the woollen industry. October exports of woollen and worsted yarns and manufactures were about £500,000 better than those recorded in September. Last month 7 million square yards of woollen expsures and 4 million square yards of worsted tissues were reexported, against figures of 6.1 millions and 3.3 millions respectively in September. October saw an increase over steel and over of nearly £900,000 in exports of iron and sterling in manufactures thereof, and of over half a million similar in reexports of machinery. Coal exports were

The list of imports, even lower in value than in September. considerable extension, as an import, however, is capable of continuing two months for export, if the figures of the past compared, the comparison of British manufactures be under practically every one of the items, the only notable exception being electrical goods and apparatus, which, however, is an item which congenially fits its figure up within comfortable distance of the figures of a year ago. This general increase cannot be wholly attributed to the fact that October was a slightly longer working month than September. After allowing for that fact, and for

the further fact that October in past experience has usually exhibited a seasonal export improvement, it is still possible to deduce from the official statistics that export trade is steadily, if slowly, recovering, and that the recovery, though particularly conspicuous in one or two industries, is not confined to them alone.

If we extend this method of comparison to the import accounts, we find that imports of food, drink, and tobacco were £4 millions lower than in September, while imports of the raw material class were slightly higher in value. On the same method of comparison, re-exports of raw cotton and raw wool show a substantial increase, and the rubber re-export figures are better. The coin and bullion figures for October and the ten months of this year and last read as follows:—

TOTAL of GOLD and SILVER.				
	October.		Ten Months to October 31.	
	1920.	1921.	1920.	1921.
Imports	5,508,028	5,329,965	44,725,872	51,710,569
Exports	24,875,405	5,747,043	91,292,623	60,923,761

The October trade returns contain figures relating to origin of imports and destination of exports in the September quarter and the first nine months. These figures, which provide data for certain important conclusions, we propose to discuss in subsequent articles.

Below will be found tables setting out the value figures for imports and British exports in October and the first ten months of 1920 and 1921.

IMPORTS (Value C.I.F.).				
	Month Ended October 31.		Ten Months Ended October 31.	
	1920.	1921.	1920.	1921.

THE RAILWAYS ACT: ADJUSTMENT OF CHARGES.

(BY A CORRESPONDENT.)

ALTHOUGH the importance of the new Rates Tribunal must not be under-rated, it will be missing the purpose of the whole of the third part of the Act if too great an emphasis is placed upon it. To claim more for it than what it is purported to be will inevitably lead to disappointment. It is nothing more than a Governmental machinery constituted to see that a certain goal is kept in view. This goal is to maintain an equilibrium between receipts and expenditure of the new groups of railways. This is to be the guiding star of their policy in fixing the charges. A word must be said about the economic basis of this principle.

In setting up this principle the Government have not (as has been suggested) thrown a "sop" to the shareholders in order to win over their support to the Bill, but have the interests of the traders foremost in their minds. Only incidentally, an act of justice is done towards the shareholders. Yet curiously enough the greatest opposition was met not from the companies, but from the traders. Their criticism was based on the ground that this mechanism will lead to the establishment of rates beyond what the trade will be able to bear. In this they have been supported by some of the railway magnates, who are only anxious to let no opportunity pass without discrediting the Act. They point to instances where companies have been working at a loss, conveniently ignoring the fact that they have been re-

stricted from increasing their charges by the Governmental regulation.

It is not denied that competition in the railway field may reduce the earnings below the average return yielded in other competitive enterprises. But no one can seriously claim that this state of affairs will be anything but short-lived. It must not be ignored that railway industry cannot survive long unless a fair return is yielded to the railway capital. A struggling line may keep up for a time in the hope of being absorbed by a richer line. But if there be no hope for the railways to earn this dividend there will be a ruin of the railway industry and a consequent disaster to the whole country. The transport crisis in Russia brings home to us the consequence of such a breakdown. Fresh capital is required every time for rolling stock and the replacement of engines, &c., even if we set aside for a moment its needs for extension of railway facilities. It must be found, or else the industry must come to a standstill.

This is a prospect which no trader can afford to view with equanimity. Its appalling consequences are hardly realised by those who have been indulging in glib talk against the principle of balance of receipts and expenditure. In these remarks we are supported by Sir William Acworth. In an article in the *Times* Railway Supplement, he made the following pointed statement:—"Railways are few and far between. Even in countries well supplied with railways the proportion of the area which is served by two is very small. And consequently railways are seldom abandoned, however unprofitable they may be as commercial enterprises. In some shape or form the public is forced to come to their assistance, as has happened more than once, for instance, in French railway history."

The problem, therefore, resolves itself not into whether the railway capital should have sufficient remuneration or not, but into whether the companies should pay their way or rely on Government assistance to enable them to maintain low charges. In this connection it will be useful to see what the Government is doing in France. It may be stated at once that in France they have now definitely set their mind against throwing any charges on the general budget on account of the railways. The Commission of Public Finances, which examined the bill, discussed this problem at great length in their usual logical and graphic fashion. In a nutshell, their argument amounts to this, that besides the State, the consumer, and the companies there is also the taxpayer, whose interests have to be reconciled. "There may exist in the obscure villages of Brittany a small taxpayer who may have never used a railway." He will be called upon to pay his contribution towards making up the deficiency of the railways if the policy of low tariffs be maintained. But besides this abstract and theoretical reasoning in support of the theory of justice to the taxpayer, the actual exigencies of the moment do not permit of any aid by the Government. This policy will be particularly embarrassing when it is found increasingly difficult to balance the general budget of the country. The problem thus stated is not peculiar to France, and applies with equal force to this country.

There is, therefore, only one solution left, and that is that the companies must pay their way. The enforcement of this principle merely supplies what the public expect to achieve by forces of competition in other fields of business. It proposes to fix a limit below which even cut-throat competition cannot lead for any prolonged period of time. To expect that the railway managers will, if unregulated, charge less than this, is to make a grievous error. Railway managers may, indeed, pose as philanthropists, and induce the trader for some time to believe that they will continue to handle the goods even if they did not yield any income. But it is doubtful whether, if left uncontrolled, they will not hastily renege themselves by an increase of charges. No sensible, Kaffi believes that they will so raise the rates as will bring the traffic to such an extent as will result in a net revenue. On the other hand, the Unions, who are known better than the traders the extent to which the trade can bear a rise in rates. Exaggerated under consideration of the part which the rate regulations in such up of the cost of an article. It is made of native part, considering the average for the trouble that certain super

country. Undue reliance has been placed upon the ability of the trader to withdraw from the business as soon as rates become high. In this connection the opinion of Commissioner Staples, of the Minnetose Commission, is worthy of note: "But there is hardly a shipper who is in a position to do so (withdraw) even if fully aware of the fact that his rates are unreasonable.....This is specially true in undertakings requiring large fixed investments and equipment which cannot be used for any other purpose."

It has been found necessary to dilate upon this argument at some length, in view of the remarks of Sir William Acworth in the article above referred to: "But railway rates and fares can be avoided by the simple method of not travelling or not consigning traffic." This very general statement is likely to mislead people about the ease with which people can refuse to avail themselves of railway service. It may be well to recall that the traffic receipts on the railways have increased, in spite of the rise in fares and rates. A component part of this system is the periodical revision of charges, in order to keep to the limit intended to be set by this mechanism. This limit will, naturally, be a shifting one, varying with the costs of working on the railways. As soon as they go down the public will benefit by a lowering of the rates. They have already shown a downward tendency, and the public may well expect a lowering of the charges. No gift of prophecy is required to say that they must come down. The public will have soon a proof of the efficacy of this system. The existing rates have been fixed at a time when wages and materials were at their topmost point. With the fall in the index numbers, the wages will go down, and in their turn will react upon the working costs of the railways. The public will benefit by this diminution of costs by the almost automatic application of the principle of revision. In this connection it is well to examine the criticism that this system of revision will operate in the direction of putting up rates when trade is bad and putting down rates when trade is good. It is not intended to minimise the importance of this criticism, but, on the other hand, lest it be over-exaggerated, it is necessary to add that each amalgamated company will find it essential, and therefore will establish its own reserve fund to check sudden variations, and that with the return of normal times revisions cannot be frequent.

We cannot resist the temptation to indicate our belief with regard to another point raised by the same eminent economist in this connection. "It is not only that traffic may fall off because in railway phrase it cannot bear the rate.....but also that no one yet knows what are the potentialities of road motor competition." That there is any immediate or reasonably remote chance of the railways being superseded by some other transport industry as a more economic tool, is out of the question. That some invention may make the running of the railways more economical is possible. In this the public will have every opportunity of sharing in the economies effected by the same principle underlying the whole machinery of rate fixation and rate revision.

There is only one inevitable conclusion from the above discussion that the traders, while contending "that to charge such rates as upon the present amount of traffic would secure necessary revenue, will destroy the traffic and prejudice both the railway companies and traders" did not sufficiently realise their own interests. They were mounting a ladder with unsafe rungs.

THE GROWTH OF THE FOREIGN TRADE OF EUROPE.

It would puzzle many people to enumerate offhand the independent governments of Europe at the present time. Isor to the Great War, they numbered 18, excluding among key, Luxemburg, and Montenegro. The value of their foreign trade per head of their populations is shown in the following table for the year 1912:—

Country	Population	Imports	Exports	Total Trade	Per Head of Population
Sweden, 1901	5,175,000	25.5	19.6	45.1	£ 8 s d
Norway, 1901	2,266,000	15.4	8.6	24.0	£ 8 s d
Spain, 1901	18,657,000	36.3	30.3	66.6	£ 8 s d
Portugal, 1901	5,100,000	16.5	9.8	26.3	£ 8 s d
Sweden, 1912	5,604,000	43.5	42.2	85.7	£ 8 s d
Norway, 1912	2,439,000	28.6	18.0	46.6	£ 8 s d
Spain, 1912	19,631,000	42.1	41.8	83.9	£ 8 s d
Portugal, 1912	5,500,000	22.7	13.6	36.3	£ 8 s d

Taken in the order of the total value of their imports and exports in 1912, the United Kingdom (£1,343,600,000) stood easily first, Germany (£1,045,100,000) a good second, and France (764,700,000) third. The Netherlands (£555,300,000) and Belgium (£507,500,000) came next, followed by Russia (£284,000,000), Austria-Hungary (£262,100,000), Italy (£257,200,000), and Switzerland (£137,200,000). The other nine countries ranged in order from Sweden (£85,700,000), Spain, Denmark, Rumania, Norway, Portugal, Bulgaria, Greece, to Serbia (£7,600,000). The growth of the trade of Russia, Austria-Hungary, and Switzerland between 1901 and 1912 is shown in the next table:—

	Population	Imports	Exports	Total Trade	Per Head of Population
		Mln. £	Mln. £	Mln. £	£ s d
Russia, 1901	135,686,000	62.6	80.4	143.0	£ 8 s d
Average, 1902-1906	144,537,000	71.1	106.4	177.5	£ 8 s d
Average, 1907-11	160,692,000	103.7	137.7	241.4	£ 8 s d
1912	1,200,000	125.7	160.3	286.0	£ 8 s d
Austria-Hungary, 1901	45,838,000	68.9	78.6	147.5	£ 8 s d
Average, 1902-1906	47,012,000	84.4	89.6	174.0	£ 8 s d
Average, 1907-11	49,000,000	114.1	98.8	212.9	£ 8 s d
1912	50,237,000	148.2	115.9	264.1	£ 8 s d
Switzerland, 1901	3,341,000	44.7	34.5	79.2	£ 8 s d
Average, 1902-1906	3,472,000	54.2	39.0	93.2	£ 8 s d
Average, 1907-11	3,695,000	68.4	47.2	115.6	£ 8 s d
1912	3,825,000	81.6	55.6	137.2	£ 8 s d

The population of Russia increased at the rate of 23.8 per cent. between 1901 and 1912. Its imports rose by 97.6, and its exports by 99.4 per cent., and its total trade by 98.6 per cent. Although the value of the total trade per head of the population remained very low, it must be remembered that the great mass of the population was composed of peasants, who cultivated their holdings in a very backward condition. The imperative need of Russia is the development of transport facilities, and of trained direction and control of its enormous resources. The population of Austria-Hungary rose at the rate of 9.6 per cent., and the values of its imports and exports by 115.1 and 44.9 per cent. respectively. The value of its total foreign trade rose by 77.7 per cent. The population of Switzerland rose by 14.5 per cent., the values of its imports and of its exports rose by 82.5 and 61.1 per cent. respectively, and the value of its total trade increased at the rate of 73.2 per cent. The value of the exports from Russia are seen to have exceeded the value of the imports throughout the period. For the first six years of the century the value of the exports from Austria-Hungary exceeded that of her imports. In the next six years the value of her imports exceeded that of her exports. In the case of Switzerland the value of the imports has been higher than that of the exports throughout.

TABLE SHOWING THE GROWTH OF THE FOREIGN TRADE OF SWEDEN, NORWAY, SPAIN, and PORTUGAL from 1901 to 1912.

	Population	Imports	Exports	Total Trade	Per Head of Population
		Mln. £	Mln. £	Mln. £	£ s d
Sweden, 1901	5,175,000	25.5	19.6	45.1	£ 8 s d
Norway, 1901	2,266,000	15.4	8.6	24.0	£ 8 s d
Spain, 1901	18,657,000	36.3	30.3	66.6	£ 8 s d
Portugal, 1901	5,100,000	16.5	9.8	26.3	£ 8 s d
Sweden, 1912	5,604,000	43.5	42.2	85.7	£ 8 s d
Norway, 1912	2,439,000	28.6	18.0	46.6	£ 8 s d
Spain, 1912	19,631,000	42.1	41.8	83.9	£ 8 s d
Portugal, 1912	5,500,000	22.7	13.6	36.3	£ 8 s d

The population of Sweden between 1901 and 1912 rose by 8.3 per cent. The value of the imports rose by 70.6, and that of the exports by 115.3 per cent. The value of the total trade rose by 90 per cent. The population of Norway did not increase quite so fast, its percentage increase being 7.6, but the percentage increase of Norway's imports was higher, viz., 85.7. Norway's exports did not rise quite so rapidly as Sweden's, the percentage being 109.3, but the percentage increase (94.2) of the total trade was higher than that of Sweden.

The population of Spain rose by 5.5 per cent., the value of her imports by 16 per cent., that of her exports by

37.9 per cent., and of her total foreign trade by 26 per cent. The population of Portugal increased at the rate of 9.8 per cent. The value of her imports rose by 37.6, and that of her exports by 38.8 per cent. The value of her total trade rose by 38 per cent. Throughout the period from 1901 to 1912 the values of the imports of Sweden, Norway, Spain, and Portugal were higher than those of their exports, although the percentage increases of the exports were greater than those of their imports.

TABLE SHOWING THE GROWTH OF THE FOREIGN TRADE OF RUMANIA, BULGARIA, GREECE, and SERBIA from 1901 to 1912.

	Population	Imports	Exports	Total Trade	Per Head of Population
		Mln. £	Mln. £	Mln. £	£ s d
Rumania, 1901	6,000,000	11.7	14.2	25.9	£ s d
Bulgaria, 1901	3,750,000	2.8	3.3	6.1	£ s d
Greece, 1901	2,500,000	5.6	3.8	9.4	£ s d
Serbia, 1901	2,500,000	1.8	2.6	4.4	£ s d
Rumania, 1912	7,248,000	22.8	27.7	50.5	£ s d
Bulgaria, 1912	4,400,000	8.0	7.4	15.4	£ s d
Greece, 1912	2,700,000	6.2	5.8	12.0	£ s d
Serbia, 1912	3,000,000	4.2	3.4	7.6	£ s d

* Values for 1911. The values per head of population were, therefore, slightly higher than shown in the table.

The population of Rumania increased by 20.8 per cent., but the values of the imports and exports nearly doubled, being 94.9 and 95.1 per cent. respectively higher in 1911 than in 1901. The population of Bulgaria was 17.3 per cent. higher, but the value of her imports was nearly treble in 1911 that of her imports in 1901, having risen by 185.7 per cent. The value of her exports in the 11 years rose by 124.2 per cent., and that of her total trade by 152.4 per cent. The population of Greece rose by 8 per cent., that of her imports by 10.7, and of her exports by 52.6 per cent. The value of her total trade was 27.7 per cent. higher. Serbia increased her population by 20 per cent. The value of her imports rose by 133.3 per cent., and that of her exports by 30.8 per cent. The value of her total trade was 72.7 per cent. higher. The values of the exports of Rumania were higher than those of her imports both in 1901 and in 1911. The values of the exports of Bulgaria and of Serbia were higher in 1901 but lower in 1911 than those of their imports. The values of the imports by Greece were higher than those of her exports in both years.

Business Notes.

The Mark Exchange and Inflation.—Although, of course, the increase in note issue in Germany has much to do with the depreciation of the mark, it may be well to recall that the reaction of note issue on exchange rates is not by any means an immediate one, and that in the recent exceptional movement the part played by inflation has been relatively small. The movement in note circulation (Reichsbank notes and Loan Bureau notes) and in exchange during the last two years has been as follows:—

	1920.				1921.			
	Bank Notes	Loan Notes	Total Notes	Ex. change, Berlin-London	Bank Notes	Loan Notes	Total Notes	Ex. change, Berlin-London
End—	Mil. M.	Mil. M.	Mil. M.	M. to £.	Mil. M.	Mil. M.	Mil. M.	M. to £.
January	37,443	12,938	50,381	282	66,621	11,461	78,082	242
February	41,034	12,721	53,755	338	67,427	10,340	77,767	213
March	45,70	13,732	59,432	279	69,417	10,755	80,172	246
April	47,940	13,776	61,716	220	70,840	9,043	79,883	263
May	50,017	13,567	63,584	215	71,839	9,043	80,882	243
June	53,975	13,205	67,180	152	75,321	8,766	84,087	282
July	55,769	13,048	68,817	187	77,391	8,358	85,749	292

September	61,735	13,468	75,203	218	86,384	7,610	93,994	437
October	63,596	13,144	76,740	261	91,528	7,516	99,044	708
November	64,284	12,491	76,775	257	..	..	..	..
December	68,805	12,153	80,958	257	..	..	..	..

It is clear that the present movement has been due far more to fears of the future than to any actual inflation that has already taken place. Indeed, if the level of prices in Germany corresponded to the present rate of exchange there would be a serious lack of circulating medium in the country. Looked at from another angle, it might be

said that, judged on the present note circulation, and if the fear of future inflation could be disregarded, the exchange should be somewhere round 500 at the outside.

The World's Debt to the United States.—The Guaranty Trust Company of New York has compiled the following table showing the indebtedness of other Governments to the Government of the United States:—

	JUNE, 1921. Credits Granted Under Liberty Loan Acts.	Total Obligations.
Armenia	..	11,960,000
Austria	..	24,056,000
Belgium	347,692,000	375,280,000
Cuba	9,025,000	9,026,000
Czechoslovakia	61,256,000	91,180,000
Estonia	..	13,999,000
Finland	..	8,282,000
France	2,950,763,000	3,350,763,000
Great Britain	4,166,318,000	4,166,318,000
Greece	15,000,000	15,000,000
Hungary	..	1,686,000
Italy	1,648,034,000	1,648,034,000
Latvia	..	5,132,000
Lithuania	26,000	26,000
Poland	..	4,982,000
Rumania	23,206,000	135,662,000
Russia	187,790,000	36,128,000
Serbia	26,175,000	192,601,000
Totals	9,435,225,000	10,141,268,000

To this total should be added approximately \$1,000,000,000 of interest accrued and unpaid. It is pointed out that "after two centuries of foreign investment the British acquired a balance due them in 1914 from all parts of the world of about £4,000,000,000, or nearly \$20,000,000,000 at par of exchange. On these investments Great Britain realised, partly through transfer of ownership, about £1,000,000,000 during the war, which was used mainly in paying for American products. Though Great Britain required many years to reach her pre-war credit position through private investment abroad, the United States in the last six years has built up foreign credits of all sorts in excess of \$15,000,000,000. Of this amount, approximately \$3,000,000,000 is in the hands of private investors in the form of various classes of foreign securities, while more than \$10,000,000,000 is owed to our Government by other Governments." In approximate figures, at the parities of exchange, the principal inter-Government debts are estimated as follows:—Germany's reparation liabilities are about \$32,000,000,000; France owes \$2,700,000,000 on principal account to Great Britain and \$3,350,000,000 to the United States, making a total of about \$6,050,000,000; Italy owes to Great Britain \$2,312,000,000 and to the United States \$1,648,000,000, making a total of about \$3,960,000,000; while Great Britain owes the United States more than \$4,000,000,000. "Investments by Americans this year in all classes of foreign securities," it is stated, "should be approximately \$500,000,000, a part of which is for refunding purposes. This is equal to the amount of a year's unpaid interest on debts owed to our Government. This American investment abroad is essentially a new item of the greatest importance in our foreign trade balance; how important can be seen from the fact that it will offset one-fourth of the merchandise balance for the year, if that should amount to

visory work should be left to native bosses. On the ground that such a provision would intensify unemployment and increase accidents, Mr Hendriks, the miners' secretary, emphatically protested, and threatened that the miners would strike within 48 hours of the gazettement of the amendment. On the other hand, General Smuts disclaimed any intention to interfere with the colour bar, and dilated upon the dangerous degree to which the mining industry of the Transvaal was dependent upon the fortuitous accident of the gold premium. He pointed out that in the event of gold falling to £5 per ounce five mines (on the basis of actual working costs) would operate at a loss; a decline to £4 15s would rule out five others; at £4 10s a further six properties would be unpayable, and at the normal price of £4 5s per ounce six more. Thus out of the 39 mines operating to-day 24 would have to close down should the gold premium entirely disappear—as it might do in the event of the cancellation of Great Britain's war debt to the States. Even with gold around £5 5s per ounce a number of mines are on the borderland. The shutting down of the most important of this group—the East Rand Proprietary—would not only entail a great reduction in the expenditure upon labour and materials, but would involve the whole district in serious difficulties arising from the excessive accumulation of water. With regard to the amendment of the regulations, it is useless to beg the question that a partial removal of the colour bar is entailed. The hard fact which the miners have to face is, however, this. Costs require to be brought down somehow on the labour side. Either the whites employed must accept lower wages, or they must agree to the performance by natives of certain partially-skilled operations, thus enabling the number of whites at any particular mine to be reduced. Whether the latter procedure would result in any real increase of unemployment is doubtful; indeed, it might operate in the contrary direction. Crushing at several mines has been suspended prematurely owing to the fact that the high level of expenses did not permit the complete exhaustion of the properties. Various areas in both the Eastern and Western districts of the Rand are awaiting better economic conditions for exploitation. It is to the best interests of all directly or indirectly concerned with the gold industry, that costs should be on a basis which would permit the treatment of the enormous quantities of comparatively low grade ore actually available. As for a strike—this threat now has few terrors for the leaders of the industry. Indeed, such an event would probably be taken advantage of to reduce the number of supervising officials to something approaching an economic basis.

Simmer and Jack Proprietary.—A striking instance in point confirmatory of the foregoing observations is supplied by the report just to hand of that old Central Rand undertaking, the Simmer and Jack. For the year ended June 30th the working revenue totalled £890,800, including £211,800 premium on gold. The working profit came out at £119,300. Hence, but for the excess above the normal price of the product, last year's operations would have resulted in a loss of £92,500. At the figure above named, the earnings scored a small improvement upon those of the preceding period, a fresh decline in the average yield being rather more than compensated for by the crushing of an appreciably increased tonnage at the somewhat lower cost ratio of 22s. At the meeting the chairman made a special point of the latter feature as indicating a turn in the tide; from 1916, when expenses were 14s 9d per ton, they had been steadily on the up grade until 1920. By a reduction to something approaching the former standard, the life of the mine might, he remarked, be extended to six or seven years, as it would bring into the payable category ore which cannot be so classed under present conditions. In the alternative, the company will apparently have to discontinue milling at no very distant date, as only reef-bearing claims are now intact. The tonnage of ore is steadily being worked out. The reserves show

the tonnage represents no more than about a year and a half's supply. Reverting to the finances, the payment of the 2½ per cent. dividend—as before—left the substantially increased surplus of £150,000 to be carried forward. The balance-sheet shows net cash assets to the amount of some £80,000.

The Salvador Loan Default.—A meeting of the holders of Salvador Government bonds on Thursday received full information of the negotiations between the trustees of the loans and the Salvador Government since the default of February last. The original debt of the Republic was compounded in 1860, and two later loans were replaced by the 5 per cent. debentures of the Salvador Railway, as to which further arrangements will have to be made next year. The external loans now in question are the 6 per cent. loan of 1908 and the 7 per cent. funding loan of 1915, the latter representing the unpaid interest on the 6 per cent. loan for four and a-half years (1915-1919). The amounts outstanding are:—On the 6 per cent. loan, £756,900; on the funding loan, £201,388; and £86,270 for the unpaid interest on both loans during 1921. On April 28th last the bondholders met and authorised the trustees, if a settlement were not arrived at within two months, to seek the aid of the Council of Foreign Bondholders and the Foreign Office. The trustees accordingly pressed for a settlement, and learnt that the Salvador Government had not sufficient funds even for the full payment of officials, that it had been in treaty for a loan with certain financiers in San Francisco, but that these negotiations had been abandoned, and that, at the instance of Mr Minor C. Keith, "the King of Costa Rica," a group of New York financiers, with the sanction of the United States Government, had offered a loan of \$16,000,000, out of which a settlement is to be effected of the claims of the external bondholders, the Salvador Railway Company, and certain holders of internal loans. These latter loans, including interest in arrear, amounted at the end of 1919 to \$3,819,119 in silver; but the Internal Debt at that date had been increased by other items to a total in silver of \$13,568,590. On the \$16,000,000 now offered, the external loans will constitute a second charge. It appears that the loan will be secured on the Customs duties, already pledged in part to the external bondholders, and the railway and other claims will take third rank; and, moreover, the United States Government will appoint officials to supervise the collection of the assigned revenues, as in Nicaragua and Santo Domingo. (The only other revenue that can be offered as security seems to be that derived from spirits.) Mr Keith is authorised by the Salvador Government to negotiate with its creditors, and a committee of two gentlemen was appointed by the meeting to co-operate with the trustees in arranging terms of settlement. It was stated that the American financiers are not prepared to lend the money unless the rights of the British bondholders are properly protected. The Council of Foreign Bondholders will co-operate, through the committee, in effecting a settlement. Naturally regret must be felt, both at the probable sacrifice of some portion of the capital of the debt of a country which has large undeveloped resources and is only temporarily embarrassed, and still more at the passing of the chief place in financing the Central American States from British to American financiers. But the United States is now the only possible source of fresh capital for Central American enterprises, and the committee may be trusted to make the best terms that it can.

Bulgarian Affairs.—The following account of international conditions in Bulgaria has been received in London from Banca Commerciale Italiana from its associated Office in Sofia. "There is a general recognition that Bulgaria's foreign policy has so far been too much on the side of the interests to the detriment of traders and manufacture, the recent abolition of the monopoly in wheat is g—

taken as a first step in the opposite direction. This measure should certainly be of very great help in restoring Bulgaria's trade balance, and wheat exporters have been quick in seizing the occasion; very large sales of flour have been made, especially to Constantinople. Sales have also been made for delivery in Russia. There has also been a marked revival in chemicals, hides, and kindred lines. The building trade is specially flourishing; over one thousand houses are being erected, and it is hoped that the housing problem will thereby shortly be solved." The Government's action "in exempting new buildings from taxation and from Government control, also in threatening confiscation of such ground in the centre of Sofia as still remains vacant has done," we are told, "a good deal towards overcoming this difficulty." "Conditions on the Stock Exchange are, unfortunately, not quite so bright; transactions are very few and only for small amounts. The depreciation of native currency has not had the effect of stimulating dealings in stocks in Bulgaria, neither has it brought about a rise in their value. The money market has been very active, owing to the constant fluctuations of foreign currencies; the pound sterling, dollar, franc, and lira have, for the last three months, been continually on the increase. It would seem that, with the revival of trade, and for other reasons which might have been expected favourably to affect native currency, the latter should have improved considerably, but any tendency in that direction was frustrated by the constant purchase of marks, made, not for speculative purposes, but for payment of goods purchased from Germany. Owing to the fall of the mark Bulgarian traders are, of course, driven to buy once more from Germany on an ever-increasing scale, and both marks and other currencies have been bought with this view far ahead." We may add, however, that the Government has fresh financial troubles. The Reparations Commission at Sofia is stated to have advised the postponement of the first payment of reparations, in view of the heavy fall in the leva at Sofia since November 1st. This fall is attributed partly to that of the German mark, partly to the proposed new duties on exports—which are so high that they may frustrate their aim. Bulgaria has just effected a settlement with her foreign bondholders, and, unless relief is given, she may have to compound with them again.

Dalgety's Year.—The report of Dalgety and Co., Limited, for the year ended June 30th last shows a considerable reduction in profits, which is ascribed to "the persistent decline in the value of commodities of all kinds and to the financial stringency which has existed." The table below shows results since 1906:—

Year Ended June 30.	Profits.	Expenses and Taxes.	Debt-ture Interest.	Prof. Div.	Ord. Div.	Rate.	Reserve, &c.	Carried Forward.
	£	£	£	£	£	%	£	£
1906	371,591	148,171	114,439	..	70,000	7	40,000	55,381
1907	427,490	164,441	115,306	..	70,000	7	70,000	63,124
1908	430,746	170,328	113,230	..	70,000	7	70,000	70,311

1915	582,097	258,048	107,377	25,000	80,000	8	100,000	208,687
1916	643,931	322,210	107,864	25,000	100,000	10	100,000	197,544
1917	861,793	484,448	107,119	25,000	130,000	13	210,000	102,771
1918	875,369	510,304	104,065	25,000	140,000	14	85,000	113,770
1919	857,773	494,475	101,141	25,000	140,000	14	90,000	120,928
1920	957,298	566,470	98,251	25,000	150,000	15	110,000	128,506
1921	689,168	445,176	103,386	25,000	100,000	10	60,000	84,112

Expenses fell from £359,600 to £310,300. Australian taxation was £10,500 lower, and English taxation fell from £88,500 to £47,600. The ordinary dividend is at the same rate as last year, but a bonus of 5 per cent. paid for 1919-20 is now omitted. The reserve fund gets £50,000, as in the previous year, when, however, £50,000 was also written off premises. The staff benevolent fund is again credited with £10,000. The balance-sheet shows a reduction of £390,500 in creditors, but advances on land, stations, stock, &c., have increased by £398,400 to

£4,429,600. "Merchandise" is £221,700 lower, and premises £146,100 lower. The directors state that a bountiful wheat harvest in Australia and excellent returns from the dairy produce exports from Australia and New Zealand have helped materially to modify the unfavourable conditions ruling in the past financial year. The present outlook continues "highly satisfactory," and prices obtainable for wool show a substantial recovery. The directors are to be congratulated upon showing an excellent and informative balance-sheet, which reveals the fact that the company is in a fairly strong position.

United of Havana.—The report for the year ended June 30th last of the United Railways of the Havana and Regla Warehouses covers for the first time the working of the amalgamated undertakings of the United Railways of Havana, the Western Railway of Havana, and the Cuban Central Railways, the amalgamation having become effective as from July 1, 1920. Gross receipts amounted to £6,329,700 as against £5,876,100 in the previous year, and expenditure to £4,848,100 against £4,255,400, leaving a balance of £1,481,500 as compared with £1,620,700. The ratio of expenses to receipts was 76.59 per cent. as against 72.42 per cent. Profit on the working of the Regla Warehouses and other properties, gain in exchange, and other receipts brought the total balance up to £1,810,200. After payment of fixed charges and taxes a dividend of 4 per cent. is paid on the ordinary stock and shares, absorbing £262,300, leaving £239,400 to be carried forward as against £31,700 brought in. British and Cuban taxes absorb £663,000. The directors state that "it has not been possible to collect all the outstanding accounts of the company, and this together with the uncertain prospects for the current year" prompts them to adopt a conservative policy, for the net earnings under normal conditions would justify a higher dividend than 4 per cent. The general manager's report states that traffic movement was carried on under abnormal difficulties for almost the whole of the year, "but the movement of the sugar crop was handled more freely than for some years past." Higher tariffs came into force in December, and these are said to have saved the railways from a serious financial situation. "To-day, with the fall in wages and in prime materials, it is becoming necessary to reduce these tariffs, and we are now studying the best means of so doing before the movement of the next sugar crop." Prospects for the current year are said to be not too promising. Proposals have been made to limit next year's sugar crop by legislation. The general manager adds that "the future prosperity of the sugar industry of Cuba would appear to lie, not in reducing output, but in producing at a cheaper rate than any other country. The next crop will undoubtedly be produced more cheaply than has been the case for some years, and in this solution of Cuba's great problem it will be the duty as well as the interest of this railway to co-operate." Further progress was made during the year in the conversion of locomotives to fuel oil, and the report adds that but for the use of oil the total fuel bill would have been much higher than was actually the case. In 1919-20 the total fuel bill was £746,800, of which £697,700 was for coal and £49,100 for oil. Last year the total was £841,500, of which £474,100 was for coal and £367,400 for oil.

Grand Trunk Award.—An official Canadian Government publication has been issued containing the full official text of the Grand Trunk Award and the reasons for the award. The awards, and reasons therefore, of the chairman, Sir Walter Cassels, and the two arbitrators, Sir Thomas White and Mr W. H. Taft, are set out separately. The award is, of course, the subject of an appeal to the Privy Council. Those who wish, pending the Privy Council's hearing, to study the verbatim accounts of the awards and the arguments of the arbitrators are referred to this document, which is issued by the King's Printer at Ottawa.

Transvaal Output for October.—The October statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to

707,825 ounces, as compared with 691,096 ounces in August, and 662,472 ounces for October, 1920. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.

The first ordinary meeting of the present session of the Royal Statistical Society will be held at 5.15 p.m., on Tuesday, November 15th, in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C. 2, when the president, Sir R. Henry Rew, K.C.B., will deliver an address on "The Progress of Agriculture."

The annual general meeting of the members of the Industrial League and Council, of which Viscount Burnham, C.H., and the Right Hon. G. H. Roberts, M.P., are joint presidents, will be held at the Central Hall, Westminster, S.W. 1, on Wednesday, November 16th, at 5 p.m. The usual banquet will not be held.

The adjourned special general meeting of members of the London Chamber of Commerce to consider "The Hague Rules, 1921, Defining the Risks to be assumed by Sea Carriers under a Bill of Lading" (as agreed upon at the conference of the International Law Association at the Hague, August 30th-September 3rd), will be held at the Cannon Street Hotel on Monday, November 14, at 2.30 p.m. The chair will be taken by the president of the Chamber (Mr Stanley Machin, J.P.).

At a meeting of the executive committee of the Sound Currency Association, held on November 9th, Mr Walter Leaf (chairman, London County Westminster and Parr's Bank, Limited), Mr F. C. Goodenough (chairman, Barclays Bank, Limited), the Hon. R. H. Brand, C.M.G. (Messrs Lazard Bros. and Co., Limited), Mr Leslie Couper, C.M.G. (general manager, Bank of British West Africa, Limited), and Mr G. J. Scott (Bank of Scotland), were elected vice-presidents of the association. Mr Francis Shipton (London manager, Standard Bank of South Africa, Limited) and Mr R. Holland Martin, C.B. (director, Bank of Liverpool and Martins, Limited), were elected members of the executive committee.

Oversea Correspondence.

STEEL CORPORATION'S EARNINGS RAILROAD STRIKE AVERTED—

(CONDENT.)

YORK, October 29.

Statistics of the Steel Corporation's earnings for the month ending October 29th, 1921, are as follows:

The October month ending October 29th, 1921, shows a net profit of \$1,223,331, as compared with \$1,223,331 for the corresponding month of the previous year.

The October month ending October 29th, 1921, shows a net profit of \$1,223,331, as compared with \$1,223,331 for the corresponding month of the previous year.

The October month ending October 29th, 1921, shows a net profit of \$1,223,331, as compared with \$1,223,331 for the corresponding month of the previous year.

The October month ending October 29th, 1921, shows a net profit of \$1,223,331, as compared with \$1,223,331 for the corresponding month of the previous year.

The October month ending October 29th, 1921, shows a net profit of \$1,223,331, as compared with \$1,223,331 for the corresponding month of the previous year.

The October month ending October 29th, 1921, shows a net profit of \$1,223,331, as compared with \$1,223,331 for the corresponding month of the previous year.

The October month ending October 29th, 1921, shows a net profit of \$1,223,331, as compared with \$1,223,331 for the corresponding month of the previous year.

the corporation was able to show net earnings for the quarter of \$18,918,058, as against \$21,892,016 for the preceding quarter and \$48,051,540 for the third quarter of last year. Private estimates had ranged from \$10,000,000 to \$15,000,000, with most guesses nearer the lower figure. The actual result, therefore, was nearly \$4,000,000 above the most optimistic predictions. The outstanding feature of the report is the progressive improvement shown in the earnings by months. The July net earnings of \$5,157,395 were the smallest for any month since January, 1915. Earnings for August, however, increased to \$6,502,976, while for September they showed a further gain to \$7,257,687. After July operations steadily increased, until in September they were about 40 per cent. of capacity, and at the present time, it is understood, the corporation's plants are operating close to 50 per cent. of capacity. The reduction in wages, together with other economies, greatly reduced operating costs, and that fact was largely responsible, apparently, for the unexpectedly favourable showing for the third quarter. Earnings, on the other hand, were not sufficient to cover preferred dividend requirements for the quarter, which amounted to \$6,304,919. The balance available for preferred dividends was \$5,693,196, or \$611,723 short of the sum needed. In the preceding quarter the full preferred dividend was earned, besides 35 cents a share on the common stock. The common dividend for the past quarter called for \$6,353,781. After meeting both common and preferred dividends, therefore, there was a deficit of \$6,965,504, as compared with a deficit of \$4,571,668 for the quarter ended June 30, 1921, and a surplus of \$17,869,939 for the three months' period ended September 30, 1920. Should the corporation earn its full dividends in the fourth quarter, as now seems likely, it will have used from its accumulated surplus less than \$10,000,000 for the full year to meet all requirements, including common dividends. Net earnings for the nine months ending with September amounted to \$73,096,796, as compared with \$133,396,264 for the corresponding period of 1920. The balance available for dividends was \$29,255,833, equivalent to \$2.03 per share on the \$508,302,500 of common stock, after providing for preferred dividends. In the like period a year ago the balance available for dividends was \$82,995,957, and earnings on the common stock were equivalent to \$12.60 a share. For the nine months the deficit, after all deductions, allowances, and dividends, totals \$8,720,267, as against a surplus of \$45,019,857 for the same period of 1920.

While recent developments in the railroad-labour crisis here had greatly strengthened confidence that no nationwide tie-up of transport facilities would occur, even if the railroad brotherhoods carried out their threat to strike, relief is felt on all sides now that the proposed strike has been called off by the union leaders. The brotherhoods decided to cancel their strike order, issued about a fortnight ago, because of "the growing public opinion that the strike would be against the Labour Board, and consequently the Government, and not against the railroads." Public sentiment undoubtedly was largely responsible for the cancelling of the strike call, but it was not the only factor. The Labour Board's active efforts to avert the threatened walk-out, and elaborate preparations by the Government to prevent, through Court injunctions and otherwise, any "interference with the arteries of commerce," were, perhaps to a greater extent, instrumental in bringing about the result. The main features of the "satisfactory settlement" reached at the Chicago conference this week between the Labour Board, railroad executives, and union labour representatives are:—The railroad managements agreed that no changes in wages, working conditions, or rules would be sought except through the Labour Board, as provided by law. The Labour Board agreed that it would not consider any request for further wage cuts for any class of employees until it had finished with the matter of rules and working conditions for that class. All parties concerned express satisfaction with this basis of settlement. As a matter of fact, however, the only thing that has been definitely settled is that the threatened strike has been called off. The 12½ per cent. average wage reduction, which took effect July 1st, of course stands, but the two vital issues—the question of

further wage reductions and the revision of working rules and conditions—remain to be determined, and it may be many months before they are disposed of. In the meantime, freight rates can, and probably will, be reduced by the Interstate Commerce Commission. The railroads will unquestionably present petitions for wage cuts in the near future, and it is quite possible that the Board may be able to reach a decision thereon sooner than the unions expect. But the railroads will seek reductions in strict accordance with the law; they will post notices of wage cuts, discuss the proposed revisions with their employees, and then, if no agreement is reached, they will appeal to the Labour Board to settle the dispute. Pending the outcome of their efforts in that direction, it is evident that the carriers must rely upon continued curtailment of maintenance and repair expenditures and rigid economies, as well as a possible increase in traffic, to offset any freight rate reductions that may be made.

FRANCE.—INDUSTRIAL PROBLEMS—WAR SERVICE AND PROFITS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 8.

An interesting sketch of the measures France has taken, and proposes to take to meet the extraordinary economic situation arising from the war, has been given to-day in the Senate by M. Dior, the Minister of Commerce, in his reply to an interpellation in which the Government was attacked on the triple ground of not having any economic programme, of having projected no serious reform, and of having failed to defend what were described as "the few clauses of the Versailles Treaty that are favourable to France." Among other factors cited as inimical to French industry at present were the Eight Hours' Law, which has resulted, it was alleged, in an enormous lowering of output. Export trade, it was insisted, was becoming impossible owing to high and inequitable transport rates. The German taxpayer, according to one speaker, is paying only 15¢ in taxes, against 56¢ paid by the French taxpayer.

One of the worst faults committed by the authors of the Versailles Treaty, it was stated in the debate, was that the metallurgical plants in Lorraine had been taken from the Germans without the necessary complement of coal and coke concessions on the right bank of the Rhine, which placed the ironworks in a similar situation to corn-mills that had no wheat to grind. As to labour, an adult workman in France was paid 22¢ 60c on an average, while the German workman on the left bank of the Rhine received 7¢ 65c, and on the right bank 6¢ 44c.

The Minister of Commerce, in his reply, first dwelt on the chaos that had descended on the economic world as the result of the war, and on the measures taken by the various nations to meet the crisis. The fall of prices, he said, had been marked by a return to the most furious economic selfishness in every country. France had been wrongly accused of having taken the initiative in this movement, but as a matter of fact it had arisen simultaneously in all countries. On the other hand, nearly all the nations had taken the same steps to meet the situation, either by transforming fixed customs duties into *ad valorem* duties, by demanding the payment of those duties in gold, by establishing compensatory surtaxes, by anti-dumping measures, or by protecting key industries. Even those countries that were most marked for their free trade policy, he said, had brought into force one or the other, and often several of these methods, while France had been satisfied with adopting the first-named.

The French Government believed that its primary duty was to help the country to return to normal conditions as soon as possible, and so to act that the economic pendulum would arrive at a steady equilibrium. Their first steps in this direction had been to bring to an end the wheat, petroleum, and other monopolies, and the various controlling organisations, and to institute a customs régime that was admittedly temporary, but that would enable the nation to exist, and that would prevent the national industries from succumbing to a passing crisis. In this connection France had not fallen into protectionism à

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000

Paid Up Capital ... 1,050,000

Reserve Fund and Undivided Profits ... 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

outrance. She had not, for instance, insisted on the payment of customs duties in gold, or on imposing anti-dumping supertaxes. She had merely sought to give her customs duties the same value as before the war. The new co-efficients were only temporary, and would be revised as soon as circumstances permitted. At this moment, he said, the Government was studying a new customs tariff which would be laid before the Chambers in the near future, and it was engaged in negotiations with 26 other countries for the purpose of assuring French exports the largest possible markets.

The problem of credit, which was a capital one, he said, so far as exports were concerned, was complicated by the difficulties connected with exchange and the depreciation of securities. Neither the British nor the Belgians had succeeded in solving this problem. The French Government had drawn lessons from their efforts, however, and was preparing a project to deal with credit in connection with exports. In conclusion, the Minister insisted that the situation was improving, and that it was improving through the action of the manufacturers and traders themselves, rather than through Government intervention.

Socialist agitators ever since the Armistice, and in some cases before it, have been steadily preaching to the proletariat that the bourgeoisie shirked and evaded service, while the working classes alone were the victims of the war. An engineer, M. Jean Rey, has analysed the facts of the situation, and has found it possible to determine to what extent each section of the community was actually serving at the front, and to what extent each section suffered. From this study it emerges that members of the liberal professions lost more by death than any other class, the figure being more than 100 per cent. over the normal, this class having lost in killed 55 per cent. of the numbers mobilised. The commercial classes come next, with a list of fatalities 46 per cent. above the normal, then the non-agricultural servant class, with 44 per cent., and then agriculturists, with a figure of 17 per cent. over the normal. Coming to the other end of the scale, the class that suffered least were the miners, who lost 42 per cent. less than the mean; next to them the transport workers, with 41; then industrial workers, with 28; and then State employees, with 21. Equivalent proportions are given by studying the figures of the severely wounded. M. Rey has also analysed the allocation of the profits made out of the war. Supplementary industrial profits made out of the war amounted to five milliards sixty millions, but of this the State recovered in taxes 3,280 millions, leaving to industry 1,800 millions, but against this there was in the various industries 3,900 millions of money immobilised. The State allowed a milliard compensation, and thus the position of industry was 2,900 millions loss, as against 1,800 profit, or a net loss of 1,100 millions. Orders were passed by the State during the war to the amount of about 40 milliards, and of this sum 17 milliards went to the workmen at very high rates of wages. They paid no war tax, but made large profits, which were very often unwisely spent.

The Bourse has remained weak, not only on account of the various appeals made to the market for capital, but also owing to collapse of the mark, which has spread a feeling of intense uneasiness. French 3 per cents. remained depressed at 53.95. There was a certain amount of recovery in banks, but much of the ground gained was lost. Banque de Paris, for instance, rose from 1,202

to 1,225, to drop back to 1,205; Union Parisienne showed a similar fluctuation, the figures being 798,815 and 802; for the Crédit Lyonnais they were 1,410, 1,435, and 1,415. Transports have improved; railways, owing to the feeling of security now prevailing as a result of the Chamber having voted for the new régime, are considerably stronger, P.M.L. being at 770 as against 750, Nord at 851 as against 838, and Midi at 723 as against 703. Navigation also improved, but for the most part lost what it had gained, Chargeurs Réunis rising from 530 to 540, to fall back to 530, Transatlantique closing at 248, as against 244, and Messageries closing at 224 as against 217. Thomson is typical of electrical undertakings, which have been heavy, though Thomson has declined more than most, falling from 860 to 832. The movement in metallurgical undertakings and in mines has been fluctuating, though copper has been rather harder, Tintos recovering at between 1,415 and 1,430.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—MARK EXCHANGE CATASTROPHE—STATE FINANCES—BOURSE—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 7.

THE mark exchange collapse to-day to 1,131 to sterling and 287 (temporarily over 300) to the dollar has produced a catastrophic situation for State finances, reparations, and the general economic position. There is a sharp, specious contrast to this in the industrial boom for which one sees no end until (1) either the mark recovers, or (2) until the mark drops so low (if the drop has not already nearly reached that point) that German paper will be rejected as international currency, after which the "catastrophe boom," however wild the demand for goods, must terminate for lack of foreign raw materials and food. The question of German bankruptcy which rises in some minds after each new exchange revolution is, however, idle. As far as home liabilities, and indeed

such foreign liabilities (among these the interest on foreign-held State and municipal bonds) are concerned, no declaration of bankruptcy is needed, for the good reasons that the Reichsbank's paper will always be available, and that a State paying its creditors (at present gold exchange) about one-eighth of their claims is already bankrupt in a measure far greater than is usual after formal bankruptcy. The real question raised (and this is not new but only aggravated) is whether Germany can pay her foreign gold liabilities, chief of which is the annual reparations payment. The prospect is extremely black, for in whatever way these gold liabilities are to be paid, nothing but foreign gold loans can prevent them appearing in the Budget in their equivalent in paper marks. Dr Wirth in May, when he did not foresee that new blows were being aimed against his desperate attempt to fulfil undertakings, optimistically estimated the annual reparations liabilities at around 50 milliards, which big enough sum was to go into the Budget expenditure. That was on a basis of 14 paper marks to one gold. To-day the reparations would cost nearer 300 milliards paper, or about seven times the whole current revenue. And that is only the beginning. On the basis of the price level conditioned by the present mark exchange, and if there is no great and speedy exchange recovery, the State expenditure will soon be three or four times above the estimate of last spring. The Government only last week burdened itself with 7 1/2 milliards for additional official salaries, but already a new salary agitation has begun. That is only a fraction of the new demands. With the exception of interest on home loans (which is now a trifle) the whole State expenditure must rise with the general price level. The *Frankfurter Zeitung's* Price Index for November 1st shows that prices have practically doubled since June 1st. Then the index figure (100 in January, 1920) was 128; now it is 248. On the more usual index basis of 100 in 1914 the present figure is 2,687. And this figure has been reached before the mark exchange drop of the last months had its full effect, and before the worst drop of this month had taken place. In June the expenditure, including reparations, was estimated at 150 milliards. Taking the above estimate of reparations, the Budget may easily be 500 or 600 milliards. What was long thought incredible in Soviet Russia will then have happened here. Such expenditure can only be covered by wholesale inflation. If it is at all possible to raise such a sum by taxation, the necessary taxes will be put through only slowly and collected even more slowly; meantime the floating debt will mount up, and with it the inflation; the price level will go higher, and the vicious circle which has characterised German State finance since the armistice will be unbreakable.

In all this (as long as the Entente claimants wait for their gold marks) there is no probability of sudden breakdown or formal bankruptcy. Not more probability than in Austria, or in Soviet Russia, which indeed repudiated her debt for political reasons, but which is not at all bankrupt, and meets obligations punctually with roubles of one-thirty-thousandth of their gold value. The parallel is close in other respects. Soviet Russia cannot recover because she cannot pay for foreign food, materials, and machines. That Germany will be able to pay for foreign food and materials much longer is unlikely. At present exchange even small imports of necessities cost whole budgets of paper marks. An importing firm complains that having contracted the petty debt of 15,000 Dutch guildens it is called on to pay 1,200,000 marks, which probably exceeds its whole capital. For the moment all import is barred. It seems certain that unless a very large foreign gold credit or an abandonment or indefinite suspension of the reparation claims (both are really necessary) is arranged, the complete obliteration of Germany as a positive factor in European economic life is only a question of time.

The Government has so far failed to settle the reparations credit question with industry, and the matter attracts just now very little attention, as the milliard gold marks hoped for would help very little. The Association of German Industries passed a resolution formulating its conditions, among which were greater economy, the freeing of industry from official restrictions, and the conduct of State undertakings without deficits. The last demand

is impracticable, as the expense of conducting these undertakings is again rising more rapidly than can be met by increasing charges. Dr Wirth some months back announced that the railways deficit had been reduced from 18 to 12 milliards; Dr Hermes, his provisional Finance Minister, last week announced that the deficit has returned to 19 milliards; this before the full weight of the new price revolution has been felt. The deficits on all State concerns together will total 37.9 milliards. Dr Hermes painted a black picture of the financial position. He put the maximum yield from the proposed new taxes at 42 milliards. The deficit in the ordinary Budget will be 53 milliards, a figure arrived at by estimating the reparations payments at the low figure of 55 milliards. Without reparations, the ordinary Budget shows a surplus of 2 milliards. The deficit on the extraordinary Budget is 57 milliards. The total sum to be raised by loan (i.e., floating debt increase) is about 110 milliards. For the financial year 1922 (ending March, 1923) Dr Hermes estimates 97.7 milliards revenue, ordinary expenditure 69 milliards, reparations 77.6 milliards, extraordinary expenditure 24 milliards, and clearing, &c., 12 milliards. The amount in paper of the reparations gold liability is, of course, entirely conjecture. Dr Hermes refused to reckon the depreciation of the mark to lower than 1 to 40 gold; on that basis the whole 1922 Budget deficit would be 126.9 milliards. This statement was made only on November 4th; since then the mark's depreciation has fallen to about 1 to 80.

The Reichsbank has raised its price for the 20-mark gold coin to 760 paper marks. At this low price practically no coins are delivered. The bourse again last week was active and rising. Professional speculators tended to hold aloof on the ground that a reaction must follow a possible exchange recovery, but the outside public bought hard. The *Frankfurter Zeitung's* index shows a rise of only from 38,510 to 38,654, which rather under-shows the real movement. Notable was the sharp rise in fixed interest securities, the index figure for home loans rising from 822 to 853, as a result of heavy buying of loans, largely by foreigners, as exchange speculations. Properly German bonds, not stocks, are exchange speculations; the buyer of the former usually gets the full advantage of a mark exchange recovery, whereas the stock buyer loses part of his gain on the exchange, owing to the accompanying fall in quotations. The following table illustrates this point:—

Date.	Stock Index.	Dollar Exchange.
1920—January 1	7,792	(about) 50
March 1	12,311	100
June 1	8,533	39
1921—January 8	15,724	73
March 5	12,286	62
November 4	36,989	230

A decree is expected tomorrow, raising the bourse transfer duties to a maximum of 1 per cent. The Minister of Industry, Robert Schmidt, announces a Bill restricting speculation, especially in exchange; and the Bourse Committee is about to forbid official dealing in stocks in smaller parcels than 5,000 marks. The newspaper agitation against the speculation craze is strong, but not entirely reasonable, as the stock buying is merely a form of the "Flight from the Mark"; the buyer, indeed, speculates on a quotation rise, but in most cases this rise is regarded as compensation for the fallen buying power of money. The dividend yield of stocks at present quotations is practically nil—some stocks paying around 20 per cent. are quoted around 2,000. Stocks are bought merely for their "liquidation value," on the assumption that the company's assets will keep their full gold value, however much the currency depreciates; and the supposed bourse speculation is only the same prudence which leads citizens, as they are at present doing, to buy headlong in the retail shops.

Federal 3 per cent. was again heavily bought, and rose to the post-war record price of 87. War Loan 5 per Cent. was 77.50, 4 1/2 per cent. 70.50, 3 1/2 per cent. 64.30, Savings and Premium 79.50. Compared with Federal, Prussian Loans remain very low, 4 per Cent. Consols being 68.10, Staffel-Anleihe 3 1/2 58.90, ditto 3 1/2, 56.50; ditto 3 per cent., 55.50. These loans all fell sharply to-day, while 3 per Cent. Federal rose 2.10 points. As Prussian Loans

"The Swedish Bank of Commerce"

are doubly guaranteed by the Republic and by Prussia, and are further secured on valuable forests and mines, the low quotations indicate neglect by the foreign bond-buying speculator in exchange.

The condition of industry is extremely good. Only 1.3 per cent. of nearly 6,000,000 trades union members were unemployed on October 1st. The figure for November 1st will probably be even more favourable. The Prussian Minister of Trade's monthly report shows boom conditions in nearly all branches, dyes being the one important exception. In many branches manufacturers are rejecting orders, and the only limit to production is a growing shortage of materials, coal, and qualified labour.

CANADA.—BUSINESS CONDITIONS—PROTESTS AGAINST THE NEW CUSTOMS REGULATIONS—PULP AND PAPER—THE STOCK MARKETS—CENSUS RETURNS—TRADE FIGURES.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 26.

WHILE there has been some improvement in business and industrial activity during the past month, it should rather be ascribed to seasonal influences than to any broad betterment of the fundamental situation. The business atmosphere is still highly unsettled, and while optimistic reports appear from some quarters, they are counter-balanced by others, which lead to the conclusion that the problems of readjustment and recovery are far from settled. In the main the consuming public is reluctant to buy anything beyond daily necessities, and as a result merchants continue to show great caution in placing orders with wholesalers and manufacturers, and, generally speaking, buy on a hand-to-mouth basis. One disturbing factor in the situation is the continued decline in grain prices, wheat having recently moved to record low levels for the year. Livestock prices are still slipping downward, and the outlook in the western provinces has been rendered more uncertain by the heavy rains of the past six weeks, which have lessened the value of the crop. The purchasing power of the Western farmer will be much smaller than last year, and the prospective market for manufactured goods will be curtailed. A prominent agrarian leader from the West is responsible for the statement that 90 per cent. of the Western farms will show a dead loss on their operations for the year. There is widespread complaint that the retail trade has shown an unfair reluctance to assume its proper share of the burden of readjustment.

Complaints have been pouring in upon the Customs Department regarding the effects of the new clauses in the Customs Act which ordain that imported goods must be marked with the name of the country of their origin. The more the new regulations are studied and the experiences of importers revealed, the wider becomes the impression that the legislation was conceived in haste and is provocative of more trouble than benefits. The Commissioner of Customs, for example, has recently been asked to rule how imported bricks are to be marked. Already the regulations have been partially modified, and their coming into operation postponed till January 1, 1922, but the impression is gaining ground that the legislation is cumbrous and useless, and could with profit be repealed.

Dry goods importers maintain that the effective marking of their goods is impossible and would ruin many fabrics; Manchester cloth firms are sending a strong protest to the Government. At home an influential deputation representing business houses and associations at St John, the chief winter port of the Dominion, has waited upon Mr Baxter, the new Minister of Customs, who is running as a candidate for the city, and after emphasising objections to the Act has asked the Government to defer its enforcement till opportunity for further consideration of its effects is available. Leading importers in Montreal have taken similar action, and the volume of criticism is steadily growing. If the Government were not dependent for support in the present election upon the Manufacturers' Association, at whose behest the legislation was passed last session, they would probably drop it, and if, as is probable, they are replaced by a new Administration, it is never likely to come into effect. The regulations for the levying of duties upon goods coming from countries whose exchange has depreciated is also exciting discontent in many quarters. Importers who bought goods from Germany six weeks ago and arranged for their sale on the then existing basis of the mark, now find themselves, when the goods arrive, faced with the payment of Customs duties which entail upon them a heavy loss.

Production of the Canadian pulp and paper industry continues to be well maintained even in comparison with the record year of 1920. During the first nine months of 1921 production of newsprint has decreased 82,491 tons, or only 12.4 per cent. as compared with the corresponding period of 1920. During the same period the decrease in production of the United States mills was 24.4 per cent. On the other hand, while the production is less than 13 per cent. short of last year, it does not represent 87 per cent. of the capacity of Canadian mills. During the year there has been added a fresh capacity of about 500 tons per day, and it is therefore estimated that at least 25 per cent. of the total capacity of Canadian mills is not utilised at present.

In the stock markets irregularity and uncertainty are still the prevailing features. The threatened strike of the American railway workers has had a disturbing influence, and while Canadian roads will not be directly affected they would suffer. At least one large Canadian industrial concern has passed its dividend during the past week, and others are likely to follow its example. Wages have been reduced in many industries, but the cost factor is still too high and is a serious handicap. A welcome ray of light comes from the steady improvement of sterling exchange in New York, and there has also been a slight decline in the adverse exchange on Canadian dollars.

The census returns are being disclosed by instalments, and while individual places and areas show a notable increase, they are in the main regarded as extremely disappointing. The decrease in Prince Edward Island and the meagre increases in the two other Atlantic provinces have already been noted, but now the figures for the western half of Ontario, exclusive of the city of Toronto, are far from satisfactory. They record substantial gains in industrial centres like Hamilton, London, Brantford, and N. Essex; but in 28 either rural or semi-rural Parliamentary constituencies, exactly one-half show a decline in population, in some cases as high as 14 per cent. Naturally such figures come as valuable ammunition to the critics of the existing protectionist system, who point to them as evidence that the tariff burdens are a serious handicap to farming and produce rural depopulation. But the *Montreal Gazette*, and other papers of that city, estimate the returns for it exceedingly disappointing. Local figures will only give the city

663,534. This represents 131,923 persons, or almost of the preceding census. The fact that in the decade an amazing increase of 90 from 283,021 to 531,611. isible for a partial check to of immigration, but, on the derable impetus to the growth establishments in the Montreal

area. The full returns of the census are not expected till November.

For the twelve months ending September 30, goods imported into Canada for consumption had a value of \$905,848,056, as compared with \$1,325,779,894 for the similar period of 1920. Duty collected for the period this year amounted to \$133,083,887, as against \$211,426,269 last year. During the same period this year total exports were valued at \$991,457,282, as compared with \$1,245,726,968 for last year. Exports in 1921 included foreign goods to the value of \$15,396,633. In 1920 foreign goods exported were valued at \$36,807,793. During the period under review imports from United Kingdom were valued at \$137,623,435, and \$643,625,678 from United States. Exports to United Kingdom were valued at \$285,017,699, and \$428,593,374 to United States.

POLAND.—FINANCIAL REFORM BILL—EXCHANGES—TRADE DEPRESSION—MR VANDERLIP IN WARSAW—RELATIONS WITH RUSSIA—COMMERCIAL TREATY WITH CZECHO-SLOVAKIA.

(FROM OUR CORRESPONDENT.)

WARSAW, November 3.

THE Financial Reform Bill is not passing as smoothly as was hoped after the enthusiastic reception of Mr Michalski's inaugural speech. The reasons for this are manifold. First of all there is a kind of struggle for financial supremacy between the Minister and the Diet. Mr Michalski has included in his Bill a clause, according to which the Diet shall not vote any new credits without the preliminary assent of the Cabinet and without the necessary cover. Against this clause there is a strong opposition in Parliament. To avoid an open breach it has been necessary to postpone the discussion of the Financial Reform Bill and to begin the proceedings with the reading of the Capital Levy Bill, which does not contain stipulations of this controversial character.

But here, too, there is great difference of opinion. The collection of the Capital Levy makes necessary the suspension of the Agrarian Reform Bill, according to which the landlords were not allowed to dispose of their properties without a preliminary licence from the Government. Mr Michalski is demanding the abolition of this clause, because only a free disposal of their property will enable the landlords to pay the sums which are due by them on account of the levy. The peasant parties are strongly opposed to such a measure. They are also claiming an exemption of small holdings from this tax. The Socialists would like to reach in a more drastic manner the proprietors of moveable capital. For this purpose they moved an amendment, according to which the value of every bank-note should be decreased from 100 to 80. They intended to realise this plan by subjecting all notes in circulation to an obligation, and Mr Michalski declared himself against it. At present of notes which are in the possession of forges cost whole such a measure is inadmissible. He says firm complains fact that the combination of a capital levy of 15,000 Dutch currency deflation must have disastrous effects, which Michalski threatened his resignation in the event of an amendment of the Socialist amendment. A great amount of definite declaration made by the Speaker, it is said, will be terminated in the Finance Bill. It will be about 10 days, so that it may be expected in the Diet will take place in a month. It seems that it will not be as a result of the collection of the levy. According to the matter of next year, so that in the meantime the Finance Committee of the deficit to the same methods as his proposal. The Committee is not the end of the conduct of the printing press. The last demand

The foreign exchanges continue to move very irregularly, but a marked downward tendency may be noticed, as is shown below:—

	English £	American Dollars.	French Francs.	German Marks.	Austrian Kronor.
October 18..	16,250	4,250	305	22.50	170
" 22..	16,100	4,175	292	24	135
" 24..	15,100	4,000	280	24	130
" 27..	17,175	4,425	320	27.50	92.50
" 29..	14,500	3,750	270	22	97
November 1.	13,000	2,900	210	17.50	81

During the last month an unprecedented rise of the Polish mark has taken place. This sudden rise is exercising a very depressing influence on the economic life of the country. Importers are cancelling their orders abroad, and the export trade is being very unfavourably affected. The situation on the foreign exchange market is only accelerating the approach of a crisis, which seems at the present moment unavoidable. Poland is suffering from a lack of capital. The situation has been much accentuated by the announcement of the capital levy. Banks and private individuals are keeping back all loanable funds, so that it is impossible for trade and industry to obtain even small loans. In consequence, factories are being closed down, and it seems that a trade depression similar to that through which Western Europe is passing is unavoidable. Here, again, we may find a confirmation of a fact, often observed in the history of paper money, that its effects are most sensibly felt not during the process of inflation, but in the moment when measures are taken for putting the currency system on a sounder basis.

Mr Frank Vanderlip has recently visited Warsaw. In an interview with a representative of the *Rzeczpospolita* Mr Vanderlip developed his plan of founding a "Gold Reserve Bank of Europe." This bank he proposed should have a capital of one million dollars, divided into shares of 100 dollars each. The branches of this bank created in the different countries of Europe should have the privilege of extraterritoriality, and they must be free of all levies, taxes, &c. The new notes should be admitted by the respective Governments as legal tender for all new contracts. The United States, he said, are ready to contribute to the realisation of such a plan. A capital of one million dollars could be easily subscribed.

The relations between Poland and Russia were recently subjected to severe tension. The Soviets were not executing their obligations under the Treaty of Riga, while, on the other hand, the Moscow Government was complaining that the Polish authorities were tolerating the organisation of anti-Bolshevist propaganda in Warsaw. The Russian Ambassador demanded the expulsion of different leaders of this movement from Poland; and the Polish Government complied with this request. This roused a storm of opposition in the Committee of Foreign Affairs of the Diet. It has been objected to the Government that the right of asylum has not been observed, and that the expulsion of political offenders at the request of a foreign Power is not compatible with the dignity of the country. The Minister of Foreign Affairs, in reply to these attacks, pointed out that Poland was only executing the obligations undertaken in the Treaty of Riga. Mr Karachan, the Russian Ambassador, now announces that in the first days of this week the first instalment due by the Soviets for rolling stock evacuated during the war by the Russian Government will be paid. It is reported that this payment will be made in gold and diamonds. It seems that the friction which existed hitherto between Poland and Russia has disappeared, and that the relations between the two countries are becoming more normal.

On October 20th a commercial treaty between Poland and Czecho-Slovakia was signed, based on the most-favoured-nation clause. It is composed of thirty articles, to which annexes relating to the transport of goods, the wa- of passenger cars on the frontier, &c. The treaty will be only ratified after the signature of a Local convention. According to the *Czas*, the two States are undertaking in this convention to maintain friendly neutrality in the case of an aggression by a 3 power.

SWEDEN.—TIMBER EXPORTS—STOCK EXCHANGE WEAKNESS—REVENUE PROSPECT.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 3.

As the shipping season is drawing to a close, a brief summary of the timber industry is possible. Timber is the most important of Sweden's export products, and therefore an important factor in Sweden's financial position. Undoubtedly had it not been for this natural resource, the Swedish exchange would not have maintained its high level. The exports this year are about half of what they were last year and about 40 per cent. of exports in 1913, the figures for the three years respectively being 415,000, 877,000, and 1,015,000 standards. England has always taken the bulk of the timber shipments from this country, in 1913 319,000, in 1920 480,000, and this year, so far, 180,000 standards; France, Holland, and Denmark following in order of importance. As regards Germany, the position is interesting, inasmuch as that country in 1913 received 111,000 standards of Swedish timber, but last and this year only 2,000 and 4,000 standards respectively. This is due to the position of the German mark. The abnormal exchange has turned Germany into a timber-exporting country.

The position on the Stock Exchange is worse than ever, quotations having been further lowered. There exists in Stockholm a consortium formed by the leading banks, whose object is to support the quotation of shares by organised purchases. Although this organisation has repeatedly intervened this week, it has been unable to maintain values. The report that several leading industrial concerns are removing from the capital to their former headquarters in the provinces for the sake of economy has caused further alarm without any reasonable cause. The survey of the State Bank up to October 29th shows a worse position, notes in circulation having increased 27.5 mill. kr. to 629.0 mill., as against 772 mill. by this time last year. Representations made to the Government for a prolongation of the term for taxes due in December next have not met with any approval, both for practical and financial reasons. On the other hand, further postponement of the last term of war contribution taxes has been granted until May next, subject to interest being paid for the period of prolongation. The total revenue for the first half of next year is calculated at 366 mill. kr. Alarm is caused in agricultural circles owing to the heavy influx of American wheat. This is better in quality, and much preferred to Swedish wheat by bakers. It places the Swedish farmers in a precarious situation, and is causing them to appeal to the Government for emergency measures. The value of ground and real estate property has fallen immensely since the war.

SWITZERLAND.—THE FALL OF SECURITY PRICES.

(FROM OUR CORRESPONDENT.)

GENEVA, November 8.

LAST week was characterised by the lowest quotations of first-class industrial securities in Swiss stock markets seen for many years. The shares of Nestlé sank to 480f, against 635f, the lowest quotation last year; the Swiss chocolate shares, Peter, Cailler, Kohler, were quoted 160f, against 222f a year ago, Basle Chemical Factory 1,000f, against 1,400f, Sandos Chemical Works 1,225f, against 1,950f. The shares of Brown, Boveri, the leading electro-technical firm, were quoted 220 as against 275, the nominal value being 500. The shares of Sulzer Bros., nominally 1,000f, were quoted 400f as against 700f a year ago. These quotations are in reality panic quotations, for everyone knows that the intrinsic value of these securities is much higher. A year ago low quotations were justified by high prices of money, but now money is cheap and abundant, and securities of fixed interest are on an average 20 per cent. higher in their quotations than a year ago. Also, with a few exceptions, banking shares, which were a year ago the object of panic, are now more or less consolidated. Therefore, the present position illustrates the general distrust of the Swiss investor concerning the prospects of Swiss industry. This distrust, somewhat deeply rooted, is now exaggerated. It may be

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

German Threes dipped to 2 when the mark fell to less than a farthing, though a recovery in the latter caused a rally in the former. Chinese bonds have been flat, in consequence of the anxiety felt in regard to the financial condition of the country. It is thought in the Stock Exchange that the weakness of some of the specially secured loans has been carried too far, and part, indeed, of the drop was wiped out by a little support. Brazilians are better. The French issues hardly moved. Mexicans fluctuate on an erratic plane, though hopefulness is the predominant note for the moment. Various of the Scandinavian bonds, Government and municipal, are higher again. Finland 4½ per cents. shed 8 points on the trouble that has arisen in connection with cashing the coupons.

The Home Railway market is better, judged by the rises that have taken place, than any other part of the Stock Exchange this week. The Board of Trade returns, the Bank rate reduction, and trade prospects are reasons. It is safe to say that the actual amount of public business is comparatively small, but so little was the floating supply of stock on hand that the effect of a few purchases led to disproportionate rises. Next Thursday there is to be held the first meeting in connection with the amalgamation of the London and North-Western with the Lancashire and Yorkshire, and this has served to direct attention to Home Railway stocks as a whole. The Stock Exchange Committee have issued a notice to the effect that the return recently called for by them of stock, shares, and loans still open, which are left as a legacy of the pre-war account, is satisfactory; this also has helped to lighten the depression which lay so heavily upon the Home Railway market. The prior charges, however, remain neglected.

Grand Trunks showed a slightly weaker tendency, though the dollar bonds of the Grand Trunk Pacific, Canadian Northern, and several of the other Canadian lines, have gained a point or two. The strongest feature amongst Foreign Rails has been San Paulos, the price recovering sharply after its very severe slump. United of Havana, which rose nearly 10 points on the dividend announcement, failed to maintain its best figures. Argentine Rails are all substantially better. Investors who follow the stocks are inclined to regard the recent slump as having proceeded too far. Moreover, prices have fallen so low that comparatively little money is required to buy for averaging purposes.

The rubber market has gone ahead briskly under the influence of improvement in the price of the commodity, and hopefulness engendered by the better trade conditions reported in various quarters that have a bearing upon the rubber industry. Possibly the Motor Show at Olympia added an element of new optimism to a situation previously over-charged with depression. Motor and tyre shares have also strengthened a little. Growing reports of boom trade being done at Olympia in motor-cars are received with interest, tempered by caution.

The oil market has further improved, being free from any further outbreak of liquidation. Trinidad Centrals, Apex, and Burmah Oil shares are the three outstanding features of strength on the week. The iron and steel market is better, in consequence of the brighter trade outlook. The textile list is somewhat erratic, owing to the fears that some of the mills may have to revert to part-time work, by reason of the expected orders from India not having materialised. The shipping market is better. A number of insurance shares are materially higher on the week. The banking group, however, has yet to move, though the tendency here is steady, and there seem to be more buyers than sellers. The same conditions apply to various other sections of the industrial market.

The public are removing their selling limits; while, on the other hand, bargain-hunters endeavour to pick up cheap values which are no longer available. There is a disposition to see the worst of the industrial crisis is over. People say that they would prefer to "see the thing through" even at the better prices now quoted. The knowledge that many concerns are rejected with a "catastrophe" rapidly.

The Kaffir Circus was overcast by a speech of General Smuts, in which he dwelt upon the difficulties surrounding the labour position, and pointed out that if the gold premium were to vanish—say, upon cancellation by America of the debt due from this country—a number of gold-producers would have to close down immediately. Upon reconsideration of the speech, it was agreed that politics had a possible connection with the views expressed, and prices accordingly recovered. The jump in Chartered to 115 6d brought in sellers and provided the market with a little excitement. The diamond group keeps steady, and Russo-Asiatics have improved. Tin shares remain weak; no fresh developments of consequence have occurred in other mining sections.

The Stock Exchange Committee invite suggestions from members of the House in regard to the principles under which any alterations of rules shall be framed in the light of forthcoming removal of temporary regulations from the Treasury. The Committee announce that they will lay before the Stock Exchange their plans on this head not later than March 1st next.

The Two Minutes' Silence was impressively commemorated in the Stock Exchange yesterday, Armistice Day, when trumpeters from the H.A.C. sounded the "Last Post" immediately before the interval, and the "Reveille" directly afterwards, this being followed by a rendering of the National Anthem.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded....	253,617,935	..	..	..

TREASURY BONDS.

Series B 5½ per cent. Treasury Bonds, issued at 98 per cent., payable on application. Repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. The first dividend will be paid on April 1, 1922. Principal and interest are chargeable on the Consolidated Fund of the United Kingdom, and interest will be exempt from Corporation Profits Tax. Bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. These bonds may be registered free of cost in the books of the Bank of England or of the Bank of Ireland.

British East Africa Colony of Kenya (late East African Protectorate).—Issue of £5,000,000 6 per cent. inscribed stock at 95 per cent. This stock is secured on the general revenues and assets of the Government of Kenya, and the principal will be payable at par on September 15, 1926, by a sinking fund of not less than £1 per cent. per annum, to be formed in this country under the management of the Crown Agents, who are appointed trustees, but the Government of Kenya will have the option of redemption at par on or after September 15, 1946, on giving six months' notice. The Government of Kenya, having complied with the requirements of the Colonial Stock Act, 1900, trustees are authorised to invest in this stock, subject to the restrictions set forth in the Trustee Act, 1893. But it should be pointed out that the revenues of the Colony of Kenya alone are liable in respect of this stock, and that the Consolidated Fund of the United Kingdom and the British Treasury are not responsible for payments. Stock will be transferable at the Crown Agents' Transfer Office, No. 1 Tokenhouse buildings, London, E.C.2, without charge and free of stamp duty. There is no public debt in this colony apart from advances made by the Treasury. An excellent

statement of revenue and expenditure and imports and exports is enclosed with the prospectus. The importance of providing funds for the task of Colonial development may appeal to wealthy patriots. But the small investor, who has to proceed with caution, can place his money better than in participating at this stage on the terms and security offered in this prospectus.

Majedie (Johore) Rubber Estates, Limited.—Authorised capital £130,000, divided into shares of 2s each. This is an issue of £5,000 debentures of £25 each, bearing interest at the rate of 10 per cent. The company was registered in 1910, and according to *Rubber Producing Companies* for 1921 has not had a very profitable career, judged from the shareholders' standpoint. It has now, however, issued a frank statement of its position, and although these debentures are only to be secured by a floating charge on the assets of the company, the issue may appeal to shareholders speculatively inclined.

Anglo-Burma Oil.—Letters of acceptance and regret have been posted.

COMPANY MEETINGS, &c.

LONDON MARITIME INVESTMENT COMPANY, LIMITED.

COMPANY'S SOUND FINANCIAL POSITION.

TRADE DEPRESSION AND THE REMEDY.

COAL PRICES EFFECTS ON INDUSTRY.

The twenty-fourth annual general meeting of the proprietors of the London Maritime Investment Company, Limited, was held, on the 10th instant, at Winchester House, Old Broad street, London.

Sir Owen Philipps, G.C.M.G., M.P. (chairman of the company), presided.

The Secretary read the notice convening the meeting and the report of the auditors.

The Chairman said: Gentlemen, upon rising to move the adoption of the directors' twenty-fourth annual report and accounts, I assume you will, as usual, take them as read. They are, I think, both clear and satisfactory. The net profit of the London Maritime Investment Company for the year ended September 30, 1921, is £60,710, making, with the balance brought forward, an available sum of £64,995. After paying the dividend upon the company's £500,000 5 per cent. preference stock and adding over £14,000 to the reserve fund, the board recommend the distribution of a final dividend of 4 per cent., less income-tax (making with the interim dividend 8 per cent., less income-tax, upon the ordinary stock for the year), carrying forward the slightly increased balance of £5,018. The reserve fund of £165,000 is, it will be observed from the printed accounts, invested separately, and in British Government securities. Notwithstanding the serious depreciation in the value of so many securities, I am glad to be able to state that a valuation in the aggregate of this company's investments as at September 30, 1921, showed the capital and reserve fund is intact. The company is thus in a sound position financially.

THREE ESSENTIALS FOR INDUSTRIAL REVIVAL.

The future success of this company, and all British companies that are interested, directly or indirectly, in commerce and shipping, is bound up with the restoration and development of the trade of the country, which is necessary to reduce the present dreadful state of unemployment and ensure regular work for all at reasonable remuneration. In my view, three things are absolutely necessary. First, and most urgent, is a reduction of the present burdensome taxation, which is throttling and crippling industry and causing so much unemployment. Secondly, much cheaper coal, which can easily be obtained without much, if any, further reduction in the colliers' wages, provided the nation realises that a mistake was made when the Seven-Hour Day Bill was passed into law. The Seven-Hour Day Act should be at once repealed, and if the output of coal per man per day is increased even to per cent. over the level of ten years ago (in the days before the Seven-Hour Day Act), coals could, even to-day, be sold at a price which would enable trade to revive with little or no loss of weekly wages to the colliers, who would within a few months be all fully employed, instead of so many of them being only able to secure intermittent work, as at present. Thirdly, all Britons must realise that it is only by harder work for longer hours by all sections and classes for the next three or four years that the country can quickly recover from the effects of the Great War. Reduced taxation is, of course, only possible by Government economy. Reduced Government expenditure is bound to come, and it is regrettable that this was not faced resolutely earlier. Commercially, the policy of this country at this time should be to encourage trade enterprise, and as far as possible to remove all fetters from industry. Given these things, and cheap coal, upon which the prosperity of this country is based, a great increase in the volume of the trade of the world will, I am convinced, result.

COAL PRICES AND THEIR EFFECTS.

But coal is still much too dear for peace times. The effects of cheap coal act and react, not only upon shipping but upon all British staple industries.

Dear coal entails a lessened demand for all commodities, consequent unemployment, and high costs of living. Cheap coal makes its own demand in the world's markets, brings employment in its train, reduces the costs of living, both directly and indirectly, by drawing tonnage and produce from the ends of the earth to Britain for its coal exports, provided the coal is cheap. In my opinion, the

trade depression is by no means over, although I hope that the Smuts, we have passed the worst. But a practical recognition of the labour I have just indicated would herald and also hasten the dawn of prosperous days. This company has been in existence 12 years. It has been built up on sound conservative lines, and I think we may face the future, whatever it may be, with equanimity. Before formally moving the adoption of the report, I should like to take this opportunity of publicly conveying our congratulations to Sir Vernon Thomson on the honour of knighthood conferred upon him in June last for the most excellent service he rendered to the country for some three years at the Ministry of Shipping. I now beg to propose:—"That the report and accounts for the year ending September 30, 1921, as submitted, be received and adopted, and that the dividend recommended therein be declared and paid."

Mr George Dodd seconded the motion.

MR SNELL ON COMPANY'S SOUND POSITION.

Mr M. B. Snell: Mr Chairman, first of all I should like thoroughly to endorse your remarks about Sir Vernon Thomson, who has been with us so many years. I think your remarks are quite appropriate, and will be fully endorsed by the shareholder generally. I should like just to say a very few words with respect to the report itself. I think I am an original shareholder in the company; at any rate, my holding goes back for a great number of years. The company started with very small beginnings, but has been gradually getting larger and larger, until now it has, of at the respectable capitalisation of £1,000,000 of money; and, I think, pleases me more than anything else at a time like this—a time of the greatest depression I have ever seen. 12 years of experience of the City, great depreciation in all directions—is the statement made in the report and made by you, Sir, that at the date to which the accounts are made up the capital of the company and the reserve fund also, amounting to another £165,000, were more than intact; and when I see you add the word "more," I know what it means. I am highly delighted, as I am sure my fellow-shareholders are, at the very brilliant way in which this company has been conducted. I am certain in my own mind that there can be very few—I doubt if there is one—of the big investment companies at the present time that can say they have got their capital and reserve fund more than intact. I am sure, Mr Chairman, when I say this, that I may express the good wishes of the shareholders and their congratulations to you upon arriving at such a position.

The resolution was then put to the meeting and unanimously adopted.

The Chairman proposed the re-election of the retiring director Mr George Dodd.

Mr Arthur A. Baumann seconded the motion, which was unanimously adopted.

The auditors, Messrs Fookes, Hickman, and Co., were re-elected.

A vote of thanks to the chairman concluded the proceedings.

GOODE, DURRANT, AND CO., LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The 23rd ordinary general meeting of Goode, Durrant, and Co. Limited, was held, on the 11th instant, at the registered office of the company, No. 27 Milton street, London, Mr Albion J. William (vice-chairman) presiding.

The Chairman, in moving the adoption of the directors' report and the audited balance-sheet for the financial year ended July 20, 1921, expressed regret that the balance to the credit of the profit and loss account was only about half the amount shown for the preceding year, but he considered there was every reason for thankfulness that this result had been achieved at the end of such an abnormal year of trading.

When the 22nd annual meeting was held in October of last year the company was still enjoying a period of considerable prosperity, but in the month of November prices for all manufactured goods began to drop, and the retail trade simultaneously stopped buying except for bare necessities. Consequently, when the half year finished in January last, the company was holding very large stocks, and from that time up to the end of the year, July 20th last, there was a very serious and unprecedented fall in the value of goods held by the company, which at July 20th had to be written down to market value.

In spite of this fall in the value of goods held, the company was able to show a balance to the credit of the profit and loss account of £36,497, including the amount brought forward from last year.

Before asking the shareholders to pass the resolution, the Chairman stated that he would like to add that, according to the advice received from Australia up to the end of October, business was not going forward in a satisfactory manner, and the company looked forward with confidence to the coming year. He could not speak too highly of the efforts put forth by the company's officials, both in London and Australia, during the past year.

statement. Pennick seconded the resolution, and it was unanimously enclosed that the directors' report and the audited balance-sheets for the year ended July 20, 1921, be received and adopted; weak dividend of 6½ per cent. per annum on the preference shares paid in April and October last be confirmed, and that a dividend at the rate of 10 per cent. per annum on the ordinary shares of the company be declared and paid, making, with the interim dividend paid in April last, 10 per cent. for the year.

The Chairman proposed the re-election of the retiring directors, Messrs H. Heale and F. Simonett, and thanked them for their past services.

Mr A. T. Wreford seconded the motion, which was unanimously agreed to.

Messrs. Newman Ogle, Son, and Co. were reappointed auditors for the ensuing year.

Hearty votes of thanks were accorded to the chairman and also to the staffs in London and Australia.

UNITED DAIRIES, LIMITED.

OUR DAILY MILK.

Mr Reginald Butler, chairman of United Dairies, Limited, in the course of his address at the sixth ordinary shareholders' meeting of that company, held, on the 11th instant, at the Connaught Rooms, London, said: The report and accounts show that the net profits brought into this year's balance-sheet amount to £356,185, to which must be added the £102,509 brought forward from the previous year, giving a total of £458,694, an increase of £94,103 over the corresponding figures of last year. After payment of preference dividend and the final dividend on the ordinary shares recommended by your directors (making 12½ per cent. per annum), there will remain, subject to excess profits duty and corporation tax, £132,719 to be carried forward. In connection with the payment for the purchase of new businesses acquired during the year under review, we have issued, or shall issue, over 62,000 shares on the whole, of which we shall pay dividends or three months longer than we have brought in revenue. At the 30th your subsidiary companies had an accumulation of 10 months' profits. This is ordinarily the most profitable period of our financial year, and whilst I have no reason to believe that it has not maintained its record, I do not think it would be correct to treat the profits in any given period as realised profits independently of the total results for the year. Although trade has been declining and prices generally reduced, you will be gratified to know that our business continues to expand—the collective turnover for the year under review exceeded 8 million pounds, being more than one million pounds in excess of the previous year.

THE MILK INDUSTRY AND THE TRADES BOARD.

The directors of United Dairies, Limited, continue to devise and carry out improvements in the company's factories, creameries, and depots, recognising that reduced production costs depend very largely upon the earliest possible adoption to the newest and most efficient labour-saving machinery, and constant application of the most progressive ideas in factory design and management. Wages also largely influence production costs, and on this point let me state in a sentence what is our attitude towards the Trades Board so far as it affects the milk industry in its distributing branch. Our feeling in that respect is that the Trades Board ought to have all the support that we can give it. There are many inequalities in the labour conditions of the distributing

trade, and the aim of the Trades Board to standardise those conditions is a right one. Our position in this matter is in harmony with our general policy, which is to endeavour to ensure for everyone connected with the industry a fair recompense for the services he renders to it.

HOW THE RETAIL PRICE OF MILK IS FIXED.

The period covered by the accounts has been a difficult one both for the distributor and the producer. As distributors we have had to face the fact that the price of our raw material, milk, has been such that any milk manufactured into butter or cheese involves a loss of many pence per gallon. The disparity between the price of milk and that of milk products has never in our experience been so great as at present—taking the average cost of our milk for this winter any milk made into cheese will probably return barely one-half of its cost price—and in fixing our retail prices of milk these losses have to be estimated as closely as possible, and provided for. If we cut down our purchases so that we had no surplus, there would be times when the consumer could not obtain anything like their requirements. The producer would be discouraged, and in the course of a very few years production would be enormously decreased, to the lasting disadvantage of the public. Wages on the distributing side are still at the highest point, and agricultural wages until quite recently showed no reduction.

A SQUARE DEAL.

We are often criticised. May I become critic in my turn, and ask the consumer, is he always so mindful as he ought to be of the claim of the producer to "fair treatment"? It is an important question. We, as consumers, expect to receive our supplies of milk every day of the year, delivered at our doors at a definite hour, almost at a precise minute; we expect to get it in quantities large or small, much or little according as our domestic arrangements vary, and the day's menu for the household is adjusted. And we insist that it shall be clean and sweet, and pure—rightly so, for our health depends upon it. These requirements demanded of our home-produced milk supplies are fairly exacting if you think them over, but they are on the whole complied with. But now think: Are we consumers giving the producer a square deal or anything like a square deal, when, having saddled him with these requirements, we turn aside and spend our money, that English gold of which we are so short, on foreign milk produced under conditions which we do not and cannot control? "Clean milk" is the cry when we deal with the home producer, and to ensure that we get it we pay official inspectors galore out of public funds, besides which, as I have told you, this company employs a service of its own, costing it many thousands of pounds per annum. There is no necessity to look abroad for our milk supplies; this country can produce all the milk that it will require for many years to come, even with that greatly increased consumption of milk in the raw state, which I hold to be a national need. Then do not go outside; give the home producer that square deal.

I recall, continued Mr Butler, a forecast which I made at our last annual meeting. It was "that during the following winter months the average retail price of milk charged the London consumer (and which area the retail trade of United Dairies, Limited, is to all intents and purposes confined), would not exceed the average price paid in many provincial towns." As facts turned out, the average London price was even less than that ruling in some provincial centres. The forecast was amply justified. It is anticipated that the retail price in London this winter will be eight pence per gallon below last year.

The report was duly seconded and carried.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

NORTH ANANTAPUR GOLD MINES, LIMITED.

NEGOTIATIONS FOR COPPER CONCESSION.

The fourteenth ordinary general meeting of the North Anantapur Gold Mines, Limited, was held, on the 3rd inst., at the offices of the company, 6 Queen street place, London, Mr V. Herbert Smith (the chairman of the company) presiding.

The secretary (Mr W. L. Bayley, F.C.I.S.) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said: During the 12 months ended on June 30th last 8,800 tons of quartz was crushed, from which 9,977 ounces of gold was produced. At the cyanide works 9,800 tons of sand and slime was treated, giving 965 ounces of gold, while a further 357 ounces of gold was obtained by dump retreatment, making a total of 11,299 ounces of fine gold, worth £61,823. During the previous year 14,118 ounces of fine gold was produced, which realised £62,592. It will be seen that during the year now under review there was a decrease in the total gross return of 2,819 ounces of fine gold, but owing to the increased premium on gold received the diminution in actual money received on sales amounted only to £769. The revenue expenditure, as shown in the accounts, amounted to £31,677, and the receipts, after deducting royalty paid to the Indian Government, came to £62,031, which left a profit of £30,354, as compared with £37,980 for the preceding year. The total cash distributions for the year were 5s 6d per share on the preference shares and 1s 6d per share on the ordinary shares, in each instance less income-tax. After making provision for these payments, and the other sums shown in the profit and loss account, a credit balance still remains of £9,074 to be carried forward to the current account, which will be subject to excess profits duty (if any) and corporation profits tax. With the addition of £10,000 charged to this year's profit and loss account, the reserve account now stands at £20,000. I regret that the underground work at the mine carried out up to this time has not resulted in the discovery of any further payable ore, and therefore it cannot be many months before milling will have to cease. It is interesting to note that this mine produced, from May, 1910, up to June 30th last, 213,021 tons of ore, from which have been extracted 122,252 ounces of gold, of a value of £534,838, the average extraction from the ore having been 11 dwts 15 grs of gold per ton.

In the directors' report for the year ended on June 30, 1920, the shareholders were informed that negotiations were proceeding with a view to obtaining an option over a copper concession situate in Chota Nagpur, North-East India. The actual agreement has not yet been executed, owing to delay having occurred in the matter of the vendor obtaining the full mining titles over the property. Everything possible, however, is being done to expedite this, and we are hopeful that it will not be long now before we are in a position to start serious work on the property.

The Hon. Lionel Holland seconded the resolution.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Nov. 14th-Nov. 19th, were opened on Nov. 11, 1921, and the total amount applied for was £78,340,000. Tenders for Monday to Friday bills at £99 os 6d, about 75 per cent., and above in full. Saturday bills at £99 os 9d and above in full. The average rate of discount was £3 17s 0.43d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition Bills.	Tenders at Rates below receive.
	£	£	£ s d		
Oct. 14 (3 months)	60,000,000	127,825,000	3 18 3.13	3½	£99 Os 2d (Monday to Friday bills) and above in full. Saturday bills at £99 Os 4d about 63.8% and above in full. £99 1s 3d (Monday to Friday bills) about 81.5% and above in full. Saturday bills £99 1s 6d and above in full.
Oct. 21 (3 months)	60,000,000	84,160,000	3 13 8.38	3½	£99 1s 1d (Monday to Friday bills), about 80.18% and above in full. Saturday bills £99 1s 4d, and above in full. £99 Os 7d (Monday to Friday bills), about 44.79%, and above in full. £99 Os 10d (above in full). Saturday bills £99 Os 6d (Monday to Friday bills), about 75%, and above in full. Saturday bills £99 Os 9d and above in full.
Oct. 28 (3 months)	60,000,000	83,445,000	3 14 5.63	3½	
Nov. 4 (3 months)	60,000,000	87,405,000	3 16 2.6	3½	
Nov. 11 (3 months)	45,000,000	78,340,000	3 12 0.43	3½	

The amount to be offered next week will be £40,000,000.

Reports and Notices.

Mr Wm. Moir has been appointed a director of the Lochnagar (Ceylon) Produce Company, Limited, in place of Mr Wm. Milne, deceased.

We are informed that copies of the annual report and accounts of the Sociedad Anónima Manufactura de Tabacos Piccardo y Cia., Ltd., may be obtained at the offices of Messrs Erlangers, 8 Crosby square, E.C. 3.

The directors of the Frederick Hotels, Limited, announce that as a settlement of their final claim against the Government is expected at an early date, they propose deferring the annual general meeting until the amount of compensation to be paid is agreed.

GOVERNMENT STOCKS, &c.

CONSOLIDATED EXTERNAL DEBT OF COLOMBIA.—The Council of Foreign Bondholders have received the November instalment of the debt service in respect of the half-year ending December 31, 1921.

INTEREST ON 5.15 YEAR TREASURY BONDS.—The Treasury announce that the Bank of England having certified that the average rate of discount at which Treasury bills were issued to the public during the half-year ended November 31 did not exceed 5½ per cent. per annum, no additional interest will be payable upon Treasury bonds, 1935, on the next interest date, May 1, 1922.

KINGDOM OF BULGARIA 6 PER CENT. LOAN OF 1892.—Referring to previous announcements with regard to payment in francs, the Imperial Ottoman Bank (Coupon Office, 25 Austinfriars, E.C. 2), is now prepared to receive from British holders coupons and drawn bonds due July, 1917, and January, 1918.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the seventh fortnightly instalment of the debt service payable to the Council in respect of the half-year ending December 31, 1921.

INSURANCE.

NATIONAL MUTUAL LIFE ASSOCIATION OF AUSTRALASIA.—The new business completed by the association during the financial year ended September 30, 1921, exceeds £5,460,000. The branch for Great Britain and Ireland completed £1,387,000 of the association's total new business for the year.

† Free of tax.

RAILWAY COMPANIES.

GREAT WESTERN OF BRAZIL.—We are officially informed that the company's representatives in Rio de Janeiro have been in constant negotiations with the Brazilian Government in order to obtain an adjustment in tariffs to meet the terms of the new lease contract. The board have now received advice that an increase in tariffs has been authorised, to take effect on or about November 10th. This increase, however, will not be sufficient to meet the charges established under the new contract. In the opinion of the Government the present position of trade in the Northern States does not permit of a greater increase, but the board are advised that it is the intention of the Government to apply to Congress for authority to make up the deficiency from the general revenues of the country. The company's representatives are pressing the urgency of a settlement, more especially in view of the fact that the line has been worked at a loss for the first nine months of the current year.

TEMISCOUTA.—The bondholders' committee are prepared to purchase a limited amount of Temiscouta Railway Company 5 per cent. prior lien bonds for redemption. Particulars and forms of tender can be obtained on application to the secretary of the committee at 55 Winchester House, Old Broad street, London, E.C. 2.

RUBBER.

ANGLO-SUMATRA.—The loss on working for year ended May 31, 1921, was £6,273, to which has to be added income-tax £5,685, making loss £11,958. Deducting this from £15,048 brought in, makes £3,090 to carry forward. The restricted crop of rubber obtained during the year was 920,074 lbs. After careful consideration of all the circumstances, the directors, in common with a large number of other companies, have decided, as in the best interest of the company and of the industry, to restrict the crop meantime to 50 per cent. of the estimated normal crop for 1920-1921. If this policy is continued throughout the current year the crop to be harvested will amount to 510,000 lbs. The planted area of the estates remains as before, namely 2,357.9 acres. The estates have continued to be maintained in first-class condition, and the visiting agent's annual report is of the most favourable nature. The general health of both the European staff and the coolies has been excellent. A claim for repayment of excess profits duty has been lodged with the revenue authorities.

BATU RATA.—Report for year ended June 30, 1921, shows a net profit of £3,652, to which is added £13,981 brought in, making £17,633 available, which is to be carried forward. In December last £2,293 shares of £1 each were subscribed for at par by shareholders or the purpose of providing further funds for the development of the estate. An amount of 10s per share has been called up in respect of such shares.

CHIMPUL (F.M.S.).—The report for year ended June 30, 1921, shows that the estimated crop for the year was 350,000 lbs. The actual amount harvested was 231,970 lbs. The output was curtailed in accordance with the restriction scheme recommended by the Rubber Growers' Association. The average gross selling price was 1s 2.6d per lb. The "all-in" cost, after charging depreciation and debiting a revenue account the whole of general expenditure, amounted to 6s 1d. Important economies have been introduced which will

materially reduce the cost of production. The only forward contract now running is for standard crepe at 25 3/4d per lb, delivery three tons monthly to end of December. The balance brought forward from last year was £8,213, from which must be deducted the debit balance for the year of £2,895, leaving a credit balance of £5,318, which the directors propose to carry forward.

MAJEDIE (JOHORE).—The accounts for the year ended June 30, 1921, show a loss of £8,595, which, with £722 debtor balance brought in, makes a debit of £9,377 to go forward. The directors write as follows:—"From the accounts submitted, it will be observed that the funds of the company are all but exhausted. Although very large economies have been enforced during the year, the results of which are now becoming apparent, it is still impossible to avoid losses altogether with rubber at current prices. The f.o.b. cost for the year which ended June 30, 1921, was 1s 5.63d per lb. The f.o.b. cost for July, 1921, was 6.44d per lb. The f.o.b. cost for August, 1921, was 5.77d per lb. If liquidation is to be avoided at a time when the company's assets would, if offered for sale, be practically valueless, it is essential that shareholders should now join with the directors in providing a sum of £5,000, which it is hoped may be sufficient to tide the company over the present period of extreme depression. The estate is at present unencumbered, and it is proposed that shareholders contributing funds for the maintenance of the estate shall be secured by

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Italian old crop shipping or shipped 49s to Spain, ditto loading 49s Italy, and ditto new crop January shipment to India at 47s 6d per 480 lbs. Visible supplies in North America continue to increase, chiefly of Canadian, but floating supplies show a decrease owing to reduced shipments. Crop prospects in the principal exporting countries are generally favourable, apart from some complaints of drought in the United States winter wheat belt. The demand for flour shows no improvement, and prices were further reduced respecting home-milled. London straight run quoted 53s to 54s, town households 51s, patents 56s, all-English straights 47s per sack delivered London district. Imported also slow of sale, and tendency easy. Manitoba export patents quoted 54s, straights 49s, Kansas top patents 49s, and Australian 46s per 280 lbs ex store. Offals steady, with a fair demand. Broad bran 59 to 59 5s, ordinary ditto 58 to 58 5s, middlings 59 15s to 59 10s per ton, ex mill, bags included, fancy Plate middlings 59 10s per ton ex ship. Maize in better demand, and prices ruled firmer in sympathy with higher c.i.f. offers. Yellow La Plata also African 34s 6d, and white flat African 33s 6d per 480 lbs, all landed terms. Forward positions were more freely dealt in, and prices firmer, with reserved sellers. Plate cargoes arrived sold 31s 9d, ditto afloat 31s 3d to 32s 3d, part cargoes November-December and December-January 31s 6d, and white flat Rhodesian on passage 28s 6d per 480 lbs. Parcel trade better, and December-January sold up to 32s 3d. Barley steadier. English malting ranges from 45s to 75s, and grinding descriptions 36s to 44s f.o.r. as to sample. Californian ex ship 38s to 56s per 448 lbs. No. 3 Canada Western ex ship 35s 6d, No. 4 ditto landed 35s, Canada feed 31s 6d, American feed 31s 3d all ex quay per 400 lbs. On c.i.f. terms a cargo of Dan.-Bess.-Kustendji shipping or shipped changed hands at 29s 7½d per 400 lbs to Continent. Oats firmer, with more inquiry. English ranges from 27s to 33s as to sample f.o.r. Imported dearer. Plate f.a.q. 26s 6d, ditto clipped 27s 3d. No. 2 Canada Western 31s, No. 3 ditto 30s, Chilean tawny 25s to 29s, New Zealand 34s to 35s per 320 lbs landed terms. Oatmeal advanced 20s per ton. English all cuts 59 to 59 10s, rolled oats 59 10s to 59 12s, flaked oats 59 10s to 59 12s, Scottish oatmeal 58 10s to 59 10s, American 58 10s to 59 10s per ton. Beans quiet. English new 40s to 43s, old 52s to 58s per 432 lbs. Peas dull of sale. English maples 65s to 75s, Duns 55s to 60s per 504 lbs. Japanese marrowfats 38s 6d to 41s, Dutch blue ex wharf 22s, and Tasmanian blue landed 22s to 25s per cwt. Lentils quiet. No. 1 split 32s, Egyptian 28s per 100 lbs. Homeward grain freights ruled easier in most directions, and only a moderate chartering business effected. From the River Plate 16s 6d was accepted for a steamer, prompt loading, Buenos Ayres/La Plata to Bristol Channel; while new crop January-February ruled steady at 25s. Upper ports to U.K./Continent. American Northern range to Continent spot done at 13 to 12 cents per 100 lbs, with 5s per qt. quoted to West Italy. Eastern markets idle. Bombay on dead weight nominally 25s. Austrian easier for new season's loading, and 51s 3d paid South Australia January-February to U.K./Continent, with option of India at 36s 3d. South African maize would repeat 32s 6d, while Danube paid up to 20s 6d for barley/oats to U.K./Continent, prompt loading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated November 10th, is as follows:—Pig-iron: Demand for pig-iron is still lacking. The bulk of our blast furnaces on the East Coast are out, and are likely to remain so until there is a drastic reduction of coke prices. Rail transport charges will have to come down also. No. 3 Cleveland G.M.B. pig-iron is quoted 110s per ton, and East Coast mixed numbers hematite 120s per ton. Manufactured iron and steel: There is some inquiry for steel, but very little actual business. Ship plates, 110 to 105; steel ship angles, 110; iron bars, 114; rails, 110 to 103, net. Iron ore: Very little business doing.

No consumer will contract ahead, as they have no prospect of selling their products. Best Bilbao Rubio is 27s per ton, sellers.

Our Sheffield correspondent writes:—British prices of pig-iron and crude steel being now on a level with European, buying from the Continent has now practically ceased, but the home producers have not yet felt the benefit of the new condition because of the heavy importations of foreign material in September and October. A number of large contracts for such material have yet to be completed, and the buyers now realise that they have made a mistake, as British iron and steel is superior to foreign. Business in pig-iron and billets continues stagnant, and producers are ready to shade prices in order to secure an order. The low prices now ruling at home, however, give promise of a substantial revival of business, although the turn in the tide may not occur until the new year. Practically nothing is doing in tool steels, as the Government have still large stocks to distribute. Foreign trade remains at an unprecedently low level, and the further deflation of the Eastern and Central European exchanges has finished off the small amount of trade which was being done with the markets concerned. The open-hearth plants are still working at only a fourth of their capacity. Light rails can be bought cheaper in England than in Belgium, but the low price is made possible by the use of old heavy rails rolled down. The demand for rails by collieries is extremely small. The railway steel departments are quiet, but all the wagon repairing shops are on full time, and are likely to continue busy to the end of the year. Important enterprises for the manufacture of iron and steel in India are in progress. Hadfields, Limited, have acquired works in Australia, where in the future the company will manufacture the commodities which they have heretofore supplied to the Commonwealth from their Sheffield establishment. Firms are busy experimenting with rustless iron, which it is believed will eventually replace tarnishable metals for hundreds of purposes. It is readily pressed or stamped from the strip into ornamental parts. The demand for house coal has strengthened considerably this week, and some of the manufacturers are more disposed than formerly to book forward. Many pits, however, are on short time, and stocks are offering at some of them. Prices of best qualities are firmly held. Business in export markets keeps on a very limited basis. Blast furnace coke is moving freely, and values are steadily held.

Our Glasgow correspondent (writing on Thursday) says:—The week is ending with a more than usually hopeful tone in evidence as to the industrial prospects in iron and steel connections. Not in all of them, but in several leading departments. It is announced to-day that the Scottish group of railways have given out orders for a respectable number of wagons, trucks, and other vehicles to local (Lanarkshire) firms, the building of which is to be at once prosecuted. And it is understood that there is a big volume of this class of work to give out to make good the wear and tear of the war, as well as the wastage that has taken place since. Then it is fairly reliably reported that there has in the last few days been quite a rush of inquiry amongst shipbuilders as to the conditions on which they are now prepared to construct new steamers, the cost of which must have been substantially reduced, consequent on the wage concessions that have taken effect of late and the lowered prices for material that currently rule. Nothing has transpired as to the class of boats embraced in the rumoured inquiries, and therefore Clyde authorities are inclined to discredit the stories, pointing out that a fleet of laid-up craft could be promptly secured at half the expenditure that would be involved in building on new keels. It is recognised, however, that granted terms are reasonable, some of the large liner companies might be led into fixing up orders for floating palaces. Whatever the issue may be, the suggestion that inquiries were on circuit has lifted the tone of things and encouraged anticipations. Amongst the features of the week—operations intended to help labour—is the statement that a firm of Port Glasgow shipbuilders has bought several old steamers from the Shipping Controller, and is bringing them round to the Clyde for breaking-up purposes, and will continue doing so should the scheme prove successful. One or two ironmasters advise a growing demand for Scotch brands of pigs for export. Last week 500 tons were shipped to South American markets. Local ironfounders are mainly covering their wants by Continental imports, which last week reached to fully 3,000 tons. There were also good quantities brought in (to Grangemouth and Leith mainly) of bars, sheets, angles, joists, and tubes; but in general there is less material coming from the Continent than was the case quite recently, and, what is more to the point, offers of material forward are almost negligible. At the various steel establishments a few mills are running, but work is far from plentiful. Preparations are in progress for turning out the heavy armour plates, which will be required in this locality for the new war vessels. Sales of ship plates have been made here at

The "ALL-IN" POLICY

affords the Householder the most complete cover yet devised.

The method of covering household risks by a diversity of Insurance is wasteful, to say the least. By covering all your household risks by the "All-in" Policy, you are economising in the true sense of the word—5% per £100 per annum (Minimum Premium, 7/6) will cover practically every serious risk in respect to the contents of your home. List of risks and full particulars post free. Address:—"All-in" Policy Dept.

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE CO., LTD.,
41 THREADNEEDLE ST., LONDON, E.C.2.
ASSETS EXCEED £19,000,000.

£11 a ton, 20s a ton below the Scotch trade sale figure; that, according to rumour, by Welsh producers, who are also undercutting in other sections. This procedure is causing irritation north of the Border, and following on the representations made, an important conference of Scotch and English makers is being held to-day in London. The outcome is awaited with anxiety, for it is affirmed that if no arrangement is arrived at, no mutual price basis discovered, a break-up of the national combine may immediately follow. Such an issue will be most detrimental to the producing interests concerned. It is many years since there was a split in the steel trade, and it played havoc with the industry; but other consuming industries reaped a rich harvest. Tube-makers give their state as quieter this week, the large works only running half-time. Some black sheet-makers have fair orders in hand. Marine engineers are pretty well employed. So are bolt, nut, and rivet makers, a few boiler-makers, locomotive builders, valve makers, and malleable iron workers. Demand for coal on home account is poor. Export orders are more plentiful, while still leaving great room for improvement.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—With rather less demand for tops, the market presents a somewhat easier appearance, though most topmakers have not changed their quotations. Apparently buyers are again exercising more caution, and although really good tops can still be sold at full late rates for spot delivery, the tendency on the whole is towards a slightly lower level. A certain amount of forward buying is in progress, and it is stated that 64's for January-March delivery have been sold as low as 3s 9d, but this appears to be on the low side. A considerable weight, however, is reported sold at 3s 10d, and this may be taken as the more general figure for future contracts. No doubt a spinner in want of a really first-class 64's warp top would still be prepared to pay about 4s 3d for immediate delivery, and as most topmakers are well booked up, and stocks of fine tops are small, the buyer in need of quick delivery is not in such a favourable position as one who can place an order for later months. Spinners report a fair amount of inquiry, and although the demoralised mark is checking business with Germany, there is still a nice trade passing with other Continental markets, while America is also buying some considerable weights. Prices are steady, but manufacturers cannot do business on to-day's basis of yarns. The demand for hosiery yarns is well maintained, and delivery of new business cannot be made this year. There is just a slight improvement in the piece goods trade, but it does not amount to much, and when stock lots are sold prices are invariably below replacement costs. Home-grown wools are steady with a moderate turnover. There is no change in mohair or alpaca.

COLONIAL WOOL.

(FROM A SPECIAL CORRESPONDENT.)

The Hull sale last week has commanded a good deal of attention, and the comedy of the alleged official refusal to report the sale can be attributed to an error on the part of somebody. If the reporters had only asked a few responsible buyers, they could have gathered information of the course of the market after Thursday's sale, but the incident passed over, and no harm was done. Those present at Thursday's sale realised that all good combing wools, both merinos and crossbreds, sold on a parity with the close of the previous London sales, but when short, somewhat tender and wasty Continental style merinos were offered, prices declined 5 per cent. Germany did practically nothing in these wools. The offerings of this description were large, and most of the lots fell to the bids of France. Bradford topmakers competed very keenly for the greasy crossbreds, but owing to the home woollen trade still being slack, slipes depreciated 5 per cent. On the whole, the sale passed off exceedingly well, some of the super West Victorian wools making very commendable figures. One missed American competition for these, but, on the whole, some excellent prices were made, and if Liverpool next week goes as well, the outlook for London will still be good.

There is no doubt that the home trade has been caught seriously short of merino wool, and tops are being absorbed in Bradford quite as fast as they are being combed. It is still possible to make 4s 3d for spot lots of good 64's, but for next January delivery 4s is about the price, and we think out of Australian-bought wool to-day a good 64's top can be made at that figure. Latest cables of clean scoured costs indicate that the market is somewhat stiffer than a fortnight ago, but even yet home trade buyers are expecting lower prices before the end of the year, which would greatly assist those topmakers who have sold cheaply for later delivery. It is now well known that several committed an error of judgment when they sold at 3s and less.

We understand that there is considerable trouble over bills of lading, the banks on this side being very stubborn in their demands. From all accounts, they are worse to deal with than shipping companies, and are apparently not prepared to take any risk. It seems as if a little competition among banks and other financial institutions would be a good thing, and one is surprised that some of the Australian banks who have done a big wool business for half a century cannot fall into line when there is practically no risk, and guarantees are given on the part of the shipping companies that everything will be straight. The matter is too complicated to go into detail, but it is high time a solution of the difficulty should be found. The business has worked smoothly in the past, and it is imperative in the interests of all sections of the

trade that it should continue to do so. I hear of a threatened stoppage of sales in Australasia if the question is not satisfactorily solved, and it only needs sound commonsense to be brought to bear upon the whole business, with a policy of give and take, for the matter to be solved to the mutual good of the entire trade.

AUSTRALIAN WOOL SALES.

Messrs Dalgety and Co., Limited, have received the following cable from their Perth branch under date of November 5th:—Wool sales opened, attendance of buyers is good, competition animated. American, Continental, and English buyers are the principal operators. 12,000 bales offered, as compared with last sales (held on August 4th). Merino wools, greasy super, 45 per cent. higher; ditto, topmaking, best sorts, 35 per cent. higher; ditto, ditto, ordinary, 30 per cent. higher; ditto, faulty, 20 per cent. higher; merino pieces, first greasy, 40 per cent. higher. Crossbred wools, fine quality greasy, 30 per cent. higher; ditto, medium ditto, 40 per cent. higher; ditto, low ditto, 50 per cent. higher. All descriptions greasy skirtings good demand; lambs' wool, greasy, poor demand, especially greasy sorts suitable for carbonising.

They have also received from their Sydney branch cables under date November 7th, as follows:—"The seventh series of wool sales commenced to-day with a large attendance of buyers. The first important instalment of the new clip was offered. Japanese and German buyers are the principal operators. The catalogue was practically cleared. Merino wools sold up to 23½d, as compared with last year's clip. The new clip is more burry, in good condition, well grown, and sound. The extension of the prompt to 21 days also applies to present series."

Member of Federal Reserve System.

being curtailed and unemployment tends to increase. In cloth for India only small lots have been sold, chiefly in light fabrics. According to some reports, there is a possibility of the boycott breaking down at an early date. White goods have been sold in odd lines for China. Nothing worth mentioning has been done for the Near Eastern or South American outlets. Heavy goods in the home trade are now moving off rather more freely. Manufacturers are harassed at every turn, and many firms are being compelled to stop more looms. In the spinning section, the question of organised short time is being discussed; but it is doubtful whether the necessary majority of spinners will be obtained. Only a retail business has been done in both American and Egyptian yarns, and prices have weakened from day to day.

VEGETABLE OILS AND OLSEEDS.

(FROM OUR CORRESPONDENT.)

Market conditions have been quiet and almost featureless through the week. The demand for Plate linseed has eased off, and values have fallen 10s to 15s per ton, with October-November shipment off to Hull offering at £15. Spot maintains a slight premium, but crushers' demands to meet the increased trade in cakes appear to have been satisfied for the present. The demand for the oil product has not been quite so good, though some orders have been received from the Continent, and values are steady at about 20s less than a week ago at £26 10s. Spot to December delivery, ex Hull, mill, with business done for January-April slightly in excess of that figure.

Egyptian cottonseed for shipment has fallen to £13 to £13 5s, but spot on scarcity remains fully steady round £14, with Sakellaridis quoted 10s below these figures. Cotton oils, which gained substantially from the recent set-back, have lost some of the ground, crude Egyptian now being obtainable at £38 spot, ex Hull, mill, and at £37 for late November delivery. Common edible meets with a poor demand, and is again lower. All descriptions of castor oil have been reduced 40s to 80s a ton. Soya bean oil has rallied slightly, but very little is doing in rape, palm kernel, and ground nut oils at about unchanged values.

The shipments of Argentine linseed from January 1st to November 5th are returned at 442,000 tons to the United Kingdom, 495 tons to the Continent, and 201,000 tons to North America—in all, 1,138,000 tons against 916,000 tons' same period last year. Indian shipments to the United Kingdom and Europe are only 68,850 tons against 179,075 tons a year ago. The quantity on passage has diminished somewhat, there now being afloat for the United Kingdom about 42,000 tons and for the Continent 76,000 tons.

Service that counts

Anything that comes within the province of Banking is included in the Service offered its customers by The Merchants Bank. If you want disinterested advice on any business subject or first-hand information concerning trade conditions in any part of Canada—this Bank is in a position to help you.

The Merchants Bank of Canada

Total Assets \$190,367,409
LONDON OFFICE - 53, CORNHILL.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

There was a serious drop in hides on Thursday at the Bermondsey sales; lights were withdrawn, but best heavy ox sellings at 8d per lb showed a decline of 2 1/2d as against last week's prices. Cows at 6 1/2d to 7d dropped a penny, whilst calfskins fell in value from 1d to 3 1/2d, best lights only making from 10 1/2d to 12d.

Tanners are in a serious position, as many of them rushed into the market when hides were much higher in value, and have pits full of dear stock with a falling leather market. A moderate quantity of hides of inferior selections have changed hands this week, and frigorifics have sold at 10 1/2d for arrival. The River Plate market continues firm, as American buyers have been taking up large blocks of hides of late. Dry hides have been rather neglected, as tanners' ideas are below those of importers. The American market is cabled as firm, with best heavy packers selling still at 15 1/2 cents; native cows are now making 13 cents as against 12 1/2 cents last week.

The demand for sole leather has fallen flat, and tanners are shading their prices to induce business. The demand continues mainly for low grade bends from dry hides, and tanners are working in more of the latter to meet it. American sole is also arriving, and is selling at low prices. Pinned offal is wanted in cheap selections, and some very low prices have been taken of late. Upper stock has again fallen flat, and dressers and carriers report poor business, with inquiries running on the low grades. Patent leather in sides is wanted in the women's shoemaking districts, and quite good sales of American sides at round about 1s 7d per foot are reported to have been made. Imports of leather for the first ten months of the year amounted to £5,983,044 in value, as against £18,200,802 for the corresponding period of last year.

The boot trade is slightly better, but the state of the export section is shown by the fact that the value of British export has only amounted up to the end of October to £1,893,249, as against £6,022,941 from January to end of October last year.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 77s 6d to 83s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—

The Safe-Custody of Securities

INVESTORS may avoid many of the anxieties incidental to the ownership of securities by depositing their holdings with this Company for Safe-keeping.

For a moderate charge we will undertake the entire care of a customer's holdings, detaching and collecting coupons and informing the owner in respect of rights and redemption dates. If it is desired holdings will be reviewed at intervals and any desirable changes suggested.

The Management at any of our branches will be glad to explain the nature and extent of these services.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 11.

The markets, almost without exception, disclosed a very quiet state of affairs, buying orders from home consumers being measured by wants of immediate necessity, while export requirements count for little owing to the question of rates of exchange. In fact, financial considerations weigh very heavily just now.

SUGAR.—Apart from a steady clearance of British refined goods, the market disclosed general slackness with regard to imported descriptions, and trend of values proved against the seller. Messrs Tate and Lyle's cubes, sold, 55s 3d to 56s 3d; crushed, 51s 9d; granulated, 49s 9d to 50s 3d; caster, 52s 3d to 53s 9d; yellow crystals, 44s 9d. Crystallised West India sold quietly, at 38s to 42s, as to quality. Only retail sales resulted in muscovado and syrups. American granulated, spot, sold, 49s; ditto, prompt shipment, sellers, 21s 6d, c.f. and i., U.K. Belgian crystals, spot, sold, 47s 3d; ditto, ready delivery, sellers, 19s 6d; November-December, 19s 1 1/2d, f.o.b. Antwerp. Czechoslovakian granulated, December, sellers, 19s 9d; cubes, 24s, f.o.b. Hamburg. Dutch granulated, prompt, 22s; and cubes, 26s 6d, f.o.b. Amsterdam. Brazilian basis, 80 per cent., November-December, sellers, 10s 3d; and 96 per cent., ditto, 14s 6d, c.f. and i. terms, London. Cuban stock, 1,105,000 tons, against 292,300 same time last year. Liquid glucose, November delivery, sellers, 26s 6d, duty paid.

COFFEE.—There was a fair demand on the spot for all the better qualities, but common met with but slow support. Good bold greenish Jamaica sold, 13s to 14s; bold greyish Colombian, 9s to 10s. Future delivery market remained quiet. December, sold, 47s 9d.

COCOA.—Business during the week was again quite retail in extent on about former terms. Butter quiet at 1s 10d per lb.

TEA.—Offerings of Indian by public sale this week amounted to 40,500 packages. Generally good competition ensued, and medium, also common, kinds ruled firm to dearer, but the finer invoices went off with some irregularity at prices mostly in favour of the buyer, as general run of quality marked some slight falling off. 18,000 packages Ceylon in auction engaged active support, and prices on balance ruled firm. Some golden tip sold at 10s per lb in bond.

RICE.—There has been rather more trade doing on the spot, chiefly two stars Ranocoon at 18s 6d. Beans quiet, and hand-picked Rangoon, due steamer, sold, 7s 9d. Peas quiet. Japanese, December-February, sellers, 33s.

SPICE.—There was only a moderate amount of business effected in pepper. Fair black Singapore, spot, sold, 3 1/2d; ditto December-February, 3 1/2d; Aleppy, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, 7 1/2d; Muntok ditto, 7 1/2d; ditto December-February, sold, 7 1/2d to 7 3/4d. Zanzibar cloves steady. Fair, on spot, sold, 1s 7 1/2d, and November-January, steamer, 1s 5 1/2d. Pimento, on spot, sold, 2 1/2d; flake tapioca, fair quality on spot, sellers, 1 1/2d per lb. Fair Penang seed pearl, on spot, 19s; small sago, 27s; sago flour, November-January, 13s; desiccated coconut, spot, fine cut, sold, 42s; medium, 43s to 42s.

FRUIT.—The market for currants remained generally firm, and a fair volume of business transacted this week. Pyrgos, sold, 47s to 49s; Amalia, 52s to 54s; Gulf, 56s to 71s; Vostizza, 65s to 82s. Sulianan command full prices. Medium to good Smyrna sold, 117s to 125s; fine to choice, 132s to 143s. Figs experienced a firm market. Layers range from 115s to 135s; Jacouns, 140s to 165s. Only 117 tons Valencia raisins were offered in auction, and sold readily at 5s to 10s per cwt advance, the finer qualities marking the greater appreciation. Medium to good quarters sold, 146s to 154s; fine, 155s to 163s; choice, 168s to 170s; seedless, 112s to 127s. Muscatels quiet, but steady. Clusters sold, in auction, at 150s; loose, 125s to 146s. Dates steady. Siar, on spot, sold, 18s. General trade in almonds is quiet, owing to the high prices current for same.

JUTE.—Market steadily declined under lack of sufficient support, and the general situation during the greater part of the week was more or less nominal. Native first marks assortment, spot, Hamburg, sold, £29 10s; bottom of ditto, spot, Dunkirk, £30; native firsts, old crop, subs, November-December, quoted £25; lightning subs, £21; heart subs, £15 10s; new crop, first grade, November-December, £26; lightning, ditto, sold, to Hamburg, at £23 to £22; new heart grade assortment, November-December, sellers, £16 10s. Calcutta hessians and twills remain slow. 10 oz, spot, 24s; 8 oz, 18s 6d; B twills, spot, 66s.

HEMP.—Manila steady, but trade proceeded slowly. D grade, October-December, sellers, £53; E ditto, £49; G, £39 10s; J ditto, sold, £38; K, at £36 10s; L, at £36; streaky ones, sellers, at £45; twos, £43; and threes, £40 10s. New Zealand idle. High point, fair, October-December, sellers, £37; fair, £35.

SHELLAC.—Market very steady, with a fair demand forward, Fair T.N., spot, sold, 345s; ditto, December delivery, 335s to 337s 6d; March, 315s to 320s.

COPRA.—Market unsettled, and business was confined to a moderate compass. F.M.S. Straits, October-December, Rotterdam, sold down to £25 2s 6d up to £25 15s; F.M. Straits, October-December, Marseilles, £24 15s to £25; Ceylon, October-December, London, quoted £27 5s; Cebu, ditto, to Hamburg or Holland, sold, £24 15s to £25; South Sea Islands, October-December, London, £25. Palm kernels, December-February, Liverpool, sold, £17 7s 6d to £17 15s.

RUBBER.—Market very steady, with a fair general inquiry. Standard crepe and sheet spot sold, 10 1/2d to 10 3/4d, 11 1/2d; January-March, 11 1/2d to 1s; April-June, 11 1/2d to 1s 0 1/4d. Fine hard Para, spot, quoted 1s 2d; and cauchou ball, 7 1/2d.

EGG PRODUCTS.—Market quiet but steady. Prime liquid yolk, spot, sold, 110s per cwt; and albumen, spot, 2s 11d per lb.

MENTHOL.—Spot parcels sold, 22s; Japanese peppermint oil, 4s 8d sellers; anised, spot, 2s 3 1/2d; Japanese slab camphor, 4s 6d per lb. Japanese wax, spot, 100s; and to arrive, 90s per cwt.

OLDS.—Linseed easier. Spot, net, naked, 27s 6d; November-December, 26s 6d; January-April, 27s. Rape dull. Crude, spot, 48s 6d; refined, 53s 6d. Cotton easier. Crude Egyptian, 42s; Bombay, nominal; common edible, 51s. Chinawood: Hankow, spot (barrels), 69s; and shipment, 67s. Coconut easier. Ceylon, spot, 48s; November-December, 44s; Cochin, ditto, 54s 6d. Soya quiet. Oriental, barrels, ditto, 36s. Japan fish quiet. October-November, cases, 21s. Cod quiet. English, spot, 27s to 29s. Groundnut dull. English crushed, naked, spot, 53s; deodorised, barrels, 62s. Turpentine irregular. American, spot, 68s 6d; December, 69s; January-April, 69s 9d. Rosin firm. American, grade B, 16s 6d; F, 16s 9d; G, 17s; K, 18s 6d; WW, 22s; French, F/G, 15s 9d; H, 15s 9d; WW, 18s 6d; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4 1/2d; and water-white, 1s 5d per gallon.

OLSEEDS.—Linseed: Market quieter, and rates weak, Calcutta, November-December, sold, £17 to £16. Plate, spot, Hull, £15; afloat, sold, £14 15s to £14 10s; November-December, £15 10s to £15; January-February, nearest, £15 5s. Rapeseed steady. Toria, October-November, £18; real bold Ferozepore quoted £18; brown Cawnpore, £17 10s. Cotton-seed easier. Egyptian black, November, sold, £13 5s to £13; and white, £12 15s to £12 10s. Bombay, December-January, £9. Gingelly easier. Chinese, November-December, Continent, £23. Castor, Bombay, November-December, sold, £16 15s. Ground nuts quiet. Coromandel, machine-dried, November-December, Hull, £21; new crop, December-February, Continent, £19. Chinese decorticated, f.a.q., ditto, Continent, £21 to £21 10s per ton.

METALS.—Tin: The market exhibited a firmer tendency early in the week, cash by Tuesday reaching £158 15s, three months' £161 10s, settling down at £160 15s, but irregularity and ease characterised Wednesday's movements under moderate selling, while cash changed hands at £157 10s to £157 5s, three months' fluctuating between £159 15s and £159 5s. At Thursday's meeting a further decline was established, these dates moving down to £156 12s 6d and £158 10s respectively. At Friday's session rates hardened. Cash realised £157 to £158 5s; early December, £158 to £158 15s; and three months', £159 15s to £160. English ingots, £156 10s to £157. Copper opened lower last Monday, with a limited business passing in standard cash at £65 15s to £65 17s 6d, and three months' £67 to £66 10s. The tendency steadied on the following day, while an improved demand prevailed, cash advancing to £66 7s 6d, three months' to £66 17s 6d. A quieter feeling ensued during the middle of the week, cash being sold at £66 2s 6d to £66 5s and three months' £66 17s 6d. An improved demand at Thursday's market led to an advance. Cash registered £66 5s to £66 7s 6d, and three months', £66 17s 6d to £67. At Friday's session cash changed hands at £66 15s to £66 12s 6d; early December, £66 17s 6d; and middle of January, £67 2s 6d to £67 5s. Electrodes, £74 to £76; best selected, £67 10s to £69 10s; strong sheets, £101. Lead firmer at £24 2s 6d to £23 15s, as to position. Spelter quiet at £25 12s 6d to £26 10s, according to position. Antimony: English regulus remains at £36 to £39. Aluminium: Home trade quoted at £120; export, £125.

NEW ZEALAND

A Wealthy Country. Splendid Climate. Fertile Soil. Plenty of Water.

An Ideal Country for the Farmer, the yield of grain and percentage of lambs being phenomenally high. New Zealand, a country as large as the United Kingdom, with a population slightly over one million, exports annually products up to the value of Thirty Millions Sterling.

NEW ZEALAND IS RICH IN COAL, IRON, TIMBER, GUM, GOLD AND SILVER. Total yield of minerals, over One Hundred and Thirty Million pounds.

The Government has advanced over Twenty-One-and-a-Half Million Pounds to Farmers and Workers, at a low rate of interest, for Improvements and Buildings, and is empowered under the new "Housing Act" to set apart Crown Lands and make advances up to One-and-a-quarter Million Pounds annually for the same purpose.

Railways (3,000 miles), Telegraphs and Telephones (216,742 miles of wire) are State owned and operated.

To those desirous of making a home in the new country New Zealand offers solid advantages.

Excellent Steamship Services are run direct to New Zealand by the Shaw, Savill and Albion Company, Limited, New Zealand Shipping Company, Limited, and the Federal and Shire Lines.

* Additional to those offered by tender the preceding week.

The Bank Return showed an addition of £12,300 to the stock of gold, and a reduction of £816,200 in the circulation, so that the Reserve was £828,500 higher. Government securities declined by £1,575,900, but Other securities expanded by £3,989,400. Deposits were thus £3,199,000 higher, of which £2,174,500 went to Public and £1,024,500 to Other. The circulation of currency notes was reduced by £1,052,200 to £313,065,800, which includes £1,802,800 for notes called in, but not yet cancelled. The fiduciary issue is £263,313,000, or £54,242,200 below the maximum.

The following table shows public income and expenditure for the week ended November 12, 1921:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	10,150	Supply Services	8,375
Taken from Exchequer Balances	340	Interest on Debt	669
		Sundries	3,743
		Reduction of Debt	1,073
	10,490		10,490

These operations reduced the National Debt by the sum of £1,072,735, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 14,230	Bank of England Advances ..	- 18,500
National Savings Certificates ..	+ 500	Depreciation fund	- 660
Treasury Bills	+ 5,340	Surrenders of Bonds, &c.	- 650
Sundries	+ 2,017	Public Department Advances ..	- 3,350
	+ 22,087		- 23,160

Customs and Excise yielded £4,442,000. Property and Income-tax produced £1,400,000, while £1,000,000 came in from special miscellaneous receipts. The sales of Treasury bonds were again on a large scale, amounting to £14,730,000. The net sales of National Savings certificates were £5,355,000, but a further reduction took place in Ways and Means advances. Bank of England advances were reduced by £18,500,000, bringing the amount outstanding down to £6,000,000, and advances by Public Departments were reduced by £3,350,000, making the amount outstanding £189,408,000. The net reduction in the floating debt on the week was £16,495,000, making the outstanding floating debt £1,317,575,000.

FOREIGN EXCHANGES.

The outstanding feature for the week in the foreign exchange market is that the dollar rate has again gone about four dollars to the pound sterling. After being rather weak at 3.93½ on the 11th, it appreciated steadily to 3.96½ on the 14th, and on the following day jumped to 4.00. On the 17th, after falling again below 4.00, it reached 4.00½, but yesterday morning was rather weaker at 4.00. The general explanation given for this movement is the initial success of the Washington Conference, but if this is so, the market would appear somewhat optimistic. Even if the success of the Conference were assured, the resultant impetus to trade would result almost certainly, for some time at least, in a renewed demand for dollars in order to finance the purchase of fresh supplies of raw material. It is suggested from the other side that the dollar may find stability for some little time round about 4.00, and there are indications that New York for the moment has sterling to offer at this figure, and also there would appear to be a tendency on this side to make some heavy special purchases of dollars near the same price. Rates for forward dollars

have been narrowed slightly, from ½ to ¾ cents per month over spot. After the dramatic movements of the last few weeks the course of the mark has been relatively steady. Closing at 1.112 on the 11th, the rate fell to 964 on the 14th, but since that time has moved roughly between 1.040 and 1.050, the price yesterday morning being about 1.045. The quotation for futures has narrowed again from 2½ to 1½ marks per month. This apparent stability, however, is deceptive, and would appear to be due mainly to uncertainty as to the line to be adopted by the Reparation Commission as the result of its recent visit to Berlin. On the whole, opinion seems inclined to conclude that the Commission will insist on the January payments being made. If this is the decision reached, we may expect to see further wild movements. After a somewhat irregular week the franc rose quickly on Thursday, and yesterday morning was quoted at 55.35, as compared with 54.47½ a week ago, while Brussels rose from 56.90 to 57.20, thus reducing somewhat the margin between the two rates. Forward rates in both centres have narrowed one centime in Paris to 3, and in Brussels to 9 centimes per month. Italy from 96 on the 11th recovered at the beginning of the week to 94.62½, but since then has reacted again to 96½. Among neutral exchanges, Switzerland has moved somewhat rapidly in our favour, from 20.87½ to 21.30, after being up to 21.40, while Madrid has depreciated from 28.34½ to 29.07½. Amsterdam, on the other hand, has gone slightly against us, from 11.37 to 11.35. In the Northern group, Christiania, although it has reacted again from the 26.92½ quoted on the 11th to 27.72½, shows some promise of maintaining its recent improvement as both shipping and local industries are decidedly better. Stockholm, after being rather higher, is practically unchanged at 17.12½, while Copenhagen at 21.50 is some 28 points higher on the week. Helsingfors at 200 again shows some improvement. In Central Europe, the Vienna (Auslandskrone) rate at 10.500 is some 1,500 points better than last week, the result partly of a real effort at internal financial reform, involving the restriction of bread subsidies, &c., partly of renewed hope of speedy relief from outside. The last rate received for Inlandskrone, that of the 14th, was 23,550, as compared with an Auslandskrone rate on the same day of 13,500. Budapest also shows some improvement, to 3,750. Warsaw at 13,000 is unchanged after again being rather higher, and Prague also remains at about 370. Belgrade, on the other hand, mainly on rumours of an external loan, shows a marked recovery from 360 to about 250, but the position is as yet by no means clear. In Roumania a sudden embargo on foreign accounts has completely disorganised exchange transactions, and quotations are merely nominal, with no business done, at least in London, although in Paris dealings have been continued. From advices now to hand it would appear that henceforward foreign accounts can only be operated on with the permission of a Control Commission against genuine commercial transactions. Athens has risen further to 97½, while Sofia is unchanged at 650, and Constantinople roughly the same at 720. In the East the rupee at 1s 4½d is very slightly weaker, while the yen at 2s 4½d is also a little cheaper. The silver market has been quiet, with a further downward movement, but some steadiness towards the close. Shanghai is unchanged, as also is Hong Kong, after having been slightly lower. In South America, Buenos Ayres and Rio are rather cheaper, while Montevideo and Valparaiso show a more marked fall.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO NOVEMBER 12, 1921.

Total spent	£ 612,497,440	Raised by revenue ..	£ 550,828,277
Inc. in balances	79,943	Net borrowings	61,749,106

Total	£ 612,577,383	Total	£ 612,577,383
-------------	---------------	-------------	---------------

ESTIMATES FOR YEAR 1921-22.

Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000

Total	£ 1,216,650,000	Total	£ 1,039,728,000
-------------	-----------------	-------------	-----------------

Surplus*

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

NOVEMBER 12TH.—Washington Conference opens. Mr Hughes announces American Government's proposals for Naval Disarmament. Cabinet Committee considers Ulster's reply.

NOVEMBER 14TH.—Cabinet Committee replies to Ulster Premier's letter. London Chamber of Commerce adopts resolution on Hague Rules. Price of flour reduced.

NOVEMBER 15TH.—American proposals formally accepted by the British Empire, France, Italy, and Japan. Mr Balfour addresses the Conference.

NOVEMBER 16TH.—New York exchange over \$4 to the £. Attorney-General for Ireland resigns. Council of League of Nations meets in Paris on Jugo-Slav-Albanian dispute.

NOVEMBER 17TH.—Mr Austen Chamberlain, at Liverpool, justifies Government's Irish policy. Amendment to resolution of Ulster stalwarts defeated by large majority at meeting of National Unionist Association.

NOVEMBER 18TH.—Warship contracts suspended.

Stock Exchange business fairly well maintained its better level. Government stocks again showed strength, while rubber shares made a spurt early in the week before giving way a little. A feature of the week was the quick over-subscription of the Port of London's new issue.

In the Lancashire cotton markets the week has been discouraging, business being checked by easier prices. Buyers are adopting a waiting policy, and some nervousness exists. Quieter conditions rule in the wool trade, and prices of the raw material at the Liverpool sale declined. In the woollen piece goods trade there is no material change. From the iron and steel trade no present improvement is reported, but hopes are entertained for the new year, since in many directions prices have now been cut low enough to meet continental competition. Coal export does not improve, and the domestic coal demand has not expanded as much as might have been expected in the recent cold snap. The heavy fall in prices in the hide market seems to have been arrested. Boot trade reports are a little better. The markets for vegetable oil and oilseeds have been quiet, with prices tending to lower levels.

Details of the week's movements and news in the principal markets from special correspondents will be found on later pages of this issue.

THE WAY OF PEACE.

We welcome with profound relief and thankfulness the courageous proposals with which Mr C. E. Hughes, on behalf of the United States Government, has opened the deliberations of the Washington Conference. It is perhaps difficult for any American to realise the strange mixture of hope and fear with which the Conference has been awaited in this country. In President Harding's invitation the British public could see a second chance for the world statesmen who had so signally failed at Versailles to provide the peace and security for which the world is hungering. But in view of the experience of the abortive conferences and narrow bickerings of the past three years, the hopes which the Conference aroused were not unnaturally tinged with a certain wistfulness and an involuntary touch of scepticism. Fears, on the other hand, were born of the imagination of what the world outlook would become if the Washington Conference failed in achievement. Failure there would leave Europe looking forward over a period of economic chaos, struggle, and bankruptcy to nothing but another war more horrible than the last. To those who approached the Conference in that attitude of mind the concrete proposals for naval armament reduction boldly put forward by America on the opening day came as a surprise, the more welcome the more they are contrasted with the elusive manoeuvring and ungenerous compromise that marked Versailles and the succeeding European conferences. To all unprejudiced observers America's naval proposals must be regarded as a hall-mark of the United States Government's genuine determination to omit no contribution which it is in their power to make towards guiding the feet of the world into the way of peace.

The American Government proposes that within three months of the signature of the suggested agreement the fleets of the premier naval Powers shall be reduced to the following tonnages:—

	Capital Ships.	Cruisers, Destroyers, and Auxiliary Craft.	Sub-marines.
No.	Tons.	Tons.	Tons.
Great Britain ..	22 .. 604,450	450,000	90,000
United States ..	18 .. 500,650	450,000	90,000
Japan	10 .. 299,700	270,000	40,000

After ten years, it is proposed, replacement shall be limited by an agreed maximum of 500,000 tons each for the United States and Great Britain, and 300,000 tons for Japan. The amount of battleship tonnage to be scrapped immediately under the American proposals is as follows:—

	United States.		Great Britain.		Japan.	
	No.	Tons.	No.	Tons.	No.	Tons.
Under construction ..	15	168,000	4	172,000	7	289,100
Old battleships	15	227,740	15	411,375	10	159,828
	30	845,740	19	583,375	17	448,928

This means an immediate destruction or abandonment of 66 capital ships, with a total tonnage of 1,878,043 tons. For those who attach importance to figures of pre-war tonnage, we may add that in 1913, according to the *Navy League Annual*, the capital ships and armoured cruisers of the British Empire totalled 99 of 1,512,350 tons, those

of the United States 43 of 639,585 tons, and those of Japan 26 of 351,786 tons.

We rejoice to see that Mr Balfour, on behalf of the United Kingdom, has accepted the principle of these proposals, and that the Government, according to an announcement made yesterday, has given a practical endorsement to this acceptance by suspending the contracts for the four projected battleships of the Hood class. It is no disparagement of the proposals but merely obvious practical common sense to say that before the signature of any agreement can be approached, the position must be examined from all angles by experts, and every possible point of view raised and discussed. It is obviously a case where the old proverb, More haste less speed, is applicable. Mr Balfour, we see, has been taken to task in some quarters for the "reservations" which he made in accepting the purport of the scheme. From a study of cabled reports it appears that Mr Balfour's so-called reservations were these. He suggested the abolition of the large submarine, a highly important extension of the American proposals, and raised the question whether, instead of having a ten-years' holiday from naval construction, a scheme of current replacement might not be preferable. We cannot see how such suggestions knock the bottom out of the American programme. The question of replacement is just one of those which calls for the careful examination of experts. It might conceivably prove from many points of view—social, economic, and pacific—that instead of a ten-years' holiday, to be followed perhaps by a feverish outburst of fresh construction, steady limited replacement would better meet the aims which America, and we trust all the nations, have in view. That is essentially a question for experts. In so far as it tends to dilute the proposals, we trust that Mr Balfour's proposed amendment will prove unnecessary, but it is at any rate a point that it is right and proper to raise for discussion at this juncture.

The generosity of the proposals from the American point of view is clear from the figures of proposed destruction given above. It is true that America lacks something of Britain's veteran experience in the matter of naval construction, and it is said that she has encountered certain technical difficulties in her new programme. But the British Admiralty, which during the war reaped the benefit of ships and equipment, turned out in exceptionally short time by some of the great American armament firms, would be the first to admit that American resource is certain in the long run to overcome all such difficulties. The proposals are the more striking when we come to look at the whole question frankly and broadly. All right-minded people in this country regard war with the United States as unthinkable. But let us assume for a moment that the unthinkable came to pass. It can hardly be denied by any student of warfare that a war between this country and America would of necessity be inconclusive unless the one country or the other possessed a naval preponderance immeasurably in excess of any preponderance which the world has yet seen or dreamed of. Furthermore, even were such a mythical preponderance to favour this country, we could hardly hope either to guarantee the Dominion of Canada against American attack, or to blockade America with the degree of completeness essential to success. Were the preponderance on the side of the United States, they could hardly hope to starve us out because they could not cut off our powers of import from Europe, and through Europe from Asia and Africa. In a word Anglo-American war would be stalemate. But it should be frankly recognised that were the Washington Conference to prove abortive, and the old armaments race to be resumed, America, through her great resources, has it in her power, if necessary, to obtain a very large naval superiority over any probable or even possible combination of antagonists. No one in this country wishes to fight America now or ever. There is no reason why we ever should fight America, and in making up our minds to that attitude, sentiment and common sense should be decisively reinforced by contemplation of America's undoubted ability to outstrip us if necessary in the ruinous race of armament construction. The restriction proposals have already had a favourable reception in this country. As soon as the fact

is clearly grasped that this fair and statesmanlike scheme emanates from a nation which is the greatest potential builder of armaments we believe that the public opinion of the country will range itself solidly behind the Government and its delegates both in their tentative acceptance and in the most determined efforts they can make to translate the proposals into a definite working agreement.

The importance of America's bold initiative reaches far beyond the question even of naval armaments. The Pacific problem and land armies are two further items on the conference agenda. If naval agreement can be reached, the atmosphere in which these other questions will be approached will be infinitely the better adapted to accommodation and reconciliation. Upon the upshot of these momentous discussions depends the course of solution of most of the leading financial and economic problems which confront the world to-day. So long as there is a hope that Washington will provide an atmosphere of peace and security, and a reduction in national expenditures which will permit of budgets balancing and currency reform being seriously undertaken, it is of little use proceeding with the discussions of financial and economic policy on the basis of existing conditions. Realisation of this fact has already prompted the conveners of the International Monetary Conference to postpone their meeting. Those who are charged with the framing of economic policies the world over will now wait and watch for the possible introduction of a great and beneficent change in the world outlook. A short time ago Mr Austen Chamberlain told the House of Commons that the policy of the Government was "to seek peace and ensue it." An unparalleled opportunity is now presented for the pursuit of that policy in international affairs, as keenly as it is being pursued with, we believe, an almost equal support of public opinion with regard to the future government of Ireland. Speaking at Liverpool, on Thursday night, Mr Chamberlain said: "There are at this moment two momentous conferences meeting, one on this side of the Atlantic, and one on the other. One seeks to bring peace to the world, the other seeks to bring peace to this island. Give us your good will in both efforts." We have frequently been numbered among the vigorous critics of the present Government's sins of omission and of commission. But in these two matters we trust that the country's response to Mr Chamberlain's appeal will be wholehearted and unanimous. The present moment of high opportunity will not recur, and any attempt to put grit instead of oil into the machinery of either conference will be a crime against the human race which history will not be slow to assess.

THE RALLY OF OUR EUROPEAN MARKETS.—I.

In economic affairs as in military, there need be no despair so long as panic does not prevail. There has been, and in some quarters there still is, too panicky a tone adopted as regards our recovery from the inevitable depression and suffering caused by the disastrous losses during the war. But if nations can reach some degree of concord and agreement; if strenuous effort is forthcoming on the part of the workers of the world, and if mutual give-and-take be shown by both capital and labour, there is no reason why the indications already visible of a recovery in trade should not rapidly become more pronounced. We in the United Kingdom have just celebrated the third anniversary of the Armistice, but over the greater portion of Europe and Asia Minor peace is of a much more recent date. Many people declare that our depressed trade is largely due to the loss of our European markets. But the fact is that, except in the case of Germany and Russia, each of the nations of Europe took a larger percentage of our total exports (i.e., exports of home produce and manufactures, and of re-exports of foreign and colonial produce) in the period from January, 1919, to September, 1921, than it took in the year 1913. When we consider that Germany has lost valuable material resources in the territory ceded to France and Poland, and has lost her shipping to a very great extent, and has

already made considerable reparation payments, it is very remarkable to find, from the last number (October) of the Trade and Navigation Returns, that she stands for the nine months of the current year second to France on the list of our European customers, and fifth on the list of our world customers. British India stands first, having taken 14 per cent. of our total exports, the United States second (8 per cent.), France third (6.4 per cent.), Australia fourth (6 per cent.), and Germany fifth with 5 per cent. In 1913 Germany was second on the list of our best customers, taking 9.5 of our total exports, the exports to British India having amounted to 11.3 per cent., and to the United States to 9.3 per cent.

TABLE SHOWING the VALUE of our TOTAL EXPORTS to the COUNTRIES of EUROPE, and of our PERCENTAGE EXPORTS, for 1913, 1919, 1920, and the FIRST NINE MONTHS of 1921, and of the COMBINED VALUE from JANUARY, 1919, to SEPTEMBER, 1921.

	Total Ex- ports in 1913, £634,800,000	Total Ex- ports in 1919, £634,400,000	Total Ex- ports in 1920, £1,557,200,000	Total Ex- ports from Jan. to Sept., 1921, £596,300,000	Total Ex- ports from Jan., 1919, to Sept., 1921, £3,116,900,000

13. Turkey in Europe	2.6	0.4	12.8	1.3	13.0	0.8	3.4	0.5
14. Portugal	3.9	0.6	7.6	0.8	12.1	0.8	3.2	0.5
Total	239.2	37.6	548.8	57.0	625.8	40.4	202.6	33.8
							1,377.2	44.2

The values in the table for the years 1913, 1919, and 1920 are taken from the recently published first volume of the Annual Statement of the Trade of the United Kingdom for 1920 [Cmd. 1503], pages 143, 144, and the values for the present year to the end of September are taken from the October number of the Trade and Navigation Returns, pages 339 to 344. The countries included under "S.E. Europe" ranking fifth on the list comprise Austria-Hungary, Rumania, Bulgaria, Servia, and Greece for the years 1913, 1919, and 1920. For 1921 the values of our exports to Czechoslovakia and the Serb-Croat-Slovene State are added, and in the case of Russia the separate values for Finland, Esthonia, Latvia, and Lithuania are included. In 1913 Russia stood sixth on the list of our best customers, when she took 4.4 per cent. of our total exports. She also stood sixth on the list of countries whence we drew our imports. As Signor Nitti says, "Before the present economic ruin Russia was the great reservoir of raw materials where one could go with the hope of finding everything." In 1913 Russia stood third to Germany and France in the list of our European customers. The table shows that for the current year to the end of September she stands ninth. The fact that Germany has risen to the second place in our

European list of customers for the current year, and that she stands first on the list of those who purchase our re-exports, is due to the unflagging industry and dogged perseverance of her people.

Referring to the table, it will be seen by comparing the percentage values of our exports in 1913 with those in the final column of the table that each of the countries except Germany and Russia took larger percentages for the combined period January, 1919, to September, 1921, than in 1913. And in every case, excepting Italy and Switzerland in the present year, the 12 countries took larger percentages in 1919, 1920, and 1921 than in 1913. It is evident that the decline in our export trade is not due to the loss of our European markets. In 1913, out of a total value of exports of £634,800,000, our European customers took goods valued at £239,200,000, or 37.6 per cent. In the period from January, 1919, to September, 1921, the same countries took goods valued at £1,377,200,000, out of a total of £3,116,900,000, amounting to 44.2 per cent. Germany is rapidly regaining her position, and the sooner we are able to help Russia to repair her transport and restart her industries the sooner shall we see all of our European customers taking a larger proportion of our exports than ever. In the next table we show the values of our total exports to the colonial possessions of the nations of Europe:—

Our Exports to Foreign Colonial Possessions.	Total Ex- ports, 1913.	Total Ex- ports, 1919.	Total Ex- ports, 1920.	Total Ex- ports Jan. to Sept., 1921.	Total Ex- ports from Jan., 1919, to Sept., 1921.
	Min. £. %	Min. £. %	Min. £. %	Min. £. %	Min. £. %

For the current year our exports to Syria, amounting to more than two million pounds sterling, are included in the list of French colonial possessions. Java and other possessions in the Indian seas compose the bulk of Dutch possessions. The combined value of our total exports to the colonial possessions shown in the table, which in 1913 amounted to £18,200,000, or 2.8 per cent. of our total exports, were valued at £22,800,000, or 3.8 per cent., for the first nine months of this year. For the period from January, 1919, to September 30, 1921, the nations of Europe and their colonial possessions took exports from us valued at £1,482,800,000, or 47.6 per cent. of our total exports, compared with a percentage of 40.4 in 1913. These figures are sufficient evidence of a decided rally on the part of most of our Continental markets. They illustrate with rather astonishing clearness the fatuity of the policy—so popular in some quarters—of attempting to turn our backs on Europe, and making up for European trade by extension of our commercial

dealings with other parts of the world. We hope to show in a further article how the nations of America and Asia, and our overseas dominions and colonial possessions, have progressed as our customers.

THE HAGUE RULES.

THERE is at last a prospect that the controversy which has existed for half a century between shipowners and shippers of cargo as to the conditions of carriage will be settled. Representatives of all the interests concerned have agreed on standard clauses defining sea carriers' risks to be incorporated by reference in bills of lading under the name of the Hague Rules, 1921. The terms of settlement have now been endorsed by numerous meetings of Chambers of Commerce specially convened, by underwriters, and by bankers, and it is anticipated that shipowners will make the necessary alterations in the bills of lading they issue, so that the new conditions may become effective from the date proposed, that is, in relation to all transactions originating after the end of January next.

The bill of lading, originally a mere receipt for goods shipped, has developed, with the growth of overseas trade since the introduction of steamships, into an elaborate document. Its complexities have demanded the attention not only of the parties to the contract of carriage, but also of bankers. Under the ordinary c.i.f. contract the buyer establishes a credit with his banker, whose correspondent at the place of shipment pays the seller on lodgment of invoice, insurance policy, and bill of lading. The banker must see that the shipping documents he receives are in order, and, handling large quantities of bills of lading, is interested in the simplification and standardisation of these documents. For this reason and also on the ground that the incorporation of the Hague Rules in bills of lading will conduce to the fairness of the contract of carriage, the British Bankers' Association at a recent meeting formally approved of the proposed new code of conditions.

The policy followed by shipowners in gradually extending the clauses in bills of lading so as to relieve themselves at last from almost every kind of liability in respect of goods carried was a deliberate one. If they were to continue basing the freight charged on the weight or bulk of the goods, they could not be both carriers and insurers. If they had assumed liability for risks of loss they would have had to take value also into account. Their policy was to act as carriers merely, though they exercised such care as was possible, as indeed they were bound to do to maintain good reputation. They left the cargo owner, however, to bear or insure the risks of the voyage. This policy of the shipowners involved consequences which it is not necessary here to examine in detail, but which unquestionably have been unsatisfactory to shippers, and especially to shippers of miscellaneous goods by liners. Much friction has existed, and the growth of the pilferage evil since the war made the controversy more acute than before. Shipowners have recognised that this state of things is prejudicial to good business relations with their customers, and have come to terms with them accordingly.

The terms are, in brief, that goods shall be carried on conditions closely corresponding to those contained in the American Harter Act. Since 1893 shipments from United States ports have been subject to the conditions laid down by the Harter Act. The compulsory incorporation of the provisions of that Act in bills of lading issued in American ports has made the shipowner responsible for the safe carriage of cargo, while freeing him from navigation risks, subject to his providing a seaworthy ship. More recently, Australia, New Zealand, and Canada have passed similar legislation, and, in the early part of this year, the Imperial Shipping Committee issued a Report recommending legislation for the United Kingdom and the British Empire as a whole of a kind similar to the Canadian statute. Proposals for legislation have been pending in various foreign countries, and there was

a possibility that in a matter where international uniformity is desirable, laws would be passed in the various maritime countries of the same general tenor, but differing inconveniently in points of detail. That undesirable state of things will be obviated if the Hague Rules are generally adopted, because their form is that of a self-contained code, not dependent, like legislation, on any assumed basis of national law, but capable of application anywhere without reference to local laws.

The preparation of the Hague Rules was the work of the International Law Association, which, through its Maritime Law Committee, intervened after the publication of the Report of the Imperial Shipping Committee, and brought together representatives of all the interests concerned in the question, developed the issue between the principal parties, facilitated interchange of views, and finally, at its conference in September at the Hague, settled the form of the Rules. At the Hague Conference all interests and nationalities were very fully represented. Under the chairmanship of Sir Henry Duke, the President of the Admiralty Court, jurists met business men, and completed the working out of the scheme for an international code of rules to be incorporated by reference in bills of lading in the same way as the York-Antwerp Rules of General Average are now incorporated. A number of delegates of Chambers of Commerce were present, Sir Norman Hill and others represented the shipowners, the chairman of Lloyd's attended, and the British Bankers' Association was represented by Mr. W. W. Paine, of Lloyd's Bank, and Sir James Hope Simpson, of the Bank of Liverpool and Martin's.

Since the Hague meeting the rules then formulated have been widely discussed in mercantile circles, and though they have been criticised, and have met with some active opposition, the general body of opinion is undoubtedly favourable to their adoption. The Associated Chambers of Commerce endorsed the rules at a meeting at Sheffield, and on Monday last the London Chamber of Commerce also approved them. In certain special trades where cargoes are usually carried in bulk, notably the timber and corn trades, the rules have been unfavourably received. Special conditions are usual in those trades. The rules can, however, be used as a common basis in conjunction with special clauses such as those referred to. In recent discussions some confusion has been introduced by references to difficulties in connection with the use of "received for shipment" bills of lading, but those difficulties are a separate problem, which the parties directly concerned with that form of shipping document are now endeavouring to solve. The broad effect of the rules is, as already indicated, to introduce Harter Act conditions. There are some differences, but not on main points except perhaps one, namely, that under the American law, but not under the Hague Rules, there is a loophole for the shipowner to lessen his liability by agreed undervaluation of the goods. The rules are expected to be adopted in the first place in connection with the shipment of miscellaneous goods by the liner companies, being designed primarily to meet the complaints of general shippers.

Experience of the working of the Hague Rules may disclose need for amendment, as was the case with the York-Antwerp Rules, but it seems now to be clear that they are to be put to the test of actual practice. Should legislation be proposed later, international discrepancies would be less likely to result than if the common basis of the rules had not been worked out. The adoption of the Hague Rules, it will be appreciated, will not result in the disappearance of all the small print conditions from bills of lading. The rules take the place only of those dealing with the voyage—with sea carriers' risks—but, even so, a useful step towards simplification and uniformity has been achieved. If the rules are incorporated the banker will know that no other clause lessening the sea carrier's liability lurks in the document, because the effect of the rules is an agreement that no such separate clause shall have any effect. It will no longer be necessary for bankers, in handling bills of lading for security purposes, to read them through from beginning to end to make sure that there is no clause contrary to their instructions, so that, in addition to other advantages, routine work will be simplified.

THE FUTURE OF COAL.

(BY A SHEFFIELD CORRESPONDENT.)

THIS week a new coal mining agreement has been signed, and, together with this, there falls to be recorded a striking change in the output per unit of labour. Taking the latter point first, the latest production figures are surprising, when viewed in the light of current wages, widespread short time, and much unemployment. Here are the bald results of three periods within the scope of the seven-hours system:—

AVERAGE WEEKLY OUTPUT OF COAL (in Tons).	
1920.....	4,409,000
1921, first 13 weeks (last quarter before strike)....	4,307,000
1921, last four recorded weeks, ended October 29th	4,243,000

At the present moment very nearly, if not fully, 300,000 mine workers are unemployed. Many pits are closed. Many are working with greatly reduced staffs. Nearly every pit and man at work is on short time. Yet here, with just about 25 per cent. of the man-power idle, and the rest only averaging a trifle over 3½ shifts per week, we have only a small reduction in the output of coal. The number of man-hours now being worked is barely 50 per cent. of the normal, yet we have an output only about 2 per cent. below what has recently been considered the normal. This is not only striking; it is highly significant. We are rapidly moving towards cheap coal, and are approaching a reasonable output per unit of labour actually employed and paid. We are proving that there are hundreds of thousands of miners in excess of requirements for the economical conduct of the industry and the good of the nation's trade.

There are approximately 1,250,000 mine workers. Nine hundred thousand, or less, could easily get all the coal required for all our furnaces and ships. With such a number of men, working at a reasonable rate, we could have fair wages, a fair output, and full employment. We suffer unemployment in 1921 mainly because we had far too many persons living on the mining industry in 1919-20. We obtained an output of six tons of coal per miner per week, or over 300 tons per year, away back in the early 'eighties. Recently, with vastly better appliances—with thousands of mechanical coal-cutters and face conveyors—with better lights, drainage, and ventilation—we have not been getting even four tons per week. For several years our mines have been over manned. Whilst living wages have had to be paid to an enormous number of men for a ridiculously small output, cheap coal has been out of the question.

The men now working are proving what can be done. Per man-hour worked they are getting not far short of 100 per cent. more coal than at any period since the outbreak of war. They are doing this on drastically reduced pay rates. I do not say "wages." The wages cost per ton of coal now coming out of our pits is barely 15s per ton, against 30s in the first quarter of this year. It is now clear that in the future we can have something like 6,000,000 tons of coal per week, from less than 1,000,000 miners working full time. With such an output, from such a number of men, we can have both good wages for miners and cheap fuel for industry. That is the vital point.

But we must consider the superfluous miners. The hundreds of thousands of men now idle ought not to be allowed to starve, and they ought not to be encouraged in the belief that they can return to the mines when trade revives. The hard fact is that they are not wanted. The greatest demand we can expect for coal will only be sufficient adequately to employ the men now on short time. Let the Government, which mishandled the coal trade whilst it exercised a special control, make immediate temporary provision for the superfluous miners, and then set about some schemes for absorbing these men into other occupations. Never again must we pay too many men for getting too little coal if our manufacturing and shipping trades are to prosper.

Turning now to the new agreement between owners and miners, it is possible to explain the situation by taking the South Wales area figures and conditions. The new agreement was signed on Monday. In the main it has been operative since the coal subsidy ceased at the end of September. It is now in full working order. The future

price of coal will depend largely upon how it is manipulated, if that word is permissible. The coal industry has not only reverted to the old district conciliation board system, but there is a national board for national questions, there is the new principle of basing wages on profits instead of selling prices, and there is a profit-sharing scheme.

Wages are to be the September, 1915, standard, plus 28 per cent. as a bedrock minimum, plus a percentage upon the minimum based upon the proceeds of the industry remaining after the payment of the standard wages and profits. The owners are to be entitled to profits equal to 17 per cent. of the wages paid, if and when such profits can be realised. Then, if and when there is a surplus over the standard wages and profits, such surplus is to be divided in the same proportions—83 per cent. to labour and 17 per cent. to capital. In addition to the base rate, or standard, or minimum, as the case may be, the piece workers are to receive 14.2 per cent. in consideration of the recent reduction of working hours from eight to seven per day. Workmen on the afternoon or night shift will be paid at the rate of six shifts for five actually worked. There are also special rates for Sunday and holiday duties. The agreement will remain in force until the end of September, 1922, and will thereafter be subject to termination on three months' notice. The men's contract period of service is 14 days.

All questions of differences which may arise on details "shall, in the first instance, be submitted to and considered by the board without the chairman being present. If the board are unable to agree on any question or difference so submitted, the meeting shall be adjourned for a period not exceeding 14 days, to which adjourned meeting the chairman shall be summoned, and shall attend thereat, when the question or difference shall again be discussed by the board, and in the event of its failing to agree the chairman shall give such decision thereon as he shall deem fit, which decision shall be final and binding on the parties."

Profits is an elastic term. To settle the knotty question of cost other than wages, in order to arrive at profits and surpluses, the agreement has been drawn up in great detail. Such points as income from coke ovens, by-product plants, iron works, brick works, &c., have at last been definitely settled. Expenses in connection with sales commissions, railway charges, miners' houses and coal, &c., have been arranged for. The capital costs of development work—sinkings, opening out new shafts or seams, &c.—have been separated from profit and loss accounts. In past times the miners have been suspicious that costs which ought to have been charged against capital account were charged against revenue. The new agreement, so far as it affects the relationship between employers and workmen, is all to the good, for the stipulations, the joint audits, the joint boards, and the independent chairmen tend to remove the atmosphere of suspicion and distrust which has hitherto hung over the mining industry. But the public interest side of mining—that relating to output and cost per unit of labour and capital employed—the ultimate selling price of the coal—remains somewhat obscure. Much depends upon what is done with the superfluous miners alluded to above.

THE FEDERATION OF CENTRAL AMERICA.

(FROM A CORRESPONDENT.)

LAST January Costa Rica, Honduras, Salvador, and Guatemala signed a Pact to restore the Federal Union which subsisted between them, and included Nicaragua, during the six years following their severance from Spain in 1821. Provision was made for the future admission of Nicaragua, but Costa Rica has withdrawn. The remaining three, with a total territory of 101,750 square miles and an estimated population of somewhat over four millions, have gone on, and in September their delegates adopted a Federal Constitution which would be "advanced" even for the most civilised European State. It has been published in the Official Gazette of Guatemala, and its chief provisions may be summarised as follows:—

The three States are organised into a Federal Re-
