* March 31st.

The loss on trading amounted to £89,600, but interest, dividends, &c., brought in £86,300. Reserve for equalisation of dividends is debited with £100,000, and the reserve for reinstatement of collieries with £80,000. The reduced dividend of 5 per cent. is almost entirely met from the transfer from equalisation of dividends reserve, which is thereby reduced to £100,000. The reserves, including £525,300 for depreciation reserve, total about £1,300,000, while the property item stands at £2,846,500. The amount due for special taxation has not yet been agreed with the Government, but it is estimated that the provision already made—the amount is hidden under Sundry Creditors—will substantially exceed the revenue authorities' demands. Any surplus, when ascertained, is to be transferred to income-tax account, with a view to placing it "in a satisfactory position." Investments, depreciation on which has been provided for, stand at £1,888,500, of which £1,488,700 represents shares in

subsidiary companies. The latter compares with £1,383,500 in the previous balance-sheet. The liquid position is far from satisfactory, cash in hand amounting to £1,900, debtors to £401,000, and creditors to £863,400, while there is a bank overdraft for £96,000. At the forthcoming annual meeting authority is to be asked for extending the borrowing powers of the company, and the capital will be increased when "a favourable opportunity" arises.

Bryant and May.—For the year ended March 31st last the directors of Bryant and May, Limited are able to show record results. Following the slight set-back in 1921, when profits fell from £226,642 to £215,324, the latest figures of £233,135 must be regarded as a satisfactory performance, especially when the fact that for the first time the full year's interest was paid on £300,000 7½ per cent. notes is taken into consideration. Results for the past six years are given below:—

YEAR ENDED MARCH 31ST.

	1917.	1918.	1919.	1920.	1921.	1922.
Net profits....	£167,743	£127,233	£149,556	£226,642	£215,324	£233,135
Reserves, &c....	55,000	25,000	25,000	45,000	45,000	45,000
Preference div..	67,200	67,200	67,200	67,200	67,200	67,200
Ordinary div..	48,000	48,000	52,000	88,000	88,000	88,000
Dividends	(12%)†	(12%)†	(9%)†	(11%)†	(11%)†	(11%)†
To employees..	2,456	12,967	5,356	2,441	9,293	8,081
Carried forward	2,456	12,967	5,356	2,441	9,293	8,081

† Free of tax.

As in the previous two years, £25,000 is written off premises, plant, and machinery, and £20,000 goes to reserve fund. After paying 14 per cent. on the preference shares, a dividend of 8 per cent., free of tax, is distributed to the ordinary shareholders, the same being also paid on the partnership shares, of which 10,674 pound shares have now been allotted. Under the Brymay co-partnership scheme, a further 3 per cent. is again paid on the ordinary shares, requiring £24,000, making a total distribution of 11 per cent., free of tax, to ordinary shareholders. This leaves £24,000 to be divided amongst the employees. During the year the Canadian Match Company, Limited, has been formed in conjunction with the Diamond Match Company, and another undertaking, each having a third interest. The first factory has been established in Ontario, and it is stated that "the product has received an excellent reception throughout the Dominion." The report makes no mention as to the redemption of the outstanding £300,000 7½ per cent. notes, although probably some further information on this point may be forthcoming at the annual meeting of the company to be held next Wednesday. The company has the option to redeem these notes at 102 any time after July 1st next, on giving three months' notice, and it is unlikely that the payment of such a generous rate of interest will escape the directors' attention. An excellent feature about the accounts is that part of the auditors' certificate which relates to valuation of stocks. It is stated that "the stocks-in-trade have been entered according to inventories certified by the managing director and the departmental managers, all items being valued at prices at or below cost, and not exceeding market value." No doubt most other companies similarly value their stocks, but the publicity given to this point by the directors of Bryant and Mays, Limited, is to be commended. The balance-sheet will be found analysed in our usual column.

Consolidated Mines Selection Group.—Our mining correspondent writes:—Of the four annual statements just issued, two relate to well-known producing companies, one to a concern in the early stages of development, while the fourth is that of a finance undertaking. The two first referred to—the Brakpan and the Springs—it may be recalled some time ago enlarged their borders on the terms of handing over a certain percentage of the profits to the Union Government. This transaction figures prominently in last year's accounts—especially with the Brakpan. In both instances an increased tonnage of ore was crushed at a lower ratio of cost than in 1920—the latter feature being due partly to the former

and partly to the enhanced degree of efficiency secured underground. Nevertheless, owing to the decline in the gold premium, the profits came out less than before. Appended is a comparison of the salient statistics for the past three years:—

	BRAKPAN.	1919.	1920.	1921.
Ore crushed.....tons	544,200	596,500	659,800	
Yield per ton.....	38/2	36/6	34/	
Cost per ton.....	26/8	29/7	27/2	
Profit per ton.....	11/7	6/11	6/10	
Working profit.....£	422,960	542,380	490,250	
Dividends.....	224,370	380,200	255,000	
Carried forward.....	133,363	34,100	59,300	
Ore reserves.....tons	2,484,000	2,526,500	2,423,200	
Value.....dwt.	8.74	8.88	8.61	

	SPRINGS.	1919.	1920.	1921.
Ore crushed.....tons	434,610	465,800	484,750	
Yield per ton.....	38/2	37/10	37/2	
Costs per ton.....	26/9	30/8	29/8	
Profit per ton.....	11/5	7/2	7/6	
Working profit.....£	343,660	438,490	397,800	
Dividends.....	251,400	197,600	197,600	
Carried forward.....	48,570	59,300	73,400	
Ore reserves.....tons	2,417,300	2,726,200	3,056,200	
Value.....dwt.	9.26	8.76	8.92	

With the Brakpan the revenue per ton set out above is somewhat deceptive. On the one hand, the grade of ore treated averaged nearly ½ dwt above the mean of the ore reserves; on the other hand, a portion of the gold won was set aside to form a reserve, and consequently did not figure in the yield. This procedure was followed for the purpose of providing funds for the development of the Lease area, acquired in the circumstances already mentioned. Of £180,000 capital outlay occurred in this connection, £100,600 was furnished by the appropriation of the gold reserve. The balance came out of earnings—hence the reduction in the dividend rate. The Government's participation in the profits for 1921 amounted to £49,500; this year it will be considerably more, the percentage being 12½ instead of 5 per cent. On the whole, development work proved a little disappointing, a considerable increase in the footage being accompanied by a decrease in the quantity of the ore in reserve; the slight falling off in value is to some extent accounted for by the over-mining already mentioned. In these circumstances it is especially unfortunate that owing to the labour position two encouraging discoveries made at the end of the year near one of the new shafts could not be followed up. On the basis of last year's dividends the shares yield slightly over 12 per cent. In regard to the Springs Mines, the consulting engineer is able to give a generally favourable account of developments. In the eastern section of the old mine the large ore body discovered some time ago continues to furnish a large tonnage, while in the western section, not only have the known ore shoots continued to show satisfactory widths and values, but a fresh payable area of considerable promise has been opened up. Then in the new ground encouraging discoveries have been made in the neighbourhood of No. 3 shaft, which will shortly be available for use. The performance of a substantially increased footage was reflected in the ore reserve estimate, and also in the appropriation account, where as much as £127,200 expenditure in excess of the monthly provision is written off. On the 1921 dividends the shares at current price show only 7½ per cent. yield, allowance being made for the expansion in the profits expected to accrue from the extension of the reduction plant to a capacity of 52,000 tons per month by means of additions on the all-sliming method—i.e., the elimination of the stamp. The West Springs, whose property adjoins that of the Springs Mines, has spent nearly a million sterling upon shaft-sinking and development without much result in the way of payable ore discoveries. The resources available amount to about £250,000, but it would look as though more will be required to bring the company to the producing stage. The Rand Selection Corporation, whose principal interests comprise shares in the three companies above dealt with, and in the Daggafontein, which has been under the necessity of suspending operations, last year made a profit of £159,300, as against £199,900 in 1920, and distributed dividends totalling 27½ per cent., or the same as before. The balance-sheet shows shares and interests £761,350; loans to the Daggafontein Company £65,250; loan (debit) £126,400. The shares—a rather nominal market—are quoted 2½, giving a return of about 11½ per cent.

Russia's Imports.—We have received from a well-informed correspondent in Russia some statistics which show that imports into that country in February were 57 per cent. greater than in January, and were five times as great in volume as the imports of January, 1921. Imports for February and for the first two months of 1922 are summarised below:—

	(In Thousands of Poods.*)	February, 1922.	Jan. 1 to March 1, 1922.
Food.....	2,395.6	3,856.3	
Animal products.....	20.6	25.7	
Timber and seeds.....	236.8	570.8	
Pottery materials.....	1.1	29.5	
Fuel.....	932.4	2,195.9	
Chemical products and materials..	32.8	63.0	
Metals and metallic products....	248.1	740.5	
Paper-making materials.....	312.6	611.4	
Apparel.....	3.3	12.1	
Famine relief goods.....	4,364.4	5,900.9	
Miscellaneous.....	18.8	33.4	
	8,566.5	14,039.5	

* 1 pood = approximately 40 lbs.

It will be seen that goods classified as for famine relief, together with food and fuel, compose the bulk of the imports. Under the heading of food, the principal imports in the two months were 798,200 poods of herrings, 420,000 of wheat, 9,000 of flour, 307,900 of barley, 161,800 of oats, 102,200 of rice, and 244,000 of sugar. Coal imports in the two months were 929,700 poods. Twenty-four locomotives also figure among the imports. Of the total weight of imports in the two months, 46.9 per cent. came from the United States, 15.5 per cent. from England, 11.8 per cent. from Germany, 7.2 per cent. from Norway, 6.8 per cent. from Esthonia, 4.9 per cent. from Finland. According to preliminary figures, Customs duties in February amounted to 334 milliards of paper roubles, against 50 milliards in January.

UNITED STATES.—HEAVY NEW ISSUES—INTERNATIONAL ACCEPTANCE BANK—STEEL CORPORATION—ESTIMATED TREASURY DEFICIT IN 1923.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 24.

THE outstanding feature in securities markets here is the continued absorption on an enormous scale of investment bonds, both old and new, particularly the latter. Last week the total offerings of new issues realised \$142,400,000, approximately, or the second highest weekly total for 1922. State and municipal offerings were unusually numerous, comprising 20 separate issues aggregating \$23,300,000. The State bonds were sold at prices yielding around 3.95 and 4 per cent., while the city bonds were floated at prices to yield from 4.25 to 4.35 per cent. New domestic railroad issues included, among others, \$9,500,000 Chicago, Milwaukee and St. Paul 6 per cent. equipment trust notes, sold at prices to yield investors 5.35 to 5.75 per cent., and \$1,000,000 New York Central and Hudson River Railroad 4 per cent. consolidated mortgage bonds, which were offered at 89, to give an investment return of 4.88 per cent. Some of the larger American industrial corporations were able to market bonds on about a 5 per cent. basis, such as the Indiana Steel Company and the National Tube Company, whose \$7,000,000 and \$3,000,000, respectively, of 5 per cent. mortgage gold bonds were offered at 99½, yielding 5.05 per cent. New bonds of other industrial concerns were sold at figures giving an investment return ranging from 6.25 to 7.50 per cent. Yields on the new offerings of public utility bonds were about the same as those for industrials. One of the largest issues of the past week consisted of

National Bank of Commerce in New York

Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE.
Gresham House, Old Broad Street,
London, E.C. 2

\$30,000,000 Series A Sinclair Crude Oil Purchasing Company 3-year 5½ per cent. notes, offered at 99½, to yield approximately 5.70 per cent.

Foreign financing supplied a substantial part of the week's total, a notable offering being \$20,000,000 Dutch East Indies 40-year external sinking fund 6 per cent. gold bonds at 96½, and interest to yield about 6.48 per cent. to the earliest redemption date, namely, March 1, 1932, and about 6.24 per cent. if held to maturity. Like the two previous issues of \$40,000,000 each, last week's offering was quickly placed, it completes the \$100,000,000 loan which the Dutch East Indies was authorised to float under the Netherlands law of December 30, 1921.

The Holland-America Line's 20,000,000 guilders 25-year 6 per cent. sinking fund bonds were sold at \$920 per bond, yielding 6.30 per cent. to maturity and 6.90 per cent. if redeemed in 1927. Simultaneously 10,000,000 guilders of the same loan were offered in Holland. An issue of \$10,000,000 Paris-Lyons Mediterranean Railroad 6 per cent. external sinking fund bonds was also made at 83½, to yield 7.25 per cent.

There will be offered to-morrow at 100 and interest \$100,000,000 30-year 5 per cent. bonds of the Dominion of Canada. The bonds are callable at the option of the Government at that price and interest on any interest date after 20 years; the proceeds are to be used to refund a portion of the Dominion's existing debt. The issue will be the first offered in this market by Canada since July, 1919, when \$75,000,000 5½ per cent. bonds were floated here.

The International Acceptance Bank celebrated its first anniversary last week. In spite of the general and drastic shrinkage in international trade the new institution has been able to attract business sufficiently large in

volume (with about \$13,000,000 of its acceptances outstanding) to give it ninth place among all the accepting banks and trust companies of the United States. At the meeting of the executive committee the chairman, Paul M. Warburg, said that the first year's results seemed to vindicate the policies and expectations of the organisers, while Mr Goodhue, president of the bank, declared that the latter is directing its efforts toward diverting to American markets a larger share in the financing of the existing volume of world trade. The present time, he remarked, offers "a great opportunity for our banks in this respect, America having two advantages of enjoying a free gold market and stable gold currency, while trade and banking in other countries suffer the severe handicap of the uncertainties of their widely fluctuating exchanges. The Federal Reserve Board, through its recent revision of its acceptance regulations, has greatly facilitated the development of American acceptance banking; particularly in dealing with foreign countries, the elimination of some of the restrictions, necessary as they were in the beginning, will enable American banks to compete more effectively with British banks, and will aid them to put dollar acceptances on a par with sterling bills in world markets."

The United States Steel Corporation's announcement that construction of a new lap and butt weld tube mill at Gary, Indiana, will be begun at once is interesting as further evidence of the marked improvement that has taken place in the steel industry. The new mill, which will cost approximately \$15,000,000, is expected to be ready for production in about eighteen months. It will have the capacity to produce 350,000 tons a year, which will add from 20 to 25 per cent. to the corporation's tube capacity.

The United States Treasury expects to end the current fiscal year with a moderate surplus, but will probably face a huge deficit of nearly \$500,000,000 for next year, according to estimates made by Secretary Mellon. Figures based on the latest available data indicate, he says, that total receipts for the present fiscal year will exceed expenditures by about \$47,000,000, as against an estimated deficit of some \$24,400,000 when the Budget was submitted. For the next fiscal year, however, indications now point to a deficit of \$359,000,000, in round numbers, as compared with a deficit of \$167,500,000, approximately, forecast last December. The Budget figures then submitted did not take into account \$125,000,000 accumulated interest on war savings certificates of the 1918 series, which, Secretary Mellon says, represents interest on the public debt and will appear as an ordinary expenditure. Including that accumulated interest the deficit for the coming fiscal year, indicated by figures now at hand, will be \$484,000,000 instead of \$359,000,000. Estimates for the fiscal year 1923, he points out, are based upon the Budget estimates after taking into account an indicated shrinkage of \$215,000,000 in internal revenue collections, an estimated decrease of \$25,000,000 in Federal Reserve Bank franchise tax receipts, additional revenue figured at about \$200,000,000 on account of interest payments by the British Government, estimated collections by the War Finance Corporation amounting to about \$100,000,000, and further expenditures on account of the railroads to the extent of approximately \$200,000,000. There are many uncertainties, however, as to just what the receipts and expenditures will be for the next fiscal year. As Secretary Mellon points out, many important appropriation bills have not yet been enacted by Congress. With respect to receipts, the Treasury has received no official notification, it is understood, that interest will be paid in that year on the British obligations held by the United States, although there have been announcements that the British Budget for the current fiscal year would include that item. Furthermore, estimates for the next fiscal year do not take into consideration expenditures which may be made under the proposed ship subsidy legislation, should the latter be enacted, or any expenditures on account of rivers and harbours, public buildings, and other undertakings beyond those already authorised by present laws and the regular annual appropriations. There is also the uncertainty as to what extraordinary outlays may be involved in the soldier bonus legislation should Congress pass such a measure.

FRANCE.—GENOA AND THE INDEMNITY—STATE FINANCE—RENTS AND HOUSING PROBLEMS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, May 2.

How ever much space the newspapers may be devoting to the Conference at Genoa, this International event is regarded here as of very considerably less importance than the climax that will be reached on May 31st if Germany, as it is expected, fails to comply with the demands that have been made upon her by the Reparations Commission. The reason for the diametrically different points of view on the Genoa Conference held by France and Great Britain respectively is easy to understand. From the French standpoint the scores of milliards invested by the people of this country in Russia in years gone by may be regarded for some years to come as irrecoverable under any circumstances. Every Frenchman is satisfied that, whatever Mr Lloyd George may believe, under pressure of British unemployment, it will be a long time before Russia again yields anything in the way of wheat, sugar, or minerals, or is in a position to absorb any appreciable amount of anything worth speaking of in the form of manufactured goods. Germany, on the other hand, every Frenchman is equally convinced—and this belief is confirmed by the expert conclusions of the Allied Reparations Commission—is able to pay what she owes, if the head of the British Government will only agree with France in insisting that she shall. The Russian bonds, which are owned not merely by the large capitalists in this country, but especially (and certainly to the greater proportion) by the working classes, the small tradesmen, and the minor professional families, can be allowed to stand over for the time being. The payment of the German indemnity, on the other hand, is vital to France, unless her national finances are to fall into bankruptcy and the whole edifice of her credit come tumbling to ruin. France has already advanced some 80,000,000,000 of francs to Germany, by finding that amount towards the cost of restoring the devastated regions of the North which were wrecked by Germany. She insists that if Germany is able to finance the restoration of Russia, there can be no reason why she should not pay her debt to France. These are the reasons which make May 31st, when France will have every right to take steps to enforce payment, a much more important date than that of either the beginning or the end of the Genoa Conference and all that it involves.

Meanwhile, although both the Senate and the Chamber are still on holiday for another fortnight, the Finance Commission of the Chamber has already held its first meeting for the purpose of beginning the consideration of the estimates for 1923. The agenda opened, however, with a statement by the Rapporteur-Général, M. Bowkanowski, who pointed out that it would be useless to waste time in considering the various departmental budgets until the Commission had some idea of the manner in which the Government proposed to balance the coming Budget. In these circumstances the Commission decided first to call before it the Finance Minister, M. de Lasteyrie, who has acceded to the request, and will probably attend before the Commission ere the week is over. It has also been decided to ask the Minister of Agriculture, M. Henry Chéron (who is now absent with the President of the Republic on his official tour of Northern Africa), to explain to the Commission the decrees that have recently been issued authorising the export and prohibiting the import of butter, cheese, and cattle on the hoof, which are alleged to be responsible for the recent substantial rise in the price of meat and other commodities. It is explained that the reason for the Commission's unexpected intervention in this direction is based on a fear that the recent fresh rise in the cost of living may prevent the suppression of the extra allowances in respect of the high cost of necessaries that have for some time past been made to members of the public services, but which should, in the ordinary course, come to an end on July 1 next. The suppression of these allowances, which amount to a total of 714,000,000 francs a year, would, of course, have an appreciable effect on

both the current year's expenditure and on next year's estimates.

The law in regard to rents which has now come into force is expected to reduce the chaos that has prevailed in regard to this question since the war began, but will necessarily leave the housing problem still unsolved. Owing to the war and the consequent stoppage of building operations for the past seven years, France is 400,000 dwelling-houses short of requirements. Even before the war there was a permanent shortage of 25,000 holdings in Paris alone, which meant that 46,000 families had to be satisfied with less than one-half of a room per head. Since then, owing to the scarcity of labour and the rise in building costs, nothing has been done to provide the 1,200 houses a year required to keep up with current needs. The situation at present is that houses that before the war would have cost 100,000 francs to build, would now cost over 300,000 francs, while rents that would have amounted in 1914 to, say, 7,500 francs a year, must now be placed at from 25,000 to 26,000 francs (if the higher average rate of interest required by house owners and the greatly increased fiscal charges be included). Many Paris landlords now calculate their rentals on the basis of 1,000 francs per annum per room. Seventy-five per cent. of the holdings in Paris are flats. Flats that before the war were let at from 2,500 to 3,000 francs a year now produce from 7,000 to 10,000 francs.

From the landlord's point of view the situation since the war began has been fantastic. Practically nobody was able to pay rent during the war, and this was recognised by legal enactment. How this affected house-owners may be realised when it is recollected that in Paris there are many thousands of people owning only a single house, the rent from which is their chief and in some cases their only means of livelihood. As a matter of fact, many of these small owners found themselves reduced to penury, and many instances were recorded in which people were compelled to act as charwomen or handymen to their own tenants, in order to keep body and soul together. When matters began to settle down after the war, ejectment orders were issued on such a wholesale scale that Parliament was obliged to intervene. Courts were set up, particularly in the interest of men who had been mobilised, to fix how back rents were to be paid, and to deal with the problems of increased rentals, and leases that had expired during the war. Landlords were forbidden to eject tenants on good cause being shown against such steps, and restrictions were placed on rentals being increased more than to the extent of 40 per cent. From 50 per cent. to 75 per cent. of the arrears were swept off entirely, and ample time was given for the payment of arrears.

This did not fully meet the situation, however. Ejectment orders continued to be served, and at one time over 30,000 were in existence in Paris alone. Tenants refused to budge, however, being faced with the impossibility of finding other accommodation, or in any case with having to pay a vastly increased rental, which would be possible in the case of "vacant" property. Parliament again stepped in, and a new law has just come into force that gives tenants, whose leases have expired since the war began, substantial consideration. Subject to accepting a 40 per cent. (maximum) increase of rent, plus the payment of a further annual sum in regard to increased charges for heating, lighting, &c., sitting tenants may now claim the right to be given an extension of their leases, verbal agreements, and other forms of tenancy, for periods varying, according to circumstances, from five to 15 years. The starting point for these extensions was fixed as October 24, 1919. Leases that expired before that date may be extended as from that date; leases that have expired since, or are still running, may be extended from the date when they terminated or will terminate. Professional men (including journalists or artists) using their premises for their work, are entitled to five years' extension without question, and so are foreigners, provided the latter served with the Allies, or had a son serving, or were living here before the war. The new law is generally accepted as a sincere attempt to do justice all round.

Under the influence of Genoa the Bourse has remained

THE BRITISH LINEN BANK.

Every Description of Home and Foreign Banking Business transacted.

hesitating and weak, for on the one hand the Rapallo Treaty has created a feeling of scepticism as to the possibility of the reconstruction of Europe, and on the other the speech delivered by M. Poincaré at Bar-le-Duc has emphasised the divergence of view between England and France as to the Allied attitude towards Germany. On all sides in consequence a waiting game has been played, because it is more and more evident that values must depend on the unknowns of the political situation. Most of the French Rentes have shown a decline. Thus the Three per cents. have dropped from 57.80 to 57.45, the 1917 Four per cents. from 63 to 62.77, and the 1918 Four per cents. from 62.75 to 62.45. The 1915 Five per cents. have, however, risen from 78.15 to 78.85. Owing to speculative selling, that has discounted the probable effect of the political situation, banks generally have declined, Banque de Paris falling from 1,110 to 1,075, Banque de France from 5,730 to 5,700, and Banque de l'Union Parisienne from 603 to 590. Transports have maintained their value better than many other securities, Nord improving from 1,010 to 1,040, though Métropolitain has shown a slight decline from 423 to 420. Shipping is depressed. Chargeurs Réunis is back from 372 to 365, Messageries from 184 to 175, and Transatlantique from 178 to 163. In electrical undertakings Thomson that had risen to 715 closed weak, fluctuating between 695 and 703, while Bréguet at 710 has lost 15 points.

GERMANY.—CURRENCY—EXCHANGE AND BOURSE—SHIPPING PRICES—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, May 2.

UNFAVOURABLE views were taken last week of the prospects of Genoa. The Conference, it is remarked, becomes more and more political in measure as the inherent difficulties of the original purely economic programme become more plain. Mr Lloyd George's speech of warning delivered to the assembled journalists was well received here, but it is pointed out that the perils to Europe which Mr Lloyd George recapitulated are almost all political, and, according to the programme, not to be dealt with. On the question of the stabilisation of the mark currency the Socialisation Commission has rendered a report, after hearing banking, agricultural, industrial, and commercial experts. The report lays more stress upon the attaining of a foreign payment balance than upon restoring equilibrium to the Budget, and declares that stabilisation at any given exchange is impossible without both a foreign payment balance and a sufficient reserve of gold, of gold currencies, or of foreign credit. An over limit for the mark's gold exchange as well as an under limit must be fixed, in order to prevent an inundation of marks from abroad. A foreign payment balance can only be attained by reducing consumption and increasing production; and even with that the reparations burden must be reduced, and the payments due on the reduced total during the next five years must be cut down, and provided for by international loans, Germany paying for interest and amortisation. At present, says the report, reparations are a rigid item in the

foreign payment balance, and have no relation to Germany's economic capacity.

Money continues to be tight. The Reichsbank statement for April 22nd books separately that part of the gold reserve which is deposited with the Bank of England in order to provide security for short-term loans, but against which no loans are at present outstanding. The amount is 41,301,000 marks, the gold in Berlin thereby being reduced to 958,567,000 marks. The pressure on the Bank for credit has fallen off, discounted Treasury bills declining by 2,097,101,000 marks to 147,085,450,000 marks, while note circulation fell by 1,435,854,000 marks to 132,627,759,000 marks. The "Kassenschein" circulation increased to 8,754,200,000 marks. The revenue received in the financial year 1920 from the export duties—which were first imposed on May 10, 1920—was 1,155,500,000 marks, and in the first eleven months of the financial year 1921 1,809,000,000 marks. The monthly receipts from this source have about doubled since November, 1921, when the rates were increased. The Reichsrat has sanctioned a Bill establishing a Federal Railway Council and 13 subordinate local Councils, with power to advise in railway matters. The members are chosen partly by the local Chambers of Commerce and Agriculture, partly by the trades unions, and one-third of them are nominated by the State Governments. To the central Railway Council each local Council will elect three to five representatives, all of whom must belong to industrial, trade, agricultural, or shipping circles, and there must be at least one employer and one employee among the representatives of each local Council. Twenty members in the Central Council will be chosen by the Reichswirtschaftsrat.

The Bourse last week was undecided and inclined to weakness. The averages of dividend payers and of home bonds declined, while foreign bonds rose. The *Frankfurter Zeitung's* index for 15 dividend payers is 38,203 for April 28th, as against 38,774 on April 21st, and 40,250 on November 10th. The general public keeps away from the Bourse. Metal stocks were favourably affected by rumours of negotiations for the creation of an international iron and steel syndicate, it being held that the rise of German iron prices towards world market level threatens to terminate Germany's present independence of market conditions elsewhere. The Rhenish-Westphalian Electricity Company, a very large concern run jointly by Herr Stinnes and the western municipalities, has raised its capital from 400 to 550 million marks, and decided to offer part of its stock to employees. The annual reports for 1921 of the companies constituting the "Aniline Concern" show large increases in nominal profits, but the gold value of the profits of these companies tends to decrease. Net profits of the Badische Aniline Company were 165,261,933 marks, against 65,184,493 marks in 1920; of Friedrich Bayer and Co. 201,425,521 marks, against 67,500,225 marks; of Lucius and Bruning 172,343,884 marks, against 61,799,786 marks; and of Griesheim-Elektron 43,393,082 marks, against 17,166,503 marks. Most of the other annual reports now being issued show profits between 100 and 300 per cent. over those of 1920. Quotations of Federal loans to-day were: War Loan 77.50, 4 per cent. 94, 3½ per cent. 87.50, 3 per cent. 138.75, colonial 4 per cent. 140, savings and premium 83.25.

Shipping reports for 1921 are almost all favourable, the causes being cheap operation and cheap coal, which drew a sufficient part of the world's decreased freighting to German lines. All companies without exception paid dividends, the lowest 8, the highest 40 per cent. The gross profits of eight Hamburg companies totalled 214,617,676 marks, of which 96,171,675 marks was earned by the Hamburg-America Company, the net profit being 60,394,781 marks. Five Bremen companies' gross profits were 162,498,859 marks, and the net profit 68,280,791 marks, of which 45,764,678 marks was earned by the Norddeutscher Lloyd, as against 29,492,253 for the Hamburg-America. In the balance-sheets the share capital of 16 companies totals 1,096,500,000 marks, the value of ships 1,313,680,215 marks, bank deposits and claims 2,883,088,934 marks, debts 1,758,068,792 marks, and moneys available for reconstruction under the Government compensation plan

of last year, 2,558,355,634 marks. The amount paid in dividends for the business year, 1921, was 89,840,000 marks. The companies have for some time past been fused in a few groups, and last year no further fusions of importance took place, with exception of the union of the German-Australian and Kosmos companies, both of Hamburg. The Hamburg-America Company's group is the largest. This company has taken over entirely the Deutsche Levante Line, is shareholder in the Hamburg-South-America, Neptune, Woermann, East-Africa, Silesian Steamer Company and Bugsier Company, and has an "interest agreement" with the Harriman concern, which itself comprises four American companies, as well as traffic agreements with English firms. The Norddeutsche Lloyd is shareholder in the Hamburg-Bremen-Africa Line, Ocean Reederei, Woermann Line, East Africa Line, and Roland Line, and it has traffic agreements with the U.S. Steamship Company, the Nippon Yusen Kaisha, and two English firms. The prospects of German shipping this year are very good, and every effort is being made to provide for the reviving ocean passenger traffic. With the resumption of traffic with Australia, which is due next month, German shipping will have returned, either directly or in collaboration with foreign companies, to all its pre-war routes.

The foreign trade report for March shows a return to import surpluses. Imports are valued provisionally at 22,900 million marks; exports at 21,500 million marks, the import surplus being 1,400 million marks. February had an export surplus of 2,492.3 millions, January of 1,716.2 millions, and December of 847 millions, while the earlier months of 1921 had import surpluses. Imports by weight in March were 2,640,000 metric tons, against 1,480,000 tons in February, and 2,310,000 tons in January; and exports were 2,150,000 tons, against 1,750,000 tons and 2,030,000 tons. Details are not yet published, but the new passivity is stated to be due to a large increase in import of raw and half-finished materials, and of food. The large increase of exports also comes mostly under the heading manufactured goods, the value of which exceeded the February total by 5½ milliard marks. In the whole first quarter of 1922 imports were 6,430,000 metric tons of value 47,700,000,000 marks; exports, 5,930,000 tons, value 50,300,000,000 marks; and there was an export surplus of 2,600,000,000 marks.

Prices, after a short set-back in connection with the recent mark exchange recovery, continue to rise. Potash prices were again increased on May 1st, and are now about forty-fold the prices of 1914. Pig-iron prices have also again been raised, and are, per metric ton: hematite, 6,435 marks, against 79.50 marks in 1914; foundry iron No. 1, 5,870 marks, against 75.50 marks; ditto No. 3, 5,800 marks, against 70.50 marks; Siegerland steel-iron, 6,000 marks, against 79 marks; and spiegelisen, 6,525 marks, against 75 marks. The prices of ferro-manganese 80 per cent. has been raised from 13,820 marks to 14,860 marks; ditto 50 per cent., 12,580 marks to 13,735 marks; and ferro-silicium 10 per cent. from 7,450 marks to 7,750 marks. Consumers' representatives in the Eisenwirtschaftsbund demand a reduction of steel and rolling-mill product prices, and the employees' representatives are pressing for reintroduction of the former compulsory maximum prices on these products. The scrap-iron market continues weak, as, though the demand for iron far exceeds the supply, smelting continues to be checked by coke shortage. Very bad reports on crop conditions are coming in. In mid-April only 14 per cent. of wheat reports were good, as against 57 per cent. at the same date last year, while 45 per cent., against 36 per cent., were middling, and 41, against 7 per cent., bad. Of rye reports 29 per cent. were good, as against 60 per cent. last year; 51 per cent., against 33 per cent., middling; and 20 per cent., against 5 per cent., as bad. Only 17 per cent. of reports stated that spring sowing was finished, as against 87 per cent. last year. In the fortnight since these reports were sent in, the abnormally cold and wet weather has continued.

Berlin's municipal Budget for 1922 shows expenditure of 11,723 millions, against 6,117 millions last year. Revenue is estimated at 10,001 millions, and the deficit at 1,722 millions. It is proposed to increase the real property, industrial and other taxes.

AUSTRALIA—NEW SOUTH WALES ELECTIONS— OVERSEAS TRADE—COMMONWEALTH BANK.

(FROM OUR CORRESPONDENT.)

MELBOURNE, March 27.

THE result of the New South Wales General Election tends to relieve some of the anxiety which was felt as to the possible outcome, as the effect of a victory for the Labour Government would have been an immediate addition of about £2,000,000 to existing taxation by that State, in accordance with the proposals set forth in the Budget a few months ago, while the programme of the Government would have involved still further additions to expenditure and taxation, besides necessitating, in all probability, heavy loans from London to maintain employment at high wages by means of a large public works expenditure. As it is, the successors of the Labour Government will have a difficult task in attempting to balance revenue and expenditure after the growth of the latter under the Labour régime. The transition from the artificial prosperity prevailing for some years past under the influence of free Government expenditure to a more natural state of affairs based upon the production of the country will not be easy.

The population of Sydney is about 900,000, or about 43 per cent. of the total population of New South Wales, against a proportion of about 39 per cent. in 1911, and it is felt that a reversal of the tendency thus shown is now required. But, owing to the advance in the rates of wages, which, under the arbitration system, rest upon a legal basis, and are not capable of easy readjustment, it is difficult for country employers to absorb more men, especially as the prices obtainable for wool, wheat, meat and butter are much lower than during the period of war activity, and at the same time more has to be paid in taxation.

The Commonwealth trade returns continue to show reduced imports, the amount for February being £9,352,455, or a decrease of £2,408,314 as compared with February, 1921, while exports for the month were £12,986,857, or an increase of £606,769. The totals for the eight months, July to February inclusive, compare with those of the corresponding period of the two previous financial years as follows:—

	1919-20.	1920-21.	1921-22.
Imports—			
Merchandise	53,462,245	117,025,505	62,385,560
Gold	40,397	9,591	21,881
Total imports	53,502,642	117,035,296	62,407,441
Exports—			
Merchandise	94,753,423	82,559,696	78,824,156
Gold	3,774,570	3,698,091	2,617,099
Total exports	98,527,993	86,257,787	81,441,255

Imports of merchandise for the last eight months show a decrease of £54,639,945.

The Commonwealth Bank of Australia has just issued its balance-sheet for the half-year ended December 31, 1921, some of the principal figures comparing with six months and a year previously as follows:—

	Dec. 31, 1920.	June 30, 1921.	Dec. 31, 1921.
Deposits	27,153,311	34,515,485	26,556,692
Do Savings Bank	35,306,956	36,190,389	37,278,788
Bills payable, &c.	6,482,831	7,985,466	2,734,942
Cash and cash balances	7,030,246	13,384,711	7,557,887
Money at short call, London	4,160,000	8,090,000	10,715,000
Public securities	32,614,411	33,304,516	34,732,900
Bills receivable in London, &c.	4,829,519	7,174,175	1,937,197
Discounts and advances	20,804,850	18,657,922	13,904,223

The profit for the last half-year is £341,361, making the total accumulated profits £3,792,726, represented by the reserve and redemption funds. As a Government institution, the bank pays no taxation.

1-4, GREAT TOWER STREET, LONDON, E.C.3.

SWEDEN—FINANCIAL AND INDUSTRIAL CONDI- TIONS—TRADE DISPUTES—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, April 23.

LATELY there has been some slight improvement in quotations on the Stock Exchange, especially in industrial stocks, whereas banking shares have dropped in value. In all, there was a rise in values of 26 million kroner, traffic shares contributing 1.78 million kr. On the other hand, company reports now appearing daily are showing mostly unsatisfactory results. The Mölnbacka Trysil, a large timber and sulphite mill concern, discloses a loss of 3.32 million kr, as large depreciation has had to be written off stocks of raw materials and ready-made goods. There is a more reassuring tone in the Swedish timber market, since sales are reported as reaching 250,000 standards, or about one-third of the whole annual production. The timber industry is, however, still under a cloud owing to labour troubles. A lockout having been proclaimed, the mills find it naturally difficult to operate, and cannot fix their prices ahead, not knowing upon what wage basis to calculate. At the same time, the very late re-opening of navigation, about one month later than usual, will probably have some influence on freights, and is stimulating the hopes of shipowners for better values. British buyers of Scandinavian timber have this year been unusually cautious, in contrast to French and Spanish firms, but it is a known fact that stocks in England are rapidly dwindling, and that therefore, sooner or later, a strong demand will set in which must be filled. With regard to the market for newsprint, which is a very important one in the Swedish export trade, there is a pleasing recovery to be noted, and all the Swedish mills are working full time. A settlement has recently been reached of the labour conflict in the paper and cellulose trades. It is reported that the well-known Stockholm banker, Aschberg, director of the Svenska Ekonomibolaget, has recently concluded a contract with Centrosojus at Moscow for a credit to the Russians of 50 mill. kr, the amount having to be used for the purchase exclusively of Swedish goods, and the payment to be rendered in three months' bills.

A slight drop in wholesale prices has taken place during the last month, but such important articles as wheat, potatoes, butter, and wool were higher in price. Prices for fuel rose owing to a stronger demand after the protracted ice blockade, petroleum and fuel oil were stationary, and the same was the case with metals. Owing to the stagnation in the building industry, which is under a cloud owing to labour disputes, there was no material change in building materials and prices for fire-bricks dropped a little. The general impression is that prices for raw materials and foodstuffs are approaching a stabilised basis. The position as regards unemployment is still unsatisfactory, and the Riksdag has granted another 15 mill. kr for relief work. The Riksdag has still to decide about the total grant of 85 million kr asked by the Government for relief work during this year, and in the meantime a total of 35 million kr, including the above-mentioned 15 millions, have been advanced for this purpose. At the same time, however, the Government has decided to reduce wages paid for relief work by 15 to 20 per cent. of existing rates, this reduction being made on the basis of a comparison made with wages paid in the open market and also in accordance with a decision of the Diet that relief-wages should be lower than the wages for ordinary employment. There are now about 150,000 unemployed in this country.

It is expected that railway freights will be lowered in the near future, as the State railways, by means of cheaper working costs through lower prices for raw materials,

and also lower wages and salaries, are able to undertake such a step without running into loss. The Diet has also proposed a lowering of postal charges from October 1st next. Both measures will naturally bring a boon to the much-tried industrial and commercial communities.

POLAND.—FOREIGN TRADE IN 1921—TRADE WITH ENGLAND—MONETARY REFORM.

(FROM OUR CORRESPONDENT.)

WARSAW, April 22.

TOGETHER with his budgetary estimates for 1922, analysed in my last letter (*Economist*, April 8th, p. 675), Mr Michalski presented to the Diet a very interesting Grey Book dealing with Poland's foreign trade during the last two years. The study of the figures contained in this volume reveals a marked progress, as shown below:—

(000's omitted.)		
	Imports. Tons.	Exports. Tons.
First half-year 1920	1,908.0	209.1
Second " "	1,621.8	411.2
First " 1921	2,470.2	878.3
Second " "	2,370.5	1,149.7

The increase of exports was much more rapid than that of imports. The progress of the former amounts for the last two years to 940,600 tons, as compared with 462,600 tons for the latter. The development of a more favourable balance is very conspicuous, and this tendency becomes even more marked if we compare the figures exclusive of corn and coal imports, which in 1920 and 1921 were mainly of a temporary character. After the incorporation of Upper Silesia, Poland will obtain the necessary fuel from her own mines instead of importing it from abroad. The import of corn will also cease. Poland's crops are actually sufficient for the maintenance of her own population.

Without coal and corn, Poland's imports and exports were as follows:—

(000's omitted.)		
	Imports. Tons.	Exports. Tons.
First half-year, 1920	308.5	173.6
Second " "	282.3	281.3
First " 1921	408.2	683.8
Second " "	415.5	995.8

Viewed thus, the figures for 1921 reveal a much more favourable situation. It is to be regretted that the official statistics do not show the value of imports and exports.

The principal articles of Poland's exports are timber, oil and oil products, cement, sugar, and potatoes. In all these groups, with the exception of potatoes, rapid progress took place in 1921, as is shown below:—

	Timber. Tons.	Oil and Oil Products. Tons.	Cement. Tons.	Sugar. Tons.	Pota- toes. Tons.
First half-year, 1920	19,800	26,100	13,100	250	96,000
Second " "	82,400	113,500	27,500	15,300	3,900
First " 1921	295,800	113,500	35,200	27,400	59,700
Second " "	561,000	215,500	38,800	12,000	22,300

The export of cement would have been much greater if the difficulties of obtaining coal had been less. These difficulties have now been overcome, and a very rapid increase in these exports is expected. Poland's principal markets for this product are not only the border States—such as Czechoslovakia, Austria, Roumania, and Germany—but also overseas countries, such as Brazil, Argentina, Dutch India, &c.

Among the countries of destination of Polish exports, the United Kingdom ranges third, after Germany and Austria. During the second half-year of 1921 the exports to these three countries amounted to 140,600, 300,000, and 215,000 tons respectively. The progress of exports to the United Kingdom was remarkably rapid (9,600 tons first half-year 1920, 4,400 tons second half-year 1920, 43,500 tons first half-year 1921, 140,600 tons second half-year 1921). The increase of imports from England has been much slower—37,700 tons in 1920, 52,700 tons in 1921. This is due to the slow progress of the import trade in general and to the high sterling exchange, which acted as a barrier against English products.

The Polish Minister of Finance is of the opinion that the situation is not yet ripe for a reform of the monetary system. "The principal condition of a successful reform," he said in his *exposé*, "is an equilibrium of the Budget, which would remove the necessity for printing new paper money. This equilibrium, again, is possible only there where the whole economic system is sane." The foundation of a bank of issue in the form of a joint-stock company, which would print bank notes with another inscription than the present one, cannot give, in our conditions, any satisfactory results."

The stopping of the printing press is the preliminary condition of any monetary reform. In this respect the situation is steadily improving, as may be seen from the table below:—

	Paper Marks in Circulation. Milliard Marks.	Increase in Comparison with Previous Month. Milliard Marks.
End of October, 1921	182.8	30.0
" November, "	207.0	24.2
" December, "	229.5	22.5
" January, 1922	239.6	10.1
" February, "	247.2	7.6
" March, "	250.7	3.5

While in October the circulation increased by 30 milliards, in March the quantity of new paper marks issued had been reduced to 3.5 milliards.

Letters to the Editor.

FOREIGN EXCHANGES AND DEVALUATION PROPOSALS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Exchange between this country and America is steady enough for all practical purposes, and the same applies to France, Belgium, Italy, Switzerland, Spain, Holland, the Scandinavian countries, India, and the Far East. There is no trade lost through fluctuations in these exchanges, which would be avoided by devaluation, as risk can be covered by forward transactions; and devaluation of itself will not keep the rate of exchange steady. If it were decided to devalue the unit of currency of any country and a new ratio to gold were fixed, the new ratio would still have to be maintained; and that which must be done to maintain it must also be done in any case, with or without devaluation, if the rate is not to fall. And if a new ratio were fixed with the old par of exchange set five steps, and if that rate were kept from falling, it might then tend to rise more quickly than arranged and thus hindering trade and causing loss by the movement of it had sought unsuccessfully to restrict. Countries like France, Belgium, and Italy will no more like to see their unit devalued than we do; nor is there any need for it. Let them balance their Budgets and keep their paper issues at their present level, and they may leave the rate of exchange to look after itself; and what can they do less than this if they devalue?

As for countries with greatly appreciated currencies, the same holds good, for if they entered into an international agreement to stabilise their exchanges, it would depend on the confidence which was felt in their being able to carry out the agreement, whether the object was attained or not. If they were prepared to set their house in order, and it was believed they could do so, it would be enough; their exchange rates would first improve and then steady themselves; there would be no need to devalue.

As no one can foresee how countries like Russia and Austria will recover, neither can anyone see in what manner and form their currencies will be established again. But this much is clear, that both a well-established Government and settled conditions of life must come before there can be a steady exchange. To devalue their unit of currency is useless. What they want is a new unit, but they cannot have it yet.—Yours faithfully,

H. FISHER.

Books and Publications.

EUROPEAN PROBLEMS.*

THE main theme running through Mr Zimmer's book is the grandeur of the opportunity presented to Europe, especially British, statesmen in November, 1918, and the tragedy of its losing. Much space is therefore devoted to pointing out what might have been, to crying over spilt milk, and indicting Mr Lloyd George as the spiller-in-chief. We are given a picture of the Premier standing on the doorstep of 10 Downing street on the day of the Armistice bowing to the crowd—the man who won the war; we are given the outlines of the great, constructive, healing speech he might then have made, and, as a contrast, the miserable electioneering promises and appeals that followed so closely. All this is fair criticism, and few people will now champion the 1918 elections against Mr Zimmer's accusations. But to extend the indictment to British policy at the Washington Conference, as Mr Zimmer does in his preface, is surely unfair. It is a pity that this paragraph was not expunged, for it cannot but detract from the weight of a book, which, on the whole, is characterised by broad liberal thought.

The tragedy of the lost opportunity is summed up in a sentence:—"Everything went wrong, from the first call for negotiations in October until the final rejection of the Treaties by the United States Senate." The result is that Europe is now "a big unfinished design, supplemented, and in part replaced, by patchwork improvisation." Mr Zimmer sees Europe's way out "along the simple and well-tried road of the old Concert of the European Powers." "If this can be achieved," he believes, "Europe will recuperate her strength in security, and the League of Nations will find the main obstacle to its growth removed and will deepen its roots and spread its branches." A restoration of the old Concert demands Anglo-Franco-German *rapprochement*, and Mr Zimmer sees no hope of improvement in either Anglo-French or Anglo-German relations "till there is a change in the British Premiership." "To the French public Mr Lloyd George is the man who, having engaged to try the Kaiser and to exact the uttermost farthing from the Boche, has pocketed most of the German colonies and German merchant fleet for his country, and put Britain's chief opposing Navy and chief trade competitor out of the way, and has then left France, uncompensated and unsupported, with a paper Treaty as her chief asset." To the German he appears as a man who pledged himself to peace on the basis of the "fourteen points" and then went back upon them. Mr Zimmer regards it as one of the first steps out of this *impasse* that Britain should renounce all share in German reparations. By so doing, he thinks, "we should do a service both to France and to Germany, and re-equip ourselves with authority for our task of mediation and appeasement." There are, however, other aspects of this difficult question with which he does not deal. Mr Zimmer often displays shrewd judgment in his conception of the plot of Europe's post-war story, and if the part of the villain (Mr Lloyd George) is somewhat luridly painted, the book perhaps will not suffer in popularity on that account. The book contains some pertinent quotations as Appendices, but no index—an omission which always causes inconvenience and could so easily be avoided.

THE AGRICULTURAL CLUB.

THE capable and popular president of the Royal Statistical Society was elected president of the Agricultural Club at its inception during the war, and successive re-elections imposed by an unanimous wish of a body not greatly united on other matters resulted in Sir Henry Rew re-

* "The Story of the Agricultural Club." By Sir R. Henry Rew, K.C.B., President of the Club. (London) P. S. King and Son. 1922. 20s 6d.

maining at the helm until the end, when with the dissolution of the Agricultural Wages Board it was decided, perhaps a little hastily, but still decided, to wind up the club. The history of the venture was well worth telling, and its "one and only" president was obviously the man to tell it. This he has done with no common skill, marshalling the difficult features of the club's discussion in such a manner as to present a very clear and indeed striking picture of agricultural movements in Great Britain during the last two years of the war and the disquieted period of transition which followed it.

Lord Bledisloe in a preface, which is itself inspiring, elects that word as the adjective best describing the record as also the debates recorded, and those who took part in these discussions, some of them already memorable, at 80 Pall Mall, will recall the stimulus derived from what the president, quoting Cowper, calls "the clash of arguments" between internationalist and individualist, between Labour and Capital. The representatives of agricultural labour were strong, the spokesmen of the landowners were strong, and there was excellent sword-play on almost every occasion. The farmers were not so strong as the squires and labourers' representatives, but three successive presidents of the National Farmers' Union entered the arena, and the cause of tenant farming, of the farmer (firmarins) who stands firm between Capital and Labour, had keenly intellectual support from publicists like Mr A. G. L. Rogers, Sir Douglas Newton, M.P., and the Rt. Hon. Henry Hobhouse. Two experts in political and rural economics, Mr C. S. Orwin and Mr R. V. Lennard, were prominent.

Of papers read before the club, those of permanent value included the really masterly surveys of "Intensive Farming and Culture under Glass," by Mr Rowland Robbins, and of the "International Wheat Trade," by Capt. R. T. Hinckes. These, by embodying a ripened judgment fortified by well-digested statistics, constituted economic documents of real importance. Careful detail invested with analogous importance the study of Danish agriculture by Mr Nugent Harris.

The club never really debated the subject of agricultural wages, and none of its speakers seems to have faced the disconcerting fact by which economists are so constantly confronted, namely, the tendency of a minimum wage once fixed to crystallise into a maximum salary. An issue which was frequently debated but never resolved was that of getting the smaller man on to the land as tenants or freeholders. The cleavage of opinion was here very marked, for while such speakers as Lord Bledisloe, Messrs C. D. Acland, M.P., G. G. Rea, Castell Wray, and C. S. Orwin dwelt on how much of rural England was changing hands and how the occasion should be embraced for the skilful labourer to settle on a holding of his own, others, such as Mr George Edwards, M.P., Mr Lovell, Mr Denton Woodhead, Mr George Nicholls, and Mr Hewitt, were insistent on the difficulty of such labourers settling. The right of expropriation was the one demand over which the combatants least bethought themselves of gloves, or, unhappily, of evidence; but thereon one conclusion, even if but a dim one, may be said to emerge from Sir Henry Rew's volume. The Royal Statistical Society could not do the community a better service than in seeing if some real light cannot be obtained in a very dark place. The "dim conclusion" to which we have referred is that there is just one hypothesis which would admit of both sides being right. Half the rural acreage of the country may be shifting ownership, and this may produce the effects described by one school; but the shifting may be confined to this half which, as it were, keeps passing and passing before the eyes of estate agents like an army of "supers" across the stage. The other half may be possessed of an extreme immobility, and the complaints of inability to get land on which to settle may come from those whose experience is of these too stable acres.

our headquarters in Chancery lane, which marked the last chapter in the story of effort and self-sacrifice of our men in "The London and Lancashire" and its allied companies, during the war.

Whilst then our excellent result for 1921 must not be taken as a criterion, and, whilst after the turmoil of the war we are beset with new and difficult problems, we are well equipped to face them. The reduction of our premium income denotes apparent retrogression in our turnover, but that was inevitable. Really it means consolidation, and as the French adage has it, sometimes one must step back a little in order to get the spring for a fresh impetus. Financially, in the percentage of our reserves to premium income and the value of our investments, we are actually much stronger than we have been for many years past.

The prospects of 1922 are not auspicious—we have not yet touched bottom—but we shall do our best to at least maintain our position, relying on that confidence which you—our shareholders—have always afforded us in the past.

Mr John H. Clayton (deputy-chairman), in seconding, congratulated Mr Rutter on behalf of both the directors and the shareholders on his emergence from the serious operations he had undergone, as well as upon his attainment to the chairmanship of this great company. His occupancy of the position would undoubtedly be for the continued welfare of the company.

The motion was carried unanimously, and the usual formal business terminated the proceedings.

THE LONDON LIFE ASSOCIATION, LIMITED. SUCCESSFUL YEAR—INCOME EXCEEDS £1,000,000.

The ordinary general meetings of the London Life Association, Limited, and the Clergy Mutual Assurance Society, and the ordinary joint general meeting of the association and the society were held, on the 3rd inst., at 81 King William street, London, E.C.

Mr Reginald B. Jacomb (president of the association) occupied the chair.

Mr Harold M. Trouncer, M.A., F.I.A. (the actuary and manager), read the notice convening the meetings, the minutes of last year's meetings (which were confirmed), and the auditors' reports.

The President, in moving the adoption of the report and accounts, said: I shall not attempt to disguise the fact that we are very pleased with this report, and I certainly shall feel disappointed if the members of both companies do not share our view.

During the period under review the reversionary bonus system, which was started just before the outbreak of war, has proved to be a great success, and every year without exception we have been able to declare a reversionary bonus of 35 per cent. on sums assured and existing bonuses, as compared with the rate of 30 per cent. per annum which we guaranteed until 1925, and considering that this has happened during the most difficult years that possibly would be conceived, it remains as a great tribute to the acumen and skill of our actuary and manager in advising us to promote it. The sums assured under this system now amount to over £2,000,000, so that the public has not been slow in recognising its advantages.

EXPANSION IN EVERY DIRECTION.

In every direction there has been marked expansion, and our new business for the year of over £1,500,000, although not up to the record figure of 1920, is still a remarkable achievement for an office which does not pay commission and spends a very limited amount in advertisement.

On the first page of the report we give a summary of the results of the year. The most satisfactory item in the London Life accounts is, I think, the amount applied in strengthening the valuation basis; in other words, the replacement of some of the reserves drawn out to meet depreciation. This amount is £231,082 in the case of the reduction of premium and general funds. Of course, it is due to the appreciation in the values of securities in the year that we have been enabled to make so large a replacement, and in addition to the item of £140,555 shown in the revenue account on page 6, under the heading of "Profit on realisations and Revaluation Differences," there was an appreciation in value of some £170,000.

All our Stock Exchange securities stand in our books at the values on December 31st last, and I need hardly remind you there has been a very substantial increase in values since that date.

I would like to make a few remarks on the broad lines on which we think that our business should be managed. Perhaps I may summarise our aims in two words—"Economy and security."

I lay stress on economy, for there are a great many people who do not understand what an enormous effect economy in management expenses has on profits earned. Let me emphasise this point by telling you that the percentage of our expenses to premium income is just over 6 per cent., as compared with an average of about 16 per cent. for offices which pay commission. What does the difference of 10 per cent. of our premium income mean? Do

you realise that it is equivalent to an increase of £1 per cent. in the rate of interest earned on our total funds? I think this way of looking at it may bring home the point to many people.

COMPANY'S ASSETS.

This brings me back to the question of security, and you may be interested to know that our assets may be classified as follows:—

	£	Per Cent.
Well-secured mortgages on property and other high-class security and properties owned ...	2,372,475	34.6
Loans on the association's policies	838,372	12.2
British Government Securities	2,282,925	33.3
Other British Securities	382,941	5.6
Indian and Colonial Securities	474,591	7.0
Foreign Government and Municipal Securities	229,192	3.3
Foreign Railway and other Debentures and Preference Stocks	231,080	3.3
Foreign Railway and other Ordinary Stocks	48,917	.7
	6,860,423	100.0

Security may perhaps be said to be attained by the employment of the funds in high-class investments, but that is not enough, in my opinion. It is the duty of your directors to keep a careful watch, not only on the investments themselves, but on the changing financial outlook, so that, consistent with security, opportunities may be taken of realising investments at a profit or of avoiding depreciation wherever possible.

In concluding the consideration of the London Life accounts, I would like to call your attention to the fact that for the first time the London Life's income from premiums and interest exceeds £1,000,000, showing a growth during the last 10 years of no less than £400,000.

Mr G. D. Smith (vice-president) seconded the resolution, which was carried unanimously.

LONDON AND BRAZILIAN BANK, LIMITED. TRADE CONDITIONS IN BRAZIL.

The fifty-first annual meeting of the London and Brazilian Bank, Limited, was held, on the 2nd instant, at 7 Tokenhouse yard, London, Mr Wm. Douro Hoare, C.B.E., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said it was a matter of disappointment to him that the results of the first year of his chairmanship had not been so good as they could have wished. The countries in which they did business had all suffered severely from the world-wide slump. The severe commercial and financial crisis, referred to last year, increased in intensity, in fact trade in Brazil was practically at a deadlock. Imported goods met with a very poor demand, and that almost confined to articles of prime necessity. On the other hand, their exports were difficult of sale, and at reduced prices, with the exception of coffee, which, owing to short crops, had ruled steady to firm. It would be understood how difficult the violent fall and fluctuations in exchange had made business.

As regarded Portugal, there had been many changes of Government, but the political situation appeared more stable, and economy was aimed at by the present Government. In Uruguay and the Argentine, cattle breeders were going through a very anxious period owing to the closing down of so many freezing establishments.

Their gross profits were £699,467, being £110,872 less than last year, and charges account was £26,846 less, the decrease being caused by the transfer of the currency salaries at the very low rate of exchange ruling on January 31. The net profit, including the amount brought forward, was £723,622. The dividend was 14 per cent. for the year. Having regard to the general slackness of trade, the gross trading profit had been quite good, and they were convinced that the earning power of the bank was great, although he must mention, in passing, the practical monopoly of the Banco do Brazil in exchange business, and the many expenses and restrictions imposed on other banks, always excepting the Banco do Brazil. This had not only militated against their deriving their fair share of business, but had also created an arbitrary and artificial rate of exchange, which had certainly acted as a deterrent to the free interchange of foreign currencies and commodities.

The past year had been one of great anxiety, but he confessed that on looking back he felt that things might have been worse than they had been. He wished he could see any marked signs of definite and lasting improvement. There were "glimmers" of light from time to time, but disappointment often followed, but it must be remembered that Brazil was not singular in its depression and always showed quicker recuperative powers than most other countries. He looked forward to the political future of Brazil with confidence. Signs were not wanting that they had seen the worst, and through the dark clouds there were struggling gleams of light of returning trade and prosperity, not only in South America, but all over the world.

Lieut.-Colonel C. E. Johnston, D.S.O., M.P. (deputy-chairman), seconded the resolution, and it was carried unanimously.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY. A SUCCESSFUL YEAR.

At the ninety-first annual general meeting held at Edinburgh, the Chairman stated that the society had had a successful year. The new business completed was £1,327,000, an increase of about 70 per cent. over the corresponding year of the previous quinquennium. The income from premiums and interest amounted to £841,000. The amount paid in claims was £511,000, which showed a favourable mortality experience.

INCREASED ASSETS.

The average rate of interest realised was £4 3s 6d per cent. after deduction of income-tax, as compared with £4 1s 9d the previous year. The assets show an increase of £198,000, and they now amount to £6,795,000.

INVESTMENTS.

Reference was made to the rise in value of the society's investments, about half of which consist of British Government securities, and to the good bonus prospects at the quinquennial investigation which takes place next year.

SCOTTISH UNION AND NATIONAL INSURANCE COMPANY. RESULTS OF YEAR'S BUSINESS.

The annual general meeting of shareholders was held in Edinburgh, on the 3rd inst., Mr T. M. Murray, W.S., presiding.

The Chairman, in moving the adoption of the report and accounts, said:—

The year 1921 was an anxious one for the directors and officials of the company, and the prevailing economic conditions have left their mark on the accounts now before you. Poor trade, reduced value of commodities, diminished stocks, and a general shortage of money—a state of affairs prevailing in all parts of the world—have resulted in our being able to secure less business practically in all departments. I trust, however, that the net results of our efforts will not be regarded by the shareholders as disappointing.

LIFE DEPARTMENT.

In the life department the net new business secured is about 30 per cent. less than in 1920, but notwithstanding this drop it is

satisfactory to know that the net business is over 25 per cent. greater than it was in the year immediately preceding the outbreak of war. The life claims are within £30 of what they were in 1920, and it is gratifying to have to report that the actuary informs us that the death claims were only 73.6 per cent. of the "expectation."

FIRE ACCOUNT.

The fire account also reflects the prevailing conditions to which I have alluded, the decrease in premiums being no less than £224,000, or 17 per cent. upon the premiums of the previous year. The bulk of this decrease is accounted for in our American returns, and by a shrinkage in the values of the Eastern exchanges, and none of it is due in any way to a loss of connections. There has been a satisfactory diminution in the amount of the claims to be met. These are down by £77,000. There has also been a proportionate reduction in the sums paid for commission, and a decrease in the expenses of management. Altogether there is an aggregate decrease of £128,000, but as to £39,000 of this I will explain hereafter. Adding £31,000 of interest on the fire fund, there is a surplus of £65,000, against £83,000 a year ago. To this surplus, however, there has to be added the sum by which the fund has been reduced, namely, £112,000, and here a word of explanation is necessary. The practice of the company is to set up 50 per cent. of the year's premiums as necessary to meet unexpired liability. Now, when the year's premiums show an increase, 50 per cent. of such increase has to be set apart before a profit is shown. It follows, therefore, that when, as in the year 1921, the premiums show a decrease, 50 per cent. of such decrease must be taken into account in arriving at the profit for the year. The net result is an underwriting profit of £146,000, and interest of £31,000, together £177,000, to be transferred to the profit and loss account. In 1920 the total was £72,000.

I will not trouble you with details of the accident, employers' liability and miscellaneous accounts. The aggregate profit in these accounts is £28,000, or £17,000 more than a year ago.

MARINE ACCOUNT.

The marine account also reflects the trade conditions of the year. Premiums show a decrease of £256,000, but part of this is due to the underwriter refusing to accept risks at what he considered the inadequate rates prevailing. A profit of £30,000 is under all the circumstances very gratifying. May I here point out to the shareholders the very strong position of the marine

fund, amounting, as it does, to more than twice the premiums for the year.

PROFIT AND LOSS ACCOUNT.

The profit and loss account speaks for itself, but there are two items to which I wish specially to refer. These are, first, the sum of £39,000 for colonial and foreign taxes. This item has hitherto been included in expenses of management, but the directors have come to the conclusion that it should be shown in this account along with imperial taxes. It is not in any sense an expense of management. The second is the item of £12,000 as a provision for possible bad debts consequent upon failure of reinsurance companies. The scandals connected with the failure of certain companies in London have been so much referred to in the public Press that they must be known to you all, and we feel that if amongst the millions of money which have been lost or misappropriated we lose only £12,000, we have reason to be relieved. We hope that our loss will be less—it cannot be more.

BALANCE-SHEET ITEMS.

And now as to the balance-sheet. The aggregate assets show a decrease of £200,000, but this is more than accounted for by a reduction of £100,000 in the fire fund, £120,000 in the marine fund, and by our having reduced our liabilities to other companies by not less than £300,000. The rise that has taken place during the past year in the class of securities which we hold has given your directors much satisfaction, and we hope and believe that the necessity for writing off depreciation has definitely passed. This should be good news also to our life policyholders, and we are hopeful of being able at the next declaration of life profits to resume payment of the liberal bonuses to which they were accustomed in pre-war years.

THE NORTHERN ASSURANCE COMPANY, LIMITED. A DIFFICULT YEAR—DIVIDEND MAINTAINED.

The annual general meeting of the Northern Assurance Company, Limited, was held, on the 3rd instant, at Aberdeen.

The Chairman, in the course of his speech, referred to the death since the last annual meeting of the Right Hon. Fredk. Huth Jackson, who was chairman also of the Indemnity Mutual Marine Assurance Company.

As had been foreseen, the difficulties of conducting insurance business which were apparent in 1920 had continued during 1921. The fire premium income of £2,575,823 was less by over a quarter of a million than in 1920, but the consequent release of reserves for unexpired risk had, notwithstanding the larger losses, enabled them to carry £48,299 as the underwriting profit from this department to profit and loss, while the accident business had proved a bright feature with a premium income of £974,755, which showed only a slight reduction and a satisfactory profit of £101,394, a fair share of which had been contributed by the motor department, which was showing distinct improvement.

The marine premiums, as anticipated, were considerably less than in 1920, amounting only to £1,986,789, and there was at the end of the year a balance of 71 per cent. to be carried forward in the account; the settlements on account of 1920 had continued to be heavy, and, having regard to the large business transacted and the generally unfavourable condition of the marine insurance market during the period, the amount of £32,176 which had been taken from profit and loss to strengthen the fund represented a comparatively small loss.

COMPANY'S INVESTMENTS.

The sums assured under new life policies were £775,677, as against £1,110,734 in 1920; the Stock Exchange securities in which a large portion of the funds were invested showed a very satisfactory appreciation in value which had taken place during 1921, and had continued since, and which augured well for the next quinquennial valuation. Of the securities comprised in the shareholders' fund, which were written down to market values as at December 31, 1920, no less than £489,000 had come back by way of appreciation to December 31, 1921, and the policy of investment which had always been to select the very best class of security was now being vindicated.

Full provision had been made in the accounts for any losses likely to be incurred in connection with the failure of certain reinsurance companies since the end of the year. The shareholders would notice that provision for income-tax and corporation profits tax amounted to no less a sum than £291,000, while it was estimated that no liability attached to the company for excess profits duty.

YEAR'S RESULTS.

As a result of the year's operations an amount of £537,852 was brought into the profit and loss account, making, with the balance forward from last year, a total of £778,117, of which debenture interest, the fixed dividend on the preference shares, the interim dividend of 8s. on the ordinary shares, and the income-tax above

referred to, with sundry other debits, absorbed £518,592, leaving the available balance of £259,525, and the directors proposed to pay a final dividend of 9s per share, less tax, on the ordinary shares, making a total of 17s for the year 1921, the same as for 1920, against 16s for 1919, 12s for 1918, and 9s for 1917. The final dividend payable on July 1st next to the 6 per cent. participating preference shareholders in respect of the year 1921 would then be 7/1.97 per share, less tax. It was also proposed to add another £10,000 to the staff pension fund and to carry forward a balance of £122,475. He looked for a gradual improvement in fire and marine business, the result of which might manifest itself more quickly in the fire accounts perhaps than the marine. As an instance of the extent to which the Government is, in effect, a preferential shareholder, he mentioned that during the past five years £1,223,000 had been paid for income-tax, as against £976,000 distributed amongst the shareholders.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED. INADEQUATE RETURNS FOR COMPANY'S SERVICES.

The sixtieth ordinary general meeting of the Rio de Janeiro City Improvements Company, Limited, was held, on the 3rd instant, at Winchester House, London.

The secretary (Mr Henry Haggett) having read the notice convening the meeting, and the auditors' report,

The Hon. Herbert C. Gibbs, who presided, said that last year he had to point out that the rise in the value of the milreis, in which their wages were paid, had caused a sensible diminution in the profits, but he was glad to say that during the past year the low sterling value of the milreis had materially increased their profits. This increase was greater than appeared from the accounts, for, owing to the fact that they were working last year on an obsolete schedule of prices in supplying private customers, they lost no less than £26,000 on those accounts. After nearly three years of unremitting effort, however, they had succeeded in obtaining from the Government a revised schedule of prices, and they might hope that during the current year they would have no further loss on those accounts. The total profit from the year's working was £97,000, and, in addition, they had received a final return of excess profits duty which, after deducting a provision for income-tax to which that return was liable, amounted to £61,500.

USUAL DIVIDEND AND SPECIAL DISTRIBUTION.

The board therefore felt that though, with the uncertainty as to the future value of the milreis, they would not like to increase the dividend beyond 6 per cent., they were justified in distributing the bulk of the profits which were earned in past years, and had now been returned in the form of a repayment of excess profits duty. They were therefore making a special distribution of 4 per cent., less income-tax, in addition to the 6 per cent. This would leave a carry-forward of £15,000. They had not abandoned their efforts to obtain a revision of their contracts so as to be able to obtain a proper return for the work they did in face of the greatly enhanced cost of working under post-war conditions. He visited Rio in November, and was astonished to see the large and wealthy area now drained by the company, and to reflect on the truly miserable return they obtained. He wished to emphasise the utter inadequacy of what the company received for its services. As to the current year, they were not likely to lose by their work for private customers, but, on the other hand, the cost of labour had risen owing to the large works pro-

ceeding in connection with the exhibition at Rio, so that possibly these factors might counteract one another, and it was certain that the return of excess profits duty had come to an end.

Mr Edward Green seconded the motion, and it was carried unanimously.

A vote of thanks to the chairman and directors and the staff in London and Rio was unanimously accorded, and the Chairman having made a brief acknowledgment, the proceedings terminated.

SALAR DEL CARMEN NITRATE SYNDICATE, LIMITED.

POSITION OF THE INDUSTRY—INCREASING DEMAND.

The twenty-fifth annual general meeting of the Salar del Carmen Nitrate Syndicate, Limited, was held, on the 4th instant, at Winchester House, London, Mr H. W. Sillem (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said the board had again the pleasure of submitting a satisfactory balance-sheet and profit and loss account. The gross profit was £88,830, and, after providing for income-tax, corporation tax, and usual London charges, the net profit was £55,761. After payment of a final dividend of 15 per cent., less tax, thus making 20 per cent. for the year, and making allowances for reserve and depreciation of plant, they carried forward £18,576.

Their policy during the year had been to continue production on the smallest scale compatible with economical working, thus providing themselves with cheap nitrate pending the resumption of sales, and that decision had been fully justified. After a lengthy period of stagnation the market had recently developed activity, and prospects were certainly better than they had been for a long time. There was a demand from all quarters, including Germany, for chemical fertilisers, and as there was a shortage of competing articles—sulphate of ammonia and synthetics of various descriptions—nitrate of soda was being asked for and sold in fairly large quantities.

The production of sulphate of ammonia was likely to be on quite a small scale for some time to come, and, with regard to synthetics, it was interesting to know that, far from the Germans being able to carry out their intention of exporting those products to neighbouring countries, they had not been able to produce sufficient for the requirements of their own country. Chilean nitrate had been sold to Germany for this season's delivery, and it seemed highly probable that next season's trade in that market would be considerable. In the United States demand was good and might easily become very large.

Owing to the long period of inactivity in the trade there was a disposition in some quarters to liquidate a portion of accumulated stocks at a much lower range of price than had been usual during the past few years. The total supply in sight on April 30 last was approximately 1,980,500 tons, of which 1,495,000 tons were in Chili, 393,500 tons in Europe and Egypt, and 92,000 tons in the United States and other countries. The total of 1,980,500 tons compared with 1,219,000 tons at April 30, 1914. To reach a more or less normal position existing stocks should be reduced, and the manner in which this could be brought about was now under discussion by the Nitrate Producers' Association. Once surplus stocks were disposed of prices should rise to a point where the average producer could work at a reasonable profit. Owing to the richness and extent of its grounds their company was able to face the future with equanimity, particularly in view of its strong financial position.

The Right Hon. Sir Archibald Williamson, Bart., M.P., seconded the motion, which was carried unanimously.

BRITISH ELECTRIC TRANSFORMER COMPANY, LIMITED. SPLENDID RESULTS—INCREASED PROFITS.

The nineteenth ordinary general meeting of the British Electric Transformer Company, Limited, was held, on the 2nd instant, at Winchester House, Old Broad Street, London, Mr A. F. Berry (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the gross profit on trading for the year under review was nearly £40,000 more than for the previous year, and the net profit had increased by just over £21,000. The available balance was £97,594. This was the fourth year in succession that they had been able to recommend a dividend of 10 per cent. on the ordinary shares, with a bonus of 1 per cent., and that was a fact upon which he thought the ordinary shareholders were to be congratulated. The directors proposed to distribute about two-thirds only of the total available profits, and to carry forward a balance of £12,708.

At this, the nineteenth annual general meeting, they were presenting a very good report, not one of the past 19 years having shown anything so good, and sometimes he feared that shareholders were so used to prosperity that a feeling might be engendered causing them to forget that they had been through times of adversity.

They had been, and were, going through times of such difficulty of late, that he could not help feeling that the time might come when the strong confidence of the shareholders would again be needed to help them to tide over one or more years during which it might not be possible to produce the splendid results to which they were by then accustomed, and, therefore, to some extent expected. The difficulties due to the shortage of work, magnified by strikes and lock-out troubles, could not be overlooked.

It appeared to him that active minorities, whose business, or avowed intention, was to make trouble between the different members of English industrial teams, were having far too much their own way, and industry would not prosper until the natural leaders of the men were actively encouraged to lead. The Stock Exchange, however, was indicating its belief in a return to a comparatively good time. There were signs in the heavier industries of some improvement, but he would be agreeably surprised if the return of prosperity would be sufficient to enable ordinary dividends of any appreciable value to be obtained, at any rate this year.

The year's results were the outcome of a carefully-thought-out policy, carried out loyally and efficiently by the staff.

The report and accounts were unanimously adopted and the formal business was duly transacted.

CONSOLIDATED WATER WORKS COMPANY OF ROSARIO, LIMITED.

PRICES OF MATERIALS AND FREIGHT CHARGES.

The twenty-seventh ordinary general meeting of the Consolidated Water Works Company of Rosario, Limited, was held, on the 5th instant, at 52 Moorgate, London, Mr James Anderson (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the results of last year's working were very satisfactory. The number of services at the close of the year was 1,116, or 4.2 per cent. more than in the year preceding. The gross revenue was £15,437 up, and the net revenue, taking dollars at par and eliminating exchange, was greater by £10,878. Those figures showed that the business was progressive, and one very satisfactory feature was the proportionately larger increase in the net revenue, as compared with the increase in the gross. The percentage of working expenses was 54 per cent., against 56.6 per cent. in the preceding year. Their net profits would have been very good indeed but for the heavy sum they had had to charge to net revenue account for loss on exchange.

As regarded the cost of materials required for the extension of their mains in the newer districts of the city, the chief item of cost was cast iron pipes. Prior to the war the price in England was round about £5 per ton and the freight about 30s per ton. In September last year the lowest price at which they could buy cast-iron pipes in England was £16 12s per ton, with freight at 30s per ton. In France they were able to buy at £10 18s per ton, and had secured freight at about 20s, thus showing a difference against business in England of about 60 per cent. on c.i.f. costs. Since then the prices of English manufacturers had been gradually coming down to nearly the level of their Continental competitors, but the cost of shipment from England was still higher. Freight from Antwerp was 25s per ton, whilst from England it was 57s 6d. It was difficult to understand why Dutch or Belgian ships could afford to carry goods at less than half the freight charged by British lines. It was well known that there was a shortage of outward freights from this country, yet freights were kept at figures which had the effect of driving trade out of the country at a time when unemployment was rampant. Outward freights on merchandise from this country to the Plate were fixed by a Conference representing the big shipping companies. Competition was thereby ruled out, to the serious prejudice of British trade.

With regard to the outlook for the current year, he regretted being unable to forecast much improvement in the present rather depressed state of affairs in Rosario. The building trade was dull, which was rather against them, as in past years they had derived considerable profit from the sale of water in connection with building operations and additional consumers. The outlook as regarded expansion of their business was, therefore, not particularly promising at the present moment.

The report and accounts were unanimously adopted.

New rules for issuing bank notes have been given by Statute of November 2, 1920. We are authoritatively informed that the right of issue of the Bank of Norway is calculated at an amount of 250 million crowns above the stock of gold and at present extraordinary additional amount of 50 million crowns from July 25, 1921, until further order.

Through Royal resolution of February 3, 1922, it has been resolved that the extraordinary right of issuing bank notes has been reduced from 50 millions to 25 millions from February 4, 1922 (this day included).

British South Africa	367,000	Straits Settlements	1,102
Other Countries	145		
Total value of imports of gold	369,161	Total declared value of exports registered in the week	452,048

Messrs Samuel Montagu and Co. write on May 4th as follows:—

GOLD.

Available supplies of gold have been absorbed for India. Gold to the value of \$100,000 has arrived in New York—\$100,000 from Venezuela and \$90,000 from France. A Warsaw message, according to the *Times* of the 1st inst., states that the Polish Finance Minister foreshadows the establishment this year of a State bank, with a new currency based on a gold cover.

SILVER.

The unsettled condition of affairs in China has caused a certain amount of buying for that quarter. A few purchases also were made on account of the Indian bazaars, but none of importance. The effect upon the market from the combined demand has not been very pronounced, owing to freer supplies from the Continent and some China reselling. The United States of America has not been much of a seller. The impression obtains that some Chinese operators bought more than they really wanted during the preceding week, but, naturally, whilst Chinese war operations are in progress they are loth to cut their losses. Meanwhile, the prospects are fairly good, though the price seems rather high, looked at from the standpoint of trade. It will be observed from the details below that the stocks in Shanghai are reduced by about 8 per cent. The amount of silver bought under the provisions of the Pittman Act

must now be more than half of the total authorised to be repurchased (namely, 208,000,000 fine ounces). The Director of the United States Mint in his last annual report gave the following interesting details as to the way in which the silver is handled:—“Every effort is being made to expedite the conversion of this bullion into dollars, since, as bullion, the silver is a ‘dead asset,’ while, as coin, silver certificates may be issued against it and used to take up a corresponding amount of Pittman Act certificates, and at the same time replace the Federal reserve bank notes issued in lieu of silver certificates when the latter were retired to make the dollars available for melting. Converting this silver bullion into an active asset thus reduces the public debt to the extent of the coinage executed, and saves the payment of interest thereon. At the time of writing the accumulated stock of bullion is being rapidly turned into coin, and it is expected that this work will be current before the close of the fiscal year 1922, now in progress.”

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	April 7, 1922.	April 15, 1922.	April 22, 1922.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The estimated gross production of crude oil for the month of April was 31,173 barrels, equal to, approximately, 4,450 tons, and the oil delivered to Trinidad Leaseholds, Limited, amounted to 6,000 tons. The output continues to be regulated by the restriction of deliveries.

LOBITOS OILFIELDS, LIMITED.—The production for April is cabled as 8,601½ tons.

ROUMANIAN CONSOLIDATED OILFIELDS, LIMITED.—Production April 1st to 15th 1,018 tons. Metres drilled 296 (971 ft.).

STEUA ROMANA.—The approximate gross production of the Steaua Romana, Bucharest, for the month of April, 1922, was 17,500 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, April 26, 1922, amounted to 1,400 tons.

THE CORN TRADE.

Mark Lane, Friday Evening

Climatic conditions in the United Kingdom continue very unsettled, with further rains and cold winds, and a spell of more genial weather would be welcome in order that spring sowings may be completed, as same are backward in some districts. Growing cereal crops appear healthy, though in need of sunshine. Quiet trading was experienced at market, and prices displayed slight irregularity both for bread and feeding stuffs. Native wheat in lighter supply, and rates generally firmer at 6s to 6s 1 for suitable milling grades per 504 lbs, free on rail. Imported descriptions quiet, and occasionally the turn easier. No. 1 Northern Manitoba quoted 6s 6d, No. 2 ditto 6s 6d, Rosafe, 6a 1bs, 5s 6d; Barussos, 6a 1bs, 5s 6d, all ex ship, to arrive, per 480 lbs; and Australian,

ex store, 62s per 496 lbs. A steady tone prevailed in the floating and forward cargo section, and with a fair inquiry on Continental account rates were maintained. Steamers of Australian, on passage, sold 57s 13d to 57s 9d, according to size and position; ditto, May, 57s 3d to 58s; Rosafe, 64½ lbs, afloat, 57s 4½d; ditto, May 15th-June, 57s 7½d to 57s 9d, per 480 lbs, c.i.f. Parcels were in fair request at generally steady rates. Crop reports from most exporting countries continue favourable. Flour was reduced by 1s decline. London standard straight run quoted 50s, town householders 48s, patents 52s to 53s, all English straight run 47s per sack, free on rail at London stations. Imported, quietly steady. Manitoba export patents 44s to 45s; top patents 47s to 49s per 280 lbs. Australian 44s 6d to 45s per 280 lbs, ex store. On c.i.f. terms, business continues on a limited scale, owing to the firmness of holders. Australian, afloat, quoted 41s to 41s 6d; Minnesota top patents, May seaboard, 48s to 49s, Kansas patents 45s, and Manitoba export patents 44s to 45s; top patents 47s to 49s per 280 lbs. Millers' offers dearer. Broad bran quoted £9, ordinary ditto £8 5s, middlings £9 per ton, ex mill. Of imported, Fancy Plate middlings quoted £8 15s, and Plate pollards £6 17s 6d per ton landed terms. Barley quiet for malting, but there is a fair inquiry for feeding sorts at fully steady prices. English malting ranges from 42s to 63s, and grinding sorts 40s to 41s, as to sample, per 448 lbs, free on rail. Of imported, Californian quoted 40s to 49s, Australian Chevalier 47s 6d to 52s landed, per 448 lbs. River Plate ship, to arrive 34s 3d; American malting 3s 1bs ditto, 34s, all include American malting, May 32s 3d; and No. 4 Canada Western, ex per 400 lbs. Forward parcels were dealt in quietly, and small sales May, 32s 6d per qr. Maize quiet, but fairly steady. Yellow round American 37s, ex quay; Plate 39s 6d, ex ship, and 41s 6d landed; less depressed, and holders required occasionally more money for new crop La Plata. Steamer of Plate, old crop, afloat, sold at about 38s 9d, and new crop early May at 38s 10d per qr. Oats

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated May 4, 1922, is as follows:—Pig-iron: The immediate outlook is not good. The engineers' lock-out has upset the inland market for pig-iron entirely, and the demand from abroad is not as good as it was. Prices are as follows:—No. 3 Cleveland G.M.B. pig-iron, 90s per ton; East Coast hematite mixed numbers, 96s per ton. Manufactured iron and steel: The market for steel is broadening, but only very slowly. Home quotations are as follows:—Steel ship plates, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s net. Iron ore: Business very quiet. If the engineering dispute were settled, it would probably mean that more furnaces might be started, and that should brighten up business in imported iron ore.

Our Glasgow correspondent (writing on Thursday) says:—It is definitely announced that a big bridge contract for the Bengal-Nagpur Railway has been placed with Sir William Arrol, Limited, Glasgow, the work including 18 bridges of 100 feet span, five of 60 feet, and two of 40 feet. Accompanying is the statement that interest in export connections, have just come actively upon the market, and may show fruition any day. Merchants report that in the last few days moderate quantities of manufactured steel have been booked for nearly every quarter of the globe, especially for the various authorities in South America, South Africa, and the Far East as a whole. At the same time, there is not sufficient work as yet available to go round, and so the Steel Company of Scotland is still idle. The "Lanarkshire," however, is fairly well off, as are Beardmore's, and in rather smaller measure Colville's.

There is no demand to speak of in evidence from shipbuilders, whose operations at the moment are mainly confined to repairs. The position in shipbuilding is clearly reflected in the figures for construction officially issued for April. Only 25 tons (a small launch) was put into the water during the month, a minimum record for the river. Despite this the prices keep firm, boiler plates bringing £14 per ton for home orders, and £13 10s for export. Ship plates stand at £10 10s for home, £9 5s export. Sections unchanged at £10 f.o.s. Glasgow. Movements in pig-iron have not been of much account, while more to the favourable side again. Germany is buying here some decent lots of Scotch, Cleveland, and East Coast (hematite), and experts look for the inquiry increasing. At the usual weekly meeting of brokers yesterday there were sellers of Middlesbro' No. 3 at 90s a ton, May delivery, and of East Coast at 97s, also May delivery. Scotch No. 3 G.M.B. were 97s 6d f.o.s. Glasgow. Makers' quotations for Scotch No. 1 and No. 3 are given as at 97s 6d, and 92s 6d per ton respectively f.o.t. works. Rather more dealing has been recorded in steel bars, the field of buying (very moderate) covering such far apart marts as Antwerp, Buenos Ayres, Durban, Delagoa Bay, Monte Video, and Yokohama. These destinations have been placing lines for tubes, pipes, and sheets. The last-named are the turn harder, owing to increased inquiry from Australia and India notably. The Eastern demand runs mainly on the lower classifications, and ¾ in. sizes are quoted £11 15s, Glasgow stations. Galvanised corrugated 24's are £16 10s, Glasgow stations.

Our Sheffield correspondent writes:—The further lock-out of engineering workers has not made very much difference to the local situation, as the majority of the men affected by it accepted the employers' invitation to continue. Some, however, were subsequently brought out by the pickets, and scarcely any of the engineers originally locked out returned. Things, therefore, are worse than before, but not so much so as had been expected. The home trade in steel and steel products has fallen off badly, although the revival in the overseas markets continues to make progress. All parties are sick of industrial troubles, hindering, as they undoubtedly are doing, a real recovery of trade. Prices of all kinds of steel materials remain very firm, as few of them are remunerative. There were no changes at the beginning of the present month. The local industries still display some very bad patches, railway steel being one of them. In this department the old trade with South America has almost disappeared. Everything relating to shipbuilding is flat, and the demand for automobile construction, while rather better, still leaves much to be desired. The American Senate is now dealing with that section of the new Tariff Bill relating to ferro-alloys, and alloy steels, and the duties submitted to the House for approval are so enormous that no business between this country and America would be possible if once they are adopted. Efforts are being made to get some of the more drastic of the proposals modified, but it is feared that the Bill will pass to the Statute Book in such a form that Sheffield's special steels will be shut out of the American market. A moderate amount of business is being done in rustless iron and new openings for its utilisation continue to be found, despite its high cost. All departments of the coal trade are quieter, and the arrival of spring has already lessened the demand for household sorts. Foreign buyers of steam coal are holding back to force easier prices. The position of slacks is better owing to reduced production at the pits. Current quotations per ton at pits are:—Best hand picked, 38s to 39s; silkstone, 33s to 34s; best household, 33s 6d to 34s 6d; best hards, 23s to 24s; steam cobbles, 22s to 23s; steam muls, 22s to 23s; best slacks, 12s to 13s; small ditto, 7s to 8s; blast furnace coke, 21s.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

Correspondence solicited.

Our Cardiff correspondent writes: Coal prices have been well maintained on the basis of 28s 6d to 29s for best Admiralty large, 28s to 28s 6d for Admiralty seconds, 27s to 27s 6d for best black veins Monmouthshires, 25s 6d to 27s for Eastern Valleys, 19s to 20s for best smalls, 17s 6d to 18s 6d for second-class bunkers, and from 15s to 17s for cargo smalls. The more bituminous coals range from 24s to 25s for No. 2 Rhondda to 30s to 31s for No. 3 Rhondda, while best house coals are ruling at a fixed price of 30s at pit, and other house coals at variable prices ranging from 24s to 28s 6d. There was a heavy drop in production during the Easter holidays, but it has since recovered, and is again in the neighbourhood of one million tons per week. Wages in May are to remain at the minimum of 28 per cent. on the 1915 standard. The audit for March, on which the May wage rate is based, was disappointing. The f.o.b. proceeds of the industry in March showed an increase of over £500,000 over the export proceeds in February, but notwithstanding this improvement, which was due partly to a rise in export price and partly to an increase in the volume of trade, the proceeds were insufficient to pay the minimum wage and at the same time permit the retention by the employers of their standard profits, and of the latter £170,000, or little more than one-half, are to be remitted to the workmen in order that the latter may receive their guaranteed minimum wage. The proceeds of the industry have been insufficient to pay the minimum wage since control was discontinued, and the total amount surrendered by the employers in five months to make good the deficiency is over £1,300,000. Of the total amount distributed between capital and labour in that period, wages have absorbed 98 per cent. and profits only 2 per cent. The production of coke has been stimulated by the revival in the iron and steel industries. The price of furnace coke at ovens ranges from 22s 6d to 25s, and for export between 20s and 35s, while foundry coke is at 42s 6d to 37s 6d. Patent fuel is a slightly steadier market at from 25s 6d to 28s 6d, and pitwood a shade easier at from 29s to 30s ex ship.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although quotations for tops were advanced last week in anticipation of an advance in wool values, it has again been found necessary to raise prices all round in sympathy with the higher level established this week in the Coleman Street Wool Exchange. It is, however, exceedingly difficult to quote what may be termed a market price for merinos to-day, every topmaker being guided by his own position in regard to commitments. Some firms are sold for four and five months ahead, and it would be difficult to place an order for a big weight for delivery this side of August-September. In the circumstances quotations show some marked discrepancies, some firms being "up in the sky," while others, with less bulky order books, are prepared to do business on what appears to be a reasonable basis when judged on the standard of current wool values. Generally speaking, about 4s 9d is wanted for a warp 64's top, while 60's ordinary are at 4s, which was the price of an average 64's at the beginning of March. Crossbreds have also been advanced anything from ½d to 2d. There has recently been a considerable amount of business in crossbred qualities, and they look like appreciating still further. Worsteds spinners are in a much better position, most firms having booked sufficient business to keep their machinery employed for at least three months. Prices for yarns show a strong upward tendency, especially in botanics, and this is making it extremely difficult for manufacturers to do business on to-day's quotations. However, the position in the piece goods trade shows improvement week by week, and even in the woollen section there is a better feeling. Taking the trade as a whole, the outlook is regarded with a good deal of confidence, though prices of merinos are rapidly approaching a dangerously high level.

(FROM A CORRESPONDENT.)

The third series of London sales commenced on Tuesday, when there was a large attendance of buyers, all sections of the trade, including the United States, being represented. The sale passed off remarkably well, and general expectations were realised. It was forecasted in this column a week ago that an all round advance of 10 per cent. would take place, and this was practically what happened. The best merinos appreciated 5 to 7½ per cent., average to good topmaking classes 10 per cent., whilst scoured merinos were sold at 15 per cent. above the close of last series. No one need be surprised at the advances in fine wools, but the most remarkable improvement was the one seen in crossbreds. Good 56-58's appreciated 7½ to 10 per cent., medium 10 to 15 per cent., and coarse crossbreds 7½ per cent. Capes appreciated 5 to 10 per cent. These are remarkable advances, and there is no doubt that merinos are now a dear commodity, though we do not think that they are on a dangerous level. At the same time, they are quite dear enough, and it would have been in the interests of the whole trade if no advance had taken place in them. However, there is general confidence felt in current values, and that the textile industry is being gradually restored to something like normal. Several American buyers are attending the current series of sales, and no doubt if the present uncertainty regarding the introduction of a permanent import duty were removed, a large quantity of wool would be taken on American account. The tone of the sale room is

decidedly encouraging, and although the prices paid are well above the limits of many Bradford topmakers, the wool is being taken freely, even Continental representatives being ready buyers. It may be reasonably expected that the values paid at the opening will continue to be paid right to the close, though there is no need for any further advances except perhaps in wools of 48's quality and below. In suggesting the desirability of an advance in these wools the possibility of expansion in Continental trade is being kept specially in mind, for it is much more desirable that values generally should be kept on a reasonably steady basis than for wool to move distinctly higher, resulting in the development of business among manufacturers being prevented. Obviously excitement in the wool market can do no permanent good unless there is a healthy state of affairs among manufacturers. Although demand is broadening, hundreds of looms are still standing, and the setting of all these in motion is desirable to impart further stability to the industry as a whole. A movement is undoubtedly taking place at the piece end of the trade, but there is ample room for further development. It is understood that manufacturers engaged on the production of ladies' fabrics are busier than those making men's wear, and Far-Eastern countries are to-day Yorkshire's best customers for light-weight fancy worsteds. Gabardines are very popular, and as big weights of merino wool are used in manufacturing these cloths, the boom which is taking place in them is no doubt contributing substantially to the strength of the merino position. Some of these gabardine cloths are being made from wool of as low as 60's quality, but they are not by any means as good as those made from merinos. The manufacturing position is certainly better, and the generally broadening inquiry for practically all qualities of wool and tops is a most encouraging feature, one which will probably become more distinctly emphasised as the weeks go by.

MANCHESTER, May 4.

The market this week has presented a firmer appearance, and in sympathy with the rise in raw cotton rates, there has been a hardening tendency in yarn and cloth quotations. The possi-

ALEXANDERS DISCOUNT Co., Ltd.,

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

bility of higher values has stimulated demand in certain quarters for manufactured articles. A larger turnover has taken place in grey shirtings and light bleaching cloths for India, but many bids from the other side cannot be entertained. Trade for China at the moment is practically at a standstill, but merchants do not believe that the trouble in the Far-East will be of long duration. There has been an improvement in the advices from Egypt, and more business has been done. Orders for South America have also been more frequently mentioned. Progress is not rapid, but many manufacturers are gradually strengthening their position. An increased turnover has occurred in American and Egyptian yarns at hardening rates. Home counts have moved off more freely, and a fairly healthy trade has been done in bundles for India.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Tanners are still unable to control the price of hides in spite of their efforts, and there was again a decided firmness in the Bermondsey market on Thursday. Best ox hides sold from 6d to 8d per lb, showing advances of ½d to ¾d on last week's prices, whilst best cows at 6½d to 6¾d are also ½d to ¾d up. Calf were erratic, heavies advancing ½d, and lights declining ½d to ¾d. Wool skins sold from 3s to 8s 9d, and showed a slight advance of 2d to 3d each. The demand for foreign hides is better, and both wet and dry have been inquired for owing to the improved demand for leather. Cables from New York report the American hide market as active, with best heavy packers now selling from 14 to 14½ cents.

The trade in sole leather is improving, and merchants and tanners are hopeful the worst is over. The trade with repairers has much improved, and there seems to be a tendency to buy a better-class bend at round about 2s 3d to 2s 9d per lb, as some of the dry hide rubbish they have been using of late has turned out most unsatisfactory. Anxiety is still felt at the arrivals of American bends at a very low price, ex some Continental port. Offers have been received here also on a large scale, as American banks have grown tired of holding the leather against advances. The question of the Government's holding of East India tanned kips came up before the House of Commons this week, when the responsible Minister seemed to think the Department had done very well to dispose of so much stock without interfering with the normal trade in kips. This opinion, however, is not, I regret to say, shared by men actually engaged in it.

The trade in upper stock is chiefly confined to suede and patent, although there are signs that glace kid will come into its own again for winter wear. Prices of box and willow are steady, as bargain parcels seem to have been absorbed. The shoe section is better, and some of the firms in Leicester and Norwich have enough orders on hand to last them for two or three months.

VEGETABLE OILS AND OILSEEDS.

The feature of the markets this week has been a further advance in linseed oil. After a set-back to £42, due to realisation, and some nervousness on the part of holders, a steadier feeling manifested itself on reported buying on American account, and the comparatively small quantity of seed at hand or on passage. Spot and par positions have been firmly held, and up to £44 5s paid for near positions have been firmly held, and up to £44 5s paid for near spot and £43 15s for May, ex-Hull mill, on Thursday. Forward delivery has also claimed some interest, June-August offering 60s

below spot, and September-December 120s below, which are sufficiently indicative of the market outlook when the present shortage of available seeds has been overcome.

Cotton oils are scarce, and from 10s to 25s dearer on the week. A fair trade has been done in Egyptian crude crosscut, value of which is about £42 ex-Hull mill. Crude soya bean oil steady, and rape oil scarce for immediate delivery, ground nut and palm kernel oils more or less neglected, and nominally unchanged.

Plate linseed is firm, and on balance is 25s dearer for April-May shipment, for which £21 to £21 5s has been paid. A good business has been done in Calcutta to London and Hull to £22 7s 6d, on passage, and £22 down to £21 7s 6d for shipment; and in Bombay to Hull at £22 to £22 15s, according to position. Egyptian cottonseed closes rather easier. Manchurian soya beans have been done at £12 10s to Hull, May-June, loading.

The shipments of linseed from Argentina from January 1st to the end of April were as follows:—To the United Kingdom 74,100 tons; the Continent, 140,000 tons; and North America, 60,000 tons, together 274,100 tons, against 334,700 tons in the corresponding period of last year. The shipments from India were:—To the U.K., 58,900 tons, the Continent 32,425 tons, together 91,325 tons, against 10,980 tons last year. The quantity for the U.K. (Plate and Indian) at 133,000 tons compares with 138,975 tons a year ago, and that to the Continent 172,425 tons, against 196,675 tons, a decline for Europe of roughly 50,000 tons. There is some improvement in the quantity of linseed afloat, viz., to U.K., 28,500 tons; Continent, 74,800 tons, together 103,300 tons, against 72,500 tons a week before.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, May 5.

Business in the leading commodities was confined to a moderate limit, demand showing no material expansion, and prices in some cases moved against sellers. Jute, however, was again an exception, and rates further hardened under sustained buying on the part of spinners, coupled with marked reserve in offers from Calcutta, while crop prospects are not satisfactory owing to continued drought.

SUGAR.—A steady tone characterised this market regarding spot lots, and a moderate volume of business was effected. Messrs Tate and Lyle's cubes sold, 52s 6d to 53s 6d, as to make; crushed 50s 3d; granulated, 48s 3d to 48s 9d; caster, 50s 3d to 50s 9d; yellow crystals, 42s 9d; pieces, 35s to 43s 3d; No. 2 granulated, 47s 48s; crystallised West India, spot, 41s 6d to 43s, as to quality. American granulated, on the spot, sold, 47s 7½d to 47s 6d; ditto, May, 20s 1½d to 20s; June, 20s 1½d; July, 20s 4½d to 20s 3d, c.f. and i. terms, London. White Mauritius, spot, 43s 9d to 44s 6d, 18s 6d, c.f. and i., London. White Mauritius, spot, 43s 9d to 44s 6d, Dutch and also Czechoslovakian sugars nominal for shipment in absence of definite offers. Cuban, basis 96 per cent., May, quoted 13s 1½d; and Brazilian, basis 80 per cent., ditto, 8s 10½d, both c.f. and i. terms, U.K. Terminal market quiet. White, August, sold, 20s 6d to 20s 3d. Cuban stocks stand at 1,083,000 tons, against 1,107,000 same time last year. Liquid glucose, spot, 26s 6d. American syrup steady, quiet, and good to fine grocery sold, 26s to 28s per cwt.

COFFEE.—General steadiness prevailed for all the finer qualities, and which received fair support from the home trade. Good to fine bold Costa Rica sold, 127s to 139s; Nairobi fair bold, 115s; Uganda, 90s to 90s 6d; East India, fair to good bold, 119s to 126s. Futures quieter. May sold, 60s 6d; July, 61s 6d; December, 61s 3d.

COCOA.—At public sale, 11,185 bags were offered, of which 9,816 bags consisted of colonial descriptions. The chief feature was a good demand for Grenada and St Lucia, others ruling dull of sale at about late rates. Grenada, fair to good, sold, 57s; common, 54s; fine, up to 62s; St Lucia, fair to good, 55s to 59s 6d; fine, 62s; Dominica, ordinary to fine, 51s to 59s; St Vincent, good, 56s; Ceylon Estate, smalls, 60s 6d; ordinary to fair, 76s to 84s; good, 88s; Samoa, good fermented, 70s to 72s; Uganda, ordinary to fair, 41s to 43s. Butter quiet at 1s 7½d per lb.

TEA.—During the week 39,000 packages Indian were brought to auction, and with more active competition for the lower qualities, these realised steady to firm prices. Medium, however, while largely represented, ruled in favour of buyers. All the finer parcels commanded good support at a firm range. 23,500 packages Ceylon offered met with but moderate patronage, and prices showed a weaker tendency as the sales progressed, closing ½d to 1d per lb down.

METALS.—Tin continued an advancing market until Tuesday, when

The prices in the following list are revised with the assistance of an eminent firm in each department.

BRAKPAN MINES, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

REPORT OF THE DIRECTORS for the year ended 31st December, 1921, to be submitted at the Nineteenth Ordinary General Meeting of Shareholders, to be held in the Board Room, "The Corner House," Johannesburg, on Monday, the 29th May, 1922, at 2.30 p.m.

To the Shareholders, BRAKPAN MINES, LIMITED.

Gentlemen,—Your Directors beg to submit their Report and the audited Financial Statements for the year ended 31st December, 1921, accompanied by the Reports of the Consulting Engineer and the Mine Manager.

CAPITAL.—The Capital of your Company is unchanged at £260,000, in 850,000 shares of £1 each, fully paid and issued.

PROPERTY.—No change has taken place during the year in your Company's holdings, which remain as follows:—

Mynpacht No. 490/1919, in extent 405'754 acres, equal to	276'06 Claims.
Mynpacht No. 548/1906, in extent 888'986 acres, equal to	604'80 "
Claims on Farm Benoni No. 3, with Coal Rights on 73 326 Claims	201'59 "
Claims on Farm Weltevreden or Brakpan No. 5	68'00 "
Claims on Farm Weltevreden or Brakpan No. 5—leased from Union Government	1,811'70 "
Claims on Farm Koolbult or Schapenvrust No. 7	424'90 "
	3,387'05 Claims.

The Undermining Rights of seven Stands and four portions of Stands on Farm Benoni No. 3.

Three Stands on Farm Benoni No. 3. Twenty-one Freehold Stands in Brakpan Township, on which are erected quarters for the Company's employees.

OPERATIONS.—Technical matters are dealt with in the Reports of your Consulting Engineer and Mine Manager.

FINANCIAL.—From the Working Expenditure and Revenue Account it will be seen that the profit, based on the standard value of gold, amounted to £224,906 19s 10d; Add—Premium on Gold, £265,339 9s 10d—£490,246 9s 8d; Deduct—Donations, £ 796 0s 1d—£488,450 9s 7d; Add—Interest and Commission, Dividends on Shareholdings, Estate and Sundry Revenue, £7,095 9s 10d; leaving a Net Balance of Revenue over Expenditure for the year of £495,545 13s 8d; Add—Balance to Credit of Appropriation Account at 31st December, 1920, £24,089 1s.; Gold Reserve Account transferred, £100,619 12s 8d—£134,708 13s 8d; making a total available Credit of £390,254 7s 1d; against which the following amounts have been appropriated:—Government Taxes, £71,820 6s 8d; Participation in Profits, £29,478 14s 5d; Development Suspense Account, £49,492 13s 7d; Funds appropriated for Capital Expenditure—Leased Area, £180,000; Dividends Nos. 19 and 20, £265,000—£585,786 13s 8d, leaving a Balance unappropriated at 31st December, 1921, of £44,467 13s 8d. Capital Expenditure for the year amounting to £277,540 8s 3d, made up as follows:—Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet, £272,190 0s 9d; Live Stock and Vehicles, £48 6s 6d; Shares and Interests in Other Concerns, £5,306 18s—£277,540 8s 3d.

Stores and materials on hand at the end of the year in excess of standard stock were valued at £55,188 8s 11d, of which £13,159 4s 6d represents stores and materials on hand in connection with the capital construction work on the Leased Area. The Balance of £44,024 4s 5d represents the value of current stock, and is a reduction of £27,765 13s 8d as compared with the corresponding figure at 31st December, 1920. The works of the Rand Refinery, Ltd., have now been completed, and the refining of gold on a limited scale has been commenced. It is expected that your Company's gold output will very shortly be dealt with at the Refinery.

The net premium realised on gold sales is £265,339 9s 10d, exclusive of the premium on gold in reserve.

In terms of the Mineral Lease the 5 per cent. participation in the profits of the Company according to the Union Government is estimated at £24,168 9s., whilst the percentage of profits due under the Schapenvrust Claims Purchase Agreement is estimated at £5,305 5s 5d, this amount being 15/32nds of the amount payable to the Union Government.

Expenditure on development for the year amounted to £214,442 13s 7d. Of this amount, £164,960 was provided by the fixed charge of 5s per ton milled, and was debited to Working Costs. The balance of £49,482 13s 7d was dealt with through the Appropriation Account.

In order to provide for heavy commitments on Capital Account, it was decided to credit Appropriation Account with a sum of £100,619 12s 8d, being the proceeds of 19,116 ozs. of gold placed to Reserve. The total amount appropriated for Capital Expenditure was £180,000.

Normal Income Tax payable by the gold mining companies was increased from 6 per cent. to 7½ per cent., the increase coming into operation in respect of the tax year ended 30th June, 1921.

The special war levy of 2½ per cent., imposed on the amount of dividends distributed, ceased as at 31st December, 1920. The charge for Dividend Tax for the year under review is therefore at the reduced rate of 7½ per cent.

In terms of Section 3 of Act No. 5 of 1921, Financial Relations Act (Further Extension Act), 1921, the power of Provincial Councils to levy taxation on mining or minerals was withdrawn. No further taxation will therefore be levied on the Company under the Provincial Gold Profits Tax as from 1st January, 1922.

DIVIDENDS.—Two dividends were declared during the year, viz.:—No. 19 of 15 per cent. (15s. per share), absorbing £127,500; No. 20 of 15 per cent. (15s. per share), absorbing £127,500—£255,000.

You are requested to confirm your Board's action in this matter.

DIRECTORATE.—You will be asked to confirm the appointments of Mr. P. M. Anderson in place of Mr. M. McCormack (deceased), Mr. A. F. Lyall in place of Mr. W. B. Saunders (resigned), Mr. J. L. Jourdan in place of Mr. E. J. Renaud (deceased), and Mr. W. J. O'Brien, O.B.E., M.L.A., in place of Mr. Charles Marx (deceased).

In terms of the Articles of Association, Messrs. P. M. Anderson and W. J. O'Brien retire from the Board of Directors by rotation, but are eligible and offer themselves for re-election.

AUDITORS.—You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. A. E. Page and L. A. Whiteley, retire, but are eligible and offer themselves for re-election.

GENERAL.—The shares registered in the names of enemy shareholders vested in or notified to the Custodian of Enemy Property of the Union of South Africa have now been transferred into the name of that official. New certificates have been issued in respect of the shares so transferred. The relative certificates in the names of the enemy shareholders must be regarded as cancelled and valueless. Shareholders have been advised from time to time of the steps taken to recover from the Custodian of Enemy Property the amount due from the Bank für Handel und Industrie, of Berlin. Judgment was obtained against the Custodian, ordering him to pay the Company the amount claimed. The Custodian appealed against this judgment to the Transvaal Appellate Division, which confirmed the judgment. The Custodian then gave formal notice of an appeal to the Union Appellate Court at Bloemfontein, but has now decided not to seek the intervention of that Court, and the Company's claim will be met in full, with interest accrued.

THE MONEY MARKET.

GENERAL complaints of stagnation in business are still rife in Lombard Street, and in other respects the position has been less comfortable. Owing to the reduction shown in the securities and deposits of the Bank of England money has been less plentiful, and balances at 1 per cent. over

the night were not so easy to find. Since the clearing banks still insist on $2\frac{1}{2}$ per cent. for weekly fixtures, the bill rate is well below this figure. The discount market was distinctly sensitive to the decrease in surplus cash, and the three months' rate was very steady at $2\frac{1}{8}$ per cent., in spite of extreme scarcity of bills.

	May 19, 1922.	May 12, 1922.	May 5, 1922.	Apr. 28, 1922.	Previous Rate and Date Changed.
Bank Rate	4	4	4	4	(Apr. 13, '22)
Banks Deposit Rate	2	2	2	2	(Apr. 13, '22)
Discount (Call)	2	2	2	2	(Apr. 13, '22)
Houses (Notice)	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	(Apr. 13, '22)
Market rate (3 months' bills) ..	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	..

The Bank return showed decreases of £8,000 in the stock of gold, and £520,000 in the circulation, and a consequent increase of £512,000 in the Reserve. Government and Other securities declined by £3,425,000 and £428,000 respectively, and there was an increase of £792,000 in the Public deposits, leaving the Other deposits over 4 millions lower. There was a reduction of £2,046,400 to £298,793,400 in currency notes outstanding in the return dated May 18th, which includes £1,624,400 for notes called in but not yet cancelled. The fiduciary issue is £249,219,000, or £60,769,400 below the maximum.

THE STOCK MARKETS.

Markets have not yet derived any benefit from the imminent restoration of pre-war conditions of dealings, but have, on the contrary, been in hesitating mood. The failure of the New South Wales $4\frac{1}{2}$ per cent. loan at 95 came as a damper to the Consol market, while disappointing developments at Genoa and temporary fears of a General Election were disturbing factors. The foreign market has been more active, but prices have given way. Home Rails fell back on profit taking after early buoyancy. In the miscellaneous section, banks have been firm, and Marconi's have advanced further, but otherwise few changes have occurred. Kaffirs have improved on the settlement of the question of ex-enemy held shares, and copper shares are better.

COMMODITY MARKETS.

Again an advance in raw cotton prices is to be recorded, fully middling American moving up to 12.15d per lb. In the cotton trade there was considerable activity at the beginning of the week, but towards the end business fell away, on account of the higher quotations for piece-goods. Although the market is not quite so active in the wool trade, there is no indication of any weakening of the recently increased prices. The home trade in pig-iron is still small, although export business is fairly active. There is no change in the steel position, orders being few and works only running part of their plants. In the coal industry, production showing a tendency to get slightly ahead of export demand caused a little falling away in prices, decreases of from 3d to 6d per ton being recorded. A quiet tone pervaded wheat markets, and quotations were easier. In the vegetable oil and oilseeds market conditions have been quiet, and prices are a little lower. In the hide and leather trade, hide prices advanced, and there is a better tone noticeable in the demand for leather. Conditions in the shoe trade are improving. Further details of markets and prices will be found in later columns from our special trade correspondents.

FOREIGN EXCHANGES.

With the indefinite ending of the Genoa Conference and the absence of any new features, the foreign exchange market has remained as dull as before—indeed, if that is possible, business has dwindled still further. The only feature that can give ground for any satisfaction has been the quiet and steady appreciation of sterling in New York from 4.44½ on the 12th to 4.45 yesterday morning, the result apparently, in part, of the confidence which is being shown in America in English conditions, and in part to the continued dullness of trade, which keeps the demand for dollars low. In the meantime, the forward rate for dollars has widened during the week from $\frac{1}{8}$ to $\frac{1}{4}$ cent per month over spot. A somewhat surprising feature has been

the further depreciation in marks during the last few days after a slight recovery earlier in the week, the rate yesterday morning standing at 1,330, as compared with 1,280 a week ago. The most obvious explanation is anxiety as to what may happen at the end of May with reference to the Reparation settlement, but lately there has until now been some reason to believe that a satisfactory arrangement was more probable than was expected a few weeks ago. Forward rates remain unchanged at one mark per month below spot. The Paris rate has also been affected by this new wave of depression, rising to 49.05 from 48.80 a week ago. The Brussels rate has also moved up, but not quite so rapidly as the French. Forward rates in Paris have widened from 1 to $1\frac{1}{2}$ centimes per month over spot, while in Brussels they have narrowed from 6 to 4 centimes below spot. The Italian rate has also moved upwards more rapidly than of late, from 84.48 to 86.50. Among the neutral quotations, Amsterdam has moved 2 cents. against us, while the Spanish rate is also rather lower. Switzerland, on the other hand, has moved in our favour, from 23.06 to 23.22. In Scandinavia, the Christiania rate has risen rather rapidly, but Stockholm and Copenhagen are practically unchanged. Helsingfors, which has shown little change, tends at the moment to be slightly higher, in spite of loan negotiations. In Central Europe, Warsaw is rather better at 17,900. The renewed depreciation, however, of the Austrian krone continues, the rate yesterday being 42,000, as compared with 38,500 a week ago. That this further weakness should take place at the same time as satisfactory negotiations for a loan are said to be taking place in London shows how serious the internal situation must be, and it is not easy to foresee the effect of the latest political crisis there. Prague, after going rather higher, has recovered again on the reports of a loan in London for the municipality of Prague. Belgrade, after its recent recovery, is moving up again. Budapest, Sofia, and Bucharest are fairly steady. Athens, however, continues to depreciate, and stands now at 107½. In the East the rupee, after being firmer, was quoted yesterday again at 1s 3½d, the same as the preceding week. The yen is again slightly cheaper. The silver market has strengthened rather sharply during the week, demand first from India and then from China calling out few supplies, Hong Kong at 2s 7½d and Shanghai at 3s 7d being respectively ½d and 1d higher than a week ago. In South America Buenos Ayres, after being dearer, is about the same again as last week at 44½d; Montevideo is rather dearer at 43½d. Rio at 7½d is ½d cheaper, but Valparaiso has moved down rapidly from \$39 to \$35.90.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 13, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	11,964	Supply Services	6,500
		Interest on Debt	1,010
		Sundries	594
		Added to Exchequer balances ..	421
		Reduction of Debt	3,439
	11,964		11,964

Revenue came in during the week ended May 13, 1922, on a slightly larger scale than in the corresponding period of 1921. The chief revenue producing item was Customs at £4,025,000, which compares with £1,337,000 in the at £4,025,000, which compares with £1,337,000 in the preceding week, and £1,812,000 in week ended May 14, 1921. Excise yielded £1,904,000, against £1,589,000 in same week a year ago. Property and income-tax at £2,471,000 yielded much the same as the corresponding period. The expenditure during the week amounted to £8,104,482, or about half as much as a year ago. Supply Services at £6½ millions compares with £14 millions in same week a year ago, while interest, &c., on War Debt is £864,091 as against £2,037,680 in corresponding period.

The week's operations reduced the National Debt by the sum of £3,438,962, and caused the following changes:—

	Min. £		Min. £
National Savings Certificates ..	+ 100	Bank of England Advances ..	- 700
Treasury Bills	+ 6,754	Public Departments Advances ..	- 520
Sundries	+ 948	Surrenders of Bonds, &c.	- 110
	+ 6,902		- 1,330

The receipts from National Savings Certificates at £600,000 exceeded the sums repaid under this head by £100,000. The floating debt was reduced by £3,495,000 during the week, and now stands at £950,290,500.

FINANCIAL YEAR, 1922-23 (April 1 to May 13, 1922).

REFLECTIONS ON GENOA.

As the chequered history of the Genoa Conference is drawing to its close, we venture to think that a very general, indeed possibly the predominant, feeling in this country will be that they are blessed who expect nothing, for they shall not be disappointed. But before the page is turned there are two questions which we should ask ourselves if we are to profit by the experience and turn its lessons to account. The first is why it happens that in a world in which the need of international co-operation is universally admitted to be necessary in the interests of all classes and peoples, a meeting of the nations has proved almost entirely barren of results, except for the Russo-German Treaty, which is, if anything, a retrograde step. The second is whether the currents of European policy have been modified by these events, and have made it necessary for us to revise our conception of the issues.

On the first point it is important to realise that, except in a small circle in personal touch with Mr Lloyd George, the powerful moral and economic forces of the world which are favourable to international co-operation have never been mobilised in favour of the Genoa idea. During recent years the world has had a very varied experience of international action and discussion, including conferences of politicians, business men, and experts of all kinds. In this sphere, as in that of understandings between individuals, recognition of community of interest is the only possible foundation on which to rear the will to co-operate, while the basis on which the parties meet must be an acceptable one. We need not here repeat at length the grounds for the scepticism with which the Genoa project was regarded—the apparent ignoring of the League of Nations, the only creation of the

Peace Conference which has enhanced its prestige in the international sphere; the lack of adequate preparation or arrangement for a joint secretariat, and the failure to remove the current misunderstandings between the conveners of the Conference. All these drawbacks were greatly enhanced when on the opening of the Conference the discredited methods of the Supreme Council were revised, and the Allies in the late war convened as a separate clique in European affairs, to the disgust of the neutral countries represented. This inevitably divided the delegations into separate camps—a result for which the Prime Minister's personality and habits on the one hand and French lack of broadminded statesmanship on the other are mainly responsible.

The moral, however, is not that we need despair of a rational solution of the troubles of Europe, but that we must modify our methods, and start afresh. Genoa's failure assuredly does not mean that our policy should be to withdraw into splendid isolation and leave Europe to find her own way out of her troubles. One third of our trade before the war was with the Continent of Europe, and we cannot hope to find elsewhere any substitute for so large a market, while, on the other hand, Europe's competition in the rest of the world is such that if no financial stability is restored, then world prices and world markets will remain in a state of uncertainty and demoralisation. This leads us to our second question, the answer to which is a matter of opinion and of judgment. But on reflection we think it may be said that while some features in the situation were brought into sharper relief, the general factors are less changed than at one time seemed probable. For example, the Russo-German Treaty in its economic aspects gives expression to the certainty that in the main the penetration of Russia by Western commerce will be carried out after the war as it was before the war—by German enterprise. At the same time, this treaty has not appreciably reduced the difficulties of Germans wishing to trade with Russia. The main importance of the Treaty is its psychological effect, and it is certainly true that its conclusion has tended to restore the self-confidence of German diplomacy in having launched out, not without diffidence, on an independent line. When the German delegates, however, return home we think they will realise that there is not much more in the Treaty than this questionable enhancement of their diplomatic prestige, and they will perforce have to bring back their attention to the old hard problems of reparations and internal financial difficulties. Nor is the situation of France so much modified as might appear at first sight. There has been very free criticism both in the British and Neutral Press on the attitude of France, but we are disposed to attach considerable importance to the fact that, distrusting Genoa profoundly, the French Government has nevertheless not broken away from the European conclave, and though relations between France and Britain have been strained to a dangerous extent, it is not the French Government but facts which are mainly responsible for the practical failure of the Conference. The French delegation goes back to face a Budget which must cause very serious reflection not only in France, but elsewhere. France has for the last three years avoided inflation, and has carried out a great deal of reconstruction by borrowed money, which she quite properly expects will one day be repaid by Germany. But the Budget for 1923, which is now before the Chamber, shows a deficit of four milliard francs on the ordinary Budget, apart from "recoverable expenses." The explanation of this is that the Finance Ministry no longer dares to charge the interest on its reconstruction loans to a hypothetical German payment. In short, the Finance Minister is asking the French nation to realise that, in any case, they will, for the present at all events, have themselves to bear some of the costs of reconstruction. This awkward fact cannot but lead to the further reflection that French military operations could not possibly hope to extract from Germany even the sums she has already spent on reconstruction, and that a settlement which will have behind it the world's financial opinion must at all costs be attained. Such a settlement will become less easy with every year that passes, and we are convinced that France's financial needs, apart from any other considerations, will turn her towards the path of international co-operation.

Finally, as regards America, we are glad to observe that the somewhat theatrical excitements of Genoa have not apparently modified the attitude of the Washington administration, and that though they are not willing to attend the Hague Conference which is to discuss further the Russian situation, they are prepared to continue such limited forms of co-operation that they have hitherto embarked upon. Speaking to the United States Chamber of Commerce, Mr Hoover, though observing that further Government loans to Europe are "the most unlikely event upon the economic earth," encouraged the hope that further assistance might be forthcoming from private enterprise, provided the following five conditions are fulfilled:—

First, such political relations between the States in Europe themselves as will produce an atmosphere of peace and destroy the atmosphere of war.

Second, a reduction of armament not only to lessen Government expenditure, but to give confidence of peace.

Third, Inter-Governmental debts, including German reparations, must be fixed upon such a definite basis of payment of principal and interest as will create reasonable confidence that the payments will be met.

Fourth, the balancing of Budgets more through the reduction of expenditure than through an increase in taxation and the cessation of the consequent inflation in currency and short-time bills.

Fifth, the ultimate establishment of the gold standard with the assistance of either credits or gold loans, and, where necessary, acceptance of diminished gold content in many old units of currency.

Mr Hoover further reminded his audience that since the Armistice America had extended Government and private loans to Europe amounting to four milliard dollars, and that another milliard dollars had been expended in charity. Meanwhile, Mr Morgan is on his way to Europe to take part in the Reparation Committees' discussions on the possibility of raising a German Reparation loan. He comes to this meeting not with any cut-and-dried schemes in his pouch, but with an open mind prepared to examine the facts in the light of the Hoover propositions. The Committee's deliberations will take time, but the presence of Mr Morgan and Dr Vissering will create an atmosphere in which an accommodation may be reached. This not unfriendly attitude of America, together with the underlying facts in Russia, in Germany, and in France are the considerations which lead us to believe that the essential factors are unchanged, and that there is much greater hopes of sane co-operation in Europe to-day than there was a year ago.

ORGANISATION OF THE FRENCH CAPITAL MARKET.

THE English financial system contains no exact counterpart to the French *Banques d'Affaires*. They combine some of the functions of the company promoter, the financial or trust company, and the issue house, but have very little in common with the deposit banks, from which they must in principle be clearly distinguished. It is true that they accept money on deposit, but these deposits are usually at notice, or, at any rate, on behalf of customers whose requirements are calculable in advance. For example, they receive on deposit money paid in on account of new issues, and profits of companies in which they are interested pending distribution as dividends. But this is a subsidiary part of their business. While the deposit banks derive their profits mainly from re-lending money received on deposit, and do not in the long run require any capital except as a guarantee, the *Banques d'Affaires* trade primarily with their own capital, and only incidentally perform banking operations. As a rule they possess no branches of their own, because their work does not bring them immediately into touch with the general public, but only with big financial and industrial companies, Governments and a more or less restricted group of capitalists. Their business is to create new enterprises, to furnish capital to companies which are in process of development or momentarily in difficulties, taking an interest in such companies by being represented on the Board of Directors, and to arrange for the flotation of new issues to the public as opportunity may offer. They advance capital and recover it by degrees by issuing it to the public.

While the distinction between the *Banques d'Affaires*, with their relatively large capital, their relatively small

deposits and bill holdings, and the deposit banks is in principle clear, it is in practice not always quite so clear. The most perfect example of the type is the Banque de Paris et des Pays Bas, and this is also the largest and the oldest *Banque d'Affaires*. The Banque de l'Union Parisienne is also primarily a *Banque d'Affaires*, but it is not quite so pure in type, because it has always taken care to develop its banking activities in order to insure for itself a stable minimum return. The Crédit Mobilier was also inclined, before the war, to pay more attention to banking functions than a pure *Banque d'Affaires*, and its financing work was on a smaller scale than those of the two banks already mentioned. Other banks which are, or rather were before the war, mainly *Banques d'Affaires*, are the Banque Française, the Crédit Français, and the Société Centrale des Banques de Province.

The development of these institutions before the war, the economic function which they performed and their methods of operation, together with their activities during the war, and the effects of the war upon them are all discussed in a book on the subject which has recently appeared from the pen of M.E. Baldy.* Among the most valuable chapters are two which describe in detail the ways in which businesses and States are financed, and the arrangements made for issuing securities to the public. In these chapters we catch a glimpse of the revolving wheels of that central machinery of the capital market, which is at once so powerful in influencing economic developments and so jealously hidden from the public gaze. We see the banks founding new companies, "taking an interest in" existing companies, "participating" in finance operations initiated by other banks, and forming syndicates or consortiums to take up loans to foreign Governments.

Syndicates, we are told, became general in the case of large operations at the beginning of the twentieth century; they serve the purpose of enabling the banks to share the risk of an issue failing, as well as to increase the number of channels through which securities find their way to the public. The syndicate may be either a *syndicat de prise ferme et de placement*, each member agreeing to take up one or more parts *syndicales*, or a *syndicat de garantie et de placement*, in which case the members only guarantee subscription without taking firm or paying for the securities. Or, again, it may be a *syndicat de simple prise ferme*, the object in this case being to found another syndicate which will take over the securities or guarantee and place them. When the syndicate is *à la Parisienne* any securities which are not taken up by the public are divided among the members of the syndicate in proportion to the extent of their participation in the syndicate, without taking into account the number of securities placed by each; when it is *à la Lyonnaise* the unsold balance is divided up in proportion to the amounts which the individual participants have failed to dispose of out of the aggregate for which they are responsible.

The author also deals fully with the methods of issuing securities to the public, which may take the form either (1) of offering the securities to public subscription, (2) of introducing them on the Bourse, or (3) of placing them over the counters of the big deposit banks with their numerous branches. For the purposes of this third method of issuing securities each *Banque d'Affaires* has established relations with a deposit bank. Thus the Banque de Paris et des Pays Bas works with the Société Générale (to a considerable extent since the war with the Crédit Lyonnais), and with the Banque Privé Lyon-Marseille, and the Union Parisienne works with the Comptoir National d'Escompte.

The outbreak of war in August, 1914, naturally hit the *Banques d'Affaires* hard. Their holdings of securities fell heavily in value, especially those which related to businesses in enemy countries and in the war area, and income was in many cases reduced. Very large sums had to be written off. The Banque de Paris et des Pays Bas came through remarkably well, thanks to its large reserves, which amounted to over 131 million francs. Over 59 million francs were written off. The Union Parisienne wrote off losses of about 20 million francs in 1915, and

* "Les Banques d'Affaires en France Depuis 1900." By Edmond Baldy. (Paris) Librairie Générale de Droit et de Jurisprudence, 1922. 25 francs.

further large losses consequent upon the disruption of Russia in 1918. The bank which was most seriously affected was the Crédit Française, a new institution with comparatively small reserves. A reorganisation had to be effected in 1919.

The effect of the war seems to have been to reduce the number of important *Banques d'Affaires* to four, viz.:—Banque de Paris et des Pays Bas, Banque de l'Union Parisienne, Crédit Mobilier, and Banque Française, the last a mixed bank. Since its reorganisation in 1919 the Crédit Française has ceased to be a *Banque d'Affaires*, and has become a deposit bank by the opening of a large number of branches. The Société Centrale des Banques de Province, which was originally founded to bring issue business to the provincial banks and act for them in Paris for certain kinds of unremunerative or not very remunerative work, has ceased to be their executive agent, and become one of the most important offices of the associated banks. Lastly, the Société Générale, following a pre-war policy, has increased its banking activities relatively to its financing work, and is now primarily a deposit bank.

To meet post-war requirements the capital of the *Banques d'Affaires* has been greatly increased, the aggregate capital and reserves of the four big banks reaching 858 million francs in 1921. They are pursuing an active policy both in the restoration and equipment of French industry and in the Colonies and abroad. It is significant that the Union Parisienne has acquired important interests in Czecho-Slovak, Hungarian and Polish metallurgical industries, and in a Hungarian bank. The author gives a considerable amount of information as to the nature of the post-war activities. On the whole, they appear to be pursuing a policy of industrial solidification, which is likely to break down the individualistic feeling which existed before the war. The author notes also that the banks are now working in much closer relation with industry than was formerly the case. Whereas the banks were before the war represented on the boards of industrial concerns in which they were interested, industrialists are now in addition represented on the boards of the *Banques d'Affaires*. He considers this to be an important improvement of organisation.

We think that the author is to be congratulated on giving to the public a most lucid and informative book on a subject about which it is peculiarly difficult to obtain information, and all who are interested in the working of the machinery of the French capital market would be well advised to read it.

THE DIRECTION OF OVERSEAS TRADE.

IN the first three months of 1922 the visible excess of imports of merchandise into the United Kingdom was phenomenally small, amounting to £18½ millions, as compared with £53 millions in the corresponding period of last year, £160 millions in the first three months of 1920, and £41½ millions in the first quarter of 1914. An analysis of the figures published in the April trade returns, giving the countries of origin and destination of imports and exports and re-exports, enables us to show in which directions this improvement in the adverse trade balance has been most conspicuous. By reclassifying to some extent the official statistics, we are able to compile the following table, which indicates how the visible balance of trade has been made up in the first quarter of each of the years named:—

named.

FIRST QUARTER. (Million £'s.)									
	1914.		1920.		1921.		1922.		
	Excess of		Excess of		Excess of		Excess of		
	Imports	Exports	Imports	Exports	Imports	Exports	Imports	Exports	
Europe	161	..	141.3	76.0	67.2	2.8	34.3	15.2	
U.S.A.	246	..	..	..	..	..	..	..	
Other foreign countries ..	..	7.3	22.9	..	..	4.2	2.7	..	
British Dominions	0.7	..	71.1	..	..	7.2	..	3.0	
Total	416	..	159.9	..	53.0	..	18.8	..	

Re-exports are included, and it will be seen that in the first three months of this year there has been a substantial growth in our net exports to the Continent as compared

with the same period of last year. At the same time, there has been a reduction of nearly 50 per cent. in our visible adverse balance with the United States, which cannot be fully accounted for by the drop in prices. If allowance be made for the fact that present prices are some 70 per cent. above the pre-war level, our present balance of trade with the United States compares quite favourably with the 1914 figure. There is a small import surplus in trade with other foreign countries; but the Dominions are, as a whole, debtors to us on merchandise account.

Turning to the figures for individual countries, we find that the growth in the surplus of exports to the Continent results not from any increase in our exports to Europe, for British exports thither have declined by some £8 millions, while re-exports are practically unchanged. But our imports for the quarter from the Continent declined by £17½ millions. These changes are set out fully in the following table, to the export side of which we have added re-exports in calculating the figures given above:—

JANUARY to MARCH (000's omitted).

	Imports From				Exports To			
	1914.	1920.	1921.	1922.	1914.	1920.	1921.	1922.
France	14,454	20,606	14,646	12,280	8,464	43,171	16,332	14,037

Portugal	811	2,784	1,723	1,581	1,498	3,917	2,340	1,815
Belgium	5,947	12,148	9,948	6,025	3,415	15,231	6,470	7,262
Germany	20,054	4,801	8,024	5,475	9,323	4,920	4,130	6,410
Austria	1,902	759	101	361	1,108	724	106	316
Hungary	346	1,369	707	728	1,033	3,583	1,709	1,114
Roumania	871	77	677	453	822	1,506	2,573	265
Turkey (European) ..	358	1,025	179	225	807	4,321	1,485	785
Russia	6,748	3,197	261	543	3,371	2,756	43	714
Sweden	2,430	9,063	5,292	3,328	1,804	9,773	2,850	1,263
Norway	1,868	5,134	3,574	2,644	1,718	7,647	4,172	3,564
Netherlands	6,871	5,514	8,774	8,055	1,586	9,856	2,857	5,655
Norway	6,760	10,643	13,065	9,960	1,840	14,639	12,756	12,180
Finland	..	..	1,193	879	..	..	397	247
Total	75,818	103,621	84,357	65,882	44,261	140,561	73,879	65,871

The decline in the import figures is general, apart from Switzerland and Italy. Moreover, in many cases imports are lower than in 1914, Scandinavia and Holland being noteworthy exceptions. The decline in the total as compared with 1914 is, however, mainly due to much smaller imports from Germany and Russia. On the export side, increases are shown for Switzerland, Belgium, and Germany in comparison with last year, but for the majority of countries a decrease is shown. It is a striking fact that our exports to Germany balance our imports, and that if we include Holland and Belgium, whose figures always include much German trade, exports are nearly £25 millions, against imports of £21 millions.

Imports from, and exports to, the United States and the principal countries outside Europe are given below:—

JANUARY to MARCH (000's omitted).

	Imports From				Exports To

Other countries	2,861	3,944	7,034	7,135	6,729	6,539	9,131	4,922
Total	64,229	267,357	129,935	90,207	36,456	62,476	56,847	44,573

There has been a further substantial reduction in imports from the United States, the past quarter's figure of less than £54 millions comparing with £43½ millions in the first quarter of 1914, an excess which is more than accounted for by higher prices. Exports to the United States have grown since last year, but the value figures are less than 30 per cent. above 1914. The figures, however, fully account for the present comparatively high level of the New York exchange. Among other foreign countries, there is a conspicuous decline in imports from Argentina, but Brazil set us twice as much in value as in the same period of 1921. On the export side, South America shows decreases, but Japan took considerably more.

The next table relates to the Overseas Dominions :—
JANUARY to MARCH (000's omitted).

	Imports From				Exports To			
	1914.	1920.	1921.	1922.	1914.	1920.	1921.	1922.
Canada	4,854	14,905	11,054	8,903	4,954	7,668	5,913	5,973
Australia	12,406	28,655	25,647	15,013	9,384	9,092	15,466	15,510
New Zealand	6,745	13,427	13,314	12,002	2,373	4,012	5,677	3,978
India and Ceylon	12,368	36,522	18,966	14,739	20,015	36,699	37,238	26,185
South Africa	4,278	7,922	3,991	5,953	5,785	9,927	9,913	6,942
Egypt	7,428	37,151	6,850	9,494	2,582	8,154	4,954	3,963
West Africa	1,708	10,221	3,329	2,773	2,078	5,066	3,144	3,070
Straits Settlements	3,986	6,308	2,079	1,963	1,343	2,561	3,022	2,043
West Indies	500	2,090	1,431	621	602	969	1,329	733
Other Possessions	2,575	12,393	6,679	5,060	3,754	8,356	10,405	7,222
Total	56,848	169,594	93,340	76,521	52,870	92,507	97,061	75,619

Imports are lower than last year in all cases, except South Africa and Egypt, and on the export side, apart from slight increases for Canada and Australia, the decline is general. Two years ago, it will be noticed, there was a very heavy import surplus, especially in the case of Australasia, Canada, and Egypt. Equilibrium has now been restored in the case of Australia, but there is now a heavy favourable balance with India and Ceylon.

The final table gives re-exports to the principal foreign countries :—

RE-EXPORTS—JANUARY to MARCH.
(000's omitted.)

To—	1914.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
France	3,155	3,616	4,878	4,336	6,679	15,982	2,359	5,409
Italy	269	1,335	1,392	1,048	1,065	1,863	461	430
Belgium	2,410	20	29	2	1,285	6,611	1,773	2,931
Germany	5,669	1,444	1,090	9	399	6,450	5,747	4,708
Russia	193	1,014	151	5	73	1,489	14	123
Sweden	150	435	575	207	269	1,194	406	276
Norway	128	836	572	5	738	1,119	265	351
Denmark	1,330	2,136	1,743	237	3,118	4,097	2,057	1,959
Netherlands	8,642	9,863	10,201	1,392	2,340	24,945	6,115	6,382
United States	53	97	67	239	307	716	236	118
Japan	1,871	1,779	1,693	484	820	4,350	3,764	2,085
Other countries	26,052	22,580	22,391	7,886	17,300	69,041	23,364	24,872
Total for foreign countries	5,310	3,591	2,602	1,236	1,329	6,059	3,494	3,914
British possessions	29,362	26,171	24,993	9,122	18,629	75,100	26,848	28,786

These figures call for little comment. They show considerable fluctuation for the past three years, but appear to be returning to the normal distribution as shown by the 1914 figures.

HARD TIMES IN THE COAL INDUSTRY.

At this date last year the country was in the middle of the worst stoppage in the coal industry from which it has ever suffered. At the close, after three months of loss, an agreement between miners and mine-owners was made, which was in some respects a model. It provided for a square deal in the future with all cards face upwards on the table. The miners were guaranteed a minimum wage, a standard rate of profit was allowed to the coal-owners, and the surplus earned by the coal mines over and above these minima in wages and profits became divisible as to 83 per cent. in wages and 17 per cent. in profits. The accounts of the mine-owners were to be open to the inspection and criticism of the Miners' Federation, so that the men had the assurance that they would certainly get everything to which the agreement entitled them. This agreement, in principle so good, has in practice worked out very badly, not because of any inherent defects, but because there has been not enough money earned by the industry as a whole to pay the minimum rates of wages and to meet the standard rates of profit of the owners. The men have worked exceedingly well, the output has improved surprisingly, but in some of the most important coal areas—especially those dealing with export markets and ships' bunkers—the miners are down to the hard minimum in wages, the standard profits are not available for the owners, and the co-operative clauses of the agreement have had no opportunity of coming into operation. This is most unfortunate, seeing that three months' notice to terminate the agreement may be given at the end of September next, and the agreement itself may expire at the close of December. So far it has not had a chance of proving its merits.

There is no industry in the country concerning whose working we have more detailed figures than that of coal mining. Returns are collected from all areas by the Department of Mines, and the results classified and

analysed. From particulars concerning the first three months of the current year issued by the Department, we learn that in every district the output of coal during the first quarter of 1922 was greater than during the last quarter of 1921. In comparison with the first quarter of 1921 there has been a still larger increase, although there were then 141,000 more wage-earners on the colliery books. The men have during the first quarter of this year been turning out over 19 cwt of coal per man per seven-hour shift, a rate of production which is nearly up to that of 1913, when the daily working shift extended to eight hours. During the bad period of Government control after the war the output per man per shift fell as low as 12 or 13 cwt. There has been a steady increase in the number of days worked, chiefly due to better transport facilities and more active trade. With the higher output and less waste of time there has come a great improvement in the amount of coal exported, though the prices at which the exported coal has been sold has meant hard work and low pay for the coal miners, and hard work without profits for most of the coal-owners.

The recovery of the export markets by resolute price-cutting has been a picturesque feature of recent coal mining history. The coal shipments from our ports during the first three months of this year were equal to 80 per cent. of those during the first three months of 1913, a year of exceptional trade activity. The figures were 17.6 million tons in 1922, including bunker coal for foreign voyages, against 22 million tons in 1913. The coal exports of January-March of the present year were 2.3 million tons more than in the previous quarter, and twice as much as was exported during the first quarter of 1921. We have recovered those export coal markets which not so very long ago appeared to have been lost. The amount exported left available for home consumption in the first quarter of this year 42½ million tons, against 48½ million tons in the first quarter of 1913. This large available home supply at a time of depressed trade has caused prices to fall slowly—though by less than one might have expected—while the export prices have in the last month or so tended to harden. The analysis of the coal exports made by the Mining Department is specially interesting. Europe and the Mediterranean naturally took less from us than in the palmy days of 1913, but Asia, Africa, North and Central America took more. France, Belgium, and Italy were still our best customers, as in 1913, but South America showed a considerable falling off. The amount taken for foreign bunkers was 4.4 million tons, only half a million tons less than was taken during the active shipping year of 1913.

It is when we come to export prices and to wages that the picture of the industry reveals its ragged back. The average value of coal exported, which amounted to 24s 11d per ton, f.o.b., in December last, had fallen to 22s 2d in February. Since the end of last year the wages of all classes of workpeople have been reduced, on the average from 9d to 1s per man per shift. The reduction in wages since March of last year has been approximately 7s per man per shift—which at 5½ shifts a week means a cut of 38s 6d a week per man. In South Wales and Monmouth colliers are not now earning more than 8s 10d per shift of seven hours—say, 48s 7d per week at the outside. The average wage for the workmen, other than colliers, in South Wales is nearer 40s a week. In Derbyshire, where the coal is highly priced, the wages are nearly twice those paid in South Wales, but there are few districts now in which the minimum level under the agreement have not been reached. And the minimum is very small indeed.

Let us take, for example, the great exporting area of South Wales. There are 51,500 fewer workmen employed now than at the beginning of last year. Those who are in work remain loaded up with debts to tradesmen, and others incurred during the disastrous three months of the coal stoppage. Their wages are at the bedrock minimum, which means an average increase on the pre-war wage of 35 to 85 per cent. The men are working as hard as they did before the war, for they are turning out very nearly as much coal in seven hours as was then turned out in eight hours. And yet, though the men are working so well and being paid so badly, there is little, if any, profit for the mine-owners. Although many markets have been regained the industry is not at its full productive

capacity. Overhead charges have to be met, timber and repairs provided, and there are heavy freight rates between collieries and the sides of ships. The men are doing their best, and we do not doubt that the colliery owners are also doing their best, but there must be a considerable extension of the export markets and some advance in prices f.o.b. before the wages paid can rise above that wretched minimum. The agreement was on sound lines, and one may hope that it will remain in force to justify itself, but for the present the industry is suffering severely from financial drought—there is not enough money coming in to go round.

MOTOR MANUFACTURING COMPANIES.

THE British motor-car manufacturing industry is now, and has been for the last few years, in a somewhat anomalous position. For while it is almost universally admitted that British motor-car engineering is equal to, if not better than, that of most other countries, there appears to be something lacking in the present methods of management and control, which produces adverse financial results in a considerable number of cases.

Since the Armistice one misfortune after another has befallen the industry. The change over of factories from war-time to peace-time conditions was apparently not accomplished with the rapidity which was thought possible. Motor-car production for 1919 was negligible. Meanwhile, the flotation and failure of many undertakings, which made obviously reckless promises of early delivery and big profits, accentuated matters by creating a spirit of distrust amongst motor-car buyers. This was followed by the disastrous moulders' strike, and later a strike of coachbuilders, which retarded output during 1920, and in spite of the tariff, which was welcomed by so many in the industry, buyers turned their attention to foreign cars in a way which is strikingly revealed by the figures given below :—

IMPORTS and EXPORTS of MOTOR CARS and PARTS.

	Total Imports.	British Exports.	Total Exports.
1913.....	4,853,360	3,649,891	4,269,702
1920.....	23,447,340	8,398,126	8,757,288
1921.....	5,832,124	4,563,571	5,615,067

But these figures are the more significant when it is considered that in 1920 we imported from the United States £16½ millions of motor-cars, motor-cycles and parts out of total imports of these goods amounting to under £24 millions. And this, be it remembered, was at a time when not only had the tariff to be reckoned with, but the unfavourable rate of exchange as well taken into consideration. Makers of commercial cars were, of course, not protected by the tariff, and, in addition, were adversely affected by sales of Government motor lorries which flooded markets.

Immediately after the war various attempts were made to compete with the peculiar type of American motor-car which invaded markets both at home and abroad. Harper Bean and Austin developments were a move in this direction, but whatever may be said in favour of the models produced, the fact remains that financially the schemes were not successful. In some quarters it is contended that the industry suffers from want of outside financial assistance. This is probably true, as no doubt a perusal of some balance-sheets may have unfavourably influenced financiers and the investing public.

In the table given below we select a few companies which are bravely struggling against adverse circumstances :—

	Loans.		Creditors and Deposits.		Stocks of Cars, Parts, and Material.		Debtors.	
	1919-20.	1920-21.	1919-20.	1920-21.	1919-20.	1920-21.	1919-20.	1920-21.
Belsize	146,677	...	395,987	510,418	676,553	581,705	88,148	259,615
Crossleys	45,559	206,451	220,061	152,830	220,794	208,797	53,907	31,999
Cubitts	193,000	34,000	150,411	152,108	801,401	676,309	30,512	107,994
Napier	52,467	9,772	144,498	105,741	328,053	191,746	50,069	30,545
Swift	105,811	125,306	160,983	126,054	522,700	258,453	84,769	97,508
Vauxhall	288,806	315,735	85,770	30,912	313,448	231,656	124,511	20,222

While it is a matter for satisfaction to note reduction of loans in some of these, it must not be overlooked that

several companies have increased their borrowings. Further, though loans may have been decreased, other liabilities may have taken their place. It would, perhaps, be more informative if companies showed deposits received on new cars apart from other creditors; but it is only natural that these figures should be generally lower and reflect the passing of the boom. Decreased stocks, it is to be hoped, represent sums written off for depreciation, while the decline in debts owing to companies must be taken into consideration with other items in the table. The Belsize Company has not been able to issue its balance-sheet in time for our review, owing to unsettled claims for refund of excess profits duty and payments on account of depreciation of stock value under the Finance Act of 1921. Although the Crossleys undertaking shows no loans outstanding in its accounts, owing to the adverse year experienced, it has been placed in the above table. The Wrigley company, though only making motor-car parts, has been included in our list to illustrate the support afforded to the industry by banks. As against available assets of this company, according to its last balance-sheet, amounting to £631,057, of which but £119,999 represented freehold land and buildings, Lloyds Bank is recorded as having an amount due to it of £293,535.

In the following table a group of motor-car manufacturing companies, representative of the industry, has been selected. Profits or losses are shown and compared with the results of a year ago, and profits distributed in 1920-21 are analysed :—

Company.	Net Profits, 1919-20.	Net Profits, 1920-21.	Preference Dividend.	Ordinary Dividend.	Reserve, Depreciation, &c.	Inc. or Dec. Carried Forward.
B'ham Small Arms	£466,152	Dr 469,168	£21,834	..	..	..
Crossleys	35,643	Dr 234,965	..	..	..	..
Cubitts	23,026	Dr 63,609	..	..	..	..
Dennis Bros	121,697	79,267	..	65,107	10,818	+
Humber	118,072	(b)114,050	(b)19,890	(b)29,288	(b)80,051	—
Napier	Dr 69,641	79,099	22,500	..	..	56,599
Rolls-Royce	202,835	107,326	..	64,590	41,921	+
Rover	187,340	139,907	..	73,500	57,587	+
Swift	325,893	167,395	..	132,902	16,013	+
Vauxhall	(c)Dr78,549	Dr 37,735	..	..	14,913	..
	48,451	Dr 221,759	..	..	..	..

(a) 18 months ended January 31, 1921. (b) August 8, 1920, to August 31, 1921.
(c) 17 months ended December 31, 1920.

On account of the differences of opinion existing as to what is an adequate sum for depreciation, we have shown where possible profits before amounts for depreciation have been deducted. Birmingham Small Arms and Napier, however, do not reveal the specific sums allocated for depreciation. It is difficult to estimate what part profits from motor-car production play in the Birmingham Small Arms returns. Humber, Dennis, Rolls-Royce, and Rover, though showing declines, can usually be relied upon to show profitable results. Napier's profits are possibly in the nature of a pleasant surprise to many shareholders, although, perhaps, not altogether disconnected with the success of its new model.

The next table shows important assets, paid-up share capital, and profits compared with these items :—

ASSETS, SHARE CAPITAL and PROFITS COMPARED.

Company.	Property and Plant.	Cash and Investments.	Total Assets.	Paid-up Share Capital.	Profits.	Percentage Capital Earning Power.
	1920-21.	1920-21.	1920-21.	1920-21.	1920-21.	1920-21.
Birmingham Small Arms	£3,199,885	4,414,452	8,964,174	3,368,902	loss on yr	..
Crossleys	155,077	372,942	1,597,797	1,100,949	loss on yr	..
Cubitts	481,029	6,287	834,567	475,286	loss on yr	..
Dennis Bros	96,187	297,105	713,434	500,825	79,267	15.8
Humber	297,727	163,544	1,282,393	624,376	114,050	18.2
Napier	480,971	159,686	1,348,801	846,000	79,099	9.3
Rolls-Royce	666,751	439,191	1,582,874	1,050,000	139,907	13.3
Rover	58,650	3,950,134	4,008,784	3,223,408	167,395	5.1
S. T. D.	246,112	1,850	729,594	300,000	loss on yr	..
Swift	709,741	90,571	1,329,649	600,000	loss on yr	..
Vauxhall	..	..	..	..	..	..

Humber heads the list with 18.2 per cent. earned on its paid-up share capital, followed by Dennis Brothers, Rover, and Rolls-Royce. It is, however, somewhat difficult to give an exact comparison of earning power on share capital. It is possible that the Rover percentage should be higher, as, before showing profits recorded above, £58,324 has been deducted for "maintenance and depreciation of plant, &c." S.T.D.—a fusion of the Darracq, Talbot, and Sunbeam companies—is mainly a shareholding and financing company, and, in conse-

quence, little definite information is offered about the actual manufacturing undertakings comprised.

Our final table shows price fluctuations in shares of these companies over a period of years:—

	Year 1913.		Year 1919.		Year 1920.		Year 1921.		Price End of 1920.	Price May 10, 1922.
	H'st.	L'st.	H'st.	L'st.	H'st.	L'st.	H'st.	L'st.		
Belsize Motors, £1...	1 1/2	1 1/4	2 1/2	2 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Birm. Small Arms, £1	2 1/2	2 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Crossley, £1...	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Cubitts Cam. Prof., £1	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Dennis Brothers, £1...	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Humber, £1...	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
D. Napier, £1...	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Rolls-Royce, £1...	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2	2 1/4	2 1/2	2 1/2
Rover, £1...	3 1/2	3 1/4	3 1/2	3 1/4	3 1/2	3 1/4	3 1/2	3 1/4	3 1/2	3 1/2
S. T. D. Motors, £1...	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Vauxhall Motors, £1...	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2
Wrigley (B. G.), £1...	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/4	1 1/2	1 1/2

It is rather a dismal record, the only shares in the list standing at a premium being Dennis Brothers, Rolls-Royce, and Rovers, three undertakings with excellent records and healthy balance-sheets.

Future prospects are, however, really much better than the actual figures given in our tables would suggest. British motor-cars are in service throughout the world, and usually elicit high praise. New and successful models are being continuously produced, and on the engineering side there is little to be desired. That a big demand for these productions at reasonable prices exists is beyond a doubt. Once finances are put on a sound basis and under efficient control, there is no reason why this industry should not show substantial profits and enjoy the fullest confidence of investors.

STOCK EXCHANGE AND PRE-WAR CONDITIONS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE Stock Exchange reverts on Monday to most of the pre-war practices in regard to hours of business, bi-monthly settlements, contangoes, Clearing-House, and the various sequelæ which arise therefrom. Business on Monday will no longer be on a cash basis except in the Consol market. Members will be dealing for the end-May account; for the settlement, that is, on Thursday, June 1st. The previous Monday will be Mining Contango Day, the General Contango Day and Ticket days following in order. Some brokers have already notified their clients that it is not their intention to undertake contango business. Others are adopting an attitude more non-committal, preferring to wait upon the course of events, while they acknowledge that in some cases it will probably be found necessary to defer to circumstances that may arise. From the point of view of the public, the reinstitution of bi-monthly settlements is to the good in making for that freedom of markets to which reference has been made many times in these columns. The Stock Exchange will no longer be tied to a nominal necessity for taking up or delivering shares within five days of the date of the bargain. Jobbers will have more scope for buying back shares which they sell, and of selling such as they buy. There is all the difference between a fortnight and five days in this connection, and most men in the House appreciate the extra flexibility which the bi-monthly settlement system gives to markets as a whole. These may be early days in which to prophesy the result of the reversion to pre-war practice, but the Stock Exchange has shown itself in the past so adaptable to all kinds of conditions that no great prescience is needed to assume that, within a very short time, markets will have settled down to the old system with as much facility as they showed when cash dealings were introduced. That a fresh element of risk is conveyed into Stock Exchange dealings by reason of the restoration of the contango system is obvious enough. The Committee frankly admit there were objections to the proposal that margin should be required from clients, and that after careful examination of all points of view they have decided to pass the new rules, and to repeal the temporary regulations, which were dealt with here early in April. All through the period during which cash dealings have been in force, markets have been handicapped by the absence of any kind of bear account. A bear position does undoubtedly constitute a buttress, which serves a useful purpose at a time when ordinary buyers

are scarce. It helps to break the force of falling markets, and it renders dealings considerably freer than is otherwise the case.

The changing-over process will be accompanied by a certain awkwardness at the start, but less than a month will see the Stock Exchange working smoothly under its new-old state. Clients will know that they are no longer required to send their cheques until a specified pay-day; they will no longer feel a natural—and too frequently justifiable—exasperation at finding themselves kept out for ten days or more of money realised by sales of stock for “cash.” An increase of speculative business appears to be an inevitable consequence. If a man, buying speculative shares, knows that he will not be called upon to put down any cash for a fortnight or so, he will be tempted to take larger risks than under the present system. This will mean bigger lines of stock being opened, and, when the settlement comes round, if that stock has not risen in price, the buyer will infallibly want to carry over part, if not all, of his commitments. Profitable employment of money cannot fail to make appeal to those who remember how, in pre-war days, they were able to add handsomely to their incomes by taking in stock. We are certainly not advocating speculation through the easy medium of contangoes; all we desire to point out is the practical certainty that Stock Exchange markets will drift almost unconsciously into the pre-war practices, however stiff may be the upper lip maintained by those who decline to engage in this branch of the business. Without the ready aid of the banks a curb will be placed upon enterprise of the contango order, and the banks' attitude is said to be somewhat passive on this point at present. Here again, however, circumstances may do much to dictate the course of events. The Stock Exchange has taken a bold step in throwing open the door to freedom of business. It is for the sound sense of members to disprove the apprehensions that are bound to present themselves as a consequence of this throw-back to pre-war conditions that will come into force on Monday.

THE GROWTH OF EMPLOYERS' ORGANISATIONS.

(FROM A CORRESPONDENT.)

MODERN industrialism, in its origins almost fiercely individualistic, has given in recent years increasing recognition to the rival principle of association. In the first place, the impulse to organisation was given by the employees' insistence on collective bargaining, for the men in combination were stronger than the employer in isolation. In time, the individualistic predilections of the manufacturers yielded to the logic of events, and a hierarchy of masters' organisations to-day confronts a similar, but better developed, hierarchy of organisation on the men's side. The pace in this direction has been made by the men, and there are still many industries in which the men are more completely organised than the masters. But although the origin of this type of employers' organisation was rooted in the desire to meet labour on equal terms, it would be an unpardonable error to regard them as merely, or even essentially, fighting bodies. Indeed, evidence is being multiplied that strong and well-established organisations of masters and of men may provide the surest basis for industrial peace. The progress of conciliation in the textile and in the iron and steel industries must be set in the balance against recent labour troubles in the mines and on the railways, in which industries there has hitherto been a much less marked disposition to conciliation, and in the engineering trades, where there is adequate machinery for conciliation, but a great deal of mutual misunderstanding to be overcome. The conditions of modern industrialism render impossible close personal touch between employer and employee; so, in the industrial, as in the political sphere, the facts of the case dictate recourse to the representative principle; and from the regular intercourse of leading industrialists with leaders of labour there is a good chance of mutual understanding, since both sides are presumably represented by able, and therefore reasonable, men. A difficulty that is frequently felt in this direction is that in the trades unions the type of mind that is successful in welding together the lodges—a task which for success requires

an “agitator”—is seldom the type of mind that is successful in sober negotiation. The ideal labour leader is at once strong and sober in negotiation, and sufficiently “advanced” in lodge meetings to keep his men together.

The second of the primary forces impelling employers to association has been State interference with industry. This interference was conducted before the war by legislation and administrative decree, and was mainly mediatory in character. During the war the State in many cases assumed direct control, and, furthermore, it became almost the sole customer for the products of many industries, either because of the necessity of converting all the engineering industries to the production of engines of destruction, or because circumstances demanded a complete national scheme of co-operation in purchase and distribution of necessities. The earlier and more normal intervention of the State in industrial questions made it necessary for employers to organise to prevent the possible infringement of their legitimate interests by well-meaning but ill-informed legislation. During the war Departments of State, such as the Ministry of Munitions, found it easier to deal with industries which were organised than with individual manufacturers. The movement towards association, which for many years had alternately flourished and languished underground, was brought to the light of day and encouraged by the Government, and in particular by Mr Lloyd George, who, when reproached on the score that he consulted labour more frequently than capital, retorted that the industrialists were not organised in any body with which he could consult. The rationing of raw materials, the pooling of knowledge, the regulation of prices and the collapse of competition—all urged manufacturers along the path of association.

The third factor in promoting trade associations was the growing realisations that certain forms of competition were not merely injurious to manufacturers themselves, but socially wasteful. Price-fixing arrangements were becoming increasingly common before the war. For the manufacturer they meant security against that type of cut-throat competition arising from sales of a product below its economic price by a firm which was financially embarrassed, or which hoped by this means to filch customers from its competitors. In some cases consumers also welcomed these arrangements for the stability of price which they ensured, and the healthy competition in quality which they engendered, a type of competition which has done more than any other to secure British manufacturing supremacy throughout the world, and which is lost to the customer when price competition is the only or predominant factor.

During the war the Government itself fixed prices, and the fact that these were maximum and not minimum prices was of little practical importance. Sections of trade, previously accustomed to a competitive price level, were introduced to one fixed by external authority; and thus the process from competition to combination was hastened in respect to prices. On the general merits of the development little can be said here, since there is no such general agreement as would justify a brief handling of the topic. It is sufficient to note that, as a matter of fact, such associations come into being usually at a time of great depression and financial embarrassment in an industry, that they flourish during periods of prosperity, but tend to disintegrate on a falling market, when the fight to live makes the “association price” an irksome bar to selling; and that when conducted with ability and moderation they may serve the interests of the consumer as well as those of the manufacturer.

These different forces have produced different types of associations. At present industrial organisation on the employers' side is strongly reminiscent of local government in the middle of last century, when the country was covered with a network of *ad hoc* authorities. Broadly speaking, the labour organisation is distinct from the commercial, and there is usually a separate body which deals with Parliamentary matters and other subjects of general interest, such as transport.

The war brought development not so much in the number of existing associations or federations as in the range of their activities. It is true that there were notable war-time creations, such as the Federation of British

Industries and the National Federation of Iron and Steel Manufacturers; but it is still more true that many an organisation which had for years been leading an unobtrusive but useful existence enlarged the scope of its activities during these years, and came more into the open—e.g., by giving evidence before Government Committees, by tendering advice to Ministers, and by acting as the focus of action against repressive Departments. Wages organisations and price associations have both been worked hard owing to the enormous fluctuations in the price levels and the often unnecessary interference by the Government in wages problems, no better example of which can be given than the famous “Churchill 12½ per cent.” The Committee on Trusts and the Anti-Profiteering Committees both investigated the existence and the nature of price associations. The organisations devoted to furthering the interests of their particular industry as a whole courted publicity on the topics which affected these industries. They are now doing a good deal of intelligence work for their members, and publicity work through the Press.

The Government based its scheme for Whitley Councils upon the existence of organisations on the side of capital as well as of labour; and when the Industrial Conference met early in 1919 it seemed that the coping-stone was to be set to the industrial organisation of the country in the shape of something resembling an industrial Parliament. Subsequent history has shown that more ground was gained during the war than could well be consolidated. Most of the large federations are now less ambitious as regards the scope of their activities than they were three years ago; some may disappear, and others sink again into obscurity. There is a certain reaction towards individualism, a tendency to grudge the time and money spent on conferences, a desire simply to *cultiver son jardin*. But the continued activity of the State in the industrial sphere, the constant grinding out of new legislative proposals, and the revolutionary changes which are taking place in railway transport make federations, so far as the great industries of the country are concerned, not a luxury but a necessity. The employers cannot risk the repetition by a Labour Government of Mr Lloyd George's taunt that they are unorganised.

Employers' organisation in this country has thus been built up somewhat haphazardly, not on any preconceived design, but to meet the actual needs of the situation. In politics a similar development has given us a constitution which other lands have sought to imitate; in the industrial sphere the result may well be the same. At present the organisation is neither founded on logic nor possessed of symmetry; but it *works*, and it is adaptable to new needs. The industrial revolution of the nineteenth century was one of production; that of the twentieth century will be one of organisation. Already we have reached a stage at which, in the words of Mr Delisle Burns, we find “the organised economic community to be neither the State alone nor the non-governmental organisation of industry, but a unique complex of these two.”

Notes of the Week.

Teachers' Pensions.—The Geddes Committee recommended economies of £18,000,000 in education expenditure. The Government adopted the suggestion so far as to secure a projected saving of £6,000,000, of which about £3,000,000 had been arranged for before the Geddes Committee's investigation. On Tuesday Mr Fisher moved the second reading of the School Teachers (Superannuation) Bill, under which savings of £2,300,000 were proposed, through making Teachers' Pension Schemes contributory instead of non-contributory as at present, but a motion for the adjournment was successfully moved, and the Government suffered a defeat by three votes under circumstances which, rightly or wrongly, would in pre-war days probably have caused the resignation of the Government of the day. For the vote was very far from being a snap division on a matter of small importance. Roughly the question at issue was this. In 1918, following the recommendations of the Burnham Committee, teachers received largely increased scales of

salary and a pensions scheme on a non-contributory basis. The salary scales were due to come up for revision in 1925. There has been, Mr Fisher stated, a rise since then of 150 per cent. in salary expenditure, while the ultimate cost of the pension scheme will be £9,500,000 per annum. The Government, realising that this bargain is under present financial conditions an onerous one for the taxpayer, proposed to recoup themselves to the extent of £2,300,000 per annum by making teachers coming under the pension scheme contribute 5 per cent. of their salaries. So far as teachers who come under the pension scheme are concerned the proposal is tantamount to a 5 per cent. reduction in salary. By defeating the Government the House of Commons in effect pronounced that to take this step before 1925 was a breach of faith with the teachers. The Government have swallowed the defeat and appointed a committee to investigate the question whether the Bill would constitute a breach of any pledge or undertaking given to the teachers. Meanwhile the Bill is suspended. The main question is, can the Government and the House of Commons properly plead a radical change in economic circumstances as justification for revising a bargain which still has three years to run? By its vote on Tuesday the House of Commons answered in the negative. Considering the form in which the question was brought before them, it is difficult to see how they could have properly answered otherwise. The whole affair is a serious blow to Government prestige. In the first place, the new salary scales should have been made subject to review at an earlier date, or else made in some measure dependent upon price movements. The only chance of straightforward escape from the effects of this blunder open to the Government was to go frankly to the teachers and claim that the complete change in financial and economic conditions made it necessary in the interests of the country that revision should take place earlier than had been arranged. Negotiations might have produced a compromise, and had they failed the Government would at least have come before the House of Commons the stronger for having tried to do the right thing. But the method of Mr Fisher's Bill is not honest or straightforward. The Minister of Education did not strengthen his position by trying to play the rôle of Mr Spenlow to the Mr Jorkins of the Local Authorities, whose direct servants the teachers are. Attempts on these lines to shuffle out of responsibility are unworthy and unconvincing, while the contention that to levy pension contributions is quite a different thing to reducing salaries—supported only by the thin plea that not all teachers will be entitled to pensions, and therefore some will not be subject to the levy—is no better than a disingenuous quibble. The whole affair provides another example of the now familiar procedure under which the Government first commits a blunder, and then, when the blunder becomes too obvious, seeks to retrace its steps by indefensible methods. The teachers' profession is of vital importance to the nation. It was most inadequately paid in past years. An increase in emolument was long overdue, and we welcome its arrival. But in these hard times the Government unfortunately cannot afford to put even the teachers in a position which contrasts too favourably with that of other public servants. That melancholy financial fact, however, in no way absolves the Government from the primary duty of frank and straightforward dealing with one of the most important sections of those who serve the community.

Three Economy Committees.—In reply to a question in the House of Commons on Monday, Mr Chamberlain announced that three Committees were being appointed to investigate the three following questions:—

- (1) The practicability of a Ministry of Defence as recommended by the Geddes Committee.
- (2) The amalgamation and co-ordination of services common to the various fighting forces.
- (3) The feasibility of introducing a system of making lump sum instead of percentage grants to local authorities.

Two days later Mr Chamberlain announced the personnel of Committee 2, which includes Sir Alfred Mond and Lord Weir. It would seem that the investiga-

tions of the first two Committees will overlap at some points. The third Committee has a very important field for investigation, for percentage grants amount to about £60 millions per annum. The Geddes Committee indicted the system in the following terms (first Report, page 105):—"The vice of the percentage system is that the local authority, which alone can really practise economy in these services, loses much of its incentive to reduce expenditure, especially when the larger proportion is paid by the taxpayer through the Exchequer. The deciding voice as to what money shall be spent is not that of the Government or the House of Commons, but that of the local authorities.....The weakness of divided responsibility is manifest throughout." The Geddes Committee considered "that the percentage grant should be abandoned in the interests of economy, and be replaced by fixed grants or by grants based on some definite unit." In their opinion the change would increase the incentive to local authorities to economise, and enable staff economies to be made at headquarters.

The Position in Anatolia.—The 15th of this month was the third anniversary of the original landing of Greek troops at Smyrna, and Mr Chamberlain chose this day to expose in the House of Commons the latest instalment of the story of murder, misery, and destruction which has since developed. No impartial observer will try to make out that Major Yowell's statements are incredible, or even unlikely, in the present condition of Anatolia, nor will he censure the Government for giving them publicity in this dramatic way, if such action could conceivably bring the atrocities to an end, or even check them. But a two-fold indictment lies against the Eastern policy of the present British Government. In the first place, they must shoulder a large share of responsibility for the present situation in Anatolia. Secondly, they have been wanting in impartiality in their attitude towards the respective misdeemeanours of the Greeks and the Turks in this war for which Western statesmanship is chiefly responsible. The first charge is the principal one. As a result of the armistice, signed by Turkey on October 30, 1918, the Allied Powers obtained fairly effective control over the northern half of the former Asiatic territories of the Ottoman Empire. Although this region did not, like the Arab provinces and the Straits, come under direct Allied military occupation, Allied control officers were in command of the situation. The railways were working under Allied military management. Even in such remote places in the interior as Konia and Erzerum, the Turkish authorities were carrying out these officers' instructions and progressively handing over war material to them, in accordance with the armistice terms. And, on the demand of a British officer, the Turkish garrison had evacuated the ex-Russian fortress of Kars, the key to Trans-Caucasia (which the Turks have since occupied again). Consequently, by May 15, 1919, the Turkish Army had successfully been reduced to a strength of 19,000 men. The decision of the "Big Three" at Paris to send Greek troops to Smyrna—taken on their own responsibility, in defiance of expert opinion and forecasts—was like a torch thrown into a powder-magazine. A new war flared up in the one extensive region in the Near and Middle East which had not been devastated by the Great War just concluded. The control of Anatolia passed out of the hands of the Allies into those of a Greek and a Turkish Army, which are at present each about 200,000 strong. Those numbers, large as they are, are not sufficient, in a country so vast and so poorly equipped with the means of communication, to obtain a military decision in favour of either belligerent. The military campaign has already resulted in stale-mate. But the war of extermination between intermingled nationalities, which this campaign has set on foot, is in full career. The Greeks are alleged to be destroying the Turkish civilian population in the territories which they occupy, and the Turks to be doing the same to the local Greek minorities in the provinces on their side of the lines. Meanwhile, the parties ultimately responsible for this trend of events are physically impotent to arrest the consequences of their original blunder. An impartial and simultaneous protest against the crimes of both parties, especially if followed up by the practical step of appointing Allied officers to

inspect and control on either side, might really have done something to mitigate the sufferings of the victims, and, in exchange for repairing some of the evil which they had caused, the British Government might have been allowed to whitewash themselves. Some belated reassurance, however, may, we hope, be deduced from Mr Chamberlain's statement in the House on Tuesday that the Government were requesting America, France, and Italy to join Great Britain in sending officers to the Smyrna district as well as to Angora, and that even if the other nations do not co-operate, an endeavour will be made to send a British mission of inquiry.

The Civil War in China.—A correspondent writes:—"The situation has been further complicated by Chang Tso-Lin's retirement to Manchuria and his declaration of its independence. He promises to observe all existing treaties and to maintain friendly relations with all the Powers, but it is probable that the strength of his forces, which a Japanese paper puts at 60,000 men, has been greatly exaggerated, as have also the numbers engaged and the severity of the fighting. He cannot safely expect much assistance from Sun Yat-Sen's projected attack on the rear of Wu Pei-Fu's army, and he has probably neither provisions for his soldiers nor money to pay them off. But his cause is receiving support in Japan both in business circles and from the Press, as well as among the Japanese in China, and he is said to be likely to obtain aid from Japanese financiers, of course in return for concessions. That he has not yet got it is shown by his demand for money from the British Postal Commissioner at Mukden, and it is believed by expert observers that he is not likely to get much, unless the lenders feel that they are backed by their Government. But Japan could not afford, even if she wished, to prolong a contest which might tend to sever her from the Western Powers, nor could the Peking Government favour an invasion of Manchuria by Wu Pei-Fu, unless its success were beyond doubt. The prolongation of civil war would imperil the unity of China, and the Powers, and consequently the Consortium, are determined that her unity shall be maintained. Probably the separatist tendencies in the various provinces are much weaker than the unifying influences of custom and history. Li Hsu-Chang, the President of the Republic, has stated that they may be overcome by local autonomy and a federal system; and the masses are passive politically, and want chiefly to be let alone. Nor are the rival armies eager for battle; the problem on both sides is how to pay them off. It is announced that the Consortium Council, having reached certain conclusions, has adjourned till October, pending the submission of them to its component financial groups. Meanwhile, the financial difficulties of the Peking Government may be somewhat mitigated by the revision now in progress of the Customs duties, which eventually are to be brought up from 5 per cent. to 7½ per cent. *ad valorem*. The outlook is extremely obscure, but there can hardly be much danger except for the unfortunate inhabitants of the districts occupied by the forces of the rival leaders. None of the foreign loans have been much affected, not even the Vickers and Marconi issues, for which no specific revenues are assigned as security. The British Foreign Office is pressing the claims of the holders, and they should eventually benefit by the pending revision of the Customs tariff. Trade is good, and, were peace assured, large sums could doubtless be raised by internal loans.

Employment in April.—In the cotton, wool, and jute textile industries, coalmining, the clothing trade, and the tinplate industry there was an improved demand for labour in April. But the improvement was counter-balanced by the effects on other industries of the engineering and shipbuilding disputes; and the May issue of the *Labour Gazette* shows that the trade union percentage of unemployed, which at the end of February and March was 16.3, went up to 17.0 at the end of April, the highest

figure since June of last year. How this percentage has moved month by month in recent years is shown below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.									
End of—	1913.	1917.	1918.	1919.	1920.	1921.	1922.		
January ..	2.2	0.3	1.0	2.4	2.9	6.9	16.8	%	
February ..	2.0	0.3	0.9	2.8	1.6	8.5	16.3	%	
March	1.9	0.3	1.2	2.9	1.1	10.0	16.3	%	
April	1.7	0.3	0.9	2.8	0.9	17.6	17.0	%	
May	1.9	0.4	0.9	2.1	1.1	22.2	..	%	
June	1.9	0.4	0.7	1.7	1.2	23.1	..	%	
July	1.9	0.4	0.6	2.0	1.4	16.7	..	%	
August	2.0	0.5	0.5	2.2	1.6	16.3	..	%	
September ..	2.3	1.3	0.5	1.6	2.2	14.8	..	%	
October	2.2	1.1	0.4	2.6	5.3	15.6	..	%	
November ..	2.0	1.1	0.5	2.9	3.7	15.9	..	%	
December ..	2.6	1.4	1.2	3.2	6.0	16.5	..	%	

* Excluding coal miners. † Revised figure.

The percentage unemployed among workpeople insured under the Unemployment Insurance Act was 14.4 at April 24th, which is the same figure as that recorded a month earlier. On April 24th the Employment Exchange registers showed 1,699,000 unemployed—an increase of 9,000 on the month—and also 189,000 persons working systematic short time in such a manner as to obtain unemployment benefit. The last-mentioned figure fell by 33,000 between March 27th and April 24th. All trade disputes current in April involved about 270,000 workers, of which the engineering and shipbuilding disputes accounted for nearly a quarter of a million.

Cost of Living.—The Ministry of Labour's index number of the cost of living fell one point in April, as compared with a decline of 4 points in March. At May 1st, states the *Labour Gazette*, the average level of retail prices (including food, rent, clothing, fuel, light, and miscellaneous items) was 81 per cent. above that of July, 1914. The peak was reached in November, 1920, when the figure was 176 per cent. above the pre-war level. Monthly movements in the percentage over the past few years are traced in the following table:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.
January 1st	85.90	120	125	165	92
February "	90	120	130	151	88
March "	90	115	130	141	86
April "	90.95	110	132	133	82
May "	95.100	105	141	128	81
June "	100	105	150	119	..
July "	100.105	105-110	152	119	..
August "	110	115	155	122	..
September "	110	115	161	120	..
October "	115.120	120	164	110	..
November "	120.125	125	176	103	..
December "	120	125	169	99	..

The average retail prices of food alone are 72 per cent. above the July, 1914, mark. The most important change in April was a fall, on an average, of 1½d per quart in the price of milk. Egg prices also fell, but these movements were offset by recovery in the retail quotations of potatoes, butter, and British mutton.

Bleaching Charges Reduced.—Our Manchester correspondent writes:—"A reduction in prices has been announced this week by calico bleachers. The Trade Advisory Board has issued a circular stating that the present surcharge upon the list of prices for all classes of bleached and scoured goods (except scoured embroidery cambrics), finished prints, &c., are reduced from May 15th from 25 per cent. to 15 per cent. The surcharge of 7½ per cent. on scoured embroidery cambrics has been abolished. The concessions reported have been very favourably received in the Lancashire cotton trade, and it is hoped that before very long there will be a further reduction in the charges for calico printing and dyeing. It is held that prices for finishing processes have not come down during the past 12 months to the same extent as other costs, and that the high rates still required are checking trade developments, especially in printed and dyed goods.

The Phoenix London Guarantee Fusion.—Provisional arrangements for the purchase by the Phoenix Assurance Company of the London Guarantee and Accident Company's shares follow the lines now accepted as most convenient. Years ago the practice was to amalgamate companies entirely; now one company buys the shares of another, and both contrive to carry on business to outward appearance unchanged. The terms are given elsewhere in detail; their effect is to double the dividend on the shares of the London Guarantee and Accident Company—20s a share in place of 10s—and practically to double the capital value. It is possible for the Phoenix to make so handsome an offer because the directors of the London Guarantee have been so modest in their dividend distributions, and have added of late years so largely to the reserves. The break-up value of the shares of a strong insurance office is almost always largely in excess of the current market value. The effect will be largely to expand the operations of the Phoenix Assurance Company, and to make it a big accident company as well as a leading fire and marine office. Instead of accident and miscellaneous business being a side line, it would become a principal line. The Phoenix, originally a purely fire office—as its name indicated—went into life assurance by absorbing its stable companion, the Pelican. Then it acquired the Union Marine Insurance Company, joined up forces with the Norwich Union Fire Office, and now proposes to become proprietor of an office which is one of the three great British accident companies in this country and the United States. The London Guarantee and Accident Company itself transacts all classes of insurance, having developed them by internal expansion instead of by external purchase, but its principal revenue is derived from accident and workmen's compensation insurance. The Phoenix, together with the Norwich Union, already a first-class fire and marine office, will by the new purchase become first class all round in dimensions and standing. Just as the specialist marine companies have become absorbed by purchase, so now the specialist accident companies are following the same pleasant road—for the shareholders. The Ocean Accident Company is the property of the Commercial Union and the Railway Passengers of the North British and Mercantile. The Employers' Liability Corporation of the leading accident companies alone stands out; it is becoming a composite office on its own lines by purchase of the Merchants' Marine and the Clerical, Medical and General Life. We are nearing the end of the long road, for there is little left now for the great insurance groups to purchase, unless they follow the example of the Royal and Liverpool and London and Globe of linking up with one another.

Royal Insurance Company.—The Royal has been more fortunate than its partner, the Liverpool and London and Globe. The fire premiums for last year were £6,428,319, against £7,074,558 for 1920; the claims were 58 per cent., against 48.2 per cent.; and the expenses were 41.1 per cent., against 39 per cent. The reduction in premiums, involving a smaller reserve for unexpired risks, allowed a surplus to be shown of £303,550 (4.7 per cent.), as compared with a surplus for 1920 of £509,796 (7.2 per cent.). In the marine department the account for 1920 was closed with a loss of £91,681, but the accident department contributed £250,000 to the profits. Interest earnings were £831,641, and the dividend cost, £870,011. After providing £100,000 for taxes, less excess profits duty recovered, writing £100,000 off the cost of business acquired, and making a loss of £198,978 on realisation of investments, there was a balance at profit and loss of £667,857, including £200,000 taken from the general contingencies fund.

Commercial Union Assurance Company.—For some years past this company has rapidly expanded its fire premium income—it rose from £3,537,279 in 1914 to £6,708,182 in 1920—but last year there was a considerable shrinkage to £6,118,495. All the world-wide fire offices are pulling in their liabilities. The claims were 57.2 per cent. of the premiums against 49.9 per cent., and the expenses were 42.7 per cent. against 38.7 per cent. The smaller amount necessary to cover the liabilities for unexpired risks re-

leased a surplus of £238,168, of which £200,000 was transferred to profit and loss. In the marine department, the premiums came down from £987,850 to £270,646, and the claims paid during the year were £354,118. A transfer was made to profit and loss of £100,000, a profit apparently derived from 1919. The very large accident department yielded £6,919,109 in premiums, the claims were £3,575,410, and £450,000 was carried to profit and loss. In all the transfers were £750,000, and the available interest earnings were £700,124. Against this must be placed £615,234 provided for income-tax, excess profits duty, and corporation tax. The dividends cost £590,000, and the profit and loss balance at the end of last year was £779,443, against £706,627 brought forward.

The Sun Insurance Office.—This oldest of the British fire offices had a fairly successful experience in the unfavourable year of 1921. The fire premiums were £2,199,041 against £2,370,989 for 1920, and the claims were 52.3 per cent. against 46.3 per cent. The expenses were 44.2 per cent. as compared with 39.6 per cent., and the surplus, after providing for unexpired risks, was £143,354 (6.5 per cent.) against £290,660 (12.3 per cent.). The jump in the ratio of expenses to premiums is common just now in fire office accounts, and cuts rather severely into underwriting profits. The income from investments was £145,871, and £151,200 was paid in dividends.

Fine Cotton Spinners.—A substantial recovery is shown in the report for the year ended March 31st last of the Fine Cotton Spinners' and Doublers' Association, Limited. Two years ago the profit rose to £1,247,500, after allowing for depreciation, and this was followed by a collapse to £122,800. The accounts now before us show that, after allowing £180,000 for depreciation, as against £220,000 in the previous year, profits have risen to £613,300. The table below gives the company's financial history since 1906:—

Year Ending March 31.	Profits.	Deb. Interest.	Prof. Dividend.	Prof. Dividend.	To Reserve, &c.	Ord. Dividend.	Ord. Div. Rate.	Carry Forward.
1906.....	£402,442	£110,000	£125,000	£125,000	£80,000	£80,000	10	£15,507

* Including £12,368 for expenses of new issue of shares.

A year ago reserves were heavily drawn upon, £100,000 being transferred from reserve for contingencies and £291,000 from reserve against depreciation of investments. This year no allocation is made to reserves, but the dividend is reduced from 10 to 8 per cent. and the balance forward increased by £12,300. There are no very striking changes in the balance-sheet, which is analysed in detail elsewhere. A bank loan for £385,600 has been wiped off, but creditors are £283,600 higher. Stock-in-trade is £729,400 lower, but investments have risen by £448,000. The latter include holdings in subsidiary companies and stand at the values at which they have appeared in previous balance-sheets. The auditors state that the position in regard to the company's investments in France is practically unchanged since their last report was made. This was to the effect that mills owned by French companies registered in France had received 75 per cent. of their claims in respect of war damage, but that nothing had been received in respect of mills owned by the company registered in England. The directors, however, were hopeful that no loss would be sustained in the ultimate settlement.

Slubbers' Profits.—Considering the depression in trade in general, and in the textile industry in particular, the report of the British Cotton and Wool Dyers' Association, Limited, for the year ended March 31st last makes a good showing. The net trading profit for the year, after deducting trading losses and administration expenses, providing an estimated sum for income-tax, &c., and after final adjustment of excess profits duty, amounted to £169,874, which compares with £124,232 for the previous year. As will be seen from the table below, however, gross profits, before allowing repairs and renewals, were slightly smaller than in the previous year, this item requiring only £71,450 as against £130,648 in the previous year:—

	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Gross profits	£110,419	£253,818	£227,978	£240,719	£295,467	£255,612	£247,237
Repairs, &c.	31,163	62,324	71,035	84,007	106,136	130,648	71,450
Expenses	13,810	17,201	19,104	21,558	3,240	1,955	1,146
Balance	65,446	174,293	137,839	135,154	186,091	123,009	174,641
Brought forward	19,488	40,382	47,116	43,813	38,160	33,753	21,599
Total available	84,934	214,675	184,955	178,967	224,251	156,762	196,240
Interest	31,156	26,865	25,333	25,000	25,000	25,000	25,000
Depreciation fund	25,000	30,984	25,000	25,000	33,644	25,000	25,000
Reserve	16,051	57,620	38,708	38,708	58,062	58,062	58,062
Ordinary dividend	(5 %)	(15 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
Carried forward	12,727	49,216	45,914	40,259	39,003	23,700	28,178

The amount available for distribution is nearly £40,000 higher, but the dividend is maintained at 10 per cent., as in the four preceding years, the surplus being added to reserve funds. A year ago £25,000 went to investment contingency fund, but this fund gets £10,000 this year, and £50,000 is allocated to reserve fund. With the report is circulated a lengthy and detailed auditors' report, in which the various items of the balance-sheet are analysed, an example which might well be followed by the directors of some of the large industrial concerns who are content to circulate a balance-sheet so compressed as to be meaningless. In this it is pointed out that the depreciation fund of £165,000 is independent of the annual expenditure incurred for maintenance, repairs, renewals, &c., which has been charged against the branch trading accounts. Goodwill, which is not shown separately in the balance-sheet, is stated to be £40,905, the same as in the previous year. Investments, which have increased by £2,000 to £92,061, consist of National War Loans, &c., £48,750, British Dyestuffs Corporation £31,311, British Alizarine Co. £8,000, and Scottish Dyes, Limited, £4,000, the last having been increased by £2,000. These investments are taken at cost, and the auditors' report makes no reference to depreciation, but the investment contingency fund now stands at £35,000. The liquid position is satisfactory, liquid assets amounting to £600,374, against which trade and loan creditors' claims existed for £218,019.

Babcock and Wilcox, Limited.—As far as trading profits are concerned the year 1921 proved a record one for Babcock and Wilcox, Limited. It would have been generally thought that the high water mark had been reached in 1920 when figures of £683,201 were recorded; the total income from all sources for 1920 amounted to £777,761 the corresponding figure for 1921 being £807,463. Net profits, however, when compared with 1920, are slightly lower. These have fallen from £497,468 to £490,181. This decrease is mainly accounted for by the amount allocated to a reserve for income-tax and corporation tax. A year ago £249,033 was set aside for these purposes, against £286,642 for the year under review. Profits and appropriation since 1907 are shown below:—

	Manufacturing Profits (Less Depreciation).	Net Profits.	To Reserve.	Pension Funds.	Divid. dends.	Ord. Rate.
1907.....	£318,261	£309,769	£125,000	£..	£172,000	20 %
1908.....	311,046	301,615	125,000	..	176,000	20
1909.....	365,733	360,004	125,000	10,000	205,000	24
1910.....	366,240	362,360	125,000	10,000	227,360	26
1911.....	387,029	379,224	130,000	10,000	239,224	28
1912.....	438,300	426,147	150,000	10,000	276,147	16
1913.....	452,000	446,073	150,000	10,000	286,073	14
1914.....	421,017	402,947	150,000	10,000	242,947	16
1915.....	434,246	396,551	150,000	10,000	263,551	15
1916.....	521,291	438,323	150,000	10,000	263,953	15
1917.....	518,664	444,513	150,000	10,000	264,513	15
1918.....	541,854	438,986	150,000	10,000	268,986	15
1919.....	570,671	465,069	150,000	10,000	265,069	15
1920.....	683,201	497,468	150,000	10,000	357,468	16
1921.....	693,514	490,181	150,000	10,000	358,765	16

Reserves again obtain £160,000. A similar sum has been placed regularly each year to reserves in the previous nine years. Dividend distributions are on the usual generous scale, ordinary shareholders receiving 16 per cent., free of tax. The balance-sheet shows the company to be in a remarkably prosperous state, the ordinary share capital of £2,148,819 having surplus assets of £4,721,003 to cover it. In the accounts, investments at £1,891,595 are taken "at cost," a method of valuation which does not convey the maximum of information. It is also a pity that the value of property and plant is shown together with patents and shares in associated companies. This item totals £1,194,044. It is, however, perhaps a matter for satisfaction to know that shares in associated undertakings are not hidden away under "investments," as is too frequently found to be the case in company accounts.

Anglo-Argentine Tramways.—The report and accounts of the Anglo-Argentine Tramways Company, Limited, always form an informative and interesting document. It is possible that results for 1921 will prove disappointing to a section of shareholders, but when the accounts are examined and the conditions under which the lines were operated are considered, the progress, on the whole, must be considered satisfactory. The increased receipts in 1920 were partly due to an upward revision of fares, which took place in April of that year. The number of passengers carried last year was 6½ millions more than in 1920, and 68½ millions higher than in 1919. Recent years' results are summarised below:—

	Gross Receipts.	Gross Receipts per Car Mile.	Expenditure.	*Net Revenue.	Interest, &c.	Balance.
1908.....	£1,264,841	13.87	£790,687	£474,154	£191,449	£282,705
1909.....	1,962,987	13.25	1,207,222	765,665	355,439	410,226
1910.....	2,422,616	13.54	1,564,093	858,522	396,378	462,144
1911.....	2,631,836	13.73	1,723,928	907,907	414,067	493,850
1912.....	2,778,302	13.96	1,824,021	954,281	442,422	511,859
1913.....	2,963,191	13.98	1,969,161	994,031	477,630	516,401
1914.....	2,860,995	13.50	1,880,996	979,999	603,888	366,111
1915.....	2,709,616	12.82	1,786,740	922,876	657,301	311,211
1916.....	2,714,225	12.65	1,956,668	757,556	664,716	132,849
1917.....	2,783,412	12.73	2,051,746	769,587	664,966	104,621
1918.....	3,012,821	13.61	2,375,564	680,278	665,225	15,053
1919.....	3,296,957	14.75	2,578,516	757,962	665,495	92,467
1920.....	4,413,165	17.28	3,198,028	1,259,650	668,776	590,874
1921.....	4,277,601	17.09	3,305,081	986,993	683,346	303,647

* Including income from interest on investments and deposits.

The reduction in net revenue is due to additional wage and maintenance charges, increase in renewal and administration costs, and higher rates and taxes in Buenos Ayres. To these additional burdens must be added fluctuation in exchange and "the absence of the benefit derived in the previous year from the adjustment of tax on payment of dividend arrears." The company's contribution in the year under review to the official pensions fund amounted to £109,302. Profits have been allocated by paying the full year's dividends on the 5½ per cent. first preference shares, thus absorbing £176,000, and in providing £137,500 for paying dividend on the second preference shares up to December 31, 1917. As £15,885 was brought into the accounts from last year, this will leave a balance of £6,032 to be carried forward. The general manager in his report considers it probable that conditions will improve during the present year "slightly, but very gradually," and concludes that "working expenses should improve" owing to "the drop in the cost of fuel, which will be very marked this year compared with 1920 and 1921." Balance-sheet changes are analysed in the usual columns of this issue.

Nestle and Anglo-Swiss Condensed Milk Company.—Figures of the heavy losses sustained by Nestlé and Anglo-Swiss Condensed Milk Company during 1921 have already been published, and therefore to some extent the fifty-fifth annual report and accounts of this company, now issued, dealing with the year 1921 have lost part of its usual interest. The total loss amounted to over 93 million Swiss francs, and that part of the report which is devoted to showing at length the causes of these heavy losses will be followed with interest not only by shareholders, but by those who are interested in the urgent necessity for stabilising conditions in Europe. In the course of the report it is observed that owing to the company's world-

wide activities, "which entails the sale of its products in almost all the known currencies," the effects of the exchanges have been mainly responsible for the deficit. Losses were made not only in collecting foreign balances, "but also by reason of the necessity of increasing the selling prices of our products to keep pace with the depreciation in the rate of exchange of importing countries." This, it is added, has resulted in practically closing certain markets. In the Near East the fall in the drachma, Turkish pound, and lei has seriously affected sales, while in other countries "the low rates of exchange have caused such an increase in import duties as to make them prohibitive." The frequent changes in the French franc and Italian lira have rendered it practically impossible to fix definitely the selling prices in France and Italy. But the most serious loss was caused by the difference of the rates of exchange at December 31, 1920, as compared with those of December 31, 1921, on account of the foreign assets taken into balance-sheets at the current exchange rate of the day. These differences in exchange rates alone were responsible for a deficit of approximately 31 million francs. It is mentioned, however, that at March 31, 1922, this loss was "already decreased in a marked degree by the upward progress of the exchanges since December 31 last." We have referred in these columns before to the question of companies' foreign assets and valuations at current exchange rates, and commented upon companies which treat a surplus from favourable exchange rates as divisible profits. This particular company appears to have taken a very courageous course. It will be interesting to see how the directors will treat the balance obtained from those exchange rates which are now in the course of reacting. Incidentally these accounts are an excellent illustration of troubles arising from the lack of some post-war parity of exchange.

Eagle Oil Transport.—A remarkable expansion in figures is shown in the accounts of the Eagle Oil Transport Company, Limited, just published, for the year ended December 31, 1921. As will be seen from our table given below, net profits amounted to £944,316, as against £473,201 for 1920. Of course, the increased capital at the company's disposal must be taken into consideration in comparing the results of the past three years, which are as follows:—

	1919.	1920.	1921.
Issued share capital.....	£ 2,240,000	£ 4,000,000	£ 5,000,000
12-year 7½ per cent. notes ..	..	..	3,000,000
Gross profits	349,523	530,844	1,066,440
Net profits	323,592	473,201	944,316
Reserve and depreciation....	153,232	250,244	536,042
Preference dividend	160,000	160,000	160,000
Ordinary dividend	19,200	51,224	172,756
Rate of ordinary dividend ..	(8 %)	(8 %)	(8 %)
Carried forward.....	8,840	11,734	75,517

During the year the paid-up ordinary capital of the company was increased to £3,000,000 by the issue of 400,000 shares of £5 each in December, 1920. The report states that "in June last a portion of the authorised issue of 7 per cent. seven-year notes was taken up by the charterers at par, and subsequently by agreement this issue was cancelled and £3,000,000 of 12-year 7 per cent. notes (part of an authorised issue of £5,000,000) were issued to them at par. These notes are repayable on June 30, 1933, at par, or, at the company's option, on June 30, 1927, at 101 per cent." Reserves appear to have been adequately dealt with. In addition to placing £435,000 to depreciation and sinking fund reserve, £75,000 was placed to repair reserve, and the expenses of the issue of 12-year notes, amounting to £36,042, were written off, altogether an excellent performance. The balance-sheet will be found analysed in another column. Out of total assets amounting to over £11½ millions, £2,069,348 is represented by cash at bankers, in hand, and "on loan against guarantee."

Rubber Plantations Investment Trust.—This company's accounts are for the first time made up to December 31 instead of March 31, and those issued this week "include income for twelve months from the properties, and for nine

months from other sources." The latest figures show improvement on the 1920-21 record, when loss on revaluation of rice stocks in Sumatra amounted to over £42,000. In the latest financial period there was a profit of £4,598, which brings the sum carried forward to the current year up to £98,919. Recent years' results are compared below:—

	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921.
Dividends, int., &c.	£ 46,550	£ 44,299	£ 29,652	£ 58,384	£ 49,532	£ 11,020

	57,125	117,375	3,300	106,471	94,321	98,919

* £121,233, less £104,641 transferred to reserve. † £57,125, less £525 in donations to war charities.

A year ago the position caused shareholders some anxiety, and the return this year to a balance on the right side is welcome. This has been the result of reduction in costs and an improvement in the tea industry. The title of this concern does not convey a full impression of its scope. In the balance-sheet properties and investments stand at £2,344,372. Of this total sum no less than 54½ per cent. is employed in tea, 35 per cent. in rubber, and 10½ per cent. in other products and land. Tea crop costs were 8.25d per lb, as compared with 1s 0.55d last year, while the net sale price fell from 11.59d to 8.41d. A larger tea crop more cheaply produced is estimated for the current year. Rubber production costs last year were reduced from 1s 3.9d to 9.87d per lb, but the fall in the net sale price was much greater—namely, from 1s 6.06d to 8.82d per lb. Thus tea redeemed a loss on rubber. In the balance-sheet, which is analysed in the usual column of this issue, "shares, debentures, and options" are entered at £766,773, but the directors state that at the date of the balance-sheet these showed a depreciation of £148,670. Shareholders will probably have to exercise considerable patience before dividends are resumed, and the rubber outlook is slow to improve, but the last financial year has, at any rate, seen a change for the better in the fortunes of this concern.

Minerals Separation and American Copper Producers.

Mail advices from the United States confirm the report current recently that the litigation between various U.S. copper-producing companies and the American subsidiary of the Minerals Separation had been practically terminated. The proceedings were initiated as far back as October, 1911, and save for the compromise now fortunately arrived at would probably have gone on for many years to come. It is not yet known whether the terms of the settlement will be published, but the latter is described as satisfactory to all parties. By a coincidence the annual statements of several of the undertakings concerned have just come to hand. With the works closed down for about two-thirds of the period, the results shown are naturally bad. That very big concern, the Utah, last year produced only about 25½ million pounds of copper, as against 106½ millions in 1920, and a net loss of \$2,058,100 resulted. However, dividends to the amount of \$2.50 per share were paid out of the large balance brought forward. The net all-in cost averaged 11.57 cents. The ore reserves are placed at the enormous total of 362,910,100 tons, averaging 1.35 per cent. copper. The discovery of a large body of high-grade direct-smelting ore in one of the mines is reported. The Chino Company produced rather over nine million pounds in place of 44 millions; the net cost was 14.5 cents per lb. There being a net deficit of \$1,314,200, no distributions were made. The ore reserves are computed at 105,385,500 tons, value 1.53 per cent. With the Nevada Consolidated the production figures almost corresponded to those of the company just referred to, and a loss of \$775,800 resulted; no dividends were paid. Net costs averaged 12.34 cents. The ore reserves are 63,401,200 tons, value 1.58 per cent. All these companies resumed work on a

restricted scale in April. The cost ratios mentioned can be interestingly contrasted with the present U.S. price of electrolytic—13½ cents.

Rand Mines—Consolidated Mines.—While these two Kaffir finance undertakings, carrying on much the same class of business, have naturally been similarly affected by the conditions which have prevailed during the past few years, the last named during 1921 suffered from certain special circumstances. In 1919 the market for South African mining shares—like all other markets—developed buoyancy, and the directors of the Rand Mines very properly took advantage of the inflation to reduce their portfolio; this transaction was reflected in the balance-sheet to the extent of £183,000, "funds released from investments, being the book value on realisation of investments in excess of the book value of new investments made." The dividend rate, however, was only increased from 85 to 100 per cent., a largely enhanced balance being carried forward. During each of the two following years, under changed conditions, a contrary policy has been followed, the funds appropriated for new investments largely exceeding the book value received on realisations. With only a moderate expansion in the profits, the dividend for 1920 was substantially increased, while last year it was cut down by more than one-half, corresponding to the decline in the dividend receipts. These and other points are clearly set out in the appended analysis of the accounts for the past three years:—

	1919.	1920.	1921.
Dividends on shareholdings.....	531,792	785,548	502,837
Sundries	56,360	84,354	66,632
Investment realisation profits ..	303,925	32,333	36,919
Total income	892,077	902,235	606,388
Administration expenses.....	35,215	31,654	30,261
Taxation	3,645	..	18,878
Bad debt reserve	..	..	21,907
Prospecting.....	6,028	7,575	16,671
Net profit.....	846,568	863,006	518,671
Dividends	531,499	770,673	372,049
Rate per cent.	100	145	70
Reserve account	183,141	133,047	127,517
Brought forward.....	367,611	866,480	627,766
Carried forward.....	865,822	627,766	499,424

Shares and debentures in the last balance-sheet, taken at or below market value, stand for £2,793,400; as usual, appreciation is ignored. A hidden reserve is thus built up. On the basis of the dividends for 1921 the shares yield about 7½ per cent., a rate which allows something for possibilities. The special circumstance in connection with the Consolidated Mines Selection consists in that company's obligations in the financing of certain of its Far-Eastern Rand subsidiaries. Under an agreement entered into at the time of the acquisition of additional ground—referred to in our note of a fortnight ago—the Consolidated Mines Company has been taking up shares in the Springs Mines at £3, when the market quotation was no more than about £2; it has also been heavily hit by the drop in the value of its holding in the Daggafontein, which had to suspend operations owing to disappointing results and the exhaustion of its resources. Then the portfolio includes Brakpan shares taken up a few years ago at £5, the present quotation being £2 10s. To meet depreciation on holdings as at December 31st, 1921, £152,000 was required. This sum was obtained by the transfer of £100,000 from reserve, with the appropriation of practically the whole of the balance of £77,100 brought forward from 1920. Conditions last year were unfavourable to realisations, and the two producing subsidiaries paid reduced dividends. As a result, the profit came out at no more than £25,100. The balance-sheet discloses a cash deficiency of £161,700, the liabilities including a loan from the bankers. The company's dividend record to 1920 is a good one, the distributions totalling about a million and a-quarter, or double the present issued capital. Doubtless good times will come again.

Transvaal Output in April.—The Transvaal Chamber of Mines states that the total gold output for the month of April amounted to 511,338 ounces of fine gold, which

compares with 681,382 ounces in April, 1921. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.

The native labour figures are improving, but have a lot of leeway to make up before they reach the level of the end of 1921.

An address will be delivered to members of the London Chamber of Commerce and others by Mr A. Uustal (Commercial Attaché to the Estonian Legation in London) on "The Possibilities of Trade With and Through Estonia" at the offices of the Chamber, on Tuesday, May 23, 1922, at 3 p.m.

At a meeting of the Royal Colonial Institute at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on May 23rd, at 4 p.m., a paper on "Colonisation in British Guiana" will be read by Cecil Clementi, Esq., C.M.G., Colonial Secretary, British Guiana. Major Hon. E. F. L. Wood, M.P., Parliamentary Under-Secretary for the Colonies, will preside.

LORD ASKWITH makes an appeal for the earliest college for the Higher Education of Women, Queen's College, Harley street, London, who are endeavouring to raise £20,000 to purchase and adapt the next house. Cheques or postal orders may be sent to "The Queen's College Extension Appeal Fund," London County Westminster and Parr's Bank, Limited, Cavendish square, London.

Oversea Correspondence.

FRANCE.—BUDGET SPEECH—PROPOSED ECONOMIES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, May 16.

THE Finance Minister, M. de Lasteyrie, has now completed the draft of his first Budget Bill—that for the financial year beginning on January 1, 1923—which has to-day been distributed to the members of the two Chambers. The Bill, with its accompanying preamble and appendices, fills some 560 pages, and forms a compendium of French national finance that conveys many striking lessons. The new Budget provides for an estimated expenditure of 23,180,000,000 and for an estimated revenue of 18,060,000,000 from present resources, plus 1,225,000,000 from "exceptional resources" (liquidation of stocks and the special tax on war profits), making a grand total of 19,285,000,000. No additional taxation is proposed, and it is foreshadowed that the deficit, amounting to 3,900,000,000, shall be met by loan. The reduction in the public expenditure

for the coming year as compared with 1922 will be seen from the following:—

	France.
1922—Estimated expenditure	24,688,000,000
Supplementary credits since voted	448,000,000
Total	25,136,000,000
1923—Estimated expenditure	23,180,000,000
Estimated total reduction	1,956,000,000

The financial burden which the war has imposed on France may be realised when it is remembered that in 1913 the total credits included in the General Budget were only 5,066,000,000, as against 25,136,000,000 for 1922.

The most striking feature of the new Budget is contained in the fact that the estimated deficit of 3,900,000,000 represents "within a few dozen millions," as the Finance Minister puts it, "interest on the sums advanced by France down to January 1, 1922, on Germany's account, for the payment of reparations. Conformably to the Treaty of Versailles, we should have been right in including this amount in the Budget of Recoverable Expenditure, and thereby balancing our General Budget, which might thus, properly speaking, be considered as the French Budget." In view of this situation it is not surprising to find the *Temps* bitterly and with justice remarking that "If Germany had kept her engagements to us as we kept ours towards her from 1870 to 1873; if even, as the invaded, ravaged, and fleeced France of 1870 did from 1871 to 1873, the Germany of 1918, with her soil still intact, had made her payments from 1919 to 1922, we should not have to-day to look for the means to meet the deficit of four milliards existing in our Budget of 1923."

The new Estimates show that great efforts have been made to reduce expenditure in every possible direction. The last Budget provided for the reduction of the civil servants and workmen in the employ of the State by 42,000, and a decree has just been published (as I stated last week) eliminating another 51,967 names from the public pay-roll, and involving an economy of 208 millions a year. "The public authorities," M. de Lasteyrie insists in his preamble, "must not depart from this road," and he adds: "To effect real and lasting economies, however, it is not sufficient to suppress officials, but services must be suppressed as well." There is no sweeping reduction (and the fact will cause no surprise, in view of the state of mind that still prevails in Germany) in the Army Estimates, which are still kept within the limits of last year's figures.

On the revenue side, the estimated receipts show a reduction of 4,095,000,000. More than half this amount (2,325 millions, to be exact) is accounted for by the anticipated falling off in the yield from the liquidation of stocks during the next twelve months (125 millions, instead of 500,000,000), and from the tax on war profits (1,100 millions, instead of 3,050 millions). Further, the estimated yield from the tax on turnover has been reduced from 3,045 millions in 1922 to 2,500 millions for 1923, and that from Customs has been taken at 1,923 millions for the coming year, against 2,707 millions for 1922. Comparing the proportion of purely military expenditure with the rest of the Budget for 1913 and 1923 respectively, the Finance Minister states that whereas it was 35 per cent. before the war, it is now only 19 per cent.

The brightest passages in the Finance Minister's observations are those in which he shows the great improvement in the collection of income-tax during recent periods. This has from time to time given rise to considerable anxiety, but apparently a steady improvement is now being experienced. Thus, while the Budget estimates in this connection in 1916 anticipated a revenue from this source of 40,000,000, the actual yield was 51,303,000. In 1921 the tax was estimated to yield 800,000,000, but actually produced 1,137,530,000. The tax on war profits has shown the same progression. In 1917, when the demand notes issued amounted to a total of 617,832,000, only 208,891,000 were recovered. On the other hand, the amount of the demand notes for 1922, down to March 31st, was 390,526,000, whereas the amount recovered was 493,912,000. The Minister is confident that the present taxes, when they have become fully acclimatised and are more closely collected, will prove sufficient, once the pre-

sent industrial crisis is attenuated, to enable the Budget to be balanced satisfactorily in the near future. He asserts that steps are being taken to improve the yield from certain taxes, and particularly the income-tax, by repressing the fraud which at present is possible through the medium of bearer bonds.

The new Budget Bill, as I have said, foreshadows no new taxation, as it is felt the limit has already been reached, and that there is no new tax available that could produce anything like the four milliards required. Any question of a tax on capital is regarded as useless, as this form of wealth is held already to be sufficiently burdened. At the same time, the Minister does not overlook the seriousness of the fact that the money annually required to meet the service of the public debt absorbs from one-half to two-thirds of the yield from taxation. The total charge for the public debt, which in 1910 was only 1,355 millions, amounted in the Budget of 1922 to 11,691,000,000, exclusive of the 1,500,000,000 required for sinking fund. Time for applying a complete debt redemption scheme, in the Finance Minister's opinion, has not yet come, and cannot come until the money required to meet the amounts now included under the head of "Recoverable expenditure" has been furnished by Germany and France relieved from the necessity of further borrowing, until the settlement of the inter-Ally debts shall have settled the exchange problem, and until the equilibrium of the ordinary Budget shall have been definitely realised.

One of the features of the new Budget is that, for the first time, a step has been taken in the direction of instituting departmental home rule in financial matters. Hitherto, no matter what sums may have been voted for a given department of the Government, the actual expenditure has more or less depended on the whims and fancies of the Treasury. Instances have frequently occurred in which money voted for specific purposes in connection with a specific department has been transferred to another department and used for quite a different purpose. The French Postal Department is alleged to have been a frequent victim of this policy in the past, which is often put forward in explanation of the seriously inefficient conditions that characterise the postal, telegraph, and telephone services in this country. Under the Budget proposals for 1923 the P.T.T., as the combined postal, telegraph, and telephone department is called, is to be given a broad measure of financial autonomy, which is expected to enable this portion of the French public service greatly to increase its efficiency. Other departments are expected to be similarly endowed in the future.

One of the other steps on which the Finance Minister is relying for the purpose of ensuring a reduction of expenditure is the proposal that the allowance of 720f per head which has for many months past been granted to Civil Servants, in consideration of the high cost of living, shall be suppressed forthwith. This proposal is meeting with a good deal of opposition, in spite of the fact that it will mean a saving of 154,000,000. Simultaneously, as a means of assisting in the adoption of the proposal, the Finance Commission of the Chamber has received from its President a formal proposal to consider whether the time has not now come when the salaries of the President of the Republic, the members of the Ministry, and of the Chamber and the Senate should be reduced to the amounts at which they stood prior to the war. It may be remembered that in March, 1920, the salary of the President of the Republic was increased from 1,200,000f per annum to 2,000,000f, those of Ministers from 60,000 to 80,000f, Under-Secretaries from 25,000 to 40,000f, and members of the Chamber and the Senate from 15,000 to 27,000f, while the higher officials received temporary extra allowances amounting to 33 per cent. of their salaries. The argument that is being used against the suppression of the extra allowance of 720f a year made to Civil Servants in general is that the fall in commodity prices is not yet sufficiently marked to justify such a step. It is suggested that if Ministers and members of Parliament set the example, the smaller salaried people would be much less inclined to object to losing their extra allowances.

Despite the unsatisfactory results of the Genoa Conference and the many alarms to which it has given rise, the Bourse has shown remarkable firmness. The failure

of the attempt to reconstruct Europe financially on a basis of co-operation with the Soviets has had the consequence of focussing attention on the financial Conference of the 23rd, of which high hopes are entertained. If an international loan should be successfully floated for Germany, the French Budget would be very greatly relieved, and business would obviously react favourably. French Rentes have been weaker, the 3 per cents. declining from 57.20 to 56, and the 5 per cents. from 90.25 to 89; the 1918 and 1917 4 per cents. have, however, been a trifle stronger, the former advancing from 62.57 to 62.90, and the latter from 62.40 to 62.50. Banks have been in demand, Banque Ottomane rising from 644 to 663, and Banque de l'Union Parisienne from 587 to 615. Banque de France, however, has fallen back. Railways are considerably stronger, Nord having gained 75 points at 1,100, Est 14 points at 685, Midi 17 points at 759, and Orléans 10 at 760. Shipping has been stagnant.

GERMANY.—FORCED LOAN—EXCHANGE AND BOURSE—INDUSTRY—LABOUR.

(FROM OUR CORRESPONDENT.)

BERLIN, May 15.

THE Government's reply of May 9th to the Reparations Commission is commented on here as exceedingly vague, and not very honest. The Reparations Commission, according to Dr Wirth, presented demands which could not possibly be met, and on the contention that no material improvement could be made in the Budget unless the main item of expenditure, reparations, was met by a foreign loan, the Cabinet and all parties were agreed. The Reparations Commission, which itself understands this very well, will not, however, allow Dr Wirth to be so categorically honest; Germany must not openly reject Ally demands, and so the new Note, while repeating that reparations must be covered by foreign loans, promises further steps with the object of "fulfilling the principle" that all expenditure, including reparations, ought to be covered out of taxation and home loans. A further detailed plan is therefore promised "pursuing the aim of recognising the above principle." These vague words mean, while professing to mean the opposite, that no plan for balancing the Budget out of revenue and internal loans will be submitted, none whatever is being considered, and nobody here expects any such plan. It is impossible to raise any further considerable sum in taxes this year, and it is impossible to float any voluntary loan of any dimensions worth considering. The only "internal loans" will be floating debt operations as heretofore.

The details of the compulsory loan of one milliard gold marks, which was sanctioned in principle by the "mantle law" of April 8th, are embodied in a Bill presented last week to the Reichstag. The loan is estimated to yield 60 milliards paper marks, which will be about 5 per cent. of all such property as is taxable under the permanent property tax. This calculation is based on the assumption that the taxable national wealth is 1,200 milliards paper, 5 per cent. of which would yield 60 milliards. Property exceeding 100,000 marks paper will be liable; at a rate of 2 per cent. on the first liable 250,000 marks, and so on progressively, the amount leviable on 500,000 marks being 15,000 marks, on 1 million marks 50,000 marks, on 5 million marks 450,000 marks, and on 20 million marks 1,950,000 marks. All persons liable for property tax, including foreigners in Germany, must contribute. The exemption limit is raised to 1 million marks for persons whose incomes come mainly from paper mark capital, if these incomes in 1921 did not exceed 50,000 marks. The assessment date is December 31st next, when the first assessment for the permanent property tax will be made, but in order to ensure speedier receipts citizens will be required to assess themselves provisionally and to pay on the provisional assessment in October this year. A punitive supplement of between 40 and 70 per cent. will be imposed if the provisional self-assessment proves to be materially below the definitive assessment. The object of the last provision is to prevent citizens escaping part of the real burden by assessing themselves too low and paying too little at first, in order to gain an advantage from a later possible currency depreciation.

We transact a general foreign and domestic banking business and solicit your inquiries.

Against this provision opposition in the Reichstag is likely.

The Reichsbank's statement for May 6th is extremely bad. Usually after the invariable month-end demand for credit, and inflation, the first week of a new month shows alleviation; this time after an increase in Treasury bill discounts in the week ending April 29th of 8½ milliards the decrease was only half a milliard, and after a record increase of 8 milliards in circulation there was a further increase of over 2 milliards. Discounted Treasury bills were 155,077,106,000 marks, note circulation 142,463,621,000 marks, and Kassenschein circulation 9,145,700,000 marks. The Reichsbank's buying price for the 20 marks gold coin remains at 1,200 marks; the price for bar gold, none being offered, is no longer quoted. In the Reichstag Committee the former Colonial Secretary, Dr Dernburg, severely criticised the Bill securing autonomy for the Reichsbank, arguing that autonomy may undesirably influence the whole State financial system. Dr Dernburg pointed out truly that the inflation has nothing to do with the State's old right of "guidance" of Reichsbank affairs, but is connected with the law of August 4, 1914, which proclaimed Treasury bills and even "Kassenscheine" (these as "cash") to be full-value security for note issue. This law is still in force, aggravated by a law of last year which freed the Bank entirely from the former compulsion to secure one-third of its issues in cash, part of the "cash" being here mainly the "Kassenscheine." The Reichsbank Autonomy Bill is another instance of the dishonest relations established between Germany and the Allies. The Allies have felt bound to demonstrate in some way against the "inflation," which is advertised erroneously as a chief cause of non-payment of reparations. But as the Allied experts know very well that inflation cannot be stopped without bankruptcy, they do not think of demanding repeal of the August, 1914, law by which it could be stopped (with bankruptcy), but make the demonstrative demand for a wholly fictional Reichsbank "autonomy," which sounds drastic, but will not affect inflation by one pfennig. Germany, of course, gives way, as it costs her nothing, and the Allied public generally is deceived into the belief that grim measures have been taken against the licentious German inflationists. For competent readers this does not need to be pointed out, but it is impossible to ignore an incident which illustrates so well the results of the present system of demonstration and dictation on one side and slavish submission and enforced dishonesty on the other.

The Bourse last week had a further slight decline. It showed some firmness towards the end, and was again to-day active, and for most mining and metal stocks rising. The general selling of dividend-payers in recent weeks has had the result of sending up considerably industrial bonds, into which the realised money has gone, and foreigners also have entered this market, showing preference for pre-war bonds. These foreign purchases are, of course, exchange speculations. The rises in industrial bonds have been very considerable, Allgemeine Electricität 4½ per cent. rising from 102½ on April 30 to 140 on May 12; Gelsenkirchen 4 per cent. from 93½ to 107; Laurahütte 4½ per cent. from 83½ to 100; Hoechst Dyes 4½ per cent. from 104 to 119. The *Frankfurter Zeitung's* index for 15 dividend-payers shows 35,754 on May 12, against 36,320 on May 5, and 40,250 (high point) on November 10. Home Loans on the whole

declined a little during the week. Quotations of the 12th were: War Loan 77.50, 4 per cent. 94, 3½ per cent. 83.75; Colonial 4 per cent. 149.75; and Savings and Premium 84.25. Federal Threes, after passing 150 some weeks back, have dropped to 120. Speculation is active as to the Bourse value of the Compulsory Loan. For the first three years this loan will bear no interest; in 1925-30, the interest rate will be 2½ per cent., and thereafter 4 per cent. It is assumed that the loan will be quoted very low. The public, expecting a further depreciation in the currency, regards it as practically a non-repayable levy. The legal compulsion of the Reichsbank to lend upon it will probably favour inflation.

There are some signs of lessening industrial activity. The Solingen cutlery industry reports that orders are falling off, and that American buyers who formerly took up to 70 per cent. of the export are showing caution. Pessimistic views were expressed at the annual meeting of the Association of Machinery Manufacturers. The President, Dr von Börsig, predicted that a mark exchange improvement, or even stabilisation, would cause a collapse in export trade. At present the machinery branch is suffering from shortage of materials, in particular pig-iron. The Pig-Iron Syndicate reports that iron smelted with English coal costs 850m a ton more than that smelted with native coal, but that it is still materially cheaper than English iron. The crop reports continue bad. According to the official scale (2 being good, 3 middling, and 4 inferior) the condition of winter wheat on May 1 was 3.3, against 2.5 in May, 1921; winter rye, 3, against 2.7; winter spelt, 2.9, against 2.3; clover, 3.3, against 2.7; lucerne, 2.9, against 2.7; and natural meadows, 3.1, against 3.0. Nine per cent. of the winter wheat area has had to be ploughed up, owing to damage by frost, against 0.4 per cent. last year.

The Reichswirtschaftsrat has rejected the Domestic Servants' Bill, which established a thirteen hours' day and paid-for holidays. A Bill providing for Federal Wage Statistics has been submitted. A Bill extending working hours in coal mines is also under consideration. The Bill provides that in certain conditions the present maximum seven hours may be exceeded by half-an-hour. Another Bill revises the eight hours' system on the State railways. Hitherto the conceptions of eight hours on duty and eight hours work have been considered identical, and the fact that certain forms of railway duty do not mean continuous work was ignored. Some curious statistics—for instance, that the unlocking of a cupboard by a watchman with no other duties cost the State on an average twenty marks—have been published. The Bill introduces the idea of "Dienstbereitschaft," the time during which an official is liable for service, but is not necessarily working, and provides that such time is reckoned only as part of working hours in the sense of the eight hours' law.

SPAIN.—NATIONAL FINANCE—FOREIGN TRADE— BANKING NEWS—MADRID LOAN—MERCHANT SHIPPING.

(FROM OUR CORRESPONDENT.)

MADRID, May 1.

THE position of the Government has been consolidated somewhat by internal modifications and by the resignation of Señores Beltrán y Musitu and Silio. It is hoped that sufficient cohesion will now be maintained until the more important business has been despatched. There is a growing feeling amongst the Spanish people that the Moroccan campaign should be terminated as rapidly as possible, even at the sacrifice of national prestige. A member of Parliament stated publicly that Morocco was not worth to Spain what it was costing, which remark has found a sincere echo in nearly all circles which are not directly profiting by Spain's misfortune.

The Minister of Finance, in a recent speech, gave some interesting figures in relation to the national revenue and expenditure in the financial year which ended March 31st last. In round figures, the total revenue of the country

was 4,352 millions of pesetas, whilst disbursements amounted to 3,600 millions, leaving a cash balance of 752 millions. It must be taken into account, however, that the first-mentioned figure includes the amount of 2,026 millions produced by the issue of an internal loan, and it will then be seen that the financial year ended with a formidable deficit instead of a credit balance. As a matter of fact, the financial year 1922-23 begins with a burden of some 1,078 million pesetas, which the Government is likely to have some difficulty in coping with, even in the probable event of the new taxation scheme being approved, as the mechanism of the latter is somewhat complicated, and will require considerable time to ensure smooth working. The proposals in question are to be presented to the Houses of Parliament at once; the despatch of more urgent matters prevented their being submitted earlier.

The General Supervisor of Customs publishes the following comparison of Spain's foreign trade in the last three years:—

	1920.	To January, 1921.	1922.
Total imports	81,264,415	138,271,703	109,068,072
Total exports	62,704,399	64,714,310	56,470,700

In explanation of the large profits of the Bank of Spain, to which I referred in my last letter, it is stated that the increase is mainly due to loans against security; when the last issue of 5 per cent. Treasury bonds was made by the Government the Bank of Spain announced that it would lend on such security 95 per cent. of the nominal value at an interest charge of 4 per cent. This offer was taken advantage of by nearly all the banks, which, with a small disbursement, made a clear 1 per cent. on the amount subscribed, while the profits of the Bank of Spain under the heading of "Advances on Securities" increased correspondingly.

The Municipality of Madrid has placed on the market an issue of 30,000 6 per cent. bonds (500 pesetas nominal) in order to provide funds for sanitary works and other immediate needs. This issue is made as from January 1, 1922, and is covered by the general guarantees allotted to the consolidated municipal debt; that is to say, the general income and property of the city and its participation in State taxes.

A campaign carried on in a vague and insidious form in one of the third-rate newspapers of Madrid, directed against foreign banks operating in Spain, was responsible for some withdrawals of deposits from these banks, but the movement did not assume the proportions anticipated by the authors of the campaign, and conditions are normal again. The more serious papers are unanimous in condemning the articles in question, and recommend that the author of them should be dismissed from the staff of the newspaper which published them. The fact that not only the foreign but also the Spanish banks were affected by so transparent a "stunt" would seem to indicate that the mass of people here are not yet educated, from a banker's point of view, up to the standard of other European countries. Also the failure of the Banco de Barcelona was a hard knock to public confidence in the banks, and left people nervous, especially in respect to foreign concerns whose strength they are not in a position to appreciate.

According to official figures just published, the mercantile fleet of Spain comprises 1,201 steamers, with a total tonnage of 1,013,355, thereby placing this country eighth on the list of the world's commercial fleets. The above tonnage, which had been reduced to 783,000 by war losses, is now the highest on record. The situation of the various steamship companies continues unsatisfactory, but it is hoped that a possible reduction of port dues and other expenses abroad will enable them to release such boats as are at present locked up for want of paying freights.

The Stock Exchange continued without animation or decided tendency. The coupons of the 4 per cent. Interior Loan, 4 per cent. Cédulas Hipotecarias, and others were cut during April, but this fact made no impression on the volume of business transacted.

CANADA.—WHEAT BOARD INQUIRY—THE FREIGHT RATE PROBLEMS—BUSINESS AND CROP CONDI- TIONS—CATTLE EMBARGO—COST OF LIVING.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 8.

The verdict of the Law Officers of the Crown that the Federal Parliament cannot set up a Wheat Board with compulsory powers has not deterred the agricultural committee of the House of Commons from continuing its investigation of the grain marketing problem. Mr James Stewart, of Winnipeg, the chairman of the original Wheat Board, while ill-disposed on principle to State interference with trade, has testified that under the control which would have been possible under a Board the slump in prices which afflicted the Western farmers during the autumn months of 1920 and 1921 could have been largely averted and many million dollars extra secured for the wheat crop. He also expressed the opinion that while the Board would be as dependent as before upon the machinery of the grain exchanges and elevators, its effect would be to decrease the spread between street and track prices, which has always been a serious grievance with the farmer. Another important witness was Mr Rice-Jones, the Vice-President of United Grain Growers, Limited, who submitted the following general objections to the existing marketing conditions:—(1) The Canadian wheat crop is not being marketed to the best advantage in outside markets, where certain qualities belonging to it create a special demand for it. (2) There is too much spread between what the producer receives and the consumer pays. (3) There is an unnecessary profit taken by speculators on the Grain Exchanges. (4) The total volume of grain can be marketed better by a centralised Board than by a large number of traders. Evidence was also given that centralised control could lead to a great economy in transportation arrangements.

On the other hand, the elevator companies, the representatives of the Winnipeg and other Grain Exchanges, have given abundant testimony in favour of the continuance of the present system. They assert that European buyers would prefer to deal with individual traders rather than a Government Board, and contend that speculative trading by making possible a broader market is a source of gain rather than loss to the farmers. They refute the charges that huge profits are made by speculation, and hold that the present charges for handling grain are exceedingly moderate. The millers strongly object to any control of flour prices which a Wheat Board would have to enforce. It seems improbable that the Government members who control a majority on the committee will recommend the revival of the Board, but the law officers admit that the Federal Government has authority to establish a Board with limited powers, and some sort of compromise may be offered.

Meanwhile Parliament has another thorny problem on its hands. In the later nineties the Canadian Pacific Railway, in return for a subsidy for its new Crows' Nest Pass line through the Rockies, entered into a definite contract with the Federal Government that its western rates on certain basic commodities like grain, flour, agricultural implements, &c., should never be above a certain level. The western farmer came to regard this Crows' Nest Pass agreement as his freight rate Magna Charta, and at one time the C.P.R. gave rates which were slightly below its schedules. In the early years of the war its existence proved an effective barrier to any increase in rates, which the new scale of railway costs seemed to demand, and it must be held partially responsible for the deficits of the Grand Trunk and G.T.P. Eventually the Borden Government secured its suspension for a period of years which will expire on July 6 of the current year. The moment it expires western freight rates automatically come down to the level fixed by the Crows' Nest Pass agreement. The effect would be to reduce the revenues of the C.P.R. by a sum estimated at from 12 to

HARRISONS & CROSFIELD, LIMITED

Agents and Secretaries of Tea, Rubber, and other Produce Estates.

20 million dollars according to the volume of the crop, and the C.P.R. directorate contend that such reductions would leave them in a position of great difficulty. Though the State railways are not directly affected by the terms of the agreement, they would be compelled to meet the rates created by its operation, and the deficits would be enormously increased. The Government are, therefore, between the devil and the deep sea. On the one hand, they are faced with an almost unanimous demand from Western Canada that the Crows' Nest Pass agreement should have its effect restored on July 7th, and on the other the railway executives are insistent that the suspension must be continued. They profess a willingness to consent to certain reductions in freight rates, and argue that the selfishness of the west will if persisted in prevent concessions to the maritime provinces and other regions not affected by the agreement. The Government have taken the extraordinary course of referring the fate of the agreement and its implications to a special Parliamentary Committee, but only secured authority for this course by the narrow majority of 107 to 92. The special Committee has now been constituted, and the general impression is that the case of the C.P.R. will receive sympathetic hearing. The westerners will, however, put up a determined fight on the floor of the House, and some Progressives have threatened that if the C.P.R. is to obtain permission to revise its contracts, the country should begin to think about a cancellation of the very valuable tax exemption privileges which were conferred upon it in its early days.

In view of the necessity of settling these two major problems a long session of Parliament is expected, and prorogation will probably not come till the middle of July. The Budget has not yet been brought down, and no hint of its terms has been disclosed. A fortnight ago the Finance Minister placed a loan for \$100,000,000 at 5 per cent. in New York through the firm of J. P. Morgan and Co. The net price secured by the Government was 97½ per cent., and as the books were virtually closed as soon as they were opened, there are criticisms that too generous terms were given the bankers. Hints have been thrown out that the Government will attempt to secure the balance of the sum which it will require during the present fiscal year by a domestic loan.

Now that the usual seasonal impetus has subsided, business is duller, and fewer orders are coming in to manufacturers. Firms like tea merchants who do business direct with farmers find great difficulty in making their collections, and never was a bumper crop so badly needed. Everywhere farmers are on the land, and in many districts the seeding conditions are excellent. But, on the other hand, wet and showery weather has delayed operations in Saskatchewan, and will have the effect of curtailing the acreage planted. Furthermore, unprecedented floods have inundated a large portion of the fertile valley of the Assinaboine in Manitoba, and extensive tracts of land which had been satisfactorily sown have been ruined for the present year.

The controversy over the cattle embargo in Britain is still being keenly followed in Canada, and the farmers have not abated their belief that its removal would be a great benefit to them. The cabled statement that the new High Commissioner had declared its removal was an urgent necessity to check annexationist sentiment in Western Canada provoked a stormy discussion in the House of Commons. Western members unanimously protested against the reflection, and Mr Larkin has now disavowed uttering any such sentiments.

According to the *Labour Gazette* there was a further decrease of the cost of living in Canada during March. The average cost of a family budget of 29 staple foods in 60 cities was down to \$10.54 as compared with \$10.61 in February, \$13.23 for March, 1921, \$15.98 for March, 1920, and \$7.68 for March, 1914.

JAPAN.—FOREIGN TRADE—IMPORT EXCESS—GOLD RESERVE—A CHINESE LOAN.

(FROM OUR CORRESPONDENT.)

TOKYO, April 9.

JAPAN's foreign commerce for the quarter ending March 31st was marked by the same import excesses that have characterised the nation's trade for most of the past year, leaving at the end of the year an unfavourable balance of something like 360,000,000 yen, to which the adverse balance of the three months just ended, amounting to 278,273,000 yen, must be added. The whole showing is rather gloomy, though a bright spot may be detected in the fact that exports for the quarter increased 23.5 per cent. over the corresponding period of 1921. The following table shows the situation at a glance:—

	January to March, 1921. Yen.	January to March, 1922. Yen.
Exports	245,783,000	303,476,000
Imports	360,898,000	581,749,000
Total	606,681,000	885,225,000
Balance	115,115,000	278,273,000

Exports to Asiatic countries, upon which Japan depends for a very large proportion of her trade, fell off by some 14 per cent., but imports from Asia gained to the extent of 48.8 per cent., as compared with the same period of last year, when Japan's foreign trade reached the zenith of its prosperity. European trade, however, increased 194 per cent. for the quarter in exports, and 86.4 per cent. in imports. Exports to North America gained 106 per cent. and imports 73.5 per cent. With South America exports fell off to the extent of 56.7 per cent., and imports gained 417.3 per cent. Exports to Africa declined by 1.7 per cent., and imports increased by 322.5 per cent. An encouraging feature of the situation is that 28 of the nation's leading articles of export gained during the quarter, but the gain is not so significant as may appear when it is remembered that comparison is made with one of the worst periods of Japan's export trade, when exports were suffering from the crisis of 1920. The largest gain is in raw silk, but cotton yarns, waste silk and silk tissues also scored heavy gains. The rate of expansion was most marked in starch, followed in order of importance by tea, waste silk, hats and caps, raw silk and buttons. Among the 12 leading articles showing a decline are cotton cloth, copper, coal, zinc, and rice. Out of the 28 leading articles of import, 19 registered gains, and these were of an important nature, particularly raw materials, fertilisers, and food-stuffs.

As was only to be expected, the adverse situation in foreign trade is having a marked effect on Japan's finance, especially on the gold holdings, which increased so phenomenally during the war years, jumping from 353,000,000 yen in 1914 to over 2,000,000,000 yen in 1920. Now, however, the drain on specie has set in to meet the demand created by so remarkable a reversal of trade currents. This heavy efflux of gold is likely to continue for some time. During the quarter just ended the outflow amounted to some 160,000,000 yen. Of this total, 45,000,000 yen went out in March alone. Though the adverse circumstances are causing the exchange banks to draw heavily on the Government's balance abroad, the amount of reserve kept at home continues normal, standing now at 1,220,000,000 yen, with about 700,000,000 yen still overseas, chiefly in England, with a lesser portion in the United States. The change effected in the nation's gold holdings in the last three months will appear from the following table:—

	December, 1921. Yen.	March, 1922. Yen.
Total at home	1,225,000,000	1,220,000,000
Total abroad	885,000,000	700,000,000
Total	2,080,000,000	1,920,000,000

Owing to the situation in trade, and the advantages offered by temporary Government bonds and debentures, bank deposits have so fallen off that the banks have been obliged to increase the interest on fixed deposits to 6 per cent., and some banks are offering a still higher rate. It is reported that China has arranged to float a loan of 33,000,000 yen in Japan for the adjustment of previous loans, and that the terms of issue will be 8 per cent. at 84, plus a 5 per cent. commission. The persistence of high prices, much unemployment and declining wages are features of the industrial situation in Japan.

NEW ZEALAND — INTEREST RATES — PUBLIC FINANCE — RENT RESTRICTIONS RELAXED — FAVOURABLE SIGNS.

(FROM OUR CORRESPONDENT.)

AUCKLAND, N.Z., April 3.

THE rate of interest continues to advance. It is true the present rates are nominally 7 per cent. on first and 7½ per cent. on second mortgage, but it is increasingly difficult to obtain loans on these terms, and of late higher rates have been asked and paid. Large industrial and commercial firms are offering debentures at 8 to 10 per cent. The various public bodies also find it difficult to obtain money on any moderate terms. It is a little curious that, while the Australian Governments have been placing loans in the United States and London, municipal bodies in New Zealand have been raising loans in Australia. Wanganui recently raised a loan of £200,000 in the Commonwealth at 7 per cent.

There has been too much interference on the part of the Government with the right of freedom of contract, and such measures have sometimes had the very opposite effect to that which was intended. The Government has, however, learned by experience, and the tendency is now for a greater respect to be shown for freedom of contract. This is manifested, among other instances, by recent modification of the law limiting rents and imposing onerous restrictions on landlords. Thanks to the modifications of these restrictions, a great impetus has been given to building operations, an important step, since the shortage of housing accommodation tended to restrict immigration and to increase the cost of living.

At the same time, the anti-capitalist agitation which has been so prominent of late in Australia has not been noticeable to the same extent in New Zealand. The almost total absence of any industrial trouble for a considerable time is one of the most hopeful signs for New Zealand's future. Reductions of wages have been cheerfully accepted, and have not caused the strikes which similar action has produced in Australia, Great Britain, and elsewhere. Wage reduction began in the agricultural and pastoral industry, which is the mainstay of New Zealand, and has extended to both unskilled and skilled labour in general.

The prospects for the future are distinctly reassuring. The policy of ruthless retrenchment initiated by the Government has produced a good effect, and although New Zealand has been hard hit by the heavy expenditure caused by the war, there is now every reason to believe that before the close of the year public expenditure will be fully balanced by the local receipts. It is believed that the loan which it is proposed in a month or six weeks' time to raise in London will be the last one required for Budget purposes. The last New Zealand loan of £5,000,000 was issued in June last year, when 6 per cent. stocks were selling at 96. Subsequently it was stated that a supplementary issue of £386,000 had been made at 99½ to cover discount and underwriting expenses, while in November the Dominion was able to sell £500,000 of 6 per cents. at 99. Stock Exchange quotations in general have shown a slow but steady rise since the commencement of the year, and this tendency is well maintained. This is taken as a hopeful sign, and there is reason to believe that the times of storm and stress through which we have passed are now nearing an end.

Letters to the Editor.

REPARATIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Admittedly, authors should not attempt to review their reviewers, but there appeared in your issue of April 15th a critique of "Reparations, Trade and Foreign Exchange," which is of such interest that a reply seems essential.

Your reviewer says: "The assertion that an indemnity is a bad thing, because it causes unemployment, needs considerable qualification. It will cause a certain amount of dislocation, but to get something for nothing, even under the capitalist system, may free resources for other purposes." Yes, Sir, I agree. But this "freeing of resources for other purposes" is the danger which we must try to avoid.

In industry there are two types of "resources"—"fixed" and "unfixed." Fixed resources consist of Labour, Capital, and Land already applied to specific purposes. Unfixed resources are those which, at the moment, are ready to be applied to various purposes, but which are not yet so applied.

Unfixed resources are *ipso facto* "free," therefore it would be nonsense for your reviewer to talk of freeing unfixed resources for other purposes. Consequently he can only be referring to the freeing of "fixed" resources. This, Sir, is the danger of which I complain, i.e., the unemployment of already specialised labour, capital and land.

The freeing of fixed resources "for other purposes" implies not only the prolonged unemployment of the human beings thus freed, but also the complete waste of most of the specialised plant.

In this latter connection—namely, the freeing of fixed capital—your reviewer is probably aware of the immense practical difficulty of converting factories "for other purposes," and of training labour for a new job, especially where trade unions are concerned. Incidentally, when many fixed resources become "freed," business confidence wanes, and a few persons in control of resources, new or old, dare to devote them to other new purposes.

Later, in his criticism (apparently of pp. 258 to 261) your reviewer proceeds: "The real difficulties of the Reparations problem lie in the reduced capacity of Germany to produce goods and services without a return. No doubt Germany could export a gross total of £6,600 millions in 42 years without overmuch difficulty, assuming that prices do not change very much. But that is not the problem. The real problem is to export a surplus of this amount over imports, and to finance it out of taxation." This argument, Sir, is certainly correct; but, judging from the way your reviewer words it, he implies that I have overlooked these two points. This implication is entirely erroneous. I have made a special point of the fact that the Reparations question consists not of one, but of three different, though closely connected, problems, namely:—

1. The German nation's problem of securing a surplus of exports over imports. This is mainly a question of the exchanges in relation to internal prices.
2. The German Government's problem of financing the cash payments of the Allies which should arise out of the German nation's surplus exports. This is mainly a political question.
3. The problem of arranging a form of payment which will not harm English industry nor aggravate unemployment.

Your reviewer will find these three points set out on p. 261, and again in blazing headlines in the addendum on p. 267.

I would therefore venture to ask you to publish this letter, not so much in fairness to myself, but because of the great importance of the Reparations problem. This letter may, however, incite your reviewer to treat me somewhat severely.—I am, Sir, yours obediently,

L. L. B. ANGAS.

A CHAPTER IN THE HISTORY OF THE LEAGUE OF NATIONS.*

THE difficulties which have been encountered by the Genoa Conference make it abundantly clear that the success of international co-operation greatly depends upon atmosphere, procedure, and careful preparation. Those who realise that the world will not now rest content to slip back into a pre-war condition of unco-ordinate and independent diplomacy will find it worth while to study the League of Nations at work. The constitution and procedure of the Geneva League is still very imperfect, and even its most ardent supporters will recognise that it is only at the beginning and not at the end of its evolution. Mr. Temperley's account of the Second Assembly, written with inside knowledge by a technical adviser to the British Delegation, says little about the Technical Organisations of the League, or even of disarmament and blockade. It is rather concerned with questions such as the admission of new States, mandates and minorities, the Courts of Justice, constitution of the League, and disputes in Albania and Silesia. In Mr Temperley's opinion these are at present the problems by which the League will be judged. On the Silesian question Mr Temperley admits many objections to the solution which the League ultimately imposed, but it was a case in which any decision was better than no decision. The breach between French and British in Upper Silesia was definite and fundamental in 1921. To have refused to make an award would have been cowardly and brought the League into contempt. The League's decision "did actually decide a question whose continuance would have worked like a festering wound in the body politic of Europe." Mr Temperley further stresses the League's services in the Albanian question. A study of this episode will help English readers to understand how it is that there is slowly growing in Europe an appreciation of the potential power of the League of Nations. Mr Temperley's discussion of what the League may mean to the British Dominions and to Latin America raises the question of the next step in the development of the League's constitution. This matter is well worthy of study by all students of politics, for the League has evidently the seeds of permanence. At the Peace Conference it was often found that small States would consent to accept as the decision of the great Powers what they had previously refused to accept of their own free will. The great Powers are beginning to learn to accept a decision from the League which they would not accept from another State, or even from a Conference of Ambassadors.

THE CONTROL OF PUBLIC UTILITIES.*

THE issue of public ownership or control of public utilities in New York State was fought, if not to a finish, at any rate to the end of a round in what the accomplished author of this thesis for a Doctorate of the University of Pennsylvania terms, with a delightful lapse into his aboriginal *patois*, "the gubernatorial campaign" of 1906. Of the two candidates, Mr Hearst demanded the public ownership of public utilities, and Mr Hughes stood for mere control. Mr Hughes was successful, and the result was the Public Service Commissions Law of 1907, and an administrative machine which is full of interest for those who are struggling in other countries with the identical problem of reconciling with the public interest a continuance of the private ownership of public utilities. Governor Hughes created a statutory authority, with power to control the capitalisation of public utility companies in New York State. It has come inevitably into collision with the law courts, which have shown their customary jealousy of the effective regulation of the life of the community through any organ other than them-

* "Capital Control in New York." By Donald C. Baldwin. M enasha, Wis.) Collegiate Press.

selves. But the results appear in the main to have been highly satisfactory. One is gratified by the spectacle of a public authority scrutinising the security offered for proposed issues, the ratio of stock to bonds, and even the scale of promotion fees. A uniform system of accounts has even been prescribed by the Commissions for the undertakings subject to their jurisdiction, and the whole scheme is a highly suggestive experiment in the public regulation of private enterprise at the point where it impinges upon the public interest.

AMERICAN "BUSINESS."

In this massive compendium of over 900 pages, which, it seems, is merely an introductory survey of the field of business administration, it is suggested that collegiate training for business administration must be comprehensively organised. Mere training in scattered "business subjects" falls far short of the standard set up in the University of Chicago, which has in hand the publication of a whole series of volumes that are to contain "materials for the study of business." Problems of adjustment to physical environment, of technology, of finance, problems connected with the market, of risk and risk bearing, of personnel, and of adjustment to social environment, all demand attention, apparently, from the serious student who thinks of trying to find a place for himself in one of the "zones of business control" which are analysed and classified in the book under notice.

The general idea is, of course, excellent. Wide study of the many forms of economic activity is an excellent foundation for business life, though it needs to be supplemented by practical experience; but really the question forces itself on one whether the embryo "business administrator" whose development is to be assisted will not be "mazed" in trying to grapple with the vast elaboration of interlocked and partially overlapping departments presented to his gaze. Modern business is complex, but there are simple ways of approach even to complex subjects which avoid oppressing the mind of the learner with the feeling of being himself merely a cog in a vast and merciless machine. Perhaps the American student's mind is not oppressed, but the American method of presenting information, while broadly enough conceived, is somewhat staggering. As the author remarks, "one after another of the functions of the business administrator is discussed, with particular reference to the character of the problems involved and to the control policies and devices of the manager." The discussion, however, lacks co-ordination. The bulk of the book consists of a compilation of extracts from numerous other works. Glimpses are presented of a great diversity of facts, opinions, and aspects, but the effect resembles that of a cinematograph show in which the sequence of action is interrupted again and again, going on after each break with some change of scene or standpoint. Still, as a compendium of varied business information, the book will be valuable.

* "Business Administration." By Leon Carroll Marshall. (Chicago) The University of Chicago Press. 1922. \$4.

A YEAR BOOK FOR INDUSTRIALISTS.*

FINANCIERS have long made use of several indispensable works of reference covering Stock Exchange, banking, and other spheres, but so far as we are aware there has never hitherto been such a volume to meet the needs of industrialists. In attempting to fill this gap, Mr Philip Gee has undertaken a very arduous task, since in the industrial field economic phenomena are not reduced to any standard form of statistical record to the same extent as in the world of finance. This fact, though it makes the editor's task more difficult, should make the result more interesting, for it means that personal comment and judgment inevitably play a larger part. For example, questions affecting the relations of employer and employed occupy a considerable part of the volume, and it is interesting to find the view expressed in a special article devoted to this subject that employers should frankly face the necessity of adapting themselves to a new relationship. "Already organised labour is

* "The Industrial Year Book, 1922." Edited by Philip Gee.

advancing a demand in the political world that labour shall be a partner and no longer the servant in industry. To many the demand will seem visionary; to most it must appear to be previous. But none the less this is the direction in which events are taking us. The rapidity of our progress thither will be measured by the ability of the trade unions to produce men with really statesman-like ability. The maintenance of industrial peace depends mainly upon the ability of both employers and employed to understand the changed conditions, and to accept the new responsibility which the conditions place upon them."

Except that much more detailed information is given with regard to the coal-mining industry than to other trades, data about home affairs seems well balanced and fairly complete. So far as foreign information is concerned, it is not to be expected that at the first attempt the conditions of each country could be given their due weight; indeed, it is a task of the greatest difficulty to get adequate information covering industrial conditions abroad. This section will steadily develop as Mr Gee's machinery for tapping foreign sources of information expand. The editor is to be congratulated on the first number of a work which is certain to take a permanent place among books of reference.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. May 31. ACCOUNT. June 1.

The Stock Exchange starts dealing for the end-May account on Monday, and the reversion to pre-war practices then comes into operation. What effect this is likely to have upon business is a matter for considerable speculation. Markets have derived no benefit from the previous expectation that removal of restrictions upon contangoes will lead immediately to substantial increase in the volume of buying. There is, indeed, a noticeable hesitation on the part of speculation, as well as that of investment, in most departments round the House. The result of the New South Wales 4½ per cent. issue at 95, which left underwriters with 94 per cent. of the stock, did not encourage the Consol market. Underwriters of the recent Lever 5 per cent. debenture stock got 24 per cent. of their obligations. There is talk of a new Straits Settlements 4½ per cent. loan, also at 95, and other borrowers are expected to make their appearance in the near future. Talk of an early reduction in the Bank rate to 3½ per cent. has died down.

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch - 168, Fenchurch Street, London, E.C.3
West End Foreign Branch - 1, Pall Mall East, S.W.1.
Liverpool Foreign Branch - 42, Castle Street, Liverpool.
Manchester Foreign Branch - Corner York St. & Fountain St., Manchester.

After dipping below 99 on the fears of an early general election, the War Loan recovered about half a point, the later assumption being that the election will be postponed. Genoa has done nothing to help matters in the Stock Exchange, and the international complications which still remain are disappointing to those who looked for settlement of many disputed points at the Conference just ending. The Consol market as a whole is inclined to be heavy, though the dullness has not invaded Home Railway prior-charge lists, nor are Colonials any worse in the majority of cases.

Paris has been taking rather more of a hand this week in the foreign market, where Peruvian Corporation stocks, Rio Tintos, Anaconda shares, and a few other inter-Bourse issues developed strength. French railways scrips remain dull. Germans eased off owing to the fall in the mark, and a number of the South American bonds have been depressed, although towards the end of the week a recovery ensued in Brazilians by reason of the improved condition of the exchange. The more recently issued scrip stocks of Brazil, Czechoslovak, Chile, &c., have barely held their ground.

The Home Railway market seethed with bullishness in the early part of the week, when the wave of speculation rushed prices up by points at a time. The chilling effect of a decline in war stock caused a check to the leaders in the Home Railway market, and this brought in a crop of profit-taking orders which lowered prices sharply from the best. It looks as though there may be a lull for a while; certainly the pace has been very fast. North Easterns, to take the most prominent example, have risen 35½ points this year, allowing for the dividend. Grand Trunks are inclined to be easier; Mexican Rails have given way, and the Argentine Railway market, after trying to go better, fell back for want of support. Debenture and preference stocks in this market are well maintained.

Rubber continues on its downward track, but prices in the share market are fairly firm, owing to some of the recent reports being better than had been anticipated. Rubber Trusts, however, gave way when the figures came out. The Oil market is taking things quietly, except for an occasional spasm in specialised shares. The Banking market is firm, and Eastern banks continue in demand, owing to the still unconfirmed rumours of certain London banks desiring to gain control over Eastern companies. The Insurance market exhibits few noticeable changes, and the shipping list, while distinctly hard, is not attracting much attention. Textiles improved, on the showing made by the Fine Spinners Co. Dunlops braced up a trifle, because of the expectation that the forthcoming report of the company may throw a favourable light on the situation, though in this direction caution is commendably noticeable. Johnson and Phillips gave way sharply, because the company is paying no dividend this time, against 12½ per cent. for the previous year. The Marconi group advanced appreciably by reason of the forthcoming extension of Radio-telephony, while cable stocks have scarcely moved. Discouraging news about the cotton crop served to render Egyptians dull and heavy, while the uncertainty regarding the engineering outlook continues to be reflected in the quietude of the market for shares immediately affected. A good many inquiries have come in for brewery stocks and trust companies' shares, to find, however, comparatively little supply available to meet demand. Imperial Tobaccos reached 60s, and British Americans hardened in sympathy. There has been a good deal doing in sound industrial preference shares.

Kaffirs improved on the news that, at last, the vexed question of enemy-held shares has been settled between the Custodian of South Africa and the various Transvaal mining groups. Relieved from this incubus, the Kaffir market put up most of its prices, without much additional business, however, being stimulated as a consequence. Copper shares of all kinds are decidedly better, on the recovery in the price of the metal. A much more modest movement in the prices of tin shares accompanied the rally in tin. Russian mining shares are heavy, Mexicans moved narrowly and irregularly, Indian shares are inclined to be better, and the Broken Hill group strengthened, but it cannot be said that activity has yet revived in any of the mining markets. There are hopes that it will be assisted

by reversion to pre-war conditions next week, though the Stock Exchange recognises that there are still many practical handicaps in the way to resumption of business on pre-war lines under present-day conditions.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:-

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	404,589,037	..	..	..

NATIONAL SAVINGS CERTIFICATES.

1916	66,350,626	1914	619,522,633	

Consent Iron Company, Limited.—Authorised share capital £3,500,000, all of which has been issued and is fully paid. This is an issue at 99 per cent. of £1,500,000 6 per cent. first debenture stock, part of a total authorised issue of £2,500,000. The issue will be secured by a trust deed constituting a floating charge upon assets. The stock will be redeemed by annual drawings at par, commencing on July 1, 1933, and ending on July 1, 1962, but the company reserves the right to pay off stock at £102 per cent. at any time after July 1, 1933, subject to three months' notice. Since August, 1919, the company has embarked upon a scheme of capital expenditure, estimated at about £1,500,000, of which about £950,000 has already been expended. The balance-sheet at June 30, 1921, showed an excess of assets over liabilities of £5,248,099, excluding goodwill. The prospectus gives a record of profits for the last twenty-three years, but these are given before allowance has been made for depreciation. It is anticipated by the company that the profit and loss account for the year ending June 30, 1922, will only show a small balance of profit before making any charge for taxation. The absence of a fixed charge renders the security somewhat indefinite, but the company agrees not to create other charges ranking in priority to *pari passu* with the present authorised issue of £2½ millions, or *pari passu* with the present authorised issue of £2½ millions, except to secure bankers' advances; this the excellent past financial history of the company will no doubt be sufficient to render the stock a good marketable security.

Chargeurs Réunis Compagnie Française de Navigation à Vapeur.—Incorporated under French law. Share capital 100 million francs, in fully-paid shares of 500 francs each. This is an offer for sale of £1,000,000 6½ per cent. sterling bonds, at £92 10s per cent. These bonds will be redeemed by a cumulative sinking fund to be applied annually by drawings at par, commencing 1928, and it is calculated to redeem the whole of the bonds by 1952. The company has the right to redeem the issue at 102½ per cent. on and after May 1, 1932, subject to three months' notice. Principal and interest will be payable in London in sterling, free from French taxation. The securities are the only sterling bonds of the company, and none of the bonds issued by the company carries any preferential charge. Thus the sterling issue ranks *pari passu* with the existing bonds in francs. It is stated that the surplus of assets over all liabilities, including all outstanding debts, as well as the present issue, is 184,000,000, or (at an exchange of, say, 50f to the £), £3,680,000. Profits are given for the last six years, and on these figures there should be little difficulty in meeting the company's bonded indebtedness easily. The

vendors paid 85½ per cent. for the bonds, but they pay out in underwriting and over-riding commissions 2 per cent. A fairly good foreign industrial investment.

Trinidad Friendship Petroleum Company, Limited.—Authorised capital £750,000, divided into shares of 5s each, of which 1,566,404 have been issued and are fully paid. In addition, 100,000 shares have been issued, with 1s paid. Four estates in Trinidad have been acquired for various payments totalling £42,265 in cash, £350,000 in shares of the company. These details are taken from an advertisement in the Press, made to comply with Stock Exchange regulations, but probably we shall have some experts' progress reports before the shares are placed upon the market.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

MONETARY POLICY.

In days when the English monetary system was based on an effective gold standard, the policy of those who had to control its destinies was to a great extent mechanical. When the balance of trade, in the widest sense of the phrase, went against us, or when for other reasons there was a drain upon the Bank of England's stock of gold, it was expected, and usually happened, that measures would be taken by the Bank of England to protect this stock by raising its rate and, if necessary, making the further arrangements by which market quotations were induced to follow the movement of the official rate. This was effected, as everybody knows, either by the Bank's borrowing money in the market or by its lending Government securities on the Stock Exchange, or any other device by which it was enabled to haul in the slack of the monetary surplus, which prevented its exercising direct control. The gold movements in those days being published day by day, with the destination of the withdrawals from the Bank and the place of origin of its receipts, it was a comparatively simple matter for those who had to work by forecasting the movements of money rates to be able to make a rough guess at the influences which were likely to be exercising the mind of the Bank court in arriving at its decisions. There was always, of course, a certain margin of variation, concerning which calculation was not possible, owing to the different opinions which might sway the governor of the day, or those by whom he was chiefly influenced, with regard to the need for promptness or delay in action. But at least the City, and even the general public, in so far as it was interested in the matter, was able to tell more or less what was happening with regard to the stock of gold and the events and developments which were likely to threaten its depletion or tend to increase its amount. If depletion was threatened, a rise in Bank rate was expected; if the exchanges were in our favour and gold was tending to come in this direction, a lower Bank rate cheered the heart of the bulls of securities.

In these times, owing to the abrogation of the gold standard, by the prohibition of gold exports except under licence, the question of gold exports as affecting movements in Bank rate has ceased to count, while on the import side of the matter the enormous holding of gold by America and the fact that the price of sterling in New York is still far below a point at which gold could come here from America on exchange considerations, has also wiped out the influence of overseas gold movements in the direction of a reduction in Bank rate. The problem has thus become purely psychological. Bank rate moves, as far as outside observers can detect, purely owing to the views that may be entertained in the Bank of England parlour concerning the desirability of dear or cheap money, though this opinion is complicated in these times by a new influence which had virtually no effect before the war—namely, the opinion of the Treasury concerning the handling of the enormous amount of Treasury bills, which form by far the greatest part of the outstanding floating debt. It will be remembered that when the Bank rate was raised at the end of 1919 and the beginning of 1920 the movement was preceded by the raising of the rate at which Treasury bills were offered. It does not, of course, follow from this fact that the Treasury forced the Bank of England's hand. It is true that the price at which Treasury bills were offered was then a much more potent influence on the market rate of discount than the official rate quoted by the Bank of England. But there is no reason to suppose that the raising of the Treasury bill rate and the immediately subsequent rise in Bank rate were not measures concerted in complete harmony between the Treasury and the Bank of England. There is also no reason to suppose that this harmony has been in any way disturbed, though gossip in the City has in recent years been rather inclined to talk about the divergence of point of view between the Treasury and the Bank. It is clearly to the advantage of the Treasury that money should be as cheap as possible in order that, in the first place, Treasury bills

can be renewed as they fall due at low rates, and, in the second—which is perhaps even more important—that the conversion operations may be carried out, by which war debt raised at the high rates current during the war can be replaced by securities with a lower rate of interest. There is the further consideration that the very large amount of short-dated war debt maturing during the next few years seems to have caused what is regarded in the City as some unnecessary apprehension on the part of the Treasury. The Treasury has been especially anxious to replace early maturing debt well before its maturity by comparatively long-dated securities. This desire was justified by the fact that if the renewal of securities is left until just before their maturity they are almost certain by that time to have got largely into the hands of professional dealers in money who will not be tempted by the offer of anything but a quite short-dated security. Under this influence, the Conversion Loan of last year took everybody by surprise by being announced at the end of the Budget speech, and by being offered on terms which not only increased the nominal amount of debt, but also made a considerable addition to the interest charge—an addition which would have been much more considerable if the operation had been more favourable. Holders of 5 per cent. War Bonds were then offered an exchange into $3\frac{1}{2}$ per cent. Conversion stock on terms which gave them "for at least 40 years a return on the amount of their original investment, varying according to the maturity of the bond converted, from about £5 14s per cent. to £5 12s per cent." In view of this fact it was somewhat astonishing to find Sir Robert Horne stating in his Budget speech that the Conversion Loan did not in any way increase the real burden of the debt. Now that British credit is priced in the market, as judged by the quotations of long-dated securities, such as Conversion Loan and Local Loans stock, at about $4\frac{1}{2}$ per cent., there is at least a real possibility of conversion which will actually reduce the burden of the debt charge; and there can be no doubt that the Treasury is anxious to take advantage of this state of things, which has been brought about rather by stagnation in trade than by any very genuine improvement in the nation's financial position as expressed by the relation between its official expenditure and the revenue that can be wrung from the taxpayers. The rate at which Treasury bills are placed has now for some time been left to the market to decide, by the offer for tender of a large block of these bills each week; at the same time, the Treasury can still very directly influence the rate at which its bills are sold, and through it the market rate of commercial bills, by varying the amounts of Treasury bills that it offers. In making all these arrangements it is, no doubt, very largely influenced by the Bank of England; and Bank rate is still in the background as an influence upon the market, owing to the fact that whenever the market finds itself short of cash it has to pay a $\frac{1}{2}$ per cent. over Bank rate for short advances. The Bank of England is nowadays credited in the City with a desire to restrain the tendency, due to slackness of trade, for money rates to decline, and its policy has been subjected to considerable criticism on this score even by those who were most strongly in favour of the policy of high rates, introduced at the end of 1919 in order to check the dangerous and feverish activity which was then in full swing. It was for some time understood to be a belief of the Bank that since America is now, in its relations with us, the creditor country, the level of money rates here should not be below that current in America; and for a long time movements in Bank rate here followed those of the Federal Reserve Bank of New York, until by the reduction made last month Bank rate is now $\frac{1}{2}$ per cent. below the American level. But seeing that the rate for Treasury bills tends constantly, with occasional reactions, to be pulled down by the weight of money set free by trade slackness, there is something to be said for the argument of those who look back to the periods of reaction after crises,

and point out that we had a 2 per cent. Bank rate for a long period in 1894-5-6 and $2\frac{1}{2}$ per cent. for a time in 1908 and 1909; and argue that Bank rate might have been brought down more quickly already, and that further reductions are possible according to precedent, and, if carried out, would help the present trade depression at least to confer upon the country the benefit of drastic and genuine conversions of debt, which would lower the interest charge which is now so large and stubborn an obstacle to the reduction of taxation.

There is, however, yet another influence on monetary policy in these times, and that is the action of those who hold and deal in Treasury bills. This action is no doubt chiefly influenced by the monetary policy of the Treasury and the Bank of England; but it would be interesting to see, if the full and exact figures were available, what the clearing banks have been doing with regard to their holding of Treasury bills. Their action in this respect and in dealing with the rest of their assets has an important bearing upon the general monetary position, second only, if it is second, to the policy of the Bank of England and the Treasury. It is especially interesting in view of the curious and at first sight unaccountable phenomenon of the extraordinary clamour for investments which has shown itself during the last six months at a time when the country was continually complaining that it was being taxed to the bone. We give below a summary of the average weekly balances at certain dates, taken from the monthly statement of the London Clearing Banks, leaving out the figures of the National Bank:—

	Jan., 1921.	Oct., 1921.	April, 1922.
Capital and reserves	115.4	115.9	115.9
Acceptances	88.4	50.9	56.7
Deposits, &c.	1,810.1	1,802.5	1,737.1
	2,013.9	1,969.3	1,909.7
Coin, notes, balance at bank, cheques in course of collection, &c.	256.2	264.5	253.3
Money at call and short notice....	98.9	101.8	107.3
Investments	341.3	330.7	402.3
Discounts	361.9	409.6	319.8
Loans and advances	845.1	786.5	745.2
Cover for acceptances, premises, &c.	110.5	76.2	81.8
	2,013.9	1,969.3	1,909.7

Inferences from the above table are complicated by the fact that some of the banks include their holding of Treasury bills in their investments, while others put them under the head of discounts. Subject to this obscurity one may be permitted to guess from these figures that the banks have during the past six months to some extent counteracted the effect of the great reduction that has taken place in Treasury bills and in trade advances by the substantial increase that they show in the total of their investments. How far this has been effected by applications for the new Treasury bonds by which the Government has been able to effect a reduction in Treasury bills it is, of course, impossible to say, but at least it seems clear from the figures that the large reduction effected on both sides of the balance-sheet leaves a considerable margin available for trade revival, if and when it should make its appearance, before the demands of that revival would necessarily oblige the banks as a whole to reduce their investments.

THE BANK ACCOUNTS OF THE UNITED KINGDOM.

THE process of banking expansion, which was unhindered until the end of 1919, was checked in 1920, and was again retarded in 1921. As will be seen from figures given later on, the rate of increase in deposits dropped to 1.4 per cent. in 1921, compared with 5.7 per cent. in 1920, 18½ per cent. in 1919, and 16½ per cent. in 1918, while there was an actual decline in legal tender currency.

From the table below, which gives a comparison of the total amount of currency and credit of all kinds at the end of each of the past five years, in comparison with 1913, it will be seen that bank deposits, other than those of the Bank of England, show an increase in comparison with 1920 of only £35 millions, as against an increase of £136 millions in 1920:—

(Million £'s.)

	End of					Ino. on 1913.
	1913.	1917.	1918.	1919.	1920.	1921.
Bank of England deposits.....	71	166	172	199	189	122
Other banks' deposits.....	1,032	1,705	1,988	2,356	2,492	2,527
Bank of England circulation	30	46	70	91	133	127
Scottish note circulation	8	19	25	28	29	25
Irish note circulation	8	22	31	29	25	19
Currency note circulation.....	..	213	323	356	368	326

Apart from small amounts circulating in the Isle of Man, the English banks have no note issues outstanding. The circulations both of the Scottish and of the Irish banks fell considerably in 1921, and the latter stands nearly £12 millions below the high level recorded at the end of 1918. The circulation of the Scottish banks, however, is only £4 millions lower than at the end of 1920, which was the highest point reached. In 1921 the Bank of England circulation fell by over £6 millions, and currency notes by £42 millions, so that the total note circulation of the United Kingdom fell in the 12 months by £58 millions—namely, from £554 to £496 millions.

It is of interest to compare these figures with the movement in prices, since they represent the country's supply of legal tender and bank money. At the end of 1913 the total note circulation of the United Kingdom was £46 millions, and gold held by banks and in circulation was officially estimated at £123 millions, so that there has been an increase in the

circulating medium of roughly £327 millions. Similarly, in the eight years bank deposits have increased by 145 per cent., and at the end of 1921 were practically at their maximum. Wholesale prices, on the other hand, reached their highest two years ago, at 225 per cent. above the pre-war level, and at the end of last year were only 70 per cent. above July, 1914, and it may well be asked how this money was employed with a smaller business being done and at a lower price level. But the general price level has not fluctuated so violently as wholesale price, and, in any case, we should not expect prices to show a direct relation to the amount of money in existence until we have taken into account the rapidity of circulation. In the case of bank money, the only test of the volume of transactions carried out by means of cheques are the figures of the Bankers' Clearing House. The total clearings for 1921 were 10 per cent. lower than in 1920, and a little more than 100 per cent. above 1913. But the country clearing totals, which are a truer index of the volume of business passing in the country generally, fell by 25 per cent. in 1921, though they are still more than 100 per cent. above 1913. The town clearings are, of course, more largely affected by Stock Exchange and City business, and the figures indicate that while the volume of general business has declined in accordance with expectation, transactions in the nature of transfers of capital have been maintained by increased activity on the Stock Exchange. In other words, though the volume of potential bank money (deposits) has been maintained, its rate of turnover in general business must have declined, and a larger proportion of it have been used for capital transactions.

Since our first Banking Number was published, more than 40 years ago, a remarkable change has taken place in the banking of the United Kingdom. Twenty-one years ago the balance-sheets of some 90 English banks were analysed. In 1913 the number had dropped to 43, and it has now fallen to 20. Since 1900 the deposits of the English joint stock banks have risen from £587 millions to £1,975 millions, and of this increase nearly £1,150 millions has taken place since the outbreak of war. During the same period the paid-up capital of these banks has only increased from £61 millions to £72½ millions, while reserve funds have

risen from £35½ millions to £56½ millions. In 1900 the ratio of paid-up capital and reserves to deposit liabilities was 13.4 per cent. for the English banks, whereas for 1921 it was only 6.5 per cent. The latter figure, however, shows a welcome increase on the 1919 ratio, which was only 5.7 per cent.

During the past year capital and reserves showed little growth, as may be seen from the table below:—

CAPITAL AND RESERVES.

	1920.	1921.	Increase.
English joint-stock { Capital..	71,737,200	72,477,400	+ 740,200
Reserves.....	56,416,600	56,653,200	+ 236,600
English private (capital and reserves).....	3,123,100	3,186,700	+ 63,600
Scottish { Capital.....	10,077,000	10,077,000	—
Reserves.....	7,834,300	8,443,800	+ 609,500
Irish.. { Capital.....	7,609,200	7,609,200	—
Reserves.....	5,290,000	5,545,000	+ 255,000
	162,087,400	163,992,300	+ 1,904,900

The only capital increases of importance were additions of £500,000 by the London County Westminster and Parr's, and of £235,000 by Lloyds Bank. A year ago the paid-up capital of the English joint stock banks showed an increase of £15½ millions, largely as the result of capital rearrangements consequent on amalgamations and alliances, while the reserves went up by over £6½ millions.

As already stated, the rate of increase in deposits has declined substantially in the past two years. From the table below it will be seen that the deposits of the English banks show a comparatively very small increase:—

CURRENT AND DEPOSIT ACCOUNTS.

	1920.	% of Assets.	1921.	% of Assets.	Increase.
English joint-stock..	1,961,526,900	89.0	1,974,838,400	90.1	+ 13,311,500
Private.....	50,864,600	92.4	48,306,800	92.0	- 2,557,800
Scottish.....	276,227,300	82.1	291,080,300	84.6	+ 14,853,000
Irish.....	200,441,300	83.2	212,860,200	86.4	+ 12,418,900
	2,492,060,700	88.0	2,587,125,700	89.2	+ 95,065,000

The expansion of 6.2 per cent. in the deposits of the Irish banks follows an increase of 20½ per cent. a year ago and 26½ per cent. two years ago. Those of the Scottish banks showed an increase of 7½ per cent. at the end of 1920 and of 17 per cent. at the end of 1919.

The total of acceptances shows a very substantial decline, the amount being £79 millions, as against £109 millions at the end of 1920. This decline of £30 millions follows a drop of £49 millions in 1919. The acceptances of the English banks dropped in 1921 from £103 to £74 millions, of the Scottish from £5.6 to £3.9 millions, and of the Irish from £1,374,000 to £834,000.

Cash in hand and at the Bank of England, cheques in course of collection, balances with other banks, and money at call and short notice taken together show a decline of 3½ per cent. in 1921, this following decreases of 1.1 per cent. a year ago, and over 4 per cent. at the end of 1919:—

CASH IN HAND AND AT BANK OF ENGLAND, AND MONEY AT CALL AND SHORT NOTICE.

	1920.	% of Assets.	1921.	% of Assets.	Decrease.
English joint-stock..	449,153,400	20.4	438,519,100	20.0	- 10,634,300
Private banks.....	11,537,600	21.3	8,484,700	16.2	- 3,052,900
Scottish banks.....	72,974,400	21.5	70,232,200	21.0	- 2,742,200
Irish banks.....	49,698,100	19.4	42,886,700	17.4	- 6,811,400
	580,363,500	20.5	560,122,700	19.6	- 20,240,800

A year ago the Irish banks showed a decline in this item of over 15 per cent., but for the Scottish banks there was an increase of 1½ per cent. The ratio of cash and money at call to total liabilities has been steadily declining since the end of the war, the average for the war years being in the neighbourhood of 26 per cent. The Scottish and Irish banks include each other's notes in this item. A comparison of the ratio of cash and short money to notes and deposit liabilities shows a decline in each case in comparison with the previous year:—

(In £1,000's.)

	1920.			1921.		
	Deposits and Notes.	Cash.	%	Deposits and Notes.	Cash.	%
English.....	1,961,700	449,153	22.8	1,975,070	438,519	22.1
Scottish.....	308,591	72,974	23.6	316,248	70,232	22.2
Irish.....	225,169	46,698	20.6	231,912	42,887	18.5

Some banks still continue the practice of including money at call and short notice with their cash in hand in the balance-sheet, but in the case of the English banks those holding over 94 per cent. of the total make a distinction in the two items. From the analysis below it will be seen that last year there was practically no change in the cash in hand held by these banks, while money at call fell by nearly £15 millions:—

EXCLUDING BANK OF ENGLAND.

Year, December 31.	(1) Total Cash in Hand and Money at Call and Notice.	(2) Together.	(3) Per Cent. of (1).	(4) Cash in Hand and Money at Call and Notice.	(5) Per Cent. of (2).	(6) Per Cent. of (3).
1908.....	194,134,000	172,774,600	89.2	91,740,600	53.1	27.3
1913.....	235,957,800	212,752,100	90.5	115,489,600	54.4	23.1
1914.....	276,045,900	260,722,700	90.8	169,530,500	67.5	24.5
1915.....	268,453,200	247,313,700	92.2	178,919,500	72.4	27.0
1916.....	369,452,900	343,429,600	93.0	247,973,500	72.2	27.8
1917.....	427,855,200	404,036,700	94.1	238,500,400	59.0	26.4
1918.....	482,755,000	454,701,200	94.5	270,135,700	59.4	25.3
1919.....	452,755,000	429,569,100	94.8	320,194,400	74.7	25.3
1920.....	449,153,400	428,678,800	95.6	304,510,400	71.0	26.6
1921.....	438,519,100	413,735,100	94.1	304,341,300	73.4	26.6

Investments show an increase of 3.4 per cent., for more than half of which the Scottish banks are responsible. A year ago a decrease of 7½ per cent. was shown, those of the English banks declining by 7.5 per cent., and of the Scottish banks by 8.1 per cent., while those of the Irish banks rose by 4.8 per cent.:—

INVESTMENTS.

	1920.	% of Assets.	1921.	% of Assets.	Increase.
English joint-stock..	368,733,700	16.7	375,564,400	17.2	+ 6,830,700
Private banks.....	6,186,400	11.2	6,108,800	11.6	- 77,600
Scottish banks.....	102,968,100	30.4	114,530,800	32.2	+ 11,562,700
Irish banks.....	80,959,400	33.5	81,670,200	33.1	+ 710,800
	558,847,600	19.7	577,874,000	20.4	+ 19,026,400

Only two of the English banks fail to distinguish their holdings of British Government securities from other investments. The amount so given separately is £312 millions, or 83 per cent. of the total investments, which compares with £309½ millions, or 84 per cent., a year ago. The Scottish banks record an increase of £17 millions to £108½ millions, and the Irish banks from £68 to £75 millions.

Figures of the discounts and advances are disturbed by the inclusion with the former in the majority of cases of Treasury bills. Taking the two items together, there was an increase last year of over £25 millions, or 1½ per cent., the ratio to total assets rising from 55 to 56.2 per cent.:—

DISCOUNTS AND ADVANCES.

	1920.	% of Assets.	1921.	% of Assets.	Increase.
English joint-stock..	1,263,090,700	57.4	1,280,170,800	58.7	+ 17,080,100
Private banks.....	35,501,400	64.2	36,214,400	69.0	+ 713,000
Scottish banks.....	153,121,800	45.0	150,949,500	43.9	- 2,172,300
Irish banks.....	109,623,100	45.5	119,274,700	48.4	+ 9,651,600
	1,561,337,000	56.0	1,586,509,400	56.2	+ 25,172,400

The majority of the banks now show bills discounted and advances as separate items. Indeed, with the

exception of the British Mutual, all the English banks do so, but a year ago five banks omitted to do so. Taking the figures of the remaining 15 English banks, we get the following results:—

	1920.	1921.	Increase.
Discounts.....	328,949,900	442,070,500	+ 113,120,600
Advances.....	914,111,900	818,559,600	- 95,552,300
Combined.....	1,243,061,800	1,260,630,100	+ 17,568,300

Complete total 1,263,090,700 .. 1,280,170,800 .. + 17,080,100

Thus while discounts have risen by £113 millions, nearly the whole of this has been offset by the decline in advances. It is impossible to say how much of the expansion in bills discounted is due to heavy holdings of Treasury bills, but it seems fairly safe to assume that the volume of commercial bills held at the end of 1921 was no greater than it was at the end of 1920, and it may be deduced, therefore, that increases in Treasury bill holdings are responsible for the whole, if not more, of the expansion in discounts. The reduction of close upon £100 millions in the advances of 15 English banks bears eloquent testimony to the stagnation in trade and industry at home.

The last item in the balance-sheets—premises and sundries—calls for little comment. In the large summary table of the individual balance-sheets given on a later page, we have, as usual, included cover for acceptances with premises and sundry items for considerations of space. If cover for acceptances be deducted, premises and sundries amount to £17 millions, or 13 per cent. of capital and reserves for the English banks, to £4½ millions, or 24 per cent. for the Scottish banks, and to £2½ millions, or 17 per cent., for the Irish banks.

We conclude with a table showing the aggregate liabilities and assets of the banks of the United Kingdom, excluding the Bank of England, whose figures are summarised in the following pages. This shows that the net result of the changes in the various items is a decrease of just over £6 millions in total liabilities and assets:—

BANKING PROFITS.

With general trade and business in the trough of depression, it was only to be expected that the profits to be made on banking operations during the year 1921 would be on a smaller scale than in the previous year, when the demands for accommodation, at least in the first half of the year, were on an unprecedented scale. But apart from the decline shown in the volume of advances, which, after all, are the banker's principal source of revenue, the decline in money rates during the year has undoubtedly diminished the income derived from this source. The rates charged for advances bear a definite ratio to Bank rate, and, as will be seen from the list of average rates in the past 12 years, average Bank rate in 1921 was 12s per cent. lower than in the previous year:—

	Average Bank Rate.	Average Market Rate (3 months).	Average Short Loan Rate.	Average Deposit Rate.
1910.....	3 14 5	3 3 7	2 14 10	2 4 4

	1,246,033	2,834,887	2,828,786	- 6,101

What has happened since the end of 1921 it is impossible to ascertain definitely, but the monthly figures of weekly averages published by the London clearing banks afford some guide, and may be taken as a fairly accurate indication of the trend of banking operations since the publication of the annual accounts.

In the table below we summarise the figures of the nine principal English joint stock banks:—

NINE ENGLISH JOINT STOCK BANKS.
(Million £'s.)

	Weekly Averages.				
	Dec. 1921.	Jan. 1922.	Feb. 1922.	March 1922.	April 1922.
Paid-up capital and reserves.....	115.9	115.9	115.9	115.9	115.9
Acceptances.....	65.3	63.6	62.9	57.1	56.7
Deposits (including undivided profits).....	1,818.6	1,826.0	1,824.4	1,746.9	1,737.1
Total.....	1,999.8	2,005.5	1,981.2	1,919.9	1,909.7
Coin, notes, balance at bank and cheques in course of collection.....	273.5	254.5	249.5	245.4	253.3
Money at call.....	105.7	114.1	110.9	102.5	107.3
Investments.....	343.3	357.0	385.1	392.7	402.3
Discounts.....	424.3	439.6	400.3	350.5	319.8
Loans and advances.....	762.3	752.0	747.7	746.2	745.2
Cover for acceptances, premises, &c.....	90.7	88.3	87.7	82.2	81.8
	1,999.8	2,005.5	1,981.2	1,919.9	1,909.7

There has been a substantial decline in deposits as compared with the December figures, the bulk of which took place in March. During the past four months, moreover, there has been a further decline in the currency notes circulation, which now stands at £299 millions.

Margins Between

	Bank Rate and Market Rate.	Deposit Rate and Market Rate.	Deposit Rate and Short Loan Rate.

1921.....	0 18 1	1 1 11	0 10 4

As very few of the banks divulge their figures of gross profits, it is impossible to ascertain to what extent the

decline in net profits arises from further increases in expenses, and how much to a slackening in business. It may be assumed, however, that with the decline in prices, and reductions in war bonuses, expenses have not risen very much. The profits and appropriations for the individual English, Scottish, and Irish banks are set out below, and it will be seen that there is an almost entire absence of provision for writing down investments, which is the result of the appreciation in the value of gilt-edged stocks at the end of the year. In the past few years the heavy decline in security prices, and the necessity for writing down book values of investments, have meant a heavy drain upon profits, as may be seen from the appended tables, which give aggregate net profits and appropriations for each year since 1908 of the joint-stock banks of England, Scotland, and Ireland:—

ENGLISH.

Year.	Profits.	Per Cent. of Resources.	Dividends.	Per Cent. of Profits.	Investments Depreciation.	Reserve Funds.	Premises.	Staff.	Move-ment of Carry Forward.

A year ago the English banks placed to investment depreciation account and reserve funds together a total of £6,860,000. For 1921 nothing is required for investment depreciation, and £3,153,000 goes to reserve fund, and this saving makes possible a maintenance of dividends at the previous year's rates. Reduction of premises funds have been credited with £500,000 more than last year. Whether this amount is necessary to

bring the book value of premises down to present-day values it is impossible to say, but it seems reasonable to suggest that in view of the large amounts written off in past years and of the great increase in property values that the banks are making further substantial additions to "hidden reserves." In the case of the English banks, the percentage of profits distributed to shareholders is much larger than in the previous five years, and is nearly up to the 1915 level, but is still much below the pre-war average, when net profits were not much less than 1 per cent. of total resources.

The profits of the Scottish banks show a further small increase, but the proportion going to shareholders is not much greater than in the previous year. Here again no provision is necessary to meet depreciation in the value of investments. Two of the Irish banks have made such provision, the Bank of Ireland setting aside £90,000. A year ago, however, this bank made no such allocation, but placed £310,000 to reserve. The net profits of the Irish banks show a small decline in the aggregate, but the total is well above that of two years ago. It may be well here to point out that too close a comparison of the profits disclosed by one bank

with those of another should not be made, especially in the case of the Scottish and Irish banks, since in some instances profits are disclosed after income-tax has been deducted, while in others the amount of tax payable is included. For many years we have urged the adoption of a uniform method of presenting banking accounts, especially in this particular respect.

From the figures given above the conclusion may be drawn that it is owing to the appreciation in security values that shareholders have received in most cases the same rates of dividend as in the previous year. It is too early yet to attempt a forecast of their prospects for the current year. While the old custom of paying 1½ per cent. below Bank rate on deposits has been abandoned, and at the present time the rate is only 2 per cent., the banks have so far this year not been able to find such remunerative channels for their funds. On the other hand, the exceptional recovery in the market value of gilt-edged securities must have already offset any diminution in business that may have occurred, and if the wheels of industry begin to accelerate in the not distant future, the banks will immediately feel the benefit.

BANK SHARES.

The key to the story of bank share movements in the past twelve months or so is to be found in the figures analysed in the preceding article. There it will be seen that 1921 was a year of falling profits for banks, owing to the trade depression, the decline in monetary rates, and the lessening of demand for financial accommodation by the manufacturing and trading community. But, thanks to the signal rise in the quotations of gilt-edged securities, lower profits were freed from the appropriation, experienced in previous years, for the purpose of writing down investment depreciation. The cessation of this drain upon resources available for distribution to shareholders enabled the joint-stock banks, as a whole, to maintain the dividend rates of the previous year. Thus holders of bank shares found in 1921 that the economic troubles of the country cut both ways, and that they regained upon the swings what they lost upon the roundabouts—and more, for they shared substantially in the capital appreciation which the cheapening of money brought to all good-class securities. This latter aspect of the banking year is clearly brought out in the following table, in which we present a calculation of the average market price as at April 30th in each of the past fourteen years of the shares of English, Scottish, and Irish banks, giving for purposes of comparison the yearly movement in the price of Consols:—

	Average Price of Bank Shares.				Price of Consols.	
	English.	Scottish.	Irish.	% of 1909.	% of 1909.	% of 1909.

In the preceding article it has been shown that, in contrast to English experience, the aggregate of Scottish bank profits showed a slight increase last year, and in the above list there are four increases in dividend rates. This being so, and the rise in market value having, as was shown in the first table of this article, not having been so sharp as that recorded by the English shares, the fall in yields is not, generally speaking, so pronounced. In the Scottish list the yields cover only the comparatively small range from 4 5 3s 3d per cent. to 4 5 16s per cent. The Irish list, like the English, contains two cases of increased dividend, but, except in the case of the Northern Banking Company, prices have risen sufficiently to produce a substantial drop in the yield. In our last article on this subject we took occasion to suggest that, in view of the fine security offered, the rise in gilt-edged securities, and the choice available of fully-paid shares of small denominations, the average investor might well pay more attention to the bank share market than he had been accustomed to pay in the past. During the past twelve months transactions in the bank share market have been sufficiently numerous to suggest that a welcome expansion in the *clientèle* is taking place, and those who bought shares in the leading banks at the depressed prices of a year ago have every reason for satisfaction.

THE AMERICAN BANKING POSITION.

(FROM OUR NEW YORK CORRESPONDENT.)

DURING the past six months the general banking position in the United States has shown further marked improvement, even more pronounced in some respects than that witnessed in the six months ending last October. Among the most noteworthy changes that have taken place is the increase in total gold holdings of the 12 Federal Reserve banks from \$2,732,599,000 last autumn to \$2,995,202,000 on April 26th, making the total reserves, including legal tender notes, silver, and other items, \$3,124,839,000 for the entire system, as compared with \$2,882,942,000 at the beginning of October. The amount of Federal Reserve notes in actual circulation has been reduced by \$324,745,000 to \$2,157,568,000—the smallest total since August of 1918—while there has been an enormous shrinkage in bills and acceptances on hand; that item now stands at only \$582,615,000, as against \$1,440,000,000 on October 5, 1921. The ratio of total reserves to deposit and note liabilities combined is now 78.3 per cent., practically the highest point reached this year, representing an advance of about 10 per cent. since last October, and more than 25 per cent. since April a year ago. The consolidated statement of the 12 Federal Reserve banks for the week ending April 26th compares as follows with the report of October 5, 1921:—

Ratio of total reserves to deposit and F. R. note liabilities combined	69.0%	78.3%

While all of the Federal banks in the central reserve cities have greatly strengthened their position, the improvement, as shown by the increase in reserve ratios and the lowering of discount rates, has been more striking in various sections of the country, particularly in the West, North-West, and South, than in the East. It will be recalled, however, that the readjustment from war-time inflation and the liquidation of frozen credits made more rapid progress in eastern districts during the last half of 1921 than in other localities. Only within the past few months have other banks been able to report similar progress. For instance, the reserve ratio of the Federal Reserve Bank at Richmond, Virginia, has advanced to 63 per cent., as compared with 48 per cent. last October; the Dallas, Texas, institution's ratio shows an increase from around 41 per cent. to more than 62 per cent., and like gains have been recorded at all centres where the ratio percentages were abnormally low last autumn, the single exception being the Federal Reserve Bank at Kansas City, whose ratio is about 58 per cent., or much lower than that of any other central reserve institution. The New York Federal Reserve Bank has the highest ratio; on April 26th it stood at 86.5, while those of the other 11 banks, barring Kansas City, ranged from 62.4 per cent. up to 78.8 per cent. The Boston bank's ratio has remained at about 75 per cent. for some time; member banks in that district have apparently been affected, directly or indirectly, by the prolonged strike of textile workers in New England, which has paralysed the textile industry in parts of that section, with far-reaching results. The reserve ratio of the Boston Federal Reserve Bank was the highest in the entire system a

year ago; it is now lower than that of any other eastern Federal Reserve institution. As reserves of the banks increased, their discount rates were lowered gradually, notably in the case of banks in agricultural districts, which were maintaining rates last autumn much higher than those in the East. The Minneapolis bank's discount rate was 6 per cent. last October; it is now 5 per cent. The banks at St. Louis, Kansas City, and Dallas also made similar reductions to 5 per cent. All of the eight other Federal Reserve banks have lowered their discount rates to 4½ per cent. Whether or not a further reduction will be made in the near future, especially at this centre, is uncertain at the moment, although such action has been expected for some time. The decided improvement in the banking situation throughout agricultural sections in recent months has been due largely to the extensive liquidation of loans, which, in turn, was made possible by the higher prices realised by farmers for their crops. As a result of such liquidation, funds have lately been piling up so rapidly at various centres that bankers, owing to the difficulty in finding employment for all moneys thus released, are now much less insistent than they were a while ago that outstanding loans be taken up. There has been a pronounced relaxation of the credit tension in all parts of the country, and time money rates have become distinctly easier; funds are now freely offered for all periods up to six months at 4½ per cent. Demand for new accommodation, however, continues rather light. Commercial paper discounts, which not long ago ruled at about 6 per cent. for prime names, have fallen to 4½ per cent.; as trade is still slow in many lines, the volume of business paper being discounted is not large. The tendency of money rates is toward still lower levels. One of the most significant developments recently in that connection was the action of the Treasury Department in offering certificates of indebtedness bearing a new low interest rate of 3½ per cent.; that was generally construed as foreshadowing a period of easier money in the not distant future.

One unfavourable development that has attracted a good deal of interest in Federal Reserve bank circles is the rapid decrease in the volume of acceptances executed by member banks and outstanding. Among the causes of the decline are mentioned the business depression, the falling off in the dollar value of our imports and exports, cheaper money in London favouring the use of sterling bills, and the resumption of financing in the London market, which was temporarily diverted because of war conditions. Another important factor, apparently, has been the relatively rigid requirements for eligibility at Federal Reserve banks, which were established by regulations issued by the Federal Reserve Board in 1920. Those regulations served to restrict the volume of acceptances, and, as one authority points out, placed American bankers at a disadvantage, as compared with European bankers, in the granting of acceptance facilities. In order to remove such restrictions and to stimulate the acceptance business, the Federal Reserve Board recently revised its regulations governing the rediscount by Federal Reserve banks of bank acceptances. While still maintaining an effective control of the quality of American bank acceptances, the new regulations permit greater elasticity in meeting competition of foreign banks. As explained by one of the Federal Reserve banks, "the principal change effected by the new regulations is the elimination of the virtual requirement that all bills which may be accepted in import and export transactions must be documentary or secured in order to render them eligible for rediscount." In a general way, the effect of this liberalisation of the Board's regulations will be "to give the Federal Reserve banks greater discretion in determining the eligibility for rediscount or purchase of any particular bill, instead of subjecting all bills to the rigid tests prescribed by a formal regulation."

The improvement in the general banking situation has been coincident with an increase of activity in some of the basic industries throughout the United States, the increase becoming pronounced during April, particularly in the iron, steel, copper, and automobile industries. There has also been a remarkable expansion of

business in the building trades and allied industries. In the textile field, woollen goods manufacturers are well engaged; some improvement is noted in the silk goods industry; Southern cotton goods mills are running close to capacity, but textile operations in New England have been greatly curtailed by the widespread strikes in that section. Wholesale and retail trade generally, however, have not yet displayed activity comparable with that witnessed in the basic industries. Railroad traffic shows a steady increase, which is being reflected in larger earnings than have been reported in many months. Thus far the coal strike has had little unfavourable effect upon any industry. With the exception of the voluntary idleness of coalminers and cotton mill operatives in New England, there is less unemployment than for many months past.

Security markets during the past month have been unusually active and buoyant as a result of easier money conditions and the brighter situation and outlook in many directions. For 26 consecutive full-day sessions, transactions in the stock market have reached or passed the million-share mark, and prices of numerous industrial and railroad shares have repeatedly established new high records for this year. Bonds likewise have advanced sharply under a broad and rapidly increasing investment demand for old and new issues, both domestic and foreign. As a result of the speculative activity Wall Street brokers' loans, according to a reliable estimate, now approximate \$1,250,000,000 in the aggregate, or close to the December, 1919, total of about \$1,350,000,000. The present credit situation, however, is quite different from that of 1919. Member banks, one observer points out, were then indebted to the Federal Reserve system through rediscount operations to the extent of more than \$2,296,000,000, of which more than 1½ billions was secured by Government paper, the total including rediscounted paper and bills bought. The volume of rediscounts and bills bought for the entire Federal Reserve system amounted, on April 26th, to only \$582,615,000, of which \$178,991,000 was secured by Government collateral, and \$321,106,000 by commercial and other paper. Owing to the well-liquidated position of Federal Reserve banks, no concern is felt over the recent expansion in Wall Street loans; in fact, since commercial borrowing has been light, and continues so, the opportunity to employ surplus funds in liquid loans secured by standard stocks and bonds has been welcomed. When financial needs of trade and industry increase the situation will be different. Ample credit, however, will undoubtedly be available for any further business and industrial revival.

The outlook at present is more or less clouded by a number of uncertainties, including tariff and proposed soldier bonus legislation, to say nothing of possible developments in the international situation; but bankers generally look for further improvement, although for some time it is likely to be irregular and gradual.

BANKING IN GERMANY.

(FROM OUR BERLIN CORRESPONDENT.)

WITH some minor exceptions, the German banks' reports for 1921 have not yet appeared. The great banks, pleading excess of work, have not yet returned to their useful pre-war practice of publishing balance-sheets every two months. But though the last balance-sheets are for the end of 1920, banking figures have so much become functions of the currency inflation that the condition of the banks throughout 1921 can be sufficiently judged by studying the reports for 1920, together with the statistics of currency inflation of the floating debt and of Treasury bill operations in the next year. The liabilities, totalling 63,346 millions, of the four "D" banks, and the Berlin Handelsgesellschaft, Commerz, National, and Mitteldeutsch Kredit banks at the end of 1920 were, for instance, 22,032 millions more than a year earlier; the assets classified as "in first degree liquid," totalling 46,308 millions, were 15,973 millions more; and nearly all other figures showed corresponding increases. That this process, though figures are not available, continued in 1921, is inevitable from the fact that the currency in circulation

continued to increase rapidly, and that the total of discounted Treasury bills, operations in which have become an ever more important part of the banks' business, also greatly increased. The balance-sheet for the end of 1921 of the Berlin Handelsgesellschaft, which is available, balances at 5,467 millions, against 2,665 millions in 1920. The holding of bills alone rose from 1,347 to 2,619 millions. Such profit and loss accounts as have appeared also show inflation under all heads. Thus the net profits in 1921, on an unchanged capital, of the last-mentioned bank were 61.507 millions, against 36.82 millions in 1920, and against 6.382 millions in 1914.

Apart from the combination tendency, the last important case of which was the semi-fusion in November, in form of a "Gemeinschaft," of the Darmstadt and National Banks, the most noted banking features of late have been the numerous foundations of small banks, the growth of communal banking, and the invasion of foreign banks. The new small banks, of which a list of nearly 50 lately appeared in a financial journal, are mostly special institutions for financing particular industries and foreign trade, and have small capital, in one case as low as 300,000 marks. The foreign banks are mostly in occupied territory. The communal banks, or "Giro-Centrals," are mainly a product of the war, having owed their rapid development to the municipalities' need of funds for carrying on such war work as the support of soldiers' families. They are financed with the public Savings Bank deposits. These banks, organised in 12 "centrals," are now united under a single institution in Berlin; and their operations have extended to general banking and to financing of local loans. They have developed very rapidly. The transactions of the Hannover Giro-Centrale alone increased from 848 millions in 1915 to 81,479 millions last year. As undesirable competitors, the "Giro-Centrals" are being sharply attacked by the great commercial banks.

The capitalisation of the commercial banks continues to increase, but far less rapidly than the totals of their transactions. At the close of 1921 the position (in millions of marks) was:—

	Capital.	Reserves.	Capital and Reserves Combined.
Dresdner.....	550	335	885
Deutsche	400	450	850
Darmstädter	420	200	620
Disconto.....	400	250	650
Bärmer Bankverein...	400	115	515
Commerz und Privat ..	350	137	487
National.....	300	150	450

Since 1921 the Disconto Bank has increased its capital to 610 millions, and for a short time led; but the Deutsche Bank last month, in connection with its fusion with the Deutsche Petroleum Gesellschaft, decided to double its capital to 800 millions, so that the Dresdner has fallen into third place. Further increases of capital are foreshadowed in the financial Press. The movement towards increase of banking capital, as in other branches, is purely a result of the inflation, and dates back only to 1920, in which year 92 banks raised their capital by a total of 1,085,870,000 marks, while in 1919 bank capital increases were only 16, and totalled only 35,613,000 marks. In 1921 there were 162 cases of increase of banking capital to a total of 4,402,630,000 marks; and 63 banks with capital of 469,350,000 marks were founded, as against 38 new banks capitalised at 252,000,000 marks in 1920.

The liabilities of eight leading banks—the four "D" banks and the Berlin Handelsgesellschaft, Commerz Bank, National Bank, and Mitteldeutsche Credit-Bank—in the balance-sheets for December 31, 1920, are as follows:—

	(Millions of Marks.)	1920.	Increase Over 1919.
Capital and reserves	2,514	484	
Acceptances, cheques	918	113	
Deposits, creditors	62,428	21,919	
Total liabilities.....	63,346	22,032	
Per cent. of capital and reserve....	2,519%	2,277%	

Of 46,308 millions classified as assets liquid in the first degree, 37,222 millions were bills and Treasury bills, 4,296 millions cash and Reichsbank deposits, and 4,467

millions other bank credits. The percentage of assets of this class of liquidity to liabilities was 73.2, as against 69.3 per cent. in the 1919 accounts, and varied between 85.1 per cent. for the Deutsche Bank and 44.7 per cent. for the National. The banks have not followed the Reichsbank's recent example of entering commercial bills and Treasury bills separately; but it is known that Treasury bills make up the main, and an ever-increasing, part of this entry. The banks are, therefore, ever more and more tied up with the State finances; and their operations have become much simplified, as they can now place their clients' money out on an ideally liquid security, the Reichsbank being obliged by law to rediscount without limit. The resort to Treasury bill discounting is, of course, inevitable; but the practical disappearance of commercial bills is generally lamented by bankers and by business men.

The chief causes of this disappearance are that credit has practically disappeared from industry and trade. Manufacturers and dealers require payment on delivery, and often part payment in advance. This is ascribed to the general shortness of money, but its fundamental cause is the disadvantage which a creditor suffers in the present time of ever-depreciating currency. The low interest and discount rates can play no rôle in favouring credit when, in the three months' period of an ordinary commercial bill, the buying value of money at home falls to half and its exchange value to even less. The assets of the eight banks classed as liquid in the second degree totalled 3,399 millions, an increase of 542 millions over 1919, consisting mainly of advances on securities, 1,496 millions, and secured advances on wares, 1,545 millions. The total assets liquid in either degree were 49,707 millions, or 16,515 millions more than in 1919, and constituted 78.3 per cent. of liabilities, against 72.8 per cent. Liabilities not covered by liquid assets totalled 13,639 millions, or 5,516 millions more than in 1919. The great rise in banking figures is sufficiently shown by the fact that the transactions of the Deutsche, Disconto, and Dresdner Banks in 1920 exceeded 1 billion marks, and those of all the first-rank Berlin banks together exceeded 5 billions.

The profit and loss accounts show corresponding increases. Nominal profits have of late risen year by year. The main cause is the chronic "Deficit-Wirtschaft" of the State, which governs alike the banks' interest, Bourse tendencies, and new issues. The interest allowed by the State on Treasury bills provides a sufficient margin over the banks' low interest on deposits to produce a big and certain profit. The Bourse in 1920, with the exception of a reaction in the summer, was extraordinarily active, and it was still more active in 1921. The same is true of the new capital market. New capital issues in 1920 totalled 11,445 million marks; in 1921, 31,855 millions nominal (effective, 38,533 millions). Against these increases in sources of revenue the banks have to bear very heavy additions to expenditure, owing to rapidly rising salaries, costs of material, and taxes. The following (in millions of marks) is the result of operations in 1920 as compared with 1919:—

	Gross Profits.		Administration and Taxes.		Net Profits.		Dividends.	
	1919.	1920.	1919.	1920.	1919.	1920.	1919.	1920.
Disconto	128.4	397.9	75.2	244.2	53.2	153.7	10	16
Deutsche	213.5	713.0	142.5	570.5	62.5	173.7	12	18
Dresden	135.6	421.8	85.3	278.3	50.3	142.5	9	12
Darmstadt	85.1	263.0	60.8	190.2	20.3	57.9	8	10
Handels Ges.	29.5	72.7	13.2	40.9	16.3	31.8	10	12
National	29.8	110.7	14.3	64.4	15.5	45.6	7	10

The position of the mortgage banks tends to improve, owing to a certain resumption of building. A Bill lately passed allows these banks to increase by a limited amount their contracted interest rates in order to recoup them for increased administration expenditure. The mortgage market, however, is practically stagnant; and until building begins on a pre-war scale, or until the State control of rents is abolished, these banks can find no object on which to lend. Outstanding mortgages of 35 mortgage banks at close of 1921 were 12,531,220,000 marks, which is only 303 millions more than at close of 1920, and not much more than in 1914. The circulation of mortgage bonds was

12,181,100,000 marks. The four private banks of issue have entirely lost their importance as compared with the Reichsbank. Before the war, the note circulation of the Reichsbank was about 15 times as great as that of the Saxon, Bavarian, Württemberg, and Baden note banks together, whereas at end of 1921 it was 339 times as much. The gold reserves at the close of 1921 were: Saxon Bank, 17,441,000 marks; Bavarian, 29,325,000 marks; Württemberg, 7,886,000 marks; Baden, 3,033,000 marks. This gold, like the Reichsbank's reserve, is at present booked at its pre-war value, but it represents a very considerable value in paper marks. The shareholders have long desired to abandon the note-issue right, sell the gold, and pocket the proceeds; and there was a considerable boom in the shares of these banks on that basis. Last year the banks lost the right of disposition over their gold, but had their note-issuing limits increased. The Prussian State Bank (Seehandlung) has decided to increase its capital from 400 to 560 million marks.

BANKING CONDITIONS IN EUROPE.

UNDER the condition of political chaos on the Continent, it is perhaps not too much to say that European banking is at present in the melting-pot. We do not mean that existing banks will not survive the ordeal to which they have been and still are subjected, but the prevailing uncertainties continue to make for further experimenting and makeshift policies, which will probably leave a train of victims amongst the weaker institutions, and will certainly modify and alter policies, until trade comes once more into more normal channels and permits of natural banking conditions.

The chief difficulties which have confronted the bankers of Europe during the past year have been due to the problems of note circulation, the lack of confidence necessary for credit operations, and the resulting uncertainty in exchanges. The militant attitude of Governments has contributed largely to Budget deficits, which, reacting on credit, have hampered trade to the point of strangulation. The marvel is that under the circumstances experienced during the past year so few failures amongst the banks have been recorded, and that where troubles have been disclosed the effects have been so successfully localised. The few institutions which have disappeared, with one or two exceptions, have been small local concerns. The most notable bank suspension was that of the Banca Italiana di Sconto, but this was due to special circumstances which have already been fully discussed, and the position, thanks to the prompt assistance of other Italian banks, has been dealt with in such a way that, apart from the inconvenience arising from inevitable delays in repayment, apparently little direct loss will accrue to the creditors.

Sweden, Norway, Spain, and Switzerland have all come through a difficult period, though up to now nothing in the nature of real disaster has occurred. It is too soon yet to say that the dangerous times have been successfully negotiated, but it is safe to assume that the weeding out of a few of the weaker concerns, and the measures taken by the more important banks, have cleared the way for safer and healthier conditions. The neutral countries naturally have been hard hit by the collapse of the artificial prosperity they enjoyed during the war, and right up to the end of the post-war boom. Heavy stocks had been accumulated, and the liquidation of the position built up was made more difficult by depreciating exchanges.

France is still waiting for the payment she hopes to derive from Reparations, and, having budgeted accordingly, much may depend upon these windfalls materialising. It is satisfactory, however, to note that the feeling of those in control of the leading banks is not now so certain that these sums will be received in their entirety, and no doubt the policy which this attitude is likely to dictate will be one of greater self-reliance and safety.

Despite occasional rumours, with the exception of somewhat heavy exchange losses by a group of French banks, largely due to the action of certain officials

and not the result of deliberate policy, the showing of the important banks gives grounds for confidence in their ability to undergo any tests to which they may yet be subjected.

While the difficulties which have to be faced by the banking fraternity of our late Allies and the Neutrals are all traceable to the post-war financial chaos, the new Baltic States, Poland, and the Balkan countries have, in addition, each their own particular problems to solve. Newly-established States, such as Poland, have had to create a banking system, and that at a time of far-reaching political confusion and with rapidly changing conditions. What has been accomplished in the way of establishing banking facilities in certain of these countries, notably Poland and Czechoslovakia, in face of apparently impossible circumstances, is remarkable, and though possibly many of the new institutions may not weather the storms still ahead, the foundations have been laid for satisfactory development.

The fierce spirit of nationalism, resulting in the establishment of tariff walls and kindred regulations, has added to the problems of financial construction in the newly-created States. Foreign banks have been excluded, with the result that old-established branches of non-native banks have had to be closed, or taken over by the national banks. A recent interesting development has been the closing of all the Spanish branches, except that in Madrid, of the London County Westminster and Parr's Bank, Limited.

The problems to be faced by our late enemies are of a different nature. Handicapped as they are by the onerous obligation of reparation payments, with its attendant evils, little or no headway towards stable peace conditions can be made, and it is impossible to forecast the exigencies which German finance may still have to face. The constantly depreciating currency contributes enormously to the difficulties of banks and traders, while incentives to save are materially impaired. From the same cause any estimate or comparison of the banking position is one of extreme difficulty.

When once the question of Reparations has been solved, German enterprise may be relied on to extend once more her banking tentacles over the very wide field which for the moment is closed to her. Swift on the heels of the Russo-German agreement, it is already rumoured that one of the big German banks is opening in Moscow. Circumstances have placed British banking interests in an exceptionally favourable condition to meet this future competition, but the policy to be pursued by Britain is still shrouded in mystery, though evidence comes from various quarters of the eagerness of Continental banks to attract British banking capital.

It is still too soon to prophesy whether these advances will be accepted, and future British incursions in the foreign field will take the form of shareholding interests in existing foreign banks. The reorganisation of the Anglo-Austrian Bank under the auspices of a London group is hardly a case in point, as this was arranged under special circumstances, but it is quite likely that this method of extending foreign connections and improving international facilities may prove more useful and more profitable than direct representation by means of branch offices.

It has been evident for some time that complete success had not attended all the ventures of British banks into the Continental field. At best, many of these offices could not hope to continue competitors of the native banks, but must sooner or later become mere dealers in exchange. The falling off in foreign exchange business, and the almost complete lack of trading activity to replace this formerly lucrative phase of banking, must have borne heavily on these British outposts.

It is impossible to forecast the lines on which development of the European position may proceed during the coming year. Should the proposal now under discussion to establish international corporations actually materialise, another step will have been taken along the experimental path. The scheme itself, so far

as has been announced, embodies a policy which, if courageously applied, would be valuable in accelerating the recovery of international trade, but much will depend on the actual administration of the proposed central banks. Theory and practice are not always in complete agreement, and the success of any such scheme must be largely dependent on the spirit in which it is controlled. However successful such schemes may be, at best they are only palliative, and though they may give the necessary breathing space to enable Europe to take curative measures, they of themselves can effect no cure. The trouble lies deeper. Let the various Governments balance their budgets and agree their differences, so that some degree of confidence can be regained, and the banking systems of Europe can be trusted to restore financial prosperity.

CURRENCY AND PRICES.

THE statistics given in the currency pamphlet submitted to the International Financial Conference at Brussels have been supplemented by up-to-date figures prepared by the League of Nations, and published in a Memorandum on Currency, 1913-21. From the numerous tables included in this document we have compiled the appended composite table giving the percentage figures relating to currency, prices and banking deposits for those countries for which data are available.

The most complete figures are those relating to note circulation. Maximum figures were reached in most cases in 1920, apart from those countries in which there has been a clear increase throughout the past two years, and with the exception of India, where an increase in 1921 succeeded a considerable reduction in 1920, and of Finland and Australia, where the contraction of circulation began after the first quarter of 1921. In the case of the last six countries on the list the figures for the end of 1920 have been taken as 100, it having been impossible to give comparable figures over the whole period, owing to the conversion of currencies in these States. The increase shown in the note circulations of these countries in 1921 was due to some extent to the entry into circulation of notes replacing old Austrian, German, or Russian currencies. This applies especially to Roumania, owing to the late date at which the conversion of krone and rouble and

German lei-notes was effected. In contrast with the relatively slow contraction in paper currency circulation prices have undergone a radical change in the great majority of countries compiling wholesale price index numbers. The fall in prices began in the Far East and the United States early in 1920, and spread westward via the United Kingdom to Europe. During the year 1921 there was some period of falling prices in every country in the world in which index numbers are compiled, with the exception of Poland, although in Germany the fall was only temporary. Official rates of discount were, as a whole, raised during the first three-quarters of 1920, kept stationary at their maximum level during the next six or seven months, the period of the greatest price decline, and then gradually lowered during the last half of 1921.

It will be seen from the table that the fall in prices at the latest date given is greatly in excess of the reduction in note issues.

Moreover, only in the case of five countries, Egypt, U.S.A., Norway, Sweden, and the Netherlands, was the circulation at the end of 1921 less than it was at the time of the Armistice, although the increase during the last year of the war was, at any rate in the majority of European countries, greater than during any other equivalent war period. On the other hand, in the case of all countries for which the data are available, with the exception of Japan, India, Italy, New Zealand, Germany, and Poland, prices were lower, and in most cases very considerably lower, at the end of 1921 than in November, 1918.

Various explanations of these phenomena have been put forward. It may in the first place be due in part to the existence of a double drag. Retail prices have not moved so fast as wholesale, and some time must elapse before the fall even in retail prices has any serious influence on the amount of cash which individuals carry in their pockets. In view of the extent of the fall in prices and the extent of the discrepancy between that fall and the contraction in circulation, however, it would not appear that these facts can constitute more than a partial explanation. It has been suggested that the fall in wholesale prices has to some extent been fictitious, since, owing to the slump in trade, goods have become unsaleable, and compilers of index numbers have been forced to accept quotations from few, frequently more or less forced, sales.

* To allow for new level of purchasing power as measured by price index numbers.

Further, it has been suggested that, owing to the fact that a certain quantity of notes have been lost or destroyed, and additional quantities hoarded at home and exported and immobilised abroad, the total effective circulation is very much smaller than the total number of notes outstanding. If the material for arriving at this smaller total were available, and if it could have been used for the purpose of comparison, a greater contraction would have been shown in the volume of immediately effective circulation, because while the figures for the basic date would have been reduced by the deduction of the destroyed or immobilised notes from the total circulation at that date, the notes withdrawn have, it is presumed, been withdrawn from the immediately effective, not from the immobilised, portion of the circulation.

If this explanation be accepted, then in all cases in which the contraction of note circulation does not completely stop the hoarding or export of notes, the continual reduction in the immediately effective circulation due to these causes constitutes a similar though distinct factor working in the same direction.

The contrast between the price movements and those of deposits is even more marked than between prices and currency. In so far as deposits represent more or less permanent savings, their failure to contract or expand in the same measure as prices was, of course, to be expected, and in so far as they represent savings accumulating for future investment they are likely to move more directly with money rates than money values. Further, it is argued that the failure of deposits to reflect more closely any decrease in the volume of available credit is due to the so-called freezing of credits; that, although bankers may have become increasingly unwilling to grant further credits, they were during the slump in prices unwilling or unable to call in old credits; and that as outstanding loans found their reflection in deposits, it was to be expected that an actual diminution of the volume of banking facilities offered would not result in the immediate diminution in the figures of bank credits and bank deposits. The nature of the change in the use of deposits here referred to would be similar to changes in the rapidity of notes in circulation. Here again the figures are, however, to some extent misleading, owing to the fact that the deposits of commercial banks are composed of very dissimilar elements.

In almost every instance the increase in the deposits of the savings banks has been very much slower than in those of the commercial banks. This may be attributed partly to the existence during and since the war in a number of countries of Government savings certificates and other forms of war loans, which have absorbed the savings of the small investor. But all forms of savings and time deposits normally increase more slowly during a period of rising prices than do those with a more rapid turnover. In order to give a comparison between countries of commercial and savings deposits the latter are given in the final column as percentages of the 1913 figures. As the value of these deposits, however, must vary in sympathy with the purchasing power of money, columns are added showing the percentages obtained after dividing the absolute figures of each country by that country's wholesale price index number.

RECENT BANKING LITERATURE.

FOR bankers, as for lesser folk, it has, for the last three or four years at all events, been impossible to look at their business from an insular point of view. They have had to think in terms of world economics, to assert the financial unity of Europe even at the period when it has seemed most completely shattered, to the external eye. This fact is reflected in the banking literature of the period. There are comparatively few books dealing with the technique of banking, against a vast accumulation dealing with foreign exchange, currency inflation, international debts, Reparations, &c. And these are, indeed, the problems with which the banker is to-day called upon to cope. One might feel more hopeful were there any reasonable probability of their being left to him instead of to the complicated evolutions of the politicians.

First among recent publications dealing with what may be called the "domestic" aspect of banking may be mentioned an admirable volume in the Bankers' Library, for which Messrs Pitman are responsible—"The Bankers' Clearing House," by its former Chief Inspector, Mr P. W. Matthews, with a preface by Mr Holland-Martin. In this account is given of the slow stages through which the idea of a clearing house had to pass after the day on which it was first mooted by the energetic Charles Babbage, and of its present work and organisation. There is also an excellent account of the recent process of bank amalgamation, and some invaluable statistics. Indispensable, of course, is the Bankers' Almanac and Year-Book, published by T. Skinner (London, 42s); while the latter part of Mr E. E. Spicer's "Money Market in Relation to Trade and Commerce" (H. F. Lynch, 8s 6d) gives a good, and on the whole a reliable, account of the normal machinery of the money market, bills, and the exchanges.

But the characteristic note of the publications of the last six months or so is given by the title of Professor Cassel's masterly "The World's Monetary Problems" (Constable, 3s 6d), which comprises the substance of the view put by the great Swedish economist before the Brussels Financial Conference. To the same category belong two League of Nations Memoranda, that on "Currency, 1913-21," and that on "Public Finance, 1921," both published by Constable. These three volumes form the basis for any profitable discussion of European financial recovery; and that, at the moment, is the banking problem. A very interesting contribution to the same discussion is the collection of papers by the Right Hon. R. H. Brand, called "War and National Finance" (Arnold, 15s). These papers are distinguished by clearness of statement and a courageous frankness in criticism. An important point that he makes is that the financial danger of the Allies' position was very grave at the moment when America intervened; while his book includes a sane and searching analysis, written at a time long before such views were anything like so general as now, of the follies of the Reparation policy. In this same connection there should be read two American contributions, "International Finance and its Reorganisation," by E. M. Friedmann (Dutton; see *Economist*, March 4th, for review), and Professor E. R. A. Seligman's "Currency Inflation and Public Debts" (published by the Equitable Trust Company of New York). Bearing even more directly on the immediate point of severest strain, though not, in itself, of the same weight and substance, is "Reparation, Trade and Foreign Exchange," by L. L. B. Angas (King, 12s 6d).

When one turns from English to foreign publications, there is, of course, a vast output of literature, large part of it in the form of short books, rather more than pamphlets, but hardly amounting to volumes, in German. For instance, a heated and animated controversy rages round the so-called "State Theory of Money," originated by Professor Knapp, who declared, in a book first published in 1905, that the standard of value is a creation of Governmental ordinance, whether there is a nominal gold standard or no. It is essentially this theory, in its application to present conditions, that is discussed in such works as Bendixen's "Wesen Des Geldes," Kerschagel's "Geldproblem von Heute," and Palyi's "Der Streit um die Staatliche Theorie des Geldes," all published in Munich by Duncker and Humblot. Among French books may be recommended M. Jules Descamps' "Les Changes Etrangers" (Alcan, 22f; see review, *Economist*, April 1st), of which the second part is devoted to a discussion of French monetary conditions, though hardly with the frankness that characterises M. Lachapelle's painfully interesting "La Verité sur notre Situation Financière" (Roustan, 10f; see review, *Economist*, November 19th). There is also M. Baldy's "Les Banques d'affaires en France depuis 1900" (Librairie Générale du Droit et du Jurisprudence, 25f). A work of great general interest is the first volume of the "History of the Canadian Bank of Commerce," by Victor Ross, for which Humphrey Milford are responsible in this country (52s).

BANK OF ENGLAND.

The Bank of England received its first charter in 1694. Its capital is now £14,553,000, in fully-paid stock, which is a "trustee" security. For each year from 1904 to 1913 the dividend was 9 per cent., paid in equal instalments, free of income-tax, in April and October. From April, 1914, the dividend has been at the rate of 10 per cent. per annum, less income-tax. The price of the stock on April 30th, 1922,

was 246½, giving a yield of £4 9s 3d per cent. The authorised note issue against securities is now £18,450,000, the Government Debt of £11,015,100 forming part of the security. All notes issued in excess of this amount must be covered by an equal amount of gold, except in so far as the Currency and Bank Notes Act, 1914, abrogates the provision of the Bank Act, 1844, in this connection.

(1) COLONIAL BANKS.

AFRICAN BANKS.

ANGLO-EGYPTIAN BANK, LIMITED.

The report presented at the meeting held on November 29, 1921, states that the gross profits for the year ended August 31st last, including adjustment of taxation, and after making full provision for all bad and doubtful debts, are £450,617, and deducting the expenses, amounting to £331,734, there remains a balance of £118,883 net profit for the year. To this amount must be added £50,000, the balance carried forward on August 31, 1920, making £168,883, which the directors propose shall be dealt with in the following manner:—Contribution to staff provident fund, £6,880; interim dividend of 5s per share, free of income-tax, June 1st, £30,000; dividend of 10s per share, free of income-tax, to be paid on December 1st, making with interim dividend 15 per cent. for the year, and bonus of 2s 6d per share, also free of income-tax, £175,000; written off premises account, £5,000; balance carried forward, £52,303—£168,883.

BALANCE-SHEET—August 31, 1921.

BANK OF BRITISH WEST AFRICA, LIMITED.

The report presented to the meeting held on July 14, 1921, is as follows:—After providing for current charges (including the contribution to the staff profit-sharing fund), rebate on bills, and bad and doubtful debts, there remains a net profit of £139,803, to which must be added £30,377 brought forward from last year, making a total of £170,180. Of this sum £32,000, being 4 per cent., has already been distributed in interim dividend, and the directors now recommend the payment of a final dividend of 4 per cent., absorbing a further sum of £48,000, making the distribution for the year 8 per cent., less income-tax. £20,000 has been applied to the payment of stamp duty upon the new capital authorised, £15,000 has been applied to writing down premises and furniture account, and £5,000 has been added to the bank's insurance fund. The balance of £50,180 is carried forward.

NATIONAL BANK OF EGYPT.

The report presented at the meeting held in Cairo on March 21st states that the gross profit for the year ending December 31, 1921, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for bad and doubtful debts, amounts to £991,830. After deducting from this sum for directors' fees, £11,667; for current expenses, £421,607—£433,274; there remains £558,556. In conformity with Article 49 of the bank's statutes, a dividend of 4 per cent. is payable on the share capital, £120,000; after this statutory distribution there remains £438,556; adding to this the balance brought forward from last year, £172,364, the amount available is £610,920. The directors consider it prudent to allocate to special reserve for contingencies a sum of £100,000, which leaves £510,920. From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital, which will absorb £330,000, and leave a balance to be carried forward of £180,920. The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s per share. An interim dividend of 8s having been paid on September 5, 1921, the balance remaining to be distributed will be £1 2s per share.

BALANCE-SHEET—December 31, 1921.

NATIONAL BANK OF SOUTH AFRICA, LIMITED

The report presented to the meeting held at Pretoria on June 29, 1921, states that, after making full provision for bad and doubtful debts and applying £50,000 in reduction of bank premises account, the net profits for the year are £382,081, inclusive of the balance of £43,200 brought forward from March 31, 1920. The bank's investments stand at or under the present market prices. They recommend that the profit be apportioned as follows:—To dividend of 8 per cent. (of which the interim dividend paid for the six months ended September 30, 1920, absorbed £118,600), £237,200; to reserve fund (raising it to £1,300,000), £50,000; to pension fund, £60,000; to balance to be carried forward, £14,581—£382,081.

12 Reasons WHY—

—Your office machinery is incomplete without the new Marconi International Directory, Buyers' and Exporters' Guide, which marks a new era in Directory Publishing, and comes as a great new service to businessmen everywhere.

1. It contains the full titles of 41,299 of the World's leading business houses, carefully selected and arranged in one alphabetical series and tells you their business.
2. Gives you their full postal addresses.
3. Supplies you with their proper cable addresses.
4. And states the telegraphic codes they use.
5. Includes a Classified Trades List of more than 60,000 entries arranged under 4,119 various Trade headings and shows you at a glance the principal firms in each country engaged in a particular trade.
6. Distinguishes clearly between actual manufacturers and dealers.
7. Contains an alphabetical register of cable addresses enabling you to identify at once the sender of a cablegram when an unfamiliar signature is used.
8. Provides you with a method of referring to any firm mentioned by a simple 5-figure indicator.
9. It is so arranged and indexed that it can be referred to with equal facility by subscribers of any nationality.
10. The book throughout has been expressly designed for quick and convenient reference to any item.
11. No book in the world offers such a complete service to progressive business men.
12. **As a subscriber to the 1st Edition you will receive special concessions and considerable reductions in connection with future Editions.**

Think of the many ways in which this volume can save you time, money and worry in the daily routine of your office. Consider the valuable assistance it gives when seeking new markets in which to buy or sell. Any business house engaged in foreign trade, however small, is severely handicapped without this valuable work of reference.

Messrs. RATNER SAFE CO., LTD.,
61, Queen Street, Glasgow.

DEAR SIRS,

We wish to express our satisfaction with the way in which your safes withstood the fire which occurred in our premises on July 2nd, 1921. We had three of your safes—a small Book Safe containing private documents, a large Double-doored Book Safe, and a two-ton Drill-proof Cash Safe. The smallest safe was found and opened a few days after the fire, the large Book Safe was got out a fortnight afterwards, while it was three weeks before the two-ton Safe was seen 50 feet below where it had been seated. All three safes were subjected to a scorching heat. We have pleasure in informing you that the contents were found absolutely intact.

We are, Yours faithfully,
WALLACE & WEIR,
Signed) ROBERT MILL, *Secretary.*

It is announced that the balance at credit of profit and loss account for the financial year ended March 31, 1922, amounts to £193,000. This figure is arrived at after taking into account (a) balance of £34,000 brought forward from the last year, (b) transfer of £300,000 from reserve fund, and (c) transfer of £25,000 to bank premises. All bad and doubtful debts have been fully provided for, and the bank's investments have been taken at or below present market price. At the general meeting of shareholders to be held at Pretoria on June 30th next, the directors will recommend that the profit and loss balance of £193,000 be allocated as follows:—Interim dividend for the half-year ended September 30th last at the rate of 8 per cent. per annum, which absorbs £118,000; pension fund, £50,000; balance carried forward, £25,000.

STANDARD BANK OF SOUTH AFRICA, LIMITED.

The directors declared an interim dividend of 7s per share (being at the rate of 14 per cent. per annum) subject to income-tax, out of the profits for the half-year ended September 30, 1921.

BALANCE-SHEET—September 30, 1921.

AUSTRALASIAN BANKS.

AUSTRALIAN BANK OF COMMERCE, LIMITED.

The report presented at the meeting held on July 26, 1921, states that the balance of profit and loss for the year ended June 30th, after making ample provision for all bad and doubtful debts, deducting rebate on current bills, and expenses of management, directors' and auditors' fees, interest on fixed deposits, rates, &c., amounts to £231,798; less graduated land and income taxes for the year, £37,312—£194,486; from which deduct interest paid on inscribed deposits, £54,907; profit for the year, £139,578. From this amount the following appropriations have been made: transfer to reserve fund, £50,000; transfer in reduction of bank premises account, £10,000—£60,000. Out of the taxable portion an interim half-yearly dividend at the rate of 6 per cent. per annum was paid in January last, absorbing £36,000; and a final half-yearly dividend at the rate of 7 per cent. per annum is now recommended, amounting to £42,000—£78,000—£138,000; balance, £1,578; brought forward from last year, £28,813; leaving to be carried forward, £30,391.

PROFIT AND LOSS ACCOUNT.	
Dr.	Cr.
Reserve fund	30,000
Dividend in May, 1920	25,000
Dividend in November, 1920	31,250
Bank premises and furniture	5,000
Balance	73,429
	164,679

The balance of profit and loss for the year ended March 28, 1921 (including the balance brought forward from previous year, £16,571), amounts to £104,679, out of which an interim dividend at the rate of 10 per cent. per annum was paid in November last, £31,250; leaving available £73,429, from which it is proposed to pay a dividend at the rate of 10 per cent. per annum, £31,250; to transfer to reserve fund, £20,000—£51,250; leaving a balance to carry forward of £22,179.

BANK OF AUSTRALASIA.

The report for the year ended October 10th last is as follows:—After providing for rebate on bills current, for British and Australasian rates and taxes, for a bonus to the staff, and making provision for bad and doubtful debts and other contingencies, the net profit for the year amounted to £588,389. To this has to be added £145,874, brought forward from the previous year's account, making a total of £734,263. From this total the directors have appropriated £487,500, representing, for the year, a dividend at the rate of 10 per cent., and bonus of 3 per cent., both free of income-tax. Of this, £227,500, equal to £2 12s per £40 share, was paid on September 30th last, as an interim dividend, leaving £260,000, equal to 6s 6d per £5 share, for present distribution on the increased capital. £100,000 has been appropriated to the reserve fund, and £25,000 in reduction of the bank premises account. £121,763 will remain to be carried forward to the next account.

BALANCE-SHEET—October 10, 1921.

PROFIT AND LOSS ACCOUNT.

Dr.	Cr.
Interim dividend for quarter ended June 30, 1921, at 10% per annum, paid in terms of Clause CV. of deed of settlement out of the half-year's profits	124,584
Balance proposed to be dealt with as follows: quarter's dividend to September 30, 1921, at the rate of 10% per cent. per annum out of the half-year's profits, £125,000; augmentation of the reserve fund, £75,000; balance carried forward, £150,923	350,923
	475,507

The report presented to the meeting held on November 29, 1921, states that the net profits for the half-year, after deducting rebate on current bills, interest on deposits, paying income, land, and other taxes, amounting to £94,488 (making in all £247,917 for the year), reducing valuation of bank premises, providing for bad and doubtful debts and fluctuations in the value of investment securities, and including recoveries from debts previously written off as bad, amount to £349,409; to which is added undivided balance from last half-year, £126,098—£475,507. An interim dividend at the rate of 10 per cent. per annum for the quarter ended June 30th last was paid on August 26th, out of the half-year's profits, in terms of Clause CV. of deed of settlement, £124,584; leaving a balance of £350,923, which the directors recommend to be dealt with as follows: to payment of a quarter's dividend to September 30, 1921, at the rate of 10 per cent. per annum out of the half-year's profits, £125,000; to augmentation of the reserve fund, £75,000; to balance carried forward, £150,923—£350,923.

BANK OF NEW ZEALAND.

The report presented at the meeting held at Wellington, on June 17, 1921, states that the profits, after providing for expenses of management, all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, also for bonus to staff, are £848,455. From this has to be deducted interest on guaranteed stock, £21,199—£827,256. Of this sum the directors have allocated in reduction of bank premises and furniture, £50,000; leaving balance of profit for the year, £777,256; to which has to be added balance brought forward from last year, £146,520—£923,776. From which there has been paid: interim dividend on "A" and "B" preference shares, £65,625; interim dividend on ordinary shares, £131,250—£196,875; leaving available for distribution, £726,901. This the directors propose should be disposed of as follows:—Dividend on preference "A" shares, making £50,000 for the year, equal to 2s per share, £6,250; dividend on preference "B" shares, making £62,500 for the year, equal to 2s per share, £40,625; dividend on ordinary shares, making £300,000 for the year, equal to 2s 8d per share, £168,750; transfer to reserve fund, £150,000 (making reserve fund £1,525,000); leaving balance to be carried forward, £361,276—£726,901.

BALANCE-SHEET—March 31, 1921.

PROFIT AND LOSS ACCOUNT.

Dr.	£	Cr.	£
Interim dividend for the half-year ended December 31, 1920, at the rate of 10 per cent. per annum, paid on January 21, 1921, out of the year's profits	125,000	Amount brought forward from last year	82,262
Balance, proposed to be dealt with as follows:		Profit for year ended June 30, 1921	392,923
Dividend for past half-year at the rate of 10 per cent. per annum out of the year's profits, £125,000; reserve fund, £160,000; balance carried forward, £85,185	350,185		475,185

The report presented to the meeting held at Sydney, on July 26, 1921, states that the balance at credit of profit and loss, after adding the amount brought forward, and deducting interim dividend at the rate of 10 per cent. per annum, paid on January 21, 1921, rebate on current bills and accrued interest on fixed deposits, reducing premises account, paying land, income, and other taxes, and providing for bad and doubtful debts, as well as granting to the officers a bonus on their salaries, and making an addition of £5,000 to the officers' provident fund, amounts to £350,185; out of which the directors recommend the following appropriations—to payment of a dividend for the past half-year at the rate of 10 per cent. per annum out of the year's profits, £125,000; to transfer to reserve fund, £140,000; to balance carried forward, £85,185—£350,185.

COMMERCIAL BANK OF AUSTRALIA, LIMITED.

The report to the meeting held on August 4, 1921, states that the net profits for the year ended June 30, 1921, amount to £237,772, to which is added amount brought forward, £16,258, making a total of £254,030. From this amount the directors have made the following appropriations, viz.:—To reinstatement of capital, £135,000; to reduction of bank premises, £10,000; to interim dividend on preference shares paid February, 1921, £42,347—£187,347; leaving a balance of £66,683, which it is proposed to apportion as follows:—To dividend on the preference shares at 4 per cent. per annum, £42,347; to dividend on the ordinary shares at 15 per cent. per annum, £11,014; to carry forward to next year, £13,322—£66,683. In addition to the above amount of £135,000 applied towards reinstatement of capital, the sum of £106,658 12s 6d, being premium received on the new issue of shares, has also been applied to that purpose, in terms of circular to shareholders dated November 1, 1920.

BOOKS
ON

COMMERCIAL GOODWILL.

By P. D. LEAKE, F.C.A.

"Mr. Leake's masterly exposition of this difficult and important subject will take rank with his other valuable work."
Economist.

PUBLIC Companies and Goodwill are dealt with in this new book. The subjects considered include market quotation of shares at a premium, its causes and meaning; balance-sheet values; and the issue of shares at a premium. Methods are suggested of testing the Stock Exchange values of shares, and illustrations are given of two cases: (1) a great retail business, and (2) a great insurance company. 21/- net.

PITMAN'S

BRITISH FINANCE.

During and after the War.

The result of Investigations and Materials collected by a Committee of the British Association, co-ordinated and brought up to date by A. H. GIBSON. Edited by A. W. KIRKALDY, M.A., B.Litt.

THIS record should prove of inestimable value, not only to contemporary investigators, but to economists, bankers, etc., for many generations to come. Mr. Gibson has put into clear and chronological form a very great amount of information, some of which might have been lost, and most of which would have been very difficult to obtain.

"No praise could be too high for the volume on British Finance, and it is impossible in a brief review even to suggest the wealth of material which has been so skillfully worked together to make this volume."—Glasgow Herald. 15/- net.

UNION BANK OF AUSTRALIA, LIMITED.

The report presented at the meeting held on July 25, 1921, states that there was a net profit for the year to February 28, 1921, of £598,057, inclusive of £31,716 brought forward from the previous year. The interim dividend paid in January last at the rate of 15 per cent. per annum, equal to 7s 6d per share, having absorbed £187,500, the amount now available is £410,557. From this the directors have made the following appropriations: £20,000 in reduction of the bank premises account in Australia and New Zealand; and £120,000 as an addition to the bank's reserve fund, which now stands at £2,750,000. From the balance remaining the directors have resolved upon the declaration of a final dividend at the rate of 15 per cent. per annum, equal to 7s 6d per share, making 15 per cent. for the year, free of income-tax. The final dividend will absorb £187,500, and leave £223,057 to be carried forward.

BALANCE-SHEET—February 28, 1921.

CANADIAN BANK OF COMMERCE.

The report to the meeting held on January 10th states that the balance at credit of profit and loss account brought forward from last year was £366,571; the net profits for the year ending November 30, after providing for all bad and doubtful debts, were £640,302—£1,006,873. This has been appropriated as follows:—Dividends Nos. 136, 137, 138, and 139, at 12 per cent. per annum, £369,863; bonus of 1 per cent., payable December 1, £30,822; Dominion and Provincial Government taxes and tax on bank-note circulation, £66,781; written off bank

UNITED KINGDOM Temperance and General PROVIDENT INSTITUTION

ESTABLISHED 1840.

A Mutual Office in which the whole of the Profits belong to the Members.

FUNDS EXCEED - - TEN MILLIONS.

By drastically giving effect to the low values obtaining at the end of 1920, and by keeping intact the reserves required by a stringent Valuation the Institution has been placed in an exceptionally strong position.

INCREASED INTERIM BONUSES.

In view of the substantial rise in security values, and as an indication of their confidence in the future prosperity of the Institution, the Directors have substantially increased the rates of Interim Bonuses formerly announced and have decided to allot these increased bonuses on the Compound System. Interim Bonuses on policies now becoming claims accordingly range from 32s to 34s per cent. per annum, calculated on the Sum Assured and existing Bonuses.

Australian Mutual Provident Society

Estab. (A.M.P.) 1849.
THE LARGEST BRITISH MUTUAL LIFE OFFICE.

SOME FIGURES from the SEVENTY-THIRD ANNUAL REPORT as at 31st DECEMBER, 1921.

ORDINARY DEPARTMENT.

NET NEW BUSINESS.—25,568 Policies Assuring £9,831,717, with Annual Premiums of £308,118.
DEATH CLAIMS.—£1,291,558, including Bonus Additions of £409,057. This is only 52 per cent. of the "Expected."
MATURITY CLAIMS.—£941,225, including Bonus Additions of £247,839.
ACCUMULATED FUNDS (including Industrial) have increased by £2,863,227 and amount to £46,711,178.
WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £13,660,000.
THE DIVISIBLE SURPLUS (after strengthening the Reserves by the application of £253,076 is £1,502,572, which represents a return of 42.4 per cent. of the premiums received under participating policies. The corresponding Reversionary Additions amount to about £2,562,000.
THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent.
THE EFFECTIVE RATE OF INTEREST (after deducting Income Tax) was £5 2s 11d per cent. There is therefore an interest margin of more than 2½ per cent.
THE EXPENSE RATE (excluding Taxes) was only 12.7 per cent. of the Premium Income. This is only about two-thirds of the provision for expenses included in the Premiums.
THE TOTAL ASSURANCES issued in 73 years amount to £216,874,999, of which £116,316,710, or 53.6 per cent., are still in force.

The report presented at the meeting on March 22nd states that the net profits to December 31, 1921, after providing for contingencies and including the balance brought forward from the last account as shown by the annexed statements, amount to £175,181. An interim dividend at the rate of 4s a share was paid in October last, absorbing £40,000, and the directors now recommend a final dividend of 5s a share, less income-tax at 6s in the £, and an addition of £34,000 to the reserve fund, which will then stand at £300,000. They propose to write £20,000 off premises account, leaving a balance of £31,181 to be carried forward to the next account.

BALANCE-SHEET—December 31, 1921.

The report for the year ended December 31 last states that the net profits, after providing for all bad and doubtful debts, amount to £555,064, and adding £149,032 brought forward, the available total is £704,096. An *ad interim* dividend at the rate of 20 per cent. per annum, free of income-tax, was paid on September 20 last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £100,000 to the reserve fund, raising it to £2,600,000. They propose to write £20,000 off house property account and to add £20,000 to the officers' pension fund, leaving a balance of £164,096 to be carried forward.

MERCANTILE BANK OF INDIA, LIMITED.

The report states that the net profits for the year ending December 31, 1921, after providing for bad and doubtful debts, and including £127,638 brought forward from last account, amount to £390,671. From this sum has to be deducted £84,000, being the *interim* dividend of 8 per cent., less income-tax, on the "A," "B," and "C" shares paid in September last. The directors have added £50,000 to the reserve fund (raising it to £1,150,000); £15,000 to the officers' pension fund, and written £20,000 off freehold banking premises. They now recommend a final dividend on the "A," "B," and "C" shares of 8 per cent., less income-tax (making 16 per cent. for the year), leaving a balance of £137,671 to be carried forward.

BANCO NACIONAL ULTRAMARINO.

For the year 1921 the net profits were Esc. 6,596,374, which includes Esc. 354,613 brought forward. It is proposed to place Esc. 700,000 to permanent reserve and Esc. 500,000 to extra reserve fund. The dividend on working shares granted to staff absorbs Esc. 77,430, and Esc. 62,417 placed to staff pension fund. A dividend of 20 per cent., free of Portuguese income-tax and transfer and stamp duties, is proposed (of which 12 per cent. has been paid), leaving a balance of Esc. 456,525 to be carried forward. In 1920 the dividend was the same.

BRITISH ITALIAN CORPORATION, LIMITED.

The report presented to the meeting held on April 25th is as follows:—The balance shown by the profit and loss account for the year 1921 amounts to £44,364; to which is to be added the balance carried forward from 1920, viz., £24,328; making in all, £68,692; which, after deduction of the directors' additional remuneration, as provided by the articles of association, viz., £968, leaves for allocation £67,724. The directors recommend the distribution of a dividend of 4 per cent., free of income-tax, absorbing £40,000, and that the balance of £27,724 be carried forward to new account.

BRITISH OVERSEAS BANK, LIMITED.

The report to the meeting, held on December 16, 1921, states that the profit, after allowing for rebate of interest and providing for all bad and doubtful debts, income-tax, and other taxation for the year ended October 31, 1921, amounts to £102,326, to which has to be added the sum of £35,200, being the balance available from last account, after payment of income and corporation profits taxes for the previous year, making a total of £137,526. Interim dividend on "A" ordinary shares at the rate of 6 per cent. per annum

for the half-year ended April 30, 1921, and income-tax thereon, £30,000; leaving a balance of £107,526, which the governing council recommends should be dealt with as follows:—In payment of a dividend on the "A" ordinary shares at the rate of 6 per cent. per annum (less income-tax) for the half-year ended October 31, 1921, which, together with income-tax thereon, amounts to £30,000; to reserve fund against shareholding interests in foreign banks, £10,000; to reduction of premises account, £10,000; leaving a net balance to be carried forward to next year of £57,526—£107,526. The governing council has now been able to conform to the usual banking practice of deducting all taxation charges before declaring the profits for the year. The balance of £57,526 is, therefore, not subject, as was the case last year, to any deductions of this character.

BALANCE-SHEET—October 31, 1921.

BRITISH TRADE CORPORATION.

The report presented at the meeting on March 29, 1922, is as follows:—Reference was made at the last meeting to the investments of the corporation in subsidiary companies, and the impossibility of placing value thereon. Since that date it has been demonstrated that values should be written down, and also that provision should be made for losses in connection with the closing of the corporation's Batoum branch, and for other bad debts, and the result is that a debit balance is shown upon the profit and loss account of £193,076. The difficulties referred to last year in obtaining payment for goods shipped abroad by clients have been accentuated during the past year, and it is to be feared that some of the loans and advances made will be difficult to realise and may be subject to loss. Having regard to this fact and the statement made by the auditors in their certificate, the directors recommend that the existing capital be written down by an adequate amount, and that there be created an issue of "A" shares to take the place of the capital so displaced. The "A" shares will be preferential, and when issued will be offered to the shareholders. Resolutions to give effect to both of these operations will be submitted to the proprietors in due course. The writing down is subject to the obtaining of a supplemental charter, for which application has been made. The effect of the reduction will be to wipe off the debit balance upon the profit and loss account now shown and to reduce the figures appearing under the heading of bills discounted, loans, advances, and sundry debtors, and provide reserves against other assets.

BALANCE-SHEET—December 31, 1921.

HAMBROS BANK, LIMITED.

The report to be submitted at the meeting on June 1, 1922, states that, after payment of all expenses, making provision for rebate on bills discounted, and bad and doubtful debts, the accounts show a profit of £305,626, to which falls to be added the balance brought forward from last year of £73,787, making an available total of £379,413. After setting aside the sum of £150,000 to contingency reserve account, and allowing the sum of £60,000 for the interim dividend of 6 per cent., free of income-tax, paid on November 1, 1921, the directors now recommend the payment of a further dividend of 9 per cent., making a total of 15 per cent. for the year, free of income-tax, and that the balance of £79,413 be carried forward.

Letters of Credit—Collection of Clean and Documentary Drafts.

FOREIGN EXCHANGE business a speciality. FOREIGN CURRENCIES bought and sold for immediate or forward delivery, enabling traders to secure the exchange for their contracts in the currency of the country of their customers.

All kinds of Banking business undertaken.

brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$14,112,787. The directors recommend the transfer of \$1,369,718 from the profit and loss account to credit of the silver reserve. They also recommend writing off bank premises account the sum of \$1,000,000. After making these transfers, deducting the interim dividend of £3 per share, paid on August 8th last—viz., £360,000 at 2s 7d = \$2,787,097—and remuneration to directors, there remains for appropriation \$8,905,972, out of which the directors recommend the payment of a final dividend on the old shares of £3 sterling per share, and a bonus on the old shares of £2 sterling per share; also a dividend and a bonus on the new shares at corresponding rates—viz., £2 5s and 15s, amounting in all to £720,000, which at 2s 7d, the rate of the day, will absorb \$5,574,193. The balance, \$3,331,779, to be carried to new profit and loss account.

BALANCE-SHEET—December 31, 1921.

IMPERIAL OTTOMAN BANK.

The report presented to the meeting held on November 3, 1921, states that the profit and loss account shows a profit for the year 1920 of £305,056, after providing for bad and doubtful debts, and after adding thereto the balance of £206,405, which was brought forward from the previous year, there remains a total credit balance on the account of

£511,461. In the preparation of the balance-sheet, all assets and liabilities in foreign currency have been converted into sterling at the rates ruling at December 31, 1920. Owing principally to the depreciation in sterling value of the funds employed in francs, the rate for which at December 31, 1920, was 60s to the £, against 41s to the £ at December 31, 1919, there is a large difference on conversion, the balance of which figures in the balance-sheet at £702,569. In consequence it is proposed to apply the credit balance of the profit and loss account to the difference on conversion, which will be thereby reduced to £191,108.

BALANCE-SHEET—December 31, 1920.

IMPERIAL BANK OF PERSIA.

The report states that the profits for the year ended September 20, 1921, after making provision for expenses of management and general charges in London, and at chief office, branches and agencies, income-tax, corporation tax, and bad and doubtful debts, amount to £88,196, to which has to be added £29,051 brought forward from last account, making a total of £117,247. From this sum, £5,292, the amount due to the Persian Government in terms of the Concession, has to be deducted, leaving £111,955, which the directors have dealt with in the following manner:—First interim dividend for the year, at the rate of 3s per share, paid June 15, 1921 (free of income-tax), £15,000; transfer to reserve account, £30,000; transfer to bank premises account, £10,000; second interim, being final dividend, at the rate of 5s per share, paid on December 29, 1921 (free of income-tax), £25,000; carry forward to new account, £31,955—£111,955.

BALANCE-SHEET—September 20, 1921.

Current Accounts are opened for Shareholders and Customers or Friends introduced by them. Interest at the rate of 2½ per cent. per annum, credited annually, is allowed upon the minimum monthly balance, provided it is not under £20. No commission charged for keeping Accounts, but the opening lodgment must not be less than £10, nor the minimum balance less than £5.

Deposits are received at interest in amounts of £1 up to £500, at seven days' notice of withdrawal; sums in excess of that figure are subject to special arrangement as to notice.

Interest is allowed from date of deposit to date upon which withdrawal notice expires, and is added half-yearly, viz., June 30th and December 31st.

The Directors reserve to themselves the power to return Deposits or change the rate of Interest.

Country and Foreign Drafts, Dividends, Coupons, Annuities, Pensions, etc., received and placed to credit. Drafts, Circular Notes and Letters of Credit obtained.

American and Canadian Express cheques cashed and Foreign money exchanged.

Balance carried down	618,622		
	1,211,114		1,211,114

The report states that the accounts show an available balance of £723,622 (including £511,647 brought forward from last year). An interim dividend of 14s per share, amounting to £105,000, was paid in October last. The directors now recommend a further payment of 14s per

share, being a dividend at the rate of 14 per cent. per annum, less income-tax, but on this occasion do not recommend the payment of a bonus. The above payments will absorb £210,000, leaving a balance of £513,622, which the directors recommend should be carried forward to the credit of profit and loss new account.

LONDON AND RIVER PLATE BANK, LIMITED.

The report states that the balance available, after making ample allowance for bad and doubtful debts, income-tax, and £106,782 rebate of interest on bills not due, amounts to £722,324, including £318,140 brought forward from last year. The directors recommend the following distribution:—To dividend, £122,400, being 6 per cent., subject to income-tax, payable December 23rd, making, with £122,400, the interim dividend paid in June last, a distribution of 12 per cent. for the year on the paid-up capital of the bank; to contingency reserve account, £160,000; to profit and loss new account, £317,524, to be carried forward.

BALANCE-SHEET—September 30, 1921.

THE LEADING LIVERPOOL DAILY
in LIVERPOOL, NORTH WALES
and the NORTH-WEST is

The Liverpool Daily Post
and Mercury

Now Reduced to ONE PENNY

A glance at its pages shows its Commercial, Literary and Advertising supremacy.
Local enquiry will confirm this, and is invited.

In all the Provincial Cities of England and Scotland nowadays there is only one big
Morning Advertising Medium—in Liverpool, in Glasgow, in Manchester, in Leeds, in
Birmingham; and in Liverpool that position is admittedly taken by The LIVERPOOL
DAILY POST AND MERCURY, which is supreme in Liverpool and District and the
North-West of England and Wales.

The LIVERPOOL DAILY POST AND MERCURY has a great reputation as a paper
with exclusive sources of information, and as a journal remarkable for its high literary
and commercial standing and editorial influence. It is beyond dispute, and irrespective
of party, the LEADING PAPER, BOTH IN SALE AND INFLUENCE.

The report presented to the meeting held at Basle on March 24, 1922, states that, after deduction of expenses and

taxes, and making provision for bad and doubtful debts, &c., the net profit for the year ended December 31, 1921, amounts to £461,990. The board propose to allocate to pension fund £20,000, to pay a dividend of 5 per cent. on the paid-up capital (according to Article 36 of the articles of association), £240,000—£260,000, leaving a balance of £201,990; less statutory participation of directors, £20,199; the remainder, £181,791, together with the amount carried forward from last year, £49,494—£231,285, is at the disposal of the general meeting, and the board propose: To pay a further dividend of 4 per cent. (making in all 9 per cent. for the year 1921), which will absorb £192,000, and to carry forward £39,285.

YOKOHAMA SPECIE BANK, LIMITED.
(Registered in Japan.)
(YOKOHAMA SHOKIN GINKO.)

The net profit of the bank for the half-year ended December 31, 1921, after providing for all bad and doubtful debts, rebate on bills, &c., was 14,847,143 yen, inclusive of 4,754,937 yen brought forward from last account. The directors propose that 4,000,000 yen be added to the reserve fund, and recommend a dividend at the rate of 12 per cent. per annum, which will absorb 6,000,000 yen. The balance, 4,847,143 yen, will be carried forward to the credit of next account.

THE INVESTOR'S
MONTHLY MANUAL.

Established 1864.

Post Free 1s. 8d.
(January and July double numbers, Post Free 2s. 3d.)
Annual Subscription 21 1 0.

THE MOST COMPLETE PERIODICAL RECORD in existence of the dealings, throughout the United Kingdom, in every description of stocks and shares.

Over 4,000 securities are dealt with each month, showing recent dividends and yields at latest prices. The Manual also contains a valuable summary of Profit and Loss Accounts each month.

IT IS ABSOLUTELY FREE FROM ANY CONNECTION WITH ANY FINANCIAL HOUSE OR SPECULATIVE AGENCY.

The latest issue, published on MAY 2nd, shows the opening, highest, lowest and latest prices during the month of APRIL, and the highest and lowest prices for the first FOUR months of 1922, also the recent dividends declared and Yields at latest prices.

TO ADVERTISERS.

The Manual is subscribed to by Investors of all classes, as well as by Banking Houses, Chambers of Commerce, Mercantile Firms, Stockbrokers, Railway, Insurance, Shipping and other Companies throughout the United Kingdom, the Colonies and abroad. Its circulation, therefore, is of a widespread and influential character, and it is a most valuable medium for advertisements of all descriptions.

The complex design and the technical ingenuity of the modern Strong Room is silent testimony to the high development of those powers of violence which, through past generations, man has learned to wield in the effort to attain his end.

Planning the Strong Room

We shall be pleased to consult with Bankers and their Architects contemplating the design of Strong Rooms, Safe Deposit installations, and all classes of security work.

For almost 70 years we have confined ourselves entirely to work of quality, and as a policy have incorporated every advancement made by science in the construction, irrespective of cost, and offer our services to those who really desire the best.

Wide experience has given us useful data and memoranda which is always at the disposal of the architect, and we shall be pleased to prepare plans and specifications free of charge and without obligation of any sort.

ORGANISATION.

The Hypothec Bank of Japan is a joint stock company established by Law No. 82, of 1896. The Bank has a capital of Yen 51,664,750 (\$ 25,832,375), divided into 1,033,295 shares of Yen 50 (\$25) each. This amount may be increased, however, subject to the approval of the Government, by the decision of a general meeting of shareholders. The Bank is incorporated for a period of one hundred years from the date of its establishment, 1897; but this period may be extended, subject to the approval of the Government, by the decision of a general meeting of shareholders. (Chapter I., Law of the Hypothec Bank of Japan.)

OFFICERS.

The Governor and the Vice-Governor are appointed by the Government for a term of five years from among shareholders owning at least four hundred shares. The Managing Directors and Directors are appointed by the Government for a term of five years from among shareholders owning at least two hundred shares who have been elected as candidates at a general meeting of shareholders.

BUSINESS OF THE BANK.

The business of the Bank is as follows:—

- (1) To make loans, on the security of immovable property, redeemable in annual instalments within a period of fifty years.
- (2) To make loans redeemable in one sum within a period of five years on the security of immovable property or fishery rights.
- (3) To make loans, on the security of "the mass of property" belonging to factories, light railways or tramways, redeemable in annual instalments within a period of fifty years, or redeemable in one sum within a period of five years.
- (4) To make loans redeemable in annual instalments, or in one sum without security to prefectures, counties, cities, towns, villages and other public bodies organised by law.
- (5) To make loans without security to Arable Land Readjustment Associations, Co-operative Societies, Fishery Associations, Forestry Associations, Livestock Associations, or Unions thereof.

The rate of interest on all loans is determined by the Governor within the limits approved by the Minister of Finance.

The Bank is also assigned by the Government to make special loans to the public bodies and associations mentioned above (clauses 4-5), at particularly low rates of interest, for which special funds are furnished to the Bank from the Treasury.

- (6) To make loans of every kind mentioned above through Agricultural and Industrial Banks, the Bank of Taiwan, the Colonial Bank of Hokkaido, the Industrial Bank of Chosen and the Oriental Development Company, acting as sureties.

- (7) To make loans redeemable in annual instalments, against loans made by Agricultural and Industrial Banks, on the security of mortgages created by said banks.
- (8) To take up debentures of Agricultural and Industrial Banks, the Colonial Bank of Hokkaido and the Industrial Bank of Chosen.
- (9) To receive deposits and to apply them to loans redeemable in one sum as mentioned above, and to the advancement of loans on, or the purchase of, negotiable instruments, and to the discounting of bills drawn against agricultural, industrial and aquatic products.
- (10) To act as the depositary of public bodies.
- (11) To engage in other kinds of business prescribed for this Bank by Law. (Chapter IV., Law of the Hypothec Bank of Japan.)

DEBENTURES.

In order to carry on its business, the Bank is authorised by law to issue special Debentures (Kwangyo-Saiken: Hypothec Debentures), with or without premiums, up to an amount not exceeding fifteen times its paid-up capital, provided such debentures do not exceed the combined total value of loans redeemable both by annual instalments, and in one sum and debentures of Agricultural and Industrial Banks and other debentures actually taken up by the Bank. The debentures are issued in denominations of Yen 10 (\$5) and upwards, and bear interest at the rate of from 3.6 to 7.2 per cent. per annum. They are redeemed by semi-annual drawings within a period fixed in the case of each issue, but not in any case exceeding fifty years.

Premiums are paid on 10 yen (\$5) and 20 yen (\$10) debentures, and are divided into several classes, the highest being Yen 5,000 (\$2,500), and the lowest Yen 3. (Chapter V., Law of the Hypothec Bank of Japan.)

GOVERNMENT SUPERVISION.

The Minister of Finance exercises a general control over the business operations of the Bank, and may suspend such operations as he deems contrary to Laws or Ordinances, or to the Articles of Association of the Bank, or injurious to the public interest. The Bank must obtain the sanction of the Minister of Finance in making any alteration in its Articles of Association, and in fixing the rate of dividend to be distributed among its shareholders.

The Minister of Finance appoints special Government officials to supervise the business operations of the Bank. (Chapter VII., Law of the Hypothec Bank of Japan.)

AMALGAMATION WITH AGRICULTURAL AND INDUSTRIAL BANKS.

In April, 1921, the Law authorising the Bank to amalgamate the Agricultural and Industrial Bank of each prefecture was passed. By March, 1922, thirteen such banks came under the vast organisation of the Bank, of which seven are already conducting business as branches of the Bank.

COMPANY MEETINGS, &c.

THE LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY, LIMITED.

FEATURES OF A DIFFICULT YEAR. SOUND FINANCIAL POSITION.

The eighty-sixth annual general meeting of shareholders of the Liverpool and London and Globe Insurance Company, Limited, was held on Tuesday, the 16th instant, at the company's head office, Liverpool, Mr A. K. Barnes (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said the year, though showing considerable profit in the accident department, had been disappointing in the fire and marine departments, where the usual progress was not recorded. Depression, due to economic causes beyond individual or even national control, had affected all branches of commerce—shipping, coal, engineering, cotton and manufactures generally. Insurance, after all, was only the handmaid of commerce, and was bound to reflect its varying moods. They had, therefore, to face the fact that the heavy slump in values experienced in 1921 was represented in the accounts by a sympathetic shrinkage of premium.

Unfortunately, they were not able to show commensurate relief on the other side of the account, for compensatory adjustments in the way of expenses and standing charges were only to be made gradually, and with extreme difficulty. Apart from this, they had to provide for ever-increasing and burdensome taxation, an operating cost entirely outside their control. It followed, therefore, that diminished income involved a higher expense ratio. The method and time of the ultimate reduction of these expenses was receiving the close attention of the management.

FIRE BUSINESS FLUCTUATIONS.

Dealing with the various departments, the Chairman said that in the fire department, as compared with the previous year, the actual losses were at £2,788,464, heavier by £321,288, and the premiums at £4,406,804 were down by £615,466. The position was less serious than these figures at first sight suggested, for they had to meet losses pertaining to the unexpired portion of the previous year's much larger premium income, but none the less he regretted there was a loss on the year's working of £23,295. U.S.A. business had been far from profitable, and in other areas of the general foreign field, and also at home, fire insurance conditions during the year were unsatisfactory. It was noteworthy that some insurance companies included foreign and colonial taxes in the profit and loss account instead of in the underwriting account. Had the Liverpool and London and Globe adopted this method the fire account would have shown a credit balance of £117,000.

LIFE ASSURANCE PROGRESS.

In the life department, although there was a decrease in new business in comparison with the previous year, nevertheless the sum of £1,239,549, which represented the new sums assured, retained at their own risk, was far from unsatisfactory, for only on two occasions in the history of the company had that amount of new life business been exceeded. As the result of the year's operations the life funds had increased by £264,921, and now amounted to £4,044,617. The non-bonus rates to which he referred last year met with a very favourable reception, and this class of policy would help new business figures in future years.

ACCIDENT DEPARTMENT EXPANSION.

In the accident department they had done well. It was true that, as regards employers' liability insurance, the premiums were down from £260,592 to £230,167, but this was largely due to the reduction made last year in the rates. Notwithstanding this reduction, the trading result had been satisfactory.

Motor, workmen's compensation (abroad), public liability, guarantee and burglary insurance business, included in miscellaneous accounts, all showed satisfactory increases. The net amount carried to profit and loss from the underwriting accounts of the accident department was £264,041, as compared with £29,846 last year. The total net accident premium income from all sources had increased from £2,904,965 to £3,130,245.

MARINE DEPARTMENT PROSPECTS.

To the marine department the year 1921 presented many difficulties, and closed with a loss of £36,084. The shrinkage in the value of hulls and cargoes had been phenomenal, and a further distracting feature which it was hoped would not recur was the demand for return of premium in consequence of the unemployment of vessels.

As to the prospects of the present year, they were fully equipped to participate in any improvement in trade whenever it occurred. The marine market was, however, still over-crowded, and competi-

tion drove some companies to take business at rates which must almost inevitably prove unremunerative. It was wiser to "go slow" until business was obtainable on terms likely to show a reasonable margin of profit. In this connection it would be noted that the net premium for 1921 was less than half that of the previous year, a reduction for which, under existing conditions, he need not apologise.

DIVIDEND MAINTAINED.

The transfers to the profit and loss account totalled £785,924, which included £500,000 taken from the investment fluctuation fund, to which he would refer later. Adding to these sums interest at £370,214 not otherwise dealt with, together with the balance brought forward from last year, a total was reached of £1,208,055.

Against this was required the various amounts shown in the report, including a provision of £276,768 for British Government taxes, £75,000 for doubtful marine reinsurance recoveries, £158,419 loss on realisation of securities, and the transfer of £50,000 to staff pension fund. After allowing for the payment of the dividend due, less tax, there remained a balance of £230,000 to carry forward, as compared with £51,917 brought into the account at the beginning of the year.

In November last an interim dividend of 8s 6d, less income-tax, was declared, and the directors now recommended a similar payment, making 17s per share, less tax, for the year.

The provision in the profit and loss account of the sum of £75,000 was made against possible marine reinsurance losses as the consequence of recent failures of certain companies. He was very glad to state, and they would be relieved to know, that, having secured themselves, they did not anticipate any loss under the more considerable fire reinsurance treaties with the same companies. With the provision of £75,000, they were of opinion an ample sum had been set aside, in all probability providing a margin for some recovery.

SUBSTANTIAL APPRECIATION OF INVESTMENTS.

A year ago he referred to the position of gilt-edged securities and the prospect of appreciation in values in the light of the fall in prices of wholesale commodities, holding out the expectation that notwithstanding the detrimental effect of the fall in prices upon premium income, they might reasonably look forward to some compensating advantages in the form of a rise in the value of gilt-edged securities. His anticipation had been fully justified. The sum of £500,000 had been transferred from the investment fluctuation fund, leaving this fund at £1,500,000, at which figure this reserve was more than £250,000 in excess of the difference between the book values and market values of the Stock Exchange investments as at the end of the year, since the close of which a further very considerable appreciation had taken place.

The directors had always stringently valued the company's securities, which were largely of the gilt-edged trustee class. The book value of the Stock Exchange investments amounted approximately in all to £14,000,000, of which over 90 per cent. consisted of British, American, and foreign Government, provincial, and municipal securities, and railway stocks.

Regarding their buildings, these appeared in the books at or below cost price, and their value at present was considerably in excess of this.

REINSURANCE—A MORAL.

The Chairman proceeded: A certain prominence has been given to the suggestion that the system by which companies issue cover for amounts in excess of their own retention is open to criticism. It is an interesting subject, but I do not think that anything which has occurred recently justifies any such contention. It has been for long an accepted practice both here and in all other important countries, and has proved a great convenience to the larger policyholders, and carries with it the advantage of creating a means of reciprocal exchange between companies producing a better average and making for economy and simplicity in working.

I do not propose to comment on certain recent happenings in the world of reinsurance except to say that I hope the insuring public will draw the obvious moral, which is that they should base their expectations of security on the intrinsic strength of the office to which they entrust their insurances, and not upon its chance of

securing reliable reinsurance facilities, a matter about which they can have no certain knowledge.

THE FUTURE: HOPEFUL SIGNS.

It is a matter for regret that whilst the fall in our premium income has been to some extent arrested, there has been so far no improvement in our claims experience, and under the present perplexing conditions it is most difficult, if not impossible, to forecast with any degree of certainty the probable outcome of the current year's training. The task of predicting the date of the world's return to normal conditions I will leave to others. There probably has never been a time when, owing to the war and the cross-currents of international relationships, particularly on the Continent of Europe, prophecy has presented more difficulties. Probably few, I imagine, have realised the unprecedented violence of the economic upheaval which we have experienced. There are, taking a broad view, some hopeful signs, however, at home and abroad, of a return to more stable conditions. Although recovery and reconstruction will necessarily be a slow process, the economic situation reveals powerful forces making for business expansion. Constructive agencies are more operative to-day than at any time since the declaration of Peace. Therefore, personally, I am, on the whole, disposed to regard the immediate future with, shall I say, a conservative optimism. If, as I incline to think, the United States (where a certain recovery is already unmistakable) will be one of the first countries to experience a substantial trade revival, then this company, owing to the extent of its interests there, may expect to benefit.

I fear a great part of Europe with which we formerly transacted a profitable business will continue to remain closed to us for the present. It is true approaches have been made to us from time to time, but it is difficult to see any prospect of an early resumption of business on any substantial scale. Some measure of political equilibrium in the countries to which I refer, and a return on their part to the immutable principles of sound finance, must necessarily precede any renewal of our former relationship.

TRIBUTE TO GENERAL MANAGER.

We are very much indebted to our general manager for the able manner in which he has brought the company through an extremely trying and difficult year. Regarding his visits to the United States, considerable reorganisation was found to be necessary there. This was carried out by Mr Lewis to the great satisfaction of the board, and I feel sure the result will add to our strength in that country, where we have always held such a unique position, and where the company is so highly regarded and trusted.

Mr E. S. Parker (deputy-chairman) seconded the motion, which was carried unanimously.

Sir Aubrey Brocklebank proposed the election as director of Mr J. J. Atkinson, who had joined the board since the last annual meeting, and the re-election of Messrs F. C. Bowring, A. G. Dent, W. R. Glazebrook and T. Woodsend as directors.

Mr H. M. Beausire seconded, and the motion was agreed to. Messrs Stead, Taylor and Stead, of Liverpool, were re-appointed auditors.

VOTE OF THANKS TO THE DIRECTORS.

Mr W. S. Crichton proposed a vote of thanks to the board of directors, the London board, and other boards of directors, and the local boards in the United Kingdom, the United States, and other centres of the company throughout the world. He said that when times were not so good the work devolving upon the directors was much more strenuous and their responsibilities greater, and there was all the more reason why they should be thanked upon this occasion. He congratulated the directors upon the frank and open statement they had made of the company's accounts—a course which would meet with universal appreciation.

Mr P. N. Stone seconded, and the motion was cordially adopted. The Chairman, in reply, expressed appreciation of Mr Crichton's thoughtful observations. In a bad year such as had been experienced, the work of the directors was always rendered more difficult than in a good year. The directors would take care to see that the sentiments expressed by the meeting were forwarded to their boards of directors in various parts of the world.

VOTE OF THANKS TO THE OFFICERS, STAFF, AND AGENTS.

Mr W. F. Moore proposed the following resolution:—That the best thanks of the meeting be presented to the officers and staff and agents at home and abroad for their zeal and interest in the affairs of the company.

He said: The chairman has referred in his speech to the hopeful signs at home and abroad of a return of more stable conditions. It is quite unnecessary to say that it is impossible to arrive at satisfactory results without the cordial co-operation and assistance of the whole of our staff and of the agents at home and abroad. The chairman has referred to Mr Lewis' recent journey to America.

We are accustomed to Mr Lewis' able handling and tackling of all difficult propositions, and we look to him for the guidance and the active energy which he always displays in managing the affairs of the company. I am sorry that Mr Reddrop is not here to-day, but he is away on the company's service. We must not forget him. On the other hand, we are very pleased to see Mr Macready from London, and I should also like to refer again to what the chairman mentioned about our South African manager, Mr Kirk. I think we may congratulate him on a safe journey to this country after the troubles and risks of the labour riots in South Africa. I would also like to pay a tribute of thanks—I am sure the shareholders always wish to do so at this meeting, as it is a great pleasure to them to do it—to all the other officers of the company at home and abroad, the heads of departments, and the members of the staff. We always have our agents, at home and abroad, constantly in our minds, and the excellent services which they perform in the interests of the company, and it is a great pleasure at this annual meeting to pay a special tribute of thanks, and to send a message of congratulations to them on the excellent work which they do for the company. Our thanks also are due to all the officers of the company, and the members of the staff, and I trust that this will be conveyed to them.

Mr R. Q. Wilson having seconded, the meeting approved of the motion.

THE GENERAL MANAGER'S ACKNOWLEDGMENTS.

Mr Hugh Lewis (general manager) responded, and said: Mr Chairman, whatever may be thought of any other part of our proceedings, I am certain this particular resolution will never appear a formality to those concerned, particularly so when it is submitted as to-day in such gracious and kindly terms.

Again, the vote of thanks will be all the more appreciated because of the poor profit results of the year. I am certain the staff, all of us, have never striven harder, but, none the less, human nature being what it is, we all quite realise that it cannot come easily to give praise when the return for the risk run is so inadequate.

However, instead of finding us at fault you have encouraged us to renewed efforts.

In acknowledging this resolution, I am very mindful of the fact that I am in the main the spokesman of others.

First amongst these, our able sub-manager, Mr Reddrop, who, as Mr Moore has stated, is away on the company's business, and Mr Warner and Mr Hay, our assistant secretaries, all of whom to my certain knowledge have laboured with incessant and well-directed energy in their respective positions to make the best of an exacting and disappointing year. From my own knowledge I can truly say these gentlemen have "scorned delight and lived laborious days."

I have also to acknowledge the extremely valuable services of our London manager, Mr Macready; our chief underwriter, Mr Harper; our actuary, Mr Kilpatrick; our accident manager, Mr Mackinnon; the principals of our departments, our branch managers, and our high officers caring for the company's vast interests overseas. I should just like to add that we all feel Mr Harper and his experienced coadjutors have assuredly made the best of a harassing marine year. I also take the opportunity of congratulating my friend, Mr Danvers, our able Australian manager, who serves us so staunchly, on his recovery from his serious illness. Our American executives have already been referred to by the chairman. All I think I need add is that I am satisfied that the company's interests on that Continent are in loyal and safe keeping. I speak also for the company's agents, many of whom, though not filling positions of salaried servants, hold positions of considerable responsibility, and much to our advantage.

And so, Sir, on behalf of all our officials at home and abroad, and of all our agents, I thank you.

May I, in concluding, express my own sense of your personal references to me from the chair. 1921 was my first year, and I could have wished my first accounts to be more satisfying to the shareholders.

My new duties—though I am now, I suppose, an old servant of the company—have been carried on in new surroundings, and in contact with many with whom I had not the privilege previously of acquaintanceship, and who, in spite of my shortcomings, I feel have been very indulgent to me.

I wish to thank you, Sir, for unvarying consideration and kindness altogether beyond anything I could have deserved.

On the motion of Mr T. Woodsend, a vote of thanks was accorded to the chairman for his services, and a brief acknowledgment by Mr Barnes terminated the meeting.

At a meeting held subsequently to the shareholders' meeting the directors of the Liverpool and London and Globe Insurance Company, Limited, re-elected Mr A. Kentish Barnes as chairman, and elected Mr R. Q. Wilson as deputy-chairman of the company.

EAGLE, STAR, AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED.

"ACCOUNTS IN EVERY WAY SATISFACTORY."

QUINQUENNIAL VALUATION RESULTS.

The ordinary general meeting of the above company was held, on the 18th instant, at the offices of the company, 32 Moorgate, London, Sir Edward M. Mountain, Bart., J.P. (chairman and managing director), presiding.

The secretary (Mr John Gardiner, A.C.A.) having read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that the year had been a lean one for insurance business. The success or non-success of particular years in respect to insurance business depended entirely upon the prosperity or otherwise of industry, and 1921 was one of the worst in that respect that had been experienced for many years. It was during such periods of depression that the care and skill with which an insurance company was managed was brought to the issue. It was a recognised fact that as all trades had been and always would be subject to fat and lean years, so in the insurance business the same was the case, and he thought shareholders would agree that, considering the times through which they had passed, the accounts were in every way satisfactory.

MARINE DEPARTMENT.

Dealing with the marine department, it would be seen that they brought forward £785,644, that the net premium income amounted to £439,960, together £1,225,604, against which they had settled on the year under review and previous years a sum of £743,673. The expenses of management, including provision for income-tax and excess profits duty, amounted to £62,009; they had transferred to profit and loss account the sum of £47,908, and the marine fund at the end of the year was £394,921, being equivalent to 90 per cent. of the income, compared with 66 per cent. for 1920. The reason that the ratio of this reserve to premium income was so much higher in proportion to it than in previous years was because they had to wind up large accounts in previous years. This reserve would in due course decline to a normal figure. Last year he referred to the outlook as unfavourable, and in consequence they anticipated a further reduction in the premium income. He did not think there was any company in London which so rapidly reduced its income from this source as this company had done during the last few years. At the present moment the position in the marine insurance world was not so much money a company was likely to make, but how little it could avoid losing. In spite of the great depreciation in this market, their underwriting had been done with such extreme care that they had been able to make a small profit, and he did not anticipate, even if such times should continue, that on the very conservative lines they adopted they were likely to make any loss.

FIRE AND GENERAL INSURANCE.

The premium income from fire and general insurance, as compared with last year, showed a slight reduction of £5,462, but this was very much smaller than was disclosed by the accounts of other companies so far published. Their total premium income was £2,249,215; the claims paid and outstanding after the deduction of reinsurances, amounted to £1,273,545, a ratio of 56.62 per cent. Commission and brokerage aggregated £476,426; expenses of management, including income-tax and provision for excess of profits duty, £441,704, a combined ratio of 40.81 per cent. After carrying forward a reserve of 40 per cent. of the total premium income, they had been able to transfer to profit and loss account the sum of £95,093. The fire business showed good results generally, except in America, that country showing the worst loss ratio since the San Francisco disaster. This was undoubtedly due to trade depression. The accident department, which embraced workmen's compensation, personal accident, burglary, livestock insurance, &c., had had quite a good year. With regard to motor vehicle insurance, this had been a loss for several years, practically to all companies transacting this class of business. So far as that company was concerned, he was of opinion that it had turned the corner, and with the tendency for the cost of repairs to decrease, it looked as though there were favourable prospects of the business once more becoming a paying proposition. America had been a motor vehicle business, which up to the end of 1919 had shown a reasonable profit for some years, had, in the last two years, shown very bad results indeed. They were endeavouring to improve the condition, and he thought it only a question of time for this business to be adjusted. The engineering, indemnity and other departments continued to make good progress. It was difficult to prophesy in these days, but the year had opened quite well, and with the steadier conditions of trade which were fore-shadowed, they were hopeful of good results in 1922.

LIFE DEPARTMENT.

Reverting to life insurance, he said that a year ago he expressed the opinion that the amount of new life business was likely to be smaller than in previous years, and it would be seen from the figures in the report that, in common with nearly every other office, they showed a reduced new business for 1921. The reason for this was not far to seek. In the first place, the exceptional demand in the years immediately following the war, created by the return to civil life of a very large number of men who had been debarred during the war from effecting life policies, had been very largely met, and, secondly, the unparalleled trade depression had made it impossible for many to effect the insurances which normally they would require. There was, however, another and much brighter side to the picture of the life department which he had to put before them. A year ago the question of depreciation of their investments, more especially in the closed fund, was an important one. To-day the position was entirely changed, and the present outlook in that respect was very favourable. In the case of the life assurance and annuity fund, applicable to their current series of policies, a large proportion of their holdings in British Government securities was held against obligations to their policyholders under War Loan and War Bond policies, and consequently the question of appreciation or depreciation of those investments was not one which directly concerned the company. In that fund, however, there were other investments which at the end of the year showed a satisfactory appreciation, though none of them had been taken credit for in their accounts. This appreciation they regarded as an additional reserve against possible depreciation or other contingencies in the future, and he was sure that they would approve their decision.

QUINQUENNIAL VALUATIONS.

Perhaps the most interesting matters with regard to the life department were the valuations and distribution of profits which they had made in connection with both the closed fund of the old Eagle Company and the policies issued by the company under its current series, both of which quinquennial valuations fell due last year. In the case of the Eagle Fund, where the valuation was made as at September 30th, they had been able to declare a reversionary bonus addition to all policies entitled to participate at the satisfactory rate of £1 per cent. per annum for the quinquennium, and after doing this the fund was left in a thoroughly healthy condition. It was very gratifying to be able to show such a result on this, the first investigation, after the transfer of the Eagle business to them, and he was sure it was regarded with satisfaction by the policyholders. In the case of the current British Dominions business, the quinquennial valuation was made at December 31, 1921. It was made on a stringent basis, and the results showed that the confidence he expressed last year was justified. As the result of the valuation a gross surplus of £84,471 was disclosed, and of this they had decided to distribute £76,102, leaving £8,369 to be carried forward. This had enabled them to declare in the case of policies in the ordinary participating branch a reversionary bonus addition to the sum assured at the rate of 30s per cent. per annum, while in the case of policies in the 30s per cent. section the addition was 15s per cent. per annum, so that the profits in the abstiners' section had proved larger than in the ordinary participating branch. He was sure they would regard the results of the valuation as very satisfactory. The directors had taken particular care in the selection of risks, and were satisfied that the business on their books was good business.

RECENT FAILURES.

Referring to the failure of various companies newly formed for insurance business all the world over, he said that this was exactly what men of insurance experience in this country expected to happen. Several others were showing signs of trouble, and would fail in due course. The failure of one particular group caused some sensation, but he would point out that a failure of this kind, however lamentable to those concerned, was very beneficial in the end to the wealthy and well-established companies, and it brought home to the public that the cheapest insurance was not necessarily the best. It had instantly the effect of bringing back to the older companies a substantial proportion of business they had lost by rate-cutting during the last few years. The immediate cause of this particular failure was the extraordinary laxity in the method of making investments. With regard to the Eagle Company, there was nothing that engaged the attention of the directors more than the question of investment, in connection with which they had an investment department presided over by a very capable manager, Mr John Spencer. So far as this company was concerned, it had been their practice where they had reinsurance treaties, except in very special cases, to hold security in connection with them, and they did so in that case, and if, when the treaties finally wound up, there should be any loss over and above the securities

they held, it would not in any case be one that would materially affect them.

The report was unanimously adopted, the proposed dividends were approved, the retiring directors and auditors were re-elected, and the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

THE MOTOR UNION INSURANCE COMPANY, LIMITED.

SATISFACTORY DEVELOPMENT OF MOTOR INSURANCE ACCOUNT.

The fifteenth ordinary general meeting of the Motor Union Insurance Company, Limited, was held, on the 16th instant, at the head offices of the company, 10 St James's street, London, Mr C. H. Dodd, the chairman of the company, presiding.

The general manager and secretary (Mr H. F. Baker) having read the notice convening the meeting and the report of the auditor,

The Chairman, in moving the adoption of the report and accounts, said that the fire insurance account was the first with which he would deal. The premium income on that account was slightly higher at £509,000, as against £506,000 for the previous year. Unfortunately, however, claims had risen in a much greater proportion, having cost approximately £100,000 more than they did the year before. The ratio worked out at something like 63 per cent. Commission and expenses were also somewhat higher, and the net result was that in order to maintain the reserve of 40 per cent. for unexpired risks, they had had to transfer from profit and loss account the sum of £14,824. That was not a very satisfactory result, but with the return of more normal conditions, they looked to receive considerable profits from that account. In the accident insurance account premiums were somewhat higher, and claims had also increased. Commission and expenses were likewise above those of last year's figure, but after making the usual 40 per cent. reserve for unexpired risks they were able to transfer to profit and loss the sum of £2,687. In the Employers' Liability account premiums were down, largely owing to present trade conditions, and the claims experienced had been somewhat higher at 45.9 per cent. From that account they transferred to profit and loss £8,936.

MOTOR AND GENERAL INSURANCE ACCOUNT.

The next account, the motor and general insurance account, was the most important of the whole, and the foundation of their business. It was a matter of congratulation that their company was the first, at all events in this country, to have attained a premium income of £1,000,000 from motor car insurance. The growth of that account since the end of the war had been almost phenomenal. In the previous accounts they had been able to show an increase of over 100 per cent. in premiums, and for the year under review, in spite of all adverse trade conditions, and in spite of a decrease, to a certain extent, in motoring, there had been a further growth in the premium income. After making the usual reserve, they were able this year to transfer a small profit of £4,287 to the credit of profit and loss, as against the transfer last year from profit and loss of no less than £113,875. They might safely say they had now turned the corner, and were on the way to a successful period with motor insurance. The 1921 account was running off very well, and so far their experience of 1922 showed every prospect of a very good year. It was to that account in the future that they would look for the mainstay of their business, and the board had the greatest confidence in the success of that branch of the business. As to the marine account, it was only reasonable to expect a set-back after the successful years of marine insurance during the war, but if shareholders looked at the company's figures they would agree that they had got through a trying time uncommonly well. The premium income had fallen from £713,000 to £589,000, a decrease which the board had been glad to see. Claims on the 1921 policies had amounted to £149,945, being 25.4 per cent. of the premium income, and commission and expenses worked out at only 9.9 per cent. After transferring to profit and loss the sum of £20,000, they were left with a reserve of £678,791, being 115.1 per cent. of the premium income. The life insurance account was growing slowly, in accordance with their expectation. During the year they had issued 380 new policies insuring £203,186 gross, of which £169,657 had been reinsured.

PROFIT AND LOSS ACCOUNTS.

Dealing with the profit and loss account, the Chairman said that the difference shown in the two years in the item interest, dividends, rents, &c., at £93,923, for the year under review, as compared with £123,000 odd for 1920, was largely accounted for by the fact that a considerable proportion of that sum in the previous year's accounts was set out before deduction of tax. From the profit and loss account they had a balance to deal with of £132,135. Out of that sum a half-year's dividend on the preference shares, and an interim dividend of 4s per share on the ordinary shares, had already been paid. The board proposed to

pay a final dividend of 6s per share on the ordinary shares, and the final dividend on the preference shares, and to add £15,000 to the tax reserve fund, and £2,000 to the staff pension fund, leaving £38,415 to be carried forward. After dealing with the principal variations in the balance-sheet, and explaining the policy of the board with regard to the writing down of unquoted securities, the Chairman concluded by summing up the position. Shareholders, he said, would be satisfied that the company was in a very sound and strong financial position. The fire, motor, and marine accounts, especially, were really in an excellent condition. The board were not troubled with what was merely a passing phase of the fire account, which they would see back again making profits in a very short time.

The report and accounts were unanimously adopted.

ALLIANCE ASSURANCE COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The annual general court of the Alliance Assurance Company, Limited, was held, on the 17th instant, at the head office, Bartholomew lane, London.

Mr C. E. Barnett, who presided, said that the severe depression in trade experienced in the year under review had a serious effect on the business in all departments of the Alliance, an experience which had been shared by all the offices. In the life account the net new business completed amounted to a little over £2,000,000, or some 25 per cent. less than in the previous year, a reduction not to be surprised at in the existing circumstances. The mortality experience had, on the whole, been favourable. The average rate of interest on the life funds showed an increase of about 5s per cent., but with cheaper money ruling they could hardly expect to maintain so high a rate. On the other hand, there was a substantial appreciation in the value of their Stock Exchange securities, a great relief after the large depreciation of past years. The combined life accounts showed a premium income, after deduction of reinsurance premiums, of £1,175,105, and the combined life and annuity funds amounted at the close of the year to £18,171,302. The prospects were good, and they had every reason to hope that at the next quinquennial valuation, at the end of 1923, they would be able to declare a satisfactory bonus on their participating policies. The business on the sinking fund and capital redemption account had slightly increased during the year, the fund at December 31st last being £955,362, some £15,000 more than at the end of 1920. The fire account showed some increase in premium income, which now amounted to £1,966,478, but this was due to a new arrangement of reinsurances, as they had now inaugurated a plan of what he might call domestic reinsurances between themselves and the companies associated with them. The gross income in the fire department, before deducting reinsurance premiums, really showed a small reduction as a result of diminished trade, lower values, and lower rates of exchange. Fires had been numerous and costly, both at home and abroad, the long drought having been an adverse factor. After making provision for commission and expenses and the necessary addition to reserve for unexpired risks, the sum for underwriting profit, and interest on the fire fund, carried to profit and loss account, was £191,198.

MARINE ACCOUNT.

With regard to the marine account, at first glance the amount of the claims paid—£855,452—as against the premium income in the year—£550,819—might appear startling. The amount of the claims might be analysed as follows:—In respect of 1919 and previous years, £231,296; in respect of 1920, £452,037; and in respect of 1921, £172,117. It had to be borne in mind that a marine underwriting account always took a long time to run off. They allowed three years, so that in the present accounts they were closing the underwriting account for 1919. A sum of £100,000 had been set aside to provide for any further claims that might occur in respect of that year, and £57,464 had been transferred to profit and loss account. The underwriting account for 1920 would be dealt with at the end of 1922, but in the meantime the whole of the present surplus on the 1920 and 1921 accounts remained in the marine insurance fund. The reduction in premium, compared with the previous year, appeared large, but it must be remembered that returns of premium in respect of previous years had been deducted. A great feature of 1921 had been the cancellation of hull insurances, entailing a very considerable sum in respect of such returns. The insurances to replace these cancelled policies had been for smaller amounts. The marine insurance fund stood at £1,192,110, a decrease compared with the previous year of £485,716. Like many other insurance companies, the Alliance had done a certain amount of reinsurance business with the City Equitable, but there was nothing that need cause the directors or the shareholders the slightest anxiety.

As he had already said, marine risks took some time to mature, but he made this statement without qualification, fully and frankly, after taking that fact into consideration.

ACCIDENT, BURGLARY, AND MOTOR BUSINESS.

In the accident department the total premium income showed a small increase, which must be considered satisfactory having regard to all the circumstances. There had been a good deal of unemployment, and this was reflected in the premiums they had received in connection with workmen's compensation business, and the fact that the rates of premium had been reduced was a contributory cause to the reduction shown in workmen's compensation income. There had, fortunately, been an improvement so far as burglary business was concerned, and the results in motor business showed some improvement, due principally to the fact that the upward trend in the cost of repairs seemed at last to have reached its maximum. Third party claims, however, were still numerous and costly. Business in the trustee department continued to grow quite satisfactorily. Including the transfer of £250,000 standing at investment reserve account, which was now no longer necessary, in view of the appreciation in the value of securities, the balance of profit and loss account at the end of the year was £948,875.

The report and accounts were unanimously adopted, and a dividend of 14s per share, less income-tax, was declared, an interim dividend of 6s per share having been paid in January last, and the balance of 8s per share being payable on and after July 5th next.

OLYMPIC FIRE AND GENERAL REINSURANCE COMPANY, LIMITED.

The second annual general meeting of the Olympic Fire and General Reinsurance Company, Limited, was held, on the 18th instant, at Cannon street Hotel, London, Mr S. Walter Morris, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: If you will carefully examine the balance-sheet I feel convinced you will agree with me that the alliance you made with the Tariff Reinsurances in 1920 was an exceedingly good move, and one which has established the Olympic Company on a sound footing. I may take this opportunity of assuring the shareholders of this company that we are not in the slightest degree interested in the company that has been so unfortunately before the public lately. We have passed through a stormy period, and we feel we have passed through it successfully, but the directors of your company and other reinsurance companies have had to watch matters with the greatest care and attention.

Last year when I had the pleasure of addressing you the premium income was £64,000; to-day it is no less than £180,000. It could have been much higher, but until your company has even bigger reserves than it has to-day we must act with prudence and caution, and afterwards we shall act with caution and prudence. We have included all claims paid and advised, and we think the result quite satisfactory for a second year's trading. In the marine department I might say we are not desirous of extending our business, except in the direction of what you may describe as very first-class insurances. On the 1920 account, after paying £32,693 in claims, we have remaining £5,279 to run off the account, and for the 1921 account our funds at the end of the year were 67.4 per cent. of the premium income. Not at all an unsatisfactory account.

You will see that on September 30th you had nearly £41,000 invested in gilt-edged securities, which is brought into the balance-sheet at cost, but on that date the market value of those securities was £42,703.

In the profit and loss account you will see that we have an item of £3,345, but we thought it desirable to transfer the whole of this sum to the fire and general fund, as we feel that at the present time it is of the utmost importance to make that fund thoroughly substantial. In taking a general survey of the balance-sheet, I think we may say that the business is sound and progressive, and we may look forward to its extension.

Mr Wilfred W. White seconded the resolution, which was unanimously adopted.

JUGRA LAND AND CAREY, LIMITED.

CHAIRMAN ON PROSPECTS OF RUBBER INDUSTRY.

The second annual general meeting of shareholders was held in the hall of the Institute of Accountants and Actuaries, 218 St Vincent street, Glasgow, on Tuesday, May 16, 1922, at 12 o'clock noon, Mr Wishart presiding.

Mr Macdonald, for the secretaries, having read the notice calling the meeting, the Chairman said:—

Gentlemen,—You have had in your possession now for more

than the statutory time the report and accounts for the year to November 30th last, and with your permission we shall hold these as read.

VISITING AGENT'S SATISFACTORY REPORT.

As the report states, the visiting agent's last report on both Carey Island and Paradise was again of a very satisfactory nature.

Planting and clearing in the new area have been somewhat kept back, owing to unfavourable weather conditions, but a considerable amount of the necessary preliminary work has now been completed, and our latest information is that over 1,800 acres have been felled, all of which, with the exception of a very small area which it has been deemed advisable to plant in rubber, will in due course be planted up in coconuts.

You will notice that there has been considerable expenditure on account of the water scheme, and I am glad to say that this work is now approaching completion, and will be of the greatest benefit to Europeans and coolies alike.

It will be noticed that our "all-in" cost for rubber at 9.04d per lb. was exactly 2d less than last year, but further economies are being effected, and the cost will show a further considerable reduction during the present year.

The price obtained for the rubber actually sold was 8.8d per lb, consequently, although the cost c.i.f. shows a small profit, this profit is converted into a loss when rubber has been debited with its proper proportion of home charges.

COCONUT CROP.

The coconut crop amounted to 5,405,806 nuts, 37,679 nuts being disposed of for cash on the estate, and the remainder manufactured into 1,411 tons of copra. This was sold at an average price of £29 7s 4d per ton, and, as the "all-in" cost amounted to £19 11s 10d per ton, a profit of nearly £10 per ton has been realised. You may remember that in the prospectus which was issued in December, 1919, a profit of £20 per ton was estimated. This seemed a conservative figure at that time, and had this profit been obtained, the revenue from coconuts would have been in excess of the prospectus estimate, as the output was higher. Even at the present price, however, a fair profit is being earned, as the expenditure has been very considerably reduced.

There is, of course, a certain liability for income-tax, but the whole amount due cannot be ascertained at the moment, the matter being the subject of negotiations with the Inland Revenue authorities, and we can only hope that these negotiations result favourably to the company.

RUBBER PROSPECTS.

As to the future of the rubber industry, there is no doubt whatever that the position is a serious one, and personally I am unable to see any likelihood of there being any appreciable increase in the price of rubber until there is a general revival of trade throughout the world.

American importers take normally about two-thirds of the world's output of rubber, but during last year they imported nearly 70,000 tons less than in the preceding year. On the other hand, owing to restriction of output and various other causes, the amount of plantation rubber produced was about 60,000 tons less than in 1920, and the world's whole production about 85,000 tons less than in that year.

There is one unsatisfactory matter in rubber statistics, and that is that while the production and port of destination of rubber can be ascertained fairly well, there is no means of ascertaining accurately the stocks in the hands of manufacturers.

One thing I think we may feel fairly confident about is that with trade deplorably bad in America, this country, and the Continent, manufacturers have not been laying in greater stocks of the raw material than they could avoid. The consequence of this should be that when any definite improvement in trade sets in, the rubber industry may expect to be a fairly early participant in such improvement.

I am inclined to think that too much stress is laid upon the accumulation of stocks in London. It seems to me to be perfectly possible that, although during the year these stocks increased by 20,000 tons, this 20,000 tons may very well be accounted for by a decrease in manufacturers' stocks.

I am glad to note that warehousemen in London have made a further reduction in their charges, and I hope that a still further reduction may be effected. This seems to me to be essential if London is to remain the rubber market of the world.

CHAIRMAN'S CONFIDENCE IN THE FUTURE.

I am sorry I have nothing more cheerful to say to-day, but I am confident it is only a question of waiting on, and you are fortunate in being shareholders in a company with ample resources, and you have therefore no financial worries to face.

I have now pleasure in moving that the report and accounts be adopted.

I shall ask Mr MacLellan to second this resolution, but before putting it to the meeting I shall be glad to answer any questions that may be asked.

Mr MacLellan seconded the adoption of the report, which was carried unanimously.

Mr W. W. Campbell was re-elected a director, and Messrs Gibson and Anderson, C.A., were re-elected auditors.

ELDER DEMPSTER AND COMPANY, LIMITED.
FREIGHT-CARRYING MERCHANTS—A WARNING.

The twelfth ordinary general meeting of Elder Dempster and Co., Limited, was held, on the 18th instant, at 23 Billiter street, London, Sir Owen Philipps, G.C.M.G., M.P., chairman, presiding. The secretary (Mr Picton H. Jones) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: Many years ago—shortly after I became chairman of Elder Dempster and Co.—a number of leading merchants in the West African trade specially urged us to refrain from engaging in business considered to be competitive to them as merchants and to confine ourselves as ship-owners to providing transport facilities. For many years past this has been the adopted basis on which our business has been conducted, and I believe it is a policy which in the long run should prove of greatest service to the merchant community and to the interests of the West African Colonies.

On the other hand, if any large group of merchants consider it to their advantage to do their own carrying, this naturally alters the whole position. Such action on their part may compel the steamship owners, however reluctantly, in order to secure the necessary freight, to take steps to obtain cargo for their own vessels. While I hope that it may not be necessary to do this, I cannot shut my eyes to the fact that, in the long run, it would doubtless be to the advantage of the steamship owners to adopt such a course.

I hope that any of the merchants who may not entirely realise the full facts of the situation will not render it necessary for us to depart from the broad and sound policy on which British West African business has been built up and maintained for many years past.

WEST AFRICAN TRADE.

During the period under review West African trade has continued to suffer from the general world depression, but, as men-

tioned in the report, signs of improvement have now become evident. I hope they will be well maintained and become more pronounced in the near future. In July, 1921, a considerable reduction was made in the rates of freight on the principal commodities from West Africa, and a further reduction came into force on March 1st last. The present cost of travel by sea to all parts of the world is, in my opinion, unduly high, and tends to limit passenger traffic. The expense of running high-class passenger vessels is still very high, but, in order to encourage an improvement in passenger business, it will probably be advisable again to reduce the fares in anticipation of further reductions in the cost of coal, wages, upkeep, &c.

I am glad to report that work on the construction of the first instalment of the Apapa Docks and Wharf scheme at Lagos has now been commenced by the Nigerian Government. The facilities which it is intended by this scheme to provide should serve as a great stimulus to the trade of Nigeria. There has been considerable difference of opinion with reference to the proposal to construct a harbour at Takoradi, mainly on the ground of its costliness. I personally am convinced of its ultimate great benefit in the development of the trade of the Gold Coast, provided always that its cost is kept within reasonable limits. Our new motor passenger vessel "Aba" took her place in the West African express service during the year under review, being the first motor passenger ship to be engaged in any regular passenger trade. A second motor passenger vessel—the "Ancobra"—will be launched this month, and is expected to be in commission by the autumn. Both these fine vessels should prove a great attraction to passengers. In addition, three new cargo steamers have been delivered by the builders during the past year.

NECESSITY FOR ALL TO ECONOMISE.

Taxation has just been slightly reduced, but with still nearly two million people out of work in this country it is, in my view, essential that taxation should as soon as possible be further remitted. This is not practicable unless greater economy is exercised. For many months past the Press has been full of appeals for more rigid economy on the part of the Government, which is most desirable; but what is really wanted to put this country in a better position is not only for everyone, from the highest to the lowest, to work harder than ever before, but also personally to economise wherever possible. Individuals, private firms, and public companies should all set an example to the Government by first putting their own houses in order. Until we all in our private

capacities and all those in control of commercial concerns and industries throughout this country put into practice similar economy to that which is demanded from the Government, it will, I fear, be hopeless to expect the Government to make the necessary economies.

Looking to the future, while we are still confronted with many difficult and complex problems, I am personally of opinion that the worst of our troubles are passing away, and that with good will, hard work, and strict economies the corner will be turned and business all round will steadily revive.

The report and accounts were unanimously adopted, and a final dividend of 5 per cent., free of income-tax, on the ordinary shares, making 8 per cent. for the year, was declared.

THE ENGLISH ELECTRIC COMPANY, LIMITED
BOARD'S CAUTIOUS POLICY.

The annual general meeting was held on the 16th instant, Sir Charles E. Ellis, G.B.E., K.C.B. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance-sheet showed for the first time the full liability for the note issue, but there was a considerable reduction in sundry creditors and credit balances. On the assets side there was an increase of nearly £700,000 in land, buildings, plant, machinery, &c., while interest in subsidiary and other companies was reduced by £825,000. These differences indicated further progress in the absorption of the constituent firms. The company's stocks had been much reduced during the year, both in quantity and value, as they were able to foresee in 1920 that although orders continued to flow in, the market was becoming exhausted. In addition to making a reduction in quantity of stocks, they had met the heavy fall in the market value of all materials by a special writing down to a figure representing to-day's value or less. Turning to the profit and loss account, the available balance was slightly in excess of that last year. The net profits brought to credit included dividends received from subsidiary companies and amounts transferred from reserves previously set aside and no longer required. In considering what dividend should be paid they had felt bound to look ahead, and there they saw uncertainties on every hand. The state of trade was unprecedented, and the engineering industry had to face peculiar industrial difficulties. In recommending a dividend on the ordinary shares at the rate of 5 per cent. per annum, the directors considered that they had reconciled the natural expectations of the shareholders with the needs of a difficult and obscure period to come. He was strongly of opinion that the way out of most of the present difficulties would be through the efforts of private enterprise. So strongly did they hold this view that they had recently, with five powerful associates of world-wide reputation, formed the Power and Traction Finance Company, Limited, with the object of dealing with comprehensive engineering contracts on a large scale. The electrical industry had been less seriously affected than many others, and during the past year they had secured many important contracts, including the complete central station for the City of Leicester, important railway electrification contracts in Spain and Japan, and others. There were signs that public works too long delayed must shortly be put in hand, and competition by Germany and other countries with depreciated currencies was not so serious as the abnormal rates of exchange would appear to imply.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED.
SPECIAL RESERVE TO BE CAPITALISED.

The thirty-second ordinary general meeting of the Anglo-American Debenture Corporation, Limited, was held, on the 18th instant, at the Cannon street Hotel, London.

Sir Vesey Holt, K.B.E., presided, and in the course of his speech said: We have had a valuation made of the investments on exactly the same basis as in past years, and this shows that the general reserve account of £200,000 is more than sufficient to look after any depreciation that exists. We had to report to you last year a depreciation of 2½ per cent. upon the book cost of the investments, after taking into account the general reserve account and also the special reserve account. The directors, therefore, are extremely pleased to be able to meet you to-day and to inform you not only that they have no necessity to take into calculation the amount of the special reserve, but also that the depreciation is less than the general reserve account. In view of the fact that the earning capacity of the company shows a substantial margin over and above the regular 8 per cent. dividend upon the ordinary stock, and that the valuation shows that the capital is intact, they have decided that the present time is opportune to distribute the special reserve account. The form that this distribution will

take is the same as on the two previous occasions—namely, by the allotment of four and a-quarter per cent. preference stock to the holders of ordinary stock. When this distribution has been made the stockholders will have received the whole of the £1 which was written off their shares in 1894. We have since 1911 capitalised a sum of £175,000, and only reduced our reserves by £10,000, and in addition during that time have paid dividends of 7 per cent. up to the outbreak of war, 6 per cent. for four years of the war period, reverting in 1919 to 7 per cent., and then increased it in the following year to the present rate of 8 per cent. With the exception of an issue of about £64,000 in 4 per cent. debenture stock, no capital has been issued for cash during this time, but the figure of the investments has increased from £1,470,000 to £1,740,000, and the interest and dividends from £76,300 to £92,795.

The future, with such a large part of the world still in a state of turmoil, must necessarily be obscure, but the foundations of this company are now in such a condition that I feel I can look forward to the future with confidence.

In conclusion, the Chairman referred to the working arrangement which had been entered into with two other long-established trust companies—the Railway Debenture and General Trust Company, Limited, and the Railway Share Trust and Agency Company, Limited. By this working arrangement they would be able to effect considerable economy, and the directors felt sure that the arrangement would considerably increase the power of each company and be of material advantage to the stockholders.

The report and accounts were unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED.
INCREASE OF CAPITAL AGREED TO.

The adjourned ordinary general meeting of Tanganyika Concessions, Limited, was held, on the 19th instant, at River Plate House, London, Mr Tyndale White, chairman of the company, presiding.

Mr L. Scotland, the secretary, having read the notice convening the meeting and the report of the auditors, business

The Chairman said the year had been, in the copper business, as in every other industry, a period of unexampled depression, but they hoped they were on the eve of better times. He formally adopted the adoption of the report and accounts.

Mr C. F. Rowse seconded the resolution.

Mr Robert Williams then dealt exhaustively with the report and accounts. He said that the year had been one of great stringency, but owing to the soundness of the undertakings in which they were interested they had been able to survive the crisis. The operations of the Union Minière du Haut Katanga had, under the circumstances, been satisfactory; in fact, the record output of 30,464 tons of copper had been reached. The present rate was over 3,000 tons per month. There had been no dividend, but he was pleased to say they had turned the corner. Since the last meeting of the Union Minière Mineral Concessions had been extended up to 1990, and a scheme of finance for installing the necessary plant to treat the ores on a large scale had been arranged. The estimated reserves of ore in the mines now under development amounted to well over 70,000,000 tons, containing over 4½ million tons of copper. After careful investigation it had been decided that the treatment of these ores could best be dealt with by the Union Minière itself, and not by subsidiary companies as formerly proposed. Accordingly, arrangements had been made for the raising of 300,000,000 francs for the installation of plant to increase the production of copper in progressive stages to over 100,000 tons per annum by the issue of "obligations," which, in addition to interest at 6 per cent., would receive 25 per cent. of the profits from the year 1928. This would be a great advantage to the old shareholders, because in 1928 the shareholders would receive 75 per cent. of the profits from this greatly increased output. The ore would be treated by the leaching process.

AN IMPORTANT DEVELOPMENT.

In the meantime, an important development had taken place which would have a great bearing on the question of the plant to be installed immediately, namely, the Sankishia coal deposits, which were to be worked, and which it was hoped would reach a production of 300 tons per day during the present year, a figure which would be gradually increased. The coal would be very suitable for reverberatory smelting works, and the cost of copper production by this means would be considerably less than by blast furnaces. In about three years they expected to reach an output of from 70,000 to 80,000 tons of copper, which would largely increase profits several years before the leaching plant was in operation. During 1921 the smelters treated 222,056 tons of ore, and concentrates averaging 18 per cent. copper, and produced 30,185 metric tons of ingots, and 279 tons of matte.

FUTURE OF THE BENGUELLA RAILWAY.

There was a great future for the Benguela Railway, and he was confident that this railway would, in a few years, be in a position to give rates to Katanga for the economic development of its low grade ores such as no competing line could afford to give. The comprehensive scheme for the completion of the railway included a proposed issue of some 1,250,000 new shares of the Tanganyika Concessions for the general purposes of the company, and in particular to enable them to take up their proportion of the new Union Minière shares. It was now proposed to create 1,300,000 new shares of £1, and to offer 750,000 to the shareholders as 10 per cent. cumulative preference shares, convertible into ordinary shares for a period of five years at 22s each. He asked the shareholders to ratify the arrangements for underwriting.

The company had a 40 per cent. interest in the Nile Congo Divide Syndicate, the operations of which were most promising. Gold had been found, and panning up to £2 value per cubic yard had been found. He looked upon the discovery of gold over so great an area in the rivers and the finding of gold and malachite in combination over 40 miles of a belt, together with big old workings, as an altogether brilliant prospect.

The Rhodesia-Katanga Railway, in which they held a 70 per cent. interest, showed a surplus of receipts over expenditure of £93,000 in 1921, as against £50,384 in 1920. As the debenture interest only required £44,000, the results were very satisfactory. It had not been possible to do any further work on the Kansanshi Mine and Luano Coalfield, which belonged to the Rhodesia-Katanga Company, but work would be resumed as soon as conditions permitted. In conclusion, he repeated that he believed they had turned the corner after very trying times, and he hoped to be able to announce soon that the original railway programme for the development of Katanga was to be carried out. Had his advice been acted upon, and the railway completed through to the mines, they would to-day have been in the position of making a large profit in the present adverse conditions, and the output would have been much greater. He had been called an optimist, but the progress of development of ore reserves in Katanga was justifying all his estimates. He questioned if any other mine could show such reserves, including, as they did, copper alone of a value of 270 millions sterling.

The report was adopted, and at a subsequent extraordinary general meeting the increase of capital mentioned by Mr Williams was unanimously agreed to, the capital being increased to £3,500,000 by the creation of 1,300,000 shares of £1 each at such price and such date as the directors thought fit.

ZAMBESIA EXPLORING COMPANY, LIMITED.

ARRANGEMENT WITH BOVRIL COMPANY EXPLAINED.

The adjourned ordinary general meeting of the Zambia Exploring Company, Limited, was held, on the 19th instant, at River Plate House, London, Mr Tyndale White presiding.

The secretary (Mr L. Scotland) having read the notice calling the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said that the copper business had been passing through a period of unexampled depression and general industrial upheaval, but they believed they had now turned the corner.

Mr C. F. Rowsell seconded the resolution.

Mr Robert Williams, in a lengthy speech, spoke of the prospects of the Union Minière du Haut Katanga, and the arrangements made for increasing the output of copper, giving the same facts as at the meeting of the Tanganyika Concessions. He also gave particulars of the increase in the capital of the last-mentioned company.

Dealing with Angola, he said that was proving a very wealthy country, and as the result of the favourable reports by the Bovril company's expert on the cattle-raising capacity of the country, they were able to carry out an important deal whereby the Bovril group shared with this company in a big land and cattle raising scheme. He did not believe there was another country in the world offering such opportunities for British trade as Angola.

Giving details of the arrangements with Bovril, Limited, he said that a company called "The Angola Estates, Limited," had been formed with a nominal capital of 100,000 shares of £1 each, in which this company received fully paid shares to an amount not exceeding £31,500, the other parties providing £22,000 cash, which it was estimated would be sufficient for a three years' programme. The new company would develop the Quito Block as a cattle-raising, mixed farming, and dairy proposition, and it was estimated that in three years this block would be able to pay all outgoings and 10 per cent. on the capital invested in it. In addition the programme provided for demarcating and securing the title to three other 50,000 hectare blocks, and of 5 other similar

blocks if the company could obtain an additional concession, which appeared likely. At the end of the three years they would be in a position to develop the other block in accordance with the experience obtained from the Quito Block, the arrangement being that the unissued capital in Angola Estates might be taken by Zambia Exploring Company and the Bovril group in half shares. The Zambia Exploring Company still retained the right to one block of 125,000 acres, which it was proposed to select and obtain title to shortly, as development in Angola appeared likely to go ahead rapidly.

The company held 214,804 Tanganyika Concessions shares, 16,235 Union Minière shares, £973,480 Benguela Railway 5 per cent. debentures, 10,000 shares in Nile-Congo Divide Syndicate, and 31,500 shares in Angola Estates, Limited, besides land and stands in Southern Rhodesia and Angola, and shares and debentures in other companies. The position of the company was very sound.

The report and accounts were adopted, and the usual formal business transacted.

FANTI CONSOLIDATED MINES, LIMITED.

VALUE OF COMPANY'S MANGANESE PROPERTIES.

The ordinary general meeting of the Fanti Consolidated Mines, Limited, was held, on the 16th instant, at the Cannon street Hotel, London.

The Chairman (Mr Edmund Davies) said that the directors recommend the payment of a dividend of 9d per share, leaving a balance of £17,379 to be carried forward, subject to the directors' percentage of profits and corporation profits tax. Shares and interests in other companies amounted to £335,162. Those holdings were taken either at cost or at market prices, or valuation where there was no quotation, but in no case over prices fixed at December 31, 1917, for the reduction of capital, but if the market price at December 31st last was below the cost of those shares acquired since, the difference had been written off. The figure, comparing with the value of the shares held on December 31, 1920, showed an increase of £132,684. Taking the investments at the market prices on the 15th inst., and where there were no quotations at the directors' valuation which was not above cost, they represented £483,236, and the amount at which they stood in the company's books was £444,670, showing an appreciation of £38,566. No valuation had been placed on a large number of shares which had a market quotation in view of their speculative nature.

At the last ordinary general meeting the directors dealt at some length with the company's manganese proposition, and in particular referred to a contract entered into for the sale of 500,000 tons of ore, deliverable at the rate of 100,000 tons per annum with a guaranteed minimum profit of 7s 6d per ton. Differences of opinion arose over the interpretation which might be put on various clauses of the contract, and in particular those relating to chargeable items to working costs prior to arriving at the guaranteed profit. The board were advised that costly litigation would have occurred, which in course of time might have resulted in reduction of the 7s 6d per ton referred to, and they therefore considered it advisable to cancel the contract. They had since been fully occupied with the opening up and equipment of the property, desiring to be in a position to produce at an early date and at the lowest possible cost from 70,000 to 100,000 tons of ore per annum. The production of manganese on a large scale would be of enormous benefit to the colony, to trade in general, and to those who shared in the fortunes of the company. The directors'

most sanguine expectations had been confirmed as to the quantity and quality of the ore, and personally he was satisfied that their manganese properties alone were worth far more than the issued capital of the company.

The report was unanimously adopted.

ROLLS ROYCE, LIMITED.

The annual general meeting of Rolls Royce, Limited, was held, on the 19th instant, at Derby, the Right Hon. Sir Edward Goulding, Bart, M.P., presiding.

The Chairman, in the course of his speech, paid a warm tribute to the memory of the late Mr Ernest Claremont, who had been chairman of the company from its formation, and whose guidance and wisdom, he said, largely contributed to the success of the business. His brother, Mr Albert Claremont, who had been solicitor to the company for a great number of years, had accepted the vacant seat on the board. At the last annual meeting, the Chairman proceeded, they congratulated themselves on a record profit shown in the accounts. Like all other trading concerns, the company had suffered in the year now under review, not only from heavy taxation, but also from political unrest, prolonged labour trouble, and the terrible amount of unemployment. They had hoped those were the dominating features of that year only, and he regretted they were still with them, arising in even more serious form in the engineers' dispute and present lock-out. He hoped, however, that if they could be free from industrial trouble, and the engineers' dispute were settled, there would come a healthy and continued revival of trade.

BALANCE-SHEET ITEMS.

In reviewing the balance-sheet and accounts, they would note the capital was practically the same, with an addition in workers' shares, which was to the good. Stock in trade and work in progress showed a reduction of £785,000, which would be deemed satisfactory. Sundry creditors amounted to £891,000, which was a reduction of £707,000. The bank overdraft had been paid off, and there was a substantial amount of cash in bank, and in hand. Since the accounts were closed a considerable further amount of liabilities had been paid, and investments had been made in Government stocks. The amount for sundry creditors was still large, but a considerable portion of it was provision for excess profits duty, income-tax, and Corporation profits tax. The reserve fund and several contingencies fund had been consolidated into one account, which amounted to £241,000. This was a very substantial sum, but in his opinion not too large in these bad times. The company had enjoyed a volume of trade which they hardly ventured to anticipate, having regard to the cost of the article they sold. Owing to the conservative policy observed by the board in the past, the provision made to meet certain probable liabilities, which had not actually realised, formed a portion of the profits for the year. On the assets side of the balance-sheet, the property of the company showed a net increase of £86,000, but as this expenditure was necessary at the time when the slump in trade arose, they were unable to cancel this, and they felt that the future would justify their action. The amount for depreciation was less than in previous years, but the directors had always been very liberal in depreciating buildings and machinery, especially during recent years, when prices were abnormal. The accounts were made up and stock taken usually on October 31 each year. The directors did not wish to change the date of the financial year, or to furnish shareholders with ten months' accounts for 1921. Therefore, in order to save expense and disturbance of work in the factory, stock was taken in August, and balance of incomings and outgoings of stock for September and October was estimated on a careful finding by the managing director and necessary officials. Debtors had decreased by £174,000. Figures in respect of debtors included amounts owing by subsidiary companies for goods supplied and money lent for purposes of the business. The cash in hand and in bank was an increase of £133,000. As a large portion of the stock had been realised, the item concerning all shareholders most was profit, which for the year was £107,000, as against £202,000 for the previous year.

ALLOCATIONS.

The total amount for disposal was £116,000, which the directors recommended should be appropriated as follows:—For dividend of 8 per cent., £65,000; income-tax, £12,000; contingent liability account, £10,000; reserve fund, £15,000; welfare fund, £5,000; and carry forward, £9,000. He thought the shareholders would agree the results of the year's working reflected great credit upon the management, and especially upon Mr Claude Johnson, the managing director. The works were producing what was recognised in all countries as the best car in the world. Since the Armistice Mr Royce had unstintingly sacrificed himself in providing designs which could at short notice be materialised should world

financial conditions demand departure from the one-chassis programme followed by the company since 1907. In this work he had received the loyal and hearty co-operation of the very able staff of designers and engineers which he had built up round him and trained in his methods. The aero engines made by the factory were renowned for reliability and endurance under most severe tests. Mr Royce and his chief aero assistant, Mr Rowledge, were fully abreast of aero engine design, and gave great thought to the matter so as to facilitate production of new designs as required.

The chairman's motion for the adoption of the report and accounts was seconded by Mr Claude Johnson and carried.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills dated from Monday to Saturday, May 22-May 27, were opened on May 19, 1922, and the total amount applied for was £88,445,000. Tenders for Monday to Friday bills at £99 7s 11d, about 9 per cent., above in full. Saturday bills at £99 8s 1d and above in full. The average rate of discount was £2 7s 2.4rd.

New rules for issuing bank notes have been given by Statute of November 2, 1920. We are authoritatively informed that the right of issue of the Bank of Norway is calculated at an amount of 250 million crowns above the stock of gold and at present extraordinary additional amount of 50 million crowns from July 25, 1921, until further order.

Through Royal resolution of February 3, 1922, it has been resolved that the extraordinary right of issuing bank notes has been reduced from 50 millions to 25 millions from February 4, 1922 (this day included).

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended May 17, 1922, the stock of coin and bullion shows a decrease of £8,712 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended May 17, 1922.	Countries to which Exported.	Week Ended May 17, 1922.
British South Africa.....	790,202	British India	373,264
British West Africa	32,909	Netherlands	16,800
		Belgium	13,600
		Other Countries	40
Total value of imports of gold	833,111	Total declared value of exports registered in the week	403,704

Messrs Samuel Montagu and Co. write as follows on May 18th:—

GOLD.

A fair amount of gold was on offer, and was all taken on account of India. No gold is reported as having arrived in New York. The following were the United Kingdom imports and exports of gold during the month of April, 1922:—Imports, £1,278,246; exports, £1,338,093. We are informed that the following gold movements took place in Switzerland during the year 1921 (value in francs):—Imports—Coin: 398,000,000 from Sweden; 35,000,000 from Germany—433,000,000. Bullion: 42,000,000, mainly from Holland and Sweden—475,000,000 (this compares with 39,500,000 in 1920). Exports—Bullion: 376,000,000, mainly to the United States of America. From the above it will be observed that Switzerland acted chiefly as a clearing-house, having retained only 99,000,000 francs of the imports.

SILVER.

The market has kept on the upward trend, as it has done since the beginning of the month. During the week, advances have been rather acute, probably because the Indian bazaars had previously refrained from sending buying orders in the hope that rates would become more favourable. As, however, the date drew near for the departure of this week's steamer (due to meet the June settlement), they delayed no longer than Saturday, and since then sharp upward movements have been recorded. The quotations to-day for cash and forward delivery are the highest since December 3rd last. The good tendency was assisted by purchases made for China here and in the United States of America. The bulk of supplies was derived from the Continent, which was more disposed to realise holdings at the substantial improvement in prices that has taken place.

PRODUCTION IN AUSTRALIA.

Year.	Zinc. (In Tons.)	Lead. (In Tons.)	Silver. (Fine Ozs.)
1910.....	210,580	219,246	13,881,815
1911.....	241,109	235,505	15,200,086
1912.....	230,275	241,692	15,966,143
1913.....	216,215	250,788	15,091,402
1914.....	166,298	199,903	12,427,277
1915.....	131,497	170,533	11,030,313
1916.....	118,684	156,187	10,175,174
1917.....	157,582	170,586	12,293,280
1918.....	181,745	206,172	14,941,394
1919.....	65,057	70,401	5,854,479
1920.....	10,076	14,360	1,195,891
1921.....	139,460	83,878	8,326,006

The above figures show how intimately the extraction of silver is bound up with the treatment of base metals. The larger the production of the latter, as a consequence of active demand or favourable mining conditions, the greater also the production of silver.

INDIAN CURRENCY RETURNS.

NOTICES.

We are informed that Barclays Bank (Overseas), Limited, has been registered with a capital of £1,350,000. This is the outcome of the purchase by Barclays Bank, Limited, of Messrs Cox and Co.'s interest in Cox and Co. (France), Limited, which was completed recently. The chief shareholder of the new concern will be Barclays Bank, Limited, and the business now conducted in France and elsewhere by Messrs Cox and Co. (France), Limited, will be carried on as from July 1st by the new institution.

At the annual general meeting of the Institute of Bankers, held in the River Plate Hall on the evening of May 17th, Sir Charles Addis, K.C.M.G., was re-elected president of the institute for the coming year, and Mr R. Holland-Martin, C.B., was re-elected treasurer.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at 195 High street, Lewes, under the management of Mr F. H. Giles.

Barclays Bank, Limited, announce that on and after Monday next, May 22nd, their office at Hinckley will be removed to new premises at the Old Town Hall, Market place; manager, Mr Henry A. Hall.

The London County Westminster and Parr's Bank announce the opening of a branch at 2 Mile End road, E., under the management of Mr R. J. Evans, with Mr J. R. Taylor as clerk in charge.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

(with which is incorporated the AFRICAN BANKING CORPORATION, LTD.)

Bankers to the Government of the Union of South Africa in Cape Province; to the Imperial Government in South Africa; and to the Administration of Rhodesia.

AUTHORISED CAPITAL	£10,000,000
SUBSCRIBED CAPITAL	£8,916,660
PAID-UP CAPITAL	£2,229,165
RESERVE FUND	£2,893,335
UNCALLED CAPITAL	£6,687,495
	£11,809,995

Board of Directors.
 William Reiferson Arbuthnot, Esq. Solomon E. Joel, Esq.

BURMA CORPORATION.—April: 15,842 tons of ore milled in treatment plant producing 9,695 tons of lead concentrates; 10,420 tons of lead bearing material smelted in the blast furnaces, producing 3,361 tons hard lead for treatment in refinery. Refinery products were 3,029 tons refined lead and 320,767 ozs refined silver.

Reports and Notices.

Chubb and Son's Lock and Safe Company, Limited, have opened a branch office at 70 Cornhill, E.C., for the purpose of dealing with enquiries for high-class security work. We are informed that Messrs Chubb have formed a subsidiary company, called Chubb-France, with headquarters in Paris; and they are entering into an agreement with Messrs Bauche and Triaud, the well-known French safemakers, to build for them safes and bankers' security work for which they receive orders in specified European countries. Messrs Bauche's works at Rheims were utterly destroyed by the Germans in 1915, but new works on a much larger scale, and equipped with up-to-date electrical machinery, have just been completed.

Branches of the Meadow Dairy Company, Limited, have been opened at 106 High street, Tunstall, and 224 Chillingham road, Heston, Newcastle-on-Tyne.

Sir Richard Gregory, F.R.A.S., F.Inst.P., has accepted the position of president of the Decimal Association, in succession to the late Lord Belhaven and Stenton.

NATIONAL BANK OF SOUTH AFRICA.—It is announced that the balance at credit of profit and loss account for year ended March 31, 1922, amounts to £193,000. This figure is arrived at after taking into account, (a) balance of £34,000 brought forward from the last year, (b) transfer of £300,000 from reserve fund, and (c) transfer of £25,000 to bank premises. All bad and doubtful debts have been fully provided for, and the bank's investments have been taken at or below present market price. At the general meeting of shareholders, to be held at Pretoria on June 30th next, the directors will recommend that the profit and loss balance of £193,000 be allocated as follows:—Interim dividend for half-year ended September 30th last at the rate of 8 per cent. per annum, which absorbs £118,000; pension fund, £50,000; balance carried forward, £25,000. The

bank has not escaped effect of grave disturbances that have characterised the financial world for a considerable time past, and in the result some specific losses of substantial amount have been sustained, notably in New York. It should be explained that certain of these losses have come to light since the declaration of the interim dividend at September 30th last. The directors have considered it prudent, and in the best interests of the bank, that in the accounts for the year ended March 31st last fullest provision should be made, not alone for the specific losses referred to, and for all accounts of a doubtful character, but also for any unforeseen items that may come to light. After withdrawing from reserve fund for this purpose the sum of £300,000 already mentioned, there still remains intact in reserve the substantial amount of £1,000,000, but the directors being desirous of maintaining the bank in a position of undoubted strength and ability to meet all the requirements of its clients, think it desirable to withhold any recommendation as to payment of dividend for the half-year ended March 31st last. The circumstances under which the bank's losses were possible have formed the subject of close investigation by the directors, who are satisfied that the dispositions which they have made in this regard will avoid risk of recurrence of such losses, and will preserve unimpaired for the future the very valuable business which the bank possesses.

ASSURANCE.

INSURANCE FUSION.—The general manager of the London Guarantee and Accident Company, Limited, has sent a letter to the shareholders stating that his board has entered into an agreement with the board of the Phoenix Assurance Company, Limited, under which the latter company is prepared to offer shares and debenture stock of the Phoenix for ordinary and preference shares in the London Guarantee, as follows:—1. One Phoenix (Pelican) share of £1, fully paid, and £8 of 5 per cent registered Phoenix debenture stock (1922), fully paid, for each ordinary share of £1, fully paid, in the London Guarantee. 2. £5 of 5 per cent registered Phoenix debenture stock (1922), fully paid, for each preference share of £5, fully paid, in the London Guarantee. 3. £1 of 5 per cent registered Phoenix debenture stock (1922), fully paid, for each preference share of £1, fully paid, in the London Guarantee. The Phoenix (Pelican) shares to be created in respect of the agreement will rank *pari passu* in all respects with the existing Phoenix (Pelican) and Phoenix (Norwich Union Fire) shares. The Phoenix debenture stock will be secured by trust deed, and will be redeemable at par on January 1, 1972, or at any time earlier in the event of the Phoenix going into voluntary liquidation, or in whole or in part at 105 per cent. on six months' notice at any time after January 1, 1932, at the option of the Phoenix. Interest will be payable half-yearly on November 1st and May 1st. The holders of the new issue of Phoenix (Pelican) shares whose names are on the register on October 31, 1922, will receive on November 1st a sum of 6s per share, less income-tax, equivalent to the half-year's dividend payable on that date by the Phoenix, and holders of the Phoenix debenture stock, whose names are entered on the register on October 31, 1922, will receive on November 1st a half-year's interest, less income-tax. In addition, in respect of debenture stock issued in exchange for preference shares, a sum equivalent to three months' interest, less income-tax, will be payable on allotment. The effect of this is that holders of London Guarantee ordinary shares who accept the offer of the Phoenix, instead of receiving on September 30, 1922, an interim dividend of 4s per share (on the assumption that the rate will be the same as in 1921), will receive on November 1st 4s in respect of each £8 of Phoenix debenture stock and 6s in respect of each Phoenix (Pelican) share, or 10s in all, equal to the dividend on the London Guarantee ordinary shares for the whole year 1921. After 1922, at the present rate of dividend on the Phoenix (Pelican) shares, London Guarantee ordinary shareholders who assent to the proposal will receive in interest on debenture stock and dividend on Phoenix (Pelican) shares the equivalent of 20s per London Guarantee ordinary share as against 10s in respect of last year. London Guarantee preference shareholders who accept the offer of the Phoenix will receive the same amount of interest as the dividend on the preference shares, payable, however, on November 1st and May 1st instead of on September 30th and (in 1922) April 12th, and, in addition, on allotment, three months' interest as stated above, and will hold Phoenix debenture stock redeemable at the latest in 1972, instead of preference shares where the capital is repayable only on the winding-up of the company. All dividends on the Phoenix (Pelican) shares and the interest on the Phoenix debenture stock will be paid, less income-tax, in the same way as the dividends on the London Guarantee ordinary and preference shares. The agreement is conditional on its being confirmed by resolutions of a general meeting of the Phoenix and on the acquisition by the Phoenix of at least 80 per cent. of the paid-up capital of the London Guarantee, represented by the ordinary and £5 preference shares, or of such less proportion as may be subsequently approved by the Phoenix. The business of the London Guarantee will be continued under its present name, and under its present board of directors, with the addition of Sir Gerald H. Ryan, Bart., chairman of the board of the Phoenix, who will become chairman of the board of the London Guarantee. Mr A. W. Tait, C.B.E., at present chairman, will become vice-chairman of the London Guarantee, and will also be appointed a director of the Phoenix.

TRADERS AND GENERAL.—The directors announce that it is proposed to go into voluntary liquidation. An arrangement has been made with the British General Insurance Company, Limited, under which policyholders will be protected against loss in respect of the unexpired period of their policies. Under this agreement the British General is prepared to take over existing policies, and to continue them for 12 months from May 13th, upon payment of an annual premium, less a proportionate allowance in respect of the period unexpired under "Traders and General" policies. This offer extends to all direct policies covering risks in the United Kingdom in respect of fire, employers' liability, motor, plate-glass, sickness and accident, burglary, third party, and general accident insurances.

Reports and Notices.

Baring Bros. and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 20th to the 30th instant, both days inclusive, for the preparation of the warrants for the interest due July 1, 1922.

The Agent-General for Ontario informs us that there have arrived in London samples of gold and silver ore from Canada. These include four samples of gold ore from the Dome Mine, value £100; one sample of gold ore from the Crossus Mine, value £500; one sample of silver ore from the Trethewey Mine, value £200; and one sample of silver ore from Cobalt, value £200. These samples are on view at the office of the Agent-General for Ontario, 163 Strand, London, W.C. 2.

Sir William Noble, who has just retired from the position of Engineer-in-Chief to the Post Office, has accepted a seat on the board of the General Electric Company, Limited. We understand that Sir William Noble proposes to devote his attention mainly to the development of the telephone and wireless sections of this important manufacturing concern.

The Imperial Ottoman Government notifies all Ottoman subjects in Great Britain who are holders of pre-war Austrian and/or Hungarian bonds that the listing and stamping of such bonds, in accordance with the regulations of the Reparation Commission, must be completed by June 30th. Any such holders should immediately communicate with the Imperial Ottoman Bank, London, 26 Throgmorton street; Manchester, 56-60 Cross street.

It is announced that Mr Duncan Paterson (Director of the Bank of Adelaide) and Mr John Falconer (Chairman Messrs Poulton and Noel, Limited) have been appointed Directors of the Southern Union General Insurance Company of Australasia, Limited.

We are informed by the Ontario Government that, owing to hydro-electric power being available, the cost of power for use at the gold mines of Northern Ontario ranges from 35 to 50 cents per ton of ore treated. The general value of the ore now being treated is over \$10 per ton, and the average cost of producing bullion is between \$5 and \$6 per ton.

Mr A. A. Campbell Swinton, F.R.S., M.Inst.C.E., M.I.E.E., has joined the Board of W. T. Henley's Telegraph Works Company, Limited.

At the annual general meeting of the Insurance Officials' Society, held on May 30, 1922, Mr E. Roger Owen, the deputy chairman of the Commercial Union Assurance Company, Limited, was re-elected president.

In consequence of the necessary building operations for the enlargement of their premises in Threadneedle street, the Bank of Australasia are to-day removing to temporary offices at 13 Leadenhall street, E.C. 3.

GOVERNMENT STOCKS, &c.

CHINESE GOVERNMENT 8 PER CENT. STERLING TREASURY NOTES, 1925-1929.—We are informed that the Chinese Government, as a result of negotiations which have been taking place, have requested Vickers, Limited, to pay the coupon due on April 1st last out of certain funds in the hands of Vickers, Limited, belonging to the Chinese Government. The payment of this coupon exhausts the funds so held. Noteholders should present their coupons to Lloyds Bank, Limited, in London in due course upon official publication of the advertisement to this effect. In view of the difficulties which have been experienced in the payment of coupons in the past negotiations are proceeding to obtain specific security on the increased maritime customs revenue if and when such increase takes place, instead of on the special security granted by the Chinese Government on the surplus salt revenue, which, for reasons already explained, never came into active effect.

BANKS.

BANK OF NEW SOUTH WALES.—Advice has been received by cablegram that at the half-yearly general meeting of proprietors held on May 30th at Sydney, a dividend on the capital stock of the bank was declared at the rate of 10 per cent. per annum for the quarter ended March 31st last, payable June 23rd. The sum of £100,000 has been added to the reserve fund, making it £3,600,000, and a credit balance of £160,132 18s 10d has been carried forward to next account.

THE SUMITOMO BANK, LIMITED.—Balance-sheet, December 31, 1921:—

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.—The directors of the Standard Bank of South Africa, Limited, have resolved, subject to audit, to recommend to the shareholders at the general meeting to be held on July 26th next, a dividend for the half-year ended March 31st last, at the rate of 14 per cent. per annum, together with a bonus of 2s 6d per share, both subject to income-tax, making a total distribution of 16½ per cent. for the year ended March 31, 1922, to appropriate £50,000 to the writing down of bank premises, and

£100,000 to the officers' pension fund, carrying forward a balance of about £191,000. All other usual and necessary provisions have been made. It may be mentioned that these figures are the result of one year's trading, whereas at the corresponding period last year the results covered 15 months' trading.

MISCELLANEOUS.

FORESTAL LAND, TIMBER, AND RAILWAYS COMPANY, LIMITED.—The directors announce that, after writing off £220,643 on stocks of stores, &c., bringing in £170,000 previously over-provided for taxation, and transferring £500,000 from reserve account, the accounts for the year ending December 31, 1921, show a net balance of £126,313, making, with the amount carried forward from 1920, a total of £239,617 available. The dividend paid on the 6 per cent. cumulative preference shares absorbed £111,951, leaving £127,666 to be carried forward to new account. The board have decided not to recommend the payment of a dividend on the ordinary shares. The profit on sale of estates, viz., £986,057, has been transferred to the reserve account, which will then stand at £2,322,859. The depreciation account remains unchanged at £1,047,604.

NOBEL INDUSTRIES, LIMITED.—The directors have now received sufficient particulars of the results of the constituent and associated companies for the year 1921 to enable them to declare a dividend on the ordinary shares (payable on July 1, 1922) on account of that year, of 5 per cent., less income-tax at 6s in the £. After this distribution (which they propose in due course to recommend as final for 1921), the estimates show that there will be a balance on profit and loss account for the year to add to the amount carried forward (£757,498) as at December 31, 1920. The recommendations to be made to the shareholders for the appropriation of this carry forward will include the allocation of a substantial proportion thereof to a special investment reserve account. The final completion of the constituent companies' accounts, with their outstanding taxation settlements, will make it necessary to defer the annual general meeting until early September.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

The continued spell of warmth and sunshine has greatly improved agricultural prospects and stimulated growth, so that the appearance of cereal crops leaves little to be desired. Spring oats, however, require additional moisture, as fields in some districts are rather patchy. Generally quiet conditions prevailed at market during the week, and prices in many cases ruled easier, though towards the close a steadier tone was apparent. Native wheat in small supply, but sells slowly, and rates easy at 57s to 58s for suitable milling samples, with inferior sorts quoted 55s per 504 lbs free on rail. Imported descriptions, after being slow and easier, improved on higher c.i.f. offers. No. 1 Northern Manitoba 63s. No. 3 ditto 58s, Australian 60s, all landed per 496 lbs, and Rosafé 64 lbs ex ship to arrive 58s per 480 lbs. The wheat cargo displayed weakness until the close of the week, when a good demand prevailed, both on Continental account and from home millers. Cargoes of Australian alfalfa sold 55s 3d to 55s 6d, Rosafé 64lbs afloat, also 63½ lbs loading, at 54s 6d to U.K., several steamers of ditto afloat to Portugal at 55s to 55s 3d, and ditto 63½ lbs May-June to France at 54s per 480 lbs. Parcels also followed the upward tendency, after a sharp decline, with business chiefly in North American and Argentine grades. Flour quiet, and prices further gave way both for home milled and imported. London standard straight run quoted 47s 6d, town households 45s 6d, patents 49s 6d to 50s 6d, all English straight run 44s 6d per sack, delivered in London area. All English country straights 42s to 43s per sack, free on rail at London stations. Of imported, Manitoba export patents quoted 47s, straights 43s, Pacific 46s, and Australian 42s 6d to 43s per 280 lbs. Business on c.i.f. terms remains dull. Canadian patents June seaboard quoted 44s, straights 40s, Kansas patents 45s, and Australian 40s per 280 lbs. Millers' offers dull, and tendency easier. Broad bran quoted

* Half-year.

† Free of tax.

£7 15s 6d to £8, ordinary ditto £6 10s to £7, middlings £9 to £9 10s, per ton ex mill, bags included. Fancy Plate middlings £9 10s, and Plate pollards £7 15s ton landed. English barley largely nominal, as trade is practically finished for the season, but a fair demand is experienced for feeding sorts, and good lots rule from 44s to 48s per 44½ lbs, free on rail. Of imported, Californian quoted 40s to 48s, Australian Chevalier 49s to 52s, Chilean ditto 51s to 56s, per 44½ lbs ex store. American malting 48 lbs 32s 6d, No. 4 Canada Western 32s 6d, both ex ship to arrive, and Tunisian 37s ex store, all per 400 lbs. Maize continued dull and easier, though closed steady at the decline, in view of forward firmness. Plate ex ship 37s 9d, ditto landed 38s, yellow African 35s 6d ex quay, and No. 2 American mixed 34s landed per 48½ lbs. White African maize meal quoted £7 15s ton ex store. Cargoes were in slow request, but holders were not pressing, and rates were fairly steady. Parcels very irregular, though closing firm, with business in La Plata May-June up to 34s 1½d per qr 280 lbs. Oats quiet, but fairly steady. English whites quoted 36s 6d to 38s, black winters 34s 6d to 36s, grey winters 35s to 36s per 33½ lbs free on rail. Of imported, Plate f.a.q. 27s, ditto clipped 29s, No. 2 Canada Western 32s, No. 2 Canadian feed 29s, No. 2 white clipped American, 38 lbs, 27s 3d, British Columbian 37s 9d, and New Zealand 35s to 40s, all landed per 320 lbs. Oatmeal quiet, but prices fully steady, owing to scanty offerings of suitable milling qualities. London-made, coarse pinhead quoted £19, other cuts £18 10s, whole groats £18, rolled oats £19, flaked oats £21, ordinary Scottish oatmeal £19 10s to £20 10s, and American, all cuts, £18 to £18 10s per ton. English beans remain quiet. Choice winters sell at 53s 6d to 54s 6d, ordinary 51s to 52s, while springs range from 57s 6d to 68s per 504 lbs free on rail. Chinese horse beans quoted £10 15s to £11 15s ton. Rangoon hand-picked spot 7s to 7s 3d, Madagascar haricots old crop 10s to 12s, ditto new 18s to 19s cwt. English peas are in good request, and offerings are now becoming very light. Maples are firmly held, and range from 85s to 95s, and duns 85s to 66s per 504 lbs free on rail. Of imported, Dutch hand-picked quoted 29s to 29s 6d, ditto screened 25s to 26s, Japanese 51s to 52s, Tasmanian "A" grade 23s to 24s, New Zealand blue 22s to 25s per cwt. English rye quoted 40s to 45s per 504 lbs free on rail. Lentils steady. No. 1 split 29s to 30s, No. 2 ditto 22s to 24s, and Egyptian 22s 6d to 24s per 100 lbs ex store. Homeward grain chartering was on a moderate scale, and mostly to Continental and Mediterranean ports. The River Plate section ruled easier, but the inquiry shows slight improvement, and now extends to July. Handy-size steamers to U.K./Continent June loading done down to 27s 6d loading at upper ports, with 25s, no reduction paid from Buenos Ayres/La Plata. Numerous charters were effected from Montreal on the basis of 20½ cents one, 21½ cents two ports Mediterranean, not east of West Coast Italy, and 20 cents to Marseilles. To Continent 15 cents is quoted, while American

GOLD and SILVER in ONTARIO

Gold mining is developing rapidly in the Province of Ontario, Canada. In 1921 the gold output was \$14,702,268. In 1922 it will probably be 18 or 20 million dollars.

The two chief camps are Porcupine and Kirkland Lake. Hollinger Consolidated, at Porcupine, is one of the great gold mines of the world; at present its production is about \$1,000,000 per month. Among other mines of this group are McIntyre and Dome, each with an output of more than 2 millions yearly.

At Kirkland Lake, the Lake Shore, Wright-Hargreaves, Teck-Hughes, and Kirkland Lake mines are the present producers.

Matatchewan, Larder Lake, West Shining Tree, Goudreau, Schreiber are other localities where gold has been discovered, and mines are being developed.

The silver mines of the Cobalt area are world-famous. Discovered in 1903 their yield up to the end of 1920 was 323 million ounces. Nipissing mine in 1921 yielded 3,012,614 ounces, O'Brien 1,408,890 ounces, Coniagas 1,301,860 ounces.

The pre-Cambrian rocks, in which the gold and silver and other minerals are found, extend over most of Northern Ontario, comprising many thousands of square miles. The greater part of this territory is unprospected.

The climate is invigorating, there is plenty of wood, water and labour. There are no mountains, and the prospector can go almost anywhere in his canoe. The mining laws are liberal. Ontario mining taxes are on net profits only, the rate being three per cent.

Magnificent specimens of gold and silver ores are now on view at the office of Mr. Wm. C. Noxon, Agent-General for Ontario, 163, Strand, London, W.C.2, where descriptive booklets, maps, and other information may be had.

THE HON. H. MILLS,
Minister of Mines,
Toronto, Ontario, Canada.

THOS. W. GIBSON,
Deputy Minister of Mines.

been not even a ripple of excitement on the surface of market business, but steamers are so full and tonnage arrivals so regular and plentiful that collieries are insisting on their own loading hours. Yet the production has shown a tendency to run slightly ahead of the export demand, and this has been responsible for a little easiness in the spot prices of some of the best steam large and small coals. The change has not amounted to more than 3d to 6d per ton, but it has been sufficient, however, to induce the colliery owners to bring pressure on their salesmen to act together on conference lines with a view to the avoidance of unnecessary price cutting. During the depression in February there were proposals for the centralised regulation of prices, but while this proposal was discredited by the experience of Government control, steps were taken towards the organisation of the collieries into distinct groups for coal-selling purposes, and the representatives of these collieries on the market were advised to confer at least once a week. Four such groups were constituted, the first embracing the Cardiff steam coal collieries, the second the dry coal collieries, the third the bituminous coal collieries, and the fourth the Monmouthshire semi-bituminous and locomotive coal collieries. It is complained that the meetings of these group committees have recently been only sparsely attended, and as it is believed that the previous meetings had a very good effect in stabilising prices, an appeal has been issued to the salesmen to meet regularly with a view to the adoption, as far as possible, of a uniform policy aiming at the maintenance at least of present prices. Quotations for best Admiralty at 28s 3d-28s 6d; seconds, 27s to 28s 6d; best Eastern Valleys, 26s 6d-27s; and the best small steams, 19s to 19s 6d. All other quotations are unchanged, including all anthracite qualities. Coke prices have hardened for export to 34s to 35s, f.o.b., and for blast furnace, inland, at from 23s 6d to 25s at ovens. Pitwood is steady at 31s to 31s 6d, ex ship. The proceeds of the coal export trade in April are £400,000 less than the proceeds in March, owing to the Easter holidays and the effects of the snowstorm early in the month. This fact makes it certain that there will be no improvement in wages in May, and that the owners will again have to surrender their standard profits in order that the minimum wage rate be maintained.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although the market is not quite so active, there is no indication of any loss of strength; in fact, prices are well maintained all round, and in some cases show a distinct hardening tendency. The strong close in London and the optimistic news from the producing countries give an appearance of great stability to present values, high as they are in the case of merinos, and traders express full confidence in the immediate future. It is recognised that merinos are now on a level which necessitates cautious buying, but there does not seem any prospect of cheaper wool, and as topmakers are sold ahead for three and more months, the general impression is that prices can be left to look after themselves. It is impossible to buy a really good 64's top under 4s 8d, and some firms are asking from 1d to 2d more. There are even some optimists who talk about the price rising to 5s, but the majority will view any further advance with a good deal of anxiety. The improvement in the demand for crossbreds is a gratifying feature of the market, and medium and low qualities are selling much better at distinctly firmer prices than those current a week ago. It is in this section of the trade that there is room for most improvement, and it is hoped that the recovery in raw material will soon extend to the piece goods trade, which is barely in need of a fillip. Spinners are well employed, and most firms are wanting more money for fine crossbreds and merinos. The higher quotations, however, undoubtedly tend to check business, most manufacturers being unable to do much with cloth on to-day's basis for yarns. Home-grown wools are moving fairly freely, especially the finest classes, but while there is more call for lustre hogs, wethers continue to hang fire. The mohair trade shows increasing activity.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The Colonial wool sales came to a finish in an excellent way, and to the very last the opening advance was still in evidence. The series throughout has been characterised with excellent competition, and every day's sale has passed off uncommonly well. The inquiry for the raw material could not have been better, and buyers left for home in the best of spirits, and general confidence is expressed in the future of the raw material. The recovery in crossbreds is one of the most satisfactory features of the series, and the all-round 10 to 15 per cent. advance is a welcome move towards bringing this class of raw material on to a paying basis when viewed from the grower's standpoint. At the same time values have a long way to go before growers can say that they are getting economic prices for quantities up to 50's, and we calculate to-day that a grower wants 12d per lb for grease 40's before he is getting a price commensurate with the cost of wool growing in New Zealand and Australia. Then the British Government paid in New Zealand 14d-14½d per grease lb for all the B.A.W.R.A. wool catalogued of 40's quality, higher counts being appreciably more. B.A.W.R.A. is doing the right thing in letting her stocks go, notwithstanding that big losses are having to be faced. All the same, the sensibly increased inquiry and the wonderful change which has come over the situation is a very welcome feature, and we think the worst is un-

doubtedly passed in regard to all descriptions of crossbreds. We certainly think that prices will be sensibly higher for both coarse and medium qualities twelve months hence, and a settlement of Continental political and economic subjects cannot but lead to an augmented call for crossbreds on the part of Germany, all with a view to distributing the finished article throughout Eastern Europe. There is nothing wrong whatever with 56's and up-wards, these wools to-day selling on a paying basis, but there is still ample room for 50's and below to move upwards.

The course of the sales is certainly indicative of a widening demand for the raw material, coupled with an expanding consumption. We have had occasion this last week to look critically at the state of manufacturing conditions, and are pleased with results of both personal inquiry and visits to Yorkshire mills. The improvement is everywhere in evidence, and the only regrettable feature is the standing looms among woollen manufacturers and the stupid indifference on the part of wool-combing operatives to the needs of the world. It is very regrettable that there are in England to-day able-bodied men and women unwilling to rise to the occasion and contribute their quota to the world's pressing needs, and it is a thousand pities that some mechanical process cannot be invented to augment the output of the combs. The law of cause and effect is undoubtedly operating, more tops are being sent from the Continent into England, the Continent is also doing a big export trade to what were Bradford's pre-war customers, while there are sensible increases in the imports of woollen and worsted yarns, all of which is displacing the home-spun article. And yet combing operatives turn a deaf ear deliberately to the claims of a poverty-stricken world, largely on account of the inability of a few officials of the Union to appreciate the present position. However, the textile industry as a whole is fast approaching normal conditions, with the exception of the piece end of the trade, and there is continual disapproval expressed at the rapid advance in wool values, particularly in merinos. The question uppermost is whether it is safe to buy for the delivery of piece goods six months hence, and when firms are now being asked to pay up to 1s 6d to 2s per yard more than prices at which they have been buying pieces during the past 18 months, it is something to which woollen merchants and export houses seem quite unable to make up their minds.

THE COTTON TRADE.

MANGRESTA, May 18.

We have experienced a stronger and dearer market this week. At the beginning there was considerable activity, and a large business was done. During the last day or two, however, the turnover has been rather smaller, partly owing to the higher rates required, and partly as a result of producers wanting extended time for deliveries. Free operations have occurred in piece goods for the several outlets of India, and the buying has covered a wide range of cloths. Numerous manufacturers are busier on contracts for Calcutta than for a long time back. A few more orders have been put through for China without there being any general buying. An encouraging off-take has occurred for Egypt, Mesopotamia, the Straits Settlements, and Central and South America, but home trade conditions are not favourable. It is estimated that more machinery is running in Lancashire than for over 18 months back. A substantial trade has been done in American yarns at hardening rates. More orders have been reported in Egyptian spinnings. There has not been very much activity in export yarns.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market continues to gather strength in spite of tanners' efforts to get prices lower. Heavy ox made this week in Bermondsey from 8½d to 8½d, showing an advance of ½d per lb on last week's prices. Light at 6½d to 8½d were also ½d to ½d up. Cows were a shade weaker, as first class dropped to 6½d-6½d. Calf showed no change, and wool skins made from 3s to 8s 10d each, with lambs at 2s to 4s 2d each. The demand for overseas hides is better owing to stronger prices at port of origin. Bovril ox are reported sold at 8½s, c.i.f., and Liebig Colons at 9½d, c.i.f., and shipping weights. Dry hides are also in better request, and are firming up in sympathy with other sorts. The American position is cabled as firmer, with May best packer hides now offering at 14½ cents.

There is a decidedly better tone to the leather market; consumers, in view of the firm hide position, seem convinced there is no cheaper leather in sight, and are filling up requirements. Tanners have in some instances already advanced price lists, a policy which is open to question at a time when consumers seem to have recovered confidence. Manufacturers are buying bends at from 15d to 22d per lb., and repairers seem able to order fair at quantities of 10-14 lbs. Rough leather is rather slow of sale, as tanners have asked advances on split and dressing hides. Rough splits are wanted, and a fair trade is again springing up in belly grains.

Upper leathers are improving, and black and coloured chrome is now being inquired for. Suèdes and patent still command the chief attention for ladies' shoes.

The shoe trade is decidedly better, and the export returns for April show that 465,434 pairs were exported, as against 336,504 for January last. The strike at Chesham is settled, but we are in another at Leicester, where the women operatives to the number of 2,000 are out against a reduction of 2s per week, although this was agreed upon by the National Union and the Manufacturers' Federation some months ago. Already the trade has re-

ceived a severe check, as male operatives are unable to work in some cases owing to the shortage of closed uppers.

VEGETABLE OILS AND OILSEEDS.

Market conditions have been quiet, and in many directions an easier tendency has to be noted. In view of the small offerings, raw linseed oil on spot and in near positions continues steady, but very little actual business has been done and prices are somewhat lower at £43 10s spot and £43 for May delivery ex Hull mill. Forward positions have attracted some interest, and quotations are round £40 June-August and £37 10s September-December. A fair demand has been experienced for crude cotton oil at £42 ex Hull mill, and some trade has been done in common edible refined up to £48 10s. Soapmakers' grade of refined is rather firmer, and inclined dearer. Palm kernel oil in fair demand, but ground nut oil neglected. Crude soya bean oil 10s dearer for spot. Rape oil again firm, and quotations maintained for prompt delivery.

In the oilseed section there has been only a limited inquiry for Plate linseed, and although shippers, as a rule, have been firm in their attitude, values have a downward tendency. For shipment to Hull £20 10s has been paid. A fair trade has been done in Calcutta to London at £21 10s to £22, according to date of shipment, April, May, and May-June. Egyptian cottonseed is dull, recent sales of Sakellaridis being done at £12. For Brazilian white cottonseed for shipment to Liverpool £8 15s has been paid. Soya beans quiet, and shippers disinclined to meet buyers here.

The imports of oilseeds, nuts, and kernels in April, at 124,714 tons, were above the average, and compared with only 85,822 tons in April last year. For the four months, January-April, the imports aggregated 469,405 tons, against 397,019 tons in the corresponding period of last year, an increase of 91,630 tons. The larger total has been contributed to by greater arrivals of linseed (129,188 tons against 114,020 tons), and cottonseed (170,320 tons against 110,619 tons). Rape, castor, and soya are also above last year's figures, but nuts and kernels, at 120,512 tons, were nearly 20,000 tons behind a year ago, mainly under the heads of ground nuts and palm kernels. Exports of linseed oil in April were 7,610 tons, bringing this year's figure up to 25,295 tons, against 11,531 tons, between 80 and 90 per cent. being shipped on American account. The total of unrefined vegetable oils exported in the four months was 35,209 tons, against 20,242 tons, and of refined oil, principally cotton oil, 5,779 tons, against 7,978 tons.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, May 19.

With one or two exceptions the markets continued in a quiet state, as consumers show no disposition to depart from the hand-to-mouth policy followed for some considerable time past.

SUGAR.—Actual transactions were confined to a moderate limit, and prices are slightly easier on the week. Messrs Tate and Lyle's cubes sold, 52s 3d to 53s 3d; crushed, 50s; granulated, 48s to 48s 6d; caster, 50s to 50s 3d; pieces, 34s 6d to 36s 6d; fine white, 43s 3d; yellow crystals, 42s 6d; granulated, July-August and also September delivery, sold, 48s. Crystallised West India ruled quiet at 47s to 43s, according to sample. American granulated, spot, sold, 47s 3d to 47s; ditto May, steamer, 19s 10½d to 19s 9d; June, 20s 1½d to 20s; July, 20s 3d to 20s 1½d, c.f. and i. terms, London. White Brazilian, May-June, 18s 3d, c.f. and i. White Mauritius, spot, sold, 44s to 45s. Dutch and Czechoslovakian sugars remain quiet nominal. Belgian granulated, October-December, 18s 4½d, f.o.b., Antwerp. Cuban, basis 96 per cent., May, sold, 13s 3d; Brazilian, basis 80 per cent., ditto, 8s 6d, sellers, c.f. and i. terms U.K. Terminal market quiet. Small transactions in white include August at 20s 3d to 20s 1½d; and December, 19s 3d to 19s 4½d. Cuban stocks stand at 1,107,000 tons, against 1,249,200 tons same time last year. Liquid glucose, spot, sold, 26s. American syrup quiet, but steadily held. Good to fine grocery, 26s 6d to 28s per cwt.

COFFEE.—A quiet tone governed this market, but prices on balance show no material alteration. Bold sizes of East India sold, 116s 6d to 124s; Costa Rica, 120s to 128s. Future delivery market remains slow. December delivery changed hands at 60s 9d to 60s 4½d.

COCOA.—Market without new feature, general course of trade ruling quiet, with but little or no change in values. Butter quiet, at 1s 7½d per lb.

TEA.—About 37,000 packages Indian were submitted to auction this week, and prices in most cases ruled easier, but buyers showed more disposition to operate thereat, particularly with regard to the lower qualities. 24,800 packages Ceylon offered passed with a quiet tone, and buyers were favoured respecting any change in prices. Good qualities 1d to 1d per lb down, though a few fine sold at tolerably steady quotations. Java easier.

RICE.—Market steady, but general trade quiet. Rangoon two stars, old crop, on spot, now scarce and quoted, 14s 3d; new, 14s 9d; ditto, afloat, 14s 4d; May-June, 14s 6d. No. 3 cleaned Rangoon, May-June, to the Levant, quoted 15s 3d, c. and f., double bags. No. 1 garden Siam, June-July, 16s 9d; No. 1 Saigon ditto, 15s 9d, c. and f. terms, United Kingdom or Continent. Siam C.1, broken, May-June, 11s 6d; and C.3, ditto, 10s 9d. Rangoon bran quiet, and May-June quoted, 6s 7s 6d, ex ship terms. Beans steady quiet. Rangoon hand-picked, spot, 7s. Madagascar butter beans, spot, new crop, 18s 6d. Japanese peas, spot, 5s to 5s 2s; Dutch hand-picked, spot, 30s; screened, 25s.

SPICE.—Pepper market remains quiet, both with regard to spot and forward positions. Fair black Singapore, spot, sold, 34d; May-July, 34d. Aleppy, spot, quoted, 44d; Tellicherry, 44d; white Singapore, 7d; Muntok, spot, 74d; ditto, May-July, sold, 74d, and June-August, 78d. Zanzibar cloves, spot, 1s 3d; May-July, 1s 2d, and July-September, 1s. Pimento, spot, 24d. Flake tapioca, spot, sold, 2d to 24d per lb. Fair Penang seed pearl, spot, 19s 9d; small sago, spot, 24s to 25s; sago flour, April, sold, 16s 3d; May, 15s 12d to 14s 9d; May-July, 14s 9d to 14s 6d. Desiccated coconut: Spot parcels, sold, 42s 6d; afloat, 40s 6d; May-June, 40s, and June-July, 39s 6d. Ginger quiet, unaltered.

FRUIT.—A moderate demand continued for currants, and steadiness prevailed. Pyrgos, quoted 57s; Amalia, 60s to 61s; Patras, 61s to 63s, and Vostizza, 64s to 75s. Valencia raisins steady, quiet. Halves quoted 50s to 60s; quarters, 60s to 75s. Sultanias sold quietly on about former terms. Dates steady. Siar quoted 27s 6d.

JUTE.—This market hardened under reserved offers and fair buying orders. First grade, spot, Antwerp, sold, 30s to 32s; ditto April-May, Continent, 30s to 31s and 31s; May-June, 30s 15s to 31s 10s; June-July, 31s 15s to 32s 5s. Lightning grade, spot, Hamburg, 28s; ditto April-May, 27s 15s to 28s 5s; May-June, 28s 10s to 29s 5s; and June-July, 29s to 29s 15s. 10 oz Hessians B group, spot, London, sold, 33s to 34s; ordinary, 32s 6d to 33s 6d; May, 33s to 33s 6d; July-September, 34s to 36s 9d. 8 oz, spot, sold, 25s 3d; May-June, 25s 9d per 100 yards. A twills, spot, sold, 75s to 75s 6d; May-June, 76s 6d; B spot, sold, 68s; May-June, 67s; salts, spot, quoted 54s; sugars, afloat, sold, 81s 6d, and flours, on spot, 80s 6d. Hessians bags, 56 by 28, spot, sold, 53s per 100 bags.

HEMP.—Manila more reservedly offered this week, and tone steadier for the undergrades, and which continue to absorb all attention. Finer qualities are really nominal. G grade, May-July, sold, 32s 10s

to 34s 10s, and streaky threes, 32s 15s to 34s 10s. New Zealand dull. H.P.F., spot, quoted 30s, and fair, 29s. African Sisal, No. 1, G.E.A., May-July, 34s, and No. 1, B.E.A., ditto, 33s 15s. Indian towns about 2 per ton higher, with a fair trade doing.

SHELLAC market quiet, and easier. T.N., spot, 355s; May, 355s; and August sold, 345s to 340s and 342s 6d.

COPRA.—Market continued very quiet and generally featureless. F.M.S. Straits, March-May, Rotterdam, sold, 25s 5s to 25s; July-September, at 25s 2s 6d to 24s 17s 6d; F.M. ditto, May-July, March-May, 24s 2s 6d; Ceylon, ditto, to near Continent, at 26s 5s to 26s 2s 6d; Malabar ditto, quoted, 26s 12s 6d; Cebu ditto, 24s 10s; South Sea Islands, 24s 5s; ditto, to London, 23s 12s 6d; Java, 25s 2s 6d.

PALM KERNELS.—May-July, Liverpool, sold, 18s to 17s 10s. **MENTHOL.**—Spot, 23s; forward, 21s; Japanese peppermint oil, spot, 5s; forward, sold, 4s 7d; aniseed, spot, 2s 12d; forward, quoted, 2s 12d; slab camphor, spot, 3s 6d; ditto, forward, 3s 3d; crude, spot, 3s 1d; forward, 2s 11d lb. Japanese wax, spot, 9s 7d; forward, 7s 5s per cwt.

RUBBER.—Eased during the week on selling pressure, but closed steadily. Standard plantation crepe and sheet, spot and May delivery, sold, down to 74d, and later 74d; June, 74d to 74d; July-September, 8d to 84d; October-December, 84d to 84d. Fine hard Para, spot, 104d; soft fine, rod, and Caucho ball, 8d. To New York, standard sheet, European estate, June-July, sold, 8d; July-August, 84d, c.f. and i. terms.

OILS.—Linseed market irregular and easier, with less inquiry on American account. Spot, net, naked, 45s 6d; May, 44s; June-August, 41s; September-December, 38s. Rape firm. Crude, spot, 45s; refined, 48s. Cotton firm. Crude Egyptian, 43s; Bombay nominal; common edible, 49s. Chinawood, Hankow, spot (barrels), 68s 6d; and May-June, 64s. Coconut quiet. Ceylon, spot, 42s 6d; May-June, 39s; Ceylon, ditto, 42s. Soya steady. Oriental, barrels, ditto, 41s. Japan fish steady. May-June, cases, 22s. Cod steady. English, spot, 30s. Ground nuts steady. English crushed,

THE MONEY MARKET.

A DISTINCT decrease in the supply of money in the early part of the week was explained when the official accounts were published, showing that owing to heavy sales of Treasury bills and excess of revenue over expenditure, the Treasury had been able to repay all the Ways and Means advances from the Bank of England. On Thursday morning money was decidedly scarce, and the rate for day-to-day advances ranged up to 2½ per cent., but the supply soon became more plentiful, owing either to disbursements

by the Government, or to arrangements made with a view to easing the market and stimulating its appetite for Treasury bills. The three months' rate for commercial bills was quoted in some quarters at $2\frac{1}{8}$ per cent., but $2\frac{3}{8}$ per cent. was a practicable rate, especially after the announcement yesterday of the Treasury Bill allotments.

	May 26, 1922.	May 19, 1922.	May 12, 1922.	May 5, 1922.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	$4\frac{1}{4}$ (Apr. 13, '22)
Banks Deposit Rate	2	2	2	2	$2\frac{1}{4}$ (Apr. 13, '22)
Discount & Call	2	2	2	2	$2\frac{1}{4}$ (Apr. 13, '22)
Houses & Notices	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ (Apr. 13, '22)
Market rate (3 mths' bills) ..	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$

The Bank return showed a decrease of £181,000 in the note circulation, and an increase in the Reserve of £182,000, there being also a minute addition to the stock of gold. Government securities had declined by $6\frac{1}{2}$ millions, and the Public deposits had risen by $5\frac{1}{2}$ millions. Other deposits thus being 12 millions lower. There was a further reduction of £1,873,400 to £296,920,000 in currency notes outstanding in the return dated May 25th, which includes £1,621,000 for notes called in but not yet cancelled. The fiduciary issue is £247,349,000, or £62,639,400 below the maximum.

THE STOCK MARKETS.

No considerable increase in business has so far resulted from the reversion in most markets to the pre-war system of dealing, and the lengthening of the daily session. War Loan and Conversion Loan have improved. While French Government and Railway stocks remain weak, Germans have improved. The Home Railway market has again been the strongest section of the House, North-Easterns, North-Westerns, and Midlands scoring conspicuous advances. The continuance of the engineering dispute kept iron, steel, and engineering shares inert; but a fair number of rises were recorded in the brewery market, while among textiles, Courtauld's enjoyed a further spurt. Rubber shares remain heavy on the weakness of the raw material, while sporadic activity in the oil market did not spread to affect leading shares. Kafirs are a little better, now that the ex-enemy blocks of shares have been finally disposed of by the Custodian.

COMMODITY MARKETS.

Fully middling American raw cotton is a trifle easier this week at 12.04d per lb, and there has been rather less activity in the market. In the cloth section, however, there has been an increased demand for China, and a fairly good trade has been done with India. At the Liverpool wool sale prices were well maintained. Business in Bradford is good, some firms being so fully booked up that they are declining new orders. In the pig-iron market conditions are dull, few transactions being done; no change is to be recorded in the demand for manufactured iron and steel. Conditions are rather easier in the coal market, best Admiralty being quoted at 28s to 28s 3d per ton. Wheat quotations show a decline of from 6d to 9d per quarter on account of American market weakness. Values in vegetable oils and oilseeds show a downward trend. The hide market is steady, the demand for sole leather having improved, and a better tone is recorded amongst merchants and tanners. Reports from boot manufacturing centres are optimistic. Further details of markets and prices will be found on later pages from our special correspondents.

FOREIGN EXCHANGES.

Business on the foreign exchange market has remained restricted, with a little more activity towards the end, interrupted, however, by holidays on the Continent. The main feature has been the sharp movement of the mark and franc, which, after depreciating rapidly to 1.402 and 49.51 respectively on Monday, recovered during the following days to 1.267 $\frac{1}{2}$ and 48.67 $\frac{1}{2}$ on Thursday, to react again yesterday to 1.285 and 48.85. As far as can be ascertained, the movement has been indicative more of market nervousness than of anything else. The chief rise in quotation occurred on reports that Germany had made unacceptable proposals to the Reparation Commission, and the

chief recovery on the insistent rumour that a satisfactory settlement had been reached. The truth, of course, is that no formal proposal has yet been submitted by Germany, but there is a general feeling that this week's informal discussions are likely to lead to satisfactory results. An additional ground for optimism is the belief that the French Government will be more inclined to accept a reasonable settlement, as without this basis the work of the international bankers' conference now sitting in Paris will certainly prove fruitless. Forward rates in Paris at 1 to 2 centimes per month over spot are much the same as last week, as also are forward marks at $\frac{1}{2}$ to $1\frac{1}{2}$ marks per month under spot. The New York rate has been very steady all the week, with slight movements round 4.45, the forward rates being a little wider at $\frac{1}{2}$ to $\frac{1}{4}$ cent per month over spot. Although this steadiness is satisfactory, the position is not a very certain one, as any covering of autumn demands may start a downward movement, which in turn might easily be accentuated through profit-taking on the part of the many recent American investors in British securities, with the object of getting the benefit of the recent rise in exchange before it is again wiped out. Among other Continental exchanges, Italy shows an improvement on the week from 86.75 to about 85.15, after being rather better. Madrid, however, after a recovery, is rather worse at 28.25. Amsterdam has moved slightly against us, but Switzerland has risen further to 23.35. Among the Northern exchanges, Copenhagen, at 20.37 $\frac{1}{2}$, shows a distinct appreciation. Stockholm has fallen slightly, but Christiania, at 24.15, is rather worse than last week, and Helsingfors, at 214, has also reacted slightly. In Central Europe, Vienna, after reaching 44,000 or over on the resignation of the Cabinet, is slightly better at 43,000 on the report that the possibility of a loan is being seriously studied by the American group. Warsaw, on the other hand, has depreciated a little to 18,500. Prague and Belgrade have remained practically steady, but both Budapest and Bucharest have moved up again to 3,700 and 650 respectively, while Athens is again rather worse at 108. In the East the rupee, on continued reports of improving trade, is rather dearer at 15 3 $\frac{1}{4}$ d, while the yen shows little change at 2s 1 $\frac{1}{4}$ d. Silver has moved down rather sharply on the absence of Chinese buying, and a marked reluctance in India, and both Shanghai and Hong Kong are cheaper again. In South America, Rio is a little cheaper at 7 17-32d, while Buenos Ayres has also moved down from 44 $\frac{1}{2}$ d to 44 $\frac{1}{8}$ d. Montevideo is slightly depreciated at 43 $\frac{1}{4}$ d, and Valparaiso at \$37.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 20, 1922:—

REVENUE.	Min. £	EXPENDITURE.	Min. £
From Revenue	18,108	Supply Services	8,900
		Interest on Debt	3,148
		Sundries	474
		Added to Exchequer balances ..	309
		Reduction of Debt	6,683
	18,108		18,108

The return of national income and expenditure makes a satisfactory showing during the week ended May 20, 1922, as revenue amounted to £18,108,946, against an expenditure of £11,216,227. The revenue in the corresponding week of last year was £17,466,500, and the expenditure £11,794,510. Some interesting changes in revenue are revealed in comparison with the corresponding week a year ago. The most striking change is £2,876,000 from special receipts, against nothing in the same week last year, and £543,946 from ordinary receipts compares with £9,500. Customs at £3,015,000 compares with £1,254,000. Excise at £7,025,000 with £9,860,000. Estate, &c., duties at £1,160,000 with £1,114,000. Property and Income-tax at £2,068,000 is about £800,000 lower.

The week's operations reduced the National Debt by the sum of £6,683,079, and caused the following changes:—

	Min. £		Min. £
5% Treasury Bonds	+ 122	National Savings Certificates ..	— 500
Treasury Bills	+ 10,771	Bank of England Advances ..	— 9,500
Sundries	+ 243	Public Departments Advances ..	— 8,120
		Surrenders of Bonds, &c.	— 408
		Exchequer Bonds repaid	— 200
	+ 11,136		— 17,919

The floating debt was reduced by £6,850,000 to £943,440,500 during the week. The whole of the temporary advances made by the Bank of England have been repaid.

FINANCIAL YEAR, 1922-23 (April 1 to May 20, 1922).

AFTER GENOA.

We do not propose to follow the thread of the rather unexpectedly restrained *apologia* for the Genoa Conference which Mr Lloyd George delivered to the House of Commons on Thursday. Nor would it appear to serve any good purpose to reiterate our views upon the birth, life, and death of the Conference, nor to speculate upon the doubtful promise of its resurrection at The Hague. In our view, the Genoa idea was conceived in haste and without due preparation and prevision; it was brought to birth in an atmosphere of mistaken psychology, and reared on a diet so necessarily restricted that no hope of waxing strength and prosperity ever really existed. That it did, perhaps, some good and did not make incurable mischief is due mainly to the persistent and untiring work of the Prime Minister, whose efforts at conciliation have been prodigious, and have succeeded in keeping alive a little spark to be fanned, if possible, into flame next month at the Hague. But while Mr Lloyd George has been playing his lone hand, other international developments have been steadily proceeding. Observers of City movements will have taken note that in the foreign exchange market all the principal Continental currencies depreciated during the progress of the Conference. That they have in the past few days shown signs of recovery is partly due to hopes based on the deliberations of the Subcommittee of the Reparations Commission, which began in Paris on Monday to investigate the possibility of raising an external loan for Germany for the purpose of Reparation payments.

In certain quarters it has been suggested that this Committee, which will treat the proposition put before it as though it were an international issuing house, may be expected to last ten days; but the idea that its difficult conundrum can be resolved in anything like so short a

space of time appears to us highly improbable. Even though the Committee takes the strictest business view of its task, it is bound to take into consideration many political aspects of the problem, for even if there is a cut-and-dried scheme to lay before them involving the pledging, say, of Customs duties payable in gold, any issuing house that contemplated raising money on such security would, in the present state of Germany's finances, have to consider how such duties would be affected by further exchange depreciation, how far such taxes would be a tolerable burden to the German taxpayer, and what would be the attitude of the German Government, who, in the long run, cannot possibly be effectively replaced as the tax-gatherer. Moreover, the Committee must consider Germany's capacity to pay reparation, for if this question is not satisfactorily answered and the total Reparation bill settled in accordance with it, there is no way of safeguarding any international loan that might be floated now against the political reactions that might ensue from subsequent attempts to collect impractically large amounts of Reparation. For these reasons, and as it is of the utmost importance that this hopeful experiment should prove a success, we would appeal to our French neighbours to restrain their natural impatience and not be disappointed if the Committee finds that it needs ten weeks rather than ten days. In the meantime, it may possibly be able, as our Paris correspondent suggests, to produce an outline statement of principles which may help to tide over the threatened crisis on May 31st.

Granted that these major questions are satisfactorily answered, and that the Committee reports that the project of a loan is a practicable one, there remain certain important questions as to how the loan is to be raised. In this connection it has sometimes been assumed that the loan will be mainly placed in London and New York. But there are many reasons, some of which are discussed by Sir Henry Strakosch in a letter to *The Times*, why this is not likely to be the case. The project would, of course, be of very little use if any attempt were made to use the proceeds to pay off any part of the debt due by France and Belgium to America or Great Britain. On the contrary, its essential object is to enable these countries to meet the heavy obligations which they are continually incurring for reconstruction purposes, and so to save them from the necessity of constantly raising fresh loans from their nationals on their own credit. Far the greater part of expenditure for reconstruction in France and Belgium is incurred at home either in payment of direct wages, or in the purchase of materials, plant, &c., from French or Belgian sources. Sir Henry Strakosch brings forward statistics of our trade balance to show that there is only a small surplus of sterling available for conversion into francs, after allowing for other essential foreign investments. But this way of stating the case does not seem to us beyond criticism, for there is to-day a large margin of productive capacity unemployed in Great Britain which could make goods for export; and if France cared to spend a large proportion of a sterling Reparations loan in England on machinery, hardware, roofing, and other commodities required for reconstruction, these orders would very soon be reflected in a larger export surplus, and the operation would not affect the exchange or necessarily prejudice other foreign invest-

ment. We, however, entirely agree with the main proposition that any international loan of this kind should be raised in France, Belgium, New York, or London, as nearly as possible in proportion to the amounts which are to be spent in the various countries. Unless this is done the new loan, as Sir Henry Strakosch points out, will introduce a new element of disturbance into the exchanges, and is not likely to be welcomed by British or American bankers. This does not mean that there would be a series of loans secured against different assets, or that it would be possible for Germany to discriminate against, say, the portion of the loan raised in France. If the loan is to be really an international one—and one of its chief recommendations is that the main financial centres of the world will become interested in the carrying out of a reasonable Reparations scheme—the pledged securities of Germany must be pooled in the hands of trustees for the various branches of the loan whether raised in France, Belgium, Holland, or America. It is not improbable that as much as, say, 70 per cent. of any new loan may have to be raised in French or Belgian francs.

In Geneva also matters have not been at a standstill, for the Council met while Genoa was actually in session. Two matters were there dealt with which are of great importance. The chief item on the agenda was to approve of the British mandate for Palestine. On a former occasion the signification of this approval was obstructed by the opposition of the United States. In the interval diplomatic discussion and explanations have removed this opposition; but when everything seemed clear for a settlement at Geneva last week objections were forthcoming from France and Italy sufficient in strength to cause the consideration of the mandate to be postponed to a special session to be held in July, a decision resulting from the unsatisfactory relations of the Powers in the Near East, strengthened by religious influences, said to have originated at the Vatican. It may be that by that time the Treaty of Sévres will have been ratified, in which case the mandate comes automatically into force; the function of the League Council being merely to approve the terms as being in accordance with the Treaty of Peace. If ratification does not precede the adjourned Council meeting, a recurrence of last week's objections is, unfortunately, not unlikely, and the continued delay will enhance the already difficult problem of administration with which the British Government is faced in the Holy Land. The affair is a reminder of the inexhaustible supply of patience and persistence which the successful pursuit of international co-operation requires, and, we may add, receives from Earl Balfour in his conduct of the British case at Geneva.

The other most interesting item on the League Council's agenda was a strong plea by Dr Nansen, on behalf of Norway, that the Council should "nominate a Commission of Inquiry, which, on behalf of the civilised nations of the world.....should conduct an inquiry into the facts of the famine that is going on in Russia; into the meaning of that famine, into the economic results which it will produce on the rest of Europe and the world; and into the measures and the extent of material help which would be essential for the famine to be stopped." As suitable members of such a Commission, Dr Nansen suggested Sir Eric Geddes, M. Marcus Wallenberg, M. Venezelos, M. Tureti, and M. Jouhaux. The proposal is eminently practical and desirable. Such a Commission would give to the world the truth about the Russian economic position, upon which future discussions may be based, and upon which immediate remedial action might be taken. This is surely the proper avenue of approach towards dealing with Russian problems, and it is also likely to have the double advantage that the United States would welcome it, and that the Soviet authorities, with their eyes on Western assistance, could scarcely refuse it. This proposal, pending Genoa and Hague decisions, was, like the Palestine mandate question, held over until July.

Thus, in spite of the failure of Genoa, persistent efforts are being made to solve the problems which arise at the various points where national interests meet. The illusory hope that the Temple of Peace could be conjured into existence in a night by a wave of the wizard's wand has been dispelled. It behoves us to get to work once more upon the foundations.

CENTRAL BANKS.

It has now for some time been recognised that a central bank is an essential part of the monetary system of a well-regulated country. Although it is now agreed that such an institution is essential, conviction on this point has by no means always been general. One or two passages in Walter Bagehot's "Lombard Street" indicated that he, as might have been expected from his strong and wholesome individualism, had hankerings after a system under which our banking might have been conducted by a set of more or less equal competitors without any control by a central institution. And as everyone knows, there was long a very bitter prejudice in America, largely owing to political reasons, against the institution of a central bank. It is perhaps possible that the present unanimity in favour of central banks may wane as banking development proceeds; for the present, however, it is so deeply rooted that even in America the public has reconciled itself to the establishment of a central bank by the simple inducement of hearing the bank described as a "system."

In normal times the chief business of the central bank consisted in giving assistance to the Government of the country at times when expenditure was temporarily exceeding revenue, and also in countries where this process was practically chronic, in carrying out the funding operations by which floating debt was made permanent when this could be done out of the resources of the home market. It also provided industry and trade with the means for carrying on their operations in so far as the ordinary banks of the country were unable to do so, and by means of this power and privilege of providing the sinews of business for industry it was able by the rates that it charged for so doing to exercise some control over the extent to which enterprise forged ahead or took in sail. This highly important control it exercised chiefly with a view to the maintenance and protection of the stock of gold, or of securities representing gold, on which the monetary systems of the chief civilised countries of the world were more or less based. Thus the central banks acted as bankers to the Government of the country that they served, and also the country's industry, serving the latter as a general rule through the medium of the other banks, whom it supplied with extra credit in times of need, either directly through the process of rediscount, or as in the case of London, by making advances to customers of the other banks, which placed them to their credit in the books of the latter. Thus, in a crisis the London clearing banks, instead of taking bills to the Bank of England for rediscount, called in money from the bill brokers, and so forced them to obtain fresh credits from the Bank of England, which increased the balances in its books of the clearing banks. There was a time when the money market was chronically in a state of dependence on the Bank of England, because there was never enough money in Lombard Street to suffice for Lombard Street's needs. But for many years before the war, owing to the much more rapid growth of the other banks as compared with that of the Bank of England, this was no longer so, and there were long periods during which the Bank of England lost all control of the money market, and could only resume it when it thought necessary to do so by making money artificially scarce by the process of borrowing some of the surplus funds of the market. Since the war the old state of affairs seems to have returned, and it is now noticed by observers of conditions of the money market that there is seldom quite enough money to go round unless either the market or the Treasury is borrowing from the Bank. Whether this state of affairs will continue after our monetary system has been restored more nearly to pre-war conditions by the reinstatement of something like the pre-war gold standard is a speculation which may interest those ingenious minds which love to discuss possibilities and probabilities long before there is any chance of their occurring. Such spirits might also amuse themselves by wondering whether the future growth of the "Big Five" and their possible agglomeration into the "Big Three" or the "Big One," may alter the relation of the London money market to its cen-

tral bank much more radically than seems likely at present. For the moment, however, a tired world full of reactionary indolence and disillusionment only desires to get back to the conditions under which, according to its hazy and perhaps slightly deceptive recollections, it lived so comfortably before 1914. This mood will not last always, but for the present it seems to be a sound instinct to try to restore the benefits of a system which worked well in place of existing chaos before attempting to evolve out of abstract principles a system which might, on paper, be a great improvement on the old one, but might, owing to some quite unforeseen flaw in its arrangements, fail to work.

Out of the Arcadian simplicity, as it now seems when we look back upon it, of these pre-war functions the central banks were rudely shaken when war brought with it the necessity for financing on a scale which had never before been dreamt of, and the Finance Ministers of the world found themselves possessed of an extremely efficient machinery designed for the creation of emergency credit, and ready to be used for the provision of the sinews of war without the unpopularity associated with taxation, or the expense and trouble involved by the issue of loans to real investors. It need hardly be said that by making use of this machinery the Finance Ministers of the world did not really lighten the financial burden of the countries for whose finances they were responsible. All that they succeeded in doing was, with the help of the central banks, and some assistance from the other banks, to delude a credulous public with the belief that the burden was not as great as it looked, and even sometimes to think that it was growing richer as it watched the swelling totals of bank deposits which were involved by this system of war finance. In the meantime the currencies of the world were being debased, and a chain of financial evils was forged, of which the end is not yet in sight. The League of Nations has lately published a memorandum on central banks showing their position, and analysing their balance-sheets as far as it was possible to do so at the end of the last year before the war, the last year of the war, and each of the subsequent years. The figures so set out are a melancholy, almost an appalling, study, especially in the clear evidence that they give of the extent to which evil financial practices which were perhaps excusable during war have been continued and extended since the Armistice. In only seven of the countries dealt with is the note circulation of 1921 lower than that of 1918, these countries being Sweden, Egypt, Canada, the United States (Federal Reserve Notes), Holland, Norway, and Japan. In the case of the Bank of England the note circulation of 1918 was shown as 237 per cent. of the 1913 figure, while that of 1921 was 170 per cent. of the 1918 figure. Seeing that in the case of this country the chief expansion in printed money was done by the Treasury through its currency notes rather than by the Bank of England, these figures are by no means pleasant to contemplate. It should be observed, however, that they do to a substantial extent overstate the case owing to one of those little vagaries which sometimes defeat the veracity of the most carefully collected statistics, because something has happened which has altered the significance of their movements in a manner which the most expert inquirer could not be expected to detect. In this case the calculations of the League of Nations memorandum are doubtless quite correct, but the increase shown in the Bank of England's note circulation since the Armistice is likely to create a misleading impression. Since no allowance appears to have been made by those who compiled the figures for the fact that over 40 millions in gold are known to have been handed over by the Joint Stock banks of the United Kingdom since the war, and thus part of the expansion of the Bank of England's note circulation merely represents a change in the form in which the other banks hold their cash reserves.

One of the suggestions lately made at Genoa from which some practical result may perhaps be hoped for, was for a conference of representatives of central banks with a view to promoting their closer co-operation in future, especially in the solution of the problem of European currencies, and the rescue of the market in exchange from its condition of chaotic demoralisation. It is difficult to see how such a conference can do any harm (though it is

not safe to be too certain in view of the hysterical state of national susceptibilities even in matters of finance), and there is good reason to hope that it may do a great deal of good. Like everything else that is semi-officially arranged, this conference has taken much longer than was expected, or necessary, in beginning to be organised, and the fact that it will certainly not be able to take place as soon as was originally planned was probably the cause of a quite incorrect statement that it was not to be held at all. It is not yet certain whether it will be held before or after the summer holidays, and in some respects a date next autumn may be the more desirable. In any case, co-operation between central banks is already a very real fact, the active development of which has been one of the many services quietly rendered to the financial world by the present Governor of the Bank of England. But it will be something gained to have this co-operation recognised and confirmed by such a conference.

AMERICAN SHIPPING POLICY.

THAT Americans can excel as seafarers no one who has read, for instance, Professor Morison's recently published "Maritime History of Massachusetts—1783-1860" can question, but that the American Government is immune from error in its shipping policy, no one who has studied the events of the last few years can suppose. The energy, skill, and enterprise of American shipowners and shipmasters made their merchant flag known on every sea, and kept it flying till, in the time of the Civil War, it suffered eclipse. Just at that period sail was giving place to steam, and wood to iron and steel, so that when the United States was ready to resume sea trade her ships were obsolete, and for over half a century the country which became the greatest exporter in the world possessed practically no foreign sea-going tonnage. Throughout the 25 years preceding the late war various attempts were made to rehabilitate the American merchant marine. Every legislative move in this direction was, as Mr Hurley has pointed out in the book on "The New Merchant Marine," coupled with some form of Government subsidy, and failed.

During the war (when, we may note in passing, it was found advisable temporarily to relax the prohibition against foreign ships in the American coastwise trade which had been in force for nearly a century) the United States entered on a great programme of providing itself with a merchant marine. Though construction was undertaken primarily for war transport, the programme—which had by no means been carried into full effect when hostilities ceased—was not then cancelled, but was modified with the object of "rounding out a well-balanced merchant marine," as the annual report of the United States Shipping Board to June, 1921, phrased it.

The policy of the last few years has been deliberate. The preamble to the "Jones Act" of 1920 laid down that it was necessary, both for defence and for the proper growth of commerce, that the United States should have "a merchant marine of the best equipped and most suitable types of vessels, sufficient to carry the greater portion of its commerce and serve as a naval or military auxiliary," and it was declared to be "the policy of the United States to do whatever may be necessary to develop and encourage the maintenance of such a merchant marine." The great fleet of Government-built ships was, under the policy of the "Jones Act," ultimately to be owned and operated privately by the citizens of the United States, though circumstances have been such that the transfer to private ownership has been for the most part deferred, and the majority of the ships are idle for lack of business. The means, under the same measure, to be employed for encouraging American shipping included preferential railway rates for goods carried in American ships, the extension of the coastwise restrictions to the Philippines and other island possessions, relief of shipping profits from taxation, and, if need be, the termination of treaties which restrict the right of the United States to discriminate between foreign and national ships both as to Customs duties on imports and as to tonnage dues on the ships themselves.

President Wilson, it will be recalled, declined to enforce these discriminatory provisions, and also refused to yield to the party which pressed for another move that, equally with the carrying into effect of the full policy of the "Jones Act," would have led to international complications.

This other matter was the question of the Panama Canal tolls. Trade between the east and west coasts of the United States is classed as coastwise, whether via Cape Horn or the Canal, and, despite treaty provisions that there should be no discrimination against any nation in charges on canal traffic, the idea of some American shipping men was that legislation should be passed to give at least to American coastwise trade the benefit of a free canal, while tolls continued to be charged against the ships of other nations.

The protectionism of American shipping policy until now has thus not been pressed to extremes involving international difficulties, but a new phase is developing. Pending disposal of the State merchant ships to private owners the Government has operated them. By methods involving enormous losses the American flag has been restored on many routes, though not to the extent anticipated. "It was our hope," wrote Mr Hurley, formerly chairman of the Shipping Board, in his book, already quoted from, "that American citizens buying materials abroad, and American citizens selling their products abroad, would co-operate with us to the extent of insisting that their agents send their purchases and sales overseas in American ships whenever possible. If they had done so, even to half the extent we hoped, I feel sure we would have had several American steamship companies in operation to-day for every one we actually have. But they have not done so." Moreover, as pointed out by Mr Lasker, the present chairman of the Shipping Board, in a recent statement, the scheme of building up trade routes so that ships might be sold with established goodwill has defeated its own purpose. The Government, in operating ships, has driven its potential customers largely off the seas.

President Harding, equally with his predecessor, has shrunk from the risk of international trouble which might arise if the policy of the "Jones Act" were fully carried out; but a ship subsidy programme containing features which threaten trouble is again being pressed. Protectionist policy seems to be now strongly in the ascendant. A Bill before Congress proposes the enactment of discriminatory provisions similar to the sections of the "Jones Act" which have remained inoperative. Apparently it is hoped to end the great loss through Government operation of ships, and perhaps ultimately to relieve the taxpayers of the heavy burden of taxation they are carrying, by encouraging American shipowning through the medium of a subsidy calculated to burden foreign ships. According to Mr Harmsworth's reply to a question in the House on the 22nd inst., the aid, direct and indirect, which the United States shipowner would receive under the subsidy proposals, would amount annually to 12½ per cent. of the capital value of the vessel.

Whether it is possible for Americans to "make the foreigner pay" for the subsidy by penalising foreign ships is at least open to question, and meanwhile their policy of flag discrimination is arousing strong adverse comment on this side of the Atlantic. Deprecatory reference to legislative proposals was made in the presidential address of Sir William Noble at the annual meeting last week of the Baltic and White Sea Conference at Brussels. This gathering, representative of 13 European nations, adopted a resolution expressing its regret at the extension of the policy of flag discrimination in America, and its conviction that, in the ultimate interests of all concerned, the principle of the freedom of the seas should govern the maritime policy of all nations in times of peace.

Notable speeches favouring equality for all flags were made by Sir Ernest Glover, who represented the Chamber of Shipping of the United Kingdom, and by His Excellency Louis Franck, of Belgium. The former described the taxation of foreign ships as folly. "If," he remarked, "any country is anxious to ship its goods abroad to find a market, or is anxious to buy goods abroad for importation, surely it should welcome the ship of any nation that will do its work for it on terms that suit, and not impose

a tax on the ship doing the work. It simply means that unless this is stopped every country will tax foreign ships coming to its ports."

This point, it may be recalled, was taken up by Sir Frederick Lewis at the annual meeting of the Chamber of Shipping in February. Discriminating conditions in favour of its own shipping in every country would, as he remarked, be an absurdity. Each country would be sending its own ships to bring its own imports, and so each vessel would make its outward voyage in ballast—a most uneconomical procedure.

Sir Norman Hill has more recently discussed the present American proposal. "No heavier blow," he declared, "can be struck against the re-establishment of international commerce than the denial of equality of opportunity to all ships, under all flags, in all ports of the world." International commerce is not, as, indeed, Sir Norman has pointed out, the exclusive concern of any individual nation. The object of commerce is to benefit both parties, and if that object be ignored, the business vanishes. The penalising of foreign ships in the ports of any country is one degree worse than the granting of a subsidy to national ships. If the subsidy is derived from internal sources, other nations cannot formally complain, although the step is likely to lead to an international competition in subsidising, as in the case of sugar. A subsidy for national ships, derived from foreign ships, is in a different category. Such a policy, if successful, in driving foreign ships out of the home freight market, and giving a monopoly to national ships, provokes retaliation, strikes at international trade, and eventually makes it impossible.

Although those who have criticised the American shipping policy are mostly shipowners, their arguments show that the danger is not to ships alone, but to the interests of all concerned with cargoes; in short, to international trade as a whole. American shipping policy is menacing international trade recovery from which America, equally with other countries, would benefit, and the measures proposed, if proceeded with, may injure not only commerce, but the growth of goodwill among nations.

THE DEMAND FOR LOWER RAILWAY RATES.

TRADING organisations have now had an opportunity of examining the effect of the reduction in rates which the railway companies brought into effect at the beginning of this week, and their scrutiny has led them to the conclusion that while it may be thought to be ungracious to look a gift horse in the mouth, the reductions can only be considered as a very modest contribution to the urgent needs of industry.

The concessions are confined to coal, Class A and Class B traffic, together with iron and steel goods in Class C and tinplates in Class 1 of the General Classification. The small trader is only affected by reduction of the charge for collection and delivery. It will be remembered that 18 months ago freight rates reached their maximum at 100 per cent. above pre-war level, together with an additional flat rate of a varying number of pence per ton according to the class of goods, the scheme being limited, however, by the imposition of certain maximum increases in the case of heavy traffics. In a number of special cases, mainly affecting coal, iron and steel, and chemicals, the 100 per cent. advance was reduced to 75 per cent., and some small modifications in the flat rates were made during last winter. The present changes make this 75 per cent. general in the case of coal and Class A and Class B traffic, except in the case of ore and blast furnace material in Class A and manure in Class B, which are now reduced to 50 per cent. above pre-war, while the 75 per cent. figure is extended to the items in Class C, and in Class 1 of the General Classification mentioned above. As regards coal, long-distance traffic will benefit by a reduction of the maximum increase to 3s 6d per ton against the previous 4s, while the short-distance traffic benefits by a further reduction of 1d per ton in the flat rate addition, which fell some months ago from 6d to 4d. Obviously a reduction of 6d per ton in coal hauled to London is not a revolutionary change that will set the Thames on fire, while 1d per ton off the export rates of Northumberland or South Wales, even though the equivalent of 5 paper marks, or 10,000 roubles, will scarcely affect the

COMPLETE FIDUCIARY SERVICE

100 Broadway

New York City

competitive strength of British industry. Even in the case of the iron and steel trade, the reductions, which will, of course, vary according to locality and the amount of transport incurred by the various works, represent less than 2s a ton in the price of pig-iron and 3s or 5s in the price at which finished steel can be marketed. In the case of some iron and steel districts these small savings will help trade, since there is quite definite evidence that increasing costs in Germany and the maintenance of relatively high costs in France and Belgium are enabling British manufacturers to enter into competition for the trade of Europe. But in the Midlands transport is a far more important item of cost than in the more favourably situated coastal centres of production, and the railways will have to concede much more before these internal areas can expect to share in the trade revival.

For the remaining industries of the country, which are mainly interested in the seven numbered classes of the General Classification, the decision is profoundly disappointing, and we understand that the Federation of British Industries will now proceed to carry to the Rates Tribunal its demand that rates should be reduced all round to 50 per cent. over pre-war. In this the Federation will not have an easy task. By the Railways Act of 1921 the Tribunal has been given a perfectly free hand in regard to rates during the transitional period, since Parliament deliberately refused to apply the doctrine of "Standard revenue" until the overhauling of the rate system is complete. But the Tribunal is likely to attach importance to the arguments of the railway companies that their preference stocks must be maintained as trustee securities, which means that the dividends on the ordinary stocks must be maintained, not necessarily at their current rate, but certainly at a substantial figure. We have previously expressed the view that the very large fund which the railway companies have in hand for the maintenance of dividends is sufficient to enable them to safeguard their shareholders, and at the same time to make very big cuts in rates for the purpose of stimulating trade revival, but our argument was based upon estimates and not upon official published data. Indeed, the main difficulty with which the traders will be faced is an almost complete lack of information as to the present financial standing of the railway companies. In the ordinary way we should have to wait until next February before this matter could be cleared up, but this is not a time for such a dilatory proceeding, and some means must be found of obtaining interim statements of railway operating results. We see no reason why British railways should find it more difficult to give information as to their operating expenses every month than railways in America and other parts of the world.

The public will also regret the piecemeal method which the companies have adopted in making their modifications. If a general all-round reduction could have been discussed, the issue would be a fairly clear cut one, which could be intelligibly presented, but with three vary-

ing factors already introduced, namely, the percentage increase, the flat rate addition, and a maximum increase, the problem is rapidly becoming one only intelligible to rating experts. The railway rating system, if it is to respond to the needs of a vital and constantly changing industrial community, will never be a simple thing reproducible on a sheet of notepaper. But the companies have been either fortunate or far-sighted in starting their piecemeal bargaining from the point where post-war rates show their greatest all-round increase.

American shippers have been more fortunate in their demand that rail rates in general should respond to the level of prices, for on Wednesday the Inter-State Commerce Commission made an all-round reduction of 10 per cent. in the freight rates fixed in July, 1920. This change is significant not merely because it will encourage the trade situation in America, but also because the judgment of the Commission will certainly provide food for thought both to British railway companies and to our Rates Tribunal. "Transportation charges," says the Commission, "have mounted to a point where they are impeding the free flow of commerce, tending to defeat the purpose for which they were established—that of producing revenue which would enable the carriers to provide the people of the United States with adequate transportation." But, in considering the question of the railway companies' revenue, the American Legislature has been wiser than our own Parliament. The doctrine of "standard revenue" incorporated in the Railway Act of last year would, if carried into effect, produce the absurd result that in depression when traffic is reduced, freights would have to be raised, while in times of good trade, when traffic is abundant, freights would have to be reduced by the Tribunal. The American law, on the other hand, leaves a margin which, though inadequate, gives certain discretion to the Commission in deciding what is a "fair return," which is defined as between 5½ per cent. to 6 per cent. on the property valuation of the companies' railroads. A year ago the Commission adopted the 6 per cent. figure as the basis of its charges. They have now decided that 5½ per cent. is reasonable. In commenting upon the reduction, the New York correspondent of the *Times* presumes "that in making to-day's decision, the Commerce Commission is counting upon a greatly increased volume of business from the lower rates, which in the absence of heavy wage reductions would alone make it possible for the carriers to operate at a profit." This is precisely the problem with which our own Tribunal will be faced. In both countries the adaptation of wages to the current low level of prices must be steadily pursued, but it is equally true that in both countries there is substantial ground for taking some risks on the assumption of an expansion of trade. In view of the urgent needs of industry, and taking account of the very substantial nest egg which the companies have received from the Treasury, and of the fact that there is in many cases a substantial margin between present railway dividends and the figure which would imperil trustee securities, we think that the Rates

Tribunal should forget all about "standard revenue" for the next few years, as they are entitled to do under the Act, and make a bold bid for prosperity by an all-round cut, which the companies, largely, no doubt, because of internal differences, seem incapable of making on their own account.

THE TIMBER TRADE.

THE building industry, though tending at times to follow a course somewhat independent of the general industrial movements of boom and depression, is bound up most intimately with the problem of employment in every town and hamlet of the country. Its problem at the moment is largely one of wages, but its triple dependence on raw material—bricks, cement, and timber—is also of vital importance. Not the least interesting is the last of these three, especially as Russia and the Black Sea play so prominent a part in the timber market.

It may not be generally known that before the war Russia (including Finland) supplied half of the timber requirements of the British Isles for building construction work. In 1913, the last complete pre-war year, of the record import of 6,636,137 loads of sawn and planed wood imported into this country, Russia sent us no less than 3,362,340 loads. Her annual shipments from Riga were the largest from any port in the world, and her exports from Petrograd and the White Sea district had the very highest influence on the British market, both as regards quality and cheapness of production. It is not surprising, therefore, that the British consumer of foreign timber had to pay heavily, up to some 18 months ago, for the elimination of Russia from our markets, though the young republic of Finland has risen nobly to the occasion, shipping to this country last year more sawn timber than Sweden, although in sawn and planed together the last-mentioned country is the largest on our list of exporters for 1921.

During the fall of Russia Sweden had almost supreme control over our requirements of timber for building construction work. In the Swedish market everything went well until the spring of 1921; up to then Swedish wood manufacturers had done most remunerative business with this country, and seemingly they were in high hopes of entering upon another season's trade with the British Isles at peak prices as a fair return for the high wages, logs, and on-costs so prevalent in that country at that time. They had got such a firm hold of the British timber market, and the Continental markets to a lesser extent, that they thought that prices could be maintained at high levels, particularly in anticipation of the rebuilding of Continental war-damaged areas, and the new and repair work so necessary in this country.

The slump in British trade, however, was weeks old at the end of 1920; prices for timber on the spot had dropped heavily in the autumn, freights had fallen about £5 a standard of 165 cubic feet; at the end of the year there was a preponderance of stock, docks were congested, and, to add to the discomfiture of importers and merchants on the spot market, icebreakers kept the ports open as long as possible to get wood over on consignment on the freights then ruling.

It was at such an inauspicious time that the Swedish shippers demanded a basis rate of £42 f.o.b. a standard for their 3 x 9 unsorted red deals—about double that during the U-boat menace—to which the British market turned a deaf ear, fortunately for importers and the whole timber industry of this country. The enormous stocks here were confronted with a poor demand, and though "feelers" were put out by the foreign shippers from time to time, nothing transpired, for the spot market, instead of rising to the basis, was getting weaker. In the spring of 1921 Swedish unsorted red deals made only £30 10s. and lower, at public auctions, whilst by July

European building timbers had reached almost pre-war prices.

It was not until the summer that the Swedish shippers (who had an understanding with their Finnish competitors—the latter have accomplished wonders in their wood export trade since their separation from Russia) began to realise the full force of the situation and the hopelessness of standing out any longer. The heavy losses suffered by the British importers and merchants were to be repeated, but this time at the shippers' expense, for the £40 to £42 f.o.b. basis dropped in almost frantic haste to £18, with Finnish at about £2 to £4 less. These prices brought considerable business, and a consequent stiffening of the market later, and the f.o.b. business again quietened down.

It will thus be realised that for nearly two years consumers have been getting comparatively cheap timber at the expense, in the first instance, of the importers and merchants in this country, and later of the foreign shippers, principally Swedish, who, as will be observed by those who have followed the balance-sheets of the companies concerned last year, made enormous losses, probably more than they made during the war. It is certain, however, that trade cannot be conducted for long on these lines, and it is satisfactory to see that the Swedish mill owners are taking the necessary steps to bring costs down to the lowest possible limit, so as to make her timber products once more the cheapest of converted wood, quality and cut considered.

As was the case at this time last year, there is again a deadlock between the Swedish wood exporters and our importers on prices for the coming season's productions, but this time the basis figure is £26 for 3 x 9 unsorted quality, middle-Gulf stock. Though much smaller than last year's quotations, importers consider that in view of the bad state of trade, and the necessity for cheaper wood to encourage building work, prices are too high, and are hesitating to pay them, but the conditions are much more in favour of the exporters this year than last.

In the first place, in the spring and summer of 1921 the stocks in this country were particularly heavy; to-day they are moderate to light in consequence of the greatly decreased import last season. Last year trade here was bad, with few prospects of betterment, whereas to-day the horizon is comparatively clearer. Then, again, the spot market during the past four or five weeks has been slowly firming up, and though perhaps Swedish shippers may not admit the fact, although the £26 basis has been kept for 3 x 9 unsorted, there has been an inclination on the part of the exporters to meet the market on the poorer qualities. In brief, the difference between the shippers' ideas, and the firmer spot prices ruling amount to some 30s to £2 a standard only. But what importers and consumers have to consider is that the free-on-board price of timber at the Swedish prices will be some £8 a standard over the fall in prices at about September, 1921, at the present low level of demand for consumption. But, on the other hand, the Swedish shippers, it is estimated, including unsold purchases "overwintering" from last year, have a cut of nearly a million standards, of which only a third has been sold. If the importers here and on the Continent refrain from heavy buying, it is questionable whether the Swedish shippers, with the assistance of their bankers, can hold, and there might be a break—it could not be nearly so heavy a one as last year—in prices within the next few months.

It will be observed from the table below that there is not much hope of making good our supplies of building construction woods from any of the extra European countries at lower levels of cost, the heavier transport charges being one of the factors against the large and cheap imports which are needed to create competition, and thus to bring f.o.b. and spot prices nearly back to those ruling before the war. This is almost too much to expect, for though we cannot hope to see wages back at pre-war level, owing to the high costs of living and to the fact that European lumber men were not too well paid before the war, we believe that relief will come by the use of still more scientifically equipped machinery than is in use to-day, by better and cheaper methods of warehousing and transport, and by the assistance of other European timber-producing

countries who could do with our assistance in exchange for their timber:—

* Included under Russia 1913 and 1920.

One clear way to secure cheaper timber is by the restoration of the Russian trade. From the port of Petrograd alone in 1913 we imported over 150,000 standards of deals, battens and boards, besides large quantities of telegraph poles, oak staves, pitwood, &c., &c., and over 170,000 standards of building woods reached us from the White Sea ports. Latvia, too, has great possibilities before it with Riga as its chief port. Poland has an inexhaustible wealth of forests, and there are also big expectations of a much greater trade with Czecho-Slovakia. Much might be done to secure further supplies of wood by coming to the assistance of these and the other new European States with whom we desire to exchange agricultural and other machinery and commodities for timber.

We repeat that for some time the consumer in this country has been obtaining his material at the expense of the traders in timber. Such business stops production. We have tried to show where the solution lies, and by means of economy in all departments—from the cutting of the trees to their utilisation by the builder or joiner—we may be able, if not this season, at least a year or two hence—to get that cheap timber material now so necessary in constructional work.

THE BUDGETS OF EUROPE.

SINCE the days of Huskisson, Peel, and Gladstone, a sound financial policy has been recognised in this country to be, perhaps, the most essential condition of healthy economic development and of social reform. To-day the matter is of wider significance, for lack of balance in the Budgets of Europe lies at the root of the chaos which prevails in international economic affairs. In this, as in every other economic question, the first step is a knowledge of the facts. On the instructions of the Brussels Financial Conference the League of Nations secretariat has continued to collect information, under the direction of the Finance Committee of the League, which is designed to show the comparative financial position of the countries of the world. The figures compiled for the Brussels Conference, though serving the purpose for which they were collected, were complicated by the fact that so soon after the end of the war they included much that was really war finance. Moreover, there was not time to persuade the Treasuries of Europe, every one of which quite naturally regards its own particular methods as above criticism, to conform to anything like a uniform standard of Budget statistics. Both these difficulties still exist, and in the second volume of Public Finance Statistics, which has just been issued by the League, it is still found necessary to cover the tables with explanatory notes. Indeed, a glance at the figures shows how difficult it is to make any comparison between countries whose Budget problems and methods vary so greatly; where the actual functions of the central Government range from those of a highly centralised bureaucracy to those of a loose Federation concerned only with tariffs and defence, and where some countries make a practice of meeting their Budget troubles half-way by presenting estimates at the beginning of the financial year which they expect to be superseded within a few months. These considerations make it necessary to read the League's report with the greatest care, but it still remains the only authentic source of comparative information on this vital question.

The first table will serve to illustrate, on the one hand, the great difficulty of making this kind of comparison, and at the same time the illuminating results which emerge from it. From it we have extracted the latest available figures of net revenue and expenditure, and placed the countries in order according to the ratio which income bears to outgoings. In order, however, to give a uniform character to the figures we have first made the assumption that nothing will be paid by Germany or received by any of the Allies for reparation. Actually, Italy and Belgium have included in their official revenue figures 3 milliard francs and 1 milliard lire respectively to be received as reparation, while France has included 22½ milliards of francs as expenditure recoverable from Germany. Germany also includes in her figures 187½ milliard marks as the total payment due to be made under the Peace Treaty. If these various figures in fact matured the Budgets of these countries would take the very different appearance shown in the second half of the table. France takes her place among the solvent States, while Belgium and Italy rise to a position appreciably better than that of the European neutrals:—

(In Millions.)

Country.	Year.	Currency.	Net Revenue.	Net Expenditure.	Percentage of Revenue to Expenditure.	Corresponding Pro'n'tage in Pre-war Budget.
Denmark	1921-2	Assuming no Reparation	353.3	354.4	133	95
United Kingdom	1921-2	£ sterling	1,156.7	1,062.6	109	122

France	1922	Franc	22,887.6	44,582	51	80
Poland	1921	P. Mark	65,496.5	144,919.3	45	..
Luxemburg	1922	Franc	35.1	77.1	45	54
Belgium	1922	Franc	1,765	5,954.2	30	..
Greece	1920-1	Drachma	530.6	2,255	23	48
France	1922	Franc	22,887.6	22,500	101	..
Belgium	1922	Franc	4,812.1	5,954.2	81	..
Italy	1922-3	Lira	14,323.5	18,142.2	79	..
Germany	1922-3	Mark	105,158	285,424	36	30

It will, of course, be familiar to the readers of the *Economist* that the United Kingdom completed accounts for 1921-2 did not, in fact, show as large a surplus as is included in the estimates supplied to the League of Nations, but even if the Budget for 1922-3 were substituted Great Britain would still appear among the countries above the 100 per cent. line. Our own experience in showing a surplus by means of the sale of capital assets such as war stores or by reducing sinking funds warns us, however, against taking the figures at their face value. In passing, it may be observed that the League has endeavoured to standardise the return by excluding provision for amortisation of debt, and, in the case of the accounts of public undertakings, by taking in only the balance of profit or loss which is included on the revenue or expenditure side, according to circumstances. There is, however, no way by which the League could have discounted the optimism of States such as Estonia and Latvia, or adjusted the figures for Denmark, whose statistics are really those of a preliminary Budget, in regard to which supplementary estimates, increasing the expenditure and diminishing the surplus, have since been submitted. Subsequent information shows that the closed accounts of Norway and Sweden will be much more favourable than the figures in the above table, while Hungary has a much larger deficit than her first balance-sheet disclosed. Switzerland also has a large deficit, but her Budget, unlike that of some larger countries, at least has the merit of drawing a real distinction between capital and revenue account.

A second figure of considerable interest can be extracted from the statistics of comparative revenue and expenditure. Taking the States in the order in which they have reduced their expenditure as compared with the previous

Budget, we find that the essential items of debt charge, other expenditure, and revenue show the following changes:—

Country.	Increase or Decrease in Interest Charges Compared with Previous Year.	Increase or Decrease in Other Net Expenditure Compared with Previous Year.	Increase or Decrease in Net Revenue Compared with Previous Year.
United States	no change	— 17	— 15
Luxemburg	no change	— 17	— 29
Norway	+ 29	— 15	— 10
Netherlands	+ 28	— 15	+ 10
Italy	+ 15	— 13	— 2
South Africa	+ 6	— 9	no change
United Kingdom ..	— 2	— 7	— 16
France	+ 13	— 6	+ 1
Switzerland	+ 6	+ 3	+ 26
Germany	+ 70	+ 14	+ 45
Sweden	+ 23	+ 14	— 23
Jugo-Slavia	+ 86	+ 21	+ 68
Bulgaria	+ 104	+ 31	+ 29
Czecho-Slovakia ..	+ 91	+ 36	+ 40
Hungary	+ 91	+ 62	+ 138
Greece	+ 131	+ 72	— 1
Latvia	+ 1,343	+ 140	+ 294
Denmark	+ 1.14	..	— 4

In considering these figures, judgment must not be hastily passed without considering that in the countries of Central Europe depreciation of the currency has been accompanied by rising prices, and therefore increased expenditure. Where this has been occurring the important test is whether revenue has expanded faster than expenditure, for this would mean that there is some hope of beginning to overhaul the increasing debt charge which must arise where Budgets are not balanced. In Great Britain, where the revenue even in the present Budget is still keeping its nose just in front of expenditure, the percentages for 1922-3 would be approximately equal in the last two columns of the table. The Greek Budget, of course, shows no sign of being able to cope with the war expenditure in Asia Minor; for 1921-2 the estimated deficit has risen from 203 to 1,678 million drachmae; but in most other cases, except Sweden, revenue is expanding faster, or at all events is not falling so rapidly as expenditure, and this points to a gradual improvement in the situation.

The report enables similar comparative tables to be compiled of public debt, and the editors have also given figures of taxation and expenditure per head. But beyond this all questions must be answered by reference to the individual Budgets which are fairly fully reproduced in the body of the report.

THE ROYAL MAIL.

THE past eight years have been a difficult period for the shipping industry, and the experience of the Royal Mail Steam Packet Company, which controls, directly or indirectly, a tonnage equivalent to one-ninth of the entire British Mercantile Marine, has not been different from that of other large shipping concerns. The company was originally formed 82 years ago as the Royal West India Mail Steam Packet Company, to carry on a mail service with the British West Indies, but its sphere of activities has gradually widened, and its services embrace South America, the United States, and Canada. Thus the service to the West Indies is now by no means the company's first string. Indeed, Sir Owen Philipps told the shareholders at the last general meeting that for 20 years the company had carried on a modern mail service with the West Indies at an annual loss to the company of about £50,000, and had been obliged to discontinue it, substituting in its place a line of smaller boats. The company holds a controlling interest in the Pacific Steam Navigation Company, Limited, the Nelson Steam Navigation Company, Limited, R.M.S.P. Meat Transports, Limited, and MacAndrews and Co., Limited, and in conjunction with Elder Dempster and Co., Limited, it holds practically all the ordinary stock in the Union-Castle Mail Steamship Company. The report claims that the whole group comprise 2,145,000 tons of shipping, though only 347,000 tons are directly owned.

A shipping company is liable to ups and downs to greater extent than the average joint-stock undertaking, and in 1914 the Royal Mail had an exceptionally lean year

for which the war, although it covered five months of the year, was by no means entirely responsible. The report for 1914 described business as having suffered not only from the effects of the war, but during the whole of the year from most acute trade depression on the South American route. In the succeeding years the company, in common with other shipping concerns, made very large profits, a considerable portion of the fleet being chartered by the Admiralty during the war for war service, while the remainder came under the control of the Ministry of Shipping. Early in 1919 the Liner Requisition scheme was terminated, and profits reached their highest point. The year 1920 saw a falling off in profits, owing to the slump in freights and world-wide depression in trade, which was unaccompanied by any appreciable fall in working expenses. Last year a further sharp decline in profits was recorded. In explanation of this the directors state that passenger traffic to and from South America is still seriously affected by adverse exchange, and by the competition of foreign lines, which in some cases receive substantial aid from their Governments, while reductions in freight rates and passenger fares have not yet alleviated the situation by stimulating a corresponding increase in traffic. Moreover, immigration restrictions imposed by the United States Government have affected traffic on the New York route.

A table of the company's profits and their appropriations since 1905 is set out below:—

	Profit.	Deb. Int. &c.	To Insee. Fund.	To Reserve Fund, &c.	Prof. Div.	Ord. Div.	Rate.	Carried Forward.
1905.....	£ 57,558	£ 13,750	£ 35,000	..	£ 9,000	nil	%	£ 8,076
1906.....	96,845	17,566	47,000	..	23,815	nil	..	16,540
1907.....	138,146	33,588	52,000	..	36,000	22,500	2 1/2	16,388
1908.....	136,306	43,982	33,500	20,000	30,000	27,000	3	2,979
1909.....	180,369	45,133	41,792	30,000	30,000	36,000	4	3,968
1910.....	176,623	65,983	..	30,000	30,000	36,000	4	4,039
1911.....	221,211	107,500	40,000	40,000	32,259	45,000	5	8,840
1912.....	481,540	155,388	47,073	130,000	45,000	97,343	6	7,570
1913.....	436,470	187,011	37,113	45,000	151,299	6	..	23,800
1914.....	98,232	249,265	8,945	45,000	nil	nil	..	18,521
1915.....	808,731	312,932	..	225,000	45,000	138,000	6	46,719
1916.....	791,697	242,037	..	225,000	45,000	273,556	7	52,502
1917.....	764,448	218,000	..	225,000	45,000	287,000	7	62,068
1918.....	706,472	218,000	..	160,000	45,000	287,000	7	48,541
1919.....	953,600	218,000	..	350,000	45,000	328,000	8	51,141
1920.....	922,224	218,000	..	270,000	62,162	312,375	7	110,828
1921.....	710,335	314,336	..	..	103,500	300,000	6	103,927

The drop in profits, it will be seen, amounts to over £211,000, but, as in the case of most shipping companies, it is impossible to tell what deductions have been made before profits are struck. In this instance the accounts show the profit for the year, including dividends from allied companies, "less depreciation of fleet, &c." Now, the balance-sheet shows that an addition of £172,636 has been made to the insurance account, whereas a year ago this fund showed an increase of £217,786, but in neither case is any mention of this made in the profit or loss account. The amounts required for fleet depreciation have probably been on a larger scale than the amounts transferred to the insurance account, but speculation in this direction would be idle. All that can be said is that for many years it has been not less than 5 per cent. on the first cost of the steamers, and that additional special depreciation has been written off steamers built or acquired during or since the war, the same practice being adopted by associated companies. But whether depreciation requirements were larger or smaller in 1921 than in 1920 it is impossible to say. It is to be regretted that the accounts are obscure on this point; but we may hope to be enlightened by the chairman at the annual meeting. Debenture interest again required £218,000, but interest and discount, which was a credit item of £44,158 a year ago, has now become a debit item of £9,336. Nothing is credited to general reserve, which received £260,000 a year ago, when £10,000 was also transferred to superannuation fund. During 1920 the capital was increased by £1,800,000, by the addition of £900,000 to the ordinary stock, and the issue of £900,000 6½ per cent. cumulative preference stock. These were issued for cash. Indeed, the undertaking is remarkably free from watered capital, it having never made a bonus issue. The recently issued additional capital now ranks for full dividend, and the increase in preference dividend is thus accounted for. The ordinary dividend is reduced from 7 to 6 per cent., and the carry forward is

nearly £7,000 lower at £103,927. On the basis of the 6 per cent. dividend, the ordinary shares yield £6 7s per cent. at the present price of 94½. Last year the shares went as low as 78, and the rise in quotation that has since taken place is an expression of confidence in the strength of this great shipping group.

Notes of the Week.

Public Trustee's Report.—In the fourteenth general report of the Public Trustee*, a loss on the year's working of the office is again recorded. Fees and credits totalled £289,451, as against an expenditure of £329,669, leaving a deficit of £40,218 to be found by the State. Thus for six consecutive years a deficit has resulted. The total number of new cases accepted during the year ended March 31, 1922, was 1,136, having an aggregate value of £19,964,382. At the end of the year the number of trusts under administration was 15,335, with a total "nominal value" of approximately £161 millions. The published accounts are certainly informative, and with the exception of liabilities under Schedule A of the Income-tax the office appears to have budgeted for all possible outgoings. Of the deficit, apart from a loss of £4,773 by burglary, £35,200 was incurred during the first six months, when the salary and wage bonus was at the highest point it has reached; for the last six months of the year the falling bonus reduced the deficit to £245. It is hoped that next year will show that the office can be run on a self-supporting basis. The Public Trustee maintains that there is no question of competing with banks or insurance companies. He cannot refuse any trust on account of its smallness or troublesome conditions. In short, business cannot be selected. The deficit was incurred entirely in respect of the London office, the Manchester branch having paid its way for the year. But it is interesting to observe that the Public Trustee states, "I am satisfied, however, that this difference in result cannot be taken as an indication that further decentralisation in other parts of the country is the obvious solution of any future difficulties."

The Carry-Over.—Most of the markets in the Stock Exchange have failed to derive any benefit in the way of new business from the public now that the latter are allowed once more to carry over stock as they did before the outbreak of war. In every market, writes a Stock Exchange correspondent, the same story is told by brokers who admit, without demur, that they find it impossible to identify many orders this week as likely to have come from clients who may be expected to send instructions to carry over the stocks and shares on Monday and Tuesday next. Nor have there been any price movements in the markets to suggest that the permission to open accounts once more has fired the willingness of the public to take advantage of the concession, and to buy or sell stock in advance of the pay day. The South African market found that some of the buying which occurred in the early part of the week was on behalf of people who said they would desire to carry-over shares, should the prices not have risen before the contango day came round. Little objection has been raised in the markets to the affording of contango facilities to bulls and bears alike. People who have sold Home Railway stocks, and who hold these in their name, may quite possibly be glad to accept a reasonable rate of interest, and retain the stocks rather than deliver them, and find themselves left with the money for employment in other directions. It may be assumed that banks, insurance companies, and other large holders of stock will certainly not be averse from accepting reasonable contango rates on stocks which they have sold. It may even prove to be the case that there will be more takers-in, i.e., sellers, than givers, the buyers, because a good deal of the buying this week was for account of the genuine investor; it was not of the speculative character, which would infer a desire to contango the stocks next Tuesday. The oil market will probably be ready enough to provide facilities in a good many cases.

FOREIGN BANKING

transactions of every description.

Correspondents in all parts of the world.

So far as the continuation rates are concerned, the 4 per cent. Bank Rate makes, of course, a kind of rough standard. On Home Railway stocks, the charges should range somewhere between 5 to 7 per cent.; on mining shares it may be 1 per cent. more, and in the oil market probably 6 to 7 per cent. will cover the majority of contangoes. The first fortnightly account after the war must have been in any case in the nature of a trial, and the Stock Exchange does not expect that there will be any real manifestation on the part of the public to take advantage of carry-over facilities until business revives more actively, especially in those markets where speculation rather than investment occupies the predominant position.

Service Personnel and Government Staffs.—A White Paper issued this week (Cmd. 1665, price 3d) contains figures of National expenditure under numerous heads for each year since 1913-14. As regards the comparison between present and pre-war expenditure, the document adds little information that we have not already given to our readers in the comparative survey published in our issue of April 29th. But it contains also a table showing the comparative numerical strength of the fighting services, and of the staffs of Government Departments. A comparison of the present position with the figures for the Armistice date and 1914 reads as follows:—

	Pre-War, 1914.	Nov. 11th, 1918.	April 1st, 1922.
Army.....	174,500	3,996,000	196,000
Navy.....	145,600	267,000	121,400
Air Force	..	293,000	27,300
Total for Fighting Services ..	320,100	4,556,000	344,700

Staffs of Government Dep'tmts. 277,900 .. 418,025 .. 317,721

It is a sharp commentary upon the pacific efforts of world statesmen that nearly 3½ years after the great war our fighting forces should be 7.8 per cent. larger in personnel than they were immediately before the war. In the list of departmental staffs the 14 per cent. increase on the pre-war figure is largely due to services that are legacies of the war and post-war conditions. But a notable figure is a decrease of 23,714 in Post Office employees, which is suggestive of improved organisation. On the other hand, it is difficult to understand why the Admiralty and War Office should both require staffs more than twice the pre-war size. The former now employs 9,109, as compared with 4,400 before the war, and the latter 5,760, against 2,800. The Ministry of Labour, whose functions before the war, under the ægis of the Board of Trade, were carried out by approximately 4,400 persons, now requires 20,579 to supervise its expanded activities, while the Inland Revenue departments employ 20,645, against 15,800 in 1914. Here, too, of course, the volume of work has increased. But the list as a whole hardly suggests that the opportunities for pruning in departmental staffs have been by any means exhausted.

Poland's Textile Industry.—It comes as a surprise writes a correspondent recently returned from Poland, to come suddenly on a large industry in a place where there seems little or no reason for it to be. Such an industry is that of Lodz, where a thriving wool and cotton textile industry is again getting on its feet, and is beginning to compete in markets hitherto exclusively Austrian or German. Situated as

It is some 200 miles from the nearest seaport, and without even direct rail communication with it, Lodz is badly placed from the point of view of receiving from overseas its supplies of raw material and machinery. This disadvantage, however, is to some extent made up for by a position which commands the avenues of approach to Central and South-Eastern Europe—Poland's natural markets. Before the war the industry of Lodz was a large one. In 1914 there were 1,380,000 spindles and 35,000 machine looms; the numbers employed were 75,000 men and women; the annual production of cloth was 70,000 tons; and the annual consumption of raw cotton, 25,000 tons. The end of the war found the industry practically ruined, factory chimneys razed, buildings and machinery gutted by fire and by removal of working parts (bronze bushes, copper bearings, &c.). This was partly the result of deliberate policy on the part of the Germans, who applied the same methods as they employed in France and Belgium; with even greater thoroughness, and, for the rest, it was the result of Russian precautions designed to prevent valuable machinery falling into enemy hands. Some machines were removed to Russia, and there lost in the general chaos. The total damage is estimated at £30,000,000, which is probably irrecoverable. After the war the millowners set to work, in the face of the greatest difficulties, to reconstitute their industry, and overcame one obstacle after another by determination and energy. After reconstituting machinery, by reassembling and repairing damaged machines, they found it was almost impossible to get raw material. It could not be got through Germany or through Russia, which were hostile, and finally it had to be brought by roundabout routes, chiefly through Italy and Austria. Adverse exchange made prices of machinery and of raw material alike almost prohibitive, but credits were arranged; British firms in some instances took an interest in local concerns, and one way and another the difficulties were got over. As a result the industry is now in a fair way to being restored to a pre-war level. Full time is being worked; production is at 60 per cent. of pre-war capacity in cotton, and 48 per cent. in wool. The total numbers employed are now over 60,000, as against 30,000 in 1920, and the production of cloth at the end of 1921 had reached 61,000 tons. Every branch of the textile industry appears to be covered, as far as the inexperienced eye can tell, and even excellent tweeds, indistinguishable from English and Scottish, are produced. Exportation is in full swing to Russia, Austria, the Ukraine, Lithuania, Hungary, Rumania, and even to Belgium, Czecho-Slovakia, and India. For this the low rate of the Polish mark is, of course, partly responsible, but there is no doubt of Poland's ability to become a serious competitor in the textile markets of the world. In the markets of Russia and the Ukraine her geographical position and other advantages will probably render her supreme when these fields are open, and this consideration alone makes the industry of Lodz worthy of serious consideration. The millowners are one and all anxious to extend their factories, and are by no means content with their present development. For this expansion credit and machinery are required. It should be possible for both to be found in the United Kingdom.

Coal in South Africa.—In a paper recently published in the Transactions of the Geological Society of South Africa, Dr E. T. Mellor describes the chief coal resources of South Africa. The Witbank or Middleburg coalfield is the most important, its capacity being estimated at a thousand million tons, and owing to its proximity to the main line of the Transvaal—Delagoa Bay Railway—it has been more extensively prospected and worked than any of the others. It is comparatively free from disturbances, and the continuity of the seams has been fairly well proved for about 45 miles. There are six seams, the two most important being No. 2, averaging 16 to 20 feet in thickness, and No. 4, averaging 24 feet. The coal is somewhat variable in character, and while much of it is of low ash content, an appreciable proportion in some parts of the field has a high ash percentage. In one block

of 7,000 acres a tonnage of 214 million tons has been proved, with an evaporative power of 12.5 or more. The Komatipoort field is disappointing, and its prospects doubtful. In Swaziland recent boring has indicated the existence of several seams, mostly thin, of high quality coal, although the total tonnage may not be considerable. In the Waterberg district several seams of good coal have been discovered, but they lack railway facilities at present. The Natal coalfields are inferior to the Witbank in having thinner seams, more broken up, and lying deeper, and they are, therefore, more gassy and difficult to work. It is estimated that the best Natal coal will be exhausted in 40 to 50 years, but the Witbank field appears to justify the development of a considerable export trade in coal.

Value of English Corn Crops.—A very interesting calculation is made in Part II. of the Agricultural Statistics for 1921, which has just been published, regarding the gross value at ordinary market prices of all the corn produced in England and Wales last year. The gross value of wheat, barley, and oats harvested was £48,700,000, as against £79,530,000 in the previous year. But a sum of £14,000,000 was paid by the Government under the Agricultural Act (Repeal), and this brings the value up to £62,700,000, or £17,530,000 less than that of 1920. The years 1918 and 1919 stand out prominently as record seasons, for in the previous year the value amounted to, roughly, £93,000,000, and in the following year to only slightly less. Before the war the gross value of the three crops was on an average only about £30,000,000. In making the above calculations, the figures do not represent the actual cash received, because the total quantity grown was not, of course, sold, a large proportion of it being retained for use upon the farm. The total quantity of wheat, barley and oats grown last year was 24,000,000 quarters, compared with 22,000,000 quarters in 1913.

New Workmen's Compensation Proposals.—It is understood that negotiations are taking place between representatives of the chief employers' organisations throughout the country, and the trade unions with regard to the terms of a new Workmen's Compensation Bill. The Government has promised to introduce a Bill if an agreement on the leading points can be arranged. The Home Office has recently drafted provisional proposals, and it is suggested that the maximum weekly compensation should be increased from 20s to 40s. Of course, it must be remembered that the War Addition Acts provided for the maximum to be increased to 35s. Another proposed change is that, instead of the weekly compensation being payable from the date of the accident if the injured person is away from work more than two weeks, compensation should not be payable when the injury does not disable the workman for more than three days, or in respect of the first three days on which he is so disabled. With regard to fatal cases, the present Act provides for a maximum of £300, but it is now proposed that additional payments should be made for children under 15 years of age, but the total amount of compensation must not exceed £500.

The Salvador External Debt.—Interesting news has come from Salvador this week. In 1915, it will be remembered, the Government of the Republic was compelled by the loss of foreign trade and Customs revenue occasioned by the war in Europe to compound with the holders of the loan issued here in 1908 by paying their interest in bonds of a 7 per cent. Funding Loan. In February of last year both these loans went into default, and in December the trustees for them announced that a settlement had been arranged involving the issue of a loan in the United States in three series of bonds. Series "A," amounting to \$5,000,000, would be placed in the United States; series "B" would be exchanged for the existing External Bonds; series "C" would be used to meet other obligations of the Republic, including the arrears of subsidy due to the Salvador Railway Company and various internal loans. All three series would be secured on the Customs, and would rank successively for

interest. The provisions for the control and supervision of the Customs administration by the American lenders appear to have been stringent, and in Salvador the influence of American financiers has hitherto been less, and the dislike of its extension stronger, than in any other Central American Republic. Indeed, the abortive Federal Constitution of 1921, which was probably drafted mainly by Salvadorean jurists, forbade the States of the projected Union to make contracts compromising their sovereignty or independence. There have been rumours that the negotiations were not proceeding smoothly, but they seem to have continued until last week. Last Saturday, however, the trustees of the two External Loans announced that the Salvador Government had notified the American Minister that the negotiations had been definitely abandoned, and that they themselves had formally demanded the renewal of the service of the British loans; meantime the British Foreign Office had requested H.B.M. Minister in Salvador to report on possible further measures to protect British interests. On Monday, however, they issued a second notice to the effect that the President of Salvador had appealed to the American Minister to conclude the negotiations, and that the power of attorney held by Mr Keilhauer, the agent of the American financiers concerned, had been renewed. What brought about this sudden change can only be conjectured; the success of the negotiations is of such importance, both to the Salvador Government and to the American capitalists concerned in the country, chiefly through the lines in it owned by the International Railways of Central America, that a movement for resumption might very well have been initiated by either side. The American loan will bring in new purchasing power, and stimulate the foreign trade of the Republic, and therefore promote the traffic both of these lines, and, still more, that of the Salvador Railway, which this year has been recovering from its misfortunes, and has resumed cash payment of the interest on its 5 per cent. mortgage debentures, as well as their redemption. Probably the negotiators, as is the way of Americans doing business in these small republics, have paid too little heed to the extreme sensitiveness of their patriots. Means will have to be found of avoiding offence to national sentiment, while making adequate provision for the service of the loan. The British bondholders have not taken alarm.

Guardian Assurance Company.—By modern standards the Guardian is a small office, but it is none the worse for that. In fact, in respect of 1921, which was its centenary year, the company shows a comfortable surplus in all departments, which is much more than many of its big rivals have succeeded in doing. In the fire department the premiums were £125,380 smaller at £1,013,734, and the release of reserves for unexpired risks permitted a trading profit to be shown of £113,403. The marine account of 1920 was closed with a profit of £34,982 (to which interest contributed £19,536), and the accident and miscellaneous branches, with premiums of £519,565, yielded £74,010 from underwriting. An analysis shows that interest receipts yielded £117,739, and that the transfers to profit and loss from the fire, marine, and accident surpluses were no more than £65,464, the remainder of the earnings being added to the reserve funds. Taxes on profits cost £88,290. The dividends paid on proprietors and staff shares absorbed £114,529 in 1921, and a special bonus of 2s a share, less tax, on each ordinary and staff share is now recommended to celebrate the year of centenary.

British Oil and Cake Mills.—The accounts of the British Oil and Cake Mills for 1921 again record a decrease in profits. Trading profits are down from £425,267 to £349,495, while net profits fell from £446,994 to £351,083. The return from investments, totalling £60,874, shows a small decrease when compared with the figures of £86,282 given a year ago. Results for a number of past years are summarised as follows:—

	1913.	1916.	1917.	1918.	1919.	1920.	1921.
Trading profit	£189,860	£263,250	£303,016	£333,552	£605,064	£425,267	£349,495
Net profit	£139,041	£241,812	£329,591	£322,008	£604,733	£446,994	£351,083
Depreciation res., &c.	£72,500	£72,500	£140,000	£104,441	£246,922	£32,530	£57,500
Preference dividend	£34,650	£37,348	£40,871	£40,871	£40,871	£40,751	£40,870
Ordinary dividend	£30,950	£30,483	£149,232	£174,756	£312,501	£372,938	£250,000
Carried forward	£941	£1,481	£57	£1,937	£444	£686	£272

Ordinary shareholders receive a distribution of 10 per cent.; this will absorb £250,000. Reserves secure £57,500, as compared with £32,530 for 1920, and as the main reserve account now stands at £950,000, the year's allocations in this direction appear to be satisfactory, especially as "sundry creditors" at £638,312 includes reserve for income-tax and contingencies. In connection with this latter item the report states that "progress has recently been made in determining the company's position in regard to liability for Excess Profits Duty, income-tax, and corporation profits tax," but no definite figure has yet been arrived at. "Meantime," the report proceeds, "ample reserves are provided in the accounts, and upon a final settlement it is anticipated that these will prove more than sufficient." The balance-sheet showing the various changes as the result of the year's operation will be found fully analysed in another column.

Two Rhodesian Reports.—The results for 1921 of both the Lonely Reef and the Rezende were to some extent affected by the labour trouble of the early part of the year, but in other respects there is little resemblance. The first-named undertaking, although still milling ore above the grade of the reserves, secured an average of 19.2 dwts, as against 21.72 dwts in 1920. Part of the difference was compensated for by reduction in costs; nevertheless, the profit came out £45,100 lower at £133,700. The dividends being cut down from 50 to 30 per cent., an enhanced balance of £72,500 remains to be carried forward, despite the allocation of a substantially increased amount for depreciation. Towards the end of the year the new gas-power plant came into operation, and effected a saving equivalent to no less than 10s per ton of ore milled. It is noteworthy that the April profit amounted to £12,840, as against £13,400 in the corresponding month of last year, while the cost ratio worked out at 37s 4d, in place of 49s 2d. The full and informative table of development results indicates that while values on the 23rd level displayed a further decline, those at the 24th—the lowest level—scored a striking recovery, the average of 31½ dwts being the best so far recorded below the 20th level. At 204,250 tons the ore reserves somewhat exceed those at the end of 1920, but the value of 18.1 dwts is nearly 2½ dwts down. On the basis of last year's dividends the yield on the shares is about 12½ per cent., but not much more than one-third of the present market price is "in sight" as profit in the ore reserves. As regards the Rezende, a cursory glance at the directors' summary of the accounts might easily lead to erroneous conclusions, the sum of £30,000 being drawn from reserve for the purpose of providing the 20 per cent. scrip bonus announced in November, 1921. Actually the working results correspond very closely to those of 1920, when, however, the gold reserve established in 1918 was drawn upon to the tune of £13,000. The dividends paid in respect of each of the past two years—8s per share—have exceeded the actual earnings, and altogether the position has been somewhat abnormal. At 140,500 tons the ore reserves are virtually unchanged in point of quantity, but the value of 9½ dwts is ½ dwt lower. The tonnage represents only two years' supply for the mill, and very little information is given in regard to the underground position. Hence a purchaser of the shares at 50s would be paying pretty heavily for possibilities.

Tanganyika Concessions and Zambesi Exploring.—Our mining correspondent writes:—Now that the overdue reports have been issued, and the annual meetings held of these undertakings, their affairs can be reviewed in the light of the full and up-to-date information available. The delay in issuing the accounts is due to the arrangements

for a new issue on the part of the Tanganyika. The position is a little complex. For some time past the Zambesia company has practically confined its energies to assisting the Tanganyika, in which it has a considerable interest. The Tanganyika holds shares in the Union Minière du Haut Katanga—an ambitious enterprise located in Brussels; also in various other allied concerns, the number as set out in the balance-sheet being 2,700,000 Benguela Railway £1 shares, 58,800 Union Minière 400f "capital" and 58,800 "dividend" shares, 494,800 ordinary, and 62,450 "B" Rhodesia-Katanga Railway shares; 1,600 Katanga Railway 250f shares, and 10,000 Nile-Congo Divide shares, 17s 6d paid. The Union Minière interest above mentioned cost £500,000; according to the auditors, it had on June 30th last value of £2,500,000. Further shares in that company are being acquired out of the proceeds of the issue shortly to be made of 750,000 convertible 10 per cent. preference £1 shares. This transaction completed, and the 10 per cent. underwriting commission paid, a balance of £285,000 will be left in the hands of the company, or more than sufficient to cover the loan from the bankers. At the date of the balance-sheet the cash assets exceeded the liabilities by somewhat over £4,000,000, the great bulk, of course, comprising the investments above catalogued. On December 31, 1920, the Union Minière Company had in issue 150,000 capital shares of 100f each, and a like number of "dividend" shares—the latter possess no nominal value, but rank for dividend equally with the others; they are in the nature of vendor. A further 110,000 shares of both classes have recently been created in connection with the extension of the company's concessions to their final date—March, 1990—the "capital" shares being issued at 400f each. For the purpose of providing for the treatment of its lower-grade ores the company is raising further capital in two different forms—150,000,000 in debentures, and a like amount in "privileged" shares, the issue being made piecemeal as funds are required. The activities and interests of the Union Minière certainly make a very impressive showing. Copper production from the rich ores has steadily expanded from 10,700 tons in 1914 to 30,470 tons last year, and is now at the rate of over 36,000 tons per annum. The ore reserves in the Eastern group of mines at the end of last year were computed as 49,006,000 tons, carrying 2,830,000 tons copper. Active drilling is in progress on the Western group. The output of tin ore is expected shortly to be at the rate of 80 tons per month. Gold, cobalt, and uranium have been found, and are under investigation. An extensive coal deposit is being opened up, and production should commence this year. The completion of the Benguela Railway is an essential part of the extension programme. At the meeting of the Tanganyika Company the unexpected announcement was made that the Trade Facilities Act Advisory Committee had been giving earnest consideration to a proposal that it should recommend a guarantee of some £3,000,000 by the British Government for the above purpose—as it would provide considerable employment in this country, but that opposition had been encountered on the part of the Union Government, which is at present negotiating with the Chartered Company for the acquisition of its controlling interest in the Rhodesian Railway system. It is to be hoped that wiser counsels will prevail; the case is one in which the "long view" requires to be taken. Altogether the possibilities are undeniably great, and afford ample scope for the exercise of the imagination. But the crucial points for holders of ordinary shares in the Tanganyika Concessions are—first, what will be the price of copper when the Union Minière is turning out the projected 140,000 tons per annum; second, what profit will be left after the Union Minière has met the service on its heavy prior charges, and Tanganyika has paid the interest on its preference issue. The Zambesi Exploring Company's interests, apart from land, are of practically the same nature as those of the Tanganyika Company—in which some 214,800 shares are held. Last year's operations again showed a small profit, increasing the surplus to £432,700; of this £400,000 is to be appropriated for depreciation on investments.

Cotton Mill Shares.—Owing to the improved reports from trade centres in the Lancashire cotton industry, writes our Manchester correspondent, there has recently been a steady rise in prices for mill shares in the Oldham district. On the whole, the lowest point for share quotations was about the middle of February, and since then the shares for most companies have hardened in price. The following table gives a representative list of companies. In each case the shares are of the value of £1, with 10s paid up:—

Spinning Company.	Town.	Paid-up Ordinary Share Capital.	Quotations.				Ag. vance.	Latest Dividend p.a.
			Feb. 15, 1922.	May 24, 1922.	Feb. 15, 1922.	May 24, 1922.		
Arkwright	Roohdale	180,000	8 0	8 6	2 6	0	5	nil

Wye	Oldham	100,000	15 6	21 3	5 9	0	10	10

At the end of the first quarter of this year 77 companies took stock either for three months or six months. The directors of 41 mills were not able to recommend any dividend, but with regard to the remaining 36 concerns, payments were made varying from 5 to 24 per cent. per annum. Fifty-nine companies took stock for the quarter, and 31 were forced to pass the dividend. The average dividend per company worked out at 5.10 per cent. per annum, against 5.78 for the December quarter, 6.21 in dividend per company worked out at 5.10 per cent. per annum a year previously. Eighteen companies took stock at the same time for the half-year, and the directors of 10 concerns were not able to recommend any dividend. The average dividend per company was 5.25 per cent. per annum, against 6.36 per cent. for the previous six months, and 7.72 per cent. per annum a year previously. During the last few weeks there has been healthy buying of mill shares in expectation of capital appreciation, and the possibility of higher dividends in the future. Many concerns, however, have to work off adverse balances which have accumulated during the depression, and it is probable it will be some time before numerous mills can recover themselves. The trade outlook, however, is distinctly better, and there are no indications at the moment of any slackening of demand for shares, especially for the companies that are known to be well financed and in a sound position.

Japanese Trade and Finance.—According to cabled advices from Tokyo, the general economic outlook in Japan continues to be dull, but activity has developed in the raw silk market owing to increased demand from both America and Europe, and seasonal scarcity of stock, and the firm tone was not upset by the announcement of the Imperial Silk Company that it has arranged to sell its holdings of silk, amounting to 2,000,000 kin, in equal instalments over ten months. Owing to the activity of the raw material, a better tone developed in silk goods export trade, where unprofitable conditions have recently hampered production. In the money market short loan conditions have been eased by the repayment of 53,000,000 yen of Treasury bills, mainly to the banks, and by a relaxation of the recent cautious attitude of the banks. Subscriptions to the 5 per cent. four-year Exchequer bonds, of which 52,000,000 yen were offered at 93 per cent., reached a total of 61,000,000 yen. On May 15th the note issue of the Bank of Japan was 1,055 million yen, or 8 million yen more than a year ago, while discounts and advances at 128 million yen are 55 millions higher than at May 14, 1921. Japanese imports in April were 185 million yen, and exports 129 million yen, the former being 46 millions

higher and the latter 14 millions higher than in the corresponding month of last year. The Bank of Japan's index number of wholesale prices in April was 261.25, as compared with 251.14 a year ago.

Oversea Correspondence.

UNITED STATES.—AMERICA AND EUROPE: BANKERS' VIEWS—A STEEL MERGER—COMMODITIES PRICES—BOND MARKET EASIER.
(FROM OUR CORRESPONDENT.)

NEW YORK, May 15.

At a recent dinner of the American Acceptance Council, Governor W. P. G. Harding, of the Federal Reserve Board, and Paul M. Warburg, president of the council, discussed the part that should be taken by American money in refinancing Europe and the world. "The main burden," said Mr Warburg, "will rest on England and the United States. It will not be a question of crowding one another out—the burden will be so heavy that both countries will be grateful for having a partner shouldering a substantial share of the load." He spoke of the council's work, and said that "the stronger the world's will to return to the gold basis, the more inevitable will be America's duty to co-operate in devising plans that would bring her unduly vast accumulation of gold into a position of wider service. At present," he added, "a lack of bills in the open market has driven the Federal Reserve banks into heavy investments in Government certificates and short-term Government obligations. It would be much healthier if they could show a larger volume of bills purchased." Governor Harding remarked, in substance, that this country should do all in its power to stabilise conditions in other countries without unsettling this country. There is no disposition on the part of the Federal Reserve Board, he said, to monopolise the acceptance business for the United States, and there is "no thought that it could do so"; but there is a field for both dollar and sterling exchange, he added, and the two great English-speaking nations can render better service to the world's commerce by participation on the part of both than would be the case if either were excluded.

For some time past negotiations have been under way to merge seven of the leading independent steel companies of this country into an organisation which, in size, would rank second only to the United States Steel Corporation. It was generally supposed that the Lackawanna Steel Company would be included in the proposed combination. Last week's announcement that the Bethlehem Steel Corporation will acquire by purchase the properties of the Lackawanna Steel Company therefore came as a great surprise to the financial district and to the steel trade, although there had been some talk of such a development in the event of the seven-company merger not materialising. It is understood that the Bethlehem deal will not interfere with plans to unite the other six companies. While all matters relating to the Bethlehem-Lackawanna consolidation are said to have been agreed upon, directors of both companies are to meet this week to take formal action thereon. The terms have not yet been announced, but it is officially stated that the transaction will involve the use of Bethlehem 7 per cent. preferred and Class B common stocks in payment for the Lackawanna properties. The purchase will unite under a single management two of the foremost independent producers of iron and steel in the United States. The Lackawanna acquisition will give the Bethlehem a gateway to the markets in New England and the Eastern States, and, according to President Grace, "fits in nicely with the plans that Bethlehem has for the future." The Bethlehem will now be able to extend its field of operations, since the Lackawanna will supply the New England and Lake States with steel rails, in which it specialises, while the Bethlehem will continue to supply Southern markets; the latter corporation as a result of the purchase will secure a market for structural plates in territory which heretofore it had not reached. The combined companies will have an ingot capacity of approximately 5,000,000 tons annually, of

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised £3,000,000
Paid Up Capital 1,000,000
Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

which 1,800,000 is credited to the Lackawanna and 3,200,000 to the Bethlehem Corporation. That compares with the United States Steel Corporation's ingot capacity of about 22,000,000 tons, and with some 8,200,000 tons of the proposed seven-company merger. On the Stock Exchange the announcement of the merger was followed by excited trading and sensational advances in the shares of both companies, particularly Lackawanna, which rose more than 12 points in one session. Other independent steel shares have also been very active and strong.

The increase in the United States Steel Corporation's unfilled tonnage last month proved to be well above conservative estimates. The total of unfinished business on the corporation's books, as of April 30th, amounted to 5,096,917 tons, the largest since June 30th last, and representing an increase of 602,769 as compared with the end of March. Apparently the corporation operated at about 73 per cent. of capacity on the average last month, and shipments are estimated to have been approximately 1,000,000 tons. The gain in unfilled orders, together with the heavy shipments, indicates that new business received in April was close to 1,600,000 tons.

Prices of commodities again advanced on the average during April, for the ninth time in the eleven months since June, 1921. *Bradstreet's* index number as at May 1st was \$11.7044, representing a gain of 1.4 per cent. over April 1st, of 2.8 per cent. over January 1st, and of 10.2 per cent. over the low point of June 1, 1921, but a decrease of 43.9 per cent. from the peak of February 1, 1920, and of 38.4 per cent. from December 1, 1918, just following the Armistice. As compared with August 1, 1914, the present index number shows a rise of 34.3 per cent.; it is 8 per cent. higher than that of May 1 a year ago. A noteworthy feature of the April price movement is the fact that all but two of the thirteen groups of commodities used in the compilation advanced during the month, the exceptions being fruits and hides and leather, both of which remained unchanged. The greatest rise, 6 per cent., was in metals.

Notwithstanding an unusually heavy loss in winter wheat acreage, due to winter-killing, the Government's crop report as at May 1st was distinctly favourable. On that date the area of winter wheat to be harvested was 38,131,000 acres, according to the Department of Agriculture, or 6,446,000 acres less than the acreage planted last autumn, and 4,571,000 acres less than the acreage harvested last summer. The average condition of winter wheat on May 1st was 83.5 per cent. of normal, indicating a possible yield of about 15.3 bushels per acre, which, on the estimated area to be harvested, would produce 584,793,000 bushels, or only 2,239,000 bushels less than in 1921, and some 8,000,000 more than the April 1st report indicated.

The bond market seems to have lost some of its vitality. Although money rates continued easy, prices of nearly all classes of outstanding bonds declined last week, and some issues suffered rather severe losses. The reaction was due largely to profit taking sales, especially in speculative issues, which had scored substantial advances in recent weeks. The largest single flotation last week consisted of \$75,000,000 farm loan bonds offered by the 12 Federal Land Banks through bond distributing houses in all sections of the country. The bonds are dated May 1, 1942, due May 1, 1942, callable after 10 years, bear a coupon rate of 4½ per cent., and were sold at par and accrued interest.

FRANCE.—REPARATION NEGOTIATIONS—GERMAN LOAN COMMITTEE—FRENCH TRADE—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, May 23.

THE one outstanding question that is occupying French attention at the present moment is whether, as the result of common action between the Allies on May 31st, Germany will be compelled to meet her engagements during the coming 12 months, or whether France, through the failure of her Allies to support her claims under the Versailles Treaty, will be obliged to resort to a further issue of Rentes, to the amount of at least 3,900,000,000f, for the purpose of balancing her 1923 Budget, and will be called on to continue to act as Germany's banker for an indefinite period. So far the French taxpayer has had to find, for the restoration of the devastated regions, over 80,000 million francs, because Germany has failed to pay her.

The object of the negotiations that have been going on between the Reparations Commission and the Berlin Government for some weeks past is to ascertain what course Germany intends to take. The Reparations Commission, as already stated, some weeks ago called on Germany to impose before May 31st 60 billions of new taxation, for the purpose of balancing her Budget, to state what guarantees she proposes to give to back her intentions to pay her Reparations debt in the future, and to set forth the extent to which she is prepared to place herself under Allied financial control, so that they may be assured she will meet her future engagements. To these demands the Berlin Government replied with a flat *non possumus* so far as the imposition of new taxation was concerned, and advanced the cool argument that her dignity as a sovereign State will not permit her to consent to any kind of control over her finances by the Allies. Dr Hermes, the German Finance Minister, who brought this reply to Paris, was told by the Reparations Commission, as might have been expected, that Germany must put forward a much more satisfactory reply, and he was further given to understand that unless she did so she will have only herself to blame for any consequences that may follow on May 31st.

The Paris newspapers began once more to talk seriously as to what effect an Allied, or even merely French, occupation of the Ruhr area would have on German industry, and M. Poincaré, in a letter replying to M. Klotz, repeated his opinion that this country, under Article 18 of the Versailles Treaty, will be perfectly justified, if the Allies decline to take common coercive action against Germany on May 31st, in exercising her right to act independently. The effect of these and other evidences of French intentions to bring the Reparations question to a definite issue by the end of the present month, coming on top of Mr Lloyd George's serious loss of prestige owing to the failure of the Genoa Conference, has shown itself in a notable modification of the German attitude in the negotiations that have been in progress between the Berlin Government and the Reparations Committee.

Dr Hermes, it is now understood, has within the last day or two given the Reparations Commission to understand that the Berlin Government is prepared to accept most, if not all, of the demands that have been made upon it, both in regard to the reform of the German national finances and as to the extent of the control which it is proposed the Allies shall exercise over those of the German revenues on which the payment of Reparations will be secured. There is now a strong probability that, if the formal proposals that are to be put forward by the German Government before May 31st are found to be in general correspondence with the formulæ agreed to in principle by Dr Hermes, a solution of the problem favourable to all parties will be reached. Should this result be realised, the next question to be settled will be as to the means by which Germany is to find the money necessary to meet the Allied claims. The method most favoured here takes the form of the great international loan, of which so much has been said. The special committee of banking experts appointed by the Reparations Commission to consider in what conditions an international loan might be issued on behalf of Germany, for the purpose of mobilising a part of the debt due to the Allies, will begin its sittings here

to-morrow, under the presidency of M. Delacroix, the Belgian ex-Premier. The other members are Sir Robert Kindersley (Great Britain), M. Sergent (France), Signor d'Ameglio (Italy), Mr Pierpont Morgan (United States), M. Sekiba (Japan), M. Vissering (a Dutch expert, representing the neutral countries), and Herr Bergmann, for Germany. There are reports that the work of this committee will occupy from 10 days to a fortnight, but that strong attempts will be made to arrive at some kind of programme that will be available by May 31st, the date when the period given to the Germans to put their national finances in order will have expired, but by which it is hoped they will have put forward their new proposals.

It is generally recognised here that the key to the success of any international loan proposal on behalf of Germany is held by the United States. Hence the presence on the committee of Mr Pierpont Morgan is regarded as of the utmost significance. Those in the confidence of the American financier, and who are believed to be able to reflect his views, state that negotiations for the issue of an international loan on behalf of Germany are much more difficult now than they would have been six weeks ago, owing to the unfortunate failure of the Genoa conference, which is held to have complicated the international situation, instead of clearing it up. The opinion of the American people, who would necessarily be the principal subscribers to such a loan, is believed to have been unfavourably influenced by the happenings at Genoa. The difficulty to be faced by Mr Pierpont Morgan is that he has not only to satisfy himself as to the solvency of the future debtor, but also as to the extent of the goodwill of the potential subscriber.

The proposal to suppress the supplementary allowance of 720f a year, in respect of the high cost of living, that has for the past two or three years been made to all the lower grades of French public employees is meeting with such strong opposition that it will very probably be dropped. The advocates of economy in the Chamber and the Press insist that commodity prices are now sufficiently near the normal as to render these allowances unnecessary. The facts, however, do not appear to support this argument. The official statistics show that, taking 100 as the index figure for the cost of living in July, 1914, it had risen to 238 in 1919, when these allowances were first given, and to 295 in December, 1921, the date of the latest complete figures published. In view of the fact that the saving from the suppression of these allowances would amount to only 200,000,000f on a total deficit of some 3,900 millions, formal proposals have been laid before the Chamber to continue them for a further period.

Official figures have been issued showing the returns for exports and imports for the first four months of 1922, 1921, and 1913. They are as follows:—

Character of Goods.	First Four Months of the Years					
	1913.		1921.		1922.	
	Value.	Weight.	Value.	Weight.	Value.	Weight.
IMPORTS.						
Foodstuffs	1,000 fr.	Met. tons	1,000 fr.	Met. tons	1,000 fr.	Met. tons
Raw materials necessary for industry	512,674	1,572,183	1,614,765	1,065,976	1,636,030	1,417,128
Manufactured articles	1,766,771	12,020,169	3,960,406	11,146,676	4,013,833	13,732,155
Totals	2,825,039	14,198,237	7,627,243	12,775,531	7,010,283	15,741,934
EXPORTS.						
Foodstuffs	263,865	401,080	736,465	479,583	542,369	271,399
Raw materials necessary for industry	611,742	5,567,237	1,846,671	4,018,217	1,828,104	5,477,663
Manufactured articles	1,190,926	721,206	4,547,430	734,232	4,522,317	681,826
Postal packets	195,034	12,224	416,896	6,537	441,928	8,816
Totals	2,261,567	6,701,747	7,547,462	5,240,369	7,331,718	6,439,504

As compared with 1913 exports show an increase of 5,070,151 thousand francs in value, but are 262,243 tons less in weight.

The tendency of the Bourse towards firmness that was a marked feature of last week's session has been well maintained and even accentuated, the principal factor in it being the end of the Genoa Conference. Up till the last moment there was a fear that the Conference would result in serious Franco-British disagreement, but now that the Conference has been terminated and that public attention is focussed on more realistic questions such as that of Reparations, and as there is a reason to hope for effective co-operation with the United States, the feeling of optimism has become more pronounced. If the hopes

raised are realised, and France can feel secure as to Reparations, a still greater improvement can be expected. French Rentes have shown little change except for the Five per Cents. that have improved from 89 to 89.92. Banks generally have improved, and railways have been in demand.

GERMANY.—LOAN PROSPECTS—STATE MEASURES—EXCHANGE AND BOURSE—SHIPPING.

(FROM OUR CORRESPONDENT.)

BERLIN, May 22.

THE somewhat improved prospect that a loan for Germany may result from this week's meeting in Paris has had no visible effect upon business. The trend of the mark exchange has, on the whole, been downward, though slowly. A large loan is not considered possible, except in connection with either a general revision of Reparations or a general revision of international war debts. Neither is expected in connection with the Paris discussions, the chance of success in which is considered to depend on adhesion to a narrow immediate programme. What security Germany can give for a loan, if security is demanded, is not very clear. The banker, Herr Max Warburg, at the Congress of the Federation of Industries, now proceeding in Hamburg, declares that as security for the loan the Allies should relinquish to the lender their first mortgage upon German State resources; but these resources are not a realisable security for a private lender any more than they are for the Allies. The allotment of any particular German State resource for interest on and amortisation of a loan would produce only paper marks, which would have to be thrown on the exchange bourses. Business circles show nervousness, believing that the conclusion of even a small loan may violently reverse the mark exchange movement, and cause industrial stagnation. The Minister for Labour, Dr Brauns, last week told the Reichstag that the boom is at an end, the cause being the great price rise which threatens to kill the margin between German and foreign prices; and the president of the Mechanical Industries Association, Dr Börsig, says that even stabilisation of the mark exchange, not to mention improvement, would produce an industrial collapse. The Minister for Industry, Herr Schmidt, has also referred to the heavy losses which will be suffered if the mark exchange is sent up.

The Government has submitted a Bill giving it authority to increase Customs duties and to impose duties on goods now duty free without getting special legislative sanction. The aim is to adapt duties immediately to changes in the exchange, and in other conditions. Sugar, of which, despite abundant production, there is extreme scarcity, has been removed from the import prohibition list, and may now be imported without licence. The iron and steel producers have petitioned for a removal of the export duties on their wares, on the ground that German prices are now near or over foreign. Postal rates are again to be raised. The Independent Socialists have submitted to the Reichstag a proposal for further reduction of income-tax rates. The last reduction was on November 10th. The proposal is that the present 10 per cent. rate should be imposed on incomes up to 80,000 marks, instead of as now up to only 50,000 marks. The foundation for the proposal is the further currency depreciation.

A considerable agitation is proceeding against the supposed "buying up of Germany" by foreigners. There is a growing tendency to charge foreigners in Germany higher prices than natives, and various plans for special taxes on foreigners are unofficially proposed. The Peace Treaty makes such taxes impossible. The agitation has no real foundation. Already export goods are charged for at the highest prices compatible with successful competition. In the whole exchange account with foreign countries since the Armistice Germany has certainly gained more than she lost. Against a certain loss on goods sold at below world-market prices is the fact that vast sums have been invested, or speculated, by foreigners in German currency, bonds, stocks and real property, and in nearly all cases the foreigners have lost much of their

INTERNATIONAL BANKING
IN ALL ITS BRANCHES

BANKERS TRUST COMPANY

CABLE ADDRESS: BANKTRUST, PARIS

capital and draw no interest worth mentioning. For the good foreign money received, Germans have got full value in necessary imports; but the foreigner, unless he bought in Germany and exported immediately, has lost. Enormous sums have been put by foreigners into German city house property, but the houses have been expropriated and transferred to the tenants, and under the new law a person who has invested £20,000 in a house will not be allowed to draw more than about £20 a year therefrom, and is highly unlikely to draw even that. In the last year alone, foreign bondholders have lost four-fifths of their money, and the small increases in dividend rates in no way compensate foreign shareholders for the loss on exchange. In fact, the falling mark exchange has been a lever for expropriating foreign property, and giving no return.

The Reichsbank announces that it is about to issue 10,000-mark notes. The highest note at present is 1,000 mark. A Bill under preparation forbids the further issue of emergency token money by local public bodies. Existing emergency issues are to be exchanged against a new metal coinage. The floating debt of discounted Treasury bills, on May 10th, was 282,590,215,000 marks, having increased by 10,655,050,000 marks since the beginning of the financial year, April 1st. The Reichsbank statement for May 15th again shows a heavy demand for credit, discounted Treasury bills having increased by 9,127,602,000 marks to 164,204,708,000 marks, and private bills by 30,799,000 marks to 2,614,563,000 marks. Note circulation increased by 439,972,000 marks to 142,903,593,000 marks; State deposits by 7,457,509,000 marks to 13,026,474,000 marks, and private deposits by 1,706,954,000 marks to 24,517,537,000 marks. An Export Bourse, to which foreigners, when accompanied by native members, will be admitted, is to be opened at Berlin. The Securities Bourse last week continued dull and undecided, averages of dividend-payers rising slightly, while home loan averages declined, and foreign loans rose considerably. The considerable activity in Russian rentes and railway bonds, which has prevailed since early in the Genoa Conference, continued, being helped by reports from the recently restored Moscow Bourse showing a great rise in quotations there. For Hungarian and Turkish Rentes there was also a great demand. Metal and mining stocks were active at intervals, on basis of rumours of a new important combination around the Phoenix Company. Industrial bonds mostly stand very much higher than at the beginning of the month. Instances of rises between April 30th and to-day are:—General Electricity 4½ per Cent., 102.50 to 136.50; do. 4 per Cent., 94 to 106; Badische Aniline 4½ per Cent., 112 to 140; Gelsenkirchen 4 per Cent., 93.50 to 110.

The price rise has put newspapers into a difficult position. More than a hundred daily, and many periodical, journals have ceased publication, many have reduced their size, and all have difficulties in making ends meet. Whereas subscription and sale prices have as a rule risen about 15-fold, the prices of materials have mostly risen 50, and some even 100-fold. Paper has risen from 20½ pfennigs per kilo in 1914 to 1590½ pfennigs on March 1st. The newspapers demand aid from the Government, and

desire that export of wood paper shall be more severely restricted. The remedy adopted by other industries of still further raising prices to the public, is not practicable, as experience has shown that circulation falls, and thereby production cost per copy is again increased. The newspapers complain of the high prices charged for wood by the States from whose forests most paper-wood comes. Ruhr coal production in April was, in 23 working days, 7,512,646 tons, and shows a considerable decline in daily output. A Bill before the Reichstag provides for increase under certain conditions of the present seven-hours day (in coal mines only) to 7½ hours.

The three foreign telegraph companies, the Deutsch-Atlantische, Deutsch Sudamerikanische and Osteuropäische, have amalgamated. A cable is to be laid from Emden to the Azores, to be connected with an American cable laid by the Commercial Cable Company of New York. The companies are negotiating with the Government for compensation for their war losses. The shipping companies report that, owing to the fall, since the spring of 1921, in the value of money, the compensation then granted by the State will finance only a small part of the construction programme. The Compensation agreement assumed that one-third of the old fleet could be restored with the sum granted; the present estimate is that only one-twelfth can be restored. Hamburg's shipping in the first four months of 1922 was:—Arrivals, 3,072 vessels of 3,672,169 net tons, against 2,217 vessels of 2,621,699 tons in the same months of 1921; departures, 3,426 vessels of 3,713,658 tons, against 2,489 of 2,610,321 tons. Shipping is now not far short of pre-war level, arrivals in the first four months of 1913 being 4,518,548 tons, and departures 4,595,020 tons.

HOLLAND. — BANKING CONDITION — GENERAL SITUATION—NEW ISSUES.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, May 15.

IN a recent letter I wrote that it might be possible that some of the smaller banks should be taken over by larger institutions, but that generally the position of the banks was good. Since that time a small private bank, an important joint-stock bank, and a large stock brokers' firm dealing also as bankers, have stopped payment. Marx and Co.'s Bank, with 12,000,000 fl capital, and 4,000,000 fl reserves, is being wound up (creditors being guaranteed by Messrs R. Mees and Zoonen and the Rotterdamsche Bankvereeniging) and the Bank Associatie (which was a fusion of the old bankers firm of Messrs Wertheim and ompertz and the Credietvereeniging) has been held up by a syndicate in which the Amsterdamsche Bank and the Rotterdamsche Bankvereeniging participated. In pre-war times these occurrences would have sufficed to cause a sort of panic, but nowadays things are taken very phlegmatically, and undoubtedly the prompt action of the other banks, instigated by the Netherlands Bank, contributed in no slight degree to maintain confidence. Rumours about some other banks continued some time with persistency, but happily no foundation for them appeared.

Business is very slack in Holland. Many industrial companies are passing their ordinary dividends, same have trouble to pay the preferred dividends, and others are being liquidated or reorganised. The spirit of enterprise is altogether lacking. The money lying idle finds employment in investment funds, issues of which are usually a fair success. An interesting issue was that of the City of Amsterdam, of which Messrs. Pierson and Co. took over 10,000,000 fl 6 per cent. bonds, which they offered to the public at the rather stiff price of 99½ per cent., while simultaneously subscriptions were invited in Switzerland. After the issues of the Netherlands and the Netherlands Indian Government and the Holland-America Line, which were offered in Holland and America at the same time, this was the first loan in which Switzerland took an interest.

CZECHO-SLOVAKIA.—EXCHANGE AND TRADE CONDITIONS—BANKING DEVELOPMENT—GENERAL OUTLOOK.

(FROM OUR CORRESPONDENT.)

PRAGUE, May 20.

FOR some months Czecho-Slovakia has been going through a period of commercial stagnation, comparable to that which was oppressing England more than a year ago. The trouble also is due to much the same causes. After the war the demand for manufactures went up rapidly by leaps and bounds, with the consequence that all factories in the country were working at full pressure, while many new ones came into being at great expense. Meanwhile, the value of the crown continued to fall until in October, 1921, it reached the unprecedentedly low figure of over 400 to the pound sterling. Czecho-Slovakia, being an exporting country, did not suffer from her low currency so much as might appear probable; her wood, her coal, her sugar, and hops found ready purchasers, while on her part she could still purchase raw material from adjoining countries whose currency was lower than her own. The crown began to rise at the latter part of 1921, and in January last the rise was phenomenal, both in the amount and the quickness of the movement. This month it has risen to 230 to the British pound, and though still 100 above the figure in 1919, the effect on the export trade of the country is deplorable. Certain raw materials can still be purchased in Germany and Austria; but Germany, on the other hand, who took most of this country's surplus coal, is now finding it too dear, and the lignite or brown coal trade is suffering with the wood and the iron.

The high cost of coal, owing to the heavy excise, as well as the high cost of production, reacts upon the cost of manufactured articles, especially machinery and iron and steel products. The Government reaps a large revenue from the coal tax, and is unwilling to make concessions, while the cost of living not having gone down to any appreciable extent, it is difficult to reduce wages. The cost of living has in some instances actually increased; meat, of which there is an almost unduly large consumption, has risen some 30 per cent. in recent months. An attempt was made to import animals from Rumania, but the rich agrarian party managed to have this stopped, with the result that frozen meat of a not very high quality, mostly from Argentina, is now being tried. But for this the cold storage arrangements are not sufficient, the meat is not readily bought, and the price of native meat is not affected. Add to this that the people are very heavily taxed (a business man is said to be taxed up to 70 per cent. of his income), that protective tariffs are well-nigh prohibitive, and the causes of the present stagnation of trade are not far to seek. To add to the difficulties, the metal workers are on strike against the proposed reductions of 15 per cent. in their wages, and in support of this a one-day general strike took place on Friday, the 19th. The general strike was ordered not only to aid the metal workers, but as a protest against the high cost of living, and it is possible that, as a consequence, the crisis may be reached sooner, after which matters should improve.

Of course, there is another side of the picture. A ready market is still found for sugar, hops and malt. Trade to some considerable extent has been carried on with Russia through the Commercial Delegation at Prague, and here there seems to be a prospect of considerable increase. A deal in paper for cash to the extent of nine million crowns took place recently, and other deals have been since announced. The commercial contract entered into at Genoa by Dr Benes will give a further impetus to this trade. The trade with the British Empire in the year 1921 did not amount to more than roughly 2,000,000 crowns for imports and about 1,000,000 crowns for exports. It is suggested that the trade might be considerably developed by means of more commercial travellers with samples, or by means of showrooms at Prague, and, *mutatis mutandis*, in London and other large English towns. It is possible that something might be done in this way. The trade returns for the year of 1921 give a good idea of the general possibilities of the country. The excess of exports over im-

ports was 56,840,503 quintals, or about five million tons. The exports amounted to 96,457,688 quintals, and of these more than 75 per cent. are accounted for by coal, wood, and turf. Minerals represent 6 per cent., sugar about 5 per cent., iron and iron goods, including machines and instruments, 2½ per cent. One-third of the whole country is said to be forest land, and of the production of timber one-third can be exported. If conditions were favourable, there is no reason why much of this should not find its way to Great Britain. The price of the crown being, however, what it is, and considering the length of transport by water, British wants can at present be supplied more economically by the Scandinavian countries as well as Russia from Archangel. A certain amount of trade, I have reason to believe, is done even at the present time, but the circumstances are and must continue to be exceptional. British timber merchants have been known to come to Prague with the wish and intention to purchase, but have been forced to go back empty handed. In such things as pottery, musical instruments, toys, pencils and other small commodities there would seem to be a wider scope. It would seem possible that paper—an industry which is represented by 200 mills—spirits and liqueurs and chemicals might find a market in England if the supplies were increased. At present, the output of chemicals is not sufficient to supply the home demand. Statistics show that, while France and Great Britain are the principal foreign customers for Czecho-Slovak sugar, this commodity finds its way as far west as Argentina, as far east as the East Indies, as far north as Sweden, and as far south as Smyrna.

Since the establishment of the Republic, banking in Czecho-Slovakia has made great strides. There are at the present time, including the new Anglo-Czech Bank, nearly 40 banks in the country, of which the aggregate capital amounts to 1,500 million crowns. Banking in Czecho-Slovakia is not confined to bank business. Banks supply capital for the industries of the country, both directly and indirectly. Frequently, by holding large numbers of shares, they can control industries by the appointment of their own directors. So it is that when home industries spread and flourish, the banks must keep pace. There has been the same tendency for banks to amalgamate as in England, and one amalgamation has brought about the establishment of an institution, having a capital of over 200 million crowns. The Anglo-Czech Bank has a capital solely British of 150 million crowns, to be increased shortly to 180 millions, the additional 30 million crowns subscribed by Czecho-Slovakia. All these banks have been doing extremely well, pay high dividends, and when the present crisis is successfully surmounted, their prospects should continue to be bright.

The opinion, formed in English financial circles, as to the roseate prospects of this country, is doubtless well founded, once the obstacles immediately impeding its path to prosperity are removed.

POLAND.—INDUSTRIAL PRODUCTION—THE PAPER INDUSTRY—THE RUSSIAN PROBLEM—RAILWAY IMPROVEMENT.

(FROM OUR CORRESPONDENT.)

WARSAW, May 19.

THE statistical data which are now available reveal a marked progress in almost all branches of industry. The percentage of workmen employed in various industries compares with the pre-war record as follows:—

	1913.	1919.	1920.	1921.
Textile industry	100	15	26	62
Mineral industry	100	18	30	73
Food industry	100	41	48	72
Paper industry	100	38	47	50
Chemical industry	100	36	37	77
Cement industry	100	49	62	67

The coal production is rapidly approaching the pre-war level, as shown by the figures below:—

	Tons.	%
1913	8,900,000	100
1919	6,000,000	67
1920	6,400,000	72
1921	7,500,000	84
1922 (January and February)	1,420,000	91

The production of iron ores has reached 72 per cent. of the pre-war level, and the quantity of extracted salt is 53 per cent. higher than in 1913. The iron industry is very slowly recovering from the depression into which it was thrown by the war. In 1921 the Polish blast furnaces produced only 14 per cent. of their 1913 output. The steel industry, with a production equal to 18 per cent. of the pre-war level, is not in a much better position. Poland's paper production is quite insufficient for the country's needs. It is estimated that the normal consumption of Poland amounts to 113.4 million kilograms of paper, while in 1921 only 36.0 millions were produced at home. Nearly an equal quantity was imported. This is unsatisfactory, because the country having a sufficient quantity of the necessary timber at home could make herself easily independent of foreign supplies. The existing paper mills are working to a great extent with antiquated machines, so that new undertakings would be in a good position to meet their competition. The average breadth of the Polish paper machines amounts to 1.8 metres, while in Germany machines with a breadth of 3 metres, and in the United States, with a breadth of 5 metres, have been introduced.

The Polish Government has presented to the League of Nations a memorandum in which the reasons why Poland is taking an active interest in the reconstruction of Russia are explained. The memorandum lays emphasis on the following points:—(1) Poland possesses a common frontier with Russia extending over 1,200 kilometres. The importance as a territory of transit is increased by the existence of direct lines of communication with the principal Russian centres. (2) The geographical position of Poland and the common political life with Russia for 150 years have enabled Poles to acquire a special knowledge of the character, culture, and interests of the Russian people. Actually more than one million Poles are living in different Russian districts. (3) Poland possesses a great number of engineers, who have taken a prominent part in Russia's economic life, and of merchants who have a knowledge of Russian markets. (4) Different branches of Polish industry are specially adapted to the needs of Russian markets. It may be added that the Polish railway system will in the future play a very important rôle as a link between the West and the East. In this respect the Polish railways are becoming month by month more efficient for this task. The traveller who visited Poland a year ago, when timetables had only a purely theoretical value, cannot fail to be impressed to-day by the regular working of the railways. This impression is confirmed by statistical data reproduced below:—

	1919.	1920.	1921.
Mileage operated (kilometers)	7,500	13,000	15,500
Average number of engines	2,000	2,700	4,000
" " passenger cars ..	4,200	7,300	9,000
" " wagons	39,800	68,000	86,000

This improvement is due in the first instance to political reasons, to the cession of new territories, and to the execution of the Treaties of Versailles and of Riga. This year the incorporation of Upper Silesia will contribute a further increase of the rolling stock to the extent of 430 locomotives, 650 passenger cars, and 20,000 wagons. Railway traffic increased last year by nearly 100 per cent. for passengers, and by nearly 80 per cent. for merchandise.

	1919.	1920.	1921.
Passengers	61,450,000	66,700,000	117,600,000
Merchandise (tons)	11,500,000	16,900,000	28,000,000

In 1919 the average daily load of a wagon amounted to 2,700 kilograms; in 1920 to 4,200; and in 1921 to 6,000.

Letters to the Editor.

CHINESE TARIFFS AND BRITISH TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest the article on the new Chinese tariff in your last issue, and I think that business men, both on this side and in China, attribute an undue importance to the new tariff rates. Whether the Chinese duties are a little higher or a little lower does not matter very much as long as all nations are treated alike. The

matter would be very different if in some way or another English trade with China was discriminated against to the advantage of some other nation or nations competing with us. I am afraid that English business men who are disappointed with their trade with China blame the tariff for their non-success instead of blaming themselves. England is by far the largest exporter of cotton piece-goods in the world. Not so long ago Lancashire absolutely monopolised the China trade, but recently a large portion of that trade has been acquired by the Japanese and Americans. According to the latest figures supplied by the Maritime Customs, the imports of cotton piece-goods into China in the pre-war year and in 1919 and 1920 were as follows:—

	1913. Pieces.	1919. Pieces.	1920. Pieces.
British	11,705,426 ..	4,592,283 ..	5,784,026
Japanese	5,716,594 ..	8,898,827 ..	7,035,458
American	2,281,123 ..	622,406 ..	563,583
Others	91,714 ..	..	54,567
Total	19,794,857 ..	14,113,516 ..	13,437,634

Not so very long ago nearly 100 per cent. of the Chinese piece-good imports came from England. In 1913 less than 60 per cent. came from this country, and Japan sent to China half as many pieces as England. In 1919 Japan sent to China twice as many pieces as this country, but in 1920 Japan's superiority had declined to about 25 per cent. Lancashire has been getting back some of the trade which it has lost during and immediately after the war. However, the figures show that Japan and America have succeeded in obtaining a powerful hold upon the Chinese market, which we have monopolised so long. Cotton manufacturers and exporters and the producers and sellers of other goods suitable for the Chinese market will do well if they blame for their non-success not the tariff, but themselves, their workers, and their methods of doing business. The Chinese, like other nations, buy those goods which they like best, provided that they are approached in the right way. In many cases Japanese and American goods have been more suitable than English because of quality, price, make-up, packing, &c. In other cases Chinese merchants have preferred dealing with Japanese and Americans because of the methods of business used by the latter. Japanese and American firms very frequently treat the Chinese as equals, enter upon partnerships with Chinese business men, and deal directly with the men in the interior, while English firms only too frequently keep aloof from the Chinese and deal with them through the importing houses. Chinese buyers, like buyers everywhere, like to get into direct contact with foreign sellers. With this object in view they have created the Sino-British Trade Association, of which I have the honour to be the secretary. If English business men wish to increase their sales in China, let them not blame the tariff, but let them learn from the methods which are increasingly used, not only by Japanese and American business men, but by Germans, Belgians, Frenchmen, and others.

In my opinion, the Chinese market is by far the most promising market in the world. China has 100,000,000 more inhabitants than India, and has vastly larger resources. Consequently China can produce and export far more than India, and can pay with these exports for vastly greater imports than India can absorb. Give China 10 years of peace and of reasonably good government, and the foreign trade of the country will be two or three times as great as that of India.

Order, a few railways, and roads will create a miracle in China, the wealth and potentialities of which can scarcely be overstated. If Englishmen are willing to work hand in hand with the Chinese, they will find the Chinese market infinitely more valuable than that of all the other Asiatic countries combined.—I am, Sir, yours truly,
London, S.W. 1, May 17th, 1922. L. E. HAYNES.

Books and Publications.

THE FOOD CAMPAIGN OF 1916-1918.*

EXCEPT for the facts that an account of the campaign for increased food production from 1916 to 1918 ought by rights to contain a warm appreciation of Lord Ernle's own work, and that he is the last man to allow his personal achievements to appear prominent, there is no one better fitted than the late President of the Board of Agriculture to tell the story of that important phase of English war policy. Lord Ernle was at the head of the Board from the end of 1916 until after the conclusion of hostilities, and his article in the *Journal of the Royal Agricultural Society* is not only written with all the experience which that position gave, but is marked by the width of knowledge and the balanced judgment which readers of his other writings have learnt to associate with their author. The difficulties of the situation at the beginning of 1917 are admirably set forth—difficulties among which the shortage of men, machines, and fertilisers, and the hindrances caused by adverse weather, deserve special mention, along with the psychological effects of the regulation of prices, which, "necessary though it undoubtedly was, and of incalculable benefit to the community, proved the great hindrance to increased production." We are told, too, of the organisation of the campaign, and of the various measures which were taken to make it successful. This part of the article is crammed with interesting information. For example, those who contended that the abolition of guaranteed prices last year ought not to have carried with it the abolition of the agricultural minimum wage, will be glad to see that Lord Ernle, in speaking of the Corn Production Act of 1917, says definitely that "there was no link between the Wage Board and guaranteed prices, except that both ceased to operate at the same date," that "the Act did not connect the two, or make the one dependent on the other," and that "it struck no bargain with the farmers." Equally interesting from other points of view is the careful description of the results attained in the harvests of 1917 and 1918. That the policy of the plough was justified by its results is by no means taken for granted, but after gains and losses have been balanced, the conclusion is reached that, in addition to the augmented produce of allotments, and to the feeding value of 809,000 tons of oat straw, the output of 1918 showed a net gain of no less than 3,294,000 tons of human food, as compared with the output of 1916. The article concludes with an account of the reasons which, in July, 1918, led to the abandonment of the tillage programme which had been drawn up for the following season.

One fault may perhaps be found with Lord Ernle's history of the period. He is too courteous to everybody concerned. In particular his sympathy with the difficulties of the farmers makes the story a little one-sided. But it ought not to be forgotten that the shortage of agricultural labour at the end of 1916 was intensified by the reluctance of farmers to raise wages, and so diminish the attraction of work on munitions and aerodromes. Again, while it is important to point out that under the system of maximum prices "the price paid for wheat to home-producers was sometimes less by two-fifths than that paid for foreign breadstuffs," and that "the burden of the taxpayer was relieved, at the expense of the British farmer, by a sum which in the years 1917-1920 exceeded £30,000,000," it would have corrected the balance of the picture if the exemption of farmers from Excess Profits Duty had been noted. One would like to know, too, whether in reaching the figure of £30,000,000, Lord Ernle has only considered cereals, or whether he has allowed for cases in which the fixed prices operated to the advantage of the farmer. Sir William Beveridge told the Royal Commission in 1919 that for potatoes the farmer, at least in 1917, "got money from the State which unquestionably he would not have got in the open market." It should also be remembered that when the price of linseed rose at the end of the war, the controlled price

* The Food Campaign of 1916-1918. An article in the *Journal of the Royal Agricultural Society of England*. Vol. lxxxii. (London) John Murray. 15s.

for linseed cake was not raised in proportion, most of the increase being put upon linseed oil, so that Sir William Beveridge (then Secretary of the Ministry of Food) was able to say that "the paint and linoleum trades are thus subsidising the farmer by paying a high price for the oil."

In reviewing the situation at the beginning of the food production campaign, Lord Ernle makes a rather sweeping statement. He says: "In 1870 the land fed 26 million people. In 1914 it fed 16 millions. The reason for the decline was the restricted area under the plough." Has Lord Ernle allowed enough for the fact that of the diminished arable area an increased amount was at the later date under crops with a high food yield per acre—e.g., potatoes? Has he allowed for changes in the yield of crops and in the quality of stock? In the April number of the *Quarterly Review*, Sir Henry Rew sounds a somewhat different note, hinting that it is not beyond the bounds of possibility that "the 14½ million acres now are producing as large a quantity of food as the 18 million acres were producing 40 or 50 years ago." Sir Henry adds that "there are no statistics adequate to measure the change."

OPENINGS FOR BRITISH TRADE.*

THIS admirable work includes not only all the South American countries, with even such comparatively unregarded items as French Guiana and the Falkland Islands, but Central America, Mexico, and Cuba. It contains a vast amount of accurate and strictly practical information, well arranged and skilfully packed and indexed, of the first importance to all persons engaged in trade with any of these regions or contemplating travel in them. The geography and topography of each country are adequately but concisely set forth, its products and chief imports are stated, and its external and internal communications; and valuable information is given respecting commercial and company law, tariffs, stamp duties, business customs, banking facilities, the regulations and licence fees imposed on foreign commercial travellers, and even the hotel accommodation and cab fares in the chief cities. Openings for British trade are indicated, probably in accordance with Consular reports, and there is a preliminary account of the Federation of British Industries, which has inspired the book. Particulars are also given of the chief members of the South American Legations in London. The Government loans are not dealt with, the information being fully accessible elsewhere, and the history is confined to lists of important events which are so rigorously non-political as to exclude all mention of the murders of the last two Mexican Presidents, and of one President of Ecuador. There is, however, an excellent bibliography, and the latest President of Guatemala finds a place in the book. It is indispensable to all those concerned in extending British trade and traffic in the countries of the Caribbean and the South Atlantic.

FOR THE UNEMPLOYED.*

THIS book, by a business man who has lately travelled much in Central Europe, propounds remedies for unemployment in Great Britain and distress abroad. Unemployment, he says, exists among us because British export prices are too high, and Germany is ousting us from foreign markets by "giving away" her goods. Soon we shall be unable to buy our food from America, even if America has it to sell. But Poland and Russia would resume production if they had the machinery and the means of transport. Let Great Britain, therefore, grant export credits to Poland, and so employ the British unemployed. Let her also lend Poland the money which would have been spent on battleships, and the superfluous machinery put up at home after the war. Let Germany be excused part of her reparations debt to us, on condition that we control her finances, modify her hostile tariff, and stop the depreciation of the mark through gambling, and that she diverts the rest of this debt into

* "World Trade and World Recovery." By "Mercator." (London) Eveleigh Nash and Grayson, Limited. 1922. 4s 6d net.

the provision of machinery and transport for Russia. Let us cancel the Allies' war debts to us, especially that of France. And let every English worker produce with all his might, so as to bring down export prices, and let him leave the problem of the fair distribution of wealth alone meanwhile. In spite of these fantasies there are some good things in the book, but the course of elementary (and inexact) economics in which they mostly occur is not helpful, nor is the vigour and redundancy of the exposition, which is that of a lecturer talking down to an entirely illiterate audience. The spirit of the book is admirable, but most of the proposals need no criticism.

ART IN ECONOMICS.*

THE past quarter of a century stands out in the history of Italy, first through the unprecedented exploitation of her great resources in agriculture, mining, water power, and man power, and through her financial recovery from the policy which ended at Adowa; and next through the cataclysm of the war and the beginnings of her emergence. It also covers the life of the great banking institution, with 100 branches, whose deposit and current accounts have multiplied more than a hundred-fold, and which issues these handsome volumes to celebrate its silver jubilee. The text sketches broadly the resources of the kingdom and their development, together with its existing social legislation and the salient features in its financial history. A much-needed and very favourable account is given of the colonies, especially Somaliland, and of Italian hopes in Asia Minor. But the main charm of the book is the variety and ingenuity of the illustrations. Statistical "graphs" are superseded by artistic designs; regional resources and industries are ingeniously symbolised; old engravings of towns are followed by excellent photographs of mines, power stations, some of the less familiar tourist resorts, and their hotels. The *Credito Italiano* may be congratulated on setting an example which might well be followed by other great financial establishments elsewhere.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
May 31.

ACCOUNT.
June 1.

The first regular fortnightly settlement which the Stock Exchange has undertaken since that of July 31, 1914, begins on Monday, and considerable curiosity is manifested as to how the details will go through. Making-up prices, contangoes, clearing-sheets, and all the paraphernalia incidental to these accounts will come into force again. From the point of view of business, it cannot be said that the markets have benefited to any great extent from the freeing of the Stock Exchange from the temporary regulations of the Treasury. The House is inclined to attribute the general lassitude in most of its markets to the heat-wave. Added to this, there is mild disappointment at the result of the Genoa Conference proving so apparently negative, while, looking round for other reasons to explain the leanness of business, some men claim that the approach of the Whitsun and summer holidays is already making its influence felt.

The War Loan has once more reached 100, and is one of the firmest stocks in the gilt-edged market. Conversion 3½ per cents. have also been advancing, on purchases which are said to be partly due to the Public Trustee. A few of the National War Bonds have eased off, apparently on continued sales by holders who prefer the longer-dated securities. New South Wales 4½ per cent. scrip, offered at 95, fell to 3 discount before it recovered about a point, while other Colonials are steady. Amongst Home Railway prior-charge stocks, the recent persistent demand has taken prices to levels which are evidently attracting a few sales, though the supply of stock available is still limited.

French Government and French Railway bonds continue heavy. In regard to the latter, it is manifest that stale stags are not yet entirely eliminated from the position. Germans have been advancing, in consequence of the improvement in the mark. Siamese scrip came into favour, but Czechoslovak Eights, Brazilian scrip, and several other of the more recent issues, are inclined to droop. Argentine, Chilean, and Brazilian bonds move somewhat aimlessly, Brazilians being swayed by the daily movements in exchange. The quick jump in China Eights (Vickers) brought in a little selling, which reduced the price from the top, other Chinese bonds showing a steady front now that the apprehensions roused by the reported revolution are partially laid.

North-Easterns have been bounding ahead in the list of Home Railway stocks. It is worth noticing that the present quotation is fully 50 per cent. higher than that which ruled at the beginning of the year. North-Westerns and Midlands have moved in the same upward direction, and rises of 2 to 5 points are common amongst the stocks which optimism expects will be exchanged for others in the bigger lines that stand at the head of the various groups. Substantial business in the Home Railway market went on every day, the public evidently taking a free hand. Next week's settlement will show to what extent the activity has been speculative. Undergrounds are somewhat neglected, but the Scottish stocks are all higher, the preferred issues, in particular, being eagerly bought.

Grand Trunks and Mexicans have scarcely moved, and the Argentine Railway market, after a fitful attempt to improve, fell back towards the end of the week. Antofagasta and Western of Havana stocks are better.

Rubber shares remain heavy, owing to a fresh low record having been reached for the price of the produce. Numbers of falls mark the result of the week's work. Oil shares have been active in places, Anglo-Ecuadorians and the recently introduced Agwi shares being prominently good, while the heavier brigade is quiet. The new Mexican Eagle 7 per cent. preferences have come on offer at a small discount, though Shell Sevens retain most of their substantial premium. The bank shares, insurance shares, and shipping stocks are receiving the usual amount of investment attention, though not sufficient to cause any outstanding changes in prices. Cour-

taulds spurred briskly as soon as the selling limits at 50s had been cleared. Other textile shares are holding their ground. A number of trust companies' stocks are again better. The brewery market shows a fair number of rises. Continuance of the engineering lock-out renders the iron, steel, and armament list inert. The Brunner Mond dividend, making 8 per cent. for the year, created a good impression. Half-a-dozen of the London electric shares are better, Gas stocks being inclined to move in the other direction. Premiums of 3½ and 1½ have been established on the scrip stocks of the Calcutta Electric Tramways and the Indian Electric Supply respectively; dealings in both started this week.

Professional efforts to put a better face upon the Kaffir Circus, now that the ex-enemy blocks of shares are finally disposed of by the Custodian, resulted in a good many small rises being established, though business on behalf of the public continues meagre. The Rhodesian market is equally quiet. Mexican mining shares show a fairly general fall, small in extent. The movements in tin, the metal, have been insufficient to cause any particular fluctuations in Malayan, Cornish, or West African mining shares. Russians are stagnant, while in the copper group a sharp rise in Mount Elliotts stands out as one of the features, the shares coming into demand from Paris. Introduction of the Rule for closing the House at four instead of three o'clock has been met every day by volleys of groans, weather conditions having been unfavourable for bringing such a change into effect.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Straits Settlements Government 4½ per cent. Inscribed Stock, 1935-1945.—Issue of £4,200,000 at 95 per cent. The loan is the second instalment of an issue to produce a total of £10,000,000. It is raised for the purpose of re-loan to the Federated Malay States Government, partly to enable that Government to repay debt due to the Government of the Straits Settlements, but chiefly to pay for large railway, harbour, and other public works now in course of construction and about to be constructed during the next two years. The loan is secured on the general revenues and assets of the Government of the Straits Settlements, but an Act has been passed in the Federated Malay States pledging the repayment of the loan and the loan charges from the revenues of the latter Government, and there is thus a double security behind the loan. The principal of the loan will be payable at par on June 15, 1945, by a sinking fund of not less than £1 per cent. per annum, commencing December 1, 1924, to be formed in this country under the management of the Crown Agents, who are appointed trustees, but the Government of the Straits Settlements will have the option of redemption at par on or after June 15, 1935, on giving six months' notice. Principal and interest will be payable in London at the office of the Crown Agents for the Colonies. The revenues of Straits Settlements and Federated Malay States alone are liable in respect of this stock, and the Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury are not directly or indirectly liable or responsible. A trustee investment, and an attractive issue as regards security of capital and interest payments, but regard must be paid to the slightly higher yields obtainable from existing Colonial trustee stocks.

Borough of Wanganui (New Zealand) 5½ per Cent. Loan.—Issue of £122,500 in debentures to bearer. Under authorisation of the borough of Wanganui, the Bank of New Zealand is negotiating the sale of the above debentures, at the price of £98 per debenture of £100. This loan is issued to provide funds towards the discharge of the council's floating liabilities, at present amounting to £140,000. Subject to existing loans, this issue is a direct obligation of the borough, and is also secured by a special rate of 10d. in the £ on the annual rateable value of all rateable property within the borough area. This loan is free from all New Zealand taxes, unless held by persons domiciled in the Dominion of New Zealand. A sinking fund of 1½ per cent. per annum will be provided. The principal will be repayable at par on June 1, 1932, at the office of the Bank of New Zealand, London, where also the interest will be payable. The borough has a population of about 16,000, a capital value of £5,503,000, and a rateable value of £236,500. The annual revenue of the borough is £208,000. The present indebtedness of the borough amount to £792,902, which is covered by an annual charge for interest, £33,396, and for sinking fund, £11,589. Against this indebtedness, of which £88,590 is represented by gas works and £246,980 by tramways and lighting plant, there is an accumulated sinking fund of £66,840. In addition to its revenues above mentioned, the city has assets consisting of lands, gas works, electrical undertakings, tramways, and other property valued at £564,000. This information is extracted from a public announcement made to comply with the London Stock Exchange regulations. It is a well-secured debenture in its class.

Compagnie Generale Transatlantique.—Incorporated under French law. Authorised share capital 200,000,000, of which 81 millions have been issued. This is an issue of £1,500,000 6½ per cent. sterling registered obligations at 92½ per cent., principal and interest being payable in London free of all French taxes. The prospectus states: "These obligations are the only sterling obligations of the company, and none of the other obligations issued by the company.....carries any hypothecation or preferential charge." They will run for 35 years, and will be redeemed at par by a sinking fund to be applied annually, final redemption taking place in 1957. The company, however, reserves the right to purchase "obligations" in the open market or "by tender." The undertaking, it is stated, is the largest French shipping concern, and taking francs at 50 to the £, surplus assets available for cover of this issue amount to £4,653,760, without including the proceeds of this issue, which is mainly intended to provide for payment of new vessels and for coal. Interest charges on all the company's obligations, including the present issue, amount to about £430,000, and as average profits for the last seven years are given as £969,441, interest payments also appear to be reasonably well covered. All these "obligations" rank *pari passu*, and the company undertakes "not to issue further obligations without obtaining subscriptions at the same time to a reasonable amount of new share capital." We presume it must be fully-paid share capital, but even then it would be better to lay down a definite ratio of borrowing. It may be that the company cannot charge its assets to its bankers, but the facts are not stated in the prospectus. Allowing for our criticisms, the issue is a fairly reasonable proposition in the foreign industrial class.

Elder Dempster and Co., Limited.—Authorised share capital £15,435,000, of which £6,735,000 has been issued and is fully paid. This includes a recent issue of 2,000,000 6½ per cent. cumulative preference shares, and the following information in regard to them has been taken from a Press announcement made to comply with the London Stock Exchange regulations. The above cumulative preference shares have been privately subscribed for cash at par and are fully paid. No commission was paid. The issue of the 2,000,000 "A" cumulative preference shares was made, and the interest fixed at 6½ per cent. by resolutions of the directors. The 6½ per cent. "A" preference shares have (1) the right to receive a cumulative preferential dividend of 6½ per cent. ranking next after the payment of the dividend on the 5½ per cent. and the 6 per cent. cumulative preference shares of the company. (2) The right in a winding-up to receive payment and any arrears of preferential dividend after the payment of the capital (and dividend arrears if any) on the 5½ per cent. and the 6 per cent. preference shares of the company. The latest results of this company were discussed in our issue of May 13, 1922; see page 900.

Magasins du Louvre (Paris and London), Limited.—Authorised and issued capital 400,000 shares of £1 each, 2s 6d paid per share, and £350,000 6 per cent. 30-year first mortgage guaranteed debenture stock. The following particulars are taken from an advertisement made to comply with London Stock Exchange regulations, and it is stated that the debenture stock was sold to Helbert Wagg and Co., Limited, at 81½ per cent., who, in turn, have resold at 85½ per cent. The company has been formed to carry on in England the business of drapers, furnishes, and general store keepers in close association with the "Société du Louvre" of Paris, who

guarantee unconditionally the payment of principal and interest on the above debenture stock. The stock is secured by a trust deed, which, *inter alia*, consists (a) of an undertaking to give a first specific mortgage on an underlease, with approximately 74½ years unexpired, of Crown lands, being Nos. 236 and 238 Oxford street, and 255, 257, 259, 261 and part of 263 Regent street, upon which a building has just been completed at a cost of approximately £200,000. (b) Of an undertaking to give a first specific mortgage on a further underlease of an adjacent site. (c) Of a first floating charge on the remainder of the company's assets (including uncalled capital), present and future. This debenture stock, which is limited to £350,000, will be repaid on or before May 1, 1952, by an annual cumulative sinking fund commencing in 1925, and being sufficient to redeem the whole by 1952. The fund will be applied in purchases in the market below par, plus accrued interest, or by annual drawings at par; power being reserved to the company to pay off the whole (but not a part) at 103 per cent. on any interest payment date on or after May 1, 1933, on six months' notice. If and when the debentures are placed upon the market, investors will naturally require further particulars as to the value of assets before acquiring a holding.

Provincial Insurance Company, Limited.—Authorised share capital £250,000, of which £140,000 has been issued. This is a statement made to comply with London Stock Exchange regulations, and a quotation for the 50,000 8 per cent. cumulative preference shares of £1 each and the ordinary shares is being applied for. The company was incorporated in 1903 to carry on a fire, accident, marine, and general insurance business, but there is nothing in the advertised statement from which an opinion could be formed as to the merits of any of its shares.

Southend Waterworks Company.—Incorporated by special Act of Parliament in 1879. The "nominal amount of capital issued" consists of debenture stocks £243,090, preference stocks £204,391, and ordinary stocks £584,447. This is an offer for sale by tender of £100,000 5 per cent. irredeemable preference stock, the minimum price of issue being £84 per cent. Net income for 1921, after payment of loans and debenture capital, amounted to £27,487. As the various preference issues (including the present offer) will amount to £18,710, and having regard to the increased revenue from the revised statutory charges for water, the issue is reasonably well covered for dividend purposes, and attractive, if obtainable near the minimum.

The Grays and Tilbury Gas Company.—Established 1866, and incorporated by special Act of Parliament, 1907. Authorised share capital £270,000, of which £162,576 has been issued, inclusive of premiums amounting to £3,596. The authorised loan capital is £135,000, of which £41,690 has been issued. This is an offer for sale by tender of £39,590 6 per cent. redeemable debenture stock, the minimum price of issue being par. Net revenue for the year ended December 31, 1921, was £13,151, and as the total interest on outstanding loan capital, including that now being offered, will need only £3,931 per annum, the debenture stock may be considered well secured for interest payments. It is estimated by the company that profits would have exceeded £17,000 had it not been for the miners' dispute, which involved the company in an additional expenditure of £4,000. Sales of gas were approximately 199½ million cubic feet last year, as compared with 100 millions for 1913. It is intended to apply for a Stock Exchange quotation. The stock, if obtainable at round about par, is a good investment, but regard should be paid to the narrow market for small issues.

Haywards Heath District Gas Company.—Established in 1865, and incorporated by special Act of Parliament in 1895. Authorised capital £86,856, of which £46,036 ordinary stock has been issued, including premiums. The authorised loan capital is £43,428, of which £6,000 has already been issued. This is a sale by tender of £20,000 6½ per cent. "redeemable" preference stock. The minimum price of issue is at par, and the stock is "to be redeemed" at par on July 1, 1932. The net revenue of the company for the year ended December 31st last was £2,605, after deducting interest on loan capital. As the dividend on preference stock will require but £1,300, there is sufficient margin for cover. It is stated that if it had not been for the coal stoppage the net revenue for the year would have been £600 higher. Application is to be made for a Stock Exchange quotation, and though the issue is quite good, regard should be paid to the narrow market for such a small amount.

New Cross Kinema, Limited.—Authorised capital £100,000 divided into 99,800 preferred ordinary shares of £1 each and 4,000 deferred shares of 1s each. The issued capital consists of 46,000 preferred ordinary and 4,000 deferred shares issued for cash at par. This is an offer of 50,000 preferred ordinary shares at par. These shares are entitled to a non-cumulative preferential dividend of 8 per cent. per annum and to two-thirds of remaining "divisible profits." They are also preferential as to capital. It is proposed to run two cinematograph theatres. The prospectus devotes much space to the

under consideration whereby the banks would be invited to join in the formation of a company to undertake the insurance of export credits. If this plan matures and the banks hold a substantial amount of the capital, and capable management is assured, the "Commercial Union" would, doubtless, be prepared to participate to a moderate extent, having always in mind that its first duty is towards those who have placed the ordinary risks of insurance with us.

The report and accounts were unanimously adopted, and the formal business was duly transacted.

BUCHANAN-DEWAR, LIMITED.
EMINENTLY SATISFACTORY RESULTS OF THE YEAR.
WORLD-WIDE REPUTATION OF THE COMPANIES' BRANDS.
25 PER CENT. DIVIDEND MAINTAINED.

The annual general meeting of the shareholders of Buchanan-Dewar, Limited, was held, on the 24th instant, at 3, Frederick's place, London, E.C.

Lord Woolavington presided.

The secretary (Mr W. G. Martin), having read the notice convening the meeting and the report of the auditors,

The Chairman said: My Lords and gentlemen, I take it that you will wish to take the report and accounts as read. I propose to deal briefly with the accounts, though, as you will see, these are very similar to those of the preceding year. The issued capital remains the same as last year, viz., £6,649,580. The reserve fund has been increased to £300,000 by the appropriation out of last year's profits, and it is proposed to allocate, as last year, a further £150,000 out of the profits for the year just ended. This fund will now amount to £450,000.

The investments in the constituent companies remain as before.

An increase in the item of sundry debtors reflects the larger dividends receivable this year from the constituent companies, whose profits have been sufficient not only to pay these increased dividends, but also to permit of large sums being placed to reserve—the total reserves in all the companies now amounting to nearly £3,000,000.

INCREASED PROFITS.

The profits this year amount to £887,220, an increase of over £40,000 compared with the profits of the previous year.

As will be seen from the directors' report it has been decided to pay the same dividend on the ordinary shares, viz., 25 per cent. for the year, free of tax. This, together with the dividends on the two lots of preference shares, absorbs the sum of £697,100.

A sum of £150,000 is allocated to reserve, and the balance carried forward to next year amounts to £95,253, which is some £40,000 more than the figure of last year.

I think you will agree that these results are eminently satisfactory, and the directors see no reason why the excellent progress of the past should not be maintained in the future.

WORLD-WIDE REPUTATION.

The world-wide reputation enjoyed by the brands of the associated companies of Buchanan-Dewar, Limited, has been acquired by the consistent maintenance of a very high standard of quality, whisky of great age only being used in these brands, and the recognition of which is materially evidenced by the continually increased demand, both in the home and export markets.

The essential factor to ensure the maintenance of a consistent quality of superior excellence is the holding of adequate stocks, to which the directors have always given their most serious consideration.

For two years distillation was stopped by the Government for the purpose of producing munition requirements, the result being that no potable spirit was made during that time. This rendered it impossible to fill the usual quantities of whisky that are annually put into stock for the purpose of maturing, and this naturally created a serious situation, not only for us, but for the whisky trade in general.

DIRECTORS' POLICY JUSTIFIED.

This situation was specially and exhaustively considered by the board in order that a policy should meanwhile be adopted which would protect and secure the future quality of our respective brands, and although at that time we held, as we still hold, the largest stock of Scotch whisky in Scotland, the board decided to limit the sales. Subsequent events have abundantly justified this course, and although, no doubt, it was the cause of a good deal of disappointment, the result is that to-day we are able to assure the public that the highest standard of quality of our brands has been and will, in the future, be maintained.

Our distilleries have been working at full pressure since distillation has been resumed. Altogether the company, directly and through their subsidiaries, own, or are interested in, 11 distilleries in Scotland, all producing malt whisky.

EXCEPTIONALLY STRONG POSITION.

At the end of our financial year the combined firms had in stock over 23,000,000 gallons of Scotch whisky. The shareholders will appreciate from these figures the exceptionally strong position held by the company. The company has the advantage of having its own co-operation and its own case works, also its own bottle works. These respective works enjoy a good demand for their productions, in addition to our own requirements.

The Chairman concluded by moving the adoption of the report and accounts.

STRENGTHENING THE RESERVES.

Lord Forteviot, in seconding, said it might be well to point out that the company were now a holding company, and that they were dealing with the profits of three associated companies. Those profits had been very satisfactory, and the companies could have contributed, if necessary, much larger dividends. It was thought advisable, however, in view of prevailing conditions, to strengthen their reserves and to have a large carry forward.

The motion was unanimously adopted.

The Chairman then proposed the payment of a final dividend of 15 per cent., free of tax, making, with the interim dividend already paid, 25 per cent., free of tax, for the year.

Lord Dewar seconded the resolution, which was unanimously approved.

On the motion of Mr William Harrison, seconded by Mr A. Winter, the retiring directors, Lord Woolavington and Lord Forteviot, were re-elected.

The auditors (Messrs Price, Waterhouse, and Co.) having been reappointed,

VOTE OF THANKS.

Lord Dewar moved a cordial vote of thanks to the chairman for presiding, and to the heads of departments, officials, and staff of the company. It was an axiom, he said, that the fewer shareholders who attended the meetings of a company the more prosperous that company was, and the directors were proud to think that in that small room they could accommodate all the shareholders who wished to attend the meeting and to hear the results of the year's working. It was some cause of satisfaction to the shareholders that the company, in such strenuous times, had been able to pay such a good dividend, and, in addition, to allocate so much to reserve. He thought they would all agree that the prospects before them were certainly very bright. They were delighted to have with them Lord Woolavington to preside over the meeting. They hoped that for many years he would attend and guide the deliberations at their annual meetings, and in saying that he was sure he voiced the feelings not only of the shareholders present, but also of those who were absent.

Mr E. A. Lundy seconded the motion, which was unanimously approved.

TRIBUTE TO THE STAFF.

The Chairman, in reply, said he very much appreciated the very kind and gracious words which had fallen from his old friend and colleague, Lord Dewar. It had been a great pleasure for him (the speaker) to attend on that occasion and to take part in the business of the meeting. It was scarcely necessary for him to say how delighted he was that such satisfactory results had been obtained. When he looked back on the many years he had been associated with his own business, and in recent years with those of his esteemed friend, Lord Dewar, the report read almost like a fairy tale.

The two companies worked very admirably together, and those

who were at the head of the different departments were so much in earnest and were such a band of brothers that the responsibility of the administration of the combined businesses was very much lessened to those who were the principals. He would like to take that opportunity of expressing his very sincere and grateful thanks to the heads of the different departments for their assiduous attention to their duties. He could assure the meeting that the members of the staff, with the board, were all very proud of the excellent results of their efforts in connection with the business. The proceedings then terminated.

BALAGHAT GOLD MINES, LIMITED.

The annual general meeting of the Balaghat Gold Mines, Limited, was held on the 19th instant, at 6 Queen Street place, London, Lieut.-Colonel Sir Donald Robertson, K.C.S.I., presiding.

The Chairman, in moving the adoption of the report and accounts, said: During the year 38,750 tons of quartz were crushed, yielding 23,102 ozs of gold, while 5,740 ozs were recovered from 62,250 tons of sand and slime, making a total of 28,842 ozs of fine gold, valued at £151,812. The average price obtained by sales of gold during the year was £5 5s 3d per fine oz, as compared with £5 0s 10½d for the period ended on December 31, 1920, but there had recently been a considerable drop, and the present price was £4 13s 2d per oz. Allowing for royalty, the receipts were £144,752 and the payments were £108,226, leaving a profit of £36,526, which was satisfactory, comparing, as it did, with £33,296 for the 14 months to December 31, 1920. The balance brought forward from 1920 was £9,899, and £316 was received for dividends from the North Anantapur Gold Mines and the Kolar Mines Power Station, making, with the profit of the year, a total credit of £46,741, and dividends had been paid amounting to 2s 3d per share on the preference shares and 1s 3d per share on the ordinary shares, £4,824 being carried forward. At the end of the year the liquid assets amounted to £63,935 and the liabilities to £22,368, leaving a balance of £41,567, in addition to materials and stores at the mine valued at £25,220 and the goods in transit worth £2,186. The total expenditure on capital account in the year was £21,735, of which £10,000 was charged to profit and loss account, the remainder being added to buildings, plant, machinery, &c., in the balance-sheet.

The report and accounts were unanimously adopted.

THE RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.

COMPANY'S IMPROVED FINANCIAL POSITION.

POSITION OF THE RUBBER AND TEA INDUSTRIES.

The annual meeting of the shareholders of the Rubber Plantations Investment Trust, Limited, was held, on the 22nd instant, at Cannon Street Hotel, London, Mr. H. J. Welch (the chairman) presiding.

Mr R. T. Bartley (representing Messrs Harrisons and Crosfields, Limited, the secretaries) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, referring to the balance-sheet, said that the reserve account remained at £500,000. Loans and advances were reduced by £40,000. Stocks of produce amounted to £114,322, and the cash at bankers, &c., showed an increase of £6,000.

As a sign of the improved financial position of the company, attention was drawn to the absence of any loans from bankers for the first time since 1913, and it was stated the company now had not any such loans.

After adding the small net profit for the year to the amount brought in from the last account, there was a total to credit of profit and loss account of £98,918 (subject to Netherlands Indies Taxation), and the directors recommended that that balance should be carried forward.

WAR PROFITS TAX.

With regard to the contingent liability for Netherlands Indies taxation, the Dutch Colonial authorities had assessed the company to pay £32,000 for what was called a war profits tax. It was quite clear that that company made no profits, and the assessment was only possible, if correct legally, owing to a technical flaw in the Act. The assessment was particularly hard in the case of the Trust, which had done itself, and helped other British companies to do, very valuable pioneer work in Sumatra in tea and rubber to the great benefit of that colony. The board had made, and were making, energetic efforts to obtain justice in this matter, and it was hoped these efforts would prove successful.

THE PROPERTIES.

The estimates of costs of production for this year, both of tea and rubber, from all the Trusts' South Indian and Sumatra estates were reduced, and, so far, higher prices had been realised for tea

than in 1921. The moderately finer plucking of tea upon the Sumatra properties was being continued. Labour forces had been much reduced, and many economies effected.

The estimated crop for 1922 was just under 7,000,000 lbs, and would be produced at a lower cost than last year. One-half of the Sumatra tea crop had been sold forward at a price which showed a moderate profit over estimated cost.

SUMATRA RUBBER ESTATES.

Upon the Sumatra rubber estates, notwithstanding that a much restricted crop was produced, the f.o.b. cost was 6d per lb less than in 1920, principally due to the heavy loss on rice that year. The net profit realised was nearly 9d per lb less than in 1920. A further considerable reduction in the cost per lb was expected this year.

According to the latest reports of the visiting agents, all the estates, buildings, and machinery had been maintained in satisfactory condition.

TEA INDUSTRY.

He proposed to submit a few general remarks about the tea and rubber industries following the precedent set at previous meetings of the company. The improvement in the tea position, to which he had referred in October last, had continued. That result was mainly due to the restriction of output caused by economic and climatic conditions. The 1921 production was approximately 510,000,000 lbs, showing a reduction of 133,000,000 lbs, against 1920, and 177,000,000 lbs against 1919.

The consumption in the United Kingdom continued to show a satisfactory increase, the figure for 1921 being 411,000,000 lbs, in comparison with 393,000,000 lbs in 1920, and 306,000,000 lbs in 1919, the last complete pre-war year. Exports from the United Kingdom had been of very moderate dimensions, largely owing to the economic disturbances prevalent throughout the greater part of Europe. A slight improvement was now noticeable. Stocks in Holland, which a year ago were excessive, had been depleted, whilst an even more important fact was that the accumulation in Northern India had been entirely cleared. At the close of March only 1,000,000 lbs of tea had remained in Northern India for disposal on producer's account, against about 65,000,000 lbs last year.

At present the United Kingdom was carrying the reserve stock of the world. The stock in bond here at the end of April amounted to 215,000,000 lbs, in comparison with 233,000,000 lbs at the corresponding date in 1921, and 207,000,000 lbs in 1920.

It was believed that outside the United Kingdom stocks were smaller than usual, and in the United Kingdom it was certain that invisible stocks were distinctly smaller than for some time past. During the next few months a rapid decline must therefore take place in the bonded stocks here.

COARSE PLUCKING A MENACE.

Although it was likely that during 1922 production throughout the middle-East, even with a continuance of moderately fine plucking, would show a material increase over 1921, it was possible that such increase would be absorbed without serious dislocation of the world's markets, in view of the disappearance of the large accumulations in the Eastern and other markets which had existed early in 1921.

Exports of common and low medium China tea during the last year or two had, however, been almost negligible, and it appeared certain that ample tea could be produced for the world's requirements at least until Russia was again re-established as a buyer of magnitude. For the present, therefore, coarse plucking (which was probably undesirable at any time) would be a most serious menace to the prosperity of the whole industry and harmful to producer and distributor alike.

DIFFERENTIAL DUTY ON TEAS.

A reduction of 33½ in the tea duty had recently been made, i.e., the duty on foreign-grown tea was reduced from 1s to 8d per lb, and on British-grown tea from 10d to 6½d per lb. The preference in favour of British-grown tea was therefore maintained at the same ratio of ⅔ of the duty. In his opinion, the differentiation was indefensible and did not benefit the producers of British-grown tea, many of whom did not desire its continuance. It tended to raise the price to consumers in this country; it penalised British capital invested in foreign tea plantations, and it invited retaliation against the trade by foreign countries. It had already diverted foreign-grown teas from this to other markets, such as Australia, United States of America, &c., replacing there British teas. To illustrate that he might mention that in 1921 Australia took 16,000,000 lbs less of Ceylon tea than she did in 1918, and imported 10,000,000 lbs more of Java tea.

As a revenue producer to this country, the differential duty was negligible and probably diminishing. It was estimated that the present yield would amount to little more than £200,000.

The foreign trade, which was so vital a thing for this country, required everywhere the open door and the most-favoured-nation

treatment. They did not want the disturbing influence of retaliation fights. In the long run Empire-grown teas, in which he personally was equally interested with foreign-grown, would not, in his opinion, be benefited, but injured, by the duty, and he hoped that at an early date the Government would return to the previous method of levying duty on all teas at a flat rate.

RUBBER INDUSTRY.

The rubber situation had shown little change since the last meeting, nor did there seem much prospect of an early substantial improvement. The total production during 1921 was estimated at 280,000 tons, of which 260,000 tons were plantation and 20,000 tons were wild rubber. During the same period the total absorption of crude rubber by manufacturers appeared to have been about 265,000 tons, of which 175,000 tons were absorbed in the United States and about 90,000 tons in other countries.

It was, perhaps, satisfactory to note that, notwithstanding the depression, the absorption by the other countries showed little decrease from 1920, which was the boom year. Assuming the manufacturers' stocks of crude rubber were not reduced, the increase in the world stocks of crude rubber during the year amounted to about 15,000 tons, or about 5 per cent. of the existing stocks. The stock in London and Liverpool was 56,000 tons at the beginning of 1921 and 80,000 tons at its close. It now amounts to 77,000 tons, and during the first three months of this year the stocks in Malaya were apparently reduced by 5,000 tons.

While as compared with pre-war years, 1911-1913, the Continent of Europe had increased her absorption by only 30 per cent., the rest of the world had increased its absorption by 350 per cent. If the existing visible surplus was to be continuously diminished, the rate of absorption must either increase, or the plantation output for the present year should be significantly less than 280,000 tons.

In view of this he again urged the necessity of drastic restriction as a temporary remedy.

After referring to the non-effectiveness of voluntary restriction, he said: He was prepared to support an approved scheme for compulsory restriction of production to be enforced by the Governments concerned, provided that its avowed object were simply to raise the price to, and maintain it at, a figure sufficient to cover the present average "all-in" cost of production of European companies.

The greatest hopes of a return to prosperity, however, must be based upon a general revival of world trade and the development of existing and new uses of rubber. When trade was again normal and the surplus stocks of rubber had been absorbed, there was reasonable ground for confidence that all the Plantation rubber which could be produced from the present planted areas would be required, and once more would command remunerative prices.

Mr E. L. Hamilton seconded the motion, and it was carried unanimously.

INDIAN ELECTRIC SUPPLY AND TRACTION COMPANY, LIMITED.

DIVIDEND MAINTAINED—INCREASED OUTPUT.

The annual general meeting of the Indian Electric Supply and Traction Company, Limited, was held on the 22nd instant, at Winchester House, London, Mr John G. B. Stone presiding.

The Chairman said that the company's earnings in Cawnpore showed steady expansion, but in remitting to this country the directors had had to contend with the fall in the exchange value of the rupee from 1s 11½d to 1s 4d. Owing, however, to their conservative policy in the distribution of profits in the past the directors were still in a position to recommend the same dividend as last year—namely, 10 per cent.—and to add a reasonable figure

to the reserves. In the past year the output had been increased from 4,334,724 units in 1920 to 5,204,324 in 1921. The earnings of the company in India were £26,416, as compared with £35,189 in 1920. The fall in exchange accounted for nearly £10,000, as it affected not only the sterling value of the rupee profits, but also the cost of stores and repair parts purchased in this country. They had erected a new alternating current high tension power station on the banks of the Ganges, which was at present equipped with 6,000 kilowatts of plant. Unfortunately, owing to unforeseen delays in delivery and erection of plant, the company had not yet had the benefit of its output, but the station was expected to be in working in August this year, if not earlier.

As soon as the new station was open they would secure a large addition to their earnings, and so rapidly had the demand, actual and prospective, increased that in order to meet it they had found it essential to make arrangements for a further large extension to the new power station, for which purpose debentures had been issued to the extent of some £250,000, including the conversion and repayment of the existing outstanding £49,600 debentures. In order to get a closer and more accurate view of the company's business in Cawnpore, he went there in the early part of this year, and was much impressed with its potentialities, the great activity of the city, and its geographical position. It was a very active centre of trade, and in order to provide for the growth of its industries, &c., it had been found necessary to lay out a large new area as an extension to the city. The work was being actively pressed forward, and he did not think it would be more than a year or two before there would be an active demand from this new area.

The report and accounts were unanimously adopted.

EAGLE OIL TRANSPORT COMPANY, LIMITED.

"GRATIFYING RESULTS"—TRADING PROFITS DOUBLED.

The eleventh ordinary general meeting of the Eagle Oil Transport Company, Limited, was held on the 22nd instant at Winchester House, Old Broad Street, London, the Hon. Clive Pearson (chairman of the company) presiding.

The secretary (Mr C. H. M. C. Wilson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The trading profits at £1,064,686 are rather more than double those of 1920. This good result is due to a considerably greater tonnage having been in commission—some 30 per cent.; to a moderate but definite all-round decrease in operating costs; and to the fleet having run with a minimum of interruption; as a fact, taking into consideration the increased tonnage in commission, the time spent in carrying out repairs and surveys has only slightly exceeded that of our first two years' running. These factors, combined, have resulted in our year having been an exceptionally fortunate one, and the profits consequently, per vessel in commission, have been appreciably in excess of our estimates.

There has been transferred to depreciation and sinking fund reserve £425,000, which is at a distinctly higher rate than in previous years. Your vessels, it is true, are chartered for long periods upon fixed terms, and the basis of depreciation applied in other years would enable them to be written down to a very low figure within the period of their charters; yet your directors felt that advantage could this year be taken of the large available profits to hasten the process of writing down the book value of your assets.

As compared with the experience of recent years the cost of repairs is lower, although still exorbitant, and not showing the same relative fall as other costs. The repair reserve account, which is available for surveys and other extraordinary repairs, can be

considered in a satisfactory condition. Nevertheless, your directors have thought it prudent again to transfer to the account the sum of £75,000, the same as a year ago.

There has already been paid the fixed dividend of 6 per cent. on the preference shares, and you will be asked later to approve a further 2 per cent., making 8 per cent., and also the payment of a dividend of 8 per cent. on the ordinary shares. It is proposed to write off the expenses of the issue of the twelve-year notes. This will leave £94,730, subject to corporation tax, to be carried forward, and I am sure you will agree that these results of our year's trading are eminently gratifying.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, the whole of the authorised share capital is now paid up in full. In addition, our charterers have taken up at par £3,000,000 of twelve-year 7 per cent. notes, part of an authorised issue of £5,000,000. The notes now outstanding, as explained in the directors' report, are in the form of twelve-year 7 per cent. notes, but redeemable at the company's option at 101 per cent. at the end of six years. Our original intention, as referred to at our last general meeting, was to issue 7 per cent. seven-year notes, but in negotiation with the charterers the issue took its present form, which is one equally satisfactory to this company. The repayment of these notes will be made out of the amounts received and credited each year to the depreciation and sinking fund reserve.

The repair and other reserve accounts, which appeared in last year's balance-sheet as replacement insurance and other reserve accounts, show a very material reduction. This is mainly accounted for by the transfer therefrom of the difference between book values and amounts actually recovered under insurances on vessels lost during the war in reduction of the book value of our more expensive vessels built to replace them. The balance of £202,533 consists almost entirely of the repair reserve, and will be further increased by the transfer of £75,000 to which I have already referred.

The cost of steamers at £9,139,563 shows the growth of your fleet. Cash at £2,069,347 has increased by some £1,700,000, and is, of course, derived from our new capital issues. Expenditure is still being incurred upon vessels building, and there are bills payable, but the company is amply in funds to meet such liabilities, and we are fortunate in having been able to arrange for the good employment of these funds meantime.

COMPANY'S FLEET.

Your fleet has been well maintained during the year, and the fact that less time than usual has been occupied in executing repairs is an indication of the efficient running of the vessels. Our turbine vessels are giving satisfactory service; and three more vessels of this type have been delivered since our last meeting.

As will be seen by the list of vessels printed on the back of the report, your fleet consists of modern vessels with the large total tonnage of 368,698 tons. It will, perhaps, convey a better idea of the size of your fleet when I tell you that during the year 1921 some 2,000,000 tons of oil were carried by your vessels. Considerably more than half that quantity consisted of refined products, such as motor spirit, lubricating oils, Diesel and fuel oil from the refineries of our charterers, the Mexican Eagle Oil Company, and for the most part was shipped to South America and Europe. We have reason to feel well pleased that our fleet shows satisfactory earnings, and so satisfactorily fulfils its useful purpose.

Mr Clive Bowring seconded the motion, which was carried, and the usual formal business having been transacted, a vote of thanks to the chairman and directors concluded the proceedings.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LIMITED.

INCREASED PROFITS DESPITE TRADE DEPRESSION.

The 26th ordinary general meeting of Callender's Cable and Construction Company, Limited, was held, on the 25th instant, at the Institute of Journalists, 2 and 4 Tudor Street, London, Sir J. Fortescue Flannery, Bart., M.P., M.Inst.C.E. (the chairman), presiding.

The secretary (Mr Howard Foulds, F.C.I.S., Assoc.I.E.E.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that throughout the whole period covered by the accounts the trade of the country had been declining; it was, therefore, remarkable evidence of the wisdom and foresight of the management that the company's business had been of such a character as not only to escape the decline in profits, but actually to improve upon the results of the previous year. There had also been other and equally serious hindrances to profitable manufacturing; they had been compelled to close their works for more than

two months owing to the stoppage in the coal trade. Advantage had, however, been taken of the interruption to institute reforms in their organisation which should lead to permanent and substantial economies both in administration and manufacturing.

The net result of the trading, namely, £217,012, was approximately £35,000 more than at the end of 1920. They were proposing to pay a dividend of 15 per cent. for the year, and to carry forward £150,112.

Their business in India, in spite of grave unrest there, had been carried out successfully. Business from Australia and South Africa had at times been much restricted, but in South America they had been more advanced. In their Continental business their most serious diminution of trade had occurred. One of the great difficulties there was the depreciated exchange. The far more important disadvantage which this country had felt the effect of during the last two or three years was the unwillingness of the worker, which had yet to be overcome. He sincerely hoped that those unhappy disputes would soon be ended, and that masters and men would once again pull together for the common good.

The profitable results obtained had been helped by contracts for work and materials entered into before the year began. The business they were carrying through at the present time was substantial, but was by no means so substantial as it was this time last year. The current year showed a reasonable prospect of a successful result, but that must largely depend upon developments during the next few months. The company must depend for its success not only upon a substantial home trade but upon large orders coming from abroad. The sooner, therefore, that an effective international agreement was reached and industrial peace in this country was secured, the sooner the company and others like it would be able to get to work without let or hindrance.

Sir T. O. Callender, J.P. (managing director), in seconding the motion, said it had been an exceedingly difficult year for the management, but to a certain extent the stoppage of the coal trade had tended to their advantage. They had taken the opportunity thoroughly to reorganise their factories and administration. The reorganisation would have far-reaching results, and would enable them to meet all fair competition with success. His view was that the outlook for their trade had never been better than it was at present.

The motion was carried unanimously.

POTTERIES ELECTRIC TRACTION COMPANY, LIMITED.

COMPETITION FROM CHARABANGS AND MOTOR OMNIBUSES.

The 24th ordinary general meeting of the Potteries Electric Traction Company, Limited, was held, on the 26th instant, at Electrical Federation offices, Kingsway, London, Mr R. J. Howley, C.B.E., M.Inst.C.E., presiding.

The Chairman, in moving the adoption of the report and accounts, said the result of the year's working had been disappointing, due to the long-drawn-out coal miners' strike, the general depression in trade, and competition with the company's tramway and omnibus services by motor coaches, charabangs, and hackney carriages, which came on the streets at times when traffic was busy. The total traffic receipts were £282,367, an increase of £2,377 over the previous year, and were the highest recorded by the company. Power and running expenses showed an increase of £3,689, due to the increased mileage. A dividend of 4 per cent. was recommended, leaving £6,872 to be carried forward. Since the summer of last year working expenses had steadily decreased, but wages were still very high. Out of every 100 pennies taken 52.8 were paid out in wages, 6.2 went in rates and taxes, 7.8 were paid to the shareholders, and 5.3 were set aside for renewals and reserves. The balance, 28.7 pennies, was spent on materials, coal, debenture interest, interest on loans, &c.

Keen competition was being experienced from charabangs, motor-omnibus, and vehicles with the tramway and omnibus services. Little or no difficulty was experienced by any owner of a vehicle in obtaining the necessary licence from the Corporation to ply for hire in competition with the tramways. This form of competition without restriction was unfair and unjust. The company, in addition to paying large sums by way of rates, paid rent to the Corporation, while the Corporation freely, and he thought he could say in the case of individual councillors, willingly, advocated the licensing of competing vehicles. In December last the company owned 27 large motor vehicles, and the number was being rapidly added to. This increased fleet would, at an early date, necessitate a larger and better equipped garage, and steps were being taken to obtain a suitable site. The directors were keeping constantly before them the question of the tenure of the tramways. The carrying on of so large a public transport business, burdened with an option to the Corporation to purchase the tramways at recurring intervals of seven years, did not justify the expenditure of additional capital in further development of that side of the business. In July the Corporation was asked to support an application to Parliament for statutory confirmation of the proposed agreement by which the

Corporation would defer their right to purchase until 1952, but the decision of the Council was that the request of the tramway be not entertained, which was not an encouraging reply to a reasonable request.

The report was adopted.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED. THE REVOLUTIONARY DISTURBANCES IN SOUTH AFRICA.

The twenty-sixth ordinary general meeting of the Consolidated Mines Selection Company, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London, Mr Walter McDermott (the chairman) presiding.

The Chairman moved the adoption of the report and accounts. He said that the outstanding facts for shareholders in the accounts were that the profit carried to balance-sheet was about £100,000 less than the corresponding figure a year ago; and that they had drawn on the reserve account to the extent of £100,000 in order to keep the valuation of their various assets on the usual safe basis for the future. The year's net operating profit was £23,685. Unfortunately, however, the market prices of some of the assets showed a heavy depreciation on December 31st, and it was necessary for safety to write off an amount of £151,995. To meet this depreciation in part they had to draw on the reserve account to the extent of £100,000; and this, with the operating profit and the credit balance of last year's profit, enabled them to carry forward in the current year a profit of £25,117.

After dealing in detail with the company's most important holdings, he referred to the revolutionary disturbances in South Africa, and said: For some months there had been a succession of negotiations between the Chamber of Mines in Johannesburg and the officials of various trade unions. The failure to agree on terms with the employers led to the strike at the beginning of this year. That there was more behind the strike than the mere wages dispute was very clearly demonstrated by the immediate appearance of revolutionary elements, occupied with quite other aims than the mere improvement of the working conditions of labour. Commandos of strikers and of others were formed to enforce their will on the country; and the Ministry were requested to resign the control of Government. Foreign agitators and political agents had been at work (as far away as Cape Town) in the stirring up of strife and the advocacy of violence; and large scale insurgent military operations were put in movement, which showed there had been well-planned organisation before the outbreak. The directors will send out with the report of this meeting an extremely interesting account of the revolutionary attack and capture of the Brakpan mine. The material loss of property for our group of mines has been very small, but the mines have all suffered heavy losses in expenses while the production of gold was interfered with.

Mr R. J. Frecheville seconded the resolution, which was carried unanimously.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel Street, Strand, London, W.C. 2.

India Office, May 25, 1922.		

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended May 24, 1922, the stock of coin and bullion shows an increase of £1,615 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended May 24, 1922.	Countries to which Exported.	Week Ended May 24, 1922.
	£		£
Netherlands	55,000	British India	1,084,482
United States	240,203	Victoria	295
Egypt	53		
British South Africa	460,824		
Other Countries	1,000		
Total value of imports of gold	757,080	Total declared value of exports registered in the week	1,084,777

Messrs Samuel Montagu and Co. write as follows on May 25th:—

GOLD.

The wreck of the s.s. "Egypt" contains £839,379 in gold, and the moderate offerings this week were therefore in keen demand. The total value of the bullion on board this ship—namely, £1,054,379—was one-third more than that on the s.s. "Oceana" (which sunk in the Channel in 1912) and was subsequently recovered, with the exception of two silver bars, from a depth of 12 fathoms. Unfortunately the "Egypt" is believed to be lying about 65 fathoms below the surface. New York reports the arrival of gold valued at \$472,000 from Sweden. The Indian authorities report the following movements of trade, which appear to be very favourable to India:—

(In Lacs of Rupees.)

	Imports.	Exports (including Re-exports).
April, 1922	17.84	23.85
" 1921	25.86	18.04
Of the exports, Rs. 84 lacs were re-exports in April, 1922, against Rs. 1,10 1/2 lacs in April, 1921. As compared with March, 1922, both imports and exports have fallen in the same proportion; the March figures were Rs. 21.48 lacs of imports and Rs. 27.62 lacs of exports, including re-exports.		

The net balance of trade (including bullion and rupee paper movements) for April, 1922, shows a great improvement over that for the preceding month. Both these months showed a favourable balance, but the April balance was Rs. 4.17 lacs, whereas the March balance was Rs. 1.42 lacs. In April, 1921, it was in favour of India by Rs. 13.87 lacs.

SILVER.

Persistent purchases on China account carried the price on Monday to 37 3/4d for both deliveries, the highest price fixed since December 2nd last for cash and December 1st for two months' delivery. The silver cargo, worth £215,000, lost with the "Egypt" on the 20th inst., is probably irrecoverable by such methods as up to now have been employed. Nevertheless, no orders came to London for its replacement. The owners would appear to have been rather relieved than otherwise to be minus the silver. On Tuesday and succeeding days, falling any special support and assisted by Indian selling, quotations sagged away with some rapidity. Movements of the price lately have shown the unwisdom of dogmatism, and have reassured the wayward disposition of the metal. Continental offerings have been slight; the chief feature has been the eagerness of the United States to sell upon each decline. According to *Financial America*, reports dated May 5th last stated that the production of silver from the Gowganda silver area has reached the substantial total of approximately 6,250,000 ounces. The French Chamber of Commerce bronze-aluminium tokens for 2, 1, and 1/2 francs seem to have had a very warm welcome in lieu of the small paper notes current since the war. The authorities are said to have ordered from Birmingham 14 new machines capable of turning out daily 600,000 pieces of the attractive models already in circulation. It is anticipated that these machines will be delivered in Paris at the end of the month. This does not suggest that a return to subsidiary silver coin is likely—at any rate, for a prolonged period to come.

INDIAN CURRENCY RETURNS.

	April 30, 1922.	May 7, 1922.	May 15, 1922.

Securities (British Government) ..	584	584	585

The silver coinage during the week ending 15th inst. amounted to 3 lacs of rupees. The stock in Shanghai on the 20th inst. consisted of about 27,800,000 ounces in sycee, 35,500,000 dollars, and 500 silver bars, as compared with about 28,900,000 ounces in sycee, 37,500,000 dollars, and 800 silver bars on the 13th inst. The Shanghai exchange is quoted at 3s 6 1/4d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

1922.		Gold.	Silver.		Date.	Silver.
		Per Ounce.	Cash Per Ounce.	Forward, Per Ounce.		Cash, Per Ounce.

	26 ..	93 5	36 1/2	36 1/2	27, 1921	33 1/2

NOTICES.

A new branch of Barclays Bank, Limited, has been opened at 32 Prospect hill, Douglas, Isle of Man. On Thursday next, June 1st, a sub-branch will be opened at Bridge road, Welwyn Garden City, Mr W. H. Washington, clerk in charge; also a new branch at Queen's square, Bowness-on-Windermere, under the management of Mr. L. A. Fogg.

Lloyds Bank, Limited, announce that a new branch of the bank is now open at 118 High street, Peckham, under the management of Mr B. W. Haws.

The National Bank of Australasia, Limited, have received cable advice from their Melbourne office that the bank will open a branch at Hobart, Tasmania, on the 26th prox.

The London Joint City and Midland Bank announce the opening of new offices at 1 Victoria road, Surbiton, in Station road, Kibworth, in Todd's Mart Office, Northallerton, and at 118 London road, Derby, under the management of Mr Samuel Attwood, and the transfer of the business of the Stepney branch to new premises at 595 Commercial road East, London, E. 1.

The Old Lady of Threadneedle Street

will sell you a banknote which you may accept at its face value without risk. There are not many other things you can safely judge in the same way, but the Chatwood Safe is accepted by the Banker with contented confidence.

Of the many things in this world which ought to be selected by reason of their established reputation are a Doctor, a Lawyer, and a Safe, for in each case their value lies in the degree of service rendered in time of need.

No prudent man would accept the services of a surgeon or a lawyer without establishing to his own satisfaction that their previous training or ability merited his confidence; likewise the wise man takes no chances when installing a safe, because he realises that should it fail under a real test, by fire, fall, or burglary, the loss may be irreplaceable.

THE CHATWOOD SAFE Since 1858

THE NEW CHATWOOD SAFE BOOK contains 58 pages, many in full colour, and includes the fullest particulars of each model of the Chatwood Safe and Strong Room. A postcard brings a copy gratis.

THE CHATWOOD SAFE CO., LIMITED

† Free of tax. ‡ 5% of this dividend paid free of income-tax.

vious year, and that a net profit of Rs. 16,36,729 was secured, making Rs. 18,56,733 available, which is dealt with in the following manner:—In payment of an interim dividend of 10 annas per share, free of income-tax, as on November 15, 1921, Rs. 6,32,279; provision for adjusting securities to or under market value, Rs. 1,70,019; transferred to reserve fund, Rs. 3,50,000; provision for income-tax and super tax, Rs. 1,38,206; final dividend of 6 annas per share, making Rs. 1 for year, free of income-tax, as on June 1, 1922, Rs. 3,75,092; and to carry forward Rs. 1,91,136.

ASSURANCE.

WESTERN ALLIANCE REINSURANCE.—The fire and general account for last year shows that the premiums were £331,582, the claims £271,257, and the expenses £123,313. After a transfer from profit and loss of £20,000, the funds were £115,994, as compared with £158,982 brought forward. In the marine account the premiums were £260,541, the claims £108,469, and the expenses £37,787; the marine fund was £210,093 at the end of the year, as against £95,808 twelve months earlier. Interest yielded £30,178, and the 5 per cent. dividend, less tax, cost £10,500. The paid-up capital is £300,000, and the total funds £644,196. The auditors state that they have personally inspected the investments of the company, other than those which have been deposited at home or abroad as security for reinsurance effected (for which certificates have been exhibited). In their belief the assets are in the aggregate fully of the value stated in the balance-sheet.

YORKSHIRE INSURANCE COMPANY.—We have received from the secretary of the Yorkshire Insurance Company an emphatic denial to the rumours recently in circulation in provincial newspapers to the effect that an amalgamation with another company is in contemplation. It is pointed out that such rumours are frequently circulated by interested parties, and shareholders are advised to make careful inquiries before dealing in the shares on any sudden fluctuation in the price. These rumours, however, were not mentioned in the *Economist*.

OIL OUTPUTS.

ROMANIAN CONSOLIDATED OILFIELDS, LIMITED.—Production (April 16th to 20th), 1,030 tons. Metres drilled, 202 (662 feet).
UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, May 17, 1922, amounted to 814 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of hot weather experienced during the week has greatly benefited cereal crops, and agricultural prospects generally leave little to be desired. Quiet conditions prevailed at market, and rates in most instances were maintained with difficulty, especially with regard to breadstuffs. English wheat continues to be sparingly offered both here and at provincial markets, but with millers showing only limited interest prices, if anything, were on the easy side. Best milling grades sold from 58s to 60s, and inferior 56s, free on rail per 504 lbs. Imported descriptions dull of sale, and occasionally 1s 6d per qr lower. No. 1 Northern Manitoba 64s 6d, No. 3 ditto 58s 6d, Australian 61s 6d, all ex-quay per 406 lbs, and Rosafe, 64 lbs ex ship to arrive, 59s per 480 lbs. Cargo market ruled dull, and prices occasionally the turn easier in sympathy with lower American and Argentine cable advices. Steamers of Rosafe, 64 lbs. May 3rd bill of lading, sold at 55s 6d, and white Pacific, June shipment, at 56s per 480 lbs. Parcels

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated May 25th, is as follows:—Pig-iron: The market is dull with very small demands. A little hematite has been sold for shipment abroad. Two hematite furnaces have been damped down, leaving only 13 now blowing. No. 3 Cleveland and G.M.B. pig-iron, 90s per ton; East Coast mixed numbers hematite, 95s. per ton. Manufactured iron and steel: No signs of a change. Much depends upon the settlement of the engineering dispute. Steel ship plates, home, £10 10s; steel ship angles, home, £10; iron bars, home, £12; steel rails, home, £9 10s net. Iron ore: A very small business for prompt delivery only. No consumers will contract ahead with the uncertain outlook. Best rubio is nominally 27s per ton sellers.

Our Glasgow correspondent, writing on Thursday, says:—Business in iron and steel productions—raw and manufactured—this week has been light, yet probably not lighter than has been the experience for, say, a month back. The following figures apply to home dealing; export terms are, probably without exception, the turn lower:—Boiler plates (delivered Glasgow), £14; ship, bridge and tank plates, £10 10s; angles, £10; joists, £10 10s; billets (soft), £7 10s; medium £8 5s; hard, £8 15s; and sections, £10. Bridge plates are in particular request, on export order. Steel rails are finding a better outlet in the Scotch railway market, and the demand, it is conceived, is more likely to expand than otherwise. The position in the sheet trade is somewhat mixed, one or two of the larger works being pretty well provided for, while others are distinctly short of orders. For black sheets values are easing a bit, ½-inch, being £10 12s 6d, and 28-gauge £14 7s 6d per ton, f.o.b. Glasgow. Scrap steel is in strong demand all round, Germany proving an eager purchaser. Several good sales have this week been effected up to 57s 6d a ton. Rolled steel bars are bringing £9 10s (home and export), but the tendency for new contracts is given as easier. According to reports, it appears that a number of lines have been placed since Monday for common bars, joists, and other building sections. There has been little done over the week in Scotch pig-iron, and yet prices have remained steady to firm—at £4 17s 6d for No. 1 foundry, and £4 12s 6d for No. 3. Scotch hematite stagnant at £5 ss. At the usual meeting yesterday of the pig-iron "ring," sellers of Scotch warrants No. 3 stood out for 97s, f.o.b. Glasgow; sellers of Middlesbro' hematite mixed numbers, at 95s 6d, f.o.b. Middlesbro'; and sellers of Middlesbro' No. 3 warrants, at 93s, f.o.b. Middlesbro'. Tube makers are better employed again (on shipment orders). There is a revival to-day of favourable rumours

GOLD and SILVER in ONTARIO

Gold mining is developing rapidly in the Province of Ontario, Canada. In 1921 the gold output was \$14,702,268. In 1922 it will probably be 18 or 20 million dollars.

The two chief camps are Porcupine and Kirkland Lake. Hollinger Consolidated, at Porcupine, is one of the great gold mines of the world; at present its production is about \$1,000,000 per month. Among other mines of this group are McIntyre and Dome, each with an output of more than 2 millions yearly.

At Kirkland Lake, the Lake Shore, Wright-Hargreaves, Teck-Hughes, and Kirkland Lake mines are the present producers.

Matatchewan, Larder Lake, West Shining Tree, Goudreau, Schreiber are other localities where gold has been discovered, and mines are being developed.

The silver mines of the Cobalt area are world-famous. Discovered in 1903 their yield up to the end of 1920 was 323 million ounces. Nipissing mine in 1921 yielded 3,012,614 ounces, O'Brien 1,408,890 ounces, Coniagas 1,301,860 ounces.

The pre-Cambrian rocks, in which the gold and silver and other minerals are found, extend over most of Northern Ontario, comprising many thousands of square miles. The greater part of this territory is unprospected.

The climate is invigorating, there is plenty of wood, water and labour. There are no mountains, and the prospector can go almost anywhere in his canoe. The mining laws are liberal. Ontario mining taxes are on net profits only, the rate being three per cent.

Magnificent specimens of gold and silver ores are now on view at the office of Mr. Wm. C. Noxon, Agent-General for Ontario, 163, Strand, London, W.C.2, where descriptive booklets, maps, and other information may be had.

THE HON. H. MILLS,
Minister of Mines,
Toronto, Ontario, Canada.

THOS. W. GIBSON,
Deputy Minister of Mines.

were only moderately dealt in at irregular but generally easier prices. United States visible stocks show a moderate decrease, while Argentine stocks have further declined, though some improvement was noticeable with regard to floating supplies. Imports into this country were about on a par with estimated requirements. Favourable crop news are received from the principal exporting countries, though the expected large increase of acreage in Canada has not been fulfilled. Flour ruled quiet, and prices reduced by 1s 6d per sack for home milled descriptions. London standard straight run quoted 48s 6d, town households 46s 6d, patents 50s 6d to 51s 6d. All English straight run 45s 6d per sack, delivered London area. Imported slow and values weak. Manitoba export patents 47s 6d, straights 44s, Pacific 47s, and Australian 43s to 43s 6d per 280 lbs, ex store. On c.i.f. terms, Canadian patents, May seaboard, quoted at 46s, straights 43s, and Australian, June, 42s 6d per 280 lbs. Millers' offers quieter and occasionally rather easier. Broad bran quoted £8 10s, ordinary ditto £7 10s, middlings £9 10s to £9 15s per ton, ex mill, bags included. Of imported, Fancy Place middlings quoted £9 10s, and Plate pollards £7 15s, both landed, per ton. Barley quiet and the turn easier for imported descriptions. Native malting largely nominal at 46s to 60s, but feeding sorts steadily held for 45s to 50s per 448 lbs, free on rail. Of imported, Californian quoted 41s to 49s, Australian Chevalier 50s to 52s, both landed, per 448 lbs. No. 4 Canada Western 33s 3d, American malting (48 lbs) 33s 3d, both ex ship to arrive, and Tunisian, landed, 37s, all per 400 lbs. Business on c.i.f. terms almost at a standstill, and prices nominally unaltered. Maize quiet, and tendency of prices weak. Yellow La Plata quoted 40s, yellow round African 37s 6d, and American mixed 34s, all landed, per 480 lbs. Cargoes continue dull of sale and rates easier, especially for near positions. Parcels met a moderate demand at irregular and easy prices. Oats moved off quietly, but prices were fairly steady, as supplies of both native and foreign are in short compass. English whites firmer at 35s to 37s 6d, grey winters 34s to 36s 6d, and black winters 34s 6d to 36s 6d per 504 lbs, free on rail. Of imported, Plate f.a.q. quoted 27s 3d, ditto clipped 29s 3d, No. 2 white clipped American (38 lbs) 27s 6d, No. 2 Canada Western 32s 3d, No. 2 Canada feed 29s, British Columbian 37s 6d, and New Zealand 35s to 40s, all landed, per 320 lbs. Oatmeal quiet at late rates. London made, coarse pinhead £19, other cuts £18 10s, whole groats £18, rolled oats £19, flaked £21, ordinary Scottish oatmeal £19 10s to £20 10s, and American ditto, all cuts, £18 to £18 10s per ton. English beans in fair demand, and choice winters sold 53s to 54s, good 51s to 52s, fine quality springs 66s to 68s, ordinary 57s 6d to 58s 6d per 532 lbs, free on rail. Of imported, Chinese horse beans £10 15s to £11 15s ton. Rangoon hand picked, spot, 7s to 7s 6d, Madagascari haricots, old crop, 10s to 13s, ditto, new, 18s to 19s per cwt. English peas steady and in good demand. Choice maples scarce and command 92s to 94s, ordinary to good 85s to 88s, and common 80s-81s, Duns in quiet request at 60s to 65s, as to quality, per 504 lbs, free on rail. Of imported, Dutch hand picked quoted 29s, and screened 25s, Japanese 51s to 52s, Tasmanian "A" grade 24s to 25s, New Zealand blue 22s to 25s per cwt. English rye 40s to 45s per 504 lbs, free on rail. Lentils quiet. No. 1 split 29s to 30s, No. 2 ditto 22s to 24s, and Egyptian 23s to 24s per 100 lbs. Homeward grain chartering was on a moderate scale, and late rates were barely maintained. From the River Plate interest has almost subsided, and rates largely nominal at 28s 9d to 30s for handy sizes, upper ports to U.K./Continent, June loading, while beyond that date there is practically no inquiry. North America fairly steady, with a moderate business passing to Continental and Mediterranean ports. Montreal to Mediterranean not east of West Coast Italy, June, paid 4s 6d per qr, and Continent quoted 16 cents per 100 lbs, ditto to Black Sea 28 cents. American Northern Range to Continent rules at 15 cents, ditto Denmark 22½ cents, Mediterranean paid 20½ cents per 100 lbs. Heavy grain from North Pacific, June, done at 37s 6d, with 40s quoted for new crop, August-September, to U.K./Continent. India dull and rates weaker, 17s 6d paid Bombay on dead weight to U.K./Continent, Australia presents more inquiry, and fixtures were recorded on the basis of 41s 3d for large steamers, June loading, with 45s for handy sizes, spot loading. South African maize, new crop, August-September, quotes 25s to U.K./Continent. Danube grain quiet, and business still mainly confined to liner parcels at low rates.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919.
Estimated sales of home-grown wheat—				
1 week to May 20	Cwts. 225,834	Cwts. 216,673	Cwts. 62,724	Cwts. 276,861
37 weeks to May 20	14,950,771	11,457,807	10,520,948	11,605,059
Average price of English wheat per

1921	50,557 0	8,021 0	7,679 4	87 6	44 3	38 3	

as to prospects of business in Scotch pig-iron for Pacific ports, but it is not thought that much will come out of the reputed inquiry. Conditions in the coal trade are more cheering. Shipments to the Continent are on the increase. Big quantities of smalls are being regularly dispatched to Scandinavia, Germany, Italy and France.

Our Sheffield correspondent writes:—Hopes of a settlement of the engineering dispute have suffered another disappointment and the trade position in Sheffield is worse than ever, nine-tenths of the steel and tool plant being idle, while the financial position of firms has become more critical. The renewal of operations on any considerable scale is now deferred until after the Whitsun holidays should the parties to the dispute agree in the meantime. A few steel furnaces and most of the mills are at work. There is a good inquiry for bright steel strip, but that is almost the only active department of trade. The revival of buying from the motor industry has been checked by the dispute. Apart from the latter trouble the general outlook appears to be improving, as large and important inquiries for steel from abroad continue to be received, and a fair number of orders are being booked. Practically nothing is doing in acid steel, but there is an increasing demand for basic quality and also basic pig-iron. The trade in hematite pig has dropped off after a brisk run of business. Several large furnaces and one or two mills in North Lincolnshire have been started, and others will be put into operation when the labour world is more settled. Agricultural engineers are experiencing the worst season in their recollection, as none of the export markets have bought anything worth speaking of and the British farmers cannot afford new implements. Prices of building materials of every kind continue to drop. The present season in the building trade, however, will be a poor one. There is no new construction on hand for industrial building, as a large proportion of the new shops erected during the war are surplus and likely to continue to be in excess of requirements. In the coal trade best South Yorkshire hards are quoted at from 21s to 23s at pits.

Our Cardiff correspondent writes:—Reports of American inquiries have been numerous and persistent this week, but, paradoxically, they have left the market rather easier than stronger. None of the inquiries have materialised, and their withdrawal or postponement have hardened "bear" tendencies. There has been little or no variation in quotations. Nominally prices have remained unchanged, but with outputs again exceeding one million tons per week the undertone of the market is a shade easier. It transpires that one-third of the £3 millions credit granted by the Board of Trade under the export credit scheme to the Portuguese Government may be utilised for the financing of coal exports from the United Kingdom to Portugal, but inquiries at Cardiff show that no use has yet been made of this credit for the shipment of South Wales coals. Exporters, in fact, are hostile to these expedients, for they complain that these credits divert business out of the ordinary channels and tend to react unfavourably on f.o.b. prices. The local dock authorities have revised their charges as from June 1st next. Tonnage dues are reduced from about 12s per cent. to 10s per cent. above pre-war rates, and tipping and weighing charges from 11d per ton to 10d per ton, the latter charge representing an increase of no less than 34d per cent. above the rate of 2½d per ton which was in force under the competitive conditions of pre-war days. In making these concessions the railway authorities state that they are not justified by the financial results on the working of the docks, but that they are made with a view to stimulating trade. They are regarded, however, as too slight to have any appreciable effect in the direction intended, and colliery owners, coal exporters, and shipowners are incredulous concerning the statement of the railway companies on the financial results of the working of the docks, in view of the fact that in the March quarter the total quantity of coal shipped from the South Wales ports was only 13 per cent. below the average shipments in the March quarters for the five years ending 1914, whereas in the quarter ending March last the principal charges ranged from 120 per cent. to nearly 400 per cent. above those in force in 1914.

The latest market quotations for large coals are:—Best Admirals, 28s to 28s 3d; seconds, 27s 3d to 29s; best dries, 27s to 28s; black veins, 27s 6d to 28s; Western Valleys, 27s to 27s 6d; Eastern Valleys, 26s 6d to 27s; while best steam smalls are ruling at 18s 6d to 19s 6d, and ordinary cargo smalls 17s to 18s 6d. Coke prices are at 23s 6d to 25s at ovens for inland blast furnace consumption, patent fuel 25s 6d to 28s 6d, f.o.b., and pitwood 30s 6d to 31s 3d ex-ship.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

The iron and steel and allied industries are now feeling pretty acutely the pinch caused by the long-drawn-out engineering dispute. Home demand for hematite pig-iron is of a very small extent, and were it not for the growing needs of the Continent—Germany, as well as Italy and France, is in the market for metal—production would have to be curtailed considerably. Scotland is taking very little iron, and high-class steel manufacturers in the Midlands are content to satisfy their requirements almost from day to day. And the steel works at Workington have closed down their steel rail mill for an indefinite period, certainly for as long as the engineers remain out on strike. With this very substantial outlet for iron gone smelters are compelled at last to begin stocking iron or to damp down their furnaces. The former alternative may be chosen in the hope that employers and workmen in the engineering industry may soon come to terms. But if a settlement does not take place quickly it is obvious that iron production must be diminished. The Continental trade is not sufficient to compensate entirely for the falling off in home demand. The number of furnaces in full blast in West Cumberland is seven, and in the

Furness district five, and three of these may be damped down next week. Bessemer mixed numbers are quoted at £4 18s 6d per ton at works, but this figure is shaded for Continental sales. Ferro-manganese commands a goodly American business at £14 10s per ton. There is not a great deal doing in the native hematite iron ore industry, and the position is darkened by the possibility of furnaces going out of blast. Superior sorts of ore are wanted on the East Coast at 30s 6d per ton, and small parcels occasionally are going to the Continent. The coal trade is in a poor way. The desperate situation in Ireland has depressed the export trade, and cross-Channel shipments from Cumberland ports are lower than has been the case for several months past. Irish merchants, fearing confiscation of cargoes, are chary of placing business. Round coal for shipment to Ireland is quoted at 28s per ton, f.o.b. Local industrial and land sale wants are small, and but for a strike at one of the largest collieries the output would be greater than needs. But if there is any marked decline in ordinary iron production in West Cumberland it will be impossible to dispose of the make of local coke, and the collieries then would have to go on short time again. At the moment the whole of the production is being absorbed at the ironworks here. By-products, like benzol and sulphate of ammonia, are not in keen request. Tar, however, is not moving away quickly, and the chemical works have few products for which there is anything more than a weak demand.

MANCHESTER, May 25.

There has been rather less activity in the market this week than last. Some of the falling off in the turnover has been due to the stiffer prices held for by sellers, and the extended delivery terms required by producers. The undercurrent of inquiry, however, remains healthy, and the general outlook continues brighter. In the cloth section there has been an increased demand for China, and rather more contracts have been arranged with the promise of a larger turnover in the near future. A very fair miscellaneous trade has been done for India, but most of the buying has been in small lots. Finishing and printing cloths have been in encouraging request for South America and European countries, and in a variety of goods some moderate lots have been sold for the Near East. Home trade reports are improving. A steady feeling has prevailed in American and Egyptian yarns, but buying has been on a rather smaller scale. Bids in export numbers for Eastern markets have been disappointing, but business continues to be done for the Continent.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—In view of the really excellent show of wool put up for sale in Liverpool to-day members of the trade here expected that prices would be well maintained, and in this they were not disappointed. There was strong home competition, and with German, French, and Swiss buyers active operators the offerings were cleared at prices fully up to those ruling at the close of the London auctions last week. There is obviously a great demand for raw material, and so long as this continues there is no prospect of cheaper wool. The demand, moreover, is apparently based on actual increased machinery consumption, and this is a most healthy and encouraging sign. Bradford topmakers are very firm, but there is little real change in quotations on the week. Some firms are so fully booked up that they are declining new business, but where commitments are less heavy orders can be placed for delivery in September and later months at about 4s 9d for warp 64's tops and 4s 4d for super 60's. It is reported that 2s has been made for a really good warp 64's for spot delivery. To-day's prices are considered high, and most members of the trade will be sorry to see any further advance; what is wanted is a steady basis, and there is every indication that this will be found at about the current level. There is an increasing consumption of crossbreds, and this is a most encouraging feature. Medium and low sorts are improving, and while there is still plenty of room for appreciation, there is a feeling of confidence that was entirely lacking a few weeks ago. Spinners are well placed as regards work, and they are beginning to make prices more in harmony with the cost of tops. Most qualities and counts are moving, and manufacturers are gradually following the upward movement in values. There is steady progress in the piece goods trade, and it is significant that the woollen branch is beginning to show signs of revival.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sale of colonial wool at Liverpool on Thursday was characterised by values which were about equal to those current in London a week ago. The trade has a wonderful capacity for absorbing the raw material. Out of the last London sales Great Britain purchased 102,000 bales, France 18,000, Germany 15,000, Belgium 7,000, Switzerland 5,000, Italy 5,000, and the United States between 3,000 and 4,000 bales. These figures show what good clearances were made of the wools available, and a good number of Continental and United States buyers went from London to Liverpool. The fact that America is showing more interest in colonial wools is all in the favour of this class of raw material. Sheep men across the Atlantic can only put upon the market about half the quantity of wool needed by mills in their own country, and yet their representatives in the American Senate are sufficiently powerful to dictate the terms of a new tariff. It may be expected that when their own domestic clip is marketed Schedule K will become the law of the land. An extraordinary lack of sound business acumen is shown in deciding that imported wool should bear a duty of 33 cents per lb clean content. The writer has always taken up the attitude that if import duties on raw material were wanted in the United States by all means let them be imposed, but when this policy takes such an extreme form as is now being revealed, the only result can be to produce injurious effects upon those whom the duties are intended to benefit. The United States public have a claim upon their Senators to see that no law is passed which is likely to result in the cost of an everyday commodity being increased, but the proposed duties on wool textiles imported into the country will compel even the middle-class to purchase the cheapest cloth, and this will be made more or less out

of substitutes. American growers have made a great ado about pure wool clothing, apparently believing that the use of substitutes is prejudicial to the interests of their own industry; yet by their own actions they encourage the use of manufacturing commodities other than wool. Prohibitive duties must lead to the consumption of big weights of shoddy, mungo, and cotton.

Australian, New Zealand, and South African wools are all superior to the raw material grown in the United States. Not many years ago the American Woollen Company opened a London office, through which to sell their piece goods, and the writer was requested to give his opinion on two cloths, one made from imported Australian merinos and the other from American merinos. In point of handle, a characteristic which is of supreme importance to wholesale buyers of cloth in this country, the cloth made out of Australian fine wool beat the other hollow. It would pay American pastoralists to import Australian stud merinos. South African merino wool has improved since the Boer War, due to farmers there having imported rams from Australia, and if United States wool growers are not satisfied with the market for their wool, they cannot do better than try to bring it up to the standard and quality of usefulness required for manufacturing purposes. The introduction of suitable blood would do far more for American wools than all the tariffs in the world.

HIDE, LEATHER, AND ALLIED TRADES.

BY OUR OWN CORRESPONDENT.

Market hides remained steady at the Bermondsey auctions on Thursday, and all best ox sold at about last prices, the general tone being firm. Calf were rather dearer in some classes, as supplies are none too plentiful. Tanners are not big buyers of imported salted hides, as prices are too high at source of origin in the River Plate. Still, sales are reported, one Northern firm having sold about 50,000 S.A. hides just a fortnight ago. Dry hides are still wanted by tanners who are making a low grade of sole and dressed leather, and I know a sale of dry Madagascars has been made at about 4d to 5d from a large parcel which were originally bought at 10d per lb, after being in store something like two years.

The demand for sole leather has much improved, and a better tone is apparent amongst merchants and tanners. The latter, in view of the firm hide prices, are standing out for quotations, a few stating they have already made advances on some classes of bends which are none too plentiful. American sole is still coming in in fair quantities, and it is the fear of competition in this direction which is giving some amount of stability to the market. Rough leather is still a slow seller, although curriers are rather better off for orders from the motor trade for upholstery hides. The advance in the price of the rough split hide has, however, checked the demand. Upper stock is selling rather better; suedes and patents still hold the field, but, as makers of men's boots are busier, there has of late been a better demand for box and willow calf and sides.

Reports from the boot centres are much more optimistic. All makers of women's shoes are very busy, and now that the silly strike of women operatives in Leicester is settled, makers of ladies' shoes find they are behindhand with their orders. Sports shoes are wanted in great quantities, whilst the trade in children's shoes is also very brisk.

VEGETABLE OILS AND OILSEEDS.

Quieter conditions have ruled in the markets throughout the week, and values in most directions have shown a definite downward trend. Partly in sympathy with seed, and partly owing to lack of demand, raw linseed oil declined sharply in all positions. Spot oil, which fell to £41 ex-Hull, since has rallied somewhat, and yesterday closed steady at £42. Forward positions also have recovered from the lowest, and close 10s to 15s below a week ago. With the new American tariff to come into operation shortly, a curtailment of demand from that quarter is expected, and there does not appear as yet to be any sign of a sufficient demand from other directions to compensate for it. The home demand has been fair, but not up to normal. A fair trade has been done in crude

Member of Federal Reserve System.

cotton oil, and values are about unchanged on the week. Ground nut oil has been in better request, and is somewhat firmer and dearer. Rape oil continues scarce and firm, and castor oil quotations are unchanged. Palm kernel oil is easier.

In the oilseed section Plate linseed has eased off substantially, and April-May shipment to Hull has been done at £19 12s 6d. Indian linseed is also lower, current value being sound, £20 15s. May-June shipment to London. Egyptian cotton-seed is inclined easier, but the business passing is only of a limited character. Shippers' idea of soya bean values are still above the market, and nothing has been done, although Hamburg is reported a buyer.

Oil-cakes are in fair request, but the trade as a whole is disappointing. Stocks, however, are not heavy, and recent prices are, as a rule, sustained.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, May 26.

There was a fair trade doing in some directions, but speaking generally demand is quiet, with buyers not disposed to exceed pressing requirements.

SUGAR.—The market for all spot parcels ruled very steady, and a moderate amount of business was concluded, chiefly British makes, as foreign are comparatively scarce. Messrs Ta'e and Lyle's cubes sold, 52s 6d to 53s 6d; crushed, 50s 9d; nibs, 51s 6d; granulated, 48s 3d to 48s 9d; castor, 50s 3d to 51s 3d; yellow crystals, 42s 9d; pieces, 34s 6d to 36s 6d; fine white, 43s 6d; granulated, July-August, 45s 3d; and September, 48s. Crystallised West India, spot, 41s 6d to 43s, as to sample. Glebe K quality granulated, spot, London, 48s. American granulated, spot, sold, 47s to 47s 6d; May, 19s 9d to 20s 4d; June, 19s 10d to 20s 6d; July, 20s 6d; with affloat parcels, 19s 6d to 20s 6d, all c.f. and i. terms, London. White Mauritius, spot, 44s 6d to 45s 6d, as to quality. White Brazilian, May-June, 18s 9d, 19s, c.f. and i. U.K. Dutch and Czechoslovakian sugars quite nominal for shipment. Cuban basis 96 per cent. June, quoted 13s 10d, and Brazilian basis 80 per cent. June-July, 9s, c.f. and i. U.K. Terminal market steadier. White, August, sold, 20s 3d to 20s 10d; September, 20s 6d; and December, 19s 7d to 20s. Cuban stocks stand at 1,114,850 tons, as compared with 1,312,243 at same time last year. Liquid glucose, spot, 26s. American syrup steady at recent level of prices.

COFFEE with a quiet demand both on home and export account, actual business during the week was confined to a moderate limit, but rates manifested no material alteration. Fair to good bold East India sold, 120s to 125s 6d.; Costa Rica, 115s to 119s 6d. Future delivery market quiet, December, sold, 59s 9d, 60s.

COCOA.—With no recovery in demand, trade proved of retail proportion on about former terms. Butter quiet, at 1s 7d per lb.

TEA.—The supply of Indian submitted to auction this week

embraced some 42,500 packages. Buyers again operated with some reserve, and in order to facilitate business sellers had to accept a decline of 4d to 1d per lb, while, owing to larger supplies of fannings and dust, these receded 1 1/2d per lb. 22,780 packages Ceylon also experienced slow support, and rates for most qualities suffered a drop of 4d to 1d per lb.

RICE.—Market steady, but there was not much interest shown on the part of buyers. Two Stars, Rangoon, new crop, spot, 14s 9d; affloat, 14s 4 1/2d; May-June, 14s 6d; No. 1 garden, Siam, June-July, 16s 6d, and No. 1 Saigon, ditto, 15s 0d, c.f. and i. terms. Bran steady, quiet. Rangoon beans, spot, 7s 6d; Japanese peas, spot, 5s to 5 1/2s; Dutch peas, hand-picked, spot, 2s 9d; screened, 2s 5d per cwt.

SPICE.—Pepper market quiet and featureless. Fair black Singapore, spot, 3 1/2d; ditto, June-August, 3 1/2d; Aleppy, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 7d; Muntok, ditto, 7 1/2d; June-August, 7 1/2d. Zanzibar cloves, spot, 1s 2 1/2d; July-September, steamer, 1s; pimento, spot, 2 1/2d. Tapioca strong, with sustained inquiries. Fair flake, spot, sold, 2 1/2d to 2 3/4d per lb; ditto, June-July, steamer, London, 23s 3d; ditto to Havre, sold 23s 9d; fair Penang seed pearl, spot, sold, 22s; and June-July, London, 21s. Small sagu, spot, 25s to 26s; sagu flour, May-July, sold, 14s 9d; and June-August, 14s 6d. Desiccated coconut, spot parcels, sold, 42s 6d; May-June, 40s; and June-July, 39s 6d. Ginger quietly steady.

FRUIT.—Currants in fair request, and market steady. Pyrgos quoted 57s; Amalia, 60s to 61s; Vostizza, 63s to 75s. Sultanias steady. Smyrna, medium to good, 120s to 125s; choice, up to 140s. Valencia raisins steady. Halves, 50s to 60s; quarters, 60s to 75s. Dates quiet. Siar, spot, 27s 6d; Khedrowie, 36s 6d.

JUTE.—Market steadily hardened under stiff cables received from Calcutta, and local mills have been operating with freedom, baled jute being secured owing to failing supplies of loose. Crop prospects are mostly unfavourable, and the carry-over of old promises to be the smallest on record. Good, steady buying ensued with regard to manufactures. First grade, April-May, Continent, sold, £31 5s to £32, £33 5s; May-June, £32 to £33 15s; June-July, £33 15s, £34 17s 6d. Lightning grade, April-May, sold, £29 to £30; May-June, £29 10s to £31; June-July, £30 5s to £31 15s. Tata lightning, June-July, done £34 5s. Hessians, 10-oz, spot, sold, 38s 6d; July-September, 39s 6d; 8-oz, spot, 27s; June, 27s 6d. A twills, spot, 77s; B, 70s. Hessian bags, 56 x 28, spot, sold, 54s.

HEMP.—Manila qualities ruled quietly steady. C grade, May-July, quoted £47; D, £42; E, £40; F, £37 10s; G, £33 10s; H, £33 10s; streaky threes, £34. New Zealand idles, and quotations quite nominal. H.P.F., spot, £30; and fair, £29. Italian, P.C., spot, £50. Indian tows very firm, with a steady inquiry. African sisal quiet, but firm.

SHELLAC.—Market firm, and business resulted in spot lots on the basis of 360s for fair T.N. standard; T.N., May, sold, 342s 6d; August, 355s; and October, 350s.

COFFRA again very quiet, and general tendency showed some irregularity. F.M.S. Straits, May-July, and also June-August, Rotterdam, sold, £24 17s 6d; ditto, to Hamburg, £24 15s; F.M., ditto, June-August, Marseilles, £24; Ceylon, June-August, Hamburg, £25 17s 6d; London, £25 12s 6d; South Sea to the Continent, quoted, £24; London, £23 12s 6d; Java to Continent, sold, £24 17s 6d; Malabar, ditto, quoted, £26 10s. Palm kernels, May-July, Liverpool, sold, £17 17s 6d.

RUBBER.—This market showed some irregularity, and during the greater part of the week trade moved quietly. Standard Plantation crepe and sheet, spot, also May, sold, 7 1/2d to 7 3/4d and 7 1/2d; June, 7 1/2d to 7 1/2d and 7 1/2d; July-September, 8d to 7 1/2d and 7 1/2d; October-December, 8 1/2d to 8d and 8 1/2d. Fine hard Para, spot, 10 1/2d; soft fine, 6d, and ball 8d per lb.

EGG PRODUCTS.—Market fully steady, but general course of trade ruled quiet. Prime liquid yolk, spot, 14s 5d; albumen, 3s 4d.

MENTHOL.—Spot, 22s; forward, 21s. Japanese peppermint oil, spot, 5s; forward, 4s 7d. Aniseed, spot, 2s 1 1/2d. Slab camphor, spot, 3s 6d; crude, on spot, 3s 1d per lb. Japanese wax, spot, 97s 6d per cwt.

OILS.—Linseed market irregular and easier. Spot, net, naked, 44s; May, 42s 6d; June-August, 39s 6d; September-December, 37s. Rape firm. Crude, spot, 45s; refined, 48s. Cotton firm. Crude Egyptian, 43s; Bombay nominal; common edible, 49s. China-wood, Hankow, spot (barrels), 68s 9d; shipment, 63s 6d to 66s 6d, as to position. Coconut quiet. Ceylon, spot, 40s 6d; May-June, 38s 6d; Cochin, ditto, 42s. Soya steadier. Oriental, barrels, ditto, 41s 6d. Japan fish steady. May-June, cases, 22s. Cod steady. English, spot, 37s. Ground nuts steady. English crushed, naked, spot, 43s; deodorised, barrels, 56s. Turpentine irregular. American, spot, 71s 9d; May, 71s 6d; May-June, 71s; July-December, 69s. Rosin firm for common grades. American, grade B, 13s 9d; F, 14s; G, 14s; WW, 20s 6d. French, F/G, 13s 9d; WW, 17s 6d; extra pale, nominal. Petroleum quiet. American standard white, 3s 4 1/2d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed market quiet and irregular. Bold Bombay, affloat, £22 5s. Small Bombay, ditto, £21 10s. Calcutta affloat, £21 15s; leading, £21 15s; April-May, sold, £21 15s; May-June, sold, £21 5s to £20 15s and £21 5s. Plate, affloat, £20; April-May, sold, £19 15s to £19 10s and £20, and May-June, £19 5s to £20. Rapeseed easier. Tonia, May-June, £18 15s; real bold Ferozepore, ditto, £18 10s. Cotton seed quiet. Egyptian black, May, sold, £12 10s; and white, £11 17s 6d. Bombay, May-June, sellers, £9 5s. Gingly dull. Chinese, May-June, Continent, nominal; large Bombay, ditto £23. Castor, Bombay, May-June, quoted £18 to Hull. Ground nuts steady. Coromandel, machine-dried, May-June, Hull, £23 15s; Continent, £23 15s; Chinese decorticated, f.a.q., May-June, Continent, nominally £23 15s per ton.

METALS.—Tin: The market continued active and easier at the week's commencement, when standard cash changed hands at £152 and £150 10s, with three months' £154 10s to £152. Dealings were on a moderate scale at Tuesday's meeting, prices being irregular and easier. Cash sold down to £149, improving to £150, and forward between £150 10s and £151 5s. Wednesday—A smaller quantity was registered, while rates were in an upward direction. Cash sold at £150 10s to £151 15s, and three months' at £152. An improve-

ment prevailed on Thursday. Cash sold at £151 to £151 5s, and three months' at £152 5s to £153, and since to £152 15s. At Friday's session rates were rather easier, and dealings quiet. Cash, £150 15s to £150 10s; early June, £150 15s; and three months', £152 to £151 15s; English ingots, £150 10s. Copper: Generally steady last Monday, standard cash selling at £62 5s to £62, and three months' at £62 10s. An improvement prevailed on the following day, though the highest points were not maintained in some cases; cash changed hands at £62 2s 6d and £62 7s 6d, settling down at £62 3s 9d; three months' £62 12s 6d. During the middle of the week the tendency was a little better, cash realising £62 5s, and three months' £62 10s to £62 15s. Only a small business was done at Thursday's meeting; cash realised £62 5s to £62 7s 6d, and three months' £62 12s 6d to £62 15s. At Friday's session cash sold at £62 10s to £62 5s; early July, £62 15s to £62 12s 6d; and three months' £62 15s to £62 13s 9d. Electros, £68 10s to £71; best selected, £66 to £68; strong sheets, £92; wire bars, £71. Lead maintained £25 to £23 7s 6d, as to position. Spelter dearer, £27 17s 6d to £27 15s, according to position. Antimony: English regulus, £29 5s to £33. Aluminium: Home delivery, £120; export, £125 per ton.

TALLOW.—Messrs Colchesters and Woolner write as follows on May 24th:—The tallow market continued quiet during the week, and prices are quoted 6d lower. The demand is slow from all directions. Shipments of tallow from Australasia during April amounted to 6,400 tons. At auction to-day 1,472 casks tallow were offered, and 471 were sold. Quotations are:—Australian mutton: Fine, 41s; good to fair, 39s 6d to 38s; dull to dark, 35s 6d to 32s; hard, 40s. Australian beef: Fine, 40s; good to fair, 37s 6d to 36s; dull to dark, 33s 6d to 31s 6d; sweet, 41s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 38s 6d; and mixed, 43s, c.i.f., London, 37s. The market letter is 1s lower for tallow, stuff unchanged. Town tallow, 33s 6d per cwt. Rough fat, per 8 lbs, 4d; melted stuff, 23s per cwt. Quotations are:—Town: 32s 6d net cash, naked, ex works. Country: Frail casks, 31s 6d; home melted, shipping casks, net f.o.b., good coloured, 34s; fair to dull, 33s 6d to 32s. Bone fat: White, none; pale, none; benzine, 29s; melted stuff, 29s, f.o.b.

The List of Applications will open on Monday next, and close on or before the 31st May, 1922.

Compagnie Générale Transatlantique

(SOCIÉTÉ ANONYME.)

(UNINCORPORATED UNDER FRENCH LAW.)

Established in Paris in 1861.

CAPITAL AUTHORISED

Fcs. 200,000,100.

ISSUED: 540,000 Shares of Fcs. 150 each = Fcs. 81,000,000. (Divided into 80,000 5 per Cent. Preference Shares and 460,000 Ordinary Shares.)

Issue of £1,500,000 6½% STERLING REGISTERED OBLIGATIONS at 92½ per cent. In Obligations of £500, £100 and £50 each.

Principal and Interest will be payable in Sterling in London free of all present or future French taxes or other French deductions. These Obligations are the only Sterling Obligations of the Company, and none of the other Obligations issued by the Company (and herein referred to) carries any hypothecation or preferential charge. The Obligations will be dated 1st June, 1922, and will run for a term of 85 years. They will be redeemed at par by a Cumulative Sinking Fund to be applied annually, and commencing on 1st June, 1927, of an amount sufficient to redeem the whole issue by the 1st June, 1907. The Company reserves the right to redeem at par on any interest date after the 1st June, 1927, the whole or any part (to be determined by drawings) of the Obligations then outstanding. It also reserves the right to purchase on the market (or by tender) the whole or any part of these outstanding Obligations. This issue ranks *pari passu* with the other outstanding Obligations herein-after referred to. The Registered Obligations of this issue when fully paid may, at the option of the holder, be converted into Bonds to Bearer, the expenses of conversion, including the British Stamp Duty, being borne by the holders. Interest will be paid half-yearly on 1st June and 1st December in each year. The first payment will be made on 1st December, 1922, representing interest at the rate of 6½ per cent. per annum calculated on the instalments from their respective due dates.

THE NATIONAL PROVINCIAL & UNION BANK OF ENGLAND, LIMITED, of 15 Bishopsgate, London, E.C.2, and Branches; and the

SOCIÉTÉ GÉNÉRALE (de Paris),

of 53 Old Broad Street, London, E.C.2, are authorised on behalf of the Company to receive applications for the above £1,500,000 6½ per Cent. Sterling Registered Obligations.

PAYABLE AS FOLLOWS:—
On Application ... £10 0 0 per cent.
On Allotment ... 30 0 0 "
On 29th June, 1922 ... 52 10 0 "
£92 10 0 per cent.

Payment in full may be made on application or on any day prior to 22nd June, 1922, under discount at the rate of 2½ per cent. per annum.

ABRIDGED PROSPECTUS

The COMPAGNIE GÉNÉRALE TRANSATLANTIQUE owning a fleet of 88 units in service, representing 494,388 tons, and five units in construction (45,750 tons), is the largest French Shipping Undertaking. Its Passenger and Cargo Steamers are in regular service between the principal French Ports and the great Ports of the United States, Central America, and the Mediterranean. The Company also controls various Navigation Companies, the most important of these being the Compagnie Française de Navigation à Vapeur (Cyprien Fabre), which Company has large reserves, and its fleet and other assets are valued in the Accounts on a most conservative basis.

THE COMPANY'S ASSETS.

The net surplus assets of the Company on 31st December, 1921, after allowing for the amortisation of outstanding Obligations and those of the present issue, all at their full redemption prices, amounted to £3,555,439, taking Fcs. 50 to the £.

The details are as follows:

	Francs. (Fcs. 50 = £1.)	Sterling.
The fleet, stores, buildings, &c. (fixed assets) ...	287,016,305	
Surplus of liquid assets over liabilities ...	185,948,599	
Net proceeds of present issue ...	423,959,804	£8,479,196
Nominal amount of Obligations outstanding 31st December, 1921:—		
8% Obligations ...	128,841,000	
4% do. ...	32,552,580	
6½% do. ...	60,000,000	
In addition to the above Obligations the Company has outstanding 5% "Bons" to the nominal value of ...	20,294,500	
Present Issue ...	282,686,000	£5,653,720
	75,000,000	1,500,000
	807,686,000	£16,153,780
Net Surplus Assets ...	Fcs. 178,371,904	£3,555,439

In the above statement the value of the fleet and the buildings is taken conservatively, as heavy depreciations amounting to Fcs. 115,087,408 have been written off in the last seven years, in addition to special provision for boilers. Excluding the "Paris" (a 35,000-ton boat just completed), the fleet stands in the Company's books at 233 Francs, or (at Fcs. 50 to the £) £4,660,000. The object of the present issue of 6½ per cent. Sterling Obligations is mainly to provide sums payable in Great Britain for the construction of the Company's vessels and the supply of coal.

THE COMPANY'S PROFITS.

The following table shows the Company's profits available for amortisation of Obligations, interest thereon, depreciation, dividends on the share capital, &c., as at 31st December of each of the past seven years:

	Francs.	Sterling (Fcs. 50 = £1.)
1915 ...	84,792,777.98	£1,695,851
1916 ...	58,701,897.98	1,174,039
1917 ...	54,126,598.07	1,082,530
1918 ...	54,372,249.85	1,087,445
1919 ...	49,076,738.18	981,535
1920 ...	51,948,928.95	1,038,959
1921 ...	55,386,690.60	1,107,732
TOTAL ...	Fcs. 390,304,807.01	£7,806,080
AVERAGE ...	Fcs. 48,473,072.48	£969,441

The average of the profits for the past seven years as shown above is £969,441. The present total outstanding annual charge for interest on and redemption of all the Company's outstanding Obligations, including interest on the present issue, approximates £430,000. To the above-mentioned profits will be added the benefit to be derived from the present issue.

The Company's Reserves on 31st December, 1921, totalled Fcs. 84,035,116 (independently of depreciation), besides which there was a Taxation Reserve of Fcs. 22,828,366, and a provision of Fcs. 19,867,800 in connection with claims for lost ships pending settlement with the Government, making a total Reserve of Fcs. 126,731,282.

The following dividends have been paid on the Company's Ordinary Share Capital:—

1915 ...	6 per cent.	1918 ...	18½ per cent.
1916 ...	12 "	1919 ...	15½ "
1917 ...	18½ "	1920 ...	18 "
		1921 ...	10½ per cent.

The Obligations now offered have been guaranteed by the Imperial and Foreign Corporation Limited, of 1 Broad Street Place, London, E.C.2, at £1,200,000. The Corporation has entered into contracts with other parties whereby such parties undertook upon the issue being made to subscribe or find responsible subscribers at the issue price for various amounts totalling in all £1,500,000 nominal of the Obligations now offered in consideration of a commission of 8 per cent., out of which commission they will pay 1½ per cent. underwriting and ½ per cent. over-riding commissions. The Corporation pays all brokerages, costs of advertising, printing and circulating the Prospectus, British Stamp Duty and other expenses of the issue.

A brokerage of ½ per cent. will be paid by the Imperial and Foreign Corporation Limited on allotments (other than allotments in respect of underwriters' applications) in respect of applications bearing the stamp of a Banker, Broker, or other approved agent.

Application will be made to the Committee of the Stock Exchange for permission to deal in these Obligations after allotment, and in due course for an official quotation.

London, 26th May, 1922.

Prospectuses and Forms of Application may be obtained from the above Bankers; from Quilter & Co., 32 Old Jewry, E.C.3; Myers & Co., 19 Throgmorton Avenue, E.C.3; Nathan & Rossell, 7 Adam's Court, E.C.3; and from Lawson and Ormrod, 4 Norfolk Street, Manchester.

FORM OF APPLICATION.

Amount allotted £.....

COMPAGNIE GÉNÉRALE TRANSATLANTIQUE

(Société Anonyme.)

(Incorporated under French Law.)

Issue of £1,500,000 6½% Sterling Registered Obligations at 92½ per cent. IN DENOMINATIONS OF £500, £100 AND £50 EACH.

To the Directors of the Compagnie Générale Transatlantique, c/o NATIONAL PROVINCIAL & UNION BANK OF ENGLAND, LIMITED, 15 Bishopsgate, London, E.C.2.

GENTLEMEN, Having paid to your Bankers the sum of £....., being a deposit of 10 per cent. on application for £..... 6½ per Cent. Sterling Registered Obligations of your Company at 92½ per cent., I/we request you to allot to me/us that amount of Obligations, and I/we undertake and agree to accept such Obligations or any less amount of obligations that may be allotted to me/us upon the terms of the Company's full Prospectus dated the 26th May, 1922, and subject to the Conditions endorsed on the obligations and the "Statuts" of the Company, and I/we agree to pay the balance of 6½ per cent. due from me/us by the instalments specified in the said Prospectus, and I/we authorise you to place my/our name(s) on the Register of Holders of such Obligations of the Company as the Holder(s) of the said Obligations allotted to me/us.

I/we desire that the £..... of Obligations applied for by me/us, or any less amount which may be allotted to me/us shall be issued as nearly as possible in the following denominations, viz.:

A.....	Obligations of £500 each = £.....	£.....
B.....	" " " £100 " = £.....	£.....
C.....	" " " £50 " = £.....	£.....
	TOTAL £.....	

Yours faithfully,

54 Usual Signature
Surname
Christian Name or Names
Address
Profession or Occupation
A Lady should state whether she is a Spinster, Married Woman or Widow.

This form is to be filled in and sent with the deposit of 10 per cent. on the amount of Obligations applied for to The National Provincial and Union Bank of England, Limited, 15 Bishopsgate, London, E.C.2, and Branches, or the Société Générale (de Paris), of 53 Old Broad Street, London, E.C.2.

Cheques should be made payable to THE NATIONAL PROVINCIAL & UNION BANK OF ENGLAND, LIMITED, or Bearer, or to the SOCIÉTÉ GÉNÉRALE (de Paris), or Bearer, and crossed not NEGOTIABLE. If altered from "Order" to "Bearer" the alteration should be signed by the Drawer.

An acknowledgment will be forwarded in due course either by Allegiance Letter or return of the deposit.

BANCO NACIONAL ULTRAMARINO.

(National Overseas Bank.)

STATE BANK OF THE PORTUGUESE COLONIES.

Head Office: LISBON.

Established 1864.

Capital (paid up):
Esc. 24,000,000

Reserve Funds:
Esc. 27,200,000

Branches as Under.

22 offices in Portugal.
28 " " East and West Africa.
8 " " Brazil.
6 " " India and China.

Also branches in Ancon, Madeira, Belgian Congo and Timor.
New York Office—60, Liberty street.
Paris Office—8, Rue du Halde.
London Office—27B, Throgmorton street.

BANCA COMMERCIALE ITALIANA.

Capital, Authorised ... Lire 400,000,000
Capital, Paid Up 348,788,000
Reserve 180,000,000
Deposits 4,988,000,000

Head Office - MILAN.
BRANCHES THROUGHOUT ITALY.
Agencies in NEW YORK and CONSTANTINOPLE.

Auxiliaries:
BANCA COMMERCIALE ITALIANA (France), Marseilles, Nice, &c.
BANCA COMMERCIALE ITALIANA & BULGARA, Sofia.
BANCA COMMERCIALE ITALIANA & RUMENA, Bucarest.

London Office - 30a, Threadneedle Street, E.C.2.

Manager: E. CONSOLO.
Deputy Managers: G. COSTA, R. B. HANDLEY.

CORRESPONDENTS TO THE ROYAL ITALIAN TREASURY

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £3 18s. 6d. Colonies and Abroad, £3 15s 6d per Annum. Single copies, post free, 1s 1d.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist." Office: Granville House, Arundel street, Strand, London, W.C. 2.

Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birch Lane; Barker and Howard, 6 Fenchurch buildings, Sugar Loaf court, Leadenhall street; Pottle and Son, 15 Cullum street; Willing and Co., Limited, 50 Copthall avenue, and 53 Finsbury pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: Economist Office, 20 Broad street (Room 1,709).

THE MONEY MARKET.

MONEY was scarce until the end of May, owing to the seasonal demands at the end of the month accompanied by small maturities of Treasury bills to offset the new ones that had to be paid for. On Thursday there was the usual expectation of extreme ease owing to the payment of War Loan interest, and the usual disappointment because the sum so produced did not seem to be available as quickly as had been hoped. There were also heavy withdrawals of cash for the adornment of the weekly average bank's statements, and money remained quite

scarce. Since, however, money must be plentiful when these temporary inconveniences are overpast, until the interest money is absorbed by Treasury bill sales, the tendency of the discount market remained easy, and the question of a reduction in Bank rate again began to be canvassed. Yesterday money became extremely abundant, but the discount market was firmer, owing to a mysterious surprise at the high rate at which Treasury Bills were allotted.

	June 3, 1922.	May 26, 1922.	May 19, 1922.	May 12, 1922.	Previous Rate and Date Changed.
Bank Rate	4%	4%	4%	4%	4% (Apl. 13, '22)
Banks Deposit Rate	2	2	2	2	2% (Apl. 13, '22)
Discount Call	2	2	2	2	2% (Apl. 13, '22)
Household (Notios)	2½	2½	2½	2½	2½ (Apl. 13, '22)
Market rate (3 months' bills) ..	2½	2½	2½	2½	2½ (Apl. 13, '22)

The Bank return showed no change in the gold stock, an increase of £1,825,000 in the note circulation, and a decrease of the same amount in the Reserve. Movements in the Government and Other securities were slight and nearly balanced, and the total deposits were 2½ millions lower. But owing to the transfer effected by maturing Treasury bills, Public Deposits rose by 10½ millions at the expense of Other, which were 12½ millions lower at 10½ millions. These figures, of course, were taken out on the day before the War Loan interest payment. There was an increase of £1,359,300 in currency notes outstanding in the return dated June 1, 1922. The amount outstanding is £298,279,300, which includes £1,617,100 for notes called in but not yet cancelled. The fiduciary issue is £248,712,200, or £61,276,200 below the maximum.

THE STOCK MARKETS.

The Irish crisis, the Epsom meeting, and the approach of the Whitsuntide holiday checked Stock Exchange activity this week in most markets. But the hopeful development of the Reparations affair, and hopes of the German Loan Committee, caused French and German bonds to recover, while among Home securities, Home railway ordinary stocks again enjoyed lively support, and the carry-over on Tuesday revealed a modest bull account in this section. British Government stocks, with the exception of War Loan, have shown an easier tendency. The slight recent animation in South African mines has subsided, while leading oil share quotations weakened on fears that the Shell dividend might be cut. On Monday and Tuesday the first bi-monthly settlement since 1914 was negotiated, and brokers report that the investing public have shown little eagerness to avail themselves of the restored facilities for speculation.

COMMODITY MARKETS.

Some uncertainty is reported in the raw cotton situation, the price for fully middling American being given at 12.30d per lb. Buyers in consequence have been less disposed to place orders with spinners and manufacturers. In the wool trade prices remain firm, although the market is not so active. In the pig-iron market, our Middlesbrough correspondent states that there is no inclination to do business, and there is no sign of animation yet in the steel trade. Our Glasgow correspondent, however, reports some activity in the Scotch pig-iron and steel markets. Best Admiralty coal is down to 27s-27s 3d per ton, and market conditions are reported to be unsatisfactory. Wheat quotations are slightly higher on account of better American advices. The vegetable oil and oilseed market is dull, and there is a tendency to lower prices. In the hide market prices are advancing; an improving demand is noticeable for sole leather. Good business is reported in the boot and shoe industry. Further details of markets and prices will be found from our special correspondents in later columns.

FOREIGN EXCHANGE.

Although there has been more movement this week in consequence of the settlement of the immediate difficulties of the reparation problem, business has remained very

restricted and lifeless. The mark, as was to be expected, has reacted favourably, having moved down during the week from rather over 1,300 to 1,200 yesterday, after being rather below that figure on Thursday, forward rates being about ½ mark per month below spot. This rather rapid recovery would seem to show a perhaps over-optimistic tendency on the part of the market. It is true that if an international loan can be obtained the mark position will be greatly relieved, but it should also be remembered that the whole industrial element in Germany is opposed to any rapid or extended fall in quotation on the ground of the confusion in business which this would cause. It is also by no means certain as yet that a satisfactory international loan will be floated, and in the meantime Germany has still to provide each month the equivalent of 50,000,000 gold marks, which, under the present agreement, it is allowed to purchase by the issue of further paper marks, an almost certain cause of further depreciation. It is surprising, in view of the recovery in the mark, that Paris should at 48.94 be worse than the 48.86½ of last week, after having been down to 48.74 on Monday. In addition to the reparation settlement, the general movement at this time of the year would have led one to expect an increase rather than a fall in value. The only explanation so far put forward is that French merchants are securing exchange for autumn purchases of raw material. The forward rate is this week about 1½ centimes above spot. Brussels and Milan have risen in sympathy with Paris to 53.01½ and 85½ respectively. Among the neutral exchanges Amsterdam has had a sharp move up from 11.43½ on the 26th and 11.39½ on the 29th to 11.49½ yesterday. Switzerland at 23.32½, is one centime higher, after being considerably lower in the early part of the week, and Madrid is also slightly higher at 28.24½. Among the Northern group, Stockholm has moved against us from 17.23½ to 17.20, but Christiania has gone up from 24.40 to 24.97½, and Copenhagen, in spite of the pending Danish municipal loan in London, from 20.36½ to 20.47½. Helsingfors has been in some request, and has moved from 214 to 210. In Central Europe the disturbed political state of Austria has been accompanied by further depreciation, the rate at one time in the week being over 50,000, and even now being 48,500, as compared with 43,500 a week ago. Warsaw, on the other hand, is some 1,000 marks lower at 17,500. Budapest shows little change, Prague, at 230, is very slightly lower, while Belgrade is about the same at 310, and Athens slightly better at 107. In the East the rupee is this week very slightly cheaper at 1s 3½d, the yen the same at 2s 1½d. The silver market has been very quiet, with little change, but, on the whole, the undertone in the market would seem good. Hongkong is ½d cheaper at 2s 7d, Shanghai 1½d cheaper at 3s 6d. In South America, Rio is 7½d, as compared with 7 17-32d a week ago, Montevideo rather dearer at 43½d (last week 43½d), Buenos Ayres, after some changes the same as last week at 44½d, and also Valparaiso at 37.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 27, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	10,482	Supply Services	5,646
		Interest on Debt	1,511
		Sundries	403
		Added to Exchequer balances ..	778
		Reduction of Debt	2,850
	10,482		10,482

Revenue during week ended May 27, 1922, at £10,482,000, compares with £11,905,500 in the same week a year ago. The expenditure for the week is £7,560,400, or about half as much as a year ago. Customs was the chief revenue-producing item at £3,095,000, against £2,895,000 a year ago. Excise yielded £1,295,000, against £1,090,000. Estate, &c., Duties brought in £1,130,000, against £1,410,000. Stamps yielded £590,000, against £140,000. Property and Income-tax amounted to £2,284,000, or about the same as last year. Ordinary receipts under Miscellaneous yielded £200,000, against £620,517; while Special Receipts yielded £514,997, against £500,000.

The week's operations reduced the National Debt by the sum of £2,849,948, and caused the following changes:—

	Min. £		Min. £
Public Departments Advances ..	+ 10,380	Treasury Bills	— 10,572
National Savings Certificates ..	+ 950	Surplus of Bonds, &c.	— 2,000
		Other Debt	— 2,000
		Sundries	— 683
	+ 10,430		— 13,250

The Floating Debt was reduced by £190,000 during the week, and now stands at £943,250,500.

FINANCIAL YEAR, 1922-23 (April 1 to May 27, 1922).

	£		£

THE PROCESS OF TRADE RECOVERY.

At the end of 1921 we ventured to express the opinion that the economic depression had passed its worst point. Subsequent events have shown this forecast to be justified, and though the recovery has been very slow, the evidences are steadily multiplying that the volume of production and business is moving, at a snail's pace, perhaps, but still in the right direction. It will be remembered that the American price index number began to rise slightly last autumn, and this, with other features in the situation, led to a very general prediction of a big boom in trade in the United States. This expectation was not fulfilled. The Harvard Committee on Economic Research, surveying the first quarter of 1922, point out that the price weakness in January and February of such important materials as iron and steel, non-ferrous metals, hides and rubber, the check to the fall in money rates, and strikes in the textile mills and the coal industry, have to be set against the general increase in the volume of production (except in the case of paper, motor cars, textiles, and rubber), the maintenance of a high level of building construction, and an increase in the movement of goods by rail. On the whole, there was a distinct balance of favourable factors, but not so marked as had been hoped. In the last month matters seem to be mending more rapidly, and it is now reported that steel production has risen to well over 70 per cent. of capacity, and unfilled orders are accumulating.

American conditions will, of course, have some reaction upon British industry. Wholesale prices in Great Britain

began to decline some months later than in America, and it is significant that the recent upward turn of our index number, which is recorded in another column, has shown a similar lag behind American prices. We do not suggest that the experience of two years ago will necessarily be followed now, and that the British curve will follow precisely the trend of the American price curve. American conditions are mainly dependent on her internal situation, whereas Great Britain's industrial position depends much more upon the general state of world trade, in which America is only one, though a very important factor. There are, however, other good reasons for thinking that the British trade situation may follow a course of slow recovery not unlike that which is in process in the United States. Firstly, conditions in some of the most vital of our markets are not unfavourable. In India the arrest of Ghandi seems to have been followed by a lull in the political unrest, and there, as in China, the volume of business is slightly expanding. In Australia the exchange situation after many months is practically normal, and British exporters are now able to get prompter payment for goods shipped. Even the Continent of Europe, as our recent analysis of the foreign trade figures showed, is buying on a freer scale. Secondly, the disturbing factor of the depreciated exchanges, and in particular of the mark, is passing away through the rapid adjustment of German internal wages and prices to the low external value of the mark, and, as there is reason to hope for greater stability in the exchange, so a sounder basis of competition is being re-established. The effect of the rise of German prices on our iron and steel industry is that Britain has returned to a position in which she can compete successfully with Continental producers in the world's export markets. This brings us to the third point, namely, the adjustment of costs in Great Britain. The coal and iron and steel industries are the two trades in which wages have been most drastically reduced. In both cases workpeople are suffering hardship through the fact that the cost of living is still high, but in both cases the result has been to regain to a very substantial extent our lost export trade. During the last four or five months there has been some adjustment of wages in other home industries, notably in the building trade, where the adjustment, together with a fall in the price of raw materials, is beginning to bring the cost of building down to a level at which private enterprise has some prospect of being resumed. This internal adjustment has still some way to go, but it is a favourable factor that the Board of Trade cost of living index is steadily approaching the wholesale price index.

There remains, however, one very serious stumbling-block which is holding up the improvement in the internal markets in the country. We refer to the stoppage in the engineering trade, which is now nearly three months old. What one may perhaps call the 47 "associated" unions have decided by a substantial majority to accept the employers' latest memorandum, which is a step towards a clearer definition of managerial functions, and though the engineers will be very loth to follow suit, there are signs that they cannot hold out much longer, and that we shall shortly see the end of a quarrel which should never have been allowed to reach the stage of a definite rupture. Some months ago our Labour correspondent pointed out that the men were fighting upon what they considered to be a point of principle, and that in resisting the employers' claim they were standing for the right of a free working man to exercise some control over his economic destiny. A majority of the employers seemed equally to imagine that they were fighting for a principle of vital importance, which they would perhaps have expressed by saying that, though they readily admitted the desirability of discussions with their workpeople on many of the conditions obtaining in the factories, the employer must have the last word and be master in his own house. The man—who surely must have been a lawyer—who coined the phrase "managerial functions" may well have imagined that he was inventing one of those "clichés" on which great public issues are fought. But, in our opinion, confirmed by a study of Sir William Mackenzie's inquiry, the issue cannot properly be expressed at all in terms of general principles.

After a century of evolution, the employer is no longer the autocrat of the workshop, but is rather in the position of a constitutional monarch who exercises authority subject to very clearly defined conditions. His freedom is limited by public opinion, by laws, by current standards of wages, and, so far as working conditions also are concerned, by a large code of collective agreements. The whole trade union movement is a limitation of industrial autocracy, and, on the other side, is a means through which the individual worker exercises a very large and real measure of control over his employment. In the present dispute the employers admit—as, of course, they must—that workshop conditions must be subject to general agreements, and their representatives are prepared to see some substantial extension of the subjects to be covered by such agreements. They are also ready to set up procedure to be followed in questions arising between employers and employed in matters of workshop practice—such as the really critical question of the grade of labour to be employed in manning new types of machinery. The masters having agreed that the men should be consulted on this point, the issue narrowed itself down to whether the employer may or may not introduce the change pending discussion. It will be remembered that during the war the unions surrendered their pre-war rules and practices, and permitted an immense volume of unskilled labour to enter into the machine shops. The events of the last twelve months, together with the fact that workpeople have to-day a very shrewd conception of the realities of international competition and of the state of trade, means that, although the individual will be tempted to take a short view of any particular change in a particular workshop, patience and consideration will be successful, as many employers have already proved, in removing the objection to developments and technical progress. But this result will not be achieved without confidence between the parties, and for this the first essential is a greater willingness than in the past on the part of employers to disclose their costs and financial results to their workpeople. This is the first step towards removing the suspicion that they are being exploited. It is undoubtedly possible at the present moment for employers to secure their aims by the process of bringing the unions to their knees, for at the moment economic conditions are strongly on their side. But to use this power in a drastic manner would be the greatest possible mistake; for it would remove any hope of rebuilding British industry, as it must be rebuilt, on the basis of co-operation between employers and workpeople. Otherwise the trade recovery will be the signal for the outbreak of more bitter struggles than ever. In this respect Mr Harding has given a lead in America of the greatest significance by calling together the steel magnates of that country—the only country in which the continuous processes at the furnace are still worked on the two 12-hour shift system instead of the three eight-hour shift system prevalent in Europe—and urging upon them that the present period of comparative depression is the moment to fall into line and put their house in order on this vital question of working conditions. A gesture to-day by English or American employers signifying that they appreciate, and intend to act upon, the conception of partnership in industry not only would help to revive a sense of national solidarity in facing economic difficulties which has rather been lost sight of since the war, but also is the only policy by which the employer can hope to prosper.

THE WORLD'S WHEAT POSITION.

(FROM A CORRESPONDENT.)

ACCURATE information about wheat production is difficult to obtain, as method and accuracy vary considerably in each country. The most reliable statistics are those of imports and exports of the wheat-consuming countries, as compiled from records of actual transactions between dealers. Taking as a basis the five years 1909 to 1913, the average annual world production of wheat was estimated to be 464.75 million quarters, grown in 262.5 million acres. Of this total, 90 per cent. was produced in the Northern Hemisphere on about 90 per cent. of

the world's wheat area, the Russian Empire accounting for 23 per cent., the United States 19 per cent., India 9 per cent., France 8 per cent., followed, in order of importance of total yield, by Austria-Hungary, Canada, Italy, and the Argentine.

The countries which absorbed the largest bulk of the surplus of the exporting countries are those of Western Europe. The average amount of wheat and flour taken by these countries during the period under discussion was around 75.5 million quarters (figures expressed in Imperial quarters of grain, flour as its grain equivalent). Of this amount the United Kingdom accounted for 27.25 million quarters; Germany, 11.2; Belgium, 9.25; the Netherlands, 9.5; Italy, 6.6; and France, 4.8 million quarters. Re-exports, chiefly in the form of flour, totalled between 12.25 and 12.5 million quarters from the Netherlands, Belgium and Germany. There was thus a balance of net imports over exports in Western Europe of about 63 million quarters, or about 74 per cent. of the world's surplus wheat imported for consumption.

Exports of wheat totalled nearly 80,900,000 quarters, contributed by Russia, 25 per cent.; the United States, 15 per cent.; Argentine, 14.6 per cent.; Canada, 14 per cent.; Roumania, 8 per cent.; India, 8 per cent.; Australia, 7.6 per cent.; and Bulgaria, 1.7 per cent.

The war at once disorganised the producing and distributing machinery in the countries of the Allied and Central Powers; eventually Western Europe was deprived of the surplus wheat of Russia and of the exporting countries of Eastern Europe to the extent of approximately 33 million quarters, or about 40 per cent. of the world's surplus. Further, large tracts of land went out of cultivation in the war zone. The consequent rapid advance in wheat prices caused large additional areas to be put down to wheat in North America and Australia, and, to a lesser extent, in other countries outside the war zone. These results may be judged by a study of the following table:—

	Wheat Area.			Production.		
	Average 1909-1913.	Average 1915-1919.	Per-centage Inc. (+) Dec. (—)	Average 1909-1913.	Average 1915-1919.	Per-centage Inc. (+) Dec. (—)
	1,000 Acres.			1,000 Quarters.		
U.S.A.....	47,097	57,873	+ 23.00	85,836	103,862	+ 21.00
Canada	9,945	16,379	+ 64.70	24,640	31,810	+ 29.00
Argentina	15,799	16,566	+ 4.80	19,668	19,437	— 1.00
India	29,114	31,020	+ 6.50	43,842	40,818	— 7.00
Australia	6,798	10,287	+ 51.00	10,618	13,830	+ 30.00
	21,751	26,422	+ 21.47	36,921	41,951	+ 13.62

Thus there was an increase of 21 per cent. of land under wheat, with about 13.5 per cent. increase in gross yield in the five important exporting countries. Labour and other difficulties handicapped the producer, and probably prevented still greater areas being brought under cultivation in North America and Australia. These adverse conditions did not exist to any extent in the Argentine and India, and the small response from these sources of supply suggests that no considerable export increase can be expected from these two countries.

The consumption of Europe has been greatly reduced during and since the war. Hence shutting off of Russian supplies has not had so adverse an effect on the British consumer as might have been anticipated, and the world price of wheat compares favourably with the price of other articles of food and drink. Were Russian wheat to come on the market in sufficient quantities at a cheaper rate than other wheats, prices would undoubtedly decline in the first instance; but the probability is that production overseas would decline very considerably in favour of other agricultural products, and though the industrial populations of the world would be better off, it is doubtful whether the price of wheat would be permanently reduced in relation to other food products. During the years of the war there was never any actual shortage of wheat. The great difficulty lay in transporting wheat from the producing to the consuming areas, and this handicapped distribution. The following table, showing exports of wheat and flour of the large exporting countries for the period 1914-15 to 1918-19, as compared

with the exports of 1909 to 1913, shows how the loss of the Russian export was made up:—

Exporting Countries.	Average Exports, 1909-1913.	Per-centage of total supply.	Average Exports, 1914-15-1918-19.	Per-centage of total supply.
	1,000 Quarters.		1,000 Quarters.	
Russia	20,125	24.5	..	..
U.S.A.	12,323	15.0	29,262	43.0
Argentina	11,897	14.5	9,647	14.0
Canada	11,268	13.7	19,937	29.0
Roumania	6,601	8.0	..	..
India	6,386	7.8	3,768	5.5
Australia	6,166	7.5	5,624	8.0
Hungary	5,981	7.0	..	..
Bulgaria	1,245	1.5	..	..

Owing to the great change in territorial boundaries it is difficult to discuss the present wheat areas and production of Europe, country by country. If Europe is taken as a whole, less Russia and Poland (about 61 million acres), it would appear that the 1921 area is about 10 million acres and the supply 17 million quarters of wheat less than the average of the years 1909 to 1913.

The outlook as to the surplus of wheat in the exporting countries in January of this year was quite satisfactory, although India has once again become an importing country, owing to her poor crop of 1921. Estimated stocks, consumption, and exportable surplus for these countries were, in million quarters:—

	Total Supplies Available at the Opening of the Current Season.			Estimated Consumption during the Current Season.	Quantities available for Export at the opening of the Season.	Exports from the Season until Dec. 31, 1921.	Quantities Available for Export Jan. 1, 1922.
	Yield, 1921 and 1921-22.	Stocks at the Opening of the Current Season.	Total.				
Canada	37.6	8	38.4	11.2	27.1	12.9	14.2
U.S.A.	99.3	5.2	104.5	70.7	33.9	23.5	10.4
Argentina	19.3	4.5	23.8	8.2	15.6	..	15.6
Australia	17.0	..	17.0	4.6	12.4	..	12.4

An exportable surplus of over 50 million quarters at the beginning of the year is sufficient to meet the demands of the importing countries until the next harvest, and also to allow of some carry over after August, 1922. Prospects for the 1922 crop in India are reported as favourable, so that she may be able to make some contribution to the world supply before the new harvests of the Northern Hemisphere come on the market. It is estimated that the area under wheat in sixteen countries in the Northern Hemisphere is a little over 117 million acres, and about 2 per cent. less than last year. Reports of the condition of the various areas are on the whole satisfactory.

Future supplies are intimately bound up with the price paid to the producer. Rapid changes in the price level result in rapid changes in the industry. If the production of wheat or any other farm produce is not profitable, the acreage is reduced in the following season, but this change in acreage is often obscured by the powerful influence of the weather, which greatly affects the yield per acre. The year 1920 was very favourable for crops, and in the United States the yield per acre of the six grain crops was 13 per cent. more than in the previous year, and the third largest yield ever known, although the area was 14 million acres less than in 1919. Uncertain prospects in the spring of 1920 caused a tendency to hold the surplus in hand. Unusually favourable weather later, and consequent unexpected production caused a severe drop in cereal prices, which was responsible for the fall of prices in the United Kingdom.

In the past, prices have been low in proportion to the economic value of wheat on account of the great difficulty of regulating or preventing over-production in a world-wide and scattered industry, partly controlled by climatic conditions. Greatly increased productive costs are general throughout North America and Australia, so that in the future a higher price may be anticipated, unless distributive and marketing costs are reduced, or a more economic system of production introduced.

The future of Russia as an exporter of grain is speculative. In the past her exports were not a true surplus over consumption. For years the exports of breadstuffs have been made at the expense of the needs of a rural population in a state of destitution and semi-starvation. It is indeed doubtful if Russia was ever completely free from famine. Now, years must elapse before Russia can build up any sound export trade in grain.

It is doubtful if the United States can further increase her export of grain, as she has already reached the limit of readily available agricultural land, and future expansion or reclamation of land will depend entirely on the return which the level food prices offers to the farmer. The United States have also to meet increasing demands for domestic consumption, so that the present high level of exports is not likely to be maintained. The Argentine as a wheat exporting country has not fulfilled the expectations of a few years ago. Cattle raising is the predominant industry, and lucerne is of more importance than wheat. Exports vary considerably, and are unreliable. British India is also unreliable, as she is dependent on the vagaries of the monsoon for the success or failure of her crops, and any increase in exports cannot be expected from this source. Canada is the only country which immediately offers facilities for great expansion in the wheat areas of the North-West Provinces. Here there are available for cultivation millions of acres of prime arable land, as soon as expenditure of capital is justified. Any consistent increase in Australian exports in the future is problematical. If, however, the retarding factors of low rainfall, limited rural population, and railway facilities can be met, Australia will probably share with Canada the major portion of the wheat export trade of the world.

The history of the war and after illustrates once more the great elasticity of the world's production, and though other countries' misfortunes have largely been responsible for the fact that we have had sufficient supplies, the fortunate fact that there are a multiplicity of sources on which to draw remains to-day, as in the past, the great safeguard of an uninterrupted supply of Great Britain's daily bread.

OUR INDEX NUMBER.

A DISTINCT upward movement has been taken by our Index Number of wholesale prices in May, the total having risen from 4285 to 4372. This increase of 87 points is the largest which has occurred since September, 1921, when there was an increase of 105 points. The rise last month was not general, the total advance being more than accounted for by the movements in primary foodstuffs and textiles. The majority of the changes which took place were, however, in an upward direction. The table below shows the latest figures for each of the five groups, and for the total:—

Date.	Cereals and Meat.	Other Food Products (Res. Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0
End July, 1914.....	579	323	616	444	553	2515	114.6
" Dec., 1915.....	897	446	731	711	848	3634	165.1
" Dec., 1917.....	1286	686	1694	839	1348	5863	266.8
" Nov., 1918.....	1289	783	1848	903	1389	6212	282.6
" Dec., 1919.....	1303	782	1805	866	1337	6094	277.0
" Dec., 1919.....	1441	881	2442	1145	1453	7364	334.7
" Mar., 1920.....	1508	914	2674	1246	1709	8352	379.6
" Dec., 1921.....	1344	805	1284	1216	1275	5924	269.8
" Dec., 1921.....	921	636	1106	762	931	4357	198.0
" Jan., 1922.....	907	654	1066	730	925	4284	194.7
" Feb., 1922.....	948	640	1037	696	936	4259	193.6
" Mar., 1922.....	980	687	1038	700	929	4297	195.8
" April, 1922.....	1008	667	1010	709	890	4285	194.8
" May, 1922.....	1040	657	1079	710	885	4372	198.7

In the first group of foodstuffs every commodity has moved, but with the exception of a sharp decline in pork, a slight drop in flour, barley, and foreign wheat, all other changes are increases. There is a further seasonal increase in potatoes, and beef and mutton have again risen. Home-grown wheat is higher, having been in

short supply and sparingly offered. Tea and coffee alone show a change in the second group of foodstuffs, and have both fallen.

In the textile section all commodities have risen, with the exception of flax, in which there has been a drop of nine points. According to Messrs Wm. F. Malcolm's market report, however, business in Russian flax has been almost negligible. Cotton quotations are all distinctly firmer, and there has been a pronounced rise in silk and jute, while wool is also slightly better. In their monthly cotton trade report Messrs Robt. Barbour and Brother, Limited, write: "Most markets of the world are increasingly feeling the pinch of short supplies, and are gradually, it is hoped, recovering from the acute financial disability which for so long has prevented any attempts to satisfy normal requirements. The steadiness of the raw material has also been a benefit, and there has been a marked absence of the nervousness characteristic for many months last purchases made one week should prove to be dear the next. More spindles and looms continue to come into operation, the unemployment figures show an encouraging reduction, and, in spite of the disinclination of overseas markets to raise their bids, spinners and manufacturers have been assisted in their efforts to secure more remunerative prices by a healthy demand, not in big lines, but in moderate quantities sufficient in the aggregate to reach an appreciable figure." At the recent wool sales the wool offered has been readily absorbed, and competition has been strong, not only from home buyers, but from German, French, and Swiss purchasers. The demand, moreover, is apparently based on actual increased machinery consumption.

In the minerals group changes are few. Iron and steel remain unaltered. Steam coal has fallen slightly, and lead and copper show a slight increase, the latter on bullish reports from America. In the miscellaneous group changes are slight and insignificant, as may be seen from the table below, in which the movement of each commodity's index, as compared with the end of April, is set out, the figure 50 representing the average price during the base period 1901-5 in each case:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	107½	— 3	Cotton A	110	+ 16	Copper	52	+ 3
English	100½	+ 7	Cotton B	129	+ 8½	Minerals	710½	+ 1
Flour	95	+ 5	Yarn	115½	+ 9			
Barley	87	+ 1	Cloth	130½	+ 5½			
Oats	94	+ 10	Wool, Eng.	95	+ 2½	Baltic timber	101½	— 2
Potatoes	125	+ 19	Aus. Wool	97½	+ 6½	Amer. timber	89	— 1
Rice	109	+ 24	Silk	112½	+ 16	Leather	72½	— 1
Beef	108	+ 9	Flax	112½	— 9	Petroleum	137	— 1
Mutton	123½	+ 11½	Hemp	43½	+ 1½	Oil	79½	— 1
Pork	93	+ 20	Jute	112½	+ 12	Oilseed	85	+ 1
						Tallow	58	— 2½
Cereals & Meat	1,040½	+ 32	Textiles	1,079	+ 69	Indigo	127	— 1
						Crystals	125	— 1
Tea	100	— 6	Pig-iron	97	..	Rubber	10½	— 1
Coffee	99	— 4	Steel rails	92	..			
Sugar cane	150½	..	Iron bars	92	..	Miscellaneous	885	— 5
Sugar beet	106	..	Coal, steam	130	— 5			
Butter	86	..	House coal	107½	..	Total	4,372	+ 87
Tobacco	116½	..	Lead	104	+ 3			
			Tin	59	..			
Other foods	657	— 10						

The net result of these changes is that our Index Number now shows an increase of 70 per cent. over the level at the time of the outbreak of war, as compared with an increase of 67 per cent. a month ago. The present position of each of the groups together with that of recent months is compared in the next table, in which the indices for the end of July, 1914, are taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100
Dec., 1918	226	222	293	186	241	236
Dec., 1919	249	250	396	247	263	287
March, 1920	261	260	484	269	309	325
June, 1920	261	263	416	278	281	305
Dec., 1920	233	229	209	261	230	231
June, 1921	203	188	158	210	185	188
Dec., 1921	159	180	180	164	168	170
Jan., 1922	157	186	173	158	167	167
Feb., 1922	164	182	168	150	169	166
March, 1922	169	195	168	151	161	167
April, 1922	174	189	164	152	160	167
May, 1922	180	186	175	153	159	170

The levelling-up process has thus continued, although minerals still remain conspicuously below the general level.

The final table gives the latest price indices from some of the principal foreign countries, the pre-war figures being taken as 100:—

	United States.	France.	Italy.	Germany.	Switzerland.	Sweden.	Denmark.	Japan.
Nov., 1918	205	358	438	6,572*	325	367	292	214
Highest, 1920	227	591	679	6,572*	325	366	403	388
End 1921	123	326	594	3,585	176	172	178	209
End Jan., 1922	131	314	577	3,955	171	170	177	206
Feb., 1922	133	307	562	4,888	170	166	182	205
Mar., 1922	132	308	534	5,899	163	164	178	200
Apr., 1922	134	315	..	6,572	161	..	177	197

* April, 1922.

The United States figure represents a gain of 10.2 per cent. over the low level of June 1, 1921, but a decrease of 43.9 per cent. from the peak of February 1, 1920. The principal increase in April was in metals. In Germany wholesale prices are nearly six times as high as at the beginning of 1920, and nearly 66 times as high as in 1914. Prices of manufactured goods are rising particularly rapidly, owing to the continuous wage increases, and to the fact that raw material bought after the mark had experienced its severest slump is now appearing in the form of finished goods. The provisional figure for the end of April for France shows that, as in this country, the lowest point of the drop was reached at the end of February.

INSURANCE AS A NEWSPAPER ADVERTISEMENT.

For some months past we have watched with amusement the frantic efforts of certain London newspapers to employ accident insurance benefits as a means of obtaining subscribers. This form of competition is by no means general. Two of the best and most shrewdly conducted morning papers have contemptuously held aloof; the strong group which owns the most popular of the London evening papers also has stood aside; the London fever has scarcely, if at all, infected the great provincial Press. The disease is essentially local and particular, and appears to attack only those newspaper proprietors who are members of the House of Lords—and not all of them. It will probably pass away as rapidly as it has arisen, but not before a great deal of money has been spent upon accident benefits which would have been better employed in improving services of trustworthy news, and not before the principles of insurance have been flagrantly violated by amateur exponents.

We must distinguish between the present feverish desire of sections of the Press to advertise accident benefits and successful claims against one another, and that old feature of the popular periodical Press—the insurance coupon. Long ago—it was in the early 'eighties—the late Sir George Newnes offered £100 to the heirs of every reader of *Tit-Bits* who was killed in a railway accident with the paper upon his person. From this beginning one had extensions of the system until almost every "popular" weekly gave away an accident insurance coupon covering death or injury to the holders during passenger travel. The risks for individuals were small, and the cost of the insurance small. Several accident insurance companies—notably the Ocean and the General of Perth—took up the underwriting of these risks in return for a small premium, and the general effect was to popularise the idea of protection by insurance against accidents. A great many people, when they discovered how limited was the cover given them for nothing by the Press, took out genuine insurance policies for themselves, and learned the truth that if one wants a thing of value one has to pay its price in the market. The present insurance craze is altogether different from these modest beginnings, for those who indulge it aim at giving—apparently for nothing—exceedingly costly insurance benefits to all registered readers, and aim at employing these benefits as a means to increase circulation in competition the one with another. The insurance companies could safely encourage the old insurance coupon which was paid for by a premium and was under their control, but the insurance companies are by no means anxious

to encourage the new wild competitive system of showering insurance payments upon all and sundry by return of post. They are, indeed, afraid of it. They do not see clearly to what it is leading. Some of the insurance offices still underwrite some of these newspaper risks, but others, who did for a while, are withdrawing entirely now. The essence of the newspaper "stunt" is the encouragement of claims. When one organ of the Press advertises that it has paid five successful death claims, a competing organ burns to shout that it has paid for six. It is the same with minor accidents, which are far more numerous and in the aggregate more expensive to meet than death claims. The more one newspaper can pile up sprained wrists and broken legs, the more eagerly others hunt for cricked backs and broken heads. The first principle of insurance companies in settling claims is to distinguish the genuine from the spurious; but it is the first principle of competitive newspaper insurance to welcome claims, genuine or spurious, as a means of advertisement. For them a day without its successful claim is a blank day. And so we have, or shall have if this business continues for much longer, the uprising of the professional claim-maker, just as in the early days of workmen's compensation we had the professional claim-maker. An insurance office has no compunction at all about rejecting a spurious claim or an excessive claim, but when one is eager to shout that one has paid more claims than the other man in Fleet Street, a proper scrutiny is a needless embarrassment. We have rarely seen a more certain method of corrupting the public wholesale than is revealed by this latest development of "newspaper enterprise."

Where is the money to come from? The cost of the old insurance coupons, given away with popular periodicals or with calendars and diaries, was a trifling sum. But the cost to newspaper proprietors of some of these advertised benefits is terrific. The sale of a penny morning paper to a registered reader does not yield to the proprietor more than eighteen shillings a year after meeting the newsagents' discount and the costs of distribution. Out of that revenue of eighteen shillings a head the white paper, the "newsprint," has to be paid for, and this cost of the white paper is by far the biggest item in the production of a daily newspaper. We reckon, after a rather careful investigation, that the annual expense of providing for the voluminous insurance benefits cannot be less than from ten to fifteen shillings per registered subscriber. It may be more, for the manufacture of claims is a deadly business when it becomes really virulent. Seeing that under normal conditions there is a very small margin between the sales revenue of a daily journal and the sums required to meet paper costs, distribution charges, and agents' discounts, there is no possibility of the expense of paying insurance claims being met out of sales. If, as must be happening now, every registered reader involves a loss—possibly of as much as ten shillings per head per annum—the bigger the sale the bigger the loss. All new readers brought in by the pull of the insurance benefits will be a registered reader, and many of the old readers will be induced to register themselves. One can see, as these volumes of registered readers are expanded day by day, an appalling liability being accumulated, a liability which it will not be at all easy to be quit of. In some instances dates next year are given as a sort of limit to the ever-growing liability, but in others the wording of the contracts is so vague that it looks as if once a registered reader always a registered reader entitled to insurance benefits. Here and there one can see that insurance office warnings have been regarded, but in other cases there is no trace of any stirrings of prudence. When this latest newspaper "stunt" collapses from the intolerable weight of it, there will be some pretty legal actions and some bitter surprises. It is not at all easy to get rid of that vague oppressive thing, an implied contract.

We repeat our inquiry: Where is the money to come from? The answer must be: out of the pockets of the advertisers, or out of the pockets of the newspaper proprietors. A newspaper proprietor may be willing to lose money for a time if by such means he may destroy a rival. But he cannot go on very long however rich he may be. These insurance benefits, continued for a year, must run away with hundreds of thousands of pounds. The chasm

between the revenue from sales and the costs of purchasing subscribers by insurance benefits must be met out of the advertisement revenue if it is to be met at all. We shall see before long a collision between the advertisers in the "insurance Press" and the proprietors. If the rates of advertising are put up to meet the cost of the successful claims the advertisers will be obliged to consider their position most carefully. They cannot pay enhanced rates which would involve an increase in the prices of their products to the public—that would be fatal in these hard times, and they will have sitting on their doorsteps the canvassers of the "non-insurance Press" offering advertising in their columns at the old rates. There is a limit to the value of "net sales" from the point of view of the advertiser, especially when the increase in net sales is due to a cause other than a desire to read the newspaper purchased. There must, while this "stunt" rages, be an enormous waste in newspaper circulation. One reads that a distinguished and astute statesman drew claims from four daily papers in compensation for a recent accident. Very many people, anxious for insurance on the cheap, must be buying two or three papers daily and registering with all of them. Surplus copies, bought for insurance purposes, are useless to the advertiser.

It is possible that this latest craze will die away as have other crazes before it. It is altogether too costly to last. If all the daily Press was in it, then the advertiser might be coerced into paying accident claims at the expense of the public who purchased his goods. But, happily for the consumer, the disease is local and particular. It does not extend very far, and it has not lasted very long. To be permanently successful it needs to be universal, of which, happily, there is no sign.

THE HAGUE RULES AND LEGISLATION.

ACROSS the international movement which has brought the Hague Rules into everyday use is projected the shadow of coming national legislation. The Hague Rules were the outcome of voluntary international agreement among commercial and shipping men. They constitute a code of common conditions as to sea carriers' liability for incorporation by reference in bills of lading. As explained in an article in the *Economist* of November 19th last, the Rules make the shipowner responsible for the safe carriage of cargo—he becomes in effect an insurer for the period of the voyage, subject to a limit of £100 per package—and they preclude the insertion in bills of lading of the endless clauses of exemption from liability, which has been a ground of complaint by merchants for many years. The Hague Rules represent an international compromise worked out by representatives of the trade interests directly concerned, together with bankers and underwriters. The basis of liability laid down is substantially that of the American Harter Act, and the similar Canadian Act, though the financial limit of shipowners' responsibility is much higher, and the form of the Rules is that of a self-contained code capable of application to transactions in any part of the world. The Rules define the extent of the responsibility, and do not, like existing legislation, merely prohibit clauses which would narrow the liability (whatever it may be) under national law. Their form is adapted to their intended world-wide use, and their adoption by a voluntary international conference (at which Sir Henry Duke, President of the Admiralty Court, was chairman) left the question of revision naturally for a subsequent similar gathering of business men, should experience of their use disclose a need for amendment.

Since the conference at the Hague last September, when the Rules were settled, they have been widely discussed, and have been endorsed by Chambers of Commerce and other representative commercial, financial, and insurance organisations in various countries. The Rules are now incorporated in the bills of lading issued by a number of the leading shipping lines. They are used, as was intended, mainly in connection with the shipment of miscellaneous goods by liners. In the "tramp" trades, where cargoes of grain, coal, timber, and so on are carried in bulk, the merchants, equally with the shipowners, have their own organisations for the purpose of agreeing with the shipowners' standard forms of shipping documents

conformed to the requirements of the particular trades. The "tramp" trades do not specially need, though, of course, they are free to use, the Hague Rules. In fact they have not adopted them. The voluntary character of the international code leaves the question of adoption open for the decision of those concerned. In matters of business this is convenient, but the "tramp" trades are now, it would seem from the remarks of Sir William Noble, when presiding at the recent annual meeting of the Baltic Conference, in peril of legislation, and may have to protect their freedom. Sir William referred to the peril of legislation on the lines of the Harter Act spreading not only to the United Kingdom, but to all maritime countries.

So far as the United Kingdom is concerned legislation is, it is understood, to be introduced almost immediately by the Board of Trade to carry out a resolution of the Imperial Conference last summer, that there should be legislation on the lines of the Canadian Act, which, as already mentioned, is similar to the Harter Act. Instead of adhering closely to the Canadian model, the bill, it is gathered, may contain, in a schedule, a code of rules similar to, but embodying, modifications of the Hague Rules. Apparently the "tramp" trades wish to be excluded from any such legislation, and the question arises whether any section of the commercial community desires legislation. An organisation calling itself the British Federation of Traders' Associations, representative mainly of merchants in the grain and other bulk cargo trades, was formed at the beginning of this year to oppose the Hague Rules in view of the promise of legislation by the Imperial Conference. Representatives of this body and of shipowners are understood to have engaged in informal conversations at the Board of Trade as to a modified code of rules to be given statutory effect. The position appears, therefore, to be somewhat confused, especially as between merchants and shipowners in the "tramp" trades. It is clear, however, that the problem is an international one, and that legislation, except as a sequel to an international convention, and to give effect to a basis of uniformity previously agreed upon with other countries, might only add to existing divergencies and complications. Moreover, acquiescence in proposals for legislation by British commercial interests would lay them open to the charge of ignoring the compact made with business men of other nationalities at the Hague. The Hague gathering took place after the sitting of the Imperial Conference, and its result, in the adoption of the Hague Rules, may be regarded therefore as a new factor which has arisen since the resolve to proceed with British national or Empire legislation was arrived at. In any event, the maintenance of the voluntary principle would keep the important question of revision open, and would avoid the stereotyping of regulations in a form beyond the control of the international trading community, whose interests they should serve. That, in a matter of this kind, is a vice from which no legislation can be free.

DEALING IN OPTIONS.

THIS week's settlement of the first regular fortnightly account which the Stock Exchange has undertaken since the outbreak of war showed that people are not yet taking any particular advantage of the additional facilities allowed them for dealing in stocks and shares through the medium of contangoes. There was a small position open in Home Rails, and also in a few of the popular industrial shares, where some of the previous buyers were anxious to carry over their commitments. As a whole, however, the result of the first fortnightly settlement has not brought much additional grist to Stock Exchange mills. Dealing in options is another of the ways whereby speculation is to-day free from restrictions imposed upon it since the outbreak of the war. It is a little curious that this particular branch of Stock Exchange activity should be confined so largely to the outside firms who advertise for option business, and who succeed in attracting the attention (with the money also) of a good many people who like to dabble in stocks

and shares without incurring more risk than can be measured.

As everybody knows, the giver of option-money pays a certain sum per share for the right to take up the shares, at the price fixed at the time of the operation, and at any time within the period which the option covers. Options may be done for any length of time up to three months, according to the new Stock Exchange rules. A simple illustration may be more useful than paragraphs of explanation, so it may be assumed that the would-be speculator, thinking that Great Westerns, for instance, may rise during the next three months, endeavours to ascertain what he would have to pay for an option which would give him the right to call the stock at a fixed price within that period. Taking the market price at 107, or whatever it may be at the time the option is done, the operator would probably find himself asked about $3\frac{1}{2}$ per cent., that is, £35 on £1,000 stock, for three months. To the price of 107 is added in the Stock Exchange the amount which it would cost to carry over stock during the time. Taking $\frac{1}{2}$ per cent. as the average rate per fortnight, in three months this would come to $2\frac{1}{2}$ points, spread over the five settlements. Therefore, the actual cost of the stock is the current price of 107, plus the contango of $2\frac{1}{2}$, plus the option money of $3\frac{1}{2}$, and the broker's commission, making the cost of the stock about £113 altogether, before the giver of the option money would see any profit at all. He would be liable for the £60 expenses on £1,000 stock, but this would not be payable until such time as the option runs out. We are taking a somewhat extreme case, because Great Western is, of course, a heavy stock, the rate of contango works out stiffly, and prices in Home Rails are moving so rapidly as to cause option-money takers to charge high rates for their own protection. The ordinary course of procedure in the House is for the man who takes option money in this way to buy half the stock immediately the option is effected, whereby he partially insures himself against loss.

The principle is exactly the same, of course, when applied to shares, and the shorter time for which the option is done, the cheaper the rate and the less expense for continuation. If the giver of option money should see his Great Westerns, for example, rise to 120 to-morrow, and sells the stock at that price, he must carry it over as a bear until the maturity of the three months, receiving the contango rate every fortnight, and so adding to his profits. The point is that his loss is limited to the amount of expenses, and if the transaction fails to come up to his expectation, the matter is ended by the payment of an amount which he can measure precisely to-day. The outside brokers come in with an offer to do options at prices which may not take into account any contango rate. It is well understood that in many instances they simply run the stock against their customers, taking the option-money (which they carefully insist upon having paid at once, instead of at the expiration of the option), and risking whatever the event may be. If the customer makes a profit, he may, with luck, get his money, but it is a well-known fact that, during the past six months, for instance, many people who have "made" paper profits by dealing with outsiders, find themselves unable to obtain settlement. They are put off with payments on account, or induced to take up other options that have the effect of giving the outsiders a longer run for their money and a greater chance of getting it back. Option dealing with members of the Stock Exchange is more expensive, and the House is urged by a good many of its friends to adjust rates in such a manner as will eliminate the competition from irresponsible outsiders. But the Stock Exchange never goes out of its way to encourage mere gambling. Chances are worked out as mathematically as possible, and with the intention of giving both sides an equally fair chance. To deal with a member of the House means that the client has a security which, naturally, he cannot rely upon when doing business with advertising outsiders of whose reputation he knows little or nothing. At the end of an option, if he has made money by dealing through a Stock Exchange firm, the client's chance of failing to get his profit is as negligible as his risk of not receiving profits that he has "made" with bucket-shops, is great.

LATIN-AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

VENEZUELA.—The announcement that Señor Don Juan Vicente Gomez has been re-elected President of Venezuela for the fifth period will be by no means unwelcome news to British investors in that country. In 1908, during the critical period in which the ex-President Cypriano Castro remained in power, British economic interests were seriously imperilled, and it was due to the action of General Gomez so soon as he became Acting-President, during Señor Castro's absence in Europe, that matters speedily righted themselves. As Vice-President, General Gomez had strongly disapproved of Señor Castro's treatment of important foreign companies. At that time, apart from a diplomatic rupture with Holland, who sent warships to Venezuelan waters, and with the United States, which also threatened action, the Venezuelan Government was engaged in disputes with several British and French firms. There is ample precedent for the re-election of General Gomez for a further period as Chief-Executive. General Cypriano Castro had himself re-elected four times, and General A. Guzmán Blanco served for six terms. Under the revised constitution, General Gomez will serve for seven years, during which term it is reasonable to look for a period of political rest and economic progress in the country. Under his previous Governments the public services in Venezuela were reformed, and the general prosperity of the country greatly advanced; many hundreds of miles of good roads were built, close attention was given to the health department, wireless stations and military aviation schools were established, immigration fostered and agriculture encouraged, while stock-breeding, in which the President takes a considerable interest (being, as he is, one of the largest stock-owners in the Republic), has been systematically supported. The financial condition of Venezuela is believed to be thoroughly sound, and the Government is reported to possess a substantial balance in the bank. The great need of the Republic—namely, transport—is likely to receive special attention, while the rich oilfields which have lately brought Venezuela into prominence are likely to be more systematically developed. The several British companies interested, such as the British Controlled Oilfields, the Shell Combine, the North Venezuelan Petroleum Company, the Venezuelan Oilfields, the Venezuela Oil Concessions, and the Bolívar Concessions, all report more or less satisfactory progress; while of late an association of interests between British and United States holdings has been introduced. It is understood that important negotiations between the Standard Oil Company and the British Controlled Oilfields for the development of a large area of the Buchivacoa oilfields have been completed, while a generally favourable opinion has been expressed of the high quality and immense quantities of oil obtainable. It would, therefore, appear that, under the new administrative auspices, Venezuela's economic progress is assured.

PERU.—That foreign banking can be made profitable in Peru is shown by the substantial gains made during the past year by the Banco Italiano at Lima, which recorded net profits of over £101,000, enabling a dividend at the rate of 18 per cent. to be distributed, and more than £P73,000 to be carried forward after all fees and several different funds had been provided for. During the current year imports into Peru are to be severely curtailed, there being already on hand a substantial amount of unsold stock, while the adverse rate of exchange precludes traders from entering into any forward contracts with foreign concerns, such as at this period of the year has been customary.

ECUADOR.—While the world produces cacao to the value of £30,000,000 per annum, and Latin America is responsible for fully one-half of the output, Ecuador contributes the largest amount of any of the South American States. In view of the threatening state of the cacao trade on the Gold Coast—up till now the most productive in the world—Ecuador may one day attain the rank of the largest producer. Just as Chile depends largely upon nitrates, Peru upon her cotton, and Brazil upon coffee for the greater part of their respective national revenues, so does Ecuador rely upon the value of its cacao exports for economic prosperity. Anxious eyes are being turned towards the cur-

rent year's crop, which, if it attains to the normal output, should reach 90,000,000 lbs, which may be compared with 75,000,000 lbs expected from Brazil. Epoca cocoa promises well, and is expected to secure favourable markets. The purchasing power of the people of Ecuador is not large at the present time, the question of exchange being still the controlling factor. The high sterling rate is handicapping business between this South American country and the United Kingdom, as well as with the United States, Ecuador's chief market for its cacao. The exceptionally low rate of German exchange, on the other hand, enables our Teutonic rivals—always active, and moderately successful in this Republic—to widen their scope and attract business in directions hitherto unattained. Financial conditions in the State are still precarious; few of the Government officials have been paid their full salaries for some time, while among the lower ranks of employees heavy arrears have been allowed to accumulate—causing widespread dissatisfaction. An effort recently made to raise an internal loan of \$2,000,000 from the more wealthy cacao planters failed, the terms asked being considered too onerous. The Government, however, will probably be obliged to concede generous terms for any financial assistance granted, and is prepared to consider applications for certain monopolistic concessions upon articles of consumption such as liquors, which would not inflict any hardship or weigh unduly upon the poorer classes of the community.

UNITED FRUIT COMPANY.—The comments made in our issue of April 8th regarding the favourable position of the United Fruit Company are borne out by the figures of the second quarter of the year, which show that this enterprise has gained remarkable earnings since April 1st, with every likelihood of exceeding \$1,500,000 for the full month. If this estimate is realised, the first four months of the year would show earnings of \$4,500,000, which, in a season generally unfavourable for fruit-growing, owing to adverse climatic influences, may be regarded as exceptionally encouraging. The company expect to close their half-year's trading with earnings of \$8,000,000, which would be equivalent to one full year's dividends gained in the first six months, and would permit of a distribution of between \$7 and \$7.50 per share.

Notes of the Week.

The Position in Ireland.—Nearly six months after the signature of the Irish Peace Treaty, and two months after the signature of the Pact between Sir James Craig and the leaders of the Provisional Government, Mr Churchill was unfortunately constrained, in the House of Commons on Wednesday, to paint a gloomy picture of the effects of the insecurity of Irish conditions. "As a consequence of this insecurity," said Mr Churchill, "prosperity has been seriously affected. Banking and business are curtailed; industry and agriculture are languishing; revenue is only coming in with increasingly laggard steps; credit is drying up; railways are slowing down; stagnation and impoverishment are overtaking the productive life of Ireland; the inexorable shadow of famine is already cast on some of its poorer districts." The months that have elapsed since the birth of Ireland's new opportunity have certainly been full to the brim with disappointment, even for those who realised most clearly the immense difficulties of the tasks facing the Provisional Government. Until ten days ago we were entitled, to quote Mr Churchill's words, to look forward "across the disappointments, vexations, misgivings, and perplexities of the Irish situation" to the "great and hopeful event" of a General Election in Southern Ireland, from which, it was confidently hoped, would proceed overwhelming popular vindication of the Treaty. To-day we can still look forward to the elections, which are fixed for June 16th. But it will not be a free election. It is to be an amazing and disquieting type of "coupon" election. Following a declaration on May 19th by Mr Griffith that "the Republicans did not represent 2 per cent. of the people of Ireland," Mr Collins on the very next day signed a pact with Mr De Valera. Under this pact, supporters of the

Treaty are to have 64 seats and the anti-Treaty party 57 seats, in the new Parliament; that is to say, that Republican candidates for 57 seats would not be opposed by the Treaty party. After the election a Coalition Government is to be formed, consisting of five pro-Treaty and four anti-Treaty Ministers, together with the President of the Assembly and the Defence Minister. The first business of the new Parliament and Government would be to confirm (or reject) the Irish Free State Constitution which has been framed and will be before the electors. Obviously, the proposed formation of Government and a Parliament in which opponents of the Treaty are to form nearly one-half arouses the most profound anxiety. If Mr Griffith believed a few days ago that the Republicans only represent 2 per cent. of the Irish people, why does he permit them to be offered nearly one-half of the seats in the Parliament and Cabinet? Enemies of the Treaty in this country see in this move an intention to throw over the Treaty and declare a Republic, now that British troops have been evacuated (except from Dublin). Mr Collins and Mr Griffith represent the agreement and coalition with De Valera and his party as necessary for the establishment of social order that the Provisional Government has been unable to secure. Mr Churchill, while frank and outspoken upon the menace of the new development, "sees great force" in that argument—though the effect on lawless conditions is certainly as yet unnoticeable—and still believes that those who signed the Treaty are still animated by an earnest desire and resolve to carry it out. If that belief is justified—and for the moment we cannot do otherwise than take the Colonial Secretary's word for it—then Mr Griffith and Mr Collins, despite mistakes, disappointments, and their latest policy, are entitled to demand an extension of that patience and sympathy that they have so far received from Great Britain. They can hardly be surprised, however, if their "extremely questionable compact" with Mr De Valera taints that patience and sympathy with anxiety and suspicion. If they are in earnest, as with Mr Churchill we persist in believing, they may yet pull Ireland through, and the desperate expedient of the Collins-De Valera pact may be justified. But we can no longer shut out from our minds the possibility of failure. In that lamentable event, the Treaty may be infringed, a Republic may be declared. Another possibility: the present lamentable situation may be prolonged through the formation of another Provisional Government, or of a Committee of Public Safety. We refuse to prophesy disaster or to abandon hope, in spite of the grave complication of extensive fighting on the Ulster border. But public opinion, while avoiding "impatience, prejudice, and vexation," should be preparing itself against all possible eventualities.

The Reparation Understanding.—The letter of the German Government to the Reparation Commission issued on May 29th, and the Commission's reply dated May 31st, has avoided the danger of a new rupture with Germany and of French action in the Ruhr, and has afforded the much-needed breathing space for the deliberations of the Loan Committee. The German Chancellor's reply follows very closely the text which Dr Hermes took back with him to Berlin, and therefore satisfies the Commission, which has accordingly extended the moratorium for the rest of this year. This means that for 1922 German reparation payments will be in accordance with the figures of the Cannes Conference. Shortly stated, the German reply points out the steps that have been taken to balance the Budget. Subsidies to public services have been abolished, food subsidies reduced from 17,200 milliard marks to 550 milliard marks in 1922, and by these and other changes the Budget expenditure has been reduced by 24½ milliard marks. A table is forwarded to the Commission showing a great increase in revenue due to the higher yield of existing taxes based upon recent experience and on the continued depreciation of the mark, together with an estimate of the yield of new taxes. The Chancellor agrees to limit the floating debt to its figure of March 31, 1922, and if at the end of any succeeding quarter this maximum is exceeded steps will be taken to raise credits otherwise than from the Reichsbank and in a form not giving rise to fiduciary inflation. If the

excess persists additional taxation will be proposed to the Reichstag. This limitation of the floating debt is subject, however, to the possibility of meeting demands for foreign currency required for reparations by an external loan, and the reply states that if such a loan is not forthcoming or fails to supply the means of making repayment, the amount outstanding may be added to the floating debt. In other words, means of purchasing foreign currency is not to be found by heavier internal taxation, and if other means of acquiring foreign currency fail, recourse will be had to inflation. The German Government accepts the principle of supervision of its finances on the understanding that such supervision will not affect the sovereignty of the German Government, disturb the working of the administration, or violate the secrecy as to the wealth and private affairs of taxpayers. It is agreed that the greatest importance attaches to the need for securing the return of exported capital, and the Government will undertake all possible steps to this end by means of a foreign or internal loan. They will also discuss with the Committee of Guarantees any means for preventing the further flight of capital. The German Government report that they have legislated last week to secure the absolute independence of the Reichsbank, and conclude by undertaking to publish statistics of German economic conditions on the same basis as before the war. They make their declaration on the assumption that the Reparation Commission will confirm the reduced rate of payment for the whole of 1922. It will be observed that the German Government do not make these undertakings contingent upon a foreign reparation loan being floated. In accepting the memorandum the Commission, while confirming the reduced schedule of payments for 1922, reaffirm that the moratorium remains liable to cancellation if the Commission is satisfied that Germany is failing to carry out the terms of the Chancellor's letter, and in particular if the proposed arrangements for dealing with the Budget deficits and the floating debts fail, and no satisfactory alteration is put in their place.

The Revival of Agriculture in Poland.—Tillage in Poland is rapidly recovering from the effects of the German and Bolshevik invasions. According to a special correspondent of the *Temps*, whose information we have reason to believe is correct, between 11 and 12 million hectares, or about 29 million acres, were sown in 1913 in the regions now forming the territory of the Republic. By 1919 about 3,500,000 hectares were lying fallow; but in the spring of last year this amount had been reduced to 1,213 million hectares, and this year to 600,000. In 1913 the grain and potatoes produced amounted to 35 million metric tons; last year the amount was 25 millions, and the wheat exported exceeded 30,000 car loads, or 600,000 metric tons. The cultivation of sugar beet, suspended during the war, has been resumed, and the country can now export grain, flax, sugar beet, hops, meat and poultry, eggs, cheese, and some timber. Agriculture is to be officially promoted by information as to the selection of seed, manuring, and cattle raising, and by the establishment of Chambers of Agriculture and elementary agricultural schools. These latter institutions for young person of both sexes already number 34; a farm is attached to each. Land hunger, however, is acute among the peasantry everywhere, and a peasant proprietary is the best defence against Bolshevism. Accordingly, in 1920, during the Russian invasion, a law was passed by a narrow majority limiting in principle the holding of any one proprietor to 180 hectares (432 acres), this amount being reduced to 60 hectares (144 acres) in industrial districts and the neighbourhood of towns, and extended to 400 hectares (988 acres) in Podolia, Volhynia, and what once was Prussian Poland. Were this redistribution carried out strictly, the great estates, with their sugar factories and distilleries, and a production enhanced by the extensive use of agricultural machinery, would cease to exist, and the total yield of the national agriculture would seriously decline. Such estates, however, may be exempted from redistribution if they reach a certain standard of organisation and production; but the provisions of the law in this respect are regarded as inadequate. However, the present *Soyez*

or Parliament will shortly be dissolved, and the middle-class element will probably be stronger in its successor. The law, therefore, will probably be modified in respect both of the distribution and the terms of sale. Those estates which are being regularly and satisfactorily worked come last in order for redistribution, and a period is allowed for voluntary sale by their proprietors to peasant applicants; failing an arrangement, compulsory sale is carried out. Apparently, therefore, there is time to correct the defects of the law of 1920.

Cotton Trade in Japan.—The secretary of the International Federation of Master Cotton Spinners' and Manufacturers' Associations has published some interesting statistics relating to the position of the cotton industry in Japan. The figures have been compiled from the returns of the Japan Cotton Spinners' Association. The amount of yarn produced in 1921 was 739,532,957 lbs, against 744,653,499 lbs in the previous year, 783,374,826 lbs in 1919, and 732,830,660 lbs in 1918. In view of the charges of cheap labour in Japan, it is of interest to mention that in 1921 the average wages per shift per hand in pence for male workers were 36.58 against 39.16 in the previous year, 27.88 in 1919, and 17.15 in 1918. With regard to female workers, wages have advanced per shift per hand in pence from 11.90 in 1918 to 21.75 in 1919, 29.89 in 1920, and 28.35 in 1921. The amount of cotton consumed in Japan last year was 850,490,559 lbs, against 847,550,110 lbs in 1920, 892,231,087 lbs in 1919, and 847,122,389 lbs in 1918. The working spindles in 1918 were 2,936,508, and in 1921, 3,162,353.

America's Abandoned Railways.—In America 1921 was the fifth year in succession during which the mileage of railway lines discarded exceeded the total mileage of new lines constructed. Operation was discontinued on more than 1,600 miles, which was over 1,000 miles in excess of the new mileage completed during the same period. These figures, however, do not indicate any real falling off in business. The lines that have been discontinued are mainly in the Southern States, and many of them were built for some temporary or special purpose. Those, for instance, that were constructed for the carriage of lumber have no reason for existence when the timber has all been cut and hauled. But in some instances the public interest suffers through the cessation of a necessary means of communication. This has lately happened in several counties along the 350-mile route of the Missouri and North Arkansas Railroad, which abandoned operations last July owing to its inability to earn enough to cover expenses of working. The people in this district are now left without any railway service whatever. Motor transport will not fill the gap, for the highways are in such a condition as to be impassable for automobiles—probably, indeed, they have been allowed to fall into this neglected state because the local needs have hitherto been largely supplied by the railways. Various schemes have been proposed to keep this railway alive. One suggestion was that the local railway brotherhoods (*Anglice*, unions) should purchase the line and run it themselves. Another was that Mr Henry Ford, fresh from his success with the Detroit, Toledo, and Ironton, should be invited to take over the property. Ultimately a committee, representing several carrying interests, put forward a plan which has been adopted. It includes a 25 per cent. reduction in wages, an increase in freight rates, and the issue of a loan of three and a half million dollars, of which three millions are to meet existing obligations, and the remainder are to be devoted to additions and improvements. In such cases as these an important legal question is sometimes involved. Has a railway the right to "quit" whenever it pleases? The Federal Transportation Act, passed in 1920, contains a section which forbids a railroad engaged in inter-State commerce to abandon its line without obtaining a certificate from the Inter-State Commerce Commission stating that public convenience and necessity, present and future, permit of such abandonment. But the interpretation of this provision has raised some difficult points. A certificate of this nature has been obtained, for instance, by the Eastern Texas Railroad, a line thirty miles long, entirely

within the State of Texas. It was built in 1902 for lumbering purposes, and has been operated at a loss since 1917. Its rolling stock now consists of nothing but a combination coach that it owns and a locomotive and a passenger car that it leases. The State authorities are opposed to the abandonment of the line, and a State Court has ruled that the certificate obtained from the Commission must be held to permit the discontinuance of only such inter-State business as is carried on by this railway. As this business has constituted three-fourths of the traffic, to act upon a permission thus limited would evidently involve the railway still deeper in financial difficulties.

The British Guiana Loan.—The loan issued this week here by the Government of British Guiana has proved a marked success. The lists were opened at 9 on Wednesday morning and, except for country applicants, were closed at 10.15. The terms were favourable, the issue price being 99½ per cent., the interest 5½ per cent., and redemption at par is to take place in 30 years at earliest, or at any subsequent interest date until 1972. The loan, like its predecessor of last year, is to be spent in defence and public works, including railways; it increases the total debt of the colony to about £2,400,000, against which there are and will be substantial assets, chiefly the railways and the debts of local authorities to the Central Government. The loan is secured on the general revenue, and there is a substantial surplus annually. Its success gives hope that more attention may be paid by British enterprise to the great resources of a colony which, like British Honduras, has been somewhat neglected hitherto by British capitalists. The colony possesses all the resources of the neighbouring Spanish-American countries, with much greater security for their uninterrupted exploitation. Labour, of course, is a standing difficulty, and East Indian immigration has not altogether solved the problem.

Bleachers' Association.—Another textile company to show a recovery in its last financial year is the Bleachers' Association, whose trading profit has gone up from £899,200 to £950,100, while the net profit has risen from £514,300 to £653,900. The figures of trading profit, however, are not strictly comparable, for in the first place repairs and maintenance required £507,400 a year ago, as against £405,700 for the year ended March 31st last. Again, last year bankers' and other interest amounting to £88,400 was charged after trading profit had been struck, whereas in the present accounts an unstated amount for this is deducted before the figure is given. A true comparison, therefore, can only be made between net profits which, as may be seen from the summary below, are still the highest recorded, with the exception of the boom year, 1919-20:—

Year Ending March 31.	Trading Profit.	Net Profit.	Prof. Dividend.	Ordinary Dividend.	To Reserve, &c.	Inc. or Dec. to Carry Forward.
	£	£	£	Amount	Rate.	£
1907.....	457,938	266,415	125,464	91,564	4	55,000
1908.....	439,814	246,104	125,464	68,673	3	53,239
1909.....	387,312	199,582	125,464	nil	—	50,000
1910.....	503,680	313,035	125,464	103,009	43	50,000
1911.....	515,783	312,981	125,464	103,009	43	50,000
1912.....	538,121	371,625	125,464	114,455	5	125,000
1913.....	672,799	433,907	130,951	137,346	6	125,000
1914.....	666,045	423,416	131,455	138,306	6	125,000
1915.....	438,575	197,835	134,983	70,078	3	50,000
1916.....	674,878	416,394	135,988	141,006	6	65,790
1917.....	794,874	515,583	135,988	176,257	74	130,000
1918.....	826,130	527,655	135,988	176,257	7	130,000
1919.....	770,259	475,513	135,988	235,010	10	164,712
1920.....	770,259	475,513	135,988	235,010	10	164,712
1921.....	899,151	514,333	135,988	237,108	10	125,010
1922.....	950,138	653,988	135,988	296,386	124	200,000

Reserve appropriations consist of £125,000 to general reserve, as against £100,000 a year ago, and £75,000 against £25,000 to superannuation fund. The ordinary dividend is raised from 10 to 12½ per cent., and the carry forward increased by £21,500 to £359,400. Balance-sheet changes are small. Bankers' loans have been reduced by nearly £300,000 to £334,300; stock-in-trade is £189,800 lower, but £390,900 has been added to debtors. The directors point out that "the profits, after deducting all charges prior to debenture stock interest and preference share dividend, are equivalent to 8.61 per

cent. on the capital employed, i.e., the share and loan capital of the Association, reserve fund, and amount brought forward as at March 31st, 1921." This compares with 7.12 per cent. a year ago and 10.88 per cent. for the year 1919-20.

Lipton's Profits.—After a sharp relapse in profits a year ago the profits of Lipton, Limited, for the 12 months ended March 31st show a substantial recovery. Business in the home trade, states the report, shows an increase for the year, both in volume and amount, but trading expenses continue to press heavily on profits. The export trade has been for the greater part of the year comparatively small in amount, but recently, it is stated, there has been some improvement in this branch. To meet losses at some of the branches abroad, £50,000 has been transferred from reserve, and with this allowance trading profits are over £128,000 higher at £561,800, while net profits have increased by £119,000 to £394,300. A comparative table of results is appended:—

Year Ended March.	Gross Profits.	Expenses, &c.	Net Profits.	Depreciation.	Div.
	£	£	£	£	%
1902.....	228,202	39,441	188,761	19,063	8

* Including £220,889 drawn from "premium on shares account."

Management expenses increased from £148,300 to £155,000, and £25,000 more is allowed for depreciation. A year ago the dividend on the ordinary shares was maintained at 12½ per cent. at the expense of allocations to reserve, which in 1919-20 had amounted to £110,000, and by reducing the balance forward. The 9 per cent. cumulative preference shares to the amount of £600,000, issued about a year ago, receive a dividend of £39,900, and the ordinary dividend remains at 12½ per cent., requiring £156,250, and no transfer is made to reserves, but the amount carried forward is increased by nearly £10,000 to £37,300. Changes in the balance-sheet are small. In view of "the extensive character of the company's interests in India and Ceylon," the balance of reserve account has been divided into India and Ceylon reserve £100,000, and general reserve £400,000. A bank overdraft for £287,300 has been wiped off, and stock in trade has been reduced by £281,900. The savings banks deposits are practically unchanged at £135,000. The directors state that the company's tea estates have shown satisfactory results, and that there has been a small profit from the rubber estates.

The "Old" Equitable.—For a man to be a life policyholder with the "Old" Equitable is *prima facie* evidence of intelligence, but for such a man to confuse his fine old Society with the late City Equitable Insurance Company—and to write to his directors on the subject—indicates that *prima facie* evidence is not always to be trusted. The recent announcement that the Old Equitable had made a valuation, and decided to resume its bonus distributions, took the cream off its report for last year; but there remain characteristic features which are worthy of some notice. The new business of 768 policies assuring £578,277 exceeded that of the "boom years" 1919 to 1920, a striking testimony to the confidence of the Equitable's *clientèle* in its ability to resume the bonuses which then were suspended. The claims by death showed that on the average every £1,000 of original assurance had been increased by bonuses to £1,842. From the point of view of profit earning, the chief features are:—Net interest earnings of nearly 4½ per cent., against a valuation rate of 2½ per cent.; expenses of 6.8 per cent. of

the premium income, against 8.28 per cent. in 1920; and a profit on realisations of investments and revaluation differences of £237,025. The funds at the end of the year were £5,249,511, an increase of £344,527.

Victory Insurance.—Existing conditions press hardly upon new insurance companies which have not had time within which to amass the necessary reserves. We see that in the fire and general department of this company the premiums were £387,216 and the funds, after meeting claims and expenses, were £36,791, much less than the customary amount to provide for unexpired risks. In the marine account there was a loss of £62,211, after estimating £65,000 as the amount required to close the account. Profit and loss showed a debit balance of £83,387 carried to the balance-sheet. The auditors call attention to the fact that the amount required to close the marine account and the outstanding liabilities on the fire and general account have been estimated by the management; they sign the report "assuming the sufficiency of these provisions." The paid-up capital of the company, £250,000, is high in proportion to its liabilities, and the assets represented by it—Government securities £114,485 and cash £137,165—are the chief source of security for policyholders.

Liebig's Extract.—In the report and accounts of Liebig's Extract of Meat Company, Limited, for the year ended March 31st last, sales show a decline from £1,049,088 in 1920-21 to £907,697 for the year under review. Expenses are still comparatively high at £731,002, and profits at £176,695 compare with £285,385 a year ago. The company's record since 1914-15 is as follows:—

	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Sales	£ 601,251	£ 683,442	£ 900,979	£ 1,056,671	£ 1,073,632	£ 1,114,291	£ 1,049,088	£ 907,697
Expenses	375,381	372,912	570,240	1,737,546	769,287	791,284	763,703	731,002
Net profit	225,870	310,530	330,739	319,125	304,345	323,007	285,385	176,695

Carried forward	70,142	150,619	247,647	243,609	252,076	247,878	255,814	259,039

It will be recalled that last year the company offered for subscription at par 120,000 new ordinary shares of £5 each to the ordinary shareholders. As at the time the existing £5 ordinary shares were quoted at round about 18½, and the quotation is now even 13½, shareholders received a substantial bonus. This issue of ordinary shares doubled the company's ordinary capital, increasing it from £600,000 to £1,200,000. It is therefore somewhat surprising to find the ordinary dividend is 15 per cent. free of tax for the year, as compared with 25 per cent. free of tax for the previous year, especially as nothing has been added to reserve, and this year it will be noticed our tables for the first time have nothing to record for the directors' "percentages." It may be that directors have undisclosed sources in view which will yield fresh avenues of profits, but with falling sales it is difficult to see how the 15 per cent. distribution free of tax can be maintained. However, the reserve fund stands at £1,000,000 and with total assets at £6,090,366, after deducting various creditors amounting to £2,532,647, there remains £3,557,719 as cover for £2,200,000 of share capital, which must be regarded as a very satisfactory state of affairs. The balance-sheet is analysed in our usual column.

THE People's Commissariat of Foreign Trade, R.S.F.S.R., informs us that the International Nishni-Novgorod (Russia) Fair will open on August 1st, and continue until September 15th, 1922. Permission to firms wishing to attend the Fair may be obtained from the Soviet trade representatives.

THE Board of Trade announces that in order that the Register of Claims against Russia may be completed as early possible, persons, firms, and companies of British nationality having claims which have not yet been

registered should record them with the Russian Claims Department, Board of Trade, Cornwall House Annexe, Waterloo Bridge road, London, S.E.1. Registration of a claim does not imply any undertaking on the part of His Majesty's Government to put it forward, or any assurance that if put forward it will be satisfied.

Obersea Correspondence.

UNITED STATES.—AMERICAN OPINION AND EUROPE'S PROBLEMS—APRIL FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 22.

EUROPEAN problems, economic and financial, received a great deal of attention at the annual convention in Washington last week of the Chambers of Commerce of the United States. Besides President Harding, Secretary of State Hughes, and Secretary of Commerce Hoover, the speakers included some of the foremost bankers and business men of this country.

Secretary Hoover's speech on "The Effect of the European Situation on American Business" attracted wide interest, because it was generally regarded as outlining the United States Government's attitude in its relations with Europe, and also because it was delivered shortly after the State Department's refusal of the invitation to participate in the proposed conference at The Hague. Next to our domestic economic problems, the matter uppermost in the minds of all of us, he declared, must manifestly be the advance of Europe toward the degree of stability which we ourselves enjoy. Business men and economists the world over, he said, have long been in common agreement upon the major steps necessary for its attainment. The conclusions of the great majority were summarised by Mr Hoover as follows: First, such political relations between the states in Europe themselves as will produce an atmosphere of peace, and destroy the atmosphere of war. Second, the reduction of armament, not only to lessen Government expenditure, but to give confidence of peace. Third, the inter-Governmental debts, including German reparations to be fixed upon such a definite basis of payment of interest and principal as will create reasonable confidence that payments will be met. Fourth, the balancing of budgets more through the reduction of expenditure than the increase in taxation, and a cessation of the consequent inflation in currency and short time bills. Fifth, the ultimate establishment of the gold standard with the assistance of either credit or gold loans, and, where necessary, the acceptance of diminished gold content to many old units of currency. There are many less important steps, he said, but they become easy and certain when those major issues are accomplished. If such measures could be accomplished to-morrow, he added, the stream of commerce and industry would rush economic recovery at a pace which would amaze the world. "The most unlikely event on the economic earth," he continued, "is that the United States, as a Government, will again engage in any Governmental loans. As financial assistance must arise from our private investors, then, in order to attract those investors, confidence must be maintained in the progress toward peace and economic stability." It is essential, Mr Hoover further stated, that such loans should be confined to reproductive purposes. The furnishing of raw materials, the construction of transportation facilities, public utilities, factories, and production throughout the world, is a use for American capital that will bless both the borrower and the lender. But loans, on the other hand, that are dissipated either directly or indirectly in monetary expenditure, or in unbalanced budgets, in the bolstering up of inflated currencies, would be, in his opinion, a double loss to the world.

Francis H. Sisson, vice-president of the Guaranty Trust Company of New York, asserted in his address that "Revaluation of some foreign currencies, formerly on a gold basis, seems to be the only alternative to complete repudiation." Mr Sisson also declared that a redistribution of the world's gold reserves might in time be effected gradually through a readjustment of international trade balances. "Whether willingly or unwillingly," he continued, "we must grant liberal extensions of time in the payment of the bulk of the debts due the United States Government by foreign Governments, or continue to forgo receipts."

A. C. Bedford, president of the Standard Oil Company, referred to the "widely held opinion" that there must ultimately be considerable revision in the obligations on Germany. At the same time, he pointed out, the ability of any of the Allies, other than England, to pay their indebtedness to the United States is dependent largely upon German Reparations payments to them. Such a situation, he declared, "constitutes a complex of bad finance, unsound economics, political manoeuvring, of efforts to attain the impossible, and of fundamental failure to face facts as they are, to grapple with realities, and to build upon foundations which the experience of mankind has shown to be dependable."

Another point made by Mr Bedford was the following:—"At the earliest possible moment, after giving due consideration to the fundamental principles which should govern a sound treatment of the problem, both Russia and Germany," Mr Bedford argued, "should be restored to economic productivity and to their full commercial relations with the rest of the world."

Dwight W. Morrow, of J. P. Morgan and Company, spoke of the improving conditions in Western Europe, but thought the extent to which the financial rehabilitation of Europe will help America will depend largely upon how much our commercial depression has been due to the financial chaos in parts of Europe. It is too often considered, he said, that all of our troubles are due to the failure of portions of Europe to recover financial equilibrium. Such, he contended, is not the case. The depression in the United States, and also in England, he asserted, has been due in large part to the fact that a great emergency demand in 1919 led to unsound ex-

pansion, and during the past two years the world has been working back through much pain and travail to a readjustment of values.

Our foreign trade in April showed some decrease as compared with the preceding month. Exports were \$321,000,000, as against \$332,000,000 for March and \$340,464,106 in April of last year. The final returns were something of a surprise because earlier indications were that our export trade was gaining in some lines and also because it was known that cotton exports, as shown by the statistics of cotton exchanges, were 613,000 bales, as against only 325,000 in April a year ago. In just what direction export trade decreased last month is not yet clear, but evidently it was not in cotton. The total exports of merchandise for last month were larger than for any month, except March, since last October. The import total of \$217,000,000 represents a decrease of 16 per cent. from March, and is only slightly larger than the aggregate reported for February. The excess of exports over imports for April amounted to \$104,000,000, the largest since October of last year.

FRANCE—REPARATIONS—THE GERMAN REPLY— THE BANKERS' COMMITTEE.

(FROM OUR CORRESPONDENT.)

PARIS, May 30.

THE German reply to the demands of the Reparations Commission was received to-day, and is accepted here as generally satisfactory. Some quarters here, indeed, go so far as to characterise the German acceptance as "the first manifestation of good faith that has yet been shown by the German Government" in its discussions with the Allies. When it is recalled that a year ago, on May 21, 1921, Germany gave way only after having been served with an ultimatum, it will be realised that substantial progress has been made in the direction of better relations between the former belligerents.

On March 21st the Reparations Commission agreed to grant the German Government a temporary moratorium for its payments during 1922, on condition that it agreed before May 31st to impose 60 milliards of new taxation, balance its Budget, limit its note issue, and submit its public finances to indirect control by the Allied Committee of Guarantees (sitting permanently in Berlin). By the Allied agreement of May 5, 1921, the German payments for 1922 were fixed at 2,000 million gold marks in cash, plus 26 per cent. of its total exports. Under the proposals made on March 21st last this was reduced to cash payments of 720,000,000 gold marks (of which 350,000,000 have already been paid this year) and plus payments in kind to the value of 1,450 million gold marks. The benefit of these concessions, Germany was informed, she would lose if she did not accept by May 31st the conditions imposed on her by the Reparations Commission's Note, and the agreement of May 5, 1921, would again come into full operation (which meant that the payments that have been in suspense since January 1st last, now amounting to about 1,000 million gold marks, would become payable within 14 days), and that, if Germany again defaulted, she would become liable to penalties (which might or might not involve an occupation of more of her territory by the Allied forces).

Experts here are convinced generally that, although the settlement reached will not directly benefit this country for some time yet, so far as ready cash is concerned, it has apparently rendered future prospects much rosier. So far as promises can go, the German reply is a surrender all along the line. The Berlin Government unconditionally accepts a measure of control over its national finances, sets forth the steps it proposes to take to balance its Budget, undertakes to limit its note issue, and promises to ensure the autonomy of the Reichsbank, and to issue honest statistics in the future, or, at any rate, to resume their publication "on the same basis as before the war." Whether this latter modification will prove sufficient remains to be seen, for it is notorious that the German national statistics before the war, notably in regard to her mortality returns, were anything but honest. Nor is this the only point on which the German reply will need strict attention. It is evident Germany's acceptance of

the demand that she shall limit her note issue is dependent on help being given to her in the near future in the form of a certain proportion of the yield from the proposed international loan. From the French point of view this is unacceptable, if put in the form in which the point is expressed in the German reply. It is expected that the Reparations Commission, in its response, will make it clear that Germany must agree, in any case, and quite apart from any question of an international loan, to limit her note issue to a fixed figure. She will also be given to understand that if the issue of the international loan proves practicable, she will obtain a certain amount of direct help from it, but that the two matters must be regarded as entirely independent of each other.*

Much will depend, however, so far as this point is concerned, on the attitude adopted by the committee of banking experts who are now considering the feasibility of an international loan. Mr Morgan and M. Vissering, who represent the Americans and the neutrals respectively, are reported to take the view that a substantial part of the yield from such a loan should be handed over to Germany, to enable her to place her finances on a sounder footing, whereas the Allied representatives on the committee are asserted to support the view that the whole of the amount subscribed should be devoted to reparation payments. On the whole, there appears to be a general feeling here that the banking experts will decide that the issue of the suggested international loan is perfectly practicable, but that it will yet be some time before the world's money markets will be in a fit state of preparedness for such an operation. It is also regarded here as probable that the bankers will make a strong attempt to fix definitely the total amount of reparation payments to be made by Germany, and that to this end they will gather all information possible both in Germany itself and from their own respective Governmental and banking sources of information. In financial circles here it is pointed out that there is no direct reference in the German reply to the forced loan which the German Government is reported to have decided to call for, and it is urged that a formal promise to take this step, and to arrange for penalties to be inflicted on defaulters in regard to such a loan, should be made an integral part of the German undertakings.

A cry of alarm has been raised among French spinners owing to the alleged invasion of the textile area of this country by English yarns. Enormous quantities of these products are stated to have recently been thrown on the markets of Calais, Lille, St. Etienne, and other centres, at prices ranging from 5f to 10f a kilogramme below the rates established by French spinners. One of the latter, in a statement printed here, suggests that the British Government, in order to relieve unemployment in Lancashire, "has offered to pay the millowners a substantial proportion of the unemployment allowances if they will reopen their mills and devote themselves to export trade." In any case, he adds, whether it be due to Government subsidies or private initiative, the British spinners threw on the French markets in January 210 quintals of yarns, in February 550 quintals, and in March 1,140 quintals, and their stocks are far from being exhausted. Some of the Bolton mills, it is asserted, are working full time, and solely for export. Demands are being made for an appeal to the Ministry of Commerce for steps to be taken to protect the French spinners against what is alleged to be "a British offensive on a large scale due to a dumping policy."

The holiday on Ascension day, and the fact that the Bourse is still waiting to know the decision of the Reparations Commission has resulted in there being no very definite movement to record as to the Bourse, though the general improvement noted last week has been fairly maintained. French Rentes are considerably stronger, the Three per Cents. rising from 56.20 to 57.80, the 1915-1916 from 76.55 to 77.40, the 1917 Four per Cents. from 62.90 to 63.70, and the 1918 Four per Cents. from 62.52 to 63.22. The Six per cents are, however, weaker, having dropped from 94 to 93.45. Banks have declined slightly. Railways have fluctuated round about 192.

* Since our correspondent wrote, the Reparations Commission have sent a reply which is discussed in a "Note of the Week" on an earlier page.

week's figures. Shipping has reacted unfavourably to the failure of the Chargeurs Réunis issue in London. Metals have been stronger, Creusot having advanced from 2,045 to 2,240. Mines have been fluctuating. Mexican Eagles have remained unchanged, but Shell showed a slight drop, and Royal Dutch was weaker.

GERMANY.—LOAN PROSPECTS—CURRENCY— EXCHANGE AND BOURSE—MARKETS.

(FROM OUR CORRESPONDENT.)

BERLIN, May 29.

THE Cabinet crisis which was threatened over the concessions made by the Finance Minister, Dr Hermes, during the Paris negotiations has been avoided; but the terms upon which the arrangement for reduced Reparations payments is to be extended, the terms of a possible loan, and the connection between these two things, are not yet clear. The public does not yet know whether Dr Hermes made his concessions conditional upon the loan, or only expressed a hope that as a result of the concessions a loan would be granted. This distinction is radical, because the Cabinet and Reichstag have so far proclaimed that it is impossible to balance the Budget, stop the increase of the Floating Debt, and cease inflation, by raising sufficient further taxes to provide for Reparations in cash and kind. For a withdrawal of the Cabinet's reply to the Reparations Commission's Note of March there is no reason. It is not possible to put before the Reichstag a plan for carrying through the Hermes concessions as preliminary to and independently of a loan. But as the Reparations liabilities were practically the only cause of deficit in the 1922 Budget, and therefore the only cause of the increasing floated indebtedness and inflation, their complete covering by means of a foreign loan would make it possible to put the Hermes concessions into operation. Additional taxation, if at all necessary, would be needed only to cover such home liabilities, arising mainly from the prices and salaries rise, as have accrued since the Budget was presented. On these points Dr Wirth's statement to the Reichstag concerning Genoa cast no new light. Complaining that Reparations were excluded from the Conference, Dr Wirth stated that hardly a single meeting with Ally or neutral representatives took place without Reparations being discussed. Apart from that and from some polite optimism, Dr Wirth confined himself to the Rapallo Treaty, which he defended without any qualification, both as useful in itself and as having been enforced by Germany's exclusion from the victor countries' negotiations with Russia.

The Forced Loan Bill has not yet been put through. A Reichsrat Commission amendment alters the contribution scale, making the rate 1 per cent. on the first liable 100,000 marks and 2 per cent. on the next 150,000 marks, instead of, as originally, 2 per cent. on the first 250,000 marks. Another amendment fixes the interest at 4 per cent. from November 1, 1925, instead of as originally 2½ per cent., to be raised to 4 per cent. only from November 1, 1930. Also in the Reichswirtschaftsrat numerous amendments (which would not, however, bind the Reichstag) are pending. There is still complete uncertainty as to the Bourse quotation, and the rules for lending on security of the loan. Bourse experts declare that a low quotation, which is inevitable on a provisionally non-interest-bearing loan if no support is provided, would send down other Government stocks; and it is suggested that the loan should be accepted at par in payment of certain taxes. The Frankfurter Chamber of Commerce suggests that the interest rate, after the no-interest term, should be 5 per cent., and that it should be freed from the 10 per cent. tax on interest and dividends.

The increase in the Floating Debt of discounted Treasury bills in the second ten-day term of May was 3,092,570,000 marks, and since the beginning of the financial year (April 1st) 13,747,620,000 marks, as against 17,702,513,000 marks in the whole first quarter of financial year 1921-22. The total on May 20th was 285,682,785,000 marks, as against 166,329,187,000 marks at the beginning of the financial year 1921-22. The Reichsbank statement for May 23rd shows a decline of 7,734,327,000 in Treasury bill discounts to 156,470,381,000 marks, but note circula-

tion increased by 1,234,733,000 marks to 144,138,326,000 marks. Kassenschein circulation was 8,989 millions. An official report on the circulation of money contains the following data. In circulation on December 31, 1913, were 3,622 million marks in coins, and 2,753.2 millions in paper, the total being 6,375.2 millions. On March 31, 1922, coins in circulation totalled 535.2 millions, and paper 139,615.8 millions, total being 140,151 millions. The circulation index figure (100 in 1913) rose to 2,198.4. This index increase is much lower than the increase in prices. The official explanation is that the circulation figure is more an indicator of incomes than of prices; that incomes have not adapted themselves to the price rise, and that the relatively small increase of circulation is a proof of impoverishment. It is, however, true that much of the reported circulation is hoarded with the aim of tax evasion, and that part is abroad. The coin circulation in all metals (net sum minted) was 6,410,808,400 marks on March 31, 1914, whereof 4,412,752,600 marks was in gold 20-mark pieces, and 706,672,400 marks in gold 10-mark pieces. On March 31, 1922, coins in circulation were 5,816,988,200 marks, of which 4,450,945,600 marks were in gold 20-mark pieces and 704,894,500 marks gold 10-mark pieces. Silver token money, of which about 1,000,000,000 marks was in circulation in 1913, was demonetised in 1920. Copper and nickel money is still legal tender, but it has disappeared entirely from circulation owing to its metal value exceeding its token money value. The token money actually circulating at present is iron, zinc, or aluminium. Note circulation, comprising Reichsbank notes, Reichskassenscheine, and notes of the private banks of issue, totalled on March 31, 1914, 2,648,556,700 marks, and on March 31, 1922, 139,944,185,000 marks. The last figure includes 8,700,591,000 mark notes issued by the Darlehnskassen, which were created after the outbreak of war. Of the Reichsbank's share, which was 130,671,352,000 marks on March 31, 1922, 64 milliards were in 1,000-mark notes, and 48 milliards in 100-mark notes. The smallest Reichsbank note is 10 marks, but the Darlehnskassen issue notes for 1 mark and 50 pf., for which no article whatsoever can now be bought. The instability of the currency's buying power has been followed by the replacement on a large scale of the small notes with coins of cheap metal.

While a decision on the loan question is awaited, the foreign exchanges have been weak, but not markedly so. The fear in business circles that a favourable solution will cause, at least temporarily, a heavy fall in the exchange continues, checks the giving of orders, and has evoked a demand that the Reichsbank, by selling foreign currencies, should do all it can to counter the movement. As prices have of late risen independently of the exchange movement, and (owing to freight-rate and wage-movements) seem destined to continue rising, a roughly working mark stabilisation is generally preferred to an improvement. A heavy drop of the foreign exchanges—such as occurred in November-December last—would certainly cause a serious industrial crisis, without at first bringing benefit to the State finances, which have fairly well adapted themselves to the present mark exchange. A permanently maintained restoration of the mark to, say, double its present exchange would at first produce chaos.

The Bourse, following the exchanges, has been extremely weak for home dividend-payers and foreign loans, but firm for home loans. Figures in the official "Wirtschaft und Statistik" show how unreal are the

nominal gains reaped by bull operators during the great Bourse boom which began a year ago. Stocks, which averaged 259 in April, 1921, averaged 772 in April, 1922, but in the intervening year the wholesale prices index rose from 1,326 to 6,355, and the cost of living index from 894 to 3,175. It follows that, except perhaps for speculators on margins, there has been no real gain from successful bull operations, and, further, that the rise in stocks quotations has been smaller than the rise in the value of the companies' properties. War Loan to-day was 77.50, 4 per cent. 100, 3½ per cent. 85.20, 3 per cent. 130, Colonial 4 per cent. 124.50, and Savings and Premium 85.10. Great activity continues in Hungarian, Turkish, Austrian and Mexican rentes and bonds. Austrian Staatsbahn 3 per cent. bonds, which in December sold around 90, to-day quoted 1,060; and on the preceding Bourse day Austrian 4 per cent. gold rente, which fell to 30 last year, touched 930.

The markets, with the exception of hides and leather, tend to weakness. The Berlin grain market is dull, showing fears of a mark improvement and reflecting recent weakness in Chicago. Chemicals, with certain exceptions, are being offered in large quantities, and buyers show reserve. Hides and leather have risen sharply, prices at the Berlin auctions on the 26th being from 10 to 40 per cent. above those at the last preceding auction. In textiles reserve is shown. Numerous English and American textile firms have taken action against Germans who failed to deliver goods within the contracted term, and refused to admit their customers' claim to annul the contracts on this ground and to receive back moneys paid on account. Foreign buyers in Germany ought to watch Reichsgericht decisions on such matters, as in numerous cases the "clausula rebus sic stantibus" has been applied to liberate German firms from, or to prevent foreigners denouncing, contracts. Often by fulfilment of their contracts the Germans would have been ruined owing to the change in conditions; but equally heavy losses are sometimes forced on foreigners, who have depended upon delivery by Germans for the fulfilment of their own obligations. In iron and steel there is an increase of imports from France. The Steel Syndicate will this week meet to determine whether prices for half-finished and rolling mill materials shall again be raised. Against the somewhat improved mark exchange stands a further increase in freight rates from June 1st, which will increase production cost by 200 to 250 marks a ton. French heavy iron producers are said to be preparing to come to an agreement with Germans in order to forestall the plans of the Thyssen, Kloeckner, and other groups to set up new blast furnaces instead of those lost in Alsace-Lorraine. At present these plans are checked by extreme shortage of coke. The Allies' demand for reparations coke has risen from 350,000 tons monthly in September, 1921, to 638,000 tons in the present and two following months. The present coke demand is about a third of the entire coal and coke demand, although Germany in 1921 produced only 27 million tons of coke, as against 136 million tons of coal. This enforced delivery has a very bad effect upon the pig-iron production, and it caused in the late winter serious privation, as the central-heated houses in the cities, in which coke is used, could not be sufficiently heated.

ITALY.—POSTAL SERVICES—STATE RAILWAYS FINANCIAL RESULTS—COST OF LIVING AGAIN DECREASING.

(FROM OUR CORRESPONDENT.)

TURIN, May 27.

POSTMASTER-GENERAL has published a very interesting report on the working of his services. The figures (in millions of lire) are based on the estimates:—

	1907-1908.	1922-1923.
Income	151.2	794.2
Expenditure	113.4	962.0

Profit (+) or loss (—) .. + 37.8

The war has played havoc with this great public service. While in 1907-8 there was a margin of 25 per cent. between income and expenditure, in 1922-3 the expendi-

ture exceeds income by 21 per cent. A remarkable decrease in the traffic handled by the Post Office took place between 1917-18 and 1920-21, and is partly attributable to the all-round increase of the tariffs. For instance, parcels, which once cost 0.60 lire up to 3 kilograms and 1 lira up to 5 kilograms, must to-day pay 2.50 lire up to 1 kilogram, 5 lire up to 3 kilograms, and 8 lire up to 5 kilograms, and so the traffic dwindles. In February, 1921, postal charges were increased by 60 per cent. If the traffic had maintained itself at the previous level, income should have increased by 60 per cent. In fact, the increase was considerably less. In the telegraphic services the increase in the tariff charged was only 20 per cent. but (excepting the period from February to May) the income was every month below the expectation by margins varying from 4 to 15 per cent.

In the case of telephones, the experience was somewhat mixed; but when, in January, 1922, to the old increase of 33 per cent. was superadded a new increase of 53 per cent. in the tariff charged, the increase of income fell short of expectation by 24.8 per cent.

Signor Repaci gives in the April number of the *Riforma Sociale* (Turin) an interesting account of the Italian State Railways. Unfortunately, as Senator Bianchi, chairman of the permanent supervising Parliamentary Committee on State Railways, remarks in a report laid on May 17, 1922, before the Senate, the railway administration has not yet published its report for the financial year 1920-21. But, although somewhat belated, the figures calculated by Signor Repaci are of importance as being the first attempt to gauge the financial results of the State railway system from its origin in 1901-6 up to 1919-20.

The following table shows expenses (in millions of lire):—

	1	2	3	4	5	6	7	8	Total.
	General.	Maintenance and Inspection.	Rolling Stock, Fuel, and Repairs.	Trade Services.	Navigation on the State Channels.	Additional Expenses.	Additional Services, &c., not included in Official Accts.	Interest and Amortisation of Capital.	
1905-6 ..	35.3	36.5	93.4	64.9	..	21.0	17.6	241.5	510.2
1906-7 ..	53.4	46.8	122.9	93.3	0.3	25.0	20.5	247.0	610.0
1907-8 ..	54.6	52.5	144.1	104.3	0.5	26.1	20.6	255.4	656.6
1908-9 ..	50.7	57.3	140.7	119.0	0.4	21.6	29.6	256.3	636.3
1909-10 ..	56.0	61.6	159.8	128.7	0.6	22.2	28.6	252.8	690.9
1910-11 ..	59.8	64.7	166.5	133.3	0.7	23.6	29.9	271.4	726.5
1911-12 ..	61.2	70.0	188.8	139.6	0.8	25.7	28.0	279.5	790.0
1912-13 ..	68.5	73.1	193.9	140.6	0.9	26.5	30.2	287.1	821.0
1913-14 ..	72.9	74.4	194.6	144.7	0.9	27.1	34.8	293.9	846.6
1914-15 ..	77.5	80.0	223.6	150.6	1.2	19.7	39.2	303.8	895.9
1915-16 ..	79.9	76.9	340.0	185.5	1.9	24.4	48.8	311.9	1,046.5
1916-17 ..	61.2	85.5	560.7	164.0	2.9	42.6	61.5	312.2	1,390.8
1917-18 ..	102.9	99.8	811.0	218.0	6.3	36.2	82.7	313.1	1,680.2
1918-19 ..	194.8	164.6	855.6	326.1	4.8	64.0	100.4	314.1	2,029.8
1919-20 ..	63.3	312.6	1,528.5	614.0	8.5	72.2	118.1	315.0	3,032.3

The official figures are those for the first six columns. The two columns 7 and 8 had to be estimated by the author so as to give a complete idea of the position. Owing to legal technicalities the railways administration omits in its accounts some items of expenses, which must be included if we wish to have a complete idea of the whole working of the railways. For instance, the interest and amortisation of the old capital invested in the State railways—i.e., the capital invested previously to July 1, 1905, when the State took over the railways from the companies, is wholly omitted from the accounts. Signor Repaci estimates this charge at 214 millions lire, which are included in column 8. The next table shows income (in millions of lire):—

	Passengers.	Baggage and Express Goods.	Goods.	Navigation in the State Channels.	Transportation for State Accounts, Miscellaneous and Indirect Income.	Total.	Deficit.
1905-6 ..	129.5	26.2	183.1	..	8.3	347.2	1,680.2
1906-7 ..	153.9	30.7	221.8	..	15.9	422.5	1,680.2
1907-8 ..	161.9	33.1	238.9	..	20.1	454.0	1,680.2
1908-9 ..	172.1	33.5	249.8	..	25.9	481.2	1,680.2
1909-10 ..	181.1	34.9	274.9	0.5	28.5	516.0	1,680.2
1910-11 ..	186.6	35.6	287.0	0.5	31.7	541.5	1,680.2
1911-12 ..	202.2	42.6	300.7	0.6	32.6	578.1	1,680.2
1912-13 ..	218.3	42.2	311.6	0.7	36.2	609.1	1,680.2
1913-14 ..	227.6	41.4	320.0	0.7	37.3	637.1	1,680.2
1914-15 ..	197.3	45.0	387.7	0.7	36.4	617.1	1,680.2
1915-16 ..	251.3	135.3	376.5	0.7	52.4	816.3	1,680.2
1916-17 ..	324.3	289.9	457.0	1.4	47.6	1,120.2	1,680.2
1917-18 ..	405.3	377.4	467.4	1.3	101.2	1,353.6	1,680.2
1918-19 ..	653.4	323.7	574.9	1.4	111.6	1,665.0	1,680.2
1919-20 ..	734.3	227.6	806.6	1.6	136.7	1,905.1	1,680.2

The extraordinary increase in 1919-20 in the deficit, and the even greater loss which in 1920-21 is known to have been suffered, is an intolerable burden, especially in view of the manifold increases of railways charges. The increase in the price of coal goes far to explain the loss; and so far as coal goes it is hoped that better times have come. But other more permanent causes are at work. The recent debate in the House of Deputies on the Railways Budget was terminated with an unanimous vote on the desirability of a better application of the principle of an eight-hour day for railwaymen. Many members spoke with alarm of the fact that railwaymen understood the eight-hours' principle as an obligation not to work, but to be present for eight hours, so that the effective hours of work are said to be only 2.6. The number of men employed on the State railways went up from 147,289 in 1913-14 to 206,600 in 1920-21, and the average annual cost from 2,065 lire to 9,700 lire. And this greatly increased number of men gives a less efficient service, as appears from the vastly increased cost of damages paid to shippers for delay, waste, thefts, &c. From 3.9 millions lire in 1913-14 (1.13 per cent. on a total of goods carried of 347.4 millions lire) the damages paid rose in 1920-21 to 97.8 millions lire (3.64 per cent. on a total of goods carried of 2,685.6 millions lire). Public opinion, as the debate in the Chamber shows, is awakening to the danger, and the responsible Minister claims that in a year or two things will be once more normal.

The cost of living is again slowly receding; but we are as yet at a level very much higher than the lowest reached last year. The following index number relates to the city of Turin, and is calculated on the basis of the first half of 1914. I have only included the maximum and minimum levels after September, 1920:—

	Food.	Clothing.	House.	Light and Heating.	Miscellaneous.	Total.
First semester, 1914	100	100	100	100	100	100
September, 1920	420.1	531.2	100	430.8	455.9	398.4
March, 1921	536.6	496.8	110	428.5	543.9	472.2
July, 1921	446.3	411.4	120	354.2	537.1	404.7
December, 1921	536.7	448.0	120	433.5	578.3	471.0
January, 1922	523.7	454.3	120	435.4	590.7	465.6
February, 1922	522.7	449.6	120	406.9	597.5	463.5
March, 1922	491.4	437.7	120	383.1	597.5	442.3
April, 1922	470.3	433.3	120	378.0	587.1	424.4

The index applies to a working man's family, with wife and three children, inhabiting a house under the Restriction of Rent Acts. If the family were obliged to find a house in the free market a rent from two to four-fold the pre-war rent would have to be paid.

SWITZERLAND.—IMPROVED EMPLOYMENT—GOLD IN CIRCULATION—INTEREST RATES—RHINE NAVIGATION.

(FROM OUR CORRESPONDENT.)

GENEVA, May 18.

SOME definite symptoms of recovery are now to be observed in Swiss industry. The unemployment figures for April are not yet published, but there was a further important reduction in March. The cotton industry, in particular, is receiving large orders from abroad, and the watch industry from non-European countries, while Government assistance in export to countries with depreciated currency has had, perhaps, some stimulating effect. As to the embroidery industry, it is remarkable that the big leading firms with international sales organisations are still suffering from practically complete unemployment, while smaller firms with simpler organisation are receiving appreciable orders from dealers in various countries. Fortunately, the number of embroidery looms working in small shops is two-thirds of the total. The better demand for labour in Swiss industry has not so far influenced stock exchange quotations of Swiss industrial shares. This market is still very dull, and the balance-sheets for 1921, publication of which is now going on, tend to increase the pessimism of investors. It makes a very bad impression that, for example, the holding company of Brown, Boveri,

the leading Swiss electrical concern, passes its dividend for the second consecutive year.

We have now in Switzerland the remarkable feature that the American dollar has risen considerably over par again, and that gold remains in circulation, having practically driven the 20f note out of use. In other words, gold has now in this country a commercial value less than that of the American dollar. At the shareholders' meeting the chairman of the Swiss National Bank declared that the bank does not intend to start open payments of gold, but to leave the introduction of gold into circulation, as hitherto, to private banks. This means that the Swiss note-bank is not convinced that it is possible to maintain a legal parity between gold and Swiss banknotes under present conditions. It is rather difficult to oppose this view, although practical evidence seems to deny it. Consequently, the Swiss National Bank refuses to pay gold against banknotes, while every post-office gives gold against notes of the National Bank. Of course, the National Bank continues issuing gold coin against foreign coin or gold bars, but never against its own notes.

Since the beginning of May practically all Swiss cantonal banks have reduced the interest on mortgage securities from 5½ to 5 per cent., and some of the urban districts from 5½ to 5¼ per cent. The interest rate on bonds issued by cantonal banks was generally reduced on May 15th from 5 to 4½ per cent., and in many cantons the currency of the bonds has been reduced from five to three years. As to savings bank accounts, their interest has been reduced from 4½ to 4 per cent., and to 3½ per cent. for deposits over 10,000f. Of course, private bankers are practically obliged to follow these regulations of the cantonal stock banks, so that the average income of the small investor becomes seriously cut down. Out of the balance-sheet total of Swiss banks, amounting to 15 milliards, 6 milliards are controlled by cantonal State banks. The reduction of the interest rates on home investments in State banks has had, of course, the effect of making the average investor inclined to purchase securities in the stock market, and also abroad. The average yield of Swiss public bonds has dropped since the beginning of April from 4.9 per cent. to 4.55 per cent., and the next loan of the Federation, which will be launched for the electric construction programme of the Federal Railways, will be issued at the rate of 4½ per cent. This means a reduction of 1½ per cent. in comparison with a year ago.

In the International Commission for the regulation of the Rhine shipping the Swiss point of view of a free Rhine up to Basle was not accepted. France received the right to construct a side canal for the purpose of electric power stations in Alsace. This Rhine canal will be under international supervision, and the rights of Swiss shipping will be safeguarded. Although this is not in accordance with the principal Swiss standpoint, the Federal Government finally agreed that the Swiss representatives on the Commission should acquiesce. The reason for this was that neither France nor Germany would have been willing to spend the very considerable sums necessary for the readjustment of the natural Rhine stream between Strasburg and Basle. Without such readjustment of the natural stream and its regular maintenance, the Rhine to Basle is economically of comparatively small importance.

CANADA.—CROP CONDITIONS—PARLIAMENT AND THE WHEAT BOARD—THE FREIGHT RATES COM- MITTEE—IMMIGRATION SCHEMES—THE FORTH- COMING BUDGET.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 22.

A SPELL of unprecedentedly wet weather during the first two weeks of May has in many districts of Western Canada given a serious setback to farming operations, and delayed seeding beyond the average normal date. The Assinabine River has flooded thousands of acres of the most fertile land in Manitoba, which had already been seeded to wheat, and no crop, except some patches of coarse grains, will be grown on this inundated soil this year. The *Manitoba Free Press* estimates the wheat acreage for Manitoba at 3,325,100, for Saskatchewan at

11,523,000, and for Alberta at 6,379,500 acres; these figures, if correct, mean a decrease of 5 per cent. in Manitoba, and of 15 per cent. in Saskatchewan, which will be partially offset by an increase of 5 per cent. in Alberta. Eastern Canada has had some very heavy rains, but farm work has not been seriously hampered, and is now well ahead. Winter wheat has come through in good condition, and acreage of this crop to be harvested will be ten per cent. greater than last year. The Federal Bureau of Statistics classes the hay crop as at present one or two points behind its state at the corresponding date in 1921, but pastures are good. There is a splendid showing of apple and other fruit blossom, and prospects are good, especially in the Niagara Peninsula, for a bumper fruit crop.

The question of a wheat board and system of control still occupies the attention of Parliament. In spite of the opposition of the Minister of Agriculture, who declared for a voluntary pool, the Agricultural Committee passed last week a resolution recommending the Government to establish a Wheat Board endowed with such powers, compulsory or otherwise, as were feasible within the limits of the Federal constitution. The Cabinet are known to be loath to take this course, but the issue will now be projected into the House, where they cannot command a majority.

The special Parliamentary Committee on freight rates has begun to take evidence. The Canadian Pacific Railway have at last shown their hand, and their President, Mr E. W. Beatty, while expressing his willingness to see a general reduction of freight rates on basic commodities, strongly opposed the restoration of the effect of the Crows' Nest Pass agreement on the ground that a return to the rates enforced by it would cripple the C.P.R.'s revenues. In fact, he declared they would fall short of earning fixed charges and recent dividends by about \$15,000,000. The re-establishment of the Crows' Nest Pass scale in the West would militate against general reductions applicable through Canada. Mr D. B. Hanna, the President of the C.N.R., also testified that the restoration of the C.N.P. scale would last year have meant an increase of over 10 million dollars in the deficits on the National system. The general impression in Ottawa is that the suspension of the agreement will be continued.

The Government have published a new series of regulations governing the entrance of immigrants to Canada. The financial test of the possession of \$250 is abolished, and in its place is substituted an occupational test, which in practice aims to exclude all except trained farmers, domestic servants, and people willing to go on the land. There is still a steady tide of immigrants coming in, and it has increased since the St Lawrence was opened for navigation, but its dimensions are much smaller than in the years immediately before the war, or even last year. Meanwhile the Western Colonisation Association has evolved a comprehensive land settlement plan, embracing every province in the Dominion, and seeking to co-ordinate the colonisation activities of the federal and provincial administrations, the Canadian Pacific Railway and the Canadian National Railways. The scheme is the product of many months of investigation and continuous conferences with the best available Canadian, American, British, and European experts on immigration, with Canadian and American real estate agents, with the heads of banking, trust, and mortgage corporations, and with Cabinet Ministers and civil servants. It contemplates the settlement within ten years, at an expenditure of approximately \$30,000,000, of 10,000,000 acres of idle land adjacent to railways in the three prairie provinces, and of vacant areas in the Eastern provinces and British Columbia. The Association hopes to obtain the endorsement of the King Government for its plan, and to begin the establishment of the necessary machinery.

The Federal Budget will be brought down during the present week, but no hint of its provisions has been disclosed. Both the farm implement and the textile manufacturers are prepared for substantial cuts in their schedules, and the Government is, in view of its attitude upon the Wheat Board, more than ever under the necessity of placating the Western Progressives by tariff reductions.

Mr Lloyd Harris, who was head of the Canadian Trade Mission in London during the later years of the war, and has always been known as a strong Protectionist, lately made a speech in which he advocated free trade within the Empire; but his remarks aroused the ire of the Ontario Branch of the Canadian Manufacturers' Association, who immediately passed a resolution to the effect that while they were prepared to support the principle of preference, they would resist inter-Imperial free trade as fatal to the growth of Canadian industry.

INDIA.—COTTON MIXING—MILLOWNERS' PROSPERITY—RETAIL PRICES—MONETARY CONDITIONS.

(FROM OUR CORRESPONDENT.)

BOMBAY, May 5.

ONE measure introduced into the Legislative Assembly during the session just ended seems to have attracted inadequate notice. This is the Cotton Transport Bill. Its main object is to prevent the mixture of long and short staple growths. The practice of transporting short staple cotton to long staple districts and then retransporting the product to market, where it receives the credit of having been grown in the district covered by the rail-mark, is very prevalent in India. So much so that the Central Cotton Committee, appointed by the Government of India, gave considered attention to the problem. The outcome is the above-mentioned Bill, an all-embracing measure, for which the new Minister of Commerce, the Hon. Mr Innes, is responsible. It calls in the aid of officials, from the Governors of Presidencies and Provinces to station-masters, and there is every indication that the fast-growing evil of cotton-mixing with intent to defraud will in the near future receive a decided check, and will in course of time be eliminated altogether.

Prosperity continues to reign among cotton mill interests in India. At the recent annual meeting of the Bombay Millowners' Association it was indicated that perhaps the future would not be so bright as the present. What was meant, in other words, was that the mills would not, perhaps, continue to pay the very respectable dividends now being received by shareholders. No fear as regards the prosperity of the mills or the industry was intended to be expressed. Huge reserves have been built up during the past half-a-dozen years. Below are tabulated the results of the past year's working of three representative Indian cotton mills, and these figures present a general indication of the industry's well-being in this country. Comparison with recent Lancashire returns would prove interesting:—

	NAME OF MILLS.		
	Phoenix.	Dawn.	Kohinoor.
	Rupees.	Rupees.	Rupees.
Net profit	23,96,455	14,18,629	22,07,401
Brought forward	5,19,280	5,11,318	14,192
Total yearly dividend	175	300	400
Depreciation	1,75,000	85,000	1,35,000
Reserve	8,00,000	5,80,000	4,00,000
Carry forward	5,33,735	2,84,947	55,149

The face values of the above shares are respectively Rs. 100, Rs. 250, and Rs. 500. The total yearly dividend given above represents the amount in rupees distributed per share, and all these dividends are free of income-tax.

According to the latest statistics of the Labour Bureau, the level of retail prices in the Presidency was for last month 62 per cent. above the pre-war level. This figure records a drop of three points on the March, 1922, reckoning and a drop of five points on the reckoning for April, 1921. The percentage increases over the July, 1914, level for April, 1920, and April, 1919, were 71 and 67 respectively. The articles included in this Indian index number are cereals, pulses (staple articles of food among the Indian population), other articles of food, fuel and lighting, clothing, and house rent; no allowance is made for any change in the standard of living since July, 1914. Such allowance, in fact, is unnecessary.

The money market remains unchanged, and the exchange market shows a firm tendency, banks' selling T.T. rate on London standing at rs 3½d. Call money is being offered at 4½ per cent., and the Imperial Bank of India rate remains unchanged at 7 per cent. The active demand for

gold which was in recent evidence has fallen off somewhat, and Bombay Mint metal now stands at Rs. 28 per tola. Ready silver has improved to Rs. 94/12 per 100 tolas. Most of the Indian Government securities are in demand, and there is no change to report in mill shares.

SOUTH AFRICA.—UNION FINANCE—GOVERNMENT AND RAILWAY BUDGETS—FINANCIAL EXPEDIENTS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, May 10.

THE whole Union has received with some relief the announcement in the Budget speech of the Minister of Finance (the Hon. Richard Burton) that no fresh taxation was to be imposed, except certain adjustments in estate and succession duties, making the tariff uniform in the four provinces of the Union. There was a general feeling that, even if the ordinary rank-and-file taxpayer escaped any extra income-tax, there would at best be a steepening in the grade of the super-tax. Additional taxation has been avoided by again taking into revenue some £640,000 from land sales and mining leases. "The wise thing to do in the circumstances of the country was to avoid the necessity of heavier taxation whilst we have this nest-egg, which is there for the very purpose of coming to the assistance of the country in bad times." It was, no doubt, unsatisfactory, admitted the Finance Minister; but if they did not once more take advantage of this expedient, they would be penalising themselves too much in favour of posterity.

Actual revenue last year was £29,106,000, while the estimate for the next financial year is £27,900,000. Revenue last year was only £286,000 below estimate, but individual items varied greatly. Customs and Excise combined were nearly £1½ millions below estimate, postal revenue over £300,000 down, while the proceeds of the diamond export duty at £143,000 were only half the sum expected. But the drop in Customs and Excise was wiped out by income and dividend tax, which realised £5,584,000 as against an estimate of only £4,952,000, super-tax £1,390,000 against a forecast of a round million, and excess profits tax £1,814,000 instead of £1,300,000 estimated for. Mr Burton's remark that the total inland revenue estimated at £16,612,000 had actually realised £18,041,000 was greeted with "A bad estimate" from one of the Nationalists. "It was not a bad estimate," rejoined the Minister amid laughter, "but the efficiency of the tax-collecting department was increased." From gold mining the revenue realised was £2,337,000, compared with an estimate of £1,945,000, but from diamonds the revenue was only £395,000 against £750,000, so depressed has been the trade. The total expenditure was £30,225,000, leaving a deficit of £1,361,000.

The public debt of the Union has been increased by £13,169,000, and now stands at £191,777,000 gross, from which may be deducted a credit of £3,163,000 and sinking funds of £11,500,000. For the ensuing year Mr Burton budgets for an expenditure of £28,718,000, plus some £225,000 special expenditure due to the disturbances on the Rand, while the revenue is put at only £27,900,000, leaving a total deficit of £1,043,000. By taking the proceeds of land sales and mining leases estimated at £640,000, the deficit is reduced to £403,000. But for the Rand disturbances, claimed Mr Burton, which stopped the gold mines for practically three months, the Union might very well have been "sailing on an even keel." Public debt expenditure is found to increase so long as money is voted for development, but purely administrative and clerical expenditure has been reduced

from £15,412,000 to £13,720,000. Pensions reveal considerable increase, largely owing to awards to sufferers in the Anglo-Boer War.

Before the war the railway systems, particularly the Central South African, embodying the Transvaal and Orange Free State lines, made handsome profits. So much so that the Act of Union prescribed that the railways were to be run on "business lines," and no longer as taxation machines. But high cost of labour, the tendency of public opinion to compel the use of white labour on work which could be equally well performed by natives, a matter which also exercises the mine managements, have changed the position very materially.

A year ago a deficit of £693,400 was budgeted for, but in consequence of the disorganisation caused by the strike on the Rand (the March deficit alone was over half a million), the actual figure was more than double, namely, £1,800,700, bringing the accumulated deficit up to £4,400,000. In view of the past experience of huge profits, it is no wonder that the Act of Union "makes no provision for losses on railways, so the total estimated deficit will have to be carried forward until it is liquidated." The railways in the South-West Africa Protectorate are being taken over in spite of their losses and accumulated deficit. For the current financial year expenditure has been reduced by no less than £2,844,000, by elimination of cost of living bonus, modification of the eight-hour day, restricted overtime, and decrease in personnel. Mainly attributable to extra interest maintenance and betterment charges, there are other increases of £1,365,000.

In the opinion of the Minister, the railway administration endeavours to maintain too high a standard, and such is incompatible with cheap rates and the building of extensions. It was preferable to do a big business at a low tariff rather than a small business at a high tariff. The expenditure for the ensuing year includes that on the Protectorate lines representing about £500,000 last year, so the economies are greater than the figures indicate inasmuch as more work is being done. "The Union Administration had spent millions on improvements of lines already constructed, and working improvements, which in many cases do not bring in a shilling more revenue, but simply pile up the capital account and the amount of interest to be paid."

The Union railways comprise 9,500 miles of open lines, and the Minister made the startling statement that "no less than 5,655 did not earn the interest on the £33,400,000 invested in them." To meet the four and a-half millions accumulated deficit, it is proposed to transfer £2,000,000 from the renewals fund, for which an Act of Parliament will be necessary.

I doubt whether such an extensive system in a sparsely populated and industrially poorly developed country (outside the Rand) can obtain sufficient traffic to carry lavish appropriations of 3½ millions each on maintenance of permanent way and equipment, and, besides these, £1,600,000 depreciation or contributions to renewals fund. A total of nearly 8½ millions is an enormous sum in relation to a revenue traffic of only 50,000 tons and 200,000 passengers a day. The Union Auditor-General considers that as the life of rolling stock is estimated at 25 years' replacement, expenditure "must be regarded as excessive, imposing a burden on revenue far beyond that which it is entitled to bear."

The Ministers both of Finance and of Railways think the Union's trade position shows signs of improving, while exports show a tendency to increase. Traversing the statement of colliery interests that high tariffs had driven trade away, Mr Jagger said that export and bunker trade had increased 54 per cent. since 1914, and the ratio of shipment coal traffic to total goods traffic from 18.8 to 21.7 per cent.

Letters to the Editor.

AN INTERNATIONAL BANKING SYSTEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In connection with the consortium plan which is generally accepted as a necessity for the reconstruction of European finances and of international exchange, the suggestion of Mr Vanderlip for an international chain of national banks, not directly Governmental, but rather on the Bank of England model, seems worthy of more general consideration than it has had. America's present stock of gold has gone far beyond a proper reserve, and has become a hoard, not of advantage to America and disadvantageous to the rest of the world. Despite unfavourable conditions of trade here as elsewhere, it is evident that America has a large amount of capital for investment, as the sales of more than a million shares of stock per day on the New York Stock Exchange give proof. The increasing prices are not so much speculative as in recognition of the fact that the abnormal rate of interest is steadily lowering. Mr Vanderlip's suggestion is that the international bank system might usefully be started in America, with American surplus capital and American stockholders, but on the agreement that American shares should be purchasable by the nationals of any country as an international bank was established in that country and its surplus capital became ready for such investment. For this purpose the co-operation of international bankers, especially in America and Britain, is necessary, but it is to be hoped that neither national nor trade jealousies would stand in the way. Through such a banking system hoarded capital might safely be made fluid, and the industries of continental countries might again be given their full opportunity.

Incidentally, such an international banking system of semi-national banks might be utilised to solve the pressing problem of paper currencies. I recall that once in Colombia I drew \$100 on a letter of credit, came out with \$10,000 in my pocket, and spent \$400 for a four dollar Panama hat and \$5.00 for a five cent. box of matches. In that country the gold standard has since been established, and the old currency has disappeared. The Russian paper rouble is, of course, close to the vanishing point, and the German mark is approaching too near that figure. Governments cannot, as such, cope with the situation, but through such a banking system further demoralisation might be checked, as the printing presses are stopped, by establishing a rate at which these banks would accept the paper currency on an understanding with the Government that its obligations for such currencies could be redeemed and obliterated at this price.

Of course, international systems of finance and currency are of no use except to promote and stabilise international trade. At the moment, while America is debating the highest tariff ever proposed, and other countries are placing barriers instead of breaking them down, discussions on this point seem academic. But the protective system is approaching its breaking point, and the world must turn to an acknowledgment of the ultimate principle that nations, like men, can exist and trade only through good will, ready to give of their best by accepting freely the best of others. This is equally good politics and good economics, and unless war is to continue, economic peace must be the basis of world stability.

New York, May 4th, 1922.

Books and Publications.

STABILISING THE MARK.*

THIS is an able and timely memorandum prepared at the request of the German Ministry of Finance by one of the most eminent of the younger German economists. The author begins by pointing out that a violently

* Die Stabilisierung der Mark. By Professor Dr M. J. Bonn. (Berlin) Verlag für Politik und Wirtschaft. 60 pp.

fluctuating exchange makes it impossible to carry out any systematic commercial policy. For the time being, the object in view must be to check a further fall in the gold value of the mark. Such a check would not amount to stabilisation, since stabilisation would require the fixing not merely of a minimum, but also of a maximum value of the mark. If large fluctuations are to be prevented, moreover, the maximum and minimum must not be too far apart. One of the great difficulties is that as soon as the fixing of such a maximum value is mooted there would be a danger of foreign speculative holdings of marks being thrown on the market, with the result that any serious attempt at stabilisation would be impossible. The immediate aim, therefore, should be the limited one of preventing a further fall in the value of the mark.

Professor Bonn next considers various methods of influencing exchange rates, quoting historical examples of each method. First the balance of payments may be directly influenced by exercising control over the buying and selling of exchange, or by arrangements with foreign creditors. Secondly, the exchange can be systematically maintained at a fixed level in relation to some other currency by organised buying or selling of drafts, as was done, e.g., by Austria, Russia, and India before the war, and by the United Kingdom in regard to the American exchange during the war. Thirdly, the value of the currency can be maintained by the institution of a conversion fund (as, e.g., in Argentina). Stabilisation of exchange, however, is only practicable when there is a favourable balance of payments and a reserve—consisting of gold, gold exchange, saleable international securities, or control over credit in a gold standard country—which can be used to counteract a temporary adverse balance. In the case of Germany the balance of international payments is at present adverse, even apart from liabilities on account of Reparations. The account has only been balanced by concealed credit operations—mainly in the form of the buying of marks by foreign speculators.

The author has some interesting remarks on the effects of exchange depreciation upon the volume of exports. He points out that the export of finished goods must be considered in conjunction with the import of raw materials, and while a fall in the exchange value of the mark may directly encourage exports, it makes the buying of materials for later exports more difficult. He does not think that there is much room for the reduction of domestic consumption. "The very heaviest taxation directed to the restriction of internal consumption could hardly result in a more ruthless restriction of the internal market than this continuous fall in the value of money." On this point Professor Bonn is, we think, not quite convincing. No doubt large classes of the community—especially owners of house property and holders of fixed interest securities—are hit by the continual fall in the value of the mark, but some other classes—notably owners of industrial shares—are benefited. The burden of taxes is lightened. There appears to be no doubt that important extensions of industrial and other plants are going on in Germany which denote considerable accumulation of capital, while the profiteer class is said to be as extravagant as ever. We are not convinced that there is not room for an important further reduction of consumption in Germany on the part of a considerable section of the community. However this may be, Professor Bonn is certainly right in concluding that the existing premium on exports resulting from the difference between internal and external prices is not enough to increase exports and contract imports sufficiently to bring about a favourable balance of payments for Germany.

Mere balancing of the German Budget by means of a compulsory loan would not in itself result in the attainment of a favourable balance of payments sufficient to meet reparations, nor is the existing moratorium adequate. Deliveries in kind are little better than payments in cash from the point of view of relieving the adverse balance of payments. The author's principal conclusion deserves to be quoted:—

England, Belgium, and Italy can accept postponement of certain conditions. France's financial existence, on the other hand, is dependent upon the receipt of considerable payments in gold. As the economic salvation of Germany cannot, at the moment, be achieved at the expense of the economic collapse of France,

a way must be found which will free Germany for a definite period from gold payments to France without France having to forego these amounts. It will, therefore, be necessary to advance for about five to seven years at the expense of Germany the sums which Germany cannot pay at the time.

This means, he says, a loan of about 5 to 7 milliards of marks. Such a loan, he thinks, would bring with it an alleviation of the German balance of payments and an improvement in the dollar exchange. It would then not be difficult for the Central Banks of the world, acting in co-operation, to keep the exchange at about the new level—i.e., to fix a minimum value for the mark in the exchange market. Internal prices in Germany would gradually adjust themselves, trade could be freed from restrictions, and the Budget could be balanced. The mark would not yet have been stabilised, but the foundations would have been laid for future stabilisation.

WASTE.*

THIS book contains the results of an investigation undertaken towards the end of 1920 at the suggestion of Mr Hoover, the first president of the Federated American Engineering Societies, into the restrictions and wastes in industry. The essence of the plan was to gather quickly such concrete information as might be used to stimulate action and lay the foundation for other studies. The present volume is, therefore, a preliminary study based on a careful examination of a considerable number of establishments in six industries only, viz., building, men's ready-made clothing manufacturing, boot and shoe manufacturing, printing, metal trades, and textile manufacturing. Detailed questionnaires were sent out, and a large amount of "field work" was done by investigating engineers, as is indicated by the fact that some 50 engineers spent about two months each in securing the information upon which the reports are based.

As regards the different elements of waste, the book is chiefly interesting as showing their variety and relative magnitude. It is estimated that over 50 per cent. of responsibility for existing waste in industry in America can be placed at the door of management, and less than 25 per cent. at the door of labour, while a smaller amount is chargeable to outside contacts—the public, trade relationships, and other factors. The investigation also emphasises the wide difference which exists between the best and the average firm in each industry. For every one point representing waste assessed against the best plant, there were assessed against the average plant a number of points ranging from 1½ in building and textile manufacturing to 4½ in the metal trades.

The investigators have carried out a useful inquiry of a novel character, and it is to be hoped that they will see their way to make a more extensive survey. We think, also, that something of a similar kind might well be attempted in this country. The elimination of waste is no less important in industry than in the public service, and a more accurate knowledge of the facts would not only make for improvement of industrial methods from within, but also facilitate the framing of a progressive industrial policy for the country generally.

* "Waste in Industry." By the Committee on Elimination of Waste in Industry of the Federated American Engineering Societies. (New York) McGraw-Hill Book Company.

A BOLSHEVIST IDEAL.*

THIS "Interim Report of the State Economic Planning Commission of the Council for Labour and Defence" of the Soviet Republic is published for the Information Department of the Russian Trade Delegation in England, and consists of articles by experts dealing with the conditions of the famine region and the necessary remedial measures. That region, apart from Uralsk, covers nearly 238,000 square miles; its population was 19 millions, and its annual wheat crop averaged about 3,000,000 tons, of which 35 per cent. went abroad. Its varying soils are elaborately described: among the remedial measures suggested are the dispersion of the huge villages in the lower Volga region, in some of which an inhabitant may

* "The Restoration of Agriculture in the Famine Area of Russia." Translated from the Russian by Eden and Cedar Paul. (London) Labour Publishing Company, Limited. 5s.

live ten miles from his holding; co-operative farming; water storage and irrigation; promotion of the fisheries, and of numerous and varied home industries; public works; above all, vast electric power stations, worked partly by water and wind, but mainly by burning the great local deposits of bituminous shale—which, however, is not good fuel. There is much statistical detail, though when we learn that the repair of bridges on 20 miles of line will employ 76,000 workers, and the building of a wooden bridge 76,580, we suspect mistranslation, unless a "worker" is an abstraction, like a "ton-mile." Apart from this vista of conscripted and possibly unpaid labour, the book presents a very attractive ideal; unfortunately, even if the Soviet Government could get the means, there is no reason to suppose that it will ever have the power, or its subordinate authorities the energy, to realise its plans. Even if they had, a public authority, especially if it repudiates money in principle, is not under the necessity of constantly considering whether it is spending more than it will get back.

The 13th annual issue of the "Oil and Petroleum Manual" has just been issued. Since its inception in 1910 the "Oil and Petroleum Manual" by reason of its complete information, has been recognised as a valuable work of reference on the oil industry. Owing to the public interest now taken in oil-producing companies, and to the increasing demand for oil and its by-products, and also to the keen competition for new oil-bearing properties, the 1922 issue of the "Oil and Petroleum Manual" makes its appearance at a most opportune moment. This year's issue contains full particulars of 615 companies, producers, refiners, carriers—pipe and steamship—and oil finance companies operating in all parts of the world. Special attention has been directed to the principal American and foreign companies. Lists are also given of the officials connected with the companies. A table showing the monthly production of the principal companies known on the London Stock Exchange for 13 months ended April 30, 1922, is also given, together with the world's annual production of petroleum since 1913 from the principal contributing countries. The glossary of technical terms is also very useful.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
 June 14. June 15.

THE gravity of the Irish situation, the attractions of Epsom, the sudden inrush of summer, and the approach of the Whitsun holidays combined to undermine activity in the Stock Exchange markets other than for Home Railway stocks and certain industrials. The speeches of Mr Lloyd George, and the more conciliatory tone adopted by French politicians, served to allay some of the nervousness recently apparent in connection with Genoa. French and German bonds have recovered sharply. In fact, there has been more doing in foreigners, at any rate, from the speculative point of view, than in the market for Home Government stocks, where the War Loan stands out as the firmest member of the group on account of reinvestment of part of the interest money distributed on Thursday.

Apart from the War Loan, British Government stocks have gone softly, and it is noticeable that the Home Railway Prior Charge list has started to ease off, after its long and continuous upward movement. Of the lately issued Colonials, the price of Straits Settlements 4½ per cents, which came out at par, is about 1½ discount, the underwriters being left with 98 per cent. of the stock. The New South Wales 4½ per cent. scrip offered at the same price, stands at 2½ discount. British Guiana 5½ per cent. Loan at 99½, though not a trustee security, was snapped up immediately. Amongst other subscription lists that closed almost as soon as they were opened this week, may be mentioned those of the Madras Electric Debenture and the Antofagasta Nitrate Debentures. An important industrial issue, said to involve some five million pounds capital, is reported as being on the stocks for issue soon after Whitsun.

The more cheerful sentiment engendered in connection with the French outlook made itself apparent in brisk rises amongst French Government Bonds and the Scrip issues of the French Railway Loans. The three German series also moved up rapidly. Russians, however, have given way. The announcement that the coupon due on the Chinese (Vickers) Loan will be duly met, brought about a jump of several points in the price of the bonds, other Chinese issues participating more quietly. Helsingfors 4½ per cent. have gone back, there being no fresh information concerning the expected Finland Loan. Peruvian Corporation stocks spurted under the buying of French speculators, although the top prices were not maintained.

The Home Railway market continues to be the most lively in the Stock Exchange. The carry-over on Tuesday disclosed a modest bull account in a few stocks, but in others the dealers appear to have none too much supply on their books, judging by the way in which contango-rates ran off in the later adjustment of rates. People have been taking profits on the eve of Whitsun, but it is noticeable that a fairly strong body of support stands behind the market, and that interest is keenly anxious to take advantage of the speculative possibilities still held out by the uncertainties connected with the grouping arrangements. Caution suggests that the remarkable rise which has taken place in prices this year may have gone sufficiently far to justify a little selling, with a view to possible replacement of the stocks at lower prices later on. The Grand Trunk and Mexican Railway markets have been dormant. Argentines are in greater favour again, and something of a feature in this department is the way in which Antofagasta, San Paulo and Western of Havana stocks advanced. Leopoldina preference strengthened on the declaration of the usual dividend, though the ordinary stock once more receives nothing.

Raw rubber strengthened a few farthings without this having any particular effect upon the share market. The oil list is disturbed by fears that the Shell dividend, the announcement of which is due immediately, may be reduced from the regular 5s per share. This caused weakness throughout the oil leaders, and prices are lower on the week. Strength is shown by the textile division. There has been little doing, and comparatively small changes in the markets for shipping, banking, insurance and brewery descriptions. Dunlops were run up smartly on the statement that Sir Eric Geddes is to take command, but the rise brought in a few sellers. Marconis were turned out by the profit-snatchers, and cable stocks are heavy, apparently on realisations by holders who fear the competition of wireless. The Eastern Telegraph Company, by the way, celebrates its jubilee this month. Electric lighting shares keep strong, gas stocks are tolerably steady, and the iron and steel market waits upon developments in connection with the engineers' lock-out. Brunner Monks improved as the result of the dividend announcement. Hudsons Bays hardened, but other land shares merely marked time. The scarcity of stocks in the trust companies is as pronounced as the demand for them.

After South Africans had enjoyed a little animation on the knowledge that a settlement has been reached in connection with the ex-enemy shares held by the South African Custodian, the market fell back into a very quiet rut. De Beers sympathised with the strength shown by Paris-held stocks, and Rio Tintos advanced on purchases from the same city. Rhodesians were redeemed from complete inactivity by a little gambling in Selukwes. Barrier shares responded to a certain amount of buying from Australia. The various shares connected with tin, the metal, have attracted no particular attention, and the same observation is applicable to Indian, Mexican and miscellaneous mining shares.

NEW ISSUES.

British Guiana Government £1,000,000 5½ per Cent. Sterling Loan of 1922.—This is an offer for sale of the whole amount at 99½. Principal and interest are payable in London. The loan will become due and payable on July 1, 1972, but the British Guiana Government reserves the right to retire the whole issue at par on July 1, 1942, or after this date upon giving six months' previous notice. A cumulative sinking fund, which will be sufficient in the aggregate to redeem bonds

when they become payable, will be provided; the first payment is to be made on March 1, 1925. The payments to the sinking fund will be made by the Government of British Guiana to the Crown Agents for the Colonies, Millbank, London. These bonds are a direct obligation of the Government of British Guiana, and are secured on revenues and assets of the colony and rank *pari passu* with all other loans of the colony, which are outstanding, whether local or otherwise, subject only to a prior charge for the Civil List, which is approximately £23,000. No other prior charges may be created. The proceeds of the loan are required to meet the cost of sea defence works, railway improvements on the coast, drainage, and other public works. The public debt of the colony of British Guiana amounted at December 31, 1921, approximately to \$5,600,000 (£1,166,666). Since that date a loan of approximately \$2,000,000 has been raised in British Guiana, the proceeds of which are to be used in assisting in carrying on the works for the purpose of which the present loan is being issued. The total revenue of the colony for the year ended December 31, 1920, amounted to \$6,099,238.59 (£1,270,675). The surplus of revenue over expenditure for the year amounted to \$1,265,411.27 (£263,627), and the total balance at the credit of the surplus and deficit account at December 31, 1920, was \$2,122,445.87 (£442,176). The prospectus states that "the official figures for 1921 are not yet available, but the total balance at the credit of the surplus and deficit account on December 31, 1921, was approximately \$1,000,000 (£208,333)." It should be noticed that this is not a trustee security. We also refer to this issue in "Notes of the Week."

Dominion of New Zealand, New Plymouth Borough Council 5½ per Cent. Loan.—Issue of £142,000 in debentures to bearer. Principal and interest payable in London. The principal is repayable at par on April 1, 1933. The issue has been sold at £98 per £100, and these particulars are taken from a public announcement made to comply with Stock Exchange regulations. It is stated that "subject to existing loans, this issue is a direct obligation of the borough." The debt of the borough at March 31, 1921, was £425,274, of which £257,118 was represented by revenue-producing undertakings. The loan is further secured by a threepenny rate. A threepenny rate produces £19,499, and the unimproved value for rating purposes is £1,559,930, but we are not informed what the present total annual rates are. The issue is free from New Zealand taxes, unless held by people domiciled in New Zealand. A fairly good issue in its class.

Peter Walker and Son, Warrington and Burton, Limited.—Authorised share capital £3½ millions, of which £3½ has been issued. There are also £1,000,000 4 per cent. first mortgage debentures issued, and the company is authorised to borrow up to £1,200,000 in all. The following details are taken from an announcement which appears in the press in order to comply with the regulations of the Committee of the London Stock Exchange in connection with an application for leave to deal in £1,000,000 of issued 7½ per cent. "B" cumulative preference shares. These rank after £1,000,000 of 5 per cent. cumulative preference shares of £10 each. The company undertakes not to create further shares ranking in priority to or *pari passu* with this issue. These 7½ per cent. "B" cumulative preference shares were issued in July, 1920, undivided profits to the amount of £1,000,000 standing to the credit of general reserve having been capitalised and applied in paying up the shares in full. The company has guaranteed the principal, interest and dividends of the debenture and preference stocks of two subsidiary corporations, viz., Peter Walker and Son Property Corporation, Limited, and Peter Walker and Son Property Corporation No. 2, Limited. It is stated that 998,000 of these "B" preference shares have recently been purchased ex June 30th dividend by Helbert, Wagg and Co., Limited, on behalf of themselves and others at the price of 18s 3d per share, less a commission of 1½d per share paid to them by the vendors. According to the *Stock Exchange Official Intelligence* for 1922, all the ordinary shares of this concern are held by Peter Walker (Warrington) and Robert Cain and Sons, Limited. This information is supplemented by a circular sent out by a city financial house, in which it is stated that the net assets available as cover for "B" preference shares amount to £3,025,459. But it mentions that assets include a sum of £1,061,659 in respect of goodwill. From this circular it would appear that profits should be sufficient to provide preference dividend needs. But having regard to the particular industry and the boom bonus share issue, the investment must be regarded as somewhat speculative.

The Madras Electric Supply Corporation, Limited—Authorised share capital £380,000, divided into shares of £1 each. The issued capital consists of 211,965 ordinary and 74,935 6 per cent. cumulative preference shares. First mortgage debentures have been issued for £151,875. This is an issue of 200,000 7 per cent. second (registered) debentures at 95 per cent. These debentures will be repayable at par on December 31, 1947, by means of a cumulative sinking fund, beginning in 1926, to be applied by annual drawings at par or

by purchase in the open market. The prospectus states that "the debentures of this issue outstanding will be redeemed at 102 per cent. if and when the undertaking of the corporation is purchased by the authorities (the earliest date being August 29, 1947), or the whole or any part of them may be redeemed at any time after January 1, 1932, at the option of the corporation, on giving six months' notice, at 102 per cent." They are to be secured by a trust deed constituting a floating charge on assets subject to existing issue of "first mortgage debentures." Surplus assets available as cover for these debentures are valued at £356,528, excluding proceeds of present issue. On the basis of 1920 revenue figures, there should be a margin after payment of all loan and sinking fund charges. Subject to industrial risks, the offer represents a fair return on capital.

The Antofagasta Nitrate Company.—Incorporated under the laws of the Republic of Chile. Issued share capital \$96 millions (Chilean currency). The Chilean currency is taken at \$35 to the £, at which rate the capital would be £2,742,856. This is the present rate, but the pre-war par was 13.3 to the £. Registered first mortgage debentures for £500,000, bearing interest at 6½ per cent., are now offered for sale at 97½. These debentures will be secured by a trust deed under Chilean law as a first specific charge on the company's land and estates in Chile. They will be redeemed, it is stated, by a sinking fund, beginning in 1924, of £34,000 per annum, to be applied by purchase of debentures at or under 102, or by drawings at 102, redemption to be completed by 1939. The prospectus is accompanied by a letter setting out the profits and their distribution for the last ten years, showing an average of £427,904 per annum. The lower profits last year were due to the disturbed condition of the nitrate market. Interest and sinking fund on the debentures will require £66,500 per annum, so that the margin of security is wide even on last year's reduced figures. The proceeds of the issue are required to complete payment to the Chilean Government for additional lands acquired, for development of the properties, and for redeeming a small amount of existing debentures in order that the present issue may have a first mortgage over properties. In 1920, \$40 millions (say £1,142,857) of reserve funds were capitalised and distributed to the shareholders in shares, "thus retaining these accumulated profits for further development." The latter sentence, however, is not a very convincing argument for bonus share distributions. This is a reasonable offer clearly set forth, and the company has a good record. In view of the present difficulties of the nitrate industry, the terms might not appear over generous. But the directors' confidence was vindicated by rapid over-subscription.

Bobby and Co., Limited.—Authorised share capital £850,000, of which £600,000 has already been issued. This is an issue at par of 50,000 6 per cent. cumulative preference, and 100,000 7½ per cent. cumulative preferred ordinary shares, all of £1 each. Surplus assets of the company are valued at £691,714. This includes goodwill at £25,155, but excludes the proceeds of the present issue. Six per cent. preference shares form part of a total issue of £300,000. These rank first, while the 7½ per cent. preferred ordinary amounting to £350,000 rank next, followed by ordinary shares for an authorised amount of £200,000, of which £100,000 only has been paid up. These preference issues are somewhat top heavy, and though it is pointed out that there are no debentures, the fact that the company owes the bank £100,000 at the present time, shows that charges can be made on assets. A little information as to method of valuing stock and depreciation allowance would have been useful. Profits are shown for one year. This shows that the company is making a good trading profit. The shares will probably interest a large number of people who have a sentimental attachment to this popular seaside house.

Incomati Estates, Limited.—Authorised share capital £250,000 of which all has been issued. There are trust certificates and debentures outstanding for £37,500. This is an offer for sale at 101 per cent. of £70,000 8 per cent. registered debentures, being part of a total authorised issue of £125,000, of which £100,000 has been issued. These debentures are secured by trust deed constituting a floating charge upon assets subject to the above-mentioned trust certificates and debentures of a company engaged in the business of sugar plantations and manufacturers. These registered debentures are to be redeemed at 102½ on January 1, 1937, but the company has the right after January 1, 1925, to redeem at 105 per cent. In the offer for sale, surplus assets available for cover are valued at £519,601. It should be noticed, however, that estates have been "recently valued," and certain other items are taken "at cost" without date of purchase, which is a point very important to know. Net profits for three years are given before allowing for depreciation, taxation and directors' fees. According to the *Stock Exchange Official Intelligence* for 1922, nothing was paid on the preference shares for 1920. Accounts for 1921 have not yet been issued, although we notice that the summary of assets is as at January 31, 1922. No mention is made as to any Stock Exchange application for quotation purposes. Although the com-

pany is precluded from creating any specific charges ranking in priority to or *pari passu* with these debentures, the offer is only suitable for the consideration of those who realise the risks involved and the difficulty of effecting sales of the security in the event of there being no Stock Exchange market.

Taymouth Castle Hydro Hotel, Limited.—Authorised capital £75,000, divided into shares of £1 each. This is an issue of the whole amount at par. The company has acquired for £25,000 Taymouth Castle, with 500 acres of "policy" grounds and salmon-fishing rights in Loch Tay and the River Tay, for the purpose of carrying on a hydro hotel establishment. Kenmore village, which consists of a modern hotel, several cottages, and shops, is included in the sale. It is proposed to spend a considerable sum in installing electricity for lighting, cooking, and heating, and a waterfall acquired by the company is available for this purpose. The property has apparently been purchased on very reasonable terms. Although the special privileges and reduced hotel terms offered to shareholders may attract the bargain seeker, the proposition at its present stage is one mainly for opulent investors.

We are informed that the issue by tender of £100,000 South-end Waterworks 5 per cent. preference stock was largely oversubscribed. Tenders at £85 2s 6d and above will receive allotment in full, and at £85 2s about 76 per cent. Tenders below £85 2s will receive no allotment.

CAPITAL PAID UP - £800,000 RESERVE LIABILITY £500,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

COMPANY MEETINGS, &c.

THE FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION, LIMITED.

MR HER

profits for the association. The contract for this machinery was placed before the war, and although we had to consent to raise the price, still it came in far below to-day's values. £7,769 has been expended on the ropery belonging to the association, which is now making ropes, banding, &c., not only for the associated mills, but also for sale in the outside market.

About £10,000 has gone in warehouse alterations, making in three mills economy in the handling of the yarn, and the balance has been spent in the research department. We have so far placed capital expenditure on this department to our property account, but when it is completed the amount will be written off against the £35,000 you put on one side for the purpose, and which, as yet, stands untouched in our balance-sheet. If you will follow the figures down you will see that this year we have placed £180,000 to the depreciation account; for many years we took £140,000, then raised it to £180,000, and last year to £220,000; but the fact that we have this year run such short time, and the perhaps more important one that the cost of machinery has been greatly reduced, has led your board to the decision that for this year, at any rate, £180,000 was an ample sum to appropriate for this purpose. You will notice we have only laid out £151,567, although we have made every renewal that was necessary to keep the mills up to the top of their form. In addition to this, we have spent £136,000 on repairs, and have written this sum off profit and loss account. Prices for all classes of repairs are still very high, and no doubt in future years this item will be considerably reduced. This brings the depreciation fund to £787,945, and gives the value of our properties in our books at £5,404,593, an increase of £79,370 over last year.

SUNDRY INVESTMENTS.

The next item is "sundry investments, &c." It stands at £4,436,135, an increase of £448,047. This increase is occasioned by the amount we have had to lend to our French mills for reconstruction, about which I shall say a word presently, and by loans we have had to make to many of our subsidiary companies for the purpose of their businesses.

STOCK-IN-TRADE.

Stock-in-trade comes to £3,078,866, and shows a decrease of £729,420. I am glad to be able to tell you that the decrease is all in yarn and stores; cotton itself shows an increase. Yarns are down 950,000 lbs in weight, and £692,590 in value. Stores are down £105,887. The reason for the reduction in stores is mainly that we have carried a very heavy stock of coal, and when we saw the price must come down and the position was safe, we used up all our surplus stocks. We have not yet replaced them, but we shall do so as soon as we consider values have come to a safe level.

YARN.

In the yarn section the policy of the board has been during the whole of the year to reduce stocks; it was obvious that wages must come down, and it was equally obvious that this reduction would reduce the value of our stocks of yarn. Our managers made valiant efforts to carry out the policy of the board, and although trade did not permit the full reduction we aimed at, still you will admit their work was not without effect. You will notice the reduction in value does not correspond with the reduction in weight, but had there been no reduction in price during the year our stocks would have stood at something like £450,000 more than they do, a fact you will easily see has had some considerable effect on our profit and loss account. I am sure, however, that you will approve of the policy of your board in taking a safe and even a conservative view of the value of stocks.

TRADE AND OTHER DEBTORS—A GOOD SIGN.

Trade and other debtors, £1,466,702, is an increase of £80,395, and is a very good sign indicating the increase of our business. I am glad to tell you, in addition, that our list of overdue accounts, always a feature watched carefully by the executive, shows a gratifying reduction on the year.

Cash at bankers shows that we have a credit against our unsecured account of £32,398, instead of, as last year, a very considerable debit.

LIABILITIES.

Turning to the other side of the balance-sheet, you will see that the capital issued stands exactly as last year, and that there is no change in the reserves. The insurance fund stands at £148,830, an increase of £13,444, this being the excess of premiums over claims on the 10 per cent. undertaken by the association. I hope it will not be long before our auditors advise us that we may safely take a bigger percentage of the risks.

THE PENSION FUND.

Our pension fund shows an increase of £1,050, this being the interest on the invested portion of the fund. The number of pensions granted during the year is 40, and the total number of your old workpeople drawing pensions at the present time is 99. Every one of these pensioners has given over 30 years, and some over 50

years' continuous service in the mills of the association, and are now incapacitated for work. The total number is smaller than we anticipated when we started the scheme, and when I tell you that we have nearly 1,200 workpeople who have completed from 30 to 67 years' service, you will agree that no attempt on the part of our workpeople has been made to take undue advantage of this fund.

The research fund I have already mentioned.

The superannuation fund shows hardly any change.

Loans, £209,722, show a reduction of £62,546.

Creditors on bills and open accounts, £1,348,517, shows an increase of £283,715, indicating the increased volume of trade, and largely the fact that we have more cotton bought on which we have given bills than we had a year ago.

PROFIT AND LOSS ACCOUNT.

This brings me to the profit and loss account, which you will find at the top of the page. You will see that we brought forward £185,906, and that we have made a profit of £613,339, this profit being £490,524 more than that of last year.

The total sum we have to dispose of is, therefore, £799,246, and from this must be deducted debenture interest of £110,000, leaving a sum of £689,246.

The profit of £613,339 is arrived at after charging all expenses in the ordinary way, the only difference from pre-war sheets being the item for enemy debts, and the adjustments of E.P.D.

ENEMY DEBTS.

As regards enemy debts, the bulk of these have been dealt with in former stocktakings, but we had amounts owing for stocks, &c., which had been lodged with the German Public Trustee, and which we had a difficulty in obtaining. Some months ago we sent our secretary and our accountant to Berlin, and they were able to make a satisfactory settlement of the greater part of these accounts, and we have been able to bring into our profit and loss account a sum of £40,000. We have still more accounts to settle, and another journey to Berlin may be necessary, but we shall hope to bring the balance into the next stocktaking. The E.P.D. account is one which, at the moment, it is best not to discuss too closely. It cannot be considered without including the question of damages to property in France, and we must not overlook the fact that we have not yet arrived at a final settlement with the Inland Revenue.

The amount that the board decided to bring into the accounts was settled after careful consideration of this position, and represents an amount over provided in our accounts in previous years.

I ought to say that the delay in coming to a settlement with the Inland Revenue does not mean that we have any disagreement with them. It simply arises from the complexity of our figures, and the great amount of arrears of work which have accumulated at the Inland Revenue offices. We have treated the officials of the Inland Revenue with the utmost candour, have found them on their side anxious to act fairly towards us, and do not doubt in due course we shall arrive at a just and proper settlement.

A GOOD RESULT.

I hope that our figure of profit for this year may appeal to you as a good result. Had the trading of the period been normal, it is one we should have been disappointed with, but when you consider that for the first five months we were working very short time, and made a loss, that we have suffered from a further decline in the value of our stocks of yarns, and that we have also been handicapped by the almost entire lack of demand for our very fine ranges of yarns, it seems to me that we may congratulate ourselves on having such a respectable figure to dispose of. Coming back to that figure, if you turn to the front page, you will find it again, and you will see that we paid interim dividends of £190,375, and have now left a sum of £498,871 2s 3d to dispose of, and I have no doubt our chairman, when he comes to the next resolution, will give you reasons for the manner in which we propose to divide it. We only gather together for this short meeting once yearly, and I know you expect a few words on our big subsidiary companies.

COTTON-GROWING INVESTMENT.

On our investment in cotton growing, I have to give you a poor report. This company had last year a partial failure of the crop. With half a crop it is impossible to make profits, and, in this case, the result was a considerable loss. Fortunately, they had reserves to cover this loss, but we received during the year only the interest on our gold bonds. The cause of the failure of the crop was the boll weevil, but I am glad to tell you that, in conjunction with the Board of Agriculture at Washington, our friends on the plantation are confident that they have at last found a means of checkmating that annoying insect. I refer to the system of poisoning, which was tried partially last season, and on all land where it was applied a crop was raised. For instance, it was applied on 900 acres where our new strain of cotton was planted, and 600 bales of cotton were raised, while on a similar extent of land next to this, which was not so treated, practically no cotton at all was gathered.

This season they have the machines and they have the poison to treat the whole estate, and, given reasonable weather, there should be no doubt of a crop, and if you get a crop a profit is practically certain. The Cotton Company is very anxious that we should inspect their work, and see the perfection to which they have brought the estate, and we have promised to send a number of directors this autumn, so next year you may expect an interesting, and I hope a pleasing, report.

THE FRENCH MILLS.

Turning to the French mills, you will remember that we have three French companies, and we have one English company trading in France. These are now in very different condition from that of a year ago. The French companies are just complete, are now in full running, and are in really magnificent condition.

The English company has two mills complete, with a total of 150,000 spindles; the third mill is not yet filled, partly because we have not as yet received one penny for reparations through our Government, partly through a difficulty about workpeople, which will take a year or two to put right, and partly because we wish to see what direction trade in France will take when it settles after the war, and when it has adjusted itself to the spindles and looms of Alsace, before we decide the nature of the machinery we put into this third mill.

None of the companies has done really well this year. Trade in France has been quite as bad as with us, but all have made a profit and all have paid a dividend. They are now finding improved trade, and there is every prospect of satisfactory results in the future.

REPARATIONS.

The settlement of Reparations goes very slowly. For our French companies the French Government has done a great deal, but we have not yet obtained a final settlement, and at the present time I do not think it would serve any useful purpose to discuss these figures.

For the English company we have not as yet received anything, but we have only just obtained the completed claim made out for us by the French Government, and been able to hand this to our Reparations Committee. We are pressing our claim there, and we are also bringing the claim for stocks of cotton and yarn before the Mixed Arbitral Tribunal. We have the best advice that it is possible to obtain, and with our direct claim and our indirect claim on E.P.D. account we shall, I feel confident, eventually settle this matter without loss.

CRUSHING TAXATION AND GOVERNMENT INTERFERENCE.

In spite of the time I have taken, you will, I think, expect me to say one more word upon our future prospects. It would be useless to pretend that we have as yet the prospect of an easy normal trade. We still suffer from crushing taxation, and undue interference with trade by our Government, and the general unrest and poverty of Europe. The next year or two must be years of uncertainty and must call for the exercise of every quality of foresight, of unceasing effort, and of good fortune, if we are to give you the results you desire.

A BRIGHTER FUTURE.

But I think the worst is over. We have got our values back upon a reasonable basis, and thanks largely to the good sense and goodwill of our operatives can now produce our yarns at a price that should ensure a sale. Fashions, which have been so much against us, show some slight signs of becoming more favourable, and I think we may look to the future with more hope than we were able to a year ago.

For ourselves, we have a fine concern to-day at a low value; we have a management in our mills, and an organisation that can and will take advantage of every breeze of fortune. We have the most skilled workers that exist in any mills in the world, who, I am happy to say, in the main, co-operate with the management in the most friendly spirit. We have not only the name but are actually the producers of yarns that cannot be beaten, and, personally, I think cannot be equalled by any other spinners in the world, and there is every reason to believe that, given reasonable trade, this association can and will render a good account of itself. (Applause.)

Now, gentlemen, I have very much pleasure in moving the resolution:—"That the directors' report and accounts, as presented to this meeting, and upon which a report by the auditor has been read, be and the same are hereby received and adopted."

The Chairman: I will ask Mr Bellhouse to second the resolution.

Views of Mr VERNON BELLHOUSE.

Mr Vernon Bellhouse, in seconding the resolution, said: I think that after the able explanation of the figures that has been given by our managing director, you will unanimously pass the resolution which he has proposed. It is perfectly true that we have passed through a very difficult year, with a measure of success

which, I venture to think, hardly any of us could have anticipated. Let us hope that it may continue. (Hear, hear.) With our wonderful equipment in mills and machinery and the staffs at our mills, including both management and operatives, we are certainly in a magnificent position for taking full advantage of our opportunities. And, personally, I think they are much brighter than they were at this time last year.

RESEARCH WORK.

Your managing director has referred to research, and as this is a subject in which I take a very deep interest, I may, perhaps, be allowed to make a few remarks upon it. Since the war, research has been very much in everybody's mind, so much so, that in war parlance it has been "Let us have research and yet more research." I maintain that this country has been built up on research, and that the premier position which it holds among the nations of the world has been owing to research, and other nations which, perhaps, may have, apparently, got a little bit further than we have in it, owe to us the origin of research.

There is no doubt that to-day everybody is going more deeply into the matter after, perhaps, having been a bit slack during the last few years. Anyhow, as far as this association is concerned, we are applying it in its most scientific sense in connection with our products. Shall we succeed? That is, of course, the question which we have before us. In other words, will the results that we get from research justify the annual expenditure which is bound to follow? I think we shall succeed. In any case, with this question before us, as to whether we shall succeed or whether we shall not, we have built up a research department which will be able to deal with any and all problems that may arise. Its management, under the able leadership of Dr Lawrence Balls, has been got together on truly scientific and practical lines, and we are in a position to tackle any questions and abstruse problems which it was absolutely impossible to deal with under the conditions of ordinary mill practice. Only time will show whether we are going to succeed. I think we shall. I am very confident—I am very optimistic about it myself. But I would like you to understand that should there be any failure in it—should we find that results do not justify the annual expenditure—we are in a position to, and should, give it up. This eventuality I do not look for, but should it come about we should be able to close it down without any very serious loss as our equipment, machinery, and buildings would still retain their usefulness.

The resolution was passed unanimously.

DECLARATION OF DIVIDENDS.

The Chairman then moved the following resolution:—"That the following dividends be now declared out of the profits of the undertaking, viz.:—

"A dividend for the half-year ended March 31, 1922, at the rate of 5 per cent. per annum on the £8,000,000 preference shares, numbered 1 to 3,000,000 inclusive.

"A dividend for the half-year ended March 31, 1922, at the rate of 5 per cent. per annum on the £940,000 preferred ordinary shares, numbered 1 to 940,000 inclusive.

"A dividend for the half-year ended March 31, 1922, at the rate of 11 per cent. per annum on the £3,675,000 ordinary shares, numbered 1 to 3,675,000 inclusive." Mr William Eckersley has specially asked me to make his apologies to you for his inability to take the chair at this meeting. I am afraid that his health is now far from robust, and at the last minute his doctor has ordered him away for a complete change.

THE ASSOCIATION'S GREAT LOSS.

I think that my first duty is to refer to the very great loss we have all sustained in the recent death of our chairman, Mr McConnell. During the last twelve months I have had exceptional opportunities of appreciating the great amount of work Mr McConnell did for the Fine Spinners. He had an infinite capacity for getting to the rock-bottom of any question that was put before him. He thoroughly mastered the detail, and no matter how intricate the subject might be, no work was too hard for him until he was thoroughly conversant with the matter from every point of view. I am sure that his wife and the members of his family have the sincere sympathy of the board and the shareholders in their bereavement.

As you have heard, the board has suffered a further loss during the year by the death of Mr Peter Eckersley. Mr Eckersley was one of a large family of cotton spinners, all of whom were more or less closely connected with this association. He was a past master in the art of mill management, and had made a life study of textile machinery. His loss will be felt severely by the board. The board will miss his services greatly.

A YEAR OF GREAT DIFFICULTY.

To turn to the year's work, it has undoubtedly been one of great difficulty, but I venture to hope that the results are not altogether unsatisfactory to you.

When we last met in this hall some 12 months ago things were at their very worst, and for the first few months of the year under discussion it was very difficult to keep a hopeful outlook. However, in the late summer there was a slight improvement, a glimmer of light, and this improvement, not without ups and downs, has continued up to the present time.

The problem of exchanges all over the world has caused us infinite anxiety. In fact, I am not sure that it was not one of the most difficult matters with which we had to deal. The high price and abnormal fluctuations in cotton at times completely undermined the confidence of our customers in the stability of values, and caused dullness.

THE FUNDAMENTAL PRINCIPLES OF GOOD MANAGEMENT.

At the beginning of the year compulsory short time was, as almost always, most detrimental to margins, for, as you all know, a small profit on 48 hours' work dwindled in the most astounding way on 36. Even when compulsory short time gave way to optional short time our difficulties were not over, for there is a point at which you can, with some firms, by an increase of production, delay and even diminish that accumulation of stocks which we are all so anxious to avoid. Yes! the year has been full of useful lessons, but has, as usual, borne out the fundamental principles of good management, and by no means the least of these is liberalism in the upkeep of plant and machinery. During the year we have on additions, depreciation, and renewals paid for out of revenue spent some £400,000 on your properties. We have, as Mr Lee has informed you, a new and entirely up-to-date mill of some 52,000 spindles, and as this mill is part of an established firm it has its market ready to its hand, and will, I am sure, become a valuable profit-earning asset to your association.

WELFARE WORK.

Mr Lee has so ably covered the ground in his criticism of the balance-sheet that I feel it is not necessary for me to take up much more of your valuable time. But there is just one other matter—it is a side issue which has not been mentioned, but in which I think you may be interested. I refer to welfare work, of which we have heard so much during the last few years. We have made a substantial start. We believe in it; we are anxious to do what we can to ameliorate the working conditions of our employees. But it is a matter which requires most careful handling. What will go in one district may be a complete failure in another, and it is very easy to spend a large sum of money on objects which will not be appreciated by the operatives.

We have efficient first aid at all the mills, rest rooms at most, and a growing number of canteens. We have at the head of this department a very able lady, with competent assistants, and we hope that she may be able to make the thing into the success it deserves.

DISTRIBUTION OF PROFITS.

And now to turn to the balance-sheet, or rather the profit and loss account, at the point to which Mr Lee brought it. You will see that we have a credit balance of £498,871, and it is now our duty to say how this sum shall be distributed. I need hardly tell you that this matter of distribution has received our most careful consideration. It first came before the executive, and they handed on their conclusion to the consultative committee. Finally, it was considered by the full board. In each case the verdict was unanimous.

Things are different from what they were 12 months ago. Then we had the coal strike, compulsory short time, and a complete lack of demand for our manufactures.

Now most of these troubles are of the past, but the demand is not yet what I should like it to be. Personally, I feel that we are justified in our recommendation. I will now call upon Mr Peel to second the resolution.

VIEWS OF MR JOHN G. PEEL.

Mr John G. Peel: It is with great sorrow that I find myself put up to second this resolution, because, undoubtedly due to the death in one case and the illness respectively of our chairman and vice-chairman, who otherwise would, the one, have proposed, and the other seconded, this resolution. Apart from that I really do think we are to be congratulated on being able to put before you such a result this year. I have had a fairly long experience of different branches of the cotton trade, and I really doubt if I have ever known a year in which there have been such long periods of acute depression. Therefore, it is with great pleasure that we are able to put before you a resolution of this kind, which I fancy you will find satisfactory. I should like to close my remarks by expressing extreme gratitude to the executive, and to the working management of this concern. It is entirely due to them that we are able to put this result before you. I trust that you will express your gratitude to them for the good work, for the honest, and invaluable, practical work, they have done throughout the year. The resolution was carried unanimously.

RE-ELECTION OF RETIRING DIRECTORS.

Mr William Howarth: The resolution I have the honour to propose is as follows:—"That Messrs William Eckersley, John W. Adam, Claude H. Blair, F. I. Dixon, H. M. Harwood, Ernest Mather, and P. B. Whitehead be, and they are, hereby re-elected directors of the association." You will notice that one name is omitted from that list. You know the cause, and I associate myself with the expressions of regret uttered by our managing director and our chairman with regard to the death of Mr McConnell. Had it not been for that death, of course, his name would have been in this list. With regard to the others, I am quite sure you will agree that they are capable of taking forward the work of this association, and carrying on its traditions in full vigour. Their names are all known to you—that of Mr William Eckersley as vice-chairman, Mr Adam has been associated with one of our branches, and with the central office, one or other, practically for all his working life. Mr Blair is our venerable secretary. Mr Dixon has charge of one of our largest spinning concerns, and has been apprenticed from his youth with us. Mr Harwood is one of our largest shareholders. He was formerly in charge of one of the concerns that we took over by purchase, and his name is known and revered wherever the cotton trade is understood. Mr Ernest Mather has also spent most of his working life with us. Mr Whitehead is in the same position. We have a judicious blend of age and youth, of experience and energy, and I am quite sure that this meeting cannot do better than unanimously agree to re-elect them as directors of this association. Mr Chairman, I have great pleasure in moving the resolution.

Mr A. E. Dixon: Ladies and gentlemen, I have much pleasure in seconding this resolution.

The resolution was passed unanimously.

ELECTION OF AUDITORS.

The Chairman: I will ask Mr Herbert Knott to propose the next resolution.

Mr Herbert Knott: Mr Chairman, ladies and gentlemen, Before I move the resolution which has been put into my hands, may I claim the indulgence of the meeting for a moment. It was my privilege to sit on the board of the association with the late Mr McConnell for the first seven years of its existence, and with the late Mr Eckersley for a period almost as long, and therefore, in a very special manner, I share in the loss which we all feel to-day at their removal. The removal of Mr McConnell, coming so soon as it does after the death of Sir Herbert Dixon, must be felt by the directors very keenly. I venture, therefore, to express on my own behalf, and on behalf of all present, our very sincere sympathy with the directors. The resolution I have to move is as follows:—

"The Messrs Edwin Guthrie and Co., chartered accountants, of 71 King street, Manchester, be and they are hereby appointed auditors of the association until the next ordinary general meeting of the association, and that they be paid the sum of £1,500 as remuneration for their services, inclusive of out-of-pocket, travelling, and hotel expenses."

Messrs Guthrie have been the auditors of our association from its inception. The firm is of very old and honourable standing in the City, and I have very much pleasure in moving their reappointment as auditors.

The Chairman: I will ask Mr G. St Clair Robertson to second the resolution.

Mr G. St Clair Robertson: Mr Chairman, ladies and gentlemen, I have much pleasure in seconding the resolution.

The resolution was passed unanimously.

THANKS TO THE CHAIRMAN.

Mr A. Linney Arnold: It gives me very great pleasure to move the following resolution:—"That the thanks of this meeting are, due, and are hereby tendered, to Colonel R. W. D. Phillips Brocklehurst for the ability and courtesy with which he has presided over this meeting."

It very often happens that a vote of thanks to the chairman for presiding over a shareholders' meeting is purely a matter of form, but I think that this morning we are all agreed that our thanks are due to Colonel Brocklehurst for the ability and courtesy with which he has presided over this meeting. And I should very much like to be able to go a little beyond the formal terms of the resolution, and to say that not only the shareholders throughout the country are very grateful to the managing director, the executive and the board as a whole, and, as Mr Peel has said, to the working and managing staff, for the very careful and efficient way in which they have managed the affairs of the association in the very difficult year under review. Losses, and in some cases very big losses, have been made by many companies during that period, and the shareholders of this association appreciate the fact that its affairs have been so managed that the directors are able to recommend and to pay a reasonable dividend in a year which all know to have been a year in the spinning trade. The directors are well aware that the affairs of this association are watched anxiously by thousands of

shareholders in all parts of the country, and it must be very gratifying to the board to feel and to know that these shareholders and others have such confidence in them and in the recuperative powers of the association that they value the preference shares on a par with War Loan, and the ordinary shares at nearly 100 per cent. premium, in spite of the present low year. But this confidence, while it is very gratifying, implies expectations which, I am sure, the board will do their best to realise. And we all sincerely hope that in the coming year they will have greater prosperity, and that they will be freer from those anxieties which have been such a marked feature of the last two years—anxieties which have been not only caused by the state of the markets and trade generally, but have unfortunately, been greatly increased by personal considerations in the loss of two able and trusted leaders. I have pleasure in moving the resolution.

Mr W. J. Smith: I content myself, after the able way in which Mr Arnold has proposed the resolution, with formally seconding it. It is, however, in my opinion, not quite comprehensive enough. It ought to have extended to our managing director for the lucid exposition he gave of the balance-sheet, which threw light on certain important points which could not be otherwise completely grasped by ordinary individuals. He did it so well that I quite appreciate it.

The resolution was put by Mr H. W. Lee and carried unanimously.

The Chairman: I beg to thank you for your appreciation of what I am afraid are my rather amateurish efforts in the chair. This, ladies and gentlemen, closes the meeting.

UNITED BRITISH INSURANCE COMPANY, LIMITED.

INCREASED PREMIUM INCOME.

The ordinary general meeting of the United British Insurance Company, Limited, was held, on the 1st instant, at the Criterion Restaurant, London, Mr C. H. Dodd (chairman of the company) presiding.

The general manager and secretary (Mr H. F. Baker) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said he was glad to be able to report in the fire insurance account a very considerable improvement on the figures of last year. It would be seen that the premium income had increased by nearly £100,000, while the claims paid and outstanding were about in the same proportion as last year—namely, 50 per cent. Commission and expenses were lower, and, after making a reserve of 40 per cent. of the unexpired risks, which involved putting a larger sum to reserve this year than last year, they had a balance to transfer to profit and loss of £1,838, as against a transfer from profit and loss of over £39,000 last year. In view of the conditions of fire insurance business in this country during the year 1921, he felt sure shareholders would agree with him that this result was quite satisfactory. The accident insurance account showed a considerable increase in premiums. Last year the premium income was about £950, and this year it had increased to £3,067. The claims paid and outstanding were at quite a satisfactory ratio—namely, 26.9 per cent.

EMPLOYERS' LIABILITY ACCOUNT.

The employers' liability account showed an increase in premium income of something like £1,300, which was eminently satisfactory in view of the fact that trade was so bad last year, and employers' liability business had consequently been very difficult to get. The claims had been considerably higher, amounting to about 46 per cent., as against 34 per cent. Commission and expenses were also somewhat higher; but here, again, after making the usual reserves, they had a profit to transfer to profit and loss account of £737, as against about half that amount last year. Their motor and general insurance account was also of a quite satisfactory nature. The premiums, it was true, had not increased to any great amount—they were up from £90,000 to £96,000 odd—but in a year like 1921, when motoring was very much under a cloud, he thought they would agree that an increase in these figures was exceptionally satisfactory. The claims paid and outstanding showed a loss ratio of about 59 per cent. Commission and management expenses were a little higher than last year, but here, again, they had set aside to reserve the usual 40 per cent., and were enabled to transfer to profit and loss a sum of just about £1,000, as against a transfer from profit and loss last year of £6,677. The marine insurance account showed a considerable drop in premium income, but this was what they had worked for and desired. They had no intention of retaining the premium income from marine insurance at the figures they showed in 1919 and 1920. The income had dropped from £638,000 to £460,000. They had

been exceptionally careful, and had taken every precaution with regard to the risks they had undertaken. Expenses of management and commission were low, amounting only to a little over 10 per cent., and, after a deduction of £25,000, which they had transferred to profit and loss, they were left with a reserve of £612,282, which was 132.8 per cent. of their premium income. This ought not only to be sufficient to meet all possible claims, but there ought to be, and he hoped there would be, a very substantial profit that would come to them one day from this account. The life assurance and annuity account had also shown a small growth. The fund now stood at £28,504, but this big increase was accounted for by the fact that they had transferred from the general reserve fund £20,505 14s, being the amount which they had to set aside in accordance with the provisions of the Act of Parliament, and this formed a deposit with the High Court as security for the life insurance department.

PROFIT AND DIVIDEND.

The total of the profit and loss account was £177,986, which was accounted for by the balance brought forward from last year, the transfers from the various accounts to which he had referred, the sum of £61,200, in respect of interest, dividends, and rents, and a small sum for transfer fees. After writing off various amounts they were left with a balance of £73,986, which they proposed should be dealt with by paying a further dividend at the rate of 10 per cent., less tax, which would be paid on or about June 10th. An interim dividend of 7½ per cent., less tax, had been paid in November last, so the shareholders would get a total dividend for the year of 17½ per cent., and after paying these they would carry forward £24,986. He imagined that there were not many companies that could show a transfer to profit and loss account from every single account as the result of last year's business. They had been through, for the last two years, a most troublesome and trying period in the insurance world. This was the aftermath of the war, and it might be some little time before things would settle down again to their normal conditions, but the United British had, he thought, been successfully steered through the troublesome waters, and a great deal of credit was due to the general manager and other officials of the company.

Mr J. E. Hodgkin seconded the motion, which was carried.

HAMBROS BANK, LIMITED.

A SUCCESSFUL YEAR.

The tenth annual ordinary general meeting of the shareholders of Hambros Bank, Limited, was held, on the 1st instant, at the registered office of the company, 45 Bishopsgate, London, E.C., Sir Everard Hambro, K.C.V.O. (the chairman), presiding.

The secretary (Mr J. H. Roscoe) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—You will find laid on the table the directors' report and the statement of accounts for the year ending March 31st last, and I will assume that, according to our usual custom, we may take them as read.

The balance-sheet calls for no special remark, except, perhaps, that it reflects the period of trade slackness through which we are passing, which is shown by the decrease in acceptances and holding of bills and the increase in Government securities. Of these securities 60 per cent. are short-dated, which we feel justified in regarding as cash.

One other item which perhaps requires explanation is the premises account, which has risen from £225,000 to £315,000. This is due to the fact that our Old Broad street premises were not included last year; both these properties we consider conservatively valued.

The bank has had a successful year, and before formally moving the adoption of the report and accounts, I shall be pleased to reply to any questions or observations from any shareholder.

I now formally move: "That the report of the directors and audited statement of accounts to March 31, 1922, already printed and circulated amongst the shareholders, and as presented to this meeting, be received, adopted, and entered upon the minutes."

Mr H. Bendixson (vice-chairman): I have much pleasure in seconding the resolution.

No questions being asked, the resolution was put to the meeting and carried unanimously.

The Chairman: The next resolution I propose is: "That a final dividend of 9 per cent. for the year ended March 31, 1922, free of income-tax, be declared on the capital paid up, and that such dividend be made payable on and after June 2, 1922."

Mr H. Hunter: I beg to second the resolution.

The motion was unanimously agreed to.

Mr H. Bendixson, Sir James Currie, K.C.B., Mr S. E. Dahl, Mr E. Gluckstadt, Right Hon. Earl Grey, and Mr H. Hunter were re-elected directors of the company.

ROYAL INSURANCE COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

CHAIRMAN'S REVIEW OF THE VARIOUS DEPARTMENTS.

APPRECIATION OF COMPANY'S STOCK EXCHANGE SECURITIES.

The seventy-seventh annual general meeting of shareholders in the Royal Insurance Company, Limited, was held, on Monday, May 29, 1922, in the boardroom of the company's head office building, No. 1 North John street, Liverpool, at 12 o'clock noon.

Mr Thomas Woodsend (chairman of the company) presided over a large attendance of directors and shareholders.

The Chairman said: Ladies and gentlemen,—Before dealing with the accounts, it is my sad duty to refer to the loss we have sustained in the death of Mr Charles Alcock, a director, and formerly for 18 years general manager of this company. Although of late years, owing to his having resided in the South of England, we had not seen Mr. Alcock very often at our meetings in Liverpool, still he very closely and regularly attended to his duties as a member of the boards of the "Royal" and "British and Foreign Marine" in London, where his ripe experience was of great value to both companies. His memory will long be cherished by those who had the privilege of being associated with him.

Last year I referred to the breakdown in health of Mr Chappell, our then general manager, and I am sorry that the hopes which the directors expressed at that time as to his restoration to health were not realised, and that, acting on the advice of his doctors, Mr Chappell felt it necessary to tender his resignation. This was received with great regret, as it meant the termination of over 40 years' continuous service with the "Midland Counties" and the "Royal," during the last 10 years of which Mr Chappell had held, to the great satisfaction of the directors, the important post of general manager of the company. It was a great pleasure to the directors to appoint Mr Chappell a director of the company, and his name will come before you to-day for re-election.

To fill Mr Chappell's place as general manager the directors appointed Mr J. J. Atkinson, who has spent the whole of his business career with the "Queen" and the "Royal," and during the greater part of this time he has occupied high and important posts in the active management with great credit to himself and benefit to the company.

With regard to the report and accounts of the company, it is customary, first of all, to refer to the operations of the company in the fire department.

FIRE DEPARTMENT.

Many of you are, no doubt, shareholders in other insurance companies, and you will have read the reports and the speeches of the chairmen at the various meetings which have already been held. You will have been struck by the unanimity with which references have been made to the comparatively poor results recorded by insurance companies generally in their fire department operations during last year. The large increase in the volume of premium shown in our accounts for 1920 reached high-water mark early in 1921, and since then there has been a steadily diminishing income, and our figures for the whole of the past year show a diminution of over £600,000. Coincident with this falling-off in business, the losses incurred have been heavier, and consequently we show a much reduced ratio of profit even after allowing for the reduction in the reserve for unexpired risks. This indifferent result is the aftermath of the fleeting prosperity engendered since the conclusion of the Great War, but I am hopeful that with the gradual improvement in trade conditions, limited though this appears to be at the present time, the return to more normal conditions will bring to insurance companies better trading results, and we are confident that when this comes about the "Royal" will secure its full share.

LIFE DEPARTMENT.

In the life department, while, in common with other insurance companies, we have not done so well as in previous years, still we have succeeded in issuing no fewer than 5,934 new policies, representing £3,677,800 of sums insured. The "Royal" life policies continue to be a popular and attractive contract with the insuring public.

ACCIDENT DEPARTMENT.

While the premium income in our personal accident department is practically the same as in the previous year, the net results were good enough to warrant our transferring to profit and loss account the sum of £50,000, still leaving a more than ample reserve in the account to meet all liabilities. Our operations in the employers' liability section have again been very satisfactory. The premiums, due to a reduction in the rates for workmen's compensation business and to diminished wage rolls, are somewhat less than in the previous year, but the claims ratio has been quite satisfactory, and from this department we have again transferred to profit and loss account £100,000, as in the previous year.

GENERAL INSURANCES ACCOUNT.

The general insurances account, which, as you are aware, embraces the operations of the Royal Indemnity Company, of New York, has again been eminently satisfactory, showing, as it does, an increase in the volume of premium of fully 10 per cent., a diminished claims ratio, and only a slight increase in the expense ratio. The percentage of underwriting profits in this section of our operations has been entirely satisfactory, and the shareholders, I am sure, will be gratified to observe that we have repeated last year's transfer of £100,000 to the credit of profit and loss account, making the total transfers from the accident department for the past year a quarter of a million sterling, while maintaining the reserves in all sections on a strong basis.

RETIREMENT OF MR R. W. THOMPSON.

It must be no little satisfaction to the accident department manager, Mr R. W. Thompson, whose long and successful career, first with the "Northern Accident" Company, and since 1907 with the "Royal," will be brought to a close in a few weeks, when he retires under the provisions of our superannuation scheme, that such eminently satisfactory results have been obtained in this department during his final year of office. We wish Mr Thompson many years of health and happiness in his retirement from active duties.

MARINE DEPARTMENT.

I need not elaborate the difficulties which the marine department underwriters of the company have experienced during the year 1921. Our sympathy must be expressed to Mr Stitt, the able successor to Mr Davies, in the chief underwriting chair of the "British and Foreign," and to Mr Williams, the London underwriter of that company, in the trying and difficult times with which they have had to cope, not forgetting in this connection their valued colleagues in New York and elsewhere. The shareholders will agree that, taking the combined operations of the "Royal" and "British and Foreign," it is a matter of satisfaction that the underwriting loss for the closed year—viz., 1920—was not greater than £91,681, which sum we have transferred to profit and loss account.

PROFIT AND LOSS ACCOUNT.

With regard to this account, the income from interest and dividends is slightly less than last year, and, having regard to the meagre result of our trading in the fire and marine departments and consequent disturbance of funds, I think the shareholders will agree that we have every reason to be satisfied with our important revenue from this source. As usual, the interest account includes the dividend received on "The Liverpool and London and Globe" shares, which dividend, I am happy to remark, is on the same basis as in the preceding year.

The provision for income-tax is sufficient to cover the whole of our income-tax and corporation profits tax for last year, after taking into account the amount recovered in respect of excess profits duty. This recovery was largely due to adverse results in our marine department.

You will see that we have this year written £100,000 off the item in the balance-sheet in respect of shares of incorporated companies, which mainly consists of our holding in shares of allied companies. The directors thought it wise to thus reduce the book values of businesses acquired.

I will refer later on to the general question of depreciation, but I may here explain that during the course of the year your directors found it advisable to exchange certain short-dated securities for others of longer date, and as the sale of these and other securities turned into an effective loss depreciation which had already been provided for in the general contingencies fund, it has been considered proper to utilise part of that fund in this way, seeing that it was created for the purpose of meeting depreciation on investments as well as any other contingencies.

After making the usual transfer to the superannuation fund, I am pleased to say that the balance of profit and loss account carried forward to the current year has been increased by nearly £120,000.

This year we have not transferred anything to the additional reserve in the fire fund, but the balance of profit and loss account, which we regard as "part and parcel" of the fire reserves, has been, as I have just shown, considerably increased.

STOCK EXCHANGE SECURITIES.

You will, not unnaturally, expect me to say something in regard to the present position of the company in respect of its holdings in Stock Exchange securities. At December 31st last, as you will

observe from the certificate attached to the balance-sheet, the value of our assets in the aggregate was in excess of the amount stated in the balance-sheet, after taking into account the provision made in the general contingencies fund. And you will be gratified to learn that a valuation taken out at a recent date of our Stock Exchange securities enables me to say that the total value is now in excess of the values stated in the balance-sheet, quite irrespective of the amount in the general contingencies fund. Taking a long view it is difficult to prophesy the course of the markets, but the position to-day of the "Royal" investments is a remarkable testimony to the wisdom of the conservative policy pursued by the board in the selection of the investments of the company.

DIVIDEND.

The resolution to be submitted will recommend the payment of 11s per share, less income-tax, making with the interim dividend paid in November last, the same dividend as in the preceding year, namely, 22s per share, less tax.

REINSURANCE COMPANY FAILURES.

So much attention has been directed to recent events in the insurance world, particularly in respect to a certain group of reinsurance companies, that the shareholders may expect a word from me as to whether our company has in any way been adversely affected by these failures. I am pleased to be able to say that so far as our fire department is concerned, there is little or no possibility that we shall sustain any loss whatever, but in our marine department we may incur a loss which I do not anticipate will be more than £25,000.

Arising out of the disturbances I refer to, it is suggested that further legislation is necessary in this country, but I hold the view that the insurance public have no need to be distressed by what has happened in the reinsurance world, and that hasty or ill-considered legislation is to be deprecated.

AUDIT ARRANGEMENTS.

Our audit arrangements, we are well satisfied, in every way safeguard the interests of the shareholders. Messrs Harwood, Banner and Son, who were appointed auditors by the shareholders, thoroughly examine the accounts of this company, and necessarily in the undertaking of an audit of the character of the "Royal's," their work extends continuously from one end of the year to the other. Every facility is given to the auditors to carefully examine and verify the correctness of the accounts, not only at home but abroad. And, as their certificate shows, they examine the securities held by the company. I think the shareholders may rest content that this is a matter which the directors, in their interests, have under close observation, and that nothing is left to chance.

I have now pleasure in moving the first resolution, which is as follows:—"That the report of the directors be approved and adopted, and that a dividend of 11s per share, less income-tax, be payable on or after Tuesday, the 30th ult., making, with the interim dividend paid in November last, 22s per share, less income-tax, for the year 1921."

Mr W. R. Glazebrook (one of the deputy-chairmen) seconded the motion, which was carried unanimously.

The following directors, namely, Mr A. K. Barnes, Mr F. A. Bates, Mr Geo. B. Heyworth, Mr A. Allan Paton, C.B., Mr John Rankin, and Mr Thomas Woodsend, who retired by rotation, and Mr George Chappell, who retired under Article 75 of the articles of association, were re-elected directors, and Messrs Harwood, Banner and Son were appointed auditors for the ensuing year.

Mr J. P. Hargreaves: I have pleasure in proposing:—"That the thanks of this meeting be presented to the directors of the company and to the London board; also to the members of the company's local boards, and to its officers and agents at home and abroad, and to the boards of directors and officials of allied companies, for their valuable services during the past year." This resolution covers a very large field, but it needs very few words in its support. We look upon the "Royal" as the home of all that is sound and sure in the insurance world, always of the best, and this is due to the long-continued policy of our directors in years past, and of our managers, not only of those who direct from headquarters here, but also of our immense army of workers who represent us all over the world. I have great pleasure in moving this resolution.

Mr J. L. Bailey, in seconding, said both directors and staff had had a very difficult year, and the shareholders were very greatly indebted to them for the report they had been able to issue.

The motion was carried by acclamation.

The Chairman: It only remains for me to express the thanks of my co-directors and myself for the vote of thanks you have just passed to us. It is always a pleasure to each individual member of the board to feel that he is helping to steer this company in the straight and correct course, and we are rather proud, too, of its being a Liverpool concern. The directors and staff wish to thank you through me for your kind vote of thanks.

This concluded the business of the meeting.

LA GUAIRA HARBOUR CORPORATION, LIMITED.

PRESENT POSITION AND FUTURE PROSPECTS.

The ordinary general meeting of the La Guaira Harbour Corporation, Limited, was held on May 30th, at Winchester House, London, Mr J. G. B. Stone (the chairman) presiding.

The secretary (Mr E. J. Summers) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The figures show that we earned during the year under review a total of £20,722, as against £50,014 in 1920, a decrease of £29,292, and, after adding dividends and interest received from the Macuto Railway, with sundry receipts, and adjusting income-tax account, our total receipts amount to £26,720. From this amount we have to debit £20,999 interest on the first debenture stock and £134 interest on loan, and we are left with £5,586 to be transferred to the credit of the second mortgage stockholders, representing 19s per cent. for the year, the balance of the cumulative 2½ per cent. being a charge on the future revenue of the corporation.

It will be observed that while our total revenue on the tonnage shows a very heavy decrease, there is also a decrease in the various items of expenses, with the exception of necessary expenses in respect of negotiations in connection with our action in charging dues by measurement, and I may mention here that the policy adopted by the board in this matter, which came into force as from April 1st last year, is justified by the additional dues already collected from that source from that date up to the end of the year amounting to 75,968 bolivars, or £3,008. I need hardly point out that this figure represents a lean year, and the extra dues that will accrue to us from this source as trade revives will be proportionately larger. As the trading conditions improve we shall, in the natural order of things, benefit correspondingly. We have had a bad year, but with a concern such as ours we cannot make trade, but can only handle it, and, as it comes, give facilities for the shipping. In the meantime we must strain every effort to be in the best possible position to handle it rapidly and efficiently when it comes. The existing circumstances are such that merchants hesitate to sell their goods at present prices, and are holding them in the hope of better times. This cannot continue indefinitely, and when force of circumstances brings these goods to market you will reap the benefit.

Referring to the balance-sheet, our capital expenditure on construction account for the year amounts to £2,842 2s 7d, the amounts having been expended as follows: Completing extension to Bajo Seco warehouse, £1,342 2s 7d; fee for engineer's report, £1,500; total, £2,842 2s 7d. We have had to make additions to our plant during the year, costing us £6,072.

I must also mention that during last year the Macuto and Coast Line Railway Co., in order to meet the public requirements, extended their line at Maqueta to the church, and we being practically the owners of the line, were called upon to advance funds for the extension amounting to £5,500. The Macuto Railway is a prosperous though small concern, and we hope will be able presently to raise funds to repay this advance. You will realise that the prevailing circumstances have prevented us proceeding with the work recommended to be carried out by Messrs J. G. White and Co. in their report, but this must be done at the first opportunity.

The result of providing the above funds, amounting to a total of £14,414 16s 9d, renders it necessary to ask the second mortgage stockholders to agree to the further postponement of payment of interest until such time as the revival in trade renders it possible for the liability to be discharged.

In moving the adoption of the accounts, I need hardly express the disappointment of the board at the very poor results obtained. These are entirely attributable to the unprecedented depression in trade and the decrease in profit on the exchange on remittances, the latter arising from the adverse rate of exchange during the year, it being 23.10 at the end of 1921, as against 20.70 the previous year, and to the impossibility of raising capital. The acute commercial depression of 1920 became intensified in 1921 and brought trade to a deadlock. Exports were difficult to realise, except at prices which offered no profit to the merchants, and consequently imported goods were in very poor demand.

I do not attempt to forecast the immediate future, as unseen circumstances often arise to falsify what seem well-founded views, but in a rich country such as Venezuela, which grows or supplies articles which are in demand or consumed in large quantities in other countries, a revival in export trade can hardly be delayed much longer, bringing in its train an increased demand for imports.

Mr E. W. Fradgley seconded the resolution, which was unanimously adopted.

A meeting of the holders of second mortgage stock of the corporation was held, and a resolution was passed assenting to a concession to the corporation in respect of the payment of the interest represented by the deferred interest warrants.

In reply to questions the Chairman stated that a scheme for capitalising the deferred interest and to put the company on a sound financial basis would be dealt with at the earliest opportunity.

CONSOLIDATED ASSURANCE COMPANY, LIMITED.

DIFFICULT YEAR—DIVIDEND MAINTAINED. LIQUIDATION OF ACCOUNTS IN ENEMY COUNTRIES. FUTURE OF REINSURANCE.

The eighteenth annual general meeting of the Consolidated Assurance Company, Limited, was held, on the 1st instant, at the Institute of Chartered Accountants, Moorgate place, London.

Mr E. A. Colquhoun (the chairman) presided.

The actuary and secretary (Mr C. Windett) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—The accounts having been in your hands for some days, if it is your pleasure we will take them as read.

Before dealing with the report and the accounts, I would like to refer to the death of our old colleague Colonel Clifford, who had been a director of the company since its formation; his ability and his keen interest in the company are a very great loss to us all.

During the year we have been fortunate in obtaining the assistance and co-operation of Mr John Scrimgeour, who has been elected to the board, and whose confirmation you are asked to sanction to-day. Mr Scrimgeour's name and experience are so well known to all of you that I need say no more than that we heartily welcome him and consider ourselves fortunate in having at our disposal his ripe experience.

Taking now the report and accounts, I would remind you that reinsurance companies' accounts are usually six months late, and as therefore some of you will have already seen the report and accounts of the leading companies, you will have realised that the past year has been a poor one both as regards fire and marine insurance. This is due, no doubt, to the general disorganisation of trade and credit all over the world, and also to the prolonged drought both here and abroad during last year.

FIRE AND GENERAL DEPARTMENT.

The net premiums amounted to £1,110,935, or £227,114 less than in the preceding year, but the total is still considerably in excess of that of 1919. The claims, commissions, and expenses total up to £1,197,768, and it is due to the fall in the premium income automatically releasing a portion of the reserve previously set aside that the account in the end shows a small profit.

With regard to the decrease in the premium income, I wish to state that this is in no way due to loss of connections. It is mainly accounted for—as with other insurance companies—by the fall in values and shrinkage on business prevalent throughout the world; but in our case another factor has been the voluntary curtailment of liabilities where the outlook was unpromising. This, in some instances, entailed considerable retrocession towards the close of the year, which has the immediate drawback of contributing to the reduction in the premium income whilst leaving the losses incurred and the expenses unaltered and increasing their respective ratios. But under normal circumstances we should derive benefit during the present year from the steps taken, and in any case there is this satisfaction, that the 40 per cent. reserve with which we have charged ourselves bears in reality a higher relation to the actual liabilities current on December 31st last.

CLAIMS RATION.

The ratio of the claims paid and outstanding works out at 72 per cent. (or 66.6 per cent. after adjustment of the premium reserve), and this high ratio reflects the unfavourable experience which was general last year.

The commission paid shows a still further advance of 32.7 per cent., and the expenses at 3 per cent. also compare unfavourably, though in this latter case it has been found on analyzing the items that quite 1 per cent. is in respect of foreign and colonial taxation—a charge with which we were not familiar in the years gone by but which, as a result doubtless of the war, has now become a serious factor.

The whole question of the cost of acquiring and conducting the business has been and is still, I can assure you, engaging our most careful consideration, and every effort will be made to improve the position in this respect.

CLOSING PRE-WAR CONTRACTS.

Turning again to the left-hand side of the account, I desire to refer to the sum of £16,884 written off the additional reserve brought forward from the previous year. This sum is composed, as stated, of payments made during the year to close pre-war con-

tracts in former enemy countries. Under the terms of the Peace Treaty sums due in the currencies of the countries in question are payable at the pre-war rate of exchange—a very unfortunate provision so far as this company is concerned, for had we been left to make our own settlement, it will be clear to you that at current rates of exchange we should have saved a considerable amount of money. Some further claims will possibly have to be met under this head, but they are of lesser importance, and full provision has been made for them in the accounts.

The final outcome of the operations of the current year is a credit balance of £4,013 which has been left in the account, and added to the additional reserve, the total of the fire and general fund thus standing at the end of the year at £473,160 or 42½ per cent. of the premium income.

MARINE DEPARTMENT.

Taking next the marine revenue account, there is no gainsaying the fact that we have had, in common with others, an unfavourable experience in this department last year, the losses paid and reserved for in respect of the 1921 and previous accounts absorbing a larger sum than the premium income, with the result that we have deemed it desirable to transfer the sum of £50,000 from the profit and loss account to the credit of this account in order to strengthen the fund. The premiums at £579,329 show a reduction of £118,661 on the previous year's total, but the fall is really greater, as the figure for 1921 contains nearly £100,000 of premiums properly belonging to 1920, but received too late for inclusion in that year's accounts. The true premium income for 1921 is consequently less than £500,000, and I may add that the present year is expected to show a further decline. I bring this out to show you that we have, in view of prevailing conditions, for some time past been curtailing our business in this department, but you will appreciate that the management of a reinsurance company has not the same liberty of action as the underwriter of a marine insurance company, who can decline offers made to him daily as he likes, whilst in our case the choice lies between continuing a reinsurance treaty or giving it up altogether. We entered this market primarily to assist in the development of the fire department, and this object has certainly been achieved.

LOSS EXPERIENCE.

Turning back to the right-hand side of the account I would mention that the loss experience was adversely affected in the latter part of the year by heavy claims under treaties which had been previously cancelled, and were in process of running out. When possible we made a cash settlement of all outstanding liabilities under expiring treaties, and thus claims are included which otherwise would only have figured as payments in later accounts. Provision has also been made for all claims notified but not yet settled.

The fund at the end of the year stood at, say, £370,000, nearly 64 per cent. of the premiums shown, or over 74 per cent. of the actual premiums for 1921, and should, we think, be fully sufficient.

The commission ratio of 7.8 per cent. shows a welcome drop of 1.3. The expenses of management work out at 2.8 per cent., but marine policy stamps account for over 1 per cent. The two items together show a reduction as compared with the previous year, and the question of further reducing the cost of the business is engaging the earnest attention of the management.

LIFE DEPARTMENT.

With regard to our life business, as I have previously stated at these meetings, most of it is drawn from abroad, and during the past year we have succeeded in finally liquidating our foreign agency accounts in the countries where during the war we were unable to correspond with our offices.

During the war we had, of course, no account from enemy countries, and we could only assume that premiums due were paid. They appeared in the income, and were balanced on the other hand as premiums outstanding. As the accounts came in, we have been able to ascertain and write off those premiums not renewed. There has thus been produced a reduction of premium income and of funds by the eliminations on each side of the account. Those policies to which a surrender value attached have been liquidated by either paying the surrender value in cash or

by reserving for it. All outstanding claims have also been fully reserved for, and we now start with a clean sheet.

I would mention here that we found on resuming control of our business in enemy countries our accounts and funds in perfect order. The only complaint we have to make is that economy has not been studied by the foreign States. Staffs were kept on and paid who were not producing.

The life insurance fund has decreased during the war by roughly £5,000, due to the writing off of premiums and the clearing up of expenses, claims, and surrenders appropriate to the war period.

QUINQUENNIAL VALUATION.

As the company's quinquennial period terminated on December 31, 1921, the usual investigation has been made into the life business as at that date on the same bases as were employed at the last quinquennial valuation. After providing adequate reserves for the satisfaction of future liabilities, a surplus of £2,570 is disclosed, which we are carrying forward in the life fund.

I think you will agree that this result is satisfactory, when I tell you that amongst our policy holders are nationals of no less than 13 European countries, all of which were engaged in the Great War, and that, in addition, the Spanish Morocco war also claimed victims amongst our assured.

Not only have our claims been affected by this, but also our expenses of management, as pointed out above.

You will see from the revenue account that we have written off £10,469, being loss on exchange due to writing down our foreign balances to the rate of exchange ruling on December 31st. I trust that in course of time, as the foreign exchanges appreciate, we shall see some of this money back again.

The new business for 1921 shows a further expansion on the previous year, while the first four months of this year show a still greater increase of new business.

BALANCE-SHEET ITEMS.

I will now, if you will allow me, pass to the balance-sheet, before touching on the profit and loss account.

You will remember last year I referred to our raising a loan in the United States to facilitate our entry into business there. This policy has been justified, as the exchange—as you know—materially improved, and so also did the price of the British Government securities which were the security for the loan. In consequence, we realised our securities and paid off the loan of £268,750, and this will account for the greatest change in the balance-sheet. There is no loan in existence to-day.

This rise in the value of our securities has also rendered the investment reserve fund unnecessary, and we have utilised it, reserving against sundry foreign debtors £20,000, and the balance £30,000—has been transferred to profit and loss.

The other changes in the balance-sheet are due to two causes—(1) the fall in our income, which I have already alluded to—viz., £345,775 in all (against this income we had certain reserves which have been called upon to meet the corresponding liabilities); and (2) exchange. As you know, this has not improved in certain countries, and we are compelled to keep large balances abroad for the services of our extensive foreign business. The writing down of these balances to their English equivalent has been a heavy drain upon us.

INVESTMENTS AND CASH.

The investments, the majority of which are gilt-edged British and foreign Government securities, are shown in the balance-sheet at £1,141,423, and their mean market value to-day is in excess of this.

The cash, measured in sterling, also has decreased, owing largely to writing down of our foreign balances to current rate of exchange, from £187,311 to £114,257, which we hope some day will come back to us.

PROFIT AND LOSS ACCOUNT.

I shall detain you, gentlemen, but little to-day by my references to the profit and loss account.

You will notice we bring in £85,217, the balance of the last account, to which we add £68,989 interest, less tax, and £30,000, balance of investment reserve fund.

On the other side, you will find the interim dividend paid, interest paid on balances in hand, expenses not charged to other accounts, income-tax, loss on exchange, depreciation of furniture, and, finally, transfer to marine account £50,000, leaving us with £57,218 to carry forward.

You will see, gentlemen, that if you deduct from interest received, £69,989, the interest paid away £17,194, we are left with a net interest receipt of £52,795. We feel, therefore, quite justified in interest proposing to you to declare the same dividend for 1921 as for last year—viz., 20 per cent. and 5 per cent. bonus, both subject to tax. This absorbs £30,859 of the £52,795. £12,343 of the dividend has already been paid, leaving £18,515 to be paid out of the balance carried forward.

You will remember that I told you at our last meeting that the board considered that additional capital would be required, and the directors decided to issue 98,666 £1 fully-paid shares to make the paid-up capital up to £275,000. In view of the disturbed condition of the market we were advised that the time was not suitable for a public issue, and we therefore accepted an advantageous offer from a financial house for the whole issue, stipulating in fulfilment of the promise given at the last meeting that the shares should be offered first to the shareholders. This transaction occurred this year, and so no mention is made in the accounts under review.

THE FUTURE.

As regards the future, when the reinsurance market has settled down, we hope to progress as in previous years, and when conditions become more normal to obtain a further share of business, for although we have been offered a considerable amount of new business, the terms were, however, such as to compel us reluctantly to decline a large portion of it. However, we feel that a spirit of co-operation will ensue, which will permit of the conditions under which reinsurance business is carried on being placed, as they should be, on a footing satisfactory to both parties.

I now beg to move the adoption of the report and accounts, but before asking Mr Scrimgeour to second this I shall be happy to answer any questions.

Mr John A. Scrimgeour seconded the motion. The Chairman, in reply to questions, said the company had had no relations whatsoever with the City Equitable.

The motion was put and carried unanimously, and the dividend and bonus as recommended were approved.

The retiring director, Mr E. Colquhoun, was re-elected, and the appointment of Mr J. A. Scrimgeour to a seat on the board to fill the vacancy caused by the death of Colonel E. T. Clifford, C.B.E., D.L., was unanimously confirmed.

The auditors, Messrs Price, Waterhouse, and Co., were re-appointed, and a vote of thanks to the chairman closed the meeting.

GODFREY PHILLIPS, LIMITED.

INCREASED SALES—ECONOMIES EFFECTED.

The thirteenth ordinary annual general meeting of Godfrey Phillips, Limited, was held, on the 1st instant, at the Abercorn Rooms, Great Eastern Hotel, Liverpool street, London, Mr Joseph Phillips presiding.

The Chairman, in moving the adoption of the report and accounts, referred to the item of stock which had been reduced to £267,000. That reduction had been brought about by working on their stock of 1919 tobaccos which gave them during the year sufficient good and fine tobaccos for the majority of their operations, and relieved them from the necessity of making purchases out of the very poor crop of 1920 tobaccos. The latter, it was true, was less costly than the stock they were working on, but for quality it had no comparison.

The growers of leaf tobacco in the United States had formed a pooling arrangement for the maintenance of prices irrespective of quality. That movement he did not think would be successful, but should it be, their stocks of old tobacco, which to some might appear too large, would prove their worth and enable them, where they were compelled to buy, to pick and choose to an extent which those who were not holding stocks of 1919 tobacco would be unable to do.

Referring to the profit and loss account, he said at the close of 1920 the total amount to the debit of that account was £104,000. During the year they had made a profit of £15,000, reducing the debit balance to £89,000. Disappointing as the result had been, it was not altogether unsatisfactory, when all circumstances were taken into account. It was not, he said, reasonable to expect that such a setback as had been experienced could be entirely overcome in the short time that had elapsed since the end of 1920, especially as the times had been very unpropitious. The coal strike in the Midlands last year materially affected employment, and trade in the manufacturing areas, which were the most important parts of the country. So far as their company was concerned, trade had been generally bad, and unemployment acute. Further, the continuance of adverse exchanges had made it exceedingly difficult to do any profitable export trade. In view of those adverse conditions, the increase in the company's sales was satisfactory.

During the year many economies had been introduced in the process of manufacture and the working of the business, not by a reduction in the wages, but by improved methods and by the installation of labour-saving devices.

Mr Arthur I. Phillips (general manager) seconded the resolution, which, after some discussion, was carried with a few dissentients.

WESTERN ALLIANCE REINSURANCE COMPANY, LIMITED.

COMPANY'S STRONG FINANCIAL POSITION.

RISE IN COMPANY'S INVESTMENTS.

The second annual general meeting of the Western Alliance Reinsurance Company, Limited, was held, on the 1st instant, at the Institute of Chartered Accountants, Moorgate place, London. Mr E. A. Colquhoun (the chairman) presided.

The secretary (Mr E. E. Colquhoun) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen, those of you who are shareholders in other insurance companies, or have noticed the reports published in respect of last year's operations, will have realised the extent to which insurance has been adversely affected—particularly in the fire and marine branches—by the abnormal economic conditions prevailing throughout the world. It could consequently not be expected that we should remain immune from these influences. Having said this much in general terms, I will deal with the figures in the various accounts.

FIRE AND GENERAL DEPARTMENTS.

It is in this section of our operations that we have felt the full force of the unfavourable conditions to which I have just alluded, and there is no doubt that the extraordinarily dry weather of last summer was also a contributory factor. We have also been called upon to bear our share of damage by fire which may certainly be attributed to political unrest, and whilst there is some hope of ultimate recovery in certain instances, these claims help to swell the total of the losses at the present time. The net premiums in this department you will see amounted to £331,582, and the claims paid and outstanding to £271,287, or nearly 82 per cent. The commission paid represents 32.5 per cent., and the working expenses, including foreign and Colonial taxation, 5 per cent.

These figures are certainly not satisfactory to us, but I venture to think that, after the information I am about to give you, they will be regarded as less unsatisfactory than appears on the surface. In the first place, there is a reduction in the premiums compared with the previous year of some £55,000, and with a falling income an increased loss ratio is ordinarily to be expected, but in the case of last year this reduction in the premium income, which was purely voluntary, was brought about by the retroceding of a portion of the current risks just prior to the close of the year in a section of the business where the outlook was not encouraging. This, whilst improving the position by cutting down the liabilities, left the losses and expenses already incurred as before, with the result that they naturally bear a higher ratio to the receipts diminished by the sum paid away in retrocession premiums. The transaction in question has further an important bearing upon the fund at the end of the year, which, augmented by the transfer of £20,000 from the profit and loss account, stands at £115,994, or 35 per cent. of the premiums as shown, but in reality—on account of the reduction in the liabilities—more nearly approaches the generally accepted standard of 40 per cent.

Before leaving this account I feel that, with two years of such widely differing experience, a fair way to review the situation would be by combining the figures of the two years. If this is done, the total premiums credited to the department amount to £718,433, whilst the total losses work out just under 51 per cent. The cost of acquiring and working the business is higher than we like to see, but I can assure you that the matter is engaging our closest attention.

MARINE DEPARTMENT.

Coming next to the marine revenue account, the premiums at £260,540 show an increase over the previous year. This is explained by the fact that arrangements entered into in 1920 did not give a full year's yield till 1921. We are still following the same cautious policy in this department that I referred to twelve months ago, and I may add that present indications point to a reduction in the premium income for the current year.

The claims paid, with full provision for those notified but still outstanding, absorbed 41.6 per cent. of the premiums, which I think will be regarded as a satisfactory ratio, especially having regard to the conditions prevailing in the marine insurance market generally. The commission and expenses together, including over 1 per cent. for marine policy stamps, work out at 14.4 per cent. and show a reduction on the previous year. The final outcome of the year's operations is a surplus of £114,285, which has been added to the marine fund, thus bringing the latter up to £210,000, or rather more than 80 per cent. of the premium income. This, then, is the position of our marine account of the second year, and without attempting to prophesy as to what profit

we may find we have made twelve months hence, I think you will agree that the showing is one that we may rest content with in the meanwhile.

BALANCE-SHEET ITEMS.

I will with your permission now deal with the balance-sheet before I turn to the profit and loss account. Last year we showed investments of just over £617,000 and cash £14,500, against which we had a loan of £77,500, leaving us with £554,000. This year we show investments of £498,217 and cash £58,469, making a total of £556,686, without taking into account the appreciation shown in the funds. You will remember that last year I explained the circumstances under which we thought it desirable to borrow the £77,500 for the purposes of our foreign business in preference to remitting at the then low rate of exchange. I am glad to say that action has been justified by circumstances in that the exchange has recovered and our securities have appreciated in value. I am glad to say that while at December 31st the investments showed an appreciation of £7,000, at the present moment a still larger appreciation is shown. The investments of the company consist almost entirely of gilt-edged securities, and to-day the invested funds are £626,837 at cost and £694,133 at middle market value, an appreciation of £67,295 net.

PROFIT AND LOSS.

Finally, I take the profit and loss account, from which you will note that dividends, interest, and miscellaneous receipts amount to £30,178, against £11,164 last year, and we therefore have no hesitation in recommending the payment of the same dividend—namely, 5 per cent.—as was paid last year. We have provided for such income-tax as the company may have to pay, and after allowing for the transfer to the fire and general account of £20,000, we carry forward a balance of £18,104, subject to the balance dividend, £5,250.

As regards the future, I am hopeful that we have seen the worst of this depression, and that, while pursuing our conservative management, coupled with our financial strength, we shall obtain our fair share of any improvement, and that the report and accounts for 1922 will show increased progress and better results.

I now beg to move that the report and accounts be adopted, that the payment of an interim dividend of 2½ per cent., less tax, in December last be confirmed, and that a final dividend of 2½ per cent., less tax, be now paid.

Mr J. C. Gould, M.P., seconded the motion, remarking that having regard to the circumstances through which they had been passing the report was more than satisfactory.

The Chairman, in reply to a question, having explained that the company had had no relations whatever with the City Equitable, the motion was carried unanimously.

TRIBUTE TO MR COLQUHOUN'S SERVICES.

The Right Hon. the Lord Amptill, G.C.S.I., G.C.I.E., in moving the re-election of the retiring director, Mr E. A. Colquhoun, said that there was nobody who had had greater experience of or had been more successful in reinsurance business than the chairman. Shareholders might be perfectly certain that so long as Mr Colquhoun controlled the destinies of the company, it would be carried on on the conservative and cautious lines for which it had been founded. They might regard themselves as exceedingly fortunate in having been able to secure that gentleman's guidance and chairmanship.

Colonel F. J. Scott seconded the motion, which was carried unanimously.

The auditors, Messrs. Baker, Sutton, and Co., were re-elected, and the remuneration of the directors was fixed at 1,000 guineas, free of income-tax.

On the motion of Colonel Lemon, seconded by Dr Smyth, a hearty vote of thanks was accorded to the chairman, directors, managing director, and staff.

The Chairman, in acknowledging the compliment on behalf of himself, the directors, and the staff, said shareholders must not overlook the extent to which they were indebted for the results shown, to their managing director, Mr J. H. E. Lane. All he would add was that if they were right in thinking that there was going to be an improvement in the market generally, with their history, with their funds, and with their cautious management, he was certain that their company would get their share of it.

The proceedings then terminated.

NESTLE AND ANGLO-SWISS CONDENSED MILK CO.

COMPANY'S POSITION AND PROSPECTS.

CHAIRMAN CONFIDENT OF THE FUTURE.

RETURN TO NORMAL CONDITIONS NECESSARY.

We would emphasise the fact that we have every confidence of a return to normal profits. One must not forget, however, under what abnormal conditions we have had to work both during and after the war. Governments were at that time the principal buyers of our products, which we could not possibly deliver direct to our customers through the intermediary of our numerous selling depots. Our strongest efforts are now directed toward the re-establishment and development of this direct contact with the consuming public by means of rational advertising and by all other means at our disposal. This brings us to believe that we can to-day still reckon on sales which are about double those of pre-war days, which will enable us to make use more completely as time goes on of our manufacturing capacity, whilst giving preference to those countries which can produce under the most favourable conditions.

FINANCIAL REORGANISATION POSTPONED.

It is difficult at present to foresee what the results of this year will be, as they depend to a great extent upon the measures adopted for the improvement of our position, and because we cannot calculate exactly when these measures will make their effects felt. This is one of the principal reasons why we propose to you to-day to delay for the time being the financial reorganisation of our company. Our bankers understand our position perfectly; we can count upon their support and their collaboration in our plan of reorganisation; nevertheless, we think it preferable not to go ahead in this matter for the present.

In coming to this decision we have been guided by the consideration that it is in the direct interest of the shareholders not to establish a definite plan of reorganisation until the working of our business during this year has given us sufficient information to enable us to estimate what sacrifices we must ask them to agree to in order that such reorganisation can be satisfactorily effected.

FALL IN SWISS LOAN RATES.

In our opinion, this information will enable us to undertake the reorganisation under the most favourable conditions possible, and we have also taken into account economic considerations contingent upon the financial situation. We see to-day a fall in the rates of interest, which makes conditions easier. Who would have thought a year ago that the Swiss Confederation would abandon so quickly the 6 per cent. and 5½ per cent. basis and come back to the rate of 4½ per cent. for loans? This fall is all to our advantage, and allows us to delay the reorganisation with the idea that circumstances are not likely to be less favourable than they are now, but, on the contrary, one can hope that they will be better. In adopting this attitude the board hopes to have the support of all classes of shareholders.

ADDITION TO THE DIRECTORATE.

I should like, gentlemen, to add also a word on the subject of our proposal to modify the articles of association. From last year onward it became apparent that financial questions would have an ever-growing importance in our enterprise. We wish, therefore, to give to the bankers, who not only help us with their credits, but also represent the interests of strong groups of shareholders, a more important place on the board, the more so as these bankers will be of the greatest assistance to us in collaborating in the establishment of a scheme of reorganisation.

We have secured for the financial side of our management the collaboration of a specialist of first rank in the person of Mr Louis Dapples, whose election to the board we are proposing to you. Mr Dapples will devote himself especially to the present financial questions, and with this end in view we shall ask him to become the fifth managing director. Mr Dapples has been at the head of banking establishments of the first order in France, England, and Italy; he has a wide experience of finance in overseas countries. With his collaboration it will be easier for us to solve in the best interest of our company the important questions of exchange, which constantly present themselves owing to the universal character of our business.

It is therefore necessary, as we propose to you in the order of business, to modify articles 22 and 29 of the articles of association with a view to increasing the number of the members of the board and of the general management.

In closing, I would like to repeat, gentlemen, that the board has taken everywhere most energetic steps for the reduction of general expenses, and that it looks forward with full confidence to the future of the company.

At the fifty-fifth annual general meeting of shareholders, held, on May 29, 1922, at Cham, Switzerland, the report and accounts of the company for the year ending December 31, 1921, were adopted by the shareholders, and all the proposals of the board as set out in the report accompanying the accounts were carried.

The Chairman, G. Aguet, Esq., C.B.E., of London, in the course of his speech said:—

In order to give you a precise outline of the position of the company and the reasons which have caused the large losses suffered in 1921, the board has established a very complete annual report, to which we refer you.

PROHIBITION OF THE EXPORT OF CONDENSED MILK.

The events which occurred during the war are still in the memory of all. You know how we in Switzerland were compelled to deliver our fresh milk supplies to the towns and important centres for their daily consumption. This resulted in serious loss to us, because we did not derive any profit from the use of our staff, as the condensing of the very small quantities of fresh milk which remained at our disposal were far from being sufficient to cover our expenses. The decrease in the production began with the prohibition of the export of our condensed milk, and as, on the other hand, the world demand for condensed milk was enormous we were compelled, in order to avoid our business being ruined, to purchase goods where we could find them. It was this which led us, through sheer necessity, to participate in a certain number of foreign enterprises of good standing.

RATE OF EXCHANGE AN ADVERSE FACTOR.

Gradually the rate of exchange of the Swiss franc rose to such a degree that it has been impossible for us to recommence manufacturing in Switzerland since the war ended as we should have liked to do. In fact, the production of condensed milk in Switzerland became, owing to these circumstances, so costly that it could only result in losses, and, therefore, contrary to all rational working.

DRAWBACK ON IMPORTED SUGAR AND TINPLATES.

The recent fall in the price of fresh milk and a certain rise in foreign exchanges allow us, however, to foresee now the time when we shall be able to produce larger quantities of Swiss condensed milk. We sincerely hope that our national product will soon regain its former importance in our manufacture. Experience has shown that our customers know very well how to distinguish between a milk of average quality and a perfect one such as ours, which is undoubtedly preferred by them. This fact gives to our brands a marked advantage over those of our competitors. We hope that the Swiss authorities will also back up our efforts by giving us, as most foreign countries do, a drawback on imported sugar and tinplates. It seems to us that such an action on the part of the authorities would be more than justified, seeing that it is more advantageous for the country to grant drawbacks on raw materials used in the manufacture of goods in Switzerland than by checking importation to paralyse home industry.

FINANCIAL SITUATION.

You will have seen from our annual report that the financial situation of our company has improved by a decrease of 115 million francs under the heading of "creditors." The programme laid down for the reduction of our stocks has continued to make its effects felt this year, and this has allowed us to reduce our debts up to the end of May by a further 21 millions.

Our debtors are represented by many thousands of customers, most of them old ones, who pay us as a rule during the month following the delivery of the goods. Since the foundation of our company we have never incurred serious losses through bad debts; the exceptionally high amount of 1,100,000 for 1921 is due to a bankruptcy in Cuba, and it is not likely that such a thing will occur again. The island of Cuba has passed through an intense crisis, due to the fall in the price of sugar.

The reduction of our financial needs is contingent on the decrease in production, but, on the other hand, it must be noted that the present production is much less costly, as certain raw materials, such as fresh milk and sugar, have almost returned to their pre-war cost, although other factors, particularly labour, are still markedly high, in spite of recent reductions.

We have been able to conclude from these circumstances that, thanks to a reduction in cost on the one hand and to a continued demand for our products on the other, we shall again have results showing normal profits as soon as we can work under normal conditions and reckon on a certain stability in the exchanges.

THE ROYAL MAIL STEAM PACKET COMPANY.

SIR OWEN PHILIPPS' REVIEW OF SHIPPING INDUSTRY.

FOREIGN COMPETITION—FLAG DISCRIMINATION.

CHEAP COAL AND TRADE REVIVAL.

CORPORATION PROFITS TAX.

The annual meeting of the Royal Mail Steam Packet Company was held, on the 1st instant, at the Cannon street Hotel, Cannon street, London.

Sir Owen Philipps, G.C.M.G., M.P. (the chairman of the company), presided.

The secretary (Mr D. I. Conradi) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—Before coming to the business of the meeting, I feel I must refer with deep regret to the losses we have sustained since last we met by the death, which occurred in October last, of Sir Joseph Savory, and on April 30th this year of Mr Herbert E. Wright.

Sir Joseph Savory had been a member of the court for over 40 years, whilst Mr Wright became a director in 1918. Both these gentlemen were respected and valued colleagues, and will be greatly missed in our counsels.

BOARD'S SOUND POLICY.

This old chartered company was established 83 years ago, and it is almost exactly 20 years since I became your chairman. It has been my consistent aim and that of my colleagues on the court of directors to pursue the policy of steadily building up this old business on sound and progressive lines by keeping abreast of modern conditions and providing up-to-date facilities for those who travel or ship their goods by our vessels.

At the same time we have kept in view the vital importance of a sound financial state of affairs, and have always (even in boom years) refrained from paying sensational dividends. The assets of the company have been well written down out of profits.

FLEET'S GROSS TONNAGE.

The total gross register tonnage of the vessels directly owned by our company is now 350,000 tons, whilst the fleets of the Royal Mail Steam Packet Company and the other shipping concerns with which it is closely allied aggregate considerably over two million tons gross register, or more than 10 per cent. of the total British mercantile marine.

ACCOUNTS.

The accounts which are before you to-day set out the financial position of the company and do not call for any special comment.

Our ordinary, preference, and debenture capital and reserves now amount to nearly £14,000,000.

Like practically all commercial undertakings, we have suffered from the world-wide depression in trade and industry which prevailed throughout the year 1921. We have, therefore, thought it prudent to reduce the dividend on the ordinary stock to 6 per cent. for the year.

RESERVES AND DEPRECIATION.

Our reserve fund stands at the substantial figure of £1,600,000; whilst, for the first time in the company's history, our insurance fund amounts to over £1,000,000.

For the past 20 years we have followed the practice of writing off not less than 5 per cent. per annum from the first cost of our steamers, so that our older vessels stand at low values in the company's books. Even in 1914, when, you will remember, the sum of £200,000 had to be taken from reserve, the full appropriation of 5 per cent. for depreciation was made, whilst the vessels that we either built or acquired under war-time conditions have had additional sums written off their cost for special depreciation. Our fleet stands in our books at a moderate figure.

COMPANY'S NEW YORK SERVICE.

Since early Victorian days the passenger services of the Royal Mail Steam Packet Company have been a household word in South America and the Caribbean, and the vessels of this company have won an enviable reputation for comfort in ocean travel.

Recognizing the desirability of strengthening the bonds of trade and travel between Europe and the North American Continent, we have for some time past been running a regular direct service of mail and passenger steamers between Hamburg, Southampton, Cherbourg, and New York. This was by no means the first introduction of the Royal Mail Company to the United States travelling public, as for many years prior to the war we maintained a regular passenger and mail service between New York and Southampton via the West Indies and Canal zone, as well as a regular tourist service between New York and Bermuda and pleasure cruises from New York to the Caribbean in the winter months.

I desire to bring specially to the notice of both British and American passengers that they now have at their disposal an additional direct line of first-class steamers to and from the United States.

NEW SHIPS FOR AMERICAN SERVICE.

As the "Orduna," "Orbita," and "Oropesa," running in this service have become popular with North Atlantic travellers, both on account of their excellent sea-going qualities, their comfortable accommodation, and the reputation which this old chartered company has for its cuisine, your directors have decided to add two fine new vessels, specially built for the New York Service, the "Orca" and "Ohio," the latter a vessel of nearly 20,000 tons. I feel sure our American friends will appreciate this progressive policy.

In passing I may mention that the connection with New York of your company and its affiliated lines is very close. From Southampton and the Continent we have a regular passenger service direct to that great port; from New York the mail and passenger steamers of the Pacific Steam Navigation Company proceed South via the Panama Canal to Peru and Chile on the West Coast of South America; whilst the mail and passenger vessels of the Lamport and Holt Line ply regularly between New York and Rio and Buenos Aires on the East Coast of South America.

SOUTH AMERICAN SERVICE.

We have maintained our passenger services between Southampton and Liverpool and Brazil and the River Plate, but the volume of traffic does not as yet permit of our resuming pre-war frequency of sailings.

In order to encourage traffic, we have substantially lowered passenger fares.

Business generally in South America has been passing through a period of severe depression, and the number of passengers travelling to and fro by all lines, whether British or foreign, has been considerably less than in pre-war days.

REDUCTION IN FARES TO SOUTH AMERICA.

I have for some time felt that, in order to assist in getting the wheels of trade moving again, it was imperative to encourage people to resume travelling between South America and Europe as in the days prior to the war. We have, therefore, been pressing our Continental friends to agree to a further large reduction in the passenger fares, which were still very high, but, as they were unable to see their way to make more than a comparatively trifling reduction, it was mutually arranged between the passenger lines serving South America that, after June 16th, individual lines would for the time being adopt the tariff which each considered best suited to existing circumstances.

After June 16th passengers will be able to travel to and from South America by the British lines at a reasonable cost, although still considerably above the pre-war figure, as the expenses of running steamers, including cost of coal and wages, are still far higher than before the war. I hope that this further reduction in passenger fares will prove a very practical step towards the resumption of business activity in and with South America.

SERVICE TO NORTH PACIFIC PORTS IN U.S. AND CANADA.

We have maintained our regular service with the North Pacific ports of the United States and Canada in association with the Holland-America Line, and our new motor vessel "Loch Katrine," of about 12,000 tons deadweight, which was built specially for this service, is now engaged in the trade.

CANADA-WEST INDIES SERVICE.

I am pleased to report that by arrangement with the Canadian Government the contract for the mail and passenger service by this company between Canada and the West Indies has been extended for a further period of two years from April, 1922.

NEW YORK-BERMUDA SERVICE.

Our pre-war passenger service between New York and Bermuda was resumed last year, and during the past winter we maintained a regular weekly service on this route.

PLEASURE CRUISES (NORWAY).

We are continuing our summer cruises to Norway this year with the s.s. "Avon." These cruises have proved very popular, and, besides being successful in themselves, are a useful means of acquainting another branch of the travelling public with the way in which we care for our passengers.

MOVEMENT OF CARGO.

The movement of cargo between the various countries to and from which our vessels ply has continued to be seriously restricted, owing to the universal depression in commerce and industry.

The company's fleet has been increased during the past year by the addition of the s.s. "Montgomeryshire" and the motor vessel "Loch Katrine," whilst the "Magdalena" and "Trent," both old ships, have been sold.

FOREIGN COMPETITION.

In British shipping, one of the outstanding after-results of the war has been the growth of foreign competition. The Great War gave a big stimulus to the mercantile marines of a number of countries, and owing to the temporary shortage of shipping immediately following the war, the newcomers for the time being prospered exceedingly. Then came the slump, and there was not enough business to go round, which has resulted in severe competition in almost every trade.

Whilst British shipping has to fight unaided for its existence, foreign ships are, in many cases, supported and assisted in various ways by their respective Governments. British shipowners firmly believe that, in the long run, they will more than hold their own, but where competition is State-aided it must necessarily be an uphill fight, and British shipowners may need to look to their Government for a greater measure of sympathy and consideration towards the shipping industry than has hitherto been extended to them.

It must not be forgotten that British shipping played a vital part in the war, and, in my view, the British nation cannot, under any circumstances, afford to let its mercantile marine take a secondary place.

FLAG DISCRIMINATION.

Another outstanding factor in shipping since the war has been the growing tendency amongst certain nations to discriminate in various ways against the ships of nationalities other than their own, such as debarring them from participation in coastwise trade, imposing much heavier dues and Customs charges in the case of foreign ships than against their own, and otherwise.

Great Britain has stood for centuries for the freedom of the seas, and extends to vessels of all nations the same treatment in all respects as to her own. It is to the interests of all that the seven seas should be free, and I hope that all discriminatory measures may be dropped.

If, on the contrary, foreign nations impose restrictions and penalties against the British mercantile marine, it may be necessary for Great Britain, in self-protection, to reconsider her position. There is an Act of Parliament of 1853, which has been on the Statute Book for 70 years, giving the British Government at any moment power to take immediate measures to protect her mercantile marine against unfair discrimination.

TRIBUTE TO STAFF.

As announced in the report, the court has appointed Mr J. W. Clark to be a director of the company, and he comes up for re-election to-day. Mr Clark's service with the R.M.S.P. extends over a period of 41 years, and he has been general manager for the past ten years. He is at present on a visit to New York on the company's business.

I would like to take this opportunity of expressing the thanks of the court for the care and attention which Mr Clark and the assistant managers, officials, and staff, at home, abroad, and at sea, have devoted to the interests of the company.

SUPERANNUATION FUNDS.

In connection with the Royal Mail Steam Packet Company and its allied steamship lines, we have within the last few years established no less than seven superannuation fund associations for the benefit of their respective staffs.

These superannuation funds together have a total membership of 5,874, and already have accumulated an aggregate capital of £1,419,715 invested in the names of trustees in trustee securities. Whilst they are all based on the contributory principle, which, in my opinion, is the best in the interests of all concerned, it is noteworthy that, out of the total invested funds of £1,419,715, the sum of £1,155,710 has been provided by the respective companies, or over 80 per cent. of the total investment fund.

I am glad to say that the Royal Mail superannuation fund continues to grow, and the membership continues to increase.

THE FUTURE.

There was never a time in my experience when it was more difficult than at present to forecast the future. One thing only is certain, and that is that no trade in the world moves in more regular cycles than the shipping industry. It is now just over two years since the post-war shipping boom collapsed. The prices of commodities, and also of ships, although they may not have reached bottom, are now tending to stabilise, and in some cases even slightly to advance.

I am still strongly of the opinion that we shall not witness a real revival in trade and commerce in this country and secure

work for all the unemployed until two things happen—namely, coal is available for industry and commerce at considerably under £1 a ton, and the present heavy burthen of taxation is very substantially reduced, including the total abolition of the Corporation Profits Duty.

If and when these things are brought about, as I hope they may be, business all round should steadily improve, and when business improves this company, with its world-wide ramifications, will be in a position to take advantage of the better conditions and continue to take no small share in the development of the trade of the Empire.

I now move: "That the report of the directors and the accounts and balance-sheet for the year ended December 31, 1921, submitted to this meeting, be and the same are hereby received and adopted, that the dividends paid on the preference stocks of the company as shown therein be and the same are hereby declared, and the payment thereof approved; and that a balance dividend of 4 per cent., less income-tax, making, with the interim dividend of 2 per cent. paid in November last, 6 per cent. for the year, be and the same is hereby declared on the ordinary stock." I will ask Mr Cameron-Head to second it.

Mr James Cameron-Head seconded the resolution, which was carried unanimously.

The retiring directors, Mr Arthur Nevile Lubbock, Mr Edward Norton, and Mr John William Clark were re-elected, and Mr Harold John Morland, F.C.A. (of Messrs Price, Waterhouse and Co.), was reappointed auditor.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr P. Matthews moved "That a cordial vote of thanks be given to the chairman, directors, management, and also to the staff, both on shore and afloat, for their services during the year." In doing so, he said the chairman had been able to give them a very satisfactory account of the stewardship of the board. The chairman was a tower of strength to the company, and they knew that in carrying on an important business in connection with one of the chief industries affecting the life of the country it was essential to have men managing their affairs who were both keen and careful. The report submitted to them showed that those virtues were prominent in the board now entrusted with the affairs of the company. The shareholders were glad to hear that the board had been joined by Mr J. W. Clark, who was well known to many of them as general manager. Those who had been connected intimately with the affairs of the company were those whom the shareholders liked to see on the board. They had an excellent staff, both on shore and afloat, and it was to the staff, as well as to the directors and management, that they owed a cordial vote of thanks.

Mr D. W. Allport seconded the resolution, and the vote was unanimously accorded.

THE CHAIRMAN'S REPLY.

The Chairman, in thanking the shareholders for the vote, said that everybody who had had to do with business realised that they had a difficult time to face, but he was convinced that if everyone interested in the future of the country did their level best in reducing the expenses of the concerns with which they were connected, and their personal expenses, then they could put pressure on the Government to reduce Government expenses. The reduction so far effected by the Government was small in comparison with the enormous further reductions, both in expenses and staff, that could be made, but until the City of London and the rest of the country showed that in carrying on their own concerns they were as economical, or almost as economical, as before the war, they could not fairly put pressure on the Government to make them go back more nearly to the pre-war level. The proceedings then terminated.

NITRATE PRODUCERS' STEAMSHIP COMPANY, LIMITED.

TAXATION BURDENS—CAUSES OF UNEMPLOYMENT.

The annual general meeting of the Nitrate Producers' Steamship Company, Limited, was held, on May 30th, at 20 Billiter buildings, London, Sir John Latta, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said that when they last met the outlook was gloomy in the extreme, and it remained so. Their West Coast business since the war had been non-existent; they had not had a steamer in that region during the war. To make matters worse, the Chilean Government had decided to reserve their coasting trade to themselves, which he thought would prove a mistaken policy. The company, however, were lucky in being able to secure profitable contracts elsewhere. The directors recommended a balance dividend of 5 per cent., with a bonus of 5 per cent., both free of tax, making 15 per cent. for the year. They were not likely to be able to repeat this distribution.

Referring to the burden of taxation, he said that in the last six years they had had to pay 100 per cent. per annum on their capital,

or a total of £935,000. This, in simple form, showed the grievous load capital had to bear.

THE CRUX OF INDUSTRIAL TROUBLE.

The present unexampled dimensions of unemployment were not entirely due to insurmountable causes. The crux of the trouble was that labour unions had reached such perfection that their leaders wielded greater power in the business destiny of the country than was exercised by the Government itself. Their one-sided restrictive policy—as they had no power over foreign unions—occasioned much needless unemployment. Many orders had to be executed abroad. Merchants could use these islands as a trading mart and conduct a substantial business altogether independently of the whims of British workmen. This was becoming daily more serious for British artisans, who had callously looked on as ship after ship had proceeded for repairs to the Continent, simply handing over their daily bread to foreign competitors with pitiable indifference. That insidious principle was also rampant in other trades.

Continental workmen were more prosperous than British because their unions' methods were regulated by expediency. British Labour leaders had mistaken views concerning the power of the Government over the business transactions and the financial fortunes of citizens. Mr Clynes remained of the opinion that good would ensue from a capital levy on the rich.

A BUSINESS MAN'S WATCHDOG COMMITTEE.

The time had arrived when a permanent business man's watchdog committee should be created in the House of Commons. It would cost little or nothing. Damaging statements were often disregarded because of the stupid licence that attached in this country to what was called "free speech." Unfortunately, our foreign competitors, with or without knowledge, but always for their own purposes, circulated such statements, claiming authenticity for them because expressed in the House of Commons. Such a committee would be most serviceable to many self-made captains of industry in the House, whose invaluable experience more often than otherwise lay dormant because they were poor speakers. It would be easy for them to bring injurious statements before the committee for examination. By question and answer, an equally authoritative contradiction, with the force of the committee's finding behind it, could, if necessary, be put on record. The advice of the committee would also be of advantage to the Treasury officials. Had

they been able to consult such a body, presumably the Chancellor would not last year have continued the E.P.D. The miscalculation of £90,000,000, although appalling, did not represent the whole loss, and demonstrated how completely they were out of touch with the trend of affairs. The levy was chiefly collected from old-established houses, and operated in restraint of trade, as it impounded money urgently wanted for reconstruction purposes. What was worse, it mostly went in refunding amounts to thriftless companies, many of which had gone out of business. The total loss of this mal-administration was incalculable.

Mr Robert A. Lawther seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

EQUITABLE LIFE ASSURANCE SOCIETY.

INCREASED NEW BUSINESS—BONUS DISTRIBUTION.

The one hundred and sixtieth annual general meeting of this society was held, on the 30th ultimo, at the Society's House, Mansion House street, London, Sir Evan Spicer (president) presiding.

The Chairman, in moving the adoption of the report and accounts, said that during the year 1921 the society obtained rather more new business than in the previous year, and, in fact, more than it had obtained for over 100 years. In some way 1921 was a very difficult year for new business, and it was gratifying that they managed to obtain more than in the previous year, which was one of the best years for new life assurance business within living memory. The claims were again very light.

Referring to the bonus distribution which had just taken place, he said that, in making the valuation at the end of last year, both the assets and liabilities had been revalued on conservative principles. In dealing with the assets, they had to consider particularly the value of the Reversionary Interest Society and the Equitable Reversionary Interest Society, which were acquired in 1919 and 1920. There was no market in these securities, and the only way a value could properly be put upon them was to make a detailed valuation of the various investments of those societies. This had been done by the actuary, and the result was that a substantial appreciation was found in respect of them. The society's Stock Exchange securities appeared at the middle market price at December 31st, and the total profit on realisations and revaluations of securities was £237,000, which meant a net appre-

ciation during the past two years of £97,234. It was partly owing to appreciation and partly to the light mortality during the past two years, and the continued low rate of expenses at which they had been able to work, that they found, on valuing their liabilities, that they were able to give the usual quinquennial rate of bonus at the end of last year. So far as whole-life assurances were concerned, they had increased the rate of interim bonus that was to be paid in the event of the older policies becoming claims before the next valuation, and they had also arranged that bonuses for recent policies were to vest and become payable at once, instead of when four years' premiums had been paid. In regard to endowment policies, a special bonus had been added, payable only if they survived to the end of the term. He might summarise the whole position of the society by saying that they were giving a little more bonus, they were making a valuation at least as stringent as they had made in the past, and they were carrying forward £160,000 as a general reserve.

The report was unanimously adopted.

THE INVESTMENT TRUST CORPORATION, LIMITED.

YEAR'S RESULTS—INCREASED DIVIDEND.

LARGE APPRECIATION OF TRUST'S SECURITIES.

MR ROBERT FLEMING ON CAPITAL AND REVENUE.

The thirty-fourth annual general meeting of the shareholders of the Investment Trust Corporation, Limited, was held, on the 1st instant, at the offices of the Corporation, Gresham House, 24 Old Broad Street, London.

Mr Robert Fleming, chairman of the company, presided.

The secretary (Mr Hildred Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—The two heads of a discourse on the annual report of an investment trust company are naturally capital and revenue, and to-day I propose very briefly to refer to our invested fund and the revenue derived from it.

FLUCTUATIONS IN STOCK EXCHANGE VALUES.

Beginning with the capital fund, the fluctuations in the Stock Exchange value of the securities of which our invested fund consists, during the last 11 years, as shown in the annual reports, will be of interest.

They are as follows:—

At May 1, 1912, the market value showed an excess over book cost of	£
" 1913, do do	334,917
" 1914, do do	165,854
" 1915, do do	38,421
" 1915, there was a depreciation of	272,196
" 1916, do do	327,420
" 1917, do do	295,914
" 1918, do do	510,569
" 1919, do do	337,100
" 1920, do do	346,469
" 1921, do do	571,531
while this year there is again an excess over book cost of	27,517

In making our valuation, which is checked by the auditor, we take the middle quoted price. If, for example, the quoted price is 100 to 102, we value at 101. Only 19 securities out of 399 are unquoted.

As showing of how comparatively small importance to an investment trust company—just as in an ordinary trust—is the Stock Exchange price of its invested funds, we may contrast these severe fluctuations with the dividends simultaneously paid to the deferred shareholders:—

For 1912 the dividend was 12 per cent.
For 1913-1919 the dividend was 12½ per cent.
For 1920 the dividend was 13 per cent.
For 1921 the dividend was 14 per cent.
For 1922 we are paying 15 per cent., and, as you see, we have a surplus of £26,757 for the year.
The corporation profits tax has during the past year swallowed up more than the equivalent of 1 per cent. dividend. We have often referred to the unfairness and injustice of this tax.

INVESTMENTS IN UNITED STATES.

We still have 21 per cent. of our investments in the United States, and the year's revenue has been helped by a favourable New York exchange. For the present year it may be less favourable, and, besides, it will not surprise us if out of the 399 investments there may be some new irregularity. We have very little in the ordinary shares of industrial companies, but already three or four substantial concerns, largely owing to the immense drop in the value of their stocks of goods, have postponed paying dividends even on their preferred shares, and these can hardly hope to be on the upgrade again during the present year. But it is wonderful with what steadiness the revenue investment trusts has been maintained, and anything which may develop in the direction indicated is not at all likely to do more than somewhat reduce our surplus over the 15 per cent.

RISE IN GOVERNMENT SECURITIES.

Returning again to capital account, as you know, there is nothing exceptional to our company in the rise in prices, which has, compared to those ruling a year ago, been fully 12 per cent. on the whole fund. The percentage of rise has been as great, even greater in some British Government securities, than in other lines. As the report shows, we held on May 1, £950,500 of these. Of that amount one-third was in the Three and a-Half per Cent. Conversion Loan. It cost us within the year about 62 per cent., and on May 1st it was 76½ per cent., a rise of 23½ per cent. on the money invested—surely an extraordinary rise during peace in an English Government security in so short a time! Unfortunately, there is no parallel improvement in the manufacturing and export industries of the country, nor any clear signs of an improvement. It is the comparative deadness of trade that has brought about that cheapness of money which in its turn has resulted in the very exceptional rise in investment securities which the past six months has witnessed. We would all prefer to see some arrestment of this rise if its cause was the restoration of the nation's manufacturing activities, on which its real prosperity depends.

World finance is still in the melting pot; how to balance budgets, stop paper issues, and stabilise exchange. The United States of America, it is certain, cannot go on as in pre-war times and during the war, exporting to Europe in enormous volume its surplus products—cotton, copper, wheat, and a hundred other things—unless it buys in exchange, and yet its legislators are busy erecting walls higher and higher for the purpose of excluding even those few imports that heretofore have managed to scale existing barriers. On the ocean, too, they seek to maintain their competition through subsidies, preferential railway rates and other means.

U.S. CHAMBER OF COMMERCE REPORT

While Washington talks and acts thus, I am glad to see that the United States Chamber of Commerce begins to see things as they are. A recent report, through its Finance Committee, on the Inter-Allied Debt situation, says:—

"It is evident that the payment of inter-Allied debts requires, first, an international credit balance arising out of trade and other financial relations, and, secondly, granting that there is such a balance it is still necessary for each country to secure from taxation the means with which to buy bills of exchange from exporters and others to pay debts.

"This raises the fiscal problem in each country. It is not imaginable that in addition to tax burdens which the people of those countries already bear still further taxes could be levied adequate to effect the purchase of bills of exchange in order to make debt payments to the United States. In fact, it would appear that the Budget situation is such in all Allied countries that they could not pay now, even though the trade balance was fixed."

With these remarks I beg to move:—"That the report and accounts, as presented, be and they are hereby received, approved, and adopted, and that a dividend of £9 10s per cent. on the deferred stock, less income-tax, making with the interim dividend £15 per cent. for the year ended May 1, 1922, be and is hereby declared."

Sir William Guy Granet seconded the motion, and it was unanimously adopted.

On the proposition of the Chairman, seconded by Mr H. A. Vernet, the retiring director, Sir William Guy Granet, was unanimously re-elected.

On the proposition of Mr Dunn Gardner, Messrs Cecil O. Webb and Lionel Baddeley were reappointed auditors, and the proceedings then terminated.

BRITISH THOMSON-HOUSTON COMPANY, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.

COMPANY'S SOUND FINANCIAL POSITION.

The twenty-seventh ordinary general meeting of the British Thomson-Houston Company, Limited, was held, on the 30th ultimo, at their offices, Crown House, Aldwych, London, Mr H. C. Levis (the chairman and managing director) presiding.

The assistant secretary (Mr Alfred Clements) read the notice convening the meeting.

The Chairman, having read the auditor's report, said:

I think the report which has been sent to the shareholders, and which is now formally submitted, will be considered very satisfactory. In submitting last year's report, I gave a brief synopsis of the company's growth, and said that from about 1912 there was a marked improvement in the electrical business in this country, and that the improvement had been steadily maintained up to nearly the end of the year then under review. I then mentioned the fact that, although a reaction had begun, the year, as a whole, was a record one. The volume of unfilled orders on hand at the

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves exceed £13,000,000.

HEAD OFFICE:
62, OLD BROAD STREET,

end of that year was such that, notwithstanding the fact that during 1921 the orders received were less in volume than for the year 1920, the output for 1921—that is to say, the amount billed to customers—was the greatest in the history of the company. This large output is responsible for the satisfactory results appearing in the balance-sheet and profit and loss statement submitted to-day.

CURRENT YEAR'S ORDERS.

Notwithstanding the general depression throughout the country, the volume of orders received by the company this year to date is over 37 per cent. in excess of the orders received for the corresponding period of 1921. The company now has on hand orders to the value of over £2,250,000.

It might be well for me to repeat what I said a year ago, relative to inquiries, and that is, that the volume is very large, and while the proportion which has resulted in orders is not as great as in 1920, nevertheless there is still a great demand for electrical machinery, which must be satisfied sooner or later, and from which we confidently expect to get our fair share of business.

COMPANY'S FLOATING DEBT LIQUIDATED.

In the latter part of the year under review, it was deemed wise to make provision to liquidate the floating debt of the company. An issue of £3,000,000 of debenture stock was authorised, and £1,500,000 par value was issued on satisfactory terms. The issue was largely over-subscribed, and it is satisfactory to note that this stock stands at a substantial premium to-day. Although on the balance-sheet there still appears an amount of £764,000 due to the International General Electric Company, this has since been liquidated, and the only debt which the company has, in addition to debenture stock and employees' savings certificates (which I will refer to again in a moment) is sundry creditors, retentions, &c., which, it will be observed, is covered more than three times over by apparatus, supplies, &c., finished and in progress of manufacture, and the sundry debtors, retentions money, and other outstanding accounts.

I mentioned the item of employees' savings certificates. This scheme was described in my speech of last year, and was instituted during the year in accordance with that statement. It enables employees to invest their savings by purchasing certificates bearing a fixed rate of interest, and pay for same on an instalment plan. The number holding the certificates is now over 1,300.

EXPENDITURE ON FACTORIES.

During the year the expenditure on factories was over £450,000, all of which was in connection with works started or authorised prior to the year under review, and, as stated in the report of the directors, was principally in connection with the new Birmingham factory, the new glass works which we are erecting at Chesterfield in connection with our electric lamp business, and extensions to the Rugby plant, all of which will be completed during the current year.

It may be of interest to note that the total cost of property, buildings, and plant to the end of December last was £2,670,000. From this cost there has been written off year by year sums aggregating £793,286, or over 29 per cent. of the total cost, and of the net book value remaining, nearly half represents expenditure at pre-war costs.

It must also be remembered that the present net value includes the large factory premises at Birmingham, which were only put into operation during the year 1921, and the works at Chesterfield, which are not yet completed. From this it will be seen how very substantial the total depreciation has been. Of course, the value at which the plant stands in the balance-sheet is much less than the cost of replacement.

The buildings and equipment have all been maintained in first-class condition.

GOODWILL, PATENTS, AND LICENCES.

The next item in the balance-sheet to which I would like to refer is that relating to goodwill, patents, and licences at cost. The heading "goodwill, patents, and licences" is a misnomer, as the item consists, in reality, of sums paid for patents and licences, the actual value of which is much greater than the figure appearing in the balance-sheet. No amount is included for goodwill. The wording is that which has been in use for many years. In addition, there are a great many patents which have come to us automatically from the General Electric Company and the International General Electric Company, both of New York, under our contracts with those companies, and without capital expenditure.

In this connection it is of particular interest to note that in the latter part of 1921 one of our most important patents covering the manufacture of the gas-filled type of incandescent lamp was sustained by the House of Lords, and since January 1st of this year, another important lamp patent, covering the so-called "leading-in wire," has been sustained, and from this decision there has been no appeal. The effect of these two decisions, of course, has been beneficial to ourselves and our licensees in this country.

SHARES AND DEBENTURES IN LIGHTING, TRACTION AND OTHER COMPANIES.

Another item on the balance-sheet to which I would like to refer is shares and debentures in lighting, traction, and other companies. Since January 1st this item has been reduced by the realisation of investments included under this head, for amounts aggregating £103,000, as against their book value of £76,600. We believe that the remaining items are carried at a very conservative valuation.

The item "Apparatus, Supplies, &c.," is carried on the balance-sheet at £1,718,793. The portion covered by stock-in-trade has been written down to replacement value during the year. The balance of this item consists of work in progress, which is covered by firm contracts.

The item in the balance-sheet covering discount, commission, &c., on the issue of 7 per cent. debenture stock will be written off from year to year, and the redemption obligation is such that the whole of the issue itself will be extinguished in 40 years.

The cash balance, as will be observed, is very substantial, and has continued down to the present date, notwithstanding the liquidation of the company's indebtedness, to which I have already referred, so that the company's finances are in a most satisfactory condition.

PROFIT AND LOSS ACCOUNT.

Turning to the profit and loss statement, it will be observed that the profit for the year, after deducting all expenses and charges, other than interest on debentures and loans, is £509,258, an increase of nearly £40,000 over the profit for 1920. To this there is added the amount brought forward from the previous year, viz., £225,891, making the total amount to be dealt with £735,150. From this we have to take, in the first instance, £119,446 for interest on debentures and loans, about £60,000 less than for 1920, due, of course, to the re-arrangement of the company's finances. The plant account has been depreciated by £60,000, and there is a reserve of £100,000 for contingencies, which we believe is ample for all requirements. This leaves a balance to be carried to the balance-sheet of £455,703. Out of this it is proposed to pay dividends on the preference shares at the rate of 7 per cent. per annum free of income-tax, which absorbs £105,000, and 6 per cent. on the ordinary shares, likewise free of income-tax, which absorbs £120,000, and these, deducted from the above amount of £455,703, leaves an amount to be carried to the next balance-sheet of £230,703.

It will be noted that the dividend on the preference shares is payable free of tax; arrangements, however, are in process of completion under which, from June 1st, future dividends will be subject to tax in the usual way. This involves the payment of reasonable compensation to the present holders for the surrender of this right, but ultimately it will be greatly to the advantage of the company.

NEW OFFICES—WAR MEMORIAL.

For a great many years the London office of the company has been at 83 Cannon street, but the business has expanded to such an extent that it was necessary to get additional office accommodation, so the offices at Cannon street were given up, and we are now occupying our present quarters at Crown House, Aldwych, which are commodious and convenient, and in a district in which a number of engineering concerns have their offices.

The memorial to the employees who fell in the Great War, and which I mentioned in my speech a year ago, was completed during the year. It was unveiled with appropriate ceremonies by Field Marshal Sir William Robertson, and dedicated by the Venerable Claude M. Blagden, Archdeacon of Warwick, and Rector of Rugby, on October 29th.

I hesitate to touch on the question of industrial disputes; much has appeared in the Press, and it is to be hoped that all of these matters will be amicably adjusted in the near future. I am glad in this connection to be able to state that the personal relations between our own employees and our management are satisfactory.

I now beg to move that the report of the directors produced, together with the annexed statement of the company's accounts to December 31, 1921, duly audited, be now received, approved, and adopted, and that the recommendations therein contained as to dividends or otherwise be adopted and carried out.

Major Martindale seconded the resolution, which was carried unanimously. On the motion of the Chairman, seconded by Major Martindale, Lord Carmichael, Messrs Owen H. Smith, and W. C. Lusk, the retiring directors, also the Right Hon. Earl Buxton (who has been elected a member of the board since the last annual general meeting) were re-elected directors of the company.

Mr Galloway then proposed, and Major Martindale seconded, the re-election of Messrs Price, Waterhouse and Co., the retiring auditors, their remuneration to be fixed by the directors. The motion was carried unanimously.

A hearty vote of thanks having been accorded to the chairman, directors, and staff, the meeting terminated.

ANGLO-ARGENTINE TRAMWAYS COMPANY, LIMITED.

"SIGNS OF REAL IMPROVEMENT."

The thirty-eighth ordinary general meeting of this company was held, on the 30th ultimo, at Winchester House, London, Sir George A. Touche, Bart. (the chairman), presiding.

The London manager and secretary (Mr W. D. Dawes) read the notice convening the meeting and the report of the auditors.

The Chairman, in the course of his speech, said: I fear our report may have been received with some disappointment by the shareholders, although you were prepared for much less favourable figures than those of a year ago. What I am able to tell you to-day will I hope, mitigate your disappointment, but I cannot hope it will remove it altogether. In 1920 the receipts from all sources were £4,413,164. In 1921 they were £4,277,600, a difference of £135,564. In my address last June I particularly called your attention to the manner in which the revenue for 1920 had benefited by special features, such as the favourable exchange and the large credit for income-tax, owing to the heavy payments for arrears of dividend on the first preference shares, and explained that such credits were windfalls not likely to recur. The difference in exchange alone represents a larger sum than the difference in our net receipts, while income-tax accounted for nearly as much as the reduction in receipts from all sources. The par rate of exchange for the Argentine gold dollar on London is 47.58d. Our remittances for the year totalled nearly £1,000,000, at an average rate of 45½. In 1920 the average rate was 58.89d. We have thus lost heavily on exchange as compared with the previous year. In addition to the special credits I have mentioned, the gross figures, as published, included various miscellaneous items. During the year under review these gave us, for advertising £25,876, tolls £10,428, rents £9,329, cargo haulage £2,274, and express trips £3,068.

TRAFFIC RECEIPTS.

When we separate the traffic receipts from the other credits we begin to find some ground for encouragement. In his report a year ago the general manager estimated an increase of 5 per cent. in 1921. This estimate has proved extraordinarily accurate. The traffic receipts in 1920 were £4,000,741; in 1921 they were £4,203,369, an increase of £202,628, or almost exactly 5 per cent. The traffic receipts are the backbone of our undertaking, and their steady increase is the basis alike of our hopes and fears for the future. It is the basis of our hopes, because it is only the advance in takings which can enable us to meet the increasing burden of social legislation. Our traffic receipts have increased because the population of Buenos Ayres has increased every year, in spite of the return of immigrants to their own country during the war. The increase in population since 1910 has been over 400,000. The population is now estimated at 1,708,000, and no similar population in the world is supplied so well with tramway facilities. At certain hours our surface cars have difficulty in coping with the traffic. Last year we carried nearly 90,000,000 more passengers than in 1916, and we ran nearly 7,000,000 more miles.

EXPENSES.

Yet we must be grateful for the larger traffics, for without them the record of increased expenditure would be an alarming one. The total expenditure for the year amounted to £3,305,081, against £3,198,028 in 1920, an increase of £107,053. Traffic expenses were £1,223,358, or £65,093 in excess of the previous year. Of this £57,218 represents increases in wages. While the increase is high, it must be remembered that there was also a substantial increase in the number of passengers. Traction expenses were £644,744. These, as you know, are governed by the cost of fuel. We expected a large saving here. The traffic expenses in 1920 were £812,693. Almost all the difficulties with which we had to contend during the war were, as you know, owing to scarcity of fuel. In 1918 the traction expenses were as high as £891,632, as compared with £644,724 last year. Here, surely, is ground for encouragement. Of the many problems which beset us we hope that of fuel may, for the moment, be considered a minor one. The cost of fuel during the year varied from \$30.75 gold in January to \$18.50 gold in December, and we confidently expect that it will be even below this last price during 1922. Maintenance was £416,819, against £345,064, an increased cost of £71,755. The actual expenditure of £166,789 compares with £82,011 in the year 1920. In order to strengthen our renewals reserve in that year, when the expenditure was abnormally low, we added £51,161 to the actual outgoings, thus increasing the renewals reserve fund to £340,000. We might have drawn upon this reserve to meet part of the heavy charges of 1921, but in the opinion of the board it was undesirable to reduce the renewals fund below the sum of £340,000, at which it has stood for the last two years. The whole of the year's expenditure was therefore charged to revenue.

PAYMENTS TO THE MUNICIPALITY.

We now come to a figure which, after traffic and traction ex-

penses, looms as the most prominent expense on our revenue account—I refer to the large sum of £433,481 under the head of general rates and taxes. The whole of this sum is paid to the Municipality of Buenos Ayres for taxation. It consists principally of the percentages on our traffic receipts payable under the terms of our concession. While it is in our interest to maintain an efficient service, it will be seen that this is equally in the interests of the municipality. We have, therefore, every reason to look to the local authorities for encouragement in our task. There are naturally many questions which involve consideration by the municipality, and on some of them there is room for divergences of opinion. That must always be so. Our fundamental rule has always been to consult the comfort of the inhabitants whose interests the Municipal Council properly seeks to safeguard. We recognise that a satisfied public is an asset to a great concern like ours. It is probably on that account that our relations with the municipality are sympathetic and friendly. Administration and general charges in Buenos Ayres were £159,954, against £144,408, an increase of £15,546.

PENSIONS.

Pensions represent a very large sum. The company's contribution to the official pension fund in Buenos Ayres was no less than £109,302. This was for a full 12 months, that for 1920, £87,461, being for nine months only. These are new charges in the last two years, and show how our burdens have increased. This additional charge alone would provide a return of 5 per cent. on over £2,000,000 of capital. A casual examination of the accounts might create the impression that we are losing ground, especially in the light of the statement that the working expenses were 76.25 per cent., as compared with 75.60 per cent. last year. A closer view shows that increased receipts from traffics are to some extent counteracting the poor exchange.

The balance carried to the net revenue account is £972,519. We have paid the current year's dividend on the first preference shares, £176,000, leaving £143,531 undistributed. This enables us to satisfy 12 months' arrears on the second preference shares to December 30, 1917, requiring £137,500, and leaves to be carried forward to 1922 £6,031. We have already paid one-half of this second preference dividend, and now recommend you to authorise the payment of the second half. It was a question whether we should pay a full year's dividend on the second preference shares, or only a half-year's dividend. To pay the full year it is necessary to encroach, to a small extent, on the amount carried forward, which is reduced from £15,884 to £6,031, rather a beggarly balance in a company of this magnitude. It goes against the grain to do this, but the board felt it to be desirable to prevent the arrears on the second preference shares from increasing. There are still four years of dividend in arrear on these preference shares, while the ordinary share capital of £3,250,000 has received no return since 1914. This is not a satisfactory position. The business should be self-supporting on a commercial basis. It is not an encouragement to investment in the provision of public utilities.

The Tramway Company deserves well of the people of Buenos Ayres. The gain to the city is great. The gain to the tramway company is very disappointing. The present tariff arrangement was authorised in 1920, and is subject to review in 1923. The increase of a cents paper, authorised in January, 1920, was no free gift and no unearned bonus. Our shareholders have not benefited. We had to pay for every penny of it. The extra amount contributed by the public in Buenos Ayres has been paid back in the shape of extra wages, pensions and taxation to the municipality; while we have been able to earn only the current dividend on the second preference shares with an effort, the arrears remain. The ordinary shareholders get nothing. It will soon be necessary to review the position, and we are confident the question will be approached by the authorities in a fair and judicial spirit.

I would draw your attention to one item in the balance-sheet—the investments—now reduced to £305,218 at cost price. They have long shown a heavy depreciation. A year ago the shortage, after allowing for the reserve fund, was £113,000, but the recent appreciation of all securities has added considerably to the valuation.

You may expect a word or two about the outlook, but I am no prophet. Under the best conditions we have a long uphill task. There are immense arrears to be made good. Happily, there are now signs of real improvement, although these ought not to be exaggerated. The shadow of war is passing, and it cannot be doubted that prosperous days for the Argentine will return.

On the other hand the remarkable growth of the city aggravates the traffic problems, already serious. These questions are engaging the attention of the management, and we hope to attain a solution as satisfactory as the circumstances will permit, but we cannot work miracles. And always our first consideration is the convenience of the public, and we hope they also will consider us.

Mr W. F. Hamilton, K.C., seconded the motion, which was carried unanimously.

EAST AFRICAN ESTATES, LIMITED.

DEVELOPMENT PROGRESS OF THE PROPERTY.

FINANCIAL POSITION OF THE COMPANY.

The fifteenth ordinary (adjourned) general meeting of the East African Estates, Limited, was held, on the 31st ultimo, at the registered offices of the company, Carlton House, Regent street, London, S.W., the Right Hon. the Earl of Plymouth (the chairman) presiding.

The secretary (Mr Wm. Beaumont) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I beg to move the adoption of the report and accounts for the year ended June 30, 1921, and in doing so regret the delay in the presentation of the accounts, which, the shareholders will appreciate, cannot always be avoided in dealing with distant places.

May I point out that the valuable property which the company holds on long lease from the Government is included in the balance-sheet at a nominal figure of £1, and that the expenditure shown in the balance-sheet upon a comparatively small portion of such property is represented by plantations of considerable value and by preparatory and experimental work, the latter of which has served to show the potential resources of the company?

In addition to the above-named assets, the value of which could be easily underestimated, I should like to draw the attention of the shareholders to the fact that the investments of the company, taken at their then value, the sundry debtors (less creditors), stock in hand, cash in hand and at call, totalled the satisfactory sum of £162,230 2s 1d. The world depression stood in the way of disposal of any of our plantations, but the directors are satisfied that the excellent state of the three plantations on the coast will eventually lead, not only to the sale of the developed portion of the estate, but to the selling or letting of other suitable plots.

PROGRESS OF THE COCONUT PLANTATIONS.

In this connection I should just like to draw attention to what you will find in the printed report—namely, that the company's coconut plantations are making good progress. One of them—the Waa plantation—has been brought into a perfect state of cultivation, and no further outlay will be required beyond occasional weeding and the collection of nuts. The Gazi plantation is also in a very satisfactory state. The expense of weeding and generally cultivating this plantation will be considerably reduced in 1922-23, many of the trees already bearing. We hope that within the next two years there will be a substantial revenue from these two plantations.

Your directors regret the adverse balance in the profit and loss account of £9,508 10s, mostly accounted for by the loss of £7,709 8s 3d on the commercial department. It will be remembered that the department was closed instantly the first indication of the slump was noticed. The shareholders are fortunate that the loss is so small, as it is quite apparent now that the continuation of the department, even for a very short time, would have resulted in great loss to the company. It is quite clear that the drastic step of closing the department was taken at the right moment.

The directors' advisers are confident that the Taveta Concession is most suitable for the cultivation of sisal, and it is hoped in the future, when financial and other conditions are more favourable, that this large acreage will be a considerable source of income.

DEVELOPMENT OF THE LIKONI TOWNSHIP.

The development of the 500 acres of building land at Likoni has been retarded through a variety of reasons, but the plans are now approved and the beginning of development of the township is being arranged for. The Government having established a suitable motor ferry for the carrying of passengers and motor-cars from Mombasa to the Likoni side of the harbour, your company is constructing a jetty, which will enable these to land on the company's property.

A road is being constructed facing the harbour, and the company's manager is having a bungalow and office erected for himself at the beginning of the road near the ferry. It is hoped that this will lead to a demand for land and for further houses. It is within the knowledge of the shareholders that Mombasa is overcrowded, and, as the port is growing in importance, the demand for the company's land must increase. The directors look with confidence to the future of the Likoni scheme.

DIRECTORS' VISIT TO THE PROPERTY.

The managing director (Sir Owen Thomas) and Major the Hon. J. C. Lyttelton, one of the directors of the company, visited the property in January last and were satisfied with the progress that had been made. The recommendations made by them regarding the future development of the property are being considered by the board.

It will be noticed that the loss of £9,508 10s has been written off the balance of the share premium account, leaving the account

standing at £72 11s 2d. I will now ask Mr Guedalla to second the resolution.

Mr Herbert Guedalla seconded the motion, which was carried unanimously.

On the proposition of Mr A. M. Hunt, seconded by Mr M. R. Margesson, the retiring directors, his Grace the Duke of Westminster and Major the Hon. J. C. Lyttelton, were re-elected, and the auditors (Messrs Downes, Munns, and Co.) were reappointed. The proceedings then terminated.

LONDON ASIATIC RUBBER AND PRODUCE COMPANY, LIMITED.

BOARD'S CAUTIOUS POLICY.

The 14th ordinary general meeting of the London Asiatic Rubber and Produce Company, Limited, was held, on the 2nd instant, at the Council Room of the Rubber Growers' Association (Incorporated), 2 Idol lane, London, Mr Henry John Welch (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Our issued capital shows an increase of £53,032 over last year. £34,518 has been added to the reserve account from premiums received on shares, and sundry creditors and credit balances are reduced by about £14,000. The cost and development of our properties shows an increase of £51,463.

Buildings, machinery, and plant are increased by about £15,000. We had at the date of the balance-sheet, and still have, cash and investments amounting to over £100,000.

The results for the year, including interest on investments, show a profit of £5,760. With the addition of the excess profits duty refund we have a total to bring into account of £36,620, which, added to the amount brought forward from last year, gives us £98,313 standing to the credit of profit and loss account. Out of this we propose to transfer £9,000 to income-tax reserve, and to carry forward the balance of £89,313. The board regrets that it does not see its way to recommend the payment of any dividend at present.

Our total planted area is just over 8,000 acres, of which 5,251 acres are six years old and upwards. Excluding any allowance for reserve lands, the total cost of all our properties, calculated on the issued capital taken at par, works out at about £46 10s per planted acre, or, if we deduct the value of our net liquid assets, the cost per planted acre works out at just over £31. The present immature areas of 2,752 acres have, however, still to be brought into bearing.

Only two of our seven estates, Diamond Jubilee and Semenyih, were tapped continuously throughout the year.

Although the immediate outlook for the rubber producing industry is not very encouraging, sooner or later, however, the tide must turn. In my opinion the shareholders may regard this company's future with confidence.

Mr Mence Wilkinson seconded the resolution, and it was carried unanimously.

In the course of the formal proceedings which followed, the Chairman, replying to Mr Henderson, said that in regard to the publication of the details of production costs and other particulars likely to be of use to buyers of rubber, before the next general meeting he hoped that the question would have been thoroughly considered by the various companies, and the reasons for and against the publication fully ventilated.

BROKEN HILL SOUTH.—Output for the four weeks ended April 8th:—16,360 tons of crude ore were treated, assaying 14.5 per cent. pb., 6.6 ozs. ag., 13.4 per cent. zn., producing 2,982 tons concentrates, assaying 66.2 per cent. pb., 25.2 ozs. ag., 7.4 per cent. zn. Of the foregoing 2,522 tons came from the lead concentrating mill, assaying 67.1 per cent. pb., 21.5 ozs. ag., 7.4 per cent. zn., and 460 tons were produced from current slime, assaying 61.1 per cent. pb., 39 ozs. ag., 7.3 per cent. zn., 12,000 tons damp slime were treated, assaying 11.5 per cent. pb., 7.1 ozs. ag., 12.6 per cent. zn., and produced 1,983 tons concentrates, assaying 52.3 per cent. pb., 33 ozs. ag., 12.4 per cent. zn. The despatches of zinc tailings were:—To Zinc Corporation, 29,028 tons net; Amalgamated Zinc, 8,984 tons net.

SULPHIDE CORPORATION, LIM.—During the four weeks ended on May 20, 1922, 9,893 tons of ore and 2,491 tons of slimes were milled at the Central mine, producing 2,343 tons of lead concentrates (including 317 tons from the de-leading plant), which assayed 43 ozs. silver, 66 per cent. lead, together with 4,011 tons zinc concentrates, assaying 11 ozs. silver, 8 per cent. lead, 46 per cent. zinc per ton. At Cooke Creek, 1,845 tons of lead concentrates and purchased ores were smelted, producing 1,151 tons lead bullion for treatment in the refinery. The refinery products for the same period were 1,381 tons soft lead, 178,836 ozs. silver, 1,325 ozs. gold, and 176 tons antimonial lead.

OVERSEAS RAILWAY RECEIPTS.

Name.

Reports and Notices.

Baring Bros. and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 20th to the 30th instant, both days inclusive, for the preparation of the warrants for the interest due July 1, 1922.

The Agent-General for Ontario informs us that there have arrived in London samples of gold and silver ore from Canada. These include four samples of gold ore from the Dome Mine, value £100; one sample of gold ore from the Crossus Mine, value £500; one sample of silver ore from the Trethewey Mine, value £200; and one sample of silver ore from Cobalt, value £200. These samples are on view at the office of the Agent-General for Ontario, 163 Strand, London, W.C. 2.

Sir William Noble, who has just retired from the position of Engineer-in-Chief to the Post Office, has accepted a seat on the board of the General Electric Company, Limited. We understand that Sir William Noble proposes to devote his attention mainly to the development of the telephone and wireless sections of this important manufacturing concern.

The Imperial Ottoman Government notifies all Ottoman subjects in Great Britain who are holders of pre-war Austrian and/or Hungarian bonds that the listing and stamping of such bonds, in accordance with the regulations of the Reparation Commission, must be completed by June 30th. Any such holders should immediately communicate with the Imperial Ottoman Bank, London, 26 Throgmorton street; Manchester, 56-60 Cross street.

It is announced that Mr Duncan Paterson (Director of the Bank of Adelaide) and Mr John Falconer (Chairman Messrs Poulton and Noel, Limited) have been appointed Directors of the Southern Union General Insurance Company of Australasia, Limited.

We are informed by the Ontario Government that, owing to hydro-electric power being available, the cost of power for use at the gold mines of Northern Ontario ranges from 35 to 50 cents per ton of ore treated. The general value of the ore now being treated is over \$10 per ton, and the average cost of producing bullion is between \$5 and \$6 per ton.

Mr A. A. Campbell Swinton, F.R.S., M.Inst.C.E., M.I.E.E., has joined the Board of W. T. Henley's Telegraph Works Company, Limited.

At the annual general meeting of the Insurance Officials' Society, held on May 30, 1922, Mr E. Roger Owen, the deputy chairman of the Commercial Union Assurance Company, Limited, was re-elected president.

In consequence of the necessary building operations for the enlargement of their premises in Threadneedle street, the Bank of Australasia are to-day removing to temporary offices at 13 Leadenhall street, E.C. 3.

GOVERNMENT STOCKS, &c.

CHINESE GOVERNMENT 8 PER CENT. STERLING TREASURY NOTES, 1925-1929.—We are informed that the Chinese Government, as a result of negotiations which have been taking place, have requested Vickers, Limited, to pay the coupon due on April 1st last out of certain funds in the hands of Vickers, Limited, belonging to the Chinese Government. The payment of this coupon exhausts the funds so held. Noteholders should present their coupons to Lloyds Bank, Limited, in London in due course upon official publication of the advertisement to this effect. In view of the difficulties which have been experienced in the payment of coupons in the past negotiations are proceeding to obtain specific security on the increased maritime customs revenue if and when such increase takes place, instead of on the special security granted by the Chinese Government on the surplus salt revenue, which, for reasons already explained, never came into active effect.

BANKS.

BANK OF NEW SOUTH WALES.—Advice has been received by cablegram that at the half-yearly general meeting of proprietors held on May 30th at Sydney, a dividend on the capital stock of the bank was declared at the rate of 10 per cent. per annum for the quarter ended March 31st last, payable June 23rd. The sum of £100,000 has been added to the reserve fund, making it £3,600,000, and a credit balance of £160,132 18s 1d has been carried forward to next account.

THE SUMITOMO BANK, LIMITED.—Balance-sheet, December 31, 1921:—

LIABILITIES.	Yen.	ASSETS.	Yen.
Subscribed capital	70,000,000	Capital unpaid	20,000,000

Net profit for the half-year	4,648,371		
Total	520,599,516	Total	520,599,516

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.—The directors of the Standard Bank of South Africa, Limited, have resolved, subject to audit, to recommend to the shareholders at the general meeting to be held on July 26th next, a dividend for the half-year ended March 31st last, at the rate of 14 per cent. per annum, together with a bonus of 2s 6d per share, both subject to income-tax, making a total distribution of 16½ per cent. for the year ended March 31, 1922, to appropriate £50,000 to the writing down of bank premises, and

£100,000 to the officers' pension fund, carrying forward a balance of about £191,000. All other usual and necessary provisions have been made. It may be mentioned that these figures are the result of one year's trading, whereas at the corresponding period last year the results covered 15 months' trading.

MISCELLANEOUS.

FORESTAL LAND, TIMBER, AND RAILWAYS COMPANY, LIMITED.—The directors announce that, after writing off £220,643 on stocks of stores, &c., bringing in £170,000 previously over-provided for taxation, and transferring £500,000 from reserve account, the accounts for the year ending December 31, 1921, show a net balance of £126,313, making, with the amount carried forward from 1920, a total of £239,617 available. The dividend paid on the 6 per cent. cumulative preference shares absorbed £111,951, leaving £127,666 to be carried forward to new account. The board have decided not to recommend the payment of a dividend on the ordinary shares. The profit on sale of estancias, viz., £986,057, has been transferred to the reserve account, which will then stand at £2,322,859. The depreciation account remains unchanged at £1,047,604.

NOBEL INDUSTRIES, LIMITED.—The directors have now received sufficient particulars of the results of the constituent and associated companies for the year 1921 to enable them to declare a dividend on the ordinary shares (payable on July 1, 1922) on account of that year, of 5 per cent., less income-tax at 6s in the £. After this distribution (which they propose in due course to recommend as final for 1921), the estimates show that there will be a balance on profit and loss account for the year to add to the amount carried forward (£757,498) as at December 31, 1920. The recommendations to be made to the shareholders for the appropriation of this carry forward will include the allocation of a substantial proportion thereof to a special investment reserve account. The final completion of the constituent companies' accounts, with their outstanding taxation settlements, will make it necessary to defer the annual general meeting until early September.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

The continued spell of warmth and sunshine has greatly improved agricultural prospects and stimulated growth, so that the appearance of cereal crops leaves little to be desired. Spring oats, however, require additional moisture, as fields in some districts are rather patchy. Generally quiet conditions prevailed at market during the week, and prices in many cases ruled easier, though towards the close a steadier tone was apparent. Native wheat in small supply, but sells slowly, and rates easy at 57s to 59s for suitable milling samples, with inferior sorts quoted 55s per 504 lbs free on rail. Imported descriptions, after being slow and easier, improved on higher c.i.f. offers. No. 1 Northern Manitoba 63s, No. 3 ditto 58s, Australian 60s, all landed per 496 lbs, and Rosafé 64 lbs ex ship to arrive 58s per 480 lbs. The wheat cargo displayed weakness until the close of the week, when a good demand prevailed, both on Continental account and from home millers. Cargoes of Australian afloat sold 55s 3d to 55s 6d, Rosafé 64lbs afloat, also 63½ lbs loading, at 54s 6d to U.K., several steamers of ditto afloat to Portugal at 55s to 55s 3d, and ditto 63½ lbs May-June to France at 54s per 480 lbs. Parcels also followed the upward tendency, after a sharp decline, with business chiefly in North American and Argentine grades. Flour quiet, and prices further gave way both for home milled and imported. London standard straight run quoted 47s 6d, town households 45s 6d, patents 49s 6d to 50s 6d, all English straight run 44s 6d per sack, delivered in London area. All English country straights 42s to 43s per sack, free on rail at London stations. Of imported, Manitoba export patents quoted 47s, straights 43s, Pacific 46s, and Australian 42s 6d to 43s per 280 lbs. Business on c.i.f. terms remains dull. Canadian patents June seaboard quoted 44s, straights 40s, Kansas patents 45s, and Australian 40s per 280 lbs. Millers offals dull, and tendency easier. Broad bran quoted

BARCLAYS BANK LIMITED.

HEAD OFFICE: 54, LOMBARD STREET, LONDON, E.C.3.

* Half-year.

† Free of tax.

£7 15s 6d to £8, ordinary ditto £6 10s to £7, middlings £9 to £9 10s, per ton ex mill, bags included. Fancy Plate middlings £9 10s, and Plate pollards £7 15s ton landed. English barley largely nominal, as trade is practically finished for the season, but a fair demand is experienced for feeding sorts, and good lots rule from 44s to 48s per 448 lbs, free on rail. Of imported, Californian quoted 40s to 48s, Australian Chevalier 40s to 52s, Chilean ditto 51s to 56s, per 448 lbs ex store. American malting 48 lbs 32s 6d, No. 4 Canada Western 32s 6d, both ex ship to arrive, and Tunisian 37s ex store, all per 400 lbs. Maize continued dull and easier, though closed steady at the decline, in view of forward firmness. Plate ex ship 37s 9d, ditto landed 38s, yellow African 35s 6d ex quay, and No. 2 American mixed 34s landed per 480 lbs. White African maize meal quoted £7 15s ton ex store. Cargoes were in slow request, but holders were not pressing, and rates were fairly steady. Parcels very irregular, though closing firm, with business in La Plata May-June up to 34s 14d per qr 280 lbs. Oats quiet, but fairly steady. English whites quoted 36s 6d to 38s, black winters 34s 6d to 36s, grey winters 35s to 36s per 336 lbs free on rail. Of imported, Plate f.a.q. 27s, ditto clipped 29s, No. 2 Canada Western 32s, No. 2 Canada feed 29s, No. 2 white clipped American, 38 lbs, 27s 3d, British Columbian 37s 9d, and New Zealand 35s to 40s, all landed per 320 lbs. Oatmeal quiet, but prices fully steady, owing to scanty offerings of suitable milling qualities. London-made, coarse pinhead quoted £19, other cuts £18 10s, whole groats £18, rolled oats £19, flaked oats £21, ordinary Scottish oatmeal £19 10s to £20 10s, and American, all cuts, £18 to £18 10s per ton. English beans remain quiet. Choice winters sell at 53s 6d to 54s 6d, ordinary 51s to 52s, while springs range from 57s 6d to 68s per 504 lbs free on rail. Chinese horse beans quoted £10 15s to £11 15s ton. Rangoon hand-picked spot 7s to 7s 3d, Madagascar haricots old crop 10s to 12s, ditto new 18s to 19s cwt. English peas are in good request, and offerings are now becoming very light. Maples are firmly held, and range from 85s to 95s, and light. Maples are 60s per 504 lbs free on rail. Of imported, Dutch hand-duns 58s to 60s per 504 lbs, ditto screened 25s to 26s, Japanese 51s to 52s, Tasmanian "A" grade 23s to 24s, New Zealand blue 22s to 25s per cwt. English rye quoted 40s to 45s per 504 lbs free on rail. Lentils steady. No. 1 split 29s to 30s, No. 2 ditto 22s to 24s, and Egyptian 22s 6d to 24s per 100 lbs ex store. Homeward grain chartering was on a moderate scale, and mostly to Continental and Mediterranean ports. The River Plate section ruled easier, but the inquiry shows slight improvement, and now extends to July. Handy-size steamers to U.K./Continent June loading done down to 27s 6d loading at upper ports, with 25s, no reduction paid from Buenos Ayres/La Plata. Numerous charters were effected from Montreal on the basis of 20½ cents one, 21½ cents two ports Mediterranean, not east of West Coast Italy, and 20 cents to Marseilles. To Continent 15 cents is quoted, while American

GOLD and SILVER in ONTARIO

Gold mining is developing rapidly in the Province of Ontario, Canada. In 1921 the gold output was \$14,702,268. In 1922 it will probably be 18 or 20 million dollars.

The two chief camps are Porcupine and Kirkland Lake. Hollinger Consolidated, at Porcupine, is one of the great gold mines of the world; at present its production is about \$1,000,000 per month. Among other mines of this group are McIntyre and Dome, each with an output of more than 2 millions yearly.

At Kirkland Lake, the Lake Shore, Wright-Hargreaves, Teck-Hughes, and Kirkland Lake mines are the present producers.

Matatchewan, Larder Lake, West Shining Tree, Goudreau, Schreiber are other localities where gold has been discovered, and mines are being developed.

The silver mines of the Cobalt area are world-famous. Discovered in 1903 their yield up to the end of 1920 was 323 million ounces. Nipissing mine in 1921 yielded 3,012,614 ounces, O'Brien 1,408,890 ounces, Coniagas 1,301,860 ounces.

The pre-Cambrian rocks, in which the gold and silver and other minerals are found, extend over most of Northern Ontario, comprising many thousands of square miles. The greater part of this territory is unprospected.

The climate is invigorating, there is plenty of wood, water and labour. There are no mountains, and the prospector can go almost anywhere in his canoe. The mining laws are liberal. Ontario mining taxes are on net profits only, the rate being three per cent.

Magnificent specimens of gold and silver ores are now on view at the office of Mr. Wm. C. Noxon, Agent-General for Ontario, 163, Strand, London, W.C.2, where descriptive booklets, maps, and other information may be had.

THE HON. H. MILLS,
Minister of Mines,
Toronto, Ontario, Canada.

THOS. W. GIBSON,
Deputy Minister of Mines.

Northern Range is represented by 13½ cents Antwerp-Hamburg range, 22 cents three ports Denmark, and 20 cents Mediterranean. From the North Pacific wheat is quoted at 37s 6d June-July, and 40s new crop August-September to U.K.-Continent. Eastern markets dull, and 17s 3d paid on dead weight for a large steamer to U.K., Continent June loading. Australia inactive at last rate established—viz., 45s from Sydney to U.K./Continent. South African maize August-September rules at 25s, home. Mediterranean trades quiet, and rates largely nominal for grain tonnage.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated June 1st, is as follows:—Pig-iron: With the approach of the holidays and the continuance of the engineering dispute, there is no inclination to do business. Once the latter dispute is settled we should have a good local demand for foundry pig-iron. Prices remain at 90s for No. 3 Cleveland G.M.B. and 95s for East Coast Mixed Numbers Hematite. Manufactured Iron and Steel: No sign of animation yet in the steel trade. Steel ship plates (home), £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s net. Iron ore: Imports of ore have been good, but consumers have as much as they need for the present, and an occasional cargo is the extent of the demand. Best Rubio sellers' price is still 27s, but other good ores can be bought at considerably less.

Our Glasgow correspondent (writing on Thursday) says:—A better tone has ruled this week in the markets for Scotch pig-iron and steel, and a more hopeful feeling as to the future generally prevails than has been the case for some time back. The improvement is most pronounced as respects pig-iron, which is in strong request on both home and foreign accounts. Scotch makers report that the volume of business put through in May was the largest recorded for years, that in proportion, however, to the tonnage produced, which, as can be understood, was considerably below the normal. It is an unfortunate circumstance that the quantity of Scotch iron in sight is only equal to covering local and home wants, and these naturally meet with first consideration. As has been said, makers here are prepared to add to their outputs—provided they are convinced that matters are really on the mend, and that the current increased demand is not a flash in the pan. Since last week values have hardened by about 2s 6d a ton, and Scotch No. 1 is called 98s 6d; No. 3, 93s 6d (on trucks at producers' works), or 5s a ton more, Glasgow delivery. At the weekly meeting of the "ring" yesterday, sellers of Scotch No. 3 were asking 97s 6d, f.a.s., Glasgow; 90s for No. 3 Cleveland (Middlesbro'), and 96s for mixed numbers East Coast hematite, f.o.b. Middlesbro'; but there were no buyers. Conditions in the steel trade are no worse than they were eight days ago. If anything, there are more rolling mills running, and that here and there on substantial orders broken a time ago. And it appears that in the bigger constructional establishments a surprising amount of tonnage (for export) is being handled. Nearly every colonial and South American market is feeling the home pulse as to prices and deliveries of material. In short, buyers all over the Eastern markets especially are closely watching the situation with a view, it is calculated, to forward operations and activity which nearly everybody expects will follow on a restoration of peace to engineering ranks. Clyde shipbuilding returns for May make a not unsatisfactory showing. In April, only one boat (a steam launch) of 25 tons was put into the water, but May was responsible for 14 vessels of 26,500 tons, which means that at the end of the preceding month a goodly number of steamers were near to the launching basin and might legitimately have been included in that period. It is of interest to note that at the beginning of the year semi-official calculations made out that there were then "in hand on the Clyde" (for finishing in 1922) 127 vessels of 754,899 tons. The launches to date represent 46 vessels of 152,587 tons, leaving "on hand" 81 vessels and 602,312 tons. How that tonnage stands in relation to com-

pletion it is impossible to say, but it remains that builders must, in the circumstances, have a fair share of construction to go on with. Authorities affirm that while new placed orders are few, inquiries are comparatively numerous, and will bear fruit if prices ease a point or so.

Our Sheffield correspondent writes:—Except for the rolling mills, which are working half-time, the iron and steel trade continues at a standstill, and consequently the Whitsun holidays will scarcely affect the situation. In those branches not affected by the strike works will stop on Friday until some day next week. Further evidence is forthcoming of the improved outlook for steel both at home and abroad, and while buying is suspended for the moment there is a decided hardening tendency of prices. These are expected to go up when active trade is resumed. Sellers refuse to contract forward at the current rates. Open hearth steel furnaces are working at a fourth of their capacity, and crucible furnaces only a day or two per week. Large firms here have suffered heavy financial losses through the lock-out, and there is a risk that orders which they are unable to execute may go elsewhere. At the same time, there is a large amount of work accumulated awaiting the settlement. Prices in files and tools are being severely cut, and some of them are nearly back to the per-war level. Much of the business being booked cannot prove remunerative. Offered prices of building ironwork, including fireplaces, baths, and rain water goods, have been reduced about 10 per cent. this week. The tendency of hardware prices generally continue in a downward direction. The coal trade is extremely flat in the home market consequent upon the idleness of so many works. The official quotation for best South Yorkshire steam coal is 23s, but it can be bought at 21s, and lower prices are predicted. Large consumers and gas companies are refusing to contract ahead. In consequence of the hot weather, the house coal market has collapsed. Progress continues to be made in the manufacture of coalite, the product of a patent process which renders coal smokeless. Authorities believe that the experimental stage of this invention has been completed, and that it is now ready for practical application. Blast furnace coke has dropped to 17s per ton.

Our Cardiff correspondent writes:—The South Wales coal market has taken a very disappointing turn this week. The Whitsun holidays are usually preceded by exceptional pressure. Ship-owners are anxious to get their tonnage away and merchants their cargo, and the normal effect of this pressure is a decided hardening, if not a rise, in the current market prices of coal. That has not been the case this week; indeed, the end of the week found prices easier than they were at the beginning of the week, and best large Admiralty steam coals, which a fortnight ago were strong at from 28s to 28s 6d per ton, were done for this week's loading at 27s. The reaction from the spurt of March last has been more extensive than that anticipated; on Wednesday and Thursday there was a very disturbing absence of new inquiries; and one of the chief reasons why the collieries have been willing during the past few days to sell so much below the figures of a week ago is their desire to obtain as large a supply as possible of empty waggons in readiness for the resumption of work at the pits on the termination of the Whitsun holidays next Wednesday. The appeal made to the salesmen a fortnight ago has not had the effect hoped for, and a special meeting of the Coal Owners' Association has been convened for next Friday to consider the application of more effective expedients for the regulation of prices. The financial difficulties both of the employers and the workmen are forcing to a head this problem of output restriction and price regulation. The miners have warned the employers that they can endure no longer a wage rate so considerably less in purchasing power than that earned before the war, and have intimated that unless the employers take some action to secure a higher selling price they will themselves aim independently at that object by an arbitrary limitation of the working week to five days instead of six. Consultations between colliery salesmen have failed, and it now remains to be seen what more stringent restriction on freedom of action will be imposed at next week's meeting of the coalowners. The audit for April has just been received, and it is so disappointing as to give a new stimulus to the movement in the direction of regulation. The proceeds of the industry in April were not enough to pay

more than 7 per cent. on the standard wages. The workmen, however, are entitled to a minimum of 28 per cent. on those standard wages, and to provide that minimum the coalowners on a district basis will have to sacrifice the whole of their standard profits of £280,000 for the month, and find a further sum of about £36,000. The cause of this reduction in the proceeds of the industry was the loss during the month of about 800,000 tons in output as a result of the snowstorm at the beginning of the month of the Easter holidays, and of a smaller number of working days than in March. The industry has not been faced with a more serious financial situation since decontrol.

The following were the market quotations for representative coals at the end of the week. Best Admiralty large, 27s to 27s 6d; second Admiralties, 26s 3d to 26s 6d; best drys, 26s to 26s 6d; best black veins, 26s 6d to 27s 3d; Western Valleys, 26s to 26s 6d; Eastern Valleys, 25s 6d to 26s; best bunker smalls, 18s to 18s 6d; ordinary cargo smalls, 16s 6d to 17s. There was no alteration in coke prices, but pit wood was easier at 30s to 30s 6d, ex ship.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although the market is not nearly as active as it was a few weeks ago, there is a steady business in most qualities, and prices remain exceedingly firm. Spot lots of merinos are very scarce, and topmakers are now quoting for delivery well on towards the end of the year. Generally speaking, there is little, if any change in top quotations, but the position is against the buyer all the time. The consumption of crossbreds is steadily increasing, and there is a strong feeling that values will continue to appreciate in 46's and below. It is in these qualities, of course, that there is most room for improvement, and it is an undoubted fact that they are now receiving an increasing amount of attention after having been consistently neglected for several months. The outlook in the yarn trade is regarded as fairly satisfactory. Most firms have plenty of work in hand, and orders continue to come through at slightly better prices than have hitherto been obtained. Apparently manufacturers are beginning to feel a little more confident, and are operating cautiously on a basis more in keeping with current values, but there is still a certain amount of hesitation in following the upward movement, and some profess to believe that they will be able to do better by waiting. On the whole, however, there is a great display of confidence in the future of values, especially in the case of merinos, and while few traders would like to see any further advance in prices of merinos, they certainly do not expect to see cheaper wool this side of August. There is practically no change in yarn quotations on the week, but it is becoming increasingly difficult to get any concession on quoted rates. A feature of the piece-goods trade is the continued run on wool whippords for ladies' wear. The demand for Botany serges and worsted suitings is also better, and, taking the trade all round, the position shows marked improvement.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The visit paid to Bradford last week-end by the Premier and Agent-General for Western Australia served to direct attention to the wool being grown in that State. Sir James Mitchell (Premier) and Sir James Connolly (Agent-General) had an opportunity to see for themselves some of the processes of wool manufacture, by which it is possible to gain a far more intelligent conception of the extent and importance of the industry than book knowledge can possibly provide. Their visit also had its social advantages, and these should eventually prove to have been the medium for bringing about a better understanding between wool-growers in West Australia and users in Bradford. The two visitors were entertained to dinner by the officials and members of the British Wool Federation, and on that occasion some very important facts were laid before the Premier and his companion, one of which was the necessity which exists for reducing freight charges on wool shipped from Australia. It was pointed out that the cost of sending wool from New Zealand to England is 1d per lb, the cost from Australia being 1½d per lb. Apart from the fact that the rates are in themselves excessive, it is anomalous that wool sent the greater distance should be charged the lower price; the explanation appears to be that the Australian Government own a fleet of steamers, and are therefore able to determine wool freights, whereas the New Zealand Government is dependent entirely upon privately owned steamships to send wool from the Dominion to English ports. The point which it was intended to drive home to the Premier and his companion was that growers are the party who really pay the cost of wool transit. Even if this were not so in theory it would be so in fact, for if the cost of transit from Australia and New Zealand were not taken into account in estimating wool values, the extra charge would have to be debited, and would come up in the price of tops and yarns, and eventually in the cost of fully manufactured goods. The public buy the last-named, and would, therefore, be paying the cost of transit. But as the public includes everybody, wool-growers and consumers alike, the whole thing will only work round in a circle. It may be assumed that the Premier and Agent-General will take these facts into consideration, and will use their influence towards bringing down the cost of transit on wool from Australia.

Mr H. Norman Rae, M.P., mentioned the necessity for better wool classing by Australian pastoralists. He stated quite accurately that some really excellent merino wool is grown south of Perth, wool which is quite equal to the bulk of the produce from other States. The clips grown north of Geraldton are heavier in con-

dition, due entirely to the nature of the country. The further north the districts on which the clips are grown, the more waxy is their character. The writer makes this statement on the strength of 25 years' experience of handling West Australian wools, and must also say that the classing done by pastoralists in that State is capable of great improvement.

Mr Rae's appeal for increased population in West Australia had also considerable force behind it. The country cannot be developed properly without men, and as it is a good wool-growing area, there is ample scope for pastoral enterprise.

MANCHESTER, June 1.

The general tone of the market has continued quieter. Buyers have been less disposed to place orders with spinners and manufacturers. The falling off in the turnover is put down to the uncertainty with regard to the raw cotton situation and the monsoon

Correspondence solicited.

season in India. Much less cloth demand has been experienced for India than for some little time back, and buying has been confined to small lots. Moderate orders have been booked for China, without there being any general buying movement. Printing and finishing goods have moved off to a moderate extent for several minor outlets. The home trade has been busier, there being an active demand for light fancy materials. It has been a slow week in American and Egyptian yarns for home use and export, but quotations have been firmly held.

(I.) Comparative Statement of the Cotton Trade.

VEGETABLE OILS AND OILSEEDS.

Various influences have conspired to make the market quiet and inanimate. Demand for the oil products has fallen away, and with prices falling there is no disposition to anticipate requirements on the part of buyers. Linseed oil has fluctuated somewhat, but is, on the whole, cheaper. Home demand is small, and export requirements are in abeyance. America, which has taken since the beginning of the year 20,000 tons from Hull alone, has not been a buyer this week, importers on the other side evidently waiting to see how the new tariff is going to shape and to size up the statistical position. Much depends upon an industrial revival and an increased spending power of the peoples. Supplies of seed are less than normal, if advances from the growing areas are to be accepted, and this is a factor tending to give the market a certain amount of firmness. Spot and near prices, though easier, still maintain an appreciable advantage, and, after touching £40 ex Hull mill, have advanced to £42. June-August delivery may be bought at £38, and September-December at £36, but these positions begot but little interest.

Demand for cotton oils is slow, and prices lower on the basis of £41 for crude Egyptian and £37 10s for common edible refined. Crude soya bean oil is scarce, and late rates fully maintained. Rape oil is rather easier, and worth £44 ex Hull mill spot, and £43 July-August. Other oils show but little change, and demand is less than normal.

In the oilseed section linseed has been lower, but has since steadied. Plate has been done below £19 10s for shipment to Hull, and Calcutta at £20 7s 6d to £20 10s, May-June, to London. Cottonseed, in sympathy with Alexandria, is lower, and crushers disinclined to buy at present level. Manchurian soya beans have been done at £12 on passage to Hull, and Cawnpore castor seed at £16. Palm kernels and ground nuts quiet.

Linseed cakes are in poor demand, and quoted 10s lower at £14 ex Hull mill. Cottons and other kinds unchanged.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR CORRESPONDENT.)

The hide market is gradually gathering strength, and tanners are getting alarmed at the outlook; best heavy ox hides sold from 8 1/2d to 9d per lb at Bermondsey on Thursday, showing an advance of 1/4d on last week's rates. Lights remained steady, but cows advanced, and several classes of calfskins showed 1/4d to 1/2d advance on last prices. The firm position of hides seems general all over the world, as latest cables from New York report further advances, best heavy packets now selling at 15 1/2 cents, and native cows at 13 1/2 cents. The demand for S. American wet salted hides remains quiet, and few sales are reported.

The demand for sole leather is still improving, and merchants have done a fair week's trade. Tanners are perforce obliged to advance prices, in view of dearer hides, although they admit the demand for leather hardly warrants it. The advent of fine weather,

coupled with the advancing prices, has led shoe manufacturers to order the lighter averages, 10/12 lb bends being popular. Shoulders and bellies are dull, although there is a fair demand for light oak tanned grades for innersoles, and soles of women's shoes for summer wear.

The sale of upper leather does not appear to have kept pace with the improvement in sole stock, although quite a good trade is passing still in suedes, coloured kid, and patent leathers. Curriers of E.I. kips are short of orders, as the demand for stout boots is badly affected by the shortage of money in the industrial districts.

The improvement in the shoe section is well maintained, and the quantity of ladies' shoes, sporting shoes in canvas and leather, sent out last week is almost a record.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, June 2.

General course of trade proceeded quietly, and with one or two exceptions demand was again governed by wants of immediate necessity.

SUGAR.—This market developed quite a firm tone, and steady absorption took place, chiefly of spot parcels, and in which British goods largely participated as imported remain in small supply. Messrs Tate and Lyle's cubes, 53s to 54s; crushed, 51s 6d; granulated, 48s 9d to 49s 3d; pulverised, 50s 9d; caster, 50s 9d to 51s 9d, as to quality; pieces, 35s to 37s; fine white, 44s; granulated, August-September delivery, duty paid, 42s to 43s 6d, as to sample. American granulated, spot, sold, 47s 7 1/2d up to 48s 1 1/2d; June, 20s 7 1/2d to 20s 10 1/2d and 20s 9d; July, 20s 9d to 21s, c.f. and i., United Kingdom. White Mauritius, spot, sold, 44s 6d to 45s 6d. White Brazilian, afloat, quoted 19s 6d; white Java, July, 19s 6d, both c.f. and i., terms, London. Cuban, basis 96 per cent., June, quoted 14s 3d; Brazilian, basis 80 per cent., July-August, 9s, both c.f. and i., United Kingdom. Dutch and also Czechoslovakian sugars nominal for shipment. Terminal market firmer. White, August, sold, 21s to 21s 6d and 21s 3d; December, 20s 7 1/2d to 20s 9d. Cuban stock, 1,084,390 tons, against 1,347,650 tons at same time last year. Liquid glucose, July-August delivery, 26s 6d. American syrup quietly steady.

COFFEE.—Spot market presented very quiet features, and no auctions were held this week. Futures remained slow but steady.

COCOA.—Market still very quiet, with quotations nominally unaltered. Butter steady, quiet at 1s 7 1/2d per lb for prime English.

TEA.—No auctions held this week, having been suspended until the 12th inst. By private treaty only a retail amount of business has been doing.

RICE.—Prices on the week show no material alteration, but demand continued very slow. Two Stars new crop, spot, quoted 14s 9d. Bran quiet, unchanged. Rangoon beans, hand-picked, spot, 7s 6d. Dutch peas, spot, hand-picked, 29s cwt.

SPICE.—Pepper market exhibited a quiet, steady tone. Fair black Singapore, spot, quoted, 4d; June-August, 3 1/2d; Aleppo, spot, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 7d; ditto June-August, 6 1/2d; Muntok, spot, 7 1/2d; June-August, 7 1/2d; Zanzibar cloves, spot, 2s 1/2d; pimento, 2 1/2d; black pepper, 2 1/2d per lb; ditto June-August steamer, London, 2s 3d; Havre, 2s 4d; fair Penang seed, spot, 2s 2d; sago flour, May-June, sold, 14s 7 1/2d; June-August, 14s 3d. Desiccated coconut, spot parcels, sold, 42s; July-August, 38s 6d per cwt.

FRUIT.—A steady tone governed the market for currants and a moderate demand was experienced. Both Valencia raisins and sultanas met a quiet sale. Dates steady, and Siar, spot, sold, 27s 6d.

JUTE.—This market, after advancing sharply in the early part of the week, disclosed slight irregularity at times, but there was a good inquiry throughout. First grade, spot, Hamburg, sold, £34 to £36; May-June, £36 to £38 10s; June-July, £37 10s to £38 15s. Lightning grade, May-June, £33 5s to £33 10s; June-July, £33 15s to £34. Hearts, June-July, £28. 10-oz hessians, spot, 41s; 8-oz, 29s 6d.

HEMP.—Manila, after being quiet and easier for the commoner qualities, showed a slightly steadier tone. G grade, August-October, sold, £32 15s to £32 10s; June-August, £32 10s. Finer qualities neglected and quite nominal. New Zealand high point, fair, spot, £30; fair, £29. African sisal, No 1 G.E.A., June-August, £35. Indian steady, quiet, but Indian tows firmly held.

SHELLAC.—Market dearer. T.N., spot, fair quality, 38os; August, sold, 38s to 37s 6d.

COPRA.—Market steady, quiet. F.M.S. Straits, June-August, Rotterdam, sold, £24 17s 6d; F.M. ditto, to Marseilles, £24; Ceylon,

THE MONEY MARKET.

LOMBARD STREET got less benefit than it expected from the War Loan interest payment, partly because it had been financed more by Treasury bills than by the creation of Ways and Means Advances from the Bank of England, and partly because the official figures seemed to indicate that nearly ten millions of the interest were still unpaid before the holiday. The market is also still feeling the effect of the Whitsuntide expansion in the note circulation, and so may find itself more abundantly supplied

next week. As it was, there was quite enough money to be had at low rates for financing all the business now passing, but when a great surplus is expected sufficiency looks like poverty. Discount rates were consequently firm in tendency, in spite of the quietness of business, and the market seemed to have taken rather more Treasury bills than it could absorb comfortably.

The Bank return showed an increase of £6,000 in the stock of gold, while notes had returned from circulation to the extent of £202,000; the Reserve was thus £208,000 higher. Government securities had risen by £13 millions, and Public deposits had declined £13 millions. The Private deposits were thus £24 millions higher, in spite of a decrease of £2 millions in Other securities. There was an increase of £3,148,700 to £301,429,000 in currency notes outstanding, which includes £1,615,471 for notes called in but not yet cancelled. The fiduciary issue is £251,863,500, or £58,124,900 below the maximum. Silver coin in the Redemption Account was increased by £1,000,000 to £6,000,000.

THE STOCK MARKETS.

The week has been a quiet one on the Stock Exchange, the Irish crisis being the chief reason for the check to recent activity. British Government securities have been a heavy market, with $3\frac{1}{2}$ per cent. Conversion Loan dropping sharply, while demand fell off for Colonial Government stocks and Home Railway prior charge issues. Home Railway ordinary stocks gave way all round on a stream of selling orders. French and German bonds improved on reparations developments, but later lost part of their gain for a similar reason. Rubber shares are in the doldrums, the raw material having gone to fresh low levels. Reductions in the Shell and Royal Dutch dividends emphasised the uncertainty in the oil share market, while industrial markets showed little excitement, although iron and steel shares hardened a little on the result of the ballot of the engineers. Kaffirs were dull.

COMMODITY MARKETS.

On account of the Whitsuntide holidays, business has been practically brought to a standstill in the cotton industry, and there is nothing to report. In the wool trade conditions are very quiet, there being a tendency to wait until values have been tested in London at the auctions which open next Tuesday. In the pig-iron market the holidays have seriously affected the volume of dealings, although in view of the prospects of an early settlement of the engineering dispute there is rather a better demand for pig-iron. When the Cardiff coal market re-opened on Wednesday best Admiralty was quoted at 27s per ton; the general trend of the coal market is towards lower values, and the industry as a whole is seriously concerned over the position. In the timber trade the Swedish import business is good, and prices are fairly well maintained, while quotations for hardwoods are not inclined to weaken. In sympathy with American prices, wheat quotations have been firm. Though prices are on a rather lower level in the vegetable oil and oilseed market, raw linseed oil supplies are scarce. There is little doing in the hide and skin market, but shoe manufacturers are fairly well occupied. Further details of markets and prices will be found on later pages from our trade correspondents.

FOREIGN EXCHANGE.

The foreign exchange market is still suffering from uncertainty as to the ultimate result of the meeting of bankers which is considering financial assistance to Germany, and rumours regarding the attitude of the politicians is reflected in rates. Regardless of the fact that the German reply to the Reparations Commission is considered satisfactory, the mark has further depreciated

from 1,225 last Saturday, and is now quoted round 1,300. French and Belgian currencies have moved in the same direction, the rates rising from 49.05 and 53.12 to 49.63 and 53.60 respectively in the same period. Paris futures are 1 centime per month over spot. The feature of the market during the last few days has been the rapid upward movement in dollars. New York, which finished last week at 4.47½, opened after the holiday over 4.50, rising at one time on Tuesday to 4.51½, from which figure, however, it has receded and is now quoted about 4.49½. The rise, due to purchases of sterling from the other side, particularly over the holidays, is not easily accounted for. An optimistic feeling appears to exist in New York at the moment regarding the financial position in this country, and the movement seems more due to psychological causes than actual material factors. Forward dollars are now ½ of a cent above spot per month. European currencies have nearly all moved in our favour: Holland shows a slight rise of two points at 11.51, and Switzerland has risen from 23.35 to 23.50. Among the Scandinavians Copenhagen has been steady, and is practically unchanged at 20.42, probably on the feeling caused by the recent municipal loan. The Christiania and Stockholm rates, on the other hand, record small rises at 25.45 and 17.26 respectively. Italy has risen in sympathy with other Allied rates, and is now round 87. Finland continues steady round 209. The heavily depreciated currencies continue weak, Austria having again reached new depths at the record figure of 70,000. The Eastern exchanges have been fairly steady: Hongkong and Shanghai each falling about ½d to ½d. With the intervening holiday the period under review is short, and the South American market has shown no particularly interesting feature. The Buenos Aires and Valparaiso rates have shed a fraction at 44d and 36.40 respectively, but Rio remains steady at 7 17-32.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 3, 1922 :—

RECEIPTS.		EXPENDITURE.	
From Revenue	Min. £ 9,877	Supply Services	Min. £ 8,652
Amount borrowed	37,952	Interest on Debt	39,841
Taken from Exchequer balances	806	Sundries	142
	<u>48,635</u>		<u>48,635</u>

The total revenue for the week ended June 3, 1922, amounted to £9,876,800, as against £11,808,500 in the corresponding period a year ago. The expenditure was swollen by the interest on War Debt, which absorbed £39,840,900 out of a total expenditure of £48,634,900. Interest on War Debt in the same week last year absorbed £43,988,000 out of a total expenditure of £64,139,800. Property and Income Tax last week yielded £3,020,000, as compared with £4,295,000 in same week last year. Customs, at £2,187,000, compares with £1,659,000. Special Receipts under Miscellaneous brought in £1,329,100, against £550,600, but Ordinary Receipts under Miscellaneous produced only £101,100, against £1,445,400.

The week's operations increased the National Debt by the sum of £37,951,766, and caused the following changes :—

	Min. £		Min. £
Bank of England Advances ..	+ 14,500	Public Departments Advances ..	— 250
4½% Treasury Bonds	+ 2,000	National Savings Certificates ..	— 660
Unemployment Insurance ..	+ 240	War Loan Surrenders	— 052
Supplies	+ 006	Issues under War Loan Act ..	3,303
Treasury Bills	+ 24,656	Exchequer Bonds Repaid	— 250
	+ 41,673		— 3,720

The Floating Debt was increased by £39,105,000 during the week, and now stands at £982,355,500.

FINANCIAL YEAR, 1922-23 (April 1 to June 3, 1922).

THE BANKERS' PROBLEM.

A YEAR ago, at the London Conference in May, when one of the most virulent of those lovers' quarrels between England and France which have arisen so frequently since the Armistice was at its height, the Reparations Commission greatly contributed to assist the Governments out of their difficulties by assessing the German debt to the Allies at a figure substantially less than had been agreed upon three months previously in Paris. This week the Commission has once again helped by its action to avert a crisis and create a situation in which the Bankers' Committee may still fulfil some of the high hopes which have been entertained in regard to it, or at all events to enable it to make some contribution towards solving Europe's outstanding problems. A few days ago the bankers informed the Reparation Commission that before they considered what loan, if any, could be raised for Germany abroad they must first know whether they were to assume that the total Reparation debt of Germany was fixed or was in any way subject to reconsideration. This question not unnaturally raised the fear of the French that the bankers might use the possibility of a loan as a lever for reducing France's claim, and indeed, looking at the matter from the business standpoint, this is the point to which the bankers sooner or later must inevitably come. But the citadel which has been defended by French statesmen so tenaciously was not to be captured on a simple summons, and M. Poincaré declared that his representative would not consent to any assumption that the total was open to review. After prolonged discussion, however, the Reparations Commission, by a majority vote, in which the French delegate was in a minority of one, decided that "nothing in the terms of reference should be held to preclude the Committee from examining any of the conditions which may be necessary for the raising of external loans by Germany, including such as relate to the general re-establishment of her external credit." This decision, in which the Belgian delegate voted with Great Britain and Italy, gives the bankers the free hand obviously essential for their work. It is true that, according to report, the bankers feel that this vote by France makes their deliberations somewhat unsatisfactory, but they can hardly have hoped to secure from their deliberations an immediate settlement of the whole difficult problem, and it is of the utmost importance that their opinion should be clearly and frankly formulated. A definite report, even if the details might give rise to differences of opinion in financial circles, would carry the problem a very long way on the road towards solution.

French opinion, however, is on very strong ground when it urges that it would be most unsatisfactory for France to take for granted the necessity for a radical revision of

her claims while the indefensible and impracticable inter-Allied debts remain on the balance-sheet at their face value. Moreover, it is well that we should remember in Great Britain that France has very substantial ground for anxiety as to her financial position. In summarising the figures of comparative budgets compiled by the League of Nations a fortnight ago, we showed how greatly the solvency of the French and German Governments respectively depends on whether Reparations are paid or not. Further examination of the figures brings out very clearly the fact that in the last two or three years, while the burden of taxation in France has very greatly increased, the burden in Germany has grown lighter, thanks largely to the strange tricks which violent changes in the value of money are playing with public finances. Thus, excluding in all cases receipts from the sale of war stores, but including as taxation the high profit from fiscal monopolies such as sale of matches, tobacco, &c., the French Government expects to collect from the nation in the current year 22 milliard francs, compared to 20 milliards last year, less than 17 milliards in 1920, and $4\frac{1}{2}$ milliards before the war. Two years ago the document prepared for the Brussels Conference showed these figures in relation to the national incomes of various countries, but owing to the great changes in values which are taking place, no attempt is made in the recent publication of the League to repeat such estimates. As, however, the wildest statements have been made as to this proportion in Italy, France, and Germany, it may be well to consider in a broad way what sort of figures are likely to be near the truth. Before the war France's national income was estimated at $37\frac{1}{2}$ milliard francs, on which taxation amounted to 12 percent. This was higher than in most other countries owing to the centralisation of French Government and finance. In 1920 the Brussels Conference memorandum estimated France's income at 150 milliards. This was probably on the high side, as subsequent statistics have shown that French prices generally did not follow the extreme rise which at that time was shown in the wholesale price index number, and the true figure may not have been more than 120 milliards. Since then France's industries have been getting busy, and Alsace Lorraine has, to an increasing extent, filled the gap caused by the lack of output from the devastated areas, both as regards agricultural and industrial production. But prices have been falling, and we should not care to have to defend an estimate of more than 100 milliard francs.

On the other hand, the Central Govern-

In Germany, on the other hand, the Central Government, which has considerably larger functions than before the war, has increased its income from 2½ milliard marks to 27 milliards in 1920, 69 milliards in 1921, and an estimate of over 100 milliards in this year's Budget, of which 24 milliards are being collected on behalf of the component States. This last figure represents approximately a balancing of the "ordinary" budget, in connection with which it has to be remembered that Germany's expenditure on armaments is now very much limited, that her internal debt, being calculated in paper marks, has become by comparison a mere bagatelle, and that partly under external pressure the last of the subsidies on food and contributions towards her public services, such as railways, are disappearing from the Budget. Her national income before the war

was 43 milliard marks; in 1920 it was estimated by the Brussels memorandum at 272 milliards, and to-day, after allowing for the transfer of large industrial territory, it cannot be less than 1,200 milliards, and may be considerably more. Our readers can form some opinion of this estimate for themselves in considering that the German population has fallen from 67½ to 61 millions by deduction of territory, that the cost of living index has increased 32-fold, wholesale prices 66-fold, wages of lower officials 35-fold, railway rates and wages of unskilled labour in the iron and steel trade 50-fold. From these figures, together with an estimate for Great Britain, based on the assumption that the British national income was 5,000 millions sterling in 1920, and owing to decreased production, falling prices and the elimination of Southern Ireland, was 3,500 millions in 1922, we get the following ratios of Government revenue to the total income of the country:—

	France.	Germany.	United Kingdom
	%	%	%
Pre-war (actual receipts).....	12	5½	7½
1920 (actual receipts).....	11 to 14	10	21
1922 (estimated receipts).....	22	7	22

These various figures are only put forward to illustrate numerically the statement that the depreciation of the mark in Germany has, in spite of the efforts of the Government, produced the result of relative under-taxation, and that until the mark is steadied for a period it is impossible for any financial organisation to cope with the problem of maintaining the ratio of taxation. This difficulty would inevitably have prevented adequate taxation in Germany quite apart from the fact that the newness of her fiscal machinery has enabled evasion to be widely practised. Even after allowing for a very wide margin of error, the figures afford justification of the action of the Reparations Commission in insisting that Germany could and should raise an additional 50 milliards of taxation this year. They also help to explain the attitude of France. French reconstruction, which has been carried out in a very remarkable way, and has extended cultivation to a quite astonishing degree across the battlefields of the Great War, has, as yet, received practically no help from Germany, but has been done by means of the thrift of the people of France, who have lent their Government many milliards for the purpose. The problem of getting reparations from Germany is unfortunately not a simple matter of statistics and taxation; the big question of the form of payment and the effect of competition of German goods have also to be considered. Moreover, even the lowest reparation figure which is being discussed in Paris to-day, viz., 2½ milliard gold marks a year, means to-day in paper marks 180 milliards of additional taxation. But until it is realised that France has up to the present paid for the devastation of the war on her own credit, and that the deterioration of the German mark, while destroying the German middle-class and making the gravest financial and political difficulties for the Government, has meant relatively light taxation for employers and work-people among the industrial classes, we shall not begin to understand the psychology of Paris.

THE AMERICAN EXCHANGE.

ON no subject has the human capacity to err been more devastatingly demonstrated than on that of the course of exchange between New York and London during and since the war. Everyone remembers how in the early stages of the war it was generally announced that the rocketing rise in sterling that followed the pulling in of British credits from America, had come to stay, more or less, and deputations composed of experienced bankers and brilliant officials visited New York and Washington with the object of devising ways and means for mending a process that promised to disorganise purchases and sales between the two countries; how the process in the meantime quietly cured itself, and went so fast in the other direction that all the high-browed experts found that they had been considering the wrong problem, and that what they had to do was to arrange a system by which the price of sterling

could be held up and pegged. Last year, again, some of the most skilful and highly educated brains that devote themselves to questions of exchange were seriously considering schemes for devaluing the pound sterling on a basis which now looks quite extravagantly low. Sir Charles Addis, who examined these proposals with an eye of searching criticism when giving his inaugural address as President of the Bankers' Institute in November, discussed a suggestion for stabilising sterling at a ratio of \$3.65 to the pound. Since then the price of sterling in New York has risen, with slight reactions, until, when the Whitsun holiday left it in the hands of American dealers, it soared above \$4.50. For many reasons such a movement seems, when considered in the light of the economic relations of the two countries, to be contrary to all the laws of financial mechanics, and opinion in the City has been much exercised, in the slackness of business brought and left by the holiday, in trying to find an explanation. The balance of trade, though to a much less extent than during or immediately after the war, is still against us and for America; instead of having to pay large sums here to meet coupons on the mass of railroad and industrial securities held by British investors, America collects interest on our war securities placed among pro-Ally capitalists, and will shortly be receiving a half-year's interest on the debt lent by her Government to ours; at this time of year it is usual for bills drawn on London in anticipation of wheat and cotton shipments to begin to affect the price of sterling, and the recent low rate of discount quoted in Lombard Street might naturally quicken such operations. And yet the price of sterling mounts, and puzzled dealers in exchange want to know why, and still more, whether the movement is likely to last.

Explanations cabled from the other side are voluminous but not altogether satisfying. Last Wednesday's *Times* contained a cablegram from its New York correspondent on the subject of the passing by the British £ sterling of the 4 dollars 50 mark, and quoted the opinion of a "well-known American banker" as summarising as follows the causes of the movement:—(1) Small offerings of commercial bills. (2) Betterment in Britain's economic and financial situation. (3) The large volume of foreign loans made in the American market (68 million pounds in the first three months of 1922). (4) Continuance of easy money conditions. (5) Rumours of successful progress of the Bankers' Conference in Paris, which means betterment in the Reparations situation, and consequent progress in re-establishing trade in Europe. (6) Authoritative statements that there is no danger of disruption in Anglo-French relations. (7) Statements that Britain has already effected all necessary arrangements for meeting the first instalment of interest upon her debt to the U.S.A. Moreover, according to the same authority, the rise itself is a cause of its own existence—"It has had a psychological effect in increasing confidence that the return of the pound sterling to gold parity is in sight." In the same strain the *New York Herald* is quoted as saying that "the pound sterling, in fact, is on the way to par. The only secret about getting a nation's foreign exchange back to par when it has been heavily depreciated is for that nation to become able again to pay all its bills and then to pay them." It need not be said that if only a sufficient number of people in America and elsewhere believe and say that the pound is on its way to par, and act upon this belief by buying it for the rise, they will put it up to par in spite of all the influences to the contrary. A new difficulty has been brought into the always puzzling problem of calculating future movements of exchange by the extent to which an inexperienced and un-instructed public has taken to gambling in foreign currencies, attracted by the violence of their fluctuations. It was at all times difficult enough to trace the influences which really affected the movements of the exchanges, and now the unfortunate gambler is obliged, in addition to these calculations, to make guesses as to what an often asinine public is going to think about the course of exchange, and how far it will act upon its beliefs. It

will be noted that several of the reasons given above by a well-known American banker for the rise in sterling are purely sentimental—such as the rumours of successful progress of the bankers' conference implying betterment in the Reparations situation, and consequent progress towards European recovery. It seems somewhat astonishing that the authority quoted did not refer to the possibility of a great international loan to which large subscriptions from America are expected as a consequence of the efforts of the bankers' committee. Even with the Reparation question most satisfactorily settled, Europe's real recovery must necessarily take time; but the big loan, the possibilities of which the bankers have been summoned to discuss, would have a much more rapid effect in giving European countries dollars to dispose of and putting up the value of the pound. A still more sentimental reason was the one given concerning the absence of any danger of disruption of Anglo-French relations. It is observed by experienced dealers in exchange that Americans who take a favourable view of the European position are likely to express their confidence by purchases of English currency owing to the remarkable freedom of the market in sterling, and the enormous transactions that take place daily in dollars in London and in sterling in New York. If, however, the rise were as sentimental as is believed by many, it would naturally be expected that Americans would be acquiring large balances in London, and there appears little or no evidence that this is actually happening. As to the other reasons given by the American banker, the betterment in Britain's economic and financial situation is, let us hope, real to a certain extent. In last week's *Economist* we showed reasons for believing that the progress of our trade is real, though we had to admit that its pace may be that of a snail, and the financial position, with real saving checked by high taxation, and the Government nevertheless obliged to borrow in order to meet its statutory and contractual obligations to repay debt, does not seem to be one to encourage extravagant bullishness on the part of operators in sterling. As to the large volume of foreign loans made in America, this is an influence which, though immediately favourable to sterling, only increases the extent of the debt, already so enormous, owed by Europe to the United States, the liquidation of which raises so difficult a problem, especially in the light of America's policy with regard to shipping and the Tariff. Finally, the continuance of easy-money conditions put forward by the American banker as a reason for the strength of sterling would seem to be evidence in the wrong direction, seeing that money is both officially and unofficially cheaper in London than in New York, a fact which would in normal times have caused a certain number of kites to be flying across the Atlantic to take advantage of the lower rate of discount here turning the exchange against London; but in these days, of course, such things as finance bills do not happen. And though tentative inquiries have been heard of from America as to forward rates of discount here, we cannot discover that business has resulted.

It may be that the real explanation of the improvement in the American price of sterling is not to be found in any of these flattering considerations which point to the appreciation of the pound, but rather in the depreciation of the dollar, as shown by a rise of the price of commodities in America, which began much earlier than the rise in England, which, indeed, has hardly begun to manifest itself to an appreciable extent when compared with the previous fall. If this be so, the question of the continuance of the rise in sterling remains very difficult, and perhaps becomes even more difficult to solve. If America has now entered on a period of price inflation, assisted by tariff restrictions on imports, credit expansion and a soldiers' bonus to be provided with money created *ad hoc*, and continued by all the speculative exuberance to which our cousins on the other side of the water are so pleasantly addicted, who can say how long this process will push the pound up by depreciating the dollar, and how soon the mercurial temperament of American business will bring about a tumble in prices and the reversal of the process? Will the depreciation of the dollar last long enough to carry the pound up to par and perhaps send back to England a sufficient sum in gold to make the authorities

here confident enough of the future to restore London's position as a free market in gold, abolishing the present prohibition of export except under licence? To answer these questions one has to foresee the course of events, political and financial, not only in America but in England; since in this country the Chancellor of the Exchequer has plenty of amateur advisers who will counsel him to meet the deficit in next year's Budget, to which he has admitted that this year's is leading, by the simple process of manufacturing credit which might go far to counteract the influences above enumerated by depreciating sterling.

THE EUROPEAN IRON AND STEEL TRADE.

IN the latter half of 1921 the curious spectacle was presented of an acute and widespread depression in the iron and steel trade outside of Germany, accompanied by a growing boom within Germany. Changes in recent months have not yet dissipated that depression or destroyed that boom, but they have profoundly modified the underlying conditions of the situation. The instability of German conditions, with costs and prices bounding ever upwards, and the success which has now crowned the persistent efforts of British manufacturers to reach a competitive price level, are the two dominating factors in the European iron and steel trade of to-day. Superficially these two factors have already effected a radical transformation in the trade, since German competition, the bane of the world market in 1921, is no longer experienced with the same intensity, and in recent months the German home market has itself been invaded by foreign pig-iron and steel. Some consideration of the nature of the German boom is required to assess these developments at their true value, and to avoid an exaggerated interpretation of undoubted facts.

The German boom has become almost exclusively, as it always has been principally, an *internal* boom. It is true that in the early months (June-August, 1921) a considerable number of export orders were booked, and that in the last six months of 1921 Germany consistently exported more iron and steel than any other country. In the depressed state of the world market the orders which went to Germany formed an alarmingly high proportion of the whole, and the menace of German competition was very real. Yet the tonnage sent abroad from Germany in the third and fourth quarters of the year (633,000 and 686,000 tons respectively) does not indicate a booming export trade, and is, in fact, less than the 772,000 tons of British exports in the first quarter of 1922. In the first quarter of 1922 German exports amounted only to 597,000 tons. The explanation of these facts is that the boom in Germany spread to the finishing industry and to the chief steel consuming industries, and that this extension created a greater home demand for steel than could be satisfied, with the result that the German manufacturer found the home market, with its soaring prices, more attractive than the keenly contested export field, to gain which he had to overcome many obstacles both within and without Germany. Furthermore, it has become a settled conviction with the German steel-makers that it is more profitable to export highly finished steel products, or engineering products, rather than crude iron and steel, and the association of many of the steelworks with the engineering groups in vertical combinations or understandings has favoured this policy.

The import of iron and steel into Germany is likewise a direct consequence of the German boom. The effects of the losses sustained by the German steel industry under the Treaty of Versailles have been clearly shown at a time when the industry is working at high pressure. These losses were more severe in pig-iron than in steel, and in semi-finished steel than in the finishing depart-

ments. On the basis of the 1913 figures Germany was deprived of an annual production of seven million tons of pig-iron and four million tons of steel. Hence, the present boom had not proceeded far before there emerged a distinct shortage both of pig-iron and of semi-finished steel. Even the available blast furnace capacity could not be fully utilised owing to the shortage of coke. Hence, pig-iron has been imported from Luxemburg, Lorraine, England, and the Saar, and semi-products from the Saar, Lorraine, and Luxemburg. It is extremely doubtful whether much of this foreign material is being purchased because of any advantage in price, although the fact must not be overlooked that Luxemburg, Lorraine, and the Saar are specially favoured for competition in the German market by the provisions in the Treaty of Versailles, which secured to the products of these districts exemption from German Customs duties.

It is therefore clear that diminished exports and increasing imports are themselves evidence of the continuance of the German boom, and the possibility must be faced that a slowing down of activity in the home market may lead to increasing exports and diminished imports. Although no statistics of production are yet available, it cannot be doubted that Germany is still producing considerably more iron and steel than any other European country. Indeed, German output is limited at present not by the market, but by material hindrances to production, and notably by the shortage of coke already referred to, and by transport difficulties, of which the two brief railway strikes were merely the most visible signs.

Already the German boom has benefited other lands, since it has dulled the edge of German competition abroad. From the point of view of export tonnage, the chief gainer has apparently been the United Kingdom, where the continuance of the depression in the home market has resulted in the exportation of a very large proportion of the present small production. The extent to which French exports have benefited cannot be fully gauged until further statistics become available, but French production has received so notable an uplift that in March the output both of pig-iron and of steel was higher than in any month since the Armistice (380,000 tons of pig-iron and 361,000 tons of steel). In Belgium also production has been increasing, and the Belgian manufacturers have benefited both from the withdrawal of German competition from the Belgian market, and by the increasing cultivation of the German market on the part of their new-found Luxemburg brothers.

More than most booms does the present German one carry within itself the seeds of its own destruction. It has been fostered by inflation and protected from external assault by the depreciation of the exchanges. But the fact that it is so dependent upon currency conditions, and thus ultimately upon political decisions, makes its future course the more obscure. Already, last December, a temporary improvement in the mark undermined confidence in the "catastrophe" boom, as it was then described. The present position is that costs and prices have practically caught up with the runaway mark, and that apparently only a further exchange landslide can prolong the phenomenal activity of recent months. Furthermore, the real burdens imposed upon the German manufacturer have been increased by the Government decision to stop subsidising industry by means of uneconomic railway rates, and flour subsidies. A series of increases has at last, by May, 1922, brought German railway rates into line with wholesale prices generally at fifty times the pre-war level. Wages, also, so long subsidised by artificially low bread prices, are now rising steadily and steeply; reliable statistics are hard to obtain, but the figure of 25 marks per hour is given as the wage paid to unskilled labour in the iron and steel industry, and this represents more than fifty times the pre-war rate. And since April the coal tax has been increased from 20 per cent. to 40 per cent.

It is not possible to make a wholly satisfactory comparison of costs and prices in the different countries, but the available data, although incomplete and in part inapplicable to the conditions of international trade, indicate at least the direction of present movements,

although they do not enable us to establish with exactitude the position reached. The prices in the following table are inland prices, and it is well known that these do not necessarily correspond with export quotations:—

TABLE I.—COMPARATIVE PRICES.

	U.K.	Germany.		France.		Belgium.	
		Marks.	Sterling.	Francs.	Sterling.	Francs.	Sterling.
Coke—							
May, 1921.....	s d		s d		s d		s d
May, 1922.....	42 6	331-20	27 6	110	47 0	130	55 6
Foundry Pig-iron—							
May, 1921.....	120 0	1,560*	128 0*	245	104 6	265	112 6
May, 1922.....	90 0	5,870	88 6	225	92 0	240	89 6
Plates—							
May, 1921.....	280 0	1,850	152 0	850	339 0	586	250 0
May, 1922.....	210 0	10,850	161 0	640	261 0	465	173 6

* This price was in May, 1921, a purely nominal maximum price, and sales were being made at 200-300 marks below it, or at a sterling equivalent of about 100s.

It is worthy of note that the sterling price of German plates is now higher than a year ago, and this would apply to some other finished steel products also. But the most significant fact disclosed by the table is that the gap between German and world prices is not nearly so great as it was. As German prices are expected to continue to mount, the narrowing of this gap is already creating apprehension in Germany, for it threatens not only to render German competition in foreign markets more difficult, but also to set a limit to the boom within Germany, unless the mark again tumbles. The possibility of foreign steel forcing its way into Germany at competitive prices is already restraining the ardour of forward buyers, and at present this slackening in the placing of orders is the real sign that the boom is endangered.

In sharp contrast with the upward movement of costs and prices within Germany is the decline in both in other countries. In the article on "The Wages Tangle" in the *Economist* of January 21st certain particulars were given regarding wages reductions in the British iron and steel industry; the far-reaching character of these reductions is sufficiently shown in the fall in the average weekly earnings of labour from £5 7s 11d in September, 1920, to £2 19s 11d in March, 1922. The decline in coke prices from the peak of 62s 9d to 23s 6d per ton, at ovens, has been the other most important item in cost reduction. As the balance-sheets now being published clearly show, prices have been reduced in advance of costs and at the expense of profits. In the export market, in particular, British manufacturers have made great sacrifices to regain lost markets and to encourage doubtful buyers, with the gratifying result that more British iron and steel was sent abroad in the first quarter of 1922 than in any similar period since the third quarter of 1920. Foreign competition in the home market has also been decisively checked.

In France the fall in coke prices has been the main factor in the reduction of costs, and although the price of coke has risen somewhat since the removal of Government control at the end of the year, the price of pig-iron has also been raised from the extraordinarily low level of the autumn without disturbing the market. The more regular arrival of German coke since the beginning of February, at the rate of some 6,000 tons a day, has permitted the re-lighting of furnaces in Lorraine, so that 32 out of 66 are now in blast, and further additions to this number are expected. Wages are falling in France, and concessions from the railway companies in respect of export traffic have also helped the industry.

Belgium was, after the United Kingdom, the chief victim of the depression in 1921. The hostility of the trade unions to any reduction in wages temporarily robbed Belgium of one of her chief advantages—the relative cheapness of her labour. Recently, however, a wages cut of 10 per cent. has been accepted, and with reductions in miners' wages also the price of coke is falling. The home market has been freed from German competition, and Belgian manufacturers have gained important export contracts. The Customs union with Luxemburg, so long resisted, is now an accomplished fact, and it is a happy augury for its success that at the very moment of its accomplishment the Luxemburg manufacturers are more interested in the German market than in the Belgian.

The following table indicates the extent of the increase in production in the United Kingdom, France, Belgium, and Luxemburg:—

TABLE II.—PRODUCTION OF PIG IRON AND STEEL.
(1,000 tons.)

	Pig Iron.		Steel.	
	Fourth Quarter, 1921.	First Quarter, 1922.	Fourth Quarter, 1921.	First Quarter, 1922.
United Kingdom	782.3	977.9	1,230.2	1,295.7
France	838.1	1,004.7	826.2	982.7
Belgium	178.6	299.5	151.3	265.1
Luxemburg	292.0	326.0	232.4	249.9

The preceding analysis points to a lifting of the depression and to a slackening of the German boom. In our own country revival is at present retarded by the engineering dispute, and the export figures, so satisfactory in themselves, are, when viewed in relation to the restricted production, eloquent of the depression in the home market. There is, however, some confidence that, with the settlement of the present dispute, business will revive. But the instability of German conditions is the dominating fact in the general situation, and the danger that a fresh depreciation in German exchange may enable German manufacturers to obtain compensation for a waning home demand in a revival of export business cannot be ignored.

IRISH SECURITIES.

(BY A MERE ENGLISHMAN.)

EVERY office boy knows that credit is a delicate plant, which requires for its growth and maintenance an atmosphere of peace and security. When political and industrial conditions are disturbed credit withers and fails, investors, who are shy birds, take fright and get out of their holdings, prices fall rapidly as capital transfers itself to other markets, and if the disturbance of the atmosphere is really severe a panic may easily be developed. War, revolution, civil war, are the worst enemies of credit and financial stability.

Ireland by common consent is at present in a highly disturbed condition. The provisional Government is fighting an anxious battle with the republicans, who will be content with nothing short of a revolution, and it is forced to make such compromises with them as endanger the peace between Great Britain and Ireland, which was thought to be established by the treaty of last autumn. In the North civil war is openly being carried on, and British troops are engaged with forces from Southern Ireland shelling their positions, clearing salients, and generally carrying out on the soil of Ireland operations which apparently might by any unfortunate turn of events develop into war on a wholesale scale. In such circumstances a fall in the price of those securities in which the Irish investor puts his capital is what we would naturally anticipate, more especially as the Irishman, more fortunate than the inhabitant of other gravely disturbed countries, has at hand the finest investment market in the world. He has only to sell out his holdings in Irish stocks and shares, and re-invest the money in English War Loan which will give him a return of 5 per cent. on the soundest security that Europe has to offer. With Ireland in the early throes of civil war, with order dethroned, and political chaos imminent, this transfer of capital to the other side of the Irish Channel is the natural and obvious course for a prudent Irishman to pursue.

With this in mind, we take a few prices of Irish stocks and shares, expecting to find that as political conditions improve and deteriorate, the market will rise and fall. A year ago, when the I.R.A. and the British auxiliaries were carrying on their irregular warfare throughout the South, prices would naturally be depressed. With the signing of the treaty, they would as naturally recover. And with the disappointments of the last six months they would fall again probably to an even lower level than that of 12 months ago. The following table includes a number of securities centred in Southern Ireland, selected at

random, and shows the price of them at the end of March, 1921, at the end of October, 1921, and on June 2, 1922:—

SOUTHERN IRELAND SECURITIES.

Name of Security.	Share or Stock.	Paid Up.	Prices.			Present Yield.
			End of Mar., 1921.	End of Oct., 1921.	June 2, 1922.	
Dublin Corporation 3½ % Red., 1944	Stock	100	56½	55½	70½	£ s d 5 14 0
Bank of Ireland	Stock	100	185	192	225	5 14 6
The National Bank	50	10	15½	15½	16½	7 3 0
Gt. Southern & West. Rly.	Stock	100	38	44½	59	6 15 9
Dublin United Tramways	10	10	5½	6½	7½	7 0 2
Guinness (Arthur)	Stock	100	350	360	420	5 18 0
Burke (Edward and John)	5	5	3	2½	2½	9 10 6
Pim Brothers	5	5	5	5½	5	5 0 0
Dublin (Stn.) City Market	10	10	3½	3½	4½	4 11 6

Instead of falling with the political barometer, the price of almost all these securities has risen sharply, Dublin Corporation 3½ per cent. going up from 55½ to 70½, and returning less than 5½ per cent. at the current quotation. Bank of Ireland stock has risen from 192 in October to 225 in June, a gain of 33 points, or nearly 17 per cent., and returns to the investor less than 5½ per cent. Great Southern Railway has risen more than 14 points, or over 30 per cent., Guinness' stock has jumped 60 points, while the others representing the bottling trade, drapery, transport, and marketing, are all either higher or practically as they were. In fact, the course of the market for these South Irish securities in the last seven months has been very similar to the course of the markets for British securities. There is no sign of anxiety in the investor, no suggestion that he has taken fright, and is seeking opportunity to shift his capital, and anyone who saw the prices and yields without being told what the securities were, would say at once that they denoted a most gratifying stability, and a high degree of peace and civilisation. Turning to North Ireland, we find a condition of things not very different. The following table sets out prices of stocks and shares in which the northern area is mainly concerned.

ULSTER SECURITIES.

Name of Security.	Share or Stock.	Paid Up.	Prices.			Present Yield.
			End of Mar., 1921.	End of Oct., 1921.	June 2, 1922.	
Belfast Corporation 3½ % Red., Jan. 5, 1935	Stock	100	65½	66	79½	£ s d 5 17 9
Do 5 Red., Oct. 4, 1945	Stock	100	..	77	94½	5 8 3
Belfast and County Down Railway, Ord.	Stock	100	71½	71½	71½	7 0 3
Gt. North'n (Irel'nd) Ord.	Stock	100	51	50	59½	8 8 6
Northern Banking, "A"	10	2	5½	5½	4½	7 12 0
Do "B"	10	2	2½	2½	2	8 15 0
Dunville and Co., Ord.	10	10	12	10½	11½	9 19 0

Belfast Corporation's new 5 per cent. stock has risen since October from 77 to 94½, and its old 3½ per cent. from 66 to 79½. The Great Northern Railway, which connects North Ireland with the South, and would be expected to suffer among the first when civil war breaks out, has risen from 50 to 59½—nearly 20 per cent.; distillery shares are good, and bank shares with a heavy uncalled liability stand at well over 200 per cent. of their nominal paid-up value.

The total capital represented in these two lists amounts to no small figure, one railway alone having loan and share capital of nearly £15,000,000, while all the other concerns are large, with capitals held mainly in Ireland by Irishmen. Why is it that with their country in so disturbed a condition they still hold on to such quantities of local stock instead of replacing it with safe stuff that they can buy in 24 hours for the trouble of sending a letter to a London stockbroker? The Irish investor is no blinder to his financial interests than the investor in any other country, and it is impossible to suppose that he would rather have 5½ per cent. in a country that threatens to go the way of Russia than 5½ per cent. in a stable country like Great Britain.

The same phenomenon of rising prices was apparent in 1914, when Ulster was arming and civil war was declared

to be imminent, and the firmness of the markets was then attributed to the splendid patriotism of Ulster and her abiding faith in her own destiny. If the same explanation is offered to-day it has to be duplicated, and we must account for the phenomenon (1) by the splendid patriotism of Ulster and her abiding faith in her own destiny, and (2) by the splendid patriotism of South Ireland and her abiding faith in her own destiny. The unsophisticated Englishman is tempted to accept a simpler explanation, and say that politics in Ireland, though a good deal hotter and a good deal more violent than in England, are just as unreal as they are here; that politicians talk a vast amount of nonsense, and love rhetorical phrases like "the pathway of revolution" and "the road to civil war" so much that they can never omit a chance of employing them, and that a great deal of what is going on in Ireland to-day is political stage play that may lead to bloodshed, but is never intended to produce civil war or revolution on the grand scale. This theory may be all wrong, but it is difficult to find another that fits the facts. If there is a better explanation one would like to know what it is.

BRUNNER, MOND, AND CO.

FORMED in 1881 to take over the business of alkali and chemical manufacturers from the firm of the same name, Brunner, Mond, and Co., Limited, has since 1911 acquired at intervals the businesses of other kindred concerns, until it has become one of the dozen giant industrial companies, whose total resources exceed £20 millions. A blemish on the company's record is the bonus issue of capital of over £4½ millions to ordinary shareholders in 1918, but apart from this the company's financial history is good. In 1911 the whole of the issued capital of William Gossage and Sons, Limited, amounting to £525,000, in 1912 control of Joseph Crosfield and Sons, Limited, by an exchange of ordinary shares, and in 1915 nearly the whole of the ordinary capital of the Ammonia Soda Company were acquired. In 1916, with the object of "mutual co-operation in technical and commercial matters," a working agreement was come to with the Castner-Kellner Alkali Company, Limited, which allotted £250,000 of its £1 shares to Brunner, Mond, and Co., and the latter allotted £200,000 of its ordinary shares to the Castner-Kellner company. In 1918 shareholders in the Buxton Lime Firms Company, Limited, were offered the option of exchanging their shares in the proportion of one Buxton Lime Firm's £10 share for five fully-paid shares of Brunner, Mond. In 1919 the company sold its holdings of ordinary shares in Joseph Crosfield and Sons and Wm. Gossage and Sons to Lever Brothers, Limited, for the sum of £4 millions, leaving a capital profit in the books of £2,100,000, of which £500,000 was transferred to depreciation account, and £1,600,000 placed to investment surplus account. In January, 1920, Brunner, Mond made an offer to purchase not less than 75 per cent. of the shares of the Castner-Kellner Alkali Company at the rate of two fully-paid shares for each fully-paid Castner-Kellner ordinary share, and this was accepted by holders of over 85 per cent. of the shares. In March of the same year practically the whole of the share capital of Electro-Bleach and By-Products, Limited, was obtained, and in July half the issued share capital of the Madeley Coal, Coke, and Brick Company (1905), Limited, was acquired, and shortly afterwards a subsidiary company called Synthetic Ammonia and Nitrates, Limited, was formed, the company being the only shareholder. The company also holds a controlling interest in Chance and Hunt, Limited. It will thus be seen that the activities of the company have steadily expanded in the last decade. Early in 1918 a revaluation of the company's investments disclosed a surplus of £2,797,200, and this sum, together with £1,849,600 from the reserve fund, was capitalised by the allotment of three fully-paid ordinary shares for every two ordinary shares held. This was done, in the words of the directors, to correct "the disparity between the share capital of the company and the actual capital employed," and the erroneous views thus created of the company's real earning power in relation to capital.

As a result, the company has now a paid-up capital of £13,647,000, of which £9,647,000 is in ordinary shares and £4,000,000 in 7½ per cent. cumulative preference shares. In May of last year the existing preference shares of £10 were subdivided into 10 shares of £1 and 2,500,000 new 7½ per cent. preference shares of £1 were issued, the rate on the old 7 per cent. preference shares being at the same time increased to 7½ per cent. as from April 1, 1921. For several years the ordinary shareholders received a dividend of 27½ per cent., but when the capital was watered the rate dropped to 11 per cent., and the highest rate paid since then is 11½ per cent. for 1919-20. In the following year it fell to 8 per cent., at which level it remains for the year ended March 31st last, the report for which was issued at the end of last week. From the summary table below it will be seen that fairly good profits have been earned, despite the depression in trade. Gross profits, after deducting depreciation, amounted to £677,500, as against £493,200 a year ago, but investment and loan revenue was £501,700, as compared with £655,500:—

	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Paid-up capital	4,031,870	4,597,049	9,244,626	9,456,603	9,470,378	11,077,841	13,647,042
Reserves	1,386,000	1,991,958	141,881	603,906	2,817,680	3,032,680	2,802,785
Gross profits, investment receipts, &c.	851,290	1,254,706	1,264,514	1,199,040	1,319,389	1,182,271	1,220,310
Charges, &c.	81,947	137,553	152,666	186,959	190,239	243,764	196,310
Net profits	769,343	1,117,153	1,111,848	1,012,081	1,129,150	938,517	1,024,000
Brought forward	120,179	121,547	214,131	117,072	136,315	123,703	138,308
Pref. dividend	889,522	1,238,700	1,325,979	1,129,153	1,265,465	1,062,230	1,160,308
Reserve, &c.	105,000	105,000	105,000	105,000	105,000	105,000	245,312
Ord. dividend	2,500	102,500	250,000	100,000	50,000	50,000	50,797
	671,102	814,972	851,907	785,753	984,224	765,912	770,906
	(27½ %)	(27½ %)	(11 %)	(10 %)	(11½ %)	(8 %)	(8 %)
Balance	110,920	216,228	119,072	138,400	126,241	141,308	93,293

These figures do not tell the whole story so far as the past year is concerned, for depreciation in the value of stocks during the year amounted to £250,100, and the cost of the preference share issue was £129,800. These two sums are met by withdrawals from investment surplus reserve account, which, as already mentioned, stood at £1,600,000. Net profits may thus be said to be £379,900 less than the figure given above. Owing to the increase in preference capital, and in the rate of dividend, the distribution thereon requires over £140,000 more. The suspense account is credited with £50,000, and £800 is written off patents account. In order to maintain the 8 per cent. dividend on the ordinary shares, the balance forward has to be reduced by £45,000. Thus the funds of the company have been drawn upon to the extent of £424,900 for dividend payments. Whether this is warranted by the company's general position may be questioned by some. The total visible reserve funds amount to £2,802,800, while property stands at £6,341,500, and investments in associated and other companies at £7,225,800. The company is certainly loaded with a very heavy capital, but there hardly seems room for serious objection to the policy adopted in the latest accounts. Incidentally, the investment surplus reserve account has now been closed by the creation of a capital reserve account of £1,000,000, and a transfer of £220,100 to general reserve. The report throws no light upon trading conditions in the company's sphere of industry, but the chairman will no doubt have something to say in justification of the dividend policy at the annual meeting next Friday.

THE TRADE UNION ACT AMENDMENT BILL.

(BY OUR LABOUR CORRESPONDENT.)

TRADE unionism to-day feels itself menaced. The engineering lock-out is deemed to be a wanton attack upon trade unionism. From the trade union point of view, the action of the Engineering Employers' Federation is open to no other interpretation. A new attack upon trade unionism has come from quite another quarter in the shape of the Trade Union Act, 1913, Amendment Bill. During the opening years of the twentieth century the trade union movement sustained two shattering blows. The first was the Taff Vale Decision. The perilous position in which the trade unions found themselves as a result of this judgment was rectified by the Trades Disputes Act,

1906. Two years later, Osborne, a railway man, raised the legality of the political levy. Backed by capitalist money, Osborne succeeded in shaking the trade union movement to its foundations. Individuals in different unions were assisted to seek injunctions to restrain their organisations from utilising their funds for political purposes. The newly created Labour Party was in the gravest peril. The situation, like that created by the Taff Vale Case, was a spur to organised Labour, and it is not an exaggeration to say that the Labour Party during its first years owed much to the effects of these two crises in consolidating Labour opinion. In 1913 the Trade Union Act was passed, and though it did not meet the demands of the Labour movement, it did enable the trade unions to embark upon political activities.

There was a political truce during the war, but since the war the growing strength of the Labour Party has drawn attention to the political importance of trade unionism. Some little time ago the *Morning Post* published some fantastic articles dealing with trade union finances—articles which any independent person acquainted with the trade union movement would regard as malevolent and unjust. The articles were reprinted, and have been distributed throughout the country. The Unionist organisation appears to have been the medium of distribution. In the next place, efforts have been made to persuade trade unionists to contract out of paying the political levy to their organisations. Sir George Younger has admitted in the House of Commons that he has had 1,000,000 exemption forms printed, and that he has distributed a quarter of a million. A form of claim for exemption from the payment of the political levy has been printed in numerous newspapers up and down the country. These devices, however, do not appear to have met with the success which was expected, and consequently a far more drastic effort is being made.

Under the existing law, a union may by a majority vote establish a political fund, and the members may be required to pay into it unless they apply to be exempted from such payment. The Unionists have introduced a Bill into the House of Commons to amend the Act of 1913. It requires that there shall be a 20 per cent. majority on a vote of 50 per cent. of the total membership in order to establish a political fund, that thereafter members shall declare in writing their intention of contributing to the fund, if they should desire to contribute, and that such a written declaration shall be made each year. Instead of taking steps to exempt themselves from payment of the political fund where they do not wish to pay, under the new Bill members of unions are exempted to begin with unless they make application in writing—and repeat it every twelve months—to be allowed to pay into the political fund. In other words, conscientious objectors are to be placed in a privileged position.

It will be obvious that under the new Bill the administration of trade unions will become more difficult and more complicated; but that will doubtless be regarded as a distinct advantage by many supporters of the Bill. This, however, is but a minor criticism of the measure. What is far more important from the Labour point of view is that the Bill seeks to impose upon trade unions limitations placed on no other kind of organisation, and it will be strongly resisted on this ground. Further, in practice, there is no hard and fast line of demarcation between industrial and political questions. Are workmen's compensation, factory legislation, unemployment insurance—to quote but three subjects—industrial or political questions? They are obviously both. The question at once arises as to whether conscientious objectors are to be automatically exempted from contributing to a political fund which is partly, at least, used for improving the industrial position of the workers.

It is regarded as strange in the Labour Movement that many of those who showed little consideration for the conscientious objectors during the war should be tenderly solicitous of trade union conscientious objectors—or it would be so regarded if it were not realised that the Bill is a direct attack upon trade unionism and the Labour Party.

It is true that the Bill is but a private member's measure, and it was anticipated that during the second

reading it would be talked out, but the Speaker—to the amazement of the Labour Members—allowed the Bill to go to a division, and the second reading was, of course, carried. It is almost inconceivable that a private member's Bill dealing with so large a question should be allowed to pass through Parliament. So far, the Government has given no sign of its attitude. No Government spokesman lifted his voice either for or against the Bill, though the members of the Government who voted walked into the lobby in support of it. Probably the Government, as on so many questions, is torn two ways. The path of political wisdom, however, is to let the Bill die.

Any serious attempt to put it through the Houses of Parliament might very well lead to far-reaching consequences. The trade union movement would not take the attack lying down. The menace to trade unionism would be a means of pulling together the whole Labour Movement. It fought hard to undo the Taff Vale and Osborne judgments; it would fight doubly hard to-day to resist the Trade Union Act Amendment Bill. If the measure were to reach the Statute Book, it may be predicted that most unions would defy it, and in so doing present the Government with a pretty problem. But it is difficult to believe that the Bill will pass into law. It is, however, in Labour's eyes, significant of a tendency. There is more than a hint in it of the class war, and it provides an excellent means of manufacturing Bolsheviks.

Notes of the Week.

The Halt in the Stock Exchange Rise.—There is no sufficient bull account in the Stock Exchange markets to bring about any widespread loss or anxiety as a consequence of the decline which has taken place in Stock Exchange securities this week. Compared with the best prices recently touched, the lowest levels, of Wednesday morning, say, showed a fairly wide gap. Great Westerns, for instance, which reached 108 the other day, fell to 102½, the 3½ per cent. Conversion Loan, which was over 78, fell to 75½, with a good many other prices weakening in a similar fashion. The previous rise, however, had been on a scale so substantial and so rapid as to leave the impression that some kind of reaction was due, and the Stock Exchange habit is to look for a fall after any such advance as the markets have witnessed during the past six weeks. The Bank rate fell, rather unexpectedly, to 4 per cent. on April 13th, and this released a tremendous amount of money from deposit accounts that were being run by capitalists, to whom the prospect of receiving 2 per cent. on their money was far from inviting. Consequently, they turned their attention to the Stock Exchange, bought gilt-edged stocks up to a standard at which Home Railway debentures paid 4½ per cent., or less, on the money, hoisted Consols, local loans, and other such securities on to a 4½ per cent. basis, and, incidentally, led to a general scramble for stocks and shares, in the course of which everything of the investment order advanced. Nor did the movement end here. Encouraged by the advances in gilt-edged issues, the more speculative fraternity began to apply eagerly for new issues. In spite of the grumbling which arose, owing to the smallness of allotments, there was a good deal of money made by tagging in this way. The little shopkeeper in the suburbs was glad to take his four or five pounds profit

transactions of every description.

Correspondents in all parts of the world.

on partly-paid scrip, and was encouraged to apply for the next issue of which his broker sent him a prospectus. All this had the effect of setting in vibration an atmosphere of successful Stock Exchange operations, and the tide of enquiry turned strongly towards industrials, more especially in those companies engaged in trades which were thought to be likely to benefit from the termination of the engineers' lock-out. By Whitsuntide the bulk of the deposit-money which was available for Stock Exchange purposes had been used. The speculative investor and the speculator were both ready to take what profits had accumulated, and to stand by for the next opportunities which might come along. Fresh buying was brought up with a round turn by the gravity of affairs in Ireland, which led to the impression that the expected fall in the Bank Rate this week might not materialise until later on, if at all. Jobbers in the Consol market reported that big blocks of Conversion Loan and other Government stocks were coming in. Dealers in Home-Railway Trustee securities maintain that the reaction in their stocks is due, not so much to selling orders, as to withdrawal of the previous buying, added to which, of course, there is the regular amount of daily realisation which goes on automatically in connection with deceased accounts, and on behalf of people who require money for other purposes. The Stock Exchange has marched to something like a halt. Some men in the House think that their markets stand on the brink of the usual summer quietude, and that the brisk business of the past six or eight weeks will be succeeded by the listlessness ordinarily associated with the dog days. Others point to the capital which constantly accumulates when trade is not particularly active, and they regard the present hiatus as nothing worse than a useful lull which is having the effect of reducing prices to levels at which they offer attractions to the man who does not mind buying something which, a little before, had stood a good deal higher. The prospects of cheaper money are held to discount the effects of the somewhat choked condition of new issue markets. Taking it all round, there is a general consensus of opinion that this week's reaction is of no special consequence, and that it will be succeeded by a recovery as soon as the influence of investments begins to make itself felt again. The argument that this condition of quietude in the markets is the result of the re-introduction of contangoes and fortnightly settlements finds little support in serious quarters, but it is put forward as one of the reasons why the public attitude towards the House to-day is marked by a reserve which time alone can prove to be the precursor of indifference, or of fresh financial energy.

Irish Free State Revenue and Expenditure.—We have received from the Ministry of Finance, Dublin, a statement of State receipts and payments, which we understand is being issued weekly by the Free State Government. The total receipts of the Irish Exchequer from April 1, 1922, to June 3, 1922, are given as £4,867,700. Of this amount, £3,867,700 is from revenue and a million from Ways and Means advances. The principal item of revenue, which for the present is collected on the basis of rates current in Great Britain, is £2,502,000 on account of Excise, to which no doubt Messrs Guinness contribute a substantial portion. Property and Income-tax, including Super Tax and Mineral Rights Duty, yield £642,000 in the two months, while Customs provide £372,000. Estate and other duties total £165,000, and Corporation Profits Tax £13,000. For Consolidated Fund Services £65,790 is allocated. It would be interesting to know, however, if any of the estimated contribution to the Home Exchequer is included in this amount. It may be recalled that this estimated contribution has been placed at approximately ten millions annually. Supply Services at £2,558,200 bring total expenditure up to £2,623,990 for the period under review. Ways and Means advances were repaid amounting to £260,000, and a balance of £1,983,710 is shown in the hands of the Irish Exchequer at June 3, 1922. We gladly welcome this financial statement of the Free State Treasury, not so much for the information it contains, or any inferences which can yet be drawn from its figures, as that it shows evidence of the intention to proceed along conventional financial lines. Incidentally, both Irish and

Home Treasury officials are to be congratulated upon the approaching accomplishment of the work of separating the accounts of the two States, a by no means easy task.

Cereal Crop Prospects.—The Statistical Bureau of the International Institute of Agriculture publishes in its latest bulletin, the most recent official information from the different countries, regarding the condition of crops and the prospects for the coming harvests. With regard to countries other than European, it is confirmed that the wheat harvest of British India has given good results, in comparison with last year's crop and with the average. It is estimated that the production of India, this year, will reach 9.7 million metric tons, surpassing last year by 40 per cent., and the average during the preceding five years by 4 per cent. The most recent telegraphic communications from India are also optimistic; in the Punjab, for example, which is responsible for more than a third of the total production of India, the results of the harvest are said to be above expectations. As regards the United States, the prospective yield of winter wheat, based on the condition of the crops at May 1st, is estimated at 15.9 million metric tons. This yield would equal that of 1921 and be 3 per cent. above the average of the previous five years. The prospective yield of rye is reckoned on the same basis at 20 million quintals, or 37 per cent. better than that in 1921, and 17 per cent. above the average. Later reports from the United States confirm this good outlook for the winter crops, and point to an equally satisfactory one for the spring sowings. In Canada, the spring sowings are rather later than usual. The crops in Japan forecast a moderate yield. Serious damage owing to drought has occurred in Algeria, but there are favourable reports from Egypt and the Anglo-Egyptian Sudan. As regards European countries, the crop condition may be considered as passable in Germany, Belgium, France, Hungary, Italy, Netherlands, and Poland. In these countries, in general, there has been a decided delay in plant development owing to cold and damp, especially during the month of April. The crop development is normal in Great Britain and Ireland, and very good in Bulgaria. As regards the areas sown with wheat and rye, there is no notable change, as compared with last year, in those countries which have furnished data.

American Cotton Crop.—The Agricultural Bureau of the United States Government has issued its first report on the cotton crop for 1922-23, the condition being given up to May 25th. The figure is 69.6 per cent., against 66.0 per cent. a year ago, 62.4 per cent. in 1920, 75.6 per cent. in 1919, and a ten-year average of 74.6 per cent. The statement was about equal to expectations, and although on the report being published prices in New York and Liverpool advanced slightly, there has not been any marked change in values. The weather in the belt so far this season has not been very favourable, and the growth in certain parts has been adversely affected by heavy rains. The acreage is understood to be rather larger than a year ago, and the Agricultural Bureau at the beginning of July will issue an official estimate of the area under cultivation, in addition to a further condition report. The crop for this season will be about 8,500,000 bales, and the consumption about 12,500,000 bales, so a substantial output in 1922-23 will be necessary if a scarcity of supplies and higher prices are to be avoided.

The Turkish Unified Debt.—The Turkish Unified bondholders are faring better than might have been expected, in spite of the suspension of the revenues ceded for debt service, both in the territory in Asia Minor held by the Kemalists and in the provinces held under mandates by Great Britain and France. Last year, it will be remembered, a payment on account was made of 1s 3d for each coupon (of 8s) from March, 1915, to March, 1920, inclusive; now it is announced that the Debt Council will pay a further 9d on each of these coupons, independently of any sum which may be due to the holders as the result of the decision, expected some months hence, of the Mixed Tribunal set up by the Treaty of Versailles as to their claim to be paid at the pre-war rate of exchange

from the sums collected by the Debt Commission during the war and deposited in German banks, and to some small extent in Austrian. It is also announced that 6s is to be paid on account on each of the two following coupons for 1921-22, and there is reason to expect that this amount will be paid on those for 1922-23. Some funds are also available for the service of the Turkish Lottery Bonds (Lots Turcs), which, however, are not held in England. The announcement raises two questions: Should not the coupons for 1915-21 share equally with the later ones in such revenue as is available; and, seeing that the French Administration in Syria and the British Administration in Palestine and Irak have, like the Kemalists, taken over the debt revenues in those provinces, though, unlike the Kemalists, they do not give receipts for them, ought not the Debt Council to apply to them for these revenues, which properly belong to the bondholders, even though the Treaty of Sèvres is as yet unratified, and the destiny of the provinces in question is therefore not yet settled finally? However, the bondholders may well congratulate themselves that, in view of the recurrent crises at Constantinople, it is possible to pay them anything at all.

Conditions in South Africa.—According to a cable received by the National Bank of South Africa from their Cape Town office, the South African Budget was well received and the discussion ended on May 24th. The Minister of Finance, speaking in reply to criticisms, appealed for the support of all parties in effecting administrative economies, and "closed his speech with a note of optimism." General Smuts contributed an important speech, summarised as follows in the cable:—"He stated in connection with the recent upheaval that, but for a stable Government being in power, the situation might have been parlous. It was time a halt was called and the country given a chance. The problem now before them was how sanely and reasonably to bridge the transition period from the old to new South Africa on industrial lines. The Board of Trade had been instructed to investigate closely important items in the tariff. The Prime Minister also outlined the Government's constructive policy, including the decision, in principle, to give a bounty to all iron and steel produced from native South African ores. Regarding agriculture, he stated it was necessary to eliminate conflicting interests, and to arrange a system whereby farmers would obtain, and consumers pay, reasonable prices for produce, and for only the best produce to be exported." As regards the iron and steel bounty proposal, the Government are adopting the least objectionable method of fostering an industry. The cable further states that the railway deficit for the year's working amounts to £1,500,000, bringing the total accumulated deficit to £4,000,000. A cable received by the Standard Bank of South Africa states that South African imports in May were £3,469,000 and exports £3,802,000. Exports included £2,292,000 of native gold.

Forestral Land Company.—None of the company's factories having been at work since the early months of the year 1921, the report of the Forestral Land, Timber, and Railways Company for the 12 months ended December 31st last shows a substantial trading loss, namely, £291,342. To this has to be added £32,272 for London charges and other expenses, and £220,643 written off stocks of stores and materials, and working bullocks, making a total loss of £544,257. But by releasing £170,000 out of sums set aside from profits during recent years for taxation, and not required for that purpose, and by withdrawing £500,000 from reserve, and including £571 from transfer fees, the directors call the result a profit for the year of £126,314. This compares with previous results as follows:—

	1914.	1916.	1918.	1919.	1920.	1921.
Profit	£ 234,065	£ 1,614,889	£ 815,980	£ 992,581	£ 560,261	£ 126,314
To pref. shares ..	123,745	260,788	186,058	92,751	92,751	111,951
Preference dividend ..	8 %	15 %	12 %	6 %	6 %	6 %
To ordinary shares ..	92,982	504,111	279,922	371,004	432,832	..
Ordinary dividend ..	6 %	27 %	18 %	18 %	12 %	..
Special reserve ..	..	250,000	150,000	150,000	..	..
Excess profits res. ..	..	600,000	200,000	..	300,000	..

The preference dividend of 6 per cent. is paid, leaving £127,666, or £14,300 more than was brought in, to be carried forward. No addition has been made to depreciation account, which stands at £1,047,604, in view of the fact that the factories were closed for practically the whole of the year, but the reserve fund has been increased by £473,520, by the balance of the realisation of sundry assets account, namely, £963,957, and sundry minor credits, less the £500,000 transferred to reserve. In May, 1920, the shareholders approved an offer made to purchase the company's Estancia business as a going concern, together with its holding in the Development Company of Santa Fé, Limited, for £2,502,551 in cash, payment to be made during 1920 and 1921. During 1920 £1,211,500 was received, but last year the buyers asked for postponement of the remaining payments, which the board granted. During the year the company acquired the entire share capital of Fontana, Ltda., an Argentine company, the remainder of the capital of Calder and Mersey Extract Company, Limited, and about 95 per cent. of the share capital of Messrs H. Renner and Co., of Hamburg, and the balance-sheet shows an addition of £1,222,500 to holdings in and advances to associated undertakings, which now total £2,200,900. Debtors have been reduced by £574,500, a holding of £596,400 in War Loans and bonds has been sold, while cash has been reduced by £102,500 to £565,107.

Present Position of the Baku Oilfields.—In the economic rehabilitation of Russia, oil is a key industry, just as, at the moment, it is the pivot on which its foreign relations turn. This is fully recognised officially; not only has M. Litvinoff been spending his time in interviewing oil deputations in Berlin and Italy, the *Economische Kaya Jizu* is full of oil week after week. But the Baku oil industry is typical of other industries in Russia in so far as it illustrates the antinomy between the policy which the Government is trying to pursue on the financial side, and that which it ought to pursue on the productive. Financial stability depends on a restriction of the note issue. The official figure of Russian rouble exchange is 602 of the new, 1922, rouble notes to the £. But in terms of previous issues, each 1922 rouble equals 10,000. In pre-1922 currency the £ is thus worth more than 6 million roubles—a fantastic situation. Restriction of note issue, however, means the starvation of the Government trusts like that working the Baku wells, the Azneft. Every report on Baku is occupied in complaints of the hopelessly hampered position of the Azneft, owing to want of capital. The workers' wages have been kept at the October, 1921, figures, despite the rise in prices, and even so, are so badly in arrears that daily output is falling off, and men are leaving in droves. Moreover, while the industry "depends exclusively on active boring, such boring can only be undertaken very slowly, owing to the lack of capital." The following table gives the output, &c., for last few years:—

Year.	Annual Production. Mil. Poods.	No. of Wells Worked.	Average per Well. Mil. Poods.
1911.....	454	2,857	159
1916.....	439	3,677	119
1919.....	225	1,880	118
1921.....	156	1,456	108
1922 (in roubles)	45	1,308	35

The wells now being worked are becoming exhausted; new ones must be struck. Even the moderate programme of the Azneft (monthly output of 16.6 million poods of oil, working 1,500 wells) cannot be carried out so long as it is not supplied with financial resources from the Department of Central Government, which controls fuels, the department known as the G.O.U.T. Its programme implies an expenditure of 253,680 million roubles up to the end of the year; its actual revenue from all sources is 12,000 million roubles. Wages alone account for 218 million roubles a month. Unless the financial crisis is overcome, the recovery of production is impossible. Of the wells which the Azneft is partially working the larger proportion were originally bored and exploited by foreign, largely British, capital. For instance, the properties of Baku Consolidated were seized in 1920.

Farm Products in America.—A gross wealth valued at £2,473,000,000 was produced by the farmers of the United States during 1921, according to an estimate recently completed by the U.S. Department of Agriculture. This amount is approximately two-thirds of the aggregate value of farm products in 1920 (£3,652,000,000), and about one-half of such value for 1919 (£4,756,000,000). During the same period, 1919 to 1921, the production of ten crops, which represent about 95 per cent. of the total crop area, fell but 8 per cent. Placing the average quantity of production of these crops for the five years 1910-14 at 100, crop production in 1919 was 108; in 1920 it was 117; and in 1921 it was 100. The quantity of crop production in 1919 was about the same as during the preceding seven years; that in 1920 was the largest ever recorded, and that in 1921 was the lowest since 1913. The total value of all crops in 1921 is estimated at £1,400,000,000. In 1920 this value was placed at £2,181,000,000, and in 1919 at £3,085,000,000. The decrease in the 1921 figures clearly indicates the drop in prices of farm products during the past two years. The total value of animal products declined from £1,672,000,000 in 1919 to £1,471,000,000 in 1920 and to £1,068,000,000 in 1921.

Central Mining and Investment.—Our Mining correspondent writes:—Recent events on the Rand having been detailed and discussed *ad nauseam*, the directors of this important mining-finance undertaking wisely keep their comments short. They intimate, however, that the revenue was swollen by dividends received during the year, but really earned in more prosperous times; also that to counteract the effect of depreciation "holdings which had formerly been stocked at low prices were written up to a level nearer market prices." The latter is an unusual course, and the two features rather discount the satisfaction which might be derived by shareholders from the comparatively small falling off in the net profit shown. Appended is an analysis of the accounts for the past three years:—

	1919.	1920.	1921.
Shares, investments, &c.	577,010	5,732,430	5,736,470
Debtors, less reserves	552,150	601,570	55,420
Creditors	3,415,030	3,191,170	2,565,380
Loans	591,900	808,900	936,450
Cash	455,550	327,630	77,330
Dividends, profits, &c.	876,770	506,630	444,490
Management, &c., expenses ..	57,960	37,350	41,320
Taxes	8,960	78,990	88,820
Net profit	809,850	390,280	314,360
Dividends	332,500	255,000	255,000
Do per share (tax free)	18/	12/	12/
To reserve fund	200,000	100,000	..
For income-tax	150,000	70,000	65,000
Brought forward	124,530	145,260	100,400
Carried forward	186,870	100,400	90,300

While as a whole the portfolio shows little change, there is a decline of some £200,000 in the gold and diamond interests, due largely to depreciation. On the other hand, base metals, minerals, oil and industrial participations figure for increased amounts, while the real estate entry has been swollen both by a higher valuation of these assets and by further purchases of Transvaal Consolidated Land shares. The diminution in the free cash resources will be noticed. Some 30 per cent. of the investments are unquoted. The others have since the date of the balance-sheet scored an appreciation of greater or lesser extent—a point to be borne in mind when calculating out the value of the shares. The surplus cash assets represent fully £10 5s per £8 share, now quoted at about 7½, giving a yield of nearly 9 per cent., tax free. When the position in these respects was pointed out a year ago, the price of the shares was 6½, and in the meantime 12s in dividends has been paid.

National Mining Corporation.—In view of the nature of the directorate, and of the technical talent available, great things were expected from this mining-finance enterprise, which was floated in October, 1919, and acquired interests in various well-known concerns such as the Burma Corporation, the Santa Gertrudis, the Mexican Corporation, the Tanganyika Concessions, and the British Equatorial Oil Company. Unfortunately for those who subscribed, the conditions then prevailing were of an inflated character. Hopes have in several directions been disappointed, while results generally suffered from the fall in metal prices in conjunction with the advance in working costs. Not very long ago the £1 shares, 10s paid, stood at a purely nominal quotation, purchasers being practically non-existent in view of the heavy liability. Just recently an improvement to nearly 3s occurred on rumours that the uncalled liability was to be extinguished, and in anticipation of the issue of the annual report. The rumour proves to have been partly "founded on fact." The directors intimate that shares and interests standing in the balance-sheet at £1,055,600 show a depreciation of £639,100. To meet this position it is proposed to write off 6s of the 10s per share so far subscribed, and to extinguish 6s of the uncalled liability, thus converting the issued capital into 8s shares, 4s paid, leaving £500,000 to be called up—it is understood only in small instalments should any exceptionally promising business come along. A simple calculation indicates that the proposed writing off will more than cover the depreciation, 6s per share being equivalent to £743,150. The net assets are equivalent to about 3s 6d per share. The interests of the Corporation now include notes of the Mexican Corporation, shares in the Ayan Corporation (Siberian gold dredging), and the South American Copper Syndicate (upon whose property a favourable report by a well-known consulting engineer has just been published). As soon as conditions become more normal, satisfactory returns should be forthcoming from the bulk of the National Mining Corporation's holdings.

Financial Conditions in Japan.—Owing to continuous American demand and the scarcity of stock, the price of raw silk recently rose sharply, but the liquidation of the stock held by the Imperial Silk Company served to flatten the market. On the strength of the recent firm tone in the silk market, farmers are quoting new cocoons at exceptionally high prices. In consequence, silk merchants in Yokohama have unanimously given warning to silk manufacturers that unless the quotation of new cocoons comes down to a reasonable level it will become impossible for the merchants to give them the usual financial assistance in purchasing cocoons. While imports seem to have passed their high mark, exports, on the other hand, are increasing in silk and cotton yarn alike, which has been reflected by a decreased adverse balance since the middle of May. The favourable outlook of foreign trade was quickly taken as an encouraging factor by the stock market, which showed a little improvement. The money market remains unchanged, and the rate of short loans has been low owing to the facts that banks are freely offering the funds they hold for financing silk manufacturers, and that a big repayment of Government loans and interest is anticipated on June 1st.

THE seventy-fifth annual general meeting of the Institute of Actuaries will take place on Monday, 12th instant, at 5 p.m., at the Hall of the Institute, Staple Inn.

THE Royal Colonial Institute announces a meeting at the Edward VII. Rooms, Hotel Victoria, W.C. 2, on Tuesday, June 13, 1922, at 8.30 p.m., at which a paper on "British West Indies" will be read by the Hon. W. G. Ormsby-Gore, M.P. Sir Owen Philipps, G.C.M.G., M.P., will preside.

Oversea Correspondence.

UNITED STATES.—THE REDUCTION IN RAILWAY RATES—LOWER WAGES.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 29.

THE most important recent developments affecting trade and industry generally, as well as railroads and railroad labour in the United States, are the decision rendered last week by the Interstate Commerce Commission, calling for a reduction of about 10 per cent., on the average, in all class and commodity freight rates throughout the country, and the Railroad Labour Board's ruling, announced to-day, making a heavy cut in wages of railway employees. Both decisions are to become effective on July 1st. The present wage reduction, and others that are expected, promise to affect largely the revision in freight rates, so far as the carriers are concerned.

In readjusting freight charges, the Commission used a novel method. It decided that on and after July 1st all freight rates would be considered unjust and unreasonable to the extent that they may exceed the rates in effect immediately before August 26, 1920, by certain specified percentages in the various rate regions of the country; the percentages are so applied as to make the reductions in each group or region equivalent to 10 per cent. In determining the reductions, the Commission took the rates before August 26, 1920, as 100 per cent., added the percentage of increase in the different districts which was authorised on that date, and then made a horizontal reduction of 10 per cent. For instance, the increase granted on August 26, 1920, to railroads in the Eastern district was 40 per cent., making an index number of 140 per cent. as of that date. Ten per cent. of the latter is 14 per cent. The Commission, therefore, directed that 26 per cent. should be substituted for the original 40 per cent. increase allowed in August, 1920. The same procedure was followed in cutting rates in other sections. For Western railroads, the 35 per cent. increase authorised in August of 1920 was reduced to 21.5 per cent.; in the Southern and Mountain Pacific groups, the 25 per cent. increase previously granted was lowered to 12.5 per cent., and on inter-territorial traffic the 33½ per cent. rise, formerly allowed, was cut to 20 per cent. The decision, however, does not mean that there is to be a sweeping reduction of 10 per cent. in all existing freight rates. The new ruling will not apply to rates that have been lowered since August, 1920, except in cases where such reductions have been made merely to equalise rates. For example, an additional 10 per cent. cut will not be made on grain and grain products, such rates having been reduced about 16½ per cent. last January, and the decision will have the effect of continuing the general 10 per cent. reduction which has been in force on agricultural products.

The Commission declared that the reductions arrived at were the largest, in its opinion, that could be ordered if the railroads were to earn a reasonable return on the valuation of their property investment. Possible wage reductions, which would lessen operating costs, had been taken into consideration in reaching its conclusions, it said, and consideration had also been given to the greater earnings which increased traffic would bring to the carriers. It is reliably stated that the rate reductions made by the railroads since August, 1920, to date have cut the carriers' revenue to the extent of about \$200,000,000 annually. Tentative estimates by competent authorities indicate that the Commission's decision, just rendered, will mean an additional loss in revenue, ranging from \$225,000,000 to \$240,000,000 a year. Obviously, the actual result will depend largely upon the volume of traffic, and upon further wage reductions which may be granted by the Labour Board. In the course of its decision the Commission states that "there is a definite conviction in the minds of the shipping public that the present rate level is unreasonably high, is an effective barrier to the return of business activity, prosperity, and the usual volume of traffic, and that it should be substantially reduced."

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,287,671

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

Besides prescribing freight rate reductions, the Commission, in its decision, which is the result of an investigation begun in the latter part of last year, makes two other important rulings. One is that, in view of the fact that taxation on income is deducted by the railroads before net operating income is computed, a return of 5½ per cent. on valuation is a reasonable annual return within the meaning of the Transportation Act. The latter authorises the Commission to fix rates on a basis that will yield the carriers an average return of 5½ per cent., and permits that body to increase such return to 6 per cent. in its discretion. The other ruling is to the effect that the Commission finds no reason to place the property valuation of the first-class railroads, adopted for rate-making purposes, at less than the tentative valuation of \$18,900,000,000, which has been employed up to the present. As a matter of fact, that valuation was adopted nearly two years ago, and does not take into account heavy additional property investment made since 1920.

The Commerce Commission's decision with respect to freight rates is welcomed in some quarters, especially by those who will derive benefit from the reduction, but it does not measure up to expectations of some interests, and is severely criticised by others. It apparently is not in line with the Administration's hope that rates on various commodities would be reduced, instead of cutting freight rates generally, and it is plain that the more important commodities will not receive the assistance, in the form of specific reductions, such as Secretary of Commerce Hoover wanted to give them, and which he had declared were needed more than were reductions in class rates, that is, rates on finished goods.

Passenger fares remain unchanged, and the surcharge on Pullman fares has been retained—a keen disappointment to the travelling public, which complains bitterly about the abnormally high cost of transportation.

While all members of the Interstate Commission concur in the freight rate reduction, three members, in separate opinions, express the belief that still lower rates should have been prescribed, or that the principle of the horizontal reduction is unfitted to existing conditions. One of the Commissioners declares that, in the case of many commodities, the 10 per cent. reduction will have "no perceptible influence in lowering costs of living, stimulating industry, ameliorating economic conditions, or bringing us into more favourable and equitable relationship at home and abroad."

The Railroad Labour Board's decision, just handed down, orders a reduction of about 12 to 13½ per cent. in prevailing wages of maintenance of way men; it will apply to all the major railroads of the country, with two or three exceptions, and will affect some 400,000 employees. After July 1st, under the Board's ruling, wages of such employees, which now range from 28 to 40 cents an hour, will range from 23 to 35 cents an hour. Pending a readjustment of their working rules, the big four brotherhoods, as well as the Switchmen's Union, are not now parties to any dispute before the Labour Board, but it is considered more than likely that sooner or later a wage controversy will develop with those unions. Other cases, however, are pending before the Board, and wage decisions applying to some 500,000 railway shopmen and approximately 200,000 telegraphers, clerks, station employees, and other classes, are expected to be rendered in the near future. All of the wage reductions, it is said, will be announced in time to become effective on July 1st.

although the Labour Board insists that its action in cutting wages is not based on the fact that freight rates are to be reduced as of the same date. On the other hand, it is quite evident that the Interstate Commerce Commission, in ordering the cut in freight tariffs, fully expected reductions would be made in wages, even though it had no jurisdiction over the latter.

It is estimated that the Labour Board's decision will cut the annual pay roll of the carriers by about \$48,000,000, and that other similar decisions yet to be rendered will make a further reduction of some \$100,000,000. In May, 1920, the Board granted an increase in wages totalling approximately \$600,000,000. In July, 1921, it cut some \$400,000,000 from that increase. Therefore, if present expectations are realised, the further reductions believed to be impending, together with the cut under the present ruling, will wipe out practically all of the remainder of the \$600,000,000 increase authorised in May, 1920, and will restore wages virtually to the levels prevailing prior to that date.

Just what the outcome of these highly important decisions will be it is, of course, impossible to predict with any degree of certainty. The general feeling, at least in the financial district, judging from the recent course of prices for railroad shares, is that increased traffic and wage reductions may more than offset the loss in operating revenue which will result from the cut in freight rates. As already stated, however, much depends on the extent of the growth in traffic; furthermore, increased traffic will unquestionably mean some increase in operating expenses and greater outlays than have been made in the past year or so for equipment and maintenance. Under the new order of things, the carriers may be able to make a better showing in the matter of net operating income than they have heretofore—provided the volume of freight moving throughout the country continues to increase at the rate witnessed in the past few months. But they will have to enjoy a long period of prosperity to make up for the very lean months of the past year and a half. In July, 1920, it will be recalled, the Commerce Commission fixed rates which were intended to yield the carriers an annual return of 6 per cent. on their property investment. They actually earned only about half that return in the ensuing year, and in only one month, namely last March, did their net operating income closely approach the 6 per cent. return, notwithstanding heavy reductions in operating expenses through drastic economies and curtailment of maintenance expenditures.

FRANCE.—BANKERS' COMMITTEE AND REPARATION —MONEY WEAK—PRICES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, June 6.

THE event of the week has been the sudden modification brought about in the whole aspect of the proceedings of the bankers' committee (called by the Reparations Commission to consider the question of an international loan on behalf of Germany), by the decision of the assembled experts to make the question of a further reduction of the German reparation debt the crucial factor in the problem under consideration. The banking experts have succeeded in maintaining greater secrecy over their proceedings than perhaps any one of the other recent international conferences here, and it was not until yesterday that the real reason for the sudden adjournment of the committee on Friday until over Whitsuntide became generally known. It then transpired that the bankers wished to elicit the opinion of the Reparations Commission as to whether the question of a possible reduction of the German debt below the figure of 132 milliards, fixed in May, 1921, may be regarded as within the terms of the reference under which the committee was brought together.

Whatever the reply of the Reparations Commission may be, there is no doubt of the attitude the French delegates will take on this question. The promptitude with which M. Poincaré—to whom a hint of what was in the wind must have become known—on Friday afternoon informed the Chamber of the French Government's view on the point, was significant. The French delegation on the

Reparations Commission, M. Poincaré insisted, must not accept any fresh reduction of the debt due to France. The bankers, according to the French view, have nothing to do with the question of the amount of reparations Germany will have to pay, but have merely to consider whether and under what conditions an international loan might be issued, and if they go outside those limits France will decline to take any further interest in the matter. Whether, in the event of the majority of the Reparations Commission taking a contrary view, the French will remain intransigent time alone can show. The one circumstance that would undoubtedly largely modify French opinion on the point would be a recommendation from the bankers' committee that the three great problems of the German reparation debt, the suggested international loan, and the outstanding inter-allied debts, should be taken up for consideration as forming three parts of one indivisible whole. The suggestion has already been made in banking circles here that perhaps the simplest way to handle the whole matter would be through the medium of another Washington Conference, and there is reason to believe that both the French and the British Governments are lending a favourable ear to the proposal. It is even reported that the American Government is actually about to be "sounded" both from London and Paris as to its views on this suggestion.

Quite apart from this eleventh hour importation of the question of whether the amount of the German debt has been irrevocably fixed, the bankers' conference was looked upon some days ago as foredoomed to failure, so far as any probability of a huge international loan resulting from its efforts. The French have all along put forward the fact that they have already been compelled, through Germany's default, to furnish between 80 and 90 milliard francs for the purpose of commencing the reconstitution of the devastated areas, and they may be regarded as firmly resolved not to place a centime more than they are compelled to do in the hands of such a notoriously bad creditor as Germany has proved to be. The British are regarded here as unlikely to lock up any appreciable amount of capital in a German loan, while it is regarded as unlikely that the Americans would be satisfied with the kind of guarantees Germany would offer. Finally, there is a strong feeling here that Germany herself is really by no means anxious for such a loan to be floated, on the ground that it would probably improve the situation of the mark, and thus deprive German exporters of one of their best weapons. Colour is given to this argument by the report that Herr Bergmann has put forward to the bankers' committee the cool proposal that 50 per cent. of the yield of any loan that may be issued shall be handed over to Germany for purposes quite apart from those connected with reparation payments. In these circumstances it is believed in Paris that the bankers are unlikely to recommend, at the best, the issue of anything more than a comparatively small international loan. It is suggested that an issue of \$1,000,000,000 (or about 5,000,000,000 of gold) would be sufficient to enable Germany to meet her reparation payments, under the present schedules, for 1922 and 1923, which would give time for a more comprehensive and perhaps quite different manner of dealing with the problem to be worked out.

The session of the Semaine de la Monnaie that has been opened at the Conservatoire Nationale des Arts et Métiers, and that is being very well attended, was opened by M. Raphael Georges Lévy, who, in delivering the inaugural address, pointed out that the main function of the conference was to study the evils caused by the depreciation of money. One of the principal of these was the uncertainty caused, but there was a second evil that was even greater and more deep seated, namely, that which affected all citizens living on fixed incomes of whatever sort, who received the same annuities despite the increased cost of living. It was easy to lay down the principle by which the evil was to be remedied. Inflation had to be replaced by deflation. The issue of paper money should be stopped at the earliest possible moment, and the amount of money in circulation calculated so that it should be decreased until the pre-war value of currency had been attained. He warned the conference against the danger of too rapid a contraction, because this would bring about a fall of prices that in its way would be as calamitous as the previous

rise. He recommended that in countries where inflation had been relatively slow the French method of progressive deflation should be adopted.

In the course of the debate that followed, M. Henri Javal summarised certain of the dangers of inflation, pointing out notably how seriously Governments were affected by inflation, as this forced them to pay unduly high rates of interest when coming on to the markets for loans. M. Bonnet, Assistant Commissioner to the Government, summarised a report he has drawn up on the effects of inflation on State finance. He insisted that it was necessary to draw a close distinction between the value of capital and profits before the war and to-day. The apparent increase observed to-day was due not to a real gain, but to the fall in the value of money, and it was therefore only equitable that special taxation based on extraordinary profits should be levied on real and not on apparent values.

The French index numbers for April, as compiled by the Service de la Statistique Générale de la France, are now available. Taking 100 as the base figure for the period 1901 to 1910, the comparative index figures for March and April, in respect of the wholesale prices of 20 categories of foodstuffs and 25 categories of industrial materials, were as follows:—

	1922.	April
	March	(Corrected). (Provisional).
General index figure (45 categories).....	355.4	362.6
Foodstuffs alone—		
General index figure (20 categories).....	366.9	387.5
Vegetable foods (8 categories)	342.3	372.3
Animal foods (8 categories)	402.3	427.2
Sugar, coffee, cocoa (4 categories).....	345.2	338.7
Industrial materials alone—		
General index figure (25 categories)	346.3	342.8
Minerals and metals (7 categories)	290.1	293.6
Textiles (6 categories).....	381.8	373.7
Various (12 categories)	361.3	356.0

The details show that, while there was an appreciable fall in most of the categories during April, the substantial rise in meat and vegetable prices more than nullified this advantage. Figures for the retail prices in Paris (13 categories) indicate a similar appreciable increase in the cost of living during the month of April. The index figure for March was equivalent to an increase of 194 per cent. on that of 1914, while that for April represented an increase of 204 per cent.

The decline of French imports continues to constitute the most striking factor of French international trade, as is shown by the statistics just published by the Customs Department for the first quarter of the year. There is some difficulty in getting an exact comparison between the various returns, as the rates for entries are those established by the Customs authorities, while those for exports are calculated on the basis laid down by the Customs Commission appointed in 1919. In the first quarter of 1922 England exported to France goods to the value of 867,550,000 francs, as against a value of 920,911,000 francs in the first quarter of 1921. The similar figures for the United States were 788,173,000 and 1,361,924,000; for Germany, 315,810,000 and 744,950,000; for Belgium, 346,655,000 and 453,714,000; for Switzerland, 107,885,000 and 112,319,000; for Spain, 27,612,000 and 103,781,000; and for Italy, 173,156,000 and 128,239,000. The general tendency of these figures is also confirmed by the returns from other countries. On the other hand, during the same period there has been a marked tendency towards increase in the volume of French exports, except in the case of Germany, Switzerland, Spain, Italy, Brazil, and the Argentine, where there has been a decline. Thus and the figures for the first quarter of 1922, as compared with the figures for the first quarter of 1921, are as follows:—England, 943,553,000, those of 1921, are as follows:—United States, 613,831,000, as against 747,833,000; Germany, 504,328,000, as against 399,599,000; Belgium, 1,148,696,000, as against 628,013,000; Switzerland, 221,604,000, as against 1,093,245,000; Spain, 64,893,000, as against 175,138,000; 339,087,000; Italy, 186,456,000, as against 175,138,000. In other and Italy, the figures for French exports have shown a comparable rise.

For the third week in succession the Bourse has maintained the firmness that manifested itself when it became evident that the alarming proposals brought forward at the Genoa Conference were not to come into effect. It is

clearly impossible in the present conditions, after the long-continued economic depression, to look for a boom, but the fact that the means have been found to bridge over the menacing date of May 31st, and that the possibility is being seriously considered of raising an international loan that would make it possible for Germany to meet a certain portion of her liabilities, have created a feeling of optimism that, it may be hoped, will be maintained. Should the proposed loan not eventuate, the resulting fall in the franc would tend to harden foreign securities, and this would to some extent support the home market. If, however, the loan succeeds, the satisfaction felt will be a very strong factor of buoyancy. French Rentes were a trifle stronger, the Three per Cents. rising from 57.80 to 57.90, the 1914 Three and a Half per Cents. from 83.70 to 84.85, the 1918 Four per Cents. from 63.22 to 63.42, while the 1920 Six per Cents., having paid interest, dropped from 93.45 to 91.25. Banks are slightly stronger, Banque de France moving from 5,700 to 5,725, Banque Ottomane from 673 to 685, and Banque de l'Union Parisienne from 618 to 639. Railways have continued their upward movement, Est gaining 15 points at 745, Nord 40 points at 1,145, and P.L.M. 3 points at 878. Others have remained virtually unchanged, except Midi, that at 765 has fallen back 5 points. Navigation stocks have been practically without variation, though Chargeurs Français advanced from 498 to 535. Suez has risen from 5,840 to 5,890. Electrical undertakings have been in demand.

GERMANY.—FINANCES—EXCHANGE AND BOURSE —INDUSTRY—PRICES—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 6.

THE prospect of a loan resulting from the Paris discussions is rather less favourably regarded than when the discussions began. This view was reflected by the Bourse and in financial circles on the first business day after the holidays. Although it is in the German interest to have the whole question of Reparations considered in connection with international war indebtedness, it is held that the chance of an immediate loan, which is necessary for this year's Reparations and for the execution of the reforms promised to the Reparations Commission, is diminished in measure as the problem is enlarged, and as the number of interests involved is increased. Few persons believe that a radical rehandling of Reparations, much less a pooling of or remission of other international debts, is possible at present. The Cabinet's last reply to the Reparations Commission makes it clear that the main point of the proposed reform, which concerns the Floating Debt and circulation increase connected therewith, depends wholly upon a release by means of loan from the coming Reparations liability. The Reparations Commission's reservation of right to withdraw the partial moratorium in case the German Government, without a loan, fails to carry through the reforms has naturally no practical meaning, as without a loan no serious attempt will be made.

In this case the only alternatives are default, or the financing of the payments by further floating debt and inflation operations. The Government has not yet got over its difficulties with the Forced Loan. The Reichsrat has made numerous further alterations in the Bill. The Cabinet is still being urged by associations representing industry and banking to raise the interest rate, to discriminate in favour of public companies on the ground that these cannot afford to part with capital, and to provide for advances by the Darlehnskassen on the security of the loan up to a high percentage of the nominal value—otherwise, it is declared, the Bourse quotation of the loan during the first interest-free years will not exceed 50.

The floating debt of discounted Treasury bills on May 31st was 289,246,065,000 marks, an increase of 17,310,900,000 marks, of which 17,180,492,178 marks was for Reparations purposes, since the beginning of the financial year (April 1st). The Reichsbank's report for May 31st shows a new record in pressure for credit. Treasury bill discounts increased by 11,323,541,000 marks to 167,793,922,000 marks; note circulation by 7,810,853,000 marks to 151,949,179,000 marks; Kassenscheine to 9,440,500,000 marks. The cause of the heavy discounting is the usual month-end demand for money. The Reichstag has sanctioned a new material increase in postal, telephone, and telegraph rates. The ordinary State railways budget for 1922-23 balances at 97,078,628,000 marks. Estimated receipts from passenger traffic are 11½ milliards, from freight 83.3 milliards. On the expenditure side is 4.47 milliards for service of the railway debt. The cost of wages is 42 milliards, of materials 50½ milliards. The Extraordinary Railway Budget balances at 16,992,459,000 marks. There is an operating surplus of 4½ milliards, the deficit, which last year was 10,835 millions, being wiped out. The condition of the railways continues to improve. Traffic, in train-kilometres, in April-December last, was 18,812,909, against 16,859,473 in the same period of 1920, and the number of freight cars loaded was 8,759,871, against 8,262,377. There is still a chronic shortage of freight cars, the deficit in which rose from 1 per cent. of the demand in May last year to over 30 per cent. in December. Traffic in the area of the former Prussian-Hessian system had by last October already recovered to 94 per cent. of the traffic of 1913. Locomotives do as much work, 183 kilometres daily, as before the war, but cars average only 62 kilometres, against 88. In spite of their great increase, German rates, which in December last were about 21 times those of 1913, and have since been increased, are lower than those of most high-exchange countries, and a good deal of "exchange traffic" is being directed over German lines.

The Bourse during most of last week was weak for industrials, but recovered towards the end, and was today firm on basis of less favourable loan prospects. The *Frankfurter Zeitung's* Bourse index for dividend-payers shows for June 2nd 33,530, against 34,484 a week earlier. Foreign loans were weak, but Home Loans extremely firm, on foreign—mostly English and Italian—buying. This buying, which is apparently meant as an exchange speculation, reached a climax on June 1st, when Federal 3 per Cent. rose in a few hours from 130 to 159.50, 4 per Cent. from 106 to 118, and 3½ per Cent. from 85.25 to 95. Many State loans also had big rises on this day, Prussian 3 per Cents. Consols rising 9½ points. Since then some loans have had a slight set-back. To-day's quotations were:—War Loan, 77.50; Federal 4 per Cent., 121; 3½ per Cent., 88.50; 3 per Cent., 149.90; Colonial 4 per Cent., 128; Savings and Premium, 85.60; Prussian 4 per Cent. Consols, 86.50; 3 per Cent., 85.30. The rise in loans between the beginning of the year and the boom day, June 1st, was very considerable:—

	January 3.	June 1.
Federal 4 %	87.75	118
Do 3½ %	73	95
Do 3 %	102.50	159.50
Prussian 4 % Cons.	69	87.50
Do 3½ % Cons.	59.50	78.75
Do 3 % Cons.	56.70	88

Bourse sentiment has been favourably affected by such reports of important banks for 1921 as have so far appeared. The Dresdner Bank reports nett profits of 203,173,932 marks, against 142,488,018 marks in 1920,

and has increased its dividend to 16 per cent., and added 50,000,000 marks to its reserve. Net profits of the *Commerz-und-Privat-Bank* are 98,707,743 marks, against 66,797,953 marks, dividend being raised also to 16 per cent. The *Schaaffhausen'scher Bankverein* announces a dividend of 15 per cent., against 12 per cent. The balances of these banks cast an instructive light upon the inflation process. The demand for capital continues. New issues in May totalled 4,151.5 millions, against 1,488.2 millions in May, 1921, capital increases of existing concerns accounting for 2,357.9 millions, issues of new companies for 1,016.6 millions, and bonds for 777 millions. Total capital raised in the first five months of 1922 was 12,480.2 millions, against 5,568.8 millions in May, 1921.

Employment and home trade reports continue to be good, but nervousness concerning the future of the mark exchange is causing buyers to show reserve. The Labour reports for end of April show only 51,417 unemployed out of 5,991,685 persons embraced by the statistics. The rate, 9 per mille, is lower than in any month of the last pre-war decade. The coal and coke shortage continues, and Berlin Municipality has returned to importing English coal for gas production, as before the war. The Ruhr coal production declined in May by about 25,000 tons a day. The Federal Minister of Industry, Herr Robert Schmidt, has made another speech of warning that a crisis will come if the mark exchange recovers. The export branch will be specially threatened, said Herr Schmidt, owing to the fact that Germany hardly anywhere enjoys most-favoured nation treatment. The Prussian Trade Minister's monthly report on industry is favourable, but refers more often than is usual to foreign competition, and declares that in thin plates England and Belgium have driven Germany from her markets, and that foreign prices are 2,000-3,000 marks a ton lower than German home prices. Representatives of the iron and steel industries have again petitioned the Government to remove the export duties, which in this branch are around 6 per cent. The import of French pig-iron is increasing, but the cause here is not price competition, but insufficiency of the German native supply.

The price-rise has slowed down. The *Frankfurter Zeitung's* index number for 77 wholesale commodities at June 1st shows (on basis of 100 for January 1, 1920) 606, against 584 on May 1, 317 on January 1st, and 143 on January 1, 1921. Foods rose from 668 to 696, textiles and leather from 375 to 388, minerals from 498 to 502, and miscellaneous from 724 to 759. On basis of 100 for 1914, the figure for June 1st is 6,809, foods being 6,073, textiles and leather 10,347, minerals 7,771, and miscellaneous 6,221. The index figure for 21 finished industrial articles is 4,585, against 4,054 on May 1st, 2,223 on January 1st, 1,200 on January 1, 1921, and 769 on January 1, 1920. Since January, 1920, the foreign exchanges have risen about six-fold, and the cost of commodities and finished articles almost exactly six-fold. Experience shows that such a close correspondence is attained only a considerable time after the fall in the mark exchange has ceased. Seven months ago (in early November) the mark exchange stood a little lower than now, but prices of both commodities and finished articles were below half of those now prevailing. This justifies the belief that a prolongation of the recent relative mark exchange stability, even if no mark rise occurs, will see German prices all round at about world-market level.

The foreign trade reports for April shows an increase of the import surplus. Imports were 2,888,900 tons, against 2,644,600 tons in March, the value being 28,249 million marks, against 22,911 million marks. Exports were 2,176,000 tons, against 2,152,600 tons; and export values 22,949 million marks, against 21,238 million marks. The import surplus was 5,300 million marks. Totals for the first four months of 1922 are:—Imports, 9,317,500 tons, value 76,003 millions; exports, 8,102,700 tons, value 73,334 million marks. The figures for the same four months of 1921 have not yet been published. Imports in April as compared with March show (in weight) an increase under the headings food, minerals, chemicals, textiles, and base metals, but a decline under leather and of machines; exports show an increase in chemicals, and stone wares, and a decrease in agricultural products, textiles, paper, pottery, glass, base metals, and wares thereof, and machines and vehicles.

NORWAY. — WAGES REDUCTIONS AND HOURS — PUBLIC FINANCE—PRICES.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, May 31.

THE awards of the Arbitration Court are being pronounced successively for the various trades. Thus awards have been given for the engineering trade, the building trade, the joiners' trade, and, as far as the holidays, overtime work, &c., is concerned, also for the paper industry. Considerable reductions have been made in the wages, but not to such extent as was claimed by the employers. As to holidays, they have, generally, been reduced from a fortnight to eight days (with full wages). The Court is certainly composed of both able and upright men; but their awards, if out of proportion to the hard fact of competition and the absorbing capacity of the markets, cannot be of much value, apart from taking the settlement out of the hands of the parties most directly concerned, which may or may not be an advantage.

The legalised eight-hours working day is also by many considered as an impediment to legitimate trade, and, therefore, in the long run tends to injure instead of to benefit the workmen, for whose sake, of course, it was introduced. As it is now, the Act is very rigid, prohibiting the workman who might for special reasons wish to work 54 hours a week instead of 48 hours from doing so; and the rigidity of the law is felt especially in agriculture. So upon an interpellation in the Storting, the Minister concerned agreed that concessions might be granted, although the principle of an eight-hour day would be strictly maintained.

The cost of Norway's defence of her neutrality during the war has now been definitely fixed, and the amount is about 189 million kroner. The cost of the "crisis arrangements" made by the Government to secure the supply of foods, fuel, &c., during the war, so far has been ascertained amounts to 238 million kroner, but as these arrangements have not yet been all wound up, there will be a considerable additional amount. The payment of these amounts, of course, has been successively provided for. The reduced public income estimated for the coming financial year will necessitate reduction in various Budget items, especially in the grants or extra salaries to public servants to the extent of more than 20 millions. The revenue expected to be subject to the greatest reduction is that of the income-tax, the stamp duties, and the tobacco tax.

The wholesale price level, according to the *Farmand*, has during May moved slightly downwards, namely, by 0.9 per cent. Textiles have risen, fuel and oils have fallen, and so have grain and flour, whereas meat and fish have risen a little.

The note circulation of the Bank of Norway at the end of this month shows some expansion, and amounts to Kr.375,152,000. The reserve consequently has come down from Kr.55,636,000 to Kr.47,140,000. The increase in circulation, though a little larger than usual, is what is generally taking place at the turn of the month. The stock market is weak, with a slight stiffening in shipping shares.

It is stated that during May 600,000 tons of iron ore was shipped from Narvik (Northern Norway), which is also said to be the largest quantity ever shipped from any port in a single month, except from Lake Superior ports.

The foreign exchange market is somewhat irregular, but with a weakening tendency for the krone. Spring work is practically finished all over the country. The weather has been very favourable, but it is cold, windy, and dry, so that vegetation is far behind the normal.

DENMARK.—FOREIGN TRADE—TRADE, PRICES, AND EXCHANGE—BANK FIGURES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, May 29.

OFFICIAL information has now appeared on the subject of Danish foreign trade up to the end of the month of March. Taking everything into consideration the trade balance results are of a favourable character, though it

must be remembered that the comparatively small import figure is a sign of depression in the Danish world of trade. During March, imports and exports practically balanced. The value of the latter amounted to Kr.100,000,000, and of the former to Kr.103,000,000. These figures are respectively Kr.38,000,000 and Kr.33,000,000 smaller than during the same month last year.

The figures for the first three months of the year are as follows:—

	Imports.		Exports.	
	1921.	1922.	1921.	1922.
	Mln. Kr.	Mln. Kr.	Mln. Kr.	Mln. K.
January	168	102	133	80
February	159	70	108	76
March	141	103	133	100

The effects of the great lock-out recently concluded were especially marked in the February figures. In March, among other goods exported, were Kr.30,000,000 worth of butchery products and Kr.34,000,000 worth of dairy produce, and the exports of eggs totalled some Kr.10,000,000. All these figures are considerably higher than those of the preceding month. During the first quarter of this year Denmark has imported 531,918 tons of coal as compared with 501,863 tons during the corresponding months last year. Of the amount imported this year 239,832 tons came from Northumberland and Durham, 260,838 tons from Scotland, 24,381 tons from Yorkshire and Derbyshire, and 4,897 tons from Wales. The imports from Northumberland, Durham, and Scotland were considerably larger than usual. Only 86 tons were, however, imported from the United States, compared with 61,265 tons in the January-March quarter of 1921. The imports of cinders and coke, which also came mainly from Great Britain, rose from 118,747 to 201,735 tons. Finally, the imports of briquettes rose from 501 to 1,521 tons, of which 1,371 tons came from Great Britain. Furthermore, much interest has been aroused lately in this country by the fact that the Danish State Railways have ordered 100,000 tons of British coal (three months' consumption) through "De Forenede Kulimportører" (The United Coal Importers). Prices are up at about 32s per ton.

The situation as regards Danish trade has not apparently undergone any substantial change. Generally speaking, the markets show the same sign of depression which has been referred to in previous reports. As regards wholesale prices, *Finanstidende* publishes monthly figures, the last of which gives an index number of 177 for May 1st, against 178 a month earlier. This figure is calculated by taking average ruling price during the period July 1, 1912, to June 30, 1914, at 100. It is, however, only the raw materials and the feeding-stuff group which have contributed towards the decline, whereas food stuff rose from 172 to 176. The level of prices is now 31 per cent. lower than a year ago, and 56 per cent. lower than in November, 1920, when prices reached their peak. The Danish krone, in the period May 1, 1921, to May 1, 1922, has risen about 14 per cent. in relation to dollars, and is now 77 per cent. of its par value. The Statistical Department reports that retail prices in January showed a fall in respect of the majority of goods since October, 1921. This fall in prices has also continued during the present year, according to the latest information, but has not, however, been large as regards most goods in consideration. Some goods even show a rise in prices as compared with January figures.

The monthly statistics regarding the position of the banks have now been completed up to the end of April. At the end of March the balance-sheets of all the banks (including the National Bank) totalled Kr.5,299,000,000, as against Kr.5,288,000,000 at the end of April. The difference is, as will be seen, extraordinarily slight, and is accounted for by very small movements in several items. On the liabilities side the total figures for share capital (Kr.409.6 million) is Kr. 12 million less than in March, which is due to the fact that "Kjøbenhavns private Laanebank" has been taken over by Den Danske Landmandsbank, in whose accounts its assets and liabilities are included. Circulation of notes by the National Bank fell during the month from Kr. 451.79 million to Kr.405.81 million. The maximum issue of notes permitted is Kr. 697.35 million, so that the bank has a note reserve

or, in other words, after the territories occupied were set free by the Germans.

Consequently the arguments made are not based on right or equity. Thanking you in advance for the publication of this letter, I am, yours faithfully,

H. PEREZ DUPUY.

(Member Board of Directors of the Banco de Venezuela.)
Caracas, Venezuela, May 15th, 1922.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S SURVEY.

"ECONOMICS seemed to me thoroughly interesting, until I got to money." This naive judgment, passed by a student in the Cambridge school, recalls itself to the mind as one surveys the publications of the past month. They would prove, to the author of the remark, but a sorry show. The feature he found so little exhilarating is, in them, predominant. Money, the gold standard, currency in all its aspects—these are the outstanding issues, as reflected in contemporary economic literature. What is called abroad, where, over a great part of Europe, it is indeed the overshadowing fact of life, the Valuta, is becoming more and more the first question to which the writer on economics has to address himself. If our generation of economic students does not understand the "function of money," it will not be from the lack of illustrative examples, or of a row of works, in all languages, designed to make their meaning accessible to the least instructed intelligence. For the moment one may continue to enter such books under the subheading "Advanced and Technical," but the fact of doing so is a reminder to the classifier of the fallacy of all preliminary groupings. There was a time when, to reach "monetary problems" was a sign that one had passed out of the elementary stage in one's economic education, and entered one relatively more advanced; but that is hardly true to-day. Even the handbooks intended for the youngest student have to contain a reference to the exchanges.

(a) Elementary.

Mr F. Lavington has performed a difficult and very useful task extremely well in the little volume in which he explains, in terms capable of being understood by all and sundry, provided they are prepared to concentrate their attention, the workings and progress of trade cycles. He describes "The Trade Cycle" (P. S. King, Great Smith street, London, 3s 6d), as "an account of the causes producing rhythmic changes in the activity of business." Clearly, no account of phenomena so complex could be entirely simple without being to some extent misleading. Mr Lavington is always candid; he admits that in his summary statement there is much that has been conjectured, little that has been proved. That is, however, inevitable, since in the factors that have to be considered the psychological, determining the level of business confidence, are recognised as of supreme importance. But his little book is at once the best and the simplest short account of the fluctuations of industry that has been published.

Mr Albert Crew's "Economics for Commercial Students" (Jordan and Sons, London, 5s) is now in its fourth revised edition; it is admirably designed for its purpose. A very large part of the space is devoted to the practical as distinct from the purely theoretic side of economics; there is a brief survey of industrial history, and a good short account of the economics of government. Excellent, too, in its way, is the "Introduction to the Principles of Industrial Administration," by A. P. M. Fleming and H. J. Brocklehurst (Pitman, London, 3s 6d).

(b) Advanced and Technical.

In the preface to the new (sixth and revised) edition of his "La Monnaie, le crédit et le Change" (Paris, Alcan, 15s) M. Arnauné writes:—"The teaching of experience, as assembled and formulated by economists, is that the exchanges cannot be regularised with any degree of certainty and permanency save by the free international

circulation of the metallic standard, i.e., gold, between civilised Western countries. Further—and here economics and morals teach the same lesson—every failure to meet obligations injures the credit of the debtor." The new material in the revised edition consists, essentially, in the application of these ideas; notably, as one expects with a French writer, of the latter. On inflation, which he calls the "science of appearances," M. Arnauné has some very acute remarks. The second volume is to appear in the course of the present year. Bearing on the same subject are two pamphlets, "Le Retour à L'Or," published in Brussels by the Moniteur des Intérêts Matériels, and "The Re-establishment of the Gold Basis of the Currency," by H. R. Sleeman (Institution of Mining and Metallurgy, 225 City road, London).

Attention may further be drawn to an interesting article in the U.S. *Banking Magazine* (published in this country by Effingham Wilson), for May, on "Gold Loans for Europe," by M. Wertheim. His view is that before such loans (as suggested, for instance, by Mr. Frank Vanderlip) can be granted, certain prerequisites must be fulfilled. These are that the present unbalanced budgets be made to balance; that a serious attempt be made to put the collapsed currencies on some sort of real basis; and that, third, the Reparation question be cleared off. There must, in a word, be some sort of stabilisation, by the establishment of a fixed unit.

Insurance underwriters, for whom it is intended, will find Mr Kubler Ridley's "The Common Hazards of Fire Insurance" (Pitman, London, 5s), exceedingly useful. It is clearly and concisely written and well arranged. Useful, too, is the volume containing Mr H. B. Hurd's lectures on "Marine Insurance" (Effingham Wilson, London, 3s 6d).

(c) Descriptive and Works of Reference.

The story of the fiscal relations between the colonies and the Mother Country is one of great interest, with much in it that is significant for students of tariff movements to-day. In "The Fiscal and Diplomatic Freedom of the British Overseas Dominions" (Oxford, the Clarendon Press, 12s 6d), this story is very well told by Mr Edward Porritt, whose volume forms one of a series of economic monographs on the war, issued for the Carnegie Endowment for International Peace. Dr Kinley, the president of the University of Illinois, writes an introduction. The watershed in the story was well marked by a speech of Lord Kimberley's, in 1873, in which he laid it down that "responsible government was an even more important principle than that of Free Trade." "The Restoration of Agriculture in the Famine Areas of Russia" (Labour Publishing Co., London, 5s), consists of a series of interim reports, made to a department of the Soviet Government, whose name it would take too much space to print out here. The most striking are those which discuss the application of electricity to agriculture. In one respect all the reports are impressive; they drive home the terrible gravity of the situation, and the deplorable state into which Russian agriculture has fallen. Only heroic measures can save it. "Les Grands Marchés des Matières Premières," by F. Maurette (Paris, Armand Colin, 5s), is an admirable brief survey of the great markets of the world's essential raw materials—coal, oil, cotton, wool, silk, iron, rubber, wheat—well written and arranged. The chapter on oil, for instance, is excellent, and marked by a genuine sense of values. Interesting as a document is the account, by the Bulgarian Director of Compulsory Labour, Christo Stoyanoff, of the actual machinery used there for carrying it through, though he does not give much information as to the economic effect ("Le Travail Obligatoire en Bulgarie." Sofia, Imprimerie de L'Etat.).

The "Anglo-South American Handbook for 1922" (edited by W. H. Koebel, for the Federation of British Industries) (T. Fisher Unwin, London, 25s), is a very fine production, infinitely more readable than such things commonly are. It includes not only the Argentine Republic, but Central America, Mexico, and Cuba. With this one naturally ranges Mr R. A. Lehfeldt's "The National Resources of South Africa," with a preface by General Smuts, published in Johannesburg by the University of the Witwatersrand Press, obtainable in

England from Messrs Longmans. A rather ironic sort of footnote to it is supplied in the "Chronological Note on the Dispute on the Transvaal Gold and Coal Mines," issued by the *Cape Times*, and obtainable in London from the Transvaal Chamber of Mines. The *Oil and Petroleum Manual* and the *Statesman's Year-Book*, both for 1922, need no special comment. Both are invaluable, and each year show additional useful features. In the same way, the "Marconi Directory" (25s) explains itself.

(d) Political and Propagandist.

There was a time when the White Paper recording Mr Churchill's Conversations with General Golovin was read with more eager interest by those who suspected that the British Government was actively backing White adventures in Russia than any novel. Now the General appears in a new character. His book on the "Problem of the Pacific in the Twentieth Century" (translated by M. Nabokoff, with a preface by Harold Williams, Gylendal, Hanover square, London, 10s 6d) reveals him as an admirable writer, rather of the Bernhardt type. In his view only the cession to Japan of the Philippines by the United States (a cession he dismisses as unthinkable) can prevent a collision between the States and Japan, whose "expansion is irresistibly motivated by increasing population." He notes some interesting facts in the internal conditions of Japan—i.e., the overwhelming authority of the Genro, and the rise in the cost of living there caused by the influx of gold. Admiral Bubnov contributes a series of chapters on the probable course of actual naval hostilities.

Mr Elliott Dodds' "Liberalism in Action" (Allen and Unwin, Museum street, London, 3s) is, of course, a purely propagandist work, very well done. He surveys the record of the Liberal party, and sets out a policy for its endorsement, including an industrial policy. Mr Dodds' task is positive; that of Professor L. Dicksee is partly negative, in so far as in his "The True Basis of Efficiency" (London, Gee and Sons, 6 Kirby street, 5s) he is attacking the Socialist conception, and quotes, in that connection, an article by Mr John Murray, M.P. His positive contribution is a spiritual concept of efficiency. In his preface he speaks of "Right-Thinking Before Right Doing; Character and Vision the Bed-Rock of all True Efficiency." His volume is the first in a new series, entitled "Studies in Commerce," edited by Sir W. H. Beveridge and Professor Sargent. Mr P. W. Wilson did not go out to the United States as a propagandist; he had an open mind about prohibition, and went there for other purposes than to study it. His little book, "After Two Years" (U.K. Alliance, 6d) is, he claims, merely an impartial account of what he actually saw. He sums it up thus: "The 10 per cent. who are resisting or delaying the object of the law are of less national significance than the 90 per cent. who have submitted to the law, and many would deny that the minority is as great as 10 per cent. None would, I think, put it higher."

In the periodicals attention may be drawn to Sir Bampfylde Fuller's analysis of the "Basis of Economics," in the *Nineteenth Century*, and a very useful attempt to weigh up recent economic developments in Russia in the *Round Table*.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 14.	June 15.

QUIET conditions in the Stock Exchange have taken the place of the activity and animation witnessed a short while ago. A dozen reasons are put forward to account for the difference in the Stock Exchange atmosphere. Chief amongst them is the state of affairs in Ireland, which does undoubtedly influence the investor and the speculator in their refusal to venture very far into stocks and shares at such a critical time. Some people expected that there would have been a reduction in the Bank rate this week, but no hopes were grounded upon this, and it is assumed that the Bank rate will not be changed until there is a rift in the Irish clouds.

It may be that the new issue torrent has been rather overdone; the stags are having none too happy a time at present. Even the British Guiana loan, the subscription list for which was very promptly closed, has been a trifle under par, though a slight premium developed on Thursday. New South Wales 4½ per cents. fell to 4 discount. Big discounts upon the strip of the newly issued French shipping lines reflect the anxiety of the underwriters to part with some of the stock with which they were left.

The market for British Government securities is heavy, and the 3½ per cent. Conversion Loan gave way somewhat abruptly. Nor is there anything like the demand which existed a fortnight ago for Home Railway prior-charge issues, Colonial Government stocks, Indian railways, and such-like descriptions. The investor has got enough stock for the present, and, in the markets, dealers are not eager to take more on their books than they know where to place.

French and German bonds have both been tolerably active, Germans rising on the latest developments in regard to reparations, but going back materially from the best. French bonds moved somewhat similarly. Brazilians have been dull, and falls occurred in Argentines, Peruvians, Japanese, Chinese, and other foreign issues. Chileans kept tolerably steady, but the tendency in this market matched that apparent in other parts of the Stock Exchange.

Home Railways gave way with a run. From the opening of the market after the Whitsun holiday a steady stream of selling caused heaviness in all the various sections. There were spasmodic rallies, but these were hardly sufficient to wipe out the effects of the profit-taking which has been a constant factor every day. North-Easterns proved superior to the sellers, and Great Westerns rose in sympathy. Canadian Northerns are lower in the Colonial railway market. Antofagasta Deferred shed several points on the disappointing dividend of 3 per cent., against 7 per cent. last year. Argentines were unable to maintain their previous bold front; Entre Rios stocks continue to give way by reason of the poor results, and Brazilians are no better, with the exception of Leopoldinas.

RUSTON AND HORNSBY, LIMITED.—The directors do not recommend the payment of the outstanding dividend on the preference shares or a dividend on the ordinary shares for the past year.

low prices charged; the increased demand on goods of their own manufacture had been most gratifying.

In view of the large amount of unemployment it would please them to learn that at most of their factories increased staffs had been working full time for practically the whole year.

The most disappointing feature of their business had been the continuation of the depression in foreign trade. They hoped they had seen the last of the adverse conditions, and they had made all possible arrangements with the object of preventing a recurrence of the losses.

The company had shown progress, but it could hardly be said that trade generally had much improved, although there was now a distinctly better feeling, and indications of some promise were showing themselves.

Sir Thomas concluded his speech with a warm tribute to the splendid support the business had received from the staff, from the highest position to the most humble. He specially mentioned Mr. H. L. Peters, deputy-chairman.

After some remarks from the shareholders, practically all congratulatory, the resolution for the adoption of the report and accounts was carried unanimously, as were the other resolutions sanctioning the dividend of 8½ per cent., making 12½ per cent. for the year, re-electing directors, and reappointing auditors.

The proceedings terminated with a hearty vote of thanks to the chairman, directors, and staff.

THE RHODESIA GOLD MINING AND INVESTMENT COMPANY, LIMITED.

COMPANY'S LIQUID POSITION.

The twelfth ordinary general meeting of the Rhodesia Gold Mining and Investment Company, Limited, was held, on the 6th instant, at the Cannon street Hotel, London, Mr C. F. Rowsell (the chairman) presiding.

The secretary (Mr A. D. Owen, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the balance-sheet this year differed very much from that of the previous year, as it gave effect to the reduction in the capital of 300,000 shares of £1 each to 300,000 of 10s each. In the year under review they had received in respect of profit on shares sold, interest and dividends, revenue from properties, and sundry receipts, £20,159; last year they had received from interest and dividends, revenue from properties, and sundry receipts, £24,195. The expenses of administration were £2,459 this year, as against £2,589 in the previous year. The result of the year's working was a profit of £11,902. The value of the assets, excluding properties, plant, and buildings, amounted to £138,767, representing 9s 3d per share on the capital. The position was, therefore, very liquid, and he thought they were fully justified in the declaration of a dividend of 9d per share, free of income-tax.

They held several blocks of claims, the most important being the Huntsman Mine, where they had milled to date 13,126 tons, which had been sold for £44,988. Up to December 31st that mine had shown a profit of over £10,000, and since that date a further profit of £1,748, after charging all costs of development, and the present developments were encouraging. They hoped to be able to continue paying dividends of at least the same rate as the present one. They still held 18,851 shares in the Lonely Reef Gold Mining Company, Limited, which continued on its prosperous career. That company had paid dividends last year amounting to 30 per cent., had already declared a dividend for the current year of 15 per cent., and he hoped it would pay a larger dividend when the accounts were finally closed.

The latest news received by cable was to the effect that prospects at the bottom of the Huntsman Mine were better than they had been in the previous year, and that there was a great increase in prospecting in Rhodesia, which might lead to important discoveries. The report and accounts were unanimously adopted, and the usual formal business having been transacted, the proceedings terminated.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

"TRADE AND TURNOVER ENTIRELY SATISFACTORY."

PROSPECTS OF INCREASING DEMAND.

The fifty-seventh ordinary general meeting of Liebig's Extract of Meat Company, Limited, was held, on the 8th instant, at Cannon street Hotel, Cannon street, London, E.C., Mr C. E. Gunther (chairman and managing director) presiding.

The Chairman said that the increase of capital resolved upon last year had been duly effected, the issued ordinary capital now consisting of £1,200,000 in 240,000 shares of £5 each.

On this occasion they were not adding to the reserve fund, which stood at the handsome figure of £1,000,000, but this did not mean that they would not add to it in the future; indeed, one of the first aims of the board would continue to be to carry a large reserve, and to supplement it from time to time, as circumstances might permit, thus further strengthening the already powerful financial position of the company.

STOCKS.

In a great enterprise such as theirs it was absolutely essential that they should keep themselves well provided with stocks, not only of raw materials, but also of their finished products. The seasonal nature of the company's working and the large volume of their sales rendered this policy in their case more than ever necessary. The heavy decline in the value of all materials had affected them in the same manner as the majority of industrial undertakings, and the chairman emphasised the point that it was not their trading results, but the writing down of stocks to the lowest figure commensurate with market values that had been the cause of the reduction in profits.

GRATIFYING DEVELOPMENT IN SALES.

Their trade and turnover had been entirely satisfactory, the sales of their products not only having been well maintained, but showing in several lines a most gratifying and encouraging development, and he considered that they might look to the future with every confidence.

Considering this and the strong position of the company, the directors felt justified in recommending a final dividend of 9s per share on the old ordinary shares, and the proportionate equivalent on the new. The new capital had, of course, not yet had time to become profit-earning, but he was glad to say that the construction of the freezer at Fray Bentos was proceeding, and the new plant should be complete and ready for working about the end of the present year. They would then be in a position to take their share in the trade in chilled and frozen meat, besides continuing to expand and develop their sales business in the products for which the company had been justly celebrated for over half a century.

FUTURE PROSPECTS.

Their Paraguayan estancias were now well stocked with cattle, and they were arranging to start a factory there later in the year. He had no doubt that the cattle business, having passed through some critical years, would eventually be fully restored to a healthy and invigorated condition. It would seem that prices had just about touched bottom, and that the livestock raiser might look forward to the future with more equanimity.

With cattle at their present prices, there were prospects of an increasing demand for the products derived from them and markets such as those on the Continent, which had appeared to be lost, were now showing a revival of interest. The company's farms carried some half million head of their own cattle, and they were probably the largest cattle-farming concern in the world.

In further remarks, the Chairman said that, with Mr Follett Holt, he was leaving shortly for South Africa, with the intention of inspecting the company's properties there. The report and accounts were unanimously adopted.

THE LONELY REEF GOLD MINING COMPANY, LIMITED.

SATISFACTORY RESULTS—SUCCESS OF NEW PLANT.

The twelfth ordinary general meeting of the Lonely Reef Gold Mining Company, Limited, was held on the 6th instant at Cannon street Hotel, London, Mr C. F. Rowsell (the chairman of the company) presiding.

The secretary (Mr A. D. Owen, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said that the total to the credit of the appropriation account was £202,449, as against £236,726 last year. They had paid two dividends, amounting to 30 per cent., as compared with 50 per cent. in the previous year, and the financial position of the company was quite satisfactory. An interim dividend of 15 per cent. was payable on July 14th next, and they hoped to be able to declare a final dividend for the current year on a higher scale, and that the total would therefore be higher than that for the past year.

With regard to the position at the mine, the immediate results of the recently installed suction gas plant showed that not only would it solve the great difficulty which the gradual exhaustion of the wood supplies was causing, but it would reduce the actual costs of supplying the power for the Lonely plant by upwards of £3,000 per month. The ore reserves at December 31, 1921, amounted to 204,294 tons, of an average value of 18.1 dwts, as against 202,845 tons of an average value of 20.8 dwts in 1920. The figures of progress during the year indicated very clearly that the mine was still in an excellent position, and that they might look forward to a long period of good results. They would not have incurred the heavy expenditure which they had on the power plant if Mr Kingston, the consulting engineer, had not held very strong views as to the profitable future of the mine.

A considerable reduction had already occurred in the working costs, and the saving on the new plant was equal to about 10 per cent. dividend on the capital of the company. Shareholders must not overlook the fact, however, that they were met with a continuous fall in the value of gold, but he was hopeful that that would be more than counterbalanced by further reductions in working costs.

The output of the mine to date was 597,706 tons of ore milled and £2,466,572 worth of gold recovered. Dividends equal to 33½ per cent. of the issued capital had been paid.

The report and accounts were unanimously adopted. The retiring directors and auditors were re-elected, and a vote of thanks to the chairman and staff in South Africa concluded the business.

New rules for issuing bank notes have been given by Statute of November 2, 1920. We are authoritatively informed that the right of issue of the Bank of Norway is calculated at an amount of 250 million crowns above the stock of gold and at present extraordinary additional amount of 50 million crowns from July 25, 1921, until further order.

Through Royal resolution of February 3, 1922, it has been resolved that the extraordinary right of issuing bank notes has been reduced from 50 millions to 25 millions from February 4, 1922 (this day included).

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated June 8th, is as follows:—Pig-iron: There has been practically no business on account of the holidays, but with good prospects of an early settlement of the engineering dispute, there is a rather better demand for pig-iron. Prices are as follows:—No. 3 Cleveland G.M.B. pig-iron, 90s per ton; East Coast mixed numbers hematite, 95s per ton. Manufactured iron and steel: Works generally have been laid off during the holidays. Steel ship plates, home, £10 10s; steel ship angles, home, £10; iron bars, home, £12; steel rails, home, £9 10s net. Iron ore: The present output of hematite pig-iron being very restricted, it would only take a moderate demand to ensure more furnaces restarting. Iron ore stocks suffice for immediate requirements only. Best Bilbao Rubio, 27s per ton, sellers.

Our Glasgow correspondent (writing on Thursday) says:—A comparatively good business has been transacted in Scotch pig-iron this week, yet, taken all over, the tone has not been as firm as was the case last week. There have been numerous inquiries about, however, chiefly from South American markets, but operators have not been seeing eye to eye as to prices, which buyers regard as rather to the high side. Sellers (producers) are still asking 98s 6d for No. 1 and 93s 6d for No. 3, both on trucks at works. Buyers but holders declined to yield, being induced thereto by the fact that the Continental conditions were given as harder, Germany especially demand than has been the experience for months, and that both on passing on local order, while there is somewhat of a lull in deliveries to the Far East. In the last day or two inquiries from Australia, New Zealand, and South Africa have shown signs of expansion. A revival in inquiry and orders for tubes (for ship-ment), bolts, nuts, &c., is in evidence. Consumers here and on the Continent continue to pick up all the scrap iron and steel moving about. Heavy smelting steel brings from 60s to 62s 6d a ton, de-

livered at works. Bar (malleable) iron producers are experiencing a lot of broken time, but several of the larger firms forecast an improvement after the midsummer holidays in July. Trading in coal has come to a practical deadlock. Demand for smalls, for shipment to the Continent, is abnormally active, but no production is mixed—large and small—the one can't be raised without the other. As there is no inquiry for rounds to speak of, their output has to be stocked, which the owners cannot afford to do indefinitely, and in the circumstances have had to close down numerous workings, to the loss of both small and large assortments. Consequently, exports are suffering. There are 71 steamers—21 at Clyde ports and 50 at Forth ports—waiting their turn for cargoes.

Our Sheffield correspondent writes:—As the end of the engineering dispute is now in sight, traders are more hopeful of a revival of business, and next week there should be a resumption of activity at many of the iron and steel works. The outlook is still black for some branches, while others have a fairly substantial accumulation of orders to start upon. The electric and motor industries have good prospects, and both are large consumers of steel. The dispute has seriously shaken the finances of many large firms who previously were finding it extremely difficult to meet their obligations, and this problem is still causing no little anxiety. Owing to the closing down of so many open hearth furnaces, Sheffield has bought no hematite iron for a long time, while deliveries have been suspended, consequently the hematite trade is extremely depressed. As there are no stocks in consumers' hands, however, a change for the better at any time is favourable. Makers of raw materials are by no means disposed to sell forward at the current prices. These are now at a low level, and if demand develops they are likely to stiffen. Latest reports show that a good proportion of the 47 unions are at work again, but the services of the rest cannot be utilised until the skilled A.E.U. men return. Moderate business is reported in edge and joiners' tools, mining tools, and electroplated goods. Prices of all kinds of castings used in building construction have again been reduced by 10 per cent. In finished steel goods generally there has been a steady deflation of prices for a long period, and there is severe competition for the limited trade offering. Some of these prices now approximate the pre-war standard. The sale of steam coal for inland consumption has been meagre during the last two months, and as a consequence prices are easier, although the market has been kept up by the large exports to Germany and Belgium. Good steam coal can now be bought at 20s and 21s at the pits. Business in house coal is extremely depressed. Blast furnace coke is being offered at 17s, or 18s below the official price.

Our Cardiff correspondent writes:—The three days' official holiday in the coalfield has had no hardening effect on prices. In view of the lower rate of wages in the coalfield the miners' leaders had contemplated a restriction of the holidays to one day, but the miners are entitled under the wages agreement to three days' holiday at Whitsun, and the leaders eventually decided to take the three days in the hope that a restriction of the output would have the effect of improving prices. The holidays have not had that effect. When the coal market reopened on Wednesday there was very little inquiry, and for spot positions the prices of best Admiralty large coals receded by about 6d per ton. The easiness of the market is not reflected in the returns of coal shipments, for in the week ending June and the quantity of coal exported to foreign destinations was only slightly below the record for any week since the war. The explanation of this circumstance is to be found in the fact that employment was regular, and outputs were within 10 per cent. of the pre-war average weekly rate of production. The miners are threatening drastic steps to force up prices if wages are not immediately improved. While these notes are being written the employers are considering the recommendation of the Commercial Committee of the Monmouthshire and South Wales Coalowners' Association that some action be taken to counteract the present falling tendency of values, but from inquiries which I have made I am persuaded that no drastic step will be taken either to regulate outputs or to fix a minimum schedule of prices. Colliery opinion is too strongly opposed to the adoption of either of these expedients; if anything is done it will take the form of consultations between salesmen with a view to the avoidance of underselling. It may be of interest to indicate the course of prices realised at the pit head since the resumption of work last July. In that month the average price realised was 29s; by December it had dropped to 19s 4d. In January there was a slight improvement to an average price of 20s 1d, but there was a relapse in February to 18s 8d. The March price was 18s 6d, and the April price 18s 7d. The latter price showed a loss of 2d per ton on the whole of the output, the costs being distributed in the proportion of 11s 4d per ton for labour, and 7s 5d per ton for other costs. In January there was a profit of 2d per ton, in February a loss of 1d per ton, in March a profit of 10d per ton, and, as already stated, a loss of 2d per ton in April. Up to date the total amount surrendered by the owners out of the profits provided for under the agreement of last June in order to pay the miners their minimum wage has exceeded £1,600,000.

The current market prices are: Best Admiralty, large, 27s; seconds, 26s to 26s 6d; best drys, 26s to 26s 6d; black veins, 27s to 27s 6d; Western Valleys, 26s to 26s 6d; Eastern Valleys, 25s 6d to 26s 6d; best bunker smalls, 18s to 19s; ordinary cargo smalls, 17s to 18s. Coke was easier at 22s 6d for export, but unchanged at 23s 6d to 25s for inland blast furnace consumption. Pitwood was firmer at 31s 6d to 32s.

The undertone in the iron and steel trade, and particularly in the tinplate market, is slightly improved, but on the average there is a marginal loss on production, and the employers this week have refused applications for increases ranging from 10 per cent. to 25 per cent. on the current wages.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—It is somewhat difficult to form a correct idea of the market to-day. There has been a poor attendance on 'Change, and there is certainly less doing in tops, though whether this is due to the holiday disturbance or whether it is caused by the reports of easier prices in the Colonies remains to be seen. It seems certain from the cabled reports that topmaking wools are cheaper in Australia, and it may be taken for granted that little business will be attempted here until values have again been tested in London at the auctions, which open on Tuesday. Some members of the trade expect a slight decline in merinos, but everything will depend on the nature of the foreign demand. In the meantime, buyers are adopting a policy of caution, and there is not enough new business going through to test the market. Generally speaking, topmakers' quotations show little change from those of a week ago, but it is reported that concessions have been obtained in some cases, and, except where firms are heavily booked forward, it is possible that real business would make an impression on quoted prices. So much has been done during the past few weeks, however, that both buyers and sellers are now in a position to take things easy and let the market find its own level. The yarn trade remains healthy, and a fair amount of business is being done, especially in fine counts. Prices are firm at about last week's rates, but there is some irregularity in quotations owing to some firms being in a stronger position than others. Steady progress is being made in the piece-goods section, but it is difficult to do much on the current basis of prices. The outlook for the English new clip is considered good. The finest wools are expected to sell well, but there may be some difficulty in disposing of the deep, strong classes.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

For once let us deal with South African wools. A very healthy business is passing, and, as far as one can see, the outlook favours a continuance of about to-day's prices. It does seem strange that very different conditions should obtain in South African to what are seen in Australian wools. The end of April saw a finish in the marketing of 12 months' grown Capes, and no more will be available at the different selling centres throughout South Africa until the end of next September. The shorter wools, say six to eight months' growth, which are now being marketed, do not suit Bradford topmakers at all, being too short in staple. It is high time that South African wool growers adopted Australian methods by shearing once in twelve months, and the increased use of Australian blood would often give an inch longer staple, which in turn would result in better prices being paid.

South African wools are a very useful commodity. They are much sought after if they have plenty of staple, but to-day there is a marked absence of this wool on the market suitable for topmaking,

GOLD and SILVER in ONTARIO

Gold mining is developing rapidly in the Province of Ontario, Canada. In 1921 the gold output was \$14,702,268. In 1922 it will probably be 18 or 20 million dollars.

The two chief camps are Porcupine and Kirkland Lake. Hollinger Consolidated, at Porcupine, is one of the great gold mines of the world; at present its production is about \$1,000,000 per month. Among other mines of this group are McIntyre and Dome, each with an output of more than 2 millions yearly.

At Kirkland Lake, the Lake Shore, Wright-Hargreaves, Teck-Hughes, and Kirkland Lake mines are the present producers.

Matatchewan, Larder Lake, West Shining Tree, Goudreau, Schreiber are other localities where gold has been discovered, and mines are being developed.

The silver mines of the Cobalt area are world-famous. Discovered in 1903 their yield up to the end of 1920 was 323 million ounces. Nipissing mine in 1921 yielded 3,012,614 ounces, O'Brien 1,408,890 ounces, Coniagas 1,301,860 ounces.

The pre-Cambrian rocks, in which the gold and silver and other minerals are found, extend over most of Northern Ontario, comprising many thousands of square miles. The greater part of this territory is unprospected.

The climate is invigorating, there is plenty of wood, water and labour. There are no mountains, and the prospector can go almost anywhere in his canoe. The mining laws are liberal. Ontario mining taxes are on net profits only, the rate being three per cent.

Magnificent specimens of gold and silver ores are now on view at the office of Mr. Wm. C. Noxon, Agent-General for Ontario, 163, Strand, London, W.C.2, where descriptive booklets, maps, and other information may be had.

THE HON. H. MILLS,
Minister of Mines,
Toronto, Ontario, Canada.

THOS. W. GIBSON,
Deputy Minister of Mines.

**DRINK AND ENJOY
LIPTON'S TEA**
The Finest the World Produces

MONEY was in keen demand in the early part of the week, owing to small maturities of Treasury bills and withdrawals for the embellishment of weekly bank statements, and discount rates hardened on this influence, and that of the approach of the end of the half-year. On Thursday morning $2\frac{1}{2}$ per cent. was quoted for all dates, when the reduction of Bank rate to $3\frac{1}{2}$ per cent. changed the atmosphere of the market. There was some doubt as to

the action of the banks with regard to deposit rates, but they decided to follow the official lead, and the discount houses did likewise, whereupon the market rate of discount became a very nominal $2\frac{1}{2}$ per cent. Yesterday, when the result of the Treasury Bill tenders was known, the market rate became more nominal than ever at $2\frac{1}{8}$ per cent. For Bank rate to come down when the open market showed signs of hardening caused some surprise, but the movement was technically justified by the improved figures of the Bank return, and has long been, in the opinion of many, overdue. A further decline to 3 per cent. is now generally anticipated, and the gossips were eagerly discussing the question whether the official cheapening of money was merely intended to assist the placing of the Indian loan, or is designed to promote a funding operation.

	June 17, 1922.	June 10, 1922.	June 3, 1922.	May 26, 1922.	Previous Rate and Date Changed.
Bank Rate	$3\frac{1}{2}$	4	4	4	4 (June 15, '22)
Banks Deposit Rate	$1\frac{1}{2}$	2	2	2	2 (June 15, '22)
Discount / Call	$1\frac{1}{2}$	2	2	2	2 (June 15, '22)
Houses (Notice)	$1\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$ (June 15, '22)
Market rate (3 mths' bills) ..	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	$2\frac{1}{8}$	..

The Bank return was favourable. A decline of £556,000 in the note circulation—in spite of the transfer of £100,000 to the currency note reserve—and a decrease of £2,000 in the stock of gold left the Reserve £554,000 higher. Government securities had been reduced by 14½ millions, but the Public deposits were nevertheless 2 millions higher. These movements left the Private deposits 15½ millions lower. There was a reduction of £2,205,800 to £299,222,200 in currency notes outstanding on June 8th, which includes £1,611,600 for notes called in, but not yet cancelled. The fiduciary issue is £249,560,000, or £60,428,400 below the maximum. The Bank of England notes in the Redemption Account have been increased £100,000 to £19,550,000.

The monthly statement of average weekly balances of the London Clearing Banks, printed in full in a later column, shows that for May deposits were some £8 millions higher than in the previous month. The aggregate figures for the nine English banks are given below:—

(Million £'s.)

	March, 1921.	June, 1921.	Dec., 1921.	March, 1922.	April, 1922.	May, 1922.
Capital and reserves	115.6	115.9	115.9	115.9	115.9	115.9
Acceptances	69.4	57.7	65.3	57.1	56.7	57.0
Deposits (incl. undiv. profits, &c.) ..	1,715.0	1,768.4	1,818.6	1,746.9	1,737.1	1,745.3
Total liabilities	1,900.0	1,942.0	1,999.8	1,919.9	1,909.7	1,918.2
Coin, notes, balance at bank, and cheques in course of collection ..	244.8	265.1	273.5	245.8	253.3	250.5
Money at call	82.6	98.0	105.7	107.5	107.3	109.0
Investments	336.1	335.9	343.3	332.7	402.3	415.7
Discounts	282.1	346.2	424.3	350.5	319.8	325.1
Loans and advances	862.6	815.4	762.3	746.2	745.2	735.7
Cover for accept., premises, &c.	91.8	81.4	90.7	82.2	81.8	82.2
Total assets	1,900.0	1,942.0	1,999.8	1,919.9	1,909.7	1,918.2

The decline in advances has continued, but the reduction in discounts has been checked, and there is a further substantial increase in investments.

THE STOCK MARKETS.

The second settlement since the outbreak of war was even smaller in volume than the first, and business during the week has been small, thanks to the uncertainty of the international situation, while the unexpected announcement of an Indian Government loan for £12½ millions caused further depression in the Consol market. The reduction in Bank rate to $3\frac{1}{2}$ per cent., and the accompanying decline in bankers' deposit rate to $1\frac{1}{2}$ per cent., served to check the downward movement, and on Thursday and Friday gilt-edged stocks and Home Rails, which had been steadily falling, showed some recovery. In the foreign market, French bonds are better, and Germans

improved. Home Rails rallied at the end of the week after their sharp reaction, but movements in the Miscellaneous section have been irregular, and many of the new issues stand at a substantial discount. Iron and steel shares have improved slightly on the termination of the engineers' lock-out, but there has been little business. Kaffirs benefited from buying from the Cape, but other mining markets have been dull.

COMMODITY MARKETS.

Markets generally are in an uncertain mood, as no one seems quite certain whether the trade recovery has really started or not. Fully middling American raw cotton has now risen to 12.80d per lb, but spinners and manufacturers are finding it somewhat difficult to book orders with material at this figure. While no real weakness has developed in wool values, there is an easier tendency noticeable in prices, but there is little in the present situation to indicate that the movement in this direction will continue. Only a gradual improvement is expected in the pig-iron market, and there is little doing at present, prices remaining unchanged. In manufactured iron and steel a reduction of 10s per ton in the price of plates, angles, and sections has been made, which it is hoped may stimulate business. Conditions in the Welsh steam coal market are still unstable, and prices have fallen further, best Admiralty being sold at 26s per ton. In the wheat markets prices were from 6d to 9d higher, but the demand was quiet. An all round weakness in the markets for vegetable oils and oilseeds is recorded by our correspondent. Hide prices were slightly easier at the Bermondsey auctions, but it is thought that leather values are not sufficiently stable to encourage buyers. Shoe manufacturers are reported busy. Further details of markets from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGE.

The foreign exchanges were seriously disturbed at the beginning of the week by the news of the failure of the Bankers' Conference to agree to the proposed loan to Germany. Naturally the incidence of this was felt primarily by the mark, which fell to 1.455 on Monday, and the French and Belgian franc, which reached 51.05 and 54.05 respectively on Tuesday, the Italian lire on the same day falling to 90. Some recovery has taken place on the announcement of the determination of Germany to meet the reparation instalment of 50,000,000 gold marks, French francs moving yesterday from 50.97 to 50.85, Belgian from 54.35 to 54.20. Sympathetically, the dollar also showed the expected appreciation, and on Wednesday reached 4.46, the lowest quotation since the 2nd inst. Since then, however, a slight reaction has set in, the quotation for sterling now being 4.47½, but merchants with autumn requirements in view are beginning to wonder whether the "peak" of this year's appreciation has not now been reached and passed. The volume of new foreign issues of capital in New York, though decreased, does not appear yet to be over, and should have a spasmodic strengthening effect from time to time, while any definitely favourable development in the Reparations situation would, if only on account of its unexpectedness, have an almost disproportionately favourable effect on quotations. Amongst European exchanges not already mentioned must be noted the further heavy depreciation in the Austrian krone to 102,000/105,000 on the 13th inst., but the speculators in Vienna would appear to have overdone things, and the announcement of a proposal to establish a new Bank of Issue has helped to bring down quotations, which have now reacted to approximately 80,000. However, Austria's financial plight, as indicated by the last Bank statement, is such that it is impossible to look for any permanent improvement in her exchange until some workable scheme of financial reconstruction has taken definite shape. The Polish rate has depreciated to 19,000, owing to the political crisis which has developed, and the fear that Budget expectations will not be realised. Balkan currencies are without special feature, while among Scandinavians,

Copenhagen has risen to 20.58, and Christiania to 26.18, but Stockholm crowns are steady, at round about 17.26, and Finnish marks at 208½. Guilders show little movement at 11.49, and Madrid is easier, at 28.40. Bombay and Calcutta have eased slightly to 1s 3½d-½d, but the other Eastern exchanges remain steady to firm, and the same applies to the South American currencies.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 10, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	9,803	Supply Services	8,030
Amount borrowed	308	Interest on Debt	3,833
		Sundries	941
		Added to Exchequer balances ..	147
	10,111		10,111

The total revenue for week ended June 10, 1922, at £9,803,427, compares with £12,190,781 in the corresponding week last year, while expenditure, at £9,963,833, compares with £14,909,023. Customs yielded £2,416,000, as compared with £2,818,000 12 months ago; Excise £1,300,000, as compared with £1,495,000; Estate, &c., duties £1,200,000, as against £863,000; and Property and Income-tax £2,273,000, as against £1,954,000. Ordinary Receipts under Miscellaneous produced £200,163, in comparison with £1,326,882, while Special Receipts, at £471,264, compare with £1,436,437 a year ago.

The week's operations increased the National Debt by the sum of £307,700, and caused the following changes:—

	Min. £		Min. £
Public Department Advances ..	+ 1,250	Bank of England Advances ..	- 9,000
4½% Treasury Bonds	+ 1,974	Issues under War Loan Act ..	- 500
Treasury Bills	+ 6,574		- 9,500
	+ 9,808		

The Floating Debt was reduced by £1,174,000 during the week, and now stands at £981,181,500.

FINANCIAL YEAR, 1922-23 (April 1 to June 10, 1922).

MR D. C. LATHBURY.

We regret to announce the death, in his 93rd year, of Mr D. C. Lathbury, who from 1878 to 1881 was joint editor of the *Economist* with Sir R. H. Inglis-Palgrave, and after 1881 was a regular contributor for many years.

THE BANKERS' PRONOUNCEMENT.

For the present, at any rate, the Bankers' Committee appointed by the Reparations Commission have failed to fulfil the highest hopes that were built upon them, but their report is a notable landmark in the tangled history of this baffling question and puts the issues upon a new and more realistic plane. The Committee were invited to consider and report on the conditions under which the German Government could raise foreign loans to be applied to the redemption in part of the capital of its reparation debt, "regard being had to its obligations under the Treaty of Versailles, and in particular under the schedule of payments of May 5, 1921." They were to consider in particular the terms of the loan and the amount which might be made available in each of the next two years; "the security which could be made available for potential lenders without undue prejudice to the future interest of Reparation"; and the method of control of assigned assets and the relations of the representatives of the lenders to the German Government and to the Reparations Commission.

All the world now knows—as, indeed, the Reparations Commission no doubt foresaw would be the case—that as soon as they came to grips with the problem the bankers on the Committee unanimously agreed that they could hold out no prospect of an external loan unless the total German bill was reduced, and they therefore asked the Commission the vital question: Whether they were at liberty to consider the possibilities which would arise from a modification in the London schedule? The reply of the Commission giving them a free hand was unfortunately not concurred in by the French delegate—which could only mean that though France is anxious to convert her claims into cash, she is not yet ready to modify her demands for the sake of ready money unless at the same time the inter-Allied debt question is settled. In so far as this last point really decided the attitude of France, it will command general support; but the fact that Germany's chief creditor was not willing that the scaling down of obligations should commence with the German payments led the Committee to the regrettable but sound conclusion that they could not profitably continue their work. The statement in which they give their reasons is a cogent and frank pronouncement of such authority—it is signed by financiers who speak the mind of the financial world of America, England and Holland, no less than of Belgium and Italy—that all further discussion of the subject will start from a new basis.

The Committee did not imply directly or indirectly that reparations ought to be reduced, but they clearly state that in the opinion of some of them a substantial loan could be floated if and only if the payments are reduced. Any figure they would have mentioned in this connection "would have necessarily represented an opinion not as to the probable maximum capacity of Germany, but as to the sums which the lending public of the world, forming its judgment amid all the perplexities of the present situation, would confidently believe to be well within Germany's capacity. Payments even so cautiously estimated would still be very considerable." So long as no modifications were made in this sense, the general credit of Germany could not be restored, since the potential lenders obviously feel that the enforcement of claims beyond the capacity and intention of Germany to pay might produce a collapse leading to social upheaval, and that in such a case even security such as Customs would become worthless; further, the investor, notably in the United States and Great Britain, would not be attracted by an arrangement which he did not regard as a permanent settlement, or one which held out a reasonable prospect of checking the deteriora-

This question of the frontier between Yugoslavia and Roumania was largely responsible for the failure of the Central European States at Paris in 1919. Instead of appearing as Allies by first settling their own differences

INDIAN GOLD MINES.

THE average annual output of gold from the mines of India was before the war not far short of 600,000 ounces, or approximately 3 per cent. of the world's total production. The bulk of this was mined by five companies, the Balaghat, Champion, Mysore, Nundydroog, and Ooregum. Since 1914 the output has been steadily dwindling, and by 1921 it had fallen to 390,848 ounces, as against 442,472 in the previous year. The accounts of the Champion Reef having been made up to December 31st, the same date as those of the other producing companies of the "Taylor" group in the Kolar field, it comes about, for the first time on record, that all the annual reports have been issued, and the meetings held in the spring. Those of the Balaghat were the last of the series. The publicity given to the affairs of these companies has been such as to induce purchases of the shares on the part of investors attracted by the dividends. It will therefore be useful to review the results of the past year, and to consider the prospects for the current period. The shareholders in three of the companies—the Champion Reef, Balaghat, and Nundydroog—not long ago had the unpleasant experience of getting a notice of reconstruction, with an assessment, very shortly after the receipt of a dividend; the one which may be considered the leader of the group—the Mysore—doubled its issued capital, while the Ooregum has forced its output—in each case to provide for the development and equipment of the mine at greater depth.

The Champion Reef statement—covering only three months—showed a working surplus of £7,000, as against £66,600 for the twelve months ended September 30th, 1920. At the date of the balance-sheet, the cash assets exceeded the liabilities by £105,000, and 5s apiece remained to be called up on 490,900 shares, representing a further £122,700. The ore reserve estimate of 221,950 tons showed a moderate reduction, compared with that of September, 1920, due to the concentration of underground work upon the provision of additional ventilation facilities; the tonnage was equivalent to about 1½ years' supply for the mill. Recent developments have not been particularly good, but encouragement is derived from the results in the adjoining Ooregum mine. Last year the Nundydroog treated rather more material than in 1920, but owing to the decline in average yield, coupled with the shrinkage in the gold premium, the revenue showed a decline. Dividends totalled 15 per cent., the same as for the two preceding years. The performance of an increased amount of development only expanded the ore reserves by 9,400 tons to 175,200 tons, also about 1½ years' supply.

The results for 1921 of the Mysore Company were affected by the same factors as those of the Nundydroog; in addition, a reduced tonnage was crushed. Thus the working profit came out £75,600 down at £207,800. The directors, however, maintained the dividend at the enhanced level of 25 per cent., taxation and depreciation allowances absorbing considerably less than before. At the date of the balance-sheet the company had net liquid assets to the tune of over half a million sterling. The ore reserve estimate of 837,000 tons—a small decrease, despite the performance of a largely increased development footage—equals about four years' work for the mill at the 1921 rate—202,300 tons, the lowest for many years. With both the Balaghat and Ooregum companies the capital includes preference shares entitled to an initial 10 per cent., and to participate in surplus profits *pro rata* with the ordinary. The first-named company in 1921 earned somewhat more than in the fourteen months ended December 31st, 1920; dividends on the preference shares were rather less, and on the ordinary rather more than before. Underground operations being restricted by the intersection of a watercourse at the 4,000 ft level, the ore reserves declined to 80,300 tons, or about two years' supply. The Ooregum last year treated a slightly increased tonnage of higher grade ore, securing thereby the record output of 101,600 ounces of fine gold. Dividends, however, remained at the rate paid for the two preceding years, amortizations being on a more liberal scale than before—indeed, as already mentioned, the output was really forced for the purpose of meeting

expenditure in connection with the sinking of a new circular shaft. Ore reserves were fairly well maintained at 422,650 tons, sufficient to keep the mill going for about 3½ years. The balance-sheet showed a strong financial position.

Appended is a statement of the dividends and yields on the different shares:—

Share.	Approx. Price, 28th May.	Dividend.	Yield.
Balaghat, Preference.....	13/ ..	22½ ..	17 ..
Do Ordinary.....	8/ ..	12½ ..	15½ ..
Mysore	12/6 ..	25 ..	20 ..
Nundydroog	9/ ..	15 ..	17 ..
Ooregum, Preferred	22/ ..	32½ ..	14½ ..
Do Ordinary.....	14/6 ..	22½ ..	15½ ..

The table given above shows highly attractive yields on the basis of last year's dividends. The crucial question, of course, is: Will they be maintained? There can be little doubt as to the answer. The Mysore Company last year averaged £5 5s 8d per ounce for its gold, or fully 13s above the current price. The difference would wipe out more than one-third of the profit. With the other companies the position, of course, is more or less the same. Below are set out the number of ounces recovered last year, the working profit, and the amount by which it would be reduced by a decline of 13s per ounce in the price of gold:—

	Gold. Ozs.	Profit. £	Difference in Gold. £
Balaghat	28,840	36,500	18,700
Mysore	129,700	207,800	84,300
Nundydroog	63,000	105,400	40,950
Ooregum	101,600	246,400	66,040

There are naturally certain small points of difference in the circumstances of the different companies, but the foregoing figures will enable conclusions to be formed as to the extent to which they will respectively be affected by the decline in the currency price of gold.

OVERSEAS TRADE IN MAY.

A SUMMARY of the official returns of overseas trade in May and the first five months reads as follows:—

MONTH of MAY.

	1921.	1922.	Increase or Decrease in May, 1922.
Imports	£ 86,275,239	£ 88,814,459	+ 2,539,220
British exports	£ 43,088,418	£ 58,045,353	+ 14,956,935
Re-exports	£ 7,231,836	£ 8,964,899	+ 1,733,063
Total exports	£ 50,320,254	£ 67,010,252	+ 16,689,998
Excess of imports over total exports	£ 35,954,985	£ 21,804,207	- 14,150,778

FIVE MONTHS ENDED MAY 31.

	1921.	1922.	Increase or Decrease in 1922.
Imports	£ 483,720,255	£ 403,042,217	- 80,678,038
British exports	£ 330,742,789	£ 299,615,854	- 31,126,935
Re-exports	£ 42,602,925	£ 46,951,311	+ 4,348,386
Total exports	£ 373,345,714	£ 346,567,165	- 26,778,549
Excess of imports over total exports	£ 110,374,541	£ 56,475,052	- 53,899,489

The only really significant point that emerges from these comparisons is the decline in the import balance as compared with last year. In spite of the fact that last month's import excess was more than double the average of the four preceding months, the total balance for the year to date is little more than half that recorded in the corresponding period of 1921. This movement must be counted as one among the influences that have led to the appreciation of sterling exchange. But in other respects the comparison with last year is of little service, because a year ago the great coal strike was crippling the country's export trade. Nor is the comparison of value figures with those of 1920 of more service, owing to the enormous change in values that the past two years have seen. The most instructive comparison, perhaps, is that obtained by placing May figures beside the average monthly figure of the first four months of the year. From various cate-

gories of import and export trade this method of comparison yields the following results:—

	May, 1922.		Average Monthly Figure for Period January 1 to April 30, 1922.	
	Imports. Million £.	Exports. Million £.	Imports. Million £.	Exports. Million £.
Food, drink, and tobacco	43.1	3.0	37.9	3.0
Raw materials and articles mainly unmanufactured.....	25.4	8.8	22.1	7.4
Articles wholly or mainly manufactured	20.2	45.1	18.4	49.0
Total (including Parcel Post)	88.8	58.0	78.6	60.4

At first sight the figures are discouraging, exports of manufactures in May being well below the average of preceding months. But cuts in prices of manufactured goods during the period must be taken into account, and actually the value of manufactured goods exported in May showed a slight advance on the April figure. Of more significance, perhaps, is evidence of heavier imports of raw materials, to which cotton and wool contribute largely. This suggests anticipation by manufacturers of increased demand for their products. Bullion and specie exports exceeded imports both in May and the five months, the figures being, for May, imports £4.3 millions, exports £4.5 millions, and for the five months, imports £15.8 millions, and exports £18.6 millions. The five months' gold and silver exports to U.S.A. were only £4.4 millions, against £23.6 millions in the same period of 1921.

One of the most encouraging figures in the official returns relates to shipping engaged in overseas trade. Tonnage cleared from our ports with cargoes in May and the five months were 5,104,340 and 21,907,286, compared with 2,934,644 and 15,157,843 in the corresponding periods of 1920. This information is supplemented by figures of coastwise shipping by months from January to April, which have been issued by the Ministry of Transport. These also indicate improvement on a year ago, the velocity of which was progressive in the first quarter, and naturally took a big jump in April, since the comparison with April, 1921, is vitiated by the coal stoppage. The improvement in coastwise shipping figures is due largely to greater coal movements. This, too, accounts mainly for an enormous increase in the tonnage of exports in March from the principal ports of the United Kingdom as compared with March, 1921. Official figures show that the tonnage of exports from the ten principal ports of Great Britain in March, 1922, were 4.3 million tons, against 2 million tons in March, 1921, and that about 80 per cent. of this increase comes under the heading of Cardiff, Newport, Swansea, the Tyne, and Glasgow. In our trade section on a later page will be found, as usual, a comparison of import and export value figures in May and the first five months of this year and last, under a large number of classifications.

Notes of the Week.

The Irish Constitution and Elections.—The constitution of the Irish Free State was issued to the Press on Thursday night, and therefore was in the hands of the electors of Southern Ireland before they recorded their votes at the general election, which began yesterday. To pass judgment upon this historical document without careful study is obviously impossible, and for the moment the public must accept the assurance which Mr Churchill gave to the House of Commons on Thursday, that the Constitution is in accordance with the Treaty. Mr Churchill and his advisors have had the opportunity for full consideration of the document, and this assurance may be welcomed as removing one of the most serious fears that have been entertained with regard to the Irish position. Unfortunately, other serious fears remain. The basis of the Collins-De Valera pact was such as to make the upshot of the elections, and the composition of the Free State

Government, subjects of grave anxiety. Mr Churchill has thought it desirable to postpone his statement on Ireland until next week. Public opinion will do well to follow his example, to accept with a sigh of relief his assurance that the Constitution is in proper form, and to temper inevitable anxiety with the hope that the election results may be such as to assure that a Constitution in conformity with the Treaty is put into force. Ireland for the moment is traversing a plank over the chasm that separates disaster from the beginning of pacification and well-being. Until the traverse has been accomplished, or has failed, a suspension of comment and criticism is the most helpful attitude for the English spectator.

Railways and Road Transport.—The public will not be greatly perturbed over the withdrawal of the London and North-Western Railway Company's Road Powers Bill, for while on balance the pros and cons are slightly in favour of the contention of the railway companies, there is a general feeling that it would be good for the companies to spend a year or two putting their own house in order and improving the efficiency and economy of post-war rail transport before they embark on this new venture. But there are grounds for serious criticism of the way in which the Bill has been torpedoed by the Ministry of Transport at the eleventh hour, after much time and money has been spent on its progress through the House, and of the arguments with which Sir George Beharell gave the *coup de grace*. The argument that the Bill, as drafted, did not sufficiently localise the activities of the different companies, and "might easily lead to wasteful competition through overlapping," is not a vital point for, if considered to be a real danger, it could have been dealt with in the Bill. The proposed agreement between the companies and the motor manufacturing companies not to buy second-hand vehicles also leaves us unmoved, for the Government can hardly frame its policy on a matter of permanent importance on the fact that it has at the moment some vehicles for sale. The vital issue is, however, the question of rates, and on this point the Government argument is worth studying. The railways believe that in order to remain the leading transport agency of the country they must enlarge enormously the amount of road carriage they are at present doing. They are prepared for their rates to be subject to control which would prevent temporary rate-cutting for the purpose of killing competition and then raising rates again; but they wish these rates to be in many cases less than the rail rates, presumably because they are satisfied that such rates will be remunerative and will develop traffic. But the Government is afraid that this will divert traffic from the rail to the road. This, in Sir George Beharell's view, might prejudice the fantastic principle of standard revenue, which he described as "the principal object of the Railways Act of last year." In certain cases the traffic managers are satisfied that goods can be carried by road cheaper than by rail, and in order not to be left out in the cold, the railways want a share of this traffic. The Ministry is willing that they may make a bid for such business, provided they charge the full railway rates, i.e., the very rates which are being undercut by rival road hauliers, which, as Euclid would have said, is absurd. Indeed, the whole controversy illustrates the impossibility of reconciling the economic problems arising out of rapidly developing methods of transport with the theory that you can for ever ensure a fixed return on the capital invested in any one form of transportation.

The Engineers' Ballot.—The most cheerful news of the week is the result of the engineers' ballot on the modified terms put forward by the employers. The members of the Amalgamated Engineering Union voted for acceptance by a majority of 36,055, the figures being 75,478 against 39,423. This practically marks the long overdue conclusion of one of the most unfortunate and futile industrial disputes of modern times. We use the word futile advisedly, for two reasons. In the first place the employers have won a Pyrrhic victory on a formula which, if it is interpreted in a spirit that clashes with the men's determination to have a voice in settling their working conditions, will certainly be repudiated. Secondly, long

months which have been devoted to quarrelling over a formula, should have been spent in discussing reduction of wages—a matter in which the engineering industry is lagging far behind other industries, and also far behind the economic necessities of the time. One union, the Boilermakers' Society, has not come into line. But as regards the industry as a whole, a fairly general and fairly prompt resumption of work is regarded as probable.

Summer Time.—The Home Secretary seems fated to flout public opinion. In suspending the death sentence on Ronald True he has been the unfortunate victim of a foolish inconsistency in the law on the one hand and of a newspaper ramp pandering to a sensation-loving public on the other. But in proposing to reduce the period of daylight saving in the permanent Act now before the House he is guilty of a great error of judgment. The introduction of daylight saving has been an exceedingly beneficent measure, which has greatly added to the health and facilities for recreation of the town population and encouraged allotments and gardens. Against this is to be set some inconvenience to a portion of the agricultural workers who have to rise in spring and autumn before daylight. Mr Shortt now therefore proposes that winter hours should apply in the greater part of April and September. But these are precisely the months when the additional hour of daylight in the evening is of special value to the city worker in his garden, on the playing field, or on holiday, and we sincerely hope that in this matter the House will not allow the interests of the great majority to be overruled by those of a clamorous minority.

Cotton Trade Hours and Production.—A Manchester correspondent writes:—This week the eleventh congress of the International Federation of Master Cotton Spinners' and Manufacturers' Associations has been held at Stockholm. The congress has been attended by over 200 delegates, representing 20 countries. The chief subject for discussion was the effect on mill production of the 48-hour week, and papers were read by three English delegates and leading employers from France and Italy. In a paper prepared by Mr Harold Cliff, the Secretary of the Oldham Master Cotton Spinners' Association, it was stated that the working hours in the English cotton spinning and manufacturing industry were fixed at 48 per week by agreement between the employers' associations and the operatives' trade unions, the reduced hours coming into operation in the middle of July, 1919. From 1902 to 1919 the Factory Acts restricted the hours of labour of women, young persons, and children to 55½ hours per week. It was pointed out that for the industry to swallow a reduction of 7½ hours per week, or 13.5 per cent., at one gulp, without producing sooner or later distressing and even painful symptoms, could not be expected. Mr Cliff presented some figures to show the actual effect of the change in this country from 55½ to 48 hours per week on the production of yarn. Owners of mills in the Oldham area, which contain more than one-third of the total spindles of Great Britain, were requested to furnish information. Particulars were also obtained from the Rochdale area. Dealing with 166 mule spinning mills in Oldham and Rochdale, it was found that in June, 1919, the average number of hanks of yarn per spindle per week produced were 22,389, whilst in July of that year, when the 48 hour per week had come into operation, the output was only 19,732 hanks, showing a reduction of 11.86 per cent. In dealing with 60 ring spinning mills in Oldham and Rochdale, the statistics show that the decline in production was 10.25 per cent. The figures given show the comparison between the period immediately before the change of the working week from 55½ hours to 48 hours and the period immediately after. During both periods the mills were neither efficiently nor fully staffed. The process of recovery from the war in both directions was rapidly proceeding. According to further statistics obtained, the average yarn output of Oldham and Rochdale mule spinning mills in 1914 for 55½ hours was 24,513 hanks per spindle per week, but by 1922 for a production of 48 hours the output had fallen to 20,212 hanks, showing a reduction of 17.54 per cent. With regard to ring spinning mills in

the same areas, the output in 1914 for 55½ hours was 35,111 hanks per spindle per week, whilst according to particulars obtained this year for 48 hours the production was only 30,140, a reduction of 14.15 per cent. Mr Cliff in commenting on the above figures said: "It will be evident that the 17.54 per cent. loss in production on mules is much in excess of the 13.51 per cent. due to the reduction in the nominal working week, and if allowance were made for the variation in average counts it would be greater still. So far as ring spinning is concerned, the loss of production of 14.15 per cent. is only slightly more than that due to the working time, and may be neglected if allowance is made for the slightly finer counts spun in 1922. It is abundantly evident from the tabulated figures that the effect of the reduction in working hours in cotton spinning in this country has not had the slightest effect in increasing the productive capacity of the worker. Credit must be given to the English textile operatives that they have never advanced such a claim as a reason for reducing the working week. The estimated number of spinning spindles in Great Britain, according to the latest figures issued, is 56,420,078. If we take it that the loss of production is no more than 13.5 per cent. reduction in our mills, then it would need the erection in Great Britain of an additional 8,805,450 spindles to equal pre-war production. At an average cost of £4 per spindle, the capital expenditure required would be £35,221,800, and the additional weekly wage bill at present rates would be over £70,000." In conclusion, Mr Cliff held that the outstanding factor of the adoption of the 48 hour per week was that, having reduced production and increased costs, a handicap had been placed on the ability of the industry to receive in exchange for its products the fruits of other labour in the same quantity or degree as formerly.

Belated Railway Statistics.—The Ministry of Transport has just issued a White Paper (No. 26, price 2s 6d net), containing certain operating statistics for the railways of Great Britain in January, 1922, as compared with January, 1921. We are emphatically in favour of the publication of the fullest possible statistics of railway working, but the present return is so belated as to lose most of its value. It is indeed doubtful whether January statistics published so late as June are worth the expenditure of public money involved in their compilation. Some of the principal figures in this belated return are as follows:—

	January, 1922.	Decrease on January, 1921.
Passenger receipts (excluding Season Ticket Holders)	4,759,556	17.01
Season ticket receipts	1,508,551	6.01
Freight train receipts (less cost of collection and delivery)	9,370,127	14.75
Tons carried	23,703,272	6.71

A feature of the figures is an increase of 5 per cent. in the tonnage of coal, coke, and manufactured fuel carried. Wagon miles in January, 1922, were 346,530,917, against 381,981,916 in January, 1921. The returns contain no information as to operating expenditure. In discussing the freight rate problem in a recent issue we deplored the fact that the railways in this country omitted to publish their operating expenses and net revenue with their monthly returns, as the American railroads do. Is there any reason why these figures cannot be produced promptly by the British railways without adding greatly to the expenditure already incurred? We are glad to see that we are at last to have ton-mile statistics, the Ministry of Transport having produced a bulky volume containing particulars of the tons, receipts, and receipts per ton mile at each mile up to 50 miles, and in mileage groups beyond that distance for 72 commodities. The information relates to monthly periods in 1920 and 1921. We hope to make a more detailed reference to these figures in the near future.

Coal, Iron and Steel Production.—The output of coal from the mines of Great Britain in the week ended June 3rd amounted to 4,440,900 tons, as compared with 4,629,600 tons in the previous week, and a weekly average

for the current year of 4,719,200 tons. Pig-iron production for May is given by the National Federation of Iron and Steel Manufacturers as 407,900, which compares with 394,300 tons in April, a monthly average of 217,600 tons in 1921, 669,500 tons in 1920, and 855,000 tons in 1913. Steel production in May was 462,300 tons, as against 404,200 tons in April and 549,400 tons in March. The monthly average for 1921 was 302,200 tons, for 1920 755,600 tons, and for 1913 638,600 tons.

Crop Prospects.—The monthly report of the Ministry of Agriculture and Fisheries states that all corn crops have improved since last month's report, particularly wheat, which is almost everywhere looking strong and healthy, and of a good colour. Barley and oats have also done well, though in some districts crops are thin and backward, especially where sown late. Wireworm is reported to be much more prevalent than usual, and some damage has also been done by frit fly. The area under each of these three crops is estimated to be, on the whole, about the same as last season, increases in the east of England being balanced by decreases in the rest of the country, and in Wales. The planting of potatoes has been late, on the whole, and in most districts was not completed until the end of May. In most parts of the country the area under potatoes is estimated to be rather less than last year, but in the north-eastern counties, where this crop is so largely grown, an increase is reported. The absence of rain has delayed the sowing of turnips and swedes, and in most parts very little had been done at the end of May; in the northern counties, however, sowing was well advanced. Owing to the scarcity of winter keep, fields were grazed later than usual in many districts, and subsequently growth was retarded by the cold weather. The warm weather in the latter part of May improved prospects, but the continued absence of moisture has now spoilt any promise of good crops except possibly in the later districts where rain may yet improve prospects. On present appearances yields in all parts of the country will be low, particularly in the case of "seeds" hay, which is expected to yield about 15 per cent. below average, while in the case of meadow hay a deficiency approaching 10 per cent. is anticipated. Pastures were somewhat bare until the middle of May, but greatly improved with the warm weather in the latter part of the month, though grass is still somewhat deficient in a few districts. Rain is now needed generally. The pastures are well stocked, and both cattle and sheep have improved, but are still rather backward in condition in many cases. Lambs have thriven well in the recent genial weather. Reports from principal growing districts indicate that both apple and pear bloom is setting well. Worcester Pearmain and Cox's Orange Pippins promise good crops, but other varieties of apples are patchy. The apple crop will probably be only slightly below average, whilst a good crop of pears is expected. Plum trees are carrying abnormal quantities of fruit and promise a heavy crop. In Kent and Middlesex the prospects for cherries are good, but in Buckinghamshire, though prospects are favourable on the whole, some trees are almost bare. In Hampshire the lack of rain has affected the prospects of strawberries; in Kent the plants, notwithstanding last year's drought, have flowered well, whilst in the Isle of Ely there has been great improvement, and the crop will nearly reach an average. Raspberry canes are stunted, and the crop is expected to be below average. Currants are generally progressing satisfactorily. Gooseberries in Kent and Cambridge will probably not yield an average crop, but prospects are more favourable in Norfolk, the Isle of Ely, and Worcester, where good average crops should be obtained. The supply of labour is ample, and generally in excess of requirements, but there are many reports that the number of unemployed has decreased since last month.

Hudson's Bay Report.—Thanks to a substantial advance in the prices of furs, the profits of the Hudson's Bay Company for the year ended May 31st last show a considerable increase. A year ago a loss of £84,100 was recorded for the fur trade, but for 1921-22 there is a profit of £237,100. Business in the salesshops, on the other hand, was adversely affected by the agricultural depression, "which has been almost greater in Canada than

in any other part of the world." Although there was an increase in the volume of sales, values diminished, and the profit dropped from £205,000 to £77,900. Receipts from the sale of farming lands dropped from £452,700 to £308,600, owing principally to a substantial reduction in the amount sold. Farm land sales for the year ended March 31st last comprised 33,594 acres at an average of £3 6s 9d per acre, as against 178,301 acres at an average of £3 10s for the previous year. Recent years' results are summarised below:—

Year Ending	Net Land Receipts.	Fur and Trading Profits.	Total Net Profits.	Ordinary Dividend.
May 31—	£	£	£	£
1909	175,476	80,391	255,867	260,000
1910	240,045	166,156	406,201	400,000
1911	548,512	159,966	708,478	400,000
1912	273,268	196,070	469,338	400,000
1913	589,926	228,324	818,250	500,000
1914	297,302	86,636	383,938	400,000
1915	2,697	30,641	33,338	nil
1916	24,652	266,662	291,314	200,000
1917	140,777	279,708	420,485	300,000
1918	367,841	315,964	683,805	400,000
1919	262,126	406,414	668,540	450,000
1920	174,276	331,757	506,033	400,000
1921	154,161	300,049	454,210	400,000
1922	69,987	450,468	520,455	450,000

The increase in total net profits amounts to £66,200, and the ordinary shareholders receive a total distribution of 45 per cent., as against 40 per cent. for the two previous years. Of the total dividend, 10 per cent. is in respect of the receipts of the land department, as against 15 per cent. a year ago. The balance carried forward "in respect of trade" is increased from £122,200 to £122,700, but "in respect of land" falls from £33,500 to £3,500. Under the Deed of Surrender of 1870, the company (whose full title is the Governor and Company of Adventurers of England trading into Hudson's Bay) was to stake one-twentieth of an area called the Fertile Belt as set out for settlement within 50 years from that date. On March 31st last there was a total of 2,810,591 acres in hand, but in addition to this there were, according to the report, instalments to be received on sales to the extent of £4,062,600. The balance-sheet, however, has as the last item on the credit side "unsold lands and instalments to be received on sales," with a blank in the value column. An analysis of the balance-sheet will be found on a later page.

British Dyestuffs.—After "prolonged negotiations with the Inland Revenue authorities in respect of" claims for refund of excess profits duty, the directors of the British Dyestuffs Corporation, Limited, are now able to issue accounts for the year ended October 31, 1921. After crediting the "estimated amount recoverable in respect of excess profits duty" and providing £467,106 for depreciation, profits for the year are shown as £437,683. But as £1,444,344 is the amount required to reduce stocks to current market values, the balance of profit together with £203,305 brought forward from the previous year's account are applied towards the reduction of this debit item, and the difference, a deficit of £803,356, is shown in the balance-sheet. The reasons for this serious setback given by the directors may be briefly summed up as (a) trade depression, and (b) foreign competition. Total assets are now valued at £9,776,744, as compared with £10,719,602. It is stated in the report that "the company has in the bank and invested in easily realisable securities over £1,250,000," which is, of course, a useful liquid asset, but it should be noticed that preliminary expenses at £251,552 remain unchanged under assets at precisely the same amount as that recorded a year ago. In the summary issued of the combined assets and liabilities of associated companies goodwill, patents, &c., are still valued at £1,000,000. The directors, however, take an optimistic view of the future in their report, and state that "with the return to ordinary conditions of trade, the continued support of users, and the assistance derive from the Dyestuffs (Import Regulation) Act," they see no reason why the output from the company's factories "should not ultimately compare favourably with that of any other country." The Government had £1,700,000 invested in this undertaking according to a White Paper issued in December last.

Lyons' Progress.—Whatever one may think of their bonus share distribution system, the directors of J. Lyons and Co., Limited, are able to point with some degree of pride to the progressive nature of and profitable results obtained by this remarkable company over a long period of years. Unfortunately in recent years we have been deprived of many valuable figures in the accounts, and it is to be hoped that with more stable conditions returning the directors will see their way clear to give them to us once again. The nature of the missing figures is revealed when an examination is made of our table, which is given below:—

Year Ending Mar. 31.	Gross Profit.	Ex-penses.	Ratio.	Net Profit.	Depreciation.	Reserves &c.	Dividends.	Ord. Rate.	Carried Forward.
1906	666,550	473,904	71.1	192,646	42,394	18,000	133,533	32	34,505
1907	722,221	496,432	68.7	225,789	55,178	60,000	145,007	32	51,169
1908	797,591	545,762	69.0	251,829	58,060	141,000	145,007	32	15,068
1909	969,305	681,454	70.5	287,851	67,452	30,000	183,300	32	13,833
1910	1,130,488	822,419	74.0	308,069	72,946	10,000	209,050	32	19,906
1911	1,220,724	918,334	75.0	302,390	79,385	201,234	424	41,674	
1912	1,358,480	1,036,421	76.3	322,059	87,003	211,256	424	64,474	
1913	1,450,590	1,110,982	76.6	339,608	91,849	69,189	221,651	424	21,303
1914	1,574,659	1,218,356	77.3	356,303	96,103	221,599	424	59,904	
1915	1,520,998	1,244,596	82.0	276,403	109,482	491,307	324	35,518	
1916	1,552,879	1,314,586	82.5	238,293	108,584	7,062	169,508	25	28,657
1917	..	..	..	268,475	105,913	170,213	25	21,503	
1918	..	..	..	316,292	120,835	40,000	170,164	25	6,803
1919	..	..	..	258,077	..	..	219,570	35	45,310
1920	..	..	..	396,684	..	60,000	346,684	424	35,509
1921	..	..	..	503,323	..	100,000	426,323	1424	12,480
1922	..	..	..	595,615	..	90,866	504,808	25	15,421

* And 10 per cent. in preferred ordinary shares. † In addition to share bonus.

Profits for the year have now reached the record figure of £595,615. This substantial sum enables the directors to allocate £90,866 to reserve, bringing the total reserves up to £500,000, and distribute £501,808 in dividends. The dividend rate works out at 25 per cent., as against 42½ per cent. a year ago. But it will be remembered that during the year a big bonus share distribution was made by making a raid upon reserves. The results of this distribution can be better seen by comparing ordinary capital, reserves and assets with those of a year ago:—

	March 31, 1921.	March 31, 1922.
Ordinary shares	399,987	400,000
Do "A"	87,810	681,820
Proportional profit shares	500,000	500,000
Reserves	900,000	409,134
Total assets	7,151,008	7,658,391

Thus while it may be admitted that ordinary capital needs increasing, many critics might reasonably contend that it would not be well to do this by depleting reserves, which are now at a figure in somewhat striking contrast to the total amount of assets. The most noticeable addition to assets has been in land and property, which has grown from £3,565,687 to £4,198,141. Investments in associated companies at £867,518 are slightly lower, and this is an item concerning which the directors might well give us a little enlightenment at the general meeting. The balance-sheet will be found fully analysed in our usual column.

British Electric Traction.—Though there was a slight decline in revenue, the accounts of the British Electric Traction Company for the year ended March 31st show a very slight change in profits, and as the balance brought forward was £27,000 higher than in the previous year, it is possible to make a slight increase in the ordinary dividend. Revenue from investments brought in slightly more, but interest on loans produced £2,700 less. The amount available for distribution, however, including the balance brought forward, was £311,400, as compared with £285,500 for the previous year. A comparison with previous results is given below:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Divs. and interest	119,841	210,362	217,864	212,748	208,387	208,999
Total revenue	225,755	237,906	250,214	246,717	264,772	262,895
Expenditure, &c.	27,265	28,685	36,890	35,401	44,575	44,402
Debit interest	91,384	90,978	90,449	87,996	85,136	84,451
Net revenue	107,106	118,243	122,875	123,320	135,061	134,042
Brought forward	12,494	97,598	112,116	130,952	150,481	177,319
Amount available	119,599	215,841	234,991	254,272	285,542	311,361
Prof. dividend	52,468	42,765	42,765	42,765	42,765	42,765
(5½ %)	(6 %)	(6 %)	(6 %)	(6 %)	(6 %)	(6 %)
Ord. dividend	nil	39,788	39,788	53,051	53,051	59,681
(3 %)	(3 %)	(3 %)	(4 %)	(4 %)	(4 %)	(4 %)
Reserve, &c.	50,000	21,172	21,486	6,035	12,349	14,677
Balance forward	17,130	112,116	130,952	150,421	177,319	191,238

Investments, the bulk of which are in tramway undertakings, stand in the balance-sheet at £3,987,600, or £125,800 more than in the previous balance-sheet. The report states that the average yield was 5.24 per cent., as compared with 5.39 per cent. for the previous year. A detailed list of investments is appended to the report, the total nominal value being £5,135,900, of which £735,500 are debentures, £1,109,400 preference shares, and £3,291,100 ordinary shares. It is not stated how investments are valued in the balance-sheet, nor is there any mention whatever of investment depreciation. Apart from the addition to the book value of investments, the only change of consequence in the balance-sheet is a reduction of £97,300 in debtors.

Wm. Cory and Son.—The report of Wm. Cory and Son for the year ended March 31st last shows a considerable decline in profits, which are given after making ample provision for further maintenance charges and depreciation, &c. This year the profit and loss account has been abbreviated, and we are not shown the amount of directors' fees, which appeared at £12,000 for 1920-21. The profits for 1921-22 amount to £601,400, as against £770,800 for the previous year. A comparison of results over a series of years reads as follows:—

	1914-15.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Profit	215,328	492,734	468,616	755,523	770,843	601,405
Brought forward	44,511	130,897	135,084	177,153	278,308	391,812
Deb. interest	259,839	623,631	603,700	932,675	1,049,151	993,217
Written off	37,000	37,000	37,000	37,000	37,000	37,000
Reserve, &c.	6,000	..	..	..	..	..
Prof. dividend	42,500	175,000	25,000	42,500	42,500	42,500
Ord. dividend	115,000	230,000	318,000	570,017	570,020	427,514
(10 %)	(20 %)	(20 %)	(20 %)	(20 %)	(20 %)	(15 %)
Employees' shs	1,108	4,047	4,047	4,851	7,819	7,364
Carried forward	58,231	135,084	177,153	278,308	391,812	478,839

For the third year in succession no allocation is made to reserve, but the distribution on the ordinary shares is reduced from 20 to 15 per cent., and an addition of £87,000 made to the balance carried forward. Reserve funds total £1,190,000, including £440,000 for premium received on ordinary shares. The principal changes in the balance-sheet are reductions of £433,900 in creditors and of £861,400 in debtors, while the property item has risen by £209,600, and investments in British Government stocks by £242,600.

Zinc Corporation.—It may be recalled that this undertaking, originally formed for the purpose of re-treating accumulated residues from the Broken Hill mines, subsequently strengthened its position by the acquisition of the property of the South Blocks company. Owing to the prolonged strike, in conjunction with the low metal prices, the mine has been shut down for some 2½ years, but the re-treatment works were restarted towards the end of 1920. The working profit, which was naturally a small one, was insufficient to meet depreciation, taxation, &c. However, the first half of the fixed preference dividend was paid, the balance being declared in July, 1921. The preference distributions in respect of the past year were announced at about the usual dates, giving ground for the inference that matters were going better. The report for 1921 shows, in fact, an operating surplus of £121,500, and after providing for the dividends in question, making special appropriations to the tune of £40,000, and providing for taxation, an increased balance remained to go forward. This position aroused hopes of an early resumption of payments on the ordinary shares, and the price experienced an appreciable advance. Purchasers, however, were rather reckoning without their host, for at the meeting held on Wednesday last the chairman intimated that money would have to be kept in hand for the purpose of renovating the plant after its long period of idleness. The corporation has become interested in a new process which promises to give a largely increased profit per ton of ore treated; its adoption on a working scale would necessarily involve outlay, hence expense under the heading of plant has to be faced in one direction or another. The Zinc Corporation, of course, already holds a large block of

ordinary shares in the Electrolytic Zinc Company of Australasia. As the arrears of interest on the preference shares are not expected to be cleared off until the middle of 1923, the investment is rather of the "long shot" order. A new departure takes the shape of the proposed acquisition of a participation in a very large zinc property on the Continent. The outlook for the Zinc Corporation generally depends partly upon trade and partly upon the attitude of labour—as to which Mr Govett had a good deal to say in the course of his speech. On the basis of the fixed preferential dividend of 20 per cent., the preference shares yield just 10 per cent. They rank for surplus profits equally with the ordinary, whose prospects in the near future, as above indicated, appear somewhat uncertain.

Crosses and Winkworth Consolidated Mills.—At the first statutory meeting of Crosses and Winkworth Consolidated Mills, Limited, held two years ago (on June 10, 1920), the chairman of the company took occasion to differ from the late Sir Herbert Dixon, who had passed some severe strictures on the recapitalisation of Lancashire cotton mills by London financiers. Sir Herbert had drawn a gloomy picture of what was likely to happen when the present boom in the trade was over, but the chairman observed that "during the last months I have made a very close study of the cotton industry, and I can see nothing to warrant the pessimism of Sir Herbert." He added: "In any case I do not think you need be nervous on this score in the case of your company." Fortunately for the company, in the first balance-sheet of the company, at March 31, 1921, in which assets were valued at £6,726,815, there were included reserve items of £1,500,000, "Premiums on shares account," and £375,522, specially allocated for taxation purposes. The company was then owing £106,754 to its bankers, and £143,392 for "loans." In the accounts for the year ended March 31, 1922, just published, a loss on the year of £539,323 is recorded. The directors are able to meet this serious slump by taking £750,000 from premium on shares account. Thus on turning to the new balance-sheet this item is now halved, and it is noticeable that debentures for £1,250,000 have been issued to the company's bankers as security for advances which have now grown to £550,783, although "loans" have fallen to £124,201. Two fresh items, however, appear; under assets, shares in Wm. Heaton and Sons, Limited, are recorded at £1,004,064, but no basis of valuation is mentioned, while on the other side, under liabilities, loans and interest, of Wm. Heaton and Sons, Limited, are taken into the accounts at £632,695. A brief reference is made to this fresh acquisition in the directors' report. Incidentally there is now a reserve for contingencies which includes taxation, and amounts to £363,235. The total assets, at £6,970,544, show an increase of £243,728 on the year. It certainly does appear that the late Sir Herbert Dixon read the signs on the horizon with a considerable degree of accurate perception.

Transvaal Output in May.—A marked improvement has taken place in the gold output figures during May issued by the Transvaal Chamber of Mines. The output during the month amounted to 629,786 ounces of fine gold, as compared with 511,338 ounces during April and 687,776 ounces in May, 1921. The following table shows the production for a number of years:—

	1916.	1917.	1918.	1919.	1920.	1921.	1922.
January	787,467	783,634	714,182	676,059	676,503	661,693	639,728

NUMBER of NATIVES EMPLOYED at the End of Last Eight Months by Members of the Witwatersrand Native Labour Association and Contractors.

	Aug. 1921.	Sept. 1921.	Oct. 1921.	Nov. 1921.	Dec. 1921.	March 1922.	April 1922.	May 1922.
Gold mines	169,008	171,912	175,331	176,410	177,836	124,169	138,277	155,425
Coal mines	14,446	14,244	13,936	13,465	13,230	11,185	11,385	11,526
Diamond	1,207	1,219	1,223	1,217	1,204	1,204	1,232	1,219
Total	184,661	187,375	190,490	191,092	192,290	136,558	150,894	168,169

It will be noted that the native labour figures also show an improvement on the April figures.

Oversea Correspondence.

UNITED STATES:—SOUTHERN PACIFIC—CENTRAL PACIFIC DISSOLUTION—COTTON CROP REPORT—FOREIGN BOND ISSUES FLOATED—TOBACCO AND STEEL COMPANY MERGERS.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 5.

THE United States Supreme Court's recent decision, ordering the dissolution of the ownership and control of the Central Pacific Railway by the Southern Pacific Company, has caused very little concern in railroad and financial circles. It will probably be many months, possibly a year or more, before the district court, as directed by the highest tribunal, can prepare a decree to carry out the specific details of the latter's decision. In the meantime, the Interstate Commerce Commission, under the authority conferred upon it by the Transportation Act, to consolidate the railroad systems of this country into new groups, may take action which will greatly modify the dissolution order, so far as practical results are concerned. In its consolidation scheme, tentatively outlined some time ago, the Commerce Commission indicated that, in the public interest, the Southern Pacific and the Central Pacific should be included in one system. Even should the dissolution be carried out through an early enforcement of the Supreme Court's ruling, it would be possible, according to competent authorities, for the Interstate Commerce Commission, in working out its consolidation plans, to bring them together again. At least, that is the belief which is held in many quarters.

The Department of Agriculture's report, estimating the average condition of the cotton crop at 69.6 per cent. of normal, as of May 25th, was about what the trade had expected. The percentage on that date compares with 66 a year ago, 62.4 in 1920, 75.6 in 1919, and a ten-year average of 74.6 per cent. While the Government report is not unfavourable so far as the condition of the crop is concerned, it gives no estimate of the planted acreage, from which the indicated yield could be calculated. The report next month, it is understood, will contain acreage figures. Last July the department estimated that 26,519,000 acres had been planted to cotton, but like its other estimates last year, those figures were wide of the mark, for the revised report, just issued, shows that at the end of June, 1921, 31,678,000 acres were in cultivation, and the area actually picked amounted to 30,509,000 acres. Most authorities believe that a much larger acreage than that would be necessary to provide a harvest sufficient to meet requirements. A highly important consideration at present is how much of the acreage planted this season suffered from the extensive spring floods, especially in the lower Mississippi Valley, and how much of that area has been replanted.

New issues of securities, both domestic and foreign, are again being offered here in rather large volume, and are meeting with an active response from investors. Last week's total of such bonds approximated \$77,000,000.

consisting of some \$15,000,000 State and municipal issues, about \$19,000,000 public utility, and \$28,000,000 foreign bonds, the remainder including industrial, railroad and land bank offerings. One of the largest foreign flotations was the issue of \$24,000,000 Republic of Bolivia external 25-year secured refunding 8 per cent. sinking fund gold bonds, dated May 1, 1922, and not callable for 15 years. The bonds are the direct obligation of the Republic of Bolivia, and, in addition, will be also specifically secured by a first lien upon all import and export duties, as well as taxes on mining claims and various industries and corporations and other properties.

The entire issue was subscribed for within an hour or so after the books were formally opened. The proceeds of the loan are to be used for refunding purposes, and for railroad and highway construction. The block of bonds just floated here is part of \$33,000,000 authorised by the Bolivian National Congress; the remainder, it is understood, will be reserved for issue to complete the Atocha-Villazon and Potosi-Sucre railroads; the former line will give Bolivia direct railroad connection with Argentina, while the latter will open up one of the most fertile agricultural sections of the country. Another large foreign issue consisted of 40,000,000 guilders of the Anton Jurgens' United (Margarine) Works 25-year secured convertible 6 per cent. bonds. Of the total issue, 10,000,000 guilders were offered in Holland. The price to investors here was \$905 flat per bond, which will yield over 6.60 per cent. to maturity. Local bankers also sold \$3,934,000 Province of Manitoba 3-year 5 per cent. bonds at 99, and interest to yield about 5½ per cent., and \$1,000,000 guaranteed sinking fund mortgage 7 per cent. gold bonds of the Transportation Building Company, Limited, of Montreal, at 100 and interest. All of the foregoing offerings were quickly absorbed, as were practically all of the domestic issues, indicating that the recent congestion of new securities in this market has disappeared. To-day a banking syndicate placed on sale at 96½ and interest to net 7.30 per cent., \$25,000,000 United States of Brazil 30-year 7 per cent. gold bonds (Central Railway of Brazil electrification loan). Besides being a direct obligation of Brazil, the bonds are secured by a first charge on the gross revenues of the Central Railway. Kuhn, Loeb, and Co., it is announced, have purchased \$7,500,000 City of Greater Prague (Czecho-Slovakia) 7½ per cent. mortgage loan bonds of 1922, which are to be offered here for subscription at 92½ per cent., and accrued interest to yield 8.17 per cent. on the investment if held to maturity.

Mergers of industrial corporations are becoming more numerous. One of the biggest consolidations undertaken for some time past will be effected by the unification of the Tobacco Products Corporation and the United Retail Stores Corporation, which controls the United Cigar Stores Company. Under the terms of the proposed amalgamation the combination of the two concerns is to be accomplished by an increase in the Tobacco Products capital stock from \$33,000,000 par value to \$157,354,000 par value, and by an exchange of the stocks of that company and of the United Retail Stores for the new Tobacco Products stock to be issued. The consolidation will unite two of the most important factors in the manufacture and retail sale of tobacco.

Following closely upon the absorption of the Lackawanna Steel Company by the Bethlehem Steel Corporation comes the announcement that officials of the Republic Iron and Steel Company, the Midvale Steel and Ordnance Company, and the Inland Steel Company have adopted a plan to combine those three companies in a new concern to be known, probably, as the North American Steel Company. The extent to which each company will participate in the new stock to be issued has been announced, but the capitalisation of the new company has not been stated, although the intention is said to be to provide \$20,000,000 additional cash working capital through the sale of new common stock. This merger is the result of the original plan, launched some time ago, to combine seven of the leading independent steel companies, including Lackawanna. The latter, however, was acquired by Bethlehem, and three other companies apparently Reserve, &c. of the negotiations, possibly because of a disbalance forward over terms.

FRANCE. — BANKERS' COMMITTEE — EXCHANGE CLEARING HOUSE — UNEMPLOYMENT — TAX REVENUE — BOURSE.

(FROM OUR OWN CORRESPONDENT.)

PARIS, June 13.

THE failure of the Bankers' Committee nominated by the Reparations Commission to report favourably on the proposal that a great international loan should be issued on behalf of Germany, proved in no way disappointing to French opinion, as such a result was fully expected when it became known that the experts who formed the committee had decided to put forward the question of a possible reduction of the German reparation debt as an essential factor in the problem. The general impression here now seems to be that the next move will probably come from Germany. It goes without saying that it is believed that the Berlin Government will take advantage of the collapse of the loan proposition to try and secure substantial modifications in its favour of the conditions embodied in the recent agreement under which Germany has been granted a temporary moratorium. There are, indeed, already indications that such an effort is about to be made. Renewed attention is consequently being given here to the possibility of France securing payment in kind, under the Loucheur-Rathenau agreements signed at Wiesbaden several months ago, now that the probability of obtaining any appreciable amount of cash from Germany appears to be as far off as ever. These agreements, however, have not yet been ratified by the French Parliament, and there is a fear that, although the machinery for putting them into operation is practically ready, some time may yet elapse before materials will be coming in from Germany for use in the devastated areas. Badly as France requires ready money, the feeling is growing that if it is impossible to obtain cash, the next best thing will be to secure payments in kind. The essential point is that under the Wiesbaden agreements, France would be able to obtain something like 1,500,000,000 of materials from Germany without having, as at present, to pay for them in cash.

One of the practical results of the conference of economists and banking experts that met here last week to consider what special technical palliatives might be applied to regulate the existing monetary instability, will be the creation of a clearing-house for exchange transactions, which will probably be ready to start operations within the next few weeks. The new institution, which is best described in French as a *marché à terme des changes*, will be modelled very largely on the only other existing organisation of the kind, the Caisse Internationale at Antwerp, which was founded only two years ago, but which has already rendered important services to the trading public, in spite of its somewhat restricted scope. Its object will be not only to centralise and regulate exchange operations, but to restrict speculation as much as possible, and particularly that involuntary speculation into which many traders are forcibly drawn through the nature of their ordinary commercial operations. A manufacturer, for instance, who buys foreign raw materials for the purpose of fulfilling orders that will take several months to complete is often in the dark as to what his selling price will have to be at the date of delivery. Obligated, in spite of himself, to speculate on the exchange, he has necessarily to increase his price considerably, to protect himself against a possible loss. If he covers his risk in advance, through his bankers, the charges are so high that he is in most cases as badly off as ever. The trader who has to sell to foreign buyers against payment at a fixed future date has to face the same uncertainty.

The rôle of the exchange clearing house will be to bring together buyers and sellers of bills maturing on the same dates. Buyers and sellers will put their respective requirements to auction, quotations will be notified, and contracts officially registered. Sharp fluctuations in rates, it is claimed, will by these means be avoided, as each increase in the rate will bring larger numbers of sellers, which will re-establish equilibrium. The manufacturer, knowing in advance the price he will have to pay for the pound, dollar, mark, or other category at a given date,

will be able to fix his price with tolerable certainty of being satisfied. Speculation, the founders of the new clearing house argue, will for all practical purposes cease to exist, and will be replaced by arbitrage, as the only dealings recorded by the institution will be those concerning deliveries of goods and actual payments for them. As the institution will incur no risk, the rate of commission will be low. At Antwerp it is fixed at 5 per cent. As a guarantee of good faith, parties to a contract will be required to deposit with the clearing house a sum equal to the difference between the rate of the day and that fixed by the contract, which will be returned with interest when the contract is completed. The new clearing house is being organised by a group of "bankers and qualified professionals, manufacturers, and traders, exporters and importers, without interference from the State," and hopes are expressed that Paris may become the principal exchange market of the world. It is argued in some quarters here that one of the political effects of the new system may be to liberate the smaller new States that have arisen from the war from the domination of the international financial groups by whom they are at present exploited.

The comparative situation of Great Britain and France as regards unemployment may be summed up in a sentence; at the end of April 1st, 699,000 workers were in receipt of unemployment allowances in Great Britain, according to official figures, while in France the number in receipt of similar assistance was 7,800. At the end of May the latter figure had fallen to 5,700. The maximum amount of unemployment in France was in March, 1921, when 91,200 workers were in receipt of out-of-work pay (as compared with the British maximum of 2,170,000 in June, 1921).

The returns of the yield from taxes, indirect revenues and monopolies have now been issued for May, and the sum recovered amounted to 1,175,603,000f, an advance over the last year of 171,523,000f, or 17 per cent. As compared with the budget estimates, however, there is a deficit of 81,013,770f, or 6 per cent. The deficit is due chiefly to the tax on business turnover, which yielded 73½ million francs less than the estimate, and to Customs, which are 11½ million francs in default. The situation, on the whole, is the most favourable so far recorded for the year, the returns for the previous months having shown a percentage deficit on the budget estimates of 7, 19, 14 and 11 respectively. Tax on business turnover is substantially the same as last month, but shows an increase of nearly 33½ million francs, as compared with May of last year. Registration fees on the sale of securities, real property, and on Bourse operations are 9,349,500f less than the estimates, but this decline, partly due to accidental causes, is to some extent compensated by the increase in stamp duties, the luxury tax, and the tax on the revenue from real property, which show a balance over the estimates of 9,254,000f. Customs have brought in 227,840,000f. This figure is only 5 per cent. less than the estimates, while in the first four months of the year the deficit fluctuated between 34 and 42 per cent. The improvement in revenue is due to clearances in nearly all classes of commodities, except wheat and, above all, to large importations of colonial and foreign sugars. Indirect taxes are in advance over the estimates by 18,021,000f, and are 3 per cent. higher than the sum recovered in May, 1921. The budget estimates have been exceeded, especially in drinks, tobacco, motor cars and railway receipts. Apart from the sums mentioned above, it may be noted that the yield for income-tax for the month amounted to 149,926,900f, while the extraordinary tax on war profits amounted to 138,927,000f.

Despite the failure of the international loan proposal that has been the dominating feature of the week, the Bourse has continued fairly firm. The main effect of the negotiations with the Reparations Commission has been, in fact, the decline in value of the franc, and this has inevitably resulted in investors taking a keener interest in home securities. Had Germany secured the issue of a loan on a large scale, the movement would clearly have been in the other direction, and a stimulus would in consequence have been given to foreign securities. A further decline in value of the franc is to be foreseen, as the reports at present to

London, E.C. 2

hand make it probable that the year's harvests will only be of moderate quality. French funds have remained virtually stationary, though on the whole the tendency has been upwards, the biggest advance being in the redeemable Five per Cents. that have improved from 91.25 to 92. The 1914 and 1915 Four per Cents. have, however, fallen back a trifle. Banks generally have been neglected. Banque de l'Algérie has declined from 3,975 to 3,850. Banque Générale du Nord from 623 to 613. Banque Nationale de Crédit from 637 to 630, and Banque de l'Union Parisienne, which has paid a dividend, from 639 to 620. Banque de France, however, is 20 points stronger at 5,745. In rails, Nord has lost 5 points at 1,180, and Est 5 points at 740, but Midi, after paying a dividend, remains unchanged at 765; Orleans is 10 points weaker at 880, and P.L.M. 5 points weaker at 873. Shipping has a trifle more than maintained its position, Messageries Maritimes being a point up at 181, and Chargeurs Réunis a couple of points up at 342. In electrical undertakings, Thomson has dropped 15 points at 785, and Electricité et Gaz du Nord 9 points at 310. Edison, however, is 20 points better at 550, Bréguet 45f better at 825, and Gramme 7 points better at 770.

GERMANY. — REPARATIONS — INFLATION — EXCHANGE AND BOURSE — CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, June 13.

THE failure of the Paris Loan negotiations throws entirely into the melting-pot Germany's relations with the Reparations Commission. It is announced that the next two payments under the partial Moratorium plan are secured. There is no absolute impossibility in procuring the high-exchange currencies necessary for later instalments, but this can only be done at a certain cost. On this point a misconception is current, for which the Wirth Cabinet's stability of will is responsible. After the great rise in foreign exchanges last autumn, the Cabinet more than

once categorically declared that it would not continue to raise Reparations money by the method until then pursued, that is, by requisitioning from private persons high-currency bills received in payment of exports, compensating with paper marks, and allowing the private merchants' need of high currencies for imports and other foreign liabilities to be satisfied by reselling the paper marks. The heavy mark fall had frightened not only Germans, but also everyone else, and the Reparations Commission, agreeing that it was "impossible" to continue paying reparations in that way (though, strictly put, there was no impossibility), advised application for a Foreign Loan. Dr Wirth's declarations implied that, short of a loan or a release from immediate payments, there would be a default. The small reduction of instalments granted for a time, and since conditionally prolonged, afforded no material relief. As no loan or full moratorium has been obtained, Dr Wirth's policy on the above basis would be simply to refuse future payments. But of this nothing is now heard, and the public, which considered the mark at 300 to the dollar a monstrosity, now takes it for granted that Reparations money will continue to be obtained by selling marks, and that the only question open is the bearing on this of the recent Hermes proposals, and of the ensuing correspondence with the Reparations Commission.

The reasons for this change seem to be psychological. After seven months have passed since the mark touched 300, this figure has come to seem no more dreadful than did the exchange of 60 before the London Ultimatum. Business has in great measure adjusted itself to the new values; indeed, adjusted itself in shape of an approach to world-market prices too well, so that some kinds of business will welcome the new inevitable mark collapse. To-day it will be no more "impossible," and, indeed, probably no more difficult, to raise Reparations money by selling marks than it was a year ago. Apparently there is no absolute limit to such transactions; even in Russia, where sterling officially quotes at 10,600,000 roubles, roubles are still sold (though only at home) to obtain good money for imports. If Germany chooses to pay future Reparations in her past way, she will certainly be able to do so for an indefinite time, but with effects on the exchange which are sufficiently obvious. Whether this policy (which means a withdrawal of Dr Wirth's promises), or the policy of default in shape of a cessation of payments is the less injurious, is a controversial matter to Germans. When the hopeful London negotiations began in November, those Germans who supported Dr Wirth's policy replied to their opponents of the default school that the policy was indeed bad for the mark, but that in order to prove the impossibility of the London Ultimatum settlement, the policy had to be tried. Only failure of an honestly attempted "Erfüllungspolitik"—a "fulfilment policy"—would convince the Allies. As long as there was a prospect of an English loan, a complete moratorium, a reduction of the total Reparations liability, or an American International Loan, this argument easily defeated those persons who counselled "default honestly at once, and take the consequences." To-day, with nothing improved, and no difference except that the mark is now at a fifth of its then low level, the default party again claims that it was right, and that an honest attempt at fulfilment which could not succeed only did harm. The German Note of May 28th plainly had in mind a continuation of Reparations payment by means of the old floating debt, and inflation operations if no loan was obtained; and only in case of a loan did it undertake to keep the floating debt at the figure of March 31st by means of non-inflation credit methods or new taxes. The Reparations Commission, merely taking notice of the Loan proviso, answered that it retained its freedom to withdraw the partial moratorium if Dr. Wirth, even in the absence of a foreign loan, did not carry out the listed financial reforms. Such a withdrawal of the partial moratorium would have practical meaning only if (which is unlikely) Dr Wirth proved willing to pay the reduced instalments by mark selling, while unwilling to pay the full instalments by the same means. If the mark-selling method is to be continued, it matters little whether the moratorium payments or the full London ultimatum payments are enforced. There is no proof that the moratorium instalments would do less damage than

the London instalments—so far Germany's current foreign liabilities have always had less influence on the exchanges than had the indiscriminate mark-selling caused by pessimistic judgments as to Germany's financial relations with the Allies.

The failure of the Paris negotiations had a bad effect on the mark exchange. The dollar yesterday sold at 320. The lowest dollar exchange of this year was around 250 in April. The Reichsbank statement for June 7th shows a decline in Treasury Bill discounts, as is usual in the first week of the month, but a new large increase of circulation. The former fell by 3,752 millions to 164,041,617,000 marks; while circulation rose by 2,965 millions to 154,914,888,000 marks, and "Kassenscheine" circulation by 99,600,000 marks to 9,540,100,000 marks. Of late, inflation has been very rapid. Circulation of both notes and "Kassenscheine" at the close of the same week of last year was 81,141,100,000 marks, or about half the present total. On December 31st Note circulation was 113,639,464,000 marks, so that there has been an increase of about 50 milliards in five months and one week. In the same period of 1921 Note circulation rose from 68,805,008,000 marks to 72,145,349,000 marks, or by a little over 3 milliards. Private bankers are discussing the abolition of pfennigs from their accounts. The value of the pfennig is now only one-sixtieth of an English penny, and except newspapers practically nothing is priced under 3 marks. The Reichsbank has closed its branches in the Upper Silesian towns Koenigshuette and Kattowitz, and transferred the accounts to Beuthen. The German private banks are retaining their branches in Polish Upper Silesia under a provisional agreement with the Polish Government. The Bourse last week was inclined to firmness for dividend-payers, but home loans mostly declined slightly. Yesterday, the first Bourse Day after the Paris result became known, was entirely under the influence of the rising exchanges, and stocks mostly had considerable rises, while home loans dropped. It has long been the rule that bad news from Reparations standpoint sends stock up, while those home bonds in which foreigners speculate decline. Yesterday Federal 4 per Cent. fell from 114 to 110, 3½ per cent. from 89.90 to 85.75, and 3 per Cent. from 139 to 135; but to-day, with the exchanges slightly weaker, stocks receded somewhat, and the market was very dull.

The crop conditions report for the beginning of June shows a slight improvement in winter wheat, but winter rye and barley are the same as a month ago. The winter crops, fodder plants, and meadows are all between 3 and 3.5, 3 being middling and 4 bad. The spring crops are better than middling, but not as good as a year ago. The consumption of meat in Germany has fallen from 1,693,141,496 kilos in 1913 to 1,029,551,276 kilos in 1921. Per capita, in the present area, consumption fell from 46.15 to 28.52 kilos. Meat now costs 90 marks a pound retail, and is beyond the means of those who have not raised their incomes in proportion to the price-rise. The Prussian Industrial Inspectors' reports for 1921 describe an improvement in Labour efficiency and willingness. One very large iron concern puts its present per cap. production in the rolling mills at 95 per cent. of that of 1913, and states that workmen who in October, 1920, produced 5,895 tons of pig-iron, produced 7,765 tons in October, 1921. Hamburg's commercial shipping has recovered to pre-war dimensions. In May there arrived 1,143 vessels of 1,243,815 registered tons, against 1,242 of 1,193,526 tons in 1913; while departures were 1,449 vessels of 1,325,714 tons, against 1,362 vessels of 1,253,987 tons. About three-quarters of the ships, with only about a quarter of the tonnage, bore the German flag. The Federal Supreme Court at Leipzig has given the new important decision that a contract may be repudiated owing merely to a fall in the value of money. In this case the defendant withdrew from an agreement to sell his business for a fixed price at a future date. The Court declared in principle that an agreement need not be fulfilled when the parties mistakenly assumed at the time of contracting that the deal would represent a fair exchange of values at the time of carrying out. Hitherto the Courts have usually held that an agreement may be repudiated only when, owing to the change in currency values, its carrying out has become impossible. The new decision practically makes all purchase and delivery contracts unenforceable.

AUSTRIA.—PARTIES AND FINANCIAL PROGRAMMES—EXCHANGE FALL—DANUBE SHIPPING COMPANY—WAGES AND LIVING COSTS—GERMAN INTERESTS.

(FROM OUR CORRESPONDENT.)

VIENNA, June 6.

IN consequence of the protest initiated by the Socialist Party against the tariff policy introduced at the beginning of last month, the Minister of Finance, Dr Guertler, suffered a defeat in the House and was forced to resign. Financial, industrial, and commercial classes of the Austrian population felt vastly relieved at his fall. The Socialist Party, however, now regrets that the step it took has had such drastic results, the German Party having immediately exploited the situation by means of a determined attack against the Prime Minister, Mr Schober, towards whom they have been particularly antagonistic ever since his *rapprochement* with the Czechs at the Treaty of Lana. The Schober Cabinet was overthrown during the last week in May. The Christian Socialist and Pan-German parties have formed a new Government under Mr Seipel, which will make a desperate effort to avert the financial catastrophe with which Austria is threatened. The programme of the new Government is based on the following principles:—The efforts to obtain foreign credits and to secure the renunciation on the part of all members of the Entente of their lien rights will be continued; the superfluous officials and employees will be reduced in numbers; the deficit in Government organisations, as far as these are not handed over to private enterprises, will be diminished; the export trade is to be re-established by a reorganisation of working hours and scale of wages; a small committee will be set up with almost dictatorial powers to supervise Government finances. It is also hoped that it will be possible to found an independent issue bank after the arrival of representatives of the Morgan group. This programme contains a number of sound proposals, but its realisation appears to be difficult, as the Government has no means of executive power in its hands which it could exert should the programme meet with any opposition on the part of the workers, the army (which is purely a Socialist concern), and of the agricultural population.

The krone continues to fall in value in relation to foreign currencies, and is losing its purchasing power in the country at an appalling rate. The record prices in foreign currencies are caused partly by legitimate business and commercial requirements, and partly by the complete lack of confidence on the part of the population in their own currency, and their unwillingness to keep any appreciable amount of kronen on hand. Besides this, the official clearing house for foreign currencies (Devisenzentrale) carries on a foolish policy. Until recently it has carried out all exchange operations at the Stock Exchange, and now it has entrusted this business almost entirely to the hands of two firms, which has given rise to a considerable amount of adverse criticism. Owing to the announcements of the Finance Minister that large credits will be made available for Austria in the near future by England, France, Italy, and Czecho-Slovakia, many merchants and industrial firms were tempted to postpone covering their obligations in foreign currencies and have thereby sustained large losses. In this respect the Ministry of Finance must be reproached for the optimistic announcements which it repeatedly promulgated. The rate of exchange on May 30th was Kr. 50.775 to the £; on June 6th the rate was Kr. 61.475 to the £. The banknote circulation of the Austro-Hungarian Bank showed during the first two weeks of May an increase of 6.5 milliards of kronen, and during the third week of May a further 14.6 milliards were issued, so that the total issue has now reached 366 milliards of kronen. The most important recent financial operations in which British finance is interested was the increase of capital of the Danube Shipping Company. This company increased its capital from 100,000 shares to 150,000 shares. The 50,000 new shares were issued at 95,000 kronen for 1,050 kronen share, the old shares being quoted at 330,000 kronen a share. The issue price of the new shares gives an interesting example of the effects of depreciation of kronen. Before the de-

preciation, the Danube Shipping Company's shares with a denomination of 1,050 gold kronen per share represented an equivalent of £40 per share at par. They were quoted for years at from 1,200 to 1,500 kronen, or £50 to £60 per share. The latest issue at a price of 95,000 paper kronen, with the exchange at 60,000, is the equivalent of £1 10s per share. In order to raise the equivalent of £75,000 the company has found it necessary to increase its capital by 50 per cent., in other words, the price obtained for the new shares in paper kronen is the equivalent of subscribing on the basis of a valuation of only £225,000 for assets which were represented as worth £4,000,000 when the kronen had a gold value!

Austrian industry finds it increasingly difficult to maintain its position against German competition, particularly the iron and metal industry. Reckoned in Austrian kronen, the following gives a comparison of the hourly wages for a locksmith and turner in the two countries:—

	Germany. Kronen.	Austria. Kronen.
1922.		
March	432	722
April	527	813
May	714	1,025

The price of foodstuffs in Vienna shows an increase of 25 per cent. during the period from the middle of April to the middle of May. The following table gives the index figures of the price of the actual living requirements:—

January, 1921	100
January, 1922	1,142
February, 1922	1,428
March, 1922	1,457
April, 1922	1,619
May, 1922	2,028

From these figures it can be seen that Austrian money has now 1-20th of the purchasing power it had on January 1, 1921, in respect of the essential requirements of life.

German industry and the German banks are daily acquiring further economic interests in Austria. The Stinnes and Otto Wolff groups seem especially active, e.g., the former has already obtained the controlling majority of the Alpine Montan-Gesellschaft. The Dresdner Bank has now acquired a large block of shares of the Union Bank, and is represented on the board. The Disconto-Gesellschaft has taken a participation in the firm Ephrussi (a well-known private bank). A considerable number of banks and Stock Exchange firms have taken on German partners. The A.E.G. group (Allgemeine Elektrizitäts-Gesellschaft) in Berlin has, in conjunction with Austrian business friends, offered the Austrian Government to take over on lease one of the largest Government works, the Woellersdorfer works, and this offer has been accepted. Negotiations are also being undertaken here by German newspapers to acquire Austrian newspapers and printing presses. The German textile industry has also firmly established itself here.

CANADA.—THE FEDERAL BUDGET.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 5.

ON May 23rd Mr W. S. Fielding, the Federal Minister of Finance, who is now in his seventy-third year, delivered his Budget speech, and as it was his sixteenth, is claimed to have established a record for the British Commonwealth. The estimated expenditures for the current fiscal year called for \$466,983,359, and the existing sources of taxation, which in 1921-22 produced \$381,270,000, could not, in his opinion, be relied on to yield more than \$332,629,000 during 1922-23. Although some of the items of expenditure could quite properly be charged to capital account, there would remain a dangerously wide gulf between the revenue and ordinary consolidated expenditure. Not only had no attempt been made at debt reduction, but actually \$86,000,000 had been added during the past year to the national net debt, which he now placed at \$2,427,296,798 on March 31st, as compared with \$336,000,000 on March 31, 1914. Therefore increased levies which are calculated to produce at least 40 million dollars during the present fiscal year, and to provide the country with a sort of a balance. The chief source of in-

The Budget has had a very mixed reception. If the

The financial community is very much agitated about the provision of the Budget which imposes a tax of 2 cents per every \$50 on all cheques and bills of exchange. Bond men, stockbrokers, trust and loan companies and insurance corporations have already made strong representations to Mr Fielding, and demonstrated the very serious burden which it will place upon the whole fabric of credit. Some large mortgage and insurance companies calculate that the new tax will cost them over \$30,000 per annum, and will have to be paid on thousands of cheques which are issued in transactions involving no profit to any parties.

As the result of outbreaks of cattle plague in 1715 and again in 1745 (this outbreak lasting 12 years), an ordinance was issued in 1770 prohibiting the imports of cattle, hides, &c. Following this prohibition Britain was free from contagious cattle diseases, the improvement of her cattle stock continued apace, the Smithfield Club held

were under 450,000. The first consignment of American chilled beef was shipped, and in 1881 New Zealand sent us her first contribution of frozen lamb. The two chief exporters of beef (frozen or chilled) were successively America and Argentina. In 1899 American exports amounted to 1,250,000 cwts, increased to over 3,000,000 cwts in 1903, and gradually declined, being barely 1,500,000 cwts in 1908; in 1910 they were under 500,000 cwts, South American exports amounting to slightly over 1,250,000 cwts in 1903, increased to 7,750,000 cwts in 1910. The largest number of imports on the hoof was in 1890, when they amounted to 642,000 cattle; these included Canadian store cattle estimated at not more than 50,000. From 1903 to 1907 they kept about 500,000 (all for immediate slaughter), dropped gradually to 200,000 in 1911, in 1912 were under 50,000; after this date the numbers were insignificant. The decline in imports on the hoof, practically all from North America, was due to the rise in the price of meat in the States resulting in the abandonment of the Cattle and Meat Tariff in October, 1913. The cessation of Canadian exports resulted from the remission of the American Tariff—in reality one and the same cause. Canadian stockbreeders, like those engaged in many industries, increased production during the war, American farmers felt the severe fall in prices, and induced their Government to put on a 30 per cent. tariff against Canadian cattle in May, 1921. The prairie provinces of Canada 5,000 miles from us, their only alternative market, now want to send us store stock on the principle, acknowledged by one of their official witnesses, that it is better to ship here, in spite of the extravagant cost of rail and sea transport than to sell nowhere (Q 3758 Finlay Commission Report). Suffice it to add that the recent change in the Cattle Tariff of the United States is the fourth in the last 25 years, and that stoppage of Canadian imports of store cattle in November, 1892, was due to our veterinary authorities mistaking bronchopneumonia for the far more serious disease of pleuropneumonia—this was at least excusable in view of the fact that little was then known about the former disease, and that cases of the latter disease were constantly coming among imports for immediate slaughter from overseas countries which were supposed to be clean.

Your readers will realise that under our system of

**We transact a general foreign and domestic banking
business and solicit your inquiries.**

Other points in the controversy have been sufficiently discussed elsewhere.—Yours faithfully,
Mansel Court, Hereford. R. T. HINCKES.

Travellers' Club, June 10th, 1922.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your interesting article on the above subject, which appeared in your issue of the 10th inst., you refer to the various causes which have helped to bring about a recovery in this exchange. There is one cause which you omit to mention, and which I venture to state is the principal governing factor, and that is the contraction in the fiduciary issue of the Treasury currency notes, which has taken place during the past two years. This amounts to £60,000,000. According to your report, the issue has been increased lately, and it is interesting to observe that this has coincided with a slight set-back in the rate of exchange. You state that it may be that the real ex-

planation of the improvement in the American price of sterling is to be found in the depreciation of the dollar, and to some extent I agree with your statement. We know that considerable inflation of the currency has taken place in America, and some authorities go so far as to state that there is not a free market in gold in America, and if there was a considerable export of the metal would take place. I express no opinion on this point, but I entirely agree with your concluding sentence in your article in which you refer to the possibility of the Chancellor of the Exchequer being tempted to meet the deficit in next year's Budget "by the simple process of manufacturing credit which might go far to counteract the influences above enumerated by depreciating sterling." This emphasises the supreme necessity of economy both in this country and elsewhere as a principal preventive of unsound finance. Waste and extravagance both at home and abroad have in the main been the principal causes leading to inflated and depreciated currencies, which in their turn have resulted in deranged exchanges, depression of trade, and unemployment. If this state of affairs is reversed we may surely look forward to sound currency, stable exchanges, and a revival of trade throughout the civilised world.—I am, Sir, your obedient servant,

D. M. MASON

(Chairman Executive Committee Sound Currency Association).

115 Cannon street, E.C. 4, June 12th, 1922.

NEWSPAPER INSURANCE AND ADVERTISERS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Might we confirm the conclusion of your able analysis of the newspaper insurance craze by briefly stating the view held by the national advertisers?

At the prevailing cost of newspaper space advertising has lost much of its economic value as a distributing agency. Our inquiries show that to-day it costs, as a general rule, two and a-half times as much advertising outlay per unit of sales as it did in 1913.

When newspaper advertising rates were raised to unprecedented levels, advertisers were assured that this was entirely due to excessive production costs (newsprint and labour), and, as a matter of common justice, advertisers naturally expected that as the reasons for excessive rates were removed, so rates would be reduced.

Newsprint prices are now almost, if not quite, normal, but instead of utilising the money saved on this main item of production cost in the reduction of advertising rates, it is being used to buy circulations with free insurance.

In view of the ascertained fact that many thousands of unwanted and unread papers are bought merely for the sake of the insurance offered (coupled with the total absence of conclusive evidence that this "inflated" circulation is of any merchandising value), advertisers decline to accept increased "net sales" as satisfactory compensation for the non-reduction of rates. And they will strongly resist any attempt to make such "net sales" an excuse for a further increase in rates.—Yours faithfully,

INCORPORATED SOCIETY OF BRITISH ADVERTISERS, LTD.,

H. T. HUMPHRIES, General Secretary.

London, June 15th.

IRISH SECURITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I should much like to know from what source your correspondent, "A Mere Englishman" (June 10, 1922), gets the information that the present price of Great Southern and Western Railway ordinary stock is 59.

I am interested in this stock, and have followed it with anxiety for some time, and within the last three weeks (May 30th) my brokers have quoted it to me at 51, which price it has been round about for a considerable time.

I can hardly believe it has risen 8 points in the interval, considering the political situation, and I suggest it be verified, as the value of your correspondent's opinion depends on the accuracy of his figures.

I believe that he has quoted the price of the preference stock in calling it 59, and that his other quotations are

for the ordinary. If he has done this in the case of any other of the investments he quotes, it would account for the larger part of the rise he maintains has taken place.—I am, yours faithfully,

H. L. DICKS.

13 Northgate, Bury St Edmunds, June 13th, 1922.

[The figures quoted by "A Mere Englishman" were taken from the Dublin Stock Exchange Official List, which on June 2nd quotes the "previous price" at 59, and "business done" in the afternoon at 58. The official quotation for the preference stock on that date was 69.—Ed. *Economist*.]

Books and Publications.

STABILISING THE MARK.*

THIS book is a careful study of the problem of stabilisation on somewhat similar lines to the memorandum by Professor Bonn, which was reviewed in our issue of June 3rd. Originally written as a prize essay for the University of Cologne, on the prescribed subject of "Attempts to Stabilise collapsed currencies during the last 50 years," the greater part of the book is devoted to an historical examination of the problem, with the special object of letting the past throw light upon the present and the future. The author has added a chapter on the stabilisation of the mark, and the whole essay must be regarded as an important contribution to the study of the subject.

He distinguishes at the outset three methods of stabilising exchanges, viz.:—"Artificial" stabilisation, "natural" stabilisation, and "seemingly artificial" stabilisation. "Artificial" stabilisation takes place when a State contracts a loan abroad for the express purpose of stabilising the exchange; "natural" stabilisation when a State stabilises its exchange either by its own power, or with the help of foreign credits resulting from its increased productiveness and prosperity. The exchange may gradually attain a level at which it is stabilised (as with the Russian exchange stabilisation under Witte, and with the American exchange in 1879), or be stabilised as soon as possible (as with the Argentine exchange stabilisation of Tornquist). The former method relies on the accumulation of gold as a preliminary condition of stabilisation, the latter regards accumulation of gold as a final result of stabilisation. This latter method is what the author calls "seemingly artificial" stabilisation (Scheinbar Künstliche Stabilisierung).

The author proceeds to examine in detail, and with much insight, the principal instances of stabilisation, including the Indian, Russian, and Argentine currency stabilisations (which he refers to as the Lindsay, Witte, and Tornquist systems, after the names of their authors), together with less important examples, such as the stabilisation of the German East African Rupee in 1904.

With regard to the Argentine reforms, it may be remarked that Tornquist's idea was to use the improvement which was taking place during the 90's in the exchange as a consequence of the inflow of capital (notwithstanding that the budget did not balance), to bring about a "seemingly artificial" stabilisation of the paper peso, preventing it from rising further, and diverting the favourable balance of payments caused by credits to the purpose of accumulating a gold reserve. Further recovery in the value of the paper peso was prevented by an arrangement under which the Caja de Conversion undertook to issue notes in exchange for gold at the rate of 2½-1, and conversely gold in exchange for notes. The success of the scheme depended upon the continuance of a favourable balance of payments which enabled Argentina to accumulate gold.

The Rouble stabilisation scheme was somewhat different. It also depended upon the favourable balance of payments, which tended to improve the value of the rouble. The idea, however, was not to devalue the rouble by fixing it at the existing low level, but to let the value rise until it reached a given higher level. Gold was gradually accumulated, and the stabilisation at the rate

* "Klassische Valuta-Stabilisierungen und ihre lehren für Deutschland." By Dr Carl A. Schaefer. (Hamburg) Verlag von C. Boysen. 1922.

of 1½ paper roubles to 1 gold rouble on 1 rouble = 2.16 marks was not announced until it had actually come about.

The Indian currency scheme was again different. It aimed at gradually raising the value of the rupee by relative contraction to the level of Rs. 15 to £1. The Indian Government would always issue Rs. 15 for 1 sovereign, so that the rupee could not rise above that level. But it might fall below it. Stability was maintained by the institution of a gold standard reserve in London, and depended on the maintenance of a favourable balance of payments with the support of the gold standard reserve.

In summing up these systems of securing stability, the author points out that they have this in common: their method is to secure a relative contraction or deflation of the currency in order to prepare carefully for the transition from paper money to true bank notes. Moreover, to be successful each method involves the existence of a favourable balance of international payments caused by credits (geborgt aktive Zahlungsbilanz). The Argentine and Indian systems have also in common the fact that they possess a gold standard without a gold currency, the former on an autonomous basis, but the latter in a state of vassalage. The Russian currency reform produced a gold standard combined with a gold currency.

In applying the results of his analysis to the case of Germany, the author considers which of his three methods might achieve a rapid and lasting success. The Witte System, he thinks, drops out at once, because it could not lead to stabilisation of the mark within a reasonable period. There remains then either the method of artificial stabilisation on the basis of a guarantee on the part of some foreign country or group of foreign countries (Lindsay System), or a natural spontaneous stabilisation with the assistance of virtual stabilisation credits similar to those which assisted Argentina in the 1890's. Artificial stabilisation would involve the stabilisor (e.g., the United States or a group of countries) in a very heavy liability so long as the rest of the world considered Germany to be unworthy of credit on the basis of a stable rate of exchange. Such a pegging of the exchange, assuming reparation liabilities unaltered, might involve the presentation of 250-300 milliards of paper marks (i.e., at the maximum, the whole of the floating debt, plus, perhaps, 20 per cent. of the note issues) for conversion at the fixed rate. If this rate were, say, 300 marks to the \$, a conversion loan of about \$1,000 million would be required, as well as a further sum for a reserve fund. So long as reparation payments remain impossibly high, artificial stabilisation is, therefore, out of the question. On the other hand, if reparations were scaled down to a sum which it became possible for Germany to pay, artificial stabilisation would be unnecessary, because capital would readily flow into the country, with the result that a favourable balance of international payments caused by credits would come about, thus supporting the exchange. Assuming that a process of natural stabilisation is the simplest and best, two alternatives are possible. The method of the Indian exchange could be adopted, reparation payments taking the place of "Home Charges," which, under the Indian scheme, are paid out of the favourable balance of payments, from the proceeds of the sale of Council Bills in London. The author thinks, however, that this would not work, and that it is essential that reparations should be adjusted to the exchange, instead of the exchange being adjusted to reparations. In any case, since stabilisation is impossible apart from a solution of the reparation problem, the first essential is a moratorium for several years, and a considerable reduction of later payments. Dr Schaefer's scheme for securing "natural" stabilisation is summarised as follows:—

- (1) Moratorium for several years. Reduction of later reparation payments. Foreign reparation loan of some milliards of gold marks.
- (2) Consequent increasingly favourable balance of payments caused by credits and a natural deflation in the note circulation.
- (3) Rise in the value of the mark to the verge of a deflation crisis.
- (4) Official announcement of future stabilisation rate.
- (5) Attainment of stabilisation rate.
- (6) Influx of gold to the Reichsbank: issue of gold notes on the basis of the stabilisation rate.

HARRISONS & CROSFIELD, Ltd.

(Associated with Harrison Ramsay Proprietary Ltd., established throughout Australasia.)
EASTERN AND GENERAL MERCHANTS.
1-4 GREAT TOWER STREET, LONDON, E.C.3.
WITH BRANCHES THROUGHOUT THE EAST.

- (7) Accumulation of a stabilisation reserve.
- (8) Consolidation of the floating debt.
- (9) Adoption of a new principle for note regulation by the Reichsbank.
- (10) Elastic reparation payments.
- (11) Denomination—i.e., for the sake of convenience, introducing a new mark equal to 10 old marks.

It will be seen that Dr Schaefer is in agreement with Professor Bonn as to the necessity for a reparations loan which would give Germany a chance of getting on her economic legs again. The scheme which he has evolved is supported by much cogent argument and learning.

WATCH JAPAN.*

GENERAL GOLOVIN is an eminent Russian strategist, and his aim is to show that Japan must necessarily come into conflict with the United States, and obtain the mastery of the Pacific Ocean unless the United States can ensure the support of a reorganised and powerful Russia. Substantially, his arguments are these: Japan's population, in 1920 nearly 56 millions, averages 375 per square mile, a density almost equal to that of the British Isles, and nearly double that of France. In Nippon the number of inhabitants varies from 500 to 1,000 per square mile; in Jesso it is only 65, but the Japanese, being rice-eaters, will not migrate northwards, and hence cannot find outlets there or in Saghalien or Siberia, nor in China proper, though it is sure to come under their control. Even now the rice crop is insufficient for them; they must, therefore, spread southwards; there is not enough room for them in Manchuria, Korea, and Formosa, and the mandate over the Marshall and Caroline Islands has opened the way for them to the Philippines, and eventually to Malaya, Siam, the Dutch East Indies, and Indo-China. The war has made their rich richer and their poor poorer, and both these results make for expansion. The Washington Conference, "a piece of political fireworks," engineered by the Republicans for party purposes, has not even suspended Japan's preparations for the conflict. The "naval holiday" enables her to spend on naval bases instead of on warships; the Four-Power Pact is an illusive safeguard; should she violate it, the navies of the other Powers cannot arrive in time to operate against her. She will have made herself impregnable except by a blockade; and they cannot even blockade her unless they have strong bases on the mainland of Asia. Cavite and Guam are useless as naval bases; Hongkong "has no rear," and Singapore is too far off. So that, to keep up the balance of power in the Pacific, as well as to avert defeat in the coming conflict, Russia must be restored to her rank as a Great Power. General Golovin, who was only prevented by illness from serving as Chief of Staff in Admiral Kolchak's army, has visited Japan, China, the Philippines, Malaya, and Hawaii, studied the literature of his subject exhaustively, and obtained the collaboration of Admiral Bubnov, a Russian naval strategist, who contributes an elaborate examination of Japanese and American naval strength. Of course, some of his assumptions may not be realised. Japan may not control China, Japanese Christians and Socialists may revolt against Mikado worship and militarism, and the overflow of Japanese population may find outlets in Malaya, or in the unpeopled regions of Spanish-America. Or, being a very adaptable people, the Japanese may take to eating wheat instead of rice, and so be able to settle in Siberia after all. But his book is a forcible presentation of possibilities, which may easily become actual if racial animosities and the methods of nations in dealing with one another prove to have remained as they were in 1914.

Non-Resident Alien Income under United States Revenue Act, 1921. (New York) The National City Company.

This pamphlet, showing how the United States Revenue Act of 1921 affects individuals and corporations foreign to the United States, has just been issued by the National City Company, and may be obtained on application to the London office of the company, 34 Bishopsgate, London, E.C.2. It also contains some useful tables and facsimiles of forms laid down under the Act.

Kelly's Directory of Merchants, Manufacturers, and Shippers of the World. 1922. (London) Kelly's Directories, Limited. 64s.

This is the 36th annual edition of this publication which has just been issued, and it is difficult not to exaggerate the value of this volume in relation to the present conditions of British trade. As its title indicates, it is a very necessary guide to those engaged in trade of every sort and variety the world over. The book consists of some 5,000 pages, giving information as to 20,000 foreign and colonial cities and towns, under which over 1,000,000 trade descriptions are given. The directory is in two divisions, the first dealing with foreign countries and their dependencies, while the second gives information concerning England, Scotland, Ireland, and Wales, the British Dominions and Possessions. Much information is given about the late enemy countries, the German section alone running to 400 pages. The publication is one of which the proprietors may be justly proud.

Getting the World to Work. By Sir Charles W. Macara, Bart. (Manchester) Sherratt and Hughes. 5s net.

Sir Charles Macara in a preface to this collection, the articles and letters he has written to the Press since his last volume appeared, gives most legitimately encouraging figures of the circulation of his earlier volumes, and looks forward "confidently to the success of another venture on similar lines."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
June 28. June 29.

This week has brought no fresh influx of business into the Stock Exchange markets. In fact, the second fortnightly settlement since the outbreak of war turned out to be almost smaller in volume than its predecessor, although an increase in the bull account was noticeable in Home Railway stocks, Courtaulds, and a few oil shares. Contango rates varied from 5 to 7 per cent., with extra stiff charges in those cases where the takers-in had to pay for stock. The Stock Exchange Committee have decided that jobbers who take up stock on contango on behalf of brokers cannot claim the sub-

stantial concession provided by the clause under which dealers may take stock into their own name on payment of a nominal 10s transfer stamp, irrespective of the consideration money.

The fall in the Bank rate came as a refreshing surprise to markets jaded with stale bulls and a plethora of new issues. The unexpected announcement of a loan of 12½ million pounds India 5½ per cent. at 96 was far from welcome. Rumours had been current some time previously to the effect that a big rupee loan was pending, but a sterling loan had not been anticipated. In point of fact, the price at which the stock was offered ruled above that at which the existing security could be obtained in the Stock Exchange, allowing for the fact that the latter carried six months' interest. The newcomer had the effect of depressing everything in this department. In addition, there has been talk of another Local Loans issue. Heaviness crept into all the gilt-edged lists, Colonial, Corporation, Home Railway prior-charge issues, Foreign Railway debentures and preference stocks, and even industrial debentures. The fact of the matter is that buyers have been fully satisfied, and, with new issues still largely in the hands of stags, there was not enough driving power in the shape of continued investment to keep up prices in the face of a general dullness. But the fall in the Bank rate promptly gave rise to hopes of an influx of fresh money to the markets. The War Loan rose from 98½ to 99½, and other stocks followed suit.

The foreign market is a little better than it was earlier in the week. On very vague statements in regard to some Reparation payment which, according to report, is to be made to France, French Government bonds, together with those of the railway companies, rallied sharply. At the same time Germans hardened. Brazilian bonds are also better. Riga 4½ per cent. put on several points, though Helsingfors issues are weak, in spite of gossip to the effect that negotiations are on the point of being reopened in connection with a new Finland Government 7 per cent. loan. Mexican Government bonds are points higher. Talk is revived of a settlement having been reached between Mexico and the United States.

Home Railway stocks turned better, after being decidedly flat by reason of the liquidation of stale bull accounts. Prices went ahead too fast, and the reaction was not surprising, though it certainly caused disappointment to a wide circle of people who were mildly dabbling in Home Rails. All sections of the market became similarly affected. Mexican Rails are better. The Canadian Railway list is unchanged; it is expected that the Grand Trunk case will be reopened next month. Argentine Rails came under the influence of dullness in other parts of the House. Amongst Brazilians, the outstanding feature is a rise in Great Western of Brazil shares, on hopes that modification of freight rates will benefit the company materially. Brazilian Tractions had risen in advance of the resumption of dividends after five years on the common shares.

Rubber shares are inert and lower. The oil market became somewhat disturbed by the news that a pool has been formed to market, at £4 11s 6d ex dividend, 1,250,000 Shell shares which have been taken from the Royal Dutch Company. The cuts in the Royal Dutch, Anglo-American, and Shell dividends caused uneasiness in regard to the forthcoming announcements of the Burma Oil and the Mexican Eagle Companies. Some of the lower-priced oil shares came into prominence, on more or less professional dealing. Richardson, Westgarths are better in the iron and steel market, on the unexpectedly good showing made by the report. Courtaulds fell away, on pressure to sell by weak bulls, but recovered on the Bank rate reduction. Textiles as a whole have leaned to the easier side. Tobacco shares are better. Hudson's Bays advanced in consequence of the increase in the dividend. The Indo-China Steamship report, showing a decreased dividend, lead to heaviness in the price of the shares, and the shipping market is somewhat out of favour. Insurance shares have scarcely moved. Further declines occurred in a few of the Australian and Eastern banking shares. New issues in a good many cases stand at substantial discounts. The wireless group is a little firmer, and cable shares have recovered the greater part of the loss which they suffered a fortnight ago. The termination of the engineers' lock-out caused a slight improvement in

iron, steel, and armament shares, but it has failed to stimulate business to any particular extent.

Kaffirs were benefited to a small extent by the fall in the Bank rate, though of more importance was the support rendered to the market by Cape buying earlier in the week. Some of the June dividends are already announced, and have had no particular influence upon prices. Lively movements in Selukwes and Globe and Phoenix gave Rhodesians a semblance of activity. De Beers and other diamond shares are erratic. In the remaining mining markets there has been so little doing as to enable their members to give up most of their time to numberless sweepstakes on the Ascot races.

Loans and contango bargains open under the emergency rules will be settled on Friday, September 1st. The account days from September to December, 1922, have been fixed as under:—September, Thursdays, 7th and 21st; October, Thursdays, 5th and 19th; November, Thursdays, 2nd, 16th, and 30th; December, Thursday, 14th, and Friday, 29th.

NEW ISSUES.

1915 ..	72,001,396	1914 ..	612,522,633	

Government of India 5½ per Cent. Loan.—Issue of £12,500,000 at 96 per cent., repayable at par on January 15, 1932. This issue is made under the provisions of the East India Loans (Railways and Irrigation) Act, 1922, and previous Acts, and the entire proceeds will be utilised for Indian railway purposes. This issue will be consolidated with the existing Government of India £5 10s per cent. loan, which also is redeemable at par on January 15, 1932. This latter loan for £10 millions, it may be recalled, was issued in December last at 93½ per cent. The books of the loan are kept at the Bank of England, and the security is a trustee stock, interest being payable at the Bank of England. Subject to political considerations, the issue is an attractive short-term loan.

The Rugby Gas Company.—Incorporated by Special Act of Parliament 1882. The authorised share capital is £205,254, of which £55,254 has been issued, while the authorised loan capital amounts to £68,418, of which £9,000 has been issued. This is an offer for sale by tender of £26,000 6 per cent. "redeemable" preference stock, the minimum price of issue being £97 per £100. The stock will be redeemed at par on July 1, 1932. Apparently this issue of preference shares rank immediately after the loan capital, and as the net revenue of the undertaking for the year ended December 31st last after payment of loan capital charges was £6,321, and only £1,560 per annum will be required to pay dividends on the present issue, there is a substantial margin of cover available for preference dividends. Of course, further borrowings under loan capital might affect the security of the preference stock, but at the minimum price of issue the yield is £6 9s 2d per cent., and this is not without attraction. Regard, however, must be paid to the narrow market for such a small issue. It is intended to apply for a Stock Exchange quotation.

The Electrical Apparatus Company, Limited.—Authorised capital £370,000, of which £143,340 has been issued and £141,030 is paid up. It is stated that "there are no prior charges on the undertaking, nor can such be raised without the consent of the holders of three-fourths of the issued preference shares." This is an issue of 50,000 8 per cent. cumulative preference shares of £1 each at par. The business

was established in 1906, and the present company was formed in 1913 to acquire and develop it. The principal articles of manufacture are electricity house service meters and electric control gear. Net assets available as cover for the £141,030 of issued share capital are valued at £141,210; this sum includes £5,678 for patents and £44,626 for investments in associated companies, which are taken at cost. Thus, although profits are shown from 1915 to be on a generous scale and dividends on ordinary shares have reached as high as 14 per cent., it would be interesting to know what has happened to reserve allocations, assuming that some have been made. The prospectus states that the directors "hold the whole of the ordinary shares and are bound to give their whole time to the service of the company," and, further, that the "directors' fees may not, under the articles of association, exceed £2,250 in all in any year unless the full dividends are paid on the preference shares." From this it is deduced that "the personal interests of the management are thus in a special degree bound up with the general prosperity of the company, and with the maintenance of regular dividends on the preference shares." This, however, is an argument which does not lend itself to universal application.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

SOCIETY'S STRONG POSITION—NEW STANDARD EXCHANGE RATES.

The seventy-third ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on the 8th instant, at the chief office of the society, St Mildred's House, Poultry, London, Sir Reginald Macleod, K.C.B., the chairman, presiding.

The general manager and secretary (Mr Alexander Lawson) having read the notice convening the meeting and the report of the auditors,

TRIBUTE TO THE LATE CHAIRMAN.

The Chairman said: Gentlemen,—Before proceeding with the business of the day, I wish to say one word to you in reference to the great loss which we have all sustained by the death of our late chairman. Sir Charles Hanson's great ability and vigorous personality have left a profound mark in every enterprise which he undertook—in the City of London, where his mayoralty was one of the most distinguished of recent years, in his native county, in Parliament, in general business in the City, and notably in the affairs of our own society. He first took a seat on this board in 1896, and he became chairman in 1908. During that long period he was in almost daily touch with his colleagues and with the management, and I wish to be allowed to say how very deeply we, who have met him so constantly, deplore his loss. He was a most wise counsellor, and was a most generous and sympathetic friend.

Now, gentlemen, turning to the business of the meeting, the outstanding feature of the report to which I wish to draw your immediate attention is the large reductions which are shown in the figures, including income, outgo, assets, and new business, consequent upon the adoption of new standard exchange rates for the conversion of foreign currencies, and I regard myself as fortunate in being able to present to you, on the first occasion of my addressing you as chairman of the society, a report and accounts based upon complete recognition of the situation resulting from the upheaval and destruction of war in so many of the countries in which we have been doing business. Although a clear and explicit statement on this subject is contained in the report, it will not be out of place if a few words are added in amplification. In previous years—as you will notice from the report, and as, indeed, you are well aware—foreign currencies have been included in the accounts at the standard exchange rates adopted prior to the war. The convenience of this course is obvious, and for a time it was possible to hope that the exchange rates would return to a stable basis. That hope has not been realised.

It will be within your recollection that on the occasion of the quinquennium ending on December 31, 1919, our actuary reported that, while retaining the old standard rates of exchange for our financial statements, the valuation balance-sheet must be based on the rates of exchange on that day, and there consequently fell to be deducted from both assets and liabilities a sum approximating to that by which the assurance fund has now been reduced. It was upon this basis that our profits for the quinquennium were shown and our bonus declared.

THE EXCHANGE QUESTION.

In view of the persistence of the depression in many foreign currencies, we have come to the conclusion, after most careful consideration and after consultation with your auditors, that it is in the best interests of the society to adopt now for all purposes, and not to wait for the next quinquennium, new standard exchange rates approximating to the rates prevailing at the close of last year. As stated in the report, however, the reduction thus shown in the assets does not represent a loss. By the adoption of this procedure we are neither worse off nor better off than before; if our assets are less as expressed in pounds sterling, our liabilities are reduced by a like amount. We hold certain investments, let us say, in francs: we receive premiums in francs, we meet our claims in francs, but in stating those premiums and claims in our accounts we no longer state them at the standard figures which were formerly appropriate, but at the figure which represents the facts of to-day.

Turning now to the figures in the report setting out the operations of the past year, it will be seen that 5,449 policies were issued, assuring an amount of £2,516,000 after deducting reassurances, and that 573 proposals, for £351,000, were declined; that the premiums upon new assurances completed amounted to £116,910, including single premiums of £1,939; that a sum of £27,968 was received as consideration for annuities granted; that the income of the society derived from premiums, interest, and rents amounted

to £1,067,360; that the death claims were within the actuarial expectation, and, with bonus additions, amounted to £256,059; and that claims on endowments maturing by age or expiration of term amounted to £326,553; that 149 annuitants have died, releasing the society from annuities amounting to £7,224; and that the assets as appearing in the balance-sheet amount to £6,683,109. It is gratifying to note that the life assurance fund increased during the year by £114,000.

THE SOCIETY'S POSITION.

These figures are of sufficient magnitude to continue to place the society in a foremost position amongst the great life assurance companies of this country. The percentage of expenses, though less than last year, is too high and must be reduced. This high rate is due mainly to the continued high ratio of new premiums to total premiums. From other points of view the largeness of the volume of new business that comes to us is an element of strength, but it is costly, and is responsible for a material part of the rise in our expenses as compared with pre-war times. Then, again, the high rate is also to some extent due to the alteration in the basis of currency conversion, and to the fact that it is in those countries where the currency is most depressed that the cost of living and charges for administration are highest. I cannot promise any great immediate reduction of this burden, but the board and management are keenly alive to its importance, and have the matter constantly under review.

I wish to draw your attention to the rate of interest realised upon our funds, which, after deduction of income-tax, is at the satisfactory rate of £4 5s 1d per cent., the rate of the previous year having been fully maintained. The question of investment and re-investment is engaging our constant attention, as it is upon the profitable but wise and safe utilisation of funds that life assurance companies particularly depend.

ARRANGEMENT WITH HUNGARY.

The arrangement by which the Hungarian Government release the society from all its liabilities in Hungary is an important step forward towards the liquidation of our business in the old Austrian-Hungarian Empire. You will notice in the revenue account a sum of £15,201 as the value of assets surrendered in respect of liabilities taken over by the Hungarian Government. We were obliged by law to hold Hungarian securities, and it is these we have surrendered to the Hungarian Government. Before the war we held a great position in Austria-Hungary, and it may be asked why we have not built afresh upon that position. One reason is—and I think a sufficient one—that the kronen cost of doing business is excessive as compared with any possible kronen receipts, and is, indeed, prohibitive. This applies with more or less force to other portions of the old Austrian Empire, and the directors are hopeful that negotiations which are now taking place may lead to a similar relief being obtained, on terms satisfactory to the society, in several other Succession States in which the severe currency depreciation and the prevailing economic conditions have caused the business to become unremunerative.

Just eight years ago, in dealing with the year 1913, the Chairman was able to tell you that it had been the most prosperous and promising the society had perhaps ever enjoyed. The new business amounted to £2,362,000, and from every point of view the prospects were favourable. The war fell; our new business in enemy countries was cut out; in our own and in allied countries we had to stand the incalculable burden of death in action and from disease; the financial conditions were uncertain and unsoundable; anxiety would have been pardonable.

CAUSE FOR CONGRATULATION.

In viewing the position as it exists to-day, we have much reason for thankfulness and congratulation. Two years ago, in dealing with the quinquennium terminating in 1919, the actuary was able to report that, notwithstanding war and pestilence, the death claims on the five years covering the whole war period of 1914-19 were within the actuarial expectations, and that the financial position justified the distribution of a bonus—a rather unusual event at that particular period. In 1920 and 1921, I am glad to say, the claims by death have been substantially more favourable. Although important branches have ceased to function, and although the adoption of the new standard rates of exchange involves large reductions in the volume of business as expressed in sterling, the

net amount of new insurances placed on the books, as I have already stated, is £2,516,000—a greater sum than in 1913.

Gentlemen, I look forward to the future with confidence, and have great pleasure in proposing "That the directors' and auditors' reports be approved and adopted."

The Deputy-Chairman (Mr Courtenay C. S. Fooks), in seconding the motion, said he would like to associate himself—and he was sure his colleagues would wish to do so as well—with the heartfelt terms in which Sir Reginald Macleod had referred to the late chairman.

The resolution was carried unanimously.

RE-ELECTION OF DIRECTORS.

The Deputy-Chairman then moved that the appointment of Major Walter H. Levy, D.S.O., as a member of the board be confirmed, and that Sir Reginald Macleod, Mr Henry Hoare, and the Right Hon. Lord Monk Bretton, C.B., be re-elected directors. On the lamented death of the late chairman, the question of filling the vacancy on the board was a matter of great concern to the directors. They felt that it was necessary to secure a personality which would be of the greatest advantage to the society, and they had been fortunate in securing the services of Major Levy (of Messrs M. Samuel and Co., Limited)—a name well known in the City as being associated with great enterprises. He was sure that the advent of that gentleman to the board would be a source of strength and give renewed confidence to both policy-holders and shareholders.

The motion was seconded by Mr Laurence Currie, and unanimously adopted.

STRENGTH OF THE SOCIETY.

Sir Arthur Lowes Dickinson, F.C.A., F.I.A. (Messrs Price, Waterhouse, and Co.)—who was re-elected auditor on the part of the shareholders, on the motion of Mr C. H. Beadnell, seconded by Mr Anderson—said he wished to congratulate the shareholders on the satisfactory way in which the society had come through the troubles which had necessarily fallen upon it owing to the war. The shrinkage in assets, as the chairman had pointed out, was not what at first sight it appeared, because it was met by a shrinkage of liabilities. It was a great satisfaction to him to be able to say that the position of the society was no less strong than it had been in the past, and it seemed to be in a splendid position to cope with the increasing business which appeared likely to come to it.

SUEZ CANAL COMPANY.

YEAR'S RESULTS—MARKED INCREASE IN CANAL TRAFFIC.

The sixty-eighth annual meeting of the shareholders was held in Paris on the 12th instant. The report of the Council of Administration was read to the meeting, and was substantially as follows:—

The results of the year 1921 have fully confirmed the optimistic forecasts which our last report contained. In spite of the intense economic crisis, which has been felt throughout the whole world for the last two years, the traffic of the canal, following out its gradual development, has continued to approach the level which it reached before the war. The position, considering the circumstances which still influence international exchanges, is singularly favourable, and further strengthens our confidence in the future.

The net profits of 1921, influenced especially by the reduction of profits from exchange and by a slight increase in working expenses, have been slightly lower than in 1920. The excess of receipts over expenditure was 180,211,679f 27 c, a sum somewhat smaller than in the preceding year, but nevertheless sufficient to maintain a net revenue equal to that of 1920, and to allocate to funds for reserve, redemption, and construction considerable sums which we still consider to be justified this year.

In fact, we do not believe that we should depart from the policy of prudence you have always sanctioned, the receipts of 1921 being, as those of the previous year, to a large extent of an abnormal and uncertain character; we refer to profits on exchange. In order to provide against the consequences of a diminution of these exceptional profits in future years, we have thought it prudent to allocate to the extraordinary reserve fund, which you have started for this reason, the sum of 15 million francs.

In recommending this measure to you, we remain faithful to a policy which has always been yours, and we feel certain that later you will have to congratulate yourselves on having reconciled your present with your future interests.

FINANCIAL SITUATION.

Total receipts in 1921 at 260,135,096f 61c, show a decrease of 7,324,682f 45c. Receipts from navigation tolls are less by 2,623,074f 20c than those of the previous year. The increase in traffic partially balanced the reduction of receipts due to the reduction in the tax of 25c, a reduction amounting roughly to 4,500,000f.

Total expenses have increased to 61,868,393f 45c. The increase

of 5,255,850 of being due, to a large extent, to measures taken last year to improve the conditions of the personnel in Paris and Egypt.

A considerable decrease in the price of coal, and a slight decrease in the price of raw materials, enabled us to increase our upkeep work without any proportionate increase in expenses. On the other hand, the increase in expenses are compensated to the amount of 1,000,790 of the decrease in interest charges and the redemption of the consolidated bonds, &c., which figure in our accounts for the last time. Whilst, on the whole, the results of the year are a little less favourable than those of 1920, they allow us to write down material by the same amount as last year, and to allow 10 millions for the construction of houses in Egypt. The actual excess of receipts over expenditure amounted to 164,893,072. To this has to be added the balance brought forward from the 1920 accounts, making an available total of 165,211,679. It is proposed to distribute 149,261,971, and, after placing 15,000,000 to special reserve, to carry forward 949,707 to the 1922 accounts.

The dividend amounts to 280 gross, and 245 net, more than equivalent to that of 1921.

CANAL TRAFFIC.

In 1921, 3,971 passages were made, representing a tonnage of 18,118,999 tons, showing a decrease of passages of 34 and an increase in tonnage of 544,342. Compared, however, with 1913, this still shows a decrease of 1,914,885 tons.

The time taken for the passage has been lowered to 15 hours 25 minutes. The shortest time previous to this being 16 hours 11 minutes, in 1914.

The merchandise carried amounts, in round figures, to 17,509,000 tons. Whilst this is 32 per cent. less than before the war, it is nevertheless a marked increase on 1921, during which we carried 17,047,000 tons.

GENERAL SITUATION

This is a very remarkable result, and testifies to the strength of your company, especially since it coincides with an intense economic crisis. This crisis has manifested itself throughout the whole world by a considerable contraction in commercial exchange, through which the shipping industry has particularly suffered. One would therefore have expected a considerable diminution in the canal traffic, which would doubtless have occurred but for a renewed activity in certain commodities.

On the journey from Europe, the export of English coal reached 4,122,000 tons, an amount almost equal to that of 1913. This increase in coal exports equals the total increase in merchandise. There is marked increase in the movement of metals, engines, and railway materials—these last almost reaching their pre-war importance. Other categories of outward traffic lower the net increase to 258,000 tons.

In return traffic, it is to the increase in passage of wheat and rice and increased movement of mineral oils that the increase of 204,000 tons is due.

Wheat reached the exceptional amount of 1,762,000 tons, which has only been exceeded twice, due mainly to the unprecedented amount sent from Australia. Rice, while only showing half the tonnage of 1913, was twice the amount of 1920.

Mineral oils show an increase of 528,000 tons, or 67 per cent. over 1920. Their share of the return traffic has increased from 2 per cent. in 1913 to 12 per cent. in 1921.

The results of the current year are not less satisfactory than those of 1921; the increase of shipping traffic is maintained and confirmed during the first months of this year; tonnage passing through shows a marked increase on that of the corresponding period of 1921, and up to May 22nd receipts show an increase of 6,820,000.

These favourable results make us optimistic that the canal traffic, at one time overwhelmed by the deep depression engendered by the war, will start once again to follow the regularly ascending curve which since its commencement has reflected the strength and growing prosperity of your company.

ANGLO-AMERICAN OIL COMPANY, LIMITED.

BOARD OPTIMISTIC OF THE FUTURE.

The thirty-fifth annual general meeting of the Anglo-American Oil Company, Limited, was held, on the 15th instant, at the office of the company, 36 Queen Anne's Gate, Westminster, London.

Francis E. Powell, Esq. (the chairman), presiding.

The secretary (Mr A. H. Hewett) having read the notices convening the meeting,

The Chairman said that, owing to the unprecedented fall in the value of all petroleum stocks and merchandise during the year, the net result of the company's business shows a loss.

The values of inventories due to above causes was less than half the value at the end of 1920, although the quantities in stock were

approximately the same. In addition, the sales of lubricating oils suffered severely due to the coal strike and bad trade in industrial centres, so that the total values of all sales were £7,126,000 less than for the previous year. Although no profit has been shown for the year, the directors have made the usual provision for depreciation on steamships, plant, &c., amounting to £710,754. There has also been set aside for depreciation on investments £126,711. These amounts, together with the net loss for the year of £31,832 and a provision for income-tax of £182,608, all of which have been charged to the surplus account, leaves a balance to the credit of that account of £476,976. From this the directors proposed a final dividend of 2s per share, absorbing £300,000, which will make, with the interim dividend declared in December, 1921, a total dividend of 3s per share, or 15 per cent. for the year. The general reserve funds, amounting to £1,931,740, stand at a figure somewhat larger than a year ago.

IMPROVED TRADING SITUATION.

Since the date of the balance-sheet the trading situation has improved and values have slightly recovered. Providing no unforeseen contingencies arise, and the present volume of lubricating and other sales is maintained between now and the end of the year, the directors believe the profits will be equal to an average of previous ordinary years.

The company's fleet of tankers is fully employed. There are only two vessels (cargo boats) laid up—it is hoped only temporarily. There are no new vessels building.

On April 1st last the company paid over \$1,250,000 to the trustees in New York as part liquidation of the gold notes due in 1925. The cash resources of the company are for the time being sufficient for the business, and owing to the lower value of all products an issue of new shares, as authorised a year ago, is not necessary for the present, at least.

The Chairman concluded by moving the adoption of the report and the accounts.

Mr James Hamilton (vice-chairman) seconded the motion, which was carried unanimously.

INDIA GENERAL NAVIGATION AND RAILWAY.

SURCHARGE TAX REMOVED—COMMON CARRIERS ACT REVISED.

The annual ordinary general meeting of shareholders was held, on the 14th instant, at Winchester House, Old Broad Street, London, Mr S. G. L. Eustace, the chairman of the company, presiding.

The Chairman said: Ladies and Gentlemen,—You will understand my feelings of regret that in thus assuming office as your chairman I have to present to you the result of the past year's working. If, however, you will recall your late chairman's speech a year ago, you will remember that he then frankly pointed out the extremely uncertain character of our prospects, in face of the continued complete industrial stagnation, and the serious political upheaval. In the period that followed, the stagnation remained, whilst unfortunately the political disturbances spread, culminating in disastrous strikes in various parts of the country, which, in due course, involved the greater part of the crews of this company—an unprecedented occurrence in our long history. So far as it is possible to form an estimate, three-quarters of our loss in the past year is attributable solely to this lamentable strike, lasting as it did for six weeks, entirely disorganising our regular services and causing the laying up of many of our vessels altogether.

THE ACCOUNTS.

Turning now to the accounts, and more particularly to our costs, our chief trouble, and one, unfortunately, over which we can exercise but little control, is coal, the life-blood of all transport companies. For many years the price of coal in India varied between Rs. 2 and Rs. 4 per ton, according to quality, at pit-head, but the price now quoted varies from Rs. 8 to Rs. 15 for similar qualities. When I remind you that this company consumes some 235,000 tons a year, you will understand what this signifies to us. In addition, we have greatly increased railway charges thereon to pay. This cost of coal, at the moment, is unquestionably the most serious factor with which Indian industrial enterprise has to cope. The remedy is in increased production, which can be assured by the substitution, to a large extent, of machinery for hand labour, and this substitution, the necessity for which is fully realised, is already in progress. We must bear in mind that the extraordinarily high cost of Indian coal last year was greatly accentuated by very large exports from India, due to the coal strike in this country. Sudden movements of this kind are always disastrous in their immediate incidence.

In the balance-sheet we have to note, as mentioned in your directors' report, our return to the old 1s 4d exchange value. When the change to 2s was made, the sterling difference was £140,521 14s 5d credit, which sum was, in view of the uncertainty of stability at that rate, retained untouched in suspense

account. In reverting to the previous practice, only £63,053 17s 2d has been needed for the necessary adjustment, due to realisations of assets in India, the proceeds of which have been re-invested in additions to the fleet. Consequently it is fair that the movable block account should be credited with any surplus remaining in exchange suspense, and the balance of this account, £77,467 17s 3d, with the addition of £22,532 2s 4d taken from fleet replacement reserve, in all £100,000, has therefore been used to write down the recent additions to the fleet. The fleet replacement reserve was, as a matter of fact, set aside for this specific purpose, and, as forecasted in our report, will be further drawn upon from time to time for a similar object whereby the annual depreciation upon such vessels that has to be provided for out of profits will be reduced.

GOVERNMENT SURCHARGE TAX.

The most unjust Government surcharge tax, mentioned in your chairman's speech last year, and which you will recollect was imposed to assist our competitors, the railways, has now been removed, and from April 1st the higher rates charged by this company, as sanctioned by the board, have come into operation. Included in the foregoing we have entered into a new agreement embodying revised rates with the tea industry and the Assam Oil Company, all these revisions being necessary in consequence of increased general costs.

The additions to your fleet afloat during the year consist of one steamer and five flats now in commission, aggregating a total carrying capacity of 3,765 tons. On the other hand, however, as mentioned in your directors' report, the company has unfortunately lost one flat of 300 tons, so that the net increase amounts to 3,465 tons.

During the year we have secured an important alteration in the law—a grossly inequitable one—for which we have been working for more than 30 years. I refer to the Common Carriers Act, which the Government of India has at last revised on a basis which makes it fairer to the inland river transport companies in their capacity of common carriers.

As regards the future, speaking with the usual caution, given peace and a strong Government, there is every reason for us to have confidence in the revival of trade of India as the world elsewhere recovers itself industrially.

The report and accounts were unanimously adopted, and the dividends recommended were agreed to.

LAKE VIEW INVESTMENT TRUST, LIMITED.

TRUST'S IMPROVED POSITION.

The second ordinary general meeting of the Lake View Investment Trust, Limited, was held, on the 16th instant, at River Plate House, London, Mr F. A. Govett (chairman and managing director) presiding.

The Chairman, in the course of his speech, said it was not his fortune to report any considerable change in the position of the company, but there could be no great change until the Burma Corporation finally emerged from its long period of incubation. This, however, was slowly approaching the end, and he trusted it might not be much longer before they obtained some increase in their revenue from Burma dividends. At first this relief was not likely to be anything very startling, for the present price of metals on the present scale of operations would not mean those large profits which were once expected, and no great rise in price was probable until there was again a large expansion in demand for metals, or until it was possible to obtain the profit which ought to be obtained from the zinc in the Burma ore, which, for the moment, for certain reasons, was not possible.

With regard to the investment account as shown in the balance-sheet, the figure of £390,300 was, of course, a purely arbitrary amount which was taken to represent the balance of the capital account over the cash and debtors when the new company was started. The actual amount was then far larger, and was now far larger, and the figure of £744,090 given in the report had been again increased by the recent general rise in prices, the appreciation in the general list since January being about £30,000, and on the Burma shares about £70,000. On the latter every shilling rise or fall made a difference of nearly £50,000.

BOARD'S INVESTMENT POLICY.

A year ago he explained the fatal effect upon the company of the operation of income-tax on capital increment with "financial" companies, the risk of which made it impossible for them immediately to carry out the idea with which the company was formed—namely, to realise their holding at the high prices which were then ruling for the Burma shares, so that they missed the market. Had this been possible, it would have given them a large capital to be invested in trust company investments, instead of leaving them with this large interest in the Burma Corporation, and leaving them also with the reputation of being still to some considerable extent interested in mines. That being the

HEAD OFFICES: LIVERPOOL AND LONDON

ROYAL
INSURANCE COMPANY, LIMITED
ALL CLASSES OF INSURANCE EFFECTED

case, and their available funds being rather small—a condition which they hoped would not perpetually obtain—they had to a very limited extent bought shares and debentures of a rather more speculative nature than might be regarded as suitable by the older investment trusts. With regard to their Granville holding, this year should prove whether the expectations on which they were originally induced to embark on this unfortunate interest were sound. The dredges had now started for this year's operations. He still hoped on, though he must confess to a considerable discouragement after this long period of trying to get the business started. It would mean a great deal to this company, in view of their large interest, even if only a part of the original expectations could be justified by results. The Zinc Corporation remained waterlogged by labour in Australia, but it was not devoid of hope. Having dealt with the company's holdings in the National Mining Corporation and the Mexican Corporation, the Chairman referred to the general list of investments.

SCARCITY OF SOUND SECURITIES.

It was perfectly easy, he remarked, to look down the list of securities which came within the range of an investment trust company, and still see a lot of most attractive stocks to pay satisfactory yields, but the trouble was that when one came to buy them in the market there was no stock, and even if one were to bid much higher one could not get any stock. The reason for the present low rate of money was almost entirely that trade was bad and enterprise shut down, so that there was no demand for loans, and consequently the banks and other financial institutions were also competing in the investment market, first of all absorbing the short-term investments and then coming to gilt-edged stocks of longer dates. The result had been a general scramble and the all-round rise in prices which had been witnessed during the past few months, and which were likely approximately to be maintained. He spoke last year of the heavy depreciation of the company's holdings at the moment in consequence of the preceding slump under which they were then still suffering. With Mr Lloyd, he had analysed the results of the company's work as an investment trust, and, excluding from the calculation the mining interests—such as Burma, Zinc, and Granville, which they took over from the old company—as having no bearing on the success of their present line of business, but including the depreciation on the (Mexican Corporation and the National Mining Corporation), he found that, notwithstanding that slump and last year's general depreciation, they were now well on the right side. This was a much happier position to report, and, although conditions were exceedingly obscure and difficult, he hoped they might be able to pick their way and gradually build up the same strong position which had been reached by the majority of the investment trusts.

The report was unanimously adopted.

THE NATIONAL MINING CORPORATION, LIMITED.

SCHEME FOR REDUCTION OF CAPITAL.

BOARD'S PROPOSAL APPROVED.

The annual meeting of the National Mining Corporation, Limited, was held, on the 15th instant, at River Plate House, Finsbury Circus, London, Mr Herbert Guedalla (the chairman) presiding. The directors' report and accounts were unanimously adopted, and at a subsequent extraordinary general meeting the scheme for the reduction of capital was unanimously approved.

The Chairman, in the course of his speech, said:—The creditors, including the bank loan, amount to £89,328, but on the other side we have loans, debtors, and cash amounting to roughly £203,000. From the profit and loss account it will be seen that the commission, dividends, and interest received amount to £59,461, as against the £81,178 received for the preceding 14 months. This difference is entirely accounted for by the fact that the period under review has been a most difficult one for finance of the character which we undertake, and we have only been associated with one issue, which, though intrinsically sound and excellent in our opinion, we felt might not be a success if offered in the ordinary way in a public prospectus. The general expenditure shows a reduction of over £2,000, and arrangements have been made whereby this will be further reduced. The directors' and Technical Committee fees show a reduction of £3,500. There is a net profit for the year of £82,777, and after deducting the

£22,336 to the credit of profit at December 31, 1920, we have a net loss in the balance-sheet of £60,441.

INVESTMENTS.

I now come to the most important item in the balance-sheet, that of £1,055,629, which represents the cost value of our shares and interests in other companies and properties. This shows an increase of about £150,000 over the same item in the preceding year's accounts, and is chiefly accounted for by the interest which we have taken in the note issue of the Mexican Corporation. The results obtained by this company since milling operations were commenced have been entirely satisfactory, and from the treatment of 75,000 tons a month from the quarry ore body, a monthly profit of over £15,000 is being earned. It is, however, on the results that may be ultimately secured when the old mine is unwatered that the real future of the Mexican Corporation turns, and we are advised that by August next the first big level of 350 feet below the collar of the shaft should be available for inspection. We still retain our large interest in the Santa Gertrudis Mine, where recent developments have been quite satisfactory. After close investigation, we have increased our substantial interest in the South American Copper Syndicate, Limited. This enterprise is now being equipped with a smelting plant, which on the treatment of the grade of ore that can be furnished to the smelter, even at the present low range of copper prices, will earn very substantial dividends on the capital of the syndicate. Recent developments are of a very encouraging nature, and an interesting report by Mr C. H. Stewart, the syndicate's consulting engineer, has just been issued, showing that there are large reserves of high-grade copper ore on the property, which contains miles of promising zones which have yet to be explored. In co-operation with other mining houses, we have taken an interest in the Ryan Corporation, Limited. The property of this company is situated on the coast of Eastern Siberia, and all reports state that this area is extremely rich in gold. When the time comes for reorganising the old-established mining properties in the Russian Empire, our corporation, through its kindred interests, should be in a position second to none for this purpose.

BURMA CORPORATION.

We still retain our large holding in the Burma Corporation. Development work has proceeded in certain sections of the mine with most satisfactory results. At the present time a tonnage of about 500 tons per day is being handled, and the accomplishment of a very much larger tonnage is dependent upon two important factors—viz., railway transport and labour. The labour problem is being tackled in a vigorous manner, and we hope to learn shortly that the extension of the Burma Railway's main line to Nanttu has been agreed to. There are also possibilities of obtaining better and more profitable results from the treatment of the ore, so that we are entitled to regard the outlook as in every way excellent, and we ought soon to be within measurable distance of the dividend-paying stage.

BRITISH EQUATORIAL OIL COMPANY.

We hold a little more than one-third of the capital of the British Equatorial Oil Company, Limited. This company has acquired large oil concessions in the Republic of Venezuela, and on what is known as Garcia Four concession an active drilling campaign has been carried out. Oil has been encountered in the first two boreholes, and there is a production of 500 barrels a day in one well at a depth of 590 feet, whilst in the second well at 739 feet a gusher has been struck which is throwing oil 30 feet over the derrick. The manager reports the results already obtained have proved as a definite oil-yielding land an area on which he recommends the sinking of 12 further wells, permission to bore having been procured. The equipment of the company enables it to keep three boring rigs in constant operation, and, as the oil is secured at shallow depths, it should not be long before a substantial production is obtained. Arrangements have been entered into with an American group, who have contracted to take an agreed amount of the production at a satisfactory price, on the understanding that their group must construct a pipeline to the wells and provide the necessary transportation. Our other holdings, which are not considerable, consist of shares in some of the best known South African properties, and in conjunction with another mining house we have recently acquired an interest in the development of certain oil properties in Roumania located in the heart of the oil productive zone.

QUESTION OF DEPRECIATION.

Taking the market prices at December 31st last, and on the basis of a conservative valuation of the assets which have no market quotation, the total investments show a depreciation of £639,110. This is undoubtedly a very large amount, but, taking the general average of the value of quoted mining securities, there has been a depreciation exceeding 50 per cent. during the last two years, whilst in the same period there has been a similar depreciation in the ordinary capital of industrial securities. This is due in our

case to a severe decline in the market value of all metals, and to the fact that in the case of the best mines it takes time to adjust the cost of production to the fall in the market value of their products. This is gradually being accomplished, and it would seem that the depreciation in certain cases is of a temporary character, although the shares may never command the market value which they at one time attained. During the current year our holdings have shown an appreciation from the market price at which they stood at December 31st last, whilst I think I may say that the intrinsic position of our unquoted securities shows undoubted improvement. If we had chosen to strain a point we might have placed a higher valuation on our assets, but for the purposes of the scheme in view we have deemed it wise to place them on a basis from which, as far as human foresight can see, there should be no further loss. If the scheme is adopted we wish to make sure that we shall start clear in the accounts from further loss, so that the company should be in such a position that future profits should be available for distribution. I trust also that the present loss in some of our largest investments will not prove to be of a permanent character. We are not a trust company, and, as long as this deficit exists, as shareholders we cannot derive any benefit from profits in the enterprises in which we are interested and from new business which we may be undertaking. It is obvious that it is desirable to set our house in order, and, as you will observe, we have taken the opportunity of dealing with the question of the uncalled capital of the company in a manner which we have reason to believe is approved by the majority of the shareholders. It might have been more simple to have reduced the shares to 10s each with 5s paid, and I daresay a more recent valuation would have justified this course, but we have come to the conclusion that if the knife is to be applied at all it is better to make as drastic reduction as possible, so as to be in a position to meet any eventuality which may arise in the difficult position in which all creative enterprise finds itself at present.

THE SCHEME.

We recommend that the issued shares of the company should be reduced from shares of £20s each with 10s paid to shares of 8s each with 4s paid up. The authorised capital, which is at present £3,000,000 in £1 shares, will then become £1,500,000, and the issued capital of £2,500,000 will become £1,000,000, being 2,500,000 shares of 8s each, leaving £500,000 available for issue in shares of 8s each, which represents 1,250,000 shares. The total present uncalled liability is reduced from £1,250,000 to £500,000, and it is not the intention of the directors to call on this liability unless it is necessary or to the obvious advantage of the company to use these resources. The effect of this reduction, after allowing for shares already forfeited, is to make an amount of £743,220 available for writing off depreciation and the loss in revenue account, we shall write off the £60,441 which is the balance of loss in the revenue account shown in the balance-sheet, we shall provide £639,110 for depreciation on investments, and we are left with a balance of £43,669, which for the moment we shall treat as a reserve for bad or doubtful debts or contingencies, but we have no reason to believe that our loans, which are all secured, are otherwise than good. The company will then be placed on a basis which can only be considered as eminently sound, and I for one would be frankly disappointed if such a position did not show a substantial improvement in the near future. Whatever may have been the past results, our business is well established, and our co-operation with important mining groups is, if anything, closer to-day. Our large expenditure on investigation has not been entirely wasted, and it has a potential value in the future. We are a very live and busy concern, and new business is offering almost daily, which, if we so wish, we have ample capital to undertake.

THE ZINC CORPORATION, LIMITED.

BOARD'S SOUND AND CAUTIOUS POLICY.

The eleventh ordinary general meeting of the Zinc Corporation, Limited, was held, on the 14th instant, at River Plate House, Finsbury circus, London, Mr F. A. Govett, the chairman and managing director of the company, presiding.

The Chairman said he was not able to report much improvement in the company's general position. The mine and lead concentrator had been out of operation for over two and a half years, while in the course of the last twelve months there had been a heavy fall in the price of the metals in which the company was interested, and the recovery which has since taken place was not sufficient for there to be any probability of an early resumption of work. He was not very hopeful of a rapid improvement in world conditions, and he regarded it as the duty of the board to take a conservative line and preserve the company's resources as far as possible. All that they had done was to work the zinc concentrator. The profits would be in excess of what was needed to pay the preference dividend, but in view of the fact that after so long an interval a lot of money would have to be spent upon

the plant to bring it up to proper efficiency, the board regarded it as of paramount importance to hoard their cash. That might seem rather hard on the ordinary shareholders, but he was sure it was the proper course.

RIGHTS ACQUIRED IN ELMORE PROCESS.

There were one or two alternative lines of progress on which they might base some reasonable expectation that the company might not be condemned in perpetuity to be shut down. The first was that a great advance had been made by the smelters at Port Pirie in the pyro-metallurgical treatment of their ores. That was an alternative on which they would rely in case the second failed. The second held out the greatest promise. They held an option to acquire about a one-sixth interest in the Australian rights of the Elmore process, and they had recently acquired, at a depreciated price, the considerable interest of some 45,000 shares in the parent company—the Chemical and Metallurgical Corporation. Should the promised results on a working scale test on the Burma Corporation ore and their own bear out the claims that had been based on long preliminary work, it would mean a very considerable change. So far as they were concerned with the existing methods, with lead at £20, spelter at £25, and 3s silver, their profit per ton of ore under the conditions in 1918 had worked out at about 11s. With the same metal prices, under the Elmore process, the estimated value of the metals recovered would be 73s 10d per ton, showing a profit of 23s as against 11s. Those figures must not be taken as certain to be realised, as the test, though on a very large scale, had not yet been on a commercial scale. Meanwhile the company was dependent on its present methods, and on the general conditions of labour on which the prosperity of their industry depended.

As to the future of lead, stocks of metal were low, and consumption, taking Europe and America together, was expanding. Therefore one could perhaps take a happier view than in 1921.

BROKEN HILL SMELTERS.

Dealing with the company's interest in the Broken Hill Associated Smelters, the Chairman said that their association with that undertaking had been of incalculable benefit, and in any case he hardly thought the Government of Australia would allow them to abandon the production of metals as opposed to the production of concentrates to sell. There had been an adjustment of wages at Port Pirie and stores were coming down, and though the cost of coal and coke was still disproportionately high, and the same applied to transport, on the whole they had confidence in the future of this branch of their industry. As regarded Zinc Producers, he claimed that a good deal of ignorant or malevolent criticism had been levelled at the contract made by the British Government with the producers' association. Critics should appreciate that up to the middle of 1920 the concentrates purchased by this country were paid for at a price below the world's market price. As to the Electrolytic Company, the full plant was expected to be in operation by next year, and the profits were estimated as likely to be sufficient to pay from 12½ to 15 per cent. on the ordinary stock which this company held. It would, however, take till the middle of 1923 to wipe off arrears on the preference stock. That might not seem a very gorgeous result on the £150,000 which they had embarked in that undertaking, but the business had been admirably handled, and a most successful industry had been built up, and he thought they might regard their £150,000 as a good investment. With regard to the Granville enterprise, the board trusted that more satisfactory results by way of proof would be obtained from the dredging operations this year. The board had under consideration a very large zinc property on the continent, as to which Mr King had come from Australia to investigate and advise.

The report was unanimously adopted.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED.

SUCCESS OF THE RECENT ISSUE.

The annual meeting of the Madras Electric Supply Corporation, Limited, was held on the 14th instant, Mr James Gray, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that while there was a check in the number of new consumers owing to the delay in installing additional converting plant, the total connections and the gross revenue were more than maintained in consequence of several large power consumers having come on to the mains. The gross revenue of £153,919 in 1921 showed an increase of £11,091, but the working expenses of £74,933 were increased by £12,297, so that there was a reduction of £1,206 on balance. This was increased by £20,993 in consequence of the necessary adjustment of exchange making, therefore, a total reduction of £22,199 in the net balance of revenue account for 1921 as compared with 1920. The balance carried to net revenue account amounts to £59,246, which, after adding the tramway dividend, interest, and transfer fees, and

deducting interest, sinking fund, depreciation, and taxation charges, left a balance of net revenue of £26,486. Adding to this the amount brought forward from last year, and deducting the preference dividend, there remained a balance of £30,356, out of which the directors recommend a dividend on the ordinary shares of 8 per cent., free of income-tax, additional remuneration to the directors in terms of the articles of association, £445, and transfer to general reserve fund of £5,000, leaving revenue to be carried forward to next year of £9,727. The expenditure on capital account on buildings and machinery amounted to £29,070, and on mains £21,216.

The number of preference shares converted in ordinary shares on December 31st last was 7,819, the capital account thus being represented by 92,181 preference shares and 193,819 ordinary shares. The debenture, stock sinking fund reserve and general reserve thus showed substantial increases, and these funds now more than covered any depreciation which might have arisen on the investments. The sum provided for depreciation and renewals for 1921 was £15,000, and the amount now standing at the credit of that account was £67,319, quite a substantial proportion of the total capital expenditure. In consequence of the strike which occurred in the early part of 1921, the results from the tramways were less satisfactory, and the dividend on the ordinary shares was reduced from 8 per cent., free of income-tax, to 5 per cent., free of income-tax.

To meet continuous demands for supply, additional generating and converting plant was being supplied. To provide the funds for this and other purposes the board recently issued 200,000 7 per cent. second debentures at 95. The issue was a great success, having been subscribed twelve times over.

The report and accounts were adopted.

CITY GENERAL TRUST, LIMITED.

AMALGAMATION WITH BRITISH AND ALLIED INVESTMENTS CORPORATION.

An extraordinary general meeting of the City General Trust, Limited, was held, on the 12th instant, at Kingsway Hall, London, Lord Askwith (chairman of the company) presiding.

The Chairman said: In moving the resolution for the liquidation of this company, I would call attention to the circular dated June 3rd, in which the proposal is laid before the shareholders. This proposal is an offer for an amalgamation made by the British and Allied Investments Corporation, Limited, of 3 and 4 Lothbury, upon terms which have been arrived at as a result of the negotiations which have taken place. The company with which it is proposed to ally has an authorised capital of £1,000,000, of which £400,000 have been fully paid up. It is an issuing house with a strong board of directors, under the chairmanship of the Earl of Harrowby, and has been successful in paying dividends since 1918. On an amalgamation there will be payable to you for the half-year ending June 30th a dividend for six months at the rate of 10 per cent. per annum, and in return for your certificates in the City General Trust you will receive a certificate for an equal number of shares in the British and Allied Investments Corporation; that is to say, the whole of the assets of the City General Trust will be handed over to the British and Allied Investments Corporation, and the shareholders of the City General Trust will receive for each share a share in that company, plus an immediate dividend of 5 per cent. The transaction is to be carried through by means of the Far East Finance Corporation, Limited, the whole of whose share capital, with the exception of 60 shares, is held by the British and Allied Investments Corpora-

tion, Limited. The British and Allied Investments Corporation have not at present an official quotation, because their shares are held by a small number of shareholders; but it is estimated that the value of their shares is about 18s, at which price transactions have taken place. As chairman, I take a place upon the board of the British and Allied Investments Corporation, Limited, and the other directors of this company will receive certain compensation for loss of office. The advantage of the amalgamation is, I think, apparent. It has been brought before the notice of the board, after very careful negotiations, by Mr Fredk. J. Benson. He was the chief organiser of the City General Trust, and has been desirous of giving the shareholders a return for their money by putting their holdings upon the best basis. I feel that credit is due to him for the caution and the knowledge he has shown in relation to your affairs.

Sir William H. Porter, Bart., seconded the resolution, which was carried unanimously.

The draft agreement was also unanimously agreed to, and a hearty vote of thanks to the board concluded the proceedings.

WHITEAWAY, LAIDLAW, AND CO., LIMITED.

DISAPPOINTING RESULTS—BRIGHTER OUTLOOK.

The fourteenth annual general meeting of Whiteaway, Laidlaw, and Co., Limited, was held, on the 13th instant, at the offices, 5 Cripplegate buildings, London, Mr Mence Wilkinson (chairman and managing director) presiding.

The Chairman moved the adoption of the report and accounts, and said: The company showed a loss of £32,761 on their trading for the year. In their accounts of a year ago, stock-in-trade, shown on the credit side of the balance-sheet, was £1,186,552. Although the figure was a large one, the percentage of stock on hand to the amount of trade done during the year compared favourably with the previous five years, but by the end of August the stock they had on hand could, at a conservative estimate, have been replaced at 25 per cent. less. In these circumstances there was only one safe course to adopt—namely, to turn the stock into cash as quickly as they could, irrespective of whether a profit was made or not; in other words, they thought it best to cut their loss and face the prospects of a bad year. Another important factor which operated to their disadvantage was the rupee and dollar exchange. The rupee, which averaged 1s 9d in the year ended February 28, 1921, averaged 1s 3½d in the past year—a drop of 5½d—while the China dollar showed an average fall of 1s 1½d in the same period. In addition to the difficulties of depreciated stock and unfavourable exchanges, they had had also to contend with a period of depression the like of which he had never known during his 38 years' experience in the East. These were the reasons why the accounts showed a loss in place of a profit.

As to the future, shareholders would not expect him to make a definite forecast, but their stock-in-trade, having been written down to current prices, could be, and was now being, sold at a profit. Further, the rupee exchange had been steady for the last six months at 1s 3½d. What they wanted in exchange was stability.

Trade still remained depressed in India, but he thought the clouds were lifting a little.

The profit and loss account showed a loss on trading of £32,761, to which had to be added income-tax, depreciation, and directors' fees, making a total of £97,617.

During the year the dividends on the 6 per cent. and 7 per cent. preference shares were paid, and an interim dividend of 5 per cent., free of income-tax, was paid on the ordinary shares. These dividends amounted to £70,969. The board shared the shareholders' regret that it could not recommend the payment of a further dividend on the ordinary shares, and thought they would accept the explanations he had given as justifying this course.

Mr Robert Whyte seconded the resolution, which was unanimously adopted.

LOBITOS OILFIELDS, LIMITED.

33 PER CENT. DIVIDEND FREE OF TAX.

The fourteenth annual meeting of Lobitos Oilfields, Limited, was held, on the 13th instant, at Winchester House, London, the Right Hon. Sir Archibald Williamson, Bart., M.P., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the production of oil for the year 1921 was 103,755 tons, which was again an improvement on the preceding year. The net income from this production was £465,172, as against £75,222. With the profit on the operation of the company's steamers, and after deducting income-tax, London expenses, &c., there was a profit for the year of £516,423. The gain from the steamers was £12,341, as against £4,003 in 1920, the increase mainly coming from a profitable charter of the "El Lobo." The "El Oso" was only in operation in the last three months of the year, while "El Grillo" only commenced operations at the end of 1921. All three

were now chartered for periods extending beyond December 31, 1922, and this branch of the company's income should be more than maintained.

With regard to work on the field, 18 new wells were put on the producing list, and four were abandoned, so that on December 31st there were 167 producing wells, and 15 were in process of drilling. The wells were not large producers, and many had a short life, but by prudent husbanding of their resources they had been able to more than keep pace with the depletion of the wells, and had established the special quality of Lobitos oil in a high place in the estimation of the market. They had applied for new areas, and next year he hoped to announce a considerable addition to the lands in which they operated. With regard to Colombia, they had acquired titles to large and promising areas, but some difficulties had arisen, and their idea was first to await the results of development by others, and the construction of a pipeline to the sea. Some day Colombia would be an immense oil-producing country.

Shareholders would have been agreeably surprised with the profit of the year, and he did not anticipate that they would revert to the low level of prices which ruled a few years ago. They were putting £100,000 to reserve, writing £100,000 off cost of steamers, and placing £125,000 to taxation reserve. The dividend for the year was 35 per cent., free of income-tax, and they were carrying forward £85,261. They were looking forward with confidence to a continuance of prosperity in the current year.

The report and accounts were unanimously adopted, and the increase in the directors' fees, of which notice had been given, was approved.

THE BRITISH ELECTRIC TRACTION COMPANY, LIMITED.

SATISFACTORY RESULTS—INCREASED DIVIDEND.

The twenty-sixth ordinary general meeting of the British Electric Traction Company, Limited, was held, on the 16th instant, at the Holborn Restaurant, London. Mr J. S. Austin, the chairman, presided.

The secretary (Mr Thomas Bower) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the directors proposed to ask the shareholders that day to sanction the payment of a dividend of 4½ per cent., which compared with 4 per cent. paid last year. There might be some among them who would ask why they were paying an increased dividend when their earnings were only about the same as they had been in the previous year. The answer to that was that the directors believed that their income was more stabilised, and was becoming still more stabilised, and that consequently they were justified in going a little nearer to their limit than they had been before. To summarise what they had done during the past year, they had earned that 4½ per cent. which they proposed to distribute, and in addition they had earned a sum of about £31,500. That latter sum they proposed to dispose of by putting £14,000 odd to reserve and by adding to their carry forward a sum of about £17,000.

With regard to the tramways, during the current year up to date there was a falling off in receipts to the extent of some

The First National Bank of Boston

banking of every nature

Correspondence solicited.

20 per cent., but against that the tramways could set a very considerable saving in expenses. On the whole, however, he would say that he did not think that tramway results in the current year would be so good as they had been in the past. In regard to electric power, owing to the engineers' strike, it was obvious that there would be a decrease. With regard to electric lighting, it was doing fairly well at present.

One of the latest developments of their enterprise was their interest in motor-omnibuses—not charr-a-bancs, which was an entirely different business, but omnibuses which traversed specified routes at fixed times. The business was not a gold-mine, but there was a living in it.

After announcing that it was the present intention of the directors to declare an interim dividend about December next, the Chairman concluded by referring to the prospects. In that connection he was not going to tie himself down to prophesying an increased dividend during the current year, but he saw no reason why in the future the company should prove an exception to other companies in a similar position in the matter of steady progress.

The report and accounts were unanimously adopted, and the formal business was duly transacted.

New rules for issuing bank notes have been given by Statute of November 2, 1920. We are authoritatively informed that the right of issue of the Bank of Norway is calculated at an amount of 250 million crowns above the stock of gold and at present extraordinary additional amount of 50 million crowns from July 25, 1921, until further order.

Through Royal resolution of February 3, 1922, it has been resolved that the extraordinary right of issuing bank notes has been reduced from 50 millions to 25 millions from February 4, 1922 (this day included).

		Straits Settlements	18,235
Total value of imports of gold	649,899	Total declared value of exports registered in the week	456,308

Messrs Samuel Montagu and Co. write on June 15th as follows:—

GOLD.

A fair amount of gold came on offer, and was taken on account of India and the United States of America. New York reports arrivals of gold to the total value of \$3,823,000—\$3,500,000 from Sweden and \$323,000 from France. The United States gold imports during the month of May amounted to only \$9,000,000—the lowest monthly total reported during the present year. Exports during the same period were valued at \$3,000,000, leaving a net import to the value of \$6,000,000. The movements of gold to and from Holland during the year 1921 were as follows:—

	Imports.	Exports.
	Kilograms.	Kilograms.
Ingot, bars and pieces, gold dust, &c., &c.	1,288	20,696
Foil and wire	267	2
Specie	12,048	34,912
Total	13,602	55,610

Rumours emanate from America that the Petrograd mint is at work again, engaged in turning out five and ten-ruble gold coins as well as silver coins of various denominations. The metal is said to be provided from the gold and silver treasures recently taken by the Soviet authorities from Russian churches. Inasmuch as the prospect of currency composed of these metals circulating within the borders of Russia is extremely remote, the most economical method of employing the precious metals, which must sooner or later be destined to leave the Russian frontiers, would be to treat them as bullion.

SILVER.

The market has shown a lack of animation during the current week. The chief feature has been its smallness, which has rendered the price peculiarly liable to be influenced by an excess of demand or of supply, though the amount of the excess would never be considered really important in active conditions. China has supported prices here and in America; there has also been demand from the Indian bazaars and from bear covering. The Continent and India have been sellers, but the United States have not shown much disposition to let out silver. The details as to silver stocks at Shanghai show a substantial increase. The market has no pronounced tendency, and unless some new and at present unforeseen factor intervenes, prices may keep within somewhat narrow limits. An official monsoon forecast has been issued for 1922. It states that the monsoon may be delayed, but that the total rainfall in North-West India is not likely to differ far from the normal in the Peninsula, excluding Mysore and South and Central Madras. A useful forecast is not possible for Upper Burma, North-East India, Mysore and Malabar, owing to conflicting indications.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	May 22, 1922.	May 31, 1922.	June 7, 1922.

No silver coinage was reported during the week ending 7th inst. The stock in Shanghai on the 10th inst. consisted of about 26,200,000 ounces in sycee, \$30,000,000, and 1,630 silver bars, as compared with 25,600,000 ounces in sycee and \$27,000,000 on the 6th inst. The Shanghai exchange is quoted at 3s 7d the tael.

Reports and Notices.

On the completion of their new premises the head office of the Provident Mutual Life Assurance Association will be moved from 222 Strand to 25-31 Moorgate, E.C. 2, on Monday, the 19th inst.

As announced by the chairman at the recent annual general meeting of the Royal Insurance Company, Limited, Mr R. W. Thompson, accident manager, will retire—under superannuation—on the 30th instant, after more than 38 years' continuous service with the "Northern Accident" and the "Royal." The directors have made the following appointments, to take effect as from July 1, 1922, viz:—

Mr J. M. Dumbell (at present assistant accident manager) to be accident manager; Mr A. H. Blake to be assistant accident manager.

Owing to ill-health Mr W. R. Rendell has decided to resign the general management of the Metropolitan Electric Supply Company, Limited, in the autumn.

Lord Milner has been elected chairman of the Rio Tinto Company.

Spicers and Pond, Limited, announce that the register of stockholders will be closed from June 17 to June 30, 1922, both dates inclusive, for the preparation of the interest warrants. Warrants will be posted on the 29th inst.

MISCELLANEOUS.

RICHARDSONS, WESTGARTH, AND CO.—The report for 1921 shows a profit, which, after providing for estimated liabilities to the Government, amounts to £305,208, which compares with a profit of £155,635 for the year 1920. The ordinary shareholders, who have not received a dividend since October, 1907, when 4 per cent. was paid, are to receive a distribution of 8 per cent. for 1921. The net balance of profits to December 31, 1920, was £54,028, but two years' preference dividend, absorbing £42,000, paying up arrears to April 30, 1919, was deducted from this, leaving £12,028, which, added to £305,208, makes £317,236 available. The preference dividend is now paid right up to date, the three years absorbing £63,000, while the ordinary dividend of 8 per cent. takes £28,000. Debenture interest for 1921 absorbs £15,750. Other allocations are:—Directors' fees, £1,700; depreciation for year 1921, £45,000; written off investments in heavy stampings, £9,000; provision for development of Diesel engines, £50,000; reserve account, £50,000. The balance of £54,786 is carried forward. The directors state that "the financial position of the company is at present better and stronger than ever before in its history. Its assets in buildings, machinery, stock-in-trade, and cash for working the business, &c., amply justify the capital, and on the completion of certain repairs the properties generally will be in excellent condition."

Mark Lane, Friday Evening.

Useful rains have fallen during the past week and proved of great benefit to cereal crops, which were in need of moisture. Latest official reports describe winter wheat as a strong, healthy plant of good colour. Dull conditions prevailed at market, trade being restricted and prices mostly easier, particularly with regard to breadstuffs. Native wheat moves off slowly, despite moderate

supplies, and rates easy at 53s to 55s per 504 lbs, free on rail. Imported quiet and easier in sympathy with lower c.i.f. offers, though at the close the market was less depressed. No. 1 Northern Manitoba quoted 59s, No. 3 ditto 55s, Australian 59s, all landed per 406 lbs, and Rosafé 64 lbs ex ship to arrive 54s 6d per 480 lbs. The cargo market proved dull, and rates declined owing to lower American and Argentine advices. Small sales, chiefly to the Continent, include steamers of Australian arrived at 53s 3d, ditto afloat 53s 9d to 53s, Rosafé 63½ lbs due 51s 6d, ditto afloat 50s 6d to 50s, No. 2 hard winter July-August 48s 6d, and August-September 48s per 480 lbs. Flour is pressed for sale at declining rates. London standard straight run officially quoted 46s 6d, town households 44s 6d, patents 48s 6d to 49s 6d, all English straight run 44s 6d per sack delivered in London area. All English country straights 41s 6d to 42s 6d per sack, free on rail at London stations. Imported easier and difficult to sell. Manitoba export patents 45s, straights 41s, Pacific 43s, Australian 42s per 280 lbs ex store. On c.i.f. terms business remains almost at a standstill. Canadian patents June quoted 43s, straights 39s, Kansas patents July 42s, and Australian 38s per 280 lbs. Millers' offals quiet and easier. Broad bran quoted £7 10s to £8, ordinary £6 10s, middlings £8 10s to £8 15s per ton ex mill, bags included. Of imported, fancy Plate middlings £9 10s. Plate pollards £7 10s per ton landed. Maize dull and easier. Yellow La Plata old quoted 35s 6d, new 37s, yellow African 34s 6d, and No. 2 American mixed 34s, all landed per 480 lbs. Cargoes neglected and weaker. Steamers of La Plata afloat sold 35s to 34s 6d, while a fair trade passed in La Plata parcels at irregular prices. White African maize meal quoted £7 15s per ton landed. Barley inactive and lower to sell. English malting nominal, while feeding descriptions range from 43s to 48s per 448 lbs free on rail. Of

imported, Californian quoted 40s to 40s 6d, Australian Chevalier 40s to 52s, Chilean ditto 40s to 53s landed per 448 lbs. No. 4 Canadian Western ex ship to arrive 31s 9d, and Tunisian landed 37s per 400 lbs. C.i.f. parcels dull, and wheat tended in buyers' favour. Oats, native, in small supply and held for generally steady prices, but imported descriptions ruled lower in sympathy with reduced forward offers. English whites 35s to 38s, grey winters 34s to 36s 6d, and black winters 34s to 35s per 36 lbs as to sample free on rail. Of imported, Plate f.a.q. 26s to 26s 3d, ditto clipped 28s 6d, No. 2 Canada Western 31s, No. 2 white clipped American 38 lbs 26s 3d, New Zealand 35s to 40s, all landed per 320 lbs. Oatmeal quiet and tendency easier. London made coarse pinhead quoted £19, medium ditto £17 10s, whole groats £18, rolled oats £18 10s, flaked £21, ex mill, ordinary Scottish oatmeal £20 10s to £21 10s, American ditto, all cuts, £18 to £18 10s per ton. English beans continue in slow request. Springs range from 56s to 65s, and winters 51s to 54s per 532 lbs, free on rail. Of imported, Madagascar haricots, old crop quoted 10s to 12s, ditto new 18s to 18s 6d, Rangoon hand picked 7s to 7s 3d per cwt. Peas firm, with a fair demand. English maples quoted 80s to 94s, duns 60s to 68s per 504 lbs, free on rail. Imported quiet. Japanese spot 51s to 52s, Tasmanian "A" grade 23s to 24s, New Zealand blue 22s to 25s, Dutch hand picked 29s to 29s 6d, and screened 25s to 26s per cwt. Lentils steady. No. 1 split 29s to 30s, No. 2 ditto 22s to 24s, and Egyptian 22s to 23s per 100 lbs. English rye 40s to 45s per 504 lbs, free on rail. Homeward grain chartering was confined to narrow limits, and tendency of rates weak in most directions. The River Plate section proved inactive, chartering being interrupted by adverse weather conditions and rates weak at 25s to 25s 6d for steamers loading at upper ports, June-July to U.K./Cont. A moderate amount of business was effected from North America chiefly to Mediterranean ports. Montreal to Mediterranean, not east of West Italy, was fixed at 20 cents one, 21 cents two, and 22 cents per 100 lbs three ports of discharge, while American Northern Range to Mediterranean established 45 6d per qr one, 4s 7½d two, 4s 9d three ports, with Adriatic options. North Pacific chartered at 35s to 37s 6d per ton to U.K./Cont. September, with 37s paid for a cargo of barley from San Francisco. Eastern markets lack orders, and rates largely nominal from India, Bombay on dead

weight being named at 16s on dead weight. Australia dull and featureless. Danube chartering was more active, and steamers fixed to U.K./Cont. at 17s 6d to 17s 9d prompt landing.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated June 15th, is as follows:—Pig-iron: Although the ballot of the engineers is in favour of a settlement of the strike, there are still some details to be settled. It will probably be a few weeks before work can be resumed, but it is expected that it will have a good effect on the iron and steel trade, and result in more work. The improvement, however, will only be gradual. Meantime, there is very little doing in the pig-iron market, and prices are as follows:—No. 3 Cleveland G.M.B., 90s per ton; East Coast hematite mixed numbers, 95s per ton. Manufactured iron and steel: The reduction of 10s per ton in the price of plates, angles, and sections should influence some orders being given out, and works are already making arrangements to restart some of their furnaces. Steel ship plates, home, £10; steel ship angles, home, £9 10s; iron bars, home, £12; steel rails, home, £9 10s net. Iron ore: Business is very quiet. Deliveries against old contracts have been very heavy recently, and works have accumulated sufficient stocks to keep them going for some time, and are not inclined to make new contracts. The nominal quotation of 27s for best Rubio is still maintained, but if there was any buying sellers would probably be willing to shade this figure.

Our Glasgow correspondent (writing on Thursday) says:—Already arrangements have been made for the active prosecution of constructive operations on large steamers lying unfinished in the Fairfield, Clydebank, and Govan yards, and the list, it is calculated, will be added to as the weeks pass on, though there is no sign yet of owners being disposed to the giving out of contracts for new boats. Steelmakers are moving in the direction of inspiring enterprise, and have taken a first step by reducing their quotations for material by 10s a ton. Now boiler plates are called £13 10s, ship plates (¾ in. and upwards) £10, and sections £9 10s,

all with usual extras and conditions. These are the first changes which have been effected since the year came in. Black sheet makers have followed suit (from yesterday), and their new list reads:—Under ½ inch to ¾, £10 15s—10s off; and ¾ inch to 1 inch, £11 5s (also 10s down); 1 to 16 gauge stands at £13 10s; 16 to 20, £13 5s; 20 to 24, £13 15s; and 24 to 27, £14 15s. In the case of nail sheets, 14g and heavier are £9 10s; 15g and heavier, £9 15s; and 16g and heavier, £10. The outputs from blast furnaces are now being absorbed, and additions to the active plant are progressing. One large firm, Glengarnock, has entered into a contract to deliver given quantities of foundry iron over the coming 12 months to a United States consumer. This departure has created great satisfaction, and has contributed to a sensible stiffening of values for all Scotch brands. No. 3 has touched 95s, and No. 1 has been done at 5s more (delivered on trucks at makers' works). At the weekly market of the "ring" yesterday, Scotch No. 3 G.M.B. was 99s f.o.b. Glasgow, sellers; No. 3 Cleveland G.M.B., 90s f.o.b. Middlesbro'; and mixed numbers East Coast hematite, 96s f.o.b. Middlesbro'. Late to-day it got bruited about that there was an appreciable expansion observable in the export inquiries for all description of "pigs," which left off strong for the week. No material change falls to be noted in the finishing and manufacturing department of iron and steel; but a fair volume of business continues to be handled. Orders for some large locomotive engines have been given out in the Glasgow district (export), and the prospects are described as fairly encouraging. Black sheet makers advise that inquiries from India, Australia, and the Far East generally are again picking up. Some delayed orders for plates, joists, and tubes are (this week-end) being proceeded with; and for textile machinery the need seems improving. The coal trade still stands much in need of improvement.

Our Sheffield correspondent writes: The settlement of the engineering dispute has already heartened business people generally and restored confidence in the future. Both masters and men are eager to get to work again, and the feeling all round is good. Some time must elapse, however, before any considerable number of the locked-out men can be set on owing to the shortage of orders in many branches and the cancellation or suspension of much during the dispute. On the other hand, certain important establishments have considerable accumulations of work ready to be proceeded with forthwith. There will be a gradual reduction in the ranks of the unemployed, but there is no prospect of the early absorption of the bulk of the men. The inquiry for mild steel is developing nicely. The worst branches are those producing railway steel, and materials and tools for the

shipbuilding industry. The hand-tool branches have been expanding nicely for several weeks past, and there is a certainty of greater general activity in the course of a week or two than at any previous time this year. The recognition that prices of iron and steel have reached a stable basis has done much to stimulate buying on a greater scale than formerly. While by no means good overseas trade continues to improve, Sheffield steel makers are already in the market for the early delivery of hematite pig, and throughout the country preparations are being pushed forward for the restarting of blast furnaces and open-hearth steel furnaces. Conditions in the coal trade are very mixed. This district is obtaining a moderate share of export business, and there is a growing demand for small fuel, especially for coking. There is, in fact, a shortage of coking fuel owing to the short working of the pits, and an increased demand for blast-furnace coke is developing. The trade in house coal has almost collapsed, nor are the gas companies taking large deliveries. Prices are somewhat irregular.

Our Cardiff correspondent writes:—A note of extreme pessimism has characterised the coal market during the past few days. The restriction of output during the Whitsun holidays has not been sufficient to reverse the downward tendency which prices took before the holidays. Best Admiralty steam coals, which a fortnight ago were ruling up to 27s 6d, have been sold this week at 26s per ton on the basis of two-thirds large and one-third small, the small coal price being 17s per ton. These prices, which give an average f.o.b. figure of only 23s for the best grade of steam coals produced in the South Wales coal-fields, are unremunerative. They represent a pit-head price of between 19s and 20s per ton, and, as the lower-grade coals have declined proportionately, the average price represented by the week's market quotations involves a considerable loss to the collieries. The position created by this slump is an extremely grave one. The drain on the reserves of the collieries during the past twelve months has been so heavy as to leave them in a more impoverished state than that experienced in any previous depression. At the meeting of the Coalowners' Association held last week a proposal to enforce a schedule of minimum prices was rejected, but under the pressure of the representations of some of the bigger collieries, the suggestion of the adoption of some form of regulation was referred back to the Commercial Committee of the Association. That committee has met this week, but the proceedings at the meeting held on Tuesday served only to discover how acute were the differences between the members, and no action was taken. It is felt that unless some proposal is put into force the miners will take matters into their own hands and endeavour to raise prices by restricting outputs under a system of stop days. This expedient has been adopted in the past, but it has never had the effects intended, and if it is adopted in the present emergency it will certainly lead to a heavy increase in the cost of production. The matter is to be further considered by the Commercial Committee, and efforts are being made to secure active co-operation between employers and workmen. There the matter stands for the moment. The Customs returns for May give a larger volume of trade than in any other month since May, 1919, and the weekly returns to date for June maintain the weekly rate in May. The explanation, therefore, of the fall in prices this week is an expansion in output in excess of the current inland and foreign demand.

The current prices on Thursday were as follows:—Best Admiralty, large, 26s to 26s 6d; seconds, 25s 6d to 26s; best drys, 25s 6d to 26s; black veins, 26s; Western Valleys, 26s to 26s 6d; Eastern Valleys, 25s 6d to 26s; best bunker smalls, 17s to 18s; ordinary cargo smalls, 16s 6d to 17s; coke, export, 34s; inland, 35s; pitwood, 31s.

THE COTTON TRADE.

MANCHESTER, June 15.

The market this week has been rather dearer, but spinners and manufacturers have experienced much difficulty in establishing the higher range of prices, and numerous buyers have refused to pay the advances required. The general tone has been healthy, but, considering the inquiry met with, the turnover has been rather disappointing. Scattered transactions have been put through in piece goods for India, chiefly in light cloths. Some fair lines have been booked for China, but there has been more activity in fancies and specialties than in standard makes. Fabrics suitable for printing and dyeing have been in encouraging request for European countries, the Near East, and South America. Light fancy materials continue to move off freely in home-trade circles.

OVERSEAS TRADE RETURNS.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—This market is comparatively quiet as a result of the easier tendency in wool values. The decline from the recent high level started in Australia, and the auctions of Colonial wool in London this week have revealed a decided inclination on the part of buyers to pay less money for merinos. No real weakness has developed, and if prices can be stabilised on about the present basis, there should again be quite a big buying movement, especially as the Continent is interested and there is every prospect of considerable activity on American account. With steadily increasing consumption at home and abroad, and with supplies of really good combing merinos none too liberal, there is little in the present situation to encourage the belief that prices will continue to ease, and all that is wanted to renew confidence is a good clearance at steady rates. In the meantime both topmakers and spinners can afford to stand aside and wait for the market to settle. Topmakers are well sold forward, and most spinners have covered their immediate requirements, so that a slight pause will probably do more good than harm. Quotations for tops are rather irregular, be-

cause some firms are indifferent to new business and the market is not being tested to any extent; but, generally speaking, buyers with definite business can do much better than they were able to do a week ago, and it would have to be a particularly good 64's top to make more than 4s 6d, even for spot delivery. Crossbreeds are also the turn easier and in buyers' favour. There is very little change in yarns. Most spinners are busy on old contracts, and are not prepared to consider new offers at less than current quotations. Development in the piece goods trade is not spectacular, but recent improvement is being maintained, and there is again more inquiry for light-weight worsteds for Japan, early delivery being an essential condition.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

The trade has been greatly relieved by the result of the opening of the sales in London. To find all good wools, with the exception of medium and coarse crossbreeds, steady and firm means a great deal to the standing of the raw material. No doubt buyers have a fairly big task before them, for in the 14 selling days arranged, 172,000 bales will be offered. It is possible that merinos may ease a little before the finish, but a decline of 5 per cent. does not amount to much. Some little variation in values is only to be expected, but so long as there is no marked decline, buyers of yarns and pieces can pursue the even tenor of their ways with a comparatively easy mind. A sound and steady market is much more to be desired than alternate rises and falls, being much more conducive to profitable business. It is recognised that merinos are now quite as high as economic requirements permit. If 64's tops were nearer 4s, there would be more incentive towards a general revival of the textile industry. I endorse the opinion expressed by Messrs H. Dawson and Co. in their recent report that "raw material values, especially in finer grades, have reached a fairly high level, and business is becoming a little more difficult. Merinos, however, are still being confidently taken, and there is an increasing consumption of crossbreeds." The last-named fact is reason for great satisfaction. I have contended all along that business in crossbreeds will never regain its pre-war proportions until Russia and the Balkan States are able to purchase crossbred fabrics. The comparative cheapness of these goods should be an incentive to large and increasing purchases by the countries named through Germany. German business houses have had more experience in dealing with Russian and other traders than British houses, and are, therefore, better equipped for taking financial risks.

There was the usual crowd of buyers in London last Tuesday when the sales opened, representatives from the United States being present. Competition was fully as good as was expected, the result being that merinos showed very little change compared with the closing week of the previous series, prices ranging from par to 5 per cent. below the highest point of the May auctions. This amounts to practically nothing, the eager competition of Continental buyers being the outstanding feature of the first sale. Fine crossbreeds sold remarkably well, and were eagerly competed for, but medium and coarse crossbreeds often declined 5 per cent. We are disposed to estimate that all classes of crossbreeds showed a depreciation of practically 5 per cent., but the wonder is that the decline has not been more. If the sales continue with prices equal to the opening level, real good will be done to the trade as a whole.

Anyone taking an impartial view of the situation must regard it as sound. The cessation of the advance in merinos is to be welcomed, these wools being dear enough in all conscience. There is absolutely no necessity for fine crossbreeds or merinos to become any dearer, this notwithstanding that the supply of fine wools is gradually diminishing. Some are attempting to make capital out of the statistical position of merinos, but present stocks are adequate to meet all present and prospective needs.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Tanners seem to have called a halt to the price of their raw material, as prices remained steady in Bermondsey on Thursday last. Best ox sold from 6 1/2d to 7d, and best cows at 6 1/2d to 7d, neither class showing any change on last week's values. Heavy calf were weaker, and one class declined 1 1/2d, whilst light were a shade firmer, and advanced 1/2d per lb. Wools were steady at 3d to 3s each, and the first offering of shorn pelts made from 1s 10d to 2s 10d each. The foreign market is firm, with no great activity in any direction, although a large purchase of Leibig hides has been made on home account. Dry hides are not selling well, and I hear of parcels having been sold to the Continent at a low price. The American market is cabled as strong, with best native Chicago packers now selling at 16 1/2 cents.

The Sixty Policy

Secures protection for your dependants
And a pension for yourself
And eases the cost during the present years of uncertainty.

National Provident Institution,
48 GRACECHURCH STREET, LONDON, E.C.3.

Although a fair amount of sole leather is going out all the time, much more could be done without inconvenience. Values even now are not stable enough, and would-be buyers do not seem happy at the thought of holding much stock. The unstable exchange is also selling against Continental business, as the quantity of split hides sent to France shows a falling off during the past week or two. Trade in upper stock is quiet, although now that the engineers' strike is settled, it is hoped the demand for stout boots will put a little life into the wax kip trade. Suedes and patent are still the best sellers, but inquiries are now being made for box and willow calf for the autumn business.

Shoe manufacturers are still turning out light goods for the summer, as retailers have run stocks down low. Prices are being slowly brought into line with the cost of production, and some cheap shoes are now to be had if the public do a little more "shopping" to get them.

VEGETABLE OILS AND OILSEEDS.

The all-round weakness in the markets for vegetable oils has been accentuated during the week. Raw linseed oil, in the absence of substantial demand and in sympathy with the break in seed, has eased off considerably, and on Wednesday there were sellers of spot oil at £40 ex Hull mill and £41 10s London, while business was done for June delivery at £38 10s down to £37, with a little interest in June-August at £36 and September-December at £34 10s. On Thursday, however, the market rallied somewhat, and closed steady at about 10s improvement for spot oil.

Cotton oils have been neglected and in poor demand, and prices have been reduced 10s to 30s a ton without attracting much business. Rape oil offers freely, both prompt and forward, at a lower range of values. Conde soya beans have been in fair demand round £40 spot and £39 forward; but palm kernel and ground nut oil continue a slow trade. Castor oil quotations are unchanged at £52 (barrels free) ex Hull mill for first pressure.

In the oilseed section, Plate linseed has been easier on lower Argentine and American advices, and prices are down about 40s a ton on the week. A fair business in Plate on passage to Hull has been done at £18 down to £17 15s, and for shipment at £17 15s to £17 12s 6d, since when the position appreciated to £18 for both spot and shipment. Both Antwerp and Hamburg were also ready buyers at £18 7s 6d on passage and shipment. Indian linseed eased off to £19 10s paid for Calcutta to London, June-July shipment, and £21 7s 6d paid for Bombay, July-August, to the Continent. Egyptian cottonseed is lower, with Sakellarides on spot sold at £10 10s. There is little doing in soya beans to this country. Hamburg has been a buyer of beans on passage at £12 10s.

A slightly better demand is reported from Hull for linseed cakes, but cotton cakes are quiet and 5s lower.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, June 16.

SUGAR.—The market opened the week very steadily with fair inquiries, but later assumed a quieter tone, and rates in forward positions moved downward. Messrs Tate and Lyle's cubes sold, 55s to 56s; crushed, 53s 6d; B caster, 52s 9d; yellow crystals, 44s 3d; granulated, August, quoted 49s 9d; September, 49s 6d. Glebe K, granulated, spot, London, 49s 6d. Crystallised West India quiet, with sales at 42s 6d to 44s, as to quality. American granulated, spot, sold, 48s 9d to 48s 6d; June, steamer, down to 20s 7 1/2d; then 21s 4 1/2d; July, 20s 9d to 21s 6d; August, 21s to 21s 7 1/2d, c.f. and i. London. White Mauritius, spot, 46s to 47s. Dutch and Czecho-Slovakian sugars quite nominal for shipment. Cuban, basis 96 per cent., June-July, sellers, 15s 3d, with business in Brazilian basis 80 per cent., afloat, at 9s 3d, both c.f. and i. terms, U.K. Cuban stocks stand at 1,015,000 tons, against 1,430,000 same time last year. Terminal market quiet, and prices lower. White, August, sold, 21s 9d to 21s 3d; December, 21s 3d to 20s 7 1/2d. Liquid glucose, spot, 27s.

COFFEE.—Spot market still very quiet, and trend of values favoured the buyer. A fair quantity offered in auction was mostly bought in. Futures slow, with no new feature to record, while rates are lower on the week.

COCOA.—In auction this week 12,800 bags were offered, of which 10,800 consisted of colonial descriptions. Demand proved very quiet, and only a small proportion found buyers, chiefly Grenada at 1s to 2s per cwt decline. Grenada, fine, 6s to 6s 1/2d; good, 5s 8s; common hard, 5s. Fine St Lucia, 60s; fine unclayed Venezuelan, 110s to 112s. Butter quiet at 1s 7d per lb.

TEA.—Indian auctions during the week embraced some 38,500 packages. With the exception of medium kinds, and which were in full supply at easier prices, there was a fair inquiry at rates showing no material alteration. Ceylon sales amounted to 20,880 packages, which met with fair support at mostly steady values.

RICE.—Market quiet, idle, and quotations in most instances purely nominal. Two Stars, spot, London, new crop, 14s 3d. Broken kinds dull, unaltered. Rangoon beans slow, and spot parcels sold 7s 1 1/2d per cwt.

SPICE.—Pepper quiet, but sellers asked steady prices. Fair black Singapore, spot, sold, 4d to 4 1/2d; ditto, July-September, steamer, 4d; Aleppy, spot, quoted, 4 1/2d; Tellicherry, 4 1/2d; white Singapore, 7d; Muntok ditto, 7 1/2d; ditto, June-August, 7 1/2d. Zanzibar cloves, steady, quiet. Spot lots sold 1s 2d. Pimento, spot, quoted 2 1/2d. Flake tapioca, fair quality on spot, sold 2 1/2d; ditto, June-August, London, 2 1/2d; ditto, Havre, 22s. Fair Penang seed pearl, spot, 21s 6d; forward, 21s. Sago flour quiet. May, steamer, done 14s 9d, and June-August, 14s 6d. Desiccated coconut steady, quiet. Spot sold

39s 6d; July-August, 36s 6d; August-September, 37s. Ginger in better demand, and rates are dearer. Fair, washed, rough Cochin, spot, sold 57s 6d for sound parcels, and Calicut 65s.

FRUIT.—There was only a quiet trade doing in most directions, but price changes were not of much importance.

brokers financing commitments in Capel Court are said to have paid as much as 3 per cent. occasionally. The likelihood of severe pressure next week is now being questioned, owing to the convenient arrangements of the calendar, which will enable the banks on the market to pay for end-September Treasury bills on July 1st, and to finance the turn of the half-year by letting Treasury bills mature at the end of June. Discount rates, which began the week stiffly under the influence of the price at which last week's batch of Treasury bills was placed, eased off to $2\frac{3}{4}$ - $2\frac{7}{8}$ per cent. on these considerations and on the reduction in the New York Federal Reserve Board's rediscount rate. Forward business in September Treasuries, for delivery in July, was reported at $2\frac{1}{2}$ per cent.

	June 23, 1922.	June 16, 1922.	June 9, 1922.	June 2, 1922.	Previous Rate and Date Changed.
Bank Rate	$3\frac{1}{2}$	$3\frac{1}{2}$	4	4	(Jne. 15, '22)
Banks Deposit Rate	$1\frac{1}{2}$	$1\frac{1}{2}$	2	2	(Jne. 15, '22)
Discount Call	$1\frac{1}{2}$	$1\frac{1}{2}$	2	2	(Jne. 15, '22)
Houses Notices	$1\frac{1}{2}$	$1\frac{1}{2}$	2	2	(Jne. 15, '22)
Market rate (3 mths' bills) ..	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	..

The Bank return showed a reduction of £584,000 in the note circulation, in spite of the transfer of another £100,000 notes to stiffen the currency notes' backing; the Reserve rose by £584,000, the stock of gold being practically unchanged. Government securities declined by £1,670,000, while Other rose by £3,196,000. Public deposits were nearly a million lower, and so the private deposits were increased by over three millions. There was a reduction of £3,610,700 in currency notes outstanding in the currency note return dated June 22, 1922. This makes the total outstanding £295,611,500, which includes £1,606,103 for notes called in but not yet cancelled. The fiduciary issue is £245,855,400, or £64,133,000 below the maximum. A further addition of £100,000 is made to Bank of England notes in Redemption Account, making a total of £19,650,000.

THE STOCK MARKETS.

The effect of last week's Bank rate reduction on Stock Exchange prices was brief, and apart from a slight rally towards the end of the week as a result of the reduction to 4 per cent. of the New York Federal Reserve Bank's re-discount rate, the general tendency has been dull. The poor response to the Indian Loan, underwriters of which were left with 63 per cent., did not improve matters. A little speculative interest was taken in Victory bonds, the drawings for which take place on Monday. Home railway stocks have fallen on realisations, and Mexicans, after a sharp spurt on the news of agreement as to payment of interest on the Mexican Debt, reacted with the advent of sellers. Industrials generally have been quiet, and business in mines was negligible, while the rubber share market is slackier than ever.

COMMODITY MARKETS.

Although the fall in coal prices shows that the demand of industry is still very feeble, there is evidence that the recovery of trade is slowly gathering momentum. Raw cotton prices show all-round gains of from $\frac{1}{4}$ d to a penny per pound, and a better demand is noticeable in the piece-good trade with China, although Indian business has not improved. The market is generally quiet in the wool trade, the general opinion being that prices will remain fairly steady on about the present basis. Orders for pig-iron from the United States and Germany have been received, but the home demand is very quiet. The outlook for steel is better, but, with the exception of a few small orders, there is no sign of any pronounced recovery in the industry. In the Cardiff coal market conditions are inclined to be worse, and prices slightly easier than they were a week ago. Quotations in the wheat market were a little higher, but not much business was done. A slight advance is also recorded in vegetable oils and oilseeds. The hide market is firm, prices all round showing a tendency to improve. The boot trade is better employed. Further details of markets and prices will be found from our special trade correspondents on later pages.

FOREIGN EXCHANGE.

The foreign exchange market has remained in a very unsettled condition during the week, and rate movements seem to indicate the general feeling to be that we are no nearer a solution of our financial troubles in Europe. This point of view has been strengthened by the disappointment at the failure of the recent Bankers' Conference in Paris. The outstanding feature has been the violent fluctuations in dollars. The rate, which has been slowly declining from the high-water mark of \$4.51 at Whitsun, declined rapidly at the end of last week to 4.45, and continued to slump on Monday, when it was for a time under 4.38. A recovery afterwards took place to 4.43, but at the time of writing part of the improvement has been lost, the rate being now round 4.41. There does not yet appear to be much movement towards covering autumn requirements, and the fall in the rate, which has been inspired from New York, would seem to be the outcome of less optimistic opinions regarding the general European position. New York forward now stands at $\frac{1}{8}$ per month over spot. As is to be expected, "Allied" currencies all show a weak tendency. Paris, which closed last week a shade over 51, is now over 51.72, with forward quotation at 1 centime per month over spot. The rise of the Brussels rate has practically kept pace with Paris, and it is now 54.55, while Italy has steadily depreciated to 92.50 at the time of writing. In spite of these movements, Berlin has kept comparatively steady, the present quotation of 1,450 showing only a rise of about 20 marks on the week. Amongst the "Neutrals," Holland and Switzerland have both quotably appreciated at 11.48 and 23.30 respectively, and forward florins are now about one point per month above spot. The Spanish rate has fluctuated between 28.30 to 28.42, and is about five points lower on the week. In the Scandinavian group, Sweden and Denmark have remained fairly steady, and at the time of writing are quoted 17.23 and 20.62 respectively. Norway, on the other hand, shows a rise of some 50 points on the week at 26.57. The recovery in Finnish currency continues, the rate now being round 202. Considerable recovery is shown in Austrian currency, the rate on Wednesday having fallen at one time under 60,000. This improvement, however, has not been maintained, although the present quotation of 70,000 still shows a recovery on the week. Polish marks, on the other hand, have further weakened to 19,500. In the South American group, Buenos Aires and Rio show practically no change on the week. Chilean currency, however, continues to improve, the present rate of 34.50 being the lowest quoted for some considerable time. This seems to be largely attributable to the improving outlook in the nitrate trade. Silver exchanges have been quiet, and are quotably unchanged. The rupee, however, has weakened slightly to 15 $\frac{3}{4}$ d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended June 17, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	15,140	Supply Services	6,250
Taken from Exchequer balances	932	Interest on Debt	1,150
		Sundry	453
		Reduction of Debt	7,319
	15,172		15,172

The total revenue for the week ended June 17th, at £15,140,450, compares with £18,430,776 in the corresponding period last year. Expenditure at £7,853,317 compares with £7,315,055. Customs produced £1,892,000, against £1,031,000, Excise £5,937,000, as against £1,611,000, Estate, &c., duties £1,050,000, as against £720,000, while Property and Income-tax yielded £2,347,000 as compared with £1,742,000 a year ago. Interest on Sundry Loans produced £958,561, against £13,952. Special Receipts under Miscellaneous yielded £903,752, against £1,500,000.

The week's operations reduced the National Debt by the sum of £7,319,526, and caused the following changes:—

	Min. £		Min. £
Unemployment Insurance	+ 600	Bank of England Advances	- 5,500
4½% Treasury Bonds	+ 1,079	Public Department Advances	- 11,000
Treasury Bills	+ 8,791	War Loan Surrenders	- 954
		National Savings Certificates	- 382
		Telegraph Money	- 700
		Exchequer Bonds Repaid	- 125
		Other Debt Repaid	- 328
	+ 10,470		- 17,789

The Floating Debt was reduced by £7,725,000 during the week, and now stands at £973,456,500.

GIVING AWAY FREE-TRADE.

It has always been a strong Free-trade argument that Protection paves the way for corruption—corruption that consists either in direct bribery or in deals and bargains, logrolling and lobbying, in which everybody's interest is considered except the consumer's and the nation's. In the days when they were Free-traders in practice as well as in theory the Liberal Coalitionists, such as the Prime Minister, the Minister for Health, and the Parliamentary Secretary to the Treasury, doubtless used this argument in their great Free-trade speeches. We see them now proving by their own behaviour in 1922 the validity of the argument they employed in 1912.

As the result of a number of deals and bargains, in which principles have been swapped and sold in the political market-place, Protection has won a striking victory, and Great Britain has taken another step away from Free-trade. The order which we anticipated last week has been laid on the table of the House, and under Part 2 of the Safeguarding of Industries Act a duty of 33½ per cent. is proposed by the Government on domestic glassware, glove fabric, and fabric gloves made in Germany; but this order "shall not apply to any articles which shall be proved to the satisfaction of the Commissioners to have been produced more than one hundred years prior to the date of their importation." The number of fabric gloves exempted under this generous clause is not likely to be large, or to be of any great interest to the Bolton spinners of fabric yarn. In so far as a duty of one-third can shut out German gloves these spinners must lose their German market, but with the help of their M.P. they have put up a hard fight and provided an excellent illustration of how Protection works. They happened to have for their M.P. one of the Government Whips, who is naturally a man of importance in the councils of the Coalition, and realising that a duty on gloves was likely to reduce the incomes of his

constituents, and that a reduction in his constituents' incomes was calculated to reduce the number of votes cast for him at an election, he is believed to have worked gamely to kill the duty. Unfortunately, however, for the Bolton spinners he had not quite enough weight politically to pull his opponents over the line, and he must now choose between the unpleasant alternatives of offending the local vote or upsetting his political chiefs. If only Bolton had been represented by someone with a little more pull, say Mr Churchill or Sir Robert Horne or the Prime Minister, the bargain would probably have been clinched on different lines, and the spinners' market would not have been threatened. The moral for manufacturers under this new régime is obvious—get on to the local caucus, and work hard to secure a Cabinet Minister for your M.P. Then you may feel tolerably certain that when the tariff is being arranged your interests will receive the fullest consideration, to the detriment of other trades who are represented only by a subordinate Whip.

In the present House of Commons, and under the present Government, which works by an elaborate system of deals and bargains, this tariff-mongering evil will have every opportunity to flourish. Indeed, the Act itself under which the duties are imposed is the product of dishonest compromise, an arrangement made regardless of their principles and convictions by men who profess to be and probably are Free-traders with other men who are avowedly Protectionists. In a speech made only a few days ago, Mr McCurdy, the chief Liberal Whip, explained, with remarkable cynicism, how he and his colleagues struck the bargain for destroying Free-trade. He is reported to have said:—

The remarkable and very welcome fact was the demonstration given by the cold logic of events of a great forward movement of the old Conservative Party towards the Liberal position. It really would be the depth of ingratitude if Coalition Liberals did not recognise the fact. When he was told the Safeguarding of Industries Act involved some dereliction of Liberal principles, he said he would be ashamed to look his Conservative colleagues in the face if they had not made some concession to them.

Because the Conservatives have "moved towards the Liberal position," therefore Liberal Free-traders should feel so grateful to them as to adopt Protection. This argument is meaningless unless the Conservatives are doing something they believe to be wrong in Ireland or some other direction, and as a *quid pro quo* the Liberals do something they believe to be wrong in the matter of Free-trade. Except on the basis of a bargain of principle and conscience, the Liberal Coalitionists owe nothing to the Conservatives, and the Conservatives owe nothing to the Liberals.

What Mr McCurdy really means is that the two wings of the Coalition have swapped principles as schoolboys swap marbles. "I will sell you my principles on Ireland," says the Conservative, "in exchange for your principles on Free-trade." "A most reasonable suggestion," replies the Liberal. "As you have pretended to believe in an Irish policy which you hate, I will pretend to believe in a tariff which I loathe. If I could not by damaging my conscience give you some *quid pro quo* for the damage you have done to yours, I should be ashamed to look you in the face." As Mr McCurdy himself explained later in his speech:—

The whole essence of Coalition is not that you should triumph regardless of the feelings, sentiments and principles of your

colleagues—that would be very unreasonable—but that you should give and take.

You take office and you give away Free-trade.

Of Mr McCurdy's past character and career we know nothing. At heart he may always have been the same cynical placeman that he openly avows himself to-day. But there are men among the Coalition Free-traders who would not always have lent themselves to this dishonourable game of swopping principles and voting against their consciences, and it will be deplorable if they continue to play it. There are those among them who till they came into the corrupting atmosphere of this Parliament could be relied on to play the part of honourable men, who could engage our respect and affection, and would never have sold their principles for office and advancement. Now they are changed men. They still believe in Free-trade, but they are planning to deal it a vital blow. They still believe that Protection brings corruption, but they assent to a corrupt bargain to introduce it. The "handful of silver" and "the ribbon to stick in his coat" have triumphed once more, and the old tragedy of character is played again before us. That a political career should have such subtle power to undermine honesty and principle is the fact that above all others makes men despair of the future.

THE ANGLO-EGYPTIAN SUDAN.

THE question of the Sudan was the first to bring into relief the anomalous position created for us by our military occupation of the Nile Valley, when we compelled the Egyptian Government in 1884 to abandon an immense possession which Egypt was incapable of ruling or holding. It is still with us. For it has been reserved for future settlement "by free discussion and friendly accommodation" between the British and Egyptian Governments when the new Egyptian constitution shall have come into force, and meanwhile the *status quo* in the Sudan remains "intact."

What is that *status quo*? The Sudan, reconquered in 1898 by an Anglo-Egyptian expedition under Lord Kitchener's command, but conducted in the name of the Khedive and mainly at the cost of the Egyptian Exchequer, did not become a British possession, nor did it revert to Egypt. Sovereignty over the Sudan has been vested since then jointly in Great Britain and Egypt, and their flags fly side by side as a permanent symbol of the condominium established by the Anglo-Egyptian Convention of January 19, 1899. Lord Cromer has given us in his "Modern Egypt" the very convincing reasons which decided him to recommend that singular device. The Convention was to give effect, as was stated in the preamble, to "the claims which have accrued to Great Britain, by right of conquest, to share in the present settlement and future working and development" of the legislative and administrative systems of the Sudan; but its provisions acknowledged Egyptian as well as British rights, whilst they carefully excluded a revival of either Ottoman suzerainty or of foreign interference under cover of the Capitulations—"the international burr," to quote Lord Cromer, "which hung on the skirts of Egyptian political existence."

Under that condominium the Sudan has steadily recovered during the last 23 years from the appalling scourge of Mahdi-ism, which reduced its population from nine millions to little more than two by war, massacre, and famine. The executive and administrative authority has remained, for all practical purposes, in British hands, the Sudan Civil Service has been recruited for all the higher posts from this country, and a small British military force has been permanently retained there. On the other hand, the Egyptian Government made up annually the deficit in the cost of administration until 1913, when revenue and expenditure began to balance; the Egyptian army provides the largest part of the garrison; a considerable number of Egyptians are employed in subordinate branches of the public services, and Customs duties are apportioned between Egypt and the Sudan. The Egyptians took no serious exception to this arrangement until they commenced to agitate for their own independence immediately after the Great War, and the revision of Egypt's relationship to Great Britain brought up the question of their joint relationship to the Sudan.

Nor would the Egyptians probably have raised it in so acute a form had not violent controversies arisen over the new schemes for storing the upper waters of the Nile by the construction of big dams and reservoirs in the Sudan itself. The inception of those schemes dates back to before the war, and into their merits or demerits from the engineering point of view there is no need to enter now, since two successive committees appointed *ad hoc* by the British Government have concluded in their favour. But the controversies which raged over them served to arouse amongst Egyptians a deep sense of alarm as to the effect which such schemes might have upon the future supply of Nile water essential to the very life of Egypt, if it could be held up within Sudan territory by Sudanese authorities under British control, whether merely to give preferential treatment to the Sudan in regard to irrigation or to put the screw upon Egypt for other purposes. Political agitators may have very unscrupulously exploited the subject in order to promote anti-British feeling, but such apprehensions, supported by the testimony of almost all Egyptian irrigation engineers, cannot be dismissed as altogether unreasonable. They were intensified when, without any public information as to their precise scope and character, works were pushed forward in the Sudan and grants made for them out of the Egyptian exchequer under the successive Egyptian Ministries, which had little authority but that of the British Residency behind them, until Adly Pasha was allowed, about 15 months ago, to form a more independent Cabinet for the purpose of conducting negotiations in London for a revision of Anglo-Egyptian relations.

Those negotiations fell through mainly on the question of a British army of occupation, but the question of the Sudan was also one on which the British Government were unable to meet the demands of the Egyptian delegation, and it will have to be dealt with whenever negotiations are resumed on the subjects specifically reserved for ulterior discussion. Unfortunately, the Egyptian Commission engaged in drafting the new Constitution, appears to have already ignored the condominium established under the 1899 Convention by proposing to style the Egyptian sovereign "King of Egypt and the Sudan" without any discrimination between his full rights of sovereignty in Egypt and his rights in the Sudan limited to joint sovereignty with the British Crown. The Egyptians, on the other hand, complain loudly that Lord Allenby prejudged the question against Egypt in a speech delivered by him during his recent visit to Khartoum, which recited Mr Lloyd George's statement in the House on February 28th, to the effect that whilst Great Britain was prepared to give ample guarantees to Egypt in regard to her water supply, she would never abandon the Sudan nor allow any change in its status. What doubtless touched the Egyptians on the raw was Lord Allenby's unimpeachable statement that the Sudan is a country quite distinct from Egypt with a nationality of its own, and that, as has been repeatedly declared by the representative chiefs best qualified to speak for its people, whether from the religious or political or commercial point of view, it desires no change in the present system of Government and administration. Except as to the Nile water supply, and possibly some slight revision of financial arrangements, the Egyptians have no case whatever in regard to the Sudan. Egyptian misrule has left nothing but bitter memories amongst the Sudanese, who have no racial connection with the population of the lower Nile valley, and are perfectly content with the complete religious liberty already assured to them. The Egyptians could never hold the Sudan if we withdrew from it. As to the water supply, the works in the Sudan have been slowed down, and will probably be modified on less ambitious lines, and the British Government agreed to provide in the draft Convention submitted to the Egyptian negotiators last year that "no new irrigation works on the Nile or its tributaries south of Wadi Halfa" [now the northern boundary of the Sudan] "shall be undertaken without the concurrence of a Board of three conservators, representing Egypt, the Sudan, and Uganda respectively." If such a provision may be deemed inadequate, as it would give Great Britain an assured majority on that Board, other guarantees can be devised for securing for Egypt "the fair share of the Nile waters" to which the British Government have

pledged themselves. To define "the fair share" may be difficult, but, like all the other "reserved" questions, it cannot be insoluble if good-will prevails on both sides. Without it none of them will ever be settled.

THE DRAFT CONSTITUTION OF THE IRISH FREE STATE.

(FROM A LEGAL CORRESPONDENT.)

THE time for a discussion of the merits of the Irish Treaty has now passed; it has been approved by the British Parliament, and the results of the Irish General Election already show that it has the support of a very substantial majority in the new Irish Chamber. What is more to the point is to examine the nature of the draft Constitution of the Free State, which was issued last week, and its relation to the Treaty.

THE PARLIAMENT.

Following the self-governing Dominion model, the Irish Constitution provides for a Governor-General representing the Crown appointed on Canadian lines, a Parliament and an Executive Council. The Parliament consists of the King and two Houses, the Chamber of Deputies and the Senate. All members of Parliament must take an oath, in the peculiar form prescribed by the Treaty, involving "true faith and allegiance to the Constitution of the Irish Free State as by law established, and fidelity to H.M. King George V., his heirs and successors by law, in virtue of the common citizenship of Ireland with Great Britain and her adherence to and membership of the group of nations forming the British Commonwealth of Nations."

The Chamber of Deputies is to be elected upon principles of proportional representation, the constituencies being revised at least once in every ten years with regard to changes in the distribution of the population, and the voters consisting of all persons, without distinction of sex, who have attained 21 years of age and complied with the prevailing electoral law.

The Senate, numbering 56 members plus two members representing each University in the Free State, is to be "composed of citizens who have done honour to the nation by reason of useful public service, or who, because of special qualifications or attainments, represent important aspects of the nation's life." Senators must have reached the age of 35 years, and their term of office is 12 years. Subject to certain transitory provisions, the Senate will be formed by the election every three years of one-fourth of its members from a panel, consisting of (a) three times as many qualified persons as there are Senators to be elected, of whom two-thirds are nominated by the Chamber of Deputies and one-third by the Senate, both bodies voting according to principles of proportional representation; together with (b) any retiring or retired Senators who may wish to be included in the panel. Each University elects one of its members every six years. Senators will be elected by citizens, without distinction of sex, who have attained the age of 30.

Suspensory Powers of the Senate.—The principles of the Parliament Act, 1911, are substantially adopted, though modified. Thus the Chamber of Deputies has exclusive authority over money bills, certified as such by the Chairman, subject to an appeal from his certificate to a Committee of Privileges, consisting of three members of each House, presided over by the senior Judge of the Supreme Court. Again, the Senate has a suspensory veto upon money bills of 14 days, and upon all other bills of nine months; upon the expiry of such periods the Bill becomes law.

The Royal Veto.—Upon a Bill being passed by the two Houses, the Executive Council presents it to the Governor-General for the signification by him, in the King's name, of the King's assent; thereupon the Governor-General may either withhold the King's assent or reserve the Bill for the signification of the King's pleasure (in which case the Bill lapses unless assented to within a year); but the Governor-General must in exercising this function follow the law, practice, and constitutional usage of the Dominion of Canada, which means that he will practically always assent to a Bill which is not *ultra vires* the Irish Constitution.

Referendum and Initiative.—Two pieces of machinery

borrowed from the Dominions are found in Articles 46 and 47. The former requires a Bill (with certain exceptions) when passed to be submitted to a conclusive Referendum of the electorate, upon either a resolution to that effect assented to by three-fifths of the Senate or a petition by one-twentieth of the voters. Article 47 contains provisions for the initiation by the people of proposals for laws or constitutional amendments; and it is apparently contemplated under this provision that the electorate shall in the last resort have direct power of legislation.

Parliament a Constituent Body.—The Parliament so created is not merely legislative but constituent; that is to say, it may, within the limits of the scheduled treaty, amend the Constitution, provided, however, that such constitutional amendments obtain, on a poll at which a majority of the whole electorate vote, either a majority of the whole electorate on the register or two-thirds of the votes recorded. In this respect the Constitution resembles that of the Commonwealth of Australia, which has wide powers of amending the Constitution, and differs from that of the Dominion of Canada, which requires Imperial legislation for its amendment.

THE EXECUTIVE COUNCIL.

The executive authority of the Irish Free State is vested in the King, to be exercised by the Governor-General in accordance with the law, practice and constitutional usage of the Dominion of Canada. The Executive Council is to "aid and advise" the Government. This Council, which is responsible to the Chamber, will consist of not more than 12 Ministers appointed by the Governor-General, of whom normally four shall be members of the Chamber and the remainder not, during their term of office, members. These "big four" are to include the President and Vice-President of the Council, and to form a kind of Cabinet and be dependent upon the support of a majority in the Chamber. The President, whom we may liken to a Prime Minister, is nominated by the Chamber, and himself nominates the Vice-President and his other two political colleagues. The remaining Ministers, who are to be appointed by an impartially representative committee of the Chamber, and are to represent the Irish Free State as a whole rather than groups or parties, seem to be temporary departmental chiefs rather than Cabinet Ministers, and do not necessarily retire from office when the "big four" lose the support of the Chamber. The "big four" alone are responsible for "all matters relating to external affairs, whether policy, negotiations, or executive acts." There is to be (as in Great Britain) a Comptroller and Auditor-General acting as the financial watchdog both in controlling disbursements and auditing expenditure.

THE JUDICIARY.

The Judicature consists of a High Court of first instance (with courts of local and limited jurisdiction), and a court of Final Appeal, to be called the Supreme Court, whose decisions are in all cases to be final and conclusive, and shall not be "reviewed or capable of being reviewed by any other Court, Tribunal, or Authority whatsoever," unless special leave is obtained from the King, presumably as advised by the Judicial Committee of the Privy Council, to appeal to the Privy Council. But, as Professor Berriedale Keith has pointed out in the *Times* (June 19th), there is no specific declaration that the decisions of the Privy Council shall be binding on the Irish courts. The High Court has power to adjudicate upon questions of the constitutional validity of any law. The judges are irremovable (as is also the Comptroller and Auditor-General) except upon resolutions passed by the Chamber and the Senate in the case of stated misbehaviour or incapacity, which is in accordance with the customary (though not certainly accurate) interpretation of the similar provision contained in our Act of Settlement with reference to the removal of judges. The judges are to have a vitally important duty in the Irish Free State as the guardians of the Constitution; if the traditions of the integrity and fearlessness of the Irish Bench in defence of the rights of the subject (witness the famous *Wolfe Tone* case in 1798, and recent *habeas corpus* cases) is maintained, there need be no doubt that they will discharge that duty faithfully and efficiently.

FUNDAMENTAL RIGHTS.

Section I. of the Constitution, entitled "Fundamental Rights," to its Irish framers probably looms very large, but to the English constitutional lawyer has an exotic and rhetorical flavour which stamps it as definitely foreign in origin and outlook. The Irish Free State is here declared to be "a co-equal member of the community of nations forming the British Commonwealth of Nations." All power and authority are derived, not as in the English Constitution from the Crown by a series of constitutional encroachments, but baldly "from the people." The national language is Irish, but English shall be equally recognised as an official language. The treatment of the question of nationality bears evidence of compromise; "Ireland a nation" may read well on a banner, but it was too much to expect that the British Government could concede the principle of a separate Irish nationality. Accordingly, something is found between full nationality and mere domicile, and that something is called citizenship of the Irish Free State. Following in the main the analogy of nationality as dealt with by English law, every person domiciled in the Irish Free State, who was born in Ireland, or born anywhere having a father or mother born in Ireland, or has been domiciled in the area of the Irish Free State for seven years, is a citizen of the Irish Free State, unless, being also a "citizen of another State," he elects not to be a citizen of the Irish Free State.

Then follows the declaration of certain rights or principles, which in the British Constitution are more or less taken for granted, and are the result of the common law as interpreted by the decisions of the judges and occasionally supplemented by statute, rather than the subject of specific statutory enactment. For instance, Article 6 provides that "the liberty of the person is inviolable, and no person shall be deprived of his liberty except in accordance with law"—an expression strangely reminiscent of the *habeas corpus* of Magna Charta; while the same article adopts the English machinery of *habeas corpus*, and another Article (71) provides for trial by jury of all criminal charges save in the case of summary jurisdiction prescribed by law for minor offences. Again, "the dwelling of each citizen" (like the Englishman's castle) is declared to be "inviolable." So also "freedom of conscience and the free profession and practice of religion are inviolable rights of every citizen"; in the same way the right of free expression of opinion, as well as the right to assemble peaceably and without arms, are guaranteed for purposes not opposed to public morality. Here the Continental influence is very marked; for instance, the French Declaration of the Rights of Man says that *la libre communication des pensées et des opinions est un des droits les plus précieux de l'homme*; and the Belgian Constitution provides that *Les Belges ont le droit de s'assembler paisiblement et sans armes*.....and again that *la liberté individuelle est garantie*. This idea of guaranteeing personal liberties is, in the words of the late Professor Dicey, "an idea utterly alien to English modes of thought, since with us freedom of person is not a special privilege, but the outcome of the ordinary law of the land enforced by the Courts." The Irishman prefers to have it in black and white, but let him not think the liberty is any the more secure to him for that. There is an elasticity, a resourcefulness, an eternal vigilance in the common law which defies compression within the narrow formulæ of a written Constitution.

INDUSTRIAL CLAUSES.

From the economic and industrial point of view two Articles deserve comment; one, a "fundamental right" (Article 11), which proclaims "the rights of the State in and to national resources, the use of which is of national importance"; this means, presumably, that something in the nature of concessions will be granted for the working of coal mines, for the use of water for power purposes, or for the cutting of peat on a commercial scale. The other (44), which is reminiscent of the Industrial Council which sat in London in 1919, provides that the Irish Parliament may establish "Functional or Vocational Councils, representing branches of the social and economic life of the nation," and define their powers and rights and duties and their relation to the government of the State; this

Article contains the possibility of far-reaching experiments in industrial structure.

FOREIGN AFFAIRS.

The power of the Irish Free State in foreign affairs remains obscure, perhaps designedly so. The Treaty of December last gave to it, in terms, the constitutional status of a self-governing Dominion, with special reference to the Dominion of Canada. What does that imply? That Dominion has for a long time had a Department of External Affairs, and has negotiated commercial and boundary treaties with foreign sovereign States. In 1919 the self-governing Dominions signed the Peace Treaty at Versailles, and their Parliamentary ratification of the abortive Anglo-French pact was made an essential condition of its obligation upon them; they are also independent members of the League of Nations. Finally, in May, 1920, Mr Bonar Law announced that it had been agreed that the King should, on the advice of his Canadian Ministers, appoint a Minister Plenipotentiary at Washington to take charge of Canadian affairs in the United States, and report direct to the Canadian Government. (No such Minister Plenipotentiary has, it is believed, yet been appointed.) What are the implications, as regards the Irish Free State, arising from this recent and rapid development of Dominion status? Is the Irish Free State to have power to negotiate commercial treaties? May it become a member of the League of Nations? Will it be entitled to a Minister Plenipotentiary at Washington and elsewhere? These points are not made clear in the draft Constitution, but we are told in Article 54 that the "big four" Ministers referred to above "shall alone be responsible for all matters relating to external affairs, whether policy, negotiations, or executive acts."

ITS RELATION TO THE TREATY.

The Constitution is to be construed with reference to the Treaty of December last (which is scheduled to it); by it the provisions of the Treaty are given the force of law, and any provision of the Constitution, or amendment of it, which is repugnant to the Treaty, is to that extent absolutely void and inoperative. In the main the Constitution appears to be a fair interpretation of the bargain embodied in the Treaty, although in the nature of things much that is in a treaty between two Governments would be hardly relevant in the constitution of one of them. Even taking the two documents together, there is much that is obscure in the relations of the two contracting parties, and one can but remember that the success of our relations with our Self-Governing Dominions has been based on flexible and informal conventions rather than rigid laws, and hope that the same will be the case with our new member of the British Commonwealth of Nations.

CONCLUSION.

Mr Gladstone once said of the document embodying the American Constitution that it was the greatest "ever struck off at a given time by the brain and purpose of man." Its best friend would not say that of the Irish Free State Constitution; but its Irish framers and British Ministerial critics have had an extraordinarily difficult task. Internally, they have produced a written constitution of a markedly advanced democratic type, adopting proportional representation and several very modern Dominion experiments. To English eyes there is inevitably something unfamiliar, "un-English," artificial about one of these ready-made written constitutions; but the internal Constitution is Ireland's own concern, and we shall learn something from the Constitutional experiments she is about to perform. Externally, while keeping the Free State within the Empire, or, to adopt the new language, within the British Commonwealth of Nations, the draughtsmen had to go as far as they dared in order to satisfy long pent-up and overflowing national sentiment. But the Constitution throws very little light upon the relations with the Home Government, and no one can contemplate this aspect of the situation without misgivings; either side could make any written arrangement unworkable if it tried, and it is only a real change of heart that can ensure a happier period in the relations between the Irish Free State and the other portions of the now no longer United Kingdom.

THE OUTSIDE STOCKBROKER.

WHENEVER Stock Exchange markets show signs of activity, and especially in those times when prices are, on balance, rising, one invariable result is a crop of unhealthy business, fostered and developed by firms whose partners are not members of any Stock Exchange. So easy a matter is it for people to prey upon the combined cupidity and gambling instincts of their fellow-men that the business of the outside stockbroker attracts a large proportion of undesirable protagonists. In consequence of this, the business of an outside stockbroker has become a by-word for sharp practice and evasion of liability. To such an extent, indeed, has the "bucket shop" fraternity tarred the whole of the industry, that the public are liable to overlook the fact that there are honest outside stockbrokers as well as dishonest. Firms, long established and of sound reputation, command the respect and credit not only of their clients, but of the Stock Exchange members with whom they deal. For the Stock Exchange man is frankly ready to acknowledge honesty and integrity outside his own circle as well as within. The Stock Exchange has its own laws, customs, and usages, which are the growth of over a century's experience, and which demand from members of the House a higher code of business morality than does that of the law of the land. The Stock Exchange Committee are jealous of the honour of the House, keen to uphold it, and to do everything in their power to cultivate in the minds of the public the conviction that they, the public, can count upon an exactitude of fair dealing when orders are sent to members of the House. The outsider is bound by no such rules, though he comes, of course, under the law of the land already mentioned. Many of the good outside brokers refuse to advertise publicly, though this does not apply in every case. Men occasionally leave the Stock Exchange with the deliberate intention of setting up as outside brokers, in order that their activities and energies may not be cramped by the Stock Exchange rules, of which the most galling to these emigrants is that which forbids advertising, or sending circulars to people other than the firm's own clients. Some of those men who have left the House of late years have done so in order to embark upon the wider business of financiers, in addition to that of ordinary buying and selling securities, but smaller men are content to work on more modest lines.

The value of the outside broker can best be appreciated by the single illustration of the manner in which his services are useful to shareholders in such companies as those whose shares command a very limited market. The outsider is free to write round to shareholders if he has an order to buy, or sell, at some price which he cannot deal at in the Stock Exchange. Where this freedom to approach strangers enables both buyer and seller to be accommodated to advantage, it is obvious that the outside broker justifies his existence and his commission, by bringing the two shareholders into touch through his own offices. The bulk of outside firms, however, are not content to do what may be described as humdrum business. If they can induce the public to speculate and to gamble, so much the better for themselves. They circularise largely, and in every possible way do their best to persuade people to buy—it is nearly always to buy—such shares as they themselves recommend, and which it is a well-known fact they are interested in selling. The small shopkeeper, the clerk, the lady in the country, and other classes who do not come into touch with the Stock Exchange in the ordinary way, are tempted to try their fortunes in some gambling medium or other. The outsiders will offer them shares which can be paid for by instalments. They will suggest options of all kinds. They will invite correspondence upon stocks and shares held by the public with a view to those securities being changed, to the client's or the outside broker's ultimate advantage. The term "bucket shop" seems to have originated from the custom of gambling on the tape, the tape itself running from the little brass, glass-covered machine into a basket, or "bucket," placed underneath for its reception. The man or woman who would not think in the ordinary way of trusting another for half-a-crown is extraordinarily ready to part with pounds to some advertising firm of whom he or she knows literally nothing. The fact of "bucket

shop" advertisements appearing in some of the best newspapers is sometimes put forward by people, who have lost their money through "bucket shop" swindling, as the reason why they were emboldened to trust their money to the unknown. In the matter of options, it is safe to say that nine times out of ten the "bucket shop" merely runs the stock against its client. If the latter happens to make money, as he has been doing lately owing to the Home Railway boomlet, he is lucky if he receives his profits. It happens more often that he will get a payment on account, and an earnest advice to take a hand in some other option, which the firm recommend on the strength of the previous successes. The client, emboldened by his good fortune, is willing enough, as a rule, to go on with the same kind of operation, and the result is always the same. Put briefly, this kind of dealing is exactly akin to tossing a man double or quits for an indefinite number of times. In the end the "banker" is, of course, bound to win the lot.

When people have been bitten in this way, or even when they cannot obtain money due to them on account of profits, it is rarely indeed that they venture to take the matter into court. In the first place, there is the natural reluctance to confess having dealt with a "bucket shop" at all. In the second, strong doubt exists in their minds as to whether any court would uphold their claim in what is manifestly a gambling transaction. In one instance which has come under our notice, an option for three different kinds of shares was granted on a contract which bore a single penny stamp. No stamped receipt was given for the amount paid by the speculator, and when the option was closed no contracts were rendered. The Stock Exchange practice is, of course, for contracts to be handed to the client for everything which is done. In gambling on the tape, which such option dealing really amounts to, the odds are heavily in favour of the man who takes the money, since the buyer gives the top price and sells at the bottom, so that from the outset of a deal the chances lie against the purchaser in a degree which is not in accord with proper sporting risks. When to this is added the prospect of the man not getting his money, even if he makes a profit, or of being lured into some further operation in which he is likely to lose his gain, surprise will be expressed that anybody can be so simple as to venture hazards of this sort. Nevertheless, the newspaper may put forward every possible argument to show the danger of speculating in this manner, and yet be unable to do more than check the ardour of the inexperienced man or woman whose cupidity is excited by glowing accounts of companies, the shares in which the "bucket shop" is eager to sell. The newspaper must feel, however, that it is incumbent upon a public service to continue warnings against the operations of these gentry, while at the same time due credit must be paid to the honest outside brokers whose business is unfairly dragged into the mire by the shady practices of the "bucket shops."

BRITISH INSURANCE COMPANIES.

Now that the accounts for 1921 of all the leading insurance offices have been issued, and the annual meetings held, we are able to make a brief survey of the results of that year. It will not stand out in the records of insurance as a favourable period. The marine results—which were mainly affected by the running off of the accounts for 1920—were almost uniformly bad. Returns of premium and the cutting down of risks have brought about a very great reduction in premium income for last year, so that the claims of 1920 and 1919 have dug rather deeply into the funds which had been set aside to meet them. Here and there a realised surplus has been transferred to profit and loss, but, speaking generally, the marine insurance accounts have been a drain upon the resources of the companies. This was to be expected; the swollen war market was wholly abnormal, and much readjustment has been, and will still be, necessary before the market settles down to the humble circumstances of to-day. The change, expressed in figures of premium income, is startling. We have the Commercial Union, for example, coming down from £987,850 in 1920 to £270,646 in 1921, the London and Lancashire (including the Marine Insurance Company) dropping from £2,669,515 to £1,383,306, and the Royal Exchange from £1,070,952 to £248,364. These are the most extreme

examples, but the cutting down is general. For the time being marine insurance is out of the picture as a means of earning profits.

The fire insurance accounts are much less favourable than we have recorded during recent years. The United States—in which our great companies transact some two-thirds of their whole fire business—were a disappointment. It is a general rule in America that when trade is depressed fire losses are extra heavy—the moral connection is painfully obvious. Even in this comparatively honest country trade depression has to be reckoned with as a factor in the moral hazard. The drop in values of stocks has led to a reduction in premium incomes, and in liabilities carried. Almost without exception the companies doing a world-wide business show a considerable drop in fire premium income for 1921, and to this circumstance the greater part of the trading surpluses are due. A reduction in liabilities means the release of a corresponding portion of the reserves set aside for unexpired risks. In the table of fire insurance results printed below we have followed our usual practice—which has general sanction—of taking 40 per cent. of the premium income as a reserve for unexpired liabilities at the end of a year. The net surpluses which we show are:—Premiums for 1921, less claims and expenses for 1921, plus (as a rule) the amount by which the necessary reserve for unexpired risks on December 31st last, was less than the corresponding reserve a year before. It is quite proper to make this adjustment to the credit of trading surpluses, for when business was active and premium incomes were going up, we always in previous years made a corresponding adjustment to the debit of the surpluses, as shown in the companies' accounts. The formula, which expresses a trading surplus or deficit in fire insurance accounts, and also in those of accident and miscellaneous departments, is as follows: Reserve for unexpired risks at the beginning of the year, plus premium income taken in that year, minus claims, expenses, and reserve for unexpired risks at the end of the year. Applied invariably, this formula permits the experience of one year to be justly compared with that of another:—

FIRE BUSINESS in 1921.

Company.	Premiums	Claims	Ex-penses.	Net Surplus.	%
Alliance	£ 1,966,478	48.2	46.6	£ 538,634	4.6
Atlas	2,123,300	54.2	45.3	97,525	4.6
Commercial Union	6,118,405	57.2	42.7	238,168	3.9
Guardian	1,013,133	54.2	40.5	102,865	10.1
London and Lancashire	3,007,501	49.9	41.0	538,634	17.9
London Assurance	1,564,030	51.5	44.4	80,003	5.1
North British	3,546,153	55.1	43.3	306,507	8.6
Northern	2,575,823	60.4	42.9	20,780	0.8
Phoenix (including Norwich Union)	4,745,020	55.4	42.4	274,482	5.8
Royal	6,428,519	58.0	41.1	335,550	4.7
Liverpool and London and Globe	4,406,809	53.3	42.8	23,295	0.5
Royal Exchange	1,088,785	54.9	45.0	103,952	6.7
Scottish Union	1,533,103	58.2	38.7	123,325	11.3
Sun	2,199,041	52.3	44.2	143,354	6.5
Yorkshire	847,169	54.1	42.3	28,018	3.3

As usual, the London and Lancashire has done very well with a surplus of £538,634 (17.9 per cent. of the premiums). There has been no more successful fire insurance company of late years. All the other companies with big American offices make a humble show, and the Liverpool and London and Globe has even yielded a small deficiency. The most ominous feature in all accounts is the continued increase in the proportion of expenses to premiums. Rates of premium have not advanced either in this country or in the United States, and commissions are a function of premiums, but salaries and other costs show continual advances. When, about ten years ago, the total expenses ranged around 35 per cent. of the premiums, a good profit could be made with a claims ratio of 55 per cent. But now that the expenses are running up towards 45 per cent., claims at 55 per cent. of the premium income leave very little margin indeed—none at all when liabilities for unexpired risks are increasing, and have to be provided for before a surplus can be earned.

If it had not been for the rapidly expanding accident and miscellaneous branches, the British insurance offices would have had little to show for their troubles and risks during 1921. Marine insurance was a loss, and fire insurance little more than a delicate balance between profit and loss. But the once despised "side shows" have played up nobly.

We have taken them all out, and present the results below. The net surpluses have been calculated by the same formula as that given above for the fire insurance accounts. The premium incomes have nearly all increased, rates have been put up to a profitable level in motor-car insurances, the burglar hasn't burgled quite so actively as he did a year ago, and the results generally were most useful to the profit and loss accounts. The size of these accident and miscellaneous branches will surprise a good many people. The Commercial Union has nearly seven millions of accident and miscellaneous premium income—more than its fire premium income—and the Employers' Liability has 5½ millions (including a small amount of fire business). The Royal and Liverpool and London and Globe taken together exceed six millions, and when the fusion between the Phoenix and the London Guarantee has been completed their joint account will be about 5½ millions:—

ACCIDENT and MISCELLANEOUS BUSINESS in 1921.

	Premiums	Claims	Ex-penses.	Net Surplus.	%
Alliance	£ 600,817	41.7	44.9	£ 22,044	10.3
Atlas	250,817	39.6	41.1	35,887	13.4
Commercial Union (including Ocean Accident)	6,919,109	51.6	38.4	685,916	9.9
Employers' Liability	5,563,965	59.2	32.4	1,023,682	18.4
Guardian	519,565	44.0	40.5	73,889	14.2
London and Lancashire	1,630,724	53.9	39.2	159,011	9.7
London Assurance	185,438	36.2	48.2	15,933	8.5
London Guarantee and Accident	3,793,054	57.3	43.7	(def) 22,614	-6
North British (Railway Passengers)	923,099	46.0	37.9	127,352	13.8
Northern	974,755	50.0	39.4	105,798	10.8
Phoenix	1,666,263	46.5	42.5	142,364	8.6
Royal	3,453,017	46.1	38.7	421,331	12.2
Liverpool and London and Globe	3,130,244	45.0	40.9	345,104	11.0
Royal Exchange	741,927	60.2	40.2	57,237	7.7
Sun	324,835	39.5	43.8	55,135	16.9
Yorkshire	1,040,464	54.9	41.0	21,840	2.1

It will be observed that the surpluses are on quite a handsome scale, and that the average proportion of profit to premium income is much higher than in the fire insurance accounts. As profit-earners, the accident and miscellaneous departments of the composite offices have more than justified the labour and money which of late years have been lavished upon them.

Into our last table we condense the financial results of the year. The net transfers to profit and loss are shown after allowing for sums withdrawn to fill up holes in marine accounts, and taking credit for amounts released from investment reserve funds by the general appreciation of securities:—

PROFITS, INTEREST, TAXES, and DIVIDENDS.

	Net Transfers to Profit and Loss.	Net Interest Receipts.	British Taxes on Profits.	Dividends Paid.
Alliance	£ 638,372	£ 270,466	£ 92,740	£ 343,013
Atlas	119,164	114,201	92,308	132,000
Commercial Union	750,000	647,777	615,234	590,000
Employers' Liability	743,813	291,896	521,694	287,818
Guardian	104,480	117,729	88,290	146,754
London and Lancashire	418,130	337,095	308,288	301,320
London Assurance	157,765	190,359	100,000	189,517
London Guarantee and Accident	213,118	140,078	195,773	62,866
North British	472,022	309,696	195,773	263,585
Northern	175,485	296,282	290,897	246,155
Phoenix	401,004	286,298	24,915	369,500
Royal	461,868	809,491	100,000	870,011
Liverpool and London and Globe	785,924	348,875	276,768	320,206
Royal Exchange	249,975	115,886	104,018	77,194
Scottish Union	200,533	95,063	116,700	63,000
Sun	165,011	145,870	41,121	151,200
Yorkshire	94,204	95,859	—	90,397

The improvement in investment values has been a great help. The Alliance has taken from investment reserve £250,000, the Liverpool and London and Globe £500,000, and the London Guarantee and Accident £75,000; the Northern has realised a profit on investments of £56,362, though, curiously enough, the Royal declares a loss on investments sold of £198,978 (met out of the general contingencies fund); provision for E.P.D., no longer required, has yielded £228,000 to the London and Lancashire and £85,484 to the Royal Exchange. These windfalls have helped to swell profit and loss transfers, and to provide for the British taxes shown in column three. This taxation is still very heavy indeed; it is being charged on the profits of fat years, and will come down quickly when the lean years are taken into reckoning. As taxpayers the insurance companies have passed their peak. Columns two and four reveal the slight dependence of the companies' dividends on their trading profits. The dividends are paid in whole or principally

out of interest earnings, and the surpluses passing into the category of investments yield interest for gradual increases of dividend in the future. That has been the regular progress. Out of underwriting surpluses funds have been accumulated, taxes paid, and depreciation provided for; the interest-earnings have gone to pay dividends to shareholders. Measured in terms of premium income, the companies do not make a large rate of profit, sometimes quite a small one; but based upon interest earnings their dividends are so well secured that neither war nor peace can interfere with the due payment.

THE HIDE AND LEATHER TRADES.

(BY A CORRESPONDENT.)

AFTER two or three years of acute depression, signs are at last apparent that the leather industries are slowly recovering, although there is nothing yet on which to base the prophecy that the improvement is permanent. That the allied trades, however, have passed through a bad period is certain; losses on trading have been frequent, and it speaks volumes for the soundness of some of our largest firms that financial disasters have not been on a very extensive scale since the fall in values set in. It is true there are a few large concerns in the tanning trade whose balance-sheets this year will be awaited with interest and anxiety, whilst some of the firms who inflated their capital after the war will in all probability have to "write it down" drastically if a profit is to be shown on the share capital. This seems proved by the fact that the Stock Exchange quotations for leather shares are in many cases far below the issued price. On the other hand, capital is once more being attracted toward the leather trades, as inquiries for premises are again noted, whilst there are no tanneries of importance for sale at the moment.

Perhaps the light leather manufacturer and the currier have been the hardest hit by the great fall in values. It is true that during the war it was easy for them to make a profit, as, no matter what was the class or quality of leather produced, it was bound to sell. Speculation, in fact, was rampant, and it is within the writer's knowledge that parcels of dressed upper leather changed hands several times, with added profits, before the material reached the shoe manufacturer's cutting board.

A good deal of the profit made during the war was in many instances invested in extensions to buildings and in modern plant and machinery, with the result that when the slump came many firms who had doubled or trebled their production found themselves saddled with huge buildings and increased overhead charges at a time when values of leather were tumbling and buyers were quite masters of the position. "Slaughter parcels" of leather were in consequence of this position frequent, and thousands of feet of good leather have to the writer's knowledge been sold at much below cost of production. As America was in much the same position, our market was often flooded with huge parcels of chrome sides in box and willow, glacé kid, and patent at very low prices, so that our own leather dressers have had to face as stiff a set of opposing forces as only crops up once in a generation. So much has this been the fact that some curriers of East India kips have closed down altogether, whilst others are even now working in only a small proportion of the amount of rough leather they could handle.

That tanners are looking forward to better times is perhaps proved by the fact that they are again eager buyers of British market hides. True, many of them say they are making no profit on their output of sole leather, and are obliged to buy a certain number of hides to keep their works going and their tan liquors "sweet"; even allowing for all this, it is difficult to see why tanners allow themselves to pay increasing prices week by week, especially as they have a strong federation and a combination which helps them to buy large blocks of South American hides when the market is in their favour.

At the time of writing best ox and heifer hides are selling from 7d to 10d per lb, and the position is regarded as firm. As this class of hide was only making about 7½d per lb in July just before the outbreak of war, and tanners' overhead charges have quite doubled themselves

since that eventful date, it speaks well for the optimism of our British leather producers that they are more or less willing to pay such enhanced rates for their raw material at a time when the outlook is still uncertain. Tanners are also not free buyers of South American salted hides, as owing to large American and Continental purchases at origin prices have gone rather beyond their reach. Chicago hides are also dearer, and best heavy packer stock is selling at 17 cents, so that the American tanner seems to have got over his fright of a year ago.

I have already alluded to the position of the currier of rough leather, and his awkward position; the scarcity of money amongst the working classes, and the constant dislocation caused by strikes, is affecting this branch badly. The English currier has for years specialised in dressing what is known as East India kips, and for half a century fortunes have been made in making that hard-wearing leather, waxed kip butts, from this rough material. Cheap semi-chrome has also had a fine run, but this seems always difficult to sell when the real chromed article in sides has dropped to a low price. A few E.I. kips are dressed and sold for other purposes, such as cheap spit and attaché cases, but the bulk of them are used up by curriers for stout shoe leathers, and until the demand for these improves, it is difficult to see how the currier is to make both ends meet. The delay of the Disposals Board in selling the Government stock of rough kips has also acted as a wet blanket on kip dressing, to say nothing of the low price at which thousands of Government dressed kips have been sold since the conclusion of the war.

In an article of this kind it seems curious to be able to quote the old French axiom, "Cherchez la femme" in connection with leather; there is, however, no denying the fact that the demand for women's shoes has saved the position this year. The advent of the short skirt has had a remarkable effect on both the leather and shoe sections, for, with no flowing draperies to cover their feet, women at once paid much more attention to their shoes, and, once they became an article of fashion, manufacturers and retailers encouraged the idea, and incidentally insured themselves against changes of style by charging much higher prices than the sort of production often warranted. The suede shoe has been responsible for much of the comparative activity of both the leather and shoe trades, and although the leather is not at all suitable for protection against wet and cold, it has attracted the fancy of the fair sex in a remarkable manner. Patent leather, too, has been demanded freely by women, and importers of American patent have every reason to be grateful to them for this. That ideal shoe leather, glacé kid, has been in consequence somewhat under a cloud of late, but, like all good things, it will sooner or later come into its own again. At any rate, one large glacé kid tannery in the West of England which closed down a year or so ago has resumed operations, and is now, I hear, working in something like 1,000 dozen goat skins weekly.

The export of leather and leather goods has been adversely affected by the exchange difficulty, and many inquiries from Eastern Europe for footwear and leather have not materialised into real business for this reason. Exports of British heavy boots have also been hit by the immense number of new and old Army boots disposed of and sent overseas since the war, many of them at much below the cost of production. Still, in spite of these and other troubles, the export of British boots is gradually increasing, and there are those who think the corner has been turned. That there is much leeway to make up is, however, shown by the fact that the value of exported boots and shoes has fallen from £2,633,594 for the first five months of 1920, to £1,002,315 for the corresponding period of the current year. But as the value of the export in May last was £219,928, as against £140,293 for the corresponding month of 1921, it looks as if matters were slowly improving; at any rate, reports from manufacturers are to the effect that orders are now coming in much better from overseas customers.

Exports of British leather are also showing an improvement, as the value for the first five months of 1921 and 1922 was £1,088,358 and £1,556,013 respectively. On the other hand, the increase in the import is very marked, as the value of imported leather and leather goods for

the first five months of 1921 has advanced from £2,777,206 to £4,264,956 for the corresponding period of 1922. Still, as the import for the first five months of 1920 reached the big total of £12,732,804, it is safe to assume British tanners and curriers are supplying a much larger proportion of this country's requirements as time goes on.

Taking a fairly optimistic view of the outlook, it seems safe to hazard the prophecy that the slump is now over, and a comparative period of prosperity awaits the allied leather trades. Prices of most leather commodities are now approaching something like their real intrinsic value, so that buyers have more confidence in purchasing. The stabilisation process has been a slow one, but as costs of production become more reasonable, I feel sure the prestige of British leather and leather goods will help to maintain both the home and foreign markets, in spite of the difficulties which a year or two ago looked insurmountable.

THE LABOUR PARTY'S PROGRAMME.

(FROM A LABOUR CORRESPONDENT.)

NEXT week the Annual Conference of the Labour Party will be held in Edinburgh, when representatives of the affiliated membership of four millions will pass under review the report of the Executive Committee for the past twelve months, and pass judgment upon a series of resolutions. These resolutions range over many subjects, but there are some which are of outstanding importance, as indicating the trend of Labour thought and policy. There are eight resolutions and two amendments on the agenda emphasising the political independence of the Labour Party. The sense of both the resolutions and amendments is strongly against "any alliance or electoral arrangement with any section of the Liberal or Conservative Parties," and several of the motions repudiate participation by the Labour Party in any Coalition Government. It is significant that in every case except one the resolutions stand in the name of local Trades Councils and Labour Parties, and not in the name of trade unions. The views expressed in the resolutions may be taken to express the attitude of the rank and file toward "entangling alliances." It is pretty certain that a composite resolution embodying these views will be adopted by the Conference.

International questions come up for consideration, both on the report of the Executive, as a matter of course, and on resolutions dealing with armaments, international treaties, war, Russia and India, and the Near East. Domestic policy looms large on the agenda. There are resolutions down on nationalisation, special reference being made to the nationalisation of land, mines, transport, banking, insurance, and electricity supply. Eight resolutions and four amendments are devoted to unemployment and unemployment insurance—a reflection of the prevailing state of trade, though at least one resolution on the subject generally finds its way each year to the Conference agenda. Of the nine resolutions under the heading of "education," no less than seven take the form of protests against "economy" in education. In recent years education has always found a place in the discussions of the Labour Party Conference, but there have never been so many motions as this year. The opposition to Geddes' cuts is widespread in the Labour movement, and a crop of resolutions on the subject was anticipated.

The ten resolutions on electoral reform are an indication of the interest taken in our political machinery. The resolutions range from a declaration in favour of adult suffrage to the prohibition of motor cars and other vehicles at elections, and the closing of public-houses on election days. Housing and house rents quite naturally occupy a prominent place in the agenda, nine resolutions, with four amendments appended, calling for a radical housing programme, and the extension of the operation of the Rent Restriction Act. The Edinburgh Conference will be asked to judge between the public ownership of the liquor trade and prohibition, and to support pensions for widows. It will be called upon to give its adhesion to more generous old-age pensions, and better provision for the blind. The delegates will, it is expected, declare in favour of the removal of the embargo on the importa-

tion of Canadian cattle, and in another resolution bless free trade.

Trade Boards will be supported, and the Report of the Cave Committee condemned by the Edinburgh Conference. The Workmen's Compensation Act will come up for discussion on resolutions demanding reform. Legislation regarding hours of labour will be asked for. These questions, however, will be more prominent at the Trade Union Congress in September.

Broadly speaking, it may be said that the resolutions indicate that foreign affairs, nationalisation, unemployment, and housing occupy the centre of attention in the Labour movement. One further question, to which reference has not yet been made, but which is agitating the rank and file, is that of the reduction of the rate of interest on the war debt. Three resolutions insist on such a reduction, and an amendment substitutes a levy on capital. It is probable that these resolutions will be defeated, but they undoubtedly express the deep sense of injustice felt by many working people, that whilst pledges to ex-Service men and the workers generally have been broken, the undertaking regarding rates of interest on war loans should alone be regarded as inviolable. The resolutions are based on ethical rather than on financial considerations, and those who are disposed to argue the impracticability of the proposal might try to conceive the situation as the worker does. Whilst the worker is becoming worse off, the holder of War Loan is becoming better off. Though, as has been said, the resolutions are not likely to be adopted, they will give rise to an animated discussion.

The Edinburgh Conference will last four full days. A large section of the Press will undoubtedly convey the impression, by giving prominence to "scenes," that the Conference is in the nature of Donnybrook Fair, and that the chief questions agitating the Labour movement are whether Labour men should be Privy Councillors or Freemasons. The delegates, however, know that exciting moments are but fleeting incidents in long, serious, and sometimes dull, discussions of important national questions.

Notes of the Week.

A Dastardly Crime.—The assassination of Field-Marshal Sir Henry Wilson by two Sinn Fein fanatics in the West-End of London is one of those rare events which send a shock right through the civilised world. With Sir Henry's views as a soldier politician—whether as regards the attitude of Ulster or the part that war will play in the future in international affairs—we had little in common. But his place in history depends not upon his political opinions, but upon the great part which he played in furthering the military co-operation of England and France during the war. One of the small band at the War Office who devoted themselves before the war to studying and preparing for possible military action on the French frontier, he had in 1914 acquired a close personal acquaintance with France and with French military officers, which was based upon a deep understanding and sympathy with the French character and ideals. His personal friendship with Marshal Foch was indeed one of the greatest assets of the Allied cause in the evolution, first of the Versailles Military Council, and later of a unified command. Of striking appearance and endowed with a most attractive and charming personality, made very distinctive by little mannerisms and an unwonted freedom of gesture, he was a man of great physical as well as mental activity, and possessed of that vital force which is the one real essential of great achievement. The reckless and misguided youths who perpetrated this outrage have struck one of the severest blows at what little prestige remains to the Irish Republican extremists, for they have advertised to the world, outside Great Britain, in a way that few other events could have done, the character of the vendetta that is being carried on in the hope of preventing an Irish peace. At a moment when a faint hope was reviving that the clouds might lift a little, the assassins have done their best to stir up a fresh outbreak of reprisals.

The Palestine Mandate.—Lord Balfour made his first appearance as Government spokesman in the House of Lords on Wednesday, but his eloquence failed to save the Government from defeat on the question of the Palestine mandate, for the motion by Lord Islington stating that the mandate in its present form was not acceptable, and was "opposed to the sentiments and wishes of the great majority of the people of Palestine," was carried by a majority of 31. Lord Islington maintained that the mandate as it stood to-day "was a distortion of the mandatory system, because under it a small proportion was to be given preferential treatment, with British authority to enforce the system," and that it involved injustice and repudiation of pledges given to the Arabs. He also criticised severely the Rutenberg contract, in which criticism he was strongly supported by Lord Sydenham and Lord Buckmaster. Lord Balfour, whose eloquence seems to have been in no way impaired by the cooler atmosphere of the Upper Chamber, rebutted the charge of injustice to the Arabs. "I cannot imagine," he said, "any political interests exercised under greater safeguards than the political interests of the Arab population of Palestine." He defended the Rutenberg contract, declaring it to have been carefully examined by most competent and disinterested advisers, and found a good bargain; and quoted evidence of world support for Britain's Palestine programme. But, in the main, Lord Balfour based his case avowedly on idealism. He dipped into Jewish history, belauded the services of the Jewish race to scientific, artistic, philosophic, and religious development in the countries where they have found homes, and appealed to the honour of Christianity to make up for the wrongs heaped upon them. But he failed to imbue their Lordships with enough of his idealism to overcome their dislike of the mandate as it stands—a dislike heightened, as subsequent speeches showed, by consideration of the cost to the British taxpayer and suspicion of the Rutenberg contract. It is believed that the Government will ignore the defeat in the House of Lords, and seek an early opportunity of taking the opinion of the Commons. This must be done quickly, for next month a special meeting of the League of Nations Council is to consider the mandate, to which at the last meeting objection was taken by Italy and France. The vote in the House of Lords will doubtless provide fresh powder and shot to the opponents of the mandate in the Council. But before the meeting takes place, we hope to see the whole matter of the Rutenberg contract thoroughly thrashed out on the floor of the House of Commons and some definite statement, calculated to allay Arab fears, elicited from the Prime Minister. We hope, too, that Members of Parliament will insist on a clear statement of the cost of Palestinian activities to the British taxpayer.

The Finance Bill Debate.—While the House of Lords has been asserting its independence by defeating the Government on the question of the Palestine Mandate, the Commons have been labouring through the clauses of the Finance Bill, and for the most part swallowing them whole, including the McKenna duties and preferential tariffs. Only last month the former were debated, and the Government and their supporters again on Monday night repeated their lofty disdain for Mr Bonar Law's pledge that "duties of this kind would never be continued under any circumstances when the war was over." In the main the debate produced nothing new, but we note, for future reference, from the official report that when accused of going to Genoa to preach free trade, the Chancellor of the Exchequer "indicated dissent," while an unconscious illumination of tariff mentality vouchsafed by the Solicitor-General should not pass unnoticed. The latter quoted the distress in the motor industry as a reason for surprise that a repeal of the motor car import duty should be suggested. When reminded that unemployment and distress was common in many industries, he retorted, "We are not discussing other industries." Here is a typical example of the inability of the tariff advocate to look beyond one industry to the whole wide field of net economic advantage. Discussion of the tea duty brought

transactions of every description.

Correspondents in all parts of the world.

up the old conundrum: If 90 per cent. of our tea already comes from within the Empire, what reason is there for a preferential duty? On the following (Tuesday) evening a sugar debate elicited some strong criticism of the removal of the excise duty on home-grown sugar, with which we are largely in sympathy. Mr Lyle protested against the proposal to "prop up the industry with the undreamed-of protection of £25 13s 4d per ton," and further expressed the view that for every extra man employed in connection with home-growing of sugar beet a man would be put out of work in a British sugar refinery. For our own part, we do not find it inconsistent with Free-trade principles that the State should in certain cases assist an infant industry in its early stages, where the prospects appear reasonably good. But sugar-growing in this country has still to prove that it is a suitable object for such a system, and, in any case, State assistance, if given at all, should be given by means of direct subsidy rather than by duty concessions. From tariff questions the House travelled, via the Entertainments Tax, to the main feature of the Budget, namely, the rates of income-tax and super-tax. Here Sir Frederick Banbury put in a plea for further reduction next year, and incidentally urged the merging of income-tax and super-tax into one tax, a suggestion supported by Sir Herbert Nield on the analogy of the merging the poor rate and district rate in the sphere of local taxation. During the rest of a long night sitting, discussion dealt mainly with technical questions arising out of the proposals to stop up the loopholes for evasion of income-tax and super-tax. On Wednesday the clauses relating to allowances in respect of repair of property, and the one providing that interest on arrears of E.P.D. should not be allowed as a deduction, were quickly passed, but the Chancellor made a concession in promising to reduce the rate of interest on arrears from 5 per cent. to 4½ per cent. Clause 28, which suspends the Sinking Fund, was passed after a few speeches of protest, Sir Godfrey Collins making a strong plea for economy in expenditure. The remaining clauses were quickly passed through. The House then considered a number of new clauses, mainly of a technical nature. The upshot of the debates is that the Chancellor's financial programme is passing through the Committee stage practically intact.

Debt Conversion Results.—A statement issued by the Chancellor of the Exchequer shows the results of various conversion operations since the beginning of the current financial year. The total conversions effected were as follows:—(a) Under offer of February 18, 1922, £14,464,248 of Exchequer bonds into £19,671,378 Conversion Loan. (b) National War Bonds, under offer of April 21, 1922, of which £70,429,871 was converted into £94,376,028 of Conversion Loan, and £8,825,975 into a similar amount of 4½ Treasury Bonds. (c) Under the original option, holders of National War Bonds for an amount of £30,651,297 5 per cent. bonds exchanged into £32,264,476 5 per cent. War Loan, while holders of £594,958 4 per cent. bonds accepted a similar amount of 4 per cent. War Loan. (d) Holders of £69,501,535 5½ per cent. Treasury Bonds exchanged under the original option into £101,472,240 of Conversion Loan. The following table shows conversions effected since March 31, 1922, in detail:—

(000's omitted.)

Description.	Bonds Converted.		Stock or Bond Issued in Exchange.				
	Nominal Amt.	Annual Interest Thereon.	3½% Conv. Loan.	4½% Tr. War Bonds.	5% War Loan.	4% War Loan.	Annual Interest Thereon.
5% Exchequer Bonds—							
April 1922	14,464	723	19,671				688
5% National War Bonds—							
October, 1922	89,855		94,376				3,303
April, 1923	17,929						
September, 1923	1,807						
October, 1924	4	5,495		8,825			397
April, 1925	1						
September, 1925	114			32,264			1,613
October, 1927	45						
April, 1928	76						
September, 1928	139						
October, 1927	278	23					594
April, 1928	177						
September, 1928	177						
5½% Treasury Bonds, 1929 (Series A and B)	69,501	3,822	101,472				3,551
			215,519	8,825	32,264	594	
	194,467						
		10,064		257,205			9,577

These results must be regarded as satisfactory. Although, as will be seen by referring to our table of National Debt, given in another column, the nominal amount of debt has been increased by approximately 63 millions, roughly 194½ millions of Exchequer Bonds, National War Bonds and Treasury Bonds have been converted into Conversion and War Loans, and only a small amount (under nine million) into Treasury Bonds. The big amount exchanged into Conversion Loan, namely, 154½ millions, is especially satisfactory, this being now our representative long-dated Government security. Interest charges have been reduced by £487,573 per annum, the annual interest on the various bonds having been £10,064, 951, while on the fresh issues £9,577,378 is the official calculation for interest. The figures show that the amount of 1922 War Bonds maturing this year for which the Treasury must make provision has been reduced to a relatively small total.

Mexican Debt Proposals.—After long delays and several postponements, a settlement of the indebtedness of the Mexican Government is in sight at last. The plan agreed on at the end of last week between the Finance Minister and the American Bankers' Committee deals with debts amounting in gold to about \$500,000,000, on which the interest in arrears is about \$200,000; but these figures apparently include several items unknown in Europe. The issues held on this side of the Atlantic comprise (a) the four External loans, together rather more than £34,000,000, with arrears of interest exceeding £1,585,000; (b) loans guaranteed by the Government, comprising the Mexico City loan of 1889 (presumably, but President Carranza is stated to have cancelled the guarantee), the Caja de Prestamos bonds, two issues by the Mexican National Packing Company, and two Internal loans, partly held outside Mexico—these five loans together are about £20,800,000, with arrears of interest amounting to £7,505,000; (c) the 4 per cent. General Mortgage Bonds of the Mexican National Railways, approximately £10,150,000, with arrears of interest of about £3,348,000; (d) other debts, possibly including other bond issues of these railways, with certain State debts and various unspecified loans. Interest payments will be resumed on these in varying proportions of cash and scrip (the latter eventually redeemable) from January 2, 1923, which seems to imply that the first actual payments will not begin till some months later; and they will be continued thereafter in gradually increasing amounts till 1928, when the full payment of interest and sinking funds will be renewed. The cash will be provided from a special fund formed by a surcharge on gross railway receipts and the export taxes on oil. The coupons now in arrear will be exchanged for receipts which will be ultimately paid off in cash, but no interest will be paid on the arrears. The railways will be given back to the companies, and operated by them, as before the revolution, and the Government will endorse and take over the railway debts—a phrase which is believed to cover the other bond issues of the National Railways, and possibly also the sums due to the railway companies for the use of the lines temporarily operated by the Government.

The bondholders' rights of foreclosure will be suspended during the operation of the plan. The settlement is not over-liberal; it was expected that the arrears would be funded, and the creditors in the third and fourth classes above specified cannot receive much cash for some years to come. It awaits the approval of the bondholders, which is practically certain, and presumably that of the Mexican Congress, which may be doubtful; but there is reason to believe that the influence of Señor de la Huerta will carry it, and its acceptance will doubtless be followed by American and British recognition of President Obregon's Government. As to the state of the country, there are diverse reports even in its capital. The damage done by the revolutionists is still unrepaired in Morelos; and probably elsewhere also; but the reports lately current in New York of widespread local disturbances and labour troubles are to be regarded as untrue, or greatly exaggerated; the depression in trade is due mainly to world causes, and American business men are continuing to establish themselves in Mexico. The Government is clearly anxious that the settlement shall be comprehensive, and Señor de la Huerta inspires confidence. Recognition should set up a revival of prosperity, which may indirectly affect other countries in Spanish America.

Employment in May.—The demand for labour improved slightly in May. The monthly review of the position in the *Ministry of Labour Gazette* records the maintenance of recent improvement in the tin-plate, cotton, jute, hosiery, and wool textile industries, and in the clothing trades, while a movement in the right direction took place in the building and pottery trades. Employment at the coal mines, however, was slack, and certain branches of the iron and steel and metal industries continued to be severely affected by the engineering dispute. The percentage of unemployed among members of trade unions from whom returns are received by the Ministry of Labour fell from 17.0 at the end of April to 16.4 at the end of May. How this percentage has moved month by month in recent years is shown below:—

End of—	TRADE UNION UNEMPLOYMENT PERCENTAGES.											
	1913.	1917.	1918.	1919.	1920.	1921.	1922.	1913.	1917.	1918.	1919.	1920.

* Excluding coal miners. † Revised figure.

A slightly larger fall, namely, from 14.4 to 13.5, is noted between April 28th and May 22nd in the percentage of unemployed among all workers insured under the Unemployment Insurance Act. At the latter date the total number of registered unemployed was 1,566,000, as compared with 1,699,000 on April 28th. The numbers of those working systematic short time in such a way as to entitle them to unemployment benefits fell in the same period from 189,000 to 134,000. From this it appears that in the 24 days ended May 22nd there was an aggregate fall of 188,000 in the numbers of those registered as qualifying for benefits under the Unemployment Insurance Act. This drop, though in part no doubt due to benefit periods running out, provides welcome evidence of measurable improvement in trade, and of savings to the Exchequer.

Cost of Living.—Like April, May saw a reduction of one point in the Labour Ministry's calculation of the cost of living, which at June 1st was 80 per cent. above the level of July, 1914. A year ago the figure was 119 per cent. above that level. The following table shows how the percentage figure moved up to its peak of 176 in November, 1920, and the monthly stages of its subsequent decline:—

ALL ITEMS—AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.
January 1st	85.90	120	125	165	92
February "	90	120	130	151	88
March "	90	115	130	141	86
April "	90.95	110	132	133	82
May "	95.100	105	141	128	81
June "	100	105	150	119	80
July "	100.105	105.110	152	119	..
August "	110	115	155	122	..
September "	110	115	161	120	..
October "	115.120	120	164	110	..
November "	120.125	125	176	103	..
December "	120	125	169	99	..

Retail food prices alone, at June 1st, are calculated to be 70 per cent. above pre-war prices, the comparable figure for May 1st being 72 per cent. The decline in May was due to an average drop of about 3½d per lb on tea, owing to the reduction in the duty, and to slight reductions in the prices of eggs, cheese, milk, butter, and fish. On the other hand, potatoes, British meat, and bacon became dearer. During May retail prices of imported meat, flour, bread, sugar, and margarine showed no appreciable change.

The Rise in the Price of Cotton.—Traders in Lancashire this week have been much concerned at the further rise in raw cotton prices. It is feared that if values continue to go higher and make manufactured articles dearer, consumption of piece goods in many outlets abroad will be restricted, especially in India. On May 26th the quotation for Fully Middling American cotton on the spot in Liverpool was 11.84d. By June 1st the price had risen to 12.30d, and on June 12th the figure was 12.91d. A strong upward movement has occurred this week, and the quotation on Thursday was 13.74d. Sentiment in the New York and Liverpool markets has been bullish on unfavourable reports relating to the American crop for 1922-23. The visible supply is steadily being reduced. It is believed that unless the yield for next season is about 14,000,000 bales, present prices can be justified. If the upward movement is continued it will be a bad thing for Lancashire, as there are already indications of cloth dealers abroad refusing to follow the advances required by manufacturers. A week next Monday the Agricultural Bureau of the United States Government will publish a condition report on the cotton crop, and also an estimate of the acreage. It is probable that the statistics issued will remove some of the uncertainty as to future supplies and values, which now exists.

Guest, Keen, and Nettlefold.—The date of the end of the financial year having been changed from June 30th to March 31st, the accounts of Guest, Keen, and Nettlefold just published relate to a period of nine months, and previous figures are not therefore comparable. Net profits for the nine months, after payment of debenture interest, amounted to £567,200, and the available balance, including the balance brought forward, was £831,300. Results in previous years have been as follows:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Gross profits	401,722	424,480	433,453	446,645	417,141	934,530	884,121
Debit interest	69,548	74,020	74,020	74,020	74,020	74,020	74,020
Net profit	332,174	350,460	359,433	372,625	343,121	860,510	810,101
Brought forward	239,016	357,319	377,029	405,712	173,316	236,687	261,605
Available for distribution	571,190	707,779	736,462	778,337	516,437	1,096,197	1,071,706
Preference dividend	86,000	86,000	86,000	86,000	86,000	200,756	290,922
Reserve	70,000	100,000	100,000	130,000	50,000	..	..
Ordinary dividend	144,750	144,750	144,750	144,750	144,750	633,836	516,686
Rate	15 %	15 %	15 %	15 %	15 %	10 %	10 %
Carried forward	270,441	377,029	405,712	417,587	235,687	261,605	264,098

The ordinary shares receive a distribution of 10 per cent., free of tax, for the nine months, which absorbs £398,000, and the balance forward is reduced by £58,000 to £206,100, no allocation being made to reserve. The most important changes in the balance-sheet are increases of £449,000 in creditors, of £301,800 in debtors, and of £525,300 in investments, the latter being presumably due to the acquisition of the majority of the shares of one of the largest anthracite colliery companies in South Wales,

THE MERCANTILE BANK OF INDIA, LTD.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

referred to in the report. The total of investments, including shares in John Lysaght, Limited, and other subsidiary companies, is now £13,266,800. Cash and bills have fallen by £295,800 to £678,800.

John Brown's Profits.—As a result of "serious diminution in orders," which has "acutely affected" all departments of the company's business, and of the suspension of important contracts, "owing to the high wages payable," a considerable decline in profits is shown in the report of John Brown and Co. for the year ended March 31st last. As will be seen from the table below, the net profit has fallen from £331,900 to £210,400, the high water-mark having been touched in 1918-19 at £467,200:—

	1913-14.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Gross profit ..	£ 437,834	£ 514,220	£ 552,190	£ 468,704	£ 418,836	£ 304,740
Interest, &c. ..	60,336	60,902	85,019	89,895	86,915	94,333

Prof. dividend ..	100,000	150,000	100,000	100,000	100,000	100,000
Ord. dividend ..	87,500	87,500	87,500	87,500	87,500	87,500
	182,300	227,875	251,757	304,688	243,750	121,875
	(10 %)	(12½ %)	(12½ %)	(12½ %)	(10 %)	(5 %)
Carried forward ..	97,420	164,394	192,308	178,929	179,600	180,632

No allocation is made to reserve, and the balance carried forward is practically unchanged after reducing the ordinary dividend from 10 to 5 per cent. Balance-sheet changes are of no great significance. First mortgage debentures have been increased by £174,700, but creditors are £835,100 less, and stock of work in progress and sundry debtors have been reduced by £579,500 and £102,700 respectively.

Howard and Bullough.—An examination of the report and accounts of Howard and Bullough, Limited, for the year ended May 31, 1922, affords interesting evidence of the prosperous state of the cotton spinning and weaving machinery manufacturing industry. With a paid-up and issued share capital of £1,250,000 and a 4 per cent. debenture stock of £250,000, making a total capital of £1,500,000 in all, the company was able in its last financial year to make a net profit of £383,058 after payment of debenture interest, which absorbed £10,000. This is over 30 per cent. return on the share capital involved, and the auditors' certificate lends further interest to this ratio of earning capacity by declaring that "adequate depreciation has been written off the buildings, plant, and machinery" accounts. Recent years' results of this profitable undertaking are summarised below:—

	1913-14.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.	1921-22.
Gross profits	163,066	126,380	301,152	25,408	128,218	158,749	393,058
Debit interest	10,000	10,000	10,000	10,000	10,000	10,000	10,000
Net profit	153,066	116,380	291,152	15,408	118,218	148,749	383,058
Brought forward	31,464	37,698	39,078	91,081	53,989	57,207	60,956
Available balance	184,530	154,078	330,230	206,489	172,207	205,956	434,014
Ord. dividend	15,000	15,000	15,000	15,000	15,000	15,000	15,000
Reserve, &c.	75,000	75,000	112,500	100,000	100,000	100,000	100,000
	64,530	25,000	111,649	37,500	..	40,000	..
Carried forward	30,000	39,078	91,081	53,989	57,207	60,956	..

Last year ordinary shareholders received 10 per cent. This year the ordinary dividend is the same, but in addi-

tion a bonus of 7½ per cent. is declared, thus bringing the total distribution on ordinary shares up to 17½ per cent. Allocations to reserve total £150,000, and £94,014 is carried forward to next year's account as against £50,956 a year ago. Total reserves included balance of profit and loss, now amount to nearly £645,000, which bears a favourable ratio to total assets now recorded as £2,596,541. The balance-sheet will be found analysed in our usual column.

Southern Pacific Report.—The report of the Southern Pacific Company for the year 1921 shows that although there was a substantial decline in operating revenue there was a very much greater saving in operating expenses, and net revenue was consequently substantially higher. The comparative table below shows the position clearly:—

	1920.	1921.	Inc. or Dec.	
	\$	\$	\$	%
Operating revenues ..	282,269,504	269,494,365	-12,775,139	-4.53
Operating expenses ..	242,113,790	212,752,263	-29,541,527	-12.20
Net operating revenue.	40,155,714	56,922,102	+16,776,388	+41.76
Railway tax, &c.	14,905,009	15,664,035	+ 759,026	+ 5.08
Operating income	25,250,705	41,258,067	+16,007,362	+63.39

Maintenance expenses declined by \$16,626,800, or 15.4 per cent., and transportation expenses by \$12,483,800, or 10.65 per cent. Traffic units handled showed a decrease of 20.7 per cent. from the peak of 1920, and both wages and fuel were slightly higher. Net operating income was \$35,946,800, as against \$17,718,100, but gross income was \$2,313,300 lower at \$55,297,400, owing to the inclusion in 1920 of \$20,490,400 received from the Government under the guaranty, as against only \$3,648,600 for 1921. The balance of income transferred to profit and loss account is \$29,375,200, as against \$31,016,300 a year ago. The profit and loss account shows a credit for \$26 millions, which represents the approximate difference between the nominal value at which Pacific Oil properties stood in the books of the Southern Pacific Land Company and the amount received for them from the Pacific Oil Company when the oil properties were separated from the railroad properties. The 6 per cent. dividend absorbs \$20,639,200, and the surplus is increased by \$34,272,900 to \$192,249,600. The ratio of railroad net income to the outstanding capital stock is given as 6.12 per cent., as compared with 7.53 per cent. for the previous year.

The Mexican Railway.—The property of the Mexican Railway Company, Limited, was handed back by the Government on June 19, 1920, and there is thus a comparable period for the accounts for the half-year ended December 31, 1921, just published. In comparison with the corresponding period of 1920, gross earnings of the line show an increase of \$1,537,600 at \$8,567,300. Working expenses rose by \$1,073,700, owing to higher wages and costs of stores and material and to the larger tonnage of freight handled, the balance transferred to net revenue account being \$1,956,900, or \$483,900 more than in the second half of 1920. At the standard rate of 24d to the peso, this is equivalent to £195,700. Adding £23,700 for differences in exchange and other sundry revenue, the total net revenue amounts to £229,700. At June 30th last there was a debit balance of £695,000, and to this has to be added £103,200 in respect of interest accrued during the half-year under the third and fourth schemes of arrangement. An allocation of £13,000 is also made to reserve for taxation, and the net result is that the debit balance at December 31st last is reduced to £581,500. The fourth scheme of arrangement, which was agreed to last December, was sanctioned by the Court on January 24th. Under its provisions 20 per cent. of the outstanding certificates in respect of deferred interest on the 6 per cent. perpetual debenture stock has been paid in cash, and registered "A" stock amounting to £627,000 has been created in respect of the balance of 80 per cent. There has also been created £138,700 registered "B" stock in satisfaction of the outstanding certificates issued in respect of deferred interest on the 4½ per cent. second debentures. In anticipation of the

percentage of profits payable to the trustees of the "A" registered stock the company will, on July 1st, distribute among the stockholders £62,700, thereby redeeming 10 per cent. of the stock outstanding. During the current half-year the concession has been purchased for a line from Pachuca to Tampico, which, according to preliminary surveys, will have a total length of 480 kilometres, and will reduce the route from Mexico City to Tampico from 969 to 594 kilometres. The report mentions that Mexico is, in common with other parts of the world, suffering from trade depression, and in the opinion of the commercial community "no substantial improvement in business will occur until the Mexican Government has been recognised by the Governments of the United States, Great Britain, and France."

The Swiss Hotel Industry.—A correspondent writes:—Four years of war, with the resultant almost total cessation of the stream of summer and winter visitors, brought nearly all the tourist hotels of Switzerland to the verge of bankruptcy. Some of the large establishments in the great towns, most of them owned by companies, managed to attract guests, and one or two even paid substantial dividends, but these lived on the custom of foreign Government emissaries or war speculators, and of invalids, well-to-do refugees, and others who did not venture to risk the journey home. But the mountain hotels, many of them owned by local families or small syndicates, who had obtained the greater part of their capital on mortgage, were practically empty, and it became necessary for the Federal Government to establish and subsequently to extend a moratorium for the payment of the interest and sinking funds of the sums they had borrowed. Eventually, however, they came under the control of the banks, which now, we believe, regulate their charges, and though the visitors are returning, the state of the exchange and the general decline in the income of the classes that travel have effectually retarded their recovery. Accordingly, their condition has been under consideration by a Committee of the Lower House of the Federal Legislature. It met recently at Zurich, and M. Schulthess, the member of the Federal Executive in charge of the department dealing with trade and industry, stated that only a Federal subsidy could avert a general collapse. Official statistics of the hotel industry have never been published, owing, it is stated, "to the popular resentment at the view prevalent among visitors, and entirely erroneous, that Switzerland derives most of its wealth from its function as the playground of Europe." In 1905, however, the capital invested was unofficially estimated as equivalent to £31,000,000, and the number of tourist hotels at nearly 2,000. Now the capital is estimated at 1,140 million francs, or £45,600,000, and the number of persons engaged in the industry at 43,000. It is stated that 50 per cent. of the hotels require pecuniary aid, and that 50 per cent. have debts in excess of the value of their land and buildings. The Federal Council proposes a grant of 5,000,000f, or £200,000, to be apportioned by a society representing the hotel industry. One-fifth to be distributed in free grants to replace lost capital, two-fifths in loans without interest, the balance lent at interest; but only those hotels which have a fair chance of reviving are to receive aid. The grant was sanctioned on June 20th by the Federal Upper House.

Western Gold Industry.—For years past, writes our mining correspondent, the gold production of Western Australia has been on the down grade, owing partly to the inevitable exhaustion of the mines, and partly to the restriction of the scale of operations—in some cases the entire suspension—necessitated by the ever-increasing expense ratio. As Mr Richard Hamilton, the veteran manager of the veteran mine of Kalgoorlie—the Great Boulder—pointed out in his recent presidential address to the Chamber of Mines of Western Australia, the decline in the gold-mining industry last year was more marked and rapid than ever before. The State Award which came into operation at the beginning of 1921 increased the basic wage 28 per cent. above that of 1920, and gave boys the same rate as men, besides compelling employers to grant a fortnight's holiday per annum, on full pay, to

all employees. To the latter stipulation little objection can be made, but the payment of boys at the same rate as men is bad for all concerned. The almost immediate result of the award was the discharge of about 15 per cent. of the men employed on the mines. Towards meeting the increased expenses—last year's average working costs were 4s 3d per ton up at 38s 7d—ore above the mean grade of the reserves was treated: a thoroughly unsound procedure. Nevertheless, the dividends aggregated no more than £307,000, as against £429,100 in 1920—which, in turn, did not greatly exceed one-half the 1912 amount. Naturally, these features are reflected in the reports of the few surviving companies in which British capital is invested. Only three undertakings of importance still figure in the producing list: the Great Boulder, the Golden Horseshoe, and the Ivanhoe. The annual statements of the trio have recently been issued, that of the Great Boulder bringing up the rear. By the appropriation of some two-thirds of the gold previously placed to reserve, this company was able to show for last year a slightly increased profit; £10,000 being now placed to reserve, the sum carried forward is practically identical with that brought in. Dividends—1s 6d per 2s share—were the same as before, except that 6d of last year's total was paid tax free. As only to be expected in the circumstances, the ore reserves continue to shrink; the 192,100 tons available at the end of 1921 represented about two years' supply. Nothing is said about the company's recent venture in the Argentine. Doubtless some information will be given at the meeting which is to be held on Tuesday next. The interim dividend of 2s 6d, tax free, per £5 share paid in December last by the Horseshoe Company proved to be the total for the year: it absorbed £37,500 out of a net profit of £44,800. This compares with £66,500 for 1920, in respect of which period the dividends totalled £75,000, or 5s per share. At 594,000 tons, value .431 dwts, the ore reserves show a further decline in both quantity and value, but the present tonnage represents between four and five years' work for the mill. The Ivanhoe also disappointed its shareholders, there being no final dividend for 1921; indeed, the three quarterly distributions of 1s 6d each called for rather more than the actual earnings. For 1920, 6s 6d per £5 share was paid. Here, again, the ore reserves are down. Still, the total of 799,500 tons will keep the plant running about five years. For some time past now the company has had a side-line in the shape of financial business. Investments figuring in the balance-sheet for £128,700 are calculated to have a value slightly in excess of that figure. The surplus of cash assets equals 20s per share, now quoted at about 17s 6d. With regard to the outlook generally, it may be taken that the worst has now been seen. Charges for stores and materials are coming down, while the Court has just awarded a general wage reduction of 1s per day. A much more drastic cut is, however, needed to place the industry on a sound footing.

Oroville Dredging Group.—The two operating subsidiaries of the Oroville Dredging Company—the Pato and the Nechi mines—both paid increased dividends last year, and thus the parent company is able to report a net profit of £153,650, as against £111,800 in the twelve months ended September 30, 1920. As a result the dividend distributions totalled 4s per share in place of 3s 3d, a somewhat larger balance being carried forward each time. That in face of this the price of Oroville shares should have lately sagged away may at first sight appear anomalous; it is due, however, to the fact that the Nechi has almost reached the end of its tether. The manager gives the undertaking only a possible further year of work—of which nearly one-half has now expired. In these circumstances, and with a view to the transfer of the Nechi company's dredge to the Pato company, the directors of the Oroville offer two of that company's shares for every seven preference shares in the Nechi company. (The Oroville holds approximately 90 per cent. of the ordinary share capital of the Nechi Company, the remainder being held by the Pato Company. Only the preference shares of the Nechi are in the hands of the public.) The offer has been criticised on the grounds that it does not make adequate allowance for the cash resources on hand, nor take account of the Nechi Company's right

to 25 per cent. of the net assets in the event of liquidation. It has been semi-officially pointed out, however, that the surplus profits on hand actually belong to the holders of the ordinary shares, having been kept in hand pending a settlement of E.P.D. claims; the only other asset is the dredge, and all the preference shareholders would receive would be 25 per cent. of the proceeds of any sale. In the light of these facts the offer appears a fair one; it is doubtless made partly with an eye to the difficulties which might arise in connection with a winding-up. It may be noted that the other two companies also—the Oroville and the Pato—are not yet out of the wood as regards excess profits duty. The Pato property is considered still to have twelve to fifteen years' life, working with one dredge. The absence of returns from the Nechi property should soon be made good by the yield from the Constanca mine of the Colombia Corporation, in which the Oroville holds all the ordinary shares. On the completion of the 300-stamp mill now in course of erection an annual profit of £70,000 to £100,000 is estimated. The Constanca has every appearance of developing into a big proposition. In connection with this interest, and in view of the possibility of exercising options held upon two properties in the neighbourhood, the Oroville Company is undertaking the somewhat unusual task for a mining concern of constructing a toll road and running a river steamboat. It has, therefore, several and varied strings to its bow.

Obersee Correspondence.

IRISH FREE STATE.—ELECTION RESULTS— SECURITY PRICES.

(FROM OUR CORRESPONDENT.)

DUBLIN, June 23.

THE results of the Parliamentary elections in the projected Irish Free State afford a welcome evidence of the political sanity of the electorate, and of its desire for peace and settled government. Bewildered by the Collins-de Valera pact, and resentful of what it half-suspected as an attempt to muzzle it, the public found itself plunged into a General Election. Its choice was confined to the Sinn Féin "panel" candidates, a few Labour candidates, and a handful of hastily-improvised unofficial candidates, with imperfectly-digested programmes, and unsupported by any real electoral organisation. Its desires, made conspicuously clear by the system of proportional representation, are overwhelmingly pro-Treaty. The Coalition pro-Treaty Party has returned with 55 members, against 34 for the Coalition anti-Treaty Party. There are fifteen Labour members, ten Independents, six Farmers' Union members, and eight, as yet, undeclared results. The Independents and the Farmers may be counted with the majority so far as the Treaty issue is concerned, and the public assumes the same to be the case with the Labour members. The will of the majority is thus made manifest. Ireland unquestionably wants the Treaty. But that is all so far. The next question is "Will the majority prove capable of executing its own will by

restoring the fabric of internal peace and good government, and by uniting upon a definite constructive policy?"

There has been some comment upon the apparent firmness of typical Irish securities upon the Dublin Stock Exchange. Prices which remained practically unchanged between January and October, 1921, have shown substantial increases during the interval from October, 1921, to June, 1922. There were suggestions that there was "popular" buying on patriotic grounds, and that there were also astute removals of Irish capital from British to Irish securities for the purpose of avoiding all risk of double income-tax. The truth, though less exciting, is of an even deeper significance. The appreciation of values has been an automatic response to general and not to local causes. An analysis of the figures for the last two years shows a sensitive and restricted market, with price levels varying in a general correspondence with money conditions in London. The owners of Irish securities have been holding on, and have been able to do so, thanks to the support of the British money world. That is all. No other explanation is possible. For of all the factors which normally make for financial apprehensions and their reflection on the Stock Exchange not one has been wanting. And it is a safe prophecy that the satisfactory result of the General Election will also remain unreflected upon that apparently unruffled surface.

The traditional policy of the business community in Ireland has always been based on the British connection. Even its most pro-Irish elements have practised a thorough-going conservatism. It has steadily supported the established order of things, and with equal steadiness has eschewed "politics." And in that attitude it has hitherto unquestionably found safety and security. But can that attitude be maintained with equal safety in view of the new situation? The political arrangements of the future, the industrial and economic conditions dependent upon them, the whole organic machinery of the new system are in a state of flux and await the process of definite crystallisation during the next year. Classes and interests and sections are struggling for predominance, and wild theories are in the air. Labour, shrewdly directed, is obtaining credit and political power out of all proportion to its intrinsic strength. Some of its most successful candidates belong to its most extreme wing. It aims avowedly at State control of all machinery for the production of wealth, with suspension of rents and Purchase Annuities, plus compulsory tillage, at compulsorily fixed high wages in the meantime. The Farmers' Union are moving. Will the business community follow suit? How long can it count upon the help of the British financial world if it fails to help itself?

UNITED STATES.—FURTHER REDUCTIONS IN RAILROAD WAGES—COMMODITY PRICES—EXPANSION IN TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 12.

THE Railroad Labour Board has ordered a cut of 7 cents an hour in the pay of shop mechanics and of 9 cents an hour in the case of freight car men. This will affect some 400,000 shop crafts workers, will become operative July 1, and means an estimated annual saving to the carriers of approximately \$60,000,000, and brings the total cut in pay-rolls under the two decisions thus far rendered up to about \$110,000,000. In its latest ruling, the Board asserts that while the present wages of machinists are 39.2 per cent. higher than those of 1917 (prior to Federal control of the railways), the cost of living now is only 17.2 per cent. above that period, whereas in May, 1920, when wages were increased, the cost of living was 52 per cent. greater than in December, 1917. The reduction of 7 cents an hour will apply to all machinists, boiler-makers, blacksmiths, sheet-metal workers, electrical workers, car men (except freight car men), moulders, cupola tenders, core makers, and regular and helper apprentices. The larger cut of 9 cents an hour for freight car men was decided upon because, in the Board's judgment, their work does not require such skilled services as do other branches of car men's work.

Car cleaners, who now receive an average of \$3.18 a day, have been reduced 5 cents an hour, or 40 cents a day. The mechanics, whose present daily pay averages \$6.11 for electrical workers to \$6.28 for blacksmiths, will be cut 56 cents a day, bringing the daily wage of that group of employees down to about \$5.70. The reduction will not affect the pay of supervisory forces, and is therefore being criticised by labour interests. The majority ruling of the Board was concurred in by the members representing the railroads and the public, while the three labour representatives again strongly dissented. They protested especially against comparatively heavier reduction in freight car men's pay, and contended that the decision served "to substantiate the position of the railroads that wages need not be established with reference to the needs of the family." Throughout the long controversy over wage readjustments, labour union representatives have persistently harped upon that point. The minority opinion of the Board argued that a minimum wage for the shop crafts should be 50 cents an hour, which would mean a rate of 87 cents for skilled mechanics. Additional reductions, totalling some \$40,000,000, are expected to be announced by the Labour Board shortly, affecting about 350,000 railroad clerks, signal men, stationary firemen, oilers, and marine department employees.

The chief executives of eleven railroad brotherhoods have ordered a vote to be taken by about 1,200,000 railway employees, who will be affected by the Labour Board's wage decisions, to determine whether the workers will accept the rates of wages prescribed by the Board, or wish to strike in protest against the reductions. After the strike votes have been tabulated, another conference of brotherhood chiefs is to be called, it is understood, if a walkout is voted, as now seems likely.

Advances in commodity prices during May greatly outnumbered declines, but the downward tendency in breadstuffs and some dairy products partly balance the general movement to higher levels shown by beef and hog products, finished and unfinished textiles, iron and steel, and non-ferrous metals, coal, naval stores, and building materials. The net result for the month was a slight increase in Bradstreet's approximate index number, which on June 1st stood at \$11.9039, representing a gain of 1.7 per cent. over that of May, 4.6 per cent. over January 1st, and 12.1 per cent. over June 1, 1921, when the low point was reached in the great decline of 1920-1921. Since June 1, 1921, the index number has advanced ten times, and declined only twice, and then only slightly. The June 1st number is the highest recorded since March of last year; it is 42.9 per cent. below the peak point on February 1, 1920, 36.9 per cent. under the level on November 1, 1918, but still 36.6 per cent. above that reported on August 1, 1914. Last month only four groups of products declined, namely, breadstuffs, live stock, provisions, and miscellaneous products. Textiles supplied practically the entire net gain, although seven other groups showed small advances. In all, 37 products rose, 13 declined, and 56 remained unchanged in May. Compared with a year ago, 52 products were higher, and 53 lower.

Statistics now to hand, showing results of operations during May in leading trades and industries, as compared with the corresponding month in 1921, give a good idea of the marked expansion in this country's activities in the past fiscal year. May was another big month in building, expenditures at 135 cities, according to Bradstreet's, totalling \$184,414,135, a gain of 10 per cent. over April, and of 68 per cent. over May a year ago, with the probability that further returns will bring the month's total close to the peak reached in March. Last month's automobile shipments of 252,000 cars and trucks were 15 per cent. in excess of April, 53 per cent. above May, 1921, and 14.5 per cent. greater than in March, 1920. Individual reports from some leading factories mention record production, or sales, while the principal centre of the industry last week reported plants running to capacity, with unemployment negligible. Deliveries of raw silk to American mills during May approximated 33,284 bales, or 36 per cent. more than in April, and much the largest since January. Wool consumption, however, has been decreasing lately, the April total having been 45,274,000 pounds, marking a decrease

of 27 per cent. from March, which was the largest since January, 1920. In the last week of May, lumber output was 100,000,000 feet below shipments, and 537,000,000 feet below orders booked, with all departments of the industry a billion feet or more in excess of the corresponding week of 1921. May pig-iron production, amounting to 2,306,679 tons, was 11.3 per cent. larger than in April, nearly double the out-turn in May of last year, and the largest for any month since January, 1921, notwithstanding the coal strike, and the fact that coke prices were 55 per cent. higher than a year ago. In May, steel ingot production was 2,711,141 tons, a gain of 272,000, against an increase in pig-iron of 234,000 tons for the month. This is the largest output since October, 1920. An accurate measure of the growth of business in the face of the coal strike is afforded by the freight car loadings in the week of May 27th, which totalled 821,121 cars, a gain over April 29th of 62,835. New cars purchased by railroads in May aggregated 18,240, against 31,400 for April, while for the past five months such orders totalled 87,225, or more than three times the total for the entire calendar year 1921. The United States Steel Corporation's unfilled tonnage as at May 31st amounted to 5,254,228 tons, an increase of 157,311 tons for the month. The total is the largest volume of unfinished business on the books of the corporation at the end of any month since May, 1921.

FRANCE.—BEMELMANS AGREEMENT—PAYMENTS IN KIND—PRICES—BANKING FIGURES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, June 20.

YET another step has been taken towards rendering it possible for sufferers from war losses, as the result of the German aggression, to receive payment direct from Germany in kind, instead of having to wait until their respective Governments receive their reparation payments from Berlin. This new step is the notification last Friday that the Reparations Commission has now definitely approved the rectified terms of what is known as the Bemelmans agreement, signed on February 27th last with the German Government by M. Bemelmans, as representative of the Reparations Commission.

It is advisable, perhaps, in view of the numerous and confusing agreements now in existence for the purpose of regulating payment of reparations in kind, that their respective utility should be, in general terms, set forth. The mental confusion that may arise from the present situation may be gauged from the fact that no less important a journal than the *Temps*, which is usually absolutely reliable, stated formally, in announcing that the Reparations Commission had approved the Bemelmans agreement, that "French sufferers from war losses will be able in a few days to profit from the simplified procedure of the Bemelmans convention," and that they "will be able to apply direct, and according to ordinary business methods, to any German firms they may select, for the purpose of obtaining deliveries in kind, which will be placed to the debit of Germany in the Reparations Commission's accounts." There is official authority for stating, however, that the Bemelmans agreement will not apply to France, even after the Reichstag ratifies it.

What happened, it will be remembered, was this. The French Government about a year ago, through the medium of M. Loucheur, then Minister for the Liberated Regions, entered into separate negotiations with the German Government, represented by Dr Rathenau, with a view to bringing about some agreement to enable French claimants for reparations to secure direct payment in kind. This resulted in what were known as the Wiesbaden agreements, which were signed on October 6th last. These were subsequently supplemented by other agreements, known as the Gillet agreements, signed in March last. None of these agreements, which are direct conventions between France and Germany, and

do not concern the Reparations Commission, have yet, for some reason, been ratified by the French Parliament, and are therefore still inoperative. In view of the benefits likely to accrue from arrangements such as the Wiesbaden agreements, the rest of the Allies took the matter up through the Reparations Commission, with the result that the Bemelmans agreement has now been concluded on behalf of the whole of the Allies. Under Article 2 of this agreement, however, although each of the Allied Governments is free to adopt or reject the instrument, it is specially provided that "this procedure cannot be employed concurrently with another"; that is to say, France cannot have the benefit of both the Wiesbaden and the Bemelmans agreements, but must stand or fall by one or the other. The French Government has formally decided—apparently in view of its intention to bring about the ratification of the Wiesbaden agreements in the near future—not to avail itself of the provisions of the Bemelmans agreement, and to rely on its own independent convention being ratified by the French Parliament. It is announced that meanwhile, and until this ratification is given, the French Government will do everything possible to develop the payment of reparations in kind under the original arrangements provided for by the Treaty of Versailles itself.

Orders and deliveries under these clauses, since the Treaty was signed, have been insignificant, especially on the part of France. Irrespective of obligatory payments in kind, such as coal, dyes, livestock, &c., the total payments in kind made by Germany since the Armistice (November 11, 1918) down to April 30, 1922, under the reparations clauses of the Treaty have been distributed as follows:—

UNDER APPENDIX IV. (deliveries undetermined as to their nature and importance, in replacement of gold).

	Gold Marks.
Belgium	389,000
Italy	6,327,000
Serbia	37,204,000
France	Nil.

UNDER APPENDIX IV. (deliveries specially designed for devastated regions).

	Gold Marks.
Belgium	18,041,000
Italy	2,361,000
Serbia	1,233,000
France	8,991,000

Figures published here from Berlin sources state that the orders received and the deliveries made by Germany down to March 30th last, under the clauses referred to above, were valued (in paper marks) as follows:—

	Orders.	Deliveries.
Serbia	3,800,000,000	533,000,000
Belgium	831,000,000	230,000,000
France	468,000,000	135,000,000
Italy and Greece	392,000,000	52,000,000
	5,550,000,000	950,000,000

According to the same authority, the orders received amounted by the end of April to about 7,000,000,000 paper marks. It is to be noted that the French requests for supplies under these clauses of the Treaty are extremely small, in comparison with the total amount of the French claims. It is now understood that the Foreign Affairs Commission of the Chamber is pushing forward the arrangements for the speedy ratification of the Wiesbaden and the supplementary agreements, and that these will receive Parliamentary approval before the Chambers rise for the holidays. The agreements will be laid before Parliament in a form that will give the French claimant of payment in kind the combined advantages of both the Wiesbaden and the Bemelmans agreements, and will enable the French sufferer and the German trader to enter into direct relations with a minimum of red-tape.

The French index numbers for May, as compiled by the Service de la Statistique Générale de la France, show that while wholesale prices of foodstuffs were practically unchanged during the month, retail prices in Paris again rose appreciably, as compared with previous months. Taking 100 as the base figure for the period 1907-1910, the comparative index figures for April and May in respect of the wholesale prices of 20 categories of food-

stuffs and 45 categories of industrial materials were as follows:—

	1922.	
	April. (Corrected).	May. (Provisional.)
Wholesale Prices.		
General index figure (45 categories) ..	362.6	366.2
Foodstuffs alone—		
General index figure (20 categories) ..	387.5	387.3
Vegetable foods (8 categories)	372.3	371.8
Animal foods (8 categories)	427.2	427.4
Sugar, coffee, cocoa (4 categories) ..	338.7	338.3
Industrial materials alone—		
General index figure (25 categories) ..	342.8	349.3
Minerals and metals (7 categories) ..	293.6	298.7
Textiles (6 categories)	373.7	395.4
Various (12 categories)	356.0	355.7

It may be recalled that the feature of the comparative figures for March and April was the sharp rise in the index numbers (wholesale prices) for foodstuffs, while those for the other categories were either stationary or showed an appreciable reduction. Thus vegetable foods rose from 342.3 to 372.3, and animal foods from 402.3 to 427.2, which are practically unchanged for May. Against this there is the fact that the comparative index figures for retail prices of foodstuffs in Paris (13 categories) are as follows:—

April, 1922	3272, or an increase of 204% on 1914
May, 1922	3413, " 217% on 1914

The index figure for March represented an increase of 194 per cent. on 1914 retail prices.

The majority of the great banks have now held their annual general meetings, and a critical analysis of their situation is begun this week in the *Situation Economique et Financière*. The first set of comparative figures to be summarised are liabilities to clients that include sight deposits, creditor current accounts, short term deposits, acceptances, &c., and are as follow:—

	LIABILITIES. (Millions of Francs.)			
	1913.	1919.	1920.	1921.
Crédit Lyonnais	2,363.2	4,447.2	4,708.6	4,744.2
Société Générale	1,967.4	4,287.7	5,228.7	5,212.7
Comptoir d'Escompte ..	1,589.1	3,355.0	3,662.8	3,440.1
Crédit Industriel	258.0	528.9	426.9	529.8
Banque Nationale de Crédit	218.2	2,262.6	2,558.1	2,126.2
Crédit Commercial de France	179.1	1,331.0	1,427.3	1,302.1
	6,575.0	16,222.4	18,012.4	17,355.1

As regards liquid money and money on call at the Banque de France the figure reached in 1913 was 550 million francs. This rose in 1920 to 2,367 millions, and has now fallen back to 1,954 millions, a higher ratio for the business carried than before the war. Bills show a very much larger total than before the war, but in this connection it has to be remembered that no distinction is drawn by the banks between commercial bills and bons de la Défense Nationale. In this respect the figures are as follow:—

	BILLS. (Millions of Francs.)			
	1913.	1919.	1920.	1921.
Crédit Lyonnais	1,518.0	3,092.9	3,239.5	3,790.8
Société Générale	1,013.5	2,834.3	3,130.1	3,531.0
Comptoir d'Escompte ..	1,004.4	2,411.0	2,654.0	2,651.3
Crédit Industriel	147.9	459.4	335.1	433.2
Banque Nationale de Crédit	75.7	1,349.1	1,353.3	1,214.3
Crédit Commercial de France	92.8	876.3	973.1	853.1
	3,752.3	11,023.0	11,685.1	12,473.7

The following table shows the position of the banks as regards investments, which, it will be noticed, have been considerably reduced:—

	INVESTMENTS. (Millions of Francs.)			
	1913.	1919.	1920.	1921.
Crédit Lyonnais	1,103.1	1,294.9	1,442.7	949.4
Société Générale	1,125.0	1,434.7	1,739.7	1,591.3
Comptoir d'Escompte ..	723.5	965.0	1,123.4	761.8
Crédit Industriel	140.4	114.0	114.3	138.0
Banque Nationale de Crédit	154.3	556.4	917.2	707.2
Crédit Commercial de France	117.5	327.4	404.4	426.9
	3,363.8	4,692.4	5,641.6	4,574.6

The eventual result on the Bourse of the failure of the international loan to Germany has proved depressing in the extreme. Not only has the franc lost considerably in value, but the decision reached by the business men who

were considering the possibility of floating a loan has had the effect of causing the business public here very seriously to reflect on the financial situation caused by the war. Towards the end of the week there were some signs of a recovery, but in the markets generally, where there has not actually been a serious decline, there has been very marked stagnation. French Rentes have, on the whole, resisted well, the 3 per cents. having risen from 58 to 58.45. The 1915-16 have dropped from 77.85 to 77.60, the 1918 4 per cents. from 63.35 to 62.40, and the 1920 6 per cents. from 90.40 to 89.55. Banks in the early part of the week showed a very serious decline, but by the end of the week recovered roughly to their previous position. Transports dropped, also recovering somewhat towards the close of the week. Thus Est is at 722 as against 740, and the similar figures for other railways are as follow:—Metropolitan, 420 and 417; Nord, 1,180 and 1,146; Midi, 765, and after paying a dividend 765; Orleans, 880 and 876; P.L.M., 873 and 852; and Wagon Lits, 410 and 408. Shipping has shared in the general depression, Messageries Maritimes dropping from 181 to 175 and Chargeurs Réunis further declining from 342 to 333. Suez at 6,060 is 80 points stronger, the rise being due largely to the appreciation of sterling.

GERMANY. — CABINET — FINANCES — PRIVATE BANKS—EXCHANGE AND BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, June 20.

THE Wirth Cabinet has been showing signs of weakness since the failure of the Paris Loan negotiations, and it is now threatened by the ever-increasing antagonism of business circles to the Forced Loan, and more immediately threatened by opposition to its Breadstuffs Requisition Bill. Financial authorities, led by the director of the Berlin Handelsgesellschaft, declare that it is technically impossible to get in 60 milliard marks, as the Government proposes, practically on a single day. Money is increasingly tight; provincial banks are refusing to give credit, and the chief banks have decided to charge 3 per cent. a year commission on advances, in addition to interest, so that the effective rate is 10½ per cent. Fear is expressed that the sudden demand for the 60 milliards will lead to wholesale presentation for rediscount of private-held Treasury Bills; in this case the effect of the Forced Loan as a counteragent to inflation would be neutralised, as the Reichsbank could rediscount only with newly printed money. The Breadstuffs Bill provides for requisitioning 2½ million tons, the same quantity as last year, of the harvest, the remainder being saleable at free market prices. The price of the requisitioned quantity is to be fixed according to the variations in production cost. The Right parties demand the complete freeing of the grain trade, and there are differences in the middle parties, while the moderate Socialists declare that they will abandon the Cabinet if the Bill is not passed. With partial requisitioning as above, the Government hopes to keep the 1,900 gramme loaf from rising over 24 marks, but if the whole native production were released for free sale, the price, it is estimated, would be at least 40 marks. The Independent Socialists want an increase of the requisitioned quantity to 4,000,000 tons. A withdrawal of the moderate Socialists would either overthrow, or make necessary a radical reconstruction of, the Cabinet.

The Guarantee Committee has established itself in Berlin. The agreement with the Allies for deliveries in kind has been approved of in Reichstag Commission. This consists of the Wiesbaden agreement with France, the Bemelman agreement with the Reparations Commission, and the Gillet agreement which regulates the application of the Bemelman agreement to France and the resulting alterations of the Wiesbaden agreement. The gold supplement on Customs duties has been raised from 5,900 to 6,400 per cent., so that duties paid in paper marks are 65 times the amount in the Customs schedules. The supplement was 900 per cent. in January, 1920, 1,900 per cent. in October, 1921, 3,900 per cent. in November, 1921, and 4,400 in March, 1922. The railway goods and express goods rates will be raised again, by 25 per cent., on July 1st. The Finance Ministry's ten days' report

for June 10th shows a decline of the Floating Debt by 1,671,300,000 marks to 287,574,765,000 marks, of which 269,241,535,000 marks consists of discounted three months' Treasury Bills and the remainder of longer-term bills. Expenditure for fulfilment of the Peace Treaty between April 1st and June 10th was 19,243,856,000 marks. The Reichsbank's statement for June 15th shows the large increase of 7,861,926,000 marks in Treasury bill discounts, the total being 171,903,543,000 marks. Another indication of the growing demand for credit is the rise of 3,181,726,000 marks in the Bank's holding of "Kassenschein." In the last two years this item has been rapidly decreasing, and at one time it showed signs of disappearing altogether. Note circulation on the 15th was 155,345,277,000 marks, an increase of 430,389,000 marks, while "Kassenschein" circulation fell by 149,500,000 marks to 9,390,600,000 marks.

The expert editor of *Die Bank*, Dr Alfred Lansburgh, has made a considerable stir in interested quarters by a new attack on the paper State finance which is now the rule in Germany and elsewhere. Herr Lansburgh sharply criticises that part of the London Memorandum which professes to provide lines of thought for the coming conference of central banks. The conference, he thinks, is threatened with futility through the London experts' admission that certain countries will not be able to return to gold payments in the next years, and that the most to be expected from these countries at present is a formal acceptance of the gold currency principle. The London argument is that a currency cannot be stabilised at any gold value until State finances have been put in order. Herr Lansburgh not only declares this to be a doctrinal heresy, and a proof of the prevalence of "moral insanity," but adds also that it is bad in practice, and asserts roundly that there is not one State in Europe (Russia not excepted) which could not cover the deficit in its expenditure (already reduced, as it is, by the partial expropriation of creditors), by means of home loans, and, in particular, by voluntary loans. The bad-currency States, says Herr Lansburgh, must first repair their currencies, thereupon their Budgets and foreign payment balances will look after themselves—to admit that currencies cannot be restored until after Budgets are balanced is to postpone currency reform for ever. This argument is based upon the fact that under the existing inflation system the States with deficits actually do annually raise from their populations the whole substance of national expenditure, doing it not by taxation with a reasoned incidence, but by the automatic expropriation which a depreciating currency involves. While a deficit system patched up by funded loans without inflation temporarily spares the population, a deficit system eked out by inflation imposes the full burden of current expenditure, and imposes it in an arbitrary way. Against this must be said that the inflation system does in part relieve the home population, because it expropriates foreign creditors; and it seems certain that a big part of the German Reparations money ostensibly raised by selling inflation marks has indirectly come out of the pockets of foreign bond-holders, mark-holders, and holders of dividend-bearing stocks (the dividends of German stocks do not rise in proportion to the fall in the currency's gold value).

The reports for 1921 of all the chief banks have now appeared. The following figures, taken from the *Frankfurter Zeitung's* analysis, refer to eight banks—Deutsche, Disconto, Dresdner, Darmstadt, National, Commerz-und-Privat, Berlin Handelsgesellschaft, and Mitteldeutsche Kredit.

	(Millions of Marks.)	
	1921.	Excess Over 1920.
Gross profits	4,286.2	2,024.2
Taxes and administration	3,065.4	1,558.4
Do in per cent. of gross profits	71.5 %	66.6 %
Written off	45.5	16.4
Net profits	1,068.6	380.6
Paid in dividends	377.5	144.0

The profits are given without carry over! Dividend rates, with last year's rates in parenthesis, are:—Deutsche 24 (18), Disconto 20 (16), Dresdner 16 (12½), Darmstadt 14 (10), National 14 (10), Commerz 16 (10), Handelsgesellschaft 16 (12½), Mitteldeutsche 12½ (10). The cost of administration and taxes tends to rise even more rapidly than the gross profits. As the gold value

of the mark has fallen to about one-fifth of its level of a year ago, the real dividends are much lower than those of 1920. Total capital at the close of 1921 was 2,609,500,000 marks, which is an increase of 869,500,000 marks over the figure for a year before; whereas total reserves have risen by 1,008,700,000 marks to 1,782,700,000 marks, the ratio of reserves to capital having risen from 44.5 per cent. to 68.3 per cent. The banks' liabilities nearly doubled. The total for the end of 1921 was 117,530,700,000 marks, which is 54,184,000,000 marks more than the year before, the excess of liabilities over combined capital and reserves being 2,676 per cent., against 2,519 per cent. the year before. The figure for the Deutsche Bank, 4,569 per cent., is the highest. Of the banks' assets, 63.5 per cent., or 74,598,100,000 marks (against 73.2 per cent.), are counted as "liquid in the first degree," and of this sum 53,136,900,000 marks consists of bills, 13,820,700,000 marks of bank credits, and 7,416,400,000 marks of cash or Reichsbank credits. The clearings of some of the banks are not given. Those of the Deutsche increased by 844 millions to 2,125 millions, Disconto by 623 to 1,463 millions, Commerz und Privat by 355 to 737 millions, Handelsgesellschaft by 215 to 385 millions. The ratio of bills and Treasury bills to clients' money is considerably smaller this year than last, and as this item mainly consists of Treasury bills (also as the proportion of commercial bills, though still very small, has increased), there are signs of a tendency to cease looking to the State for investments and to return to business banking; but as long as Treasury bills are freely discounted by the Reichsbank, this tendency can only increase the inflation.

The Bourse continues undecided. The tendency last week was slightly upward for dividend-payers, while home loans moved little. The general public holds aloof. Yesterday and to-day the tendency was weak, but home loans were steady. War Loan was to-day 77.50, Federal 4 per cents. 110, 3½ per cents. 87.60, 3 per cents. 145, Colonial 4 per cents. 123, and Savings and Premium 86.40.

CZECHO-SLOVAKIA. — FOREIGN TRADE — ANGLO-CZECH BANK—BANKING FIGURES—INDUSTRIAL POSITION.

(FROM OUR CORRESPONDENT.)

PRAGUE, June 17.

THE trade figures for the first three months of 1922, as published by the Statistical Office, show imports 9,206,790 quintals, as against 11,099,724 quintals for 1921, a decrease of some 1,800,000 quintals, which was to be expected. On the other hand, the exports—20,528,906 quintals, as against 20,772,435 quintals for 1921—show not much more than some 25,000 quintals difference. A glance at the importing and exporting countries, however, explains the matter. Germany accounts for 2,001,165 quintals of the imports and 7,179,498 quintals of the exports. Austria sent here 536,406 quintals, and took 7,441,218 quintals, coming first in the list, Germany being second and Hungary third. The last-named country figures for 639,160 quintals among the imports and 2,225,372 quintals among the exports. Nearly 17 millions out of the 20 million exports went to the neighbouring countries. It should be noted that the sugar season comes to an end with April, and that it probably represents a considerable portion of the amounts exported to other countries. The U.K., whose shipments to this country amounted to no more than 72,668 quintals (7,266 tons), coming twelfth in the list, took as much as 377,853 quintals of the exports.

Since my last letter a settlement for the time, at least, has been reached in the metal industry, and the men have returned to work. A wage reduction from 8 to 10 per cent. has been accepted, and a new collective agreement is to be framed for the future. Meanwhile the price of iron has been raised in Austria, and a like increase is to be imposed in Germany, and the prospect of having to import from other sources does not improve the outlook for the industry. It looks as though the Government would have to reconsider the question of

import duties on foreign machinery. The smaller machines, such as ploughs, it is now impossible to import at all, while in the case of motor cars, it is next door to impossible. The Czecho-Slovak Government appear to go on the principle that anything that can be made in the country must be made there. This point of view, however unsound it may be thought economically, is natural in a young country, especially where an industry—such as the building of motors—is still more or less young. In time the question will assume its natural position and broader views will prevail. It is fair to assume that after paying moderate duties, English and American machinery could compete successfully with local products.

Before the starting of the Anglo-Czech Bank there was practically no British money invested in Czech banking, while what foreign capital there was did not amount to more than 15 per cent. of the whole, and therefore the various countries, including France, Italy, Holland, Belgium, and U.S.A., which were represented, cannot individually be large shareholders. The starting of the Anglo-Czech Bank has been described as of "historical interest," and hopes are expressed that the new bank will play a great part in the development of Anglo-Czech relations, commercial and otherwise. It is significant that the Prague municipal loan, recently negotiated through Messrs Helbert Wagg and Co., has been placed through the bank. The strength of the board, with an ex-Minister of Finance as president, Mr Spencer-Smith, a director of the Bank of England, Mr G. M. Young, and Mr Bark, a former Russian Minister of Finance, gives great confidence.

The Government has decided to create an official State bank as soon as the time is ripe. Meantime the functions of such a bank are performed by the Banking Office, an institution under the control of the Ministry of Finance, and having all the rights of a note-issuing bank. According to the statement of this office for May 7, 1922, the sanctioned and actual note circulation was as follows:—Sanctioned note circulation, Kc. 10,454,840,004; actual note circulation, Kc. 9,784,170,210; unused balance, Kc. 670,669,793.

The crown remains firm round 230 to the £ sterling, and the course of its rise is interesting to observe. In August, 1921, the Czech crown was 203 to the £ sterling, while the mark was 298. On November 26th the crown had fallen to 380, while the mark was 1,129. On January 28, 1922, the crown was 219, the mark 864; on February 25, 1922, the crown was 242, the mark 963; on March 25, 1922, the crown was 242, the mark 1,368. The break away began in September, when the crown rose to 318, while the mark fell to 399.

The following figures help to give an idea of how the banks have prospered during the last few years. The Zivnostenská Bank, which paid a dividend of 5 per cent. in 1914 on a capital of 80 million crowns, has recently declared a dividend of 14 per cent. on a capital of 200 millions, the reserve fund having moved from 31 millions to 103 millions. Likewise the Bohemian Union Bank pays 14 per cent. on a capital of 120 millions, compared with 6½ per cent. on a capital of 65 millions in 1914. Another bank, the Bohemian Industrial Bank, now amalgamated with the Agrarian Bank, known as the Bohemian Industrial and Agrarian Bank, has at present a capital of 210 millions, and paid 8 per cent. in 1921, against 3 per cent. only in 1914. The shares of the first-named banks, which were quoted at 480 and 420 respectively in October, 1918, rose to 620 and 615 in February, 1920, and in February, 1922, were called 436 and 439.

The glass industry, which has been going through a critical period, is still in a delicate state. The chief cause of this is the successful competition of Germany and Belgium, enhanced by the fact that in some instances Bohemian manufacturers have removed into Germany with their plant and workers. Apart from the cost of production, there are difficulties as to raw material in Czecho-Slovakia which do not confront her rivals. Much of the sand required for manufacture comes from Germany, and difficulties have recently developed as to its importation. The Government have therefore determined to exploit certain sand deposits, which have been favourably reported on, on the Silesian border, and also to consider the reduction of freight charges from the

German borders. This, with some encouraging demands for window and mirror glass from India, has caused a more optimistic feeling in business circles, and improvement is looked for confidently by September.

Taking the industries by turn, the sugar industry may be said to be quite sound and flourishing. The same may be said of the Gablonz ware, as apart from the glass industry as a whole. The timber trade is said to have turned the corner; export duties have been lowered and contracts entered into as far West as Holland. The trade in cereals for the harvest of the present year will be free, the Government having given up control, to be resumed only if the harvest should prove poor. The result will probably be an improved export trade in malt and barley and an increased importation of foreign wheat and flour, as production is insufficient for home consumption. The iron and metal trade have troublous times to encounter, and very careful supervision is required if the difficulties are to be surmounted. In this connection much is hoped for from Russia, but as long as the trade with that country is confined to the Soviet Government, it would be unwise to be too optimistic. A good deal of business may be fairly expected to be done with the Ukraine, Yugoslavia, Rumania, and Poland, and to a lesser extent Austria and Hungary. In the textile industry, the chief industry of the country, there is also a more optimistic feeling.

INDIA.—A CALL FOR ECONOMY—THE INCHEAPE RETRENCHMENT COMMITTEE—INDIAN BORROWING—EXCHANGE, BULLION, AND INVESTMENTS.

(FROM OUR CORRESPONDENT.)

BOMBAY, June 3.

THE spirit of retrenchment is abroad in India. The most important event of commercial and financial significance experienced during the past month took the form of a joint influential and thoroughly representative deputation of Indian and European merchants which waited upon the Viceroy to urge the vital necessity of reducing the country's current expenditure at least to the level of the country's estimated revenue. The event also possesses political significance, for this is the first time that Indian and European business interests have "come together" in formulating financial proposals direct to His Majesty's Viceroy in India. It is at least a sign that all castes and creeds are beginning to recognise the wisdom of Mr Montagu's dictum that "the keystone of Indian politics is finance." Lord Reading, in his reply to the deputation, emphasised that his Government were fully alive to the seriousness of the present financial situation, and agreed that one of the first avenues to be explored—and thoroughly explored—was the question of expenditure. This question would be put to the test by the Incheape Committee, which will report to the Government of India. The terms of reference of this Committee are substantially the same as those of the recent Geddes Committee, and contain the proviso which formed part of the British terms to the effect that in so far as questions of policy are involved in the expenditure under discussion, these will be left for the exclusive consideration of Government.

Before this Indian Retrenchment Committee begins work we should have the report of the Fiscal Committee before us. This is expected to be ready in July. While some difference of opinion among the members is likely to be revealed, it is generally believed that a good deal of unanimity exists on all important points. Your correspondent derives this supposition from Simla; it is, of course, understood that nothing definite can be said until the report has been through the hands of the Government of India. Another note from influential quarters leads me to suppose that in the near future the Government of India intend floating a large sterling loan on the London market. In the past the issue of Indian loans on the London Stock Exchange has prompted dissatisfaction amongst Indian investors, who have complained that they have not been granted sufficient time to purchase, owing to the sharp success of the said loans. A simultaneous release of the next loan in England and on the exchanges of India would obviate a repetition of

the discontent, much of which, by the way, was of political promotion. Indian financial circles, like those at home, were surprised to hear that the underwriters of the Straits Settlements Loan were left with 98 per cent. of the stock, but the feeling is general that any forthcoming sterling loan on behalf of this country will meet with as much success as has been the lot of recently floated Colonial and foreign Governmental issues.

The rupee exchange during the past month shows very small fluctuation. The present London banks selling rate is 1s 3½d. The purchase of silver on Indian accounts is proceeding steadily, and gold has been bought from America via London at 93s 6d per ounce. At the moment of writing bar gold is ruling steady on our market inquiries at 92s 9d per ounce. Cotton and industrial shares on the Bombay Stock Exchange remain steady, and there has been something of a boom in jute shares at Calcutta, with cottons and industrials dull.

ARGENTINA.—GENERAL OUTLOOK—CATTLE PRICES AND AGRICULTURAL FINANCE—A FOREIGN LOAN PROJECT—RAILWAY TARIFFS—SECURITIES AND EXCHANGES.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, May 26.

MAY has been a month of expectancy. In the first place, it was generally hoped that more definite decisions at Genoa would have reacted favourably on the prices for Argentine produce. Some shipments of grain have been made to Russia, and the fact that M. Krassin had, in the course of an interview with the correspondent of a leading Argentine daily, laid particular stress on the desire of the Soviet to enter into direct relations with this republic, was naturally given prominence. It was also thought that the European atmosphere would, after the Conference was over, be more favourable to the consolidation loan, whereby Argentina hopes to set her national finances in order. For the present, both these hopes must be laid aside, and although exports are relatively brisk, Argentina is greatly perplexed over the problem caused by the fall in meat prices and its natural reaction on the cattle industry. The matter is serious, if not quite so grave as the actual sufferers, through falling prices, are inclined to make out. Prices for the finest quality live stock, the cross-bred steers specially prepared for the freezers, are scarcely half what they were 18 months ago, and the ratio of depreciation is still greater in the poorer grades or native cattle. While such a state of affairs means diminished profit, and in many cases actual loss, to the large breeder who owns wide extensions of land and large numbers of horned stock, it threatens to spell utter ruin to the smaller or more speculative individual who bought young animals for fattening with borrowed money, and, as often as not, added to his own land rented pasture leased at a high figure. At present many people coming within this category are being carried by the banks under what is known as the Agrarian Pledge Law, the stock being hypothecated in cover of the advance. It is, however, manifestly impossible to force repayment at the present time without bringing about disaster, affecting particularly the more specifically Argentine banking institutions, since there is grave reason to suppose that the hypothecated cattle do not, at present values, give a sufficient margin on the amount of the outstanding loans. The Banco de la Nacion itself admits to 80 million dollars Argentine paper as being thus locked up, and it has adopted the usual expedient of having cattle killed and frozen for its account, some 500 tons of meat thus prepared having been shipped recently to France, there to be sold for account of the bank. This is merely an experimental move, but it serves to illustrate the difficulties of the position. The Argentine Government, fully alive to the situation, has, moreover, sent two special commissioners to Europe charged with the mission of increasing the demand for Argentine meat, either canned, chilled, frozen, or on the hoof. It may, however, be mentioned that the soundest local opinion is still against any of the empiric remedies that have been brought forward in large

numbers. Gradual diminution of the herds is going on, and the situation, though desperate for some, is not quite as dangerous as it at first sight looks, judging by the steady and high values obtainable alike for the leasing or the sale of good pastoral camps.

In the matter of the consolidation loan, rumour has been very busy all the month, but nothing will be publicly done until May is past, and with it the optional rights over proposed new issues of the New York group of bankers who launched Argentina's last series of Treasury Bonds in that market. Then Congress will be asked to authorise the Ministry of Finance to make arrangements with an international consortium—banking houses of London, New York, Paris, and Amsterdam are mentioned—for an issue of a long-term consolidation loan amounting to anything from \$150,000,000 to \$200,000,000 gold. Part of the funds thus obtained would be used to lift some of Argentina's short-date debts in the New York market, and the balance would be applied to paying off the bulk of the internal floating debt. Taking all things into consideration, Argentina's foreign indebtedness is not disproportionate to her means, and, given the revision of her fiscal and taxation system which is foreshadowed, the service of such a loan as is proposed comes well within her abilities. Moreover, seeing that the bulk of the present floating debt is held by the Banco de la Nacion in the name of the private institutions who have rediscounted their holdings with that concern, repayment would mean the freeing of a large amount of "frozen" credit, indubitably useful to the trade of the republic at the present juncture.

Considerable disappointment has been felt at the dilatoriness of the Government in the matter of the railway tariffs, but there is good reason to hope that the final authorisation to increase certain rates will be published shortly. When the two lines serving the Entre Rios region addressed their joint memorial to the Minister of Public Works, advising him that unless they were granted additional tariff charges without delay they would be forced to reduce both their services and their personnel, the Argentine Press in general spoke out plainly. It was even said that the decree would be signed in the self-same week, but the rumour proved ill-founded. With receipts from cereals beginning to fall off, and both passenger and freight traffic showing the customary seasonal decline, the introduction of the new rates is especially important, and should not be any further delayed.

Shipment of Argentine produce continues on a normal scale. There have been 2,073,000 tons of wheat shipped to date for the current year, 750,000 tons maize, and 322,000 tons linseed. Prices in the Buenos Aires market have weakened during the month, and close at \$13 Arg. paper per 100 kilos for June wheat, \$7.65 for maize, and \$20.60 for linseed. The exportable surplus of the first-named grain is now assumed to be at least 1,300,000 tons, and as scarce 50,000 to 60,000 tons a week are being shipped, no heed need be paid to reports of Government interference with export. The wool market is very firm, stocks diminishing at a great rate, and there are less than 2,500,000 kilos in the Central Produce Warehouse in Buenos Aires, as against 15,000,000 kilos this time last year. \$7.50 Arg. paper per 10 kilos has been paid for finest coarse cross, and \$11.50 to \$12.50 for medium cross. Practically no fine wools are to be had, and there is every indication that the demand for the coming clip will be very firm. Hides are also moving off freely at better prices, the majority of the dry hides going to Great Britain and Germany, while the salted hides are taken for the States. Quebracho, both in logs and as extract, is once more being shipped in fair amount, chiefly to the United States and Germany. Exchange during the month has fluctuated considerably from day to day, but closes with little change as compared with the end of April, banks drawing at sight on London at 44½, and the U.S. rate being 121.50. Local discount rates for first-class business are weak at 5½ per cent. per annum. A heavy movement is observable in the Cédulas of the National Mortgage Bank, those carrying the July coupon being quoted at 98.30. There has also been a strong demand for issues of the Province of Buenos Aires, both by local investors and for foreign account, this applying more especially to the 3½ per cent. loan of 1906.

Letters to the Editor.

VENEZUELA AND UNPAID COUPONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the letter of Mr H. Perez Dupuy, which appeared in the *Economist* of the 10th instant, I beg to enclose copy of correspondence with the Government of Venezuela in the case of a bondholder who was prevented by the war from encashing his coupons within the prescribed period. Mr Dupuy is evidently not acquainted with the facts.

Letter from the Council of Foreign Bondholders to the Venezuelan Finance Minister.

"London, July 20, 1920.

"I have the honour to inform your Excellency that Mr R..... B....., of Brussels, has presented to us for payment coupons of the Three per Cent. Diplomatic Debt of Venezuela, 1905, due January 1, 1915, amounting to £8 2s.

"As your Excellency is aware, the Arrangement of 1905 provides for the proscription of coupons not presented for payment within five years of their due dates. We accordingly inquired of Mr B..... why the coupons had not been presented before, and he has replied that they were hidden away during the occupation of Brussels by the Germans, and had only recently been recovered.

"In these circumstances we feel sure that your Excellency's Government will not wish to apply the rule of proscription, and will be good enough to send us instructions to pay Mr B..... the coupons referred to."

Letter from the Venezuelan Finance Minister to the Council.

"Caracas, September 24, 1920.

".....In answer I beg to inform you that this office considers that the interest, amounting to £8 2s, belonging to Mr R..... B..... to which you refer is included in the proscription."

Letter from the Council to the Finance Minister.

"London, October 26, 1920.

"I have the honour to acknowledge the receipt of your Excellency's letter of the 24th ultimo.

"We take the last paragraph to mean that your Excellency's Government is not disposed to consent to the payment of Mr B.....'s coupons.

"We beg to point out to your Excellency that the non-presentation of the coupons within the prescribed time has arisen from a state of war, and it is the invariable practice of all nations to treat this as a ground for suspension of any period of proscription.

"We cannot think that the Government of Venezuela would wish to relieve itself from payment on this ground of a small sum which unquestionably is owing to the unfortunate bondholder concerned.

"We trust your Excellency will reconsider your decision."

No reply was received to this communication, and in the Council's Annual Report for 1921 the following appeared:—

"While the Government of Venezuela is to be congratulated on the regularity of the remittances for the Debt Service, it is a matter for regret that they have declined to follow the invariable custom of nations to suspend, during war, stipulations which proscribe the payment of Bonds or Coupons not presented within a fixed period. In consequence of the occupation of parts of France and Belgium by the enemy during the recent war, some of the holders of Venezuela Bonds were not able to obtain access to their property, and it is inequitable that they should be told that their coupons are valueless because they failed to comply with a regulation which it was not possible for them to act upon."

We leave it to your readers to say whether there is anything in this which can possibly be regarded as "contemptuous."

It is obviously necessary for the Council to obtain the sanction of the Government for payment of coupons which in the circumstances mentioned had not and could not have been presented in due time. Mr Dupuy appears to think it a sufficient reply to this application that the

Government had advised claimants to apply to the Council, who are its agents in the matter, and whose application for its sanction the Government ignored.—Your obedient servant,

JAMES P. COOPER, Secretary.

Council of Foreign Bondholders, 17 Moorgate, London, E.C. 2, June 13th, 1922.

WAGES, PRICES, AND PROFITS.*

THE tendency to overstate one's case is one which besets us all at times, but it is a great pity that the compilers of a report on wages, prices, and profits* have been so biased as to make a number of assertions which cannot possibly be substantiated. The book is full of good things, and a great deal of extremely useful statistical matter has been collected, especially in relation to wages in a large number of different trades. But while we hold no brief for the official cost of living index number, we do not think the writers advance their case by describing the Ministry of Labour figures as "official distortions and misrepresentations." Furthermore, to the unbiased reader the case collapses altogether when in the concluding paragraph of the chapter on War Prices it is stated that from a "rough estimate" it is "fairly certain" that the cost of living in June, 1921, was much higher than the official figure. Particular animosity appears to be felt against "clever Professor Bowley and the Working Classes Cost of Living Committee," owing to their definition of the "rise in the cost of living." But it is in the chapter on War Profits that a great deal of good material is spoiled by the prejudiced manner in which it is treated. Incidentally, while we heartily agree that company accounts are very often exceedingly difficult, and sometimes impossible to disentangle, we think the writer flatters himself when he says that many of the forms of accounts "have been adopted because they best serve to conceal the real prosperity of the concern from the Labour investigator." We ourselves have been up against this particular problem for a great many years, probably long before the "Labour investigator" thought of turning his attention to it. That many companies do not disclose their entire profits, but build up "hidden reserves" by various methods, is common knowledge to the student of company balance-sheets, and the practice may have become more common during and since the war. But we think the "Labour investigator" is rather on the wrong tack when he lays a great deal of stress on the question of depreciation. In nine cases out of ten a critic of a balance-sheet finds cause for complaint that sufficient allowance has not been made for depreciation of plant and property rather than the reverse, and we are sorry that the writer does not reproduce any of our quarterly figures of industrial profits, because "careful investigation has shown these to be so much below the real figures that to reproduce them would give a wrong idea of the facts." But we do submit that these statistics of ours, imperfect though they may be, are a better guide to the earnings of capital invested in joint-stock enterprise than the isolated figures given in this report. Moreover, the more recent quarterly statistics have shown how the trade depression has hit the investor in industrial shares, who has had to be content with a lower rate of dividend, and that the latter has only been made possible by a heavy withdrawal from the reserve funds and accumulated profits to which the Labour investigator takes such strong exception. Strong criticism, and rightly so, is levelled against the policy of issuing bonus shares, but that this fashion became so popular with company directors because it served to conceal the prosperity of a company by reducing the price of its shares, is an unconvincing argument. No doubt many company directors would be only too glad to conceal their present adversity by wiping these same bonus shares off the slate if it were possible, for a heavily watered capital is nowadays a very heavy burden to bear.

* Prepared by the Labour Research Department. Preface by Sidney Webb.

ECONOMICS FOR STUDENTS.*

THIS is a comprehensive text-book of economic theory prepared with special reference to the syllabus of the London University Intermediate Examinations in Economics and Commerce, but also for the purposes of the general student. An initial chapter summarises the history of economic thought, and the next chapter discusses the influence of war experience on economic thought. After dealing with consumption and the theory of wants, the author in Books II., III., and IV. considers successively in the orthodox manner the problems connected with Production, Exchange, and Distribution. Book IV. includes chapters on Money, Banking, and International Trade, and Appendices deal with Mathematical Economics, the Scope and Method of Economics, and the Structure of Economics. The book does not pretend to present the results of original research, but its comprehensiveness and conciseness may well make it useful to students, to whom the directions for further reading will also be of assistance.

MOTIVE IN INDUSTRY.*

If publishers' lists are any guide to the direction of the national intelligence, the British community is doing some hard thinking about the reconstruction of British industry. Eager employers rush into print with breathless prescriptions of their panaceas for the relations of capital and labour, and economists descend from the icy heights of abstract truth with draft constitutions of ideal shop committees and Councils undreamt of by Mr Whitley. Mr Hobson's latest contribution to the discussion is, as one would expect, a vivacious piece of dialectic. But it must be confessed that on the constructive side it is slightly deficient. He makes a vivid and highly interesting defence of something which he terms "the new Industrial Order." It is, as he says, "a vague but convenient term." Yet the convenience seems greater for the writer than for the reader, when one fails to extract from his little polemic in seven chapters any closer indication of the future of British industry than a hint of something that "is neither State Socialism, Syndicalism, voluntary co-operation, nor guild Socialism, but a blend of these and other schemes, varying with the conditions of the several industries." But beyond this nebula of negatives, which performs the admirable function of exasperating Mr Webb, Mr Cole and Mr Rowntree at the same time, one can find little more than a suggestion that we are to enjoy an increased measure of public control and an elaborate infusion of the principles of representative government into the methods of industry. That is all very well; but one feels a little bitterly that the one need of the British mind at the present moment is constructive thought upon industrial topics, and we can ill spare Mr Hobson from a symposium in which none of the contributors has yet distinguished himself by a simultaneous knowledge of theory and practice. His sword-play in attack on the old order and in defence of the new is often highly suggestive. But whilst Mr Hobson seems intent on silencing the critics of the new order, many of his readers will find themselves anxious for more information as to the thing criticised. It is always interesting to observe Achilles plying the long sword over the body of Patroclus, but for some of us Patroclus is the more interesting figure of the two, and one could wish that Mr Hobson had been just a little more the coroner and a little less the controversialist.

Perhaps the most suggestive chapter in a highly stimulating little book is that in which the author deals with the problems of management. Private enterprise is to be permitted to subsist over a vast area of industry, but Mr Hobson would eliminate it from "those industries which are of fundamental importance to the national life, and from which the safeguard of competition has already been withdrawn." He is then faced with the elementary problem of recruiting the higher command in these industries. Lord Askwith seems to warn him

that he will never get the men. The optimism of Lord Haldane insinuates that an ideal Civil Service will contain legions of public-spirited captains of industry. Somewhere between the two Mr Hobson concludes that his experiment may be successful. Almost his whole book is a series of skirmishes of this type round the outworks. Mr Hobson is a skilful defender of his New Jerusalem. But one would wish that he had furnished his readers with a fuller ground-plan of the heavenly city.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
June 28.	June 29.

The tendency of the Stock Exchange markets as a whole is dull. In some parts a mild depression has settled over prices, while in regard to all the markets it must be said that business is on so small a scale as to cause prices to sag in the absence of sufficient support to keep them up. The modest bull account which has been built up during the past few months becomes a practical influence at a time when there is a general disinclination to buy War stock. One seller, according to the Stock Exchange aphorism, makes many others, and unless there is a buying force to meet sales, which is not the case at present, prices are bound to sag of their own weight.

Last week's reduction in the Bank rate to 3½ per cent. had a cheering effect, which, however, turned out to be very little more than a flash in the pan. The War Loan went over 100, encountering, at that price, literally hundreds of orders to sell at par. Some of these were executed, but perhaps not the majority, and the price has gone back to the neighbourhood of 99½. The fact of the India 5½ per cent. underwriters being left with 63 per cent. of the stock (which was issued at 96), added a further weight to the heaviness induced by the fact that the expected buying of stocks, for the account of money still on deposit at the banks, has not materialised to any noticeable extent. Victory Bonds have been a good feature, on a little speculative buying in advance of the drawing, which takes place on Monday. Home Railway

COMPANY MEETINGS, &c.

J. LYONS AND CO., LIMITED.

ANOTHER SUCCESSFUL YEAR—INCREASED PROFIT.

COMPANY'S POPULARITY UNABATED.

PLANS FOR FURTHER EXPANSION.

CHAIRMAN'S CONFIDENCE IN THE FUTURE.

The twenty-eighth ordinary general meeting of J. Lyons and Co., Limited, was held, on the 22nd instant, at the Trocadero Restaurant, Shaftesbury Avenue, London, Mr Montague Gluckstein (the chairman) presiding.

DIRECTORS' REPORT.

The report of the directors for the year ended March 31st last states that the balance from trading account shows:—

	£	s.	d.
A profit of	595,615	9	5
Amount brought forward from last year	12,480	3	6
	608,095	12	11
From this amount is to be deducted:	£	s.	d.
Dividend on 5 per cent. preference shares paid to November 30, 1921, and proportion provided for period to March 31, 1922	32,353	5	0
Dividend on 7 per cent. preference shares paid to March 31, 1922	70,000	0	0
Dividend on 8 per cent. preference shares paid to March 31, 1922	80,000	0	0
Dividend on the 6 per cent. preferred ordinary shares paid to September 30, 1921, and proportion provided for period to March 31, 1922	24,000	0	0
Interim dividend (2s per share) on the ordinary shares and "A" ordinary shares already paid for the half-year ended September 30, 1921	108,182	0	0
Interim dividend (4.8d per share) on proportional profit shares already paid for the half-year ended September 30, 1921	10,000	0	0
And the directors propose to deal with the balance as under:			
To place to reserve (making a total of £500,000) ...	90,866	5	0
To pay a dividend of 3s per share on the ordinary shares and "A" ordinary shares for the half-year ended March 31, 1922	162,273	0	0
To pay a dividend of 7.2d per share on the proportional profit shares for the half-year ended March 31, 1922	15,000	0	0
To carry forward to next account	15,421	2	11
	608,095	12	11

The business done has been satisfactory. During the financial year the following establishments have been opened:—

133 Rye Lane, Peckham,
4 Vicarage Place, Watford,
150 High Road, Balham,
265 Finchley Road, Hampstead,
45 High Road, Harlesden,
Lyons Café, The Angel, Islington,
147A and 149 High Street, Stoke Newington,
and negotiations are in progress for additional premises.

Mr J. Browne Martin and Mr Maurice Salmon retire from the office of directors, and being eligible offer themselves for re-election.

Since the close of the financial year, Messrs G. W. Booth and C. W. Oatley, who have been valued members of the company's staff since its formation, and have, furthermore, been for many years employé directors of the company, have been appointed by the board ordinary directors of the company, and as a consequence have respectively resigned their appointments as employé directors.

There will be submitted at the annual general meeting a resolution having for its object the provision of additional ordinary directors' remuneration to permit Messrs Booth and Oatley receiving in their capacity as ordinary directors the remuneration which has hitherto been paid to them as employé directors.

Pursuant to the articles of association, they now respectively resign office as ordinary directors of the company, but being eligible offer themselves for re-election.

Messrs Geo. Dee and G. A. Pollard, employé directors, retire, and are eligible for re-election.

Messrs Turquand Youngs and Co., the auditors, retire, and are eligible for re-election.

CHAIRMAN'S SPEECH.

The secretary (Mr Geo. W. Booth) having read the notice convening the meeting and the report of the auditors,

The Chairman, who was received with applause, said: Ladies and gentlemen,—It has always been a gratifying event to the board to greet at our annual meetings a body of shareholders satisfied and, indeed, pleased with the record of the year's trading and its resulting dividend.

The figures submitted to you at this meeting, being the record of all our achievements for the past 28 years, will assuredly be most welcome to you, and I trust, as I confidently believe, that our future balance-sheets will, stage by stage, demonstrate that our powers of profitable expansion are virtually without limit. This conviction is based upon the fact that in the composition of our board every director is a highly trained expert, and that most of them are interchangeable—that is to say, can perform the duties of the others. Added to this is the further fact that we are constantly training young men of energy and intelligence to occupy similar posts when they have earned them.

I can conceive of no body of directors which hold more business meetings per week than does ours, for, practically speaking, these take place every day. They are not formal and are not worked from agendas prepared beforehand; they deal with events on the spot as they arise, and, moreover, there is no cavilling on the part of those who are absent and cannot be reached by telephone when matters of importance are settled without them. This fine spirit pervades the chiefs of departments, and is reflected in the entire staff of the company, which counts some 22,000 members.

ENORMOUS NUMBER OF CUSTOMERS.

The popularity of the company with its customers is unabated. It is our constant endeavour to anticipate their requirements, and their appreciation is proved by the fact that the Lyons Company remains in the very forefront of the catering trade. The drastic cuts we have made in our prices, so far from diminishing our turnover, have even increased it, so that it will be obvious to you that we have added enormously to our number of patrons.

You may form some idea of the extent of the company's business when I tell you that we compute the number of consumers of our commodities at no fewer than 10 millions per week. That is sufficient to indicate that, even at a small expenditure per head, there is a very substantial turnover. It will also indicate that the profits—substantial as they are in amount—are small when converted into percentage on turnover. With a small spending power and a small profit on each individual amount, a great deal of imagination is not needed to recognise what care and attention is required to obtain the results it is my pleasure to put before you to-day. How small the margin is will be shown when I tell you that the profit on rs may be calculated in decimals of a penny; on a shop meal the profit is fractionally more than the amount represented by the smallest coin of the realm. But out of these small margins there remains £600,000 available for distribution, and I have no doubt you will feel that both your board and the staff may be complimented on a year of highly satisfactory work.

I may mention here that the board has this year granted to the managing directors a similar privilege to that of the past two years by permitting them to apply for and be allotted 2,000 "A" ordinary shares each at par. I do not think it is necessary for me to add anything in justification of this beyond stating that the year's figures are sufficient to show that these gentlemen performed their duties in an extremely able manner, and no small proportion of the company's prosperity is due to their personal effort (this without in any way depreciating services rendered by the other directors); such effort is, I am sure you will agree, worthy of recognition.

BALANCE-SHEET ITEMS.

I will now deal with the figures. There is little to comment upon in the balance-sheet, in which most of the figures are normal. The freehold land and buildings, &c., at £4,198,840, has increased by £632,000 (I am giving figures in round numbers). Much of this newly-expanded capital has been put into payment for freehold land in the further construction of our Greenford factories and the Coventry Street Corner House and sundry smaller properties. We are estimating that by this time next year they will be finished, and then our expenditure will become fully remunerative, which at this moment is far from being the case.

With such additional strength in profit-making, our first purpose (always safeguarding reasonable dividends for our shareholders) will be directed to giving our customers the benefit of very sensible reductions in our tariffs, apart from cuts which will be made in the meantime to the same end. Stock-in-trade at £1,766,378 has increased by £244,000, a small variation when compared with the basic figure, and, let me add, it is in point of value a most excellent stock; the goodwill stands at nil, and I need say no more about it; sundry debtors, at £427,947, are less by £30,000; investments in associated companies, &c., at £867,517, is approximately the same as last year—there is a decrease of £5,000; cash at bank, at £398,000, is £334,000 less, due to the capital expenditure to which I have already referred.

CAPITAL AND RESERVE.

The issued share capital now stands at £4,628,000, which is an increase of nearly £600,000 upon last year, being the amount of new "A" shares issued last year by way of bonus to ordinary shareholders and to holders of "A" ordinary and proportional profit shares. When this bonus issue was authorised you will remember that I warned you not to expect equal dividends, but that you probably would (or, at any rate, that I hoped you would) get a dividend on the two shares combined which would be better than the dividend paid on the ordinary share alone. You will see by the figures before you that my expectation has been fulfilled.

From the reserve, which last year stood at £1,000,000, is now deducted the face value amount of the bonus share distribution, and the balance remaining in such reserve is £409,133. We are making this up to £500,000 by transferring thereto £90,866 out of our profits for the year.

The total of mortgage liabilities at £905,000 is £100,000 less than last account. We have cleared off a mortgage for the latter amount which was attached to a large property purchased by us.

Trade and other creditors and credit balances is larger by £500,000, and is accounted for by allowing for the quarter of a million increased stock, the demands consequent on the general expansion, and such contingent provisions as we have considered it prudent to make.

APPROPRIATIONS FOR DIVIDENDS AND RESERVES.

Turning to the profit and loss account, the net balance available for the service of share dividends and reserve amounts to £595,615, which overtops last year by £92,000. You will see that we have this year had to pay an additional £30,000 in respect of the dividend on the 8 per cent. preference shares. Last year they did not bear interest for the full 12 months. The interim dividend absorbed £118,000 this year, as against £73,500 last year. We told you when we issued that dividend that we were paying a larger amount with a view of bringing the interim dividend nearer to the final distribution.

The amount of £90,800 we are placing to reserve this year is really £14,000 more than last year, because then we had a contribution of £23,000 from the carry over, while this year (as I have already indicated) the whole is taken from the year's revenue. The final dividend is £177,273, against £176,373 last year, and the amount carried forward at £15,421 is increased by £3,000.

GREENFORD FACTORY.

We had visions of inviting you this year to meet the directors on a given reception day at our Greenford factory, but I am sure you will be pleased to know that the pressing demands upon its output are such as to preclude the holding of that function. But, needless to say, we shall be happy to afford to you every facility in our power to enable you individually to inspect those great works, and I think you will find them well worth a visit.

Our report informs you that we have in the past year extended the list of our light refreshment depôts, and now that more rational terms can be discussed with property owners we hope to be able to continue the extension of this section of our business.

BOARD'S PLANS FOR NEW OXFORD STREET PROPERTY.

We have also recently completed a building agreement affecting an island site in Oxford Street bounded by Old Quebec Street, Bryanston Street and Portman Street, a site, if anything, better adapted to the company's requirements and business, and of more than double the area of the Marble Arch property, to which I referred last year. Both these properties have been acquired by the directors on what they consider very favourable terms, and both are eminently suitable for the company's business. They are rendered still more so by the fact that the intervening block of property of some 50,000 square feet between the Marble Arch site and the site between Old Quebec Street and Portman Street has been acquired by the Strand Hotel, Limited, for the purpose of erecting a large hotel capable of accommodating about 1,500 people. The present intention is that all three properties—a combined frontage in Oxford Street of over 700 feet—shall be developed on the ground-floor as magnificent shops. Our possession of two such sites in the chief shopping thoroughfare in London, with the power to put up premises unhampered by certain restrictions from adjoining properties, constitutes, I am sure, a very valuable

asset to the company, and we are sanguine of making a fair profit upon any portion of the property we may not wish to utilise for the purpose of our own business.

LABOUR'S SANE ATTITUDE.

It may perhaps be recalled that last year I made some comment on the handicap to industry of high wages and onerous taxation. My experience of industry led me to utter a warning then that the theory of high wages and cheap food, or dear exports and cheap imports, is a fallacy. At the time I spoke one of the greatest labour strikes the world has ever seen (that of the miners) was in full swing. A huge body of workers expended untold energy in trying to force economic laws into an unnatural mould. The results of this great struggle have been deplorable in the extreme. It precipitated (though I do not suggest it was entirely responsible for) the greatest trade slump within living memory. If any good can be said to have emerged from the struggle, it is that it demonstrated as nothing else could have done the futility of the extremist attitude; and it is to the great credit of the working class as a whole that they have not been slow to realise the fact, however unpalatable, that the vitality of industry could not be revived until cost of production was lowered. They have played their part by accepting with a good grace the absolutely necessary fall in their wages. I would say that the continuous reductions of prices which have taken place during the past trade year have in great measure compensated the worker for the wage reductions that made them possible; and, in our opinion, if we can remove that other Old Man of the Sea who perches on the shoulders of industry (I refer, of course, to the onerous weight of taxation) all the conditions are present for a return to a state of prosperity.

TAXATION AND THE CATERING TRADE.

We have been paying some little attention of late to this question of taxation collected by the Government and local authorities. You will probably be surprised to learn that this year's contribution by our company runs into millions, and that without counting such things as duties on alcohol, tobacco, &c. Now, it should be obvious from this that taxation cannot be derived from the profits of industry; that, in fact, high taxation is just as much a burden to the cost of production as high wages. And there is another aspect of this matter which may not be apparent on the surface, but which is nevertheless of considerable interest to you; that is, that the very great majority of the dutiable and excisable commodities of the United Kingdom are the direct raw material of the catering trade.

When I instance you tea, coffee, cocoa, sugar, dried and canned fruits, tobacco, wine, beer, spirits and mineral waters, I have surely given a list which in itself supplies almost the whole of the Government's Customs and Excise Revenue. To me this appears to be a clear demonstration of the fact that the handicap of taxation under which the catering trade works is much more severe than that of other manufacturers for home consumption. To parody Sidney Smith in his famous tirade against taxation: "When you enter a Lyons' shop you order your taxed tea, and sweeten it with taxed sugar; you eat taxed fruit salad and your taxed piece of cake; you regale your son with a bottle of taxed ginger beer; and you lean back contented in your chair to light your taxed cigarette with a taxed match."

EFFECT OF PRESENT REDUCTION.

We therefore have a special interest in the reduction of the burden of taxation, and we welcome the step that the Government has taken in the current Budget, because the reductions in duties alone will represent reductions in our tariff of about £500,000. We hope it may follow up the earnest already given by scrutinising every penny of its expenditure, as closely as the great commercial and financial houses are obliged to do. Where the balance is between profit and loss ruthless cuts must often be made to keep such institutions in existence at all. It is a pity that the form of Government accounts does not admit of their being worked on a profit and loss basis, but the vital need for determined cutting down of the excrescences of the war is none the less present.

STRAND HOTEL'S DEFERRED SHARES.

Before resuming my seat, ladies and gentlemen, I wish to tell you of a suggestion which came to me some time ago; it was then somewhat premature, but perhaps now it may be regarded as within the sphere of practicability. The idea was that the Lyons Company should acquire the deferred shares of the Strand Hotel, Limited, which virtually give control of that prosperous concern, in exchange for an allotment of Lyons shares. As the deferred shares in the hotel company are as to 90 per cent. of them held by myself and confrères, and as we also have rights of pre-emption of the remaining 10 per cent. on the death of the present holder, or possibly earlier, such an exchange would not be difficult if a mutually satisfactory basis could be found.

The present view of the holders of the 90 per cent. of the Strand deferred shares is that if the proposals prove acceptable to your

company, the Lyons shares to be allotted in exchange should be ten-shilling shares, taking the same rights share per share as the existing proportional profit shares, except for repayment of capital, where they would rank as ten-shilling shares, and not, as the present proportional profit shares do, as £1 shares.

We shall think the matter over very carefully for the next few months, and if and when a satisfactory basis is found, we shall invite you to a special meeting to consider it.

TRIBUTE TO THE STAFF.

And now I will conclude with a word of thanks to the company's staff generally. The directors do not take credit for their services without recognising that they would be of little avail without the loyal support of the staff. That support has always been given unstintingly, and it is our endeavour to see that they in turn participate in the company's prosperity.

I now propose: "That the payment of an interim dividend of 2s per share on the issued ordinary and 'A' ordinary share capital of the company for the half-year ended September 30, 1921, be and it is hereby confirmed; that the report of the directors and the balance-sheet submitted to this meeting be and are hereby adopted; and that a dividend be paid for the half-year ended March 31, 1922, of 3s per share on the issued ordinary and 'A' ordinary share capital of the company."

SHAREHOLDERS' CONGRATULATIONS.

Mr John Balfour, in seconding the motion, said he desired to congratulate his fellow shareholders and the directors upon the continued, and, indeed, increased, prosperity of the company. It was simply marvellous that the company, on the same capital, should have made £92,000 more net profit in the past year than in the preceding 12 months. He had listened with interest to what the chairman had said with regard to the suggestion that Lyons and Co. should acquire a large interest in the Strand Palace Hotel, and, although this seemed to him a very serious proposition, and one which would require a great deal of consideration, he would say, speaking superficially, that the scheme struck him as being a very wise one, particularly in view of the scope for expansion possessed by the hotel company.

Mr Mansford also complimented the directors upon the excellent report which they had presented.

The Chairman thanked the shareholders for their kind expressions of appreciation, and then put the resolution, which was carried unanimously.

On the proposition of the Chairman, seconded by Mr Shearme, it was further resolved: "That the payment of an interim dividend of 4.8d per share on the proportional profit share capital of the company for the half-year ended September 30, 1921, be and is hereby confirmed, and that a dividend be paid for the half-year ended March 31, 1922, of 7.2d per share on the proportional profit share capital of the company."

Major Isidore Salmon, C.B.E., D.L. (one of the managing directors), proposed the re-election of Mr J. Browne Martin and Mr Maurice Salmon as directors of the company, which was seconded by Mr J. Joseph, and unanimously agreed to.

Mr Maurice Salmon briefly thanked the shareholders, on behalf of Mr Browne Martin and himself, for this mark of their continued confidence.

TRIBUTE TO EMPLOYEE DIRECTORS.

Mr Alfred Salmon: Ladies and gentlemen,—It is now my privilege to propose the re-election as directors of Mr Geo. W. Booth and Mr C. W. Oatley. These gentlemen have for many years held the position of employee directors of the company, and the board has unanimously thought fit to mark its recognition of their services and devotion to the company for nearly thirty years by electing them as ordinary directors. It is not my intention to address you upon the individual merits of these gentlemen; in point of fact, that would occupy too much time. It is sufficient to say that we feel that this fresh dignity is but a small recompense in proportion to the invaluable labours which they have so dutifully and so long exerted on the company's behalf.

Mr S. M. Gluckstein, M.C., in seconding the resolution, said that from his own knowledge of the gentlemen named, extending over the last twenty-five years, he could assure the shareholders that all that Mr Salmon had said with regard to them was really insufficient.

The motion was passed with acclamation.

MR BOOTH'S REPLY.

Mr Geo. W. Booth, who, on rising to respond, was accorded a very enthusiastic reception, said: Ladies and gentlemen,—I am very sorry that my friend and colleague, Mr Oatley, is too unwell to be here to-day. It is the first time, I believe, that he has ever been absent from one of these meetings. In the circumstances I hope you will accept what I may say as being said on his behalf also. Our thanks are due to the proposer and seconded of this resolution and to you for the way in which you have received it. I cannot offer you more than thanks, because I am afraid it would be rather idle to promise greater exertions, nor do I think that

our chairman and his colleagues, when they offered us this dignity, had in their minds any idea of a spur to further endeavour. We cannot claim it as due to merit; we accept it as a further example of that genial kindness which we have experienced always from these gentlemen in all those years to which Mr Salmon has already referred. It cannot make any difference in their attitude towards us, because that, in all those years, has left nothing that could be desired. No men could have received more generous consideration, whatever their degree or however close the tie.

It has been said at these meetings on several occasions how much the directors owe to the loyalty of the staff. With respect, might I say that loyalty is not a spontaneous growth; it is engendered by loyalty, and our chairman and his colleagues have a very conspicuous quality in their spirit of intense loyalty to the men who work with them. I say "with" advisedly, because they share the labour, and I venture to add that it is by this quality, which attaches men to them, that they are able to give full effect and scope to those great abilities which command success.

Mr A. G. Arnold moved: "That as from the 1st day of April, 1922, the remuneration of the ordinary directors be increased by a sum calculated at the rate of £1,000 per annum."

The Chairman seconded the resolution, remarking that it did not really mean any increase at all, as the figure mentioned represented what had hitherto been paid to Mr Booth and Mr Oatley in their capacity of employee directors. It was because they had changed from the one position to the other that it was necessary to submit this resolution.

The resolution was unanimously approved.

RE-ELECTION OF EMPLOYEE DIRECTORS.

Mr Harry Salmon proposed the re-election of Mr G. Dee and Mr G. A. Pollard as employee directors of the company, the amount of their remuneration to be determined by the ordinary directors. In doing so he said that more estimable men it would be difficult to find. They devoted the whole of their marked ability and energy to the welfare of the company, and it was a privilege to be a member of the same board with them.

Major M. Gluckstein, O.B.E., seconded the resolution, and expressed the hope that, as it had been his good fortune to work with those two gentlemen for a very long time, he would continue to enjoy the privilege for many years to come.

The resolution was passed unanimously, and Mr G. Dee said that both Mr Pollard and himself appreciated very greatly the honour of being associated with the chairman and the other gentlemen on the board, and that in itself was more than an incentive to them to give their best endeavours in the interests of the company.

On the motion of Mr H. W. Faire, seconded by Mr A. J. Wood, Messrs Turquand, Youngs and Co. were re-appointed auditors.

VOTE OF THANKS TO CHAIRMAN AND DIRECTORS.

Mr Arnold proposed a hearty vote of thanks to the chairman and his colleagues on the board, which was seconded by Mr Shearme and cordially passed.

The Chairman, in a brief acknowledgment, said that just as the results achieved in the early years of the company's existence were now regarded as negligible, he had absolute confidence that 20 or 25 years hence the results now being shown, good as they were, would be regarded in a similar light. There was, in fact, no limit to the possibilities of expansion of the company's business.

The proceedings then terminated.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED.

COMPANY'S STRONG POSITION.

SOUTH AFRICA'S UNECONOMIC TREATMENT OF MINING INDUSTRY.

BRIGHTER OUTLOOK ON THE RAND.

NECESSITY FOR ECONOMY AND HARD WORK.

The seventeenth ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held, on the 21st inst., at No. 1 London wall buildings, London, Sir Lionel Phillips, Bart. (the chairman), presiding.

The secretary (Mr R. P. Nelson) having read the notice convening the meeting, and also the auditors' report,

The Chairman said: Gentlemen,—The profit and loss account before you shows only a small reduction in profits compared with the previous year, and does not contain any marked evidence of the bad times through which we have passed, due to the conservative methods adopted in framing our accounts concerning more prosperous years. I hope you approve of this policy, in following which we are taking advantage of the caution exercised and reserves created in the past. I think I am entitled to congratulate you on the position to-day, which is strong. We have pointed out to you in our report that considerable provision had to be made for depreciation, to the detriment of our revenue, and some encroachment upon the substantial margin between book and market values.

Your assets, nevertheless, still figure in the accounts below the market prices of December 31st. Since then an appreciable rise in many of your investments has taken place, which augments the inner reserve.

For the first time for many years we are not proposing an addition to the reserve fund, but feel entirely justified in recommending the final dividend, which, with the interim distribution, has come to be regarded as normal. The outlook of affairs is more promising than it has been for the last two years. In good times, when it would not interfere with the payment of the rate of dividend you have reason to expect, we shall not ignore the advantage of still increasing the reserve fund.

ACCOUNTS.

I shall refer only to those individual items in the accounts which call for some comment. You will see that our liabilities to creditors have decreased by £626,000; naturally, our liquid assets show a corresponding reduction on the other side of the accounts. The increase shown in the holding of sundry debentures is due to the acquisition of Modderfontein East debentures. The reduction of £203,000 in gold and diamond mining shares is largely due to writing down, but, as remarked before, a substantial appreciation in value has occurred since the turn of the year.

BASE METALS AND MINERALS.

An increase is shown under this head which is attributable largely to our having taken a participation in a satisfactory business with the British Metal Corporation. The affairs of that important company are being conducted with skilful care, and, securely established by the success achieved so far, it has, I think, a prosperous future in prospect. We have also an important holding in the copper manufacturing business carried on by Messrs Williams, Foster, and Co., and Pascoe, Grenfell, and Sons, Limited, at Swansea. This undertaking has enjoyed a very successful career, and although not unaffected recently by the extremely bad times through which we have passed, we now find a satisfactory tendency beginning to operate with the general improvement in trade.

OIL, COAL, INDUSTRIAL AND SUNDRY.

These interests, together, represent over £1,000,000 in our accounts. There is an increase of £120,000. The more important items under this head are represented by the Witbank Colliery, Limited, the Pretoria Portland Cement Company, Limited, the Hume Pipe and Northern Lime Companies, holdings in South African printing and newspaper companies, a considerable sum in the Chilean electric enterprise referred to last year, and a large interest in the Trinidad Leaseholds and North Venezuelan Petroleum companies. With anything like reasonable good fortune, the undertakings comprised under this heading present a large and hopeful sphere of activity, and, we anticipate, of profit for our corporation.

TRINIDAD LEASEHOLDS, LIMITED.

Perhaps at this point I may conveniently refer to the Trinidad Leaseholds, Limited. Production was satisfactorily maintained

up to the close of last year, but has been restricted for some months past owing to storage congestion and the company's desire not to produce a greater quantity of oil than could be readily marketed. Great attention has been given to the development of methods for dealing with the high gas pressures encountered at depth, and hopes are entertained of a successful solution of this difficult problem. The extensions to the refinery are practically completed, and the plant is now capable of treating largely increased quantities of crude oil. Mr Beaumont, the general manager, who has recently assumed charge of the property, is hopeful of its future and is approaching his big task with vigorous enthusiasm and capacity.

NORTH VENEZUELAN PETROLEUM COMPANY.

The geological examination of a portion of the property of the North Venezuelan Petroleum Company, Limited, confirms the existence of conditions favourable for the accumulation of oil. It is expected to begin drilling the first test well within the next few weeks.

PREMIER HYDRAULIC TIN MINES OF NIGERIA.

The operations of the Premier Hydraulic Tin Mines of Nigeria, Limited, a minor interest to which I may refer, were hampered during the year owing to transport difficulties, to overcome which a portable plant has been constructed, and is now, after a thorough running test, about to be shipped to Nigeria. This plant can readily be added to as circumstances warrant. The low selling price of tin adversely affected the company's financial position, and it became necessary at the beginning of this year to make an issue of debentures.

RHODESIA BROKEN HILL MINE.

The production of lead at the Rhodesia Broken Hill Mine during last year amounted to 18,122 tons, as compared with 14,602 tons for the preceding year. From the commencement of the current year it has shown still further improvement, the record output of 1,981 tons having been obtained for the month of March. The company's operations continue to show fair profits, despite the low price of the metal.

LAND COMPANIES AND PROPERTIES.

The item under the head of land companies and properties has been increased by £57,000, principally owing to our having added to our holding in the Transvaal Consolidated Land and Exploration Company, Limited, which we are confident has a profitable career in front of it.

GENERAL SITUATION.

Other items in the accounts do not, I think, call for any mention at this stage in my address. Generally speaking, you will observe that there has not been any very material change in any of our holdings. We have during bad times rather pursued a cautious policy than one involving fresh responsibilities. Taking our balance-sheet as a whole, and holding in view the state of the financial and business world, I think there is reason to be satisfied with the results achieved. The condition of affairs at the gold mines, the virtual suspension of operations at the diamond mines, and the obliteration at one time of the market for diamonds, in which we hold very large interests, caused your directors, I need hardly say, very serious anxiety. The situation to-day is infinitely better, the market for diamonds is reviving, and we, who are responsible for the management of your interests, are correspondingly relieved.

EX-ENEMY HOLDINGS.

You were duly advised in the directors' report of the recent purchase of the ex-enemy holdings in our group and the scope of the syndicate formed for the purpose of carrying through this transaction. The offer made to shareholders of the New Modderfontein Gold Mining Company, Limited, and Modderfontein "B" Gold Mines, Limited, resulted in applications for about 385,000 and 165,000 shares respectively. The other holdings acquired have, as you know, been offered to the companies concerned, all of which have notified their acceptance. The commission to the syndicate for its services is, therefore, due, and will be sent out to-night. Regarding the balance of shares that fall to the syndicate under its guarantee, approximately 146,000 New Modderfontein and 70,000 Modderfontein "B" shares, we are considering the best course of procedure, with a view to the early liquidation of the syndicate.

GOLD MINES.

With regard to the gold mines, shareholders will notice that this year the board is publishing a letter signed by three of your resident directors, covering the report of the consulting engineers in Johannesburg. Information in regard to companies in which we have interests is presented in a condensed form. Shareholders who are particularly interested in any of the individual concerns mentioned, and who, therefore, desire fuller details than can be conveniently supplied in our annual statement, are referred to the reports of the companies themselves, where the fullest particulars are given. I must not ignore the reference by the consulting engineers to the cost of securing an output of gold month by month as regular in amount as possible. The cost varies according to circumstances in different mines; it is greatest when labour is scarcest. To move men and tools from stopes in which too high or too low a yield is being obtained to other stopes expected to reduce or raise the yield to the normal causes a certain amount of disorganisation and expense. Our engineers do not recommend the abolition of monthly returns, but the abandonment of the practice of trying to equalise them. I admit that some economy would result. I should hesitate, nevertheless, to recommend the change, because shareholders are accustomed to the present practice and the effort to equalise the returns month by month necessitates very close daily study of the amalgam returns by the managers; moreover, there are other factors, which I do not think it necessary to enlarge upon to-day. We should not, therefore, be inclined to change the present system, unless public opinion appeared to be very strongly in favour of the reform.

LITTLE CHANGE IN INDIVIDUAL PROPERTIES.

I do not propose to comment at any great length upon individual properties, because, from the actual mining point of view, there are no very significant changes to record. Neither in yield nor in other physical attributes do we find any material change. From the profit-earning standpoint, in the lower grade mines everything depends upon working costs; in the richer mines they govern results in a lesser degree. In this connection it is desirable to emphasise one point very strongly, namely, that the attraction of capital for new enterprises is not fostered by a bare return of interest and redemption of capital. State securities provide so much. The prospects must be more alluring. Increasing depths and rock pressures naturally add something to the working expenses, but not of an important character.

WORKING COSTS.

The currency value of gold, which at one time figured so largely in the profits, has gradually fallen until to-day it does not play an important rôle. We base our calculations upon the standard price of gold, and rely upon efficiency and low working costs for profitable results. During the latter part of the war, and even after peace was proclaimed, the trade unions made extravagant demands affecting wages and the conditions of employment. They insisted on the employment of white men in work of an unskilled character, or requiring little skill—work that natives, with reasonable experience in the mines, are able to perform. The local leaders of the mining industry did everything in their power to propitiate the men's leaders. Higher pay, shorter hours, holiday leave on full pay, and various other concessions were made, and, to sum up, the political conditions were such that the mines were forced to comply with demands the unsoundness of which they appreciated fully, but were powerless to resist. In fact, as in the rest of the world, the atmosphere was inconsequent. Everyone was inclined to grasp what he could get at the moment, irrespective of the retribution which economic laws would exact at a later date. The leaders of the white men were not the only people to blame. Parliament itself imposed obligations upon the industry regarding compensation for occupational disabilities which entirely transcended awards hitherto known to the civilised world. Concurrently, the price of stores rose phenomenally. The men responsible for carrying on the mining industry made no disguise of the inevitable results, and, towards the end of the latter half of last year, it became obvious that unless reforms were brought in, half the industry was doomed to extinction.

CHAIRMAN'S WARNINGS.

I was in South Africa twice last year and, upon the first visit, in spite of warnings that I uttered publicly, found it impossible to induce either the Government or the leaders of the white employees to take a commonsense, businesslike view of the position. Because I frankly and truthfully described the situation in a speech at the Chamber of Mines, I was accused of trying to frighten the public. Stubborn facts, however, began to force themselves on public notice, and I found, upon my second visit, that a different spirit was beginning to manifest itself. Labour leaders, either ignorant of the facts or in defiance of them, still turned a deaf ear to appeals made to avert the impending catastrophe. While I was on the spot, a frivolous strike arose on the Crown Mines because the management refused to allow the

Miners' Union to interfere in a matter between the general manager and one of his own officials. That strike, however, was of minor importance in violence and in financial loss to the industry and to the workmen, compared with the succeeding general strike and revolt.

EVILS OF DIFFERENTIATING BETWEEN MINES.

Commissioners have been appointed by the Government to inquire into the causes of the strike, and to make recommendations to Parliament in regard to the future administration of the gold mining industry. I have, of course, no intention of trying to prejudice the conclusions at which they may arrive, but, nevertheless, I must not be silent at this critical juncture. As a well-wisher of South Africa, I notice with the greatest regret that the Mining Industry Board has been invited to consider a possible differentiation in working conditions in mines of different yield. I shall not discuss the complications and the field for dispute which the adoption of any such system would create. Viewing the matter purely in its economic aspect, it would be a serious, if not a vital, blow to investment in South Africa if needless expenditure were forced upon enterprises for philanthropic purposes, because they happened to be in a position to bear the burden. Any country adopting a policy of that description would forfeit the confidence of investors, because there is no limit to the application of such a system. I think that the reference must have been framed without sufficient consideration, and do not, therefore, apprehend that any sinister consequences will result.

FOREIGN CAPITAL IN THE MINES.

It is not perhaps generally understood in South Africa that the gold mines are owned by a very vast number of investors, the great majority of whom are not resident in South Africa. They invested their money there in the belief that the security offered reasonable attractions, and that they could rely upon fair treatment at the hands of the South African people. Strangely enough, the gold mining industry in South Africa has never been popular with the bulk of the inhabitants. Being one of the wonders of the world, and the mainstay of the revenue as well, one would have thought that it would be a source of immense pride and care. On account of its importance, the mining industry has necessarily occupied a great deal of Parliamentary attention—too much for its welfare—because a subject which is perpetually in the political arena offers the temptation to politicians to play up to the voter, and when politicians and voters are, as a whole, not interested in the industry as investors the danger becomes the greater. There is one check, however, which the politician and the voter should both keep in mind, namely, that ill-treatment of capital brings its own punishment; people with savings to invest will shun enterprises in that particular region.

THE STRIKE.

At the time of the last great strike, half the mining industry, with the fall in the value of gold, was, as already stated, faced with the danger of extinction. No attention had hitherto been paid to the representations made by those who are fully acquainted with the industry and are responsible for its management. I sincerely believe that it was only the publication, by the much maligned Chamber of Mines, of the cost of producing an ounce of gold in each individual mine that brought home to the people of South Africa the perilous condition to which the industry had been brought by the exactions of the State in various forms, and the level to which working costs had been driven up. At last, however, the members of the Government, and no doubt also the bulk of the thinking population in South Africa, realised the position. In fact, everyone did so, except the Labour leaders, who refused to give any assistance in carrying out the only effective steps to save the situation. The history of the strike which followed is too fresh to need any description at my hands. It resulted not only in great loss of life and suffering, but also in important pecuniary loss to the industry and to the men engaged in it, as well as to the Union of South Africa.

BETTER OUTLOOK.

Since operations have been resumed, my advices indicate that better and cheaper work is being done, and that the relations between the managers and the men are healthier than they have been for many years past. The fact is that surrender to demands which are uneconomic is unfair and unjust to the persons who are supposed to benefit, as it is unfair and unjust to the industry which has to bear the immediate consequences. So far from promoting goodwill between employers and employed, it merely intensifies hostility. I sincerely believe that the terrible upheaval will have saved a large section of the mining industry, and that it will now again enter upon an era of peaceful progress, with satisfactory profits to those whose capital has been entrusted to it.

WHITES AND NATIVES.

Like most people who have lived in countries where the preponderant population is coloured, I have given much thought to

the future of the country from the racial standpoint. The settlement of a large white population in South Africa is naturally in the interests of progress and civilisation; the policy that can achieve that desirable end is not so easy to define. I never have believed, and I do not now believe, that a permanent white population can be supported and increased by any artificial expedients for propping up the white man. He has got to hold his own by virtue of superiority, and, in the long run, nothing but that superiority will avail. The native is a tractable and contented superior worker. His mental limitations will debar him from becoming a real competitor of the white man. But the white man must live up to his caste by putting zeal and intelligence into his work. That is my conviction. I have watched the effect of the policy of specially protecting him over a great many years, and I have no hesitation in saying that it is a failure.

If every industry had been conducted on the most economic basis possible, I believe South Africa would hold a much larger population than it does, that the general efficiency of everyone working would be upon a higher level, and that the country would be to-day more prosperous than it is. The life of the mining industry would undoubtedly have been extended. Let me say, therefore, as a final word in this connection, that it is to be hoped, in the interests of South Africa, that the Government and the people there will benefit by recent experiences and the complete knowledge of the gold mining industry which is at their disposal. In the past that industry has been hampered by an excessive growth of regulations and taxed beyond strength. To humour the voter, measures have been passed and demands acceded to which should have been resisted, not alone for the welfare of the industry, but in the interests of the population it employs directly and but in the interests of the population it employs indirectly. A sort of misconception grew up that the industry could stand anything. That fallacy has been exposed, and, if real prosperity is to be restored, the past attitude, of which there is just reason to complain, must be altered.

STANDARD OF LIVING AND WAGES BILL.

A realisation of the economic truth that no country can prosper if its standard of living is unduly high and its wages bill excessive, should cause South Africans to ponder over the present standards. Are they higher than need be for maintaining the supremacy of the white race in coloured men's eyes? Given the courageous facing of facts, and the production of commodities at a cost that enables them to be sold with a reasonable profit in a competitive market, I am sure there is a great future for the country. Railway charges must be reduced. They are abnormally high to-day. They are crippling the farming industry, as well as all other material activities. They hamper the development of the whole country and the successful establishment of that large white population which is so much needed. Cannot they be reduced without impairing the standards of life referred to? Coal is cheap enough. It is the white wage bill that is mainly responsible for the high rates.

ECONOMY AND HARD WORK ESSENTIAL.

There has been a tendency in the whole world in recent years for men to think, and for politicians seeking their votes to encourage them to think, that they can improve their condition in life by being inimical to their employer and to their employment. The straitened circumstances of the world and the resulting unemployment are only to be conquered, to use a hackneyed phrase, by economy and hard work. Those who foster distrust between employers and employed are doing a very bad turn to the working classes, who can only maintain and advance their interests by working with energy and sincerity.

AN EXAMPLE.

To use a pertinent analogy, the same root causes ensure success in business life as in the field of athletics. In games, victory depends upon whole-hearted effort. Where a team is concerned, unity of action and obedience to the leader are essential factors. Men are selected as members of a team because of demonstrated fitness, and, once selected, they obey their chief and do their best. In that way they gain rewards and renown. Is there any branch of sport, or of human endeavour for that matter, in which discipline and full effort are more rigidly enforced than in football? Surely, if such rules govern games, they should be applied with the even greater fidelity to every branch of economic life, for the stakes are infinitely more important, and to gain them demands the same strenuousness and *esprit de corps*. I am no advocate of excessive hours that produce undue physical or mental fatigue. They are not conducive to good work or to sound health, and hence are not economic. The point I wish to emphasise is that in serving faithfully men are not doing a favour to their employer but are, if they only knew it, pursuing the only road to their own advancement and the comfort of their families. To restrict their efficiency is to imperil their employment, because competition may wipe out the enterprise in which they are engaged. By acting in

that way, therefore, they are traitors to themselves as well as to their country. Every child at school ought to be taught the incontestable truth of this doctrine before entering the ranks of working life, because it would help him to meet inevitable competition.

MINE OFFICIALS.

As to the general conduct of operations on the mines, I can speak with great confidence. The managers and their officials are men highly qualified for their positions, with wide experience of the duties they have to perform, and during the recent disturbances they manifested a spirit of courage and loyalty of which I cannot speak too warmly. To appreciate the multitude of complex questions that arise in the working of the mines, one has to be familiar with them. Geological, metallurgical, and mechanical problems necessitate unceasing investigations by the professional men who are charged with solving them. The extraction of even an extra decimal point in the yield of gold, spread over the whole industry, is a matter of some importance. Economy in the use of compressed air is another item of consequence. During the past year our mechanical engineering department has designed and introduced graphic air recorders of considerable value in checking the use and any leakage of that expensive commodity. Very interesting experiments, too, have been undertaken in regard to certain rock drills, the standardising of the best steel for the purpose and the size of the cutting bits employed, which will effect economies in this direction.

I will not detain shareholders by reviewing the complex and tremendous work which the managers and their staffs are engaged in. The few examples of research work to which I have just referred are, of course, all done concurrently with the big regular operations.

VAST ORGANISING WORK OF A MINE.

The public at large have no conception of the extent of one of our big mines. Let me take the Crown Mines as an illustration. Its length along the Reef is greater than the distance from this room to Hyde Park Corner. Envisage a line of buildings from room to Hyde Park Corner not 80 or 100 feet high, but, say, 2,000 feet high. The stopes in the mines may be looked on as rooms in the houses. Work is, of course, not going on in all the rooms at the same time, but in most of the big mines ore is being extracted from various rooms, at all sorts of floor levels, over the lateral distance from here to Hyde Park Corner. If we take the position we are standing in in this room as the central level above and below which work is proceeding, we should have to look 1,000 feet below our feet and 1,000 feet above our heads, over a distance of three miles in length, with thousands of men distributed all over the area. Imagine the organisation involved in lowering, in raising, and in distributing them to their various stations and in conveying the ore from these scattered points of attack to given central places for elevation to the surface! To say that the extraction of ore is proceeding at various points over a length of three miles and at various levels within a vertical range of 2,000 feet, is by no means an exaggeration. Couple with this the sinking of shafts, the driving of levels, the piercing of connections between levels, the proper control of ventilation, the many expedients for health and safety, the puzzles presented by geological caprices, and the maintenance of something like an even monthly output from ore that varies in value in different levels and at various points in the same levels, and, leaving aside any consideration of metallurgical or mechanical problems, the management of men, the ordering of supplies, and the supervision of natives, one gathers some idea of the work which the manager of a big mine has on his shoulders.

RENEWED CONFIDENCE NEEDED.

What is needed above all things, and what I believe is coming, is renewed confidence in the mining industry, to which, given fair treatment, it is indeed entitled. Some of the mines which are still in the earlier stages of development need large capital outlay to establish them on a proper basis. At a level of working costs which I believe it is quite reasonable to attain, the provision of those funds would be justified and could, no doubt, be secured. It is true that in these days of financial stress people want, above all things, good security, but, given fair chances of substantial gain if all goes well, they will also take a speculative risk, but they must be satisfied that new capital commitments are entered into not upon promises as to what may be done, but upon the evidence of what is being done.

The great industry about which I have offered you a few observations to-day has not in the past enjoyed the sympathetic treatment it deserves, holding in view, particularly, its importance to South Africa as a whole. I do think there is real hope for it now, as I am sure that the load under which it has staggered during the last few years, a load that would have crushed it but for the currency value of gold, is going to be lightened. Working costs are coming down, and I am encouraged, therefore,

to expect that when I meet you next year I shall be in a position to report a more satisfactory situation in regard to the working conditions at the mines than has existed during the last few years. In regard to the other directions in which your funds are placed, I think the outlook is encouraging.

Before submitting the motion, I desire to thank my colleagues for their unfailing support, and the staffs here, in South Africa, and elsewhere for the excellent services they have rendered.

THE RESOLUTION.

I beg to move:—

"That the report and accounts for the year ended December 31, 1921, as printed and circulated among the shareholders, be, and they are hereby received, approved, and adopted; and that the payment of a final dividend of 6s per share, free of income-tax, to shareholders registered on the books of the company at the close of business on June 14, 1922, and to holders of Coupon No. 20 attached to share warrants, in respect of the year ended December 31, 1921, be, and the same is hereby, sanctioned."

Lieutenant-Colonel S. H. Pollen, in seconding the resolution, said: I beg to second that motion. I have recently had the opportunity of paying a visit to Johannesburg, and was there during the outbreak.

I wish to take this opportunity of bearing witness to the devotion to duty shown by all the officials of the corporation during those critical and dangerous times; one and all, directors, managers, office employees, and, above all, mine managers and mine officials showed a disregard of personal safety and a courage in carrying on work that was nothing short of heroic. It is difficult to estimate what losses were saved to this corporation by these men, who daily went to work in the face of threats which events during that period proved to be no empty ones. I beg, therefore, to join very heartily with the chairman in his expressions of appreciation of their services. I came away from South Africa with a very hopeful view of the corporation's future.

There now seems every prospect of a period of industrial peace, of that genuine effort on the part of the men to produce—without which prosperity can never be obtained—and of a restoration of individual responsibility to the various mine managers without which the discipline essential in any combination of effort is impossible. Granted these, I have every confidence that lower costs and larger tonnages milled will open a new era of prosperity for undertakings such as ours.

This corporation has many solid assets, both gold mines and coal mines, and your board is fully alive to the necessities of the future, and will take such measures as will give the corporation, I am confident, even greater prosperity in the future, though possibly with a numerical diminution in the number of mines under its control.

SHAREHOLDER'S VIEWS.

Mr F. A. Robinson said he would like to congratulate the chairman on his excellent speech, and upon the results achieved during the past year. It was very gratifying that at last the question of ex-enemy shares, which had been hanging over the South African market for so long, had been cleared up. He was also very much interested in the vivid description given by Sir Lionel of the Crown Mines. The picture he had drawn was a very useful one, because there were very many people who had never seen a mine, and to whom a mine, even like the Crown, was nothing but a name or a piece of paper. People had no conception of what the work in a mine really meant, and especially one of the immense magnitude of the Crown. He had hoped that the chairman might, perhaps, give the meeting some idea of what he anticipated the average reduction in working costs would be throughout the Rand, but he recognised the great responsibility which attached to anything that Sir Lionel said from the chair, and therefore it was hardly to be expected that he would venture upon such a statement. If they took the case of the Crown Mines—he would not ask the chairman to confirm this, but it might take place—they might easily have a reduction in working costs of 6s a ton, which was equivalent to £1 on the cost of producing an ounce of gold.

The resolution was then put, and carried unanimously.

DIVIDEND ANNOUNCEMENTS.

The Chairman: Before proceeding with the next business, I may inform the shareholders that our dividend warrants will be posted on the 27th inst., and perhaps it may be of interest to you to know that the dividends of some of the mines with which we are associated will be announced to-day. As I have them here, I may as well give you the list. Of course, you must not expect much; owing to the strike, things have not been exactly conducive to the earning of profits. The dividends are:—City Deep, 7½ per cent.; Crown

Mines, 5 per cent.; Modder B, 30 per cent.; New Modder, 20 per cent.; Nourse Mines, 2½ per cent.; Rose Deep, 5 per cent.; Rand Mines, 20 per cent. I may tell you that when considering these dividends the companies have had to take into account the purchases of ex-enemy shares which they have made, which, of course, deplete their resources. In this connection, I might just repeat that I am looking forward very confidently to a considerable reduction in working costs. It is going to be due not only to a decrease in wages—that is not the only thing at all—it is going to be due to efficiency. Nobody can estimate the amount of output you may get if your white men, instead of being against you, are going to be with you, and to help you. It will make an astounding difference, as it has made in the coal mines of England, but to assess that in pounds, shillings, and pence requires a braver chairman than myself. I now formally move the re-election of my colleagues, Sir R. Sothorn Holland, Bt., and Mr R. W. Ffennell.

Mr F. J. Dormer seconded the motion, which was unanimously adopted.

ADDITION TO THE BOARD.

The Chairman: I now have pleasure in moving the confirmation of the addition to the board made by the directors themselves in Mr F. Heim. He has served with us for a great many years, and is certainly a factor of strength.

Mr L. Reyersbach, in seconding the motion, said that, speaking as one who had been connected with Mr Heim for over twenty years, he considered that no better choice could have been made by the directors. With regard to the very able address which the chairman had delivered several points of interest had been emphasised by Mr Robinson, and he himself would like to touch upon one further point. When he was in South Africa last year he told the men at the Crown Mines—for the formation of which he was to a certain extent responsible—that, unless their methods changed, and changed considerably, within 15 years from that time the whole of the industry west of the Van Ryn Deep would be derelict. He pointed out that the calculations on which the working of the Crown Mines had been based had proved correct in every detail except one, and that was working costs. Mr Webber, who, he regretted to say, died a fortnight ago, based his calculations, when the Crown Mines Company was formed, on costs of 16s or 17s, and the difference between the costs at that time and those which prevailed last year had made the whole of the difference in the dividends anticipated and those actually paid. The yield of the Crown Mines, as calculated in 1908 and 1909 by Mr Webber and his assistants—not in any individual part, but over the whole of the area—had been maintained within 1 dwt. over the whole period during which the amalgamated company had been at work. The watchword for the next few years with businesses such as that of this corporation would be preservation rather than expansion. They were not yet at the end of their troubles. Caution, care, and patience would have to be the principal attributes of every board, and he hoped these would be exercised by the directors of this corporation.

The motion was unanimously agreed to.

On the proposition of Sir Otto Beit, seconded by Mr W. T. Anderson, C.B.E., Messrs Cooper Brothers and Co. were re-appointed auditors of the corporation.

Mr D. Holt proposed a cordial vote of thanks to the chairman for his able conduct of the meeting, and the brilliant speech with which he had favoured not only the shareholders, but he thought it might be said, even the world at large.

The vote was cordially passed and, a brief acknowledgment having been made by the Chairman, the proceedings terminated.

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

BRUNNER, MOND, AND CO., LIMITED.

MR. ROSCOE BRUNNER ON THE YEAR'S OPERATIONS.

STRONG FINANCIAL POSITION.

BRIGHTER FUTURE PROSPECTS.

Mr Roscoe Brunner (chairman of directors) presided over the annual meeting of Brunner, Mond, and Co., Limited, at the Exchange Station Hotel, Liverpool, on Friday, June 16th, and was supported by the Rt. Hon. G. W. Balfour, Sir Hugh Bell, Bt., C.B., Sir John Brunner, Bt., Mr Arthur Colegate, Mr J. H. Gold, Mr A. Travers Hawes, Sir John G. Jarmay, K.B.E., Mr Emile S. Mond, Lieutenant-Colonel G. P. Pollitt, D.S.O., and Captain D. Marsh (secretary). There was a large attendance of shareholders.

THE ACCOUNTS.

The Chairman, in proposing the adoption of the annual report and the payment of dividends—the ordinary dividend at the rate of 8 per cent. per annum, less income-tax—said: Dealing briefly with the accounts, and taking the balance-sheet first, the additions during the year to the first item on the assets side—and I shall use round figures all the way through—are £511,000, which is considerably less than last year's additions, as you would have expected. It includes £140,000 spent upon houses, and I am glad to say that that sum finishes the expenditure on houses, nearly all of which are occupied. They are not all occupied by our men; some of them are tenanted by outsiders, but upon such terms as admit of us regaining possession if, and when, we want them for ourselves. When our Wallerscotte works are erected we shall want the houses, and we shall get them.

INVESTMENTS.

Our investments are up by £211,000, partly in Canada, but more largely due to purchases of outstanding shares in the Castner-Kellner Alkali Company. Stocks are down by £588,000, partly due to a lesser tonnage, but as to a quarter of a million due to the writing off of such amount on account of depreciation in values. The stocks are now valued at proper figures, and we do not expect to have to depreciate further. The patents account has had £796 written off it, and now stands at the purely nominal round figures of £1,000. The debts owing to the company are up by £387,000. During the year we have advanced a great deal more than that figure to our subsidiary company, Synthetic Ammonia and Nitrates, Limited. Deducting this advance, the debts owing are less than last year's.

CASH BALANCE.

The cash in hand is £1,214,000, as compared with an overdraft at the end of last year of £820,000, or a difference to the good of £2,035,000. This is, of course, due to the issue during the past year of £2,500,000 of preference capital. I was reminded this morning to tell you that that, of course, does not represent good trade, but bad trade, and we should have been very glad to have had a very much smaller cash balance.

CAPITAL AND RESERVE.

On the liabilities side the capital is increased by the £2,500,000 of preference capital, and by £69,000 in ordinary shares, due to the issue of our own shares in exchange for the Castner-Kellner shares I have already mentioned. Depreciation account is increased by £150,000, charged against the profits of the year, bringing that reserve up to £965,000.

Passing over for the moment the next three items in the balance-sheet, we have written off suspense account nearly £60,000; the savings bank deposits are down by £22,000, due, no doubt, to the general trade depression, and to the short time which our men had to work during the coal stoppage of last year. The debts owing by the company are practically unchanged. The difference in the items I have passed over is explained in the report. At March 31st of last year we had a reserve account which we called the investment surplus reserve account, in which there was a credit of £1,600,000. We have now closed that account and dealt with the amount by transferring first, to a new capital reserve account, a round figure of £1,000,000; secondly, to general reserve, £220,000; and, thirdly, carrying to the credit of the profit and loss account the sum of nearly £380,000, made up of the depreciation of stocks, which I have mentioned—namely, a quarter of a million—and the expenses of the issue of the preference shares—namely, £130,000. A great many companies would have left the expenses of issue of the preference shares as an asset, but we have thought it well to write it off. The balance-sheet discloses a very strong position, great reserves, and an excess of assets over current liabilities of 17½ millions, against a capital of less than 14 millions.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, the debit side

shows, as compared with last year, decreases in the first two items, directors' and office salaries and auditing, of £19,000, and general charges £30,000, so that you can see we have been economising in these directions. Bad debts show an increase of nearly £4,000, due, of course, to bad trade. The credit side shows a decrease in investment revenue of £154,000, and you will remember I told you last year that the financial years of our subsidiary companies ended before the end of the calendar year. Last year, owing to that fact, they had a good year; this year, owing to the same fact, they have had a bad year. They all bore, as we did, the trouble and expense of the coal stoppage, and, therefore, our investment revenue is, as I said, less by £154,000.

The gross profit after deducting the depreciation of £150,000, as last year, actually shows an increase, but since in last year's accounts those gross profits had borne a writing-off of £264,000 for depreciation in stocks, and this year the writing down of one quarter of a million has been done out of reserves, the real trading profit is considerably less than last year's. Not all the newspapers who comment upon our accounts, though they had all the information before them, have noticed this fact. In a good year this would be bad finance; in the worst year—I think it is no exaggeration to say—that the world has ever known, it is entirely justifiable. The *Economist* gave a table a few weeks ago which showed that for the last quarter of the year 1921 a number of large companies, whose accounts they had examined, had paid away in dividends 120 per cent. of the profits they had earned, or, in other words, had drawn largely upon reserves to pay dividends. That is exactly what we have done. Mr J. M. Keynes, the critic of the finances of the Peace Treaty, and now the chairman of a large insurance company, speaking in the early part of this year, gave the figures of the production of pig-iron and cotton. He showed that in one case the production in this country was the lowest for 70 years, and, in the other case—cotton—the lowest for 60 years.

INTERESTS OF SHAREHOLDERS, WORKMEN, AND CUSTOMERS.

We make no apology whatever for the accounts we present to you. In a year when a great many companies have made such losses as have wiped out the whole of their reserves, to have made a profit at all is a great achievement. Your directors have to consider very many interests in shaping the policy of the company. No doubt you would consider that the interests of the shareholders come first, but we also have to consider the interests of our customers, the interests of our workmen, of our staffs (of which two latter bodies quite a number are also shareholders), and last, and of course least, we have to consider the interests of the directors, who must necessarily be shareholders. We claim to have dealt fairly by all these classes. The dividend has been reduced, so have wages; salaries have been reduced all round, and our customers have borne part of the cost of the increase in the cost of products by having to pay higher prices. We have not changed in any way our policy of the highest possible "makes," coupled with a fair margin of profit. We have given some reduction in prices to our customers as our costs have fallen, and others are under consideration for the near future.

THE COMPANY'S PROCESSES.

The financial expert of the *Liverpool Courier*, in the issue of June 9th, wrote of our accounts the following:—

"I think that insiders expected a much worse result, as some of the patent processes are not turning out well, and there has been considerable anxiety amongst the directors."

Ladies and gentlemen, that is sheer nonsense. I do not know who the insiders are who expected a worse result, but we are quite satisfied with our processes, though we are at all times endeavouring to improve them, and very often succeed. Your directors are in no way anxious, and so satisfied are they with our last patent process that the work of erection of the plant of Synthetic Ammonia and Nitrates, Limited, at Billingham, has been proceeding as fast as possible for many months. It was, of course, considerably interfered with by the engineering lock-out, which is now happily over, and we hope to have the plant running early next year, not, indeed, in time to reap any benefits during the current financial year, but almost certainly in time to benefit us in the succeeding financial year. As to the ammonia soda process, though that does not now depend much upon patents, we have been at work slowly for a considerable number of months past in the erection of the Wallerscotte Works. Latterly we have speeded up that work, and, as we believed prices had reached

economic levels, we have given further orders for buildings and plant to be erected at those works, and we think we shall be in time to meet the increased demand when it arrives.

MANCHESTER SHIP CANAL LITIGATION.

You will no doubt be aware that the Manchester Ship Canal Company brought a test action against our company to recover tolls which they alleged to be due, and you will no doubt also be aware that all the traders on the River Weaver joined with us in bringing a counter-action to secure what we conceived to be our rights. We lost in the first Court, and in the Appeal Court two of the three Lords Justices were against us. We are appealing to the House of Lords, and as the case is therefore *sub judice*, I cannot refer to its merits, but we have been blamed for not settling the case out of Court, and I want to read you a paragraph from Lord Justice Scrutton's judgment. He says that "Even Jarndyce v. Jarndyce must look to its laurels. The costs, I suppose, are now well over £100,000, perhaps much more. I hope the shareholders in the Ship Canal Company and Brunner, Mond and Co., and the various Weaver traders appreciate the expensive muddle into which their legal advisers have led them, which, in my opinion, could have been avoided by a little common sense and compromise on the part of the business men who manage their affairs."

Now, ladies and gentlemen, I have been a Weaver trustee for the last twenty years, and during the whole of that time, off and on, there have been negotiations, on these very points, with the Manchester Ship Canal Company, and some of us, principally Mr. Gold, one of my colleagues, who is also a Weaver trustee, spent many months in negotiating with the directors of the Ship Canal Company before we went to the Appeal Court. Those negotiations unfortunately failed.

JUDGES' CRITICISMS.

We have been blamed by the Judges for wasting time and money, and Lord Justice Bankes spoke of the time which he considered had been wasted, and added: "The supplying daily to the Court and to counsel of printed notes of every word uttered by counsel, witness, or Judge, has no doubt contributed largely to the time occupied both in the Court below and in this Court." What is the alternative to a verbatim report in a Court? It is a longhand note taken by the Judge. That naturally costs nothing, but it is an impossible record upon which to appeal to a higher Court, and not only does it not save time, but it necessarily wastes a good deal of time, and time means money, especially with the present exorbitant fees exacted by fashionable counsel.

Lord Justice Atkin, who was the dissenting Judge, supplies me with an absolutely complete answer to these criticisms. He spoke of the two actions, and said they were tried together, but the issues were by no means identical. He added: "The importance to the public"—note those words, "to the public," please—"of the second action is immeasurably greater, though in the Court below it appears to have been dwarfed by the first. The case affects considerable financial and public interests, and involves investigations of a considerable body of facts and a consideration of many disputed propositions of law. I do not think that any time was wasted before us by counsel on either side, by whom I personally have been much assisted, and I am not disposed to pass strictures on the conduct of either side in the Court below, though as often happens the relative importance of particular issues may not at the trial have been at once perceived either by counsel or by the Court."

I suggest to you that the relative importance of particular issues can only be found out by counsel seeing the next morning the whole of his speech, and the evidence of the day before, so that he may be quite certain neither he nor the Judge has missed a point. I cannot help feeling that Judges in these days are too prone to comment upon matters outside their province and upon which they are ill-informed.

TIMEKEEPING OF THE MEN.

We are very pleased to be able to report that the time-keeping of our men, to which reference has been made at these meetings from time to time, was the best on record. Ninety-nine point one per cent. of our men have earned their week's holiday. That is a record upon which everybody concerned is entitled to be congratulated. Incidentally the chemical trade employers, who were the first as an organised trade to follow our example and grant a week's holiday, have been trying, at the Joint Industrial Council of that trade, to induce the leaders who represent the men on that council to agree to stiffen up the conditions under which the holiday is earned to our standard of two days' lost time in the year without reasonable excuse. We cannot understand their attitude in refusing to agree, since good time-keeping is good for the men, good for the employer, and no less good for the trade union, because a man in receipt of steady wages is more likely to become and to remain a member.

We have erected at Winnington, and had unveiled on Saturday last by the Minister of Health, our former colleague, Sir Alfred Mond, a bronze statue of my late father. The statue was executed by Sir William Goscombe John, R.A.; it is a fine work of art, and

a striking likeness. It stands on a very fine site on the road which will eventually connect the Winnington and Wallerscote works, and is not far from the statue of Dr. Mond. We have here on a side-table photographs showing the statue and the unveiling ceremony.

TRADE UNDOUBTEDLY IMPROVING.

Now as to the future. Trade is undoubtedly improving, and, as I have said before, we believe that a slow improvement is better than a quick one, for the reason that it is not so likely to be followed by a rapid decline. In the past we had statistics so reliable that we could, about half-way through the year, make an accurate estimate of our "make" for the year, our costs and our profits, to within a few tons of the make, and to within a few pounds of the profits. Nowadays, data are entirely lacking. The future cannot be said to be bright nor can it be said to be dark, but as the Air Service reports have it, "visibility is poor." We hope and believe that the future has better prospects in store for the world generally, and for ourselves in particular.

Sir Hugh Bell, C.B., seconded the resolution, and offered his congratulations to the chairman on what he described as his temperate and statesmanlike speech.

The resolution was unanimously carried, as was a resolution to re-elect the six retiring members of the board of directors.

On the motion of Sir John Brunner, seconded by Mr. Emile Mond, thanks were conveyed to the staff and workers in all departments, to whom a very high tribute was paid.

Messrs. Edmund D. White and Sons, of Liverpool, were re-appointed auditors, and the meeting closed with thanks to the chairman, who, in acknowledging the vote, mentioned the fact that 1923 would be the fiftieth anniversary of the foundation of Brunner, Mond and Co.

GRESHAM FIRE AND ACCIDENT INSURANCE SOCIETY, LIMITED.

INCREASED ACCIDENT PROFITS, NO LOSS FROM THE CITY EQUITABLE FAILURE.

The twelfth annual general meeting of the Gresham Fire and Accident Insurance Society, Limited, was held, on the 15th inst., at the head office, St. Mildred's House, Poultry, London, E.C.

Sir Reginald Macleod (of MacLeod), K.C.B., chairman of the company, presided.

The general manager and secretary (Mr. T. Brand Miller) having read the notice convening the meeting and the directors' and auditors' reports,

The Chairman said: Gentlemen, you will have seen from the accounts for 1921 that, though the accident department shows a greater profit than in any year since our establishment, the fire results have been disappointing. In addressing you a year ago I felt it necessary to suggest to you that in the then current year, 1921, fire insurance must suffer from the general collapse of business, and you will have realised from the character of insurance company reports that this apprehension was only too well founded, the year 1921 having been, perhaps, the most unfavourable since the San Francisco conflagration. We have passed, like other companies, large and small, through a very difficult and trying period. When goods are not being made they cannot be insured, and premiums decrease, not, in our case, from any loss of good connections or of any block of business in any particular centre of operations, but from shrinkage of demand practically throughout the world. We retain our friends and their good will, and we have no doubt as trade improves our fire income will regain its elasticity. Our fire premiums are less by £46,000 than in 1920, and now stand at £151,000. On the other side of the account our losses have shown no decrease and amount to £105,315, or 69 per cent., while commission and expenses of management—I take them together because our foreign business is largely done on commission, with little or no expenditure on management proper—require £62,793, or 42 per cent.

At the end of the year, the unexpired risks being lower than at the end of 1920, the sum required as a reserve against them, though standing as before at 35 per cent. of the premium income, is also reduced, and the fire insurance account closes with a balance—though it be only the nominal one—of £195 to the credit of profit and loss. Perhaps at this point I should draw your attention to an item of £1,787 under the title of "Interest on Enemy Debts." Certain payments from enemy companies were due to us, and we placed on our last balance-sheet a sum of £6,000 in reserve on their account. The greater portion of these debts have now been paid to us with interest, and it is the proportion of interest accrued to December 31st, and since received, which here appears.

The employers' liability, accident, and general account has shown much more favourable results, the premiums being diminished by about £5,000 and standing at £102,270. The claims amount, at 44.9 per cent., to £45,903, and commission and

management at 45.7 per cent. to £46,757, thus enabling us to carry to profit and loss, after maintaining our reserve for unexpired risks, the satisfactory sum of £12,033.

Having dealt with the fire and accident departments separately, I will only refer you to the report for the combined totals, showing an income of £265,647 and outgoings amounting to £268,196. After maintaining the reserve on the basis of 35 per cent. on our reduced premiums and bringing in our balance from last year, we find ourselves with an available balance of £21,702.

Turning to the profit and loss account, you will observe that our net receipts from interest and dividends have increased from £8,512 to £9,562, and that a debit to profit and loss on investments realised and on exchange of £2,529 in 1920 is changed to a profit of £452. We have, on the other hand, to provide £5,546 for balance of income-tax in addition to the sum of £1,458 deducted from interest, making a total charge for income-tax of £7,004, which is equivalent to the whole dividend we propose to pay. In addition, the provision for corporation profits tax is increased from £870 to £1,130, and now amounts to very nearly 1 per cent. on our dividend. We place £7,000 to reduction to our establishment of business account and carry forward, after paying a dividend of £5 per cent.—which requires a net sum of £7,000—a balance to next year increased from £6,119 to £7,702. I do not need to draw your attention to many items on the balance-sheet. The insurance reserves are reduced in proportion—as I have already explained—to the amount of risks outstanding.

The investment reserve stands at the same figure as it did last year, £23,434, and, as stated in the auditors' certificate, is sufficient to provide for depreciation below market price. I am glad to say since December last there has been a very material appreciation in value.

The reserve for contingencies is reduced from £6,000 to £4,500, certain sums from enemy debtors having now been received, and this figure we believe to be ample to cover all possible demands. I am glad in this connection to say that we have had no loss whatever in consequence of the City Equitable failure. We were only interested in one other reinsurance company which had defaulted, and that only to a small amount, which has been amply provided for.

The amounts stated as due to other companies and from other companies, and as agents' balances, have for the most part been paid or received since the closing of the accounts.

I am glad to point out to you that for the first time we have been able to commence writing off the establishment of business account, which has stood in our books for many years at £56,362. Expenditure must be incurred in the establishment of any business, insurance or otherwise, but such an item ought not to appear as an asset—however valuable the position it has secured may be—longer than necessary. We have utilised £7,000 for this purpose, reducing the account to £49,362, and it is our aim to continue the policy of reduction as rapidly as circumstances admit. It is tedious work, gentlemen, marking time while trade is so slow to revive. If I may I will ask you to use your very best influence among your friends to give us their business as well as your own, so as to help us through these times of depression. We have to wait, keeping our house in order, with close attention to economy and our organisation at the highest point of efficiency, for a move forward at the first opportunity. We are at least fortunate in the way we are served. Everyone knows Mr. Miller, our general manager, who ranks so high in the insurance world for skill and prudence, and in Mr. Richley, his assistant, and our local managers and agents at home and abroad, and our head office staff, we recognise ability and good will for which we are grateful, and with the assistance of all we look forward to the future with entire confidence. I will conclude by moving "That the directors' and auditors' reports be approved and adopted, and that a dividend

at the rate of 5 per cent., less income-tax, be paid upon the paid-up capital of the Society."

Mr. Courtenay, C. S. Fooks (deputy-chairman) seconded the resolution.

The Chairman invited questions, but none were asked, and the resolution was carried unanimously.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED.

NITRATE DEPRESSION—TARIFF QUESTION.

The ordinary general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London, the Hon. Charles N. Lawrence presiding.

The managing director and secretary (Mr. A. W. Bolden) read the notice convening the meeting and the auditors' report.

The Chairman said that he could only describe the report in respect of the twelve months to December 31st last as one showing very poor results. The depression in the nitrate industry had continued until just recently. During the past two or three months nitrate had been sold in fair quantities, and it appeared as if the outlook was becoming gradually brighter. They carried during the year under review only 179,436 tons of nitrate, as compared with 1,013,491 tons in 1920. The gross receipts were only £1,031,489, as compared with £2,370,079 for 1920. The working expenses, however, were reduced to £738,000, as compared with £1,615,000. The profit from the undertaking for the twelve months was 293,367, to which had to be added for interest on their Bolivia Railway bonds, and from other investments a net amount of £80,360, registration fees produced £181, and, adding the carry-forward of £285,706, they had a total of £659,616. The directors recommended a dividend of 3 per cent. on the consolidated ordinary stock, and £172,229 would be carried forward. With regard to the prospects for the current year, the gross receipts to June 11th were £187,000 less than at this time last year, but he thought that leeway would gradually be made up because of the improving outlook for nitrate, and that the working expenses would show a more favourable ratio. The published figures of weekly traffics during the last seven weeks had shown increases aggregating over £18,000 compared with the corresponding seven weeks of last year.

Beyond this, however, he did not care to prophesy. Trade throughout the world was still in a very uncertain condition, and the Central European markets, which were such large consumers of nitrate before the war, were not in a position, from one cause or another, chiefly owing to their depreciated exchanges, to take nitrate in the quantities the directors would like to see; at any rate, he was afraid that must be so for some time, but from recent advices they understood that fairly considerable quantities had been sold and that sales were still proceeding.

As to tariffs, the company secured the Bolivian Government's agreement to an increase of 15 per cent. on all the lines which it operated in Bolivia, and this increase was put into force as from July 25th last. Unfortunately by that time the Bolivian exchange had dropped from its par value of 19 1.5d to about 14d, so that they were practically faced with a loss in the earnings of 27 per cent., for which the 15 per cent. clearly did not compensate them. The directors had presented to the Government a table of surcharges which they suggested should rule in the case of the Bolivian Railway, and they were hopeful that this would be put in force before very long. As to the Antofagasta Company's right to surcharge, negotiations were still proceeding.

In conclusion, the Chairman entered a protest against the corporation profits tax, which he considered unjust.

The reports and accounts were unanimously adopted.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

BLEACHERS' ASSOCIATION, LIMITED.

SUCCESSFUL YEAR—INCREASED NET PROFIT.
BURDEN OF HIGH RAILWAY RATES.

The twenty-third ordinary general meeting of the company was held at the Memorial Hall, Albert square, Manchester, on Tuesday, June 20, 1922, at 12 noon.

Lt.-Col. Sir Alan J. Sykes, Bart., M.P., in moving the adoption of the report and accounts, said:—Ladies and gentlemen, I have pleasure in submitting to you the twenty-second annual report of Bleachers' Association, Limited. Before, however, referring to the business for which this meeting has been called, I should like to say how very much the directors regret to record the deaths of two of their colleagues, Mr Harry Bridson and Mr A. P. Brydson. Both these gentlemen had been connected with the company as directors from its inception, and Mr Harry Bridson was, in addition, the manager of our successful branch of Messrs T. R. Bridson and Sons, Bolton Bleachworks.

I think you will all agree with me that, considering the exceptionally bad time through which the textile trade had to pass during the first six months of the year (which was reflected in our half-yearly accounts), the figures presented to you in our completed accounts for the year are very satisfactory.

THE ACCOUNTS.

The accounts which have been sent to you do not call for any special comment. You will see that after charging £405,665 for repairs and maintenance, as compared with £507,394 a year ago, the profits for the year ending March 31, 1922, after deducting estimated amounts in respect of income-tax, corporation profits tax and other contingencies, and after deducting debenture interest and the usual depreciation funds, amount to £653,888, compared with the corresponding figure for last year of £514,535. This shows an increase in the net profits of £139,353. The amount brought into the accounts this year was £337,890, and added to the profits for the year of £653,888, makes a total available balance of £991,778, compared with £835,996 a year ago.

After paying the dividend on the preference shares, the directors recommend a transfer to the general reserve fund of £125,000, making the total of that fund £1,450,000, and also a transfer of £75,000 to the superannuation fund, making the total of that fund £143,762. I shall refer later on to the question of this appropriation to the superannuation fund. The directors further recommend a dividend on the ordinary shares of 10 per cent. (actual) for the half-year ending March 31, 1922, making, with the interim dividend paid in December, 1921, 12½ per cent. for the year, and that £359,405 be carried forward to next year's account. The amount carried forward is £21,515 in excess of the balance brought into the accounts, and the 12½ per cent. dividend for the year compares with a dividend of 10 per cent. for the previous year.

RAILWAY RATES.

The maintenance of railway rates at their present high and uneconomic level is acting as a serious drag on trade recovery, and although there are signs that this matter is receiving the attention of the railway companies (in fact, certain slight reductions have already been announced), it is a matter for regret that the Scottish railway companies have not yet seen their way to make these reductions as fully operative as their English confrères.

The lack of uniformity in reducing railway rates as between the English and Scottish railway companies, chiefly affects the transportation cost of coal, but there still remains the important traffic in cloth, in respect of which there appears at present to be no prospect of immediate relief, and unless the railway companies (both English and Scottish) do give serious consideration to this question of rate reduction, there is no doubt that permanent damage will be inflicted upon the important trade between Lancashire and Scotland, in which this association is extensively interested.

I was able when I had the pleasure of addressing you last year to refer to the very cordial relations existing between the managing directors and our workpeople during the year. It is a matter for gratification to be able to tell you that this position has been maintained, and I hope that by mutual trust and confidence we may be able to overcome any difficulties which may arise in the future.

During the year we have been able to make some progress with our programme of extensions at one or two of our branches. Now that constructional costs are lower, we are anxious to proceed with our scheme for reorganising and equipping our works, in order that they may readily meet all the requirements of the trade, and give our customers still better service.

PENSION SCHEME.

To revert to the amounts set aside from time to time for the

superannuation fund, for some time past my directors and I have felt that it would be a wise step to inaugurate a pension fund for members of our staff, with a view to cementing them closer to the company, and to enable them to make a reasonable provision for themselves for the time when they are old and past work. It is a policy that is followed with success by other large companies.

After making careful investigations with the help of a skilled actuary, and one who has been responsible for many such schemes, we have now evolved a scheme that we believe will be satisfactory to all concerned. It is not as ambitious as some, but we believe it is adequate.

(1) The scheme will be open to members of our staff—managers, sub-managers, engineering, chemical and clerical staff, townsmen and foremen—between the ages of 21 and 65.

(2) The main principle of the scheme is that it is contributory, that is to say, that both the member and the company contribute to the fund, to provide the member with a pension on the attainment of the age of 65.

(3) All contributions to be paid into a fund to be administered by trustees.

The pension age will be 65; the pension will then be paid for life or for five years, whichever is the longer.

Seeing that our men eligible for the scheme are of all ages, and have put in various terms of service with us, it has been found necessary to allow them considerable rebates, to be paid by the company, and the money which you have voted year by year will be available for dealing with this matter. It will also be available for assisting those who from their age are unable to join in the scheme.

I need hardly say that I feel sure that I have the sympathy of the shareholders in this scheme. As a result of the adoption of this scheme, the company's contribution will in future be a charge against the company, to be met before striking the profit, so in future years there will be no need to ask you to vote annual sums for this specific object.

WELFARE WORK.

You may remember that last year I said something about welfare work, and the fact that we had undertaken the building of a small garden village at one of our branches, which was then approaching completion. I am glad to say that the buildings are all finished, and that the tenants appreciate the houses and the general lay-out and situation.

In an association like ours, with the works scattered in many directions, and mostly in comparatively small units, welfare work as practised by some of the large works in the country is not possible; it is a matter, however, that we keep very much before us, and where we see an opportunity we do what we can.

Our occupation is a healthy one, and the great majority of our employees work in good conditions as to light and fresh air.

Besides various housing schemes, we have laid out, or are now doing so, a good many bowling greens and tennis courts, and at many works have dining rooms and canteens.

In all work that we have done in this direction, we have met with a hearty response from the workpeople, and this helps to foster that genuine spirit of comradeship and co-operation which exists in such a generous degree among all the ranks of our trade.

BOWLING CUP.

Last year I mentioned that I had instituted a bowling competition between our English branches, which proved very successful in bringing the men of the different branches closer together.

This competition has proved so popular that I have this year offered a similar cup to be competed for by our Scottish branches.

In conclusion, I wish to express to the managing-directors and central office staff, and to the managers, staff and men of all our branches, and I include our engineering and transport branches, our hearty appreciation of their hard work and loyal co-operation, without which an association such as ours cannot hope to succeed. We appreciate the fact that all of them have so co-operated, and we hereby tender them our hearty thanks.

Sir Alan Sykes then moved a resolution declaring a dividend at the rate of 10 per cent. (actual) on the ordinary shares for the six months ending March 31, 1922, making with the interim dividend of 2½ per cent. (actual) paid in December, 1921, a dividend of 12½ per cent. on the ordinary shares for the year.

On the motion of Mr D. Q. Henriques, seconded by Mr W. Gee, it was resolved that the retiring directors be re-elected, and the joint auditors, Messrs Jones, Crewdson, and Youatt and Messrs P. and J. Kevan, were also reappointed, and the meeting closed with a vote of thanks to the chairman.

GREAT INDIAN PENINSULA RAILWAY COMPANY. DISAPPOINTING YEAR—SURTAX REMOVED.

The one hundred and forty-fifth half-yearly general meeting of the Great Indian Peninsula Railway Company was held, on the 23rd inst., at the company's offices, 48, Copthall avenue, London, Sir Charles H. Armstrong, chairman of the company, presiding.

The secretary (Mr R. H. Walpole) having read the notice convening the meeting,

The Chairman, in the course of moving the adoption of the report and accounts, said:

The result of the year's working has been a disappointment, and there is no surplus profit. At our last half-yearly meeting I reported a deficit for the first half of the year of 144.15 lacs, and to this has now to be added 95.90 lacs, the adverse balance of the past six months, making a total deficit for the year of 240.05 lacs. We have been overburdened with expenses, a high level of salaries, a greatly increased cost of coal, heavy charges for maintenance of permanent way, bridges, &c., and for the repair of wagons. The percentage of working expenses for the year to gross receipts was 97.49, a very excessive figure, which must and will be reduced in the current year.

Our gross earnings for the year on the amalgamated system, including State lines, were 13.74 crores, a decrease of 9½ lacs, or .68 per cent. on the previous year. Our expenditure was 12.57 crores, against 10.64 crores, an increase of 19½ lacs, or 18.08 per cent. The net earnings on the amalgamated system, excluding State lines, were 101 lacs, or 7.94 per cent. of the gross receipts. When adjustments have been made, that item is turned into a deficit of 240 lacs, and this is the result of the year's working.

During the year we have collected over 87 lacs of surtax for Government, and if we could have included this amount in our accounts the deficiency would have been reduced to 153 lacs. This surtax has now ceased, and from April 1st we have been charging higher rates and fares, which will improve our position materially, but will not be sufficient to produce a favourable balance during the current year. Economies under all heads are, therefore, imperatively necessary, and all capital and renewal expenditure which can be avoided must be avoided until equilibrium has been reached.

RAILWAY BOARD'S RESPONSIBILITY.

Our capital expenditure the last two years has been heavy and above the average, but this is due in a great measure to difficulties and delays caused by the war. There are still, however, many capital works in progress on which further expenditure is necessary to bring them to completion. The position in which we are now placed was foreseen by your directors some time ago, and in June, 1920, they urged on the Railway Board a general increase in rates and fares, which up to that time had hardly been altered since the war began. Our request was refused, and the position was made still worse for us by Government imposing a heavy surtax on freights for revenue purposes on Government account. This has now been removed, and the higher rates and fares now in force will help us in the future, but if our suggestion had been followed two years ago we should not be forced to delay development as we are now compelled to do. Passenger and troop traffic increased during the year by 1½ millions, but the revenue earned was less by 15.43 lacs. We carried during the year over 42 million passengers, against 40½ millions in the previous 12 months. In goods we carried 10,653,000 tons, against 10,147,000 in the previous year, an increase of 506,000 tons, and our receipts from this were 24 lacs in excess of the previous 12 months. Our total gross earnings were, however, about 9½ lacs less than in the previous year.

In connection with working expenses, heavy increases are shown in all departments, excepting traffic. As regards electrification, I am hoping something will be decided shortly, and if, ere long, the decision is favourable, we shall get to work as rapidly as possible.

CURRENT YEAR'S PROSPECTS.

As regards the current year, traffic, so far, are disappointing, although gross receipts are showing some increase, but this addition is due, mainly, if not entirely, to the higher rates and fares. The trade position in India is improving, slowly, but steadily. The balance of trade has shown a tendency lately to swing round in India's favour, and if there is a good monsoon this year there ought to be a better trade next season. Continental exchanges are still, however, adverse, and little improvement in this respect is likely at present, but Indian export trade in all probability will slowly expand, and signs of an increased inquiry for raw materials from India have not been lacking the last two or three months. Sterling exchange is still low, but will no doubt improve gradually as the export trade of India increases. As regards imports, I think we may also look for a steady growth of trade, for manufacturing prices to-day in this country and elsewhere are much less than they were two years ago. The heavy fall in prices the last two years has been a serious blow to Indian trade, from which it will take some

time to recover. The unrest in India the last two or three years has hampered trade and industry in all directions, and Indians themselves must in many cases have been heavy losers. The monsoon has set in quietly and rather early, and its future may therefore be followed with some anxiety, but the forecast for Western India is, at any rate, favourable. If last season's good monsoon should be repeated, the country will be prosperous, and, although living expenses are still much above the normal and will probably remain on a high level for some time, a good harvest is bound to bring improved trade.

The report and accounts were unanimously adopted.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED. ACTIVITIES AND INTERESTS OF THE COMPANY.

The statutory meeting of Whitehall Electric Investments, Limited, was held, on the 20th instant, at Winchester House, Old Broad street, London. The Hon. Clive Pearson (chairman of the company) presided.

The secretary (Mr J. Lister Walsh) having read the notice convening the meeting,

The Chairman, in the course of his remarks, said: Over a period of years Lord Cowdray, through one of his companies, the Whitehall Securities Corporation, Limited, had acquired a controlling interest in various electrical companies in Mexico supplying certain large cities and their surrounding districts with light and power, and operating the tramway system in such cities. These enterprises were remodelled, and have been built up over many years into good properties; they have been nursed through Mexico's troublous times, and are now in an established position, with steady earnings and good additional prospects still before them. An opportunity arose at the end of the war of purchasing from the Public Trustee for a considerable sum in cash the share control of the English company owning and operating the tramways and the power and light distribution system in Santiago, a city of 500,000 people, and the capital of Chile, which company had been controlled for some years before the war by the A.E.G.—the well-known German electric company. At the time of this purchase it was known that very considerable sums would have to be spent on extensions in order to develop the properties to their fullest extent, and to embrace not only the City of Santiago, but also the rich territory stretching to Valparaiso, the chief port of the country. It was, therefore, determined to form your Whitehall Electric Investments, Limited, and to transfer to it the whole of the debentures and shares in the different electrical companies, both Mexican and Chilean, giving in exchange, therefore, only ordinary shares in your company, and to issue debentures and preference shares of your company to provide the cash required for the extension work. You will see, therefore, that the whole of the cash received from the public is applied to new work: the vendors, the Whitehall Securities Corporation, receiving no cash in respect of the securities transferred.

THE CHILIAN PROPERTIES.

Upon acquiring the Chilean properties a complete examination of the position showed the existence of a very fine field for a large and satisfactory business. It was found that the development of considerable additional hydro-electric power was essential, and remodelling and extensions were required, both of the tramways of Santiago and the light and power distribution system. To provide the additional water power a controlling interest was obtained in and amalgamation effected with the Cia. Nacional de Fuerza Electrica, a company which had been formed and into which Chilean Nationals subscribed over half a million cash for the purpose of developing hydro-electric power at Maitenes, some 30 miles outside Santiago. The Cia. Chilena is thus inaugurated as the owners of hydro-electric developments, and of a very large system of tram and light and power distributing facilities. It is earning a large immediate income in a field very favourable for the investment of additional capital to extend its activities and to serve efficiently an energetic, vigorous, and wealthy prosperous population of some million people. When the Maitenes water power development is completed the company will be enabled to fulfil the important contract it has entered into for the supply of power to the Government railways, the electrification of which is already in hand, and generally to satisfy the immediate power demand in the Santiago-Valparaiso territory.

The earnings of this Chilean enterprise fluctuate to some extent with the rate of exchange, but with the company's programme of development work the light and power side of the business becomes of far greater importance, and this is almost wholly upon a gold basis, and thus not subject to exchange fluctuations. The earnings of the Cia. Chilena, to-day sufficient to meet its debenture charges and to pay a dividend on its preference shares, will, we are confident, grow to very large figures. The company has, we believe, an immense future, in that, whilst it already has a big

business, its territory is relatively undeveloped, and is ripe to absorb additional power to a very large amount. I may add that your company's Chilean investments represent over half of your total investments.

MEXICO—THE TAMPICO INTERESTS.

In spite of all its misfortunes, political and financial, during the last nine years—Mexico still continues one of the richest countries in the world, with an unlimited future. Mexico has a population of some 15,000,000 of people, whose capacity for work and whose reputation for honesty must be regarded quite apart from the relatively small number of people who constitute the disturbing factor in the country. To enable the factories to work they require the services of the great utility companies for the supply of electric light and power. It is a noteworthy fact that during the whole of the disturbed period little or no damage has been done to any electric power and light plant throughout the Republic. The demand for the supply of electric energy is constant and growing. I would also remind you that Mexico has passed through the period of paper inflation. She has no war debt, her currency is on the gold basis, and her Customs revenues are to-day larger than ever before.

I will now refer shortly to your Mexican investments. The Tampico Company (which is a Mexican company) was formerly an English company, now in voluntary liquidation, owing to English income-tax. The port of Tampico has grown largely in the last few years, due, of course, to the oil industry having developed so materially in the district, and while there is a temporary lull, their profits for 1922 will not be as large as those of 1921, the company's record year, there seems to be no reason why the earnings of this company should not before long again equal the 1921 figures, and, in fact, exceed them. So far as we are able to judge at present, there is no reason why—in addition to the payment of its debenture interest and sinking fund, and dividend on its preference shares—it should not earn a reasonable dividend on its ordinary shares for the current year. The company's plant is an oil-fired steam plant, the extensions to which are well in hand.

The Puebla Company, which operates in the city of Puebla—the centre of the cotton industry in Mexico—is a Canadian company, which was formed many years ago. The company supplies power over a large district, and Puebla is probably one of the best-lighted cities in the world. The water-power station at Tuxpango is now developed for 17,000 h.p., and is capable of developing 17,000 more. The total horse-power at present developed by the company at its three stations—Tuxpango, Portezuela, and St. Augustin—is 26,000.

OUTLOOK FOR PUEBLA COMPANY.

The outlook of the Puebla Company is good, and the earnings ought steadily to increase. The company has available a considerable amount of unsold power, but when the demand becomes pressing it can increase this very much by the heightening of the dam and the installing of an additional unit. The company has now sufficient cash available to meet this expenditure as soon as it is required. When this company issued the prospectus for its debenture issue of £250,000, it was estimated that its earnings would ultimately reach round about £30,000, but this estimate proved to be much below the mark, and its maximum earnings have exceeded more than double the estimated figure. As conditions in Mexico continue to improve there is no reason why this company should not steadily increase its earnings. Since this company's shares were acquired by your company a final dividend of 5 per cent. and a bonus of 2½ per cent. have been paid in respect of the year 1921, making a total distributed of 12½ per cent for the year.

In conclusion, it is the view of your board that the company's prospects are excellent, in that it is the controlling owner of enterprises which are well established, are successfully operating, and have growing revenues.

SCHEDULE OF INVESTMENTS, JUNE 20, 1922.

The following is the schedule of securities referred to by the chairman:—

- CIA. CHILENA DE ELECTRICIDAD LIMITADA.
 £3,140,556 Eight per Cent. First Mortgage Bonds.
 1,525,226 Eight per Cent. Non-Cumulative Participating Preference shares of £1 each, fully paid.
 4,764,586 Ordinary shares of £1 each, fully paid.

NOTE.—Of the above £425,000 of the bonds; 425,000 of the Preference shares, and 850,000 of the Ordinary shares are represented by shares in the Cia. Nacional de Fuerza Electrica, and do not carry interest or participate in profits until certain construction work is completed (estimated to be completed about December 31, 1922), when these securities and shares will be issued in exchange.

- CIA. ELECTRICA DE TAMPICO, S.A.
 £474,169 Seven per Cent. First Mortgage Debenture stock.

- 634,105 Eight per Cent. Cumulative Preference shares of \$10.00 (Mex.) each, fully paid.
 642,615 Ordinary shares of \$10.00 (Mex.) each, fully paid.

GENERAL SECURITIES, LIMITED.

This company has the controlling interest in the Puebla Tramway, Light, and Power Company.
 £636,000 Five per Cent. Debentures.
 300,000 shares of £1 each, fully paid.

VERA CRUZ ELECTRIC LIGHT, POWER, AND TRACTION, LIMITED.
 213,632 shares of £1 each, fully paid.

CIA. DE LUZ ELECTRICA Y FUERZA MORTRIZ DE ORIZABA, S.A.
 12,000 shares of \$100.00 (Mex.) each, fully paid.

CIA. VERACRUZANA DE LUZ Y FUERZA, S.A.
 200 shares of \$1,000.00 (Mex.) each, fully paid.

UNION CORPORATION, LIMITED. (INCORPORATED IN THE TRANSVAAL.)

DIVIDEND MAINTAINED.

BETTER PROSPECTS ON THE RAND.

The annual meeting of the Union Corporation, Limited, was held at Johannesburg, on May 29th, Mr P. M. Anderson presiding.

The Chairman, in the course of his remarks, said:—The gross profit for the year amounted to £280,361, being an improvement on last year of £26,052. We have considered it desirable, however, to write off £41,250 from sundry debtors, but owing to lower exploration and general expenses, our net profit at £179,517 works out at only £10,557 less than last year. Bringing in £68,355 brought forward from last year, we have £247,872 to dispose of, being within a few hundred pounds of last year's figure. We have added £30,000 to reserve account, bringing it up to £150,000, and we have declared and distributed a dividend of 2s per share, the same as last year, leaving a balance of £77,872 to carry forward to this year.

SHARE AND DEBENTURE HOLDINGS.

There has been little change in our share and debenture holdings, suitable opportunities to enter into new ventures on the one hand, and a desire to realise on the other, not having arisen. Our principal interests continue to be centred in gold mining on the Rand, where important changes for the better have recently taken place in economic conditions. The protracted strike was a costly matter for the mines, but has resulted in re-establishing conditions, including the functions of the management, which should have far-reaching effects on the cost of production and assure the prosperity of the industry. Further, the steady fall in the cost of living has made it possible to reduce the cost of living allowance paid to employees. It is intended that these allowances shall disappear entirely after June 30th next. It may, therefore, confidently be expected that working costs will be sufficiently reduced to offset the inevitable return of gold to its standard price in sterling.

MODDERFONTEIN DEEP RECORDS.

During the past year the Modderfontein Deep Levels, Limited, established records in the yield of gold per ton milled, in the total profit, and in its ore reserve position. The tonnage milled was 509,300 tons, the yield per ton was 11.009 dwts, the gross profit £932,394, and the working costs 22s per ton milled. Taxation absorbed £161,299, and £750,000, or 150 per cent. on the capital of the company, was distributed in dividends. The unappropriated balance carried forward to this year was £179,456, or some £16,000 more than at the close of the preceding year. The development footage accomplished was slightly larger than in 1920, and exposed equally satisfactory values. The ore reserves were increased by 275,000 tons to 4,375,000 tons, having a value of 9.3 dwts over a stoping width of 77 inches.

Operations during the current year were seriously interfered with by the strike; nevertheless, the company was able to make a profit of £52,874 during the first quarter. The profit for April was £53,959, in spite of the rock hoist being out of commission all the month owing to a breakdown. This result was made possible by the fact that the company has a large reserve of broken ore stored on the surface. Satisfactory repairs to the engine were completed by the 15th of this month, since when normal operations in both mining and development have proceeded uninterruptedly. The working costs for April were nearly 2s per ton lower than the average for last year.

GEDULD PROPRIETARY MINES.

At the Geduld Proprietary Mines, Limited, the gold produced was slightly greater, and the working costs less than in the preceding year, but the gross profit of £386,128 was less by about £19,000, on account of the lower average selling price of gold, which fell from 110s in 1920 to 105s 9d last year. Of the total profit accruing to the company £47,285 was absorbed by taxation,

£32,552 was expended on excess development, and £220,916 was distributed in dividends. The unappropriated balance carried forward to this year was £129,468, or some £74,000 more than at the close of the preceding year. Development continued to show very satisfactory values, particularly in the southern area of the mine. The result is that the ore reserves at the end of the year amounted to 3,545,000 tons, valued at 8.1 dwts over a stoping width of 62 in, which figures disclose increases over those of the year before of 325,000 tons, .1 dwt in value, and 1 in in width.

During the first three months of the current year conditions were quite abnormal, owing to the strike, and a working loss of £21,100 was registered. During April conditions became more normal, and a working profit of £27,014 was earned. A very satisfactory feature of the month's work was that working costs were 20s 9d per ton milled, compared with 23s 7d for the year 1921.

In view of the improved ore reserve position and the favourable prospect of developing further high-grade ore, the company has decided to increase, as soon as possible, the capacity of its reduction plant by about 50 per cent., so as to treat 65,000 tons per month.

The anticipated reduction in costs, resulting from the improved industrial position and from operating on a larger scale, will bring within the scope of profitable working a large tonnage of low-grade ore developed within recent years, but not yet included in the ore reserves. The consulting engineer estimates this additional ore at 2½ million tons.

As nearly all of the 180,000 shares which were under option until December 31st last at 40s per share were taken up, the company is well supplied with funds.

The report and accounts were adopted.

FORESTAL LAND, TIMBER, AND RAILWAYS COMPANY, LIMITED.

CURRENT YEAR'S SALES SATISFACTORY.

The ordinary general meeting of the Forestal Land, Timber, and Railways Company, Limited, was held, on the 22nd instant, at River Plate House, London, E.C. The Hon. Sir Arthur Lawley, G.C.S.I. (chairman), presided.

The secretary (Mr C. Winkup) having read the auditors' report,

The Chairman, after a full commentary on the accounts and on the company's holdings in associated undertakings, went on to say that they had now established in the commercial world a chain of outposts, so that the company could penetrate into all the more important tanning markets of the world, and be in a position to take full advantage of any trade revival. Last year he used the following language regarding labour conditions: "Matters, if anything seem worse rather than better." The hostile attitude shown by labour necessitated the formation of the company's own mounted police force to protect the lives of their officials and the property of the company in the Chaco. This hostility was, the directors were assured, provoked entirely by agitators outside the company's employ. The demands for new conditions of wages and hours were such as the board could not accept. At the same time they had to consider the quantity of their then existing stocks, well as the high productive cost and the fall in selling price.

Factories Closed.

Having regard to all these things, they decided in January, 1921, to close two of their factories—a smaller one had been closed a month earlier, after which serious difficulties arose, resulting in strikes and the assassination of the manager at Guallarmina. They therefore determined to close the remaining factories. Many of the workmen then resorted to the company's forests and carried off large numbers of cattle. On a recount of the livestock an abnormal shortage of some 5,400 animals was shown, mainly due to the conditions he had mentioned. The closing of the factories involved heavy revenue expenditure by the company's obligation to pay fares and expenses of large numbers of workmen and their families to other parts of the Argentine to seek employment. Then again these conditions obliged the company to further extend its insurance covers against the risk of strike damage to its properties. These factors, which the board could not control, accounted for the excessively heavy charges, which had resulted in a trading loss being shown, but the board were determined that they could not and would not order the reopening of the factories for working operations except on their own terms and conditions. In January last the Gallareta factory recommenced producing, and at the beginning of last month the Guallarmina factory was reopened. Work was proceeding most satisfactorily, wages had been reduced, and hours extended, and the board hoped that at last the company might be free from Bolshevistic agitators, and be able to pursue its activities to the best interest of the country, the workmen, and the shareholders.

TRADING PROFIT.

As to the trading of the past year, the sales effected fell below those of the previous year, and showed a substantially smaller margin of profit than for some years past. The reason for this lay in a lessened demand for quebracha, and, consequently, a competitive cutting of prices. The diminution in the matter of demand might be ascribed to various causes, but he thought it was primarily due to the world economic position, as many countries were unable to pay for raw materials except in a restricted degree. Stores purchased for retail to workmen showed a substantial loss on trading consequent upon the closing of the factories and the necessity to resell at low prices during that period. The conditions indicated had resulted in part, at least, that the costs of administration had also risen considerably. The board was devoting unremitting effort to secure a rigid economy. In these circumstances, the board regretted that it was not possible to declare a dividend on the ordinary shares out of earnings.

THE OUTLOOK.

They had two of their factories running for several weeks, so far without political or labour troubles. If, as the board hoped, there might be no recrudescence of labour troubles, the shareholders might be assured that everything that could be done would be done to produce as economically in the future as in the past, having regard to altered conditions of wages and living costs, so as to regain the success enjoyed by the company for so many years. The results of last year's working had been bad—disappointingly bad. In conclusion, he uttered a word of caution. He did not want the shareholders to think from what he had said that all their difficulties were overcome, and that they could immediately look to a resumption of the prosperity of previous years. Though sales to date for this year had been satisfactory, the company had yet more than six months of the fiscal year to run, and so he preferred not to make any prophecy as to probable results.

The report and accounts were unanimously adopted, and a vote of thanks to the chairman, directors, and staff terminated the proceedings.

OROVILLE DREDGING COMPANY, LIMITED. PROPOSAL TO NECHI PREFERENCE SHAREHOLDERS.

The eleventh ordinary general meeting of Oroville Dredging Company, Limited, was held, on the 23rd inst., at River Plate House, Finsbury circus, London.

Mr Frederick W. Baker, chairman of the company, who presided, moved the adoption of the report and accounts. He said that during the year under review dividends were received on the company's holdings in the Nechi Mines (Colombia), Limited, and Pato Mines (Colombia), Limited, amounting in the Nechi Mines to £62,996, and in Pato Mines £93,616, the other credits of the profit and loss account amounting to £1,449. From these total credits of £158,062, after debiting all charges in London, the balance to profit and loss account for the year to be carried to the balance-sheet was £144,785, compared with £111,829 for the previous year. Adding to this amount a credit balance from last year—£42,797—the total of £187,582 was shown. Deducting from this the four dividends of 9d per share paid in December, March, June and September, and a bonus of 1s per share in July, making up the sum of £137,307, there remained a balance of £50,275 to the credit of profit and loss as at September 30, 1921, this amount being subject to excess profits duty (if any) and corporation profits tax. This figure did not really represent the true cash position of the company.

The Nechi and Pato Companies together would be in a position to-day, subject to Excess Profits Duty, to pay to the Oroville Company in the form of dividends a sum approximating to £150,000. These dividends had not yet been declared, because in the case of the Nechi Company they could not be paid until the company had received out of calls being made from the Colombian Corporation, Limited, the advances made by the Nechi Company to the corporation, and in the case of both Nechi and Pato until the definite liability in respect of Excess Profits Duty had been determined. The negotiations between the company's expert accountant and their lawyers with the Revenue authorities were still pending, but the board had great hopes that the case that they had put forward would be accepted, in which case the figure for payment should not seriously affect the cash resources of the three companies.

After dealing in some detail with the position at the Pato and the Nechi Mines, he explained an offer which had been submitted by the board to the Nechi preference shareholders—to take Oroville shares in exchange for Nechi preference shares—half the Nechi preference shareholders were already shareholders in the Oroville Company, and he hoped they would accept the proposal. In anticipation of their doing so, the directors had decided to increase the authorised capital of the Oroville Company by 40,000 shares.

The resolution was adopted unanimously.

NECHI MINES (COLOMBIA), LIMITED. OROVILLE PROPOSAL EXPLAINED.

The seventh ordinary general meeting of the Nechi Mines (Colombia), Limited, was held, on the 23rd instant, at River Plate House, Finsbury circus, London, Mr Frederick W. Baker, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net receipts during the year under review amounted to £200,609. After debiting the field cost, £47,643, depreciation written off, £7,602, and all London administration expenses, the credit carried to the balance-sheet was £140,934. Adding to this the credit brought forward from the previous period, and deducting the dividends paid on the preference and ordinary shares during the financial year to September 30, 1921, amounting to £96,250, the balance carried forward was £189,136, subject to excess profits duty (if any) and corporation profits tax. Shareholders would have received with the directors' report and accounts a circular to the preference shareholders containing an offer from the Oroville Dredging Company, Limited, to exchange their preference holdings into Oroville Dredging Company, Limited, shares on the basis of seven Nechi preference shares, 10s fully paid, for two fully-paid £1 shares in Oroville Dredging Company, Limited. When the Nechi Company was formed and based upon the reports issued at the time, it was apparent that while the Nechi gravels were abnormally rich, the life of the property was a limited one. The company had been in existence for nearly eight years, and during that period they had exhausted the original tested gravel reserves, and but for the fact that recent drilling in an outlying section of the property had disclosed good values, he might say that the property would have been practically worked out. Influenced by these facts, the company's manager, Mr Prichard, had laid before the directors a proposal which, if successful, would have the effect of extending the dredging life of the company for another four or five years, but which might result in the loss of the company's dredge. For this reason, and as the Oroville Company owned all the ordinary shares in the Nechi Company, and practically the entire capital of the Pato property adjoining, the directors of the company felt that rather than incur at this time such a serious risk as he had indicated, some equitable arrangement should be made with the Nechi preference shareholders so that the Nechi dredge could be operated on the Pato property until the property was worked out. By acquiring Oroville shares in exchange for Nechi preference shares, holders of the latter would be getting a holding in an established dividend-paying company, with a long period of prosperity ahead of it, with all the prospects of continued earnings after the Pato and Nechi properties were exhausted.

The resolution was unanimously adopted.

WM. CORY AND SON, LIMITED. STRONG POSITION OF THE COMPANY.

The twenty-sixth annual ordinary general meeting of William Cory and Son, Limited, was held, on the 22nd instant, at the Cannon street Hotel, London.

Sir A. C. Cory-Wright, Bt., chairman of the company, who presided, said that when the company first entered upon the very difficult period now under review, they were in the fortunate position of being entirely free from any unfavourable forward commitments, and were not burdened by the possession of large high-priced stocks like many other commercial undertakings. It was gratifying to be able to submit to the shareholders a statement of accounts which, he felt confident, would be viewed with satisfaction. The result of the year's trading, after providing for the corporation profits tax, charging all expenses, the cost of maintenance, and making liberal reserves for depreciation, showed a profit of £601,404. They had already paid the interest on their debenture stocks, the dividend on the preference shares, and an interim dividend of 5 per cent. on the ordinary and employees' shares, leaving, with the balance of £391,812 brought forward from last year's accounts, a sum of £768,834 at their disposal. In view of the unfavourable conditions that had prevailed throughout the year, the result was not unsatisfactory, and quite up to their expectations.

Had it not been for the company's expansion policy during the past few years and their recent developments both abroad and in oil fuel, their profits would have shown a very much greater decrease, and the board would not now be in a position of being able to recommend what, in the circumstances, must be considered a very satisfactory dividend. Their trade in oil fuel, which they entered into to meet the requirements of many of their customers, who had decided to substitute the use of oil fuel in place of coal, had during the past year steadily developed, and they were further extending it. There was, he felt sure, a great future for the company in this direction. The position of the company was one of exceptional strength. Their balance of undivided profits which they carried forward, had been gradually built up until it now

reached the sum of £478,838. Their total reserve funds remained at £750,000, and their investments in Government securities amounted to £2,150,886. All these investments were valued in the balance-sheet at cost or under, and at the present market valuation they showed an appreciation of approximately £200,000. During the last three years they had reserved for depreciation a sum exceeding £1,000,000.

The report and accounts were unanimously adopted.

MORTGAGE COMPANY OF EGYPT, LIMITED. CONTROL TRANSFERRED TO EGYPT.

The ordinary general meeting of the Mortgage Company of Egypt, Limited, was held, on the 22nd instant, at the Cannon street Hotel, London.

Sir Henry Babington Smith, G.B.E., K.C.B., C.S.I. (chairman of London committee), presided, and after referring to the changes that had been made in the organisation of the company, and to the fact that the board had now its seat in Cairo, said that the economic position in Egypt, though in some respects difficult, might be regarded as extremely favourable when it was compared with that of many other countries. The Egyptian currency had been steadily maintained on a parity with sterling, and the contraction of the paper currency from the very high level necessitated by war requirements and war prices had been effected without disturbance. The note issue of the National Bank of Egypt had fallen to £E31,112,000. The cotton crop of 1921 was a poor one. It was estimated at 3,300,000 kantars, as against more than 6,000,000 kantars in 1920. This was due partly to the restriction of the area to be planted with cotton and partly to the poor yield.

The average price in Egypt had been just under 35 talaris, or about double the pre-war price. The Liverpool price had varied between 28½d and 16d, and it now stood at 19½d. The prospects for the current year were fairly good. The crop would be a small one, as the area was still restricted. The cost of production had fallen, so that if the present price were maintained the cultivators' profit would be increased. The amount invested in first mortgages on March 31st last was £3,122,024, an increase of £244,000 over the preceding year. There had been a further increase in instalments in arrear during the last 12 months, and the amount now stood at £352,000, as compared with £240,000 in March, 1921. That increase was due primarily to the unsatisfactory cotton crop and to the less favourable results obtained by agriculture generally. The funds required for the increase in loans and outstandings had been provided by further advances from the Agricultural Bank of Egypt, their loan now standing at £798,000, as compared with £474,000. The balance of the profit and loss account amounted to £96,354, as against £80,310 last year. This enabled the board to recommend the shareholders to maintain the dividend on the ordinary shares at the rate of 12 per cent., and to add £15,000 to the special reserve, leaving £44,603 to be carried forward to the next account.

The report was unanimously adopted.

A resolution was passed approving of the payment of £6,000 by way of compensation to Sir Henry Babington Smith and also two of the London directors for their loss of office.

Reports and Notices.

At the annual conference of the Chartered Insurance Institute, held at Birmingham, on Friday, June 16, 1922, Mr. Albert H. Heal, general manager and secretary of the State Assurance Company, Limited, was elected president.

At a meeting of the London Discount Houses, held at the offices of the Union Discount Company of London, Limited, 39 Cornhill, Mr. F. Newcomb, of Alexanders Discount Company, Limited; Sir Alfred E. Tritton, Bart., of Messrs. Brightwen and Co.; and Mr. R. C. Wyse, of the Union Discount Company of London, Limited, were elected members of the sub-committee; and Mr. Philip H. Wade, of the National Discount Company, Limited, and Mr. R. C. Wyse were elected chairman and vice-chairman respectively, in place of Mr. Christopher R. Nugent and Mr. R. Ernest Alexander, who have resigned.

Owing to the termination of their lease Walter Judd, Limited, are removing to 81-87 Gresham Street, E.C. 2.

RAILWAYS.

ANTOFAGASTA (CHILI AND BOLIVIA).—The results of working of the railway and waterworks during 1920 and 1921 are shown in the following table:—

	Year 1920.	Year 1921.	Decrease.	%
Gross receipts	2,370,079	1,031,489	1,338,590	56.48
Working expenses	1,614,959	738,121	876,838	54.29
Net receipts	755,120	293,368	461,752	61.15

The dividend of 3 per cent. on the ordinary stock for 1921 will require £167,357, and a balance of £172,229 is carried forward. The report states that the decrease in gross receipts is the result of the great depression which ruled in the nitrate industry and the small demand for tin, copper, and other minerals carried by the company. The total nitrate carried during 1921 amounted to 179,436 tons, as compared with 1,013,491 tons in 1920. The net receipts from the waterworks undertaking were £35,318, compared with £83,896 in 1920.

MEXICAN RAILWAY REGISTERED STOCK ISSUE "A".—By arrangement with the trustees for the Registered Stock Issue "A" the company will on July 1, 1922, distribute among the stockholders a sum of £62,697 4s, thereby redeeming 10% (ten per cent.) of the stock outstanding. The amount to be distributed is on account and in anticipation of the percentage of the net profits of the company payable to the trustees under the provisions of the trust deed securing the stock. The amount so redeemed will cease to carry interest after June 30, 1922. The certificates for the stock endorsed with a note of the redemption together with warrants for the amount of the redemption money will be posted to stockholders on June 30th next, unless the company is instructed otherwise.

MISCELLANEOUS.

BRITISH CYANIDES COMPANY.—On December 15th last information was sent to shareholders that the petition of right against the Government had been adjudicated upon in favour of this company. Shareholders are now informed that on the 14th inst. a settlement was arrived at whereby the Government have undertaken to meet the company's claim by a payment of £25,000, and at the same time to reimburse the company for all reasonable costs in connection with the settlement. Accounts for the year ended April 30, 1922, will now be completed forthwith, and the annual general meeting will be held at an early date. The preference shares for the half-year ended April 30th last at the rate of 5 per cent. per annum has been posted.

BRITISH SOUTH AFRICA COMPANY.—The secretary has sent us the following:—"The board of directors of the British South Africa Company have decided that it has become necessary to consolidate the supervision of their numerous commercial interests in South Africa under one responsible head permanently resident in Rhodesia, and, at the instance of his colleagues, Major Percy S. Inskip, O.B.E., has consented to exchange his seat on the board for the position of general manager of the company in South Africa. Major Inskip has a long and notable record in the service of the British South Africa Company, dating from the original pioneer expedition to Mashonaland in 1890, of which he was a member. For some years prior to the European war he was the company's commercial representative in Rhodesia, but relinquished the post to proceed on active service. On the termination of the war he was elected a director and a member of the executive committee. His future headquarters will be at Salisbury, Rhodesia."

RUSTON AND HORNSBY, LIMITED.—The report for year ended March 31, 1922, shows that the balance of profit and loss account, after providing for all outstanding liabilities, amounts to £101,637; from which deduct depreciation on buildings, £13,254; depreciation on plant and machinery, £42,698; interest on debentures, £25,500; leaving a balance of £20,185; to which add the balance brought forward from last year, £43,920, making £64,105. Deduct dividends on preference shares paid to July 1, 1921, £5,875, leaving £58,230. The directors feel it essential that, owing to the continued trade depression and the serious fall in stock values, the whole of the above balance should be retained in the business, and in addition that a sum of £100,000 be transferred from the general reserve to meet possible further diminution in the values of stock-in-trade. They, therefore,

† Free of tax.

(k) Nine months.

regret that they do not recommend the payment of the outstanding dividend on the preference shares, or a dividend on the ordinary shares for the past year. The stocks of materials and the finished stock of machinery have been taken at cost price or under; buildings, plant, and machinery have been maintained out of revenue; and ample provision has been made for doubtful debts.

THE EBBW VALE STEEL, IRON, AND COAL COMPANY.—Active negotiations with the Government relating to the control periods are still in progress, and as it is hoped that a settlement of the accounts of the company and its associated companies relating thereto will shortly be reached, the directors propose to defer the issue of the report and balance-sheet usually made in the month of June.

WILLIAM COOKE AND CO.—The directors state it is not possible to issue at present a balance-sheet for the year ending March 31, 1922, because they have not been able to arrive at any settlement with the Inland Revenue Authorities as to claims for refund of Excess Profit Duty on account of reductions in values of stocks on August 31, 1921, and on other accounts. These negotiations are not easy because of the complications in the Templeborough Rolling Mills agreement and other matters, but they are being dealt with as quickly as possible. Although a balance-sheet cannot be prepared, the directors know the year's working has resulted in a serious loss. The general depression in the iron and steel trades has alone been sufficient to account for this loss, but in addition the works were practically standing for the first three months of the financial year through the unfortunate coal strike, and the reductions in the prices of stocks have been continuous and very serious—this latter, in spite of the fact that the greatest care has been exercised in keeping the stocks down as low as possible.

With these facts before them the directors regret they cannot recommend the payment of any dividend on the ordinary shares.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Recent showers proved very beneficial to spring crops, but further moisture is needed, and in some districts the ground presents a parched appearance. Winter wheat continues to be favourably mentioned, though the yield is not expected to reach last year's total. Supplies of native wheat continue very light at most of the statute markets, but demand shows no improvement, and rates are easy at 53s to 54s for suitable milling grades per 504 lbs, free on rail. Imported descriptions quiet, but less

† 4 weeks return.

§ Approximate receipts.

64 lbs afloat, 50s 6d to 51s, 63½ lbs ditto, 50s 6d, July 50s 9d, 63 lbs ditto 50s, and 62½ lbs, July, 50s. Barusso, 62½ lbs shipping or shipped at 49s, Pacific, September, 50s 10½d per 480 lbs. Parcels were in fair demand at irregular but firmer prices. Crop reports from most producing countries continue favourable. Flour remains dull and weak. London standard straight run was reduced to 45s 6d, patents 47s 6d to 48s 6d, town households 43s 6d, all English straight run 43s 6d per sack, delivered in London area. All English country straights quoted 40s to 41s, free on rail at London stations. Imported makes remain without improvement. Manitoba export patents quoted 45s, straights 41s, Pacific 42s, Australian 41s 6d to 42s per 280 lbs, ex store. On c.i.f. terms business was on a limited scale, and prices weak. Manitoba export patents, June seaboard, 42s, straights 39s, Kansas patents, July, 42s, Australian, June, 38s. Millers' offals quiet. Broad bran quoted £7 10s, ordinary ditto £6 10s, middlings £8 10s to £8 15s per ton, ex mill, bags included. Of imported, fancy Plate middlings quoted £9 10s, and Plate Pollard £7 10s, both landed. Maize firmer on improved inquiries, and higher forward offers. Yellow Plate, old, 35s 6d, new 38s 6d. Yellow round African 34s 6d, American mixed 33s 9d, all landed terms. Cargo market quiet, but holders required full to dearer prices. Plate steamer, July-August, changed hands at 33s 9d, and Galatz Fox-steamers loading 32s, while Plate parcels were dealt in more freely at advancing rates. White African maize meal quoted £7 15s per ton landed. Barley remains slow of sale at generally late rates. Native grinding sorts range from 45s to 48s per 448 lbs, free on rail. Of imported, Californian quoted 40s to 47s, Australian Chevalier 49s to 52s, Chilean ditto 49s to 52s 6d, all landed, per 448 lbs. No. 4 Canadian Western, ex ship, 33s 6d, Tunisian both landed 37s, both per 400 lbs. Scottish pearl barley quoted £19 to £25, and Dutch £19 to £29 per ton. Oats less depressed, but trade without improvement. English white quoted 36s to 38s, Grey winters 34s 6d to 36s, Black winters 34s to 36s per 336 lbs, free on rail. Of imported grades, Plate f.a.q. quoted 26s 6d, clipped 29s, No. 2 white clipped American 38 lbs 26s 6d, No. 2 Canadian Western 31s, New Zealand 35s to 40s, all landed, per 320 lbs. Oatmeal quiet, and occasionally the turn easier. London made coarse pin-head quoted £18 10s, medium ditto £17, whole groats £17 10s, rolled oats £18, flaked £20 10s, ordinary Scottish oatmeal £20 10s to £21 10s, American all cuts £18 to £18 10s per ton. Beans continue slow of sale. English springs range from 56s to 67s, winters 51s to 54s per 532 lbs free on rail. Imported Rangoon hand-picked 7s, Madagascar haricots old crop 10s to 12s, new crop 16s to 17s per cwt. Peas steady and in good demand. English maples quoted 90s to 97s, duns 62s to 68s per 504 lbs. Imported Japanese spot 52s, Dutch hand-picked 29s, screened 25s to 26s, Tasmanian 23s to 24s, New Zealand blue 22s to 24s per cwt. English rye 40s to 45s per 504 lbs free on rail. Lentils steady. No. 1 split 29s to 30s, No. 2 ditto, also Egyptian, 21s to 23s per 100 lbs. Homeward grain chartering was on a moderate scale, but rates were fairly steady in most directions. River Plate charterers showed more interest, and tonnage was fixed from upper ports to U.K./Continent at 26s 3d to 24s, according to size and position, with 30s paid to the Adriatic. North America continues to take vessels, Montreal to Continent, at 15 cents, Mediterranean 20 cents, and Northern States to Continent 14 cents, West Italy 19 cents, while Gulf of Mexico to Continent indicates 19 cents August loading per 100 lbs. Further business transpired from North Pacific to U.K./Continent at 37s 6d, September. Eastern markets dull and largely nominal, chartering from Australia being in abeyance. Danube quiet, but steady, at 17s 6d to U.K./Continent.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

1918-19.	1921-22.	1920-1921.	1919-1920.	1918-1919.

The following is a statement showing the Quantities and Average Price of British Corn (Imperial Measure) in the past week, and for the corresponding week in each of the years from 1918 to 1921:—

1918 to 1921.		AVERAGE PRICES.	
QUANTITIES SOLD.			

As the beautifully finished high powered motor car of the West is to the pre-historical ox-cart of the East, so does The Chatwood Safe stand alone as an example of the engineering work of quality that has made Great Britain famous throughout the world for the standard of excellence of her work.

The attack upon a safe to-day is a real test, because the burglar no longer depends upon the strength of his arm, skeleton keys, or jemmies, as these methods belong to the days that have passed.

The modern burglar calls science to his aid and uses high explosives, electric drills, and the oxy-acetylene blowpipe, and if you have a fire it means that your safe must withstand the shock of the collapse of the walls and floors of the buildings as well as remaining perhaps for days in the burning debris.

If you desire contented security, then buy the best—the acknowledged best.

IRON, STEEL, AND COAL.

CUMBERLAND IRON.

(BY OUR WORKINGTON CORRESPONDENT.)

There is a better tone in the Cumberland pig-iron market, as the result of the termination of the engineering lock-out, but business so far has not exhibited any marked improvement, and it is doubtful indeed whether there will be any movement of importance for some weeks to come. Until the consuming industries are in full swing again, it can hardly be expected that the requirements of iron will increase, and meantime it is a hard struggle to maintain production. As a matter of fact, the output of the eleven furnaces in blast in the district is considerably in excess of demand and stocks have been accumulating steadily for some time past, and now amount to over 70,000 tons. It will be seen, therefore, that whatever expansion of the volume of business comes along it will be almost the end of the summer before it can be necessary to put any additional furnaces into blast. Trade at the present moment is entirely of a hand-to-mouth character, users buying only to cover their immediate needs, and home business is confined mainly to that with midland high-class steel makers. Scotch requirements are few, if any, and South Wales has not taken any Cumberland hematite pig-iron for a long time. The Continent, however, continues to place some useful orders, and not infrequently there are shipments to Antwerp for France, Belgium, and Germany. Prices are unchanged, Bessemer mixed numbers being quoted at £5 15s per ton delivered at C'asgow and Sheffield, and at £5 5s per ton, f.o.b. Ferro-manganese, the make of which is confined to one furnace at Workington, is in fairly brisk request for export at £4 10s per ton. The closing of the steelworks at Workington is, of course, chiefly accountable for the stocking of iron, and it cannot be said that the outlook, as far as the steel trade is concerned, is at all cheerful. Few orders are being booked, and it is doubtful whether the mills will resume the rolling of railway material before the middle or end of August. The depression is being felt pretty severely in the iron ore industry in Cumberland and in the Furness district. There are not more than 12 mines raising ore, and none of them is yielding anything like a full output. Banking of ore has now become general. The railway rates kill any chance of ore being sold to Scotland, or to the East Coast. Low phosphoric ores are quoted at 30s 6d to 31s 6d per ton at the mine; medium sorts, 27s to 30s; and ordinary sorts 25s to 27s per ton. The coal trade is in a bad way, the decline in the shipments to Ireland having been considerable, because of the fear of confiscation of cargoes, and several of the pits are now working short time. But for the absorption of smalls at the coking plants, the position of affairs would be worse still. East Coast coke supplies to the district dropped to 7,000 tons. There is a sharp demand for sulphate of ammonia, and crude benzol and pitch and creosote are moving away well. Acids are quiet.

Our Sheffield correspondent writes:—Some progress has been made in setting on the men who were locked out, but the reduction of unemployment is not considerable at present. For one thing, the state of trade, while expanding, is still extremely bad, orders being few and far between in the railway, shipbuilding, and some other important branches. The heavy engineering shops have a moderate amount of work, but another week must elapse before it can be taken up. The heavy steel departments are developing increased activity, especially in the Far-East and the colonies, although the demand is chiefly for the lower qualities. A number of large open-hearth furnaces will be restarted in the course of a week or two. According to the Board of Trade Returns, May was the best month since the slump began as regards exports of iron and steel material. It is notable that the United States took 17,000 tons of British pig, while Belgium and France took large tonnages. All descriptions of steel recorded a substantial increase upon the previous month and upon the year. There was also a large increase in the production of steel last month. The scrap situation has now become interesting. The huge accumulations existing in 1921 have disappeared, and as little has been produced since and some has been sold to Germany, the quantity left in the country is small. Any considerable revival of steel-making activity will therefore create a scarcity, and prices are already hardening in this district in anticipation. Consumption is still limited locally, but South Wales has been buying heavily for a year. A welcome revival is taking place in engineers' small tools, as well as hand tools used in a number of trades. The cutlery and plate trades continue in a bad way. The coal market generally is quiet, the demand for steam coal from the home and export markets being stationary, and that for bunkering is quiet. Slacks have become rather scarce, owing to reduced working at the pits, many of which are only operating a couple of days per week. Furnace and foundry coke are in moderate request. House coal is stagnant. Quotations per ton at pits are:—Best hand-picked bark, 37s; best Silkestone, 33s; Derbyshire best brights, 27s 6d; Yorkshire hard, 22s to 23s; Derbyshire ditto, 21s; rough slacks, 8s to 10s; smalls, 2s to 4s 6d.

Our Middlesbrough correspondent's report, dated June 22, 1922, is as follows:—Pig-iron: Although the engineering dispute is now settled, the recovery in the iron and steel trades is extremely slow. Some orders for pig-iron from the United States and Germany have been received, and this is fortunate because the home demand is very quiet. No. 3 Cleveland G.M.B. pig-iron, 90s per ton; East Coast hematite, mixed numbers, 95s per ton. Manufactured iron and steel: The outlook is better for steel, but with the exception of a few small orders there is no sign of any pronounced recovery yet. Steel ship plates, home, £10; steel ship angles, £9 10s; iron bars, £12; steel rails, £9 10s net. Iron ore: The difficulty in selling hematite pig-iron is having a depressing effect on imported ore business. Buyers generally prefer to hold off until they are assured of a better demand for pig-iron. Best Rubio, sellers, 27s. Best South Spanish and North African ores, 24s to 25s.

Our Glasgow correspondent (writing on Thursday) says:—A line for 1,000 tons of Scotch ordinary—the largest fixed up in one transaction for many a day—was closed here yesterday, and negotiations are proceeding as to several other lots—all for shipment, and supplies have become so restricted that it has been resolved to blow in more furnaces, amongst other quarters, at Carron and Ardeer. Quotations to-day are strong and fractionally higher—95s for No. 1 and 100s for No. 3, both on trucks at producers' works. Training to Glasgow and other ports involves other 5s or 6s a ton. At the weekly meeting of the pig-iron ring, yesterday, sellers of No. 3 G.M.B. Scotch were naming 98s 6d f.a.s. Glasgow; No. 3 G.M.B. Cleveland, 90s f.o.b. Middlesbrough; and mixed numbers East Coast hematite, 95s f.o.b. Middlesbrough. It is not without interest to note that since Monday moderate quantities of Scotch pigs, of bar iron, joists, girders, &c., have been forwarded to Antwerp, Montreal, Copenhagen, Zanzibar, and Singapore. And it is even of greater interest to learn that, in the circumstances, quite a rush of tenders for steel and iron material are invited from and for different colonies—the beginning it is hoped of a prosperous season. The inquiries include about 5,000 tons rails of 80 and 100 lbs (for Victoria), 8,400 tons steel rails (for Bengal and Nagpur Railway, India), 40 steel girder bridges (Madras Railway, India), dredger plant (for Siam), and a couple of double-lined bridges (for Midland Railway, Ireland). Several fresh orders for railway plant have just been booked for the Caledonian Company, and leading firms advise that in this relation (the home railway section) prospects are more hopeful than they have been for a while. Steel and iron bar makers, tube-makers, and nail and wire-ropes makers are busy clearing off old contracts. Machinery builders are, exceptionally, better employed, and engineering pump makers are more actively engaged than has been the case for months, since the year came in. This is becoming one of the most important engineering branches in the West country. Black sheet makers have not so far benefited from the recent price concessions. Indeed, neither have steel makers, and both parties maintain now that the reduction (10s a ton) should not have been made, as its one effect has been to induce consumers to look for a still lower level. Coals give no sign of improvement. Larger sorts are a drug, evidence that the big producers in iron and steel are still indifferent consumers. There are 40 steamers lying at ports here and there, waiting for cargoes of "smalls" chiefly.

Our Cardiff correspondent writes:—There has been no improvement this week in the position on the Cardiff coal market. If anything matters are worse than they were a week ago. In the last full week before the Whitsun holidays approximately 550,000 tons were exported as cargo from the South Wales ports to foreign destinations; in the first full week after the holidays the quantity exported as cargo to foreign destinations was about 385,000 tons. Moreover, this contraction in the volume of trade has been accompanied by a further easiness in prices. One or two of the combines have resisted the falling tendency of values, but with no effect except the loss of working time at their collieries, for the few orders circulating in the market have been taken up by others at lower prices. Spot business has been done on the basis of 26s f.o.b., and even less for best Admiralty large qualities, and at 25s for second large steam qualities, while it is also reported that offers have been received from collieries to sell from July to December on the basis of 25s. If there is no improvement of this price position the closing down of a large number of pits is inevitable. Two balance-sheets issued this week have accentuated the despondency of colliery salesmen. One of these, namely, the Locketts Merthyr Collieries (1894), Limited, which showed a profit in the 13 months ending March, 1921, of £63,789, suffered a loss for the period of 11 months ending last February of £74,887; while the other, namely, the Imperial Navigation Coal Company, Limited, which in 1920 had a profit of £30,645, last year lost on colliery working £10,088. The conditions under which the collieries are now being worked are, on the revenue side, worse than those prevailing last year. Strong pressure is being brought to bear on the railway companies to provide some relief to the industry by the reduction of railway rates and dock charges. It is argued that South Wales should be treated as a separate unit, and the charges of the railway and dock companies adjusted to the volume of traffic in the district. An interview has been arranged with Mr Felix Pole for next Friday, but decisions in regard to rail rates rest with the Clearing House, and the policy of that body at the moment is to administer the railways on a unified national basis. There seems, therefore, very little prospect that the present agitation will be successful. No further action has been taken by the coalowners in regard to proposals for the regulation of prices, and on Thursday the problem was complicated by a decision of a conference of the South Wales Miners' Federation to serve notices next month authorising a general stoppage throughout the coalfield to compel membership of the federation. According to the annual report of the federation for the past year there has been a decline of nearly 80,000 in its membership since the national coal strike, while its funds, which two years ago amounted to nearly £300,000, have been almost entirely depleted. The current prices on Thursday were approximately as follows:—Best Admiralty, large, 25s 6d to 26s; seconds, 25s to 25s 6d; best dries, 24s to 25s 6d; Black Veins, 24s 3d to 25s 6d; ordinary Western Valleys, 24s to 25s 6d; Eastern Valleys, 24s to 25s 6d; best bunker smalls, 17s to 18s; ordinary cargo smalls, 16s to 17s; coke for export, 35s to 37s, f.o.b.; inland blast furnace coke, 24s to 25s at ovens; pitwood, 20s to 20s 6d. (Note, last week's inland coke price was incorrectly stated at 35s; the actual price was 24s to 25s at ovens). In the iron and steel trade the general situation is much improved. Prices of tinplates are firm at between 19s 6d and 19s 9d per box, and Continental inquiries are fairly active. There has been a spurt in the galvanised sheet trade, and the number of mills in operation are increasing.

THE COTTON TRADE.

MANCHESTER, June 22.

Prices throughout the market have continued to go against buyers, and in most sections it has been exceedingly difficult for producers to secure adequate advances to meet the additional cost in the raw material. The tone, however, has been healthy and strong. Fluctuations in raw cotton prices at the moment are disturbing. In piece goods for China there has been rather more demand in standard makes, and further buying has occurred in fancies and specialties. For India much difficulty has been met with in arranging price and delivery, but fair sales have been put through in light fabrics. A steady demand has been met with for several minor outlets and the home trade in a variety of fabrics, and where manufacturers have been prepared to accept a little less than top prices business has been done. Yarns are dearer than a week ago, and a very fair trade has been put through in home counts. Buying in shipping counts has been irregular.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market generally is quiet, but although there is no large volume of business passing, the tone is certainly better than it was a week ago. The improved demand for merino wool in London has

helped to restore confidence to a large extent, and the general opinion now appears to be that prices will remain fairly steady on about the present basis. Buyers in this centre are still holding off more or less, but if the auctions close with a show of firmness there will doubtless be more doing in tops and yarns. The curtailment of the series indicates clearly that the directors of B.A.W.R.A. are determined not to offer wool in excess of the requirements of the trade. Topmakers' quotations are somewhat irregular as some firms are in a stronger position than others. Generally speaking, it is possible to buy a good 64's top for delivery in September at about 4s 6d, but several makers will not consider anything less than 4s 7d. As a matter of fact, the majority are not pressing business at the moment as they have plenty of orders on hand. Crossbreds are weaker in sympathy with the decline in the raw material, and quotations are more or less nominal. As a rule, a definite offer of business will bring out concessions, and medium and low qualities have apparently lost the advantage which they reaped from the improved demand at the May series of auctions. Yarns do not show much change. Business is quiet, but spinners' quotations are fairly well maintained at late rates. There is also a quieter feeling in the piece goods trade, the decline in wool values having made buyers very cautious. It is considered probable, however, that demand will again revive if values firm up, and there is no likelihood of cheaper wool being obtainable. Taking a broad view of the trade generally, it may be said that there is much less activity than a month ago, but there is no indication of any real weakness.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sales have gone better during the past few days than during the opening week, and although there is not much recovery in prices, a distinctly better buying spirit has been observable. If anything, there has been a slight improvement in the demand for merinos, these wools often selling at prices equivalent to the close of the previous series, while the demand for crossbreds has certainly been better at the lower values which came into force a week ago. Continental buyers have continued to figure prominently in the demand for merinos, and a very steady market is seen, particularly for scoureds, while good straight combed 64-70's, which are selling at 24d to 27d, show very little change compared with the May auctions. The decline has been most marked in West Australian bare 60's topmaking wools, and these have mostly sold at 5 per cent. reduction. The reported 10 to 15 per cent. decline in Australia, from which only superior and comebacks were exempt, has somewhat affected consuming centres, and Bradford topmakers report an exceedingly slack market with little desire to buy on the part of spinners, unless prices are sensibly shaded. It is a fact, however, that topmakers and spinners are so well sold forward that there is no great desire to consider new business seriously. Sporting bids, which range around 4s 4d for good 64's tops, are being made, but such prices are largely ignored by topmakers, although it is understood that less than 4s 6d has been accepted in one or two quarters for September delivery. Though quiet, the market is steady, and machinery is still very fully employed.

The greatest weakness of the London sales is shown in crossbreds, the decline in this description ranging from 10 to 15 per cent., which indicates a further fall compared with the opening. At this lower level competition has improved distinctly during the past few days, there being a much better buying spirit in evidence. It may be admitted that the decline in crossbreds is disappointing, and the B.A.W.R.A. have plainly indicated their opinion of crossbred prices by withdrawing 15,000 bales of this description; 5,000 bales of merinos have also been taken out of the current sales. The decline in crossbred values is probably largely due to less forward

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains very firm, and advances were again the order of the day at the auctions in Bermondsey, on Thursday. Best heavy ox sold at 93d, showing an advance of 3d on last prices, whilst relative advances were obtained on other selections. Calf skins were also dearer, most classes showing an appreciation of 1/4d to 1/2d per lb. Wool skins showed no change from last week's values. The demand for foreign hides is improving, as frigorific hides are firming up at source of origin, 843 having been paid for some parcels. Dry hides are also selling better, and holders are firm in their quotations. The American position is calmed as firm, with best heavy packed hides now selling at 17 cents.

Although there has been no increase in the demand for sole leather, Bermondsey merchants have been doing a fair amount of business of late. Repairers have been covering their requirements in various parts of the country, and clearances of 10/12 lbs bends have been made at firmer prices. Cheap dry hide bends are also selling still, although some of the more reputable shoe manufacturers now refuse this leather owing to its 'bad wear'. Rough dressing leather is still selling slowly, as the fall in the French exchange has affected this business.

Upper leathers are a slightly better sale, and sales are reported of coloured calf and glacé kid. Suede is still selling, but it is felt the big demand is over. British chrome leather dressers are anxious as to the position of the industry, as last week the Northampton Chamber of Commerce fully discussed the outlook, and agreed to take steps to arrange a discussion on it between representatives of all sections of the leather and shoe sections.

The boot trade is better employed, and now that the engineers' strike is settled, enquiries are coming to hand for the heavier classes of boots, stocks of which are low.

VEGETABLE OILS AND OLSEEDS.

The market for linseed and linseed oil rallied somewhat, but trade continues very quiet at the higher level of values. The lowered price of linseed oil brought in substantial orders for shipment to America, and some home business. Raw linseed oil on spot is now about 40s above the lowest, £42 being the quotation, ex Hull mill, for prompt delivery, and about £41 for month. Forward positions do not show any definite signs of activity, and values are nominally £38 July-August, and £36 September-December. Cotton oils, after a period of easiness, are somewhat firmer and dearer, with crude Egyptian quoting £40, and common edible £45 10s, ex Hull mill. Rape oil is in good supply, and offers readily at £42 spot. Crude soya bean oil is lower, but deodorised in good request. A good trade in palm kernel oil is reported below the market. Ground nut oil is neglected, and consumers disinclined to pay prices asked.

In the oilseed section, Plate linseed has assumed a firmer tone, and after £19 paid for shipment, 5s to 7s 6d above this is now required to effect business. Cottonseed is quiet, and crushers unwilling to pay higher prices asked by shippers at Alexandria.

The imports of oilseeds, nuts and kernels in May at 110,138 tons, were below this year's average, and compared with 139,374 tons, due in the main to much reduced arrivals of linseed. The figures for the five months January-May, however, show an increase in the aggregate of 43,148 tons. Exports of unrefined vegetable oils in May were 14,423 tons, against only 5,307 tons in May last year; and of refined 1,042 tons, against 585 tons. In the five months we have exported 49,632 tons of unrefined, against 25,549 tons same period last year, the principal item being linseed oil, 37,171 tons, about 80 per cent. of which has been shipped to North America.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, June 23.

In one or two directions there was a moderate amount of business stirring, but, generally speaking, business again moved on quiet lines, as demand is largely governed by wants of immediate necessity.

SUGAR.—Stability was again marked, prices in most cases being dearer on the week, and there is a fair inquiry. Offers from producing countries are reservedly made. Messrs Tate and Lyle's cubes, sold, 55s 6d to 56s 6d; crushed, 54s; granulated, fine and coarse, 50s 9d; London, 50s 3d; No. 1, 50s 6d; No. 2, 50s 3d; caster, A quality, 54s; B, 53s 3d; yellow crystals, 44s 9d; pieces, 35s to 37s; fine white, 45s 6d; granulated, August, 50s 3d; ditto, September, 50s. Crystallised West India sold rather quietly at 42s to 45s, as to quality. American granulated, spot, changed hands at 48s 9d to 49s 13d; June, steamer, 21s 7d to 22s 3d; July, 21s 9d to 22s 6d; August, 22s 13d to 22s 9d, c.f. and i. terms, London. White Mauritius, spot, sold, 47s to 48s. White Java, July, steamer, sold, 20s 13d to 21s; August, 20s 10d, c.f. and i. terms, London. Belgian crystals, October-December, done 20s 3d, f.o.b. Antwerp. Dutch, and also Czechoslovakian sugars, largely nominal for shipment. Cuban basis, 96 per cent., June-July, 16s 9d, c.f. and i. U.K. Brazilian basis, 80 per cent., August-September, 9s 3d ditto. Cuban stocks stand at 976,000 tons, against 1,421,000 same time last year. Liquid glucose, spot, 27s 6d. American syrup dealt in to a moderate extent at late rates.

COFFEE.—The market disclosed a steady tone, particularly with regard to the more attractive qualities, and fair competition prevailed for the quantities submitted to auction. Nairobi, fair bold, sold, 10s 6d; Uganda, 7s 6d to 7s 6d; bold Costa Rica, 10s 6d to 11s 6d. Futures steadier. December delivery, sold 61s 6d.

COCOA.—Market still very quiet, and without new feature. Butter, 1s 7d per lb.

TEA.—Nearly 40,000 packages Indian were catalogued in auction this week. Competition on balance was good, though values manifested some irregularity. Common and low medium in several cases were barely steady, but all the fine qualities, particularly those pos-

sessing autumnal flavour, realised full rates. 32,000 packages Ceylon were offered, which went off with good competition at full to rather higher values.

RICE.—Market nominally unaltered, demand at the moment being quite dormant. Two Stars, spot, 14s 6d. Broken kinds generally neglected. Beans remain slow. Rangoon hand-picked, spot, 12s 4d; Japanese peas, spot, 52s; Dutch hand-picked, 29s; screened 25s 4d.

SPICE.—Pepper was dealt in quietly, but price changes were not of much importance. Fair black Singapore, spot, sold, 43d; ditto, June-August, 33d; Aleppy, spot, quoted 43d; Tellicherry, 43d; white Singapore, spot, 7d; June-August, 64d; Muntok, spot, 74d; June-August, 74d. Zanzibar cloves steady, quiet. Fair quality, spot, 1s 2 1/2d; August-October, steamer, 9d. Pimento, spot, 24d; flake tapioca, spot, 24d per lb; ditto June-August, London, sold, 21s 6d to 21s 9d; fair Penang seed pearl, spot, 21s 6d; ditto June-August, 21s; sago flour, May, sold, 15s 10d; May-June, 15s 9d; July-September, 14s 10d to 15s, and again at 14s 10d. Desiccated coconut quiet. Half-fine and half-medium, spot, sold, 38s to 38s 6d; June-July, 36s 6d; July-August, 37s; and August-September, 37s 6d to 38s. Ginger firmly held, and a moderate inquiry was experienced.

JUTE.—Jute opened the week quietly, but soon responded to a much better inquiry, and prices on the week are altogether higher. First grade, spot, Hamburg, sold, £35 10s; ditto, June-July, £35 10s to £36 and £35 15s; July-August, £35 10s to £36 15s and £36; lightning grade, June-July, £33 5s to £32 15s; July-August, £33; new crop, first grade, August-September, sellers, £40; and lightning grade, £36; with September-October 10s less in each case. Hessians: 10 oz, spot, 38s 6d; July-September, 41s; 8 oz, spot, 28s; July-September, 29s per 100 yards. A twills, spot, 80s; July-September, 82s; B, spot, 70s; July-September, 71s; salts, July, 61s; sugars, spot, 82s; flour, spot, 84s 6d; hessian bags, 56 by 28, spot, 61s 6d per 100 bags.

HEMP.—With more inquiry from ropemakers and firm cables coming to hand from Manila, the market responded, and a fair amount of business was put through this week. C grade, July-September, quoted, £50; D, £45; E, £42; F, £38; G, sold, £33 10s to £34 15s; H, at £33 to £34; J, £30; K, quoted, £29; L, £27 10s; M, sold, £26 10s to £27 5s; streaky, one, sold, £36 15s; two, quoted, £35 10s; and three, £34 10s. New Zealand very quiet, with sellers of high point, fair, on spot, at £30; a fair £29. African sisal quietly steady. No. 1 G.E.A., July-September, held for £35 10s, and B.E.A., £34.

SHELLAC.—Market steady, though trade moved rather quietly. Fair T.N., spot, quoted, 380s; August, sold, 377s 6d to 375s; October, 370s; and June-July, steamer, 380s.

COPRA.—Market quietly steady. F.M.S. Straits, July-September and August-October, to Rotterdam, sold, £25 2s 6d to £25 5s; F.M., ditto, to Marseilles, quoted £24; Ceylon, July-September, Hamburg-Rotterdam, £26; Cebu, £24 10s; South Sea Islands, £24; Dutch East Indies, July-September, sold, £24 16s 3d. Palm kernels, May-July, Liverpool, sold, £17 12s 6d to £17 15s.

RUBBER.—Market generally quiet, but tolerably steady. Standard

When you
Rent a Typewriter
have the best possible—

"The ROYAL"

Makes work easy because the touch is so light that the keys would almost appear to anticipate your thought; it makes the work look so well because the sharp, clean-cut letters please the eye and, in fact, the machine seems to do anything you wish, so adaptable is it. The duplicating is particularly good.

Machines can be hired at reasonable rates, by the week, month or any period.

Skilled operators provided at any time for special or temporary work.

Portable Typewriters Supplied.

ROYAL

crepe and sheet, spot, also June delivery, sold, 7 1/2d, 7 3/4d, and 7 1/2d; July, 7 1/2d to 7 3/4d; July-September, 7 1/2d to 7 3/4d; October-December, 8 1/4d to 8 3/4d and 8 1/2d. To New York, standard sheet, July-August, sold, 8d, c.f. and i. terms. Fine hard Para, spot, quoted 9 1/2d; soft fine, 9 1/4d, and Cauchó ball, 7 1/2d.

NTHOL.—Spot parcels sold, 24s: Japanese peppermint oil, spot, 1; aniseed, 2s 2d; slab camphor sold, 3s 6d; and crude, on held for 3s 6d per lb. Japanese wax, spot, 90s; forward, 76s per cwt.

EGG PRODUCTS quietly steady. Prime liquid yolk, spot, 130s per cwt. Albumen, spot, sold, 3s 5d per lb.

OILS.—Linseed market irregular. Spot, net, naked, 42s 6d; June, 41s; July-August, 39s 9d; September-December, 37s 3d. Rape quiet. Crude, spot, 44s; refined, 48s. Cotton quiet. Crude Egyptian, 42s; Bombay nominal; common edible, 49s. China-wood: Hankow, 40s (barrels), 67s 6d; shipment, 65s to 63s 6d, as to position. Copra quiet. Ceylon, spot, 39s; June-July, 38s; Cochin, ditto, 39s. Soya quiet. Oriental, barrels, ditto, 39s 6d. Japan fish steady. May-June, cases, 22s. Cod steady. English, spot, 31s. Groundnuts steady. English crushed, naked, spot, nominal, forward, 48s; deodorised, barrels, 56s. Turpentine active and again stronger. American, spot, 120s; June, 120s; July-December, 104s; September-December, 103s. Rosin firmer for common and medium grades. American, grade B, 13s 9d; F, 14s 9d; G, 14s 9d; WW, 20s 6d. French, F/G, 14s 6d; WW, 17s 6d; extra pale, nominal. Petroleum quiet. American standard white, 1s 4 1/2d; and water-white, 1s 5d per gallon.

SEEDS.—Linseed market irregular, but fully steady on balance, a better demand. Bold Bombay, afloat, £22. Small Bombay, £20 15s. Calcutta, afloat, £21; May-June, sold, £20 15s to £21; June-July, £20 15s. Plate, afloat, sold, £18 15s to £19; June, sold, £18 15s, £19 5s and £19 15s; June-July, £15, £19 5s and £19 15s. Rapeseed firmer, but irregular. June-July, quoted, sold, £18 12s 6d to £18 10s; real Percepsore, July-August, quoted £18. Cotton seed firm quiet. Egyptian black, June, £11 15s; and white, £11 5s. Bay, June, sellers, £9 2s 6d. Gingly firm. Chinese, May-June, Continent, nominally £27 5s; large Bombay, ditto, £26. Bombay, May-June, quoted £18 5s, to Hull. Groundnuts for Coromandel, machine-dried, May-June, Hull, £22 15s; Continent, £22 15s; Chinese decorticated, f.a.q., May-June, Continent, £23 5s per ton.

TIN.—Tin rather firmer at the week's commencement and in demand. Cash sold at £152 5s to £152 15s; three months', £153 5s 10s. Prices were easier on the following day, and continued downward direction until the middle of the week when cash sold at £152 8s 9d, and three months', £153 5s. On Thursday an uptone prevailed, though buyers were well in evidence. Cash, £152 5s, and three months', £153 7s 6d to £153 5s. At Friday's

session rates ruled firmer. Cash sold at £152 2s 6d to £152 17s 6d, and three months', £153 to £153 15s. English ingots, £153. Copper opened firmer, but buyers were somewhat reluctant to follow the advance, and only moderate transactions occurred in cash at £62 to £62 5s, and three months', £62 10s. No material change in values on Tuesday, the market being steady, with an improved demand. By the middle of the week prices marked a setback on less inquiry. Cash sold at £61 12s 6d to £61 13s 9d; three months', £62 5s. The tendency at Thursday's meeting was quiet, and only small sales resulted at about previous rates. Cash, sold, £61 13s; and three months', £62 5s. At Friday's meeting the tone was rather easier. Cash sold at £61 12s 6d; early August, £61 17s 6d to £61 16s 3d; three months', £62. Electrodes, £69 to £70 10s; best selected, £66 10s to £68 10s; strong sheets, £94; wire bars, £70 10s per ton. Lead firm, £24 10s to £23 10s, as to position. Spelter lower, £27 10s, both positions. Antimony, English regulus, £27 to £29 10s. Aluminium, home delivery, £100; export, £105.

TALLOW.—Messrs Colchesters and Woolner write as follows on June 21st:—The tallow market continued active during the week, and prices are quoted 1s dearer for good mutton and 2s for good mixed, while inferior kinds are 1s 6d dearer. Shipments of tallow from Australasia during May amounted to 6,700 tons. At auction to-day 2,285 casks tallow were offered, and all were sold. Quotations are:—Australian mutton: Fine, 40s 6d; good to fair, 39s 6d to 38s 3d; dull to dark, 36s 6d to 33s 6d; hard, 40s. Australian beef: Fine, 40s; good to fair, 38s 9d to 37s 6d; dull to dark, 36s 3d to 33s 3d; sweet, 40s 6d. Present shipment from Australasia: Mutton, fair coloured, 4d, 4d, 4d, and mixed, 43d, c.f., London, 38s 6d. The market letter is dearer, tallow 1s; stuff, 1s. Town tallow, 34s 6d per cwt. Rough fat, per 8 lbs, 13d; melted stuff, 24s per cwt. Quotations are:—Town: 33s 6d net cash, naked, ex works. Country: Frail casks, 33s; home melted, shipping casks, net f.o.b., good coloured, 34s; fair to dull, 33s to 34s. Bone fat: White, none; pale, none; benzine, 30s; melted stuff, 29s 6d, f.o.b.

SOUTHERN PACIFIC CO.

REPORT OF THE BOARD OF DIRECTORS.

To THE STOCKHOLDERS OF THE SOUTHERN PACIFIC COMPANY:

Your Board of Directors submits this report of the operations and affairs of the Southern Pacific Company and of its Proprietary Companies for the fiscal year ended December 31, 1921.

New York, N.Y., June 1, 1922.

TRANSPORTATION OPERATIONS.

As stated in last year's report, your properties were operated by the Director General of Railroads during the first two months of 1920, and by your Company during the last ten months of that year. In the following table, however, which shows the net railway operating income for the year 1921, compared with that for the year 1920, the 1920 figures include the results from operation for the entire year, regardless of the change in control.

	Year Ended December 31, 1921.	Year Ended December 31, 1920.	+ Increase. — Decrease.	Per Cent.
1. Average miles of road operated	11,187.99	11,151.60	+ 36.39	.33
Railway Operating Revenues—				
2. Freight	\$181,409,691 87	\$183,416,522 60	— \$2,006,830 73	1.1
3. Passenger	63,442,251 17	71,701,637 26	— 8,259,386 09	12.9
4. Mail and Express	11,935,604 42	13,660,156 92	— 1,724,552 50	14.4
5. All other transportation	5,638,563 36	5,074,092 84	+ 564,470 52	11.2
6. Incidental	6,358,343 55	8,342,712 13	— 1,984,368 58	31.0
7. Joint facility—Credit	166,168 78	105,349 51	+ 60,819 27	57.7
8. Joint facility—Debit	66,267 82	30,967 01	+ 35,300 81	115.7
9. Total railway operating revenues	\$269,494,365 33	\$282,269,504 25	— \$12,775,138 92	4.4
Railway Operating Expenses—				
10. Maintenance of way and structures	\$42,198,882 59	\$48,465,465 26	— \$6,266,582 67	14.9
11. Maintenance of equipment	49,188,143 35	59,548,392 36	— 10,360,249 01	20.9
12. Total maintenance	\$91,387,025 94	\$108,013,857 62	— \$16,626,831 68	18.2
13. Traffic	4,182,340 14	3,490,706 53	+ 691,633 61	19.8
14. Transportation	104,744,036 41	117,227,797 91	— 12,483,761 50	11.9
15. Miscellaneous operations	4,153,650 67	5,607,062 74	— 1,453,412 07	35.0
16. General	8,521,639 30	8,112,651 83	+ 408,987 47	5.0
17. Transportation for investment—Credit	416,329 67	340,986 07	+ 75,343 60	22.1
18. Total railway operating expenses	\$212,572,262 79	\$242,113,790 06	— \$29,541,527 27	12.2
19. Net revenue from railway operations	\$56,922,102 54	\$40,155,714 19	+ \$16,766,388 35	41.8
20. Railway tax accruals	\$15,539,469 20	\$14,792,063 67	+ \$747,405 53	5.1
21. Uncollectable railway revenues	124,565 69	112,945 09	+ 11,620 60	10.3
22. Railway operating income	\$41,257,198 03	\$25,250,705 43	+ \$16,006,492 60	63.4
23. Equipment rents—Net	5,154,543 91	4,496,775 66	+ 657,768 25	14.6
24. Joint facility rents—Net	156,732 60	* 558,414 27	— 401,681 67	25.7
25. Net railway operating income	\$35,946,791 14	\$21,312,344 04	+ \$14,634,447 10	68.7

*Credit.

The figures for the year 1921, shown in the foregoing table, do not represent the actual results from operations during the year, because the accounts, as stated, include estimates of unadjusted items, such as loss and damage claims and repair claims, appertaining to operations during the guaranty period (March to August, 1920, inclusive). In the case of many of these claims the Company's liability cannot be definitely determined in advance of final decision by State Commissions, by the Interstate Commerce Commission, or by the courts. They are included in the current accounts, because the Interstate Commerce Commission decided on December 15, 1921, that the operating income accounts for the guaranty period should be closed as of December 31, 1921, and that no item would be considered in connection with the Company's claim under the guaranty provision of the Transportation Act of 1920, unless taken into the accounts as of that date upon an actual or an estimated basis. If these guaranty period items were eliminated from the accounts, the net railway operating income for the year ended December 31, 1921, would amount to \$39,837,756.48. It should be understood, however, that, although these guaranty period items reduce the Net Railway Operating Income, they do not affect the Net Income for the year (line No. 25 of the income statement), because they result in a corresponding increase in one of the account Miscellaneous Income appearing on line No. 41 of the income statement. The following summarizes results of transportation operations for 1921, compared with 1920, also compared with the Federal control years, 1918 and 1919 and with

	1921	1920	1919	1918	1917
Operating revenues	\$269,494,365	\$282,269,504	\$239,657,273	\$221,611,203	\$199,444,444
Relative to 1917 (100)	135	141	120	111	100
Operating expenses	212,572,262	242,113,790	188,885,172	162,732,815	147,444,444
Relative to 1917 (100)	144	164	128	107	100
Net revenue from railway operations	56,922,102	40,155,714	51,772,100	58,878,388	52,000,000
Relative to 1917 (100)	78	55	70	80	100
Operating ratio, per cent.	78.88	85.77	78.61	73.44	70.00
Traffic units (ton miles plus 8 times passenger miles), thousands	17,451,417	22,010,458	20,198,015	20,836,083	20,836,083
Relative to 1917 (100)	84	105	97	100	100

Operating revenues were seriously affected by the nation-wide business depression that began about the close of 1920, and continued throughout the year 1921, aggravated on your company's lines by diversion of trans-continental business, by much lower rates offered by the Panama Canal route, and by the competition on the highways of motor trucks substantially free from taxation and regulation. The traffic units handled show a decrease of 20.71 per cent. from the peak of 1920 and although advanced freight and passenger rates made effective August 1, 1920, were enjoyed during the entire year, operating revenues decreased 4.53 per cent. Average wages paid throughout 1921 were slightly higher than in 1920, as the wage increase dating from May 1, 1920, was effective during eight months of that year and six months of 1921, while during the remaining six months of 1921 wages were higher than during the first four months of 1920. Prices of fuel and other material in 1921 also averaged more than in 1920. The combined effect of these higher wages and higher material prices increased 1921 operating expenses by \$5,292,000. Notwithstanding these adverse conditions, operating expenses were reduced 12.20 per cent. and net revenue from railway operations increased 41.75 per cent. This net result reflects the improvement forecast in last year's report as progress is made in substituting the incentive of self-interest of private management, and the increased efficiency and more cheerful service of the entire operating staff, for the apathy and blight of Government management.

After the return of the roads and the passage of the Transportation Act, your company joined other railways in applying to the United States Railroad Labor Board to readjust wages to meet changes in living costs, and to equalize wages paid by others for skilled and unskilled labor for like work in the territory in which your lines are operated. Modification was also requested of the unjust and onerous rules of National Agreements made by the Director General near the close of Federal control, whereby unearned wages and excessive amounts for time were paid. These applications have been granted in part, but a great many serious conditions remain which increase expenses compared with those previous Federal control, and which the carriers are seeking to remedy. Effective January 1, 1921, the Labour Board rendered a decision which lowered wages about 10 per cent., reducing by more than half the increase of 20 per cent. granted in 1920. According to a statement recently issued by the Labour Board, now wages are still nearly 60 per cent. higher than they were in December, 1919. The roads were taken over by the Government. Whether justified or not, the wage scale profoundly affects expenses compared with the cost of operation under Federal control. The following table shows the average monthly wages paid by specified classes of employees on Southern Pacific lines in 1916, in the last half of 1921, compared with the same period of 1920. These wages were effective, and compared with wages earned in the year preceding the passage of the Adamson Act, which increased the measure of a day's work for train service employees:

AVERAGE MONTHLY WAGES EARNED BY REPRESENTATIVE OF EMPLOYEES.

	Six Months Ending December 31, 1921	Year 1921	Relative 1920
Engineers	\$921.77	\$916.77	100
Conductors	281.56	282.38	100
Firemen	194.15	149.64	77
Other trainmen	188.95	110.25	58
Machinists	161.81	107.80	66
Carpenters	139.33	105.62	76
Clerks	196.69	151.13	77
Employees, floating equip.	110.64	71.54	64
Station service employees	97.53	124.51	127
Stationmen	71.08	96.43	136
All other employees	131.22	109.60	83
Total employees	\$180.57	\$154.85	86

The decrease of \$25,775,138.92, equivalent to 8.8 per cent., in the face of increased freight and passenger rates which have been the latter part of preceding year, is principally attributable to a decrease of nearly 11 per cent. in the aggregate of the principal railroads of the country.

Revenue from passenger business was further diminished by conventions such as were held on the Pacific Coast during the year, and by a substantial increase in travel by automobile, appropriated by the Federal and State governments for the ways that usually parallel the very railroads which are maintained.

Decrease in revenue from mail is due to a large payment in previous years, included in the year 1920, with which Texas and Louisiana that has been adversely affected by reduction in the acreage of rice planted in the same. Such important commodities as beans, canned lumber, apples, cantaloupes, and vegetables. Some of these made in defiance to public sentiment, and in response to were made to restore market relationships that had been horizontal increase, and again other reductions were made.

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—continued.

wholesale diversion of transcontinental traffic to the steamship lines operating through the Panama Canal. In 1921, the number of steamship voyages through a Panama Canal between Atlantic and Pacific ports of the United States increased 80 per cent., and the volume of freight increased 88 per cent. over the preceding year. Freight shipped by direct sailings between the Pacific Coast and Europe and by direct sailings between Atlantic ports and trans-Pacific ports, much of which was formerly handled by transcontinental railroads, is not included in these increases. The steamship lines operating through the Panama Canal enjoy enormous advantages, because their rates, which are not subject to regulation by the Interstate Commerce Commission, may be freely changed from day to day. If these vessels are exempted from the payment of tolls, as pending legislation contemplates, their advantage will be increased at the expense of the taxpayers of the entire country. This competition is supplemented by barge lines operated by the Government on the Mississippi and Warrior rivers, which carry freight at reduced rates between interior points and Gulf ports in connection with the Canal. The railroads have not made much progress towards meeting water competition for transcontinental freight, because of the unfair handicap which they are subjected. To make rates to or from Pacific Coast ports to share a share of the traffic fostered by the railroads, for which the Canal steamship lines now compete, the railroads are required by the long and short haul provision of the Interstate Commerce Law to reduce rates to the same bases as those of the water lines. This requirement is not necessary to meet the water competition at all intermediate points (where they are not necessary to meet the water competition), unless relief from that requirement is granted by the Interstate Commerce Commission, and even if such relief should be eventually granted, the railroads are subjected to the loss of the coast traffic during the many months of hearings, argument, consideration, and decision. Applications made in August, 1921, have not yet been decided after nearly a year's delay. Maintenance of way and structures decreased \$6,266,582.67, or 12.93 per cent., because of the substantial reduction in the cost of materials and labor. The cost of way and structures was substantially reduced, and the cost of maintenance was substantially reduced. This was evidenced by the table showing materials used in repairs and renewals in 1921 and 1920, and compared also with the Federal control years 1919 and 1918. There was deficient maintenance on a part of your lines.

Net income on average amount of outstanding capital stock of Southern Pacific Co.	6.12	7.53	— 1.41	18.7
Net income on average amount of outstanding capital stock of Southern Pacific Co.	2.81	3.04	— .23	7.8
Net income on average amount of outstanding capital stock of Southern Pacific Co.	8.93	10.57	— 1.64	18.4

In arriving at the figures for per cent. of railroad income and per cent. of other income on outstanding capital stock, the items were made by adding, as nearly as possible, to railroad income the items relating solely to that class, and to other income the remaining items being apportioned between the two classes on an estimated basis.

SOUTHERN PACIFIC COMPANY AND PROPRIETARY COMPANIES COMBINED—continued.

Miscellaneous operations decreased \$1,455,412.07, or 25.95 per cent., following decreased incidental revenues.

General expenses increased \$408,897.47, or 5.04 per cent., due to increased charges for Federal valuation work, increased accounting requirements, and allowances for pensions.

The increase in taxes for 1921 over 1920 is \$747,405.53. This increase is the result of an increase of \$1,938,052.10 in state and county taxes, due principally to an increase in the rate of taxation on gross earnings in California from 5 1/2 per cent. to 7 per cent. under the King Tax Law which became effective July 1, 1921; to an increase of \$170,606.93 in capital stock tax; and to a decrease of \$1,515,263.50 in Federal income and excess profits taxes, due principally to an assessment in 1920 of excess profits tax for the year 1917. As this report goes to press the large increase in taxes of \$747,405.53, or 5.05 per cent., over 1920 seems trivial in comparison with the taxes for the first four months of 1922, which amount to \$6,393,726.28, an increase of 32.36 per cent. over 1921. At this rate taxes for the year 1922 will aggregate \$19,131,178.84, or 93 per cent. of the dividends distributed to stockholders for 1921. Taxes amounted to \$8.60 for every hundred dollars of freight revenue during the year 1921, and to \$12.43 for every hundred dollars of freight revenue during the first four months of 1922.

The total Railway Tax Accruals for the year consumed \$15,539,469.20 or 27.3 per cent. of the \$56,922,102.54 of Net Revenue from Railway operations. With an increase of 138.76 per cent. in the miles of road operated over the miles operated in 1885, the first year of operation, taxes have increased \$14,679,964.14, or 1,707.96 per cent.

The heavy passenger travel in motor vehicles has introduced an element of great danger at railway grade crossings, as shown in the following statement giving the casualties to persons in automobiles at crossings on your company's steam lines:

	1921	1920
Number of persons killed.....	76	57
Number of persons injured.....	960	293

Several states now require motorists to stop before attempting to cross railroad tracks. It is gratifying to observe the rapid recovery from the conditions that prevailed during Federal control towards normal conditions of safety in the operations of your property in 1921, the first complete year of operation after Government control. In the three years of the test period ending in 1917 one fatality to employees in train accidents occurred to every 8,338,333 locomotive miles run; in the years of Federal control, to wit, 1918 and 1919, the fatalities were one to every 6,350,000 and 3,000,000 locomotive miles run respectively; in 1921 there were one to every 14,338,333 locomotive miles run.

Not a passenger was killed in a train accident in the three test years, but under Government control the number killed was one to every 3,000,000 locomotive miles run in 1918, and one to every 10,000,000 locomotive miles run in 1919. In 1921 the number was only one to every 14,338,333 locomotive miles run.

The extent to which the maintenance of way and equipment was neglected on the lines of Louisiana and Texas during Federal control is shown thus:

During the three years of the test period the number of derailments, caused principally by defective track and equipment, was one to every 200,000 locomotive miles run; during 1918 and 1919, under Federal control, it was one to every 150,000 and 95,000 locomotive miles run respectively; in 1921, the first entire year of private operation, it fell to one to every 205,000 locomotive miles run.

The attention of the Federal Railroad Administration was directed to the neglect of maintenance and the unsafe condition of these lines by your corporate officers and by the Louisiana Railroad Commission, but without substantial remedy.

OPERATING INCOME

As stated in last year's report, your properties during the months of January and February, 1920, were operated by the U. S. Railroad Administration under the Federal Control Act, and for that period your Company received the standard return rental as fixed in the agreement with the Director General of Railroads. During the ten months March 1 to December 31, 1920, your properties were operated by your Company, and the amounts reported in the column headed "Year Ended December 31, 1920" (lines 1 to 24), represent the operating results for those ten months. The operating results for the entire year 1920, regardless of the change in control, compared with the operating results for the year 1921, are shown in the table appearing at the beginning of the report.

The \$1,138,122.99 shown in the 1920 column as Miscellaneous Operating Income (line No. 29) represents the operating income for January and February, 1920, of the Fuel Oil Department which was sold to the Southern Pacific Land Company on February 29, 1920.

NON-OPERATING INCOME

The item of \$8,043,288.03, shown in the 1920 column as Income from Lease of Road—Standard Return (line No. 31), represents the proportion for January and February, 1920, of the standard return rental as fixed in the agreement with the Director General of Railroads. The item of \$852,740.80 shown in the 1921 column (line No. 31), is made up of \$1,859,646.63, representing the approximate amount of additional compensation for the use of additions and betterments, new equipment, and road extensions completed during the period of Federal control, less \$1,006,905.83, representing the net deduction from the standard return rental (as fixed in the agreement with the Director General of Railroads and taken into account by the Company during the period of Federal control) resulting from changes and corrections made by the Interstate Commerce Commission in the accounts for the test period which were used as the basis of the standard return.

The increase of \$348,634.45 in Miscellaneous Rent Income (line No. 33) is due, principally, to the rental received this year, from Associated Oil Company and from Pacific Oil Company, for the use of oil pipe line formerly used by the Fuel Oil Department.

The increase of \$594,617.04 in Income from Unfunded Securities and Accounts (line No. 39) represents interest on U. S. Government Certificates of Indebtedness, California Bonds, and increased bank deposits, resulting from the sale of the same.

The item of \$20,000.00, shown in the 1920 column as Miscellaneous Income—U. S. Government Guaranty (line No. 40), represents the estimated amount due from the Government, under its guaranty, for six months ended August 31, 1920, such estimate having been based on figures available at December 31, 1920, as explained on page 8 of last year's report. The item of \$8,000.00, shown in the 1921 column (line No. 41) is made up of \$3,880,965.34, representing estimates of unaudited items taken into account this year for the reasons stated in the first paragraph on page 7, less \$232,962.87, representing an adjustment of the amount of the Government guaranty as booked to December 31, 1920, due to the statement made by the Interstate Commerce Commission in the amount of the standard return rental, as explained in the third paragraph above.

The decrease in Other Miscellaneous Income (line No. 42) is the result, principally, of charges made by the U. S. Railroad Administration representing adjustments of account of revenues to January 1, 1918, credited to the Company during the period of Federal control.

REDUCTIONS FROM FUNDING INCOME

The decrease of \$1,138,561.17 in Interest on Funded Debt—Bonds and Notes (line No. 48), is made up of a decrease of \$2,034,614.39 resulting from the conversion of Southern Pacific Company Four and Five per Cent. Twenty-Year Convertible bonds into capital stock, a decrease of \$278,412.16 resulting from the retirement of bonds and equipment trust certificates maturing during the year; a decrease of \$35,753.78 resulting from the retirement of bonds through sinking funds; a decrease of \$294,694.17 resulting from the acquisition of bonds by Southern Pacific Company and Proprietary Companies; and an increase of \$304,646.39 resulting from a full year's interest on Southern Pacific Equipment Trust Certificates, Series B, issued on June 1, 1920.

The increase of \$1,744.71 in Interest on Funded Debt—Non-negotiable Debt to Affiliated Companies (line No. 49) represents, principally, interest on deposits with Southern Pacific Company made by Southern Pacific Land Company, resulting from the sale of oil properties by the latter company to the Pacific Oil Company.

The increase of \$10,432.79 in Interest on Unfunded Debt (line No. 50) is made up, principally, of interest on money borrowed before the proceeds from the sale of all properties were available, and of interest allowed on freight claims.

The decrease of \$68,737.18 in Amortization of Discount on Funded Debt (line No. 51), is the result of the conversion, during the year, of \$17,989,500 of Southern Pacific of the Five per Cent. Twenty-Year Convertible bonds into common stock, and the retirement of \$1,641,000 of Southern Pacific Equipment Trust certificates to Principal and Loss.

The decrease of \$570,892.93 in Miscellaneous Income Charges (line No. 53) is the

result, principally, of a decrease in the charges to that account for power and expenses appertaining to the period prior to January 1, 1918.

The dividends paid for 1921 were appropriated from the profit and loss account, and therefore do not appear in the income account. They amount to \$2,629,246.25, an increase, compared with dividends paid for 1920, of \$2,629,246.25. The increase is caused by the dividends paid on \$17,989,500 of capital stock issued this year against a like amount of Five per Cent. Convertible bonds retired, and a full year's dividends this year on capital stock issued last year against the retirement of such convertible bonds. The figures for this year include \$54.00 and \$54.00, last year \$515.00, representing dividends on stocks of Proprietary Companies held by the public.

The Southern Pacific Company does not take into its income the interest on advances made by it for the construction of new railways by companies incorporated in its interest, or for the acquisition of new lines, until the principal of such advances, with interest has been repaid either in cash, or in stocks of such companies. The interest included in the cost of such railways is authorized to be charged to such cost under the accounting regulations of the Interstate Commerce Commission.

On December 31, 1921, the principal or advances to the Southern Pacific Company of Mexico amounted to \$39,742,150.84. The interest accruing on such advances has not been taken into the income of the Southern Pacific Company.

CAPITAL STOCK

The capital stock of the Southern Pacific Company outstanding at the beginning of the year amounted to

Issued during the year:

Common stock issued in exchange for a like amount of Five per Cent. Twenty-Year Convertible Gold Bonds surrendered and cancelled.....

Amount of Southern Pacific Company capital stock outstanding December 31, 1921

There was no change during the year in the capital stocks of the Proprietary Companies. The amounts outstanding December 31, 1921, were as follows:

Preferred stock

Common stock

Amount of capital stocks of the Southern Pacific Company and of its Proprietary Companies outstanding December 31, 1921

Held as follows:

In hands of public:

Capital stock of Southern Pacific

Company

Capital stock of Proprietary Companies

Owned by Southern Pacific Company

Owned by Proprietary Companies

69236

FUNDED DEBT

The funded and other fixed interest-bearing debt of the Southern Pacific Company and of its Proprietary Companies, outstanding December 31, 1921, is as follows:

Southern Pacific Company

Proprietary Companies

Total outstanding December 31, 1920

Retired during the year:

SOUTHERN PACIFIC COMPANY.

San Francisco Terminal First Mortgage Four per Cent. Bonds:

Purchased from payments to sinking fund

Five per Cent. Twenty-year Convertible Gold Bonds:

Retired in exchange for a like amount of Common stock issued

Four and One-half per Cent. Equipment Trust Certificates:

Series A, Due March 1, 1921, paid off

Series B, Due September 1, 1921, paid off

Series C, Due December 1, 1921, paid off

Series D, Due May 1, 1921, paid off

Six per Cent. Temporary Equipment Gold Notes, due January 15, 1921, paid off

CENTRAL PACIFIC RAILWAY COMPANY.

First Refunding Mortgage Four per Cent. Bonds:

Purchased from payments to sinking fund

Three and One-half per Cent. Mortgage Gold Bonds:

Purchased from proceeds of sale of lands \$105,000 00

Purchased from payments to sinking fund

Four per Cent. Thirty-five Year European Loan of 1911:

Adjustment account difference in exchange

HOUSTON & TEXAS CENTRAL RAILROAD COMPANY.

General Mortgage Four per Cent. Bonds, matured:
