Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: Economist Office, 20 Broad Street (Second Floor).

THE MONEY MARKET.

AFTER the four days' scarcity which preceded the end of 1921, money became even more abundant than had been expected. The banks released large sums, the Bank had lent a very large sum to the market and to the Government, the whole of which was not due for repayment this week, and the demands of trade do not increase. Thus the "tap" rate of Treasury bills, which remained at 3½ until Thursday as a result of the high tender rate of the preceding week, proved attractive, and sales were large. Efforts to maintain the three months' bill rate above this level were

not very successful, and after the result of Friday's tender was known the rate became weaker still.

	Jan. 6, 1922.	Dec. 30, 1921.	Dec. 22, 1921.	Dec. 16, 1921.	Previous Rate and Date Changed.

Houses Notice	3½	3½	3½	3½	3½ (Nov. 3, '21)
Treasury Bills, 3 months ..	2½	3½	3½	3½	..
Market rate (3 months' bills)	3½	3½	3½	3½	..

* Additional to those offered by tender the preceding week.

Heavy borrowing at the Bank is reflected in Thursday's Bank Return, which shows an increase of £68½ millions in securities—£31½ millions for Government, and £36½ millions for Other. The gold stock rose by £5,600, and the circulation fell by £825,800, so that the Reserve was £831,400 higher. As deposits increased by £69½ millions, of which £68½ millions went on to Other, the Proportion dropped from 16½% to 11 per cent. There was a reduction of £5,720,900 to £319,863,500 in the circulation of currency notes in the week ended January 4, 1922. These figures include notes called in, but not yet cancelled. The fiduciary issue is £270,183,800, or £39,804,600 below the new maximum, which is based on the highest of 1921, and becomes £309,988,400.

THE STOCK MARKETS.

The opening of the New Year has proved rather disappointing in the Stock Exchange, where gilt-edged stocks have fallen back a little. This movement is attributed to heavy new issues, fears of the Cannes Conference, and the uncertainty created by General Election talk. Home Railway prior-charge stocks have, however, shown renewed strength. A feature of the week is the disappearance from the list of Lancashire and Yorkshire Railway stocks on absorption by the North-Western. Details of the week's movements are given in a later column.

COMMODITY MARKETS.

Although no decided increase has taken place in the cotton markets, inquiries have been well maintained, and some fair contracts arranged. It is believed in Manchester that the Indian boycott is gradually breaking down. Wool markets have opened the New Year confidently, and a strong advance in the price of the raw material is predicted in Bradford. In the iron and steel trades there is little new to report. Most steelworks are idle, owing to the New Year holidays, which in some districts are being extended beyond the usual length. Collieries are well supplied with orders for best house coal; but, owing to the industrial holidays, the demand for steam coal has not been maintained. The wheat market is firm, owing to recovery in the United States and Canada. Business in the markets for vegetable oils and oilseeds is generally quiet, and the demand for linseed oil exceptionally poor. Quotations for hides have eased off, but there is a fair inquiry for sole leather, and the shoe trade is more optimistic. Details of news and movements in the principal markets from special correspondents will be found on later pages of this issue.

FOREIGN EXCHANGES.

Uncertainty as to the deliberations of the Cannes Conference and a tendency to be pessimistic as to its results have been the chief features of the foreign exchange market during the past week. The German mark, after being comparatively steady for some little time past, has

started to move up again, and from 775 on the 30th had by Thursday reached 832. Yesterday there was a recovery to 795, but the position is still quite obscure, and the reported attitude of France and Belgium towards reparation is making the bearish view predominate. The rate for future marks is three to four marks per month below spot. In Paris, too, the prevailing uncertainty has tended to send the franc higher, and on Thursday a quotation of 52.58½ was reached, as compared with 52.32½ on the 30th. Yesterday morning, however, there was a fall here also to 52.50. The Brussels rate has risen from 54.44 to 55, thus again widening the spread between the two currencies. The future quotation in Paris is one point per month either side of spot, in Brussels it remains unchanged at 8 to 12 centimes per month below spot. The dollar also has been affected by the prevailing depression, and has fallen from 4.21 on the 30th to 4.19½ yesterday, after being just below 4.19 on Thursday. Future rates are slightly wider again at ½ cent per month over spot. The lira, which has been shaken by the troubles of the Banca di Sconto, was up to 98.24½ on Tuesday, but has now recovered again to 97½, as compared with 96½ on the 30th. Among the "Neutral" exchanges Amsterdam has gone well in our favour; Madrid, after moving up, is about the same as a week ago, while Switzerland has gone slightly against us. Among the Northern currencies, Stockholm has depreciated, and is now again about 17, while Christiania and Copenhagen have both slightly appreciated, probably in connection with loan operations in America. In Central Europe, Austria has again gone higher, and reports would suggest that the prospects of assistance are still very obscure. The Inlandskrone rate on Wednesday stood at 28,190, as compared with the Auslands rate of 11,250 on the same date—an absurd discrepancy, with which for some reason the Austrian authorities still neglect to deal. Warsaw, on the other hand, shows an improving tendency, and the Prague rate, mainly on rumours of successful loan negotiations, still unconfirmed, is again higher. Belgrade continues unable to get control of its financial difficulties, and the recent large increase in circulation is reflected in another rise in the dinar quotation. Bucharest, although the various restrictions do not yet appear to have been satisfactorily modified, is again quoted, after a long interval, at 550-600. Athens, on loan reports, shows a distinct improvement to 96½ from 100. In the East, rupees, at 1s 4d, are very slightly cheaper, while the yen is slightly dearer. Silver has been very quiet, with a tendency towards lower rates. Both Hong Kong and Shanghai are slightly cheaper. In Buenos Ayres, the quotation at 43½d is slightly cheaper, while Montevideo has depreciated rather more sharply to just under 41d. Valparaiso, also at 40.20s is rather cheaper.

THE NATIONAL ACCOUNTS.

The revenue statement for the nine months ended December 31st, which is reproduced in full on a later page, shows total receipts from revenue amounting to £676,831,300, as compared with £888,803,700 for the corresponding period of the previous financial year, a decrease of £211,972,400. The estimates for the full current financial year, it may be mentioned, are £1,216,650,000. The most prominent decreases, as compared with the receipts of the nine months of 1920-21, are excess profits duty (—£126,640,000), and miscellaneous special receipts (—£104,519,000). Excess profits duty has yielded to date only £29,714,000, against an estimate for the year of £120 millions, while the corporation profits tax has brought in £10,290,000 out of an estimated £30 millions for the year. Income-tax receipts amount to £174,660,000, against an estimate of £410,500,000 for the 12 months. In the nine months a net reduction of £15,490,000 has been effected in the floating debt, the total of which now stands at £1,259,840,000, and compares with £1,408,081,000 at December 31, 1920. There has been a welcome decline, as compared with the end of 1920, in Ways and Means Advances from the Bank of England, namely, from £87,250,000 to £20,000,000, while advances by Public Departments have dropped from £218,722,000 to £180,034,000.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO DECEMBER 31, 1921.

Total spent	£ 739,990,604	Raised by revenue ..	£ 676,831,318
Inc. in balances	580,945	Net borrowings	63,740,231
Total	740,571,549	Total	740,571,549

ESTIMATES for YEAR 1921-22.

Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure	£ 874,023,000
Special Receipts ..	188,540,000	Special Expenditure	65,705,000
Total	1,246,690,000	Total	1,039,728,000

Surplus* 176,962,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

ELECTION ISSUES.

In the absence of definite news from either of the conferences, or of an authoritative pronouncement from the head of the Government as to his political intentions, Rumour has had a particularly busy week. In particular, the Press and other agents of the lying jade have left us in complete uncertainty as to whether there will or will not be an election next month. From the business point of view, a General Election would be an unwelcome interruption to the slow recovery of trade, which, though past the crisis, is still in need of careful nursing. The commercial world would be better pleased if the appeal to the country were postponed until the autumn; but if, as has been suggested, the alternative is a May election, we believe that most business men would prefer to cut short the period of waiting, and get it over now. In passing, it may be noted that no intermediate date is possible, since, if the present Parliament meets again at all, the estimates must be dealt with, the Budget introduced, and the Irish Act passed—a task which, if it is to be done properly, should occupy a considerable amount of Parliamentary time.

Few will regret the early demise of the present House of Commons, which has enhanced scarcely any personal reputations, contributed very little of permanent value to the legislative record of the country, and has not added to the prestige of Parliamentary Government in the minds of the people. But a new House of Commons would be an improvement only in so far as it enabled greater definiteness to be given to the policy of all parties. As a writer in the current *Nineteenth Century and After* has said, "Coalition Governments from their very nature

are almost bound to be opportunist in their action, inasmuch as the divergent opinions of their followers preclude the possibility of their adopting a policy on a common principle. Their motto must be 'sufficient unto the day,' and in this respect the present Government is no exception." Coalition Government for the purpose of making peace was perhaps a necessity, and certainly it is extremely doubtful whether the Irish settlement could have been carried through the British Parliament in the face of Conservative opposition. But after three years of confusion, the development of political thought would be greatly stimulated, and trade and industry be given a fairer field, if the election, when it comes, could be made the occasion of placing before the country a few clear issues of principle.

A century ago, when peace, with its troublesome problems and difficult readjustments, "broke out" in Europe after a quarter of a century of war, British political life passed through a phase not unlike our present situation. It is true that there was no actual Coalition, but party divisions and policies were sadly confused, and both parties in the State found themselves endeavouring to reconcile the most contrary opinions. The historian records that the years 1815-22 were singularly barren in legislative and administrative achievement, and that the Opposition, distracted by internal weakness and division, was unable to exercise effective pressure on the Government. "In finance, at a moment which demanded the most drastic remedial measures, the only real reform proceeded from a Committee whose chairman was a private member." It was, indeed, 20 years before the political ideas of the period began to affect legislation and policy, while the great principle of Free-trade did not emerge triumphant for three decades. But there is no reason why we should repeat the mistakes of history and allow hand-to-mouth tactics to dominate our politics for an indefinite period. An intelligent public opinion can be formed far more rapidly to-day than in the early nineteenth century, and we may reasonably ask our political leaders, and the Prime Minister in particular, to state the principles upon which they propose to act. We urge this demand not as a matter of theory, but because the absence of a definite objective, and the consequent frequent changes in policy, have produced distrust of the Government both at home and abroad, and are largely responsible for the present unsatisfactory state of our international relations, and for the internal condition of India and Egypt. No one can compare British policy in regard to reparations at the Paris Peace Conference and at Cannes, or study our attitude towards France on other political questions, without understanding something, at all events, of the distrust which our Government inspires across the Channel. It is easy to criticise French policy or opinion and to point out the serious difficulties which are being created by her Government. But if we can cast from our own eye the beam of inconsistency, we shall be better able to appreciate the defects in our neighbour's vision. Similarly, in other fields the essential weaknesses of coalition lay the Government open to very damaging destructive criticism.

In Ireland, for example, the present policy of reconciliation follows upon two years of the most outrageous form of warfare, thereby lending colour to the dangerous idea that violence is a more powerful and effective argument than reason; while in home affairs the whole programme of economic reform developed under the auspices of the National Industrial Conference of 1919 has been jettisoned, and the Government policy in regard to agriculture and the nationalisation of railways and mines reversed. It cannot even be claimed that the Government has carried out the primary purpose for which it was elected, for peace is not yet made in that most difficult of all diplomatic fields—Turkey and the Near East.

But in no respect has coalition proved more unsatisfactory than in regard to Free-trade. Nothing has done so much to make Great Britain unpopular as our coal export restrictions of 1919 and 1920, which deprived France and Belgium of the means of restarting their industries at a time when Continental production of coal was entirely inadequate. This has been followed by the futile and irritating provisions of the Safeguarding of Industries Act—a legislative achievement which is only to be explained as an example of filial piety. It is notorious that employers in practically all the great industries of the country who were attracted by Protection before the war recognise in present circumstances, at all events, the necessity for Great Britain of a Free-trade policy. The Safeguarding of Industries Act has not, in fact, substantially altered our commercial policy. The Board of Trade has neither the personnel nor the power to convert it by administrative action into the foundation of a general protectionist system; nor does the Act itself, which imposes the same rates against goods from Germany and from France, establish a system which could by any stretch of imagination be called "scientific." But if the Act has had little practical effect at home, it has done great damage to British influence abroad. With the exception of our coal regulations, the restrictive measures imposed by Great Britain have been far less severe than foreign tariffs; but no one who is in touch with Continental opinion can fail to realise that the compromise with principle in the home of Free-trade has had, and is having, a profound psychological effect abroad. The most urgent necessity of the moment is freer interchange between the nations of Europe themselves and between Europe and the outside world, and this doctrine is the one which Great Britain alone can urge as a keynote of international economic relations. Yet this is the moment that we have chosen for abandoning so vital a principle in exchange for Mr Stanley Baldwin's masterpiece. A British Prime Minister who would put forward the maintenance of Free-trade and whole-hearted support of the League of Nations—so far, at all events, as the problems of the Old World are concerned—as the guiding principles of British International policy would at once introduce an element of stability into European politics, and make much easier the difficult task of reaching a real understanding with France, which is the key to the situation.

OUR INDEX NUMBER—A YEAR'S PRICES.

A FURTHER decline in wholesale prices during December brings our Index Number down to 4357, a decrease of 101 points in the month. A year ago the total stood at 5924, so that in the 12 months there has been a drop of 1567 points, or just over 26 per cent. As will be seen from the table below, the downward movement was only interrupted in the late summer, thanks principally to the vagaries of the cotton market:—

Nov. "....	956	685	1171	816	960	4588	208.6
Dec. "....	951	672	1117	774	943	4458	202.6
Dec., 1921....	921	636	1106	762	931	4357	198.0

So far as December is concerned, the principal declines have occurred in foodstuffs. The fall in cereals, including a sharp drop in rice, has only been partially offset by an advance in meat, while the reduction of 36 points in the group of subsidiary foodstuffs is entirely due to a heavy decline in the quotations for butter.

In the textile group changes were small in December, cotton and cotton yarn and cloth being a little lower, while hemp and jute were a trifle higher. In the minerals group pig-iron and steel rails were again lower, but tin continued its upward movement. In the miscellaneous section the only movements of any consequence were small declines in leather and tallow.

The following table, in which the July, 1914, indices are taken as 100, shows how each of the groups stands at the present time in relation to the pre-war level:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914....	100	100	100	100	100	100
Dec., 1918....	226	222	293	186	241	236
Dec., 1919....	249	250	396	247	263	287
March, 1920....	261	260	484	269	309	325
June, 1920....	261	263	415	278	281	305
Dec., 1920....	233	229	209	261	230	231
March, 1921....	209	206	167	216	203	198
June, 1921....	203	188	158	210	185	188
July, 1921....	202	200	156	201	186	186
Aug., 1921....	205	203	162	198	180	188
Sept., 1921....	193	195	204	189	178	192
Oct., 1921....	166	194	190	176	173	178
Nov., 1921....	165	190	181	167	170	174
Dec., 1921....	159	180	180	164	168	170

Thus while the general level is now only 70 per cent. above pre-war prices, primary foodstuffs and minerals are still nearer to the normal, but subsidiary food products, which include sugar, and textiles still lag behind on the downward path. A year ago, when the general level was 131 per cent. above the July, 1914, figure, textiles were the lowest group, while minerals were still near the maximum. These changes are accounted for to a considerable extent by the heavy decreases in iron and steel prices, and the upward movement on balance of cotton quotations. The table below shows the movements in these and in other principal commodities:—

	End of 1913.	End of 1918.	End of 1919.	End of 1920.	End of 1921.	Rise or Fall 1921.	% Change in 1921.
Cotton—Middling	7.14d	22.20d	30.75d	10.27d	11.81d	+ 1.54d	+ 15.0
Do 32's twist	10.3d	41.4d	55.9d	24.4d	18.4d	- 6.0d	- 24.6
Hemp—Manilla	22.9d	41.0d	48.0d	43.8d	43.8d	- 0.2d	- 0.5
Silk—Canton	12.6s	25.7s	48.6s	24.7s	33.8s	+ 9.1s	+ 39.5
Flax	4.32s	4.17s	4.23s	4.15s	4.11s	- 0.04s	- 1.0
Cleveland pig-iron, No. 3	50/6	95/	160/	225/	100/	- 125/	- 65.5
Steel rails	130/	217/6	350/	510/	190/	- 320/	- 79.9
Copper—Standard	84s	411s	411s	471s	466s	- 5s	- 1.0
Tin—Standard	4167s	4236s	4347s	4202s	4170s	- 37s	- 0.9
Lead—English	118s	457s	464s	425s	428s	+ 3s	+ 0.7
Tallow	34/	88/6	108/	58/	42/	- 16/	- 27.5
Petroleum	38s	164d	21d	27.4d	28.4d	+ 1d	+ 4.0
Wheat	31/	72/3	72/6	86/9	45/2	- 41/7	- 48.0

Tea (common)	5d	13d	13d	14d	14d	0d	0.0
Rice	26/3	26/3	26/3	26/3	26/3	0d	0.0

* Granulated. † Foreign lead. ‡ Broken and Fannings. (†) Pekoe.

Cotton prices did not show much fluctuation in the early part of the year. Middling American, which touched the lowest point of the year in February at 7.13d, soared to 15.71d, however, at the end of September, owing to unfavourable crop reports, but closes the year at 11.81d. The downward movement in pig-iron quotations was steepest in the first three months, after which there was a temporary check. In cereals, on the other hand, the decline has been almost unbroken. Sugar has fallen by 20 per cent., but is still nearly three times the pre-war quotation.

To show more clearly how present-day quotations of the individual commodities used in the calculations of the Index Number compare with those of the end of July, 1914, we append a list of the changes. With the exception of two, jute and rubber, all commodities show increases ranging from 14 per cent. in the case of tallow to 250 per cent. in the case of indigo:—

	%		%		%
Indigo.....	+ 250	Cotton yarn ..	+ 91	Lead	+ 37
Flax	+ 235	Barley	+ 84	Oilseeds	+ 34
Sugar	+ 234	Potatoes	+ 81	Coffee	+ 33
Crystals	+ 216	Tobacco	+ 79	Mutton	+ 33
Cotton (Egyptian)	+ 155	Timber	+ 78	British wheat ..	+ 31
Silk	+ 141	Cotton (Amer.) ..	+ 72	Tin	+ 30
Cotton cloth ..	+ 136	Tea	+ 70	Foreign wheat ..	+ 25
Petroleum	+ 126	Beef	+ 64	Wool	+ 20
Pork	+ 121	Hemp	+ 50	Butter	+ 18
Iron bars	+ 104	Leather	+ 50	Copper	+ 16
Pig-iron	+ 95	Flour	+ 48	Tallow	+ 14
Rice	+ 93	Steel rails	+ 46	Jute	+ 10
Coal	+ 93	Oats	+ 42	Rubber	- 59
		Oil	+ 38		

In examining this table considerations must be given to the fact that the comparison is made not with average pre-war quotations, but with the prices of a particular date. For instance, iron bars were at a particularly low figure in July, 1914, while wool was at a rather high level.

The increase of 70 per cent. in British prices over the pre-war level may be usefully compared with the foreign index numbers included in the latest issue of the League of Nations monthly bulletin. The figures indicate that prices have risen in the following ratios compared with the level in 1914:—

	Fold.		Fold.
Poland (Oct.)	115	Switzerland (Nov.)	1.77
Germany (Oct.)	125	Sweden (Oct.)	1.75
Italy (Oct.)	26	Canada (Sept.)	1.72
France (Sept.)	3.4	United Kingdom	1.7
Norway (Oct.)	2.9	Australia (Sept.)	1.6
Japan (Oct.)	2.2	U.S.A. (Oct.)	1.5
Denmark (Oct.)	1.9	S. Africa (Oct.)	1.4

The bulletin also shows that prices are rising in India and Japan, and are stationary or hardening in Switzerland and France. Elsewhere the movements are still in a downward direction.

THE AIRCRAFT MANUFACTURING COMPANY.

SIR W. B. PEAT, as liquidator, has recently issued an interim report on this business, which flourished so richly during the war, and collapsed with such disastrous results for the public within two years of the war's end. The unfortunate persons who bought and hold the company's securities will read the report with interest and anxiety. Some of them—the holders of the first and second preference shares—may at once dismiss all hope of getting back the money that they ventured, but from the provisional statement it is not clear whether the holders of the 7 per cent. notes can expect any refund or not. Before dealing with the details of the liquidator's statement, let us briefly reconstruct the history of this extraordinary bubble.

Founded in a small way by Mr Holt Thomas in the early days of aviation, the company grew rapidly, and on the outbreak of the war achieved a very remarkable prosperity. Enormous works were erected at Hendon; great activity prevailed; stocks were very large, and the total property of the concern—apart from its subsidiaries—cannot in the middle and later stages of the war have been of less value than £1,000,000. While development continued at this rapid pace at the centre, the company's tentacles were reaching out to embrace other smaller concerns elsewhere, Mr Holt Thomas, who was something of a Napoleon in business, conceiving and carrying out great financial schemes to complete a chain that would circle the whole industry of aviation. The preponderant

interest in the company was his, but he was good enough to allow the public a share in his prosperity by issuing two lots of preference shares and one lot of 7 per cent. notes, which were readily taken up. At some time after the Armistice it became apparent to the directors of the company that the prosperity was not likely to last. Aircraft were not wanted in peace time, and the subsidiary companies which Mr Thomas's genius had linked up to the central organisation were draining instead of supplying nourishment. And here came the real stroke of genius. Look, stock, and barrel, the ordinary and deferred shareholders, who controlled the company and understood better than anyone its true value, sold out to the Birmingham Small Arms Company for what is believed to have been a handsome figure, left the centre of the stage, and retired into the wings, never to re-emerge. The public who, largely on the reputation of the directors, had invested in the 7 per cent. notes and the preference shares were left to hold one end of the baby, while the B.S.A., who might have had a better judgment, retained a firm grasp of the other. From that day to this, so far as we know, Mr Thomas has never made a public statement of his position, or given any explanation to his old note and share holders. It is not surprising to learn now that the liquidator contemplates proceedings, which may result in establishing claims against past directors.

Dealing with the present state of the company's assets, Sir W. B. Peat makes it clear that little can be expected from its numerous subsidiaries, several of which have already followed in their parent's footsteps to an inglorious liquidation. The chief of them was Peter Hooker, Limited, which is believed to have been the bait that caught the fancy of the B.S.A. It is in liquidation, with a receiver in possession on behalf of the debenture-holders, and owing the Aircraft Company, apart from the loss incurred through the holding of its shares, a disputed sum of £47,000. One subsidiary, which manufactured seaplanes, has been sold for a fair sum already, but how the price realised compared with the original cost we do not know. Others are limping along with broken wings, and may ultimately come to market; but it is unlikely that the combined contribution of the subsidiaries still unsold will contribute materially to the relief of the Aircraft Manufacturing shareholders.

The main assets of the company lie in the plant and buildings at Hendon, which under present conditions are naturally very difficult to realise, and are not being pressed for sale. What they will fetch must for long remain in doubt, but they cannot possibly produce a figure which will cover the claims of all the interested parties. These parties, with the amounts for which they stood in November last, may be set out as follows:—

	£
Debenture-holders	537,725
Note-holders	270,416
Trade creditors	130,000
Preference shareholders	350,000
Other shareholders	52,500

This represents the position after payment of £200,000 to debenture-holders on account of principal, and the chief point of uncertainty is how far the assets at present unrealised will go towards repaying the note-holders or trade creditors if and when the debentures are completely met. Apparently a considerable sum may be expected from the refund of E.P.D., the total paid by the company during its existence amounting approximately to £200,000. Under present conditions the liquidator cannot estimate the surplus available after paying off the debentures, but we may surmise that unless there is a complete change in the engineering industry no one will be willing to pay a considerable figure for the plant and factories into which most of the capital was put. In any case, the liquidation must be a long process, and all the time interest is accumulating and increasing the debt.

On one point the liquidator's statement is extremely interesting, and full of possibilities. He has:—

"Investigated the past administration of the company, particularly in regard to the circumstances in which the 'A' preference, the 'B' preference shares, and the 'Short Term notes' were issued to the public, and the statements contained in the circulars offering these shares and notes for sale. Particular attention has been given to the omission in these circulars to refer to the debentures in issue at the dates when these shares and notes were offered for sale, and to the amounts of the bank overdrafts at such times, to the fact that debentures for £400,000 were issued the day

after the offer for sale of the Short Term notes, and to the heavy increase during the last eight months prior to the liquidation in the amount of the advances secured by the debentures."

This comment suggests that the finance of the company was, in the liquidator's opinion, open to criticism, and it will be interesting to see what are the final views of himself and his committee on the relation between the directors and the investing public which supplied them with capital.

One curious by-product arises in connection with an insurance company which had relations with the Aircraft Manufacturing, and shared directors with it. This company is the United General Commercial, which appealed to the public with a prospectus dated December, 1919. On the board of this company were Major-General Branker, vice-chairman of the Aircraft Manufacturing, and Mr A. E. Turner, described in the prospectus as "financial director of Aircraft Manufacturing Company, financial director of Peter Hboker, Limited, and director of May, Harden and May." The prospectus declared in big black letters that the company possessed a valuable asset in the personal and business connections of the directors, and a substantial and profitable income should accrue to it from these connections. The shares were issued to the public at 10s, and the last price we have been able to trace is 3s 6d paid in June last.

It would be interesting to learn what Major-General Branker and Mr A. E. Turner knew about the real financial position of the Aircraft Manufacturing Company and its subsidiaries, when they allowed their business connections to be put before the public as an inducement to subscribe for the shares of this insurance company, which had so serious a fall from the price of issue.

LATIN-AMERICAN NOTES.

(BY A CORRESPONDENT.)

ARGENTINA.—The intimation conveyed to all foreign legations in Argentina of the Government's special offer of facilities to purchase wheat, among other Argentine products, shows that the authorities do not mean to repeat their error of the autumn of 1920, when, through a miscalculation of the quantities available, the National Government were obliged to buy back large consignments of wheat awaiting shipment on account of some of the European Governments. For one thing, Argentina is handicapped by the fluctuating export duties in competition with the United States, Canada, and Australia, while another obstacle has been the persistent manner in which many shippers have held back for higher prices, considerably above the offers of other countries. No reliable statistics of the wheat situation have been obtainable until recently, when the first official estimates were published showing that, including the supplementary figures from the important wheat-growing district of Santa Fé, the amount of exportable balance of cereals is as follows:—Wheat, 1,261,000 tons; linseed, 151,000 tons; and maize, 2,028,000 tons. The action taken by the Federal Government has been prompted by the falling-off in the demand for Argentine wheat, and the exceptionally bright prospects of the new harvest. There is also the old-crop wheat, which exceeds by an immense amount the quantity on hand in any other exporting country. Local shippers have adversely criticised the action of their Government's interference with the freedom of the exports of the country, thus causing them to "miss their market." To prevent a glut in the stocks and the stranding of Argentina with unsold and unsaleable stocks of wheat is now the Government's chief concern.

MEXICO.—Among those having commercial and financial relations with Mexico, the opinion seems unanimous that no pronounced or abiding improvement in the economic affairs of that country is possible until diplomatic recognition of its present Government has been accorded. Nor does there appear to exist any sufficient reason why this should be longer withheld, since all accounts to hand show that a decided improvement has taken place in administration, that the Government is fulfilling, to the best of its ability, its financial obligations, and that so soon as economic affairs show further advancement a real settlement of the Republic's foreign indebtedness may be looked for. It is a matter of regret with some that the

Foreign Office should, in this matter, wait upon the action of Washington. The interests of the two are not identical. Ours are merely economic, while those of the United States are both economic and political. The reasons that debar Mexico's recognition in the adjoining State—if comprehensible—in no way apply to the United Kingdom; and it seems a pity to refuse diplomatic courtesy to a friendly country from a mere desire to be polite to America. A different policy was pursued in 1913, when, notwithstanding the disfavour shown at Washington, the British Minister, the late Sir Lionel E. G. Carden, was instructed to present his credentials to General Huerta, even after that ruler had abolished all pretence of constitutional government. On the other hand, the United States conferred recognition upon the Carranza administration when the United Kingdom refused it, and the consequences to the trade and commerce of this country were and are serious. In a matter of this kind the aim of the Government should be primarily to secure the large commercial interests of Great Britain in Mexico, and that is all that is asked. Certainly of late years the Mexican Administration has done nothing to forfeit the right to be placed upon the rôle of civilised States. This has been pointed out frequently of late at a number of meetings of companies interested in Mexico's transport, mining, and industrial development. It may be permissible in this connection to recall the words of Mr Asquith, in a speech delivered at the Mansion House banquet in November, 1913, when he declared that: "We are bound to deal with Mexico, as with any other Central or South American State, with whatever government is, at the time, the *de facto* government." It is understood that an early opportunity will be taken soon after the reassembling of Parliament again to raise the question of recognition for Mexico.

BOLIVIA.—Bolivia has been negotiating with American bankers for a \$25,000,000 loan, which, if granted, will be employed for the stabilisation of the Bolivian exchange, and the refunding of external and internal indebtedness. The finances of this Republic have not of late offered much evidence of improvement, and the Government has had to consider the advisability of proclaiming a moratorium, thus bringing itself into line with Cuba and Paraguay. Till now the financial record of the country has been without reproach. Economic progress has developed slowly but consistently, all foreign obligations having been regularly observed. In view of the undoubted richness of the country, and the fact that its many natural resources have been hardly touched, a favourable field for foreign investment would appear to exist. Hitherto France has been the banker of Bolivia, loans having been made in 1910 and 1913 upon moderate terms, secured upon export duties on minerals and rubber, railways, and—in the event of deficit—upon general revenues. In 1919 the external debt was £3,114,682, the internal debt £1,500,000, and the floating debt £750,000; or a total of £5,364,682. The French loans were liquidated by means of an internal loan for 11,000,000 bolivianos, placed through three principal banks of the country—the Banco de la Nación, the Banco Nacional, and the Banco Mercantil. At the date fixed for liquidation the total of the debt amounted to 43,500,000f, the original having been 56,119,392f; but at the time of the liquidation the Bolivian Government still held a credit in France with the Crédit Mobilier of 12,382,241f, which, with accrued interest, was placed to the country's credit, thereby leaving a balance of some 43,500,000f. At the time that the loans were called the exchange situation was favourable. This has altered, commercial difficulties have accumulated, and the Government is seeking in the United States the financial assistance which France is now no longer enabled to offer.

TWO YEARS' RAND MINING DIVIDENDS.

(BY OUR MINING CORRESPONDENT.)

EARLY in the second half of 1921 there appeared every indication that the gold mining companies of the Transvaal would enjoy an even more prosperous six months than they had done in the corresponding period of 1920. Under the arrangement arrived at between the Chamber of Mines and the Miners' Unions, the first instalment of a reduction in the wages of white employees had become effective; the benefit of the decline in charges for stores, &c., was beginning to be felt; the gold premium had

recovered to something approaching the level of the preceding year; and an amendment of the mining regulations was under consideration which would enable a greatly increased degree of efficiency to be obtained from the native workers. Unfortunately for those interested, the bright promise of the morning, so to speak, has not been fulfilled. The amendment just referred to was passed, while schedules recently published show an appreciable decline in the charges for stores and materials. Sufficient time has, however, scarcely elapsed for savings under the head of native labour to make themselves apparent, while the economies in other directions have not gone far towards compensating for the depreciation in the currency price of gold, which just before the end of 1921 touched a low level for the year. The tendency in this respect is illustrated by the appended contrast of the gross valuation adopted by the Rand companies for their produce in respect of the past six months as compared with the corresponding periods of 1920:—

	1920.		1921.	
	s	d	s	d
July.....	105	0	112	6
August.....	112	6	111	6
September.....	115	0	110	0
October.....	117	6	103	0
November.....	117	6	102	0
December.....	119	0	95	6

The quotation for the precious metal being recently under 98s per fine oz, it was a foregone conclusion that the basis for December would be several shillings below that of November. A very drastic reduction in working costs is required to counterbalance a drop of 20s in the price of gold. So serious has the position of the industry become that, as recently mentioned in these columns, fresh proposals have been brought forward. At the moment the diamond industry of South Africa is practically eclipsed, and gold mining under a cloud. The dispute at the Witbank Colliery has every appearance of developing into a general mining strike. The extent to which the Union depends upon the gold mines is, however, now being emphasised, and it is not too much to expect that some method will be devised for placing the industry upon an economic footing. In the meantime, the discomforts of the situation are necessarily reflected in the earnings of the various undertakings, as will be seen from the appended schedule of the dividends for the first and second periods of 1921, and for the whole of the year in contrast with those in respect of 1920:—

Company.	June, 1921.	Dec., 1921.	Total, 1920.	Total, 1921.

* Tax free.

Above table does not include declarations made at dates other than June and December.

In several cases—notably the Government Areas and the Witwatersrand Gold—the distributions for the concluding portion of the current year are the same as those of 12 months ago, but only one company now announces a higher rate—the Modder "B," 55 per cent., as against 50 per cent., making the total for the year 95 per cent. instead of 82½ per cent. As the result of making an interim declaration at an increased rate the Modder Deep also pays somewhat more; likewise the two concerns named at the commencement of this paragraph, and the City Deep. Little importance attaches to the jump shown by the rate of the New Primrose, which is in its "declining days." The principal examples of decrease are supplied by the Brakpan, Crown Mines, Meyer and Charlton, New Modder, and Rose Deep undertakings.

The absence of any return for the past half-year on the part of the Anglo-American arises from that corporation's large participation in the Consolidated Diamond Mines of South-West Africa. The reduction in the rate of the Rand Mines fully reflects the shrinkages in the rates declared by its subsidiaries; indeed, the opinion is held in some quarters that the directors of this group have been ultra-conservative, whereas those of the Johannesburg Consolidated group adopted a somewhat liberal policy. Heavy special appropriations are largely responsible for the cuts in the dividends of Brakpan and Springs companies (C.M.S. group)—£228,500 out of a profit of £676,000 in the one instance, and £131,501 out of £407,000 in the other. The distributions of the Transvaal mining companies for 1921 represent £7,164,000, a decrease of £1,000,000 compared with the aggregate in respect of the preceding year, which scored a recovery of £2,100,000 upon the result of 1919.

LAND AND PROPERTY IN 1921.

THE adverse conditions which affected the country generally during 1921 were in evidence in nearly every section of the property market. In the early part of the year property continued to be offered in considerable volume, but owing to the unwillingness of owners to recognise changing circumstances, and accept prices more in accordance with the general fall in values, sales were difficult to effect, and it soon became obvious that the year would be one in which dealings would be limited to those who were compelled to test prices in the open market.

There is one section, however, of the estate market, Messrs Hampton and Sons point out in their annual review, in which business is good, and the writers add that "it may be that cottages and the smaller class of villas in and around industrial districts will more or less maintain their prices, as the demand for these little places for occupation is still in excess of the supply; but for every other class of property—whether residential or commercial—there is more on offer than can be readily absorbed, with the natural result that only those properties which are placed in the market at reasonably competitive figures change hands."

According to the official figures compiled by the *Estate Exchange*, recorded sales of property have fallen from £18½ millions for 1920 to well under £11 millions for 1921. These figures are grouped each year under three headings—(1) Sales of property during the year at the headquarters of the property market; (2) auction sales in other places, which are registered with the Estate Exchange; and (3) sales by private treaty of which the parties interested consent to publish details. As has been pointed out before these figures give but a limited view of the statistical picture, for while some auctioneers are inclined to preserve a discreet silence as to their sales, others, on the other hand, may possibly include in sales properties which were merely submitted to the public, but bought in. In private sales the position is even more uncertain, there being so many interests at work which often prevent the sale price from leaking out. In the first table we

show a comparative summary of sales from 1912, as follows:—

COMPARATIVE SUMMARY OF SALES.
(000's omitted.)

	1912.	1913.	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.
Mart	2,554	2,346	1,866	804	929	1,546	2,299	6,251	5,855	3,030
Other sales	4,698	4,039	3,462	1,824	2,917	5,546	7,149	9,234	7,581	3,378
Private	1,837	2,189	1,357	1,942	1,232	1,435	1,935	6,057	5,04	4,451
	9,089	8,574	6,685	3,570	5,108	8,527	11,382	21,542	18,276	10,859

It will be noticed how the figures reflect the wild career of the trade boom, while it is perhaps a matter for surprise that the past year's figures are so close to those for 1912. Sales began to decline, it will be noticed, in 1913. This was the year when a pronounced fall in property values was noticed, which continued until the end of 1915. Agricultural land, however, came into request fairly early in 1916, and the land boom continued until 1920. Figures for 1917 included sales of enemy bank and other property, while house property came into demand early in 1919.

The monthly and quarterly figures for the past year are as follows:—

1921.	The Mart and Winchester House.	London and Country.	Private Contract.	Monthly Total.	Quarterly Total.
January	140,463	63,098	109,950	313,511	
February	189,738	80,681	101,350	371,769	
March	225,905	214,478	143,265	583,648	
First quarter	556,106	358,257	354,565	1,268,928	
April	166,035	166,720	195,750	528,505	
May	420,155	646,179	921,150	1,987,484	
June	512,588	355,367	863,370	1,731,325

October	439,863	433,396	321,800	1,195,059	
November	309,812	162,765	299,920	772,497	
December	181,921	146,459	361,287	689,667	
Fourth quarter	931,596	742,620	983,007	2,657,223	
Grand total					10,858,946

Among the largest estates sold were 210 acres in Hackney, which realised £400,000, and land and property in and around Reigate Town, which brought in £203,000. City properties included Standard Life Assurance offices in King William street, with an area of 3,200 feet, for about £300,000, while in connection with City land values, it is worthy of record that the site of 38 Cornhill, with an area of 460 feet, was let at a sum equal to £5 8s per foot per annum.

The demand for agricultural land continues, though buyers are exercising more discretion in purchasing, and indifferent farm land is showing signs of falling in value, although small farms, no doubt sought for more on account of residential convenience than commercial propositions, command good prices.

In town property, the outstanding feature has been the demand for flats and maisonettes. This is a significant sign of the domestic service problem, as, in striking contrast, buyers of large town houses are difficult to find, although medium-sized two-story residences are in good demand. Messrs Hampton have some pertinent remarks to make on the type of house once familiarly known as "the town mansion." In pointing out the difficulty of finding purchasers, they state that "many situate in, or East of, Park lane and Grosvenor place, where the restrictive covenants permit, have been secured for club and business premises. There is no doubt that as business premises tend to push Westward, so clubs tend toward the same direction. If a licence could be obtained, many a large, unwieldy house would be converted, and so become income-producing, instead of standing empty and becoming more and more dilapidated."

Industrial and financial events of the past year have made their imprint upon the almost absurd competition

for business premises which took place during the years of the trade boom period, and though it may be still difficult to obtain premises in important thoroughfares, prices of office accommodation are inclined to lower levels in many districts.

Messrs Hampton are especially interesting in their observations on factory and warehouse properties, although these, it should be remembered, apply mostly to factory premises in the South of England only. They say: "It is common knowledge that during the two years immediately following the cessation of hostilities fabulous sums were paid for both factory and warehouse properties. Many of these premises have been placed upon the market and prices accepted which are about half what the owners gave for them but a few months before." And it is not improbable that, judging from the values placed upon factories in the North of England by company promoters, these remarks may to some extent be true of other districts. Building sites have been in slightly greater demand, but the high cost of building still militates against any approach to a revival of 1911-12 figures.

Property for investment purposes remains in a state of depression, although demands are occasionally made for large City and West-End freeholds. But occupied property of the cottage and villa type is practically impossible to sell, except on terms which bear no relation to post-war factors. This, of course, is mainly on account of the Government's restrictions on rents. Ground rents with a not too far distant reversion to the property are saleable on a basis approximating to a 6 per cent. yield.

Business Notes.

Bankers' Clearings.—The long record of annual increases in the totals of the London Bankers' Clearing House has ended, and the figures for 1921, published with commendable promptitude on Monday last, show a drop not only in the total, but in each of the three branches. The figures read as follows:—

	1920.	1921.	Decrease.
Grand total	£39,018,903,000	£34,930,559,000	4,088,344,000
Town clearing	£32,852,933,000	£30,268,214,000	2,584,719,000
Metropolitan clearing	£2,093,750,000	£1,660,166,000	433,584,000
Country Cheque clearing	£4,072,220,000	£3,002,179,000	1,070,041,000

The decline in the figures is to be attributed in the first place to worldwide trade depression, while other causes have been the fall in prices, the greatly reduced number and amount of new issues, and the stagnation of Stock Exchange business. On the other hand, there has been considerable business passing in foreign exchange, and the repeated maturing and renewal of Treasury bills has also called for a large turnover of money, while the issue of Treasury bonds, especially during the closing months of the year, has also made itself felt. Of the total decline, 65.2 per cent. occurred in the first six months, but it must be borne in mind that the large increase of 1920 over 1919 was mainly in the first half of the year. In studying the figures it is well to remember that evidence of the trade of the country is, in the Town Clearing, obscured by the large financial transactions of the Money Market passing through that clearing, and that much more reliable data as to the course of trade are furnished by the other two clearings, the Metropolitan being indicative of the retail business of the Metropolis, and the Country Cheque Clearing of the general trade of the country. Decreases in the Metropolitan Clearing amounted to 18.8 per cent. in the first quarter, 22.8 per cent. in the second, 21.9 per cent. in the third, and 19.2 per cent. in the fourth. In the Country Cheque Clearing the declines were 20.5, 27.7, 31.7, and 25.3 per cent. respectively. Eight of the provincial clearings showed declines ranging from 34.9 per cent. in the case of Leeds to 48.8 per cent. in the case of Manchester, while Bristol showed a decrease of only 16.2 per cent. Hull, which opened on February 1, 1921, had a total of £50,691,976 for the 11 months. The turnover of the New York Clearing House for the 12 months ended

November 30, 1921, taking the dollar at 4s, was approximately £39,941,628,000, showing a decrease of £8,953,438,000, as compared with the previous year.

Stock Exchange Values.—The December market valuation of Stock Exchange securities compiled by the *Bankers' Magazine* shows that the recovery which took place last month was sufficient to cause the total to show a slight gain as compared with that of December, 1920. It is pointed out that, so far as the 12 months is concerned, the appreciation, although slight, is noteworthy, because it has occurred in spite of the fact that American railroad securities show a decline for the year of nearly £60 millions. The following table shows the monthly movements of the year:—

MARKET VALUES OF 387 REPRESENTATIVE SECURITIES.
(Million £.)

End of December, 1920....	2,320	End of June, 1921....	2,291
" January, 1921....	2,336	" July, "....	2,345
" February, "....	2,294	" September, "....	2,356
" March, "....	2,289	" October, "....	2,288
" April, "....	2,285	" November, "....	2,299
" May, "....	2,308	" December, "....	2,332

The April total was the lowest touched since 1907, when the present valuation was started. On the whole, the variations are astonishingly small for a year of such big economic changes. The steadiness of the average is, however, the net result of big movements in opposite directions. As compared with December, 1920, British Government securities have increased in value by 12.9 per cent., Home Railway debentures by 7.3 per cent., Home Corporation stocks by 11.2 per cent., British bank shares by 3.6 per cent., colonial bank shares by 9.6 per cent., and brewery stocks by 14.1 per cent. On the other hand, there are declines in iron, coal, and steel shares of 25.5 per cent., American railway shares of 17.4 per cent., foreign railways of 13.3 per cent., South African mines of 13.4 per cent., and miscellaneous mining shares of 25.6 per cent. We are glad to see that a revision of the list of selected stocks, usually made every ten years, but postponed owing to the war, is now to be made, and that next month a new set of values will be presented which will include war stocks and some of the speculative descriptions which have come into favour since the last valuation was made.

The First Bank Dividends.—For the reasons given in our article on Money in 1921, in last week's issue, it was not anticipated that the dividends of the joint stock banks for 1921 would show any appreciable change in comparison with those for 1920, and these expectations prove to have been correct, so far as the banks are concerned, as may be seen from the table below:—

Name of Bank.	Amount of Share.	Rate % per Annum.	Whole Year.		Price, Jan. 6, 1921.	Price, Jan. 5, 1922.	Present Yield.
			1920.	1921.			
Barclays "A"	4	10	10	14	6 1/2	6 1/2	5 16 0
Do "B"	1	14	14	14	2 1/2	2 1/2	6 1 3
Lancashire and Yorkshire	20	10	18	18	18	18	5 18 0

National Discount	25	5	18 1/2	22 1/2	16 1/2	18 1/2	9 12 7
Union Discount	10	5	18 1/2	22 1/2	16 1/2	18 1/2	9 12 7

* Includes bonus of 2%, free of tax. (a) Includes bonus of 3%, free of tax.

Each of the three discount companies raises its distribution, Alexanders and the Union paying the bonus, as usual, free of tax. Alexanders, after placing £50,000 to reserve, propose to capitalise £50,000 of undivided profits, and distribute 10,000 ordinary shares £5 paid to the ordinary shareholders. The Lancashire and Yorkshire reserve fund is credited with £106,560, as against £25,000 a year ago, which raises it to £1,006,560, the same as the paid-up capital. The London Joint City and Midland places £750,000 to reserve for future contingencies, and in £300,000 to bank premises redemption fund, and increases the carry forward by £36,000. A year ago £1,200,000 was required for investment depreciation, and £250,000 went to premises fund. The Manchester and

Liverpool profits have fallen from £561,800 to £539,300, but thanks to the much larger amount brought forward, £684,000 is available for distribution, as against £611,800. The reserve fund is credited with £100,000, as against nothing a year ago, and £28,000 less is carried forward. The profits of Williams Deacon's amounted to £365,200, as against £463,700 for the previous year. Reserve appropriations a year ago totalled £225,000. This year the amount is £125,000, nothing being put to investment depreciation, but it is stated that investments stand below the market price at December 31st.

National Savings Certificates.—An official announcement has been made that from April 1st next the purchase price of National Savings Certificates will be raised from 15s 6d to 16s each for certificates encashable for £1 in five years, and £1 6s in ten years. The change in price will not affect the privilege of holders of certificates purchased at 15s 6d on or before March 31st to extend the currency of their holdings to the ten-year limit. The sale of these certificates, under the original name of War Savings Certificates, began early in 1916. The announcement of a lifting of the purchase price should serve to emphasise the favourable nature of the terms now in force, and give a decided fillip to sales in the course of the next three months.

The New Chilean Loan.—The success of the Chilean loan for £1,657,500 issued through Messrs Rothschild on Thursday was a foregone conclusion, and it is not surprising that it was largely over-subscribed. The terms were very attractive—interest at 7 1/2 per cent., an issue price of 95, and redemption at par by half-yearly drawings from 1923 to 1956. The money, we believe, will remain in England to obviate the necessity of remittances from Chile at the present time. Alone among the Spanish-American States, Chile has never defaulted on her External Debt, not even during the disastrous Civil War of 1891. Presidential and Ministerial responsibility is specially secured by the Constitution, and there is a stringent system of financial control. The External Debt now amounts to some £30,000,000, and consists of 17 separate loans issued from 1885 onwards. For a population of about four millions this, according to present-day standards, is by no means excessive, especially as taxation is not heavy, and the value of the State property in lands, forests, and railways is many times more than the whole capital of the Debt.

The Salvador Railway.—This line, which for the eight years preceding the war was very prosperous, recovered some of its prosperity in 1919-20; during the last 18 months it has been unfortunate, but there are signs that an improvement is not far off. During the year ending July 31, 1921, the receipts fell to £199,501, against £236,453 for 1919-20; the expenses rose to £174,936, against £143,199. Passenger traffic increased during the last half of 1920, but then declined owing to the general economic depression; goods tonnage declined during the year over 70 per cent., especially in sugar and rice; more coffee was shipped at Acajutla, but part was from the previous crop. The coffee crop was poor, and the depression caused resort to other forms of carriage, notably by motor lorries to the port of La Libertad, which the Government is making great efforts to develop. Import traffic, of course, fell off also, and the total receipts

or the 26 weeks of the current year are only £56,039, about two-thirds of those for the corresponding period of 1920. On the other hand, this year's coffee crop is promising; recovery in those countries, as the Report notes, is usually rapid, and if the crop proves good, passenger traffic and upward as well as downward freight traffic should soon revive. Moreover, the arrears of the State subsidy, amounting to £44,000, will be met by the issue of Government bonds secured on the Customs revenue under the settlement just effected through an American financial syndicate, and accepted by the external bondholders just before Christmas. The deferred interest certificates issued in part payment of the mortgage debenture interest since 1915 are being converted under the scheme of last summer into one denomination maturing in 1931, and bearing interest at 7 per cent. (instead of 5 per cent.) from February 15th next. Even the diminished revenue of last year is nearly double the amount needed for the service of these and of the prior lien bonds.

Dutch Loan in New York.—The London office of the Guaranty Trust Company of New York states that a syndicate, headed by the company, offered in New York, on Wednesday, a 6 per cent. loan for \$40 millions for the Government of the Dutch East Indies. The bonds, which are direct obligations of the Government of the Dutch East Indies, are redeemable in the years 1932-1947 by means of a sinking fund, beginning in 1932. It is stated that this is the first dollar loan ever made by the Dutch Government or any of its dependencies.

The Chartered Report.—All who are interested in the fortunes of the British South Africa Company should study carefully the report for the year ended March 31, 1920, which has just been issued. They will find it no mean task, for the report embraces 100 pages, and it is doubtful if they will derive from its perusal any cheerfulness as to financial prospects. Stock market opinion apparently failed to do so, for since the publication of the report Chartered shares have weakened a trifle. The document contains a series of appendices, among which are the full text of the report of the Judicial Committee of the Privy Council on the ownership of unalienated lands in Southern Rhodesia, and the report of the Cave Commission, which are thus rendered available in convenient form for the study of shareholders. These documents were discussed in the *Economist* at the times when they were published, and on the whole the directors do not add much to public knowledge. They find the Cave award of £4,893,467 against a claim of £7,638,227 "not wholly unsatisfactory," but regard the disallowance of annual interest on various items "profoundly disappointing." The delay in issuing the present report and the postponement of the annual meeting are due to the necessity for readjusting the balance-sheet in the light of the Cave award, and the rapid political developments in Rhodesia, especially with regard to the claim for the establishment of Responsible Government in Southern Rhodesia, on which a Government Committee has issued a first report, and which forms "the subject of constant confidential communication with the Secretary of State." With regard to that report, the directors say: "The board can say no more..... than that in their view the institution of a system of local Responsible Government in Southern Rhodesia framed generally on the lines of the report, and unaccompanied by a prompt and full re-imbursement to the company by the Crown of the whole amount of the Cave award, would be altogether inconsistent not only with that generous treatment which the company is entitled to expect, having regard to its public services, to which no one has borne more eloquent testimony than Lord Buxton and Mr. Churchill, but even with the company's bare legal rights." A Southern Rhodesia deputation is now in this country, and shareholders must restrain their thirst for news while the political future is being worked out. The political sections of the report overshadow the financial and commercial interest. But it will be noticed that the balance-sheet has been readjusted in view of the Cave award. Explanations of the readjustments occupy nearly three pages. But it may be noticed that interest accrued on the Cave award from March 31, 1918,

to March 31, 1920, has, with obvious wisdom, been placed to a suspense account. The year under review saw a deficit of £90,481 on administrative account in Northern Rhodesia, as compared with a deficit of £47,071 for the previous year, and the administrative accounts for Southern Rhodesia a deficit of £32,223, as compared with a surplus of £100,000 in the previous year. This deficit, it is stated, "has been added to the company's claim against the Crown, and the company will be entitled to repayment thereof in the manner determined by the Judicial Committee of the Privy Council." The commercial accounts for the year show an excess of revenue over expenditure of £166,898, as compared with £229,490 in the previous year. The decline is partly due to the fact that quit, lease, and other rents in Southern Rhodesia, previously included as revenue, were applied to reduction of past administrative deficits. Also no dividend was received on holdings in the Rhodesia Railways Trust, Limited, as compared with £51,607 in the previous year.

British American Tobacco.—The meteoric progress of the British-American Tobacco Company, Limited, since 1915 has, according to the accounts just published for the year ended September 30, 1921, received a check, and profits are recorded at £4,323,481, as compared with £4,879,177 for 1920. In the tabular statement of past profits which we give below it will be observed that £3,842,493 of profits were absorbed in paying an ordinary dividend of 24 per cent., while last year it needed but £3,745,492 to pay a dividend of 30 per cent., although the ordinary share capital was recorded at £16,002,523 at September 30, 1920, as compared with the slightly increased amount of £16,015,645 at September 30, 1921. But it should be remembered that in 1919 ordinary share capital stood at £8,501,911, and it is probable that the process of capital ranking for dividend was gradual.

For 1916 and 1917 profits were shown subject to excess profits duty, and for the past four years after providing for payments of this duty, as well as income-tax and corporation profits tax. In the accounts in front of us total assets have increased by over half a million to £33,622,495. Advances to associated companies have been reduced from over 7 millions to just over 5½ millions, but investments in associated companies have been increased by £398,000 to roughly 15½ millions. The balance-sheet will be found fully analysed in another column.

London Electricity Supply.—A report has just been issued by the Electricity Commissioners on the results of the inquiry held last summer concerning the unification of Greater London's electricity supply. The main proposal is to set up a joint authority for London and the adjoining counties—Essex, Herts, Kent, Surrey, and Bucks. The report accepts the technical scheme agreed upon previously by the London County Council, the borough councils, and representatives of most of the supply companies. This scheme provides for an immediate linking up of certain existing generating stations, whereby it is hoped greater economy, combined with greater efficiency, will be assured. Nine existing stations, called "group" stations, would be retained, and would be extended as required—some new generating plant has been already authorised by the Commissioners—whilst other stations would be gradually closed down. It is estimated that the total demand for the district covered by the Joint Authority would be 465,000 kw in 1925-26, and 660,200 kw in 1930-31. These figures do not include railway electrification. Two former schemes, one proposed by the London County Council, and involving an expenditure of £9,750,000, and another involving an expenditure of £23,855,000, are rejected by the Com-

THE REVENUE.

I.—An Account of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1922, as compared with the corresponding periods of the preceding Year.

	Quarter from October 1 to December 31, 1921, compared with the corresponding Quarter of the preceding Year.				Period from April 1 to December 31, 1921, compared with the corresponding period of the preceding Year.			
	Quarter ending Dec. 31, 1921.	Quarter ending Dec. 31, 1920.	Increase.	Decrease.	Period ending Dec. 31, 1921.	Period ending Dec. 31, 1920.	Increase.	Decrease.

Treasury, December 31, 1921.

missioners; and in place of these it is proposed that the additional 200,000 kw required, over and above that provided by the existing stations when extended, should be supplied by a new "capital" station or stations. It is estimated that this will mean an annual saving of £1,000,000 per annum in the cost of electricity delivered. In regard to the financial aspects of the scheme, the group stations would probably be vested in the Joint Authority, and the present distributors would remain distributors; but an objectionable factor in the proposal is that the supply companies may be bought out in 1931, and since these companies are by no means sure that the purchase price would be an equitable one, their commitments under capital expenditure for developments must be necessarily limited. The right of purchase which originally belonged to the local authority is now vested in the London County Council, and it is agreed that this right should be transferred to the Joint Authority. Since the Electricity Act of 1919 contains no provision for the financing of joint authorities, the proposed authority, as matters stand at present, has no direct borrowing powers. It is stated in the report, however, that the associated companies, who are vesting their stations in the Joint Authority under a deferred payment arrangement, will advance the sum of £1,200,000, whilst the London County Council and the local authorities concerned will assist with their municipal credit. The arrangement is not altogether clear, especially in view of a letter to *The Times* from the chairman of the Joint Committee of Companies, in which it is pointed out that the financial proposals of the companies were contingent on the financial control of the Joint Authority's work remaining in the hands of members representing the body which provided the funds. There are naturally many details to settle, and in due course the Commissioners will draft an order embodying their decisions, and a further inquiry will be held under the terms of the Electricity Act of 1919.

Japanese Trade and Finance.—Cabled advices from Tokyo state that general business conditions obtaining there towards the end of the year were rather dull. The cotton yarn market displayed a slightly better tone, while the Stock Exchange and the rice market both remained quiet, but all three markets closed the year with expectations of better things in the New Year. Fresh buying orders improved the tone of the silk market. After the middle of December large Exchequer payments served to produce monetary market ease, and towards the end of the year large remittances to the country, and a strong demand for money for end-of-the-year settlements, caused stringency. The market had to borrow heavily from the Bank of Japan, and the rate for short loans rose to 12 per cent. per annum. When the turn of the year was reached monetary conditions became quieter. At December 30th the note issue of the Bank of Japan was 1,559 million yen, against 1,458 million yen a year earlier, and discounts and advances 393 million yen against 265 millions. Imports in 1921, up to December 25th, were 1,570 million yen, and exports 1,220 millions, as compared with 2,172 millions and 2,098 millions respectively in 1920.

Indian Cattle Exports.—In a letter from our Bombay correspondent in the *Economist* of October 1st last (p. 511) it was stated that the existing scarcity and high prices of meat were in the main attributable to the huge exports of cattle to Africa and S. America during the war for breeding purposes. The Department of Revenue and Agriculture at Delhi points out to us that this is a misstatement, and supplies us with the following figures:—

	Exports of Living Animals.	
	Cattle.	Sheep and Goats.
1912-13	30,188	189,290
1913-14	29,900	201,002
1914-15	17,708	123,419
1915-16	14,241	129,806
1916-17	14,681	149,387
1917-18	9,977	119,813
1918-19	9,951	95,053
1919-20	16,685	90,099

By far the greater proportion of these exports went to Ceylon.

THE Right Hon. H. H. Asquith will address a meeting of business men in the Great Hall of the Cannon Street Hotel, on Thursday, January 19th, at 2.30 p.m. The meeting will be held under the auspices of the National Association of Merchants and Manufacturers, and Sir Hugh Bell will preside.

At a meeting of the Royal Colonial Institute at the Edward VII. Rooms, Hotel Victoria, Northumberland avenue, on Tuesday, January 10th, at 8.30 p.m., a paper on "The Birth of the Overseas Empire and its Development" (with lantern illustrations) will be read by the Right Hon. Lord Morris, K.C.M.G., LL.D. The Hon. Sir Edgar Bowring (High Commissioner for Newfoundland) will preside.

Oversea Correspondence.

UNITED STATES.—HEAVY NEW ISSUES—NEW LOANS BY DENMARK AND THE C.P.R.—FOREIGN LOAN MATURITIES.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 23.

New financing for both domestic and foreign account is being undertaken here on an extensive scale. There has been a veritable flood of offerings of new securities in this market during the past week, four different issues alone aggregating about \$100,000,000, and many more are likely to be brought out in the near future, provided money and investment conditions remain favourable. It was expected that a great deal of financing would be done, but Wall Street did not look for such heavy offerings before the turn of the year. One explanation is that many corporations have been borrowers from the banks, and the latter, desiring to make a good exhibit at the end of this year, have urged new financing at this time. Another theory advanced is that the usual January reinvestment demand is being anticipated by many interests, who decided to enter the market now for new capital in order to avoid the rush next month. Although investment demand is still vigorous, and the new securities are being readily absorbed, it is conceivable that the market may soon be over-supplied if the present pace is continued. The new offerings have already begun to divert interest from existing bonds; substantial declines have occurred this week in many of the latter, including both Government war obligations and corporate issues, owing to sales by holders who wish to reinvest in the new offerings.

One of the largest of recent offerings, and one that attracted unusual interest, was the \$25,000,000 Canadian Pacific Railway Company 4 per cent. consolidated debenture stock, which a banking syndicate, headed by the National City Company and the Guaranty Company, offered to investors at 78 and interest to yield 5.13 per cent. The offering, which met with a very favourable reception, was the first block of that stock to be floated in the United States. The issue is perpetual, with interest payable in New York City in gold. The bankers point out that the stock is a first charge upon the entire undertaking, railways, works, rolling stock, and property of the company, excepting lands received by way of subsidy, subject only to operating expenses and charges on securities issued prior to 1889, and totalling \$38,651,724.

Another big issue was the \$30,000,000 Kingdom of Denmark 20-year 6 per cent. external gold bonds offered for public subscription at 94½ and interest. The bonds are callable only as a whole at 105, on any interest date prior to maturity, on 60 days' notice; they are the direct obligations of the Kingdom of Denmark, which agrees that, in the event of future issues being made, the service of this loan shall be secured equally with such subsequent loans. A particularly interesting and significant feature is that these bonds are being offered at a price to yield only about 6½ per cent. to maturity. That is the lowest return offered to investors here on any new foreign Government issue for some time past. Heretofore it has been necessary to offer such new securities at prices yielding nearer 8 per cent., in order to attract investment capital. The

comparatively low rate on the Danish issue has been made possible by the decidedly easier money situation now prevailing in this country.

Foreign Government loans, payable in the United States during 1922, are comparatively small in volume, the total of such issues placed exclusively in this country amounting, according to the *Wall Street Journal*, to \$128,500,000. In addition, Canada has a five-year 5½ per cent. loan of \$194,870,000, due December 21, 1922. That was the Canadian Victory Loan, which was floated partly in Canada and partly in the United States. As it was exchangeable for previous war loans, it is uncertain just what portion is still outstanding in this country. The due date of foreign loans payable in the United States, and maturing next year, their amounts and rate of interest, are given below:—

Due.		Rate.	Amount
Jan. 1	Province of Ontario	5 ..	3,000,000
April 1	Province of Manitoba	5 ..	2,250,000
April 15	Province of Ontario	5½ ..	3,000,000
May 1	Province of Ontario	6 ..	1,000,000
May 15	City of Rio de Janeiro	5½ ..	1,000,000
May 28	Province of New Brunswick	5 ..	4,000,000
Aug. 1	Province of Ontario	4 ..	10,000,000
Aug. 1	Philippine one-year certificates ..	5 ..	1,500,000
Aug. 1	Province of Alberta	5 ..	101,620,000
Nov. 1	United Kingdom three-yr. notes ..	5½ ..	194,870,000
Dec. 1	Canadian Victory Loan five-year ..	5 ..	1,000,000
Dec. 1	Province of Alberta	5 ..	130,000
Dec. 1	Republic of Panama gold	5 ..	130,000

Total foreign maturities in 1922 323,370,000

Other important offerings of new securities within the past few days include \$12,753,000 Louisville and Nashville Railroad Company first and refunding mortgage 5½ per cent. gold bonds, series A, dated August 1, 1921, and due April 1, 2003. These bonds, which are redeemable as a whole, but not in part, at the option of the company, on October 1, 1936, or on any interest date thereafter, at 102 per cent., and accrued interest, were offered at 101 and interest, to yield about 5.45 per cent. In the industrial group the largest new offering was \$30,000,000 American Sugar Refining Company 15-year 6 per cent. gold bonds, which were priced to investors at 98½, to yield 6.15 per cent.—a new low return for that class of industrial bonds. The total of all offerings this week approximated \$148,000,000.

FRANCE.—BUDGET PASSED—CAPITAL ISSUES—THE RENTE MARKET—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, January 3.

By the ingenious device of stopping the clocks in the Chamber and the Senate at 11.45 p.m. on the last day of the year, the Budget for 1922 was finally passed through both Houses before the New Year dawned. As a matter of fact, however, it was not until between 10 and 11 o'clock on Sunday morning that the last formalities were accomplished, and the Senators and Deputies, after sitting consecutively for two days and two nights, were able to complete their work. The concrete result of this feat of endurance is that the Budget Act for 1922 came into operation, for the first time in the case of a Budget for many years, with the beginning of the normal financial year on January 1st. More important still, perhaps, is the cogent fact that the method adopted this year will save an enormous amount of both expense and parliamentary time, as it will now be unnecessary to ask Parliament for any *douzièmes provisoires*, or monthly Votes on Account. Last year the Budget Act did not come into operation until August 1st, thereby involving Votes on Account for seven months.

The amendments made by the Senate concerned chiefly the credits for Syria, which the Senate proposed to reduce by 50,000,000, and the reduction of the national civil service by 50,000 officials during 1922. As to the first matter, M. Briand insisted that unless the credit for 50,000,000, which was required to pay the cost of the civil administration of Syria, were granted, General Gouraud, the French High Commissioner there (who is now in this country), would be unable to return to his post, in view of what would amount to an attack on his authority. In spite of a bitter Socialist attack on General

Gouraud, the Chamber insisted on the credit being maintained. To the Chamber's proposal that the number of civil servants should be reduced by a round 50,000, the Senate proposed that the reduction should take the form of a "cut" of 10 per cent. in the number of employees of each department of the public service. This the Chamber also refused to accept, and ultimately the Senate gave way and approved the Budget Bill as it stood.

Figures are now available showing that during the three years January 1, 1919, to December 31, 1921, the French money market has absorbed about 97,000,000,000 in new issues, of which more than 75 per cent. consist either of loans to the State or issues guaranteed by it. During the war, from August 1, 1914, to the end of 1918, the French Government took up internal loans of various forms amounting to about 107,000,000,000. In 1919 new scrip, valued at 27,000,000,000, was issued or offered on the French market, 16,000,000,000 of this being in National Defence Bonds.

In 1920 two great national loans were issued—that of February being at the rate of 5 per cent., redeemable at 150, and that of the following October being in the form of Perpetual 6 per Cent. Rentes. These two loans produced a gross yield of 42,640,000,000 and a net yield of 16,180,000,000, as subscribers took advantage of the offer to pay half their subscriptions for the new stock to the extent of 13,400,000,000 of National Defence Bonds and 13,060,000,000 in old Rentes of various categories. The net result of the two issues was to provide the State with 16,180,000,000 of fresh money, and to reduce the amount of National Defence Bonds in circulation by 13,400,000,000. During the year, however, the public also absorbed against cash 4,000,000,000 of new National Defence Bonds, 8,038,000,000 of various kinds of mortgage and debenture bonds, and 5,171,000,000 of shares, making a total of about 33,000,000,000. During the first nine months of 1921 the State disposed of 20,026,000,000 in National Defence Bonds (including 5,000,000,000 in two-year bonds at 6 per cent.), the railway companies of 2,343,000,000, the Crédit Foncier, Ville de Paris, Houillères de France, and other organisations, whose issues have been noted in this column from time to time, of 8,523,000,000, making a total of 30,902,000,000, to which must be added for the last quarter of the year an issue by the Crédit National amounting to 3,000,000,000, one of 500,000,000 by the metallurgical industry, and at least 2,000,000,000 of other issues.

The first of the pending new issues for 1922 to be announced is that of 150,000,000 by the Department of the Nord. This will yield interest at the rate of 6 per cent., free of all taxation, both present and future, and will be redeemable in 30 years. The 500 bonds are issued at 475f, and are guaranteed not only by the Department of the Nord itself, but are also secured on 30 annual payments that will be due from the State to the Department in respect of war damage.

In an article in the *Figaro* M. Edmond Théry, the well-known economist, argues that circumstances were never more favourable than at present for the market in French Rentes to be again thrown open. The fact that prices are still officially maintained at an artificial figure is now a dead weight on the market, he insists, and one of the

causes of the depreciation of the Rente, which has become unsaleable, except as the result of clandestine transactions outside the Bourse, at five or six points, and sometimes more, below the official quotation. He shows by the following table the influence that the enormous issues of the past three years have had since the beginning of the war on the note issue of the Bank of France, and on the volume of the current accounts open both at the Bank of France and the four other great French banks—the Crédit Lyonnais, the Comptoir d'Escompte, the Société Générale, and the Crédit Industriel:—

(Million Francs.)

(1) Estimated.

Figures show, M. Théry claims, that the war has had no detrimental effect either on the credit or on the power of attracting the investing public which is enjoyed by the great French banks, whose deposits on December 31, 1918, had already exceeded those of June 30, 1914. The 97 milliards invested by the public during the past three years, he adds, have had scarcely any influence either on the note issue or on the deposits of the great banks, which he considers undeniable proof that the situation of the French financial market on the eve of 1922 is absolutely healthy, and that there need be no hesitation in restoring full liberty to the market for French Rentes.

The various efforts that have been made by international financiers to improve the financial situation of Europe have reacted to some extent favourably on the Bourse, as members always hope that results of real economic value will accrue from such discussions. French 3 per cents. have dropped a trifle, falling from 54.75 to 54.60. Banks are rather more in demand, Union Parisienne rising from 710 to 727, Banque de Paris from 1,215 to 1,245, and Crédit Lyonnais from 1,410 to 1,425. Banque Ottomane, as a result of certain purchases, has risen from 660 to 685. During the year 1921 the Banque de France has paid to the State a total of 101,169,000f, and in addition to this, a sum of 1½ milliard francs has been paid over to the State by the bank on account of war profits. Transports have fluctuated, with, on the whole, an upward tendency. P.L.M. has gained 13 points at 819, Nord 6 points at 916, and Orléans 22 points at 886. Shipping is slightly improved, Chargeurs Réunis being 20 points better at 495, Transatlantique 5 points better at 235, and Chargeurs Réunis 3 points better at 208. Suez, however, has dropped from 6,020 to 5,955.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—NEW YEAR PROSPECTS—INCOME-TAX—INFLATION—EXCHANGE AND BOURSE—FOREIGN TRADE—PRICES—EMPLOYMENT.

(FROM OUR CORRESPONDENT.)

BERLIN, January 3.

THE prospects of Germany in the New Year appear to depend altogether upon developments in the Reparations question. The immediate influence governing economic life—State finances, currency, prices, industry, and trade—in the past year was the movement of the mark exchange; but observation has shown that the exchanges are mainly dominated by international views of Germany's relations with the Allies, in which relations Reparations are likely again this year to play a leading rôle. Not very optimistic views are taken of the prospects of any drastic settlement of Reparations in Germany's favour. Since early December the foreign exchanges and with them stock movements have indicated a waiting attitude; after the first optimism induced by the London negotiations caused a collapse of the exchanges, nothing happened to strengthen or weaken the effect. The good effect upon the mark's foreign value has, as always in the past, been accompanied by a distinct slackening of industrial and commercial activity; the great buying boom which reached its height in early November has ceased; and manufacturers are saved from serious depression only by the fact that for a long time ahead they booked large orders, given under the wrong impression that the public's buying fever would last. Large classes are therefore interested in a resumption of the currency depreciation as measured by the foreign exchanges (the inflation which is going on worse than ever here plays no rôle); but neither the Federal Government nor other public bodies, all of which suffer from the price-rises, belong to this class.

The Reichstag has been obliged to reduce the nominal income-tax rates, for the same reason as has compelled Dr Wirth to throw over Herr Erzberger's Emergency Levy and to substitute a property tax with recurring reassessments of capital values. While the rise in nominal values caused by the currency depreciation enables property to escape the intended burden of a tax assessed unchangeably upon the values of a past date, it at the same time increases the burden of a progressive income-tax. Since early 1920 the income-tax has therefore been three times nominally reduced; against an original minimum rate of 10 per cent. (1,500 marks being exempted) on incomes up to 10,000 marks is now a 10 per cent. tax on incomes up to 50,000 marks. The Austrian Government has so much felt the inconvenience of similar frequent changes that it last month submitted a Bill substituting "taxation units" (*Steuereinheiten*) for crowns as basis of the progressive rates; the rates are fixed unchangeably upon the number of taxation units in an income, while the number of crowns constituting a taxation unit will be periodically fixed according to the currency's buying power. A similar expedient will be necessary here unless

greater price-stability is attained. The new income-tax, as compared with that last fixed, is:—

	Income in Marks.	March, 1921. Marks.	March, 1922. Marks.
50,000	10,100	5,000	..
100,000	32,500	15,500	..
200,000	81,600	45,500	..
300,000	136,600	80,000	..
500,000	251,600	160,500	..
1,000,000	551,600	385,500	..
2,000,000	1,151,600	910,500	..
3,000,000	1,751,600	1,510,500	..

After beginning extremely well as regards inflation, 1921 ended badly. The first three months saw practically no increase in Reichsbank note circulation, and an actual small decrease in note and "Kassenschein" circulation together; the second quarter showed a small increase; the third a large, and the fourth a very large increase, "Kassenschein" circulation continuing to fall off. The total absolute increase is somewhat greater than in 1920, the percentage increase is, however, much smaller. The movement of Reichsbank note circulation was as follows:—

	1,000 Marks.
June 30, 1914	2,909,490
December 31, 1919	35,698,369
December 31, 1920	68,805,008
March 31, 1921	69,417,288
June 30, 1921	75,321,095
September 30, 1921	86,384,286
October 31, 1921	91,527,679
November 30, 1921	100,943,632
December 23, 1921	108,995,550

Plentiful money, which facilitated the placing of Treasury bills, and a relatively small current deficit, are the causes of the low inflation in the first part of the year, but of late the current deficit has largely increased, and growing money tightness prevails. The outlook for the next few months is not good. The Reichsbank's price for gold (quotations for fine gold per kilo having been suspended) is 720 marks per 20 marks piece, the maximum price having been 850 marks, fixed in the second half of November, and the minimum 260 in January. The total of capital raised by private companies in December was 2,941,470,000 marks, as against 4,876,930,000 marks in November; in the whole year the total was 21,745,240,000 marks, which is 50 per cent. more than the combined capital in all German companies in 1914. The decline in December, after rapid increases in preceding months, is probably due to the brake put upon industrial activity by a mark exchange recovery. Of the year's total 16,228,030,000 marks was subscribed as ordinary stock, and 2,459,440,000 marks as preference stock, and 3,057,770,000 marks as bonds. In the first eleven months were founded 726 companies, as against 306 in all 1920. The number of bankruptcies of late shows the decline which is usual during mark-exchange fall and "catastrophe boom" periods—in November 195, October 263, September 256, August 290. The small number of bankruptcies as compared with the 12,000-13,000 a year usual before the war, is due, however, largely to the law of December 14, 1916, which enacted that concerns made insolvent by war conditions should merely be put under control if their insolvency was likely to disappear when normal conditions returned. This law, under a judicial ruling, is still being liberally applied.

The Berlin Bourse to-day began the New Year firm; under influence of a slight rise in the exchanges War Loan was quoted 77.50, Federal 4 per cent. 87.75, 3½ per cent. 73, 3 per cent. 102.50, Colonial 4 per cent. 110, Savings and premium 82, and Prussian 4 per cent. Consols 69. The *Frankfurter Zeitung's* index for 35 securities on December 30th (last Bourse day) shows 32,699, against 29,841 a week earlier, 42,358 on November 10th (highest point at any week-end), 17,174 on January 8, 1921, 9,141 on January 2, 1920, and 6,387 on September 1, 1919. The list includes 10 bonds; the rise for stocks only since September, 1919, is from 5,424 to 30,071. In 1920-1921 the rise in security quotations closely corresponded, as in theory it should, to the general price-rise; on the basis of 100 for both in January, 1920, prices at the close of 1921 were 320, and securities 358. Quotations of bonds and stocks on the last Bourse days of 1921 and 1920 were:—

	1920.	1921.
War Loan 5 %	77.50	77.50
Federal 4 %	66.10	87.75
Federal 3½ %	59.80	72.75
Federal 3 %	65.80	103.25
Prussian Consols, 4 %	62.75	63.10
Darmstadter Bank	180	303
Deutsche Bank	326.50	507
Disconto Bank	247	420
Dresdner Bank	219.75	398
Hamburg-America	195.50	437.50
Norddeutsche Lloyd	194.50	455
Schultheiss Patzenh. (Brewery)	338	1,588
Allgemeine Elektrizität	319	733.55
Augsburg-Nürnberg Machines	450	1,340
Badische Anilin	474.75	649
Concordia Chemicals	742	1,050
Deutsch-Luxemburg	407	840
Daimler Motors	229	549.75
Deutsche Erdöl	269	2,001
Nobel Dynamite	376	720
Gelsenkirchen	400	850
Hohenlohe	330	750
Phoenix	665	1,020
Rhenish Steel	540.75	1,110
Schuckert	284.50	915
Siemens and Halske	685	800
Verenigte-Glanzstoffe	778	3,550

Foreign trade in November showed a sudden disappearance of the heavy, and in former months rapidly increasing, import surpluses. Imports were 12,272,600,000 paper marks, against 13,814,400,000 marks in October, exports 11,869,700,000 marks, against 9,681,500,000 marks, and the import surplus 402,900,000 marks, against 4,132,900,000 marks. The import decrease is probably due to the heavy mark exchange fall in the preceding months; the increase in exports, details of their kind being lacking, cannot be explained; but the present stagnation in home selling may easily lead to increased exporting. The *Frankfurter Zeitung's* commodities index shows for January 1, 1922, 320 against 303 on December 1st, 249 on November 1st, 184 on October 1st, 128 (lowest of year) on June 1st, 143 on January 1, 1921, and 100 on January 1, 1920. The smallness of the increase in December shows how rapidly a mark exchange recovery reacts on prices. In December the food index figure, which had risen from 127 on June 1st to 378 on December 1st, fell to 375; textiles and leather, which rose 68 points in the preceding month, remained without change; and minerals rose by only 4 points. Taking 100 as price of all commodities in 1914, the present figure is 3,596. The following shows paper-mark prices of important commodities at the beginning and end of the year:—

	January.	December.
Wheat, 100 kilos	155.50	750
Rye " "	141.50	559
Oats	136.50	558
Potatoes, 1,000 kilos	805	1,664 (Nov.)
Sugar, 100 kilos	565.2	700 (Nov.)
Coffee, Santos, 1 kilo	16.80	51.50
Rice, Burma 2, 1 kilo	4.45	11
Ox hides, 1 metric lb.	9.16	22.02
Sole leather, 1 kilo	72	136
Wool, Cape snow white, 1 kilo ..	70	165
Raw silk, Organdy, 1 kilo	1,000	5,625
Electrolyt. copper, 100 kilos	1,932	6,307
Smelters' tin, 100 kilos	585	2,062
Lead, 100 kilos	517	2,062
Nickel, 98-99%, 100 kilos	4,275	11,500
Silver, bars, 1 kilo	1,060	3,162
Foundry pig-iron, 100 kilos	1,725	3,326
Petroleum, 200 kilos	779	880 (Nov.)

The Federal Statistical Bureau reports cost of food for a family of four in November as 473.89 marks, against 418.42 marks in October, 381.70 marks in January, and 25.57 marks in January, 1914. Employment records continue to follow closely the exchanges. At the end of November, after a slight mark exchange recovery, the proportion of unemployed among 5,912,750 members of trades unions was 1.4 per cent., as against 1.2 a month before. The number of publicly supported unemployed on November 1st was 151,871, as against 426,600 on March 1st (high point of the year). The high point of 1920 was 454,775 in January. The fuel production in 1921 was:—Black coal, 124,287,000 tons, against 119,421,000 tons in 1920; brown coal, 111,967,000 tons, against 101,524,000 tons; coke, 25,501,000 tons, against 22,822,000 tons; black coal briquets, 5,265,000 tons, against 4,489,000 tons, and brown coal briquets 25,958,000 tons, against 22,194,000 tons. An agitation is proceeding for restoration of free pricing for coal. Herr Stinnes has

[January 7, 1922.]

complained to the Federal Coal Council that through maximum pricing at home, and through the obligation to deliver to the Allies at home prices Germany is losing 200 to 240 million gold marks a year.

CANADA.—ELECTIONS—THE MERCHANTS BANK: MERGER WITH BANK OF MONTREAL—BUSINESS CONDITIONS—EFFECTS OF THE AMERICAN TARIFF.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 20, 1921.

THE result of the Canadian General Election, which was held on December 6th, has not falsified general predictions. But the devastating character of the Government's defeat was completely unexpected. Eleven Ministers, including the Premier, have been beaten. In no less than five out of the nine provinces not a single Government supporter has been returned, and half the 50 seats which have been salvaged from the wreck have been retained by minority votes. The causes of this unprecedented débâcle are various, the chief being the grave industrial depression which has hung over the industrial life of Canada for the past year, and shows scant signs of lifting. It was impossible for Mr. Meighen to win applause for the merits of Protectionism, as he heroically tried, from the 200,000 unemployed industrialists of Eastern Canada. Agriculture is in an equally distressed condition, and Western farmers, who are being forced to sell their wheat at less than a dollar a bushel, are prone to take a black view of a Government's performances. Any Government which appealed to the country under such circumstances was doomed to defeat.

The financial world in Canada has just passed through a very severe crisis. For some time past considerable uneasiness had prevailed in the inner circles of finance concerning the stability of the Merchants Bank of Canada, which is the fourth largest of the Canadian banks, and the shares of the bank reflected the conjectures on the stock market. Friday, December 16th, was a day of wild rumours and deep anxiety in Montreal financial circles, and there was general relief when an announcement came that the directors of the Merchants Bank were recommending its shareholders to accept an offer made by the Bank of Montreal to take over the institution. The announcement was followed by a statement issued from the Bank of Montreal appointing Mr. H. B. McKenzie, one of their most experienced officers, to audit the Merchants Bank's finances, because "the directors had reason to fear that the bank's affairs were not in the condition as disclosed to them." The outgoing Finance Minister has given Parliamentary consent to the merger, but it will have to be confirmed by his successor and ratified by the shareholders of both banks. The terms of the merger will not be known until the notices for the shareholders' meetings are sent out, but it is believed that the offer to be made by the Bank of Montreal will be \$1,000,000 cash and one share of Bank of Montreal stock for every two shares of Merchants. At yesterday's prices of Bank of Montreal stock this means that the Merchants stock will be taken over at \$116 a share, or \$41 less than was being offered when the stock was summarily removed from the exchange list yesterday. The capital of the bank is \$10,000,000, and it is calculated that the shareholders will have to suffer a loss of close upon \$5,000,000. The depositors have been reassured by an official statement from the manager of the Bank of Montreal that the deposits of the Merchants Bank are safe beyond doubt. Sir Montague Allan, the president of the Merchants Bank, intimated in a statement that the reserve fund of the bank had been impaired to such an extent that absorption by the Bank of Montreal was the only means of escape from a serious financial disaster. The general impression is that the position of the bank was precipitated by a number of contributory causes, chief of which were unfortunate commercial and industrial loans, and the shrinkage of collateral issued against them.

The Merchants Bank was established in 1861, chiefly through the efforts of Sir Hugh Allan, one of the founders of the Allan Line. In the early 80's it was the second largest bank in Canada, and there had until recently been

no setback to its steady prosperity. It has been very strong in Western Canada, where it possessed a large number of branches scattered through the better-class farming districts. At the end of October it had total deposits of \$131,874,326, while its notes in circulation totalled \$13,994,475. Its total liabilities were placed at \$165,185,703, against assets of \$185,405,494. The rest, or reserve fund, was reported as \$9,450,000.

Wholesale business throughout Canada shows a distinct falling off except in a few lines, due to the fact that retailers have laid in their Christmas stocks and are busy selling them. Montreal and Quebec report that wholesale dry goods, hardware, and even grocery houses find a marked curtailment of the orders. Boot and shoe factories are still reasonably busy, but the iron and steel trades are deplorably dull. The retail trade shows the improvement usual at this season, but the volume of Christmas shopping is much smaller than in former years. Toronto and Ontario advices are almost similar in tone. In Western Canada business is feeling the effects of the agricultural depression, and the continuous decrease in the prices of grain and livestock.

The operation of the United States emergency tariff was extended to February 1st, and in view of the strength of the agricultural bloc at Washington, hope is now dim in Canada that the duties imposed by it will not be perpetuated in the permanent tariff measure now being framed by Congress. The emergency tariff has now been in operation six months, and statistics are available to show its disastrous effects upon Canadian export trade to the United States in certain lines. In November, 1921, the value of Canadian exports to the United States on goods affected by this tariff was \$8,528,963, as compared with \$31,288,398 for the corresponding month of 1920; for the six months' period of June to November \$35,922,059, as compared with \$93,454,422. In this six months' period the exports of butter and substitutes therefor declined from \$4,776,888 to \$2,254,914 in value; of potatoes, from 1,472,390 bushels to 464,424 bushels; of wheat, from 18,588,728 bushels to 7,558,325 bushels. But the most startling decreases were in fresh and frozen beef and meats of all kinds, which fell from 25,753,300 lbs to 17,556 lbs, and preserved milk, which fell from 8,879,175 lbs to 1,196,258 lbs. There can be no real compensation to the Canadian farmer for his comparative exclusion from the great market lying to the south of him, and sooner or later some effort must be made to secure more favourable trade arrangements. The Liberal party, which has now come to power, will be exceedingly wary in view of its previous experiences with a reciprocity treaty, but the forces which drove Laurier to make approaches in 1911 are stronger than ever, and the need for such a trade arrangement is clearly recognised in circles which were formerly hostile.

GREECE.—MERCANTILE MARINE—CROPS—FOREIGN TRADE—NEW BANKS—EXCHANGES AND STOCKS.

(FROM OUR CORRESPONDENT.)

ATHENS, December 26.

DURING the world-war almost the whole of the Greek commercial fleet was in the service of the allied Governments. It suffered heavy losses, and the end of the war found it greatly decreased both in number of ships and in tonnage. Part of the decrease, however, was caused by sales at high prices to foreigners, before the Government enacted measures prohibiting such sales. Since the armistice new steamers have been bought or built out of money representing either the proceeds of sales, or the insurance payments for losses from ordinary or war risks. To promote shipbuilding after the war the Government inserted in the law for taxing the excess profits realised during the war, a provision to the effect that the tax levied on excess profits arising out of the sale of ships or from insurance payments would be returned to the taxpayer, after a trifling deduction for benevolent purposes, in cases where the taxed shipowner would purchase foreign ships, or build new ones of a value double the amount of the tax within a fixed period from the date of the signing

[January 7, 1922.]

of peace. The following table shows the pre-war strength of the Greek mercantile marine, and its condition at the end of the war:—

	August, 1914.		November, 1918.	
	Number of Ships.	Gross Tonnage.	Number of Ships.	Gross Tonnage.
Steamers	474	830,000	200	180,000
Sailing vessels	884	135,000	640	115,000
Totals	1,358	965,000	840	295,000

The losses incurred from war perils and by sales to foreigners amounted to 71 per cent. of the total tonnage, and are divided as follows:—Losses from enemy action, 386 ships of 427,000 gross tons, and sales to foreigners, 114 ships of 260,000 tons. In consequence of important additions made since the Armistice, the strength of the commercial fleet at the beginning of November was 1,512 vessels of 850,000 tons.

The increase since the Armistice is nearly threefold, and is due almost entirely to private initiative, save for 12 ex-German steamers allotted to Greece by the Allies, as a partial reparation for her shipping losses. The amount collected by shipowners from the sale of ships and from insurance payments is officially estimated at £23,450,000. To this amount should be added a sum of at least £17,500,000, roughly representing, according to the same estimates, the freights collected during the war, bringing the total receipts to £40,950,000. Deducting from this total a sum of approximately £10,400,000 spent on the purchase of new tonnage, there remains a balance of cash in the hands of shipowners of £30,550,000.

Agriculture shows poorer returns for this year, as compared with those of last year. The figures for the principal products are given below:—

	1920.	1921.
	Tons.	Tons.
Wheat	306,000	298,000
Currants	116,000	69,000*
Tobacco	32,000	25,000
Oil	132,000	45,000†

* Not including the returns of one province, whose yield in 1918 was 48,000, in 1919 40,000, and in 1920 41,000 tons.

† Estimated yield.

Provisional returns of imports and exports for the first ten months of the year show a decrease in imports and an increase in exports in comparison with the same period of last year, as the following table shows:—

(In Millions of Drachmæ.)			
	Imports.	Exports.	Excess of Imports.
January-October, 1920	1,328	542	1,284
January-October, 1921	1,306	607	699
Difference	22	+ 65	— 585

Two new banks have recently been established. One, the Bank of Thessaly, with a capital of 6 million drachmæ, having its head office at Volo, is a commercial bank, and is intended to serve the interests of Thessalian commerce and industry. The other, founded at Athens under the style of "The Hellenic Banking and Securities Company, Limited," with a capital of 3 million drachmæ, will deal mainly in stocks and investments. The prospects of both of them are good.

Foreign exchanges have been rather steady for some time past. The Bankers' Consortium selling rates, which serve as a basis for dealings in foreign currencies, have been fixed for some weeks at 100 dr for the pound, the other currencies varying according to their fluctuations on the London market. Smyrna quotations are, however, higher. Political developments have been for more than a year the principal factor in foreign exchange movements. The market is now waiting further developments in international politics, particularly in regard to the Near East problems, which directly and vitally affect this country. The same tone prevails in the Stock Exchange, the market for stocks having been rather dull recently, though Government bonds and industrial shares have enjoyed a fair demand in recent months.

ARGENTINA.—RAILWAYS AND TARIFFS—BORROWING IN NEW YORK—TAXATION PROBLEMS—MONEY AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, December 9.

THERE is good reason to believe that the Argentine Government will go into the question of the railway tariffs fully and finally early in the New Year. Political reasons alone explain the Governmental volte face of three months ago, with its consequent unfavourable impression upon all who are interested in strengthening the financial and commercial ties between Argentina and Great Britain. It is, however, very questionable whether anything but harm can come of the recent interviews with British members of Parliament, in which Foreign Office intervention is mentioned, and Argentina described as being liable to become subject to an Anglo-American agreement similar to that which ruled at one time in respect of loans to China. Such an interview, recently cabled to Buenos Ayres, and reproduced in extenso by *La Prensa*, is as mischievous as it is untimely. To try and make use of the recent loans obtained by Argentina in New York as a lever is both bad diplomacy and a proof of a misconception—to put it as politely as possible—regarding the Argentine position. That the railways are in justice entitled to certain tariff increases is generally admitted in Argentina; that their present unprofitable position is wholly due to the fact that such increases as have been sought were not permitted is very debatable. In common with other trade interests, the railways have suffered from the post-war reaction, and even admitting that the results of 1919-20 were good, none knew better than the responsible heads of the various systems how casual, and to a great extent unexpected, was the yield for that period. Owing largely to scanty population and antiquated land laws, which practically bar the path of the small settler desirous of owning cultivable soil, railway traffic per ton-mile is not increasing. The following table, made up on the figures of the Southern, Western, Central Argentine, and Pacific systems, was recently published in an Argentine financial journal of repute, and shows this very clearly:—

Year.	Kilometers		Tons Carried.	Tons per Kilometer.		Passengers per Kilometer.
	Line.	Area.		Kilometer.	Kilometer.	
1912-13	18,963	..	26,725,000	..	1,409	.. 3,809
1913-14	19,506	..	21,198,000	..	1,085	.. 3,783
1917-18	20,135	..	17,319,000	..	860	.. 2,445
1918-19	20,135	..	21,295,000	..	1,057	.. 2,893
1919-20	20,135	..	26,148,000	..	1,298	.. 3,490

It is honestly believed by many Argentines that higher rates will not yield the increased revenues that the railways confidently expect; certainly not until such time as the producer is better circumstanced to meet additional charges than he is to-day. The railways, on their side, argue that, inasmuch as practically all exportable produce is valueless until it is hauled to the ship's side, they must benefit, and are entitled to benefit by higher rates under the Mitre Law; that is up to the 6.80 per cent. per annum limit, taken over a triennial average of net profit.

Allusion to the opening of the New York market to Argentine loans recalls the frequent references, apparently inspired, which have figured in American Press cables to Buenos Ayres during the latter half of November. As yet the only completed operation has been the \$50,000,000 issue of two-year Argentine Treasury bonds at 97, carrying 7 per cent., but it is now generally admitted in official

circles here that an attempt will be made to induce American capital to facilitate the consolidation of part of Argentina's floating debt. This is now estimated at something near \$650,000,000 Argentine paper, or, say, £53,000,000 sterling, at current exchange. If it were possible to negotiate a long-dated loan in New York for, say, 200,000,000 United States dollars, the advantages are many and obvious. New York-Buenos Ayres exchange, now at \$136 Argentine gold per \$100 United States, would be brought to par, thus favouring renewed shipment of United States goods hither, and the general reaction on Argentine commerce would be almost immediate, since it is now certain that the Fordney Emergency Tariff will either be abrogated, in favour of South American shippers of such produce as is required by North American manufacturers and merchants, or dropped altogether. Argentine official finance, suffering from the difficulties of the last seven years, which are common knowledge, and handicapped by an old-fashioned fiscal system already overdue for revision, at once gains a breathing space which will enable much in the way of reform to be put into practice, while the benefits accruing therefrom will radiate through all branches of trade and industry. The continuance of export taxes is manifestly impossible; indeed, December has already seen a sharp reduction. For instance, the wheat tax has dropped from \$3.13 gold per metric ton to \$0.96, and taxes on other cereals in a similar proportion—and 1922 will probably see the last of this uneconomic impost. Moreover, taxation of imports, though providing the bulk of Argentina's revenues, is limited by the steady expansion of Free-trade principles among the mercantile classes, who, with the object lesson of Brazil before them, show no desire to see tariffs raised, but, on the contrary, favour their reduction whenever possible. How the incidence of taxation will be redistributed is too big a question to enter upon here, but that it is likely to come to the fore in 1922 is reasonably certain. Unfortunately, there is small hope of much practical legislation being even discussed until the Presidential elections are over in April. That they will result in the re-election of the Radicals is fairly certain, and one may also predict that they will be carried through with little or no popular excitement.

In commercial and financial circles the stagnation characteristic of the past two months continues. Export trade is slow, and the import trade still awaits the liquidation of high-priced stocks, and is suffering from heavy failures among retailers, who report an utter want of interest on the part of consumers. Money is not in great demand. Bank interest on loans has been reduced to 6½ per cent., and looks like going lower, and the deposit rate of the leading banking institutions may be put at 3 to 3½ per cent. for three to six months' deposits. Exchange at the moment is a shade firmer, and any substantial movement in wheat would react on sterling and reduce the premium on the pound, now quoted at 43½d. Crops promise well, and an exportable surplus of 5,500,000 tons of wheat may be reasonably expected. Linseed is lighter, and in all there is not likely to be more than 800,000 tons exportable, including the balance of last season's seed. Cattle prices are weak, freezers buying at 22 cents per lb, dressed weight, and merely nominal figures are being paid for store cattle, canners, and *criollo* stock. Wool is better, and stocks are slowly moving off, while it is reported that Boston buyers are again in the market, though apparently for fine staple only.

Letters to the Editor.

ANGLO-IRISH FINANCE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Hitherto little has been said on this side of St George's Channel as to the financial results of the agreement with the Sinn Féin delegates which is now awaiting ratification by Dail Éireann. The essence of the agreement is that the Irish Free State, which may now be considered to mean Southern Ireland, is to occupy relatively to the United Kingdom the position of a Dominion such as Canada or Australia. In that position Southern Ireland

will have no responsibility for any of the Imperial expenditure of the United Kingdom, except so far as an agreed figure may be reached with regard to national debt and war pensions. In particular Southern Ireland will pay nothing at all towards the expenditure which Great Britain will continue to incur, at any rate, for several years, for the coastal defence of Ireland. The agreement provides that "until an agreement has been made between the British and Irish Governments, whereby the Irish Free State undertakes her own coastal defence, the defence by sea of Great Britain and Ireland, shall be undertaken by His Majesty's Imperial forces." This provision is to be reviewed at the "expiration of a period of five years from the date hereof, with a view to the undertaking by Ireland of a share in her coastal defence." That is to say, England, Scotland, and Ulster remain, at any rate, for five years, responsible for the whole coastal defence of Ireland, and even after five years for part of that defence. Yet Southern Ireland is to contribute not a penny to the cost incurred.

It may be argued that England in defending the coast of Ireland is defending herself; but she is also defending Ireland, and as the Irish get part of the benefit they ought to pay part of the cost. This consideration applies not only to coastal defence; it applies to the whole work of the British Navy, which will defend Irish trade as well as English and Scottish trade throughout the whole world. Yet Southern Ireland is to pay nothing. The unfairness of this kind of arrangement was fully recognised even by Irishmen themselves before the Act of Union. Speaking in the Irish Parliament in 1783, Grattan said: "The Navy of England protects our trade, and we as an equivalent pay £70,000 a year to maintain the troops destined to serve in the plantations. This is not a dear purchase for partaking that which has cost England so many millions." Grattan implied that the £70,000 then paid by Ireland was not enough. The distinction to-day is that though the service costs England immensely more, the Irish Free State is to pay nothing at all.

This is the primary defect from the financial point of view of the agreement made with the Sinn Féin delegates. It may be argued that a similar defect exists in the financial relations between the greater Dominions and the United Kingdom. That is true, but, on the other hand, these Dominions have spontaneously recognised their responsibility to contribute to the defence of the Empire, and apart from peace expenditure on defence forces, have in time of war shown their willingness to face unlimited liabilities to meet the common needs of the Empire. There has so far been no indication that Southern Ireland recognises any responsibility whatever to defend any portion of the empire, though she is willing to accept as a free gift the defence provided for her by Great Britain. Under the agreement, Southern Ireland will remain in enjoyment of all the military, naval, and commercial benefits of membership of the empire, but will be freed from the obligation of paying a single penny for the services she thus receives.

The only financial obligation placed upon the Irish Free State is to make a contribution towards the cost of the National Debt and of war pensions. Under this head she is to pay "in such proportion as may be fair and equitable, having regard to any just claims on the part of Ireland by way of set-off or counter-claim." This proviso refers, of course, to the old legend of the over-taxation of Ireland. That legend ought to have been disposed of for all time by the Royal Commission on the Financial Relations between Great Britain and Ireland, which reported in 1896. For the evidence laid before that Commission, and summarised in a series of reports, showed clearly that at no period in modern history, except for a few brief years between 1850 and 1860, had Ireland on balance paid more than a fair contribution to the common expenditure of the kingdom. During that particular period she did pay, as far as can be gathered, more than was justified by her relative wealth, the reason being that in that period the whisky duty, which previously had been much lower, both in Ireland and in Scotland than in England, was raised throughout the kingdom to the English level. Irishmen being large drinkers of whisky, this levelling up resulted in a greatly increased contribution from Ireland to the common Exchequer. That fact might plausibly be treated as an injustice to Ireland, though it was an injustice that

Irishmen could themselves have avoided by drinking less whisky. As a matter of fact, however, it was a greater injustice to Scotland, though Scotland has never complained. After 1860, this injustice to Ireland—if it really was an injustice—ceased, for two reasons; first, because it became the policy of Parliament to look for increased revenue to direct rather than to indirect taxation, and, secondly, because it also became the policy of Parliament to subsidise purely Irish services out of the Imperial Exchequer. The result of this double process was that the net contribution from Ireland to the common Exchequer rapidly declined. By 1894, when the Royal Commission began its sittings, that contribution was just under £2,000,000 a year, whereas on the basis of relative taxable capacity which the Commission accepted—namely, one-twentieth—it ought to have been £3,000,000. Ireland's net contribution continued after 1894 steadily to decline, and for several years before the Great War Ireland was contributing nothing at all to the common Exchequer. Not only was the whole cost of her national defence paid for by England and Scotland, but, in addition, many of the purely local services in Ireland were partially paid for by the money of English and Scottish taxpayers.

During the war the situation altered to an appreciable extent as the result of the imposition of war taxation. The war taxes hit Ireland as well as the rest of the kingdom, with the result that Ireland again began to make a real contribution towards Imperial expenditure. The figures for the last financial year have not yet been published, but it will suffice to take those of 1919-20. In that year the Irish contribution to Imperial expenditure was £21,000,000, as compared with £84,000,000 from Scotland and £670,000,000 from England. It will be seen that the Irish contribution was 2½ per cent. of the total. Yet in 1896 the Royal Commission reported that the Irish relative taxable capacity was 5 per cent. of that of Great Britain. It is hard to say whether in the interval Ireland's relative capacity has increased or decreased. It is certain that from the 'nineties onwards the wealth of Ireland has increased very greatly. Eloquent testimony to this fact was given by no less an authority than the Irish Parliamentary party in the House of Commons in the pronouncement which they made on May 10, 1916. This pronouncement declared that: "The Irish labourers have been transformed from the worst housed, worst clothed, and worst fed class in Europe into the best housed, the most comfortable, and the most independent body of labourers in the world. . . . Tenants in the towns have achieved a charter far in excess of anything ever extended to any city or town in England." During the war it is notorious that Ireland did extremely well for herself. Doubtless, also, many people in England and Scotland did well, though others lost heavily. On balance, it is reasonable to assume that Ireland's taxable capacity is not less to-day than it was in the 'nineties. On that assumption the contribution which Ireland has been paying of late years to Imperial expenditure is not much more than half of what she ought to pay. Looking back upon the whole period since the Act of Union, it may confidently be asserted that Ireland owes a heavy debt to Great Britain for services which she has received, and for which she has never paid her fair share of the cost. The concession which is now being made to the political demands of the Sinn Féiners ought, in fairness to English and Scottish and Ulster taxpayers, to have been accompanied by a fair financial settlement. Instead, the Irish Free State is to receive future financial favours at the expense of her neighbours.—Yours, &c.,

REVIEWS.

"An Administrator in the Making." James Saumarez Mann. 1893-1920. Edited by his Father. (London) Longmans, Green, and Co. 15s net.

This book is the life-story of a young public school and university man, who left Oxford to fight in the great war, and having survived arduous service in France, went to Mesopotamia after the Armistice, was placed in charge of

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

an administrative district, and was killed by a sniper at the siege of Kufa. The story is mainly self-told in a series of letters, in which are frequently visible signs of an alert and capable brain, and a breadth of vision. These qualities, coupled with courage and a gift for languages, were given their scope in difficult administrative work in Mesopotamia, and the appreciations of those who watched this work at close quarters show that the title of this volume is no idle claim. If the earlier part of the book can be matched from the all too numerous memoirs of fallen officers, the later chapters, dealing with post-Armistice experiences in Mesopotamia, possess a special interest for the general reader. They are a reminder of the dangerous and ill-recognised public services performed year in and year out by devoted young Englishmen in many an outpost of Empire, and recall the pathetically heavy toll which such work exacts upon young lives of high promise. The book, which is well illustrated, has been put together and edited with efficiency and perfect good taste by Saumarez Mann's father, Mr J. S. Mann, formerly editor of the *Annual Register*, and for many years a frequent contributor to the columns of the *Economist*.

"The Consumers' Co-operative Movement." By Sidney and Beatrice Webb. Longmans, Green, and Co. 1921. 18s.

THE latest volume of these indefatigable authors will take rank with their "Industrial Democracy" and "History of Trade Unionism" as a most scholarly and informative study of the working-class movement which it describes. Its 487 pages are packed with information about the Co-operative movement, its growth in membership, its extension into new branches of production, its relations with its employees and with the Government (especially in regard to the vexed question of the taxation of the "profits" of co-operative enterprise), and its experiments in the democratic management of vast industrial undertakings. There are words of caution and criticism, dealing in particular with the complacent backwardness of certain co-operative societies, the existence of "co-operative deserts" in the shape of classes and districts into which co-operation has never penetrated, and the overlapping and confusion of function which beset the Federal institutions of the movement, especially the Co-operative Union. Looking forward, Mr and Mrs Webb believe that there are few limits to the possible extension of co-operative enterprise. They would especially like to see newspapers controlled by associations of consumers dividing the profits amongst themselves. And they believe that it is sounder policy to vest the ultimate control of industry in the consumers of industry's products than in the workers by whom those products are made.

"Post-Office London Directory with Country Suburbs, 1922." London: Kelly's Directories, Limited. 55s.

THE 123rd annual edition of Kelly's London Post Office Directory is well up to its usual standard of excellence. The latest issue has been published in one volume, this having been achieved by the use of thinner but, we understand, equally strong paper. Thus the necessity is obviated for the three somewhat unwieldy separate volumes which have been published during recent years. The area covered has been extended, and now includes the borough of West Ham, which comprises the important industrial districts of Stratford, Plaistow, Canning Town, and Silvertown. An important feature of this directory is that it contains telegraphic addresses and telephone numbers. These have now been added to so that they

include the telephone numbers of private residents as well as of business houses.

It would be difficult to imagine the London business community without its Kelly's Directory, and its familiar appearance in practically every important office is sufficient evidence of its success.

BOOKS RECEIVED.

Money. By D. H. Robertson.

Supply and Demand. By H. D. Henderson.

The two above-mentioned books are Volumes 1 and 2 of a new series to be known as "The Cambridge Economic Handbooks." They are published by Messrs Nisbet and Co., Limited, of London, at 5s each. Professor J. M. Keynes is the general editor.

Commercial Banking Practice Under the Federal Reserve Act. (New York) National Bank of Commerce in New York.

The Swedish Year Book, 1921. This is the first year of issue of this work, which is printed in English. It is obtainable in London from Messrs Williams and Norgate. 7s 6d net.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
January 11. January 12.

In some respects the New Year has opened in disappointing fashion for Stock Exchange markets, and for the holders of securities in the gilt-edged sections. It had perhaps been too generally assumed that there would be resumption of the previous strength, as soon as the holidays were over and capitalists had time to study their pass-books. However, various factors contributed to a dull tendency taking the place of the brightness which prevailed about Christmas time. There were a few fairly large selling orders; one, for instance, embracing half-a-million pounds of War Loan. The stream of new issues checked inflow of money to existing stocks. The talk of an early General Election had the invariable effect of causing uncertainty. Less optimism is felt in regard to the upshot of the Cannes Conference. Profit-takers came to market when they found the public were not responding to the expectation that there would be a large amount of fresh money available for Stock Exchange investment this week. Business accordingly is quiet, and the disposition in most of the markets is to adopt a waiting attitude.

The prompt success achieved by the Buenos Ayres Western debenture, Chile and South Australia Governments, and the Bristol Corporation with their new issues failed to counteract entirely the unfavourable factors just set out. The War Loan is lower on the week, and in its decline it has carried the prices of Consols, Funding, Victory, India sterling stocks, and a few of the newly issued loans. Nevertheless, Home Railway debenture, preference, and guaranteed descriptions continue to go ahead steadily, many fresh rises being recorded during the past few days. The market turned better again on Thursday afternoon.

Gossip busied itself with talk of small points of friction between this country and France, and these are claimed to have a depressing influence over the prices of foreign bonds. At the same time, it is worth noticing that French issues keep firm; Argentine and Brazilian loans have again improved. Scandinavians have further strengthened. Russians are not quite so good after their recent outburst of buoyancy, and German bonds went back upon a cessation of the speculative dealing which previously advanced prices, talk of a further improvement in the mark having no influence. Uruguay bonds are better, and the Far-Eastern groups show no special tendency one way or the other.

The feature in the Home Railway market is the starting of dealings in the new stock of the London and North-Western. Lancashire and Yorkshire stocks no longer exist. The North-Western stock now marketable is that of the new company, and the price carries no dividend until next July. This leads to a confusion which need not arise if it be remembered that the books of the North-Western and the Lancashire and Yorkshire closed on December 31st, and that all bargains subsequent to that date are in new stock. Great Westerns spurred, and the substantial advances in Welsh railway stocks have been maintained. Other Home Railways show improvements. Grand Trunk stocks are quiet, Mexican Rails a little lower, Argentines somewhat erratic, but Brazilians better, on the anticipation of traffic receipts increasing from now onwards.

The rubber market is stagnant, with the produce back to about 11d per lb. Oil shares came under the influence of the general dullness in other markets, though Phoenix and English Oilfields both improved as a result of statements made at the recent meetings. Roumanians and Uroz have risen. The banking market is better. Discount shares advanced appreciably, owing to the fulfilment of the expectation that their dividends would be increased. The insurance market is also firmer, but the shipping group is neglected, though the debentures and preferences in this section keep remarkably hard. The textile market waits for a definite lead. Shares in the stores and catering companies remain hard. Various of the newly-issued industrial debentures and notes are better. Joshua Hoyle debenture and Reading Electric debentures are particularly wanted, while Niger Notes have risen to 99. Forestals further recovered, while in other land shares there has been little doing. The British American Tobacco dividend, making 24 per cent. free of tax for the year, against 30 per cent. a year ago, satisfied the market, and tobacco shares as a whole are better as a consequence. Iron and steel shares have started to harden, though armaments are stagnant and the brewery market has fallen upon extremely quiet days. Egyptian issues came into demand at rising prices.

The Kafir Circus is under the influence of labour trouble at the Cape. An important ballot of workers is to be taken to-morrow (Sunday); meanwhile, the price of gold is depressed. Randfonteins, however, are substantially higher. The after-effect of the Chartered report was to bring about a trifling decline in the price of the shares. De Beers and other diamonds have been moving somewhat aimlessly. Russo-Asiatics, which rose to 11s 6d, fell back on profit-taking, but the price has again rallied. Colombian Mining attracted speculative attention, owing to the close approach of the date when the mine will get to work with its new treatment plant. Broken Hill and other Australian shares have not recovered from the proprietary company's statement of the necessity for reduction of work on the mines, owing to labour conditions. In none of the tin shares has there been anything of interest passing this week.

The trustees and managers of the Stock Exchange have convened a meeting of their fellow-shareholders for Monday, to re-discuss a scheme for the unification of control in order to do away with the historical method whereby the House is governed by managers in the interests of shareholders, and by a committee as representing the interests of members.

The peerage bestowed upon Sir Robert Nivison, Bart., in the New Year honours, has greatly pleased the Stock Exchange, of which he is a popular member.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and summary reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
TREASURY BONDS.				
Total receipts, 5-15 Year, 1925-35				1,062,317
5½% 1925 receipts to December 24, 1921				168,470,199
Week to December 31, 1921 (new series)				6,895,000
Receipts to date				175,365,199

NATIONAL SAVINGS CERTIFICATES.

NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED DECEMBER 31, 1921.

April 1 to December 31, £6,130,000	250,000	250,000
--	---------	---------

To the Public—				
Government of South Australia, £3,000,000 6% Registered Stock (rep. at par 1930-40), issued at 96% (Jan. 3)	3,000,000	2,880,000	150,000	2,730,000

5½ per Cent. Treasury Bonds.—Issued at £99 per cent. and repayable at par on May 15, 1930. Interest payable half-yearly on May 15th and November 15th. Full particulars of this issue will be found in the *Economist* for December 3rd (see page 986).

Government of South Australia 6 per cent. Registered Stock, 1930-1940.—Issue of £3,000,000 at 96 per cent. The principal is repayable in London at par on September 1, 1940, the Government of South Australia having the option of redemption on or after September 1, 1930, on giving three months' notice. The loan is issued to provide funds for public works, for the settlement of discharged soldiers on the land, and for other purposes. Debentures and stock of the Government of the State of South Australia issued and payable in London, the property of persons not domiciled in South Australia, are not subject to any taxes of South Australia. It is pointed out that the revenues of the State of South Australia alone are liable in respect of this stock, and the Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury are not directly or indirectly liable or responsible. An excellent trustee investment, subject to individual holdings and geographical distribution of capital. The issue has been oversubscribed.

Chilean Government.—This is an offer by Messrs N. M. Rothschild and Sons, at £95 per cent., of a nominal amount of £1,657,500 7½ per cent. bearer bonds of the Chilean Republic. The loan will be redeemed at par by an accumulative sinking fund of ½ per cent. per annum, to be applied by 66 half-yearly drawings in June and December of each year, the first drawing to take place in June, 1923. Drawn bonds will be paid off on July 1st or January 1st immediately following the date of the drawing. An excellent offer, and it was stated that lists were closed at half-past eleven in the morning on which they opened. We refer to the loan in a "Business Note."

The Buenos Ayres Western Railway, Limited.—Nominal stock and share capital £26,000,000, of which £20,200,000 has been issued. The company's borrowing power is limited to two-thirds of the nominal share capital. Including the present offer, £11,859,953 of loan capital has been issued. This is an issue of £2,000,000 4 per cent. debenture stock at 60 per cent., "ranking in all respect with previous issues." Presumably they share with the existing 4 per cent. debentures the right to redemption at par in the

event of winding up or of the Argentine Government exercising its right of expropriation in 1930. The proceeds of the issue will be used to meet expenditure in connection with the work of electrifying suburban lines. An excellent table of past profits is given from 1912, but unfortunately adverse factors in 1920-21 severely affected the company's earnings. But even profits for this year at £738,173 would cover the sum needed for debenture service, which amounts to £494,276 per annum. The issue was underwritten at 1½ per cent. Special consideration was given to application from present investors in the company, and it was not a matter for surprise to hear that the list was quickly closed.

Bristol Corporation 5½ per cent. Redeemable Stock, 1932-1942.—This is an issue of £1,061,800 5½ per cent. stock at 96 per cent. The issue takes the form either of inscribed stock or of stock certificates to bearer, at the option of subscribers. The stock will be redeemed at par on February 1, 1942, unless previously cancelled either by purchase in the open market or by agreement with stockholders, but the corporation have the option of redeeming at par on or after February 1, 1932, on giving three months' notice. The net proceeds of the present issue of stock are required to meet the following expenditure for sanitary work, electric supply, and other purposes. It will rank equally with all stock previously issued by the corporation. The total outstanding debt of the corporation for all except dock purposes is £3,926,817, whilst the dock debt is £5,758,642. The liquidation of debts of the corporation is being provided for by redemption or sinking funds, and provision for the repayment of the present issue of stock will be made by the creation of a redemption fund, as required by the Ministry of Health. The redeemable value of the city is £1,997,056, and is steadily increasing, and the population according to the last census is 377,000. This is a trustee investment, which met with a quick success.

The Great Yarmouth Waterworks Company.—Authorised stock capital £440,000, of which £299,500 has been issued. There is also an authorised loan capital of £220,000, of which, excluding the present offer, £67,700 has been issued. This is an issue at par of £40,000 7 per cent. redeemable debenture stock, to be redeemed at par on January 1, 1932. The net revenue of the company for the year ended March 25th last was £24,251, and as the interest on existing stock and that now being issued will need but £5,508 per annum, the interest service may be considered well secured. Capital invested may be regarded as something in the nature of a lock-up, although we notice that application is to be made for a Stock Exchange quotation. Subject to this reservation, the issue is worthy of consideration.

(a) Increased capital.

(b) Also a capitalised bonus of one share for every nine shares held.

CHARLES SEMON and Co. announce that owing to the continued depression in the textile trade, much accentuated in concerns trading with the various European countries whose rates of exchange make profitable transactions impossible, the directors have been informed that it would not be advisable to meet the dividend which was due to be paid on December 31st.

B. and T. PINK and PLAISTOWS (PROPRIETARY) feel justified in making a payment on account of the arrears, and have decided to pay one-half of the dividend due to June 30, 1921. They have met fully the substantial payment required under the trust deed for the redemption of debentures, and now await payment of considerable sums due from the Government. They anticipate, however, that it will be possible to issue dividend warrants for the partial payment referred to above before the end of January.

FOODS, LIMITED.—The directors are unable to recommend interim dividend for current year. Company has suffered in common with all industrial concerns from prevailing depression in trade, and directors consider it wise to conserve company's resources.

LYNDAL MOTORS, LIMITED, state that it is impossible to consider the payment of dividends on the 6 and 7 1/2 per cent. preference shares at present.

PROBST, HANBURY, and Co. announce that it has been decided to pay no dividend on preference shares due December 31st.

THE ASSOCIATED PAPER MILLS, LIMITED, have decided to postpone the payment of the half-yearly dividend, payable on January 1st, on the preference shares of the company. The directors express the hope that the payment of the dividend, in any event, will not be postponed longer than June 30th next.

COMPANY MEETINGS, &c.

ULSTER BANK, LIMITED.

The eighty-fourth ordinary general meeting of the Bank was held on December 30, 1921, at Belfast, when the following accounts were presented:—

Capital Authorised and Subscribed	£3,000,000
Capital Paid Up	£500,000
Reserve Fund	£700,000

BALANCE-SHEET, November 30, 1921.

	£	s	d
To capital paid up	500,000	0	0
To reserve fund	700,000	0	0

UROZ OILFIELDS, LIMITED.

SATISFACTORY RESULTS OF PROVING OPERATIONS.

The ordinary general meeting of Uroz Oilfields, Limited, was held, on the 30th ultimo, at the Institute of Chartered Accountants, Moorgate place, London, Capt. Albert H. Farley presiding.

The Chairman, in moving the adoption of the report and accounts, said: We are again pleased to report to you that since we last met the work of development on the company's properties has been of a nature which gives your directors cause for gratification. It has been a period during which steady and persistent headway has been made, and it has brought us much nearer that interesting period of our career when we begin to reap the fruits of past endeavours.

ANTHRACITE PROPERTIES.

The general manager, Mr Renwick Cowan, has prepared full and very interesting reports upon all our operations in France, and, with your permission, I will ask our secretary to read these and, at the conclusion of my remarks, and it is, therefore, only necessary that I should refer to the subject in a somewhat general manner. Well, with regard to our anthracite concessions, the proving operations, which have continued during the year, have confirmed the high opinions your directors have all along entertained as to the value of this portion of your properties, and to-day Mr Cowan estimates that at least 1,000,000 tons of anthracite are available for immediate exploitation. No less than four workable seams of anthracite have been established beyond all possible doubt to exist on these properties, and two main hauling inclines, each capable of producing 250 tons per day, have been sunk to these deposits, the various seams being then entered by short crosscuts.

				<u>302,387</u>	15	0

and making ample allowances for any irregularities in the first seam, he estimates that this area of our properties contains some 3,000,000 tons of lignite.

The first unit of our briquetting plant commenced operations in August last, and the guarantee that the plant would produce 200 tons of briquettes per day has been clearly demonstrated. The briquettes are spoken of by consumers as being of excellent quality.

It will be easily possible to increase our briquetting production as circumstances warrant. Another incline has been commenced to the mine working, which could increase the output to 500 tons per day, while additional units can be added to the present briquetting plant if and when deemed necessary.

Before leaving the subject of our lignite reserves, I should like to take this opportunity of imparting to the shareholders a most important item of information which has only recently come to our knowledge. During the past few weeks quantities of our lignite have been received in England for the purpose of experimental tests as to their by-products. The important work was entrusted to highly competent people, under the direction of the well-known firm of Close Brothers and Co., Limited, and we have received notification from them that the tests carried out have proved that our lignite contains over 50 gallons per ton of light oils. These light oils are of such a character that over 25 per cent. of them are in the form of motor spirit. We are assured that the figures given as to the oil content of the lignite will be considerably increased.

This interesting discovery should naturally have a highly important bearing upon the ultimate results achieved from the commercial development of your lignite properties, especially when it is stated that very high protective duties are placed upon the importation of motor spirit into France.

In conclusion, let me say that, speaking of our properties both in France and Trinidad, your directors are convinced that this company possesses assets the great value of which will be appreciated as time goes on.

Mr W. R. Lester seconded the motion, while, after some discussion, the resolution was put and carried unanimously.

STEAUA ROMANA (BRITISH), LIMITED. AFFECTS OF ROUMANIAN RATE OF EXCHANGE. RESULTS AND PROSPECTS.

The first annual meeting of the Steaua Romana (British), Limited, was held on Thursday last, the 5th instant, at Winchester House, Old Broad street, London, E.C., Sir Charles Greenway, Bart. (chairman of the company), presided.

The Chairman pointed out that the company, together with a group of the six most prominent bankers in Roumania and a French group, held control of the Steaua Romana (Bucharest), who had, during the period under consideration, made an increase in their capital in which the three groups had participated. The Roumanian company had declared a dividend of 20 per cent., or Lei 100 per share, for 1919, and 35 per cent., or Lei 175 per share, for 1920.

The value of the British company's holding of shares in the Roumanian company had, of course, declined owing to the heavy fall in Lei, with a similar fall in the value of the dividends thereon, but the intrinsic value of the latter's present and potential assets was probably much in excess of the present value of the shares.

EARNINGS NOT TO BE CONVERTED INTO STERLING.

With regard to the various economic and industrial features of the country, owing to the great value of her natural resources, Roumania, which was before the war a large exporter of cereals, oil and timber, had greater possibilities of recovery than any other country in Europe. In the meantime, however, Lei earnings would be kept in Roumania, and not converted into sterling.

The British and French groups each had made, in addition, an advance to the Roumanian banking group to enable them to participate, and, as security for that, they each had a charge upon one-half of the holding of that group in the Roumanian company. That amount was repayable in sterling during the last six months of 1924. The Roumanian banks had requested that the settlement of the interest thereon in sterling should be foregone for a period of four years, ending 1924, and be met by the deposit of Lei, in cash or securities, with a margin of 25 per cent., to the equivalent at the current rate of exchange of the sterling due. That matter was at present under negotiation.

OBJECTS OF THE COMPANY.

With reference to the objects of the company, the purchase was made to secure for Allied interests, that was Roumanian, French and British, the position formerly held by the Germans in the Steaua Romana Company, and in its sub-companies, agencies and properties, and to secure control of the surface production of oil available for export.

Under the Roumanian, French, and British management, drilling had been increased, 5,000 metres being drilled during the first six months of 1921, and over 10,000 during the year, while it was hoped to drill 20,000 during the present year. Refineries and storage had been repaired, and the company's tin-making plants were working at Constantza, Smyrna, Salonica, and in Bulgaria.

POWER STATION AND FLORESTI.

Jointly with the local power company, the erection of a new electrical power station at Floresti, on the output of which the company would have first call, had been started, and should be completed by the end of the current year. The company's distributing companies and agencies in Bulgaria, Turkey, Greece, Asia Minor, and Italy had been reorganised, and valuable sequestered assets had been, or were in process of being, restored to the company. One of those, which would bring into the company a very large sum of money in sterling, had been admitted, and was expected to be shortly realised.

One tanker of 4,000 tons had been returned, and a satisfactory arrangement reached with the Reparation Commission over another of 7,000 tons, while the return of others was under negotiation.

On the trading side, the British company had during the past year dealt with approximately 35,000 tons of petroleum products under the rights which it held in that connection. A commercial agreement had recently been concluded with the Roumanian company, and it was hoped that increased activity in Roumania would cause greater quantities of oil products, in excess of internal requirements, to be available for export.

He concluded by moving: "That the report and accounts for the year ended June 30, 1921, be received and adopted."

The resolution was seconded by Sir Albert G. Stern, K.B.E., and carried unanimously.

COLOMBIAN CORPORATION, LIMITED. FAVOURABLE STATEMENT FROM THE MANAGER.

The first ordinary general meeting of the Colombian Corporation, Limited, was held, on the 3rd instant, at River Plate House, Finsbury circus, London, Mr F. W. Baker presiding.

The Chairman, in moving the adoption of the report and accounts, said: There is no change to report in the authorised capital. The issued capital stands at £510,000, consisting of 255,000 preference shares, entitled to 50 per cent. of the annual profits available for dividends until the full amount paid up on them has been returned to the subscribers free of income-tax, and thereafter in each subsequent financial year to a fixed non-cumulative preferential dividend of 12½ per cent., subject to deduction of income-tax, and 255,000 ordinary shares of £1 each, issued as fully paid, which are held by the Oroville Company. They had

received from the application and allotment on the preference shares a sum of £63,748, leaving a liability in respect of uncalled capital of £191,250.

Against this uncalled capital they had borrowed at the date of the balance-sheet £100,211 14s 8d. He had no comment to make on the credit side of the balance-sheet. With regard to the Constantia Mine, the main factor was the statement of the manager, Mr Prichard, that the ore reserves above the third level, including old workings, amounted to probably 300,000 tons, of an average value of \$6 to \$8. The probable ore between the third and fourth levels he (Mr Prichard) estimated at 70,000 tons, averaging \$8 to \$10. The working costs, including development, were estimated at \$3 per ton, and the extraction was taken at 85 per cent. On the completion of the new 300 tons per day mill it was estimated that an annual profit should be earned of over £50,000. One favourable feature in Mr Prichard's report was the fact that the ore disclosed in the developments on the lowest level in the mine gave an average in excess of the average of the upper levels.

The directors had come to the conclusion that, in view of transport costs, the wisest policy was to secure a road concession from the local authorities, and build their own road from Dos Bocas on the Nechi River direct to the mine. Mr Prichard estimated the cost of the road at approximately £20,000. There was in sight in the mine a tonnage of ore which should keep the mill going without further additions for practically four years, and Mr Prichard believed that he could treat the ore at an operating cost of \$3 per ton. It was satisfactory also to realise that the tonnage in sight was sufficient to yield, on Mr Prichard's estimate of annual profit, a sum more than sufficient to cover all the original outlay of capital which he (the speaker) claimed was a good conservative basis on which to start mining operations, and should go a long way to provide the revenue to redeem the preference capital.

The report was unanimously adopted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £60,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Jan. 9th-Jan. 14th, were opened on Jan. 6, 1922, and the total amount applied for was £84,175,000. Tenders for Monday and Saturday bills at £99 3s 8d, and above in full; Tuesday to Friday bills at £99 3s 5d, about 13 per cent., and above in full. The average rate of discount was £3 4s 11.73d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date of Bills.	Amount Offered.	Amount Applied for.	Average Rate of Discount.	Rate for Additional Bills.
1921.				
December 9	45,000,000	82,850,000	3 8 1.71	3 8 1.71
December 16	45,000,000	66,940,000	3 5 3.41	3 5 3.41
December 23	60,000,000	67,975,000	3 7 11.09	3 7 11.09
December 30	60,000,000	117,040,000	3 13 6.52	3 13 6.52
1922.				
January 6	60,000,000	84,175,000	3 4 11.73	2 4 11.73

The amount to be offered next week will be £60,000,000.

are included in the ABOVE Schedule of Assets and Liabilities.

REPUBLIC OF SALVADOR.—Government Six per cent. Sterling Loan of 1908, and Seven per cent. Funding Loan of 1916.—All holders of the bonds of either loan are urgently requested to forthwith deposit all their bonds with the London and South American Investment Trust, Limited, for the purpose of carrying into effect the proposals for the exchange of the bonds for series "B" bonds of the Salvador Government, pursuant to the resolutions duly passed at the meetings of the bondholders held on the 28th ult., and which resolutions are binding on all the bondholders. Forms of deposit, setting out the deposit conditions, can be obtained on application in person, or by letter, to the London and South American Investment Trust, Limited, at 62 Old Broad street, E.C. 2. Bonds may be deposited between the hours of 11 a.m. and 2 p.m. on any day except Saturdays and Sundays. No bonds will be accepted through the post. All coupons up to and including No. 28 on the six per cent. bonds of 1908, and all coupons up to and including No. 13 on the seven per cent. funding bonds of 1916, should be detached before the bonds are lodged.

STATE OF BAHIA (5 PER CENT FUNDING LOAN, 1915-6 PER CENT FUNDING BILLS, 1918).—The Commercial Bank of Spanish America, Limited, announce receipt of advice by cablegram by the Government of the State of Bahia to the effect that the remittance of the funds necessary to meet the interest due on January 1, 1922 has been delayed owing to suspension of business during the holidays and that they undertake to make remittance of the funds by telegraphic transfer in the course of January.

STATE OF PARA.—The Governor of the State of Para announces that, owing to the low price of rubber and depreciated exchange brought about in Para by the general economic crisis, the revenue declined very considerably during 1921. As a consequence of this the stipulated percentage of the export duties, which the Government has punctually paid over, has proved insufficient for the State's fiscal requirements; but an arrangement concerning the Bragança Railroad is now being made with the Federal Government of the United States of Brazil, and upon the formalities in connection therewith being completed the proceeds will improve the financial position of the State and will enable it to treat with its foreign creditors.

GUARANTY TRUST COMPANY OF NEW YORK.—The December 31st balance-sheet, a cabled summary of which has just been received in London, shows total assets \$578,309,758.37; deposits \$470,916,979.07 surplus fund \$15,000,000; undivided profits \$2,255,398.56. The new statement reports no borrowing from the Federal Reserve Bank.

ROYAL BANK OF CANADA.—The annual statement for the year ending November 30, 1921, shows that the profits for the year amounted to \$4,037,836.49, which compares with \$4,253,549.24 in 1920. Deposits have decreased from \$455,017,387 to \$375,616,343, and current advances have decreased from \$286,421,619 to \$252,150,279. For the year the bank has paid the same dividend that has been paid in recent years, viz., 12 per cent. and a bonus of 2 per cent., and has carried forward to profit and loss account \$905,044. The paid-up capital of the bank is \$20,400,000, and the reserve fund and balance at credit of profit and loss account \$21,305,044.

GREAT WESTERN OF BRAZIL, LIMITED.—With regard to the circular issued to the shareholders on November 4th last, the directors of the Great Western of Brazil Railway Company, Limited, are now able to announce that a telegram has been received from their representative at Rio, advising that the Brazilian Congress had passed a law authorising the Government to make half-yearly payments to the company to cover any deficit there may be in the funds derived from working the railway necessary to meet interest at the rate of 5 per cent. on the company's capital as recognised by the Government, and the amortisation of the same during the period of the lease. The company will also share in any surplus revenue that may be earned in excess of the above. To become effective the new Act requires a Decree bearing the signature of the President of the Republic. When the Decree is issued, and full particulars are received from Brazil, the shareholders will be advised.

B **BRITISH** firms are often criticised abroad that the catalogues issued by them leave much to be desired, since they in no way convey to prospective customers the dignity and standing of the firm and the high standard of their work.

The guiding factor in the preparation of this new Catalogue has been a desire to convey something of the quality of work and high ideals of the firm, in the hope that their worth may be gauged in some measure by their aims as well as their achievements.

We shall be pleased to send a complimentary copy to all those having in their keeping gold, silver, precious stones, securities or records of vital kind—possessions which the lust of thieves, appetite of fire, or destruction by violence may cause to be lost.

INSURANCE.

LONDON LIFE ASSOCIATION, LIMITED.—The directors announce that the total new business (net) effected in 1921 amounted to £1,550,056 of life assurance, and £439,064 of endowments certain, with a total renewal premium income of £86,556. In addition, £122,592 was received as consideration for immediate annuities, and deferred annuities were effected with a renewal premium income of £24,646. Approximately one-fourth of the above life assurance and immediate annuities was reassured with the Clergy Mutual under the agreement with that society. No commission is paid by the association in any form for the introduction of new assurances or annuities.

MISCELLANEOUS.

BRAZILIAN GOVERNMENT STEAMSHIP LINES.—The Brazilian Warrant Company, Limited (20 King William street, E.C. 4), have been appointed general agents in the United Kingdom of the Companhia de Navegação Lloyd Brasileiro, Rio de Janeiro. We understand that the Lloyd Brasileiro Company propose to institute shortly, in addition to their existing services of cargo steamers, a regular service of fast up-to-date passenger steamers between Brazilian ports and Southampton and other European ports. A future announcement will be made regarding dates of sailings and passenger rates.

CHARLES SEMON AND CO.—The following circular is issued by the company:—"Owing to the continued depression in the textile trade, much accentuated in concerns trading with the various European countries whose rates of exchange make profitable transactions impossible, the results of the trading of this company for the year to the 31st ult. will show further considerable loss. With one exception, the half-yearly dividends on the preference share capital have hitherto been met by Textile Corporation, Limited, in terms of its guarantee; but in view of the liabilities of the corporation by way of guarantee to the bankers of this company, the directors have been informed that it would not be advisable to meet the dividend due to be paid on 31st ult. The board has for some time past been engaged in preparing a scheme for capital reconstruction, and it is hoped to have this completed in time for issue with the annual report and accounts in March next."

E. AND T. PINK AND PLAISTOWE (PROPRIETARY), LIMITED.—The directors state that they have had under consideration the question of the payment of a dividend on the preference shares. It will be recalled that the accounts to June 30th last showed a balance at credit of profit and loss account sufficient to cover the dividend to that date, but in view of the industrial depression payment of the dividend was deferred. The directors now, however, feel justified in making a payment on account of the arrears, and have decided to pay one-half of the dividend due to June 30th last. They have met fully the substantial payment required under the trust deed for the redemption of debentures, and now await payment of considerable sums due from the Government. They anticipate, however, that it will be possible to issue dividend warrants for the partial payment referred to above within one month from this date.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions have been more seasonable during the past week, and the spell of cold weather will tend to harden the young wheat plant, reports of which continue satisfactory. General course of business proved quiet, as usually the case following the holidays, but rates were firmly maintained especially for feeding stuffs. Offerings of native wheat were rather lighter, and a steady tone ensued, good milling grades ruling at 48s to 50s per 504 lbs free on rail. Imported descriptions in moderate request, and prices firm. No. 1 Northern Manitoba quoted 56s to 56s 6d ex

Agents and Correspondents in all the principal towns throughout the World.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated January 5th, is as follows:—Pig-iron: No further change has been made in the prices of pig-iron this week, and the market was purely nominal. No further blast furnaces have been started. Manufactured iron and steel: All our steel works have been idle, and prices have been without any change. Prices are as follows:—Steel ship plates (home), £10 10s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9 10s net. Iron ore: Best Bilbao Rubio could be bought at about 26s 6d for prompt delivery, but few orders are being placed. A few transactions have taken place in other imported hematite ores at shaded prices.

Our Sheffield correspondent writes:—With the exception of a few departments, the steel works of the district have been closed all the week for holidays and stocktaking, and there will be a resumption next week. Firms have little with which to start the New Year with, and a good deal of plant will have to continue standing until new work arrives. There are no very distinct signs of a revival in buying of the special steels for which Sheffield is famous. An upward movement here must await the general recovery of the heavy iron and steel trades of the engineering industry. A number of inquiries for mild steel have come into the city during the holidays, and as there is no price inducement to buy pig-iron or steel billets on the Continent, it is expected that henceforward users of such material will place their orders with British makers. German competition is beginning to wane. Owing to the increasing inability of German makers to deliver, buyers in urgent need of iron and steel are drawing their supplies from British sources. Great congestion at the German works is reported. Moreover, costs of production are rising rapidly, owing to the exhaustion of stocks of raw materials of various kinds and the necessity of buying them from countries where the exchanges are heavily against the purchaser. Trade in steel-making alloys is stagnant. Prices have been dropping continuously for about 15 months, and most of the quotations are below those prevailing before the war. Scrap steel is also cheaper than in 1913. The English and Welsh railways announce small but acceptable reductions on the rates for conveying fuel, lime, pig-iron, scrap, and crude iron and steel. There are, however, no concessions on the finished and expensive iron and steel covered by the "C" railway classification. The changes will lessen the cost of production to some extent. The Scotch railways still refuse to make any changes in their rates. Collieries are well placed with orders for house coal of best qualities, and deliveries of such fuel are now getting into arrears. The cheaper kinds of coal do not, however, sell freely, owing to the large number of unemployed householders who can only afford to buy from hand to mouth. The demand for steam coal is scarcely being maintained, but this is due to many of the works not having resumed after the holidays. There is some improvement in the export trade for South Yorkshire coal. The market for small fuels is steadier than before the holidays. Blast furnace coke is not going quite so strongly as lately, which is due to some falling off in exports.

Our Glasgow correspondent (writing on Thursday) says:—The New Year holidays are in full swing north of the Border this week. Machinery will not be running even on the restricted scale common to recent months for at least a week to come; in some connections a start will not be made for a fortnight. Most large establishments—in shipbuilding, engineering, steel, and iron making, &c.—have light order books, and few inquiries of real value to proceed with. At the same time producers in almost all departments are concerned to keep their decks cleared, so that they can seize upon any opportunity that may arise, and are no doubt encouraged thereto by the crop of glowing rumours in circulation as to the brighter prospects of shipbuilding and of relative branches. Quite a number of employers are going almost out of their way to talk up the outlook for trade, and it can only be hoped that they are right in their conclusions. As to the man in the street, there is no evidence that trade conditions are on the mend. All that can be absolutely affirmed is that in the last eight days or so Clyde and other district shipbuilders and engineers have been invited to quote their lowest prices for several "tramps" and "liners" (which shipowners may place), and the replies, according to reliable information, have proved discouraging. Before anything of consequence can be done, quotations for material must be sensibly reduced. Shipowners declare that on the basis of quoted values no money can be made from the running of new boats and shipbuilders affirm that they

"ALL-IN" POLICY

affords the Householder the most complete cover yet devised.

The method of covering household risks by a

diversity of insurance is wasteful, to say the least.

By covering all your household risks by the "All-in" Policy, you are

economising in the true sense of the word—£100 per annum

(Minimum Premium, 7/6) will cover practically every serious risk in respect

to the contents of your home. List of risks and full particulars post

free. Address:—"All-in" Policy Dept.

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE CO., LTD.,

41 THREADNEEDLE ST., LONDON, E.C.2.

ASSETS EXCEED - - £19,000,000.

ship per 480 lbs. No. 2 hard winter 54s 6d, and Australian 53s 6d to 54s 6d, both landed per 496 lbs. Forward market rather easier on lower Argentine and American cable advices, though more interest was evinced. Cargoes of Australian loading sold at 48s to India, and Plate early January to U.K. at 49s 6d per 480 lbs. The international position continues favourable, and revised estimates of United States 1921 crop show a substantial increase, while harvest returns in the Southern Hemisphere are satisfactory, both as regards quality and yield. The flour trade remained dull, and home-milled descriptions again easier. London standard straight run reduced to 46s, patents 49s, All English straight run 42s per sack delivered. All English country straights 37s to 39s free on rail London stations. Imported steady spot supplies being none too plentiful, especially Australian. Canadian export patents 46s, straights 42s, Kansas top patents 43s, and Australian 43s 6d to 44s, all per 280 lbs ex store. On c.i.f. terms business is more or less at a standstill. Canadian patents January seaboard 42s, straights 40s, Kansas top patents 42s, and Australian 38s per 280 lbs. Barley steady, but quiet. Native malting ranges from 43s to 65s, grinding 38s to 42s per 448 lbs. Of imported, No. 3 Canadian Western ex ship 34s, No. 4 ditto 32s, Canadian feed 29s, American feed 28s, and La Plata 30s, all landed per 400 lbs. No business was reported forward. Maize firmer, and holders reserved. Plate 37s 6d, yellow round African 36s, white flat ditto 34s 6d, and American mixed 34s 6d to 34s 9d, all landed, per 480 lbs. White African maize meal £7 17s 6d per ton, landed terms. C.i.f. market firmer, with few offers. A cargo of white flat Rhodesian, arrived, sold, 30s per 480 lbs, and a cargo of white African maize meal, December 1st bill of lading, at £7 per ton. Oats firmer, with a better demand. English ranges from 28s 6d to 34s per 336 lbs., free on rail. Of imported, Plate f.a.q. 27s 3d, clipped 27s 9d, No. 2 Canadian Western 31s 6d, No. 3 ditto 30s, and Chilean tawny 29s, all landed, 320 lbs. Millers' offers easier. Broad bran quoted £9 to £9 10s, middlings £8 15s to £9 ex mill, fancy Plate middlings £9 15s, and Plate pollard £8 per ton, landed. Oatmeal easier. English all cuts £18 10s to £19 10s, rolled oats £20 10s to £21 10s, flaked oats £22 10s to £23 10s, all per ton. Beans quiet. English new 50s to 52s, old 53s to 56s per 524 lbs. Madagascan butter beans firm at 15s to 22s, and Rangoon hand picked 8s 6d to 9s 6d per cwt. Peas quiet. English blues 75s to 85s, Maples 75s to 80s, Duns 54s to 56s per 504 lbs. New Zealand blue 20s to 22s, and Dutch f.a.q. 22s to 24s per cwt ex wharf. Lentils quiet. No. 1 split 36s, and Egyptian 28s per 100 lbs. Homeward freight market showed fair activity from the River Plate for heavy grain, and the shipment of surplus old wheat crop is being expedited. Up river to U.K./Continent January 15th done at 35s, and ditto February 15th 32s 6d. North America steady, and 5s per qr paid Northern States to West Italy, with 24c per 100 lbs one port Greece, and 25c two ports discharge. Eastern markets quiet, but rates fully steady. Bombay on dead-weight quoted 21s 6d, Saigon rice indicates 30s to 32s 6d, Dalny beans paid 37s 6d, and Philippines on dead-weight at similar figures to U.K./Continent. Australia easier for wheat, and 47s 6d paid January loading at South Australia/Victoria to U.K./Continent. South African maize steady at 30s to 31s 3d to U.K./Continent. Time charter steady, and modern steamers of 5,600 tons quoted 45s 9d to 5s per ton per month for a period of six to twelve months general trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919.

1921	3,201,176	3,906,917	828,227	71 6	52 2	34 2

are losing on every ton constructed on existing terms. It is not surprising in the circumstances that experts are inclined to be doleful as to prospects. Official figures as to the course of shipbuilding in 1921 show that the Clyde again tops the list for the United Kingdom with 249 vessels of 511,185 tons, or nearly 33 per cent. of the aggregate totals (in vessels and tonnage).

MANCHESTER, January 5.

Although there has not been any decided increase in the amount of business passing in the market, the larger inquiry has been well maintained, and here and there fair contracts have been arranged. Both spinners and manufacturers complain loudly of the prices which have to be taken, but remunerative rates cannot be expected until producers have strengthened their position somewhat. Some encouraging sales have been put through in piece goods for China, and more favourable advices are to hand from Shanghai. Scattered transactions have occurred in grey shirtings and lighter fabrics for the several outlets of India, and it is now believed that the boycott of imported goods is gradually breaking down. Only odd lots have been sold for the Near East, but a little more demand has been about for South America, and printing cloths have attracted increased attention. In American and Egyptian yarns for home use prices remain steadier, but there has not been any active buying. Export bundles have moved off fairly freely for China and India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although there is a tendency to wait for the London sales next week to reveal the true position of the raw material, a fair amount of business is being done in anticipation of a further rise in values. The cables from the world's wool markets report a strong demand, and, what is very significant, an improving tendency in crossbreds, and the general opinion in this centre appears to be that prices will advance about 10 per cent. in Coleman street compared with the rates ruling at the close of the last series in December. The scarcity of fine tops is still a strong "bull" feature in this market, and unless something can be done to increase output it is to be feared some firms short of supplies will be placed in an awkward position. The production of fine tops is barely sufficient for present requirements, and any increase in demand would inevitably result in a partial famine. In the circumstances, topmakers are in a strong position when discussing prices, and as many are very well booked up for the next three months they are inclined to quote protective prices for delivery in April and onwards. There is also an improving demand for medium and low crossbreds, and some firms are beginning to speculate a little on the assumption that while there is plenty of room for an improvement, values cannot possibly fall below the present uneconomic level. Spinners report a fair demand for yarns, both on home and export account, and prices remain very firm. There is some improvement in the piece goods trade, but this section is irregular, and financial stringency in the merchandising end is greatly retarding developments. The outlook, however, is considered to be brighter than at any time during the past 12 months, and it is possible that business will expand during the spring.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

New Year wool markets have opened in an encouraging way, and everything indicates a stronger position. The fact that sales have begun in New Zealand with wools of all descriptions dearer is taken as epitomising the state of European markets, and everything indicates a strong opening at the Colonial sales in London next Tuesday. The sales are due to last practically a month, and 100,000 bales are to be catalogued. This looks a big weight of wool, but the trade should find itself in a position to lift the lot, and a good, sound, active series is expected. It is known that some topmakers must buy fair weights of wool in order to cover their recent sales, and French buyers are expected to purchase liberally. What I think the trade should guard against most is the adoption of "rushing" tactics. I am just afraid of the merino position being a little overdone, and prices again suffering a setback. In consuming centres the verdict is that 6 1/2's tops ought never to have advanced beyond 3s 9d at the outside, and the fact remains that among woollen and worsted manufacturers there is not by any means the activity that one finds among combers and spinners. It is none too pleasing a feature that the bulk of the yarns being spun are going out of the country, and I am certain that a good deal of the recent business placed has been largely on speculation, many spinners buying tops through fear of having to pay more later on. A little healthy anticipation of the future is certainly a good thing, but see-saw movements bring no final benefit to anyone. Business, no doubt, is better all round, and nothing can stimulate the market more than sound, healthy sales, with steady persistent buying at firm prices.

Turning to crossbreds, everything indicates a better state of affairs. The fact of values at Timaru advancing 15 to 20 per cent. is significant, and surprises everyone. The position of medium and coarse crossbreds is certainly out of all proportion to that of merinos, and there is still much leeway to make up in 50's and below before these wools approach the level at which they deserve to stand. Sooner or later a good proportion of the trade in textiles must get on to these wools as in pre-war times, and unless I am greatly mistaken that time is not far distant. If this comes about, it should help to take some of the weight of demand off merinos, but that is not likely to take place just yet. All the same, there certainly is an improving situation in crossbreds, and I am looking next week for practically an all-round advance of 10 per cent. on last London sales rates.

(France) Limited. Deposits are received for fixed periods on terms which may be ascertained on application.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR HULL CORRESPONDENT.)

Markets are recovering activity after the holiday only very slowly, and there seems little disposition to trade. Practically all vegetable oils are in ample supply, but demand is on very quiet lines. Raw linseed oil, which has stood at £27 10s. per ton naked, ex Hull mill for some days, is rather firmer, in sympathy with seed, but home consumptive requirements are small, and easily satisfied, while the condition of European exchanges continues to have a serious effect in holding up trade with Continental buyers. The outlook for forward delivery is a little better, and quotations for May-August are at a slight premium over January-April. The scarcity of cotton oils has been relieved, but demand is restricted, and prices for both crude and refined have an easier tendency. Palm kernel oil is quiet, and is offered at £39 ex Hull mill. Other crude oils are nominally unchanged. In the oilseed section, Plate linseed continues quiet, but the market is steady, with seed on passage at a premium of 10s per ton over January-February shipment. Cotton seed is quiet, but spot and near values are maintained. For January loading, £12 to £12 2s 6d represents value of Egyptian black.

Cakes are a poor trade, and this and the disappointing demand for linseed oil has caused several of the Hull mills to close down for periods varying from two to four weeks.

HIDE, LEATHER, AND ALLIED TRADES.

(FROM OUR CORRESPONDENT.)

Hides dropped in value at the Bermondsey sales on Thursday, heavy best at 8 1/2d showing a drop of 1/2d, and lights at 6 1/2d to 7 1/2d, a drop of 1/2d to 1d. Cows sold at 6d, and declined 1/2d to 1d on last sales. Heavy calf made from 9 1/2d to 11 1/2d, and light 12 1/2d to 14 1/2d, showing average falls of 1/2d to 1d. Business in foreign hides is quiet, as tanners are taking stock. The only sale of importance in Liverpool is one of fregorios of October kill, at 11d, c.i.f., and in saladeros at 10 1/2d. Montevideo meatworks hides, ex store, have been quoted at 8 1/2d. Latest news from the River Plate is that hides have accumulated, and that the position is easier. The American market is steady, and best heavy packers remain at 16 1/2 cents. Much interest is being taken in a sale which will take place in London on the 25th inst., when several thousand Russian cattle hides, horse hides, calf skins, sheep skins, and goat skins will be offered by brokers. These are the property of the All-Russian Co-operative Society, Limited (Arcos).

A fair inquiry for sole leather has been the experience of Bermondsey merchants since the holidays, and as stocks are low, shoe manufacturers seem anxious for supplies. The most popular line is in 12 1/4 lbs bends in English and wet salted, lighter selections being rather out of favour. American and French sole leather is also selling, the latter being slightly cheaper in some grades than the home production.

Upper leathers are quiet, but prices are well maintained. Advices from the United States are to the effect that stocks are much reduced, and prices firm for glacé and box calf, much of which was sold last year below cost of production.

Rough leather is a quiet seller, and I hear the Government have reduced the price of their holding of E.I. kips in the hope of clearing these goods from the market.

The shoe trade is in a hopeful vein, as a few orders have already come along. The probable settlement of the wages question has also given a feeling of security to the trade, as the cost of production has been too high for some time.

PORTLAND CEMENT

The following quotations for Portland cement are supplied by the Cement Marketing Company, Limited.—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 77s 6d to 83s per ton; area—in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 70s 6d per ton. Extra on above prices for the following special brands:—"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 6.

The markets for the main part ruled quiet during the week, holiday influence being still felt, though in one or two directions business proceeded with fair animation.

SUGAR.—At a further general reduction of 6d per cwt a fair volume of trade resulted in refined goods. Messrs. Tate and Lyle's cubes of trade resulted in refined goods. 46s to 46s 6d; caster, 48s to 48s 6d; yellow crystals, 40s 6d; crushed, 48s. No. 2, also London 48s 6d; granulated, second half January, sold, 45s; February-March, 44s 6d; April-June, 45s. Crystallised West India, spot, sold, 38s to 39s 6d; American granulated, spot, 45s 9d; January-March, 17s 6d, c.f. and l. White Java, spot, 43s; white Natal, 42s 6d to 43s 6d, and l. Belgian crystals, prompt shipment, 17s 3d, f.o.b. Antwerp. Dutch ordinary granulated and crystals, prompt, 17s 6d; cubes, 21s, f.o.b. Hamburg. Cuban basis, 96 per cent., January shipment, sold, 10s 6d, c.f. and l. terms U.K. Cuban stocks stand at 889,780 tons,

against 191,317 same time last year. American syrup, on spot, sellers, 28s to 28s 6d. Liquid glucose, January delivery, sellers, 24s 6d, duty paid.

COFFEE.—There was a moderate demand for all the better qualities on spot, and recent prices were maintained. Future delivery market quiet and easier. March sold, 51s 9d to 50s 6d; May, 52s 6d to 52s.

COCOA.—Market ruled steady, and a fair inquiry prevailed. Sales include Trinidad at 57s to 58s. Accra forward received steady support, and F/F quality, January-March, sold, 41s, ex quay terms, Liverpool. Butter quiet at 1s 7d per lb.

TEA.—During the week 19,720 packages Ceylon were brought to auction, and, with active and well distributed competition, full to dealer rates were secured, medium Pekoe in particular showing marked strength. Good common leaf teas, sold, 1s 2d to 1s 3d. Indian sales totalled 23,200 packages, and also received active support at full to dealer rates. Clean common to low medium qualities were distinctly dearer.

RICE.—Market still very quiet, and general position nominal. New crop positions at the moment are scarcely mentioned. Two stars Rangoon, spot, quoted 15s. Broken neglected and nominal. Bran slow, and Burma for shipment quoted £5 per ton, ex ship terms, London/Liverpool. Beans dull. Rangoon, hand-picked, spot, 7s 3d; affloat, sold 6s 9d. Peas slow, unaltered.

SPICE.—Pepper market quite steady, and a fair inquiry prevailed spot and forward. Fair black Singapore, spot, sold, 3 1/2d to 4d; January-March steamer, 3 1/2d to 4d; Aleppy, spot, quoted 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 7 1/2d; Muntok, ditto, 7 1/2d; ditto, January-March steamer, 7 1/2d. Zanzibar cloves, spot on spot, sold, 1s 6 1/2d; January-March steamer, 1s 5 1/2d. Pimento, spot, 2 1/2d. Flake tapioca, fair, sold, 1 1/2d per lb. Fair Penang, seed pearl, spot, sold, 16s 3d; small sago, spot, quoted, 26s for fair quality. Sago flour, December, 14s 6d; January-March, 13s 9d. Desiccated coconut, fine cut, spot, 41s; medium, 41s 6d. Ginger dull. Fair Japanese, limes, spot, 45s; fair washed, rough Cochín, 50s for wormy.

FRUIT.—Market for currants fully steady, but quiet. Pyrgos, quoted 56s; Amalia, 57s to 59s; Vostizza, 75s to 86s. Valencia raisins slow of sale. Half-boxes quoted 128s to 132s. Sultanias in demand, and market firm. Medium to good, 120s to 128s; choice, 140s. Dates quietly steady.

JUTE.—This market steadily improved under fair buying orders in circulation and reserved offers from Calcutta. New crop, first grade, January-February, usual continental ports, sold, £27 5s; ditto, February-March, at £26 10s to £28; lightning grade, January-February, £21 10s to £22 10s; ditto, February-March, £21 15s to £23; heart grade quoted £18 10s.

HEMP.—Manila firm, but general trade quiet. D grade, January-March, quoted £51; F, £45; H, £39 10s; J, £38 10s; streaky, ones, £44; two, £42 10s; three, £41 10s. New Zealand, steady, quiet. Fair, October-December, quoted £35 10s.

SHELLAC.—Market quiet, and fair quality T.N., spot, quoted, 32s 5s; March delivery, sold, 280s to 290s; May, 270s.

COPRA continued slow of sale, and trend of values unsettled. F.M.S. Straits, November-January, Rotterdam, quoted £25 7s 6d; January-March, £25 10s; February-April, £25 12s 6d; Ceylon, December-February, London, £27; South Sea Islands, ditto, £24 10s; Cebu, January-March, Hamburg, £25. Palm kernels quiet. January-March, Liverpool, quoted, £18 5s.

RUBBER.—A dull and easier tone governed this market. Standard crepe and sheet, spot, sold, 11 1/2d to 10 1/2d; January, 11 1/2d to 10 1/2d; February-March, 11 1/2d to 11d; April-June, 1s to 11 1/2d. Fine hard Para, spot, 18 1/2d; soft fine, 1s 1/2d; ball, 8 1/2d.

MENTHOL.—Spot, 22s 6d; Japanese peppermint oil, spot, 4s 7d; aniseed, 2s 2d; Japanese refined slab camphor, 4s 3d; crude, 3s 10d per lb. Japanese wax, spot, 100s.

EGG PRODUCTS.—Market slow, but steady. Prime liquid yolk, spot, 110s; April-June, steamer, 80s per cwt. Albumen, spot, 2s 11 1/2d per lb.

OILS.—Linseed firmer. Spot, net, naked, 30s; January-April, 29s; May-August, 29s 4 1/2d. Rape dull. Crude, spot, 45s; refined, 50s. Cotton quiet. Crude Egyptian, 37s; Bombay, nominal; common edible, 45s. Chinawood: Hankow, spot (barrels), 65s; and shipment, 63s. Coconut quiet. Ceylon, spot, 46s; January-February, 42s 6d; Cochín, ditto, 46s. Soya quiet. Oriental, barrels, ditto, 34s. Japan fish quiet. January-February, cases, 21s. Cod quiet. English, spot, 29s to 30s. Groundnut quiet. English crushed, naked, spot, 45s; deodorised, barrels, 59s. Turpentine steadier. American, spot, 71s 6d; February-April, 71s 6d. Rosin firmer. American, grade B, 15s; F, 15s 6d; G, 15s 6d; K, 17s 6d;

THOUGH sales of Treasury bonds and "tap" bills had been large up to January 7th, the market began this week with money easy. The banks were still getting $3\frac{1}{2}$ per cent. on their old fixed money, but even from within that charmed circle fresh loans were offered for a week at $3\frac{1}{2}$ per cent. Up to Wednesday there were surplus balances to be used at nominal rates. On Thursday the

accumulation of repayments to the Bank caused a better demand, but at $3\frac{1}{2}$ per cent. most wants could be satisfied, and there was no evidence of any real change from the present easy conditions. Bills were no more numerous, and though the rate was strengthened by Thursday's demand for money, it still shows no profit compared with the average cost of money. Whether this fact is due to the slackness of trade or to the hope of a reduction in Bank rate will be seen in the course of a few weeks.

* Additional to those offered by tender the preceding week.

Thursday's Bank return showed an improvement. The stock of gold rose by £12,800, and the circulation fell by £2,067,500, so that the Reserve was £2,080,300 higher. Government securities were reduced by £13,748,300, and Other securities by £34,857,700. Deposits were thus £46,533,100 lower, of which £45,017,000 came off Other. The circulation of currency notes was reduced by £6,407,600 to £313,455,900, which includes £1,718,900 for notes called in, but not yet cancelled. The fiduciary issue is £263,787,000, or £46,201,400 below the maximum.

THE STOCK MARKETS.

Once more the strength of gilt-edged securities has been the feature of the Stock Exchange week. The advance in high-class investment stocks continued in spite of unfavourable omens at Cannes; and only a very slight reaction took place yesterday on the news of M. Briand's resignation. Gilt-edged strength is caused by an excess of willingness to purchase over the supply of stock, and not to any great increase in the volume of business. Home railway stocks have recorded substantial gains. Russian stocks are better. The Kaffir market is under the shadow of the Rand strike. The rush for soundly secured new issues continues. Details of the week's movements are given on a later page.

COMMODITY MARKETS.

Though business has not increased this week in the cotton trade, and developments were checked by the easier tendency of the raw material, demand is reported to be on a larger scale than a month ago, with China's demand for piece goods an encouraging feature. The London wool auctions revealed strong demand, both by home and Continental buyers. Bradford topmakers have sold their output for several months ahead; the renewed interest in crossbreds is a favourable sign, and there is improvement in some branches of the piece goods trade. Cleveland ironmasters have made further cuts, varying from 7s 6d to 10s per ton, in pig-iron prices, and a revival of inquiry is hoped for. In the steel trades generally present indications of revival are slight, but confidence as to the approach of better business appears to be spreading. The steam coal market has not yet recovered from holiday influences, but best qualities of household fuel remain in good demand. The wheat market is firm, but demand not conspicuous. The feature of the vegetable oil and oilseeds markets was a revival of business in raw linseed oil, big orders being placed on American account. The hide market is easier, and the trade somewhat disturbed by the failure of a prominent firm in the market. Details of market news and movements during the week from special correspondents will be found on later pages.

FOREIGN EXCHANGES.

Up to late on Thursday, although on the whole the foreign exchange market was quiet and hesitating, there was a growing tendency towards optimism as the result of the Cannes deliberations. Marks, which on the 6th ended at 794 $\frac{1}{2}$, dropped rapidly on Monday to about 700, on the expectation of relatively favourable terms for Germany. On the same day, however, a reaction from this figure began again, and by Thursday the rate was 763 $\frac{1}{2}$, to jump once more hurriedly to 815 yesterday morning after the news of the adjournment of negotiations. Up to the 10th Paris showed a steady appreciation down to 50.87 $\frac{1}{2}$. Wednesday was more uncertain, and on Thursday evening the rate jumped on the announcement of M. Briand's resignation. Yesterday morning it was quoted at about 52.46, but was falling away again to under 52. New York, after a slight reaction on Saturday, moved more or less steadily in our favour, from 4.20 $\frac{1}{2}$ to 4.23 $\frac{1}{2}$ on the 12th, to be followed by a natural reaction yesterday morning to 4.22 $\frac{1}{2}$. Italy has been irregular, but after rising has, on more satisfactory news relating to the Banca di Sconto, and on a belief that the present banking trouble can be kept isolated, recovered again. Amsterdam, though it lost a little of its rise on Thursday, showed a decided movement in our favour to 11.48, while Madrid is also a little higher. Among the Northern countries, Christiania, Stockholm, and Copenhagen all show slight movements against this country, but Helsingfors is again depreciating, in spite of a real improvement in general conditions. In Central Europe, Vienna shows a slight recovery. Warsaw remains satisfactorily steady at 11,500, but Prague has been tending during the last few days to lose some of its recent recovery which took place on heavy buying from certain centres. Belgrade remains well above 300, and Budapest continues to depreciate. In the East, India is a little cheaper at 1s 3 $\frac{1}{2}$ d, and there is still much uncertainty as to the trade outlook there. The yen has also fallen further to 2s 3d, after being slightly lower still. Hongkong at 2s 7d and Shanghai at 3s 5 $\frac{1}{2}$ d are both distinctly cheaper than a week ago. In South America, Rio is unchanged, and little business is being done. Buenos Ayres at 43 $\frac{1}{2}$ is slightly dearer, as also is Montevideo at 41 $\frac{1}{2}$. Valparaiso, on the other hand, has moved somewhat in our favour.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 7, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	19,448	Supply Services	18,789
Amount borrowed	3,800	Interest on Debt	4,496
Taken from Exchequer balance ..	503	Sundries	466
	23,751		23,751

These operations increased the National Debt by the sum of £3,799,757, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 16,511	Surrenders of Bonds, &c.	- 560
National Savings Certificates ..	+ 400	Bank of England Advances ..	- 15,500
Treasury Bills	+ 8,483	Public Department Advances ..	- 5,530
Housing	+ 1,266	Unemployment Insurance	- 400
Sundries	+ 130	Depreciation Fund	- 1,000
	+ 26,790		- 22,990

The yield from Property and Income-tax amounted to £8,136,000, from Customs and Excise to £4,285,000, from interest on sundry loans to £1,876,341, and from special receipts under miscellaneous to £1,127,935. Sales of 5 $\frac{1}{2}$ per cent. Treasury bonds totalled £16,511,064, making total sales to date £191,876,263. The floating debt was reduced by £12,440,000 during the week, making the amount outstanding £1,247,400,000.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 to JANUARY 7, 1922.

Total spent	£ 763,742,053	Raised by revenue ..	£ 696,279,336
Inc. in balances	77,270	Net borrowings	67,539,988
Total	763,819,323	Total	763,819,323

ESTIMATES FOR YEAR 1921-22.

Ordinary Receipts..	£ 1,058,150,000	Ordinary Expenditure	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000		1,039,728,000

Surplus*

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

SEEKING PEACE.

PROGRESS along the road leading to peace and sanity in international relations is threatened with a setback by the resignation of M. Briand and the breakdown of the Conference at Cannes. The effect of this event upon our relations with France and upon efforts to hasten the restoration of more normal conditions in Europe cannot be estimated pending further developments in the French capital. We do not, however, take a pessimistic view of the situation; for we are convinced that, whether M. Poincaré forms a Cabinet of the Right or M. Briand is recalled and appeals to the country, the fear of isolation, coupled with the unmistakable desire of this country not only to pursue peace, but also to meet the natural demand of France for security, will sooner or later bring us back to the point at which negotiations have been interrupted. This view is supported by the tone of the comments attributed to M. Poincaré as well as by the concurrence of the French representatives in the decision to grant a temporary moratorium to Germany.

But whatever the issue in Paris, the Cannes Conference remains an important landmark, because of the definite offer by Great Britain of an undertaking to support France with naval, military, and aerial forces in the event of aggression by Germany. This proposal should put an end to Anglo-French bickerings over matters of comparative detail, and bring us back to fundamentals. An understanding between the Allies and Germany on economic and political matters is urgent, but for Great Britain the only road to Berlin lies through Paris. We are, however, doubtful of an arrangement between England and France with a limited objective. The "Entente Cordiale" of 1904 was based upon agreement on the outstanding questions in Asia, Africa, and America, in which there was possible divergence of interest between Great Britain and France. A similar understanding covering not only European matters, but also the Turkish and other problems of the Near East, is in 1922 a necessity, without which the military pact would be a hollow pretence and a source of weakness to both parties.

But if the news from across the Channel is of uncertain import, we are reminded by two other events of the week of the real progress which is being made towards a world at peace. On Tuesday last the League of Nations celebrated its second birthday. Fortunately, its doings have throughout been free from the spectacular elements which have characterised the meetings of the Supreme Council; but this should not mislead us into underrating the significance of the institution which has been created and nursed through the trials of infancy during the last two years. The League was not set up to reduce to order the chaos created by the great war. That was the task of the Allies assembled at the Peace Conference. The function

of the League was to give stability to the new conditions created by the Peace Treaties, and to set up the machinery by which permanent international co-operation can be effected. The network of the treaties has not, however, yet been completed, and the League has therefore been functioning up to the present with an incomplete charter. Nevertheless, the achievements of two years have already proved its value, and have sufficed to incorporate it as a permanent part of the machinery of international politics. The functions of the League lead it into many domains, but its permanent importance is shown by the single illustration of its duties with regard to minorities. The task of securing the rights of the subject races amid the confusion of nationalities of Central and Eastern Europe and in Asia Minor has baffled the statesmen of the world for generations, and if left unsolved would constitute in the future, as in the past, a most serious menace to peace. The Paris Conference dealt with the matter not by laying down rules or giving expression to vague principles, but by appointing the League the permanent guardian of racial and religious minorities. The possibility that we may thus set bounds to this source of unrest would alone justify the strongest possible support for the organisation set up at Geneva. The League, however, has to its credit the more specific achievements of having averted the outbreak of war which might easily have resulted from the Aland Islands dispute, the Vilna episode, the partition of Silesia, and quite recently the Albanian frontier question. The last incident is of special interest as the first illustration of the use of the League's special weapon—the economic blockade. The mere threat of the Council at Paris to apply the terms of Article 16 was sufficient to induce Yugoslavia to withdraw her troops within the boundaries laid down by the Powers, and the incident proves perhaps more clearly than any other the effectiveness of the machinery of the League when backed wholeheartedly by the Governments which compose it. We have only one comment to add to the forceful and balanced appreciation of the League contained in Viscount Grey's speech at Bristol on January 10th. Experience has proved that the framers of the Covenant were mistaken in endeavouring to formulate one common rule equally binding upon all countries of the world, and at the second assembly in September last it was recognised that the League must make provision for the special interests which countries, in particular continents, have in their local problems. It is not practicable for the representatives of America to take the same interest in or share an equal responsibility for events in the Balkans, as it is for the countries of Europe. It is clear that, in addition to common membership of the League, there will in the future be many regional understandings, of which the Four Power Pact in regard to the Pacific is a most notable example. It is of the utmost importance that the League should be so modified as to permit such agreements, for if they are not brought within the purview of the Assembly of the League they will assuredly be made independently, and the old evil system of alliances and secret treaties be restored. These considerations have an important bearing on the present crisis. Distrust of the Supreme Council and its methods appears to be largely responsible for the new political crisis in

France. On the other hand, French opinion has on several occasions shown more readiness to fall in with world opinion when expressed through the Council of the League. We would, therefore, urge the Government to consider whether the time has not arrived for the abandonment of spectacular conferences, such as those of Lympe and Cannes, and for a wholehearted attempt to pursue international peace through the medium and machinery of the League.

The second event is the conclusion of discussion (except on minor technical detail) of the Naval Agreement at Washington. America, herself unfortunately outside the League, has made a bold initiative in the direction of international security, and in co-operation with nations who are members of the League has achieved concrete results both in the Pacific Pact and the Naval Agreement. No student of British foreign and naval policy will deny that this country, too, has contributed in no small measure to these achievements. The Naval Agreement of Washington has nowhere been more aptly summed up than in the cartoon in which Mr Punch depicts Britannia laying up the sword of naval supremacy on the altar of disarmament. Neither Parliament nor any important section of public opinion has challenged the action of our delegates in voluntarily surrendering the principle which has been the key of British foreign policy since the days of the Armada. So great a break with tradition could not have been achieved unless the people of Great Britain had definitely and finally put from their minds the possibility of war between the two branches of the Anglo-Saxon races. The numerous and well-founded arguments which our Press would have freely used before the war to resist what would then have been represented as a direct challenge to our Imperial responsibilities have been left unsaid, and the feelings of this country towards America have been expressed frankly and with dignity by Mr Balfour, who has performed no finer service during his long public career than his leadership of the British delegates at the assembly of the League and at the Washington Conference. We venture to doubt, however, whether the great prestige of the Washington Conference will be enhanced by a paper agreement to abolish poison gas and to forbid the sinking of merchantmen by submarine. Indeed, a solemn declaration by America, Great Britain, and France of these principles without the assent of Germany invites the derision of the scoffer, who recollects the pious resolutions laid down before the war by the Hague Conferences. The friends of peace will be more profitably employed in endeavouring to remove the causes of war than in attempting to render it a humane and gentlemanly pursuit.

THE SLUMP IN PROFITS.

THE depression in trade lends peculiar significance to our quarterly summary of the company reports issued in the quarter ending December, 1921, the statistics for the past quarter showing an even more severe decline than did those for the quarter ended October 31st. In studying the figures it should be borne in mind that the profits relating to the last quarter are not those earned in the past three months, but are the profits disclosed in company reports published during that period. Some company directors are prompt in presenting their accounts, but others, either of necessity or intention, allow considerable periods to elapse before divulging to the proprietors and to the public the financial results of the companies' operations. Consequently the profits disclosed in any one quarter do not represent the earnings of one particular period. As a general rule, it may be assumed that the reports published in any quarter relate on the average to the financial year which ended six months before the end of the quarter; for example, it may be taken that the majority of the reports published in the three months ended December 31st relate to the financial year ended June 30, 1921. Moreover, in the present instance, the depression started in various trades at different dates, a fact which accounts for great divergences in the decline in profits in the period under review.

In the past quarter the reports of 311 companies have been analysed, and these show aggregate net profits, after payment of debenture interest, &c., amounting to £14,268,278, which compares with £30,272,382 earned by the same companies in their

previous financial year. This means a decline of no less than £16,004,104, or 52.9 per cent. Debenture interest amounts to about 2½ millions, so that the total surplus available for distribution to capital (after certain allowances for depreciation) has fallen from 32½ millions to 16½ millions. As will be seen from the first table below, there has been a progressive decline in each of the past three quarters:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	No. of Companies	Reports Published in		Increase.		Decrease.	
		1920.	1921.	£	%	£	%
First quarter	412	41,915,998	43,387,538	1,471,540	3.5	3,705,798	8.4
Second quarter	355	44,173,294	40,467,496	..	..	10,945,001	24.4
Third quarter	232	24,157,770	13,912,771	..	..	16,004,104	52.9
Fourth quarter	311	30,272,382	14,268,278	..	..	28,483,363	20.1
	1310	140,519,446	112,036,083	..	..	..	..

On the assumption that the figures relate to the financial years which ended six months previously, the decline in trade began to make itself felt on company profits in the year ended December 31, 1920. The progress of the boom and depression may plainly be seen from the next table, which shows the increases or decreases in profits recorded in our quarterly statistics since the beginning of 1918:—

	1918.		1919.		1920.		1921.	
	%	£	%	£	%	£	%	£
First quarter	1.0	..	10.4	..	26.9	..	3.5	..
Second quarter	5.8	..	5.1	..	37.8	..	8.4	..
Third quarter	12.3	..	3.4	..	41.9	..	42.4	..
Fourth quarter	4.7	..	10.5	..	27.1	..	52.9	..

Thus, while the decline shown in the third quarter of last year approximately cancelled the increase recorded in the corresponding quarter of 1920, the decrease recorded in the quarter just ended not only wipes out the increase in the same quarter of 1920, but also more than cancels those of the last quarters of the two preceding years.

From the next table, which sub-divides the figures for the past three months into 14 different groups, it will be seen that decreases are general, the only exception being the tea company group:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	No. of Companies	Reports Published in Quarter Ended Dec. 31.		Increase.		Decrease.	
		1920.	1921.	£	%	£	%
Breweries	49	2,156,414	1,947,348	..	..	209,066	9.7
Hotels, restaurants, &c.	9	44,637	378,209	..	..	70,418	15.7
Iron, coal, and steel	22	3,892,239	1,869,717	..	..	2,022,522	52.0

Motor and cycle	5	673,593	Dr 44,722	..	..	1,164,315	175.0
Nitrate	5	282,311	195,431	..	..	8,875	4.4
Rubber, &c.	75	1,813,711	Dr 264,224	..	..	2,077,937	114.6
Shipping	7	1,744,131	760,142	..	..	983,989	56.1
Shops and stores	6	1,347,794	292,196	..	..	1,055,598	77.9
Tea	6	Dr 929	32,245	..	..	33,174	..
Telegraph, &c.	5	3,445,631	2,340,824	..	..	1,104,807	32.1
Textiles	9	4,559,597	2,038,531	..	..	2,521,066	55.4
Trust companies	15	1,270,133	39,282	..	..	830,851	65.1
Miscellaneous	65	6,951,394	3,916,227	..	..	3,035,167	43.6
	311	30,272,382	14,268,278	..	..	16,004,104	52.9

The Nitrate and Tea groups, which show respectively only a small decrease and an increase, encountered the trade depression before it became so general. Breweries also show a comparatively small decline, while the nine hotels and restaurants record a decrease which is well below the average. With these exceptions, every group shows a very heavy percentage reduction. Even the Telegraph group, which includes some of the important cable companies, shows a very heavy decrease. Motor and Cycle companies and the Rubber group each show heavy net losses in the aggregate, while the decline in the profits of the half-dozen retail shops and stores is well above the average. It has, moreover, to be remembered that in certain groups, such as the Iron, Steel, and Coal companies, the reports do not cover the last six months, when production was carried on at less than cost.

In the next table we show how profits were appropriated in each of the past four quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Reserve, &c.
1921.	£	£	£	£
First quarter	43,387,538	24,377,364	6,357,521	12,652,645
Second quarter	40,467,496	23,732,561	8,028,669	8,706,273
Third quarter	13,912,771	10,646,366	2,814,956	431,549
Fourth quarter	14,268,278	11,464,889	3,386,145	Dr 682,756
	112,036,083	70,221,080	20,607,292	21,207,711

The last column of the table includes, in addition to sums specifically set aside to reserve, the amounts by which the balances carried forward exceed the amounts brought into the accounts. In the last quarter this item proves to be a minus quantity by reason of the fact that the great majority of companies have drawn upon their balance in hand in order to pay dividends, while some have withdrawn considerable amounts from existing reserve funds. Thus while in the first quarter ordinary shareholders received 56 per cent. of profits and preference shareholders 14.7 per cent., reserves being credited with 29.3 per cent., in the past quarter no less than 80.4 per cent. has gone to ordinary shareholders and 23.6 per cent. to preference shareholders, a sum equal to 4 per cent. of net profits having had to be taken from balances in hand or from reserves for the purpose.

We next show how profits for each of the groups were appropriated in the December quarter:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
	£	£	£	£
Breweries	1,947,348	989,419	50.8	397,259
Hotels, restaurants, &c.	378,209	195,912	51.8	94,025
Iron, coal, and steel	1,869,717	1,022,792	54.8	568,551
Land, mortgage, &c.	815,068	417,589	100.5	218,474
Motor and cycle	Dr 44,722	259,606	..	82,753
Nitrate	195,431	93,918	48.5	3,780
Rubber, &c.	Dr 264,224	162,013	..	294,603
Shipping	760,142	804,585	105.9	294,603
Shops and stores	292,196	80,832	28.3	137,068
Tea	32,245	23,339	72.5	4,210
Telegraph, &c.	2,340,824	1,035,716	44.2	2,000,000
Textiles	2,038,531	2,692,763	132.5	391,227
Trust companies	439,282	291,901	66.8	226,458
Miscellaneous	3,916,227	2,992,534	76.5	964,737
	14,268,278	11,464,889	80.4	3,386,145
			23.6	Dr 682,756

The Telegraph and Nitrate groups are striking exceptions in the matter of reserve allocations, each setting aside more than 50 per cent. of profits. At the other end of the scale we have the Motor and Cycle and Rubber groups, both of which show a substantial net loss and a still bigger reduction in reserves. It should be added, however, that in neither of these groups have companies which individually show a loss paid any dividends to ordinary shareholders. Again, in the Textile group reserves have been reduced to pay out more than was earned to ordinary shareholders. For this the figures of J. and P. Coats are chiefly responsible, this company having earned net profits of £2,072,400 and paid out £2,581,300 on ordinary capital, reserves being reduced by £250,000 and the balance forward by nearly £600,000. Even in the case of investment trust companies, past earnings were drawn upon to pay dividends.

The next table shows the ratio to total ordinary and preference capital of net profits and of the amounts added to or deducted from reserves:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
	£	£	£
1921.	£	£	£
First quarter	365,534,600	43,387,538	12,652,645
Second quarter	336,719,100	40,467,496	8,706,273
Third quarter	166,443,500	13,912,771	431,549
Fourth quarter	218,246,700	14,268,278	Dr 682,756
	1,086,943,900	112,036,083	21,207,711

The ratio of profits to capital has been steadily declining, until for the past quarter it is only 6.5 per cent., while reserves have only been expanded by a sum equal to 1.9 per cent. of total capital. The average rates of interest and dividend paid on debenture, ordinary and preference capital in each of the past four quarters are set out below:—

	Debenture.	Preference.	Ordinary.
	%	%	%
First quarter	4.43	5.0	10.3
Second quarter	4.61	5.6	12.6
Third quarter	4.45	5.0	9.7
Fourth quarter	4.52	5.1	7.6

There has been a heavy decline in the average rates of dividend received by ordinary shareholders, and, as will be seen from the final table, only two of the groups have paid, on average, more than 10 per cent. on ordinary capital:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.	Rate of Dividend.
	£	%	£	%	£	%	%
Breweries	13,525,985	4.5	7,312,774	5.4	9,223,463	10.7	9.1
Hotels, restaurants, &c.	2,372,636	4.4	1,480,000	6.4	2,081,700	9.5	10.6
Iron, coal, and steel	4,843,743	5.4	8,914,636	6.3	26,76,660	9.9	12.0
Land, mortgage, &c.	10,135,032	4.2	5,187,521	4.0	12,972,530	6.3	9.5
Motor and cycle	392,286	6.6	1,811,945	4.6	4,325,311	6.0	11.7
Nitrate	402,650	5.3	1,062,069	5.3	1,062,069	8.8	14.8
Rubber, &c.	149,700	6.2	405,250	0.9	12,064,310	1.3	9.6
Shipping	3,511,910	4.1	4,583,380	4.9	9,652,565	8.3	11.4
Shops and stores	2,486,800	5.5	3,577,849	3.8	6,185,078	1.3	11.4
Tea	42,660	5.0	111,000	3.8	256,831	9.1	6.6
Telegraph, &c.	3,771,275	4.1	2,000,000	3.5	12,555,310	2.2	8.3
Textile	218,400	4.1	6,846,478	5.8	16,090,000	16.7	17.8
Trust companies	3,608,037	4.1	5,422,071	4.2	9,026,940	3.2	9.2
Miscellaneous	6,636,775	4.8	18,490,177	5.2	29,981,079	10.0	12.4
	54,253,939	4.5	66,483,217	5.1	151,763,436	7.6	11.6

The ordinary rate for the Textile group remains exceptionally high, but again the figures of J. and P. Coats are responsible. Breweries and Tea companies are the only groups to pay a higher average dividend than a year ago, but the latter earned larger profits. Heavy reductions are shown by the Iron and Steel and Rubber groups, by Shops and Stores and by Investment Trust companies. The moral of these returns is plain. Dividends at a reduced rate have been paid at the expense of reserves. These tactics cannot often be repeated, and the investor must be prepared for still lower dividends in the current year. When industrial companies are paying but 7½ per cent. on their paid-up ordinary capital, it is easy to understand the preference of the investor at the moment for debentures or gilt-edged securities.

THE POSITION OF SPAIN.

MANY people take a pessimistic view as to Spain's future. Not unnaturally, the recent disaster in North Africa has given a great shock to the friends of Spain. Spanish Morocco has yielded nothing but loss and disappointment to the Motherland, and its reconquest is bound to be extremely costly. It may totally upset the equilibrium of the Spanish finances, and it is generally expected that North Africa will never yield much benefit to Spain's trade and industries. The tariff rupture with France and this week's political crisis resulting from King Alfonso's refusal to support the Cabinet in imposing civilian control upon the army, are further reminders of the difficulties which the country is at present facing.

In the past Spain was one of the richest and one of the most powerful countries in the world. Its decline must be ascribed mainly to natural causes. The country consists almost exclusively of mountains and high plateaux. Little Portugal has a larger extent of low-lying plain than has Spain. The natural harbours of the country are few in number, and are mostly too small for modern ships. The trade of the Spanish ports declined for the same reason for which the trade of Amalfi, Pisa, Venice, and Bruges went down. Spain's turbulent rivers are unsuitable for navigation, owing to their wildness and owing to the irregularity of their flow, and the building of roads and of railroads is made exceedingly difficult and costly through the absence of level ground.

While rivers unite nations, mountain chains separate them. Since the earliest ages the Spaniards have been divided among themselves. Their lack of unity and consequent civil wars have been disastrous to them. Even now several nations dwell in Spain. The Catalonians have not become reconciled to the supremacy of the Spaniards. The capital of the former is Barcelona, the greatest Spanish business centre. The two Spanish capitals have each about 600,000 inhabitants. The differences between the two races and the two capitals are apt to become acute. Many Catalonians incline towards revolt, and the danger of their separation from Spain is not inconsiderable. Unending foreign and civil wars have also kept back Spain. But there has been a great deal of progress in the country, especially during the last two or three decades. Agriculture throughout Spain has been vastly improved by irrigation works, the application of science, and the construction of roads and railroads. Production per acre has greatly increased, but it remains very low if compared with the yield in countries which possess a happier climate and more level ground. During the war vast numbers of animals were

sold by the Spaniards to the belligerents, and especially to France. Nevertheless, the livestock of the country increased from 27,767,465 head in 1913 to 33,821,530 head in 1919, animals of all kinds sharing in that increase. New crops and processes have been introduced. The production of sugar rose from 86,146,827 kilograms in 1909-10 to 153,518,110 kilograms in 1918-19. Co-operative societies, rural banks, and other institutions have aided greatly in the improvement of Spain's agriculture, which remains by far the most important resource of the people.

Not so very many years ago transport in the interior was carried on chiefly by means of pack-mules and pack-horses. Spain is converting its ancient mule tracks as rapidly as possible into roads. The length of these has increased from 43,438 kilometres in 1906 to 74,149 kilometres in 1917. Railway construction is very costly, because the railroads have to be taken over countless viaducts and through countless tunnels. Nevertheless, the railway net is being gradually extended. During the last 15 years more than 1,000 miles were added to it.

Spain endeavours to develop her industries *pari passu* with her agriculture. Coal production is still low. Still, it has considerably expanded, the output increasing from 888,677 tons in 1880 to 7,164,463 tons in 1918. That is the maximum reached. Since then a reaction has taken place, owing to strikes, over-high prices, and a falling off of the demand. Water power resources have been developed with the greatest energy. Between 1914 and 1920 the horse-powers derived from waterfalls increased from 281,000 to 618,000, and a further great increase is projected. Lately the Spanish manufacturing industries have expanded considerably. Spain produces practically all her own requirements in textiles, especially cotton goods, and hopes to become self-supporting in iron and steel, and in goods made from iron and steel under the shelter of increased protection. Spain manufactures on a competitive scale numerous articles which came formerly exclusively from abroad, among them accumulators, ships, and machines of every kind. She has important furniture factories, boot and shoe factories, &c., and has begun exporting manufactured goods on a considerable scale. Her shipping is still very small, but is gradually increasing, her tonnage having risen from 233,695 tons in 1881 to 740,343 tons in 1920. It is frequently stated that Spain's internal troubles are due to the poverty of the people, who, we are told, are becoming steadily poorer. The statistics published by the banks and savings banks and by the co-operative societies show that masses of the people live better now than they did in the past. The consumption of sugar per head per year has gradually increased from 4.71 kilograms in 1902 to 7.51 kilograms in 1919. The improvement in social conditions is most clearly reflected by the prison population, which has shrunk from 23,005 in 1907 to 16,076 in 1918, and by the criminal statistics, which tell a similar tale.

Spain is progressing, though slowly. The land is rich in minerals and in water power. It has been kept back by lack of capital and lack of enterprise, and it offers considerable possibilities to English business men. The Spaniards are anxious to work in co-operation with foreign experts. The Germans have recognised the opportunity offered by Spain, and they have succeeded in obtaining a considerable hold upon the country. If English business men wish to take an important part in modernising Spain and in developing the Spanish market, they must bestir themselves. That they should do so is important, for British manufacturers are deeply interested in certain raw materials, particularly iron ore, copper and pyrites, in the provision of which Spain plays a predominant part.

But in Spain, as elsewhere, economic progress suffered a set-back in 1921. Months and months have been wasted in political and party discussion in the Cortes, with no benefit whatever to the material interests of the nation. The disastrous war in Morocco greatly contributed toward the already large deficit on the Budget. The year also ended with a commercial rupture with France. The new Customs tariff has not yet been drawn up by the Commission, and when it is complete, is expected to give even less satisfaction if possible than the present ultra protectionist schedule. The settlement of the railway question is

still under discussion, and during the past year the State has continued to advance money to the companies, and the traffic has continued to be unsatisfactory, while there is a scarcity of rolling stock and coal. The industrial year could not have been worse. Though prices of merchandise fell considerably in the wholesale markets, the benefit did not reach the consumers, who naturally restricted their purchases, and large amounts of goods remained unsold. Wages continued high, and industries closed down, being unable to secure raw materials at reasonable cost. In Catalonia the suspensions of payment and failures were alarming in 1921. Money was dear, and new concerns were not able to find credit as in the prosperous years of the European war. Speculation in foreign currencies continued as much as ever, and after the closing down of the Bank of Barcelona the Government had to call to order several other banks, which continued to encourage speculation in German marks. The Government began the year 1921 with an issue of 5 per cent. Treasury bonds for the amount of 750 millions of six months' currency. In July these were renewed, and new bonds issued for 600 millions more. In November there was a third issue of 1,356.60 millions three months bonds. These issues, at 5 per cent., were mostly taken up by the large banks, and the fall in all other Spanish stocks was considerable. The Custom House statistics, which only cover the ten months to the end of October, show that the foreign trade of Spain fell from 2,009 million pesetas to 1,736 millions, and that the unfavourable commercial balance rose from 307 to 460 million pesetas.

SOME CABLE COMPANIES' RESULTS.

THE accounts of some prominent cable companies which we examine in this article cover the calendar year 1920, with the one exception that the accounts of the Western Telegraph Company closed at June 30, 1921. Most of the reports, therefore, cover a part of the boom period, and that of the Western alone covers a period in which the trade depression was for a large part of the time in full force. After allowance has been made for this fact, the results may still be regarded as satisfactory. Certainly the fortunes of cable companies in this difficult period have been favourably regarded in the stock markets, where, as will be seen from the following table, quotations of the shares have improved during 1921:—

Name.	Prices of 1920.	Prices of 1921.	Price July 27, 1921.	Price End of 1921.	Yield.
Anglo-American ord. stock.	Hght. 55	Lwst. 41	Hght. 49½	Lwst. 42½	4½

† Free of income-tax.

In a year of heavy depreciation in industrial shares of most classes almost every share quoted in the above list has improved substantially in value.

The latest reports of six companies show an aggregate rise in gross receipts, which is turned by higher working expenses into a decline in net receipts. However, the 1920 aggregate of net receipts is well ahead of that recorded in 1918, namely, £3,188,833 against £2,746,696. The following table compares the receipts and expenses shown in the two latest reports of each company:—

	Gross Receipts.		Working Expenses.		Net Receipts.	
	1919.	1920.	1919.	1920.	1919.	1920.
Cuba Submarine ..	78,852	99,154	50,489	41,347	28,363	57,807

Great Northern ..	1,584,032	2,051,346	1,015,946	1,410,871	568,086	640,475
Western ..	2,683,076	2,073,498	1,627,926	1,330,961	1,055,150	742,537
	10,963,634	11,254,436	7,118,222	8,065,603	3,845,412	3,188,833

For the six companies working expenses rose by little short of £1,000,000. But it will be seen that this increase comes mainly from two companies, the Eastern and the Eastern Extension. Heavy message traffic during the time when business was still active entailed heavy working expenses; the maintenance of cables claimed more money, and in the case of two of the companies taxation absorbed larger sums. This last point is brought out in the following table:—

	Working Expenses Proper.		Excess Profits Duty and Income-Tax.	
	1919.	1920.	1919.	1920.
Cuba Submarine ..	£ 29,188	£ 34,284	£ 21,301	£ 7,063
Direct Spanish ..	103,629	91,956	21,081	15,490
Eastern ..	2,207,179	2,988,783	430,326	324,016
Eastern Extension ..	961,781	1,196,241	413,865	666,138
Great Northern ..	996,390	994,004	*305,556	416,667
Western ..	939,933	1,024,425	687,993	306,536

* Reserved for extraordinary taxes.

The Eastern shows the largest rise in working expenses proper. Salaries and wages at stations cost this company £990,866, against £653,691; maintenance of cable £519,122, against £438,073; general expenses in London £134,999, against £92,943. English taxes cost the Eastern Extension over £250,000 more in 1920 than in 1919, and this company also suffered an increase of expenses under each of the main items mentioned above in the case of the Eastern. The Great Northern Company still suffered from the disuse of its trans-Siberia line, but in 1920 compensation came from heavier volume of traffic elsewhere, which helped the company to record a large rise in gross receipts. Income was also largely assisted by an increase of £325,863 in the item "gain on exchange," and working expenditure did not rise so much as in the case of each of the other companies. Since the Western report carries us up to a more recent date than the others, its figures are of especial interest. It will be seen from the tables given above that while gross receipts fell sharply, a substantial decline in working expenses is also shown. But it should be noticed that practically the whole of this decline in expenses is due to a fall in tax payments.

The way in which these companies dealt with their profits is shown below:—

Company.	Prior Charges, Pref. Div., &c.	Ordinary Dividend.		Rate Paid for 1919.	Placed to Reserve, &c. *	Inc. or Dec. in Carry Forward.
	£	%	£	%	£	£
Cuba Submarine ..	6,000	7½	11,200	7½	35,111	+ 5,496
Direct Spanish	3,000	10½	6,466	10½	12,000	+ 4,845
Eastern ..	150,000	10½	418,662	10½	600,000	+ 99,604
Eastern Extension ..	30,096	10½	318,550	10½	450,000	+ 151,660
Great Northern ..	24	24	360,000	22	133,333	+ 117,286
Western ..	32,747	10½	270,125	10½	450,000	+ 20,671

† Free of income-tax.

The Great Northern alone increases its rate of distribution to ordinary shareholders. The last four companies in the list all had new capital ranking for dividend in 1920. The Western places £245,000 less to reserve than in the previous year, the Eastern and Eastern Extension each £100,000 less, and the Great Northern £25,000 less. The last named, however, has added largely to the carry forward. Cable company directors have in the past years pursued a very conservative financial policy, and have employed the exceptional results of boom years to build up sound balance-sheets. This fact appears from the analysis of principal items in the latest statements, which comprises our final table:—

Company.	Total Capital.	Reserves.	Book Value of Cable, &c.	Cash and Investments.
	£	£	£	£
Cuba Submarine ..	220,000	145,695	230,677	190,032
Direct Spanish ..	94,655	151,285	90,925	143,712
Eastern ..	8,997,405	3,063,880	9,143,458	2,716,844
Eastern Extension ..	4,724,220	2,850,012	4,320,828	3,886,202
Great Northern ..	1,500,000	3,952,658	1,978,221	5,247,540
Western ..	3,937,625	2,950,831	3,793,633	2,664,589

The large reserves built up stand the companies in good stead in these days, when arrears of cable repairs and extensions have to be caught up, and with the stronger concerns investment income is an item which grows in importance in lean years. In 1921, presumably, cable companies' receipts will be found to have been restricted by trade stagnation. But to place against these declines there should be important decreases in working expenses. By reason of the reserves built up, these companies are able to face a few lean years with comparative equanimity, and investors may also derive confidence from the fact that cable companies' accounts will immediately benefit from any general revival in trade. At the Eastern Extension meeting the old question of cables *versus* wireless was discussed. Asked whether recent developments in wireless would adversely affect the cable companies, the chairman, Sir John Denison-Pender, said:—

The Germans were supposed to be well up in "wireless" before the war, and it was their only direct means of communication to the outer world during the war—a fact which ought to have tended very materially towards making it efficient, but at the present time they were entering into arrangements with the big Atlantic companies for direct cable communication with the United States. Then Italy, which was looked upon as the birthplace of "wireless," was at the present time endeavouring to get direct communication with North and South America by cable. This being so, it did not look as if the days of cables were over.

"If wireless," concluded Sir John, "were better than cables it would cut them out, but it had some work to do before it got into that position."

SHIPPING AND SHIPBUILDING IN 1921.

SHIPPING, the most vital transport agency of these islands, is always among those industries which feel acutely the effect of economic fluctuations. But it has rarely had to face a more difficult task than the dramatic descent from the peak attained in 1920. In doing so it has reduced its handmaid, the shipbuilding trade, to one among the three most depressed industries in the country. The causes of the depression are not far to seek; according to Lloyd's Register, the gross shipping tonnage of the world in the middle of 1921 was nearly 13 million tons, or 26 per cent. more than in 1914, the United States merchant marine being nearly 12 millions larger in the middle of 1921 than in 1914:—

GROSS TONNAGE OF VESSELS, of 100 TONS and UPWARDS, BELONGING to the SEVERAL COUNTRIES of the WORLD, as RECORDED in "LLOYD'S REGISTER," 1914, 1920, and 1921.

Total	49,089,552	57,314,065	61,974,653

It is true that many of the ships are old, and ought to be "scrapped," and that others, which are not so old, will never be efficient freight earners; but they will not be scrapped while the cost of replacing them remains so high, to say nothing of the cost of breaking them up. Mr Archibald Hurd, on the authority of Messrs Turner, Davidson and Co., shipbrokers, recently put the cost of completing an ordinary tramp steamer at £12 per ton, whereas new tonnage has recently changed hands at £8 per ton.

But with the increase in tonnage available there has been a decrease in the quantity of goods exchanged between country and country. In the United Kingdom the total tonnage of vessels entered and cleared with cargoes in 1921 was no more than 62 per cent. of the total in

1913, while the tonnage of imports was 70 per cent., of exports 36 per cent., and of exports and imports combined 49 per cent. of the corresponding figure for 1913. The actual figures are as follows:—

	Total Tonnage Entered and Cleared with Cargoes.	Imports. Tons.	Exports. Tons.
1913	116,884,000	56,023,000	93,824,000
1920	73,108,000	45,542,000	41,175,000
1921	73,507,000	39,436,000	33,598,000

Freights have consequently declined enormously, until, according to a calculation of the Chamber of Shipping, freight rates at the end of October were no more than 30 per cent. of the geometrical average of 1920, and they have since fallen further. That freights are much less than 30 per cent. of the highest rate in 1920 will be seen in the following examples, which could be multiplied indefinitely:—

	Highest in 1920.	Lowest in 1921.
Coal—		
Cardiff to River Plate	75 0	13 6
Gibraltar	52 6	9 0
Havre	60 0	5 6
Ore—		
Bilbao to Middlesbrough	39 6	6 0
Tyne	38 0	7 9
Homeward Freights—		
Calcutta to U.K.	180 0	50 0
Bombay to U.K.	155 0	20 0
Time Charter—		
General trade (12 months)	27 6	5 0

But even these low freights have failed to stimulate trade, and a large volume of British shipping, which Lord Inchcape recently put at 650 vessels of 1,117,000 tons, is lying idle in British ports.

The effect of these conditions upon shipbuilding is clearly shown in the returns issued by Lloyd's Register this week in respect of the last quarter of 1921. The construction was commenced in the United Kingdom of only 19 vessels of a total tonnage of 55,290 tons, compared with 99 vessels of 392,877 tons in the first quarter of the year, and 148 vessels of 506,353 tons in the last quarter of 1920. The total tonnage on which work was commenced during the whole of 1921 amounted to only 568,438 tons. The figures of launchings for each quarter of the year compared with 1913 and with 1920 are as follows:—

TONNAGE OF VESSELS LAUNCHED in U.K.

	Tons.
1913	1,932,152
1920	2,055,624
1921	
1st quarter	433,607
2nd "	321,690
3rd "	307,850
4th "	467,246

Total (1921)

The tonnage completed during the year has thus been substantially larger than the tonnage commenced, even though work on a large number of vessels has been suspended; the tonnage under construction has therefore steadily declined throughout the year, until on December 31st it was only 2,640,319 tons, which is 1,068,000 tons less than at the same date in 1920. The tonnage under construction in the United Kingdom and in the world (excluding Germany) at the end of each quarter for the last two years was as follows:—

TONNAGE UNDER CONSTRUCTION.

	United Kingdom.			World.
	Total.	Tonnage on Which Work Had Been Suspended.	Completion Postponed.	
1920—March 31	3,394,425	..	..	7,727,257
June 30	3,578,153	..	..	7,584,812
September 30	3,731,098	..	..	7,507,614
December 31	3,708,916	..	..	7,157,480
1921—March 31	3,798,593	497,000	350,000	7,086,766
June 30	3,530,047	735,000	444,000	6,199,468
September 30	3,782,972	731,000	457,000	5,542,978
December 31	2,640,319	722,000	?	4,457,093

Includes 375,000 tons on which work has been suspended (mainly in U.S.A. and Italy). † Includes 400,000 tons on which work has been suspended (mainly in Italy).

The tonnage nominally under construction is now less than it has been since June 30, 1919, and even so, the figures are over-stated, since they include 722,000 tons on which work has been suspended, and a further tonnage, not stated, the completion of which has been postponed. Since this latter item amounted at the end of September to 457,000 tons, we are safe in assuming that work was actually proceeding on not much more than 1½ million tons of shipping. It is therefore not surprising that the percentage of unemployed in the shipbuilding industry, according to the December *Labour Gazette*, amounts to 34.5 per cent.—indeed, the surprise is that the percentage is no higher.

It goes without saying that a necessary preliminary to the revival of the shipping and shipbuilding industries is an increase in production the world over and an increasing interchange of this production. But more than this is required to make either shipowning or shipbuilding remunerative—there must be a reduction in costs. In the case of shipbuilding the price of ship plates has been reduced from £24 10s per ton, at which they stood throughout the second half of last year, to £10 10s per ton—only 33 per cent. above the pre-war figure. Ships angles have fallen from £25 per ton to £9 10s, and are now only 27 per cent. over pre-war, and the shipbuilder expects still further reductions; the cost of rivets, castings, &c., has also fallen, but the big item in the cost of shipbuilding which has not yet fallen appreciably is labour. Government figures show that whereas the miners have accepted wage reductions in the first eleven months of 1921, averaging 38s 1d per week, and iron and steel workers reductions averaging 36s 1d per week, the corresponding wage reduction in the shipbuilding and engineering group amounts to no more than 9s 7d per week. An instructive table in the *Shipbuilding and Shipping Record* for January 4th gives the hourly rate of skilled, semi-skilled, and unskilled shipyard workers at various dates, from which we extract the following:—

	Skilled.		Semi-skilled.		Unskilled.	
	Hourly Wages.	Per Cent. Inc. Over Pre-War.	Hourly Wages.	Per Cent. Inc. Over Pre-War.	Hourly Wages.	Per Cent. Inc. Over Pre-War.
July 31, 1914	d 9.3	..	d 6.2	..	d 5.3	..
June 1, 1920, to April 30, 1921	23.3	151	19.2	210	18.1	242
January 1, 1922	19.1	105	15.6	153	14.6	176

The percentage increase over the pre-war level on December 1, 1921, was 114 in the case of the skilled, 162 in the case of the semi-skilled, and 187 for the unskilled, compared with the *Labour Gazette's* retail index number of 99 per cent. increase and the *Economist's* wholesale percentage of 74. The cost of living should fall still further in 1922, and make it possible for the trades unions to accept proposals for wage reductions in a more accommodating spirit than hitherto. Given co-operation between capital and labour, we have no reason to fear foreign competition; no other country has as much as one-sixth of the amount of shipping under construction that there is in this country, and of the 1,800,000 tons building outside the United Kingdom work on 400,000 tons is suspended. In the U.S.A. the tonnage now under construction is less than 5.2 per cent. of the total building in March, 1919.

A revival in the shipbuilding industry would do much to revive the iron and steel industries, for on the average one ton of iron and steel is required for every 2.1 tons of shipping tonnage built; a revival of shipbuilding would therefore mitigate the unemployment, not only in its own industry, but also in the iron and steel, coal mining, iron ore mining, limestone quarrying, and transport industries.

In the meantime, we have shipbuilding firms turning over to constructional work, and we learn this week of the Furness Shipbuilding Company, which in 1921 had the third largest output of shipping tonnage (72,660 tons) in the country, obtaining orders for grain silos for South Africa and oil storage tanks for Scotland.

Notes of the Week.

Ireland and the Treaty.—A crowded week of Irish history has passed off as satisfactorily as we in this country had any right or reason to expect. On Saturday last week the protracted discussions in the Dail Eireann ended in approval by 64 votes to 57 of the Treaty providing for the setting up of an Irish Free State. The majority was certainly narrow, but the essential fact remains that the most desperate and bitter attempts of the irreconcilables failed to secure the rejection of the pact. These efforts were renewed on Monday in the insidious form of a motion for the re-election of Mr de Valera to the Presidency, which he had resigned on the previous Friday. This motion, too, was rejected, but by a narrower majority still—namely, by 60 votes to 58. On the following day Mr de Valera and all his supporters left the Chamber, and Mr Arthur Griffith, who headed the delegation that signed the Treaty, was unanimously elected President of Dail Eireann, and charged with the duty of forming a provisional Government. This he succeeded in doing the same day, and announced a Ministry chosen from supporters of the Treaty. Losing no time, Mr Griffith has summoned a meeting for to-day at the Dublin Mansion House of the members entitled to sit in the Parliament of Southern Ireland. Mr de Valera's supporters are not expected to attend. It is unfortunate that attention in this country has been largely concentrated on the bitter wrangling in the Dail and on methods of procedure that seem farcical to a nation trained by long experience in the traditions of Parliamentary conduct. It is even fashionable to argue that a people whose leaders manage Parliamentary affairs in such a manner are unlikely to make a success of governing their own country. So hasty a conclusion is, in our view, both unjustified and unworthy. Patience is an essential virtue of an Imperial race. It has been shown before in the case of South Africa. It should be shown now in this latest experiment of self-government within the British Commonwealth of nations. Patience may yet be sorely tried, for it should not be forgotten that Mr Griffith is faced with difficulties far greater even than those over which General Botha triumphed. There will doubtless be mistakes, disappointments, and crises in Ireland. But the responsibility for them will rest with the Irish themselves. That at least is a great thing gained for an Empire which professes the doctrine of free partnership and government according to the wishes of the governed. Having accorded Dominion status to Ireland, the duty of this country lies, not in criticism, carping and fretting, but in refraining from word or action that may add to the immense difficulties of those who are doing their best amid a sea of troubles to make proper and effective use of Ireland's opportunity. Public opinion in Great Britain welcomed the birth of self-government in Sinn Fein Ireland. It would be unworthy of this country if it refused to the new-born babe a generous degree of sympathy and tolerance during the pains, disorders, and anxieties of teething. Fortunately, King George's grant of amnesty to political prisoners has given the nation a clear lead in this matter at the psychological moment.

Overseas Trade.—The Board of Trade Returns of overseas trade in December and the full year 1921 are to hand just as we go to press, and will be discussed in our next issue. On Tuesday, however, an official summary of value figures was issued, from which may be drawn the following comparison between December, 1920, and December, 1921:—

(In Thousands of £'s.)

MONTH OF DECEMBER.

	1920.	1921.	Inc. or Dec. in December, 1921.	
	£	£	£	%
Imports	142,785	85,312	— 57,473	40.1
British exports	96,631	59,375	— 37,256	38.6
Re-exports	12,699	9,204	— 3,495	27.4
Total exports	109,330	68,579	— 40,751	37.2
Excess of imports over total exports	33,455	16,733	— 16,722	50.0

For the full year the excess of imports on the published merchandise figures is nearly £278 millions, as compared with £358 millions in 1920. For the twelve months imports fell from £1,932,649,000 to £1,086,687,000, British exports from £1,334,469,000 to £703,196,000, and re-exports from £222,753,000 to £107,052,000. Value summaries alone being given in the preliminary statement, no indications are available, until the full returns are studied, of the parts played in the value figure decline by falling prices and lower quantities respectively. A statement issued by the Ministry of Transport, however, states that imports in November, 1921, were 270,000 tons less than in November, 1920.

Banking Profits.—The preliminary statements of net profits of the joint-stock banks, issued with the dividend announcements, show almost without exception a material decline in profits for the past year. But there have been no reductions in dividends, since there has been no drain on profits to meet investment depreciation. From the table below, which gives net profits and dividends for the past three years, it will be seen that with one exception the profits of the banks are lower, while those of the discount companies have been further increased:—

	1919.		1920.		1921.	
	Profits.	Div.	Profits.	Div.	Profits.	Div.
Bank of Liverpool and Martin's	£ 325,320†	% 16†	£ 745,949	% 16	£ 548,528	% 16

Union Discount	155,579	15	197,019	16	..	..

† Half-year.

The Lancashire and Yorkshire, which pays a higher dividend (not the same rate, as stated in a Business Note last week), shows higher profits, but this may be because last year's figure was struck after making provision for investment depreciation. The other banks show substantial decreases, to a figure in some cases below the 1919 level. The discount companies, on the other hand, have had a still more profitable year, and each company has increased its dividend. Alexanders, moreover, makes in addition a distribution of £50,000 in bonus shares. How 1921 profits have been appropriated may be seen from the next table:—

	Profits.	Investment Depreciation.	Reserve.	Premises.	Staff Funds.	Carried Forward.
	£	£	£	£	£	£
Barclays	2,201,652	..	600,000	100,000	100,000	— 30,350
Lloyds	2,529,124	..	200,000	450,000	200,000	+ 2,280

Bank of Liverpool & Martin's	548,528	..	400,000	100,000	..	+ 22,705
Lancashire and Yorks	243,327	..	150,000	..	..	— 19,546
Manchester and County	260,953	..	61,560	..	..	— 16,504
Manchester and Liverpool	539,275	..	100,000	..	..	— 27,746
Union of Manchester	..	..	..	..	..	..
Williams, Deacon's	365,231	..	100,000	25,000	..	+ 5,856
Alexanders Discount	141,015	..	50,000	..	5,000	+ 3,516
National Discount	165,305	..	..	..	10,000	+ 60,478
Union Discount	..	..	100,000	5,000	10,000	..

None of the banks or discount companies have this year made any allocation to meet investment depreciation, whereas twelve months ago the banks in the above table set aside £4,930,000, and the Union Discount Company £50,000 for this purpose. The reserve funds of the banks a year ago were credited with over £1,700,000, while £925,000 went to premises accounts and £500,000 to staff funds, and balances forward were increased by £538,000. This year total allocations to reserve, premises, and staff funds amount to £4,587,000, while there is a net addition to amounts carried forward of less than £100,000. It is abundantly clear, therefore, that shareholders have to thank the appreciation in the market value of gilt-edged securities for the maintenance of dividends at last year's rates. The Manchester and

County retransfers £125,000 from investment depreciation to the reserve fund. A table showing last year's highest and lowest prices of bank shares, together with the yield on the basis of the latest dividends is appended:—

Name of Bank.	Am't. of Share.	Paid Up.	Price of 1921	Price of 1920	Price Jan. 10, 1922.	Present Yield.
Bank of Liverpool and Martin's	20	2½	6½	5½	6½	8 0
Barclays "A"	4	4	6½	5½	6½	8 0
Do "B"	1	1	2½	2	2½	6 1
Lloyds	5	1	2½	2	2½	6 1
London Joint City and Midland	12	2½	7½	5½	7½	6 4
Do	2½	2½	7½	5½	7½	6 4
London County Westminster, &c.	20	5	15½	12½	15½	6 11
Do Maximum dividend 12½ %	1	1	2½	2	2½	6 1
National Prov. and Union	25	1	8½	7½	8½	6 17
Do	20	4	9½	8	9½	6 14
Lancashire and Yorkshire	20	10	31½	27½	31½	6 4
Manchester and County	20	4	10	8½	10½	6 13
Manchester & Liverpool District	15	3	8	7	8	6 17
Williams, Deacon's	5	1	1½	1½	1½	6 13
Do	1	1	2½	2½	2½	6 5
DISCOUNT COMPANIES.						
Alexanders	10	5	10½	8½	11	7 14
National	25	5	8½	6½	9	8 17
Union	10	5	11½	9½	12	7 10

The bank shares have recovered strongly from the lowest point touched last year, and in some cases are now higher than at any time in 1921. Present quotations for each of the three discount companies are above the highest of 1921, but yields are still considerably higher than those of the banks.

The International Corporation.—An official memorandum has been issued at Cannes on the organisation of European reconstruction by means of a proposed international corporation, to be established in London under British Company Law, so far as suitable, with the title of the Central International Corporation. In the first instance the funds shall be not less than £20 millions, subscribed by national corporations, formed in each country which is a party to the arrangement in proportion to their capital. It is provided that "The principal functions of the corporation shall be to examine the opportunities for undertakings, in connection with European reconstruction, to assist in financing such undertakings, to obtain adequate security for payment in respect of work carried out, to arrange for contracts, and to promote or assist in promoting the subsidiary companies or corporations in various countries for special purposes." The information so far available does not show whether the corporation is to be a private body or a semi-public organisation, or how the national representatives are to be selected. Until further information is available it would be premature to form an opinion as to its possibilities. But as the Export Credits Scheme, which does not apply to Russia, had at the end of October expended only £3.3 millions out of a total fund of £25 millions, the natural conclusion is that the latest scheme has been formulated for the rehabilitation of trade with Russia. But until the Soviet has given unequivocal guarantees to respect the rights of property trade with Russia is not a "fair business risk," either for public or private, international or national, enterprise.

The Year's Coal and Iron and Steel Output.—The production of coal in the mines of Great Britain in the week ended December 31st amounted to 3,049,000 tons, making the total output for the year 164,354,200 tons. This compares with 229,295,000 tons for the year 1920 and 287,430,000 tons in 1913. The output in each of the four quarters of 1921 was as follows:—First quarter, 54,296,300 tons; second, 179,100 tons; third, 52,438,600 tons; fourth, 57,440,200 tons; the second quarter covering the entire period of the stoppage. The output of pig-iron, according to the National Federation of Iron and Steel Manufacturers, amounted in December to 275,000 tons, making a total of 2,611,400 tons for the year 1921, as against 8,007,900 tons in 1920. The steel production in December was 381,000 tons, making 3,624,800 tons for the year, as compared with 9,056,800 tons for the year 1920.

The Wages of Railway Servants.—A most important case is being heard this week before the National Wages Board for British railways. The Scottish railways have demanded abolition of the increases granted by the

National Wages Board in their award of June, 1920; the removal of the special payment for night duty; that junior employees should not be recognised as adults until they reached the age of 21 years; and that the hours of work constituting the standard day of the respective grades should be modified and varied. These claims, which have been rejected by the Central Wages Board and are being taken on appeal to the national tribunal, are a test case, for they challenge not only the principle of the wages agreement which the Government passed on to the companies when the railways were decontrolled, but also the rigid application of the eight hours' day in railway service. Of these the former is less likely than the latter to give rise to a deadlock, for the agreement between the National Union of Railwaymen and the Government was concluded at a time when neither party realised the nature of the depression that was coming. Railway men will not continue to secure support for an agreement which maintains wages at a level above the cost of living from other trade unions whose members are perforce accepting severe wage reductions now that the latter realise that the national demand for lower railway charges is blocked by swollen wages bills, which in the case of the Scottish companies amounted to £14,916,290 in 1921, against £4,291,424 in 1913. "They asked for decrease of wages," said Mr Mathieson, "and were given increase of rates and charges. Many of them knew to their cost that it was like asking for bread and being given something like a stone." We believe that the railway men will not refuse altogether to follow other trades in recognising the harmful results of such a policy. The hours question, however, raises a more difficult issue for them, since the eight-hour day is a principle common to the whole labour movement. Nevertheless, its rigid application has in all countries where there is light traffic in country districts involved a great increase in personnel, who are only partially occupied, and slackness or insufficiency of work are everywhere the arch-enemy of low labour cost.

Lancashire Cotton Trade Wages.—A correspondent writes:—The wages agreement between the employers and the operatives in the Lancashire cotton industry came to an end on December 24th. According to the settlement of the dispute last June, it was arranged that on the expiration of the agreement three months' notice would have to be given of any further change in list rates. Last week the position of affairs was considered by the two employers' associations in joint conference, and in course of discussion it was agreed that, owing to the trade depression they were justified in claiming a further wage reduction. The fact, however, that three months' notice to be given causes a rather awkward situation, as it is realised by the employers in both spinning and weaving departments that if a demand for a big fall in wages is put forward to take effect in three months' time, buyers of yarn and cloth will withhold orders in anticipation of being able to purchase cheaper later on. On Tuesday last, therefore, on behalf of the Federation of Master Cotton Spinners' Associations and the Cotton Spinners' and Manufacturers' Associations, a letter was sent to the secretaries of the trade unions affected, asking them to consent to a variation of the agreement with regard to the notice of any further change in wages. The proposal of the employers is that no action by either side shall be taken for two months, but that at the end of that period it will be open for either party to give one month's notice of an alteration in list wage rates. The suggestion put forward is now receiving the consideration of the trade union committees, and it is probable that a joint conference of masters and operatives will take place in Manchester early next week, to discuss the proposal of the employers.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries states that, as there was little rain in most parts of the country in December until the last week, the weather was favourable for agriculture generally. Crops did well, and winter keep was saved as cattle could be kept at grass. Good progress cultivation is well advanced in all parts of the country. The rains which occurred after Christmas made the land

too wet to work in some western districts, but in the east many districts were still short of water at the end of the year. Almost without exception winter corn germinated well, and there is a good, thick plant. With the mild weather the crops have grown quickly, and are healthy and forward. In some cases they are considered too forward, and have been grazed by sheep. The area sown with wheat seems to be about the same as last year, smaller areas having been drilled in the west and slightly larger areas in the east. Winter oats and beans also occupy about the same area as last year. On the whole, potatoes do not seem to be keeping so badly as was anticipated, though generally the keeping qualities of the tubers are not so good as usual. A fairly large proportion were caught by the frosts before lifting, and these are often rotting in the clamps. There are also signs that sprouting will be early. Throughout the country ewes are healthy and in good condition. In Dorset lambing among Dorset Horn flocks is fairly well advanced, with satisfactory results. Sheep on turnips have generally done well. There is not the same anxiety as a month ago as regards the sufficiency of winter fodder, and in most parts of the country the supply is now considered to be large enough to last until spring. The supply of labour is more than sufficient for requirements in all parts of the country. With work well advanced and the falling prices farmers are sometimes reducing the number of regular workers employed, but unemployment is mainly among casual labourers, the more skilled men usually finding work.

The Rand Strike.—The remark in last week's article on "Two Years' Rand Mining Dividends," that "the dispute at the Witbank Colliery has every appearance of developing into a general mining strike," has been justified with almost dramatic suddenness, the men ceasing work on Monday evening, notwithstanding that the conference between representatives of the Chamber of Mines and of the unions, arranged for Tuesday, was pushed forward to Monday. It may be recalled that the trouble started with the refusal of the colliers to submit to the rather sharp reduction of 5s per shift as from January 1st. A ballot of the gold miners was then taken, to the accompaniment of totally unwarranted statements as to the intentions of the Chamber of Mines with reference to the "colour bar" and the reduction of the ratio of whites to natives; it resulted in an overwhelming majority in favour of the stoppage of work, although one-third refrained from voting. The men at pumping and power works have since been called out, and the latest news is that the executive of the Industrial Federation has requested all labour organisations throughout the country to prepare to strike on Monday. That the miners have some appreciation of the necessities of the situation is indicated by their action in asking General Smuts to call a joint meeting. The basis of discussion put forward is, however, so one-sided as to be of very little utility. The simple fact is that owing to the rapid decline in the gold premium, an exceedingly grave crisis has arisen in the Transvaal gold industry. With costs at their present level, fully two-thirds of the mines would be compelled to close down in the event of a relapse in gold to its normal figure of 85s per fine ounce; even with credit taken for a premium of 10s 6d per ounce many of the low-grade properties are in effect running at a loss. The latter point was well brought out by the Johannesburg correspondent of an enterprising daily contemporary, who mentioned that last month two of the largest properties—the Randfontein and the East Rand Proprietary—crushed a total of 250,000 tons of ore for a working profit of £450, spending £315,000 in the process! Reference to the 1920 reports of these two undertakings elicits that in 1920 they had to provide £390,000 net for debenture charges, taxes and depreciation. On this basis, last month's operations would have involved a total net loss of £32,000! The case is one in which loose talk of "attacks on the workers' standard of living" are worse than useless. Unless drastic measures are taken to meet the situation, a very large proportion of the workers in South Africa—those indirectly dependent upon, as well as those directly engaged in, the mining industry—will have no standard of living at all—unless they can find one elsewhere.

Premier (Transvaal) Diamond.—This company, writes our mining correspondent, has a status very different from that of other South African diamond producers, the Union Government taking no less than 60 per cent. of the profits. It is, however, a member of the big combine; and, like the others, suffers from the practical cessation of the demand for new stones. Indeed, last year's results from sales were much worse than might have been inferred in view of the due declaration of the dividends on the preference shares. The latter called for £92,500, whereas the accounts show that the shareholders' balance of realised profits amounted to only £36,100. Fortunately, the company received a windfall in the shape of a refund both of British income-tax and of some capital invested in an insurance company, which raised the free sundry revenue to the substantial total of £100,200. There being no dividend on the deferred capital, the balance carried forward—£77,900—is almost double that brought in. Under the prevailing conditions no fault can be found with the directors for pursuing a conservative policy. A point is the strength of the financial position. The "trading and emergency funds," £500,000, are represented by surplus cash assets, while the diamonds on hand are taken at 1s and stores at 2s! Operations having been severely restricted during the latest period, little purpose would be served by a detailed comparison of results. Still, it may be mentioned that while the ground washed last year was only about two-fifths the 1919-20 quantity, the number of carats recovered only fell off by rather less than one-half. This results from a clearing of various areas nearer the surface of the mine, which for various reasons were not completely worked out before. The value per carat averaged no more than 21s 4d as against the record of 51s 2d last time. At 39,000,000 loads the available ground represents between five and six years' work on the basis of the last normal period. Twelve months ago considerable importance attached to the installation of a new washing gear. The directors now intimate that the orders given have been as far as possible cancelled. Nevertheless, extended facilities for production could be made available at short notice if required. It would not be very surprising if payment of at any rate part of the preference interest due in respect of the current year had to be deferred, although the prospects of the diamond trade are now thought to have improved.

Transvaal Output for December.—The December statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 681,847 ounces, as compared with 704,236 ounces in November, and 632,215 ounces for December, 1920. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.
January	787,467	782,634	714,182	676,059	670,503	651,593
February	763,524	781,321	658,759	636,728	625,330	558,137
March	736,689	787,094	696,281	712,379	707,036	671,123

Total	186,407	184,373	182,933	184,661	187,375	190,490	191,092	192,290

A CONCERT in aid of the Distress Fund for Cornish tin miners will be given at the Queen's Hall on January 28th, at 7.30 p.m.

At a meeting of the Royal Statistical Society on January 17th, at 5.15 p.m., Mr H. W. Macrosty, O.B.E., will read a paper on "Some Current Financial Problems."

The Efficiency Club announces that an address on "The Problem of the Exchanges" will be given by Prof. T. E. Gregory at Vernon House, Park place, St James's, on January 18th, at 8 p.m. The Hon. Lady Parsons will take the chair.

Oversea Correspondence.

UNITED STATES.—FINAL CROP REPORT— NOVEMBER FOREIGN TRADE. (FROM OUR CORRESPONDENT.)

NEW YORK, December 31, 1921.

THE final report published this week by the Department of Agriculture, giving crop areas, yields, and values for 1921, fully confirms the belief which had quite generally been held that some others of this country's crops besides cotton, were larger than the Department's earlier estimates had indicated. The wheat estimate has been raised 54,000,000 bushels, the increase being principally in winter wheat. Gains are also noted in the yields of potatoes, rice, tobacco, hay, and buckwheat, while decreases from the October 1st forecast are shown in corn, oats, barley, rye, apples, sweet potatoes, flaxseed, and beans. The total wheat yield is now placed at 795,000,000 bushels, as against 787,000,000 last year; corn, 3,081,000,000 bushels, compared with 3,232,000,000 in 1920; oats, 1,061,000,000 bushels, against 1,526,000,000; cotton, 8,300,000 bales, as compared with 13,400,000; and barley, 151,000,000 bushels, against 202,000,000 in the preceding year. Yields of other crops are shown in the accompanying table. The production of seven leading cereals amounted to 5,203,000,000 bushels, as compared with 5,883,000,000 last year, which was the largest yield ever recorded. In its final estimates the Department of Agriculture values the principal farm crops of the United States this year at \$5,675,877,000. That is nearly \$3,400,000,000 less than last year's crops were worth, and \$8,000,000,000 less than the crops of 1919, when farm products were commanding high prices. This year's value shows a decrease of 37 per cent. from that of 1920, and of 58 per cent. from 1919. The values are based on prices paid to farmers as at December 1st, while the crops included in the estimate comprise about 90 per cent. of the value of all farm crops. Some authorities figure, therefore, that this year's value of all crops will be about the same as that of 1914—namely, \$6,112,000,000. Only two crops this year—corn and hay—are valued at \$1,000,000,000, while last year there were four. Yields were lighter than in 1920 for almost every crop, notwithstanding the fact that the acreage of the principal crops was somewhat larger, with the exception of cotton. The following table gives the estimated yields in bushels, unless otherwise stated, as indicated by the Government's final figures, together with the final yields in 1920 and in the previous high-record years:—

	Production, in Millions of Bushels.			Year.
	1920.	1921.	Record Yields.	
Corn	3,232	3,081	3,232	1920
Winter wheat	578	587	729	1919
Spring wheat	209	208	356	1918
All wheat	787	795	1,026	1915
Oats	1,526	1,061	1,593	1917
Barley	202	151	256	1918
Rye	69.3	58	91	1918
Rice	53.7	40	53.7	1920
Buckwheat	13.8	14	22.8	1866
Seven cereals	5,883	5,203	5,883	1920
Hay, tame, tons	91.2	81.5	91.3	1919
Hay, wild, tons	17	15.2	21.3	1915
All hay, tons	108	96.7	110	1916
Potatoes, white	430	347	442	1917
Apples, total crop, barrels	240	96.9	253	1914
Peaches	43.7	32.7	64	1915
Sweet potatoes	112	98.7	112	1920
Flaxseed	11	8.1	29	1902
Tobacco, pounds	1,508	1,117.1	1,508	1920
Cotton, bales	13.4	8.3	16.1	1914
Peanuts	36	..	52.5	1917
Beans	9.1	9.1	17.4	1918
Cotton-seed, tons	5,970	3,704	7,186	1914

The returns of our foreign trade in November, classified by origin and destination, show that of the \$49,200,000 decrease in exports as compared with October, \$43,000,000 was due to a falling off in shipments to Europe, and \$36,000,000 to decreased exports to England, France, and Italy alone. The interesting fact is also disclosed that whereas in November of last year our exports to England and France were about \$146,000,000 greater than our imports from those countries, imports since then, especially in the past few months, have increased, while at the same time our shipments have decreased, with the result that our excess of exports has declined, until last month it amounted to only \$45,000,000 approximately. That development undoubtedly accounts to a considerable extent for the marked improvement in sterling and French exchange rates in the past month or two. Our exports to all countries in November, totalling \$294,437,000 were 56 per cent. less than in November, 1920, and 60 per cent. below the same month in 1919. Compared with November of last year, exports of manufactured goods showed the heaviest shrinkage, with a decline of 63 per cent.; foods were next, showing a drop of 56 per cent.; while exports of crude materials were 41 per cent. less. Imports last month, \$211,027,000, were 34 per cent. smaller than in November, 1920, the decrease being due principally to a decline of 53 per cent. in foods, 30 per cent. in manufactured products, and 15 per cent. in crude materials. Comparisons with a year ago are, of course, vitiated by the great decline in prices.

FRANCE.—THE BUDGET AND REPARATIONS—COST OF LIVING—CROPS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, January 10.

THE report of the Finance Commission of the Chamber on the "Special Budget for 1922 of Recoverable Expenditure" has now been distributed, and provides much interesting information. M. de Lasteyrie, the Rapporteur-Général of the Commission, reminds us, in the preamble of his report, that this special budget comprises the expenditure on the devastated area, pensions, &c., that Germany is under obligation to repay, in accordance with the stipulations of the Peace Treaty. "Down to this day, however," the report asserts, "the Government of the Reich has repaid to the French Treasury only a portion of the cost of the army of occupation on the Rhine, and has not paid a single centime of the amount it owes for the reconstitution of the liberated regions and for the payment of military pensions." The burden of these payments has consequently fallen on the French Government, which down to January 1, 1922, according to this report, "had paid on account of Germany a total amounting approximately to 80,000,000,000, made up as follows:—

Paid on account of reparation of damage to property	45,000,000,000
Paid on account of damage to persons	29,000,000,000
Interest on sums borrowed for recoverable expenditure	6,000,000,000
Total	80,000,000,000

Referring to the negotiations that have been from time to time in progress in regard to France's share in the Reparation payments, M. de Lasteyrie points out that, under the London agreement of May 5, 1921, France suffered a reduction of 30 per cent. in the amount that was due to her. He criticises the financial agreement arranged in Paris in August last, congratulating the French Government on not having so far ratified it, and he fully approved and emphasised the importance of the Wiesbaden agreements. As a means of solving the Reparations problem, the Finance Commission urge that an Allied Debt Commission, similar to those that function in Greece, Turkey, and Egypt, should be installed in Berlin, in substitution for the Committee of Guarantees now operating there. This Commission, the Rapporteur urges, should have the double function of (1) bringing pressure on the German Government for the purpose of inducing it to restore order to its finances and controlling the note issue of the Reichsbank effectively, and (2) for assuring the service of the Reparation Debt, particularly in the direction of re-establishing control over foreign bills and other securities, and preventing capital from leaving the country.

The Special Budget of Recoverable Expenditure for 1922 provides for a total expenditure of 7,320,000,000 and for a revenue of 7,000,000,000, composed of 4,500,000,000 coming from payments due from Germany during the current year under the terms of the Peace Treaty and 2,500,000,000 to be derived from the negotiation of indemnity bonds due to this country from Germany during the same period. As there is no reason to suppose that any effective revenue will be derived from either of these two theoretical sources, however, "it is to be feared that this year, as in previous ones, the Special Budget will have to draw its resources almost entirely from loans." The Government propose to take up during the current year the sum of 8,000,000,000 in loans through the Crédit National and a further 4,000,000,000 in loans that are to be arranged through various industrial groups and secured on the annuities due to them from the Government in respect of war losses. Down to the end of December, the report shows, the Crédit National has expended a total of 9,397,000,000 in respect of reconstruction work, and now has an available balance of only 1,200,000,000. From this it appears that a fresh issue of Crédit National bonds may be expected in the comparatively near future.

Official figures are now issued showing the following diminution in the cost of certain of the principal necessities of life in France during 1921 (as compared with the year 1910, for which the figure 100 is taken as a basis):—

	April, 1920.	Jan., 1921.	Nov., 1921.
Vegetable foodstuffs	613	401	366
Animal foodstuffs	616	570	403
Sugar, coffee, cocoa	474	357	343
Manufacturing materials	763	478	393
Minerals and metals	608	409	332
Textiles	1,115	539	453

Some interesting figures have been issued by the Prefecture of Police in Paris, showing the fall in the cost of living in Paris during the past twelve months, as compared with that in London during the same period. The figures, which have been drawn up by the prefectorial Commission du Cout de la Vie, are based on the expenditure of an average Parisian or London family for food, clothing, fuel, lighting, and miscellaneous articles during 1921, as compared with the earlier part of 1914. From these figures it appears that articles of consumption that could have been bought with a unit of 100 francs or 100s in 1914 have necessitated an expenditure in 1921, in London or Paris respectively, of:—

	Paris.	London.
December, 1920	370	269
First quarter, 1921	338	252
Second " "	307	223
Third " "	295	220
Fourth " "	204	204

* Not yet available.

It should be mentioned that the figures for Paris do not include anything for rent, whereas those for London comprise this important item. Down to the beginning of 1921 house rents still remained at what were practically pre-war figures, owing to repeated efforts of the Legislature to protect tenants, and particularly tenants who had been mobilised. During the course of 1921 house rents in Paris rose, on an average, 21 per cent.

The Ministry of Agriculture has published this week figures showing the comparative yield in France for the various crops for 1913, 1920, and 1921, Alsace-Lorraine being included in each instance. The figures are as follows:—

	1913.	1920.	1921.
	Quintals.	Quintals.	Quintals.
Cheese	86,919,050	64,482,180	87,843,770

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE.
Gresham House, Old Broad Street,
London, E.C. 2

The political situation has this week reacted very seriously on the Bourse, and the political hesitancy at Cannes has been interpreted into financial hesitancy on the markets. Financiers here are far from optimistic, and it is felt generally that the crisis through which industrialists have passed cannot but have their sequel. In consequence the public is frankly shy from the standpoint of investment, and private purchasers have neglected such opportunities as were offered them. French 3 per cents. have dropped from 54.60 to 54.20, but foreign securities were rather more in demand. Banks have dropped, Banque Union Parisienne falling from 727 to 715, Banque de Paris from 1,258 to 1,245, and Credit Lyonnais from 1,435 to 1,425. Transports have resisted the general tendency. Thus P.L.M. is improved at 828 as against 819, Nord has lost a point at 915, and Orleans stands at 891 as against 886. Shipping has again been depressed. Chargeurs Réunis have fallen from 495 to 472, Trans-Atlantique from 235 to 211, and Messageries from 208 to 204.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

	Jan. 5, 1922.	Dec. 29, 1921.	Jan. 8, 1913.

GERMANY.—REPARATIONS—FINANCES—REICHSBANK—EXCHANGE AND BOURSE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, January 10.

ALTHOUGH the conditions and exact extent of the alleviation granted to Germany at Cannes were not yesterday known, the announcement that a decision in principle had been come to had the expected effect on business. The pound exchange fell from 780.80 (on the 7th) to 710.75, and the dollar from 185.94 to 168.67. This is another instance of the long-observed fact that the mark exchange depends primarily upon sentiment regarding Germany's relations with the Allies. The last preceding instance was the great mark rise of December 1st, which followed the beginning of the London discussions. If the Ally countries consider the present low mark exchange a threat either to their trade or (as it unquestionably is) to the payment of reparations, they have a power over this exchange's future which a speculator might envy. The substance of the coming report of the German delegates at Cannes is so far unknown. The reduced payments, independently of how they are distributed between gold and goods, will not be easy to make. The proposed International Syndicate has here awakened great interest, but not much hope. The main objective is Russia. The Russian Government, which only last week decided that foreign trade must remain a State monopoly, seems to be less than ever inclined to accept any aid which is combined with even a small measure of foreign control.

The Independent Socialists are holding their annual Congress at Leipzig. Last year at Halle the party split up on the question of accepting the Moscow International. This year all groups proclaim for united work with the moderate Majority Socialists; but all also proclaim against the collaboration with a "bourgeois" Government, which is the main plank in the Majority Socialists' platform. At Leipzig the extremer group of Crispian and Ledebour seems to outweigh the more moderate Hilferding-Breitfeld group. The resolution at present before the Congress demands class war and the Social Revolution, and Herr Ledebour again proclaims for the Dictatorship of the Proletariat.

The result of the Budget for 1922, now under preparation, is described by the "Dena" News Agency as follows:—The deficit, to be covered by credit operations, is 224,338 millions, composed of three separate deficits: 3,127 millions on general administration, 11,015 millions on railways, posts, &c., and 210,196 millions for execution of the Peace Treaty, including Reparations. This on a basis of one gold mark equals 60 paper marks. The deficit, 93 per cent. of which is due to Reparations, means a loan burden of 3,739 marks in one year on each of Germans 60 million citizens. The three milliards odd deficit on general administration all appears in the Extraordinary Budget. The Ordinary Budget shows a surplus of 18 milliards, but this must go towards Peace Treaty (mainly Reparations) execution, the total cost of which is 228,196 millions.

Ordinary revenue has developed satisfactorily. Income-tax will yield three milliards more than in 1921; the total yield of direct taxes and stamp duties will be 68,171 millions, or 30 milliards more than in 1921; and Customs and Excise will yield 25,457 millions, or 10,500 millions more than in 1921. About 8,630 millions are to be saved on food and fodder subsidies. The loss of 11,015 millions on railways and posts means a great improvement on last year. The real operating loss is only 2,189 millions, the remaining 8,826 millions being productive expenditure. This has been achieved by ruthless increases of rates. On January 1st postal rates were raised at one blow more than threefold, and are now 20 to 25 times higher than in 1914. Railway rates and fares were again raised on November 1st and December 1st, and heavy new increases (up to 75 per cent.) are announced for February 1st. The expected falling off in traffic has not so far taken place. Receipts from goods traffic in April, 1920, were 785 millions; October, 958 millions; April, 1921, 1,417 millions; October, 2,097 millions. In April, 1921, receipts were 80.4 per cent. over those of April, 1920; in October, 1921, receipts were 118.8 per cent. over those of October, 1920, in judging which the extraordinary business activity of last autumn must be taken into account. Passenger receipts have also risen considerably. That high material prices and not excessive wages are the causes of the railway deficits is shown by the fact that whereas in 1913 salaries and wages made up 60.9 per cent. of outlay, and material 39.1 per cent., in 1921 the respective figures were 52.7 and 47.3 per cent. On October 1, 1921, salaries and wages averaged 13.8 times the peace rates, whereas coal cost 48 times, rails 37 times, wooden sleepers 22 times, and bar-iron 64 times more than in 1913.

The Reichsbank statement for December 31st showed a new record increase in Treasury bill discounts of 15,293,638,000 marks, and the very large increase in circulation of 4,643,914,000 marks. The position of the bank at the close of 1921, 1920, and 1918 is here shown. A noteworthy feature is the great decrease in the last year of the asset "Kassenscheine," nearly all of which are "Darlehenskassenscheine" (loan notes), the small remainder being "Reichskassenscheine" (State notes). The former kind of "Kassenscheine" were in August, 1914, declared to be bookable as "cash" security for notes; but since the Reichsbank law of last spring no "cash" security for notes has been necessary, and to-day practically the whole security consists of discounted Treasury bills, which are not liquid assets. The bank's position is all the worse because in the hands of the public are about 114 milliards of Treasury bills, which may at any time be presented for rediscount. As the bank is obliged to rediscount, this would cause a vast further increase in circulation.

	1918.	1920.	1921.
Metal reserve	2,282	1,097	1,007

Other assets	22,188	68,805	113,639
Note circulation	13,280	22,327	7,591
State deposits	1,776	3,649	25,314
Private deposits	..	..	2,944
Other liabilities	..	..	..

Bank clearings in 1921 reflected the inflation, being 1,172,114 millions against 644,758 millions in 1920, 182,671 millions in 1919, and 73,634 millions in 1913. In 1914, 1915, and 1916 clearings were smaller than in 1913. Clearings in December, 1921, were 120,834 millions, against 72,873 millions in December, 1920, and 6,623 millions in December, 1913. Whereas in 1913 clearings varied little from month to month, and showed no general tendency to increase in the second half of the year, clearings in January, 1921, were 78,916 millions, in September 98,004 millions, and in November 140,490 millions, the highest point reached. The decline in December must be attributed to the lessening business activity brought with the mark exchange recovery. Savings bank reports indicate increasing tightness of money. The net increase in 282 savings banks in 11 months of 1921 was 950 millions,

against 5,640 millions in the same months of 1920 and 5,050 millions in 1919. In October savings declined by 1,800 millions, in November by 1,900 millions.

Stocks in the Bourse week ending January 5th moved up a little, but home loans were weaker. The *Frankfurter Zeitung's* securities index for stocks and loans shows for December 5th 34,646, against 33,545 on December 30th, stocks being 31,928 against 30,917, and home loans 902 against 920 (976 on November 10th). With the foreign exchanges falling, stocks were yesterday moderately weak, loans being: War 5 per cent., 77.50; Federal 4 per cent., 88; 3½ per cent., 73.90; 3 per cent., 102.75; Colonial 4 per cent., 110; Savings and Premium, 80.50; Prussian Consols 4 per cent., 70.60. The Reichswirtschaftsrat has proclaimed in favour of the restoration of daily Bourses.

The industrial "Catastrophe Boom" has come to an end, and cannot be revived by any means other than a new fall in the mark exchange. The Prussian Trade Ministry's report for the end of December agrees with private reports that in practically all branches the public, the retailers, and the wholesalers suspended buying after the big mark exchange recovery of December 1st, and that while most mills and workshops during the boom booked enough orders to keep them going for months, very few new orders are being booked, while conditionally given orders are being annulled. The same condition is reported from Austria, and in both cases the causes are the same, "Catastrophe Booms" being unhealthy conditions induced by distrust of the currency. The German "Catastrophe Boom" now ended differed from that of the winter of 1919-20 mainly by being based on a home, not upon a foreign demand. The last monthly report, for December 1st, shows a slight rise of unemployment from 1.2 to 1.4 per cent. of registered workers. As the mark's lowest point was reached in early November, this report also agrees with the theory and the past practice of "Catastrophe Booms." The lowest unemployment figure at the beginning of any month since the Armistice was reached on November 1st, with 151,871 publicly supported unemployed, the highest in 1921 being 426,600 on March 1st. The highest figure in 1920 was 454,775 on January 1st. A provisional estimate of Ruhr coal production in December is 8,000,000 metric tons in 25½ working days, against 7.77 million tons in 24½ working days in November. Total Ruhr production in 1921 (provisional estimate) is 94 million tons against 88.26 million tons in 1920. The increase is due to more labour, not to greater efficiency.

ITALY.—BANCA DI SCONTO'S MORATORIUM—FEATURES OF THE CRISIS.

(FROM OUR CORRESPONDENT.)

TURIN, January 7.

AFTER my last letter of December 24th, the story of the Banca Italiana di Sconto has filled the columns of all Italian newspapers, and may be chronicled thus:—On December 26, 1921, the Minister of Industry signed a decree limiting Stock Exchange transactions to cash dealings. While the general public were puzzled, those with inside knowledge said that Banca Italiana di Sconto's shares were pouring into the market, and a precipitate fall was threatening. The Government were clearly of opinion that speculative sales, with the consequent breakdown of prices, threatened a panic among the depositors, and accordingly stopped them. On December 27th, the newspapers reported meetings at Rome between representatives of the Government and the banks. It appeared that the figure of 600 million lire fixed as the capital of the banking consortium for the demobilisation of the Banca Italiana di Sconto was insufficient. Foreign depositors, and also some big Italian depositors, took alarm, and began hasty withdrawals. Several million lire were employed in supporting the market for the Banca's shares. On the same day an authoritative statement by Signor Parodi, counsel to the Banca Italiana di Sconto, explained that an agreement was finally reached that the sum necessary to put the Banca on its legs could only be furnished by the State or by the banks of issue acting on behalf of the Treasury. On December 28th, Cabinet Ministers discussed the position, and decided to come to the rescue; the

HARRISONS & CROSFIELD, LIMITED

Government could have authorised the Bank of Italy to give to the Banca Italiana di Sconto sufficient advances to face the inevitable run; but they came, as they were bound to come in the public interest, to the sound conclusion that direct assistance from the Bank of Italy would be unjustifiable. It would only mean that taxpayers would have to pay for private faults or misfortunes. On December 29th, the *Gazette* published a Royal decree authorising the concession of a special "moratorium" to all joint-stock companies and co-operative credit societies with a capital of not less than 5 million lire which could prove inability to pay creditors owing to extraordinary and unforeseen events, or in cases where a moratorium might be in the creditors' interest.

As soon as the Royal decree was published, Signor Pogliani, general-manager of the Banca Italiana di Sconto, tendered to the Civil Tribunal of Rome a request for the concession of the moratorium, urging that the bank had assets largely in excess of liabilities. The tribunal, in the night, after a long discussion, accepted the request, and granted a moratorium up to December 30, 1922. On December 30th, another decree of the Minister of Industry postponed to January 4, 1922, the monthly Stock Exchange settlement which should have taken place on December 31, 1921. It appeared that some 60,000 shares or more of the Banca Italiana di Sconto had been sold for December and January settlement; but it was feared that buyers would not pay for them when duly tendered by sellers. The principal buyer is, it is said, the Banca Italiana di Sconto; not, indeed, directly, as the Italian law forbids joint-stock companies to acquire their own shares, but indirectly, through the agency of the Banca Italo-Caucasica, whose capital was wholly subscribed by the former. On January 3rd the Tribunal of Rome expressly forbade the Banca di Sconto from paying the sum needed to settle the Stock Exchange purchases of its own shares either directly or indirectly. Up to the moment of writing, the settlement, already postponed to January 4th, is not completely effected. A great many brokers in all the Italian bourses have been parties to sales of Banca di Sconto's shares, and are unable, owing to the default of the buyer, to fulfil their obligations toward their seller. It is a matter of 30 millions, and it is hoped that a voluntary consortium may be formed to carry over this unfortunate deal. The Government has very wisely declined to accept liabilities in a matter which only interests a number of professional Exchange men. Another decree, of the same day, changed from the permissive to the compulsory the substitution of the former directors by Judicial Commissioners when a moratorium is requested. The directors of the Banca Italiana di Sconto are therefore obliged to abandon the bank, and their assets are, moreover, put under seizure. The Tribunal of Rome used strong expressions to describe the directors' conduct:—"Serious and systematic mistakes," "risky financing methods," "favouring industrial concerns not worth financing," "mistaken interest taken in enterprises apt to produce great losses," "disastrous situation of the bank." On January 5th, the Mediterranean Lloyd Navigation Company preferred a request for a moratorium to the Civil Tribunal of Rome. This company is a creature of the Banca Italiana di Sconto.

Perhaps the time is not yet ripe for a careful and reasoned judgment of the crisis. But three observations may be made. The first is, that in Italy economic education has advanced not a little, as will be realised by those who remember the great outburst of public opinion in the old days of Tiberina, Esquilino, Credito Mobiliare, in the early nineties. Then public opinion and Government were unanimously in favour of stopping the crisis with generous use of public money. The liberal advances to private concerns and banks were the first and

foremost cause of the subsequent crisis in the public banks of issue. Nothing of the sort has happened to-day. The Government encouraged in an early stage, when they hoped the crisis might be averted, the formation of the 600 million lire consortium, whose advances were, I am informed, covered by adequate assets. But when the position appeared untenable, further assistance, at the expense of the taxpayer, was refused; and Ministers will certainly stand by their decision. Secondly, it may be doubted whether the resurrection of the moratorium was a happy one. Professor Sraffa, in a letter to Professor Cabiati, says that at most the moratorium should have been confined to the Banca Italiana di Sconto, and not extended generally to all embarrassed companies. Thirdly, the public has accepted the disagreeable notice of doors closed by one of the four big banks with great calm. Throngs at other banks were not noticeable, and if a little stream of depositors was seen requesting reimbursement during the two or three days following the announcement of the moratorium, it had ceased wholly by January 3rd or 4th. In the great savings banks the paying in of deposits continued. As I explained in my last letter, out of a total of 26.6 billion lire of deposits at June 30, 1921, only 6.6 billions are entrusted to ordinary banks, and upwards of 20 billions to co-operative and public or quasi-public savings banks. Given our social and economic conditions, this distribution of deposits is perhaps the greatest asset of our credit fabric.

SWEDEN.—A. GLOOMY YEAR—WAGE CUTS—UNEMPLOYMENT—EXCHANGES.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, December 31, 1921.

WE are now at the end of a year of unparalleled depression and misery. Unfortunately, the outlook is just as gloomy as when the year began, and the only bright point is the rapid reduction in costs. Whether this will bring about a revival of trade in the new year is difficult to say. The abnormal conditions in Germany, Baltic Provinces, and Finland upset all calculations. Negotiations for the adjustment of wages have not made any progress since the labourers in nearly all industries refused to discuss the terms offered. The consequence is that employers are posting announcements to the effect that on and from January 1st next wages will be on the basis of their offer until a settlement has been arrived at. In this way the match factories are introducing a 40 per cent. reduction, the mines in Central Sweden a 50 per cent. reduction, and so on. There was a slight spurt on the Stock Exchange just before Christmas, which raised values by about 18 million kr, bringing them again up to the level of the beginning of November. During the autumn and winter months unemployment has increased in Sweden, so that at the end of November the number out of work was 34,800, that is those who were drawing unemployment pay, as against 23,000 in October and 15,000 in September. Of these, 21,050 men and 550 women belonged to towns. In Stockholm itself there is a marked increase in unemployment, the figures for October being 4,699, and for November 6,618. The whole number of unemployed all over the country, including those who received no monetary assistance, amounted at the end of November last to 117,000, 38,000 in towns and 79,000 in the country. To fight unemployment 35 million kr have during this year been granted by the Government to various works. The past year has shown a constant rise in Swedish exchange. An index prepared by the Svensk Handelstidning gives the average of all foreign exchanges on January, 1921, as 116.1 to 100 Swedish kr, whereas at the end of this year the figure has risen to 126.2. The decline in the value of sterling has especially puzzled people here. It was taken for granted that, as soon as timber shipments were over, the £ would advance, but the restricted coal shipments from United Kingdom have upset calculations.

INDIA.—TRADE BALANCE—IMPERIAL BANK FISCAL COMMISSION.

(FROM OUR CORRESPONDENT.)

BOMBAY, December 24, 1921.

IT must be admitted that Christmas finds the political position in India as turbulent as they have ever been since the inauguration of the Non-co-operation Programme. But in matters financial and commercial a more pleasant story has to be recorded. True, the November trade figures, just published, show an adverse balance against India of Rs.9.22 crores, but exports have risen by Rs.1.06 crores, or 5.6 per cent., and imports have fallen by Rs.5.23 crores, or 16.5 per cent., since the same month of 1920. The Imperial Bank of India rate rose to 6 per cent. on the 15th inst. after standing at 5 per cent. since June 2nd last, and although there is no immediate likelihood of a change in the rate, the money market remains firm. There are plenty of inland bills, and money is moving at a fair rate, chiefly in the cotton districts and to Rangoon for rice. The Imperial Bank of India figures for the 16th inst. show a decline all round, and the percentage of cash to liabilities has fallen to 17.77. Government and trade requirements have considerably decreased the bank's cash balance, and money for legitimate commercial purposes is in genuine demand. Despite the facilities given to Indian investors in the matter of the new £10,000,000 sterling loan floated in London, and despite the outcry that was raised when no such facilities were afforded when the last loan was put on the market, India has taken up very little of this new 5½ per cent. issue. Notes in circulation have decreased by Rs.1.34 crores to Rs.171.03 crores in the week ended the 15th inst., and silver coin in India has fallen by a like amount to Rs.71.76 crores.

The Fiscal Commission is proceeding with its tour throughout industrial and commercial India, and is gathering valuable evidence. So far general opinion seems to be in favour of a policy of Protection, but it is realised that it will be difficult to formulate hide-bound proposals for the many industries and branches of trade in India which are governed by very different conditions. The local governments are all advocating policies of economy in regard to legislative expenditure. The revised Budget estimates for the current year of the Madras Presidency point to a total deficiency of Rs.2.74 crores, a large amount; and Bengal, in view of an expected deficit, intends to introduce an Entertainments Tax as a means of gathering fresh revenue. Company registrations in India have fallen off considerably during the last year. Thirty-eight were registered in October last, with an aggregate authorised capital of Rs.6.20 crores as against 93 companies with an aggregate authorised capital of Rs.13.16 crores in the same month of the previous year.

NEW ZEALAND.—THE BURDEN OF TAXATION—NOTE ISSUES.

(FROM OUR CORRESPONDENT.)

AUCKLAND, December 5, 1921.

THE wave of anti-capitalistic legislation which has been so prominent of late seems to show some signs of subsiding. It is true, the moratorium on loans and mortgages has been further extended, the rate of interest on such renewals being 6½ per cent. Owing to this fact, the legal restriction of interest, and the heavy taxation on companies, many large insurance companies and other financial bodies have reduced their investments in loans or debentures—other than Government loans, which enjoy special privileges. With regard to the crushing taxation of 8s 9d in the £ on the profits earned by industrial companies, the Premier, in a recent speech, has foreshadowed a reduction of this burden, though he announced that such a concession could only be effected by increasing the income-tax levied on private individuals. Some companies have evaded this taxation by transferring their surplus earnings to a special reserve account and distributing the amount thus accumulated in the form of bonus shares

among the shareholders. So far, this action has not been challenged by the Finance Minister, who doubtless recognises the impracticability of permanently imposing such a burden on industry. At the same time, the announced intention of the Government to reduce the tax has produced a good effect on the Stock Exchange, a strong upward tendency being apparent in the quotations of company shares. Not less gratifying is the formal declaration of the Government that they will pursue a policy of severe retrenchment. The war has cost the Dominion some £80,000,000, involving also a heavy annual charge for interest, sinking fund, and pensions. It is claimed that a saving has already been effected in departmental expenditure of £907,041, besides £646,000 in subsidies; while other savings would bring the total up to £2,000,000, which would be later increased to about £3,250,000. It is recognised that the policy of meeting increased expenditure by new loans has been disastrous, while increased taxation has proved a great handicap to industry.

The Government continues to observe much secrecy with regard to its financial policy. The Premier has definitely stated that he did not intend to go to the London money market again during the current financial year, but with regard to future financial arrangements he could not yet take the public into his confidence. When asked how some funds obtained for educational purposes had been raised, he declined to give fuller information. His statement, however, that "there was not enough currency" in circulation would seem to portend, taken in connection with other facts, a further increase of the inconvertible paper issue. It is just a year since the last issue of new paper money was made, so far as ascertainable, for such issues are not discussed in Parliament, but made in a semi-clandestine manner, through an Order in Council, published in the *Gazette*, which is the first announcement to the public of any increase in the note issue. The financial difficulties of the Government are enhanced by the great fall in the value of all New Zealand produce, and the decreased returns from Customs and railways, while accounts have yet to be adjusted with the Mother Country; in a few years' time an obligation of at least £50,000,000 must be met. The proposed financial measures are calculated to maintain the credit of the Dominion, and there is a possibility that another loan may be attempted in London during the coming financial year. So far, the parity of exchange has been well maintained, the New Zealand banks charging a rate of 1½ to 2 per cent. for sight drafts on London. The industrial outlook is good, with the exception of a coal miners' strike, which will probably soon be settled.

Letters to the Editor.

INTER-ALLIED DEBTS AND IRELAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have received to-day a reprint of Mr Sam Evans' letter as published in your issue of November 26, 1921.

Mr Evans appears to be anxious for better relations between this country and the U.S.A., but I do not see how his object is furthered by what he is doing. He is entitled to the free expression of his opinions in his own country, but many of us deeply resent being lectured like this by a stranger in our own Press.

I wonder what would happen if some unfortunate Englishman in America wrote a similar letter to the papers there about the Philippines! He would be told in no measured terms to mind his own business.

That we have got to pay our debts to America is quite clear, and I fancy the country, apart from purely Stock Exchange interests, would really resent being relieved of any such obligation. Certainly, if our domestic policy is to be interfered with, it would be dear at the price.—Yours faithfully,

W. R. NICHOLSON.

Pangbourne, Berks, January 11th, 1922.

BOOKS RECEIVED.

- A Revision of the Treaty, Being a Sequel to the Economic Consequences of the Peace.* By John Maynard Keynes, C.B. (London) Macmillan and Co., Limited. 7s 6d net.

- Sound Money.* By William Smellie. (Liverpool) William Smellie, 501 Tower building.
- Oil: Its Influence on Politics.* By Francis Delaisi. Translated from the French by C. Leonard Leese. (London) The Labour Publishing Company, Limited. 2s 6d.
- The Port of Swansea: Tides, Rates, and Dock Facilities, 1922.* (Swansea) Swansea Harbour Trust.
- Calcutta Commercial Gazette and Investors' Guide.* December 22, 1921. (Calcutta) Calcutta Stock and Share Syndicate, Limited.
- The New Hazell Annual and Almanack, 1922.* (London) Henry Frowde, Hodder and Stoughton. 5s net.
- Hazell for 1922 is published at 5s net, representing a reduction of 2s 6d on the 1921 price. This has been effected by cutting out certain sections which seemed less essentially useful than others. It contains practically all the well-known features which have made it the standard work of reference for official information. The Civil Service personnel occupies no less than 31 pages, notwithstanding that the Ministries of Food and Munitions are no more. Tables are given of the post-war strengths of the navies of the United Kingdom, the United States, and Japan. Final statistics of war casualties are also given.
- Clubs, 1922.* Edited by E. C. Austen-Leigh. (London) Spottiswoode, Ballantyne, and Co., Limited. 7s 6d.
- A list of 3,936 British clubs situated in various countries.
- Mechanical Appliances for Handling Railway Traffic.* By George Bulkeley. (London) The Railway Gazette. 5s net.
- Mathieson's Handbook for Investors for 1922.* (London) F. C. Mathieson and Sons. 5s net.
- A record of Stock Exchange prices and dividends for the past 10 years.
- The Blackpool Times.* January 6th. (Blackpool) Blackpool Free Press, Limited.
- This issue is produced by the "photo litho offset" process, which avoids the necessity of making any half-tone blocks for illustrations, and the *Blackpool Times* is, it is claimed, the first newspaper to be printed by this method in this country.
- The Lloyd George Liberal Magazine.* January, 1922. (London) L. J. Gooding, 25 Old Queen street, S.W. 1.

STOCK EXCHANGE NEWS. SETTLING DAYS.

TICKET.	ACCOUNT.
January 25.	January 26.

It may appear to be almost monotonous to reiterate that the prevailing feature of the Stock Exchange markets is the strength of gilt-edged securities. In spite of the unexpected developments that have arisen between France and England in connection with the Cannes Conference, the investment stocks pure and simple not only hold their ground with tenacity, but continue to advance every day. New issues which offer sound security are promptly over-subscribed, and it is the exception for subscription lists to remain open for anything like their full term. As one stock ceases to advance, several others take its place in the rise. The War Loan has been up to 92½, and upon giving way from the best, the running was quickly picked up by the Funding Loan, Victory Bonds, and Consols. Several hundreds of rises have occurred this week in the lists for Colonial Government securities, corporation stocks, home and foreign railway debenture and preference issues, Indian rails, and similar stocks. Yet the Stock Exchange is not greatly benefited in the matter of business, because of the fact that the rises are brought about more by

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of

EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch - 168, Fenchurch Street, London, E.C.3.
West End Foreign Branch - 1, Pall Mall East, S.W.1.
Liverpool Foreign Branch - 42, Castle Street, Liverpool.
Manchester Foreign Branch - Corner York St. & Fountain St., Manchester.

willingness to buy than sufficiency of stock to meet the demand. Various new issues are known to be pending. It is said in the Stock Exchange that January will see something like 50 millions of new securities created and offered to the investing public.

French and German bonds both improved because of the efforts being made at Cannes to promote international trade and to restore credit. The rises, however, were not held, owing to the recall to Paris of M. Briand. The dealings in the new Chilean loan began this week on the basis of $\frac{3}{4}$ premium, a price that was rapidly improved upon, and Argentine Government bonds of most kinds have been in the ascendant. Something of a feature is the way in which Scandinavian and Dutch bonds, Government and Municipal alike, have advanced. Russians are also substantially better. Italian and Portuguese hardened, and Foreign Government descriptions are becoming more popular. Chinese and Japanese rose with the rest.

Substantial rises have occurred in Home Railway stocks. Resumption of publication of weekly traffics set a match to the smouldering optimism engendered in the market by hope that, in the demand for investment stocks, buyers would come round to the Home Railway market in due course. Prices rose by a couple of points per diem, the Preferred stocks being especially prominent in the newly-awakened fervour. The companies have notified the dates on which their dividend declarations will be made. Whether or not the rise may have proceeded too rapidly is a matter for speculation. Canadian railway stocks have strengthened a little, but Mexicans continue apathetic, and Argentine Railway Ordinary stocks, with a somewhat dull tone, have been thrown into the shade by rapid rises amongst Brazilian railways, the latter group being the subject of rumour as vague as it is hopeful.

Rubber shares are dormant, and the Oil market attracts comparatively little attention. Physical conditions in the market are such that it is easy for a broker to walk unimpeded through the middle of a market which, a year ago, was a huge crowd of excited and closely-packed dealers. British Controlled shares gave way on the issue of a report regarded as disappointing. The banking market is little affected by the reduction in profits shown by the Big Five, and quotations have scarcely varied, though the discount companies' shares are better, and the Insurance list has further improved. The offer, promptly accepted, of Union Castle 6 per cent. debenture stock at 93 $\frac{1}{2}$ had no effect upon the Shipping market as a whole, where steadiness is the principal feature. Textile shares are better, with Coats and Courtaulds leading moderate advances. Vickers have given way, and the Iron and Steel market is a little hesitating, though prices keep firm. Amongst the new issues, Reading Electric, Llanelly Electric, Midland Counties Electric, De la Rue debenture, and several others of similar class have been readily taken at rising prices. Lyons led a quiet improvement in Catering and Stores shares, while in the Brewery market the quotations of something like 70 debenture stocks were advanced without dislodging stock which is in keen demand from prospective buyers.

The Kaffir market has lain under the shadow of the strike of miners on the Transvaal. Hopes are entertained that the influence of General Smuts will be able to promote a satisfactory settlement, and these anticipations served to rally the market from the lowest prices touched. Rhodesians are tinged with sympathetic dulness, and the Diamond shares are practically neglected. There has been a fair amount of speculation in Russo-Asiatics, Colombian Mining, and one or two other speciality shares. The markets concerned with tin are uninteresting. Indians show a slight tendency to droop, with the exception of Champion Reefs, in which the price rose in one day from 1s 3d to 2s 9d, being offered later at a florin.

On Monday, a meeting of the proprietors of the Stock Exchange will be held to discuss a scheme having for its object the abolition of Dual Control. Past experience of the apathy which the Stock Exchange displays in connection with most matters concerned with its internal government will prevent any feeling of surprise if the present proposal shares the same fate as that accorded to all of its predecessors which have been aimed at a similar end.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	13,963,953			

TREASURY BONDS.

5 $\frac{1}{2}$ per Cent. Treasury Bonds.—Issued at £59 per cent and repayable at par on May 15, 1930. Interest payable half-yearly on May 15th and November 15th. Full particulars of this issue will be found in the *Economist* for December 3rd (see page 986).

Lanarkshire County Council Redeemable Stock, 1935-1955.—This is an issue of £2,500,000 5 $\frac{1}{2}$ per cent. stock at 96 per cent, to be redeemed at par on January 15, 1955, unless previously cancelled by purchase in the open market or by agreement with the stockholders. The Council, however, has the option of redeeming at par on and after January 15, 1935, on giving three months' notice. The present issue of stock is intended to replace in part existing loans, and to provide for authorised capital expenditure on housing (State assisted) schemes and on gas undertakings. It will rank *pari passu* with all other loans of the Council. The valuation of the county for 1921-22 is £2,748,831, while the gross revenue of the Council for the year ended May 15, 1921, was £901,447. Total net debt of the County Council at May 15, 1921, after deducting sums at the credit of the several sinking funds and excluding debt for housing (State assisted) schemes, amounted to £1,770,895. Debt in respect of housing (State assisted) schemes amounted at May 15, 1921, to £681,370. This housing debt is secured by statutory obligation of the Government to contribute a subsidy towards expenditure in excess of the produce of a rate of four-fifths of a penny per £. On the completion of the housing schemes authorised by the Scottish Board of Health, at an estimated cost of about £5,000,000, the Exchequer subsidy will approximate to £250,000 per annum. Payment of interest on debt of the gas undertakings is secured in case of default by a gas contingent guarantee rate of unlimited amount. In addition to these securities, the County Council have power, under the Local Authorities Loans (Scotland) Act, 1891, to levy a guarantee rate, unlimited in amount, for the purposes of this issue upon all lands and heritages within the county. An excellent issue, which met with the success it deserved.

Richard Thomas and Co., Limited.—Authorised capital £9,000,000, of which £4,875,851 has been issued. This is an offer for sale of £1,000,000 7 per cent. first mortgage debenture stock at 94 $\frac{1}{2}$ per cent., and is the first issue of a total authorised amount of £1,500,000 debentures. The stock is to be redeemed by an annual cumulative sinking fund of 1 per cent., beginning in 1923, and operating by purchase or annual drawings. This sinking fund will redeem over 87 per cent. of the stock now offered by January 1, 1952, and any balance then outstanding will be paid off at par. The company reserves the right to redeem the stock by drawings, at 103 per cent., on any interest date after January 1, 1937, on not less than two months' notice. The company also reserves

the right on the issue of the remaining £500,000 of debenture stock to fix the rate (not exceeding 7 per cent.) at which interest will be paid. The undertaking was formed in 1884, and it is claimed that it is the largest manufacturer of tinplates in Europe. The debenture stock will be secured by a trust deed as a first specific mortgage on the freehold and leasehold property, and a first floating charge upon the remaining assets. Property and plant are valued at £1,881,859, while net tangible assets of the company, before adding proceeds of this issue, are £5,794,700. Profits are given from 1916, and these show that debenture interest payments can be easily found, while it is worthy of note that the company has earned and paid dividends on its ordinary share capital every year since its incorporation in 1884. In this offer for sale we cannot find any reference that the trust deed makes allowance for pledging assets to bankers against borrowings in the ordinary course of business, yet it is to be observed that "bank advances" figure under liabilities. The present vendors of the stock paid 89 $\frac{1}{2}$ per cent. for it, but they are paying 2 per cent. for underwriting and a $\frac{1}{2}$ per cent. overriding commission. Subject to industrial considerations, the issue possesses merit.

Union-Castle Mail Steamship Company, Limited.—Authorised capital £8,240,000, of which £3,980,000 has been issued, and is fully paid up. There is also outstanding £909,757 of 4 per cent. debenture stock falling due for repayment on January 1, 1923. This is an offer at 93 $\frac{1}{2}$ per cent. of £2,000,000 6 per cent. debenture stock, being part of an authorised issue of £3,000,000, the balance of which is reserved to provide for the redemption of the existing 4 per cent. debenture stock. This 6 per cent. stock is secured by a trust deed constituting a floating charge upon assets, and subject to existing debentures. It would have been better, perhaps, from the investors' standpoint if a specific charge on the company's boats could have been offered. The stock will be redeemed at par in 1934, but the company reserves the right at any time after February 1, 1927, on giving three months' notice, to pay off stock at 100 per cent. The company was formed in 1881, as the Castle Mail Packet Company Limited and changed its name to the Union-Castle Mail Steamship Company, Limited in 1900, on amalgamation with the Union Steam Ship Company Limited. Its financial success as a progressive shipping undertaking is amply reflected in the record of dividends shown in the prospectus. Assets of the company are now valued at £8,000,000. Following previous practice, the directors are content to rely upon the established reputation of the company for attracting subscribers, and information is lacking which in smaller and lesser known undertakings would be looked upon as serious omissions. But the issue has been fully subscribed, and will take rank among the best investments in the shipping industry.

ACTIVE SECURITIES

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

COMPANY MEETINGS, &c.

BANK OF MONTREAL.

BANK'S STRONG FINANCIAL POSITION.

FINANCIAL AND TRADE CONDITION IN CANADA.

The one hundred and fourth annual general meeting of the shareholders of the Bank of Montreal was held on December 5th in the board room at the bank's headquarters, Montreal.

On the motion of Mr R. B. Angus, Sir Vincent Meredith, Bart., was requested to take the chair.

Mr George Caverhill moved, seconded by Mr E. W. Beatty, K.C., that Messrs Hartland B. MacDougall and G. L. Ogilvie be appointed to act as scrutineers, and that Mr C. H. Cronyn be the secretary of this meeting.

The Chairman then called upon the general manager, Sir Frederick Williams-Taylor, to read the annual report of the directors to the shareholders.

THE PRESIDENT'S ADDRESS.

Sir Vincent Meredith, in moving the adoption of the report, said: Our banking year just closed has witnessed a further readjustment of prices and slackening trade. It has been a year of unrelenting anxiety, entailing constant vigilance in order to avoid serious losses.

I need not remind you that the proverbial policy of your bank has been, and it still is, to maintain a strong position by means of abundant liquid resources, so that in times of stress we may be in a position to meet the legitimate demands of our customers, as well as such exceptional calls in the general interest as may be made upon us.

While our profits have naturally fallen off in comparison with the previous year, they have been sufficiently large to warrant your directors in paying a bonus of 2 per cent. in addition to the quarterly dividend of 3 per cent. A substantial sum has as well been carried forward to credit of profit and loss.

The foreign trade of Canada has suffered serious diminution this year in terms of value, and there is no doubt that in quantity also there has been a shrinkage. In this respect we do not differ from other nations, and, indeed, make favourable comparison with many of them.

The year's harvest, taken in the aggregate, was fairly abundant, but in parts of the Western Provinces, and particularly in Central and Eastern Canada, prolonged summer drought stunted growth and impaired the yield. The outturn of wheat is probably 50,000,000 bushels larger than last year, and coarse grains generally have yielded well. The stimulating effect of a good harvest would have been experienced but for the serious decline in prices, which has cut into farmers' profits, and in a number of instances has actually involved loss on the season's operations. Another year, however, may retrieve this situation by reduction in price of articles consumed by agriculturists, including that of labour.

BURDEN OF TAXATION.

Taxation has everywhere become a serious burden. In our own country it is heavy even to the point of impeding industry and trade, and I know of no other means of redress than economy in public and private expenditure.

The past year in Great Britain has been marked by gradually falling money rates. Inactive trade and renewed inflation through Government borrowings are the chief cause of this monetary ease. Trade has sunk to a very low ebb there, as elsewhere, the improvement noticed in the spring having been checked by the coal strike. Wholesale prices have had a substantial fall, which has not been followed to the same extent by retail prices.

In the United States deflation has proceeded more rapidly than it has with us, and I am inclined to think that country is at the turning towards improving conditions. These, however, I fear, will be spasmodic and slow. It is noteworthy that a tendency to a broader view of international affairs, both monetary and political, is in evidence, and this tendency will, I hope, grow as time goes on, and the one country in the world which is in a position to do so will extend the relief so urgently required by an economically and commercially distressed Europe.

The state of the international exchanges continues to be a disturbing element in business.

Conferences have been called for the purpose of devising some feasible plan for establishing and restoring rates, and the subject has been widely discussed by economists and bankers, but so far no practical proposals have been made to yield the result desired.

EXPORT CREDITS.

It is only recently that the importance of foreign trade and foreign credits in the restoration of exchange and in bringing about a more prompt return to prosperity has been generally recognised. Although difficulties of financing have not by any means been cleared up, it is being realised that domestic trade is largely dependent on export business, even though its volume be small.

The British Government, as you are aware, has given the lead in inaugurating a scheme for facilitating exports to impoverished countries through the Export Credit Department of the Board of Trade, which is empowered to advance a large sum of money for this purpose. The United States Government has legislated in the same direction by authorising banking and credit corporations to engage in foreign trade, and it may be that Canada will find a way to participate in similar schemes.

It has been my consistent practice to avoid anything savouring of politics, and if I allude to the railway question it is only because it relates intimately to public finances, to taxation, and so to the daily business of the country, already bearing heavy imposts to sustain the public credit.

In Great Britain and in the United States, as is well known, the railways were returned to private ownership because the operation by the Government was resulting in financial chaos.

With our own national system of railways it is well to face the facts. There has to be met an annual fixed charge of about \$66,000,000, plus loss in operation, which last year amounted to \$32,000,000, and will this year be not greatly less. In addition, a sum estimated at \$150,000,000 has to be provided in the next few years for replacements and betterments. I see no reason to change the views I have expressed to you on former occasions, nor do I look for any marked improvement in these conditions so long as the roads continue under public—that is, political—ownership and operation, which all experience condemns.

IMMIGRATION.

Only second in importance to our railway problem is that of immigration. As is well known, following upon the cataclysm of a great war, there has come in the past a desire for change and an exodus of people from many countries has resulted. No such movement has yet occurred following the recent upheaval in Europe, but I think Canada has an exceptional opportunity of filling up her waste spaces if a vigorous, sustained immigration policy is set in motion. We need people upon the land—the cities will take care of themselves. Now that the United States has awakened to the advantage of directing her emigrants to outer parts of the Empire, the time seems opportune for Canadian agencies of all kinds to exhaust every effort to turn the stream to our shores, so that our vast uncultivated arable territory may be populated and made productive.

In the most propitious circumstances of trade, prophecy is rash, and in the complicated conditions that now beset us I will refrain from the risk of forecast. What we do know is that Canada has withstood the shock of deflation and readjustment in a manner which has afforded gratification to our own people, and has caused much favourable comment abroad, but a return to pre-war standards cannot be expected at once, and probably not for a considerable time to come.

The position is still full of difficulties, and the way to sustained improvement is not year clear. While there has been a revival in some lines of business, in others deflation has not yet run its course, and stocks are being carried which possibly may have to be written down to lower replacement values.

The revival, now being experienced, possibly based upon a demand in consequence of depleted stocks, has given a temporary spurt to buying. I look for a period of rises and falls as demand exceeds supply or otherwise.

A return to normality will be hastened if and when labour realises that war inflation wages cannot be continued, and that the changed economic conditions necessitate more efficiency and greater production if we are to compete successfully in the world's markets. Increased production will, without doubt, be followed by a lowering of prices, larger consumption, and fuller employment.

No survey of the business world, however brief, can omit that matter of supreme importance, the Washington Conference on the limitation of armaments.

Though the utmost hopes may not be fulfilled, great gain will come from reduction of expenditure on armaments and the lessened taxation thereby made possible. In no small measure the restoration of normal world trade depends upon the outcome of the Conference. A happy issue will give that confidence which creates credit, and will go far towards bridging the period of liquidation and reconstruction.

THE GENERAL MANAGER'S ADDRESS.

Sir Frederick Williams-Taylor, the general manager of the bank, then made his annual address, and said: In presenting the 104th annual balance-sheet of the bank I will explain the chief changes which it discloses, and will refer briefly to the most important events bearing upon our affairs during the past year.

Inevitably, losses brought about through the unprecedented drop in the price of commodities and the heavy decline in the market value of securities have in many instances fallen indirectly upon the banks.

More money has been lost by foreign banking institutions operating in certain directions abroad than ever before in a similar period in any country.

I think it may be asserted that in Canada banks generally have been fortunate when compared with those of other countries, and while doubtless all Canadian banks have lost money in loan accounts that have "gone bad" during the past year, no disaster has developed.

We do not blind our eyes to the fact that 1921 has been an exceptionally hard year for many of our customers, and, therefore, we have considered it prudent to take an even more conservative view than usual of our loan accounts in estimating what might be classed as doubtful.

STRONG POSITION.

It is a satisfaction to be able to assure you that our own actual losses have been moderate, and, though profits have shrunk, we have come through safely, and can report our business as a whole as being in a secure condition, while our position is stronger than ever, with amply liquid assets to meet any contingency.

The premium on New York funds is still with us, with little prospect of departure in the near future. The rate is 8½ per cent. to-day as compared with 15 per cent. on December 5, 1920. The fact that Canadians have become accustomed to the penalty of doing business abroad with an inferior domestic dollar does not alter the fact that Canada is at a very serious disadvantage indeed in its monetary dealings with the United States of America.

I shall not go into the matter, as it has been dealt with in my previous reports, except to say that the premium on New York funds will not disappear until we buy many millions less of goods and materials abroad or increase our exports.

The premium would have been higher had it not been that Canada has borrowed in the United States this year \$144,000,000, which sum, so far as exchange is concerned, must be added to our exports or deducted from our imports.

Every Canadian should understand, however, that this is merely alleviation, not cure. Economically, it would be far better that we should borrow within our own borders. By borrowing abroad we add steadily to the already great sum of interest on our foreign obligations annually sent out of the country, the capital amount aggregating nearly \$3,500,000,000.

Canada still maintains its excellent credit position in the New York market, and no difficulty has been experienced in floating such loans as have been offered.

OUTLOOK IN CANADA.

As regards the outlook in Canada and the prospect as affecting Canadian business generally, I have no desire to join the list of oracles who predict the date when normal conditions will be restored. For one thing, values are out of joint. Our main dependence is on our natural resources, and at present the purchasing power of the products thereof is at the lowest level reached for several years past. On the other hand, we still have with us high prices in other directions, while retail prices generally are conspicuously out of line.

The cause of this anomaly is still mainly the cost of labour. Unemployment is a natural corrective, though painful and regretted by everyone.

Apart from this, I cannot see how we can count upon improved conditions concurrently with trade revival in the United States. Conditions are similar in many respects, as everyone knows, but our liabilities and our mistakes are our very own. Aside from the cost of the war, we must pay the penalty of having mortgaged our future in the building of superfluous railways and in other extravagances.

DOLLAR AT SERIOUS DISCOUNT.

It is all very well to talk about our vast resources, but we as a people have pledged these resources and wasted our sub-

stance to an extent only now being realised. Evidence of this is, first, in the great sum of nearly \$200,000,000 annually sent abroad to meet the interest on our debts; and, second, that our dollar is at a serious discount in the United States, with which country we trade so heavily.

The Canadian resources that remain intact are the manhood of the Dominion and the industry and the ambition of our citizens. In these respects Canada is still rich, and, having learned our lesson from that inexorable teacher, stern experience, we shall emerge from our difficulties in time a wiser nation and then proceed to the full development of a great inheritance on a sound and sure basis, turning the experience of the past to the advantage of the future.

The General Manager then gave in detail the reports on the conditions of trade, &c., in the various Provinces, as supplied by the superintendents.

The report having been adopted, votes of thanks to the president, vice-president, directors, and staff were passed.

The votes of thanks having been responded to by the president and general manager, the ballot for the appointment of auditors and the election of directors was duly proceeded with, and the meeting terminated.

BANK OF NEW SOUTH WALES.

RESULTS SATISFACTORY—CURRENT YEAR'S PROSPECTS.

At the half-yearly general meeting of the Bank of New South Wales, held at the Chief Banking House, Sydney, on Tuesday, November 29, 1921, the chairman, the Hon. Sir Charles K. MacKellar, K.C.M.G., M.L.C., president of the bank, in moving the adoption of the report, said:—

Gentlemen,—Before dealing with the figures of the last half-year, I desire to refer to the loss the bank has sustained during that period by the deaths of two of its most notable officers, viz., Sir John Russell French, K.B.E., and Mr Roderick Murchison. The former, who for 27 years was the general manager of this great institution, was a man much above the average in strength of character and ability, and the loss of his public spirited energy will long be felt throughout the State, both in connection with the bank and otherwise. I am pleased to say—and feel sure the shareholders will agree with our action—that your board has granted to the widow, Lady French, the sum of £10,000 over and above the amount she is entitled to from the officers' provident fund, which is £1,000 a year for five years from the date of Sir John's death.

Mr Roderick Murchison, so well known in Victoria, was for many years our Melbourne manager and chief officer of that State. He passed away within a couple of days after the death of the late general manager. Mr Murchison had retired some years from active service on the staff, but up to the time of his death acted as our advisory director to the Melbourne management.

BALANCE-SHEET ITEMS.

In moving the adoption of the report, I beg to call your attention to the figures which make up the balance-sheet.

Circulation in New Zealand has decreased £187,000 during the year, due largely to the slump in the meat and produce exports from New Zealand, and to the curtailment of importations there.

Deposits are £421,000 higher than this time last year and £1,203,000 less than on March 31st, when, as then pointed out, the increase at that time was of a temporary nature—and until the demand for our produce and metals is more active, deposits must have a downward tendency.

Bills payable remain stationary on the year, but are £2,101,000 less than last March. This is solely owing to the necessary restriction of imports affecting London commitments under credits.

Capital has been increased £69,000. All forfeited shares and shares derived from fractional parts in respect of the last issue of new capital have been disposed of and accounted for to various shareholders interested, the capital now standing at £5,000,000.

On the assets side the fluctuations are more marked, the first line figures being £1,050,000 more than last year, and £1,700,000 less than March last, this latter being mainly reflected by the decrease in deposits referred to above.

Advances against Commonwealth war gratuities are £315,000 higher—and wheat advances £1,334,000 higher. Both these Government advances are temporary, and will disappear in due course.

Advances show a reduction of £2,350,000 since last March, and a total reduction for the year of £2,100,000. Restricted purchases of British and foreign goods and consequent realisation of excessive stocks held here partly account for this reduction, and another factor is the receipt by the farmers of money for their wheat, which is reflected in their accounts with us.

Premises stand at £800,000, and are £20,000 less than last year. It is not our policy to unduly write down this asset, but it has been kept in the vicinity of £800,000 for a decade, notwithstanding purchases of properties and erection of buildings.

PROFITS.

Profits are lower than last half, but, after making full provision for contingencies, are slightly more than last year, and the carry forward has been increased by £25,000 after bringing up the reserve fund to £3,500,000. Last half-year's profits were exceptional as then pointed out.

The reports from our inspectors and representative officers throughout New South Wales and the other States in Australia are one and all satisfactory, in that they record grass in abundance, and stock, speaking generally, in excellent condition. The production of wool, sugar, and wheat is forecasted to exceed last year—the two first-mentioned products will be very considerably greater, and our information is that the wheat production will be a little better than hold its own in comparison with last year. The price these commodities will command is very much a matter of conjecture, but there has been an appreciable improvement of late in the demand for wool, and we have every justification in looking forward to a reasonable price for our wheat, although we cannot expect a repetition of last season's prices.

The frozen meat industry should under ordinary circumstances have renewed its activity this coming year, but unfortunately there is a glut in the market just at present, and our advice is that we cannot look for much improvement in prices for some months to come. The over-importing, which gave us some concern up to a few months ago both in New Zealand and Australia, has now been controlled, and although domestic commodities may not be falling in prices as rapidly as some buyers may desire, there can be no doubt about the trend being in the right direction, and we may look forward to something like normal prices ruling again in the not very distant future.

EXTRAVAGANCE AND ITS RESULTS.

Gentlemen, peace conditions are now upon us, and to many they are more difficult to control than war conditions. The population generally has become extravagant and disinclined for the more prosaic, though in every way healthier conditions which obtained before the war. These inclinations, which have been growing amongst us for the last six years, cannot be altered altogether at once, but they should not be encouraged to continue, as they have been in every way during the last few years. Institutions and individuals have been carried away by temporary and fictitious success; the craving of both public and private institutions to borrow more and more money and cast it about in unreasonable wages, and otherwise, seems insatiable. This kind of thing might

be very beautiful if it could go on, if it could continue indefinitely, but it cannot—it is false, therefore it cannot last, and the reaction is inevitable. The reaction, as a matter of fact, is setting in already, and is reflected in the unemployment. No country nowadays can live alone, we are all associated one with the other, and no article can be of any sustained value to us—whether manufactured or raw material—if it costs more to produce than the world values it at. Therefore I hope with all my heart that the authorities responsible for economic conditions will bear this in mind and avert the growth of unemployment, which would appear to be the natural consequence of the country's present policy. In the old and over-populated centres of the world a certain number of unemployed may be accepted as the natural order of things, but in this great, naturally resourceful and sparsely populated country it should not be accepted as a matter of course, because it is avoidable, and the fact that it exists and promises to increase, to the degradation and discomfort of the population, is a reflection on our Australian intelligence.

In this magnificent country there should not only be work for every man and woman desiring it, but there should be openings to attract an influx of population from the over-populated and temporarily disorganised centres of Europe, and that, gentlemen, is, I protest, what all of us desire who place the love and pride of country before everything else, and long to see this splendid continent develop until we become one of the great producing and influential powers of the earth, which, beyond all doubt, is within our possibilities if we all carry on and work with such ideals in view.

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED. SATISFACTORY RESULTS DESPITE DIFFICULTIES OF THE PAST YEAR.

The nineteenth annual general meeting of the British-American Tobacco Company, Limited, was held, on the 11th instant, at the offices of the company, Westminster House, 7 Millbank, London, under the presidency of Sir Hugo Cunliffe-Owen, Bart., one of the deputy chairmen.

The secretary (Mr A. M. Rickards, F.C.I.S.) read the certificate of Sir William Plender, of Messrs Deloitte, Plender, Griffiths, and Co., chartered accountants, appended to the accounts.

The Chairman, in moving the adoption of the report and accounts, said: Since our last annual general meeting there have been two changes in the directorate. Sir Joseph Hood, M.P., one of the deputy chairmen, resigned his directorship, as he desired, having

regard to his Parliamentary duties, to have more leisure, and Mr Lawrence Hignett, also one of the deputy chairmen, resigned his position as a deputy chairman because he felt he could not continue to devote himself so closely to the business, and has become an ordinary director. I am glad to say that as a matter of fact he is still continuing to devote the whole of his time and attention to the business.

I may mention that Sir Joseph Hood was engaged in the formation of the company, and was appointed its solicitor, and within six months after the incorporation of the company was elected a director. His resignation was accepted with the utmost regret. I am glad, however, to be able to inform you that Sir Joseph Hood was good enough to offer to place his invaluable knowledge of the company's affairs and experience at the disposal of the board at any time when they desired to consult him, and we have on many occasions availed ourselves of his kind offer. No doubt you will all have seen from the last Honours List that his Majesty conferred the honour of a baronetcy on Sir Joseph Hood, and I am sure you will all join with me in congratulating him on that well-deserved honour. The vacancy caused by the resignation of Sir Joseph Hood has been filled by the election of Mr Charles Ernest Maconochie.

BALANCE-SHEET ITEMS.

Taking the assets side of the balance-sheet first, you will observe that the item of real estate and buildings at cost, less provision for amortisation of leaseholds, £550,950, shows a small increase of £8,964. We have made some further investments in land and buildings at Southampton and land at Bangkok, Mombasa, and Lagos, against which we have disposed of certain property at Rochester, New York, leaving the net increased figure just mentioned.

Plant, machinery, furniture, and fittings at cost or under, £475,931, shows an increase of £56,430. This increase is made up of a number of items of additional machinery at various places.

Goodwill, trade marks, and patents is reduced from £505,114 to £200,000. We have during the past year disposed of the goodwill of our business in Canada, and also the goodwill of certain parts of our business in Belgium and New Zealand, and have received in each case shares in payment therefore in subsidiary companies. Whilst we have only written off from the goodwill item the sum of £305,114 to bring it down to £200,000, yet the par value of the shares received represents a much larger sum.

Loans to and current accounts with associated companies, £5,547,886, show a very substantial decrease of £1,647,071. A number of our subsidiary companies have during the past year materially reduced their indebtedness to us, which accounts for the large decrease in this item.

Investments in associated companies show a very considerable increase, from £11,356,132 to £15,340,582. This again is the largest item on the assets side, and shows an increase this year of £3,984,450. We have made a number of investments during the past year by increasing our holdings in various subsidiary companies throughout the world, including the investment of nearly £1,000,000 in the 7½ per cent. bonds of the Imperial Tobacco Company of Canada, Limited. This item, of course, is also swelled by the shares we now hold in subsidiary companies represented by the decrease in the item of goodwill previously mentioned.

Other investments, which stood last year at £607,922, is now reduced to £4,958, due to the fact that we have disposed of our investments in War bonds and 4 per cent. funding loan.

Stocks of leaf, manufactured goods and materials at cost or under, now stands at £6,873,065, or a decrease of £148,120. As mentioned by the chairman last year, stocks of leaf, manufactured goods and materials have been in the past carried at cost or under, and this practice has been maintained, stocks being taken at market value, which is again lower than cost. While the stocks of leaf on hand are larger than last year, the decrease referred to is accounted for by smaller stocks of manufactured goods and materials on hand.

Sundry debtors, less provision for doubtful debts and debit balances now stand at £2,108,140, or a reduction of £423,035. Generally, less money is owing to us by our customers than was the case last year.

Cash at bankers and in transit, £2,520,980, shows a reduction of £335,139. This is necessarily a fluctuating item.

Turning to the liabilities side of the balance-sheet, the issued capital of 4,500,000 preference shares remains the same, but the issue of ordinary shares is increased from 16,002,523 to 16,015,645, or an addition of 13,122 shares. This is partly due to issues to shareholders in respect of belated acceptances of the various issues of shares, but 10,000 of it is due to the issue to two directors of shares in pursuance of a resolution passed by the shareholders on May 19, 1919.

Creditors and credit balances is increased to £6,239,843, representing £560,904 more than it stood at last year. This increase is mainly accounted for by increased provision for income-tax, and,

in addition we had loans from our banks—which, however, have since been paid off.

The item of reserves for buildings, machinery, and materials is reduced by £140,426 to £489,737, as it became unnecessary any longer to maintain certain reserves.

Premium on ordinary shares issued has increased by £10,000 to £401,039, due to the premiums received on the 10,000 shares issued to the directors previously mentioned.

Provision for redemption of coupons now stands at £50,545, or a reduction of £5,289.

Special reserve has increased from £1,198,727 to £1,254,230, a difference of £55,503. This is due to the realisation in respect of the liquidation of some shares in excess of the amount standing on our books, and the difference has been carried to the credit of this item.

General reserve to provide against possible losses arising from the war. This item still stands at £1,500,000. At our meeting last year the chairman then said we expected to receive shortly a sum of approximately £1,280,000 in respect of the amount due on loans and current accounts from Germany. We only received a small part of this amount, however, prior to September 30th, but I may mention that since then we have received a further sum on account, making a total of £1,246,565 3s 4d up to date, which will mean that this item will have to be dealt with in our balance-sheet a year hence, when we shall be in a position to say how much has been received and in what way we propose to deal with the balance of the £1,500,000.

PROFIT AND LOSS ACCOUNT.

That brings me to the last item—namely, profit and loss account. You will remember that last year we carried forward a balance of £3,076,868 12s 11d, out of which we paid a final dividend of 9 per cent., amounting to £1,440,405 14s 5d, which left us with a disposable balance of £1,636,462 18s 6d. During the year the necessary coupons have been deposited with us in respect of the shares issuable in pursuance of the extraordinary resolution of the shareholders of May 10, 1920, and we have allotted to shareholders 2,263 ordinary shares of £1 each, and a sum of £2,263 is deducted from the balance, leaving £1,634,199 18s 6d. To this sum the net profits for the year—after deducting all charges and expenses for management, &c., and providing for income-tax and corporation profits tax—amounting to £4,323,481 5s 10d, should be added, less the preference dividend of £225,000 and the four interim dividends, amounting to £2,561,227 0s 10d, which leaves a disposable balance of £3,171,454 2s 9d, out of which the directors recommend the distribution on January 18th instant of a final dividend (free of British income-tax) on the issued ordinary shares of 8 per cent., amounting to £1,281,266 6s 5d, leaving £1,890,187 16s 4d to be carried forward. This final dividend of 8 per cent. will make 24 per cent. for the year upon the ordinary shares, which were in existence a year ago, and upon the small number of shares issued since. The amount, of course, varies with the date of their actual issue.

The directors trust that the shareholders will consider the dividend satisfactory.

I may mention that the net profits for the past year show an increase of £1,229,000 over the average net profits for the preceding seven years, 1914 to 1920, even including the record year of 1919-1920.

During the past year we have passed through a period of great difficulty and depression, more particularly in January, February, and March. Since that time conditions in our business have gradually improved and are still improving, and during the first

three months of our current year this improvement has been maintained. I feel that we are in a very sound and promising financial position, as all our stocks of tobacco and materials have been written down to or below to-day's market value; our carry forward is larger than last year, and, as I have said before, we have received since September 30th a very large proportion of our German claims, against which we set up and still have on our books the general reserve of £1,500,000.

The resolution was carried unanimously, and a vote of thanks to the chairman, directors, and staff terminated the proceedings.

At an extraordinary meeting following, it was unanimously agreed to issue certain shares to the directors at 30s each, this being, by agreement, their recognised remuneration.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

Total	40,293,582

SIDNEY TURNER, Accountant-General.

India Office, January 11, 1922.

Messrs Samuel Montagu and Co. write on January 12th as follows:—

GOLD.

A large amount of gold came on offer, and was taken chiefly for the United States of America. On the 10th inst. the price of 97s 2d per fine ounce was quoted, which was the lowest price for gold, carrying an export licence, since September, 1919, when exports in gold were resumed. This figure represents a premium of 14.5 per cent. upon the Bank of England buying price of 77s 9d per standard ounce. The average price for exportable gold during 1921 was 107s 0.5d per fine ounce—involving a premium of 26.2 per cent. The highest price ever fixed for exportable gold—127s 4d on February 5, 1920—carried a premium of 50.1 per cent. Gold valued at \$4,995,000 has been received in New York—\$4,295,000 from London, \$400,000 from France, and \$300,000 from India. Toward the end of last year the Banque Nationale of Switzerland made use of a portion of its superabundant metallic reserves, and put into circulation a certain quantity of gold coin in different Swiss towns. The public did not take kindly to the fresh circulating medium, preferring the small bank notes to which it had become accustomed. The gold set free from the bank treasury was returned, therefore, to the custody of the bank. The occurrence is odd and remarkable.

SILVER.

Some activity has been shown in the market during the latter part of the week under review. The Indian bazaars somewhat suddenly began to send buying orders upon a rather dull market. Prices rose to 35½d for cash and 35½d for two months' delivery on the 9th inst., and remained at that figure the succeeding day. The demand was met at first by Continental sales. When, however, the possibility of a further advance seemed unlikely, America, influenced by the falling value of the dollar, began to offer silver, and, owing to a lessened Indian demand, had to accept lower prices. Yesterday a decline of ½d was recorded, and to-day there was a further drop of ½d. China has been rather inactive, being neither a buyer nor a seller to any great extent.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Dec. 15, 1921.	Dec. 22, 1921.	Dec. 31, 1921.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The keen demand for wool at the London auctions reveals the strong position of the raw material, and not the least significant feature of the trade is the general demand from both home and Continental users. The advance in values had already been discounted in Bradford to some extent, though in the case of merinos, topmakers are now demanding considerable advances on quotations ruling a week ago. Most firms have already sold their output for at least three months ahead, and the scarcity of tops enables sellers to adopt a very firm attitude. The output of tops is inadequate, and the position is likely to become serious if the operatives cannot be persuaded to work longer hours. The woolcombers have refused a request from topmakers for a reduction in combing charges, but if wages are reduced in the near future, the matter will again be discussed. An encouraging sign at the moment is the increased interest in crossbreds, and following the improvement in values in Coleman street, most firms have advanced their quotations for tops. Spinners are well employed, and some fairly good orders are reported to have been placed in coating yarns. Unfortunately, manufacturers do not appear to be in a position to follow the upward movement in wool, and spinners experience great difficulty in making prices for their yarns at all commensurate with the current cost of tops. There is some improvement in some departments of the piece goods trade, and a considerable amount of business has recently been done with Japan. The financial stringency, however, is still very acute in both home and export trade, and many merchants are more or less crippled on this account. In home-grown wools, there is a fair demand for most sorts, and prices show a hardening tendency.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The first series of colonial wool sales for the current year began last Tuesday in London, the attendance of buyers being one of the largest ever seen. A very animated sale took place, succeeding sales being quite as good. The competition for merinos proved to be better than the majority expected, and instead of 10 per cent. advance compared with the close of the previous series (which was expected), good combing merinos appreciated practically 15 per cent., while average and shabbier grades met a good market at fully 10 per cent. advance. Fine crossbreds were somewhat poorly represented at the initial sale, but competition was excellent, with prices all round 15 per cent. higher; medium crossbreds appreciated 7½ to 10 per cent., and coarse crossbreds 5 per cent. New Zealand scoureds and slipes were mostly 5 per cent. dearer, the advance being less in evidence in the latter, due, no doubt, to the very plentiful supply. These results harmonise fully with the recent movement in consuming centres, and there is as much confidence in to-day's values as at any time. One could not fail to observe the active competition of the home trade, their efforts to obtain wool being ably seconded by the French section, and one expects a strong demand from Continental buyers during the whole series. Government Cape wools are to be offered next Friday, January 20th; in the meantime, "free" Capes are showing an average 10 per cent. advance for anything showing decent combing characteristics, but snow-whites are meeting with a rather poor reception at little more than unchanged rates.

The course of the auctions clearly shows that the raw material is in a very strong position. This also applies to tops and yarns, the manufacturing end of the trade being the one in which the improvement is not as great as it should be. The demand for fine

worsted goods is no more than sufficient to keep half the machinery running. Indeed, in view of this fact, it is remarkable that the demand for wool should be so keen. The existence of such opposite factors makes it very difficult to reckon up the situation. On the one hand there are strong markets for the raw material, values appreciating both at home and in the colonies, and, on the other, manufacturers with mills only half running, these bemoaning their inability to sell either wollen or worsted pieces. Yet everybody handling wool, tops and yarns is in an optimistic frame of mind, and these must be going into consumption somewhere, otherwise combs and spindles would never be running full time. The demand for merino tops is so keen that the combing facilities in the West Riding are not able to deal with it all, and it is understood that the same activity is being experienced in Roubaix-Tourcoing. Evidently tops and yarns are being sent out of the country at a much faster rate than they are being consumed at home, the requirements of home machinery, plus export demand, largely accounting for the activity in these two commodities. Notwithstanding the serious complaints about the poor state of the home piece trade, I am still optimistic regarding the future, and while many question seriously whether there is any justification for the recent rise in merinos, it is entirely the outcome of a big demand. The move that has been made at Cannes in regard to improving the financial position throughout Europe has had a beneficial effect upon trade, and no doubt, to some extent, is responsible for improvement in textile circles in general.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The domestic hide market is still drooping, and reductions of ½d to ¾d on ox and cow hides were a feature of Thursday's Bermondsey sales. Best heavy ox made from 8d to 8½d, and lights 6½d to 7½d, best cows going at 5½d. Calf also shared in the drop, all classes showing declines of ½d to ¾d, light best selling at 14½d. Tanners seem determined to get the price of raw stock down, as none can "see themselves home" on leather at to-day's prices of bends and offal. There is little doing in foreign hides, and tanners will only do business at reductions. Spot fregorifics are firmly held, shippers asking 10½d to 11d per lb. The hide trade is disturbed by the failure of John C. Gale and Co., Limited, one of the oldest hide factors in the trade. The liabilities are stated at £128,046, against assets of £46,414, leaving a deficiency of approximately £81,300. Nothing was settled at the recent meeting of creditors, but as several large firms in the trade are interested for large amounts, some anxiety is felt in regard to developments.

The demand for sole leather is moderate, but affected by the fine weather, repairers not buying their normal quantities. Tanners are reducing prices of 12-14 lbs bends, and large blocks of light-weights are on offer. American sole is coming over in fair quantities, and the fear of a dump is still prevalent. Upper leathers are slowly improving, but little in the way of big orders is expected until stocktaking is over.

Orders are coming in for spring boots and shoes, and retailers have still some way to go to meet the market, as the public demand is for cheaper stuff. The result of the ballot of the Shoe Operatives' Union re the reduction of wages shows a majority of 333 against it. The Manufacturers' Federation has, however, decided to postpone the reduction until the first week in February, the second reduction to take place in May instead of June.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Trade in raw linseed oil received a welcome filip at the close of last week, when there were big orders in the market, chiefly for American account, and quite a large business was done at advancing prices, up to over £20 being paid ex Hull mill, and £31 reached in London early this week. Demand having been satisfied, prices

ALEXANDERS DISCOUNT Co., Ltd.,

have eased off about 10s per ton from the highest, but the undertone of the market is fully steady at the moment. Cotton oils are in better supply, but the demand is poor, and prices are distinctly easier and lower to the extent of 20s to 30s per ton on the week. Crude soya bean oil of English make is also quoted lower, and is feeling the competition of the Oriental article, large arrivals of which, in bulk, are to hand this week. Rape oil maintains the recent advance, but palm kernel and ground nut oil are only a poor trade. Castor oil, in sympathy with the slackness in the textile industries, is in small demand, first pressure now offering at £50 per ton (barrels included) ex Hull mill.

In the oilseed section some business has been done in Plate linseed, chiefly on speculative account. With better receipts, the spot value has eased off 10s per ton, and £17 has been accepted for December-January shipment to Hull. With £16 15s offered for January-February, cotton seed is quiet, and values for shipment inclined lower.

The shipments of linseed from Argentina in the year ended December 31st were no less than 1,335,800 tons, against 1,023,300 tons in 1920. Of the total, the United Kingdom took 493,800 tons, the Continent 576,000 tons, and North America 266,000 tons, the former two being more than double the figures of 1920, and America about half. The shipments of Indian linseed in the year were 37,275 tons to the United Kingdom, and 56,300 tons to the Continent—in all, 93,570 tons, against 185,800 tons in 1920. The shipments of cottonseed from Egypt were 238,005 tons, and from India 50,500 tons—in all, 288,505 tons, against 337,140 tons, the falling-off being due to the smaller quantity from India.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, January 13.

There was a fair amount of trade doing in some directions, though in the case of raw materials demand failed to show any appreciable recovery.

SUGAR.—Most descriptions of refined opened the week at a decline of 6d per cwt, and engaged good support, closing 3d up. Messrs Tate and Lyle's cubes sold, 50s 3d to 51s 6d; crushed, 47s 9d; granulated, fine, and also coarse, 46s 3d, London; also No. 2, 45s 9d; No. 1, 46s; icing 48s 9d; ditto, in drums, 48s; caster, finest, 48s 3d; A, 48s; B, 47s 9d; yellow crystals, 40s 3d, London; also No. 2, granulated, February-March, 45s 3d; and April-June, 45s 6d. Imported kinds met with fair patronage. Crystallised West India, in small supply, sold at 38s 9d to 40s, according to sample. Muscovado sold, 31s to 33s; white Java, on spot, was dealt in at 42s 6d to 43s; Belgian crystals, 43s; white Natal, 43s to 44s; white Mozambique, 43s 9d to 44s 3d. American granulated, January, sold, 17s 9d; and February-March, 17s to 17s 6d, c.f. and i. terms, United Kingdom. Cuban basis, 96 per cent., January-February, held for 11s 9d, c.f. and i. terms; and Brazilian, basis, 80 per cent., 9s ditto. With interest still shown in Belgian crystals on French account, certain buying back continues regarding contracts previously entered into by Belgian houses with London buyers. Cuban stock amounts to 890,500 tons, against 205,100 tons same time last year. American syrup steady, and good grocery sold, 28s. Liquid glucose, January delivery, quoted 24s 6d, duty paid.

COFFEE.—Spot market generally steady for all the finer qualities and which meet with fair support, though slight irregularity governed Costa Rica descriptions. Good bold Nairobi sold, 108s 6d; Uganda, fine bold, 96s; Costa Rica, medium sizes, 136s 6d to 141s 6d; bold, 140s to 155s 6d. Colombian, good to fine bold greyish, 99s 6d to 106s 6d. Future delivery market ruled quiet. March sold, 51s.

COCOA.—At public sale, about 4,000 bags were submitted, and with a slow demand only 500 bags were disposed of at prices showing no quotable change except Trinidad, and which ruled easier. Ceylon, red estate, sold, 93s to 97s; fair to good Grenada, 45s to 48s; fine St Lucia, 49s; fine Java, 140s. Trinidad, middling to fine red estate, quoted 53s to 59s. Cocoa butter quoted at 1s 6½d to 1s 7d per lb.

TEA.—Public sales of Indian during the week amounted to 52,000 packages. Competition from a full attendance of buyers proved active at full rates, while all qualities up to 1s 3d per lb were again dearer. 22,300 packages Ceylon offered aroused brisk support, and higher values were secured for all qualities up to 1s 6d per lb. Above this figure, however, demand was not so keen, and rates were barely maintained.

RICE.—Market very quiet, and only retail transactions took place this week. Importers, however, do not press, and quotations for the main part ruled nominally unaltered. Two stars Rangoon, spot, 15s; No. 1 garden Siam, 14s to 15s. Broken idle. Bran steady. New crop Burma, February-March, quoted £5 10s per ton, ex ship terms. Rangoon beans dull, and hand-picked, spot, quoted 7s 3d; afloat value, 6s 9d. Japanese peas steady, but quiet.

SPICE.—Pepper received fair support both with regard to spot and forward positions, and a steady tone governed proceedings. Fair black Singapore, spot, sold, 4d; ditto, February-April, steamer, London, 3½d; ditto, Hamburg, 4½d to 4d; Aleppy, spot, quoted 4½d; Tellicherry, 4½d; white Singapore, spot, 7½d; Muntok ditto, sold, 7½d to 7½d; ditto, February-April, steamer, 7½d, and March-May, 7½d. Cloves slow of sale. Fair Zanzibar, spot, 1s 6½d; ditto, to arrive, 1s 5½d, c.f. and i. Pimento, on spot, sold, 2½d. Tapioca steady, quiet. Fair flake, spot, sold 1½d to 1½d per lb. Fair Penang seed pearl, spot, changed hands at 17s 6d. Sago flour dearer, January-March, steamer, sold, 14s 4½d. Desiccated coconut quiet, steady. Fine cut, spot, sold, 40s 6d; medium, 41s to 41s 6d; and half-and-half at 41s.

FRUIT.—A steady tone prevailed for currants, and market moved on steady lines. Pyrgos quoted 56s; Amalia, 57s to 60s; Vostizza, 75s to 85s. Valencia raisins slow. Halves quoted 115s to 118s; quarters, 120s to 150s. Sultanias commanded firm prices, with fair patronage accorded.

JUTE.—The market opened the week easier, but ruled steady later, though business proved quiet while confined to assorting requirements as far as spinners were concerned. New crop, first grade, January-February, usual continental ports, sold, £26 10s; February-March, £27, £26 10s. Lightning grade, January-February, £21 10s; February-March, £22. Heart assortment, spot, Antwerp, sold, £19 10s. Daisee grade, No. 2, January-February, Dundee, quoted £26 10s. 10 oz Calcutta hessians, spot, London, sold, 24s; January, 23s; 8 oz, spot, 20s; January-February, 19s 2d. A twills, spot, 80s; B, 64s 6d; ditto, January-February, 62s.

HEMP.—The market for Manila remained in a very quiet state, but sellers required full prices. D grade, January-March, quoted £52; E, £49; F, £45; G sold, £40 10s; J, at £39 10s; K quoted £38; L, £37; M, £35; streaky threes, £41. New Zealand dull. High point, fair, spot, quoted £37 10s; January-March, £37; fair, spot, £36; January-March, £35. African Sisal steady. No. 1, G.E.A., January-March, £40, and B.E.A., £39 10s.

SHELLAC.—Market quiet, but steady, both spot and forward. T.N. spot, quoted 330s; May sold, 280s.

COPRA.—Market remained in a quiet state. F.M.S. Straits, January-March, Rotterdam, sold, £25 12s 6d to £24 15s; February-April and March-May, £25 15s to £24 15s. Ceylon afloat, London, sold, £25 10s; January-March quoted £26 5s; Cebu, January-March, Hamburg, sold, £24 5s; South Sea Islands to London quoted £24. Palm kernels slow. January-March, to Liverpool, sold, £18 10s to £18.

RUBBER.—Market continues generally quiet and prices weak. Standard crepe and sheet, spot, sold, 10½d to 10½d; April-June, 11½d to 10½d; July-September, 1s to 11½d. Fine hard Para, spot, quoted 1s 1½d and Caucho ball, ditto, 8½d.

OILS.—Linseed irregular. Spot, net, naked, 30s; January-April, 29s 1½d; May-August, 29s 7½d. Rape dull. Crude, spot, 45s; refined, 50s. Cotton quiet. Crude Egyptian, 37s; Bombay, nominal; common edible, 45s. Chinawood: Hankow, spot (barrels), 64s; and shipment, 63s. Cocanut quiet. Ceylon, spot, 45s 6d; January-February, 41s 6d; Cochin, ditto, 46s. Soya, quiet. Oriental, barrels, ditto, 34s 6d. Japan fish quiet. January-February, cases, 21s. Cod quiet. English, spot, 29s to 30s. Groundnut quiet. English crushed, naked, spot, 45s; deodorised, barrels, 56s. Turpentine irregular. American, spot, 72s; February-April, 72s. Rosin firm. American, grade B, 15s; F, 15s 6d; G, 15s 6d; K, 17s 6d; WW, 21s. French, F/G, 14s 9d; H, 14s 9d; WW, 17s 9d; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

THESE ARE APPLETON BOOKS

BUSINESS COSTS D. C. EGGLESTON

"The book can be well recommended to all in search of knowledge on this wide and important subject."—ECONOMIST.

MARKETING C. S. DUNCAN.

The first book to cover thoroughly the marketing of manufactured goods as well as of the raw material. "The book is worthy of close study by business men everywhere."—GLASGOW HERALD.

18/-

25 BEDFORD STREET, LONDON.

at one time saleable only at $3\frac{1}{8}$ per cent., changed hands towards the end of the week at $3\frac{1}{4}$. Fundamentally there was no change in the situation, and the supplies of money for gilt-edged securities, increased by the payments to the railways, remain large.

	Jan. 20, 1922.	Jan. 13, 1922.	Jan. 6, 1922.	Dec. 30, 1921.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	5% (Nov. 3, '21)

Market rate (3 mths' bills)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

* Additional to those offered by tender the preceding week.

The Bank return showed a diminution of £8,500 in the gold stock and of £1,027,000 in the circulation, so that the Reserve was £1,018,500 higher. Government securities were reduced by £7,860,000 and Other securities by £1,187,800. Deposits therefore fell by £8,044,400, Other being £12,065,300 lower, while Public rose by £4,020,900. The circulation of currency notes was reduced by £4,889,900 to £308,566,000, which includes £1,714,400 for notes called in, but not yet cancelled. The fiduciary issue is £258,901,600, or £51,086,800 below the maximum.

THE STOCK MARKETS.

The most prominent feature in the stock markets during the week has again been the strength of gilt-edged securities and sound investment stocks, which was encouraged by the withdrawal of $5\frac{1}{2}$ per cent. Treasury Bonds and the announcement of a new 5 per cent. issue at 99 to take its place. Securities of home and foreign railways, brewery, and other industrial investments in this class have been in some demand, although dealings were restricted owing to lack of sellers. Amongst foreign Government bonds, Brazilians and Chileans improved, but French and Russians were inclined to weakness. Industrial debentures have been receiving much attention. Details of the week's movements in the stock markets will be found on a later page.

COMMODITY MARKETS.

Anticipation on the part of buyers of obtaining yarn and cloth at lower prices had the effect of restricting movements in the cotton market. China and India are not inclined to place substantial orders, while minor markets give no support. In wool, values of the raw material have been maintained at London auctions, buyers for France and Germany giving support; merinos and fine crossbreds have been in special demand. Reductions last week in prices of Cleveland pig-iron resulted in substantial sales, chiefly to Scottish consumers. In the steel trades some activity, it is hoped, may occur at the end of the month, but there is no evidence of a revival movement on any considerable scale. The steam-coal market is without feature, while business in household coal is less than might be expected at this time of the year. The wheat market remains firm, in sympathy with foreign advices. Raw linseed maintains its price, but other sections of the markets for vegetable oil and oilseeds have been quiet, quotations tending to decline. In the hide market conditions were easier, although business in the sole leather trade is better. Further particulars of market news and movements from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

Under the influence of political changes in France and uncertainty as to the policy to be pursued by M. Poincaré, the foreign exchange market has been quieter and more hesitating than for many weeks past. Francs have been up and down within comparatively narrow limits, but jumped again yesterday morning to 51.65 (compared with

51.50 on the 13th) as the result of M. Poincaré's speech on Thursday, and there is an uneasy feeling that a "vigorous" policy on the part of the new French Government may have a serious and rapid reaction on the French financial situation. As was to be expected, the mark has depreciated in the face of this new situation, and yesterday stood at 830, compared with 786 $\frac{1}{2}$ a week ago. The dollar, although it has weakened somewhat, is at 4.22 $\frac{1}{2}$, only one cent lower than a week ago. Should the attitude of France cause a revulsion of feeling in America with regard to Europe, the pound sterling will also suffer, although certainly not to the same extent as the franc. Otherwise, to judge by the general trade position, we may expect to see sterling maintain its present value for some time to come, and possibly to show a certain increase. Italy shows a slightly lower rate, but confidence with regard to the banking position there has by no means yet been restored. In neutral centres, Amsterdam has moved rather sharply in our favour, Geneva and Madrid have gone a little against us, the latter city being little disturbed by the serious political situation. The three Scandinavian countries have all appreciated slightly, while Helsingfors remains relatively steady. In Central Europe Vienna, after its recent recovery, is moving upwards again, and Warsaw has depreciated again to 13,000. Prague, on rumours of a loan in New York, has again improved slightly, but the rate of appreciation is less rapid than in recent weeks, as the active intervention of the Prague "Bank Amt" appears to have been relaxed. Belgrade is still well above 300, and Bukarest about 550, while Sofia remains considerably above 625. In the East the rupee has cheapened slightly to 1s 3 $\frac{1}{4}$ d, and the yen has also fallen slightly to just under 2s 3d. Silver has been quiet and easy, with sagging prices, and Hong Kong and Shanghai rates have dropped in sympathy to 2s 7d and 3s 5 $\frac{1}{2}$ d respectively. In South America Rio is very slightly cheaper, Montevideo unchanged, and Buenos Ayres rather dearer. Valparaiso, however, shows a sharp movement in our favour.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 14, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	23,917	Supply Services	48,560
Amount borrowed	27,549	Interest on Debt	3,196
Taken from Exchequer balance ..	653	Sundries	363
	52,119		52,119

These operations increased the National Debt by the sum of £27,548,538, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 26,369	Treasury Bills	- 4,634
National Savings Certificates ..	+ 950	Surrenders of Bonds, &c.	- 560
Bank of England Advances ..	+ 17,000	Public Department Advances ..	- 10,220
		Unemployment Insurance	- 370
		Depreciation Fund	- 660
		Sundries	- 327
	+ 44,319		- 16,771

Property and Income-tax yielded £12,020,000, Customs and Excise £3,741,000, Motor Vehicle Duties £1,566,000, and Special Receipts, "Miscellaneous" £2,500,000. The floating debt was increased by £2,045,000 to £1,249,445,000. Sales of Treasury Bonds amounted to £26,369,348 during the week.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JANUARY 14, 1922.

	£		£
Total spent	815,861,130	Raised by revenue ..	720,196,429
Dec. in balances	576,175	Net borrowings	95,088,526
Total	815,284,955	Total	815,284,955

ESTIMATES for YEAR 1921-22.

	£		£
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure ..	974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000

Surplus*

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

ANGLO-FRENCH RELATIONS.

By the time these lines appear, the country will be feeling the full force of the spate of political oratory that is to descend upon it this week-end. The moment is one of great possibilities, for if the orators can escape from the ephemeral issues of Party advantage and can give a clear lead on matters of principle, it may be that the waters of political life will divide off in new and possibly clearer channels. Unimaginative persons, less optimistic but perhaps more weather-wise, predict that the flood is likely to be succeeded by fog.

In the meantime, the country has had a short interval to reflect upon the epoch-making events that broke up the Conference at Cannes last week. If it is still too early to weigh up the full implications of the statement of policy made by M. Poincaré on Thursday in the French Chamber, we can at least take the opportunity of attempting to define our own attitude towards France. If we may attempt to analyse British opinion, there are three leading ideas which we believe are predominant in the minds of thinking people in this country. In the first place, the illusions of 1918 with regard to reparations have been generally discarded, and recognition has dawned that the recovery of British trade is dependent upon the renewal of more normal international trading conditions. Such renewal obviously involves a substantial modification of the present scheme of reparations, though it does not mean that Germany should be released from the obligation to restore war damage to the limit of her capacity to pay and of Allied capacity to receive without undue dislocation. On that point there is no weakening discernible in this country. But it does mean that there is no common ground between British opinion and M. Poincaré if the latter intends—as, unfortunately, his statement leaves little room to doubt—to insist upon the literal execution of the reparation chapters of the Versailles Treaty. At the same time, it is recognised that Great Britain is not in a strong position in this matter, for was it not the British delegation which made the pace at the Peace Conference and swelled the indemnity total to its present inflated figure by insisting on the inclusion of war pensions? Since this country has changed its mind, and since it is very much to our material interest that the new point of view should prevail, it behoves us to meet France very liberally in reducing our own claims to reparation and in giving her assurance of our strong support in the enforcement of such of her claims as can in practice be met.

In the second place, France has seen the anticipated sweets of victory turn to ashes, and the diplomatic barricades which she laboriously constructed in 1919 against

possible German aggression collapse. British opinion also realises that it is largely a result of our own rulers' policy that the League of Nations is not yet a sufficiently strong organisation to give the security France desires, and it therefore welcomes the principle of a pact. But this does not mean that we follow Lord Derby in declaring that we have a common frontier with France on the Rhine, and should undertake its joint defence in a simple agreement. It is idle to conceal that British opinion has been seriously perturbed at the French attitude towards many world problems—an attitude which betrays a failure to understand what may be termed the Anglo-Saxon view of world politics. Conviction that this generation of Europeans has definitely abandoned the idea that war can bring anything but harm to the victor as well as to the vanquished; belief in the healing power of international commerce and communication; trust in the liberalising influence of self-government; and, finally, the belief that by organised international co-operation the opinion of the world can be forged into an effective protection against war among white races—these are ideas which should find a fruitful soil in the traditionally liberal mind of France. But it sometimes seems as though France has a dual personality, and when her more militant mood is in the ascendant, as appears to be the case to-day, Great Britain would not be willing to bind herself unconditionally to a military alliance against German aggression without a very clear understanding as to what aggression means. Nor would she agree to accept the French interpretation of what constitutes a breach by Germany of her treaty obligations. This difficulty is a particularly real one, for under present arrangements France is technically entitled to enforce demands which we know cannot be carried out. In other words, a binding Anglo-French agreement is not readily acceptable until the two countries can find more common ground in the whole sphere of foreign policy. It is for this reason that we have urged that the first step should be to endeavour to reach an agreement on all outstanding questions. Only then should we be in a position wholeheartedly to enter into a guarantee. Moreover, the essence of such a guarantee is that it should have its basis clearly and indisputably in the sense of justice. It was the clear conviction that justice had been outraged that rallied the people not only of these islands, but of the whole British Commonwealth of Nations, to the side of France and Belgium in 1914. In the terrible event of the recurrence of a war crisis on the Continent, the question of justice and clear conscience will be even more closely scrutinised. It is, therefore, essential that any guarantee should make it clear beyond a peradventure that it can only come into operation in a case of proved and obvious justice. A guarantee thus clearly defined and framed in accordance with the principles of the League of Nations would, we believe, satisfy British opinion, and be accepted here as a step towards that provision of European security which must precede real economic recovery.

But in what direction are we to turn if it should unfortunately prove that there is no ground for such an understanding? This brings us to our third proposition, which is that under no circumstances would public

opinion at present permit the definite modification of our policy in a pro-German direction. The war experiences have burned too deeply to be forgotten yet, and if we cannot continue in close alliance with France, we must do our best to build up stable economic and political relations with countries outside Europe and wait for experience to teach its own lessons nearer home. To adopt this policy of turning our eyes away from Europe would be admittedly a counsel of despair. Anglo-American friendship and co-operation is the bulwark of world peace, but Anglo-French harmony is the only door to European settlement and recovery. In the absence of such recovery the limits that will necessarily be imposed upon chances of trade revival in this country are grievously restricted. Week by week our columns testify to the devastation caused in industrial Britain by the continuance of the great Continental gap in the world trade circle. The prime object, then, of this country and of her statesmen should be to bring nearer the time when France and England can find sufficient common ground for the establishment of a clearly defined agreement. The way is at present barred by misunderstanding and suspicion, to which the spectacular proceedings of the Supreme Council have undoubtedly contributed. As the murky atmosphere of distrust begins to clear away, the numerous and vital points of common interest between the two nations should emerge into view as a pillar of fire drawing towards it paths that are at present divergent. If present hope in this direction burns very low in view of M. Poincaré's uncompromising statement on reparations, the spark is at least kept alive by his recognition that a policy of French isolation would be madness, and that it is the intention of his Cabinet to "mitigate the misunderstandings that have arisen between the two countries."

THE WAGES TANGLE.

It has constantly been emphasised in these columns that the recovery of trade in this country depends upon the solution of international problems in which politics play the predominant part. But there is another side of the story. Great Britain is also under the necessity of making drastic reductions in the cost of the manufactured products with which she purchases from abroad the necessities of her existence.

Unfortunately, adequate statistics are lacking to enable us to generalise about the main elements of cost during recent months; but, in regard to wages, sufficient information is available to show to some extent what has been happening. We have not attempted to estimate what total the national wages bill amounted to in 1921, but, allowing for short time as well as for unemployment, it is probable that the weekly disbursement of wages to-day is from 25 to 33 per cent. less than a year ago. Even in employments which may be regarded as definitely industrial, however, this reduction has been made very irregularly. The following figures, of which the first two columns are taken from the current number of the *Labour Gazette* and the third is a calculated figure, show the average reduction of earnings of men working full time in various industries:—

	No. of work-people affected by wages changes in 1921.	Net reduction in weekly wages bill.	Net reduction per head per week.
Mining and quarrying	1,290,000	2,588,000	2 0 0
Iron and steel	240,000	475,000	1 19 7
Building and allied trades..	450,000	304,000	0 13 6
Textiles	1,010,000	651,000	0 12 11
Engineering & shipbuilding	1,730,000	1,054,000	0 12 3
Transport	910,000	388,000	0 8 6
Public utility services	340,000	134,000	0 7 10

The coal-mining and iron and steel industries, in which the largest reductions have been made, are also those in which average earnings were highest during the boom; the cuts have, however, been so severe that these two trades have fallen substantially behind other industries.

But though such figures are illuminating, they do not bring out so clearly as a comparison of actual rates the extraordinary wages situation in the country at the moment. Wages of skilled men do not convey very

much except to the specialist, nor are many figures of skilled rates of wages readily available. But the earnings of unskilled labour tend in normal times to a much greater degree of uniformity, and we have therefore collected together a considerable number of unskilled rates of wages current in various industries and in various parts of the country at the end of the year. The figures, summarised by industries, show the following wide variations:—

RANGE OF UNSKILLED LABOURERS' WAGES—CHRISTMAS, 1921.*

	s	d	
Agriculture	34	0	(Rutland) to 50s (Lancs).
Railways (porters)	57	0	(country) to 61s (London).
Local authorities	42	0	to 76s 3d.
(Industrial Council scheme)			
Town range	50	0	(Aixminster) to 76s 3d (London).
Country "	42	0	(Shifnal) to 51s (Amblecote).
Builders' labourers	53	2	(Saffron Walden) to 71s 6d (London).
Engineering "	55	9	(Bristol) to 64s (London).
Iron and steel "	43	0	(South Wales) to 48s (Sheffield).

* Railway servants' wages fell 4s a week in January, and a sum amounting to about 2s 3d came off the engineering labourers' wages. A substantial reduction is also due in the iron and steel trade in the North of England on February 1st.

As regards coal mining, wages are calculated on a shift basis; but, assuming 5½ shifts a week in Northumberland and Durham and six shifts in other parts of England and Wales, the full week's work would produce for underground labourers 36s in the Forest of Dean, 37s 2d in Durham, up to 69s in Derbyshire, while surface labourers would earn from 31s 6d in the Forest of Dean and 39s 3d in Durham, to 67s in Yorkshire. January rates are somewhat lower in some cases. The recent mining settlement provides that by agreement a minimum day rate may be fixed if the wages of the lower-paid men fall abnormally, and in certain districts 7s 1d per day, or 42s 6d per week, has been fixed as a minimum under this clause. But this arrangement is not universal; and in any case, this weekly figure, as well as the previous figures quoted, are subject to the qualification that, in fact, the average time worked is nearer five than six shifts a week. On the other hand, a large number of the miners receive a house or housing allowance, and cheap or free coal.

These are really very remarkable figures, and depict a highly abnormal state of affairs, which goes far to explain the demand of the Miners' Federation that the Government should make an inquiry into the wage situation. Looking first at the differences between the trades, it is natural that the industries which have to face keen export competition, or which provide materials for the export trades, have been compelled by economic circumstances to lead the way in the process of adjustment. In the two trades most affected—viz., the coal and iron and steel trades—earnings of unskilled labour are definitely on an agricultural level. On the other hand, the wages of builders' labourers, which have been maintained at a high figure largely as the result of the policy of subsidising house building, and in the railway service, which until recently has also been enjoying a State subsidy, are at a comparatively high level, even in country districts. Between these extremes, unskilled labour has maintained its earnings in proportion to the extent to which it has been protected by economic circumstances from keen competition.

An equally striking feature is the great variation between different districts in certain trades, though not in all. Thus railway service has a very small range indeed, whereas in agriculture the tendency to uniformity introduced during the war is now rapidly disappearing under the present County Conciliation Board system. The local authority figures are even more startling. Those quoted in the table above are the figures laid down in the scheme of the local authorities' Whitley Council. But many towns have not adopted this plan, and the wages of the "outsiders" show a still wider variation. As illustrating the extremes, one rural district council in Hampshire pays 30s a week, while an urban district council on the North-East coast has fixed its minimum at 84s. Such wide variations for essentially similar classes of work can have no economic justification, and it is clear that the efforts made during the war to standardise wages all over the country have broken down.

The situation which these figures present is one which calls for sympathetic and statesmanlike treatment on the

A YEAR'S OVERSEAS TRADE.

NATURALLY enough, with the great fall in commodity prices and the stagnation of trade prevalent throughout the year, the value figures of overseas trade for 1921 show enormous decreases when compared with the results of 1920. The total merchandise trade turnover in 1921, as revealed in the Board of Trade returns, was £1,896,935,567, as compared with £3,489,871,481 in the previous year. In fact, the value figure for the total 1921 turnover was less than the value figure of imports alone in 1920. The fall in the total value figure is one of 47 per cent. The *Economist* Index Number, as was shown in a recent issue, fell during 1921 by 26 per cent., and the fall was of a fairly steady and persistent nature. Statistics, it is hoped, will be produced in the course of time to show what 1921's trade would have been had price levels been the same as those of 1920. Meanwhile it is only possible to say that a very important part in the decrease in the value figures was played by the fall in prices. The summary of the year's value figures for imports, exports, and re-exports, as compared with those for 1920, reads as follows:—

	Calendar Year.		Decrease in 1921.	
	1920.	1921.		
	£	£	£	%
Imports	1,932,648,881	1,086,687,213	845,961,668	-43.7
Exports	1,334,469,269	703,196,282	631,272,987	-47.3
Re-exports	222,753,331	107,052,072	115,701,259	-51.8
Total exports	1,557,222,600	810,248,354	746,974,246	-47.9
Excess of imports over total exports	375,426,281	276,438,859	98,987,422	-26.3

It may seem surprising at first glance that the import excess should have been reduced by nearly £100 millions in a year in which a long coal stoppage struck so severe a blow at the export trade. But, of course, the trade depression caused a severe restriction of our purchases abroad of the raw materials of industry, and the import figures were also reduced by the especially large fall in the prices of some leading articles of import, while some allowance must be made also for the rise in the value of the £ sterling in countries of purchase. The reduction in the import excess was entirely the work of the first half of the year, as will be seen from the following table:—

MOVEMENTS OF MERCHANDISE TRADE BALANCE.

Month.	Imports in 1921.	Total Exports in 1921.	Excess of Imports in 1921.	Excess of Imports in Corresponding Month of 1920.
	Million £.	Million £.	Million £.	Million £.
January	117.0	102.7	14.3	59.0
February	97.0	76.2	20.8	61.8
March	93.7	75.7	18.0	45.9
April	90.0	68.4	21.6	40.4
May	86.3	50.3	36.0	26.8
June	88.2	45.2	43.0	33.8
First half-year	572.2	418.5	153.7	260.7
July	80.8	52.5	28.3	7.8
August	88.6	61.3	27.3	25.0
September	87.1	63.8	23.3	22.0
October	84.7	72.7	12.0	21.2
November	89.3	72.7	16.6	11.7
December	85.3	68.6	16.7	10.2
Second half-year ..	515.8	391.6	124.0	97.9
Full year	1,088.0	810.2	277.9	358.6

It will be seen that the totals do not agree with those given in the first table, the reason being that, while the official returns give an adjusted total for the full year, adjustments in certain monthly figures are not made in the returns until later on. The last six months of 1921 compare with a period in 1920 when exporters were still busy on old orders, while the booking of new orders was already so slack that a falling-off had occurred in the imports of raw materials. For these reasons, the last half of 1920 saw the excess of imports reduced to a low figure.

The quantity and value figures of certain leading imports in 1920 and 1921, set out in the following table,

part of those who control the policy of our leading industries. In many cases the men have recognised the force of economic pressure, and accepted drastic reductions in a manner deserving of the highest praise, and by so doing have given proof of the solid qualities which are needed if the ideal of partnership is to become the ruling principle between employers and workpeople. The reduction has also been accompanied, particularly in those industries in which payment by results obtains, by a greatly increased output per head per day—even where the weekly output is reduced by short time. The highest output ever attained by a single blast furnace in Great Britain was reported recently from South Wales, and similar results are being experienced in most parts of the country. Unfortunately, the renewed exertions of workpeople, though they have greatly contributed to the lowering of working costs, have not yet sufficed to revive trade, and in such circumstances it is of the utmost importance to keep alive the will to work. Employers can assist in bringing about this result by satisfying workpeople that every effort is being made to reduce cost by all available means other than the mere reduction in the rate of wages; but above all by the fullest possible disclosure of the economic conditions of the trade. There is no doubt that the monthly publication of the costs, receipts and profits of the coal industry during control, which gave the men for the first time a trustworthy general view of the position of their industry, enabled the two sides, in the spring of 1921, to get to a degree of understanding which, given a little more time, might have averted the strike, and certainly largely contributed to the acceptance by the men of the product-sharing principle which underlies the present settlement. We regret very much that the Mining Association of Great Britain has not continued the publication of these figures, for the future of industrial relations in this country depends, more than upon anything else, on creating the conviction that workpeople are being treated frankly and with fairness during the present depression.

There is, however, another aspect of the situation which raises a more difficult issue. In the industries and employments protected from keen competition, wages rates are mostly calculated on the basis of the cost of living rather than by what industry can afford to pay. But these wages are themselves a cause which tends to maintain the level of internal retail prices, for it has to be remembered that the rates of wages paid within Great Britain to workers in retail and wholesale distributing industries, in road and rail transport, in warehousing, in making and in preparing food products for market, constitute a very large factor in the cost of retail commodities. The two factors which interfere with this tendency of internal wages to maintain the level of the cost of living are a reduction in the remaining elements in cost, such as the import value of imported food, and the reduced demand caused by unemployment and low wages in the industries subject to competition. In the long run the level of wages in this country must be governed by the level of wages that can be paid in the export industries, which is only another way of saying that the standard of living must be governed by the valuation which the world is prepared to put upon British products in terms of the products which it has to offer in exchange. In normal times the adjustment between the wages of those who work for export and those who work for the home market does not involve rapid and drastic variations; but in times like the present, when very big adjustments have to be made, it is very desirable to speed up the variation of wages so that the general level may more promptly follow the level payable in exporting industries. On this issue, which is definitely raised in the present controversy over railwaymen's wages, we suggest that it would be in the best interest of workpeople as a whole to modify the present rigid adhesion to the pre-war cost of living formula, and seek by a study of wages in other industries to find a temporary post-war standard which would reflect the economic condition of the country. This would be one of the surest roads leading out of the present morass of unemployment to the plains of trade prosperity. It is a topic which Parliament is not very qualified to discuss, but it is exactly the kind of problem to be thrashed out in an industrial Parliament organised on the lines which Mr Arthur Henderson has again been advocating this week.

gives an indication of the effect of price movements on the value totals:—

	IMPORTS.			
	Quantity.		Value.	
	1920.	1921.	1920.	1921.
Raw cotton.....centals	18,972,224	11,725,521	253,997,742	72,461,969
Sheep & lambs wool ..	8,728,799	7,610,440	87,623,962	41,539,603
Flax, hemp and jute..tons	383,350	180,797	32,263,320	9,692,152
Rubber	2,481,910	1,903,756	24,517,721	9,242,336
Beef	10,668,463	12,166,907	51,870,074	45,068,675
Mutton and lamb ..	6,398,942	6,810,151	26,760,522	28,973,658
Wheat	109,328,326	80,246,994	146,753,350	70,355,481
Sugar	27,427,116	25,590,292	73,140,456	35,283,957
Butter	1,702,203	3,523,998	24,518,748	42,528,399
Tea	431,196,236	445,519,602	26,957,802	23,017,425
Tobacco	219,042,927	227,620,930	32,767,209	22,192,947
Pig-iron—				
Forge and foundry tons	49,581	411,744	705,884	2,802,016

The cotton, wool, wheat, sugar, and rubber figures are the most prominent examples of the effect of lower prices. Mutton and lamb has varied very little. A noteworthy point is the fact that butter imports increased over 100 per cent. in quantity. The figures for forge and foundry pig-iron are put in, because foreign competition in this line has been a feature of the iron and steel trade year. Quantity and value figures of exports of coal and certain prominent manufactures are set out below in similar form:—

	EXPORTS.			
	Quantity.		Value.	
	1920.	1921.	1920.	1921.
Coal	24,931,853	24,660,558	99,627,146	42,951,591
Pig-iron and ferro-alloys.. tons	579,509	135,998	10,002,701	1,686,461
Railway material	311,211	339,603	9,835,488	10,571,882
Total of iron and steel and manufactures thereof	3,251,225	1,700,407	128,907,361	63,772,453
Textile machinery	63,314	156,996	25,148,832	74,630,495
Total machinery	461,663	606,008	74,630,495	23,998,459
Cotton yarns.....lbs	147,432,400	145,504,900	47,585,814	23,998,459
Cotton piece goods	4,436,405,000	4,902,659,000	315,717,631	137,168,336
Wool tops	237,703	246,898	5,036,621	4,401,655
Woolen tissues.....sq. yds.	187,232,900	76,626,600	75,166,330	24,638,719
Worsted tissues.....sq. yds.	77,354,900	40,816,400	26,683,079	11,227,527
Woolen piece goods	93,044,700	39,992,900	14,935,201	5,851,573
Boots and shoes	818,969	313,262	7,116,030	2,248,830
Leather	271,257	228,063	8,153,959	3,239,647
Paper and cardboard	2,350,132	1,464,996	12,810,405	7,736,444
Locomotives	43,296	47,468	5,987,396	7,936,903
Motor cars and chassis	8,433	3,800	6,404,545	3,296,234

Coal shipments were much the same in quantity, but less than half the value recorded in 1920. In 1913 coal shipments amounted to 73,400,118 tons, or nearly three times the quantity sent out of the country in each of the past two years. The acute foreign competition alluded to above, coupled with trade stagnation, has reduced pig-iron exports to a very low level. The quantity of cotton piece-goods exported fell by nearly one-third and the value by no less than £17½ millions. Of cotton yarn rather more was exported in 1921 than in 1920, but for little more than half the value. Machinery—especially textile machinery—is the most satisfactory item in the list. Railway material and locomotives also show up well. Woollen and worsted tissues, linen, boots and shoes, motor cars, paper and cardboard, and leather all illustrate not only the fall in prices, but also the slump in demand which marked the year 1921. To the fall of £115½ millions in re-exports, raw cotton and wool contribute between them declines of £41½ millions, and rubber another of £10 millions. The coin and bullion figures for the past two years compare as follows:—

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1920.....	50,678,283	92,565,137	9,923,034	11,493,266
1921.....	49,676,327	59,348,158	10,282,693	12,046,272

The surplus of gold exports over imports in 1921 was only £9.6 millions, as compared with £41.8 millions in 1920. We sent rather more gold to the United States, namely, £55.5 millions against £52.8 millions in the previous year, but gold shipments to British India fell from £23.6 millions to £1.5 millions, while we imported from that country £8 millions in place of £270,500. The total of shipping engaged in the foreign trade which entered our ports with cargoes was 37.1 million tons, against 36.5 million

tons in 1920 and 49.1 million tons in 1913; the total clearing with cargoes was 36.4 million tons last year, as compared with 36.7 million tons in 1920 and 67.8 million tons in 1913. Considering the growth in available mercantile tonnage, the figures throw light upon the deep depression in the shipping world.

The following table gives the value figures of the principal imports and British exports in 1920 and 1921 under their official heads:—

	Imports.		British Exports.	
	1920.	1921.	1920.	1921.
	£	£	£	£
I.—Food, Drink, and Tobacco—				
A. Grain and flour	231,635,600	138,084,686	2,773,296	3,903,897
B. Feeding-stuffs for animals ..	8,899,902	6,599,366	1,025,200	1,529,614
C. Meat	141,527,296	132,968,634	829,515	865,316
D. Animals, living, for food ..	..	2,804,427	13,889	45,126

THE CITY EQUITABLE COMPANY.

THE City Equitable Fire Insurance Company was established in 1908 to accept fire risks by way of re-insurance, a branch of business in which Great Britain had not hitherto been prominent. It was, in fact, a speciality of foreign fire managers, who made a great study of the science, and had for years supplied English fire offices with most of their opportunities to cover their surplus liabilities. From its birth the City Equitable developed quickly, its fire premium income rising between 1909 and 1913 from £20,448 to £83,443. After 1913 the foreign market, on which London and Liverpool had for long relied, was closed to them, and it was no easy matter for the offices to find reliable companies to whom their risks might be ceded under treaty. Naturally, then, the business of the City Equitable grew very rapidly, and the advance of its pre-war days was dwarfed by the great strides made during and after the war, both in its pre-

The New York Trust Company

Accepts deposits drawing interest from foreign banks, firms and individuals.

Buys and sells drafts and cable transfers on foreign countries.

Furnishes credit and trade information to foreign firms desiring to buy or sell in the American market.

Finances import and export transactions

Buys and sells American and foreign securities.

Hambro's Bank, Ltd.

mium income and in its fire surplus. A brief summary of its fire figures would work out as follows:—

Year Ending	Premiums.	Balance Over Claims Paid and Expenses.
1909	20,448	9,463
1913	83,443	6,853
1916	363,498	133,656
1918	458,375	82,045
1920	1,189,760	275,444
1921	2,071,516	429,696

This is a very remarkable development, and it has been accompanied in the last few years by the growth of a big marine premium income, the figures since 1917 being as follows:—

Year Ending	£
1917	260,489
1918	740,038
1919	1,351,728
1920	1,442,772
1921	1,469,197

The whole of this premium income is derived from re-insurance business, so that the importance of the company to the English insurance market is obvious. The paid-up capital compared with the size and growth of the business is small, and the return to shareholders from the huge profits made is proportionately great. The shares authorised and subscribed amount to £375,000, but the capital paid up is only £75,000, which in comparison with the enormous premium income looks ridiculously small. Of this £75,000 £60,000 is in 6 per cent. participating preference shares (4s paid) and £15,000 in ordinary shares, also 4s paid. The dividends paid in the last few years are as follows:—

	Preference Dividend.	Ordinary Dividend.
	£	£
1918-19....	22,500 = 37½ %	22,500 = 150 %
1919-20....	30,000 = 50 %	30,000 = 200 %
1920-21....	37,500 = 62½ %	37,500 = 250 %

Returns of this size on so small a capital are very remarkable, and have naturally attracted much attention, both from insurance men and from investors in insurance shares.

Until last year the interests of the company were confined entirely to re-insurance business, but in July last a new venture was started under the protection of the City Equitable, which opened up wider fields and brought the company into more direct touch with brokers and the general insuring public. A company was floated under the name of the City Equitable Associated, with the stated object of consolidating the interests of the City Equitable in its dealings with various other insurance companies and "assisting it in its operations, more especially in the American field." It acquired a controlling interest in the Greater Britain Insurance Company, the City of London Insurance Company, and the First National Insurance Company (all of which had marine offices taking direct risks from brokers), and also in the Excelsior Company of Amsterdam, which, so far as we know, does no direct business in the London

market. The authorised capital of the new company was £1,100,000, and after a number of shares had been allotted in purchase of the Greater Britain and other shares, a public offer was made of 250,000 8-per cent. participating preference shares of £1 each, which are now fully paid, and are guaranteed both as to capital and dividend by the City Equitable Company. It is in this issue that the public shareholding interest mainly lies.

During the past fortnight there has been a striking fall in the price, both of the City Equitable 6 per cent. preference and the City Equitable Associated 8 per cent. preference, recent quotations being as follows:—

	City Equitable 6 %.	City Equitable Associated 8 %.
	£ s d	£ s d
June 30, 1921	2 19 0	
September 29, 1921	2 19 0	17 4½
December 31, 1921	2 15 0	16 3
January 19, 1922	0 15 0	9 9

An instalment of 10s per share (it may be noted) was due on the Associated 8 per cent. on January 12th. The rapid decline has caused some anxiety and disturbance in the insurance world, and shareholders and others have been much exercised in mind to comprehend the reason for it. The secretary of the Associated is reported in a daily paper of Thursday to have declared that he knows of no reason for the drop in prices, but, apart from this communication and a note in Friday's *Daily Express*, no official statement has been made, and the directors of the City Equitable may have decided to say nothing. If their interests were still confined entirely to re-insurance, and their dealings were all with big offices whose managers are acquainted with all the ins and outs of insurance, and can go to the source of things for their information, this policy might well be the correct one. But since they have now so closely connected with them companies doing business with the general public, and since investors are so much more largely interested in the shares than they were twelve months ago, would it not be advisable for the board of the City Equitable to take note of this decline and make a public statement? It would be idle to deny the disturbing effect of this week's price movements, or the desire of the shareholders to have their confidence established. Among the points that might be dealt with are:—

(1) Whether in the last few months any change has taken place in the relations between the City Equitable Company and its policy holders among the big insurance offices?

(2) Whether the directors are satisfied with the liquidity of their assets, especially the sum of £1,350,000 shown in the last balance-sheet as representing insurance shares, miscellaneous securities, and loans?

(3) Whether the directors are satisfied with the position of the companies with whom they have re-insured their excess liability?

(4) The state of their American connection and funds.

(5) Where the guarantee given by the City Equitable

on the Associated shares ranks among the City Equitable's liabilities?

In view of the difficulty of dealing in the shares this week a statement would be desirable both from the company's and the shareholders' point of view, and we cannot regard the personal comment of the general manager, published on Friday, as a satisfactory equivalent. The directors must declare their position.

THE COAL TRADE IN 1921.

THE returns of the output of coal in the United Kingdom in 1921 are the most convincing revelation that can be given of the disastrous effects on the mining industry of the United Kingdom of domestic strife and international depression. The production for the twelve months was only 163,663,800 tons. There is no parallel for so small a production in the records of the industry since 1887. It was 66 million tons less than the output in 1920, and 124 million tons less than the output in the record year of 1913. The chief cause of this contraction in the supply of coal was the three months' strike, extending from April 1st to July 2nd. In that period alone there was a loss of approximately 65 million tons, but both before and after the strike the conditions prevailing in the coal trade discouraged both inland and foreign demand. In the first three months of the year the industry was still financially under the control of the Government. The restrictions on exports had been removed in 1920, and those on inland prices were discontinued as from February 1, 1921, but up to the end of March both wages and profits were subsidised.

At the beginning of the year the price of coal in the inland market was less than the cost of production. In the export market it was considerably in excess of the cost of production, and though the industry in that month was worked at a loss of nearly £5 millions, the Government was under a guarantee to the coalowners to pay them profits at the rate of over £2 millions per month, or nearly £28 millions per annum. During 1920 it had been possible for the United Kingdom to exploit the foreign consumer, but by the end of 1921 the foreign consumer had discovered other sources of supply, and while our own exports to foreign countries were declining those from the United States, and even from South Africa and the Far East, were increasing. The effect of this redistribution in the world demand for coal was to bring down the export prices of British coals, and it was in consequence of the approximation of the export price to the inland price that the Government in February decided to decontrol the industry, and in March rushed through Parliament the Coal Mines (Decontrol) Act, under which all gratuities to the miners and guarantees to the owners were discontinued as from the end of March 31st. Production after the strike suffered through the dislocation of the manufacturing industries of the United Kingdom. Even in December the production of pig-iron in the country was only 275,000 tons compared with 682,000 tons in December, 1920, and with an average monthly output in 1913 of 855,000 tons. Moreover, during the strike Europe imported American coal on an extensive scale, and we ourselves imported 3½ million tons. In these circumstances both the inland and the foreign demand for British coal was comparatively inactive until the last few weeks of the year, when there were signs of recovery, and when the output in some of the coalfields approximated very closely to pre-war figures.

It was the export trade that suffered most from this reduced output. In 1913, when the production of the United Kingdom was 287 million tons, there was retained for inland consumption approximately 187 million tons, and exported as cargo, bunkers, coke, and patent fuel, roughly 100,000,000 tons. Last year the quantity exported was only about 34 million tons, leaving less than 130 million tons for home consumption. There was, therefore, a deficiency in the inland supply of about 60 million tons, and in the export trade of 60 million tons. This deficiency in the export market was not supplied by any other country. Acute conditions of depression existed in the great coal consuming industries of the United States, France, and Belgium. The under consumption of coal

even in November last was in France and Germany alone at the rate of upwards of 60 million tons per annum, and it is desirable to bear this fact in mind when the Spa Agreement is blamed for the very much diminished Continental demand for British coal.

The course of prices during the year was uniformly downward. The high-water mark of f.o.b. values was reached in September, 1920, when the f.o.b. price of all the coal exported from the United Kingdom was 89s 9d. By the end of January, 1921, there had been a reduction to 65s 4d, while in March the average f.o.b. price was 43s 6d. The coal strike did not interrupt this falling tendency, for in July the average price had further decreased to 38s 2d, while in the last month of the year it was about 27s. The decline in values had been greater in the coal exporting than in the inland districts. In the March quarter the average pit-head price in South Wales was 38s 1d. In December it was about 21s, a decrease of 17s; in Scotland the pit-head price fell during the year from an average figure of 32s 1½d in the first quarter of the year to 19s in November; Northumberland from 34s 1d to 19s; Durham from 34s 4½d to 22s 3d; but the English Federated Area only from about 31s 4d to 25s 1d—a decrease of only 6s compared with the decrease of 17s in the South Wales coalfield. Taking the year as a whole, the working of the industry involved a very considerable loss. In the first three months the debit balance as shown in the statistical statements of the Mines Department was £16,637,028, exclusive of approximately £6 millions due to the colliery owners under the provisions of the Mining Industry Act; during the three months' strike the maintenance expenditure of the colliery companies is estimated to have amounted to at least £10 millions; while the monthly ascertained between July and November showed a net nominal profit of £5,400,000, subject to commercial expenses and to those profits surrendered where the proceeds were otherwise insufficient to enable the collieries to pay the miners their minimum rates of wages. If we assume the net profits for the last six months of the year at £5 millions, we arrive at an approximate loss on the working of the industry for the 12 months of £27 millions.

The only coalfield where wages did not fall appreciably below the pre-war level, after allowing for the diminished purchasing power of money, was that of the Eastern Federated Area. With decontrol the Sankey wage of 2s per day, the war wage of 3s per day, and the 20 per cent. increase of March, 1920—involving a minimum rate of 2s per day—were withdrawn. The terms of the national settlement secured for every district a minimum wage equal to 20 per cent. above the average earnings in July, 1914. In the Eastern Federated Area, in which are included the Yorkshire, Nottinghamshire, Derbyshire, Leicestershire, Cannock Chase, and Warwickshire coalfields, the general wage rate payable in December was 109.54 per cent. on the standard, or 77.54 per cent. above the minimum wage for that area; in South Wales, South Staffordshire, Cumberland, Bristol, Kent, and the Radstock district of Somerset the wages in December were at the minimum; while in Scotland they were only 26.44 per cent. above the minimum, in Northumberland 27.35 per cent. above the minimum, in Durham 30.73 per cent. above the minimum, in Lancashire, North Staffordshire, and Cheshire 42.76 per cent., and in North Wales 12.5 per cent.

This is not the place or the occasion to tell the story of the coal strike, but it is necessary to refer to two or three of the more important of the facts in the settlement of that great struggle. The Government came to the assistance of the miners with a subsidy up to £10 millions spread over a period of three months, in order to mitigate the effect of the reduction which the financial condition of the industry had rendered unavoidable. By the aid of that subsidy, the reductions in wages in July were limited to 2s per day below the wages in March, to 2s 6d per day in August, and to 3s per day in September. Moreover, the colliery owners had agreed to surrender their July and August profits to the extent to which wages had been subsidised in those months from the Treasury, and as the result of this arrangement, the wages in September and October were maintained at a much higher level than otherwise would have been the case. The great change

in the permanent system for the regulation of wages in the industry introduced under the settlement of last July was that of the substitution of profits for selling prices as the main wage regulating factor. The miners were given a minimum wage as well as a standard wage, and the owners a minimum profit equivalent in money amount to 17 per cent. of the amount of money represented by the standard wage, or to approximately 8 per cent. on the capital employed in the industry. All the surplus proceeds left in each district after meeting these standard labour and capital charges, as well as the other costs of production, were distributable in the fixed proportions of 83 per cent. for labour, and 17 per cent. for capital, but in any case the colliery companies had to meet the minimum wage charge before they could retain any profits, and the concession to the coalowners as a compensation for this sacrifice was that of the right to carry forward any deficiencies in their standard profits as a charge to be met out of future profits before the granting of any further increases in wages. In the ascertainment of the working results of the industry the workmen's representatives were given an equal voice with the colliery owners, and all the items to be treated as costs were determined jointly by the two sides. No more epoch-making change has taken place in any other of the great industries of the country, but how far it will stand the strain of competitive trading experience alone will show.

THE COMMUNIST PARTY.

(BY A LABOUR CORRESPONDENT.)

IN spite of the alarms and excursions concerning Communism, there is no movement in this country which is less understood. An account of its establishment and present position may not be without interest. In this country before the war there were Socialist groups of which little was known to the general public. Many people were aware of the Social Democratic Federation, under the leadership of that picturesque bourgeois, H. M. Hyndman. The S.D.F. was a Marxian body, the members of which, in the early days at least, really expected to see the collapse of capitalism and the establishment of Marxian Socialism. Some of its most active members—Will Thorne, Dan Irving, Jack Jones, and Tom Kennedy—are now engaged in humdrum "reformist" work in the House of Commons. The Social Democrats split during the war, the left pacifist wing providing one of the nuclei of British Communism. The rest stoutly declared that Lenin and Trotsky had perverted the doctrines of the master, Marx, and that Social Democracy was the only true gospel. There were also before the war two smaller Socialist bodies to which reference must be made—the Socialist Labour Party and the Socialist Party of Great Britain, consisting of irreconcilables. The latter, though its few members would violently repudiate it, has never been of any consequence. The latter unsuccessfully contested three seats at the last General Election, one of their candidates being Mr Arthur McManus, now the chairman of the Communist Party of Great Britain. The S.L.P. was another nucleus of the British Communist Party. During the war Miss Sylvia Pankhurst, whose political views diverged from those of her mother and sister, raised the flag of revolutionary Socialism in East London and provided recruits when the Communist Party was founded. The shop stewards' movement, which was one of the most important spontaneous developments amongst the workers during the war period, also contributed its quota to the Communist movement. These are the main elements in British Communism.

With the second Russian revolution the world was presented with a new political philosophy, known as Bolshevism. The flag bearing this barbarous and uncouth word, which carries no glimmer of its meaning on the surface, threw the vast majority of people everywhere into consternation. On the other hand, the revolutionary spirits on the extreme left of the Labour movement in this and other countries responded to the new doctrines. There is no space here to attempt an analysis of Bolshevik (or Communist) psychology. Communism bears all the characteristics of a religion, and its supporters show all

the intolerance, blindness and fervour of the devotees of a new creed. No doubt in the "Red" movement there are poseurs, to whom anything which is left of the left is *ipso facto* good, and anything that is new is true. These, however, are not proletarians; they are generally intellectuals. Bolshevism, or Communism, to use the more modern term, stands for the Soviet form of government and the dictation of the proletariat. It claims to be the practical application of Marxism. Kautsky, the German Socialist, and Trotsky have engaged in a wordy duel on this subject, and thrown books at each other's heads. Communism has undoubtedly spread. A year ago the Communist Party of Great Britain was founded, with the blessing of Moscow, and under the wing of the Third International. It applied for affiliation to the Labour Party, but its application was rejected. It claims to have secured the defeat of Mr Ramsay MacDonald at the Woolwich Parliamentary by-election last year. Mr MacDonald was defeated by about 700 votes, and it is said that the Communist votes, which were cast against him, turned the scale. The Communists brought a candidate into the field a little later at Caerphilly, in South Wales, against Mr Morgan Jones, the Labour candidate. The Communist vote was only about 2,000, in an area where there is much unrest. The Communist Party has endeavoured to win the support of the unemployed workers, but they have met with little or no success. The British Communists have obtained a good deal of advertisement through the prosecution of certain of their members for sedition, and more recently as a result of the libel charge brought by Mr J. H. Thomas, M.P., against the Communist newspaper.

The *Communist* is a weekly propagandist newspaper, claiming a circulation of 50,000 copies. In addition, the party publishes the *Communist Review*, a monthly organ. Miss Sylvia Pankhurst has a weekly paper known as the *Workers' Dreadnought*, which some little time ago was, so to speak, put on the *index expurgatorius* by the Communist party. The Labour College appears to be the educational institution of the Communists. Eden and Cedar Paul, in their recent volume "Proletcult," deal with "proletarian culture," and the part which is being played by the Labour College in extending it. There are said to be 10,000 members of the Communist party of Great Britain. According to M. Rákosi, one of the secretaries of the Communist International, there are a similar number of Communists in the United States; in Germany 360,000, in Italy 70,000, in Norway 97,000, in France 130,000, in Czechoslovakia 360,000, in Sweden 15,000. It is claimed that there are Communists as far away as Japan and Uruguay, whilst Palestine is credited with 500 members. The gradual re-orientation of the policy of the Russian Soviet Republic, which has now proceeded a considerable way in coming to terms with capitalism, has obviously perturbed the Communist movement in other countries. Certainly there is uneasiness amongst the British Communists, though they invariably ascribe the views of those who hold that Lenin has compromised with capitalism as being due to a misunderstanding of the situation. There can be no doubt that the spread of Communist ideas depends very largely upon the success of Bolshevism in Russia. As Russia must live in a world which is overwhelmingly capitalist, it is inevitable that it should adapt its policy to this governing consideration, and it may be expected that the Communist movement will receive a substantial check owing to the partial reversion of Russia to private ownership and capitalist enterprise. The movement in this country has not made any substantial headway, notwithstanding falling wages and serious unemployment, and there is little prospect of any considerable growth in the future. It cannot be denied, however, that the Communist party has within its ranks some people of ability, and the party will be ably led. But quite apart from the doctrines of Communism, which will not win much support from the mass of workers, British labour will not submit to the discipline imposed by the party, and to the dictatorship of Mr McManus and his colleagues. The charge has often been made against trade unionists that they do not follow their leaders. It is much truer that they will never be driven by leaders, and the high-handed methods of Communist leadership will repel rather than attract the rank and file.

Not a word has been said in this article about trade unions which are subsidised by "Russian gold," or responsible Labour leaders, who are in Lenin's pocket—and for a good reason. These frenzied statements are utterly untrue. Nor is it true to suggest that the Labour movement is honeycombed into Communism. If the Communists had half the influence which it is sometimes suggested they possess, they would have plunged the country into a general strike on the unemployment question. Certain newspapers are far more afraid of Communism than is the trade union movement, which is quite capable of looking after itself.

Notes of the Week.

China and Washington.—The financial difficulties of the Peking Government are intensified by a fresh political crisis. The new Ministry represents a coalition of the Northern reactionaries, and Liang Shih-Yi, the Prime Minister, is known to favour a return to monarchy. This circumstance, coupled with his release of the political offenders of the Anfu or pro-Japanese party, not only precludes an arrangement with the Republican Government at Canton, but has provoked Wu Pei Fu, who overthrew the reactionary Government in 1920, to give its successor eight days' notice to resign. He has organised and trained a considerable force, and is preparing to advance on Peking; and he will be opposed by Chang Tsao-Lin, the Governor of Manchuria, and the real creator of the new Ministry, who likewise commands a large body of trained troops, which, however, are said to be less numerous. A peaceful settlement is not impossible, for Chinese military leaders are apt to settle their differences by negotiation rather than by arms; but there is no Government to which foreign financial aid can be safely given, and there is not likely to be until Peking and Canton can come to terms. The Consortium is necessarily non-political, and cannot offer a loan to any authority which does not represent the whole of China. Meanwhile, in order to obtain arrears of pay, a section of the fleet has seized a collecting station of the Salt Revenue administration on the Yang-tse; the salt traffic on the river is stopped, and the Legations have requested the Peking Government to restore order. Chinese Governments, however, have a way of emerging from apparently insurmountable difficulties, and competent observers in England expect that important developments will take place after the Chinese New Year holiday, which begins on January 27th. The consent of the Powers has been given to the proposed increase of the Customs tariff, the Customs revenues are still the highest on record, and the increased returns from them and the salt surplus afford ample security for a new loan so soon as a Government can be formed with which the Consortium can negotiate with confidence. The unrest gives additional importance to the task of the Washington Conference in dealing with Chinese affairs. The far-reaching American proposal, announced on Thursday, of an international Board of Reference, to secure "the open door" as regards concessions to foreigners, is fully in accord with British policy during the present century; the chief sufferer from it, should the action of the Board be retroactive, must be Japan; and, though the retroactive clause has been abandoned, it is not quite clear that retroactivity is dropped. Besides, there is an obvious objection to setting up a precedent, which may be applied elsewhere, by going back on arrangements, like those concluded in regard to Shantung, which have been formally accepted by the Powers which are parties to them. Apart from this, the Shantung question is still unsolved, owing to the opposition of the Chinese delegates to the proposed terms. The difficulties ahead, therefore, are serious, but the Powers most concerned seem disposed to be reasonable, and the publication of all the treaties, secret or open, between China and other Powers is a long step in advance. In many ways the Conference is clearing the ground for a strong Chinese Government, if the Chinese can manage to form one.

New Treasury Bonds and Gilt-Edged Prices.—The rumour, followed by the official announcement, of the withdrawal of the 5½ per cent. "C" series of Treasury bonds last Wednesday, and its proposed replacement next Monday by a new 5 per cent. series issued at 99, caused a notable rush on the first two days of the week to seize the last opportunity of buying the 5½ per cent. variety, and also gave renewed strength to quotations of gilt-edged securities. The addition of this week's advances makes the rise in the quotation of Government stocks in the past twelve months or so look very formidable. The extent of the rise is illustrated below in the case of some leading British Government stocks:—

Description.	Price End of 1920.	Lowest Price 1921.	End of 1921.	Present Price.
2½ % Consols	45	44½	50½	53
3 % Local Loans	50½	49½	56½	57½
5 % War Loan (1929-47)	83	82½	92½	93½
4 % Funding Loan (1960-90)	68	67½	76½	79½
4 % Victory Bonds	72½	72½	81½	83½
3½ % Conversion Loan	..	61½	66½	68½
National War Bonds, 5 %, red. at 102, Oct. 1, 1922	98	97½	102½	102½
Do 5 %, red. at 105, Oct. 1, 1929	95	94½	100½	100½

The new 5 per cent. Treasury bonds are to have a currency of five years, their maturity being fixed for a period which is comparatively free from debt maturity obligations.

Business Men and Economy.—At a public meeting held at the Cannon Street Hotel on Thursday afternoon, at which Mr Asquith was the chief speaker, the following resolution was proposed by Dr Walter Leaf, seconded by Lord Gainford, and carried with unanimity and acclamation:—

That in view of the present serious economic and financial situation, and the imperative need of replacing the wealth annihilated by the war, this meeting of bankers, manufacturers, merchants and shipowners

(1) Calls upon the Government to adopt immediately a policy of drastic retrenchment in the national expenditure, and to enforce a rigid economy in the administration of all public departments;

(2) Demands that the interference with our commerce, whether by Parliament or by the Administration, be stayed at once; and that trade and industry be released from the trammels imposed by the Safeguarding of Industries Act and allowed to recover the same freedom as before the war.

The meeting was convened by the National Association of Merchants and Manufacturers, and as Sir Hugh Bell, who presided, pointed out, the resolution was a further confirmation of the manifesto issued by prominent bankers in May of last year. The demand voiced by most of the speakers that the Safeguarding of Industries Act should be "scrapped and thrown upon the rubbish heap" met with general applause, only exceeded by that accorded to references to the necessity for retrenchment in Government expenditure. Mr Asquith's conclusion, in which he summarised the methods by which economic restoration can be achieved, is worthy of quotation:—"What is the sum of the whole matter? It is the rigorous curtailment of unproductive expenditure; putting an end to the artificial multiplication by the printing press or in other ways of purchasing power and credit inflation; the cessation of paralysing and sterilising State interference in the whole domain of business and industry, and, finally, the assessment and liquidation of outstanding international liabilities; the immediate lowering and the ultimate removal of tariff barriers, with the result of opening of all markets to the free interchange of commodities; the effective prosecution of a universal policy of disarmament both on the sea, on land, and in the air; the resolute avoidance of entangling engagements, which may tie our hands and mortgage the future between separate Powers or groups of Powers."

Employment in December.—In spite of some improvement in the demand for labour in coal mining, hosiery manufacture, and leather tanning and currying during December, the *Labour Gazette* shows that, on the whole, unemployment grew worse last month. The percentage unemployed among members of Trade Unions making returns to the Labour Ministry rose from 15.9 per cent.

to 16.5 per cent. The resulting movements of this figure in 1921 and former years are set out below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.							
End of—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
January ..	2.2 ..	0.6 ..	0.3 ..	1.0 ..	2.4 ..	2.9 ..	6.9
February ..	2.0 ..	0.5 ..	0.3 ..	0.9 ..	2.8 ..	1.6 ..	8.5
March	1.9 ..	0.5 ..	0.3 ..	1.2 ..	2.9 ..	1.1 ..	10.0
April	1.7 ..	0.5 ..	0.3 ..	0.9 ..	2.8 ..	0.9 ..	17.6*
May	1.9 ..	0.5 ..	0.4 ..	0.9 ..	2.1 ..	1.1 ..	22.2*
June	1.9 ..	0.5 ..	0.4 ..	0.7 ..	1.7 ..	1.2 ..	23.1*
July	1.9 ..	0.4 ..	0.4 ..	0.6 ..	2.0 ..	1.4 ..	16.7
August	2.0 ..	0.4 ..	0.5 ..	0.5 ..	2.2 ..	1.6 ..	16.3†
September ..	2.3 ..	0.4 ..	1.3 ..	0.5 ..	1.6 ..	2.2 ..	14.8
October	2.2 ..	0.3 ..	1.1 ..	0.4 ..	2.6 ..	5.3 ..	15.6
November ..	2.0 ..	0.3 ..	1.1 ..	0.5 ..	2.9 ..	3.7 ..	15.9
December ..	2.6 ..	0.3 ..	1.4 ..	1.2 ..	3.2 ..	6.0 ..	16.5

* Excluding coal miners. † Revised figure.

The percentage unemployed among workpeople covered by the Unemployment Insurance Act rose from 15.7 per cent. to 16.2 per cent., the percentages for males and females being 18.2 and 11.3 respectively.

The Cost of Living.—The *Labour Gazette* calculation of the cost of living for an average working-class family shows a fall of 7 points in December, the level at the end of the year being 92 per cent. above that in force at the outbreak of war. The following table shows how the figure has moved month by month since the beginning of 1920:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.				
	1920.	1921.	1922.	
	Per Cent.	Per Cent.	Per Cent.	
January 1st	125	165	92	
February ..	130	151	..	
March ..	130	141	..	
April ..	132	133	..	
May ..	141	128	..	
June ..	150	119	..	
July ..	152	119	..	
August ..	155	122	..	
September ..	161	120	..	
October ..	164	110	..	
November ..	176	103	..	
December ..	169	99	..	

The January 1st figure is the lowest recorded since March, 1918. The decline in December is attributed mainly to reductions in the prices of some of the principal articles of food, including bread, flour, meat, butter, and eggs. According to the official calculation, retail food prices alone are 85 per cent. above the July, 1914, level.

Export Credits.—A statement has been issued showing advances, general credits, and guarantees sanctioned and taken under the Overseas Trade (Credits and Insurance) Act, 1920. According to this, applications for advances sanctioned from September, 1919, to December 31, 1921, totalled £6,071,665, while advances and guarantees taken during the same period amounted to £1,687,075. Of the latter, £1,412,210 was for Finland, Baltic Provinces, Poland, Czecho-Slovakia, Jugo-Slavia, Roumania, Austria, and Bulgaria.

The Measurement of Inflation.—On Tuesday last Mr H. W. Macrosty, B.A., read a paper before the Royal Statistical Society dealing with "Some Current Financial Problems," the current theme of which was credit during the last seven years, involving the problems of the nature of bank credit, the creation of credit by the Government, the situation created by Treasury Bills, the holding of currency by the public and the banks, and the inflation or expansion of currency. Analysing the various methods in which the banks could extend credit, the lecturer showed that it was not possible, from the existing banking statistics, to measure the amount of credit created and to estimate the precise responsibility of the Government in the matter. Government financing during the war had inflated credit, but since that time there had been no tendency to inflation inherent in the methods for the continual renewal of floating debt. Dealing with Treasury Bills, Mr Macrosty estimated that at the end of 1920 probably about £500 million of Treasury Bills, and to-day a somewhat lesser amount, was held by the industrial and commercial community, as apart from financial interests. A brisk revival of trade would, con-

sequently, lead to the wholesale non-renewal of bills and place the Government in the dilemma of choosing between a great inflation of the currency, which would in effect be a universal and unintelligent taxation of the community, and some form of a special levy on property for the redemption of debt. By a separate investigation, the lecturer confirmed Mr McKenna's estimates of the distribution of currency between the public and the banks in 1914 (£128 millions held by the public and £75 millions by the banks), and concluded from his calculations that the velocity of circulation, which had slowed down during the war, had nearly returned to its former rate, thus enabling a certain amount of currency to be withdrawn. The Currency Notes Account to-day appeared to be administered on purely banking principles, so that the Government had no responsibility for its temporary movements of restriction or expansion.

World's Gold Production.—From Messrs Samuel Montagu and Co.'s annual bullion letter for 1921 we extract the following interesting table of the world's gold production from 1913 to 1921:—

(Millions of £'s)

Year.	Transvaal.	The Rest of the Empire.	Total British Empire.	Foreign Countries.	Total for World.
1913.....	37.4	21.4	58.8	35.9	94.7
1914.....	35.6	20.9	56.5	33.9	90.4
1915.....	38.7	22.0	60.7	35.7	96.4
1916.....	39.5	20.1	59.6	33.9	93.5
1917.....	38.3	17.8	56.1	30.2	86.3
1918.....	35.8	15.2	51.0	28.0	79.0
1919.....	35.4	14.6	50.0	25.2	75.2
1920.....	34.7	13.5	48.2	21.3	69.5
1921 (est.) ..	34.5	12.0	46.5	19.5	66.0

For the purposes of this table gold is taken at 84s 11½d per fine ounce. For 1921 it is estimated that the total world's production will be 66 millions, which is again a serious decline. In the British Empire, the Transvaal is slightly lower on the year, while Australasia, with a drop from 5 millions for 1920 to just over 3½ for 1921, provides grave matter for reflection. Rhodesia and West Africa maintain their output, but India records a decline. Canada must be given credit for the very satisfactory increase of £400,000, climbing from an output of £3,300,000 to £3,700,000.

Guatemala Anti-Federal.—It is officially announced by the Guatemalan Consul in London that, in view of the hostile attitude of the Federal Council, Guatemala has withdrawn from the Pact of Union (with Salvador and Honduras), and resumes her sovereignty as an independent Republic. This development was fully expected as a result of the revolution three weeks ago, and for the present it obviously wrecks the projected federation of Central America. The Federal Constitution, as will have been seen from the sketch of it published in our issue of November 19th, was evidently in great part drawn up by imaginative idealists; geographical reasons alone would have rendered it unworkable, and a number of its provisions could not have been carried out for many years to come. Holders of Central American stocks will not mourn over its fate, for, though the existing State debts were recognised by it, their basis and structure were not in harmony

with its spirit, and a Federal Government might easily have been tempted to obstruct the working of such adjustments of them as that which has been achieved in Salvador, or those which at various times have been contemplated in Honduras. We understand that the new "Liberal" Government in Guatemala is composed of the more moderate members of the party of the ex-President, General Estrada Cabrera, who was overthrown and imprisoned last year by the Government which fell in December, and was believed in the United States to have instigated the revolution; but, so far as is known here, he is still in prison, and is not likely to regain power.

The Band Strike.—Little progress has been made during the week towards a settlement of this dispute. At one time the cables have been of an encouraging character, at another the position has assumed a threatening aspect. The strikers endeavoured—apparently without success—to dissuade the railwaymen from working the trains carrying natives in course of repatriation. At the Modder B they "pulled out" the mine officials, who were endeavouring to continue the essential service of pumping, but subsequently acknowledged that their action had been wrong. Having regard to what happened in this respect during our own last and most disastrous coal stoppage, it is surprising to find Labour again following the suicidal policy of allowing the mines to become flooded. Already several have arrived at such a stage that it is doubtful if they will ever be reopened. The question arises whether, after all, there is so very much room for reduction in the wages of the rank and file of the white miners. But there is obviously scope for change in a condition of affairs which enables contractors to gain £100 to £120 per month, and it is absolutely necessary that the management of the mines should be in a position to discharge incompetent or redundant supervisors. The latter point probably constitutes the real keynote of the situation. Latest news is to the effect that progress is retarded by certain preliminary difficulties; once these are surmounted it is thought that matters will move rapidly.

Baldwins' Report.—The accounts of Baldwins, Limited, for the year ended June 30th last show a substantial decline in both trading and net profits in comparison with the previous year. Net profit, after allowing £50,000 for depreciation, amounted to £325,200, as compared with £567,000 for 1919-20, when £75,000 was written off depreciation. A comparison of the last four years' results is set out below:—

	1917-18.	1918-19.	1919-20.	1920-21.
Trading profit	£ 442,900	£ 554,997	£ 683,405	£ 410,758
Net profit	359,043	471,139	567,023	325,167
Brought forward	156,969	255,139	285,799	291,325
Reserve	516,012	726,270	852,822	616,492
Preference dividend	75,000	75,000	75,000	25,000
Ordinary dividend	13,750	13,750	45,667	80,476
Carried forward	153,790	351,729	440,830	207,537
	(11½ %)	(12½ %)	(12½ %)	(5 %)
	273,473	285,799	201,325	303,479

In June an issue of £2,250,000 7½ per cent. mortgage debenture stock was made, but the amount of interest payable on debentures in the year 1920-21 was not affected. In connection with the acquisition of the British Mannesmann Tube Company, the ordinary capital was increased by £610,738 and the "B" preference shares by £334,512. This accounts for the increase in preference dividend. The ordinary dividend, which is reduced from 12½ to 5 per cent., is paid free of income-tax, and while the reserve appropriation is reduced from £75,000 to £25,000, the balance forward is increased by some £12,000. The principal changes in the balance-sheet, apart from the increases in capital already mentioned, are a decrease of £222,700 in creditors, increases of £1,013,800 in investments, £182,400 in debtors, and £523,500 in the property item, and decreases of £592,900 in stock and £249,100 in cash and bills. A new item on the asset side is £2,013,750 under the head of B.S.T., Limited, and B.S.T. (Birmingham), Limited, for pur-

chase of the 7½ per cent. debenture stock at 89½, "of which £1,006,458 has been lodged at bankers at this date."

The Debenture Corporation, Limited.—The report and accounts of the Debenture Corporation, Limited, for the year ended December 31, 1921, again show an increase in net profits, and, as will be seen in our table given below, a steady growth of earnings is revealed for the past six years:—

	1913.	1916.	1917.	1918.	1919.	1920.	1921.
Net profit....	£ 104,390	£ 98,474	£ 101,634	£ 111,946	£ 116,501	£ 127,037	£ 137,101
Prof. dividend	47,083	38,750	37,500	35,625	35,000	35,000	35,000
Ord. dividend	47,078	30,997	33,747	35,496	41,999	42,000	49,000
	(5 %)	(4 %)	(4½ %)	(5 %)	(6 %)	(6 %)	(7 %)
Income-tax ..	6,697	17,857	21,823	31,112	28,439	32,370	38,898
Founders' shrs	3,531	2,232	2,160	2,052	..	..	..
Reserve	..	8,638	6,404	7,660	11,064	10,955	15,000
Depreciation ..	..	..	..	..	..	..	..

Higher profits for the past year are caused by an increase of £4,663 from interest, dividends, and rent, and an additional £3,632 from fees and commissions. The ordinary dividend has been raised from 6 to 7 per cent., while £15,000 has been allocated to reserve in addition to the proceeds of differences in buying and selling investments mentioned below. In 1919, in consideration of a payment of £25,000 in cash, the special rights attached to founders' shares were cancelled, and they became ordinary stock, which accounts for the disappearance of founder share dividends in our table. The status of the corporation has now been changed from that of a financial company to a financial trust, and in consequence "premium reserve" becomes "capital reserve," and £4,884 profit made last year on selling securities is added to this account. In the balance-sheet the two reserve funds amount to £324,769, while investments in stocks and shares on the other side total £3,302,355. In this connection the auditors state that no valuation of securities has been made this year, and that there has been no provision for depreciation other than reserve accounts. The report states that, "although there is still considerable depreciation in the market value of the quoted investment held by the corporation, in the opinion of the directors their security is not affected." The balance-sheet is analysed in our usual column.

Minerals Separation.—Having regard to the recent activity in the shares of this company, it may be useful, writes our mining correspondent, briefly to review the history of the undertaking. Formed in 1903 with a capital of £15,000, principally to exploit certain patents for the recovery of minerals by oil flotation, the company now has an issued capital of just under £200,000, while its ramifications are very wide. The treatment of gold, copper, and complex ores by the flotation process is proceeding in various countries, and its application to the Witwatersrand banket has lately been the subject of experiments. Investigations with a view to improving the recovery of nitrate of soda from the caliche in Chili are announced to have been attended with encouraging results, and a rust preventative is in process of development. Undoubtedly, the most important of recent activities has reference to the recovery of fine coal, with which is associated the manufacture of briquettes. In this branch of its business the company works with the well-known Powell-Duffryn Steam Coal Company. The question the investor has to consider, however, is whether future possibilities are sufficiently concrete to justify him in purchasing the £1 shares at nearly £6 each. So far the dividends paid comprise 50 per cent. in respect of 1917 and 1918—on a much smaller capital than the present—and 25 per cent. on account of 1919, when the issued capital stood at about £100,000. In addition to these cash payments, the shareholders have received bonuses in the shape of certificates in the American company, and the right to subscribe for additional shares at a figure appreciably below the then current market price. Thus, early in 1920 a round 100,000 shares were offered at £4 premium, while the lowest price touched that year was 6½. The highest,

by the way, was 23. The net profit of 1920 amounted to only £16,600. It is true that the mineral industry was in a more or less depressed condition, and that several new lines of business were only in the early stages of development. Still, a careful consideration of the position as a whole suggests that the market valuation of the undertaking at £1,200,000 discounts the early future somewhat heavily.

Oversea Correspondence.

UNITED STATES.—EASIER MONEY RATES—ACTIVE INVESTMENT DEMAND—COMMODITY PRICES—RAILROAD EARNINGS.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 6.

MONEY rates are becoming decidedly easier, as was generally expected after the turn of the year. On the Stock Exchange the rate for call loans has been steadily declining this week, until to-day 3½ per cent. was reached, the lowest figure quoted for this type of loan since last July. A comparatively small amount is being loaned, however, even at that figure, because stock market and other speculative requirements are very light at present. The present rate compares with 5 and 6 per cent. prevailing in the final week of 1921. Of greater interest and importance is the relaxation in time money, which is now obtainable for all maturities at 5 per cent., as against 5½ to 5½ per cent. recently, with very little offered at those rates, and in some instances borrowers' bids of 4½ per cent. are being accepted by banks and other lenders on collateral other than Government securities, such as Liberty bonds. For some time past it has been possible to secure loans on such securities at rates below the general market rate. Commercial paper discounts of 5 and 5½ per cent. still prevail, and some exceptionally desirable offerings have lately been purchased at 4½ per cent. Further relaxation is expected in both time money and in business paper discounts in the near future. Call money rates, on the other hand, are unlikely to go, or stay, much lower.

As invariably happens, the easier money situation is reflected in a broad and active demand for bonds, and has, if anything, given an added stimulus to the January reinvestment purchasing now under way. After some moderate declines early this week due to profit-taking sales, bond prices generally have more than recovered their loss, and show an advancing tendency under renewed investment buying. Much of this week's liquidation was attributed to sales by holders who, for income-tax reasons, evidently did not wish to take their profits during 1921, preferring to enter such profits in their tax returns for 1922. New securities continue to be offered on a large scale, and include corporate, State, and municipal bonds, as well as some foreign obligations. One of the largest of the latter is the \$40,000,000 Dutch East Indies 25-year external 6 per cent. gold bonds offered by a syndicate headed by the Guaranty Company of New York at 94½ and interest, to yield about 6.75 per cent. to the earliest redemption date, January 1, 1932, or approximately 6.45 per cent. if held to maturity. New railroad bond offerings this week included \$3,000,000 first mortgage 6 per cent. bonds of the Western Pacific Railroad Company due March 1, 1946, which were priced to investors at par and interest, and \$3,000,000 first mortgage 6 per cent. bonds, series B, of the Chicago, Indianapolis, and Louisville Railroad Company, due in 1966, which were offered at 94½, to yield 6¾ per cent. An interesting development in the investment field is the offering of preferred stocks of substantial corporations. A block of 8 per cent. cumulative preferred stock of one large manufacturing company, for instance, was offered this week at 98 and accrued dividends, to yield 8.16 per cent., the stock being callable in whole or in part on 30 days' notice at \$115 a share and accrued dividends.

Commodity prices showed considerable irregularity in

December, but the general tendency was upward, as is indicated by Bradstreet's index number for January 1, 1922, which shows a slight advance following the decline in November. The January 1st index, \$11.3725, represents a gain of five-tenths of 1 per cent. over that of December 1, 1921, and is the highest number reported since April 1, 1921. The present index number is almost identical with that of April 1st of last year, but is 10 per cent. lower than that of January 1, 1921, and 45.5 per cent. below that of February 1, 1920, which was the highest point ever reached. It is still 30.5 per cent. above the index of August 1, 1914. During December eight groups of commodities rose, namely, live stock, hides and leather, textiles, metals, coal and coke, oils, naval stores, and miscellaneous products. Five groups, including breadstuffs, provisions and groceries, fruits, building materials, chemicals and drugs, declined. Textiles and hides and leather were conspicuous in the advances, while provisions and fruits were outstanding features among the commodities that declined.

Reports from all but eight of the first-class railroads show total net operating income in November of \$65,741,893, or about \$15,000,000 more than preliminary estimates had indicated would be shown by the complete returns. The total thus far for that month represents an increase of approximately 30 per cent., as compared with the \$50,562,552 net operating income in November, 1920, and is equivalent to about 4 per cent. return on property valuation. Total operating revenues, for the lines reporting, were \$462,959,534, a decrease of 21.4 per cent. from November of 1920, but operating expenses were reduced 28.4 per cent., as compared with the corresponding month in 1920.

FRANCE.—THE NEW GOVERNMENT—REPARATIONS POLICY—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, January 17.

THE dramatically sudden fall of the Briand Ministry may safely be attributed to the long-felt dissatisfaction, in both the Chamber and the Senate, with the position in which France has been placed, as the result of the numerous concessions that have been made to Germany by the Supreme Council in regard to reparation payments. Contributing causes included the conflict that has been going on for several months past between two great rival international financial groups that burst into flame in connection with the failure of the Banque Industrielle de Chine. M. Doumer, M. Briand's Minister of Finance, is alleged to have been opposed to the proposal that the Government should extend aid to the moribund banking concern that was formerly so closely bound up with French interests in the Far East, whereas other members of the Ministry were believed to take the opposite view. The resignation, just before the end of the year, of M. Philippe Berthelot, Permanent Secretary at the Quai d'Orsay and one of M. Briand's closest friends and political associates, was the direct outcome of the conflict in question, and could not but prove a very serious blow to Ministerial prestige.

The climax came when the text of the draft of the proposed Anglo-French pact of guarantee became known during the course of the Cannes meeting of the Supreme Council. It was felt by French Nationalists, who at present form the majority of the Chamber, that the proposed treaty, if allowed to become operative, would be of a purely unilateral character, and would have the effect of placing France in the position of a protected and inferior nation. This blow to French national pride, coupled with the other factors referred to above, made M. Briand's fall inevitable.

The new Ministry formed by M. Poincaré has come into office frankly for the purpose of enforcing the reparations clauses of the Treaty of Versailles, and, incidentally, for the purpose of trying to arrive at an understanding with Great Britain in regard to the numerous questions, such as that concerning the future of Turkey and Greece, on which the two countries favour opposing policies. M. Poincaré has long insisted that any attempt at concluding a treaty of alliance or a pact of guarantee between England and France without first arriving at some kind of common policy in regard to the various questions at issue between them would be putting the cart before the horse and a mere waste of time. For the moment, therefore, the one all-important problem to be settled is that of Germany's reparation debt. "Once that is settled," M. Poincaré is reported to have said, "I shall be prepared to resign."

The composition of the new Ministry amply confirms this view. Of the eight new Ministers—the other six having been members of the Briand Cabinet—no fewer than six have long been known as prominent advocates of the argument that the reparations clauses of the Peace Treaty shall be carried out in their entirety. M. Poincaré himself was for a time the chairman of the Inter-Allied Reparations Commission, and has made this question his strongest argument ever since. M. Maurice Maunoury was the president of the Finance Commission of the Chamber down to the day he entered office as Minister for the Interior. M. Charles de Lasteyrie, the new Finance Minister, was the Rapporteur Général of that Commission. For many years one of the high officials of the department of which he has now become the head, he has a great reputation as one of the leading financial specialists in this country. He recently made an exhaustive study of German finances, in the course of a tour of the Reich, and his report on the Budget Spécial des Dépenses Recouvrables (to which I alluded last week) has done more perhaps than any other factor to foster the belief in this country that no moratorium should be granted to Germany, but that the Allies should compel the German Government to put its financial house in order, and that its finances should be placed, to some extent at any rate, under Allied control. MM. Raiberti, the new Minister of Marine, and Reibel, who has succeeded M. Loucheur as Minister for the Liberated Regions, were both also prominent members of the Finance Commission of the Chamber, while M. Henry Chéron has undoubtedly been installed as Minister of Agriculture primarily because of the remarkable campaign he has led in the Senate in the same direction as Rapporteur Général of the Budget Commission of the Upper House. The views in this respect of M. Barthou, who has been promoted from the War Office to the double post of Vice-President of the Ministry and Minister of Justice, are too well known to need emphasis. It may safely be said that no such galaxy of financial specialists has been included in any French Ministry since the war began.

The fact that reparations will undoubtedly be the one great plank in the programme of the Poincaré Ministry more than justifies me in devoting special attention to the exact position in which this question now stands, particularly in view of the drastic, although not very generally known, decisions that were come to at Cannes, and of the inaccurate statements that have been in circulation on this matter. According to the decisions arrived at on May 5th last, Germany should have handed over to the Reparations Commission on January 15th the sum of 500 millions marks gold, less the value of the payments made in kind, and on February 15th a second sum, in respect of the current quarter's yield of the 26 per cent. tax on German exports, the amount of which was provisionally

fixed at 275 million marks gold. After deducting the payments that have been made in kind, these two payments were fixed respectively at 400 millions marks gold and 240 millions marks gold. On December 14th, however, the German Government notified the Reparations Commission that it would be unable to hand over more than between 150 and 200 millions marks gold in satisfaction of both payments called for, and it intimated, further, that similar difficulties would be found in connection with the subsequent payments during 1922.

The question was considered during the negotiations that took place both in Paris and London, and finally, during the sitting of the Supreme Council at Cannes, a decision was arrived at. Last Friday, at Cannes, the Supreme Council notified the German delegates there, through Dr Rathenau, that a "temporary delay," the duration of which was not fixed, would be granted to Germany in regard to the January and February payments. It was stipulated, however, that during the period of this temporary delay the German Government must hand over to the Reparations Commission, *every ten days*, through the various Allied national banks, the sum of 31,000,000 marks gold in foreign bills and currency, the first of these payments becoming due on January 18th.

The German Government was further informed that it must, within 15 days, submit to the Reparations Commission proposals for the reform of its Budget and its note circulation (accompanied by appropriate guarantees), together with a statement setting forth the programme of payments it proposes to make to the Allies during the current year. The period of the "temporary delay" accorded to Germany, Dr Rathenau was notified, would come to an end when the Allies have arrived at a decision as to the proposed reforms and guarantees and the proposed programme for the rest of the year. The effect of the step taken by the Supreme Council is apparently that Germany will be called on to pay over 31,000,000 marks gold every ten days until she is prepared to submit satisfactory proposals to the Allies. Apparently, also, if by January 28th the German Government has not paid over two sums of 31,000,000 marks gold, and also submitted the proposals called for by the Supreme Council, it will be open to the Allies again to bring pressure to bear upon the Reich, either by ultimatum or otherwise.

Cannes has exercised a certain influence on the Bourse. When the news was current in Paris that M. Briand was once again going to save his Government there was a certain movement of firmness, but this led to a weaker market as soon as it was known that he had failed. The fact does not mean that M. Poincaré has not supporters on the Bourse, it merely indicates that once again a factor of uncertainty has arisen, and that in consequence buyers—other than professionals, who will probably unload—have abstained from the general markets. The result has been a general depression, in which most securities have shared. French 3 per cents. dropped from 55.95 to 54.20. Foreign exchanges were generally weaker, and it is only Russians that at their weak quotation have shown any signs of real activity, while it must be admitted that Turkish Government stock has been in demand and has remained firm.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—REPARATIONS—TAXES—REICHSBANK LAW—EXCHANGE AND BOURSE—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, January 17.

AFTER M. Briand's resignation and M. Poincaré's succession as Prime Minister had made a considerable stir, sentiment here quieted down, the view being held that M. Poincaré will not be able to pursue a policy differing much from M. Briand's. It is recalled that M. Briand's earlier expressions on the Reparations Question and on the necessary methods of enforcement were rather more forcible than M. Poincaré's; and it is still believed that Reparations will be settled on the basis of what Germany can pay, the unsettled questions being what she really can pay and what concessions she will have to make in exchange for what must in any case be granted. The net movement of the exchanges since the Cannes Conference began is very small; but the mark fell on news of M. Briand's resignation, recovered on news of the conditional moratorium, and in general continues to depend upon international views of Germany-Ally relations. Dr Wirth has not yet come to an agreement with his parties as to taxes. The difference in principle is between the Centre and the other Coalition party, the Majority-Socialists, on taxation of capital, in particular of the so-called "gold values" or "real values." The Government is pressing for the passing of its measures. The Socialists have pressed for the taxing of the "gold values," even if that requires a Reichstag dissolution. At this weekly Centre Congress speakers expressed themselves somewhat ambiguously against this plan. The Democrats, who are outside the Cabinet, require an amendment of the Estate Duties, which will take into account the new depreciation of the currency, after the precedent of the recent income-tax amendments. This measure would not necessarily mean lower revenue from the Estate Duties; the income-tax with its reduced rates is this year to yield the large sum of 23 milliards. The sugar tax, which the Government plan raised to 100 marks per 100 metric pounds, but which the Reichstag Commission reduced to 50 marks, is still unsettled, and the Commission's lower rates, as compared with the Government's proposals, for the new property and increment of wealth taxes, are also a matter of controversy. Under pressure from the Allies, the further reduction of bread subsidies has been decided on. From February 16th the 1900 gramme loaf will be raised from 7 to about 12.25 marks. The Budget for 1921-22 foresaw a reduction of bread subsidies to 3.27 milliards, as against 9 milliards in the preceding year; but the fall in mark exchange upset this calculation, requiring a further subsidy of 13.15 milliards. Even after the new increase in bread prices, and assuming the favourable dollar exchange of 100 marks, a subsidy of 6.25 milliards, or nearly double that proposed when the mark exchange stood highest last year, will be necessary. The reduction of subsidies, though from some viewpoints desirable and from others undesirable, neither increases nor decreases the ability to

THE MERCANTILE BANK OF INDIA, LTD.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

pay Reparations; the subsidies had to be taken back in taxes or added to debt, and only the incidence, but not the amount, of the national burden will be changed by raising prices. This applies also to the railway deficits and other involuntary subsidies.

The Federal revenue in the first nine months of the present financial year (ending March 31st next) totalled 51,665,295,000 marks. Expenditure totalled 132,360,574,000 marks, of which 11,939,891,000 marks were subsidies repairing the Posts and Railways deficits. The current deficit was nearly 8½ milliards; and to cover this 80,592,363,000 marks was added to the total of discounted Treasury bills and 102,364,000 marks to the Funded debt. The total of outstanding discounted Treasury bills on December 31st was 246,921,550,000 marks. The Reichsrat has sanctioned, and the Reichstag is considering, an amendment to the Reichsbank law of 1875, allowing the Bank to book as cash among its assets gold deposited in foreign central banks. This is a result of the recent agreements with the Bank of England and other central banks. Under present law only gold actually in the Bank's possession in Germany counts as cash. The aim is to deposit gold abroad, firstly, it appears, in England, as security for necessary currencies. This gold will be booked as cash only in so far as it is not pledged as security or after advances have been paid off. As the aim is to obtain such advances, a reduction in the gold amount appearing in the weekly statements may be expected, and though the Bank remains sole owner of the gold, the effect, so long as advances are outstanding, will be to reduce the amount of gold available for note covering. The gold has long ceased to play any except a sentimental rôle, but this rôle has been important. The Bank's statement for January 7th shows the big decline of 14,392,576,000 marks in Treasury bill discounts—this is natural after the exceptional year-end pressure for credit; note circulation declined by 499,592,000 marks to 113,139,872,000 marks, and "Darlehenskassenscheine" by 91,700,000 marks to 8,233,000,000 marks. State Deposits declined by 3,817,008,000 marks to 3,774,245,000 marks, and Private Deposits by 12,265,806,000 marks to 13,048,524,000 marks. The *Kassenscheine* held on the asset side fell to 4,903,056,000 marks, and are now only one-fourth of what they were at the beginning of 1921.

The Bourse, following the exchanges, has been unsettled. The *Frankfurter Zeitung's* index for January 13th shows:—Stocks, 32,487, against 33,442 on January 5th; home loans, 900, against 902; and foreign loans, 1,771, against 1,816. Since November 10th home loans have dropped from 976. This is apparently explained by a decline in the foreign buying which set in when the mark exchange was approaching its lowest. Of foreign mark exchange was approaching its lowest. Of foreign loan buying little is heard at present. The Berlin Bourse is inactive. Tuesday saw a slight tendency towards firmness, and on Thursday, with the mark weak as result of Cannes complications, there was a further rise. Home loans to-day quoted:—War, 77.50; 4 per cents., 88.25; 3½ per cents., 73.70; 3 per cents., 104.30; Colonial Fours, 109; and Savings and Premium, 79.90. The stocks index of the Berlin *Boersen-Courier*, which starts with 100 with the year 1913 (the *Frankfurter Zeitung's* only from September, 1919), shows that the index figure of 657 stock quotations on December 30th was 546.9. The highest index figure is that of the shipbuilding company group—851.3; the figure for companies engaged in ore and smelting is 749.5; cement, 767; textiles, 786; sugar, 724.6; hotels, 790; paper,

720.5; glass, 768.6; porcelain, 739.4; mineral oils, &c., 729.7; machines, 614.4; chemicals, 300.6. The depression in the chemicals-dyes branch, caused by loss of foreign markets, is indicated; but here (and in some other branches) capital has been largely increased. The index for bank stocks is 236. The annual reports for the year ending June 30th of three Stinnes concerns show large increases of (nominal) profits; the dividends of the Deutsch-Luxemburg, Gelsenkirchen, and Bochum Verein concerns are respectively 20, 20, and 14 per cent.

The Federal commodities index, which gives the average price of each whole month, shows 3487 for December, against 3461 for November, 2460 for October, a low point in 1921 of 1308 in May and 100 in 1913. At present most prices are stable, and differ little from those of mid-December. The following is from a retail prices list:—

	Beginning Jan., 1920.	Jan. 14, 1921.
Beans metric lb	2.80	2.80
Oatmeal "	2.20	4.50
Lard "	17.00	26.00
Cocoa butter "	15.00	23.00
Condensed milk (can) "	7.75	16.00
Santos coffee "	17.00	44.00
Cocoa powder "	16.00	26.00
Salt "	0.22	0.60
Matches 10 boxes	1.20	4.00
Petroleum litre	3.20	9.50
Sugar metric lb	1.20	6.50

Shipping in Hamburg in 1921 was:—Arrivals, 8,633 vessels of 9,532,801 net tons, against 4,808 vessels of 4,485,833 tons in 1920, and 15,073 vessels of 14,185,496 tons in 1913; departures, 9,940 vessels of 9,494,096 tons, against 5,096 vessels of 4,353,257 tons, and 16,627 vessels of 14,440,026 tons.

CANADA.—THE NEW GOVERNMENT—RAILWAY PROBLEMS—MERCHANTS' BANK—EXCHANGES—STOCK AND BOND MARKETS—NEW POWER PLANT.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 6.

THE transference of office from the defeated Meighen Government to a Liberal administration headed by Mr W. L. Mackenzie King was accomplished on December 29th, and the new Cabinet are now busy settling down. When the revised returns showed that the Liberal Party did not possess a clear Parliamentary majority, Mr King attempted to form a coalition with the Progressives. Eventually, however, Mr King was thrown back upon the resources of the Liberal Party for his Ministry. Within the Cabinet friends of protection and the economic status quo are strongly in the ascendancy, and its dominating personality is expected to be Sir Lomer Gouin, the ex-Premier of Quebec, who is a director of the Bank of Montreal and has close affiliations with the C.P.R. He takes the important portfolio of Justice, and brings to the Cabinet with him four other French-Canadian Ministers. Mr W. S. Fielding, who was Laurier's Finance Minister from 1896-1911, returns to his old office. The Department of Railways has been entrusted to Mr W. C. Kennedy, of Windsor, Ont., a successful business man, as is also Mr J. A. Robb, the new Minister of Trade and Commerce.

The railway question will provide the new Cabinet with a difficult test. In recent months the national railways have shown markedly better results and earned a margin over operating expenses. On the other hand, the Grand Trunk, which has not yet been absorbed in the national system, still gives very disappointing returns. The supporters of State ownership are pressing for the immediate consolidation of the Grand Trunk with the rest of the national railways, on the ground that great economies in administration can be effected, and that the G.T. is needed to round off the State system by providing connections with strategic points in Eastern Canada and the U.S. On the other hand, the *Montreal Gazette*, and other opponents of public ownership, continue to denounce the whole State system as a menace to the national prosperity, and insist that the Grand Trunk, instead of being absorbed in the C.N.R., should be sold or leased at the

earliest possible moment to some private corporation. It happens that public ownership of railways is very unpopular with the French-Canadians and a large element of the Liberal Party. Undoubtedly the C.P.R. has influential friends in the Cabinet, but if Mr King endorsed any policies which seemed to be the fruit of C.P.R. dictation he would imperil his whole political future; he is, moreover, definitely pledged to give the national system a fair trial.

But even if this rock can be avoided, the transportation problem will confront the Cabinet in another direction. The prairie provinces are suffering from an agricultural depression without parallel in the history of Canada. Thousands of families in districts where the crops failed or were damaged by the autumn rains are not only unable to meet their obligations, but cannot buy the ordinary necessities of life. Agents of the mortgage companies and implement firms bring back most distressing tales of acute hardship. Creditors are extending the utmost possible leniency, and foreclosure would in most areas be a profitless enterprise, as the land, when secured, would be a drug on the market. But mortgage and insurance companies, who have heavy holdings of farm securities, are alarmed at the gravity of the situation, and there is a growing realisation that drastic measures must be taken to buttress the agricultural industry till some prosperity returns to it, or the West may lose thousands of good settlers. Westerners, with one voice, protest that the industry and trade of the country are being smothered under the load of heavy freight rates. In the past four years the Railway Commission has changed freight rates four times, but at present they are, on an average, 50 per cent. higher than the level of August, 1918. The following figures, showing the relations of the freight rates to grain prices at different dates, are illuminating, the price quoted being for December 15th in each case:—

FROM SASKATOON.				
	Port William. Price per Bushel.	Freight. per 100 Lbs.	Per Cent. of Value Consumed by Freight.	
1. Nor. wheat, 1917....	2.21	22	5.9	
" " 1921....	1.08½	33½	18.4	
2. C.W. oats, 1917....	79½	22	9.4	
" " 1921....	41½	33½	26.9	
FROM GRAND PRAIRIE, ALTA.				
	Price per Bushel.	Freight. per 100 Lbs.	Per Cent. of Value Consumed by Freight.	
1. Nor. wheat, 1917....	2.21	43	11.6	
" " 1921....	1.08½	59	32.5	
2. C.W. oats, 1917....	79½	43	18.4	
" " 1921....	41½	59	46	

In September, 1920, Mr Carvell, the chairman of the Railway Commission, laid down the principle that rates must be fixed to allow the C.P.R. to pay its usual dividends of 10 per cent. and provide something for the reserve account of the company. This decision has always rankled in the West. In the farming community there is a sullen determination that freight rates shall come down, and it finds expression in the threat that next season they will not till fields merely to provide revenues for the railways. Substantial reductions of some sort must come, and in view of the decline in wages and other operating costs, the railways ought to be able to face them with greater equanimity.

The Merchants' Bank débâcle continues to attract discussion, and most of the directors have been subpoenaed to give evidence in an inquiry now being held concerning the bankruptcy of Thornton, Davidson and Co., whose downfall involved the bank in enormous losses. In many quarters a demand for a Royal Commission on the affairs of the bank itself is being pressed. The meeting called for ratification of the fusion with the Bank of Montreal will hear some plain speaking.

Reports on the Christmas trade are on the whole good. The trend of the stock markets during the past month has been uniformly, if slowly, upward; there have been minor reactions, but the average price level is now well above the low of the year. Money has been reasonably plentiful, and large sums have been placed in bonds, but the rise in their quotations is now being checked. One of the last acts of the Meighen Government was to modify the marking regulations which were introduced last year

and aroused such criticism among British exporters to Canada. Foreign shippers are no longer required to mark goods like tea, coffee, raisins, dates, &c., which are obviously not of Canadian origin. However, the general expectation is that the King Government will sweep away the whole crop of these absurd rules, which even their sponsors now see may work to their disadvantage.

Last week there took place the formal opening of the great new plant of the Ontario Hydro-Electric Commission, which, when fully completed, is to generate from the Niagara cataract 600,000 horse-power. At present one unit of 33,000 h.p. is available, and another of equal size will be ready in three weeks. The cost of this enterprise, which will reach 85 million dollars—a sum far in excess of the original estimates—has frightened the people of Ontario, and Premier Drury is being widely supported in his resolution to curb the expensive activities of the Hydro Commission till times improve.

ARGENTINA.—CATTLE FINANCE—EXPORTS OF PRODUCE—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, December 27, 1921.

ANOTHER proof of the influence of the cattle interests in this republic is afforded by the latest Government announcement. Falling prices are to be counteracted by special banking facilities; special alike in respect to their terms of repayment, their rate of interest, and their apparent disregard of the international trend of prices. That the drop in the quotations for all save specially fine steers, such as the freezing companies now demand, is severe must be admitted. Cattle of a certain type are worth to-day but a third of the figure obtainable for similar stock two years ago, nor can any early improvement be expected. Cessation of canning, heavy stocks of meat-extract in Europe, the diminished purchasing power of consumers, low prices for hides, all have something to do with the collapse, no doubt. The principal reason is, however, to be found in the speculative instinct of the Argentine man of affairs. With prices higher in 1919-20 than ruled during the war, he pledged his herds under the *Prenda agraria* law, and with the money thus obtained rented more pasture at dear rents and bought young stock to fatten thereon, also at the top of the market. The *Prenda agraria*, or agrarian pledge, legalises advances against grazing cattle when certain provisions relative to registering of marks, &c., have been complied with, and in theory such business is both useful and safe. In practice, results have not been so satisfactory, it having been found that when execution becomes necessary the cattle are not always as represented, or have been disposed of to third parties despite all legal safeguards. This notwithstanding, many of the Argentine banks have advanced largely against such "security," and now find that not only is it next to impossible to call in their loans, but that any stringent measures will at best result in heavy capital loss owing to the poor prices which forced sales must bring.

The statistics of the Ministry of Agriculture being much behindhand—a serious fault which, unfortunately, is a drawback general to all Argentine returns at the present time—no definite figures as to the total amount involved in this class of loan are available. Estimates range from 200 to 500 million dollars paper, or, say, from £18,000,000 to £42,000,000 at present rates of exchange; but one thing is certain, namely, that the major portion of this business lies with Argentine banks. It has therefore been announced, officially and with much blowing of trumpets, that the Banco de la Nacion is to help all who have cattle interests by giving them special loans repayable within five years, the rate of interest to be 5 per cent. per annum, and the capital sum to be amortised by 5 per cent. every quarter. Actual details of what will be in the aggregate a very big piece of internal financing have not yet been published, nor will they be as easy to adjust as the official world seems to suppose. While the needier pastoralists are singing the praises of the Government, commercial interests in general are not so sure of the excellence of its proposals. In the first place, they

come startlingly soon upon the heels of the change of the above-mentioned bank's directorate; secondly—and the point is of the greatest importance—it is far from clear as to how such business will be financed. In its essence it involves the locking up of a very large sum for a long period, and when it is borne in mind that the same institution is indirectly carrying the weight of the Government's immense issue of short-date loans, estimated at anything from \$500,000,000 to \$900,000,000 Argentine paper, the feeling of anxiety is comprehensible. Under the *Dediscouting Law*, one of the Emergency Measures of August-September, 1914, it was enacted that the Banco de la Nacion might encash under discount selected paper presented by other banks. To meet this call, and to provide against any possible pressure, the Banco de la Nacion has the right not only to employ a special fund of \$30,000,000, which figured in its books prior to 1914 as part of the Conversion Office assets, but also to draw paper money from that office to cover its rediscount transactions, unless and until the percentage of gold in specie falls to 40 per cent. of the total paper circulation. Although \$20,000,000 of the special fund have been thus employed, the other alternative has not yet been made use of, and the percentage of gold to paper is now over 70. It is the feeling that, if the indubitably great resources of this unquestionably well-managed and widespread institution are too sorely tried, and its tradition of non-official interference is broken, there may come a call on this emergency issue, that tends to uneasiness in all conservative quarters. For, as *La Nacion* observed, in a leading article dated May 24, 1917, "the inherent drawback of the Conversion Fund is that it foments indefinitely the conversion of the balance due on exportable products, on top of which comes the Rediscount Law 9,479, which turns commercial documents into notes. If this emission is added to by encashing the internal and external public debt, to how many thousands of millions will the galloping increase of the circulating medium ascend, what disastrous effects will it hold in store for the country?"

Seeing that the greater part of the Argentine Government's short-date indebtedness is trustworthily reported to have been practically all rediscounted, and therefore lying in the portfolio of the Banco de la Nacion—and bear in mind that these short-date obligations are perpetually renewed pending some workable scheme for consolidation—the foregoing quotation has a present application, which those who best know Argentine affairs can amplify at their discretion. Important though Argentina's cattle interests undoubtedly are, it has still to be remembered that they embrace both wise and foolish virgins. The former took the oil of wartime profits, and filled their lamps withal; the latter counted on supplies being permanent and always at hand. If the Government sees fit to bolster up the reckless and speculative interests among the estancieros, the effect on trade as a whole will at best be but transient, while it may very well end in complete collapse.

The closing year has not been brilliant, it is true. Cereal shipments have been poor, but, contrary to general belief, the exports of produce are higher as regards quantity than they were in 1920, as the following table shows:—

	Wheat. Tons.	Maize. Tons.	Flour. Tons.	Wool. Bales.
1921	1,659,700	2,757,000	45,000	357,000
1920	5,043,000	4,410,000	165,000	229,000

	Butter. Cases.	Quebracho Ext. Tons.	Quebracho Logs. Tons.
1921	810,000	120,700	18,000
1920	507,800	114,000	4,000

Rates for money are easier in the case of first-class business, and may be put at 6 per cent., there being small demand by signatures coming under this category. For general purposes 8 per cent. may be considered an average charge, with 9 per cent. for advances in current account. Exchange is weaker than at this time last month, at 43½ sight drawing on London, nor has the rate on New York improved to any extent, being \$131.50 Arg. gold per \$100 U.S. If the long-delayed movement in cereals takes place in January, sterling and Continental currencies should be firmer, but the year ends on

a note of uncertainty in this as in many other directions. National Cédulas have appreciated steadily during the month, the last series, the 10th, being quoted at \$92.50 Arg. paper, which is some 50 cents below the highest quotation registered in December. There is little interest in local industrial and banking shares.

POLAND.—FOREIGN DEBTS—REVENUE AND EXPENDITURE—CUSTOMS UNION WITH DANZIG—ECONOMIC RELATIONS WITH AUSTRIA AND RUSSIA.

(FROM OUR CORRESPONDENT.)

WARSAW, January 12.

THE Ministry of Finance has published statistical data relating to the indebtedness of the Polish Government incurred in foreign currencies. The figures are for September 30th, as follows:—American dollars, 143,143,167; French francs, 460,563,669; English pounds, 3,715,478; Dutch florins, 17,800,000; gold francs, 35,578,062; Norwegian kroner, 16,575,836; Italian lire, 7,134,335; Swedish kroner, 128,507; Austrian krone, 111,070,000; Polish dollar loan, 16,969,120. Expressed in Polish marks this foreign debt is equal to 800 millions. This is equal to 41.76 gold francs per head of population. The debts incurred by the Polish Government at home are much smaller. They are composed of 27 millions obtained by the issue of loans, and of 220 millions of advances made to the Government by the Polish National Bank. The whole home and foreign indebtedness of the Polish State can be estimated at about 1,000 million marks.

The financial situation shows some improvement during recent months. Revenue compares with expenditure as follows:—

		Revenues.	Expendi- ture.	% of Revenues to Expendi- ture.
January, 1921.....	896	6,896	13.0	
February, ".....	1,396	12,896	10.8	
March, ".....	1,899	18,399	10.3	
April, ".....	2,434	15,438	15.1	
May, ".....	2,620	13,620	19.2	
June, ".....	3,108	16,108	19.3	
July, ".....	3,677	13,677	26.8	
September ".....	5,135	22,510	22.8	
October, ".....	7,083	27,083	26.1	

According to reports of the Press, steps have been undertaken for the organisation of a cotton exchange in Danzig. It seems that in this respect this port, with its great textile hinterland, will play in the future an important rôle as market for Poland and for the Russian border states. The consumption of Lodz alone amounts monthly to 20,000 lbs of cotton, and it may be assumed that as soon as the trade relations of the Polish textile industry with Russia are resumed, this quantity will greatly increase. Hitherto Bremen was the central market for the supply of cotton imported by Poland. An American company (American Cotton Trading Corporation) has acquired an entrepôt in Danzig for the warehousing of cotton to be supplied directly to the Polish textile manufacturer.

Negotiations for the signature of a commercial treaty with Austria will be opened shortly. The trade and banking relations between the two countries are already very intimate. Representatives of Soviet Russia will meet shortly with Polish delegates for the negotiation of a commercial treaty. The Polish Government has also taken steps for securing the participation of Poland in the reconstruction of Russia, which is planned by the Allies.

SWITZERLAND.—NEW LOAN—BANKING DIVIDENDS.

(FROM OUR CORRESPONDENT.)

GENEVA, January 17.

THERE will be issued at the end of this month a 5½ per cent. Swiss Federal Government loan, but whether it will meet with the success forecasted a few weeks ago is problematical. In view of this loan, the Swiss Treasury has

stopped the sale of Treasury bills during the last 10 days, and consequently the rate of discount for first-class commercial bills has fallen to 2½ per cent. But the number of bills considered as first-class commercial scrip is declining. The Canton of Neuchâtel, which issued during the past few weeks a small loan of 15 million francs, met with failure, for the amount was not covered. Public finance in Neuchâtel, the watchmaking canton, is still heavily charged with unemployment assistance; as a matter of fact, about 45 per cent. of the male population of this canton receive unemployment aid.

There is no encouragement for new investment on the part of the Swiss public. Although rumours of dividend reductions by the leading Swiss commercial banks prove incorrect, there is little doubt that the banks have endured certain heavy losses. Profits during 1921 were at least on the same scale as in the previous year, and the increase of business expenses ceased. But there are enormous credits granted to manufacturers of all kinds, whose stocks are rapidly depreciating. Though the cases of imprudent credits are rather the exception, in view of the depreciation of stocks even normal credits have become risky. At the same time, one would imagine that the banks will not risk the complete disturbance of the investment market by cutting down their dividends. At any rate, since the beginning of the year the quotations of the leading banking shares have risen in proportion to the expected dividends ordinarily paid in the month of April. So far, only a few reports have been published of local banks, which, of course, do not undertake risky business. Their results for the past year were quite satisfactory.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
January 25.

ACCOUNT.
January 26.

Each week adds to the strength shown by the market for gilt-edged and other investment stocks and shares. Each week, while it enlarges the number of issues available for dealing, witnesses the curious anomaly of restriction in the supply of existing securities on offer in the markets. For instance, the demand at the moment is for any good 3 per cent. stocks standing in the neighbourhood of 50, four per cents. quoted about 60, and fives in the neighbourhood of 70. The markets to which the investor naturally turns for such securities—namely, the home and foreign railway, brewery, industrial, and others of this class—are nonplussed to provide the stock which people want to buy. It is no exaggeration that there are hundreds of securities in the Stock Exchange markets for which there are buyers only, no stock being available to satisfy the demands of those who would like to acquire it.

Displacement of the "C" 5½ per cent. Treasury bonds by a new issue of 5 per cents. at par has had the effect of reinforcing the buoyancy of British Government securities. The War Loan, the Funding and Victory Bonds are close to their issue prices. Corporation stocks are in scanty supply. The recent Colonial scrip issues stand mostly at premiums, of which several are substantial. The big Commonwealth loan was subscribed before the date at which the lists were timed to close. Industrial debentures have been taken avidly. The Home Railway market shows several scores of advances this week in debenture, preference, and other prior-charge descriptions. In spite of the known fact that new issues are pending, the appetite of the public seems to be insatiable, for everything of good character is readily taken.

Brazilians are moving up to better levels, and the market in Argentine and Chile bonds is also firmer. The new Chilean scrip continues about 1½ premium. German threes have been somewhat erratic, the tendency remaining dull on the whole, and French bonds eased off on the announcement that the Seine contemplates an issue of 7 per cent. bonds. Russians, both Government and railway, gave way after their swift advance, but there were buyers about at the lower figures, and the market turned firm again.

The Home Railway market is tolerably cheerful, the traffics being regarded as satisfactory, and the dividend expectations leading to a little speculative investment. Amongst Canadians, the only feature is the way in which bonds of the various Canadian railway companies are moving upwards. Mexicans continue lifeless, although Mexican Utility bonds and shares are generally better. Amongst Argentines, the new Buenos Ayres Western 4 per cent. debenture stock, issued at 60, has risen to 5 premium, while the ordinary stocks are disposed to harden, after having been very dull. Brazilians went better, but failed to maintain their top prices, profit-takers evidently being attracted by the rise. Nitrates are extremely quiet.

The Rubber market is lower, in consequence of the raw material going below 10d per lb. There is nothing much doing in oil shares, the advent of the Anglo-Persian new issue giving rise to a few sales of other oil shares, apparently with a view to raising funds for application to the new issues. In the Insurance market, a heavy slump in City Equitable Associated preference and City Equitable Fire shares is the outstanding point of interest. The fall aroused much uneasiness, owing to the difficulty of finding a reason for the drop. The Shipping market is steady, and a newcomer to the market this week is the Union Castle's recently issued debenture stock. London banking shares are unaffected by the various reports that have appeared, but the colonial and foreign group is better. Armaments are dull, a further shrinkage occurring in Vickers. Tobacco shares stand out with pronounced strength. The unexpectedly good showing made by Carreras caused a brisk advance in the price of the company's shares, and assisted the rise in other tobacco issues. Tea shares are also conspicuously strong, rises occurring in practically the whole list, with a fair amount of business attaching to the movement. Radio Corporations, on American buying, spurted, both as regards

ordinary and preferred, and Marconis hardened in sympathy, while the cable group, together with the shares of the manufacturing companies, holds all its recent strength. Textiles are quiet, and catering shares inclined to be a little better. The brewery list shows a long catalogue of rises amongst the debenture and preference stocks, and the same remark covers similar issues of the trust companies, financial undertakings, and land concerns.

The Kaffir market is swayed by the conflicting reports which arrive from day to day in regard to the progress of the miners' strike on the Transvaal. Rhodesians are sympathetically affected by the dullness of Kaffirs, though diamonds maintain their quotations. The fall in the price of tin, the metal, led to heaviness amongst Cornish, Malayan and West African shares connected with that industry. Russo-Asiatics, the most active gambling counter at the moment in the mining markets, have gone back a little, and the interest in Mexican mining shares showed a tendency to ebb, with the inevitable result that prices eased off where they moved at all. Business during the week proved patchy, by far the greater proportion going to the Consol market, into which, by the way, various jobbers from other parts of the Stock Exchange are beginning to migrate.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital. £	Cash Subscription. £	First Payment. £	Further Liability. £
ISSUES OF THE WEEK—

1916	63,024,250	1915	685,236,336	
1915	680,096	1914	519,599,633	

Commonwealth of Australia.—Issue of £5,000,000 6 per cent. registered stock at £97 per cent. The principal is repayable in London at par on March 1, 1941, the Commonwealth Government having the option of redemption on or after March 1, 1931, on giving three months' notice. The proceeds of the loan are intended to meet expenditure on public works and redemption of Treasury bills. When the property of persons not domiciled in Australia, this stock and interest are not liable to Australian taxation. The information contained in the prospectus is brief, and the usual Treasury disclaimer of responsibility for the loan appears. But considering that the issue is a trustee security of one of the big British Overseas Dominions, the offer is on the generous side, and investors showed their appreciation by the excellent reception which they gave it.

Anglo-Persian Oil Company, Limited.—Authorised capital £20,000,000, in shares of £1 each, of which there has been already issued 7,000,000 8 per cent. cumulative first preference shares, including the present issue, 3,500,000 9 per cent. cumulative second preference shares, and 8,100,000 ordinary shares, also including those now offered. This is an offer of 2,000,000 8 per cent. first preference shares at 21s each, and 600,000 ordinary shares at 65s each. The first and second preference shares are limited to £10,000,000 for each issue. There is outstanding 5 per cent. first debenture stock for £4,750,000, being part of an issue limited to one-half of the issued share capital. The company was formed in 1909, but its profits are only recorded in the prospectus from 1917. The British Government holds 5,000,000 ordinary shares, of which 1,000,000 are paid up to the extent of 1s per share. But this, of course, does not constitute a Government guarantee of success. The directors are strangely reticent over past dividends on ordinary shares, and the prospectus does not help investors

to gauge the probable return on money invested in this part of the issue. The preference shares appear to be a good industrial investment, but the risks attached to the undertaking may be judged by the fact that these first preference shares yield £7 12s per cent. on the issue price. The preference shares are underwritten for 2½ per cent. on the nominal value, while a subtle difference on underwriting ordinary shares is revealed by the increase of underwriting commission to 3 per cent. on the issue price for these. We have seldom seen a prospectus of a big undertaking offering ordinary shares in which information is so lacking. In this case, no doubt, the large public interest in the company, together with the prestige of directors, outweigh defects in the prospectus.

The Liverpool Gas Company.—Share capital, including £371,565 premium capital, consists of £2,498,905 authorised and issued ordinary stock, and £600,000 7 per cent. redeemable preference stock, now offered at par. Total authorised loan capital amounts to £750,222, of which, including premium of £30,226, only £550,219 has so far been issued. The company was formed in 1849, and from that date to 1914 maximum dividends were paid. This, when read in conjunction with the amount of ordinary capital issued, shows that there is ample margin for dividend payments, while capital security is equally good. The proceeds of the issue will be devoted to extension of plant, &c., and paying off an overdraft of about £450,000. This preference stock is repayable at par on June 30, 1941, but the company reserves the right to repay at par any time after June 30, 1931. The issue was underwritten for a commission of 2½ per cent., and an overriding commission of ½ per cent. The disadvantages of the stock, that it is redeemable and the dividends non-cumulative, are outweighed by the adequate rate of dividend and the substantial amount of ordinary capital over which the stock takes precedence. Moreover, the past financial history of the undertaking alone is sufficient to make the issue a first-class industrial offer. But those responsible for issuing the prospectus do not set a shining example for fullness of information to other companies not so happily situated.

Fife Tramway, Light, and Power Company, Limited.—Authorised capital £1,000,000, of which £720,000 has been issued, and is fully paid. There is also outstanding at date £236,235 5 per cent. debenture stock, which is redeemable at or below 105 per cent. This is an issue of £250,000 7 per cent. debenture stock at £93 per £100. The stock is secured by a trust deed, which constitutes a second charge, the first charge being the above-mentioned 5 per cent. debenture stock, on certain shares of various subsidiary electric supply and tramway undertakings. It is provided that no further 5 per cent. debentures shall be issued, and that any 7 per cent. debentures not redeemed by a sinking fund shall become due and payable on July 1, 1952. It will be noticed that although the operating companies may not pledge assets, the controlling undertaking may create debentures *pari passu* with the present issue, providing that the total amount borrowed by the company "does not exceed the amount of the issued and paid-up share capital of the company for the time being." This would appear a somewhat elastic proposition to be covered by a trust deed. Capital expenditure by subsidiary companies is given as £1,100,000 on property and plant, while a useful table of profits and ordinary share dividends is submitted. The issue was underwritten for 4 per cent., and quickly absorbed by the public when offered.

Arghan Company, Limited.—Authorised capital £40,000, divided into shares of 2s each, of which 200,000 shares have been issued for cash at a premium of 2s each. Shares to the number of 100,000 have also been issued in payment of purchase consideration, which consideration was £11,000 in all, the balance being payable in cash. The company was formed in November, 1919, to cultivate "arghan," a fibre which is claimed to be superior in tensile strength to every other fibre of its class. Borrowing powers of the company are limited to £50,000 without consent of shareholders, and £3,521 has been obtained in this direction up to the present. This information is extracted from an advertisement in the public Press, published to comply with Stock Exchange regulations. The progress of the undertaking will be watched with interest, although the merits claimed for the fibre are somewhat vaguely set out.

The Hobson Gold Sluicing Company, Limited.—Authorised capital £40,000, divided into shares of 10s each. This is an issue of 33,000 shares at par. The company has been formed to acquire certain ground and water rights in New Zealand, together with some plant. An estimate of profits is given which would provide a return of 15 per cent. on capital. At least the estimate has the merit of being moderate. The purchase consideration and the underwriting commission are payable in shares. Thus there are several favourable points about the proposition, but at best it is of a highly speculative nature.

Super Cinema and Restaurant (S. E. Barnes), Limited.—Authorised capital £40,000. This is an issue of 16,000 ordinary shares of £1 each at par. The company has been formed to acquire a newly-erected picture theatre and other property at Cleethorpes. The consideration to be paid the vendor is £60,000, of which £42,000 is payable in cash. No independent valuation appears in the prospectus; thus it

is impossible to test the purchase value. The directors named in the prospectus are permanent directors, so long as they retain a specified minimum holding. It is proposed to borrow £20,000 on mortgage or debentures. Estimates of future earnings are given only. The prospectus is lacking in many essential details, and the proposition as revealed looks unsatisfactory.

The Mersey Power Company, Limited, 7½ per Cent. Mortgage Debenture Stock.—The British, Foreign, and Colonial Corporation, Limited, B.F.C. House, Gresham street, London, E.C.2, notify that renounced letters of acceptance for the above stock must be lodged with them for registration on or before February 1, 1922.

Midland Counties Electric Supply Company, Limited, 7½ per Cent. Mortgage Debenture Stock.—The British, Foreign, and Colonial Corporation, Limited, B.F.C. House, Gresham street, London, E.C.2, notify that renounced letters of acceptance for the above stock must be lodged with them for registration on or before February 3, 1922.

COMPANY MEETINGS, &c.

ALEXANDERS DISCOUNT COMPANY, LIMITED.

SPLENDID RESULTS OF YEAR'S BUSINESS. UNDIVIDED PROFITS TO BE CAPITALISED.

The fifty-fourth ordinary general meeting of shareholders of Alexanders Discount Company, Limited, was held on January 19, 1922, at the office of the company, 24 Lombard street, London, E.C. Mr Colin Frederick Campbell (the chairman of the company) presided.

The secretary (Mr A. K. Bruce) having read the notice convening the meeting and the auditors' report, and the minutes of the last ordinary general meeting of January 20, 1921, having been also read and confirmed,

The Chairman said:—

I presume that you will accept the report as read.

I am sure that you will be well satisfied with the report and accounts that we are able to submit to you to-day, as they are the most favourable that it has been my privilege to lay before you.

I do not propose to take you through all the events of 1921, as I think I may say without fear of contradiction that few years have been so full of incident, whether you consider them from the point of view of the industrial, commercial, or the financial world. In our business as a discount company we live more particularly in the financial world, and as finance and credit are immediately affected by whatever takes place in industry and commerce, we are in the ascendant as those in which we can carry on our business to the greatest advantage; but what was the situation throughout 1921?

In industrial circles we have witnessed one upheaval after another culminating in a most acute and deplorable period of unemployment that still exists to-day throughout the whole country. In commercial circles we have seen even our strongest institutions striving to maintain their organisations in face of adverse changes, an unprecedented decrease in trade, a heavy fall in the values of raw materials and serious losses on stocks of manufactured goods throughout the world, and the effect of these conditions on the financial situation has been to still further reduce the demand for credit and consequently the supply of bills which began to make itself felt in 1920. Had it been our misfortune to have had to rely on the supply of bank and commercial bills for our profit we should indeed have been in a bad way, but once again an unending supply of Treasury bills has supplied all our needs, in the early part of the year when they were on tap and more recently since they have been offered by tender. The latter method has not been so advantageous to us as when the bills were on tap at a fixed rate; but, on the other hand, the change has enabled the Treasury to borrow on much more favourable terms, so that from the wider and more important point of view the change is one that we cannot in any way regret.

DISCOUNT BUSINESS.

The discount side of our business has been less profitable than in 1920, as though the average margin between money and bills throughout the year was about 12s compared with about 24s in 1920 the actual margin was much greater in the first part of the year, and it practically disappeared altogether during the month of December. The circumstances that have materially added to the profits of 1921 have been the steady fall in the value of money, coupled with a pronounced rise in the price of all Government securities. Our policy for several years past has been to hold only short-dated securities, so that the phenomenal rise in War Loan, for instance, from 83 to 93 has not affected us, but short-dated securities have also enjoyed their rise, and our holding in them as shown in the balance-sheet has been substantial.

THE FUTURE.

If the past year was one of difficulty, the immediate future cannot be said to be particularly clear. Last year I referred to the crushing burden of taxation, and now its effect on our national life and well-being is past contradiction, so much so, that the attention of all men is now concentrated on the problem, and we can only hope that Government will take such steps as may be necessary this new year to materially reduce public expenditure, and so prepare the way for some possible lessening of this intolerable burden. Should this take place, I am sanguine enough to look into the future with a good deal of hopefulness. The present extreme pessimism seems to me now to be a little psychological, our hopes have been so often disappointed, that we have almost ceased

to hope; but I believe the position is slowly and quietly improving all the time, and that though it would be unwise to anticipate anything like a boom in trade this year, I believe it would not take very much to materially alter the present outlook. In any case, however, this would take time to materialise, and I doubt whether the conditions in the discount market in 1922 can possibly be as favourable as they have been in recent years. In order that they may be so, it is not sufficient that Treasury bills should be available even to their present extent, for competition has forced the rate for them on to a basis which is frequently unremunerative for us. We need, like the rest of the world, a recovery in general trade, which will establish the discount rates on a more normal basis in relation to money. During 1921, with only small exceptions, bankers' advances decreased without a corresponding decrease taking place in deposits, a fact which goes far to explain the great increase in the demand for Treasury bills and the supply of money which marked the end of last year and the beginning of this. Already, however, a slight recovery in the figures of the clearing-house may perhaps be regarded as a hopeful sign. We have also the satisfaction of knowing that our banking and credit system, compared with that of the Continent and America, has so far come through a tremendous ordeal unshaken, so that London will be ready to take advantage of any trade revival when it comes.

THE ACCOUNTS.

Turning now to the accounts before you, the total of the balance-sheet shows the satisfactory increase of about 10 per cent. compared with last year, being 22½ millions, against 20½ millions. Our net holding of bills has risen by £625,000 to £16,432,000, and our total of commercial bills rediscounted by £268,000 to £2,523,000. Our holding of investments, unchanged in character, is £694,000 higher at £2,512,000, and it will be obvious that in view of the fall in money rates this holding is more remunerative than are bills. Loans on security we have increased from £190,000 to £651,000, and cash from £448,000 to £477,000. These increases combine to make up the total increase of two millions to which I have already referred.

PROFITS.

The gross profits for the year show an increase of £45,000 and amount to £377,000. The dividend this year calls for £2,500 more, and rebate, the maintenance of which on a conservative basis we regard as most necessary, is nearly £20,000 more, and now stands at £195,000. Although the directors have anticipated the natural desire of the shareholders by giving a generous bonus to the management and staff, the expenses show practically no change, owing to the absence of items which appeared last year, but which, as I then said, were not likely to recur. We have again transferred £5,000 to the Clerks' Pension Fund, so that it may be better able to meet whatever demands may be made upon it. We have placed £50,000 (an increase of £20,000) to the reserve fund, leaving £30,000, an increase of £4,000 to be carried forward, and thus accounting for the increase of £45,000 in the profits to which I have just alluded. The dividend at the rate of 15 per cent. per annum, together with a bonus of 2s per share, free of tax, are the same as a year ago.

CAPITALISATION OF UNDIVIDED PROFITS.

I now come to the proposal, of which you have had notice, to capitalise £40,000 of the undivided profits, and to distribute the same among the shareholders on the register *pro rata*, which works out at one new share for every nine existing shares held. Resolutions to this effect will be submitted to you at an extraordinary meeting to be held at the close of this meeting, and a few alterations have also to be approved of in the articles of association to carry out the proposal, which is included in the resolution to increase the authorised capital by 25,000 shares. The capital of the company will then be £1,250,000, of which £1,100,000 will be subscribed, consisting of £1,000,000 ordinary, paid up to the extent of £500,000, and £100,000 preference shares fully paid. There is also a reserve fund of £320,000. The balance of 15,000 shares will be held for issue as and when the company think fit.

The justification for this bonus distribution is not to be looked for in the anticipation of the directors that the profits of the past few years are always likely to continue, but in the fact that as their policy has been one of caution and conservatism, they think the share-

holders are now entitled to this special share in the prosperity of the company which has continued for several years, and for this reason I have little doubt that the shareholders will approve of the proposal.

In conclusion I would like to say that an account such as the one in your hands is only possible when the management, supported by the staff, is highly efficient, and the shareholders are indeed fortunate that their affairs are in the hands of one so capable as their present manager, who is also keenly backed by a very efficient staff.

If anybody has any questions to ask before I propose the adoption of the report and accounts, I shall be pleased to answer them. No questions were asked.

I now beg to propose:

"That the report and accounts be received, adopted, and entered on the minutes."

Sir Austin Edward Harris, K.B.E.: I have pleasure in seconding that

The resolution was carried unanimously.

The Chairman: I now have to move:

"That dividends for the half-year ended December 31st last be declared at the rate of 6 per cent. per annum on the £100,000 preference capital, and at the rate of 15 per cent. per annum on the £450,000 ordinary capital, both less income-tax, and a bonus of 2s per share on the ordinary shares, free of tax, payable on and after the 20th instant, and that the balance of £30,087 2s 6d be carried forward to next account."

Mr Robert Ernest Alexander seconded the resolution, which was carried unanimously.

Mr Robert Ernest Alexander: I should like to move:

"That our chairman, Mr Colin Frederick Campbell be re-elected a director of the company."

Mr George Cleverly Alexander seconded the resolution, which was carried unanimously.

Mr H. G. Alexander moved that the auditors, Messrs Price, Waterhouse, and Co., be re-appointed auditors of the company at the same remuneration as before.

Mr Robert Alexander seconded the motion, and it was agreed to unanimously.

The Chairman: That finishes the business of the ordinary meeting.

EXTRA REMUNERATION FOR THE DIRECTORS.

Mr D. A. Horner: I think there is an obvious duty which devolves upon someone on this side of the table, namely, to propose a hearty vote of thanks to you, Sir, for the illuminating address you have given us, and also to you, Sir, and your colleagues for their conduct in the affairs of the company during the last year. Those of us who have grown old in the money market and have lost the bloom of youth trying to make money there, know that great watchfulness and very great caution are needed to produce the excellent statement which has been placed before us to-day. And not only is that so, but we shareholders have earned an exceptionally handsome dividend; the public appreciation in which the company is held has added to the value of our securities, and by way of adding a crowning mercy to the year we have been allotted a substantial addition of new capital for ourselves. In the cutting of that luscious melon one little slice ought to go to a quarter which is not mentioned in the published accounts.

I hope I am in order in the proposal which I venture to make, namely,

"That we vote as a contribution amongst the directors of the

company a sum of not less than £2,500 as a little mark of our appreciation for the splendid services they have rendered to enable us to earn such an excellent dividend, and to receive such a good account of the year."

I should like to move that resolution, and add to it a vote of thanks to the chairman and his colleagues.

The Chairman: I am not quite sure whether such a resolution is in order, or whether notice should be given. I will ask our solicitor about that.

The Solicitor: You may accept such further remuneration as is voted in an ordinary general meeting.

Mr H. G. Alexander seconded the motion, which was agreed to unanimously.

The Chairman: It is extremely generous of you; we thank you most heartily.

A vote of thanks to the management and staff having been proposed and seconded, the proceedings came to an end.

NATIONAL DISCOUNT COMPANY, LIMITED.

SPLENDID YEAR—INCREASED PROFIT.

The ordinary annual general meeting of the National Discount Company, Limited, was held, on the 20th instant, at the Cannon street Hotel, London, Sir Sigismund F. Mendl, K.B.E., chairman of the company, presiding.

The secretary (Mr Charles H. Gough) having read the notice convening the meeting, and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the past year had been a profitable one for the company. The figures in the profit and loss account and in the balance-sheet showed increases under nearly all heads, and these increases had been obtained although there had been a smaller margin between the rates of money and discount than in 1920. The yield on the investments was considerably higher in 1921 than in 1920, and, as the shareholders would have noticed, they had considerably increased their investments and therefore their profits under this head, and he would like to anticipate any questions on that subject by stating that the investments stood in the books at well under current market price.

The net result of the working of the year was that after making a moderate addition to the pension fund they were able to pay 2 per cent. more dividend, to declare the same bonus as in 1920, and to carry forward some £60,000 more than they did in 1920. He thought the shareholders would regard that as a not unsatisfactory result. The expenses had risen somewhat, and that was not entirely due to normal causes. They had for the first time, in 1921, taken up a methodical, or perhaps he might call it a scientific method, of allocating a portion of the profits to a bonus to the staff. They thought it a suitable opportunity to do that because they had been engaged in revising the special bonus hitherto given to the staff to meet the cost of living, and thought it a suitable moment to introduce a system by which the staff could be personally interested in the profitable working of the company.

SCHEME FOR REDUCTION OF LIABILITY ON SHARES.

Proceeding to deal with the scheme for the reduction of the liability on the shares, the Chairman said he did not think the shareholders could accuse the board of having been precipitate, but previously they did not consider that the time was ripe for the change. The moment they did they at once gave their earnest consideration to the matter, and in view of the generally expressed opinion of the shareholders, they had prepared a scheme for effect-

ing a reduction of the liability by £15 per share, thereby reducing the liability to £5. Of course, they could have done that in a very simple manner by calling their £25 shares £10 shares with a £5 liability, but after considering the matter, and having taken the best advice they could obtain, they came to the conclusion that it would be a better thing in the interests of the shareholders to divide each existing share, when the liability had been reduced, into two shares—namely, one "A" share and one "B" share, the "A" share to be fully paid and the "B" share to carry the £5 liability which it was proposed to retain. Their reason for that was that shares with a liability could not be held by trustees and executors, and that being the case, the market in their shares was unduly affected when any of their shareholders died, or for any other reason, trustees found themselves in the possession of shares. It appeared to the board desirable that they should have a fresh class of shareholders—namely, trustees and executors, who could hold shares in the company without any question of liability. They also thought that in that way there would be a better market. On the other hand, it was necessary to restrict the dividend in respect of the fully-paid shares to a moderate amount, and to allow the partly-paid share, which was the more speculative share, to have the opportunity of earning a larger dividend. The existing shareholders were not affected, because each of their shares would be divided into two, and they would have one of each class, and the people who bought later on would know what they were doing, and have no grievance. The scheme was very simple. They proposed to reduce the liability of £20 per share to £5 per share by the extinction or cancellation of £15 per share. Each share thus altered to £10 with £5 paid would then be subdivided into two shares—namely, one "A" share of £2 10s fully paid, the dividend on which would be limited to a maximum of 10 per cent. in any one year, and one "B" share of £7 10s having £2 10s paid without any limitation of dividend. The two classes of shares would participate equally in the distribution of dividends up to 10 per cent. in any one year, and any distribution in excess of 10 per cent. would belong wholly to the "B" shares. The directors' qualification would be 200 "B" shares, instead of 200 shares as at present, because it was obvious the directors should be qualified in shares carrying the liability.

Col. the Hon. Sidney Peel, D.S.O., M.P., seconded the resolution for the adoption of the report and accounts, and it was carried unanimously.

An extraordinary general meeting was then held, at which the resolutions to carry into effect the scheme outlined by the chairman were carried unanimously.

GREAT INDIAN PENINSULAR RAILWAY COMPANY.

CHAIRMAN ON THE REPORT OF THE COMMITTEE OF INQUIRY.

The 144th half-yearly general meeting of the Great Indian Peninsular Railway Company was held, on the 20th instant, at the offices, 48 Copthall avenue, London, Sir Charles H. Armstrong, the chairman, presiding.

The secretary (Mr R. H. Walpole) having read the notice convening the meeting,

The Chairman, in the course of his speech, said: Gentlemen, when I addressed you six months ago at our last half-yearly meeting, I was not very sanguine as to the prospects of the current year, but I must admit I did not anticipate that for the first six months to September 30 last the result, as shown by the figures in the report now in your hands, would be so very unfavourable. The explanation is an excessive and, I hope, an abnormal expenditure, due largely to a serious increase in the cost of our coal supplies. Finding some months ago that we were not receiving from the Bengal Coalfields as much as we had been led to expect, and as our stock was running dangerously low, we were compelled to buy additional supplies in this country, in South Africa, and elsewhere, so that we might have a sufficient stock during the monsoon months and more or less up to the end of the year.

RECEIPTS AND EXPENDITURE.

Our gross receipts during the six months were Rs. 6,35,00,000, and our gross expenditure Rs. 6,06,00,000, leaving a sum of only Rs. 28,66,000 as net earnings. After bringing into account interest on capital expenditure and other charges, there was a deficit of Rs. 1,44,00,000, as against a deficit in the corresponding period of last year of Rs. 2,77,000, the net difference between the two periods being Rs. 1,41,00,000.

Our working expenses were 95.49 per cent. of our gross receipts, against 75.86 per cent. in the corresponding period of last year. The excess of approximately 20 per cent. was due largely, as I have already said, to the excessive cost of overseas coal.

During the period under review, we collected on behalf of the Government of India Rs. 34,00,000 on account of surtax, in

addition to our gross receipts. This tax, which was rather hurriedly imposed at the last Budget and which cannot be defended from any point of view, continues until March 31st. From April 1st it is intended to bring into operation a higher scale of rates, and this to some extent ought to improve our position next year, but I am doubtful if the advance will be sufficient to cover our greatly increased expenditure. At the same time, I think later on we may fairly look for some improvement in trade, and, if so, our traffics will increase.

REPORT OF THE COMMITTEE OF INQUIRY.

Perhaps the most interesting event of the half-year has been the publication of the Report of the Committee appointed by the Secretary of State to inquire into the administration and working of Indian railways. It is a very interesting document, full of valuable information, but it does not seem to me to solve the question as to what is best to be done with the Indian railways. Well-informed opinion is against an extension of State management, and, so far as the formation of Indian companies is concerned, as recommended by some members of the Committee, it is not, I imagine, a practicable financial proposition, so far, at any rate, as this railway is concerned. If some of the recommendations made by the Railway Committee are carried out, working conditions will no doubt be improved; but, whatever the system of management in future,

FINANCIAL DIFFICULTIES.

I cannot see how the position of the Indian Company Railways can be materially altered for the better until there has been a very large expenditure on equipment, on necessary renewals, and in course of time on much-needed extensions. The cost of raising the necessary funds is at the present time expensive, and there is little money to be made on loans raised at present rates, but a large expenditure is not only necessary but unavoidable in the interests of Indian industries and of the country's overseas trade. Finance has been the difficulty of the situation all along. If sufficient funds could have been provided by the Government of India, or, failing this, if the general public had been invited to take a greater interest in the financing of Indian railways, the position in India to-day would have been very different and the need for a heavy expenditure would have been less acute.

During the half-year we have not been able to make any progress with our suburban electrification project, an urgent and very necessary work in connection with the Bombay development scheme.

The guaranteed interest of 1½ per cent. for the half-year was distributed in December as usual.

The report and accounts were unanimously adopted, and the formal business was duly transacted.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY.

RESULTS OF BOARD'S SOUND INVESTMENT POLICY.

The 92nd annual general meeting of the National Mutual Life Assurance Society was held, on the 18th instant, at 39 King street, Cheapside, London, Mr J. M. Keynes, C.B., the chairman, presiding.

The actuary and manager (Mr Geoffrey Marks, C.B.E., F.I.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, after mentioning the figures of new business, premium income, claims and rate of interest (which have been already published), pointed out that the net rate of interest earned represented a profit of about £56,000 on the year, and proceeded as follows:—There is a balance of profit on assets realised and revalued of nearly £179,000. Of this sum, £162,000 is represented by profit actually realised in cash, and only £17,000 is attributable to an increase on balance in the reassessment of book values. Nearly all, namely £172,000, of this profit is due to the capital gains on our Stock Exchange securities, which represent about 8 per cent. over the whole of our assets of this description.

SOCIETY'S INVESTMENTS.

A considerable part of this is, of course, attributable to the general improvement in the value of gilt-edged securities which occurred in the latter part of last year, but the exceptionally satisfactory result recorded above could have been secured only by the special care which the board have bestowed on this part of their duties, and the active policy which they have pursued in taking quick advantage of the opportunities which have presented themselves. The members can best judge, I think, of the success which has attended the efforts of the board in this direction by considering together the results of the two years 1920 and 1921. This period happens to be a particularly convenient one for purposes of comparison, because the leading British Government securities stood at almost the same prices at the beginning and at the end of the period. For example, 5 per cent. War Loan

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

AFFILIATIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

stood at 91½ at the beginning of the two-year period, and at 92½ at the end of it; Funding Loan at 75½ and 76½; Victory Bonds at 80½ and 81½; and Local Loans at 55½ and 56. In fact, the average of these four standard securities fell 10 per cent. in 1920 and rose 11 per cent. in 1921, so that the depreciation of the first year was almost exactly balanced by the recovery in the second year, the net result over the two years being an appreciation of almost exactly 1 per cent. National War Bonds did a little better than this, the recovery in 1921 bringing them to about 4 per cent. above what they had been two years earlier. On the other hand, many other classes of securities, particularly ordinary shares, showed a heavy depreciation on balance over the two years.

The test of success in an active investment policy is to be found in an ability to avoid losses when security values are falling, whilst nevertheless obtaining profits when they are rising. Anyone can make profits in gilt-edged investments when gilt-edged investments are all going up; and we must look, therefore, to the net result of the two years 1920 and 1921 taken together. Over these two years our society has a balance of appreciation and realised profit over the whole of its Stock Exchange securities of approximately 8 per cent. I do not think that any other society can show an equally good result, and I am certain that it could not have been obtained by an inactive policy, however well and carefully the investments had been selected in the first instance.

LIFE ASSURANCE SOCIETIES' POLICY.

I venture to say that at the present time life assurance societies must stand or fall mainly with the success or failure of their investment policy. The labours of the great actuaries of the nineteenth century have carried actuarial science to a point where great improvements or striking innovations are no longer likely. All well-conducted societies now follow almost the same established actuarial rules. They work on mortality tables based on past experience, which, by reason of the improvements in medical science and public sanitation, are likely to yield some profit on the actual claims falling due over a period of years. The rise in the rate of interest, even when allowance is made for the depredations of income-tax, the present incidence of which on life assurance is open to objection, both on principle and on grounds of public policy, provides an automatic profit over the rate assumed in the valuation. These factors are in favour of all societies alike, and tend to put them in a strong position, unless these advantages are thrown away by a defective investment policy. But investment, on the other hand, provides both more pitfalls and also more opportunities than formerly. The wide fluctuations even in securities of the highest class, which have occurred in recent years, are likely to continue in the near future; whilst the range and choice of investments now available afford opportunities for an active policy which did not exist previously. The new problems of investment thus presented are, in the opinion of your board, the most difficult and the most important with which the insurance world is now faced. They believe that the gradual building up of a sound investment policy is the most vital part of their duties. It is too soon to speak confidently as to what can be done on these lines. But, at any rate, the results which your board has obtained in the past two years are not an accident, but are attributable to a conscious and deliberate policy.

RESULTS OF RECENT VALUATION.

The funds of the society have increased during the year by £277,000, the largest addition which they have ever received in a single year. This year, as in previous years, we have made a valuation of our liabilities for our own information, with a view to determining how much of this increase represents surplus. This valuation discloses that our net surplus has increased during the year by £231,000, bringing our aggregate surplus up to nearly £409,000, with two more years still to run before the close of the current quinquennial period. At our valuation in 1913, which concluded the most successful quinquennium in the society's history, there was a surplus of £341,000, on which result a compound reversionary bonus of 36 per cent. was declared, and more than £100,000 carried forward. The cost of a similar bonus would now be greater, owing principally to the increase in the number of endowment assurances, but, after making allowance for this factor, and for certain adjustments which may be necessary in 1923, the prospects for the society's policy-holders are decidedly good.

TRADE REVIVAL PROSPECTS.

I look for a revival of trade in the coming year irrespective of political developments here and in Europe, because I attribute the exceptional severity of the recent trade depression by no means entirely to the falling off in consumption, but also in large measure

to a financial and credit situation which has held up production and has kept it far below the rate of current consumption. This means that stocks, particularly invisible stocks, have been falling, a process which cannot go much further without leading to scarcity and a reaction towards higher prices and busy production. Let me quote two figures so striking as to be almost incredible. In 1921 Lancashire's export of piece goods was the lowest for 60 years; Great Britain's production of pig-iron was the lowest for 70 years. In spite of the war and the state of Europe, nothing like this can be true of consumption.

The Hon. Francis N. Curzon seconded the motion, and it was carried unanimously.

The formal business was duly transacted, and a cordial vote of thanks to the Chairman, directors, and staff terminated the proceedings.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED.

SATISFACTORY RESULTS OF YEAR'S WORK.

The thirty-sixth ordinary general meeting of the Rio de Janeiro Flour Mills and Granaries, Limited, was held, on the 17th instant, at the Institute of Chartered Accountants, London.

The Chairman (Mr R. Foster), in moving the adoption of the report and accounts, said that the profit on the flour mill had increased some £37,000, while that of the cotton mill was £25,500 down, after ample provision had been made for various reserves. The falling off in the cotton mill profit was wholly due to the lower rate of exchange. The quantity manufactured and sold, however, had increased. As to the work of the past financial year, he thought that, on the whole, they might consider it very good. The deliveries of flour had increased, as had also the proportion of the total amount of flour consumed in Brazil, notwithstanding the fact that the higher prices of wheat and the low exchange combined had made the cost of this commodity too high for the natural increase in consumption. It had been a very difficult year in which to make profits, as the wheat market had had a falling tendency most of the time.

The reports with reference to the biscuit factory in which they had taken an interest were most encouraging. First-class goods were being turned out, and already the demand would appear to be equal to the supply. The Bahia mill, in which they had also taken an interest, had not yet started owing to the many delays caused by the local authorities.

With regard to the present year, he was hopeful that it might be one of average prosperity, although the quarter just completed had not been a good one. This, however, did not necessarily mean that the result at the end of the year would be bad. There would seem to be ample supplies of wheat for the requirements of the world, which should mean the price of this article being at a very much lower level than the average of last year. The company's interests were very closely bound up with those of Brazil, and he believed there was a feeling that things were on the mend in that country.

Mr S. C. Sheppard (managing director) seconded the motion, and, after making a few remarks regarding the progress of the business, read the following cablegram just received from the general manager at Rio:—"Demand for flour and cloth is well maintained. The spinning side of the cotton mill extension has started, and the prospects of business generally are encouraging."

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £50,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Jan. 23rd-Jan. 28th, were opened on Jan. 20, 1922, and the total amount applied for was £79,470,000. Tenders for Monday bills at £99 is 11d and Tuesday to Saturday bills at £99 is 8d, about 11 per cent., and above in full. The average rate of discount was £3 13s 7½d per cent.

The following table shows Treasury Bills by tender outstanding:—

Date of Bills.	Amount Offered.	Amount Applied for.	Average Rate of Discount.	Rate for Additional Bills.
1921.				
December 23	£ 80,000,000	£ 67,975,000	3 7 11-09	3 ½
December 30	50,000,000	117,040,000	3 13 6-52	3 ½
1922.				
January 6	60,000,000	84,175,000	3 4 11-73	2 ½
January 13	60,000,000	78,545,000	3 13 10-73	3 ½
January 20	60,000,000	79,470,000	3 13 7-62	..

The amount to be offered next week will be £35,000,000.

NOTICES.

The Manchester and Liverpool District Banking Company, Limited, announce that Sir D. Drummond Fraser, K.B.E., while retaining his seat on the board, has retired from the position of managing director. Mr W. R. Easterby, manager, has been elected to a seat on the board of directors, and appointed a managing director. Mr H. J. Daffern has been appointed manager, and Mr W. Cunliffe, sub-manager. Mr Robert Crerar has been appointed manager of branches.

Mr Joseph F. Cosby, vice-president of the National City Bank of New York, is now in Europe in connection with the opening of a branch of the bank at 39-40 Boulevard Haussmann, Paris. Mr Cosby announces that Mr G. K. Weeks, who has been vice-president of the National City Company in charge of European operations, has also been made a vice-president of the National City Bank, with general jurisdiction over operations in Great Britain and on the Continent. A closer co-ordination of the commercial and investment banking operations of the institution is contemplated.

The London Joint City and Midland Bank, Limited, announce the opening of new branches at 49 High Holborn, London, W.C.1 (Mr W. H. Salter, manager), and George street, Nailsworth, Stroud, Glos.

Barclays Bank, Limited, announce that they will open a new branch on Monday next, the 23rd inst., at 3 Bank street, Ashford, Kent, under the management of Mr S. Roe.

The directors of the Anglo-South American Bank, Limited, have appointed Mr A. W. Martin to the position of manager at the London office of the bank.

During the past half-year branches of the Queensland National Bank, Limited, have been opened at Babinda, Queensland, and Wiangaree, New South Wales.

We are informed that Dr Boris Gavronsky, of Paris, and I. Wissotzky, Esq., of London, have been appointed members of the board of the British and North European Bank, Limited.

BRITISH BROKEN HILL.—Mill returns for fortnight ended Jan. 14th:—5,919 tons crude ore produced 1,024 tons lead concentrates, containing 625 tons lead, and 26,524 ozs silver; also 810 tons zinc concentrates, assaying 93 per cent. lead, 104 ozs silver per ton, and 45 per cent. zinc. Carbonates raised, 180 tons. One day stoppage.

MOUNT LYEEL.—From December 15th to January 11th, inclusive, ore treated by flotation plant, 5,062 tons; concentrates produced by flotation plant, 1,068 tons. A total quantity of 3,950 tons of ore was smelted, being 2,549 tons from Mount Lyeel mine and 1,401 tons from North Mount Lyeel mine, also 694 tons concentrates. The converters produced during the same period 193 tons of blister copper, containing copper 191 tons, silver 4,387 ozs, gold 138 ozs. Furnace in blast 256 hours. Decreased output due to furnace being shut down for 16 days for repairs to flue and stack, also on account of holidays.

Mark Lane, Friday Evening.

Wintry conditions have prevailed during the week, and with a lower temperature, heavy snowfalls were experienced in most parts of the country, though same will afford a protective covering to the young wheat plant. Official reports point to the acreage under wheat being on a par with last year. A steady tone was apparent at market, the demand being chiefly for feeding stuffs, which maintained a firm price level. English wheat in fair supply, and moderate sales occurred at 47s to 50s for suitable milling grades, with inferior down to 40s per 504 lbs, free on rail. Of imported, Canadian qualities remained firm, as supplies of this quality are in moderate compass, but other descriptions quiet, though firmly held. No. 1 Northern Manitoba quoted 56s, and La Plata 62½ lbs ex ship to arrive 52s 6d per 480 lbs. Australian ex quay 53s to 54s per 496 lbs. There was a fair amount of activity in the floating and forward cargo market, and prices ruled fully steady for all North American grades, but Plate qualities somewhat pressed for sale, and rates the turn easier. No. 1 Northern Manitoba shipping sold 52s 6d net. Steamers of Rosafé 62½ lbs afloat sold 50s 9d, ditto 64 lbs loading 47s 6d to 48s 9d, expected to load 21st inst. 47s 9d. Several steamers of Rosafé 78 kilos were sold to Germany, February-March, at 45s 9d, March-April 45s 6d per 480 lbs, while shipments of North American wheat are being made on account of the "Russian Relief Committee." Reports from Australia indicate full average yields, though the total outturn is not expected to reach last season's figures. Indian prospects continue favourable, while the Argentine new crop is now moving freely. North American visible supplies show a normal decrease, and U.K. arrivals continue on a light scale. Flour trade dull, and quotations were reduced by 1s to 2s per sack for home milled descriptions. London standard straight run quoted 43s, town households 41s, patents 45s to 46s, all English straight run 40s per sack, delivered London district. All English country straights 36s to 38s, free on rail at London stations. Imported quiet and occasionally the turn easier. Manitoba export patents 44s, straights 40s, Kansas patents 40 to 41s, and Australian 43s, all per 280 lbs, ex store. On c.i.f. terms, Canadian patents, January seaboard, quoted 42s, straights 40s, Kansas patents 41s, and Australian new crop, January, 38s, per 280 lbs. Millers' offals firm. Broad bran quoted £9 to £9 5s, middlings £9, ex mill. Fancy Plate middlings £9 15s, ex ship, and Plate Pollards £8, landed terms. Maize continues firm and sparingly offered. Yellow La Plata held for 38s 6d, yellow round African 37s 6d, white flat ditto in small supply and nominally 35s 6d, all landed, mixed American ex ship, to arrive, 31s 6d per 480 lbs. In the forward cargo market near position, were sparingly offered and general tone firm. Plate steamers January shipment guaranteed sold 35s, and ditto expected ready to load February 5th 34s 3d per 480 lbs. Parcels in fair request at full rates, and Plate December-January sold up to 34s 1½d. Barley dull for malting, but feeding sorts steady. Native malting ranges from 43s to 65s, feeding sorts 37s to 41s per 448 lbs. Of imported, Morocco quoted 30s to 31s 6d, Plate 30s, No. 4 Canada Western 33s 6d, and American

(b) Union Discount.—3% of this dividend of 18% is paid free of income-tax. The previous year 2% of the 16% was paid free of tax.

feed 28s 3d, all landed per 400 lbs. Oats firmer, especially for imported sorts, with a steady demand. English ranges from 28s 6d to 34s per 336 lbs, as to sample. La Plata f.a.q. quoted 28s 6d, ditto clipped 29s 6d, No. 2 Canada Western 30s 9d, Chilean tawny 28s to 29s per 320 lbs landed. Oatmeal easier. London made, all 28s to 29s per 320 lbs landed. American oatmeal £17 10s cuts, £18 to £19, rolled oats £20 to £20 10s per ton. English beans in to £18 10s, and rolled oats £19 to £20 per ton. English peas less freely offered, with a steady demand in evidence. Maples range from 76s to 84s, Duns 55s to 60s per 504 lbs. Of imported, New Zealand blues 18s to 22s, and Dutch blue 22s to 28s per cwt. Lentils quiet. No. 1 split 32s to 34s, No. 2 27s to 28s, and Egyptian 27s to 28s per 100 lbs. Homeward grain chartering generally quiet, but rates steady in most directions. From the River Plate spot steamers are worth 36s 3d upper ports, February 32s 6d, and March-April 30s to U.K./Continent, with proportionate increases for light cargoes. American Northern States to U.K. quoted 4s 3d qr, ditto Continent done at 17 cents, West Italy 21 cents, and some 21,000 tons booked to Greece at 5s 6d one and 5s 9d per qr two ports of discharge. Tonnage is also in request on account of the "Russian Relief Commission," and 28 cents is indicated to Baltic and 30 cents per 100 lbs to Black Sea ports. India steadier, with 23s paid on dead weight to U.K. Liner parcels of rice are doing at 25s to Germany. Australia firmer, and 50s paid for wheat South Australia

to U.K./Continent, February 10th-March 10th. South African maize quiet at about 30s to 32s 6d U.K./Continent. Egyptian cottonseed can be placed at 9s per 60 cubic feet to London/Hull. Other markets without new feature.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox and Co. (France) Limited. Deposits are received for fixed periods on terms which may be ascertained on application.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated January 19th, is as follows:—Pig-iron: The reductions in the prices of Cleveland pig-iron made last week have resulted in substantial sales being effected, chiefly to Scottish consumers, although a few small lots have been sold for export. Prices are as follows:—No. 1 Cleveland, 95s; No. 3 Cleveland G.M.B., 90s; No. 4 Cleveland foundry, 87s 6d; No. 4 forge, 82s 6d; mottled and white, nominally, 80s. East Coast hematite makers are still very keen to secure orders, and it is understood that for mixed numbers 95s has been quoted. Manufactured iron and steel: No more steel furnaces have been put into operation, orders are few for home requirements, and competition for foreign orders is very keen. Prices are as follows:—Steel ship plates (home), £10 10s; steel ship angles, £10; iron bars, £12 10s; steel rails, £9 10s; but these would be cut for export orders. Iron ore: The immediate requirements of consumers having been covered, no actual business is reported. Meantime, freights are firmer, and best Bilbao Rubio is quoted 26s 6d.

Our Sheffield correspondent writes:—The effect of the holidays upon local industry has not yet disappeared, and the amount of work in progress is disappointingly small. If a revival movement has really begun, there is little evidence of it to be seen. Nevertheless, people speak hopefully of the future. There is a small accumulation of business at some of the plants which have been standing. These furnaces and mills are to be re-started. By the end of the month some increase in steel plant activity is certain to occur. A moderate booking of orders is reported for common steels from India and Japan. When all is said, however, the local position is about as bad as it can be at present, and there is much leeway to make up before the heavy unemployment roll of the city is reduced. The number on this list is fully a thousand more than when last year ended. There is much price-cutting in semi steels, which means unremunerative operating in many instances. Since the opening of the year makers of finished steel products have been busy notifying customers of reductions in their selling lists. These average about 10 per cent. Buyers, however, still expect further cuts, but the opinion of sellers is that prices are now comparatively stable. Manufacturers are pressing for reduced postal and parcel rates, as the present high charges constitute a serious addition to their on-costs. The coal market is without feature or incident. The demand for manufacturing fuel does not expand, although requirements will increase in the event of the re-starting of a number of pig-iron and steel furnaces which are now being got ready. The export trade is also quiet. Inquiries for both home and export are rather more numerous. The market for small fuels is decidedly flat, the demand being particularly poor for second qualities. Business in house coal is much less than might be expected during this severe weather, but the existence of many thousands of unemployed people who cannot afford the usual standard of warmth in their homes is one explanation of the flatness. The demand for coke is unchanged.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Judging from the trend of trade at the Colonial wool sales in London during the past few days, the upward movement in prices has not yet exhausted itself. The extreme strength of the raw material markets, indeed, is the outstanding feature of the trade at the moment, and it is significant that competition is general. There is a feeling that the rise in merinos is being rather overdone, and that the sharp advances of recent weeks may be followed by a reaction, but at present buyers appear to have confidence in values, and, of course, the official statement issued by B.A.W.R.A. as to stocks in their hands is also having a bullish effect. Some Bradford topmakers are so well sold ahead that they have withdrawn their quotations for merinos, and others are quoting protective prices. On the whole, there is rather less business passing, but quotations remain very firm at late rates, and the position is decidedly against the buyer. Spinners are well employed in the meantime, but most firms would be able to regard the future with more confidence if they could see more business coming forward. As things are, it is apparent that the strong upward movement in values has seriously checked business in yarns, and the disparity between the price of yarns and the cost of the tops from which they are made is still very striking. The one thing needed to place the industry on a sound foundation is a greatly increased demand for cloth, but this does not appear to be likely to develop on the current basis of values. For this reason many believe that the turn of crossbreds will come in the not distant future, because the general public at home and abroad will not be able to afford to pay the high prices for Botany fabrics.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales have been continued under favourable conditions. Perhaps home trade buyers are not as keen as they were during the earlier part of the series, but values are fully maintained, France, and sometimes Germany, being eager to purchase all desirable parcels. From the range of values ruling, it is plain that merinos occupy a unique position, anything below 50s quality showing little advance compared with last series, 1d per lb being the extent of the rise seen. Selling and buying brokers are surprised with the competition for merinos and fine crossbreds, but the interest shown in these indicates that consumption is large, and confidence is still being expressed in the future of these wools. There is no probability of any falling off in demand or consumption, even if values should ease slightly, and prices have certainly gone as high as circumstances justify. Some firms who

were large buyers in Australia during the earlier months of last year have done remarkably well, and a maintenance of the present consumption of merinos may be expected to be followed by a full maintenance of values, if not an advance. Nobody desires this, but the statement made by the London directors of the British Australian Wool Realisation Association to the effect that at the present rate of offering all their surplus stocks of merinos will be cleared by the end of July, shows clearly enough what is happening. Merinos should certainly not become dearer until the general trade of the country shows a substantial improvement, and it is understood that responsible members of the trade, including the largest buyers, are strongly opposed to any advance in the price of this description. Meanwhile the demand in Coleman street is exceedingly good, and as far as can be judged is likely to remain so to the end of the series.

The principal of one of the leading firms of buying brokers has stated this week that everything indicates the probability of America becoming an important factor in the wool market at no distant date, stocks of merinos across the Atlantic being very small. If the representatives of United States mills become important buyers, in either London or Australia, the trade can say goodbye to lower prices for merinos this year, but so far as the home trade is concerned, spinners are finding it impossible to make prices for yarn which correspond to the 4s 6d basis now current for 64's tops.

B.A.W.R.A.'s statement issued at the end of last week is one of the most enlightening documents turned out by that body. A wise course has been pursued in making the announcement, and it can be largely left to speak for itself. The most important points contained in it are the indication of the rapid absorption of all merino supplies, and the satisfaction expressed regarding the future of crossbreds. It will probably take till the middle of 1924 to clear all the surplus stocks of this description, but future developments are likely to favour holders, and no undue haste need be manifest to market these wools. It may be strongly maintained that 40's crossbred wool in the grease should realise nothing less than 9d per lb. This should be the standard price for low crossbreds if pastoralists in New Zealand and South America are to make any profit. Prospects for crossbreds are encouraging. By the middle of this year Germany, and to a large extent West Riding export houses, should have resumed trade with many pre-war customers in Central and Eastern Europe.

MANCHESTER, January 19.

The tone of the market has been quieter than last week. The falling off in demand has been chiefly due to increased bearish sentiment in raw cotton circles, and the anticipation on the part of buyers of yarn and cloth of lower values. Scattered sales have occurred in piece goods for China, but buying has tended to taper off. Bids for India remain very poor, and it seems quite impossible to get dealers abroad to raise limits, operations being confined to sorting up lots. The minor outlets East and West have given no support worth mentioning, and fewer contracts have been arranged in home trade fabrics. More manufacturing concerns are weaving out. A dull feeling has prevailed in American and Egyptian yarns for home use, and prices have favoured buyers. There has been less activity in export yarns.

THE marvels of one age are the commonplace of the next. The methods for security used in the past are not to be derided because they have been superseded. Our ancestors did the best they knew.

The stout oaken chest hewn from a tree with an axe was good enough until the saw was invented. The ironclad was a power until a gun and shell were produced which penetrated it, this in time being inevitably followed by armour plate which resisted the shell.

The means of attack and defence, thrust and counter-thrust, are ever advancing. The poison invariably is followed by the antidote; and the antidote to the modern burglar, armed with the oxy-acetylene blow-pipe, is THE CHATWOOD SAFE.

The armoury of the up-to-date Burglar consists of the Oxy-acetylene blow-pipe, which can cut through 3 ft. of 17 inch steel in 15 minutes.

THE CHATWOOD SAFE SINCE 1858.

THE NEW CHATWOOD SAFE BOOK contains 58 pages, many in full colour, and includes the fullest particulars of each model of THE CHATWOOD SAFE and STRONG ROOM. A post card brings a copy gratis.

VEGETABLE OILS AND OILSEEDS.

Markets generally have been quiet, and only a moderate amount of business has been put through. Raw linseed oil maintains its value round £28 10s (Hull) and £29 10s (London), but demand is not heavy, and for home consumption decidedly poor. Crude cotton oil has dropped sharply to £31 10s, ex Hull, mill, and soap-makers' grade of refined is 25s lower on the week, and edible refined 40s down. Supplies are good, but trade disappointing. English makes of crude Soya bean oil have fluctuated somewhat, but is still 40s dearer than Oriental, with which it has to compete. Rape oil is scarce and dearer at £48 for near positions, ex Hull, mill. Other oils quiet and unchanged.

In the oilseed section, Plate linseed has been in small request. Substantial quantities have changed hands at £17 on passage to Hull, and £16 15s, January-February, while a cargo of 4,000 tons to Avonmouth, January shipment, has changed hands at £17 2s 6d, these representing current values. Egyptian cotton seed is easier, and a little more trade done up to £12 for January loading. Hamburg is a buyer of rapeseed (Toria) at £15, January-February.

The imports of oilseeds, nuts, and kernels into the United Kingdom in 1921 aggregated 1,358,345 tons, against 1,495,426 tons in 1920, a decline of 137,081 tons. Linseed at 469,791 tons was 80,424 tons better than in the previous year. Cotton seed, however, was down over 66,000 tons, viz., 376,522 tons, against 442,842 tons, due to very small imports from India. Soya beans at 61,425 tons showed a substantial increase, but oil nuts and kernels at 394,631 tons compared with 477,594, the falling off being under the heads of ground nuts and palm kernels. The re-exports of all kinds were 61,339 tons, equal to 4.5 per cent. Exports of vegetable oils manufactured or refined in the U.K. were 110,092 tons, against 114,112 tons, linseed oil standing for 55,360 tons, against 48,421 tons.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market was again weaker in Bermondsey on Thursday, as best ox sold from 64d to 7d for lights, to 7d-8d for heavies. Cows at 6d, however, were 4d up on last prices. Calf skins were firmer, heavies making 87d to 11d, and lights 12d to 15d. Wools sold at 3s 4d to 8s, and hogs at 3s 6d to 8s 6d each. Trading in imported hides is erratic, as tanners are not much interested. Anglo-fregoric ox, ex store, London, have been sold at 9 1/2, but these are oldish hides, and the price is no criterion of real values. Dried and dry-salted have sold at recent rates, 7d having been made for 1,000 Mendes of best selection. Cables from New York report the American hide market as steady, with best heavy packers selling still at 16 1/2 cents.

On the whole the tone of the sole leather trade is better; factors, it is true, are not yet in the market, as they are waiting a further fall. Tanners seem more contented, however, as small lots are being regularly taken, which keeps stocks down. Tanners are firm on prices, but are willing to make small concessions if big business is in view. The repairing section is rather more active, following on the recent spell of snowy weather, and are taking fair amounts of 12/14 bends. Upper leathers are still slow, but some of the big operators in the Midlands report a fair amount of business.

The boot trade is only fairly well employed, and in the Bristol districts, where heavy goods are made, short time is the rule. The majority of the operatives' union against the proposed wages agreement has checked business, although it is expected it will be accepted when the question again comes up for balloting upon.

Boot exports dropped to 313,252 dozen pairs, valued at £2,248,830, for last year, as against 818,969 dozen pairs, valued at £7,116,030 for 1920—a fall without precedent, I believe.

OVERSEAS PRODUCE MARKETS.

Mining Lane, Friday, January 20.
There was a fair trade doing in some directions, but, generally speaking, a quiet demand continued during the greater part of the week for most raw materials.

SUGAR.—With sustained inquiries for all classes of white, and supplies of imported having shrunk to limited proportions on the spot, the market manifested a firmer tendency, with prices fully 6d per cwt dearer. Messrs Tate and Lyle's cubes sold, 51s to 52s; crushed, 48s 3d; granulated, 46s 3d to 46s 9d; caster, 48s 5d to 48s 9d; icing, 49s 3d; ditto in drums, 48s 6d. Granulated, February-March delivery, sold, 46s; April-June, 46s 3d. West India crystallised in small supply and sold at 39s to 41s, as to quality. American granulated, nominal on spot, and January-March, steamer, sold, 18s, c.f. and i. terms. Belgian crystals largely nominal, and with regard to forward offers these are above London parity owing to sustained operations on the part of French interests. White Brazilian, on spot, sold, 45s. White Natal, spot, sold, 43s 3d to 43s 9d. West India syrups and muscovados, 32s to 35s. Dutch granulated, prompt shipment, 18s 6d; and cubes, 22s 6d, f.o.b., Amsterdam. Czechoslovakian ordinary granulated and crystals, ready delivery, sold, 17s 6d to 18s; and cubes, 21s, f.o.b., Hamburg. Terminal market steadier but unsettled, White, March, sold, 18s 3d to 18s and 18s 6d; May, 18s 3d to 18s and 18s 6d; August, 18s 3d to 18s 4d, 18s 1d, and 18s 7d. Cuban receipts last week 29,000 tons, against 36,000 tons same time last year. Stock, 84,000 tons (including 38,000 tons new crop), against 210,400 tons same time last year.

COFFEE.—Moderate supplies were offered at public sales, and met a rather quiet demand, but prices on balance showed little or no alteration. Nairobi low mid, 101s; East India, Shevaroy, 103s to 110s; Costa Rica, bold sizes, 120s 6d to 145s; peaberry, 115s to 161s 6d. Future delivery market remained in a dull state. December, sold, 52s.

COCOA.—There was a better inquiry during the week, and market proved steady. Transactions include good to fine Grenada, 50s to 52s; fine Trinidad, 58s; fine estate Ceylon, bold red, 95s to 100s. Accra, F/F quality, January-March, Liverpool, sold, 41s, ex quay.

TEA.—Indian auctions this week totalled 49,500 packages, which met with active support. All the finer qualities ruled about steady, while common went off briskly at full to dearer values. 25,000 packages Ceylon submitted attracted keen support regarding the lower descriptions at full to higher prices, while the better sorts denoted no material change, though attended by slight irregularity.

RICE.—Market easier, with a little more interest shown. Two stars Rangoon, spot, sold, 14s 6d; and No. 1 garden Siam quoted 13s 6d. Siam C.I. broken, spot, 9s 6d. Bran quiet but steady. New crop Burma, February-March, quoted 110s, ex ship terms, per ton. Beans steady. Rangoon hand-picked, spot, 7s 9d per cwt.

SPICE.—Pepper market generally quiet, but tolerably steady. Fair black Singapore, spot, sold, 4d to 3 1/2d; ditto, March-May, steamer, 3 1/2d; Aleppy, spot, quoted 4 1/2d; Tellicherry, 4 1/2d; white Singapore, spot, 7 1/2d; Muntok, 7 1/2d; ditto, March-May, sold, 7 1/2d to 7 3/4d. Zanzibar cloves dull. Fair, on spot, quoted 1s 6 1/2d; ditto, to arrive, 1s 5d, c.f. and i. terms. Pimento, spot, quiet at 2 1/2d per lb. Flake tapioca, spot, sold, 1 1/2d and sellers per lb. Fair Penang seed pearl, spot, done 18s. Sago flour easier, and January-March, steamer, sold, 13s 6d; February-April, 13s 4 1/2d. Desiccated coconut, fine cut, spot, 40s 6d; medium, 41s; February-March, halves, 30s 6d. Ginger quietly steady.

FRUIT.—The market for currants rules steady with moderate inquiries. Pyrgos, quoted 56s; Amalia, 57s to 60s; Patras, 57s to 60s; Vostizza, 75s to 76s. Valencia raisins quiet but steady. Halves, quoted 115s to 120s; quarters, 130s to 150s; Cape, 70s to 95s. Sultanias quiet at about late prices. Dates steady, quiet. Siar, spot, 28s 6d.

JUTE.—Extreme dullness governed this market, and prices steadily declined, though no undue pressure to sell was shown. Demand for spinners is restricted to assorting requirements. Native, first grade, January-February, Continent, sold, £24 15s; ditto February-March, £24 15s; lightning grade, January-February, £24 15s; ditto February-March, £20 15s; heart grade, January-February, sold, £16 10s. A fine parcel.

Continued from page 110.

Belas M, D to E, spot, Antwerp, sold, £30. Hessians quiet. 10 oz. spot, sold, 23s 6d; 8 oz. quoted 18s 6d. A twills, spot, 78s; B, 64s.

HEMP.—The market for Manila developed a very dull tone, and rates were easier in some cases, despite firmness cabled from the other side. C grade, January-March, quoted £54; D, £52; E, £49; F, £44 10s; G, £40; H, £39 10s; J, £39 10s; K, £38; L, £37 10s; M, £34 10s; streaky, ones, £44; two, £42; three, £40. Some streaky ones, afloat, sold, £42 10s. New Zealand slow of sale. High point, fair, on spot, £37 10s; January-March, £36 10s; fair, on spot, £36; January-March, £35. African Sisal steady, quiet. No. 1, G.E.A., January-March, £40; B.E.A., £39.

SHELLAC.—Market firmer, but rather irregular at times. Fair T.N., spot, 330s; March sold, 310s to 305s and 300s; May, 295s to 300s and 290s.

COPRA.—Market slightly unsettled, and general trade ruled quiet. F.M.S. Straits, December-February, to Rotterdam, sold, £24 5s to £23 10s and £24; ditto, January-March, £24 to £24 7s 6d; February-April, £24 12s 6d to £24 17s 6d; March-May, £24 15s to £25, £24 10s, £25. Ceylon, January-March, London, quoted, £25 15s; South Sea Islands, ditto, £23 5s; Cebu, ditto, to Hamburg, £23 15s. Palm kernels quiet, and February-April, Liverpool, sold, £17 10s.

EGG PRODUCTS.—Market steady, with a fair demand for prime liquid yolk, and spot lots sold, 112s 6d; April-June, quoted, 75s per cwt. Native dried whole egg, spot, quoted, 3d; dried yolk, 3½d; and albumen, sold, 2s 10½d lb.

MENTHOL.—Spot, quoted, 22s 6d; forward, 22s; Japanese peppermint oil, spot, 5s 6d; aniseed, 2s 2d; Japanese slab camphor, spot, 4s; crude, quoted 3s 8d per lb. Japanese wax, spot, 90s cwt.

ISINGLASS.—A small supply offered at public sale met a good demand, and practically all sold at irregular prices. Saigon, long leaf, 1s to 1s 9d per lb lower as compared with rates current last auctions, round, however, being dearer. Karachi leaf, 6d to 1s 6d higher; purse slightly dearer, with a better demand. Brazilian lump is dearer, tongue ruling firm, and honeycomb slightly dearer. West India lump is up. Saigon long leaf, sold, 16s 6d to 18s per lb. Brazilian lump, 4s 5d to 5s 9d. Karachi leaf, 3s 7d to 6s 2d. West India lump, 3s 3d to 4s 7d per lb.

RUBBER.—Market opened the week firmly, but assumed a quiet and easier tone later. Spot, sold, 9½d to 10d lb.

OILS.—Linseed easier. Spot, net, naked, 29s 9d; January-April, 28s 10½d; May-August, 29s. Rape dull. Crude, spot, 45s; refined, 50s. Cotton quiet. Crude Egyptian, 36s; Bombay, nominal; common edible, 43s. Chinawood: Hankow, spot (barrels), 64s; and shipment, 61s. Coconut quiet. Ceylon, spot, 44s; January-February, 40s 3d; Cochin, ditto, 45s. Soya, quiet. Oriental, barrels, ditto, 34s 6d. Japan fish quiet. January-February, cases, 27s. Cod quiet. English, spot, 29s. Groundnut quiet. English crushed, naked, spot, 44s; deodorised, barrels, 56s. Tur-

pentine irregular. American, spot, 72s; February-April, 71s 9d. Rosin easier. American, grade B, 14s 6d; F, 14s 6d; G, 14s 6d; WW, 20s 6d. French, F/G, 14s 3d; WW, 18s; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OLSEEDS.—Linseed: Market firmer. Calcutta, January, sold, £18 7s 6d. January-February, sold, £17 15s to £18. Plate, spot, Hull, quoted £18; afloat, sold, £17 to £17 15s; December-January, £17 to £17 12s 6d; January-February, at £16 15s to £17 2s 6d. Rape-seed lower. Toria, January-February, sold, £15 to £14 15s, to Continent; real bold Ferozepore quoted £14 15s; brown Cawnpore, £14. Cottonseed irregular. Egyptian black, January, quoted £11 17s 6d; and white, sold, £11 7s 6d; ditto afloat, £11 8s 9d. Bombay, January-February, £8 17s 6d. Gingelly quiet. Chinese, January-February, Continent, £24. Castor, Bombay, January-February, £15 10s. Ground nuts quiet. Coromandel, machine-dried, January-February, Hull, £19; Continent, £19 10s; Chinese decorticated, f.a.q., ditto, Continent, £20 5s per ton.

METALS.—Tin, under selling pressure, continued a declining market early in week, cash fluctuating down to £163 5s; three months' to £164 15s, while finally registered at £165 5s. An improvement characterised last Wednesday's movements, these dates advancing to £164 and £165 15s respectively. Irregularity prevailed on Thursday. Cash changed hands at £164 5s to £164, and three months' up to £166 12s 6d, while settling down at £165 12s 6d. At Friday's session values eased. Cash sold at £163 5s to £162 12s 6d; early February, £163; and three months' at £165 to £164 10s. Copper lower until last Wednesday, when standard cash sold at £64 10s to £64 12s 6d; three months' down to £65 5s. At Thursday's meeting the tendency was firmer. Cash sold at £64 17s 6d to £65 7s 6d, and three months' up to £66 5s. At Friday's session prices were rather lower. Standard, late January, being sold at £65 5s to £65 10s, and three months' at £66 to £65 15s, and finally at £65 17s 6d. Wire bars, £72 to £73. Lead easier at £23 2s 6d. Spelter lower at £26 2s 6d to £26 10s, as to position. Antimony: English regulus remains at £36 to £39. Aluminium: Home delivery, £120; export, £125.

METROPOLITAN CATTLE.—JANUARY 19.

THE MONEY MARKET.

SINCE by Saturday last the Government had repaid the
Bank its debt on Ways and Means advances, the pay-
ment of very large sums to them on Monday for the last
issue of Treasury bonds caused money to be badly wanted.
Even so, the amount borrowed from the Bank by the
market was small, and its character unrepresentative;
the situation had again been saved by special buying of
short bills. Thereafter money became easier, and buyers

of bills, alarmed by the smallness of the amount of Treasury bills offered for tender, began to buy at falling rates. Thus, though fine bills, of which few came to market, were sold at $3\frac{1}{2}$ per cent., Treasuries were taken below $3\frac{1}{2}$ per cent. on Thursday. It appears that the quantity of money actually on loan in the market has fallen since the end of last year, and there are large tax payments still to be made to the Government. The money, however, having gone into Treasury bonds for the most part, the market is not surprised to find conditions fairly easy, while new subscriptions to the present issue remain small.

* Additional to those offered by tender the preceding week.

The Bank Return showed an addition of £2,900 to the stock of gold and a reduction of £394,100 in the circulation, so that the Reserve was increased by £397,000. Government securities were reduced by £2,065,000, and Other securities by £307,200. Deposits were thus £1,991,200 lower, Public falling by £5,098,800, while Other rose by £3,107,600. The circulation of currency notes were reduced during the week by £3,562,000, to £305,004,000, which includes £1,704,000 for notes called in but not yet cancelled. The fiduciary issue is £255,350,000, or £54,638,400 below the maximum.

THE STOCK MARKETS.

The feature of the Stock Exchange remains the short supply of stock in sound investment sections in face of persistent demand, which, however, slackened after the middle of the week. The gilt-edged market absorbed a lion's share of the activity of the House. This state of affairs favours borrowers in the new capital market, where large new issues have been rapidly and largely oversubscribed, and have quickly established premiums on quotations. Foreign bonds show narrow movements, and home railway ordinary stocks are irregular. Rubber shares remain dull, and the oil market is quiet. Details of stock market news and movements will be found in a subsequent column.

COMMODITY MARKETS.

In the cotton markets the tone is weaker, although there are indications of a slight broadening of cloth demand for India, and spinners are making slight progress. Raw wool remains in strong demand, but new business in Yorkshire is being curtailed owing to the inability of users to follow the upward movement. In the iron and steel trades, in spite of the relief from foreign competition afforded by recent cuts in prices, the revival anticipated in some quarters still hangs fire, and the position remains very unsatisfactory. More confidence in the outlook is, however, reported from Sheffield. Neither home nor export demand for steam coal is expanding, while the demand for house coal is lower than might be expected in view of the bad weather. In the markets for vegetable oil and oil seeds there is little change. The hide market is steadier, but consumers are very cautious. The shoe trade is quiet. Movements and news in the principal markets are detailed on later pages by special correspondents.

FOREIGN EXCHANGES.

The foreign exchange market has had another week of uncertainty and restrained dealings, with all the more important currencies moving irregularly. With the dollar the rate has, on the whole, moved upward, and yesterday morning took a rather sharp jump to 4.23 $\frac{1}{2}$, as compared with about 4.21 the week before; this is a continuance of

the steady upward tendency which may with some reason be looked for at present, should political factors not intervene and should a policy of extension of credit and consequent rise in prices not be undertaken here. For the moment dollars at one month forward are quoted at par, with $\frac{1}{8}$ cent for two months. Paris francs, after an irregular recovery, have moved up again, and at 52, or rather over, are about the same as last week. Berlin, under the pressure of reparation uncertainties, depreciated more rapidly than for some time past, up to not far short of 900, and although yesterday it was back at 865, was still well above last week's quotation; nor does there seem much prospect of relief in the near future, whatever further conferences may bring forth. Italy has improved slightly, in spite of the unexpectedly serious figures of the Banca di Sconto. Brussels has improved slightly in relation to Paris, and there are some slight indications of the spread between the two rates becoming narrower. Among the neutrals, Amsterdam, after moving irregularly, ended about the same as the week before; Switzerland, after last week's depression, has moved somewhat in our favour again. The value of the peseta, on the other hand, has recovered rather sharply to 28.12 $\frac{1}{2}$. Among the Northern countries, Christiania and Copenhagen have reacted a little from their recent improvement, and have moved upward again. Stockholm, after moving further against, has risen to about the same level as last week. Finland, at about 224, shows a slight improvement. In Central Europe the week has been remarkable for another catastrophic collapse in the Austrian krone, which in Vienna (Inlandskrone) has been quoted at about 43,000 to the £, while the London (Auslands) rate was yesterday 16,000. Warsaw also shows a tendency to lose its recent steadiness, and has moved up to 14,000. In Prague, however, improvement, on loan rumours, continues more rapidly than before, the rate being now down to about 220. In Belgrade, depreciation continues steadily, Bucharest remains at a practically nominal figure, Athens is a little better, but Sofia shows a further upward movement. In the East the rupee is slightly dearer at 33 $\frac{1}{2}$ d, in spite of fears of political trouble, while the yen is practically unchanged. Quiet at first, the silver market moved up a little later in the week, on good demand from India. The Hongkong and Shanghai rates, however, are unchanged. In South America, Buenos Ayres continues to improve, as also Monte Video and Valparaiso. Rio also is very slightly more expensive.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 21, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	36,040	Supply Services	14,630
		Interest on Debt	1,517
		Sundries	225
		Added to Exchequer balances ..	4,513
		Reduction of Debt	15,149
	36,040		36,040

These operations reduced the National Debt by the sum of £15,149,117, and caused the following changes:—

TREASURY BONDS.	Min. £	TREASURY BILLS.	Min. £
National Savings Certificates ..	+ 47,960	Surrenders of Bonds, &c.	— 2,519
	+ 2,450	Public Department Advances ..	— 34,540
		Bank of England Advances ..	— 21,500
		Other Debt	— 5,568
		Unemployment Insurance	— 560
		Depreciation Fund	— 500
		Sundries	— 500
	+ 50,410		— 65,555

Property and Income-tax yielded £14,243,000, Customs and Excise £13,150,000, Estate Duties, &c., £1,724,000, and Special Receipts, £3,500,000. The floating debt was reduced by £58,585,000 to £1,190,860,000. Sales of Treasury Bonds amounted to £47,960,000 during the week.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JANUARY 21, 1922.

Total spent	832,233,555	Raised by revenue ..	756,236,742
Inc. in balances	3,942,596	Net borrowings	79,939,409
Total	836,176,151	Total	836,176,151

ESTIMATES for YEAR 1921-22.		£	
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000		1,039,728,000

Surplus* 176,922,000
* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

THE BANKERS' DIAGNOSIS.

THERE has probably never been a time when the country was in greater need of light and guidance in matters of economics and finance. Unfortunately the flood of political oratory which has swept the country during the past ten days has, on the whole, been singularly unproductive of either, most of the eminent speakers being mainly concerned with destructive criticism or with defence based upon special pleading. The outstanding feature is the definite return of Viscount Grey to public life as a supporter of Mr Asquith. His mordant criticism of the Government left no doubt that the Opposition have been strengthened by a formidable reinforcement. On the Coalition side Mr Churchill endeavoured to make anti-Socialism a main plank in the Coalition Liberal platform, but he and his colleagues not unnaturally had little success in putting forward proposals which would at once appeal to the mass of liberal sentiment in the country, and also heal the growing breach in the Coalition. Indeed, neither party rose to the opportunity which the occasion offered of submitting even in outline a really constructive policy in home or in foreign affairs. A reader could rise from a perusal of these speeches without ever gleaning that Great Britain has any abnormal difficulties to face in Turkey, Egypt, or India, or that she is faced with social or economic problems at home that require new methods of treatment.

But if the speakers at Westminster lit no flares to guide us through the economic fog, bank chairmen in the City, availing themselves of the opportunity of the annual meetings of shareholders, were more successful in concentrating attention on vital economic issues, and illuminating them from the wealth of their daily experience. Mr McKenna, chairman of the London Joint City and Midland Bank, took as his main theme the study of the unemployment problem from

various aspects—external conditions, labour conditions, and the effect of taxation. He finds, as every expert observer must find, the prime cause of the great trade depression is the continental gap which the war has made and the peace has failed to mend in the circle of world trade. "If the economic needs of Europe were the primary consideration in international policy, our course would be tolerably clear. We should recognise at once that modern industrial and transport conditions have brought all countries into such close trading relationship as to make each an integral part of the trading world as a whole. One nation, and still more a large group of nations, cannot be broken up and impoverished so as to destroy its ability to function without throwing the entire machine out of gear. If Russia fails to buy tea in China or India, our Eastern market for cottons is narrowed, the United States sells less raw cotton to us, and our shipping, banking, and insurance business is impaired. Illustrations could be multiplied indefinitely showing how the trade of each country is linked up with that of the whole world. Our own trade cannot recover its pre-war activity whilst so many countries continue in their present broken-down condition, and though our plans to foster our export trade by the grant of special credit facilities may be a temporary palliative, the only lasting solution of the problem is by the re-establishment of genuine peace and an ordered system of government throughout Europe."

Mr Goodenough, chairman of Barclays Bank, developed the same idea. "Every portion," he said, "of the world's population must be able to produce and to consume, and any check or interruption anywhere in the continuity of production and consumption throws out of gear the whole industrial machine." There is nothing new in these presentations of the case; they are indeed the *crambe repetita* of economic discussion ever since the Brussels Conference. But the need for their constant repetition is no less now than it was eighteen months ago, and our leading bankers perform good service by dinning it once more into the deaf ears of governments and statesmen. The Prime Minister has reached the stage of adopting this view for platform purposes. But we should like to hear more precisely from him before the country is committed in its policy towards France, Germany, and Russia how he proposes to carry it into effect.

Passing to conditions at home, Mr McKenna devoted a large portion of his address to a lucid exposition of the evils resulting to all sections of the community from restriction of output. It is perhaps one of the most hopeful features of the past year that Labour leaders have vied with capitalists in the propagation of this doctrine, and that in many industries—the coal industry, in particular—an important increase has taken place in the daily output per head of worker. Yet, at a time when widespread unemployment lends attraction and plausibility to the old fallacy that the less work that one man does the more work there will be for others, Mr McKenna is doubtless right in claiming that the pure economic truth of this matter is still in need of propagation through the length and breadth of the land. The third cause of industrial idleness examined by Mr McKenna was excessive taxation. He took the view, as on a previous occasion, that taxation in this country has exceeded "the

LONDON JOINT CITY AND MIDLAND BANK LIMITED

CHAIRMAN:

exact maximum scale which could be imposed upon us without impairing in any marked degree the national spirit of business enterprise," and urged that "the strictest economy in our national expenditure has become the first and most imperative necessity of our time." With this general view we heartily concur, but we doubt whether the effect of taxation upon enterprise can be treated as precisely as Mr McKenna contemplates. If it were so, critics of the Chancellor would have an easier task.

We cannot here follow the bank chairmen over the varied fields covered by their speeches, which are reported in full in later pages of this issue. Among the most important problems touched upon was that of inflation and deflation. Mr McKenna drew a picture of the evils resulting from both processes, and, like Mr Winston Churchill, proclaimed stability as the need of the moment. Sir Harry Goschen, at the meeting of the National Provincial and Union Bank of England, argued strongly against devaluation, a policy which, in his belief, "would not only permanently destroy the position we occupy as the clearing house of the world, and which, I feel sure, we shall in time regain, but would amount to a repudiation of obligations incurred during the last century." Sir Harry did not, however, appreciate the other horn of dilemma and deal with the argument, that by lowering prices to a level which would permit return to the old gold parity, the country would be imposing upon itself the heavy burden of paying back to holders of the War Loan, both in principal and interest, a much greater amount of wealth than the equivalent of the original loan. This is only one aspect of the most difficult problem in currency policy—one to which we shall have occasion to return. On the question of German reparations, Mr McKenna repeated his conviction that revision is necessary, both of amount and method. "Before Germany could meet her full liability, before she could develop her foreign trade to such a degree as to have an exportable surplus of £400 millions a year, the foreign trade of this country, her chief competitor, must dwindle into insignificance." Mr Goodenough was not on very different lines in pointing out that the problem turns "not only upon the ability of Germany to pay, but also upon the world's ability to receive payment according to the plan as it now stands." The note on which three of the speakers closed was one of cautious encouragement. Sir Harry Goschen finds that the outlook is certainly brighter, and Mr Goodenough that fundamental conditions are sounder than a year ago. Mr Edward Paul, at the meeting of the Bank of Liverpool and Martin's, bases a confident outlook on hopes of the Genoa Conference. If, however, as at present seems likely, the reparations problem is removed by the French Government from the agenda paper, and the view current in Washington and New York that America will not participate is well founded, the Conference's potentiality for good will be restricted within narrow limits. We are in any case convinced that the negotiations between Paris and London should not be rushed, and should be carried to successful completion before the Genoa conference is allowed to meet.

THE BANK BALANCE-SHEETS.

WE have already given a summary of the net profits of the English joint stock banks for 1921, as shown in the preliminary statements (*Economist*, January 14th). The full reports have now appeared, but with few exceptions add little to the information concerning profits already published. In the few cases where gross profits are given, they are found to be slightly higher than in 1920, but there has been a much larger increase in expenditure, and it may be assumed that this has been the case with the remainder. This gives further confirmation to the assumption that but for the rally in the value of gilt-edged stocks dividends would have had to be reduced.

Turning to the balance-sheets themselves, we set out below the principal items of 13 English joint stock banks at December 31, 1920 and 1921:—

(Million £'s.)								
	Capital and Reserves.		Acceptances and Endorsements.		Deposits (inc. Undivided Profits, &c.).		Total Liabilities.

* Includes money at call.

The publication of the monthly statements of weekly averages has to some extent prepared the way for the end-of-the-year figures, and any element of surprise has thereby been removed. Capital and reserves are practically unchanged, acceptances are considerably lower on balance, and deposits are very slightly higher. The ratio of paid-up capital and reserves to deposit liabilities, which fell steadily from 18½ per cent. in 1890 to 5.5 per cent. at the end of 1919, and rose to 6.3 per cent. at the end of 1920, has risen to 6.4 per cent. On the credit side of the balance-sheet, cash, including cheques in course of collection, which most of the banks now show as a separate item, is slightly lower, but the principal movement is the heavy decline in advances, which has been more than offset by the rise in bills discounted. The latter includes Treasury Bills, and as it is reasonable to assume that the volume of commercial paper has not expanded during the 12 months, it may be taken that the increase is entirely due to larger holdings by the banks of Treasury Bills. This in its turn may be taken to be the result of a decline in advances unaccompanied by a corresponding decrease in deposits. Investments show a small increase, and now doubtless stand well below market value. The ratio of cash to deposit liabilities at the end of 1921 stands at 16.4 per cent., as compared with 16.6 per cent. a year ago. How the various items have fluctuated during the year may be seen from the next table, which gives the aggregate figures of the nine English clearing banks at the end of 1920 and 1921, together with the weekly averages for every third month of the past year:—

	(Million £'s.)					
	Dec. 31, 1920.	Dec. 31, 1921.	Weekly Average.	Dec. 31, 1921.	Dec. 31, 1921.	Dec. 31, 1921.
			March, 1921.	June, 1921.	Sept., 1921.	Dec., 1921.
Capital and reserves	115.0	115.6	115.9	115.9	115.9	115.9
Acceptances	87.9	69.4	57.7	47.2	65.3	59.1
Deposits (incl. undivided profits, &c.)	1,804.6	1,715.0	1,768.4	1,771.4	1,818.6	1,813.5
Total liabilities	2,007.5	1,900.0	1,942.0	1,934.5	1,999.8	1,988.5
Cash, notes, balance at bank, & cheques in course of collection	304.1	244.8	265.1	250.4	273.5	295.7
Money at call	113.0	82.6	98.0	96.9	105.7	105.1
Investments	339.1	336.1	336.9	332.7	343.3	344.0
Discounts	296.3	282.1	284.2	284.3	284.3	284.3
Loans and advances	845.1	862.6	815.4	786.2	762.3	750.6
Cover for acceptances, premises, &c.	109.9	91.8	81.4	72.0	90.7	83.8
Total assets	2,007.5	1,900.0	1,942.0	1,934.5	1,999.8	1,988.5

Deposits, it will be seen, fell considerably in the spring, but have since steadily increased. Discounts fell and advances increased in the first three months, but since then the movement has been reversed. We may here

mention that we cordially support the plea for an improvement in the method of compilation of bank balance-sheets, and in particular for a distinction between Treasury Bills and other bills discounted in bank balance-sheets, put forward by Mr H. W. Macrosty in a paper read before the Statistical Society last week. To quote from his address:—"To-day when the London clearing banks handle between 70 and 80 per cent. of the banking deposits of the United Kingdom, and when five great banking amalgamations with their Scottish and Irish affiliations dominate the British banking world, bank accounts can no longer be treated as the private affairs of the proprietors and customers of the banks. Not only has the Bank of England, but all other banks have their finance intimately bound up with the national finance, and, at a time when on all hands it is recognised that some unusual, if not drastic, action has to be taken to improve the monetary situation, not merely bankers or politicians, but the country as a whole should have the fullest information available as to the financial situation and as to the position of those institutions which control, so far as it can be controlled, that situation. The London clearing banks, in their accounts showing their monthly average position, give much more detail than formerly, but it can still be usefully expanded, and similar information should be furnished by all banks."

We next show how total deposits have fluctuated since 1913. The figures are taken from our annual banking numbers, with the exception of those for 1921, in which are included estimates in the case of some of the banks whose reports have not yet appeared:—

DEPOSITS AT DECEMBER 31st.

(Million £'s.)

	1913.	1915.	1916.	1917.	1918.	1919.	1920.	1921.
English	809.4	992.6	1,154.9	1,365.3	1,583.4	1,874.2	1,961.5	*1973.7
Scottish	125.9	140.6	166.6	196.5	221.1	259.6	279.2	*289.6
Irish	70.7	77.7	83.7	99.3	131.6	166.2	200.4	212.9
Private	27.1	32.9	39.2	44.7	51.3	56.2	50.9	*46.0
	1,033.1	1,243.8	1,444.4	1,705.8	1,988.4	2,356.2	2,492.0	*2522.2

* Partly estimated.

The increase in the total since 1913 amounts to 144½ per cent., the change in 1921 being a net increase of 1.2 per cent. only.

The final table shows the principal items of the balance-sheets of the three discount companies for each of the past two years:—

1920.

	Capital and Reserves.	Loans and Deposits.	Bills Discounted.	Cash.	Short Loans, &c.	Investments.	Bills Discounted.
Alexanders	£820,000	£17,196,230	£2,255,865	£448,111	£190,427	£1,818,289	£18,063,470
National	£1,346,665	£21,206,142	£12,174,743	£614,179	£1,682,161	£575,855	£32,406,636
Union	£2,000,000	£31,669,303	£12,661,765	£1,259,557	£1,558,415	£3,019,944	£1,079,453
	£4,166,665	£70,071,675	£27,092,373	£2,321,847	£3,431,003	£5,414,088	£21,549,559

1921.

	Capital and Reserves.	Loans and Deposits.	Bills Discounted.	Cash.	Short Loans, &c.	Investments.	Bills Discounted.
Alexanders	£870,000	£18,931,994	£2,523,491	£477,954	£651,319	£2,511,776	£18,955,449
National	£1,346,665	£22,374,040	£14,703,190	£500,083	£2,223,457	£1,890,717	£34,125,925
Union	£2,100,000	£33,417,987	£12,660,346	£1,256,490	£2,339,478	£4,517,666	£40,882,932
	£4,316,665	£74,724,021	£29,887,027	£2,264,527	£5,214,254	£8,920,159	£93,964,306

The profits of the discount companies in the past year increased considerably—Alexanders from £115,900 to £141,000, National Discount from £123,000 to £165,300, and Union Discount from £197,000 to £245,600—although the margin between money rates and discount rates was much smaller in 1921 than in the previous year. The supply of ordinary bills was very much smaller, and as the chairman of Alexanders pointed out at the meeting, "had it been our misfortune to have had to rely on the supply of bank and commercial bills for our profit we should indeed have been in a bad way, but once again an unending supply of Treasury bills has supplied all our needs, in the early part of the year when they were on tap and more recently since they have been offered by tender." Each of the companies, it will be seen, has largely increased its holdings of investments. In drawing attention to the company's higher investments, the chairman of the National Discount Company remarked that the yield on the investments was considerably higher last year than in 1920.

The outstanding fact which emerges from an examina-

tion of the bank and discount companies' figures is that the difficulties of the post-war period, which for them have been quite as serious as those of war time, have been met and overcome in a highly creditable manner, and that their strength remains unimpaired.

TRADE UNION AMALGAMATIONS.

(BY OUR LABOUR CORRESPONDENT.)

ALTHOUGH the new year is but begun, the establishment of two new trade union amalgamations is to be recorded. At the beginning of January the Transport and General Workers' Union came into existence, to be followed by the new amalgamation in the wool textile industry. So far as internal development is concerned, the keynotes of trade union policy since the opening of the twentieth century have been federation and amalgamation. In almost every industry these processes have taken place. Partly, no doubt, the movement towards consolidation is the result of practical considerations. That is to say, it has been a response to the growth of combinations, and to the increasing scale of capitalist organisation. But it is also the outcome of new trends of thought. Though Syndicalism in the decade before the war never captured the imagination of British labour, its emphasis upon the producer made a powerful appeal; for it supplied what Collectivism lacked. The synthesis between Collectivism and Syndicalism was provided at least tentatively by Guild Socialism, which incorporated the principle of industrial self-government with that of the public ownership of the means of production. The doctrines of the Guild Socialists have exercised considerable influence on the trade union movement, as may be seen from the resolutions adopted at recent Trades Union Congresses and Labour Party Conferences. Before the rise of Guild Socialism, Syndicalism, and Industrial Unionism stimulated the idea of trade union consolidation. The guildmen, by their active propaganda, have assisted the movement, and given the trade unions a new importance in Labour theory.

The movement began before the war, the chief example being the National Union of Railwaymen, which was an amalgamation of three unions. It was hurried on during the war. The Triple Alliance and the National Federation of General Workers—both important federations—sprang into being during the war period. The post-war period saw the foundation of several large amalgamations—the Union of Post Office Workers, the Amalgamated Engineering Union, and the Amalgamated Society of Woodworkers may be cited as examples. It might have been thought that the trade depression would for the time have put an end to large schemes of unification. There are two reasons, however, why this should not be so. In the first place, an amalgamation is a long business. There are lengthy negotiations between the executives of the various unions concerned regarding contributions, benefits, accumulated funds, and other similar questions. These negotiations, commenced in a time of good trade, may be prolonged into a trade depression. Secondly, the misfortunes which befall trade unions during periods of serious unemployment are a reason for promoting amalgamations rather than excuses for postponing action.

The Transport and General Workers' Union is an amalgamation of dock and road transport unions, the chief of which was the Dock, Wharf, Riverside and General Workers' Union, more generally known as the Dockers' Union. This union and the National Union of Dock Workers, another constituent body of the new organisation, arose during the 'eighties of last century, and both were products of the great trade union revival which spread the doctrine of organisation to the transport workers and semi-skilled labourers. The Dockers' Union has exercised an important influence in the Labour movement. Since the days of the Dock Strike of 1889—one of the most dramatic struggles in the history of trade unionism—it has been an active organisation. The Transport Workers' Federation was founded very largely through its efforts. The National Federation of General Workers superseded the more informal General Labourers' National Council, mainly through the instigation of the

Dockers' Union, and it has been the moving spirit in the establishment of the Transport and General Workers' Union. The new union starts its career with a total membership of about 470,000, the majority of whom are transport workers, the remainder being, for the most part, factory workers, general labourers, and agricultural workers. The Transport Union will presumably gradually absorb the remaining unions catering for various grades and types of transport workers, and it may be that in the future an amalgamation will be arranged between the National Union of Railwaymen and the Transport Union. It is realised that the various transport services are very closely interwoven, and even if the railway and road transport workers and the dock and wharf workers do not combine to form one big transport union, it is probable that there will be close co-operation between the various existing unions. The Transport Union, the N.U.R., the Associated Society of Locomotive Engineers and Firemen, and the Railway Clerks' Association together represent a million organised workers, and if common industrial action were taken by them there would be an almost complete stoppage of the whole transport system. It is not suggested that any such step is contemplated, and it is certain that the energies of the new union will be directed for some time to the questions of organisation and administration involved in a large amalgamation, but the possibility cannot be ignored.

The new wool textile amalgamation is not nearly as comprehensive as that of the transport workers. There still exists in the textile areas a number of local unions. In the cotton industry, however, there are effective federations of long standing. Central organisation in the woollen and worsted industry, on the other hand, is of more recent growth. During the war there was formed a federation known as the National Association of Unions in the wool textile trade, to which about 30 unions, large and small, are affiliated. This was a great step forward, particularly in view of the consolidation of employers' organisations in the industry. The new federation assisted the movement towards co-ordination, and some of the unions, of which the chief were the General Union of Textile Workers and the National Society of Dyers and Finishers, decided to promote amalgamation. After the necessary negotiations, ballots were taken in the unions concerned, but there was not in all cases a sufficient majority in favour of amalgamation. But the two largest unions in the industry—the General Union and the Dyers, together with the Yeoman and Guiseley Factory Workers' Union, decided on complete unification, and the new organisation came into existence a week ago. It will undoubtedly be the dominant influence on the trade union side in the wool textile industry, and it can only be a matter of time before it becomes the one union for woollen and worsted workers. Even now the majority of the remaining independent unions will be almost compelled to follow the lead of the new society, and it will not be long before there is an industrial wool textile union.

The Transport and General Workers' Union and the new textile amalgamation illustrate the trend towards industrial unionism, i.e., one union for all grades of workers in each industry, though neither of them has succeeded in its first stages in securing a complete amalgamation of all the unions concerned. Nevertheless, they indicate the general lines on which trade union development is proceeding. But there is still some distance to travel before the many overlapping trade unions are merged into comprehensive organisations.

THE NEW CAPITAL MARKET IN 1921.

An article in our issue of December 31st last was devoted to showing the amount of capital raised by public subscription in the London market in 1921, the purposes for which it was raised, and the countries by which it was borrowed. In the following article we present statistics showing the form in which the capital was raised, and the average rates of interest offered on

those securities on which a definite yield is calculable. By way of explanation of the tables that follow it should be said that all yields are less tax, the yield of securities offered "free of tax" being brought into line with this method by a simple calculation. Profit on redemption has been allowed for in all cases where it is necessary.

The public London issues of 1911, 1912, 1913, 1920, and 1921 are compared in the first table:—

PUBLIC ISSUES OF CAPITAL IN LONDON.

	Year 1911.	Year 1912.	Year 1913.	Year 1920.	Year 1921.
Debentures, bonds, &c.	£132,603,200	£123,064,600	£139,920,400	£134,184,300	£347,517,400
Preference stocks and shares.	21,150,700	28,674,400	22,955,500	78,235,100	21,045,300
Ordinary stocks and shares.	38,005,700	59,111,000	33,661,300	155,130,200	20,415,500
Total	£191,759,600	£210,850,000	£196,537,200	£367,549,600	£388,978,200

It is seen at a glance that 1921 saw a great change in the investment fabric for which the borrower has to cater. Issues of ordinary shares, so prolific in 1920, dwindled to a low figure under the influence of the trade depression, while preference shares were far less prominent. The year 1920 saw a great boom in short-term notes and preference shares with speculative participating rights attached. The short-term note issues of 1920 totalling about £20 millions, are included under the heading "debentures, bonds, &c." for that year. In 1921 there was only one prominent issue of short-term notes. The year 1921 saw the return to favour of the debenture for private borrowers, and a heavy campaign of Government borrowing. In 1921 the British and Colonial Governments raised £276 millions, against £49 millions in 1920. Our statistics, like those of our previous article, do not include temporary borrowings by the British Government in the shape of Treasury Bills and Ways and Means advances.

We next analyse in detail the way in which various classes of borrowers raised their capital in 1921:—

NATURE OF CAPITAL OFFERED ON THE LONDON MONEY MARKET.

Analysis.	Total for Year 1921.	Ordinary Stocks or Shares.	Preference Stocks or Shares.	Debentures, Bonds, &c.	Total for Year 1921.

Total	£367,549,600	£20,415,500	£21,045,300	£347,517,400	£388,978,200

After deducting loans by Governments and municipalities at home and abroad, about £83 millions are left of the 1921 total, of which about half was raised in the form of debentures, and one quarter each in the form of ordinary shares or preference shares.

We pass now to the question of the rates which borrowers had to pay. The average rates paid on Government and municipal stocks and company debentures, &c., works out at 6.39 per cent. for 1921, as against 6.97 per cent. in 1920, and 5.07 per cent. in 1913. The substantial decline in 1921 is due mainly to the great increase in the volume of Government borrowing at comparatively low rates. The usefulness of this figure as a guide to conditions in the market being impaired by the wide divergence between the prestige and stability of various borrowers, we give further tables analysing in more detail the types of borrowers and the average rates they had to pay. The first comprises British, Foreign, and Colonial Governments:—

BRITISH, COLONIAL, and FOREIGN GOVERNMENT SECURITIES.
(000's omitted.)

	(a)	British Government Loans.	Colonial Government Loans.	Foreign Govt. Loans.	Total.	Total.
	Year 1913.	Year 1920.	Year 1921.	Year 1920.	Year 1921.	Year 1921.
Yielding over 5½% to 4%	£4,000	..	..	..	..	..
" " 4% to 4½%	21,329	..	..	..	..	..
" " 4½% to 5%	7,663	..	..	..	..	..
" " 5% to 5½%	11,178	..	..	..	..	..
" " 5½% to 6%	6,675	7,500	186,417	4,470	2,650	12,970
" " 6% to 6½%	..	..	..	6,500	63,500	6,500
" " 6½% to 7%	..	..	..	7,500	3,520	11,020

" " 7½% to 8%	..	..	..	..	455	455
" " 8%	..	..	..	..	1,930	1,930
Total	£52,437	19,715	197,547	11,970	73,650	5,905
Average yield	4.77%	6.98%	5.7%	5.54%	6.42%	7.49%

† Represents borrowing at over 6%. (a) This total of £52,437,000 represents £26,279,000 on behalf of Colonial Governments, at an average yield of 4.15%, and £26,158,000 on behalf of Foreign Governments, at an average yield of 5.31%. There were no Foreign Government borrowings in 1920 on the London market.

The figures reveal a decline of 1.78 per cent. during 1921 in the average rate which the British Government had to pay for its capital, and the 1921 rate of 5.7 per cent. would be lower were it not for the inclusion in the statistics of net sales of National Savings Certificates, on which the yield if held to redemption runs to 7½ per cent. Colonial Governments, on the other hand, had to pay a considerably higher rate on a very much larger volume of borrowing. The foreign Governments that appeared in the market had to pay an average of about 1 per cent. more than Colonial Governments.

British municipalities had to pay almost the same rate as in 1920—6.22 per cent., against 6.24 per cent., or about ½ per cent. more than the average rate paid by the British Government. How industrial debentures raise the average rate for all Government, municipal, and debenture borrowings is shown below:—

INDUSTRIAL and COMMERCIAL BONDS, DEBENTURES, &c.

	Year 1913.	Year 1920.	Year 1921.
Yielding over 3½% to 4%	£60,000	..	..

" " 8% to 8½%	..	12,122,900	7,655,700
" " 8½% to 9%	..	5,702,400	3,837,900
" " 9%	..	3,437,500	1,935,100
Total	£25,086,000	£36,263,400	£39,896,000

Average yields

† Represents capital yielding over 6%.

The average rate on industrial debentures thus rose fractionally in 1921. The same is true of preference stock and share issues. The average rate paid on new issues of preference stocks and shares was 8.39 per cent. in 1921, as compared with 8.09 in 1920, and 5.74 in 1913. There has been practically no railway borrowing during the years 1920 and 1921, the totals being £1,116,000 at a yield of 6½ per cent., and £630,000 at an average yield of about 8 per cent., respectively on behalf of foreign railways. In 1913 the average yield on £39,469,699 of borrowings on behalf of Indian, Colonial, and Foreign railways was 5.22 per cent.

That the record of the rates paid by borrowers during 1921 does not offer greater evidence of decline seems at first sight strange, since so great a fall in money rates had taken place before the end of the year. In spite of the decline in Bank rate, and a striking fall in money rates, the rate paid on new industrial debentures rose in 1921. The following table gives the average Bank rate, the average three months' bill rate, and the rates paid on industrial debentures, and on all Government borrowings, in 1913, 1920, and 1921 respectively:—

	Average Bank Rate.	Average 3 Months' Bill Rate.	Average Rate on Issues of Industrial Debentures.	Average Rate Paid by all Government Borrowers.
	%	%	%	%
1913	4 15 5	4 7 5	5.5	4.77
1920	6 16 4	6 7 11	7.92	6.05
1921	6 2 4	5 4 3	8.09	6.49

in dollars or other currencies

It must, however, be remembered that Bank rate remained at 7 per cent. for nearly four months, and then descended only by ½ per cent. at a time in April, June, July, and November respectively. The average Bank rate for the first half of 1921 was £6 16s per cent., as compared with £6 8s 7d per cent. for the first half of 1920.

THE COTTON TRADE IN 1921.

(BY OUR MANCHESTER CORRESPONDENT.)

THE year 1921 in the Lancashire cotton industry will long be remembered as probably the worst twelve months ever experienced in the history of the trade. Quite apart from the limited demand met with, the losses of merchants mainly through the depression in values were of a serious character, and for some time leading firms have felt the financial stringency very acutely. Recently failures have increased in number, and from week to week rumours are being circulated of old-established firms being in a tight position. Spinners and manufacturers were unable throughout the year to secure orders at prices which cover the cost of production, and most producers on several occasions had to go into the question very closely as to whether it was more economical to close down entirely, or accept contracts at a loss, in order to provide employment and keep the operatives together.

Fully middling American cotton on the spot in Liverpool was quoted on January 3rd at 9.99d. Trade demand was poor, and prices tended to be easier, the lowest quotation of the year, 7.13d, being reached on February 28th. There was comparatively little change in values during the next month or two, the figure on June 30th being 7.85d. A more bullish feeling prevailed in August, and by the 31st the price had advanced to 11.05d. The upward movement continued, and on September 29th the highest price of the year, 15.71d, was registered. A distinctly easier tendency followed, the figure on October 31st being 12.49d, whilst on November 30th 11.30d was posted. On December 30th the quotation was 11.71d. The outstanding event of the year was the way in which traders were misled by the Agricultural Bureau of the United States Government. In the middle of the summer it looked as though the crop for the season was a complete failure. The rise in prices which began at the end of August, and continued throughout September, stimulated demand in yarn and cloth, and a larger business was done in the belief that lower values were most improbable. More recently it has been found that the Agricultural Bureau miscalculated the probable yield, as a result of faulty acreage returns. At the beginning of October, according to the Government, the output would only be about 6,500,000 bales, but in December an official forecast of the crop of 8,340,000 bales was published. Trade organisations in Lancashire have passed strong resolutions about the discrepancy, and protests have been made to the United States Government. On January 3rd the quotation for fully good fair Sakellaris Egyptian cotton on the spot in Liverpool was 21d. On February 28th the lowest quotation of the year, 13d, was posted. By the beginning of June the rate had advanced to 16d, and the market was steady for several weeks. The month of September brought higher values, and on October 4th the highest rate of the year, 30.75d, was registered. There followed a rapid downward movement to 23d on November 3rd, and 20.50d on December 1st, whilst on December 30th the quotation was 21.50d. Last week the

figure was 19,50d. The Egyptian crop for this season is expected to be very poor, and the Government has estimated the yield at only 3,300,000 cantars.

Spinners of yarn throughout the year had a wretched experience. The position became worse almost from month to month. It was impossible to sell the output of the machinery at figures which did not show a loss. Short time on an organised scale was started in the Egyptian spinning section in October, 1920, when it was decided to run the mills only 35 hours a week instead of the usual 48. In the following December spinners using American cotton resolved to work only 24 hours a week. This organised curtailment of production continued until last July. About that time there was a slight improvement in trade, and it was decided to abandon the official scheme of short time. There was no real improvement in business, and the mills worked very irregularly. Rather more orders were booked in September, but the increased demand soon fell off, and in November there was another ballot of American spinners as to restricting the production by 50 per cent., but on the result being made known it was found that the Masters' Federation had not secured a sufficient majority to put the proposed scheme into operation. Throughout the year it was a struggle for spinners of both American and Egyptian yarns to make ends meet, and most of the contracts secured were at prices very little better than stopping machinery. Owing to the large number of looms idle for want of orders, the total consumption of twist and weft was comparatively small. During the latter half of the year there was a distinct improvement in the demand from abroad. A big business was done for China, especially in twofold descriptions, and more recently buying has been on a much freer scale for India. Trade was also rather better in cops for Germany and Holland.

The following is a comparative table of yarn shipments, particulars being given of 1913, the year before the outbreak of war, and the two last years:—

	Lbs.	£
1913	192,968,400	13,751,785
1920	139,826,200	45,330,682
1921	129,856,800	21,512,734

During 1921 Germany, Bombay, Roumania, and Bengal increased their takings of yarn, but there was a falling off in the exports to France, the United States, Belgium, Turkey and Sweden.

It was a deplorable year for manufacturers of cloth. Compared with the boom period of 1919-20, a remarkable change presented itself. Now and again there were spurts of buying, but the activity did not last very long, and the orders secured were not sufficient to strengthen the position of sellers. One of the outstanding features was the extensive depreciation in the value of stocks, and this led to great trouble in the completion of contracts. The demand from India was very discouraging. The political unrest abroad was largely responsible for the dull state of affairs. The Gandhi agitation and the boycott of foreign goods had a serious effect upon Lancashire trade. The monsoon was excellent in every respect, and the good crops should have a favourable effect upon trade in the near future. Buying for China was very irregular. Since the turn of the half-year there has been more activity in standard goods and fancies. Stocks in Shanghai are much smaller than a year ago. Recently there has been rather more business for Java and the Straits Settlements. The outlets of the Near East were adversely affected by the uncertain political situation, but in September there was an extensive buying movement for Egypt, the Levant, and Persia. Trade with South American outlets was blocked by the unfavourable position of exchange. A few months ago there was an improvement in the demand for certain of our colonies, and houses with connections in Australia and Canada reported a larger turnover. In view of the trade depression, it can easily be imagined that unemployment in the weaving towns of Lancashire during the year was on a very extensive scale. The home trade houses experienced big losses, especially during the first half of the year. A slack state of affairs prevailed for calico printers, bleachers, and dyers. Although several cases of financial difficulties were reported, it is satisfactory to know that no really important failure took place.

The following is a comparative table of cloth shipments:—

	Yards.	£
1913	6,544,866,100	90,292,766
1920	4,188,511,700	295,630,641
1921	2,572,385,600	125,293,291

During 1921 exports increased compared with the previous year to Bengal, Morocco, Germany, and Roumania, but there was a big falling off in the shipments to Bombay, China, Turkey, British West Africa, Egypt, and the Argentine Republic.

The only labour dispute of importance during the year was in June, when the operatives resisted the wages reduction of the masters, and were locked out for three weeks. The original demand of the employers was for a drop of 95 per cent. in list rates, which meant a decline on current wages of about 30 per cent. After extended negotiations, a settlement of the trouble was reached. The agreement provided for an immediate reduction in list rates of 60 per cent., or 3s 10d in the £ on current wages, and a further drop of 10 per cent. on list rates, or 7d in the £ on current wages, in six months. The agreement expired on December 24th, but it was part of the settlement of last June that if either side wished to make a further change in list rates, three months' notice would have to be given. The masters now want to alter this condition, and substitute one month's notice. A joint conference of employers and trade union officials was recently held in Manchester, when the suggestion was discussed. It has now been decided that no change shall be made in wages until April 24th, and that a month's notice shall be given by either side. It may be pointed out that the operatives are now being paid on a basis of 145 per cent. above list rates, or 140 per cent. higher than the wages existing in July, 1914.

During the last few weeks there has been an increased inquiry in yarn and cloth in the Manchester market. Although business has not been on a large scale, there has been an increased turnover in certain sections at very low rates. Numerous merchants, however, owing to lack of funds, are not in a position to adopt a policy of enterprise. The trade situation in many outlets abroad is not all that could be desired. On the other hand, stocks of manufactured articles are being reduced, and in certain styles dealers are in need of supplies. The political outlook in India remains uncertain. Recently there has been some improvement in the demand for China. In other parts of the world Lancashire goods are required, but financial matters and the irregularities in exchange rates prevent a revival of demand. Spinners of yarn are hampered at every turn, and it is impossible to sell, except at prices which mean a definite loss. The position cannot improve until more looms are running. Taking the trade as a whole, there is every likelihood of 1922 being more encouraging than the year which has just closed, but progress towards better times will probably be slow. The Lancashire cotton industry depends for its life upon foreign trade, and, owing to the disturbed conditions throughout the world, an important revival of demand cannot be expected immediately.

AUSTRALASIAN LAND COMPANIES.

THE comparatively low prices ruling for produce and the high costs of production combined with heavy taxation have made the past year one of great difficulty and anxiety to all engaged in the Australasian agricultural industry. Apprehensions, however, arising from hasty legislation, which affected in some parts the full development of the industry, appear to be giving way to a more hopeful outlook, especially as the horizon is not without signs of a better feeling towards outside British and foreign investors.

Although climatic conditions in the first half of 1920 were not favourable for agriculture generally throughout Australia and New Zealand, the weather which followed up to June, 1921 at least, on the whole must be regarded as fairly satisfactory. Thus, in considering the position of Australasian land companies as revealed by the accounts

and reports of a group of representative undertakings, attention must be paid to the period covered by accounts. Government control of Australian wool ended on June 30, 1920, but the British Australasian Wool Realisation Association, Limited, took over the balance of unsold wool for realisation on behalf of the British Government and growers. As a further assistance to stabilise wool prices the Commonwealth Government prohibited the sale or export of wool from Australia unless guarantees were forthcoming not to sell under the reserves fixed by the Association. Whatever views may be held as to the merits of wool control, it is of interest to observe that the directors of Dalgety and Company in November of last year reported that "prices obtainable for wool show a substantial recovery." In livestock the position, although at present depressing for the industry, is not without redeeming features; the position was aptly summed up by an official of the Australian Agricultural Company, who wrote that "the company's stock and runs could scarcely be in a better condition, whilst the fat stock market could hardly be worse." It is only too evident that present freight costs for frozen meat, and increased freezing charges followed with low selling prices in home markets, are rapidly bringing conditions prevailing in this branch of the industry to a climax. There is, however, some consolation in the fact that there has been a good wheat harvest, and excellent returns are shown from dairy produce.

In our first table we show the total assets of ten of the most important companies for the past year, with land interests and cash and investment items shown separately, compared with a pre-war year:—

	1912-13. Land, &c.	1920-21. Land, &c.	1912-13. Cash and Invest- ments.	1920-21. Cash and Invest- ments.	1912-13. Total Assets.	1920-21. Total Assets.

South Aust. Land Mort.	205,001	162,237	74,130	101,414	319,817	284,900

* Overdrafts, &c., £263,091.

In examining assets, and also liabilities, a comparison of figures with a pre-war year shows that there is a distinct lack of inflation. It would perhaps be better if some common practice could be adopted for valuing investments. Some companies are content to show them at cost, with no explanation, while others value at cost and build up what may be probably ample reserves against depreciation. Others follow the third course of showing investments at market value. In one instance the auditors take a courageous lead in this matter, and publish in their certificate the exact amount of depreciation.

Under investments of Australian Agricultural is included shares in Hebburn, Limited, at £265,000. It would be interesting to know the basis of valuation for this item. Australian Mercantile Land and Finance show lumped together in one item loans on land, fixed deposits with bankers, and properties owned by the company. It would perhaps be better if the separate amounts could be given. Dalgety and Co.'s main business consists of financing farmers and others by loans, and under land, &c., in the above table, we have recorded the advances of the company against land and agricultural produce. The New South Wales Land includes, under property and mortgages, £104,650 of fully-paid shares in other companies, but the amount of dividend revenue from this source is not stated separately. Cash in hand or at bank is not revealed in the accounts of the New Zealand and Australian. This is, however, explained by the item of bank overdrafts, which are taken into consideration less cash at bank and on hand. For the New Zealand Loan and Mercantile under "land" we have placed "secured loans and other advances," this being the main item in assets.

The next table shows the fully issued loan and share capital of these undertakings together with reserves:—

	1912-13. Loan Capital.	1920-21. Loan Capital.	1912-13. Pref. and Ordinary Capital.	1920-21. Pref. and Ordinary Capital.	1912-13. Re- serves.	1920-21. Re- serves.
Australian Agricultural	£	£	£	£	£	£
Aust. Est. and Mortg.	2,250,894	1,928,949	476,762	800,000	201,099	157,248
Aust. Merc. Land, & F.	1,913,340	1,898,640	520,000	807,980	160,000	154,216
Australian Pastoral	93,000	110,000	932,500	932,500	576,912	534,556
Dalgety and Co.	2,639,613	2,584,345	1,500,000	1,500,000	418,595	520,148
N.S.W. Land & Agency	160,000	150,000	261,450	261,450	79,532	75,177
N.Z. & Australian Land	685,900	677,400	2,500,000	3,000,000	912,876	520,636
N.Z. Loan and Merc.	1,700,000	1,700,000	1,823,514	2,000,000	347,165	682,305
Scottish-Aust. Invest.	354,900	306,300	1,100,000	1,100,000	134,870	466,339
South Aust. Land Mort.	114,950	30,450	139,405	139,415	54,685	75,706

Share capital has not been increased to the extent prevailing in most industries, and it may be observed that debenture capital is being slowly but substantially reduced. Reserves shown in our table include sums at the credit of profit and loss accounts. An examination of our columns comparing these reserves reveals, in many cases, sad raids which directors have had to make in this direction. It is, however, difficult to draw conclusions from figures of the Australian Agricultural Company, as the balance-sheet for 1913 contains several suspense and contingency items which we have not included. A year ago Dalgety's figures under "reserves" stood at £1,309,500; in the year under review, although the main reserve fund was increased by £50,000, bringing the total up to £850,000, the balance at profit and loss account was reduced from £338,506 to £194,112. A curious practice is observed by the New Zealand Loan and Mercantile in recording debentures outstanding. Under liabilities, debentures figure at £2,000,000, while on the other side under assets appears an item of debenture stock held by the company amounting to £300,000; this company, as observed later, reduced its reserve during the year.

In the following table profits for the past two years are compared with those for 1912-13, together with rates per cent. of distribution on ordinary capital. Profits are struck after deducting loan interest:—

Company.	1921. Year Ending.	Profits.					
		1912-13.	Ord. Div. Rate.	1919-20.	Ord. Div. Rate.	1920-21.	Ord. Div. Rate.

* Free of income-tax.

If figures of profits, given above, are compared with our table of capital employed in these companies, it will appear strange, perhaps, that such substantial dividends can be declared, but these profits are usually shown after Australian and British taxes are deducted. To give some idea of the proportion of profits which goes in payment of taxes, Dalgety and Co. made a trading profit of £689,169 for the year ended June 30, 1921; working expenses absorbed £310,318, and debenture interest £103,386, while Australian and English taxes swallowed £134,858, leaving £140,606 for net profits.

As will be seen from our final table quotations for stocks and shares show interesting fluctuations. Based on prices prevailing at the end of 1921 some generous yields are obtainable, and, moreover, these yields are in most cases free of tax:—

Name of Company.	Amount.	Paid Up.	Price July 30 1914.	Price End of 1920.	Price End of 1921.	Yield.
Australian Agricultural	5	5	84	5	4½	5 2 3

† Free of income-tax.

It is not improbable that shares in many Australasian land companies would appeal more to the general public if the liability attached to the uncalled capital could be removed, and it is difficult to see why the lead in this direction set by joint-stock banks could not be followed.

The future has encouraging prospects. The freightage question may tend to right itself. The empty outward voyage is a passing phase, and with a better tendency to acquire European manufactures, Europe, revitalised, will demand in return a heavy share of Australasian agricultural products.

Notes of the Week.

Scottish Railway Wages Award.—The National Railway Wages Board has given its decision on the appeal of the Scottish railway companies referred to in our issue of January 14th. The Award is signed by the chairman, by the four representatives of the users of the railways, by the six representatives of the railway trade unions, and by four out of six of the general managers representing the railway companies, the two general managers representing the Scottish companies alone dissenting. On the wages question the Award agrees to the removal of the special advance made in June, 1920, but instead of the decrease being immediate, it is to be withdrawn, as the cost of living falls, by doubling the reduction which should normally take place under the sliding scale, until the special addition is removed. It is not certain whether the Board would make a similar decision in favour of English railways; for while the companies urged that conditions justified special treatment for Scotland, the men refused to admit the argument. The award does not say which view the Board accepted. The Award makes no alteration in the rules as to night duty, but increases the age at which railway servants secure adult earnings from 18 to 20 years of age, though the Award must not in itself be held to be a justification for regrading as a "junior" position any post which is now graded as an "adult" position. On the difficult problem of the eight-hour day, the tribunal observes that its introduction "was not the subject of that minute examination and discussion between the companies and the employees which so considerable an innovation deserved and would normally receive. Its operation has been marked by an inflexibility which, as regards some grades of employees, the conditions of railway service do not easily support. In the view of the Board the evidence submitted sufficiently established this point. The question, therefore, resolves itself into one of how the necessary degree of flexibility can be introduced." The Board has not ventured to interpret the eight-hour principle either in the company's sense of eight hours' actual work or in the employees' sense of eight hours' duty. But in order to give substantial relief in the cases where the principle works badly, they have decided that in cases where economy will accrue men may be rostered up to nine hours a day provided the additional hour is paid for at an agreed overtime rate. They also confirm the arrangement under which men may work five long terms and one short term in the week. Finally, they consider that a spread over up to 10 hours a day, and in some cases even up to 12 hours a day, may be put into operation where men can be booked off and freed from duty for the period in excess of the rostered day. Special provision is made for determining disputed cases under this concession. It is a hopeful augury for future harmonious relations in railway service that the men's representatives have agreed to this concession, which obviously will restore greater elasticity in the application of the eight-hour principle. The fact that they are concurred in by so overwhelming a proportion of the Board will, we think, carry great weight as against the contention of the dissenting general managers, who declare that "the findings fall far short of meeting the necessities of the Scottish railway companies, and would only in small measure relieve them of the enormous burden placed upon them by the universal application of the eight-hour day—a burden which neither the Scottish railway companies nor the industries of Scotland can bear."

Coal Output.—The production of coal from the mines of Great Britain for the week ended January 14th showed a recovery from the lower totals of the holiday period, the total amounting to 4,719,100 tons. This compares with the output for the three previous weeks as follows:—

Districts.	Dec. 24.	Dec. 31.	Jan. 7.	Jan. 14.
	Tons.	Tons.	Tons.	Tons.
Northumberland.....	240,200	205,400	163,100	254,000
Durham.....	647,900	453,800	405,900	616,700
Yorkshire.....	869,400	386,700	729,300	867,800
Lancashire, Cheshire, and North Wales.....	414,700	270,200	285,800	403,000
Derby, Nottingham, and Leicester.....	621,500	244,500	527,600	596,200
Stafford, Shropshire, Warwick, Worcester.....	366,300	149,900	307,800	341,200
South Wales and Monmouthshire.....	1,002,100	616,900	898,600	927,900
Other English districts..	90,300	45,400	74,300	89,200
Scotland.....	713,000	676,200	281,600	623,100
Total.....	4,965,400	3,049,000	3,674,000	4,719,100

In the week ended January 15, 1921, the production was 4,897,700 tons.

Shipbuilding in 1921.—The Annual Summary of the Mercantile Shipbuilding of the World, published by Lloyd's Register, states that the total gross tonnage of merchant vessels launched in the United Kingdom during 1921 amounts to 1,538,052 tons, of which 946,182 tons are intended for registration in the United Kingdom and 591,870 tons are for owners residing abroad. The totals for 1921 are 517,572 tons less than for 1920, which remains the record year. The output of the leading shipbuilding districts is as follows:—Glasgow, 358,347 tons; Newcastle, 354,813 tons; Greenock, 146,842 tons; and Sunderland, 144,280 tons. The largest decrease during 1921 has taken place on the Clyde, where the tonnage launched is 175,277 tons lower than during 1920; the decrease for the Wear is 170,174 tons, and for the Tees 105,013 tons. The total launched abroad during 1921 amounts to 2,803,627 tons, a reduction of just over one million tons as compared with 1920. The countries where the largest output has taken place during the year are:—United States, 1,006,413 tons; Germany, 509,064 tons; Holland, 232,402 tons; Japan, 227,425 tons; France, 210,663 tons; and Italy, 164,748 tons. The totals for the United States are nearly one million and a-half tons lower than in 1920. For the first time since 1913 complete figures are available for Germany, and totals for that country include 40 vessels of between 4,000 and 7,000 tons, 13 of between 7,000 and 10,000 tons, and one vessel of about 14,000 tons. The totals for Holland, France, Italy, Denmark, and Sweden are the highest on record in each case. The world's total output for 1921 reached 4,341,679 tons, a decrease of about 1½ million tons as compared with 1920, but the totals still exceed by over a million tons those for 1913, which was the pre-war record year for the world. The total figures comprise 167 vessels of about 1,195,000 tons to be fitted with steam turbines; they also include 151 vessels of about 1,050,000 tons built to carry oil in bulk. Of the 1,377 vessels launched in the world during the year, 47 are of over 10,000 tons each. During the four years 1918-1921 the total addition to the world's merchant navies by new construction amounts to nearly 23 million tons. The annual summary draws special attention to the present circumstances, and to the immediate future, of the shipbuilding industry of the world, and points out that although the tonnage under construction at the end of 1921, viz., 4,457,093 tons, is no less than 2,722,000 tons lower than in December, 1920, even the present reduced figures are not a correct index of the position of the shipbuilding industry unless certain factors be taken into consideration, such as the very large number of vessels, included in the totals, the construction of which is now suspended, and the fact that the orders for new vessels have been for some time and are now far below those in normal times.

Economy in the Army.—The problem of getting the maximum result from the lowest possible expenditure which is exercising the minds of the fighting services no less than of the civilian departments of the Government, has raised the question of the economy which may be secured by the widest possible adoption of mechanical and modern scientific methods into all branches of the army. In this connection a Service correspondent has forwarded to us some very striking figures comparing the annual cost and the fighting efficiency of normal units and mechanical (tank) units respectively:—

	Per-sonnel.	Armament.	Total Annual Cost Including Replacement.
Cavalry Regiment—			£
Normal.....	550	{ 20 machine guns 300 rifles..... }	144,240
Mechanical.....	400	108 machine guns....	196,300
Infantry Battalion—			
Normal.....	1,000	{ 40 machine guns 500 rifles..... }	204,485
Mechanical.....	350	84 machine guns....	135,025
Field Artillery Brigade—			
Normal.....	700	18 guns, 6 howitzers	184,875
Mechanical.....	400	18 guns, 6 howitzers	162,850

From this table it will be seen that in the case of all arms, except cavalry, the balance is in favour of the mechanical unit. Combining the figures, and assuming a force of three cavalry regiments, three artillery brigades, and twelve infantry battalions—roughly one-sixth of the Expeditionary Force of 1914—the saving amounts to £3½ million out of a total normal cost of less than £3½ millions. It is, however, claimed that the advantage is enormously greater when account is taken of comparative fighting efficiency. The maximum speed of normal cavalry may be put at 16 miles an hour, its average rate of movement at four to five miles an hour, and its daily limit of endurance at 30 miles when operations are continuous. The maximum speed of a cavalry tank may be taken at 25 miles an hour, its average rate of movement at 10 miles an hour, and its daily endurance at 150 miles. The maximum speed of field artillery may be put at 8 miles an hour, its average rate of movement at 2½ to 4 miles an hour, and its daily endurance limit at 25 miles. The rates of movement of artillery tanks may be put at, maximum 15, average 10, miles per hour with a daily endurance of 75 miles. The maximum speed of infantry (for a very short distance) may be put at 5 miles an hour, its average rate of march at 2½ miles an hour, with a daily limit of 15 miles. The maximum speed of the infantry tank may be assumed to be 20 miles an hour, its average rate of movement at 10 miles an hour, and its daily limit at 50 to 75 miles. Further, mechanical cavalry has a firing capacity of three times that of the normal cavalry unit, and the mechanical infantry of 1½ times that of the normal infantry unit. Taking these various factors into consideration, it is urged that the true comparison of expense for equal fighting efficiency is, in the case of mechanical cavalry, 45 per cent., mechanical artillery 88 per cent., and mechanical infantry 40 per cent. of the cost of corresponding normal units. If these ratios are applied, the cost of the combined forces referred to above would be reduced from £3½ millions to £1¼ millions, a saving of 50 per cent. General Horne has reminded us that we should cast from our minds the possibility of a repetition of the conditions of the Great War, and must assume that the small wars for which we must prepare will be of the "open warfare" type for which our pre-war army was designed. It is sometimes assumed that mechanical methods are not suited to wars of this character. There would undoubtedly be difficulties in waging war by means of tanks in distant countries, notably in connection with transport of fuel supplies. But the supporters of a mechanical army are able to urge a certain amount of successful experience in this respect. It is admitted that mechanical units alone cannot fulfil all requirements of present-day tactics, but in the future, as in the past, tactics will always adapt themselves to new weapons. So long as we have to maintain armed forces for policing the troubled quarters of the globe the tax-payer is interested to obtain the greatest possible value for his money. We think the case

of our correspondent is a strong one, and vested interest should not be allowed to stand in the way of a fair consideration in organising the army of to-morrow.

Progress in Mesopotamia.—A correspondent writes:—After the apprehensions as to the future of Mesopotamia which have been aroused by the provisions of the Franco-Turkish Treaty of Angora, it is reassuring to learn from the "well-informed observer" of the country whose testimony is published in the *Times* of January 14th, that prosperity is increasing, and that the tribes generally desire to retain the British Divisional Advisers, and value their advice. Native capital is ready to be invested in the roads, railways, power stations, and irrigation works which are necessary for the economic development of the region, and are really desired by the wealthy sheikhs and the large landowners of Baghdad. There can be no great engineering difficulties, and labour can be furnished by the tribes at a very low cost. What is chiefly needed is some means of ensuring tribal co-operation for works of common benefit; but as the country settles down this difficulty may be overcome. The leaders of the risings of 1920 have been amnestied, and there is reported to be no trace of animosity against the British. If the country is only allowed to use its very limited man-power in development rather than in the defence of its immense frontiers, it may in a few years' time be rich enough to raise a loan in Europe on the security of its revenues from cereals and oil. Unfortunately, until the Treaty of Sèvres is ratified—or reconstructed—British advisers are in the country merely as a consequence of the British military occupation; but the only opposition now manifested comes from the Shabibah ("youths"), a sort of "Young Arab" party (Syrians and natives, some of them in Government service), with the confidence and the ignorance of youthful politicians everywhere. But the tribes and the urban population generally suffered quite enough in 1920 from misguided Nationalism.

Births and Deaths.—The provisional returns of births and deaths in England and Wales in 1921 issued by the Registrar-General on Thursday show that the death rate is the lowest on record for the country as a whole at 12.1 per 1,000 of total population at the 1911 Census, which compares with 12.4 for 1920 and 14.3 for 1911-15. Infant mortality was 82 per 1,000, as against 80 in 1920 and 110 in 1911-15. The birth rate at 22.4 per 1,000 compares with 25.4 in 1920 and 23.6 in 1911-15, but is well above the average of the war years.

The Hague Rules.—The proposal in regard to the Hague Rules was that they should be adopted so as to be effective in relation to transactions originating after the end of the present month of January. The indications are that, though the Rules will not come into general use on any fixed date, they will be incorporated during the next few weeks in the bills of lading issued by a number of leading shipping lines. The scope and purpose of the Rules were fully explained in an article in the *Economist* on November 19th, and it will be recalled that they constitute a code of conditions defining the risks to be assumed by sea carriers from the loading to the unloading of the goods. The code, being intended for international use, is worded so that it is independent of any national laws, but in substance the basis of contract resulting from the incorporation of the Rules is that the goods are taken at carriers' risk. In other words, the relations between cargo owner and carrier are similar to those obtaining in shipments under the American Harter Act, or the corresponding Canadian or Australian Acts. There are, however, divergencies between the legislative measures, and the standardisation of the conditions, besides meeting the long-standing complaints of shippers against the negligence clauses in bills of lading, which will be superseded, is regarded by bankers and underwriters as a matter of great convenience in dealing with large numbers of shipping documents. The Rules will bring about international uniformity in a degree not readily obtainable by promoting legislation in all the countries engaged in maritime trade. Apparently

the compromise, as between shippers and shipowners, represented by the Hague Rules is acceptable to shipowners in general. They endorsed the Rules at their International Conference in London last November, and, as already indicated, they are taking steps to revise bills of lading and use the Rules in everyday business. A certain amount of opposition to the introduction of the Rules has developed, but the great majority of commercial men, both in this country and America, appear to be in favour of their adoption. Certainly among shippers of miscellaneous cargo by liners the change has been welcomed. It was primarily in order to meet their complaints that the Rules were prepared. The opposition has come especially from members of the timber and corn trades interested in the carriage of bulk cargoes. The coal exporters have also indicated that they are not altogether in favour of the proposals. Apparently doubts arose whether the special clauses hitherto inserted in shipping documents in these trades would continue to be used along with the Hague Rules. Shipowners and those who were promoting the adoption of the Rules neglected for a long time to confer with the interests concerned, and the attitude of the latter developed into one of active opposition, counter proposals for legislation instead of international agreement being put forward. Probably no attempt will be made for the time being to introduce the Rules into the special trades where objections have been raised, but it seems to be clear that they will be put to the test of practice by the liner companies, and, if they are found to afford a basis satisfactory to the various interests concerned, their use may afterwards be extended.

The City Equitable.—No official statement has yet been issued, but we understand that on Wednesday last a hurriedly convened semi-public meeting was held at the Cannon street Hotel, at which a new committee was appointed to examine the position. The committee will co-operate with a chartered accountant, and it is hoped that within a month it will be possible for it to issue some kind of report, though not necessarily for public consumption. Meanwhile, neither rumour nor criticism is silent, the points of chief interest being the investment policy of the directors (especially in connection with industrials and real estate), the relation of the parent company with its subsidiaries (especially in matters of finance and funds), and the general likelihood of the big offices consenting to carry the burden until the City Equitable's position is restored. It may be taken for granted that if they can help the lame dog over the stile they will, but apparently no one knows yet either the weight of the dog or the height of the stile, both matters of importance. The share market is very weak indeed, and preference shareholders of the City Equitable Associated would like to know whether the task of supporting the framework of the City Equitable necessarily involves paying the preference dividend of the City Equitable Associated. A legal opinion on the guarantee would be very interesting. Can an outside combination keep the City Equitable going in any form without having to recognise its guarantee to the shareholders of the subsidiary? Unfortunately the difficulties of a big re-insurance must have a disturbing effect on the whole insurance market, since it is impossible to say what other interests are involved and to what extent, and the silence of the directors is day by day increasing the general disquiet. Never was the air so full of rumours, and while the official silence is maintained the public is apt to assume that the rumours undershoot rather than overshoot the truth. Otherwise why not meet them with a plain statement of what is going on.

Hours of Business.—Banks open at 9 o'clock in the morning and close at 3 o'clock in the afternoon; at 12 o'clock on Saturdays, in both cases an hour earlier than was the case before the war. The Stock Exchange opens at 10.45 a.m., closes at 3 p.m., and remains shut on Saturdays. Before the war, the House used to open on Saturdays until one o'clock, and to close at 4 o'clock on ordinary days, at half-past four on settling days. Both the banks and the Stock Exchange, writes a Stock Ex-

change correspondent, are being urged to revert to their pre-war hours, if only by way of setting a good example to the labour community in the matter of showing readiness to work for at least the same number of hours as those which prevailed in July, 1914. It is obvious to the City man that the Stock Exchange must be dependent in this matter upon the banks to no small extent. The old time for paying against delivery of transfers used to be half-past two, which left an hour and a-half for the arrangement of paying in. To-day, transfers need not be paid for after 1.45 p.m.; this practice has demonstrated that no loss and very trifling inconvenience are caused by the curtailment of 45 minutes. On Saturdays, as the banks close at noon, the time allowed for transfer deliveries would be extremely limited if cheques were to reach the banks before noon. The banks themselves are understood to be not unwilling to extend their hours if it could be proved that there were any real demand for the extra facility, but, as the Stock Exchange is one of the principal customers of the London banks, and there is no such demand from the House for this extension of time, the inaction of the banks is natural enough. The Stock Exchange is busy in a few markets only. There is no general activity. A small proportion of members are overwhelmed with orders, their staffs working late every night, and some of them coming up on Saturdays in order to cope with the rush of work involved by the investment boom. This, however, is by no means general, and by far the greater number, unfortunately, of Stock Exchange firms find that even the present short hours hang heavily on their hands, and that their receipts do not cover expenditure—a simple statement of fact which any Stock Exchange man will regretfully confirm. The Stock Exchange Committee, however, have appointed a sub-committee for inquiring into a mass of proposals, recommendations, and suggestions for modifying the existing regulations as soon as Treasury control is removed from the Stock Exchange. The question of business hours appears amongst these, and it may be assumed without hesitation that if business were to broaden out, to flow into the general markets of the Stock Exchange, and to assume such proportions as would give members more work to do, those members will be the first to press for an extension of working hours which, if brought into force now, would merely mean a greater waste of time than is involved while business remains so slack.

A New Form of Management Share.—A new form of management share has made its appearance in the prospectus of the Stoll Picture Theatre (Liverpool), Limited. The share capital is £380,000, divided into 379,900 ordinary shares of £1 each, and 100 management shares of £1 each. The management shares do not rank either for capital or for dividend, and are to be issued as fully paid as part of the purchase consideration. But although the management shares do not rank either for capital or for dividend, they confer upon the holders extraordinary voting rights which may obviously prove extremely inconvenient to other shareholders. Thus—to quote the words of the prospectus—"at general meetings of the company.....upon a poll.....the holders of the management shares shall in respect thereof be collectively entitled to as many votes as the holders of all the other shares for the time being issued would be entitled to upon a poll in respect of such other shares, and each of the management shares shall upon a poll confer on the holder, whether present in person or by proxy, a rateable proportion of such votes." It is to be noted that only 377,650 ordinary shares of £1 each are offered in the prospectus for subscription, thus leaving 2,250 of the total authorised issue unaccounted for. Nothing is said in the prospectus as to rights of transfer attaching to the management shares. It thus seems that those who subscribe for ordinary shares are clearly fixed with notice that as shareholders they will have no effective voting power. The prospectus makes it plain that—for weal or for woe—they must be content to leave final decisions upon all subjects to the holders of the management shares. These subjects include, of course, the personnel and the remuneration of the management, the modification or abrogation of the rights and privileges attached to the

management shares, the creation and issue of preference shares, and even the very winding up of the company by shareholders' resolution. As far as can be gathered from the full prospectus, the great body of ordinary shareholders are, in fact, effectively disfranchised. It may be doubted whether such a complete subversion of the whole spirit of joint stock enterprise as is involved by this new form of management share will be found to hold good in law. But apart altogether from this, it is hoped that the practice will not become common even when, as in this case, the sovereign control is vested in capable and experienced hands.

Power Alcohol.—A correspondent writes:—The Memorandum on "Fuel for Motor Transport" recently issued by the Fuel Research Board of the Department of Scientific and Industrial Research scarcely conveys an adequate idea of the degree of progress that has been made towards solving the problem of the supply of power alcohol on a commercial scale. But experiments carried out at the instance of one of the biggest distilling concerns in the country have produced a fuel which consists of a mixture of strong alcohol and benzol in certain proportions, and its reliability has been proved by exhaustive tests. In its general conclusions, the Fuel Research Board's Memorandum is almost uncompromisingly negative so far as the provision of supplies of power alcohol on a commercial scale in this country are concerned. As its first conclusion it states that the prospect is remote of adding materially to the supplies of liquid fuel for internal combustion engines in this country by the manufacture of alcohol from home-grown materials. Reference is made in the body of the Memorandum to the experiments that have been carried out in connection with the cultivation of mangolds and Jerusalem artichokes, the two raw materials which seem to hold out any solid hope of success. It was found that mangolds could be grown to yield 20 tons to the acre, which in turn would yield 200 gallons of 95 per cent. alcohol, while Jerusalem artichokes could only be relied upon to provide 130 gallons per acre. The only reference made in the Memorandum to the spade work put in by the distilling interests is contained in the following sentence:—"The Distillers Company, Limited, is also sending representatives to various colonies to investigate the questions of raw materials and all other relative matters with a view to considering the possibilities of starting the industries where localities and other conditions are found suitable." It is understood that the reports of the Distillers Company's representatives are not too encouraging as regards the possibility of manufacturing such a quantity of power alcohol in any part of the world as could take the place of petrol were the supplies of the latter for any reason to fail. But, on the other hand, there is not likely to be any insurmountable difficulty in the way of producing large quantities of power alcohol as an adjunct of or supplement to the supplies of petrol both at home and abroad. Reference is made in the Memorandum to the suitability of molasses as a raw material for the production of alcohol. As a matter of fact, the Distillers Company has had extensive experience of producing industrial alcohol from this product on a commercial scale, and will undoubtedly increase its output from this source so soon as cost, selling price, and demand permit. The Fuel Research Board point out that only 100 gallons of 95 per cent. alcohol can be produced from 250 gallons of molasses, and that the capacity of the existing distilleries for dealing with this raw material is only eight or nine million bulk gallons per annum. As a matter of fact, the present available distilling capacity would permit of a production of approximately 20 million bulk gallons, equal to 33 million proof gallons, so that it will be seen that even from this immediately available raw material the possible production is by no means insignificant. On the average Empire production of sugar for the last three years, the total quantity of 95 per cent. alcohol which could have been produced, if the whole of the molasses had been used for that purpose, is put at 15 million gallons, but it is added that on the basis of the world's sugar production, both cane and beet, for the same period, the resultant molasses

would have produced about 250 million gallons of alcohol, which is approximately equal to the quantity of petrol consumed in the United Kingdom during 1921.

Tin Prices and Producers.—Our mining correspondent writes:—A relapse in the quotation of tin to a level fully £15 below the best point touched during the recovery of December synchronises with the issue of poor annual statements on the part of three tin mining companies. There is no connection between these circumstances, for in two cases the accounts are of a very belated character, being made up to December 31st, 1920. The most important of the trio is the Rayfield (Nigeria) Tin Fields, which has a considerable issued capital in ordinary and preference shares, debentures, and income participation certificates. For 1920 a net loss of £21,400 was made, which fulfilled the forecast of the general manager. At the date of the balance-sheet the liquid assets comprised:—Cash, £9,900; tin, £10,900; debtors and loans, £21,200. In connection with the latter, the auditors call attention to a very unsatisfactory feature: "Sundry debtors include £9,000 due from the chairman; this amount has since been settled by the payment of £2,500 in cash, and the transfer of securities." The nature and value of the securities is not stated. It is fortunate that the directors have been able to come to an arrangement with the Niger Company for capitalisation of the substantial sum due for principal and interest. The Sha Falls Company's balance-sheet indicates that the financial resources were practically exhausted, and the directors intimate that the efforts made to discover payable tin deposits on the areas held were not successful. Negotiations are proceeding with a view to letting the property. The operations of the Benue Tin Mines in the 12 months ended July 31st last resulted in a loss of £6,400; the financial position is, however, comparatively good. Conditions in the Nigerian tin industry have recently undergone an appreciable improvement, the concessions granted by the Government in the matter of rents, royalties, &c., having been supplemented by reductions in smelting and other charges. Even the best-managed companies can, however, barely pay their way with the metal at the price to which it has now been depressed by a combination of unfavourable factors. There can be no doubt that the December spurt was partly due to purchases in anticipation of a revival in trade which has failed to materialise. In the United States the tin-plate industry is fairly well employed, but advices with respect to the position in South Wales are far from encouraging. Then substantial sales have lately taken place in the Far East in anticipation of the Chinese New Year holidays.

Electrolytic Zinc of Australasia.—The full text of the first annual report and accounts of this important industrial-mining enterprise is now available, writes our mining correspondent. A cabled summary of the directors' statement was, of course, published early in December. It intimated that, owing to the excess of constructional costs over the estimates, additional capital would be required. A leaflet accompanying the report announces that £400,000 8 per cent. debentures have been placed in Melbourne at 95; holders have the right until the end of 1923 to take up a corresponding amount of preference shares. At the date of the balance-sheet—June 30th—the paid-up capital figured at £1,786,300; machinery and plant stood for £917,400; stores, fuel, &c., £260,000; properties and equipment, £357,700; research and development work, with balance of profit and loss, £213,000. The cash deficit of about a quarter of a million then existing has been wiped out by the calls since made on the preference shares, but the need of additional resources is obvious, despite the fact that expectations in regard to the commencement of treatment operations have been more than realised. The first half of the 30,000 horse-power electrical plant started in November, and it is anticipated that the remainder will be running well before the end of this year; the production to January 25th has just been advised as 2,318 tons of zinc. The company, may be recalled, occupies an exceptional position in several respects. By a contract with the British Board of Trade it is assured of a large supply of

zinc concentrates, and through another contract between the Board and the Zinc Producers' Association it is assured of a market for its products over a term of years on advantageous terms. Further, on the supply side there are the reserves in the company's Tasmanian properties—estimated at 1,000,000 tons—as well as the further quantities which will be available from Broken Hill. The original working capital was provided by a number of British-Australian mining companies, whose shareholders were subsequently invited to subscribe for a large block of preference shares. The issued capital is now £2,200,000 in preference and ordinary shares, plus the debentures earlier referred to.

Lister's Year.—The directors of Lister and Co., Limited—the silk spinners and silk manufacturers of Bradford—are to be congratulated upon the year's progress of the undertaking as shown by the report and balance-sheet at November 30, 1921. Profits for the year ended at this date amount to £144,862, which, considering the industrial crisis through which we are passing, compare favourably with profits of £145,283 recorded for 1920. The dividend of 7½ per cent. is maintained, while including the previous year's balance brought into the accounts, a total of £171,870 is carried forward, which again compares favourably with £174,383 a year ago. The fact that dividends and profits are maintained is of more than passing interest, as the capital was increased in 1920 by capitalising a portion of reserves. Turning to the balance-sheet, total assets are down from £3,588,881 to £3,191,050. It is a pity, perhaps, that goodwill patents and property are all included in one item at £1,331,775, as it would be interesting to know the value placed upon the various assets. "Investments" at £249,550 might also be usefully more informative, and include the basis of valuation. The company have valued their stocks at £783,412, as against £881,100 a year ago, while cash and bills at £477,473, as compared with £365,885, reveals strength in liquid resources. Sundry debtors have been reduced from £709,417, and sundry creditors have fallen from £943,247 to £547,930.

Oversea Correspondence.

UNITED STATES.—MONETARY EASE—BANKING POSITION—BOND MARKET ACTIVE.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 14.

THE most noteworthy development in the financial situation here is the further marked relaxation in money. Call funds have accumulated at this centre in such volume that the rate for demand loans on the Stock Exchange fell this week to 3 per cent., the lowest point reached since the summer of 1917, with the exception of a momentary decline to 2 per cent. in November, 1917. Demand for accommodation for stock market purposes, however, continues extremely light. The rate would probably have gone lower were it not for the fact that many interests are financing their current needs with call money instead of time money, which commands a higher rate at present, although in the latter there has also been a decidedly easier tendency this week. Loans for all maturities can now be obtained at 4½ per cent. on all industrial collateral, and at 4½ per cent. on mixed collateral. Long-term borrowing has not been of large proportions, partly because of the comparatively easier call money market and partly because still lower time money rates are expected in the near future, provided there is no sudden and extensive business revival—which is about the last thing that conservative bankers, railroad and industrial interests expect. On all sides the consensus of opinion seems to be that improvement in trade and industry will continue from now on, but that it will be gradual.

The lowering of money rates, as well as easier terms in the commercial paper market, where prime names are now being discounted at 4½ to 5 per cent., is, of course, due to the further improvement in the banking position, which in turn reflects the progress made in thawing out frozen credits in virtually all sections of the country, but more particularly in the West and South. As evidence of the better credit situation, the Federal Reserve banks at Richmond, Atlanta, Dallas, and Minneapolis have lowered their rediscount rates from 5½ to 5 per cent. Throughout the Federal Reserve system the maximum rate is 5 per cent., while at three centres, namely, New York, Boston and Philadelphia, the rediscount rate is 4½ per cent. The pronounced relaxation in money, and especially the decline in the open market for bills or acceptances to 3½ per cent., the lowest rate in about four years, are taken to foreshadow a more or less general reduction in current Federal reserve rediscount rates in the not distant future. A few brief facts will serve to show the great improvement that has taken place in the banking position. For the entire Federal Reserve system rediscounts were reduced during the past week \$125,000,000, making a total decrease of \$192,000,000 since the end of December, while note circulation was reduced to the extent of \$113,000,000, making a total retirement of \$132,000,000 in the past fortnight. The system's rediscounts are now smaller in the aggregate than at any time since the middle of 1918, while the amount of reserve notes outstanding is the smallest since September of that year. As compared with their respective peaks about a year ago, rediscounts show a decrease of more than 60 per cent., while note circulation has been reduced about one-third. The Federal Reserve system's present ratio of reserve to note and deposit liabilities is 74½ per cent., the highest recorded since the middle of 1917, and comparing with 71½ per cent. at the close of 1921. The New York Federal Reserve Bank's ratio has advanced to virtually 87 per cent., as against 79.03 per cent. a week ago; it compares with a maximum of approximately 84 per cent. for last year and with 36½ per cent. last February, when credits were pretty solidly frozen throughout the United States.

Another noteworthy fact is that not less than 25 of the leading New York City banks and trust companies have entirely cancelled their indebtedness to the Federal Reserve Bank at this centre. An idea of the enormous liquidation of reserve bank loans may be gained from figures compiled by the *Wall Street Journal*. It is shown that when such loans were at the peak, 17 New York City banks had obligations to the extent of \$882,954,831, while to-day only two of those institutions are borrowing, and the total of their loans amounts to less than \$90,000,000.

The vastly improved banking situation and, in consequence, the declining tendency of money rates, have caused heavy purchasing this week of high-grade investment bonds of all descriptions by corporations, institutions, and individuals. Under the broad and active demand, prices have registered sharp advances. United States Government war obligations, in particular, have been bought on an extraordinarily large scale; many of the Liberty loan issues reached the highest prices witnessed in more than a year, while Victory notes sold at substantial premiums above par. At this week's top levels, which have been well maintained, the Government's war issues show an advance from last year's low points of approximately 12 per cent. for the Liberty bonds, and of about 4 per cent. for the Victory notes. The usual January re-investment demand has contributed to the activity in the bond market. Furthermore, the depression in trade and industry has left a great amount of surplus funds, which is now seeking employment in bonds.

FRANCE.—M. POINCARÉ'S FINANCIAL POLICY—THE YIELD OF TAXATION—INCOME-TAX—LIQUIDATION OF WAR STOCKS.

(FROM OUR CORRESPONDENT.)

PARIS, January 24.

M. POINCARÉ came before the Chamber of Deputies last Thursday with a strong programme, and secured the large majority of 472 votes to 107. This majority and the enthusiasm accorded to his speech are easily explained. For months past he has been stating in the Press and elsewhere that Germany must pay the full sums due by her to France under the Peace Treaty, and that France, with or without Allied aid, must ensure her own security. M. Poincaré, in fact, is regarded as a strong man in France, who will show more determination than M. Briand in attempting to carry the French view point. The declaration opened by M. Poincaré congratulating the Chamber and Senate on having duly passed the Budget, and of having got away from the unsatisfactory system of *douzième provisoires*; but he immediately added that it was impossible for France to have a stable financial position, unless Germany should at least execute the engagements it has undertaken. M. Poincaré indignantly repudiated the suggestion that France could be justly accused of Imperialism, and, returning again to finance, contended that Germany was deliberately encouraging disorder in her public finance so as to enable the nation to amass wealth. If Germany did not pay a really effective control must be imposed on the Budget of the Reich, on the issuing of paper money, and on Germany's exports. Most of the other points in the Premier's speech were of a political rather than of an economic importance. In connection with the Genoa Conference, M. Poincaré pointed out that France would not be represented at the Conference until guarantees had been given that none of the stipulations of the Peace Treaty should be even remotely discussed there. The declaration was very warmly received from every quarter of the house except the Extreme Left, and, in reply to a number of interpellations, M. Poincaré again insisted that Germany should meet her financial obligations towards France.

From this brief summary of the French Premier's financial policy, it will be seen there is a considerable divergence between his view and those of England. M. Poincaré and his friends, who include all except the Left and the Extreme Left, are convinced that Germany can pay and will pay, provided payment is demanded with sufficient vigour. M. Poincaré has taken office with the avowed intention of employing the necessary vigour, and he and the country are faced by three alternatives, either Germany will pay and the French financial situation will be considerably relieved, or Germany will not pay, and M. Poincaré must then employ the vigorous methods to which he has referred, or else point out to his followers that Germany is a debtor from whom the full sums that all admit she owes cannot be abstracted.

Figures are now available that give, at any rate, an approximate summary of the yield of French taxation during 1921, and consequently a general idea of the economic situation of France during the year that has just closed. From these it appears that the total amount received by the Treasury during the year from indirect taxation and State monopolies was 13,233,707,500f, or 1,112,506,200f less than the Budget estimates, which placed the expected yield at 14,346,213,700f. The following figures show the yield from the chief categories of indirect taxation, as compared with Budget estimates:—

	Actual Yield. Francs.	Inc. or Dec. as Compared with Estimates. Francs.
Registrations	2,705,416,000	.. + 139,158,000
Stamps	563,326,000	.. + 122,065,000
Bourse operations	19,425,000	.. — 13,585,500
Taxes on stock and bonds	926,425,000	.. + 265,876,000
Luxury tax	13,114,000	.. + 1,114,000
Tax on turnover	1,897,457,000	.. — 1,002,543,000
Customs (excluding sugar & salt)	1,192,966,000	.. — 831,450,000
Indirect taxation (exclusive of do)	2,404,415,000	.. + 12,008,000
Colonial foodstuffs	177,134,000	.. — 59,320,000
Salt	32,376,000	.. — 1,486,000
Sugar	352,045,000	.. — 75,148,000
Motor spirit and petroleum	166,705,000	.. + 66,584,000
Benzols	13,097,000	.. + 3,362,000

National Bank of Commerce in New York

President

JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE,
Gresham House, Old Broad Street,
London, E.C.2

Taxation on spirits and higher-priced wines (vins de luxe) yielded 462,053,000f, or 37,943,000f less than Budget estimates; taxes on wines, cider, perry, &c., which produced 578,311,000f, yielded 41,144,000f below the estimate, and those on commercial alcohols 575,589,000f were 39,649,000f less. The tax on beer, on the other hand, produced 69,172,000f, or 18,085,000f more than was expected. Other categories that yielded revenue in excess of Budget estimates were:—

	Francs.	Francs.
Tax on transports by railway	388,605,000	.. + 19,945,000
Tax on theatres, music-halls, &c. ..	48,135,000	.. + 15,296,000
Taxes on motor cars	95,738,000	.. + 58,738,000
Government monopolies in 1921 yielded a total of 2,769,806,500f, or 260,859,300f more than Budget estimates.		

The yield from the income-tax during 1921 has been extremely disappointing, the total produce being only one-third of the amount for which demands were levied. Demand notes were issued for a total sum of 2,775,872,900f, of which only 945,279,800f were actually recovered. Of the total amount for which demands were issued last year, 2,117,552,000f were in respect of the financial year 1921, the balance consisting of 51,663,200f in respect of unpaid income-tax for 1916, 1917, and 1918, 72,735,900f for 1919, and 533,921,800f for 1920. It is interesting to notice that nearly one-half of the total amount levied for was allocated as follows among the following four great categories into which French income-tax payers are divided, namely, those who derive their incomes respectively from—

	Francs.
Profits from trade and industry	975,101,200
Profits from agriculture	27,999,700
Incomes from salaries	284,811,300
Incomes from the liberal professions	42,631,600

The balance levied for (1,445,329,000f) takes the form of the *impôt général*, or general tax, which is imposed on all persons alike who are subject to income-tax; the persons belonging to the four categories above being called on to pay according to the category to which they belong, in addition to the *impôt général*.

The striking discrepancy between the total amount of income-tax asked for from those who derive their revenues from trade and industry, as compared with those who till the soil, has for many months past been the cause of bitter controversy throughout France. On the one hand it is asserted that the trading classes, who are a comparatively small handful, in comparison with the agriculturists, are called on to pay over 33 per cent. of the total income-tax, whereas the agriculturists escape with a total of something like 10 per cent., in spite of the fact that they number something like 50 per cent. of the population, and have been making enormous profits for several years. The agricultural classes, on the other hand, insist that the income-tax statistics do not present the actual state of the facts, as every peasant proprietor is subject to the tax on undeveloped (that is, unbuilt on) land, which, if added to the total amount paid by the agricultural class in income-tax, would bring its contributions to the National revenue appreciably nearer to the total paid by the trading classes.

The yield from the tax on war profits during 1921 was almost as unsatisfactory as that from income-tax. The total amount due to the State under this head, including 2,485,252,000f in respect of 1921, was returned on the published lists as 12,193,527,000f, of which 10,325,390,900f became due and payable during 1921. A large proportion of this sum, it may be mentioned, was outstanding from previous years. The amount actually recovered during the 12 months was 7,578,383,500f. Another enormous amount of unpaid taxation was represented by the outstanding amounts due in respect of old direct taxes, including land tax and certain other taxes, that were abolished when the income-tax came into operation. The total amount of these taxes notified during 1921 was 2,261,195,200f, of which 733,028,900f were due to the State, and 1,538,167,200f to the various departments, communes, chambers of commerce, &c.

The liquidation of French and American war stocks during 1921 yielded a total revenue of 1,501,582,500f. It may be interesting to state that, so far as French war stocks are concerned, goods to the value of 6,110,000,000f have been disposed of since the liquidation began, and of this amount 5,615,000,000f have actually been paid for down to the beginning of December last, leaving a balance of 495,000,000f still to come in, practically the whole of which is due from public administrative bodies and Government departments. About 150,000,000f worth of French stocks still remain in hand awaiting disposal. The American army stocks left in France at the close of the war, it will be remembered, were purchased by the French Government for a lump sum of \$400,000,000, the dollar being calculated for this purpose at 7f, making a total cost of 2,800,000,000f. To this must be added interest at the rate of 5 per cent., payable in dollars at the rate of the day, as and from 12 months after the purchase was concluded. The total purchase price is payable to the United States Government within 10 years from the date of purchase, in dollars at the then current rate. Of these American stocks, goods have been sold to the total amount of 3,072,000,000f, of which 1,794,000,000f have been sold to public bodies and the balance to private purchasers. As in the case of the French stocks, the private purchasers have paid for the goods they have bought, while the public bodies concerned have so far not done so, about 250,000,000f worth of American stocks remain to be sold, and these, it is expected, will be disposed of by July next.

Despite the dramatic political events of the week, namely the fall of the Briand Government and the coming to power of Poincaré, also the sudden collapse of the Cannes Conference, the Bourse has remained more or less unaffected, the calls for new capital being now a much more important factor than events in the political world. The French Three per Cents. have remained at 55.90, but there has been a sudden improvement in French war stocks owing to the law that those subject to war tax may pay the war tax in French war Rentes providing that these are purchased before January 31st. There has consequently been a considerable demand for these Rentes, and the actual prices have approached very much more nearly to that officially quoted. Thus the discount charge on 1920 Six per Cents. has fallen to 2½, and the 1915 Five per Cents. to 1½, the 1920 Five per Cents.

to 1½, and the 1918 Four per Cents. to 1½, and the 1917 Four per Cents. to 2. Banks have been neglected, Union Parisienne fluctuating between 710 and 700. Banque de Paris closed at 1,240 from 1,255, and Crédit Foncier fell from 800 to 790, but Banque Ottoman advanced from 685 to 700. Transports have remained without movement, but shipping has been heavier.

GERMANY.—REPARATIONS—REICHSBANK REFORM—EXCHANGE AND BOURSE—EXPORT DUTIES.

(FROM OUR CORRESPONDENT.)

BERLIN, January 23.

M. POINCARÉ's statement to the French Chamber depressed slightly the mark exchange, and is considered unpropitious for the Genoa Conference, as the Conference was here understood to be a continuation on a greater scale of the Cannes debates, and that being so the Reparations clauses of the Versailles Treaty were bound to be discussed. If M. Poincaré's condition that no provisions of the Treaty are to be even indirectly raised, the Conference will have a very limited interest for Germany. The replies to the questions put at Cannes have not yet been published. Around the Wirth Cabinet rages a dispute on the subject of taxes. The Socialists have so far insisted that the so-called "solid values" (*Sachwerte* or *Goldwerte*), which increase in nominal value in measure as the currency decays, shall be subjected to a special tax. Such a tax was the main point of Dr Wirth's own declarations after he became Chancellor; but as the non-Socialist parties, including his own centre, are unfavourable, he has changed his mind. From the first the Socialists made their support of new indirect taxes conditional upon a "solid values" tax. The compromise proposed is that a second large instalment of the Emergency Levy be collected at once. Originally, the levy was to be collected in 30 (for land 50) instalments. Last year, as alternative to a forced loan, a whole one-third of the levy was collected at once, and it is proposed that the new instalment be another third. The fall in the value of money since 1919 (when the levy law was passed) is shown by the fact that in that year many persons held that the tax could not be paid even in small 30-year instalments, whereas to-day it appears practicable to collect two-thirds in a couple of years.

The estimates of the General Administration for 1922 show estimated revenue of 97,328 millions, or 44,700 millions more than in 1921. The estimates for execution of the Peace Treaty, as sanctioned by the Reichsrat, total 187,900 millions, whereof 135,000 millions are for Reparations. The expenditure for the Inter-allied Commissions is put at 1,800 millions. The total deficit of the financial year 1922 is put at 181,900 millions. The probable effect of this deficit on the currency inflation is shown by analysis of the floating debt and Treasury bill figures. The inflation of the past years has represented that part of the discounted Treasury bills which have remained on the Reichsbank's hands. The floating debt is almost entirely (246 out of 264 milliards) made up of discounted Treasury bills. The proportion of new bills remaining on the bank's hands depends upon money market conditions, and of late the proportion has greatly risen. The great inflation of the last few months has, therefore, been caused not only by the absolute increase of the floating debt, but also by the increased saturation of the money market with Treasury bills. In 1918 the private banks and public took up 13,707 millions out of 26,356 millions of new bills, or 52 per cent.; in 1919 17,079 millions, out of 31,174 millions, or 55 per cent.; in 1920 50,068 millions, out of 66,442 millions, or 75 per cent.; and in 1921 19,393 millions, out of 94,098 millions, or 21 per cent. The *Frankfurter Zeitung* comments that either the capital market has become much more stringent, or that the bank has lost control of this market—probably both. Prospects of inflation for 1922 are black. The Prussian Budget for 1922 shows revenue of 29.1 milliards, ordinary expenditure of 18.8 millions, and extraordinary of 10.3 millions. Plans for reform of the Reichsbank are under way. The increase of the bank's capital to 1,000,000,000 marks from the present 180,000,000 marks is discussed. Also

under debate, in connection with expected Ally demands, is the right of foreigners to take part in the management. At present only foreigners residing permanently in Germany can sit on the Central Committee. Except in the main question of financing the Government, the bank has practically complete Home Rule; and in the question mentioned it is war legislation still in force, not the pre-war law, which limits liberty. To the Financial Committee of the Reichswirtschaftsrat has been submitted a resolution demanding abrogation of war laws as far as they compel the bank to assist the State in contracting debts without limit. The bank, says the resolution, should during the transition period be allowed to issue a limited quantity of notes against Treasury bills. The bank should be converted into a share company, managed entirely independently of the Republic, but with its president sanctionable by the Government. In general notes should be issued only against purchases of gold, or against commercial bills. In exchange for its concession the bank should book part of its present holding of Treasury bills as a perpetual, non-interest-bearing debt from the Republic; it should be allowed to issue notes against such Treasury bills, and be required to cancel them out of its profits at a fixed minimum rate. The rest of the bank's holding of bills should be amortised by the State.

The Reichsbank has raised its purchase rate for 20 marks gold coins from 720 to 780 paper marks. The highest price, 850 marks, was reached in November. No statement as to the rate for fine gold has been issued since late September, when the price per kilo was 63,000 paper marks. The bank's statement for January 14th shows a decline of 4,897,315,000 marks in Treasury bills discounted to 122,845,645,000 marks; an increase of 893,481,000 marks to 4,067,726,000 marks in State deposits, of 4,420,028,000 marks to 17,468,552,000 marks in private deposits; and a decline of note circulation of 545,935,000 marks to 112,593,937,000 marks, and of "Kassenscheine" of 90,900,000 marks to 8,142,100,000 marks. Stocks last week were mostly moderately firm, with sharp rises in potash and brown coal papers. The *Frankfurter Zeitung's* index for January 20th shows 34,537 for 25 stocks, against 32,487 on the 13th, 898 against 900 for home loans, and 1,826 against 1,771 for foreign loans. Potash stocks have been sent up by a fight for domination between the leading Wintershall and Deutsche Kaliwerke groups. The former, which produces cheaply, desires to cut export prices; the latter, which produces at greater cost, opposes. While stocks in general (following the fall in the exchanges) are much lower than in the first fortnight of November, potash stocks are much higher, one nearly twice as high. Brown coal is closely connected with potash; by buying up brown coalfields some potash works have been enabled to extend materially their business.

The Reichswirtschaftsrat has approved of a Bill establishing universal export duties. Under the law of December, 1919, export duties were imposed only on those wares which are export-forbidden, that is, exportable only under licence.

ITALY.—BANKING—FOREIGN EXCHANGES—THE LIRA'S EXTERNAL AND INTERNAL VALUE.

(FROM OUR CORRESPONDENT.)

TURIN, January 22.

No further important news is to hand as regards the Banca Italiana di Sconto affair. Two or three minor banks have closed their doors in consequence of the Banca's moratorium, but the effect is hardly noticeable. It appears that several plans for the reconstruction of the Banca have been submitted to the Government for approval, but no definite decision has been arrived at. The Ilva iron and steel company shareholders, after inquiring into the loss of their capital, have come to the conclusion that it was inexpedient to prosecute past directors, and was better to accept a formal offer from the same directors of a payment of 30 million lire. Notwithstanding these and other bad incidents of the crisis, the impression is gaining ground that the worst is passing.

Some interesting financial data are contained in the new edition of "Prospettive Economiche" by Professor Giorgi Mortara. Professor Mortara studies the relations

HARRISONS & GROSFIELD, LIMITED.

 Borneo. China. Java. Sumatra.
 Canada. India. Malaya. U.S.A.

between the internal and external buying power of the lira. At first sight the situation is not bettered, perhaps is yet worsening. Exchanges continue very much against Italy, as is seen from the following table of average monthly prices at the end of half-years:—

		100 Swiss		Pound	100 French
		Dollars.	Francs.	Sterling.	Francs.
Parity	lire	5.18	100	25.22	100
June, 1914	"	5.16	100.22	25.27	100.33
December	"	5.30	101.60	25.88	103.31
June, 1918	"	9.10	230.70	43.75	161.02
December	"	6.34	130.00	30.37	116.25
June, 1919	"	8.05	151.32	37.33	125.43
December	"	13.07	241.67	50.08	121.92
June, 1920	"	16.89	308.98	67.14	133.64
December	"	28.57	441.02	99.79	169.65
June, 1921	"	19.84	339.40	75.63	161.51
December	"	22.70	439.85	94.00	177.10

If not quite at its worst, the lira remains gravely depreciated. The value of the lira in terms of the gold lira has moved thus:—December, 1914, 98 per cent.; 1915, 79 per cent.; 1916, 76 per cent.; 1917, 62 per cent.; 1918, 82 per cent.; 1919, 40 per cent.; 1920, 18 per cent.; 1921, 23 per cent. Fortunately, it seems that the two levels—internal and external—of the buying power of the paper lira are approximating. Thanks to the decrease of prices in the United States, the lira purchases more goods there than a year ago. Professor Mortara has calculated the weight which a given sum of money could acquire in 1913 and in September, 1921. Making 100 the weight acquired in both markets in 1913, with a given sum of lire, the same sum acquired in September, 1921, the following weights:—

In Italy.		In the United States.	
Wheat	 23	Wheat	 17
Indian corn	 20	Indian corn	 25
Wine	 15	Sugar	 17
Olive oil	 16	Petroleum	 23
Butcher cattle	 15	Calf skins	 29
Butter	 14	Coal	 13
Raw wool	 23	Raw wool	 22
Raw hemp	 19	Raw cotton	 14
Raw silk	 14	Pig-iron	 17
Sulphur	 17	Steel	 20

As far as these scattered data go, it seems that the buying power of the lira is reduced to a fifth part of 1913. And the reduction is not very much different in the two markets. If that is a true picture, equilibrium ought not to be a very distant hope, and when it is attained, the stabilisation of the foreign exchanges would no longer seem an impossible dream.

GREECE.—LOAN IN ENGLAND—OPENINGS FOR BRITISH CAPITAL—REACTION IN EXCHANGES AND STOCKS.

(FROM OUR CORRESPONDENT.)

ATHENS, January 5.

On Friday last the Minister of Finance issued a communiqué stating that the British Government have given their consent for the issue of a Greek loan of £15 millions in England (for which negotiations have been proceeding in London for some time lately), under the condition that the greatest possible portion of the proceeds of this loan will be utilised for the purchase of English products. On the other hand, the Greek Government have renounced their claim against the British Treasury in connection with the unpaid balance of £5,500,000 of the credit opened in favour of Greece in virtue of the agreement, signed on February 10, 1918, between the Governments of Great Britain, the United States, and France on the one part, and the Greek Government on the other. The openings which Greater Greece offers for British capital and trade have been repeatedly indicated in this column. Nearly everything has to be done. New railways need construction; those already

existing must be extended, new locomotives be purchased, and the rolling-stock must be repaired and increased; ships, bridges, roads, and houses have to be built; factories to be enlarged and equipped with machinery; ports and docks to be constructed, and automobiles to be bought for communication purposes. Agriculture, cattle, and live-stock raising and fishery are waiting for development; finally, foodstuffs and clothing materials of every kind must be imported annually in considerable quantities. The importance of Greek markets to British trade may be judged from the following table:—

(In Millions of Drachmæ.)

	1913.	1918.	1919.	1920.
Imports from—				
England	43	84	389	523
United States of America	3	86	445	478
Germany	14	..	..	26
Russia	35	..	4	12
Austria	29	..	3	6
France	11	83	134	213
Italy	6	80	142	218
Egypt	1	62	84	64
Total imports	178	734	1,608	2,131
Proportion of imports from England to total imports	24 %	11 %	24 %	25 %
Exports to England	28	83	175	121
Total foreign trade of Greece	297	1,031	2,335	2,795
Proportion of total trade with England to total foreign trade	24 %	16 %	24 %	23 %

England alone accounted for 23 per cent. of the total foreign trade of Greece in 1920.

The news of the permission to raise the loan in England spread a temporary panic among speculators in foreign exchanges and in stocks. Foreign exchanges fell immediately. Happily for the speculators, the Consortium has lowered its rates for the moment only by 3 dr to the pound sterling, and this wise action has served as a deterrent to the falling trend, which otherwise would assume dangerous dimensions. It is the intention of the Consortium to lower the rates (so far as may be deemed advisable) only gradually and slowly, so that the readjustment of the general level of prices may be made with the least possible disturbance. Speculators are offering their holdings in blocks to prevent losses from a further fall of rates, and it is believed that sales would have been much more important still if a sudden fall of the rates were anticipated. In the Stock Exchange the reaction was somewhat more severe, as the depressing factors had free play. Consequently Government securities in gold and Corporations shares, which the rise of foreign exchanges had pushed to high levels, dropped sharply. An exception to this downward movement were the shares of the National Bank of Greece, which rose from 9,950 to 10,300 dr per share. The initial nervousness having now subsided and confidence restored, Government bonds and Corporations stocks, on the whole, show a sensible and progressive recovery.

NORWAY. — FINANCE AND TRADE IN 1921—A BLACK YEAR.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, January 9.

THE weather during the past year has been so dry that few, if any, people can remember anything like it. The result has been disastrous to such parts of Norwegian industry as need a great quantity of water for production of power, &c. This, of course, in the first place, applies to the wood industry and the generation of electric power. This misfortune has, however, been mitigated by circumstances which are in themselves misfortunes—viz., the greatly reduced inquiry for all kinds of wood or forest products. So, if production has been restricted through want of water, export has been, perhaps, still more restricted. One might have expected that the dry weather would have entirely spoiled the crops. This has not been the case. Small, seasonable rainfalls have helped, and the hay may be characterised even as good,

while other crops are not so bad as was feared. Since the boom of 1920 the timber trade has been extremely bad. Many cellulose and woodpulp factories and sawmills bought timber excessively during 1920, and at exorbitant prices. As the prices have fallen 50 per cent., or perhaps more, they are heavy losers. The difficulties of financing these enormous purchases seem to have been overcome, for the present at least.

The money market has not, generally speaking, been tight. By the middle of the year circumstances permitted a reduction of the official discount rate from 7 to 6½ per cent., while the private banks took a further and unprecedented step of lowering their rate for deposits a further ½ per cent. to recoup themselves for increased costs of management. The note circulation of the Bank of Norway, which a year ago was about 478 millions, was about 418 million kroner at December 31st. This was not the lowest, for at the end of November last the circulation even fell below 387 million kroner. The larger private banks are in a sound position, but some smaller banks, chiefly the country and coast city banks, have found it difficult to maintain liquidity. More than 20 of them have got into difficulties, out of which some have been extricated by aid from outside, while some have succumbed. At the beginning of the year the large Overseas Export and Import Company, owing to some unsuccessful undertakings of a daughter company in the Far East, was compelled to stop its business, and the result was a loss of about 30 millions. Another very large concern, the Elektrokemisk, with a capital of about 37 millions, owing to losses sustained in 1920, had, at the beginning of the year, to write down its capital to one-fifth of the nominal amount. Just before the close of the year, to finish this sorry list; a couple of big insurance companies proved to be insolvent and had to discontinue business.

The number of bankruptcies, of course, is very considerable compared to the preceding years, but by no means appalling, considering the fall in prices of merchandise and the reduced purchasing power of the public. The shipping trade had a very black year. The coal strike in England, and the sailors' strike at home, aggravated the difficulties. The gross freight earned last year is computed at 400 million kroner, or hardly one-third of the sum earned in the previous year. Fortunately the end of the year seems to have brought some improvement. The fisheries have, both in respect of quantities of fish caught, as to quantities sold, and as to prices obtained, shared in the general depression. A tariff war with Spain and Portugal—important markets for dry codfish—has added to the difficulties of this trade. The stock markets have been very quiet indeed, and the prices of shares, especially of industrial and shipping shares, have receded sharply. The same, though less markedly, is also the case with bank shares. Public bonds, on the other hand, have gained substantially. The year saw some big struggles between workers and employers. The result, inevitably, was a defeat for the workers. Wages are, however, still considered too high if industry is to be able to compete in world markets. The early part of this year will see new negotiations—new struggles perhaps—on this score. Both the contending parties are in difficulties. The cost of living is, however, constantly going down, and this may ultimately lead the way to agreement.

JUGOSLAVIA.—TRADE DIFFICULTIES—BRITISH EXPORT CREDIT SCHEME.

(FROM OUR CORRESPONDENT.)

BELGRADE, January 17.

FURTHER depreciation of the dinar has placed Serbian import merchants in a very difficult position. During December London was quoted at about 275 and Paris about 520. These rates are too high for our importers who have debts abroad. Towards the end of the year the situation became still more serious. At the present moment the cheque on Paris has reached 595, and the London cheque 305. It is becoming almost impossible for Serbian merchants to settle their old debts (from 1920 and 1921) contracted in England, France and Italy.

In this difficult situation the Belgrade merchants are asking for a moratorium for a period of 18 months. The Government would have completely to guarantee commercial debts in order to assure the position of creditors abroad. It appears that the Government is disposed to help the merchants, but the plan suggested by the merchants has not been accepted, because this throws upon the Government a very heavy responsibility towards the foreign creditors.

Mr Horton, the Representative of the Department of Overseas Trade in London, has just been on a visit here, to obtain information on the application of the export credit scheme in Yugoslavia. Up to the present there has been very little business done between Yugoslavia and Great Britain under the scheme. This scheme was elaborated in the hope that the depreciated currencies of Eastern Europe were going to improve in one or two years, and this has not happened. If the Serbian merchants had done business on the basis of the export scheme they would all be bankrupt now, seeing that the dinar has steadily depreciated since 1918. Nevertheless, it is thought that the dinar could improve in the near future, if our politicians would pay more attention to economic and financial questions. In this case the export credit scheme would be a very great help to Yugoslav trade. It would only require to be slightly modified, and suggestions have been submitted to Mr Horton during his conferences with the merchants, manufacturers, and banks of Belgrade.

Letters to the Editor.

"THE WAGES TANGLE."

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of January 21st there appears in an article under the above heading the following statement:—

"There is no doubt that the monthly publication of the costs, receipts, and profits of the coal industry during control, which gave the men for the first time a trustworthy general view of the position of their industry, enabled the two sides, in the spring of 1921, to get to a degree of understanding which, given a little more time, might have averted the strike, and certainly largely contributed to the acceptance by the men of the product-sharing principle which underlies the present settlement. We regret very much that the Mining Association of Great Britain has not continued the publication of these figures, for the future of industrial relations in this country depends, more than upon anything else, on creating the conviction that workpeople are being treated frankly and with fairness during the present depression."

It is plain that your correspondent has not made himself familiar with the terms of settlement following last year's stoppage. Clause III. of this Agreement covers the question thus:—

"The amount of the percentage to be paid in each district during any period shall be determined by the proceeds of the industry in that district during a previous period, as ascertained by returns to be made by the owners, checked by joint test audit of the owners' books carried out by independent accountants appointed by each side."

Every colliery in a given district sends in a return of which both the owners' accountants and the men's accountants receive a copy. In order to satisfy themselves that nothing has been improperly included as a cost of production, and that the returns are correct in other respects, the men's accountants have the right to make a test audit of the owners' books. This right they, in fact, exercise. The results are then summarised by the accountants, and both owners' and men's organisations receive a statement showing for the district what are:—

- (a) The total proceeds.
- (b) The total wages paid.
- (c) The total costs other than wages.

The results of these "ascertainties" are announced

by the men's accountants, and the state of the industry, being reflected in the men's wages, is at all times known to the men.

I do not think the workpeople have doubts with regard to the information supplied to them, and I will finish my letter with a quotation from a recent speech of Mr. Hodges, in which he says:—"Even if the archangel Gabriel had, with a divine pen, drafted the agreement for the mining industry, it would not have substantially changed their lot."—Yours truly,

PHILIP GEE.

40 King street, Covent Garden, W.C. 2,

January 24th, 1922.

[We were aware of the provisions for joint audit referred to by Mr. Gee, and the comments to which he refers were not intended to convey that the miners are suspicious or are ignorant of the results used in fixing wages under the new product-sharing scheme. But these results are of importance not only to the miners in the district concerned, but also to the whole industrial community, who are watching this experiment with the greatest interest. The temper of Labour generally will be largely determined by its success or failure, and at the moment, when the settlement is approaching its most critical period, we are gravely concerned at the cessation of full publicity.—Ed. *Economist*.]

RAILWAY RESERVE FUNDS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Would you give space for the consideration of a subject which these days of adversity have illuminated with a new light, and that is the subject of railway company reserve funds? A railway must spend money on many objects which cannot be charged under the usual heads of working expenses, for which money should not be borrowed, or stock issued, and this money, therefore, comes from net earnings before dividends are declared, and the fund which provides the money is generally called "credits to reserve." This is necessary and good, but those objects on which the money is expended are largely consumed in use, and the abuse of the system is that the reserve fund does not suffer a corresponding waste: so it increases year by year, looks splendid in the balance-sheet, and perhaps represents nothing any longer in existence. I urge the adoption of a new system. Nothing should be called reserve except that which is represented on the other side of the account by saleable assets which can be turned into cash and used to supplement earnings if required. The railway official would say, "What is the use of our locking up our money to return, say, 5 per cent. to 6 per cent., when in our hands it earns perhaps 25 per cent.?" Perfectly; I don't urge any different practice from the present, but a less misleading nomenclature. Let the account be called "renewals and improvements," and then let the money spent be debited to that fund and the net credit reduced. There was a case this year which vividly illustrated the disadvantages of the present nomenclature. A railway company had been most ably managed and financed for many years. It gradually accumulated in its accounts a so-called reserve fund of £1,000,000, and besides much money reserved from earnings in various funds under other titles. At last the directors thought the shareholders would grumble if, after reserving £1,000,000, money was still added to reserve, and they reserved £300,000 more, but called this fund dividend equalisation account. This year brought great difficulties. The interim dividend was passed, and the final dividend largely reduced, though the net earnings shown in the report would have sufficed to continue the rate paid the previous year. But there was not really the money to pay out, though this company had on paper enormous reserves and a dividend equalisation account. Of course, professionals know, if they look into an account and see nothing tangible against reserve credits, that they represent earnings reserved and returned to the business, and that these credits will not help the company in an emergency, except to inform inquirers that the directors have been wise and cautious in the past and not divided earnings up to the hilt, and that the stockholders, though they may not have had dividends, have a well-maintained plant to represent their stock. But all shareholders are not professionals, and a

state of affairs like that outlined above was a great disappointment and should not be perpetuated.—Yours truly,
F. L. GOVETT.
6 Throgmorton street, E.C. 2.

Books and Publications.

REVIEWS.

"The South Sea Bubble." By Lewis Melville. Illustrated. (London) Daniel O'Connor. 1921. 25s net.

THE amazing outburst of speculation in the London of 1720 has never yet had a book to itself. It was the outcome of the Tory effort, ten years earlier, to show that the landed classes which made up the party could outdo the mercantile wings in finance, by converting the Funded Debt into the stock of a company formed to monopolise British trade with Spanish-America. The trade proved disappointing, and in 1720 the company reverted to finance, planning to pay off the unfunded Debt by issues, at huge premiums, of its own stock. The resultant gamble, the profit-taking, and the rise of a host of companies offering fresh opportunities for speculation—Mr Melville enumerates 166—was followed by a crash and a scandal described in all the histories of the period. Mr Melville gives details and long extracts from the original authorities, and from the comment and satire of the time. The book should be useful to students, though the economic causes and bearings of the outburst must still be sought in the pages of economic historians. The eighteenth century "projectors" anticipated most of the devices of their successors in the twentieth—even to the blind pool of the modern bucket shop.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET—
February 8.

ACCOUNT—
February 9.

THE feature of the week is the way in which new stock has been eagerly absorbed by the public. The subscription lists for the thirty million pounds Local Loans issue closed within a couple of hours of their opening. Marked success occurred in the cases of the Anglo-Persian Oil and a number of other industrials. Premiums obtain on practically all the new issues recently made, premiums that range from a point up to 6. The scramble for existing stocks continues. Debentures of any good-class railway; preference shares in sound industrial companies, even the ordinary stocks of many scores of sound concerns are increasingly difficult to obtain. Every morning the market happens in the Stock Exchange: brokers go round from market to market with orders to buy stock, and find that the jobbers are ready enough to deal—but only as buyers, themselves. They have no stock to offer. Naturally enough, in these circumstances, new issuers are busy with their wares,

BARCLAYS BANK

LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch - 168, Fenchurch Street, London, E.C.3
West End Foreign Branch - 1, Pall Mall East, S.W.1
Liverpool Foreign Branch - 42, Castle Street, Liverpool.
Manchester Foreign Branch Corner York St. & Fountain St., Manchester.

and it is said that a dozen or more promotions are already on the stocks to be presented to the public within the course of the next week.

India Government stocks gave way upon alarmist references to the state of affairs in the Dependency. These were deemed to be somewhat exaggerated, but the market remains dull. Conversion, Funding, and practically all the latest Colonials are in active demand. The throwing upon the market of a large line of War stock caused the price to react a trifle from the top. The three series of Treasury 5½ per cent. bonds have advanced in company with the rest of the Consol market, and the Local Loans, issued at 57, rapidly advanced to ¾ premium, while Port of London Sixes, a non-trustee stock, has risen to 6 premium.

Foreign Government bonds keep tolerably steady, but interest in them is subservient to that shown in the Consol market. Germans have been moving narrowly, and French issues are not attracting much attention. Brazilians moved erratically, the Funding Loan of both dates being better, while the other issues were disposed to give way. The new Chile 7½ per cent. scrip failed to make headway against the sales of stags, who wanted to get out before the second call becomes payable on February 1st. Uruguay bonds have strengthened. The speculation in Russians has died down, and, while prices maintain most of their recent sharp recovery, there has been a little selling to lower prices from the best.

Home Railway ordinary stocks are irregular; the Scottish and Undergrounds have given way somewhat noticeably. Yesterday's dividend announcements from the Great Northern and Lancashire companies aroused lively interest. The debenture and preference stocks are mostly better. Canadian pre-ordinary railway stocks have again been rising. Mexicans are a little harder, and Argentine Rails pursued an erratic course, the market being easily swayed by a few orders on either side. The prior charge stocks, however, in this department are decidedly strong, there being plenty of demand with very little supply to meet it.

Rubber shares are as dull as ever. The oil market is quiet. Allotments of the new Anglo-Persian issue are expected in the course of the next fortnight or so. Maples gave way, on the disappointing dividend of 7½ per cent. Tobacco shares recovered after a drop in Imperials, the dividend of 17½ per cent. net being the same as that of a year ago. The submarine cable group is better, and Radio Corporations rose substantially, on persistent buying from New York, though Marconis are quiet. Fears of a capital reorganisation led to a further dullness in Dunlops. The company's debentures, however, together with those of Levers, Joshua Hoyle, and Niger Notes, have all attained three figures this week. Vickers enjoyed a brief spurt, and held part of the rise, but other iron and steel shares are attracting little attention. City Equitable Associated preference remain very flat, and the shares of the City Equitable Fire Company further gave way. The insurance group as a whole is stronger. Banking shares have moved but little, though Indians are lower. Nothing of fresh consequence has occurred amongst shipping issues, P. and O. deferred being lower on the week, while the new Union Castle debenture stock opened at 1 premium and remained steady at that price.

The Kafir market weakened further, on the fear lest some of the companies which had declared dividends payable next month would elect to postpone the distributions, but this apprehension was removed towards the end of the week, and there was a faint recovery. The position of the mines, however, is far from being happy. The only consolation which the market draws from the strike is that, if the fight is allowed to go on to a finish, it should definitely end the restlessness that has marred relations between the mines and their employees for Kaffirs. The gamble in Russo-Asiatics has died down to small proportions. The course of tin, the metal, brought no comfort to holders of tin-mining shares, and the tendency of the various markets, Cornish, Malayan, West African, has been towards lower levels. The only outstanding feature of strength in the mining markets this week was a jump in Mount Elliotts on Paris buying, stimulated apparently by the reorganisation scheme now before shareholders.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Five per Cent. Treasury Bonds.—Issued at 99 per cent. payable on application. Repayable at par on February 1, 1927. Interest payable half-yearly on February 1st and August 1st. Principal and interest of these bonds are chargeable on the Consolidated Fund of the United Kingdom. Interest will be exempt from corporation profits tax. The first dividend will be payable on August 1, 1922, and will represent interest to that date from the date on which the relative application was lodged and payment made for the bond. The yield on these bonds, including profit on redemption in five years, is £5 4s 7d per cent.

Local Loans 3 per Cent. Stock.—Issue of £30,000,000 at 57½ per cent. First dividend payable April 5, 1922, at the rate of 5s. per £100. The stock will be inscribed in the books of the Bank of England and of the Bank of Ireland, and will be consolidated with existing Local Loans stock. Principal and interest are charged upon the Local Loans fund established under the control of the National Debt Commissioners, and, if such fund is insufficient, upon the Consolidated Fund of the United Kingdom to the extent of any such insufficiency. The stock is redeemable at par at any time by resolution of the House of Commons on one month's notice being given in the *London Gazette*. Interest is payable quarterly. Transfers and stock certificates are free of stamp duty. The yield of this stock at the price of 57 is £5 5s 3d per cent. A gilt-edged trustee security, which was quickly over-subscribed.

New South Wales Government 6 per Cent. Conversion Loan, 1930-1940.—This is an offer of conversion to holders of £4,400,000 4 per cent. debentures, maturing October 1, 1922, and £494,600 5½ per cent. debentures and £2,005,400 5½ per cent. stock maturing August 15, 1922. The price of the issue is £97 per cent., and this stock will rank *pari passu* with the existing £3,000,000 New South Wales 6 per cent. stock, 1930-40. Holders of the 4 per cent. debentures maturing October 1, 1922, are to receive a cash payment of £3 7½ per cent., being £3 per cent., the difference between the nominal amount of 4 per cent. debentures and the issue price of the 6 per cent. stock, plus 10s per cent. (less tax) difference of interest. Holders of the 4 per cent. debentures are to surrender the coupons due April 1 and October 1, 1922, and holders of the 5½ per cent. debentures or stock maturing August 15, 1922, are to receive a cash payment of £2 18s 3d per cent., being £3 per cent., the difference between the nominal amount of 5½ per cent. debentures and stock and the issue price of the new 6 per cent. stock, with a deduction of 2s 6d (less tax) for difference of interest. Holders of the 5½ per cent. stock will

receive the interest due February 15, 1922, and holders of the 5½ per cent. debentures should retain the coupon due the same date, surrendering the coupon due August 15, 1922. The usual disclaimer of the British Treasury appears, but it is a trustee investment, and ranks high amongst Australian securities.

The Clan Line Steamers, Limited.—Authorised capital £3,750,000, of which £3,700,000 has been issued. This is an issue of £1,500,000 7 per cent. mortgage debenture stock at 99 per cent. The Clan Line of Steamers Co. was incorporated as an undertaking with a limited liability in 1890, with an ordinary capital of £500,000. Its fleet consists of 53 steamers, the value of which, at December 31, 1921, after allowing for depreciation, amounted to £5,000,000. This mortgage debenture stock will be secured by a trust deed, under which vessels of the company valued at £3,226,403 are "specifically vested by first mortgage" in the trustees. Further, the trust deed provides for additional tonnage, so that the total value of security pledged should always be double the amount of stock outstanding. The issue was underwritten for 2 per cent., with an overriding commission of 1 per cent. Details given in the prospectus are informative, though a table of past profits would have been of material assistance to investors, and those subscribers who succeeded in obtaining allotments may consider that they possess an excellent stock.

The African Steam Ship Company.—Authorised share capital £5,000,000, of which £2,500,000 has been issued and is fully paid up. This is an offer of £1,500,000 6 per cent. debenture stock, being part of an issue authorised and limited to 70 per cent. of the paid-up share capital of the company. Right is reserved to pay off stock any time after February 1, 1927, on giving three months' notice, and stock not redeemed will be repaid at par in 1934. The company was incorporated by Royal Charter in 1852, and now owns a fleet of 31 vessels. It also holds the whole of the share capital of the Elder Line, which has a fleet, "free from any charge," of 14 vessels. A table of dividends on ordinary shares is provided, which goes back to 1896. No profit figures being given, the statement that "the interest on the present issue of 6 per cent. debenture stock will amount to £90,000 per annum" is of little interest to intending investors. The prospectus states that "the book value of the fleet and investments of the company at December 31, 1920, as shown by the balance-sheet of that date, certified by the auditors, amounted to more than £4,000,000." This debenture stock is, however, only to be secured by a floating charge on assets, and as far as is revealed by the prospectus, no provision is made against the creation of prior charges. However, the excellent past record of the company will ensure a hearty reception being given to the issue, and may be taken to outweigh in importance the points we have mentioned.

The South Essex Waterworks Company.—Incorporated by Special Act of Parliament, 1861. This is an offer by tender of £100,000 6½ per cent. redeemable preference stock, the minimum price of issue being par. The stock is to be redeemed at £102 per cent. on January 1, 1932. The authorised stock capital is £835,700, of which £466,908 has been issued, including premiums on stock. Of this latter amount, preference stock represents but £148,500, but it does not, of course, include the present issue. The authorised loan capital is £414,396, of which £155,550 has been issued. The prospectus is not as fully informative as those usually circulating from this quarter, as in the place of actual past profits an estimate of profits for 1922 appears. This is possibly an oversight. As the maximum rates of dividends on ordinary stocks have been paid for upwards of 10 years, the issue can be regarded as an excellent security in its class, if obtained at par. It is a trustee investment.

Stoll Picture Theatre (Liverpool), Limited.—Authorised share capital £380,000, divided into 379,900 ordinary shares of £1 each and 100 management shares of £1 each. This is an issue of 377,650 ordinary shares at par and £175,000 7½ per cent. debenture stock at 85 per cent., "redeemable" at 105 per cent. The term "redeemable" is somewhat ambiguous. A cumulative sinking fund of £5,250 per annum, beginning in 1926, is proposed; but from our reading of the prospectus, we do not find anything that binds the directors definitely to redemption of the whole or any part at any particular date. It is also proposed to issue "constructional period convertible notes," bearing interest at 6½ per cent. per annum, "to applicants for £200 and over." This is a proposition of Sir Oswald Stoll's to erect and run a picture theatre at Liverpool. The novelty of issuing 100 management shares, which do not rank either for capital or dividend claims, are dealt with in another part of this issue under "Notes of the Week." The debentures are to be secured by a trust deed creating a floating charge only on assets, and the company reserves power to create mortgages or specific charges, in priority to these debentures, during the constructional period. Thus the value of the floating charge and trust deed are distinctly problematical. The owners of the site are selling at a profit of £33,098, and Sir Oswald Stoll

is interested in the property to the extent of one-fifth part. Profits are estimated on the basis of earnings made by the Stoll Picture Theatre (Kingsway), London. But it is reasonable to assume that profits of an entertainment in the Metropolis is a measure which can be applied to Liverpool? It is quite probable that under Sir Oswald's efficient management the undertaking will prove successful, but a subscription to the issue will be based on this confidence rather than on the intrinsic merits of the prospectus.

National Bank of Australasia, Limited.—According to cable advices, it has been decided to increase the capital of this bank by the issue of 100,000 ordinary shares of £8 each, with £5 paid, to existing shareholders, in the proportion of one share for every two fully paid and one for every four ordinary shares "at a premium of £1."

Société Générale des Huiles de Pétrole.—The capital of this company is to be immediately increased from 100,000,000 (say £2,000,000) to 227,000,000 (say £4,540,000). Of this increase 120,000,000 (say £2,400,000) will be issued this week at par, a large proportion being guaranteed by the Anglo-Persian Oil Company. The Société Générale des Huiles de Pétrole was formed a year ago primarily as the refining and marketing organisation for the Anglo-Persian Oil Company in France and the French colonies, when 45 per cent. of the capital was subscribed by the Anglo-Persian Oil Company. Certain rights in the new issue are reserved for the present shareholders.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

JOHN GALT, President.

H. B. SHAW, General Manager.

COMPANY MEETINGS, &c.

LONDON JOINT CITY AND MIDLAND BANK, LIMITED.

RIGHT HON. R. McKENNA ON ECONOMIC AND FINANCIAL PROBLEMS.

EVILS OF INFLATION AND DEFLATION.

GERMAN REPARATION DIFFICULTIES.

RESTRICTION OF OUTPUT CRITICISED.

EFFECTS OF EXCESSIVE TAXATION.

The ordinary general meeting of the shareholders of the London Joint City and Midland Bank, Limited, was held at the Cannon street Hotel, London, E.C. 4, on Friday, January 27, 1922, for the purpose of receiving the report and balance-sheet, declaring a dividend, electing directors and auditors, and transacting other ordinary business.

The Chairman (the Right Hon. R. McKenna) said:

My Lords, Ladies and Gentlemen,

It is my duty to-day to lay before you all the figures necessary to enable you to form a judgment upon the progress of this bank during the year which has just elapsed, and at the conclusion of my address I shall ask you to approve and adopt the report of the directors. But in accordance with a custom of many years' standing I propose, before I tell the story of our own bank, to make some observations on general trade and economic conditions. The business of this bank covers so wide a field that all considerations affecting the industry of the country as a whole are of the greatest importance to us, and I am sure you will agree that it is not out of place in surveying our year's work to extend our view beyond our own bank to the general conditions of our trade and employment.

INFLATION AND DEFLATION—A RETROSPECT.

Two years ago, when we were suffering the discomfort of a rapid rise in the cost of living, it seemed appropriate at our annual meeting to take high prices as the subject of my address. I ventured at that time upon a word of warning. Although the high prices were due to the monetary and credit inflation consequent upon the immense borrowing by the Government during the war, I endeavoured to show that any attempt to drive prices down by a policy of forced deflation would lead to grave trade depression and widespread unemployment.

Last year when I addressed you a policy of deflation had been publicly announced and steadily pursued for a considerable period. I discussed on that occasion inflation and deflation in detail, and outlined so far as I could the monetary, trade, and social conditions which arise in either case. We have recently learnt the evil consequences of deflation in the school of experience, and this policy has for the time being fallen into disrepute. But, unfortunately, the lesson has had the effect of turning a considerable body of opinion back in favour of inflation, and we seem now to have in prospect a regular alternation between the two policies, each to be adopted in turn as a remedy for the other. The danger of this proceeding is my apology for touching upon the subject again before I turn to the other matters upon which I wish to address you.

NEED FOR STABILITY OF PRICES.

The danger is a real one, because of the force of the appeal which either policy can make to different sections of the public. The trading community require the assistance of the banks, and are very much alive to all the arguments against dear money and restriction of credit, which are the accepted marks of a deflationary policy. They know that falling prices, the objective of this policy, mean loss of profit, trade depression and unemployment, and, convinced that deflation is bad, they are apt to think that inflation, the opposite of deflation, must be good. On the other hand, consumers suffer acutely under the pressure of high prices, and, if not traders themselves, readily assimilate all the undeniable arguments against inflation. For them deflation, the opposite of inflation, is necessarily good. The truth is, of course, that both are bad. What is needed is stability, the point from which both alike proceed in opposite directions. When we have stability of prices we have a basis upon which trade can be carried on with confidence. Manufacturers, merchants, and retailers are then able to make their contracts with reasonable assurance that the debts created under the contracts will be paid when due in a currency of the same purchasing value as it had when the obligations were assumed.

HIGH PRICES AND UNEMPLOYMENT THE RESULT.

The evil of inflation is that it raises prices; the evil of deflation is that it causes unemployment. High prices in any country are marked by a low rate in foreign exchange, and the currencies are most depreciated where inflation has been most rampant. On the other hand, the highest percentage of unemployment is found in the two countries in which a policy of deflation was recently pursued. There is a higher proportion of unemployment in the United Kingdom and the United States than anywhere else, although these two countries have the greatest wealth and the largest volume of foreign trade. The world offers at the present time the clearest examples of the evils of both inflation and deflation. In Russia we see the complete industrial and commercial collapse in which the inflationary process finally ends; while in this country part at least of the trade depression and unemployment, and much of the budgetary difficulty which we see ahead of us, are attributable to the policy of deflation.

CAUSES OF UNEMPLOYMENT.

The overwhelming gravity of the problem of unemployment with which we are confronted at the present time has led me to choose it as the central theme of my address to you to-day. In considering its causes, it is natural for a banker to have his attention more immediately directed to the effects of financial policy, but we should be taking a very partial view of the subject if we failed to give due weight to the other influences which have their share in creating the unparalleled amount of unemployment that we have now in this country. We depend so greatly upon foreign trade that external conditions are a factor of first-rate importance; so also are our labour conditions, which in a large degree determine the cost of production; and so, too, by its moral as well as its material influence, is the toll levied upon trade and commerce by taxation. It would be impossible within the limits of such an address as this to give more than a bare outline of each of these causes of unemployment, but in the short time at my disposal I will ask you to consider first the state of Europe, next our labour conditions, and lastly the burden of taxation.

ECONOMIC CONDITION OF EUROPE.

It would no doubt have been desirable that in the Europe created by the Treaty of Versailles we should have found as good a market for our products as we had before the war. But our responsible representatives, whose freedom of action was restricted by international considerations, could not have their attention solely directed to our trading requirements. The political necessities, which, regardless of economic needs, compelled the dismemberment of Austria-Hungary and the creation of a group of new States without any tradition of organised government, must have been very powerful, and may still be too powerful, to permit a modification of the present settlement. If the economic needs of Europe were the primary consideration in international policy, our course would be tolerably clear.

ALL MARKETS' NECESSITY FOR TRADE REVIVAL.

We should recognise at once that modern industrial and transport conditions have brought all countries into such close trading relationship as to make each an integral part of the trading world as a whole. One nation, and still more so as to destroy its ability to function without throwing the entire machine out of gear. If Russia fails to buy tea in China or India, our Eastern market for cottons is narrowed, the United States sells less raw cotton to us, and our shipping, banking and insurance business is impaired. Illustrations could be multiplied indefinitely, showing how the trade of each country is linked up with that of the whole world. Our own trade cannot recover its pre-war activity whilst so many countries continue in their present broken-down condition, and though our plans to foster our export

trade by the grant of special credit facilities may be a temporary palliative, the only lasting solution of the problem is by the re-establishment of genuine peace and an ordered system of government throughout Europe.

GERMAN REPARATIONS.

An essential preliminary of the restoration of Europe is to settle the terms of the German indemnity upon a sound economic basis. While we recognise that political and international considerations could not have been disregarded in settling the amount and form of the demand upon Germany, the subject is one which admits of being treated from a purely economic point of view.

HUGE ORIGINAL ESTIMATE.

When the German indemnity was first discussed the public expected a huge money contribution by Germany which was to go a long way towards paying for the war. A total figure of £20,000 millions was talked of, our share of which, about £4,000 millions, was to be used to pay off a large part of the National Debt. At a later date the original estimates of Germany's capacity were considerably modified, but even the reduced figures of the Ultimatum of London point to the conclusion that there was no clear idea of the manner in which alone international debts can be paid.

When one nation owes money to another, it is obvious that the debt cannot be discharged by payment in the money or currency of the debtor country except in so far as this consists of gold coin. If the creditor were willing to accept paper, I have no doubt that the printing press would very soon prove equal to meeting any nominal liability. Payment in gold, though possible to a small extent, may be left out of account, as the amount available is insignificant in relation to the amount of the debt. When then Germany is required to pay large sums periodically to the Reparation Commission, what is really meant is that Germany must export during each period saleable commodities which have a total selling value equal to the liabilities she has to meet.

MAXIMUM ANNUAL PAYMENTS.

If this were the whole problem it would not present any great difficulty. The maximum annual payment Germany could be required to make under the terms of the London Ultimatum is about £400 millions, and there is no doubt that German industry is more than equal to an export of this value. But an industrial country cannot have a large export without receiving imports. Germany has to import a considerable proportion of her raw materials and a certain amount of food, and payment for these must be a first charge upon her exports. The utmost she can pay over to the Reparation Commission is her exportable surplus, and, considering the question only from the point of view of the amount Germany can pay, the problem becomes one of determining the extreme limit to which this surplus could be forced. What that limit may be I do not venture to say, but, judging from the experience of the last six months, I do not think that it could possibly be made sufficient to meet her liabilities for reparations under the Ultimatum of London.

EFFECTS OF A FORCED GERMAN EXPORT.

The more or less, however, of the German exportable surplus obtainable under external pressure is not the only point we have to bear in mind. We have to consider also the other effects of this pressure and how it reacts upon ourselves and our own trade. After all, we exact reparations in order to gain some advantage for ourselves. If the form of the reparations and the means adopted to secure payment do us more harm than good we fail in our object. External pressure means forcing Germany to develop her export trade under penalty of invasion, blockade, or such other punishment as the Allies may inflict. But Germany can only export in competition with her trade rivals, whom she must undersell in the foreign market. To ensure cheap production she must pay less wages than other nations for an equal labour product, an object she can achieve by depreciating the mark in foreign exchange so as to keep its external below its internal value. So long as this difference in value exists it affords a premium on German exports, and as the pressure upon her to pay reparations continues she cannot avoid a progressive depreciation of her currency.

DEPRECIATED MARK AND EXPORT TRADE.

We have seen in recent months this process in action. We have seen how a compulsory depreciation of the mark has stimulated German exports, and as her manufacture competes directly with ours any increase in her trade must be largely at our expense. Perhaps we should not have suffered as much in normal times as we do now, when effective foreign demand, owing to the closing of the Russian market and the general disorganisation of Europe, is very restricted; but in the actual condition of affairs German competition at prices far below what is possible for us is a serious blow to our foreign trade, and is one cause of the depression and widespread unemployment of the last twelve months.

EFFECTS OF FORCED GERMAN EXPORT.

The injurious effect of a forced German export is not felt by us alone; every market in the world is disturbed by the depreciation of the mark. In all countries capital has been invested, trade has been organised, and millions of workers—I include employers and employed under this name—have found their daily occupation in meeting the requirements of foreign and domestic trade on a certain basis of demand and supply, a basis founded upon the normal capacity and growth of each nation. If now it is sought to force one country to make a gigantic export of goods which, if accomplished, would flood the markets of the world, the whole balance and adjustment of the foreign trade of every nation must be violently upset. Before Germany could meet her full liability, before she could develop her foreign trade to such a degree as to have an exportable surplus of £400 millions a year, the foreign trade of this country, her chief competitor, must dwindle into insignificance.

HOW GERMANY CAN PAY.

It will be asked, what then can Germany pay, without injury to us, towards making good the civil damage the Allies have suffered in the war? As to the annual amount, she can pay to the full extent of the export surplus her trade can give her without forcing the external value of the mark below its internal value. As to the form, she can pay in specified commodities, which in our case might include sugar, timber, potash and other materials which are indispensable to us, but which we either do not produce at all or in insufficient quantities. She can pay also by the surrender of any foreign securities her nationals may possess, so far as they can be traced, and, if the Allies are willing to accept this form of payment, by the direct employment of her labour in reconstructing devastated areas. In all that I am saying now I am speaking only from the economic point of view. It is not my province to enter into the sphere of political action. But I cannot help thinking that an agreement founded on a realisation of economic possibilities would be at once more advantageous to the trade interests of the world and more productive in reparations payment itself than successive ultimatums which in due course prove to be impossible of execution.

LABOUR AND RESTRICTION OF OUTPUT.

If we pass from the external influences upon our trade which at the present time are affecting us injuriously and turn to our labour conditions, I believe we shall find that here also mistaken economic ideas are at the root of much of our trouble. Every person in this room would, I have no doubt, regard it as the merest commonplace to say that all rules, or customs or practice which by restricting output cause more men to be employed than are necessary to do a given piece of work in a given time, must increase the cost of production and in the long run be harmful to trade. But we should make a mistake if we thought that this was an opinion generally held by workmen. Many workmen, of course, have as good an understanding of economics as anybody; and it is right to say that, so far as I am aware, there is no trade union regulation, with possibly one exception, which in so many words directly restricts output. But it is not open to doubt that such restriction is very common in practice. We know, for instance, how usual it is to prescribe a limit which individual output may not exceed, and it is quite customary upon the introduction of a new machine to insist upon more men being employed than the machine really requires.

FEAR OF UNEMPLOYMENT.

Underlying this practice or custom is the praiseworthy purpose of preventing men being thrown out of employment. I believe a large part, if not the majority, of our workmen think that a restriction of output has this effect. In a country like ours, in which trades are greatly sub-divided and every man is confined by habit and training to a particular section of work, the fear of unemployment is the bane of the working-class life; and if the unwritten rules restricting output did in fact prevent unemployment, we could not hope to see them given up. But since they do not, since, on the contrary, the supposed remedy for unemployment is itself a powerful aggravation of the evil, what we need is to convince the workmen that their economic theory is false.

A FALLACY EXAMINED.

Let us examine, for instance, how a rule requiring more men to operate a machine than are needed works in practice. I will take a case in which the actual number required to handle the machine is only two, but the rule requires that three men should be engaged on it. The framers of the rule believe they have achieved their object: they have found employment for an additional man. But is this really so? There is still only work for two men. The third man is paid, but in a true sense there is no work for him. We have yet to examine the question of who it is that pays this unnecessary third man, and to see the effect of this payment upon employment generally.

At first sight the answer to this question is obvious. The third man's wages are paid by the employer. But, like so many obvious answers to economic questions, this, though superficially true, is fundamentally untrue. Let us look for a moment behind the apparent at the real facts of the case. The employer, we may suppose, is executing a contract. He based his tender on the cost of the materials, the total of wages, the overhead charges and the anticipated profit. In his estimate of wages cost he included the third man whom he would have to pay for doing nothing, and his tender was increased accordingly. The wages of the third man were not paid out of the employer's profits, but were a charge upon the cost of production, and raised the price of the goods he had to deliver.

EFFECTS OF RESTRICTION OF OUTPUT.

All restriction of output raises the price of the article produced, and if the restriction operates over a wide enough field, it must increase the general cost of living, and thereby reduce the real value of the wages received by all workmen. Combination amongst workmen to raise wages is very different from a combination to restrict output. In the former case, the workmen seek to obtain for themselves as large a share as possible of the total earned by the joint efforts of capital and labour; in the latter they seek to increase the number of men amongst whom the workmen's total share is to be divided. They do not see that this is the effect of the restriction of output, because it does not show itself by a reduction in money wages. All that they see is that more men are receiving wages, all of whom are paid at the same rate. They fail to observe that the wages will buy less; or, if they observe it, they attribute the rise in price to some cause other than the high labour cost.

LABOUR THE GREATEST SUFFERER.

But the evil consequences of a restriction of output do not end here. Let us go back to the case of three men being required on a machine which two could operate. The contractor, being obliged by this rule to add to his price, may lose the order to a foreign competitor. The whole of his men may then be thrown out of employment, and the very misfortune which it was sought to avert in the case of a few men only falls upon the whole body. That this happens we have only too good reason to know. The first effect of a restriction of output is a rise in the cost of living; the next effect is general unemployment. The greatest sufferers are the workmen themselves. They share in the product of their labour as a whole, and, if they did but realise it, are most benefited when each individual member of their body works at his highest efficiency.

I am afraid you may think that I am labouring to prove an obvious conclusion, but I would remind you that we are all apt to turn aside from the narrow path of strict economics when our interests or our preconceived ideas seem to point another way. If we are surprised that elementary economics are sometimes disregarded by workmen, we must not forget that they were no less ignored in dealing with German reparations. And when I turn now to the third cause I have mentioned of our bad trade and unemployment—excessive taxation—we shall find here also that economics are treated as of little account.

A NATION'S TAXABLE CAPACITY.

It would not be easy—I doubt if it would be possible—to define the limits of a nation's taxable capacity. Too much depends upon the human factor, which varies so greatly in different people. One man will exert himself to the utmost though the tax-collector should take from him 10s in the £ of all he earns; another will be disheartened if he be mulcted of but 5s in the £. We cannot doubt, however, that, taking the nation through, there is a limit beyond which, if taxation continues so high as to give only a very small return for additional effort and for risk of additional capital, it will become a matter of general occurrence that the effort will not be made and the capital will not be risked.

As wealth is created by human effort, the greatest care should be taken not to dishearten those upon whose enterprise so much of the industrial progress of the country depends. Looked at from the point of view of national wealth and prosperity, in which we all have an interest, it is bad policy to deprive business men of the stimulus of a reasonable return for their labours. It may be difficult to determine in advance the exact maximum scale of taxation which could be imposed upon us without impairing in any marked degree the national spirit of business enterprise, but we cannot shut our eyes to the signs that our present taxation has probably exceeded this limit.

EVILS OF EXCESSIVE TAXATION.

But the question is not merely one of the discouragement of business. We know that if business is to expand and prosper con-

tinuous additions must be made to the capital employed. A growing business—and at every period it is upon the growing business that the progress of the future depends—is one in which a large part of the profits each year are saved and put back into the concern. By this method the energetic and capable young man slowly acquires the additional capital he needs for development, and brings himself to the front. If now the whole or a large part of his savings is absorbed each year in taxes, he is deprived of the means of enlarging his business. New plant cannot be acquired; additional stock cannot be bought; growth becomes impossible. The capital which the keen, active, enterprising man could use to the utmost advantage in developing trade is taken from him and spent unproductively on one of the manifold activities of the State. In such conditions business must become stagnant, and in this country, where the industrial organisation is contrived for expansion and a continually growing production, stagnation means failure.

Let us look at excessive taxation in another aspect. Everyone is agreed that taxation of the poor on such a scale as to deprive them of the means of obtaining the necessities of life is morally wrong. But it is not generally accepted that excessive taxation of the rich is economically wrong. Most rich men do not spend the whole of their income on their own consumption. Some part, and often a very considerable part, is saved, and these savings are lent as industrial and commercial capital. A high super-tax in the case of the rich is largely a tax upon savings, and the money taken by the State is withdrawn from productive use and spent upon consumption. In a healthy condition of a State no more should be raised in taxation than will leave an amount available for capital development sufficient to meet all the needs of business.

EXPENDITURE MUST BE REDUCED.

Our present scale of taxation, then, I believe to be so high as to undermine our national business energy and enterprise, and to deprive us of indispensable capital. What is the remedy? There is only one, which we must face with all the determination and resolution at our command. We must reduce expenditure to the utmost limit consistent with our contractual obligations and the supply of indispensable services. If we do so now, we shall quickly recover our national earning power, and with it will come the elasticity of revenue which we experienced during the second half of the last century. The ideal of economy, both in public and private affairs, is alluring and popular, but the practice is quite another matter. It is difficult, often hateful, and certainly never popular. But to-day, looking at our decline in revenue, the state of our trade, and the dangers which confront us, we have no choice. I have no hesitation in saying that, whatever the difficulties, the strictest economy in our national expenditure has become the first and most imperative necessity of our time.

OUR OWN BANK.

Ladies and gentlemen, I pass on now to the story of our own bank.

The prolonged period of falling prices and trade depression has brought many failures in the business world, but, happily, there has been no extension as in other countries to the banks. Indeed, the experience of last year has demonstrated that we owe much, first, to the spirit of conservatism, which has led our banks to confine their operations to banking business, and, secondly, to the far-sighted policy of amalgamation. Our banks generally have emerged from the recent difficult and trying conditions with enhanced prestige, and in the case of our own institution I feel sure that the exceptional position revealed by our balance-sheet figures for December 31st last cannot fail to be regarded as satisfactory by both shareholders and depositors. Let me, however, remind you before we examine our own figures in detail that we must expect to see a reflection of the disorganised state of the world's trade in the balance-sheets and profit statements of all commercial enterprises.

PAID-UP CAPITAL AND RESERVE FUND.

During the year there has been a small increase of £1,052 10s in the amount of our paid-up capital, due to the issue of 421 shares of £2 10s each, fully paid, principally in exchange for Clydesdale Bank shares. These shares were issued at a premium which more than sufficed to enable us to add an equal amount to our reserve fund, which now stands at £10,860,852, the same amount as our paid-up capital.

DEPOSITS.

Deposits at the end of the year reached £375,117,092, an increase of £3,275,124 on December, 1920, and the highest published figure in any balance-sheet in the history of the bank. Although a record in joint stock banking, it does not actually constitute the highest

point touched by our own deposits. Even as recently as last December, the average for the whole of the month was higher by several millions than the actual total for the last day.

It may seem remarkable that we are in a position to report such high figures of deposits in view of the heavy fall in prices and the great decline in trade. Wholesale prices have dwindled in the course of twelve months by 30 per cent. Ordinarily it would be right to anticipate that a considerable decline in the price level would be accompanied by a marked reduction in deposits. Indeed, this result was expected by the protagonists of the deflationist theory, who avowed it as their object. As a matter of fact, however, and for reasons which I explained on a previous occasion, the policy of forced deflation has reduced very little, if at all, the actual volume of purchasing power represented by the amount of deposits in the banks and currency in the pockets of the people. What dear money and restriction of credit accomplished was a reduction of the rate at which this purchasing power has been exercised; or, in other words, the velocity of circulation of money has been reduced. In the price equation this velocity is a factor no less important than the actual amount of money or purchasing power, and the actual amount of goods available for purchase. If it were possible accurately to measure the velocity of circulation of money in 1921, as compared with 1920, I think it would be found that there was a decline last year of at least 40 per cent., a diminution which, while it did not affect the total of bank deposits, caused a fall in prices and was largely responsible for the great reduction in trade and trade profits.

ACCEPTANCES AND ENGAGEMENTS.

Acceptances and engagements on account of customers at £19,848,322 are down by a little over eight millions. The reduction in this item is due to lower prices and the smaller volume of international trade. Our acceptances are for the most part drawn by or on account of first-class bankers, and are, we believe, quite undoubted.

COIN, BANK, AND CURRENCY NOTES, &c.

Let me turn now to the other side of our balance-sheet and examine the manner in which our assets are distributed. The cash item, coin, bank, and currency notes and balances with the Bank of England, at £59,989,012, represents 16 per cent. of our deposits. I told you last year that our traditional principles were to keep the bank strong and to help the country's trade and industry. These principles guide our policy to-day. The average statements of accounts, issued by the bank each month in conformity with the decision of the London Clearing Bankers' Committee, show that for the year 1921 our weekly ratio of cash to deposits averaged 15 per cent., and if we were to take the average daily ratio throughout the year we should find that it did not differ from the average weekly ratio by as much as one-third of 1 per cent. As the cash reserve of a bank is the basis of its stability, it has been part of our policy to maintain a strong cash reserve in the daily conduct of our business, and although on balance we may sacrifice a little in actual profit, we are confident that the compensating advantages are great and that our policy is justified.

BALANCES WITH AND CHEQUES IN COURSE OF COLLECTION.

The next item, balances with and cheques in course of collection on other banks in the United Kingdom, is five millions higher. In 1920 this item consisted solely of cheques in course of collection, and the increase is due to balances with banks other than the Bank of England.

MONEY AT CALL AND SHORT NOTICE.

Money at call and short notice at £11,651,497 is nearly seven millions less than the previous year, five millions of which are accounted for by the transfer to the previous item to which I have just alluded.

INVESTMENTS.

Investments stand at £56,758,808, an increase of nearly five millions over the amount for December, 1920. Our investments, which are never taken at above cost, are here entered at prices below their market value. We are happy to assure you that the provisions made in earlier years are sufficient to meet all probable depreciation. The higher market price of our securities this year is, of course, due entirely to the lower Bank rate and the cheaper rates for money.

BILLS DISCOUNTED.

Bills discounted at £72,118,034 are 14½ millions higher than a year previously, and, incidentally, are greater in amount than in

any previous balance-sheet. The whole of the increase in bills is due to our larger holding of British Government Treasury bills, a fact which in itself reflects the condition of the country's trade and industry. In previous years by far the greater proportion of our bills has consisted of bank or approved trade bills, but with the restriction of trade and lower prices the available supply of commercial paper has been reduced, and we have had no alternative but to invest our surplus money in Treasury bills.

It is worthy of note that while the banks generally hold a much larger amount of Treasury bills now than six months ago, the total of Treasury bills outstanding has declined considerably during this period. The public, who formerly were large holders of these bills, have allowed a great amount to run off, and have thus been provided with funds used for subscription to new issues. To the extent that the banks have taken the place of the public as holders of Treasury bills, the issue of Treasury bonds at a rate of interest much higher than the discount rate on bills has failed to accomplish its purpose of funding floating debt, and has led to an increase in bank deposits.

ADVANCES ON CURRENT AND OTHER ACCOUNTS.

The next item in our balance-sheet is "advances to customers on current and other accounts," which this year show a diminution of nearly 13 millions on the total of £189,719,805 reported for December 31, 1920. The decrease is more apparent than real in view of the heavy fall in commodity prices, and I think you will agree that customers of the bank have suffered in no way from a restriction of credit. Indeed, after making due allowance for a 30 per cent. reduction in the price level, the figures indicate that the bank has responded to the demands for legitimate trade accommodation. We can say without hesitation, not only that we have assisted trade and industry to the full limit of banking prudence, but that we are looking forward to the time when we shall be called upon to assist a genuine revival of trade, and in that event the surplus funds devoted to the purchase of Treasury bills can be made available for advances.

PREMISES ACCOUNT.

During the year we have opened 121 new offices in different parts of the country, which, with those previously in existence, give the bank a total of 1,600 offices in England and Wales. Sites have also been obtained in localities where the bank is not now represented, and where there are reasonable prospects of profitable business. It must be remembered that much necessary work was held up for several years during the war, and we have been obliged, notwithstanding the high cost of building, to make good some of these arrears. The expenditure in respect of our new offices and the extension of existing offices has increased the book value of our premises account to a total of £4,942,299, which is considerably below the actual value of the properties.

INVESTMENTS IN SUBSIDIARY BANKS.

Investments in subsidiary banks show a small increase, owing to the exchange of an additional 50 shares of the Clydesdale Bank for shares of this institution, bringing our holding in the Clydesdale Bank to 99,959 out of a total of 100,000 shares. As you know, we own the whole of the share capital of the Belfast Banking Company. The book value of these investments amounts to £3,258,665, or £112,000 less than the combined paid-up capital, reserve fund, and undivided profits of the two institutions. Both banks have made satisfactory progress during the year, and if I make special mention of the Belfast Bank it is because the management are to be particularly congratulated on the results of their labours in the difficult and trying conditions which have existed in Ireland. You will notice from the balance-sheets which have been circulated with our own that both banks report a reduced note circulation, due partly to the fall in prices. The affairs of both companies have been conducted in a manner which reflects the highest praise upon their respective managements, and I gladly avail myself of this opportunity to record our appreciation of their invaluable services.

PROFIT AND LOSS ACCOUNT.

I pass now to the profit and loss account. After full provision for bad and doubtful debts, the net profits for the last year were shown at £2,454,084, which, with £741,618 brought forward, gives us for distribution and allocation a total of £3,195,702

Out of this amount—

We propose to pay dividend at the usual rate of 18 per cent., less tax, absorbing for the whole year a sum of £1,368,449
We have allocated to reserve for future contingencies £750,000

And to bank premises redemption fund £300,000
And we carry forward the balance of £777,253

In view of what I have already said, it is hardly necessary to explain at length the reasons which have prompted your directors to make these allocations. Fortunately, there is no immediate prospect of depreciation in our investments, and accordingly we have not deemed it necessary to make further provision for this purpose. You will, I feel sure, agree with the policy of providing against other contingencies. In the present condition of trade, it is impossible to conduct banking operations without risk of loss, and in any reasonable forecast of the future such risk must be taken into account. I would not like to be understood to mean that the year ahead of us will pass under such disturbed trade conditions as we have lately suffered; but recovery when it comes is always slow, and in the meanwhile we must be prepared to meet the consequences of any delay in the restoration of our trade.

The allocation to bank premises redemption fund is somewhat greater than our usual contribution owing to the large number of new offices which have been or are about to be opened. The carry forward this year is maintained at a slightly higher figure.

NET PROFITS.

Our net profits are £377,777 less than they were a year ago. The decline is considerable, but profits are inevitably lower in a period of falling prices, when all business activities are restricted. Quite apart from losses arising in the ordinary course of business, the banks have suffered from a decline in turnover and commission, due to a reduced velocity in the circulation of money. Full and adequate provision has been made for all bad and doubtful debts. Every account on our books has been scrutinised with the utmost care and with entire regard to the uncertainty of prices and trade. Wherever it has been thought that an account might prove to be bad, the whole amount has been written off and provision has been made for every doubtful debt.

COST OF ADMINISTRATION.

Last year I told you that the cost of administration was very high, and that we could expect little relief in the future owing to our heavy permanent charges. There has been an enormous rise in rates and taxes, and the charge for salaries and bonus to staff has increased in recent years considerably faster than the growth of business, rapid as this has been. The bonus has been paid by the bank from 1916 onwards to enable the staff to meet the rising cost of living, which reached its maximum in November, 1920. It was always understood that the bonus was temporary, and would be reduced as a matter of course as the cost of living declined. The reductions, however, will be gradual, and will never be made until they are more than justified by the fall in retail prices. Notice of reductions as from April and July next have now been given.

MANAGEMENT AND STAFF.

I cannot conclude without saying a few words about the management and staff of the bank. The year through which we have just passed has been one of exceptional difficulty, calling for the exercise of the highest qualities of judgment, prudence and courage, qualities which are possessed by none in higher degree than by the managing directors of this institution. I can assure you that no words of mine can adequately indicate the extent to which we are indebted to Mr Murray, Mr Hyde, and Mr Woolley for their unremitting and self-sacrificing zeal in the bank's service. The managers and other officials of our staff, both at head office and the branches, also deserve the highest commendation for the manner in which they have assisted, by the faithful discharge of their manifold duties, in maintaining our unique position in the banking world. With their continued help, and in the same spirit of mutual confidence and loyalty, we face the future with a firm belief in our ability to overcome any difficulties which may lie before us.

The Chairman then moved the adoption of the report. This was seconded by Mr W. G. Bradshaw (deputy chairman) and was carried unanimously.

The motion declaring payable a dividend at the rate of 18 per cent. per annum was seconded by Mr A. H. Goschen (deputy chairman).

Mr R. C. Beazley and Mr F. H. Fox, retiring directors, were re-elected, as also were the auditors.

Mr Rowland Blades, Bart., M.P., in proposing the thanks of the meeting to the chairman and the board of directors, paid a special tribute to the great ability of Mr McKenna. The change from Cabinet rank to the chairmanship of the bank had in no way impaired his world-wide reputation. He was better known now, and, if possible, more highly respected, and his great qualities had been more fully recognised.

VOTE OF THANKS TO MANAGING DIRECTORS, MANAGERS, AND STAFF.

Mr W. G. Bradshaw, in moving that the thanks of the meeting be presented to the managing directors, general managers, branch managers, and all other officers of the bank for their continued devotion to their duties, said:—

I do not think that there has ever been a time when this resolution was more clearly called for than on the present occasion. The work of our staff during the past year certainly deserves our admiration and our hearty thanks. As the chairman has already pointed out, the exceedingly difficult and anxious times through which the country has been passing, and which are still with us, have made exceptional demands upon the care, knowledge, and good judgment of the staff, and especially of the senior members of it. The good results which we are able to present to you to-day show how ably and successfully they have surmounted the difficulties which beset banking operations last year.

I think I may say that in the Midland Bank we are a happy family. I believe that the staff are proud of the bank, and recognise the good conditions of their service, and I have reason to know that their relationship with the directors continues to be of the most harmonious and satisfactory character.

I have the honour of associating with this resolution the names of our three managing directors, for while they are our valued colleagues on the board, they are also the much-esteemed chiefs of the staff. Upon them falls the principal burden of responsibility for the conduct of the business of this great bank. None could be more devoted, more able or better equipped for their work than they are. The chairman has already borne his tribute of praise, and I will only add that they possess the entire confidence of the directors and of the staff, and they are making for themselves a great name in the estimation of the public, not only in England, but all over the civilised world.

I must not include the name of our chairman in this resolution, for he is not a member of the staff, and moreover he has a resolution all to himself later on, but I cannot omit a reference to him, and such a reference is not out of place, because he presides over the supreme committee of management of the bank. During the two and a-half years he has been our chairman he has gained the confidence and esteem, and may I add, for it is strictly true—the affection also of all who work under him, while his past distinguished career in the Government, and still more his character and ability, have conferred upon the bank a prestige which is of the utmost value to it both at home and abroad.

Mr Stanley Christopherson (director) seconded the resolution, which was carried with acclamation.

MR E. W. WOOLLEY'S ACKNOWLEDGMENT.

Mr E. W. Woolley (joint managing director), in reply, said: It is a privilege to respond to this resolution, because my colleagues and myself, and also the executive management, realise that the expressions of Mr Bradshaw and Mr Christopherson are no mere courtesy address, but reflect the feelings of the whole of the directors with respect to our staff, of whom we are justly proud. To receive such an expression of approval at this meeting is the greatest possible encouragement to those whose earnest endeavours have been directed to serving your best interests, and to send them this message of recognition will greatly assist them in making further efforts. They are fully appreciative of the exceptional conditions through which we are passing and are working with that admirable spirit of co-operation which ensures a continuance of loyal and enthusiastic support to the chairman and directors and the management in carrying on the work of your great institution.

You have been so kind, Mr Bradshaw, as to include my colleagues, Mr Murray, Mr Hyde, and myself in your resolution, and on behalf of each of us I beg you to accept our sincere thanks. You have alluded to the absence of Mr Murray. I know how keenly he is disappointed, and how much he regrets not being here to-day owing to indisposition, a regret in which we all share, but I am glad to say we shall soon have him with us again.

We are experiencing most difficult and trying times, calling for the exercise of the greatest care and vigilance, while at the same time we are giving the fullest consideration and assistance to the needs of the country's trade. With the knowledge, ladies and gentlemen, that we have your support and approval, we shall meet the future and its demands with the utmost confidence.

The unavoidable absence of Mr Murray (joint managing director) was also referred to in suitable terms by Mr Rae, of Liverpool, who expressed the hope of the shareholders that Mr Murray, beloved and respected by all who had the privilege of knowing him, would soon be back at the bank.

The proceedings terminated with a vote of thanks to the chairman, proposed by Sir William P. Raynor, and seconded by Mr John Embley.

BARCLAYS BANK, LIMITED.

MR GOODENOUGH'S EXHAUSTIVE REVIEW OF INTERNATIONAL FINANCE AND COMMERCE.

PAPER MONEY AND CREDIT SCHEMES.

NECESSITY FOR LOANS TO FOREIGN COUNTRIES.

GERMAN AND AUSTRIAN REPARATION DIFFICULTIES.

SIR HERBERT HAMBLING ON THE CURRENT YEAR'S PROSPECTS.

The twenty-seventh ordinary general meeting of the shareholders of Barclays Bank, Limited, was held, on the 25th instant, in the great hall at the Cannon street Hotel, London.

Mr Frederick Craufurd Goodenough (the chairman) presided.

The secretary (Mr W. N. Seeley) read the notice convening the meeting and the auditors' report.

The Chairman, who was received with cheers, said: My lords, ladies, and gentlemen,—Will you be pleased to take the report and accounts as read? (Agreed.) Since our last meeting we have to deplore the death of three of our directors—Sir Gilbert Claughton, Bart., who was also chairman of the London and North-Western Railway Company; Mr Percy Tew, a very well-known country banker from the West Riding of Yorkshire, and a man widely respected for his sound judgment and great experience; and Mr Charles Barrington Balfour, C.B., who had been a director of the British Linen Bank, and joined our board upon the affiliation of that institution with ourselves—a man well known in Scotland and in London, and a very valued colleague. We deeply regret the loss of these members of our board. The value of the services of each of them to the bank was of a very special character.

YEAR'S PROFIT.

During the year we have made a profit of £2,201,651. This profit is less than that of the previous year, the reduction being due to lower rates of interest upon short money, to a reduction in the amount lent out to customers, and, on the other hand, to higher expenses. The payment of salaries to our staff, taken as a whole, has been larger; the number of staff employed and the average individual payments (inclusive of the war bonus and allowances) have both been higher. Moreover, we have been required to pay more taxation. The full amount of the corporation tax has been a heavy item under this heading.

You will realise that during the past year banking conditions have been difficult. We have, as you may well suppose, made some bad debts, but in all the circumstances—seeing how great has been the break in prices and values—this is not surprising. You may rest assured that we have fully provided not only for all bad debts, but for all probable bad debts.

On the other hand, there has this year been a great improvement in the values of all gilt-edged securities, so that we have not appropriated anything to investments, as we found it necessary to do in the last and in previous balance-sheets. The market price of our securities is considerably in excess of the figure shown in the balance-sheet.

Our profit, after payment of the same dividend as a year ago—namely, 10 per cent. on the "A" shares and 14 per cent. on the "B" and "C" shares—has been allocated in the way set out in the report. We have carried the sum of £600,000 to the fund against contingencies, £100,000 to a reserve against pensions for widows and orphans of members of our staff, £100,000 to reduction of premises account, leaving a balance of £535,251 to be carried forward, as compared with £565,602 brought forward from the previous year.

Some idea of the magnitude of the work conducted by this bank may be gathered from the fact that during the past year the number of cheques, &c., collected and paid by us through the medium of our clearing department alone, irrespective of the direct settlements made by branches, was about 87 million items, representing a total turnover of £12,000,000,000.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, you will agree that its most notable feature is that of extreme liquidity. The current, deposit, and other accounts show an increase of £3,153,930, as compared with a year ago. They stood at the date of the balance-sheet at £339,942,299. In looking at our figures, however, you should, for all practical purposes, include the current, deposit, and other accounts of the British Linen Bank and the Union Bank of Manchester, totalling a further £55,000,000, as we hold practically the whole share capital of both those institutions.

On the other side of our balance-sheet we have cash, money at call and short notice, equal to 23.6 per cent. of the deposits; bills

discounted (being mostly Treasury bills), 22.6 per cent.; and investments amounting to £63,668,610, of which over 75 per cent. are British Government securities taken at book value, but of which the market value, as I have already stated, is substantially higher. The loans and advances to customers were, at the date of the balance-sheet, in the proportion of 40.3 per cent. to the deposits, which is a considerably lower percentage than was the case in the earlier period of the year, owing both to the falling off in industry and to the gradual reduction which has taken place in stocks of manufactured goods and produce.

Our premises account stands at £4,600,412, after making the appropriation from profit towards reduction to which I have already referred. We have opened many new and important branches. This has enabled us to make use of some supernumerary staff from other places, and in this way we have been able to employ more men, which is a good thing in these times.

INDUSTRIAL AND ECONOMIC CONDITIONS.

A great change has taken place in industrial and economic conditions during the past 12 months. In the early summer of 1920 almost every industry was fully employed, and orders had been booked for the supply of goods ahead in sufficient quantity to warrant the expectation that, for a very considerable time, there would be a continuance of great activity. There had been, however, some signs of a falling off of orders for a few months, and during the autumn of 1920 the absence of new orders became very marked, and made itself felt acutely. There was also a great cancellation of contracts already entered into. This setback arose from inability on the part of purchasers, chiefly from abroad, to pay. The increased supply of commodities at the existing price levels had overtaken the world's purchasing power—then, and still, greatly reduced by the wastage and dislocation resulting from over four years of war. After that there followed a great scarcity of new business, until September last, when there was a slight revival, but this soon died away. Now, after a period of great stagnation, there are perhaps some signs of improvement in conditions, although they are very slight.

"INEVITABLE REACTION."

The period of trade stagnation from which we have suffered, and are still suffering, represents the inevitable reaction from the spell of great industrial activity which followed immediately upon the termination of hostilities. The provision for the immediate needs of devastated Europe, and, in the case of other countries, the making up of arrears in their requirements, gave rise to a boom which was carried to great lengths before people fully realised that, until the financial stability of European countries had been restored, their capacity to purchase must fall far short of what might be regarded as a normal figure. There is also the fundamental fact that a lack of purchasing power on the part of one important section of the world's population reacts upon and is reflected in the purchasing power of the world as a whole. It is no longer possible to separate the world of industry into compartments, and to expect that there can be prosperity in one direction whilst there is poverty in another. To-day, world trade has passed the stage of primitive exchange of the bare necessities of life, and barter is, for all practical purposes, a thing of the past.

BARRIERS TO TRADE.

Every portion of the world's population must be able to produce and to consume, and any check or interruption anywhere in the continuity of production and consumption throws out of gear the whole industrial machine. The theory of self-determination, however necessary or desirable it may have been as a political ideal, has served to raise trade barriers. These tariff walls must be broken down, and trade, like a stream, will then gravitate to the old and well-worn channels which are the most natural and have proved to be the most beneficial.

At the present time it is computed that the total volume of international trade does not exceed one-half of its pre-war volume. In these circumstances it is easy to understand why industry has received a severe setback and is depressed, and why it is essential

to make a determined effort to restore the financial stability of Europe as a first step towards better markets.

PAPER MONEY

We can also understand why, with existing high prices and with an enormous burden of war debt upon our shoulders, many countries have been driven to create more and more paper money, or "promises to pay," in order to fill the gap between exports and imports—between revenue and expenditure. This gap cannot at the present time be filled by shipping freights, or by earnings through finance and other sources, which, in some instances, formerly helped to make good a deficit. These invisible exports have been largely lost to the more distressed countries of Europe, and the alternative to starvation has been the sale, where possible, of paper money to foreign speculators as the only method of adjusting an adverse trade balance, since the national credit of the distressed countries has been destroyed. Similarly, the gap between revenue and expenditure has also been filled by the creation of paper money for purposes of internal circulation. It follows that, with the best will to cease this form of borrowing, it is to a large extent inevitable, until help arrives from outside to arrest the *débacle* which is hurrying the countries concerned into bankruptcy—a condition which must necessarily react upon the rest of the world.

The wide fluctuations in the exchanges, which have resulted from the generally unsound conditions, have not only been a disturbing factor to trade, but have encouraged excessive speculation abroad in both exchanges and securities, and have resulted in the temporary closing of more than one European Bourse. The greatest care should be exercised to preclude facilities from being given which would result in the transfer of this dangerous speculation to the London market.

CREDITS SCHEMES.

Many schemes have been devised to meet the difficulties encountered by our own exporters, and for providing credit to enable their goods to be sold, but up to the present very little has been achieved in this manner. In point of fact, little could be expected, for no practical step has yet been taken for dealing with the financial conditions of the distressed countries, or to get to the root of the problem—namely, unsound currency. It is only fair, however, to say that the export credits scheme, in its latest form, has undoubtedly proved to be of use in facilitating exports from this country to other parts where credit is weak, and the Government's action in promoting this scheme should be acknowledged as a valuable contribution to the needs of our exporters. So long, however, as unsound currency conditions continue abroad, it will be open to question whether the export credits scheme really tends to promote sound business, or whether it may not ultimately lead to some of the exports having been practically given away.

These problems were the subject of discussion at the conference lately held at Cannes, and we must await the result of those deliberations and of the further discussions at Genoa. One thing is certain—this country must take the lead, and it remains for it to do so.

Before, however, anything could be attempted with any reasonable chance of success, it would be essential that there should be an honest and acceptable plan on the part of the country requiring assistance whereby its finances might be put upon a sound basis. This would involve:—

1. A determination to impose taxation and to reduce expenditure.
2. An adequate assurance against the creation of new paper money except against value of an approved kind.

With these fundamental conditions fulfilled or assured, it should be for us to extend credit in order to help the country concerned to balance its exports and its imports for a period of time sufficient to enable it to return to a normal condition of trade and financial equilibrium.

CONDITIONS OF LONDON MONEY MARKET.

Turning to the conditions of the London money market during the past 12 months, the great falling off in trade and the lower interest rates which have ruled have had the effect of diverting funds to permanent investment. There has, in consequence, been a considerable rise in the prices of Government securities, five of the principal issues nominally amounting to £3,000,000,000, showing an improvement during the year of approximately £268,000,000 in total value.

An important change has also taken place in the policy of the Government in regard to rates of interest for their borrowings through issues of Treasury bills. In April last the tender system was reintroduced, and since then, instead of being more or less regulated by the Bank of England rate of discount, the rates for Treasury bills and for the short-loan market have to a greater

extent been permitted to follow the ordinary course as regulated by supply and demand, whilst the Bank of England rate, though also reduced, continues at a relatively higher level.

GOVERNMENT BORROWING CHEAPER.

The average rate at which the Government have borrowed against issues of Treasury bills since April is £4 10s 8d per cent., compared with £6 10s per cent. for the corresponding period in the previous year.

This important change has effected great economy in Government borrowing, and there seems to have been no real reason why the Government should for so long a period have paid a higher price for money than market conditions at the time demanded. The return to the system of tender, combined with a method by which bills are offered for sale "on tap" at a lower rate than the last tenders received, has proved a useful combination, which secures liberal supplies for the Exchequer, whilst at the same time going a long way towards abolishing that control by the Government of market rates for money which has been so highly prejudicial to the taxpayer. The Treasury bond issue has also proved to be a conspicuous success, and the further recent change from 5½ to 5 per cent. indicates the success of the policy of cheaper money as the result of allowing it to find its own level.

DOMINION LOANS.

Another benefit which has accrued through this change of policy is found in the fact that lower rates and easier conditions in the money market have afforded opportunities for several of the Dominions and Colonies, and also for foreign Governments, to come to the London market for permanent loans. The proceeds are applied either towards the repayment of floating indebtedness, or for development purposes, and this should in due course give some aid to our industries.

LOANS TO FOREIGN COUNTRIES.

There seems to be a growing appreciation of the fact that debts due to this country for money lent abroad for productive purposes, form the backbone not only of our financial, but also of our industrial position. I have often said that, because we cannot ourselves produce all we need for the maintenance of our population, we must turn to profitable use all the credit we can command, employing it, in the first place, in the preparation and development of those markets which will take from us our manufactured goods.

It is only 18 months ago that even first-class foreign Governments were, for all practical purposes, shut out of the London money market. I have one particular instance in mind, and the fact that the loan in question has since been floated with success—the fact that what a few months earlier was considered to be inexpedient or impossible, proved to have been both expedient and possible—serves to illustrate the important change of policy which has taken place in responsible quarters, upon those questions of inflation and deflation of which so much has been heard. It is now recognised that, if we are to preserve our industrial and financial position, this country can, and must, play its part in financing the needs of other countries, even in the matter of large loans.

AMERICAN COMPETITION.

With keen competition from America, we cannot afford to neglect any safe opportunities which may present themselves for loaning money to our foreign customers, nor can we ignore the advantages in pursuing that policy which accrue through a cheap and plentiful supply of credit. London held its position in the past as a financial centre through relatively cheap rates of discount and other financial facilities. The granting of loans resulted in the receipt of orders and, with cheaper conditions for manufacture, secured for us our place in the markets of the world. Unless we can maintain those conditions of relative cheapness, it is difficult to see how we are to regain, and retain, that position upon which the whole future of the country depends.

A relatively cheap money market will also tend to restore financial cohesion within the British Empire, which cohesion has been gravely threatened through the dear money policy, and through the disturbance to our own currency system. Financial cohesion within the Empire is of great importance both for its development and also for the welfare of our own industrial position. Financial cohesion is also essential for the preservation of the individuality of our race and for the principles which guide it.

MONEY RATES IN LONDON AND NEW YORK.

Now that a policy of cheaper money has been accepted there seems no real reason why rates in the London market should, as

a matter of policy, be kept higher than rates prevailing in New York, and we may gradually see the way towards greater independence, and to a return, at all events from time to time, to the old conditions when the London rates were, as a rule, fractionally lower than New York rates. There will probably be alternate phases of cheap money and dear money in this country, according as our supplies of loanable capital are encroached upon to an extent which would cause rates to harden on this side. When that happens America, with her larger basis of loanable capital, will be better able to meet the demands pending the return of the London money market once more to easier conditions. It seems clear, however, that we should make use of our opportunities as and when they occur, notwithstanding which America should recognise that such a policy would ultimately benefit both countries by bringing about a maximum development of international trade. By developing world markets through a courageous financial policy, we might, for the time being, appear to be acting adversely to America. In point of fact, we should be acting for the good of both countries, for by the gradual relief which would be given to the pressure on the sterling-dollar exchange through the development of sources of supply in other directions, together with the active competition with America in financing the world's markets, we should in reality be co-operating with her in restoring the world's equilibrium, and co-operation with America is what we and she should desire.

ALTERNATIVE TO EXPANSION OF CREDIT.

Such a policy may necessitate expansion of credit and currency, and many people take the view that it is dangerous to permit such expansion of credit for the purpose of financing other countries in order that they may buy from us, and so improve our own industrial conditions. It is urged that this involves granting credit for a considerable period of time, while the goods which we supply must in effect represent large cash payments abroad, since cost of production is largely represented by wages, and a substantial portion of wages paid is spent on imported food supplies and other necessities of life. It is contended that under such conditions prices must rise, and that inflation, with all its attendant evils, must follow.

It must be remembered, however, that the alternative is unemployment, and that, though there is always the outlet of emigration for those who are able and willing to seek a living abroad, we cannot allow our population to starve. It follows that—to a considerable extent—cash payments abroad for the necessities of life are in the nature of a continual charge which cannot be avoided. In as far as it is practicable, it is better to follow a policy of productive expansion, resulting in the development of new markets and new sources of supply, rather than be compelled to fall back upon other remedial measures, which would certainly call for inflation, such as relief work or doles.

CURRENCY AND CREDIT.

I now wish to turn to the question of currency and credit. At the present time slackness of trade and the lower cost of living (the latter being, no doubt, due in some measure to reduced wages) have served to bring about a reduction in the demand for currency, so that there is a substantial margin now available for issue, without the need for infringing on the limitations imposed by the existing regulations.

Credit is gradually finding its way into permanent investment, but the amount of outstanding Treasury bills which are convertible into cash at the option of the holder is still over £1,000,000,000. There is thus room for considerable expansion when, with a return to trade activity and with money more in demand, additional currency may be needed. Moreover, if wages can be adjusted to and retained at an economic level, any tendency for prices to rise should be diminished, and the fiduciary margin now available, without infringement of the limit, should to that extent go further towards meeting what may be required. If, however, the legitimate trade expansion, which we look for, should demand a volume of currency in excess of the limit, it would be a mistake to endeavour to maintain what is at best an arbitrary figure fixed by the maximum needs of the previous year, by penal action in regard to money rates. Now that we no longer possess a free gold market the Bank rate is not really effective, and it seems that, providing we balance our national Budget without recourse to the printing press, and keep a tight hand on speculation of an undesirable character, we shall not, in existing conditions, go far wrong.

MONETARY FLATION.

In fact, it seems to be impossible to do much more, for a policy of monetary deflation such as was intended under the Cunliffe Committee's Report, has been found to be impracticable. It is

only when there is a surplus of taxable capacity at the disposal of the Government that monetary deflation can be effected, and at the present time no such surplus is available or is immediately in sight. Moreover, monetary deflation with the object of reducing sterling prices to the level of gold prices may prove to be unnecessary. The relative tables of prices, for this country and America, indicate a tendency towards a gradual approximation between sterling prices and gold prices, and this movement towards a common level is confirmed by the improvement which we have seen in the London-New York exchange. This approximation may continue, for America holds some 40 per cent. of the world's gold, and against this gold there must naturally be a tendency to create credit, and so to cause prices to rise.

To-day it is generally recognised that, although the policy outlined in the Cunliffe Committee's Report would be practicable on a full tide of prosperity, and would have been effective and suitable if this country were still a free market for gold, yet under actual post-war conditions it has not afforded a practical working basis. Possibly at some later date its provisions may be usefully applied, but it seems that, for the time being, direct monetary deflation must be postponed, although this should not prevent the energetic pursuit of a policy of "commodity" deflation. On the other hand, no one should be an advocate of deliberate inflation. We know the evils of such a policy.

NEED FOR ELASTIC CURRENCY.

What is really needed to-day is a policy neither of deflation nor of inflation, but an ability and a readiness to expand for productive purposes, under sound economic conditions. For this we require a currency which is both capable of elasticity and is sound, and one that has a definite relation to value. It should be capable of expansion and contraction, and, in addition, there should be such elasticity of credit as will enable us to meet the needs of productive enterprise.

Such a policy, coupled with the adoption of some of the recommendations of the Geddes Committee for economy, should justify some revision of taxation on the lines which are now being discussed.

CRUSHING BURDEN OF TAXATION.

A reduction of income-tax and of double taxation would do much to improve trade and remove unemployment, and should help to bring down retail prices. The trade of this country has developed largely under our limited liability system, but that system is now penalised by a corporation tax, and in consequence many companies may have to reduce their dividends. Under this tax the State takes 5 per cent. of your profits before you draw your dividend, on which you are again taxed. This is only one of many instances of double taxation. At the present time a relief in the crushing burden of taxation would enable those who are engaged in retail trades to reduce their prices, and others who are employers of labour would be able to give employment in many directions where they would gladly do so, but are prevented for the sole reason that they cannot afford it. There is a point which is, in fact, the limit of taxable capacity; beyond this only a strangling effect is produced, which is paralysing to industry and to the earning capacity of the community as a whole.

GERMAN REPARATION.

Few people understand exactly what the payment of the reparations due by Germany under the London Agreement involves, or what is the precise method by which payment will have to be carried out, and how it will affect ourselves—either favourably or otherwise.

Germany has to provide the agreed sum of £6,600,000,000, together with certain interest charges, which are regulated by the Reparation Commission. This payment must be made by instalments, and bonds have been handed over by her in accordance with this plan.

Under the terms of the Treaty payment is required to be made in gold, or in something which can be measured by gold, but Germany has at present only a comparatively small stock of gold—with which she may perhaps be able some day to start to reform her currency—and the whole stock of gold in the world would not suffice to enable Germany to make her payments in gold, even if she should possess it. She must, therefore, import raw materials, and, in order to pay for them, must export her manufactures. This is a first charge on her exports. Then she must still more goods abroad and render other services so that she may buy gold, or its equivalent in value, in order to make reparation payments.

The question must, of course, arise whether the world can absorb so large a quantity of goods as will have to be sold in order to realise the amount that is required as quickly as is at present proposed, or, at all events, whether it can do so without dislocation to trade and consequently injury to itself.

The problem of reparation payments turns, therefore, not only upon the ability of Germany to pay, but also upon the world's ability to receive payment according to the plan as it now stands.

LIMIT TO GERMANY'S EXPORTABLE CAPACITY.

No doubt there are many things which Germany can make and sell with benefit to the rest of the world and without doing any injury, but there is certainly some limit in this direction. There is also a limit to her exportable capacity, having regard to the extent to which she is dependent upon raw material from abroad, and her ability to pay for it; for, as I have said, in the first place her exports must balance her imports of raw materials and necessities of life, and, after that, a surplus of exports is needed in order that she may make her payments under the Treaty.

If she is forced to inflate her currency for the purpose either of balancing her trade or of making her reparation payments, she must eventually come to bankruptcy, or, in the alternative, the internal value of the mark will fall to a point where the cost of manufacture will not enable her to sell abroad.

SUGGESTIONS.

It seems, therefore, that it is only by spreading such payments as may ultimately be decided upon over a longer period—and according to some plan such as will enable a part to be accumulated, for the time being, as mark balances in Germany for the redemption of the bonds which she has deposited—the ultimate payment can be accomplished without undue disturbance to the world's economic system.

In this way reparation bonds already deposited by Germany would become a saleable security improving in value as her recovery proceeds.

If steps are taken to stop further inflation in Germany much can be done, but without such stability of currency as will afford a reasonably sound and stable medium of exchange any attempt to obtain continuous and substantial payments from her, or to find in her a market such as she afforded to this country in former days, when she was our second largest customer, could not produce any very satisfactory results. If report be true, Germany has been given to understand, and has accepted, this condition, and in such case the first step towards the restoration of Europe will have been taken.

AUSTRIA'S POSITION.

The case of Austria is much the same, though it presents fewer difficulties through being of less dimensions. It is, however, of immense importance, seeing that Austria is once more regaining her old position as a centre for the South-Eastern portion of Europe, and any improvement in her position would have its effect on the whole of that area. She needs support for a few years, by assistance in the form of external credits, to enable her to obtain the necessities of life upon reasonable terms, and in this way to reduce her expenditure and to obtain stability of currency by balancing her Budget. The extending influence of such a policy would have an ever-widening effect, and would be far-reaching. It is by providing her indirectly in this manner with those facilities which will enable her to balance her Budget and stabilise her currency that the restoration of Austria can be achieved, provided always there is the desire and intention upon the part of her own people to take the necessary steps, even if they involve temporary privations, so as to make revenue and expenditure balance.

FALSE PROSPERITY.

At the present time there is an appearance of prosperity, and there is great activity in industry and trade, both in Austria and Germany; this is due to the continuous rise in prices, following upon further creations of currency, so that the goods already manufactured have the appearance of cheapness, and are regarded not only as a profitable investment by the people, who are supplied with further paper with which to buy, but also as an investment which is preferable to the holding of paper money, in which public confidence has been gravely shaken. As this proceeds, there must come a time when the climax is reached, and bankruptcy ensues. When that time arrives, if no step has been taken to arrest it through want of concerted action between the different peoples, payment of any kind will have become an impossibility. Nevertheless, if Germany and Austria are allowed and placed in a position to trade, and to trade profitably, a reasonable burden of debt for reparations could be undertaken and discharged, provided it is spread over a sufficient period of years.

Sound currency is the first essential, and in the case of Austria will help through credits and loans as will give her time to turn round.

INTER-ALLIED DEBTS.

The problem of inter-Allied debts presents much the same difficulties as that of reparations, because any effective payment on account of either interest or principal must ultimately be made in goods or services. Any general scheme for dealing with this matter presents many difficulties, but there is always room for bargaining between individual nations as to a basis for payment, either now or at some future time.

"FUNDAMENTAL CONDITIONS SOUNDER."

Before concluding this brief résumé of the financial history of the past year, and my outlook on the future, I should like to say that the grave difficulties we have encountered have, in my opinion, left us with fundamental conditions sounder than they were a year ago. There is still much to be done, but it is to the good that prices have fallen substantially, that considerable stocks have been liquidated, that profits and wages have gone some way on the road towards a sounder economic basis, that the credit position is easier, and that a new and more suitable monetary policy has been adopted.

LABOUR.

Labour, as is almost invariably the case when it is not misled, is prepared to adapt itself to the altered conditions, and will accept lower wages as the cost of living comes down, and the need is shown for lower cost of production, to enable us to secure our place in world markets. Labour is the life of the country. It is often the custom to assign to labour an unfair share of the blame for a failure to secure all the markets that we would, but my impression is that, if conditions are properly explained and understood, labour will be ready to play its part. It is by the direct exchange of confidence between employers and employed, and the disregard by both of outside interference, that the best results can be achieved.

My lords, ladies, and gentlemen,—I now beg to move the following resolution:—"That the report of the directors produced, together with the annexed statement of the company's accounts as at December 31, 1921, duly audited, be received, approved, and adopted, and that a final dividend at the rate of 10 per cent. per annum on the 'A' shares, and 14 per cent. per annum on the 'B' and 'C' shares, less income-tax, making, with the interim dividend paid on August 2nd last, 10 per cent. for the year on the 'A' shares, and 14 per cent. for the year on the 'B' and 'C' shares, be declared, payable on the 1st proximo, to the shareholders registered in the books of the company on December 31st last."

VIEWS OF SIR HERBERT HAMBLING.

Sir Herbert Hambling (deputy-chairman): Ladies and gentlemen,—Before formally seconding the motion which has been proposed by the chairman, I should like to congratulate him on the address that he has given us to-day. I think you will all agree that he has reviewed the situation during the past 12 months in a most admirable and statesmanlike way. I think he has pointed out to you that the position of the bank is more solid, its assets are more liquid, and it stands even higher in the estimation of the public than it did a year ago. That is in a measure reflected in the price of the shares. You will observe that the bank share market has had a considerable rise during the last few months. It is true that the rise has been general in all gilt-edged securities, and we must not forget that the enormous rise that has taken place in gilt-edged securities is rather strong evidence of bad trade. It is the large sums of money that have been taken from commerce and have been driven into the gilt-edged market that, in my opinion, primarily account for the increase in value; and I should like, before the end of the year or before we get half through the year, to see that money come out of these gilt-edged securities and go back into commerce.

THE CURRENT YEAR.

There is no doubt that we have many difficulties in front of us in the present year. I see, personally, no sign of any boom in trade. But in my humble opinion the political situation entirely overshadows the commercial position, and if we can get a real peace all over the world, if we can get all countries back again into the financial circle, if we can set the wheel moving, gradually at first, I hope and believe that before the end of the year it will gather increased impetus, and that trade—the trade we want; the trade we live on; export trade—will come back to us. I am not going to weary you or to keep you longer. I only hope that this time next year, if we are all alive and well, you will have a better record of prosperity, and I think it will certainly happen that if the peace that I earnestly hope will come about, does come

about, trade will follow. With these few words, ladies and gentlemen, I beg to second the motion which has been proposed by the chairman.

SHAREHOLDERS' CONGRATULATIONS.

Mr Millar Wilkinson said he felt sure that the address which the chairman had delivered had been listened to with considerable interest by all present. He was exceedingly pleased to hear that the bank had splendid investments to the amount of no less than £55,500,000, of which £48,000,000 consisted of Government securities. He wished to ask whether the directors were of opinion that the date would ever arrive when they would cease opening branches of the bank throughout the United Kingdom. As one of the oldest shareholders in the bank, he congratulated the chairman and his colleagues upon the splendid and sound report which they had submitted. Although the profits had been somewhat less, they knew that the commercial gloom was being pierced, and when it was pierced and commerce improved, the very first to participate in that improvement would be Barclays Bank.

TWO EXCELLENT QUALITIES.

Mr Stephen Collins expressed his thanks to the chairman for the very able and comprehensive address which he had delivered, remarking that, on the whole, it was very encouraging. The chairman, by his long experience, was a prophet, and the shareholders all valued the wise remarks he had made. Some of them had doubtless felt a little amused by Sir Herbert Hambling's paradox, when he said that Barclays Bank was not only solid, but liquid. Those, at any rate, were two excellent qualities in a bank. He trusted that this important institution would go on expanding. As a very modest shareholder, he was very pleased that the bank had during the last six months opened a branch in the locality in which he resided. He was sure they all wished continued and increased success to the bank, and hoped that Mr Goodenough would preside over its destinies for many years to come.

GERMANY'S TAXATION.

Mr Edwards said that, having travelled in Germany and Austria recently, he had listened with considerable interest to the remarks which the chairman had made on the subject of reparations. There were one or two facts with regard to Germany which did not appear to be generally known. In his opinion, Germany was playing with the question of reparations. He had had a good deal of discussion with people there, and he found that until recent months income-tax for 1919-20 had not been collected; the money, in fact, had only just been applied for. His own opinion was that Germany must have time to pay, and that every possible opportunity should be given to her to do so, but if Germany were forgiven her reparations, she would again begin her preparations for war. The payment of her reparations was, as a matter of fact, the best guarantee we could have for peace in the future.

SOUNDNESS OF THE BANK'S POSITION.

Mr Christian, who remarked that the shareholders must all recognise the soundness of the bank's position, asked whether the advance of approximately £1,000,000 in the value of British Government securities was due to fresh investments or to appreciation, and whether the diminution in investments in the British Dominions and in Colonial Government securities was due to withdrawals or depreciation. He wished to put the same question with regard to the decrease of £500,000 in British railway debentures. A further item which required a little elucidation was the investment in the Anglo-Egyptian Bank, where there was an advance of nearly 2,000 shares, whereas the value this year was £1,680,000, as against £1,900,000 a year ago.

Mr Bromwich asked as to the amount lent by the bank upon shipping undertakings during the last three years, and particularly in the case of the Western Counties Shipping.

REPLY TO QUESTIONS.

The Chairman, in reply, said that he had not before him at the moment the figures asked for by the last speaker, but the gentleman might take it from him that whatever advances the bank had outstanding upon shipping were well covered by good securities. They might have lost a few thousand pounds, but there was nothing material, and nothing that need disturb shareholders under that head. The Western Counties Shipping owed them nothing whatever. The bank did advance them a considerable amount at one time, but it was repaid in full without the loss of a single penny. Again, with regard to the questions raised as to investments, he was without precise information, but he thought he could satisfy Mr Christian. With regard to the Anglo-Egyptian Bank shareholding, they had bought during the past year a few more shares as they were offered for sale by the remaining shareholders, but

they had thought it prudent to write down materially the total shareholding in their books. That was an ordinary matter of prudence in the management of the business, and could not do otherwise than strengthen the bank's position as a holder of those shares. It was not that they were not entirely satisfied with the holding, because they were, and they received a very good return on the shares. The whole transaction, in fact, had worked out completely to their satisfaction. As to the other securities, they had written down some of them and had sold others because they thought that, with the uncertainties of the future, it was better, perhaps, not to continue to hold them—not that they were dissatisfied with them, but simply in order to take no risks. In the matter of the Government securities, shareholders might take it that on the total of the bank's holdings there was a very substantial margin between the figure at which they stood in the books and the present market value—a very substantial sum indeed. They might have purchased some investments, and, on the other hand, they might have sold others. He could not state precisely what the balance of their holding was one way or the other, but certainly they had not written up their holding, if that was what the shareholder meant. He was much obliged to Mr Collins for his kind remarks and for the expression of his hope that the bank would continue to prosper. He (the chairman) had no doubt that it would. In reply to Mr Millar Wilkinson, he might say that they would certainly go on opening branches wherever they found they could do so with profit to the bank.

The motion was carried unanimously.

RE-ELECTION OF DIRECTORS.

The Chairman next moved:—"That Messrs Henry Birkbeck, Edward Gurney Buxton, Geoffrey Fowell Buxton, C.B., Edwin Henry Galsworthy, Arthur Bevington Gillett, Walter Somerville Gurney, the Right Hon. Lord Kinnaird, K.T., Messrs George Macpherson, Hugh Exton Seebohm, and Francis Barry Whitfield, the retiring directors, be re-elected directors of the company."

Sir Herbert Hambling seconded the motion, which was unanimously adopted.

On the proposition of Sir Rowland Blades, Bart., M.P., seconded by Mr C. Heath Clark, Messrs Kemp, Chatteris, Nichols, Sendell, and Co., and Messrs Price, Waterhouse, and Co. were reappointed auditors.

VOTE OF THANKS TO STAFF.

The Chairman said that perhaps the most pleasant duty which fell to him on the present occasion was to propose a cordial vote of thanks to the staff. The past year, as he had already said, had been characterised by difficult banking conditions, and had required all the ability and energy of their general managers, assistant general managers, and the whole of the staff in order to bring about the very satisfactory position shown by the report and accounts. It was due very largely—principally, in fact—to the staff that the bank was carried on with such very great success, and in saying this he referred not only to those at the top, but also to every one in the employ of the bank. They had a most excellent staff, and were glad to recognise the fact. He therefore moved:—"That the cordial appreciation and thanks of the shareholders be given to the general managers and assistant general managers, and the whole of the staff of the bank, for their excellent services during the past year."

Sir Herbert Hambling said he had very great pleasure in seconding the resolution. He could assure the shareholders that, in his 45 years' banking experience, he knew of no other occasion during the whole of that period when such a vote had been more deserved than it was in respect of 1921.

The vote was unanimously accorded.

MR W. F. TUKE'S ACKNOWLEDGMENT.

Mr W. Favill Tuke (one of the general managers): On behalf of my colleagues and myself, and also on behalf of the whole of the staff, I wish to thank you for the very cordial way in which you have received this resolution. I appreciate very highly the words which have fallen from the chairman and the deputy-chairman, and I am sure that we shall all be encouraged—not only the management, but the whole of the staff—by what has fallen from them and from you to-day. I thank you very much for the resolution.

VOTE OF THANKS TO THE CHAIRMAN AND DIRECTORS.

On the proposition of Mr Millar Wilkinson, seconded by Mr Christian, a hearty vote of thanks was passed to the chairman and directors.

The Chairman, in a brief acknowledgment, said that the directors would certainly do their utmost to continue to deserve the good opinion of the shareholders.

The proceedings then terminated.

NATIONAL PROVINCIAL AND UNION BANK OF ENGLAND, LIMITED.

SATISFACTORY RESULTS DESPITE DIFFICULTIES OF THE YEAR.

NATION'S FINANCIAL AND ECONOMIC POSITION.

IMPROVEMENT IN NATION'S FINANCE.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

DIMINUTION OF ADVERSE TRADE BALANCE.

The annual meeting of the National Provincial and Union Bank of England, Limited, was held, on the 26th instant, at the Cannon street Hotel, London.

Sir W. H. N. Goschen, K.B.E., presided.

The secretary (Mr E. W. Blackler) read the notice convening the meeting and the auditors' report.

The Chairman said: My Lords, Ladies, and Gentlemen,—Before I deal with the actual figures we have the pleasure of submitting to you to-day, I should like to refer to one or two matters mentioned in the report, and especially to the paragraph which announces the retirement of two of our general managers—Mr Hopewell and Mr Thomas.

TRIBUTE TO RETIRING GENERAL MANAGERS.

Mr Hopewell has devoted no less than 48 years to the service of the bank, the greater part of which has been spent in our City office, and I can pay him no higher tribute than to say that during this time he has gained not only the respect, but I think I may say also the affection of all those with whom, both inside and outside the bank, he has come into contact. His long experience has been an invaluable factor in the conduct of the finance of the bank in the abnormal times through which we have been passing. We lose in him a most efficient general manager possessed of an unrivalled knowledge of London business, deeply imbued with all the highest traditions of our service and well versed in the customs both of the City and of this bank.

Mr Thomas's varied experience and great energy have been employed rather in country banking, and the large increase in the country business of the Union Bank bears testimony to the good use he made there of the connections and knowledge he originally acquired in the London and Yorkshire Bank. He was appointed a general manager of this bank on the amalgamation with the Union, in which position his intimate acquaintance with the trade of the North of England, where he is widely known and respected, has proved of the greatest assistance to the development of this side of our business. We part with them both with much regret, and trust they will long enjoy the leisure to which they are so well entitled.

CHANGE ON THE BOARD.

I must also draw your attention to the paragraph in the report announcing the resignation by Mr Gilliat of his seat on the board of this bank. Mr Gilliat felt that owing to other demands on his time he was unable to give the affairs of the bank the attention they deserved, and under these circumstances he thought it right to tender his resignation, which the directors had no alternative but to accept with much regret.

We are glad to be able to announce that we have elected the Right Hon. Lord Illingworth to fill this vacancy, and his extensive experience as a man of public affairs, as a late partner of a famous firm in the woollen trade and a former director of the Bradford District Bank, will be of great value in the deliberations of our board. You will be asked later on to confirm this appointment by his re-election.

BANK'S WAR MEMORIAL.

In May the memorial to the members of our staff who laid down their lives in the Great War was unveiled by Field-Marshal Sir William Robertson in the presence of some hundreds of relatives of the fallen, and representatives of ex-service men throughout the bank. The names of no fewer than 440 members of our staff are engraved on its tablets, and we trust it will serve not only as a visible memento of their self-sacrifice, but as an example of patriotism for future generations.

NEW BRANCHES.

The consolidation of the various institutions absorbed by this bank continues to progress smoothly, and the several constituent parts are rapidly settling down into one harmonious whole. As stated in the report, a number of new offices have been opened during the year, our policy being to open branches wherever they are necessary for the convenience of our customers, to conserve our business, or where we see an opportunity of extending our connections and adding to our profits.

BANK'S TRUSTEE DEPARTMENT.

I do not know whether the advantages that our trustee department, under the able superintendence of a highly experienced solicitor, is now able to offer to our customers are sufficiently well known. The previous disabilities under which we suffered have lately been removed, and, in consequence of recent legislation, the bank can now be appointed an executor in its corporate name. I think it will be found that our fees compare favourably with those of the Public Trustee and insurance institutions doing a similar business.

THE FRENCH AUXILIARY

We are pleased to report that our French auxiliary—Lloyds and National Provincial Foreign Bank, Limited—continues to make good progress, and we believe the facilities it provides are proving of considerable service to many of our customers. During the past year new branches of that institution have been opened in some of the more important centres in France, and its business generally is extending satisfactorily.

THE ACCOUNTS.

Turning to the accounts, there are no changes of great importance to which I have to call your attention. The amount of our current, deposit, and other accounts—£272,000,000—is practically the same as last year. On the other hand, the coin at the Bank of England and currency notes in the United Kingdom, &c.—the first item on the asset side of the balance-sheet—amounts to £36,167,000, against a previous figure of £31,094,000, an increase of some £5,000,000, showing a percentage this year of cash to deposits of 13.2 per cent., or, if balances at other banks and cheques in course of collection—£8,000,000—are taken into consideration, a percentage of 16.17 per cent. of our deposits.

MONEY AT CALL AND SHORT NOTICE.

The amount of money at call and short notice is about the same as in 1920. Bills under discount—£56,000,000—show an increase of £13,000,000 over last year's figures. These bills, practically all maturing within three months, include a very large proportion of English Treasury bills, and form a readily realisable asset.

INVESTMENTS.

With regard to investments, Government securities stand at £38,000,000, against £48,000,000 in the previous year, from which you will gather that we have had during the past year opportunities of realising at favourable prices some of the investments resulting from the issues in less favourable times to which it was incumbent on the bank to subscribe. For the first time for many years you will be glad to hear that there has been no necessity to provide for any depreciation in our Government securities.

Our shares in other banking companies amount to £2,737,000, and are set out at their cost price. If any item amongst these appears at a price above its present market value you may rest assured that specific provision has been made to meet it.

REDUCTION IN ADVANCES TO CUSTOMERS.

Advances to customers at £126,000,000 show a reduction of £14,000,000 as compared with the figures last placed before you, but it must not be understood that the cause of this reduction is the result of any undue restriction of facilities to our customers. On the contrary, not only have we responded to all applications for assistance by our customers in a liberal spirit, and granted advances where any justification could be shown, to the utmost limits of prudence and safety, but in view of the exceptional times the bank has exercised unusual forbearance and leniency with regard to renewals of advances which otherwise would have become due for repayment.

BANK PREMISES.

Bank premises account shows an increase of a little over £300,000. The rearrangement of our organisation necessary for the effective control of the businesses we have taken over and the absorption of their staff entailed large alterations in, and extensions to, our head office. It is unfortunate that the work had to be undertaken while prices are still at a high level, but we feel confi-

dent that the money is well spent, and that the new arrangements it has been possible to make in consequence of the greater space at our disposal will result, not only in increased efficiency, but also in eventual economy.

PROFITS AND ALLOCATIONS.

After making provision for all bad and doubtful debts—and I am glad to assure you that not only has every ascertained bad debt been written off, but ample provision has been made for any active account the result of which might seem doubtful—we are able to show you an available profit of £2,054,686, which, together with £824,070 brought forward from last year, makes a total sum now available of £2,878,756.

After deducting the interim dividend paid in July, which absorbed £744,753, and after providing an equal sum for the dividend which we have now declared of 8 per cent., making a total distribution of 16 per cent. for the year, there remains a balance of £1,389,249, which has been disposed of by transferring £100,000 to the bank premises fund and £400,000 to the contingencies fund, leaving a balance to carry forward to next year's account of £889,249, or more than a half-year's dividend at the present rate on the bank's capital.

I should like to add that the results of the year's working we have been able to lay before you are, in the main, due to the close co-operation and devotion to duty existing in all ranks of our staff; our general managers, who have only one object in view, the success of the bank, are ably supported by the zeal of the branch managers throughout the country, backed up by an efficient and loyal staff.

DIFFICULTIES OF PAST YEAR.

It is hardly necessary for me to remind you that we have been passing through one of the most troublesome years the business community has ever experienced. In times past there may have been moments of greater stress and crises of a more acute nature may have had to be dealt with, but I doubt whether there has ever been a year during which the obstacles to be surmounted have been more constant, or when the general condition of trade has caused greater anxiety. Throughout the year we have been confronted with a combination of adverse circumstances which have strangled any revival of commercial activity.

Strikes and threats of strikes have impeded the course of business and nipped in the bud any feeling of growing confidence or enterprise. Markets for our exports in all parts of the world have been disorganised, and merchants have been faced not only with a scarcity of buyers, but with the difficulty of collecting the proceeds of sales they might have been fortunate enough to have made, payment of which was, in many cases, long overdue. A large part of Europe has been practically a closed market, and the uncertainty in world politics and the violent fluctuations in exchange have all contributed to the troubles and perplexities which have beset the trade of this country during the past year. None of us can regret that we have finished with 1921, but it speaks volumes for the stability and common sense of the business community, and for the prudence and courage which has characterised the relations of the banks of this country with their customers, that the country has come through the year without any serious disaster.

HOPES OF THE FUTURE.

With regard to the future, apart from the feeling of optimism that the beginning of a new year is apt to beget, I cannot help feeling that there is some break in the cloud of depression which has been hanging over our trade for so long, and that the worst of our troubles are over.

Manufacturers and the wholesale trade have to a great extent faced and realised their losses. Wholesale prices of manufactured goods have declined to more normal levels, and although this has not been the case to the same degree in the retail trade, it would seem as though those engaged in this branch of business are beginning to realise that losses have to be faced, and that the only way to attract customers and to increase business is to bring down their prices to a reasonable level.

Our national finances also seem to be improving, and it is satisfactory to know that from January 1, 1921, up to the end of the year the Treasury have been able to pay off no less than £94,000,000 of our external indebtedness, and it is a no less significant feature that the securities they have created during that period for the purpose of paying off maturities as they became due or of converting them into longer-dated bonds have been issued on an increasingly favourable basis to the State.

The value of the pound sterling, as judged by the American exchange, stood on December 31, 1921, at 4.21½, as against 3.53 on December 31, 1920—an improvement which is fully justified by our general position and the state of our currency.

NOTE ISSUES AND THEIR COVER.

At the end of 1920 (and I ought to explain that in the figures I propose to put before you I have deducted both from the total

note issue and from the currency note reserve the £20,000,000 Bank of England notes held on account of the currency), the issue of Bank of England notes amounted to £124,934,000. And currency notes to a total of 367,626,000.

Making together a total issue of notes available for circulation of £492,560,000. Against which there was bullion at the Bank of England and in currency reserves of £154,434,000. Or 31.3 per cent. of the total issue. Whereas at the end of 1921 there were Bank of England notes issued amounting to £125,064,000. And currency notes issued 325,584,000.

Making together a total issue of notes available for circulation of £450,648,000. Against a total amount of bullion of £157,564,000. Or 34.9 per cent. of the issue. Had I been able to compare the figures for the end of 1919 with those at the present day, the comparison would have been much more striking. At that time the Bank of England notes amounted to £108,748,260. And currency notes amounted to 356,152,000.

Showing a total of £464,900,260 but no comparison of the bullion held at that time is possible or right, as the gold held by the banks had not then been paid into the Bank of England.

This unquestionably shows that we are progressing in the right direction, and assures us in the belief that the policy adopted for the restriction of the currency note issue must appreciably facilitate a return to the pre-war gold standard.

DEVALUATION POLICY CRITICISED.

A far more important factor in the recovery of our general position than the actual amount of note issues and their cover is the condition of our international trade and the gradual diminution of our adverse trade balance, which only amounted to £276,500,000 in 1921, against £375,500,000 in 1920—a remarkable reduction, especially when we consider that it took place in the year of the disastrous coal strike, with all the consequent dislocation which that calamity entailed.

This progress would seem to me to afford no support to, and even to dispose of, the suggested policy of devaluation, or, in other words, the proposal that we should permanently reduce the gold contents and value of our sovereign. I remember an old and well-known London banker, who has now passed away, once saying: "It is bad enough to be poor, but to look poor is the devil," and what greater confession of poverty could we make to the world than to proclaim that we had no hope of the pound sterling ever regaining the pre-eminence it had attained prior to the war? Such a policy would, I believe, not only permanently destroy the position we occupied as the clearing house of the world, and which I feel sure we shall in time regain, but would amount to a repudiation of obligations incurred during the last century. I do not believe there is any necessity for such a pusillanimous policy, which would, to my mind, be a confession of disaster and manifestly unfair to a large section of the community.

CANCELLATION OF DEBTS.

It has also been suggested that we should appeal to the United States to cancel our debt to them because other nations do not, or cannot, pay us. We are, I hope, honest debtors, although we may require time to satisfy our creditors, and can reasonably expect to receive some consideration in this respect while we put our house in order; I trust we shall never attempt to evade the payment of the obligations we have incurred. Nothing could be more harmful to our credit, and I am glad to see the Chancellor of the Exchequer has energetically repudiated any suggestion of the kind, and has stated that even though it may be a burden on the country for years, he will be no party to an appeal to cancel our just debts; it is his firm intention to honour all the liabilities the country has incurred.

RAW MATERIALS AND COST OF LIVING PRICES.

Since we met last year there has been further improvement in the conditions, then so ably expressed by Lord Inchcape in his speech as necessary for a return to a more normal state of affairs and improvement in trade.

Prices of raw materials are now, generally speaking, on a reasonable basis, and the average of wholesale prices has fallen during the year from 132 per cent. over the level ruling on July 1, 1914, to 75 per cent.

The cost of living as disclosed by the Board of Trade figures has fallen from 165 per cent. at the end of 1920 to 92 per cent. at the close of last year above that ruling in July, 1914. But perhaps

one of the most satisfactory features of all is the change that seems to be taking place in the attitude and policy of labour throughout the country. Leaders of the principal trade unions and a large proportion of their members appear now to be realising that industry must be conducted on an economic basis, and are more inclined to work for a rate of wages which gives the manufacturer some hopes of being able to produce and sell his goods in competitive markets.

Our Eastern markets also show signs of improvement, and stocks of unsold or undelivered goods are slowly being absorbed.

TAXATION BURDEN

The excess profits tax, which, in spite of the abuse heaped upon it, has in some cases proved a blessing, or, in other words, a reserve in disguise, has disappeared, but the heavy burden of taxation still remains with us.

I trust that the arrangements which have been arrived at by the Washington Conference may result in decreased demands for expenditure, with a corresponding alleviation of taxation, and we are looking forward to some further relief from this heavy burden by the adoption of the recommendations in the direction of public economy made, we believe, by the Geddes Committee, of which our colleague Lord Inchcape is a distinguished member. We anxiously await the publication of their report.

Although to a small extent some business has been possible with the Central European countries, the situation there is still far from satisfactory, and we can only hope that at the Conference to be held in March next arrangements may be made for the regeneration and reorganisation of that part of the world and the consequent resumption of trade on a more normal basis.

BRIGHTER OUTLOOK.

Taking all things into consideration, I think that the outlook is certainly brighter than it was a year ago. Not that one expects or wishes to see a boom in trade this year; we must go slowly. Our commerce is as yet hardly convalescent, and has still to recover from the effects of the war and the slump in prices we have lately experienced, and if pressed to efforts beyond its strength, the wounds which are just healing may break out afresh. But if I am right in thinking, as I do, that we have begun to realise that economy, hard work, and combined efforts are, after all, the only remedies which will cure the ills from which we have been suffering, then I believe we have really made some progress on the uphill road which leads to success.

I now beg to move the adoption of the report and accounts.

Sir Felix O. Schuster, Bart., seconded the motion.

LIABILITY ON SHARES.

Mr Deputy Millar Wilkinson said that he had listened with great attention to the chairman's excellent speech. He felt sure that all the shareholders would readily agree that the past year had been an extremely trying one for bankers, and that it must have taxed the great financial ability of the chairman and his colleagues to a considerable extent. He had no doubt that the consensus of opinion among the shareholders would be that the report before them was a very sound one. As a citizen of London for over 60 years, and as one who had been until recently engaged in business, he had many friends among manufacturers and retailers, and they all imbued him with the idea that the worst was past, and that next year would show some lifting of the dark cloud which had hung over trade so long. He wished to ask whether the board had considered, or would consider, the advisability of reducing the amount of the uncalled liability on the shares. They had shares in this great institution, £5 fully paid and ranking *pari passu* in every respect with the ordinary shares, and what was the result? The £5 fully-paid shares stood at about £12, and the ordinary shares stood at £9. It seemed quite clear that the public were now showing a disinclination to hold shares with a heavy liability. In conclusion, he congratulated the chairman very heartily on the way in which he had dealt with the report, which he believed all the shareholders would agree was an admirable one.

Mr John Hedges said he was heartily in accord with the remarks of the last speaker. They all recognised that the past year must have been a very trying one for the bank, but it appeared that all the banks had passed through it fairly satisfactorily. He was afraid, however, that the present year would not show much better results in regard to trade unless the Government reduced taxation. He did not see how it was possible for people paying a heavy income-tax, and also super-tax, to spend money, and, after all, it was by people spending money that trade was made good. He quite agreed with the opinion expressed by Mr Millar Wilkinson with regard to the liability on the shares. There was not so much likelihood with fully-paid shares of holdings being thrown on the market when a person died. Executors would not run the risk of keeping shares carrying a liability, and he thought it would be agreed that there was more likelihood of the price remaining

steadier with fully-paid shares. With regard to the closing of the banks at 3 o'clock, he thought the matter deserved some further consideration, because it was well known that a good many businesses did a lot more trade after 3 o'clock than earlier in the day, and the cashiers could not get their money added up and ready to be paid in before the present early closing hour.

CHAIRMAN'S REPLY.

The Chairman, in reply, thanked the speakers for their kind expressions with regard to the conduct of the bank, and said he could assure them that the various points brought forward would receive the most careful consideration of the directors. The whole question of the capital of the bank had been often discussed at their annual meeting, and the board had given the matter very careful consideration. There was one great difficulty with regard to reducing the liability, and that was that they would have to go to the court, and, if the capital were reduced, he believed he was right in saying they would have to add the words "and reduced" after the name of the bank. This, perhaps, would not have an injurious effect in this country, where people knew the bank, but it might cause considerable inquiries to be made abroad as to what the reduction in the responsibilities of the bank really meant. However, the matter should receive careful consideration. The question of keeping the bank open after 3 o'clock was one that came from time to time before the Committee of the London Clearing Bankers, and it had received careful thought, but in view of the very heavy work thrown upon their employees, and the small demand from the public for a later hour of closing, it had not so far been considered necessary to make any change; he would certainly bring the matter before the committee again.

The resolution was unanimously carried.

The Chairman next moved the re-election of the directors going out of office by rotation—namely, Mr Selwyn Robert Pryor, Mr Francis Alexander Johnston, Mr Colin Frederick Campbell, and Mr Lindsay Eric Smith, and this, having been seconded by Sir Felix Schuster, was carried; and the appointment of Lord Illingworth to a seat on the board was confirmed.

On the motion of Mr J. B. Braithwaite, seconded by Mr J. A. Scrimgeour, the auditors (Sir William Barclay Peat, C.V.O., and Sir Nicholas E. Waterhouse, K.B.E.) were appointed.

A hearty vote of thanks having been accorded to the directors, general managers, branch managers, and other officers of the bank for their efficient management and services, the proceedings terminated with a vote of thanks to the chairman for his able conduct in the chair.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.

NEW CONCESSIONS ACQUIRED.

The adjourned eleventh ordinary general meeting of the British Burmah Petroleum Company, Limited, was held, on the 24th instant, at the Cannon Street Hotel, London, the Hon. Lionel Holland, the chairman, presiding.

The Chairman said that conditions in the oil industry of the world and in India had materially diminished the company's profit. Profit on exchange, which last year amounted to over £112,000, this year was under £10,000. Substantial economies were being or would shortly be effected.

The refinery throughput averaged 300 barrels per day less than in the preceding year, through smaller deliveries of crude oil from the producing fields, and a strike in September and October among employees on the oil "flats" conveying crude oil from the field to the refinery. The seven lean months that followed were the effect of a forced reduction in drilling and development during the war, but the extensive programme undertaken thereafter made its effects felt last spring, with a satisfactory initial yield from new wells in the Singu area. Consequently, before the end of the financial year the refinery was receiving a full supply of crude oil.

The trading profit was £168,559, or a drop of nearly £200,000. Including profit on exchange, already mentioned, and other items, and deducting sundry charges, debenture interest and depreciation, as well as nearly £77,000 for drilling and sinking, there remained a profit balance of £93,334, apart from about £74,000 of surplus on the sale of investments and refunded taxation. The proposed final dividend was at 12½ per cent. per annum, free of income-tax, making 12½ per cent., tax free, for the year.

At Singu several wells had reached the deeper and richer sands, and others were being sunk, while they were taking seriously in hand the development of another field in which they held a very considerable territory. Oil rights over some 58 square miles in the N.W. Provinces and the Punjab had been acquired, and might well prove an asset of importance. On the Sinai Concessions active work was proceeding, and in the Argentine they looked for early success.

The report and accounts were adopted.

BANK OF LIVERPOOL AND MARTINS, LIMITED.

MR EDWARD PAUL ON CURRENCY INFLATION AND TRADE REVIVAL.

DIVIDEND MAINTAINED DESPITE YEAR'S DIFFICULTIES.

INDUSTRIAL SITUATION REVIEWED.

HOPES FROM THE GENOA CONFERENCE.

The ninety-first annual meeting of shareholders of the Bank of Liverpool and Martins, Limited, was held at Liverpool on Tuesday last, the 24th instant, Mr Edward Paul, the chairman, presiding over a large attendance.

In moving the adoption of the report and accounts for the year 1921, the Chairman said: Gentlemen,—I beg to move that the report of the directors now submitted, and already printed and distributed among the proprietors, be adopted. I presume you will allow me to take the report as read.

LOSSES ON THE BOARD OF DIRECTORS.

You will observe that the report refers to the loss we have sustained by the death of Mr A. T. Neilson, a member of our general board, and Mr William Taylor, a member of our Manchester board.

Mr Neilson served the bank as a director with great acceptance for 15 years, and rendered us good service by his advice and by his knowledge of business affairs in Liverpool and Manchester. In losing him the directors feel that they have lost a valuable and most congenial colleague.

Mr William Taylor was a director of the Palatine Bank, and latterly of this bank, for 22 years. He was a man of shrewd judgment, business knowledge and capacity, all of which qualities he placed unreservedly at the disposal of the bank. In his case, also, the directors will miss him greatly.

May I also refer to the death of one who was for many years a director, and only retired from our board a few years ago. I mean Sir William Henry Tate. He was an excellent director of the bank and a leading citizen of Liverpool, and we shall treasure his memory.

To the families of all these friends I beg to tender, on your behalf and on behalf of the directors, our heartfelt sympathy.

MANAGEMENT CHANGES.

During the year we have lost the services of Mr J. C. Kerr, our Halifax district general manager, and Mr Sydney P. Bell, our North-Eastern assistant district manager, both of whom retired in consequence of the state of their health.

To the Halifax Commercial Banking Company, as their general manager, and to ourselves as district general manager, Mr Kerr rendered valuable service during a combined period of 24 years. The directors regret the necessity for his retirement, and offer him best wishes for his future welfare. His successor is Mr Herbert Holt, who was for many years associated with him in the management, and has the full confidence of the directors and the customers.

Mr Bell entered the service of the North-Eastern Bank shortly before its amalgamation with this bank, and has rendered us very good service. We are sorry to lose him, and hope that retirement will restore his health. In his place we have appointed Mr J. M. Furniss, formerly manager of our Victoria Street branch, Liverpool, who is well qualified to discharge the duties of his new office.

Another important change in management is due to the retirement, owing to advancing years, of Mr R. W. Williams, manager of our London office, who served Martins Bank and ourselves loyally and efficiently for 56 years. Mr J. H. Cooper, who succeeds him, has a thorough knowledge of the London business, and is well fitted for his new position.

NEW BRANCHES.

The report also refers to the opening of certain branches and the acquisition of premises for new branches. During the war we were deprived of so many of our men that extensions were impossible, but now that the staff is replenished we propose to open offices in places where we feel that an extension is not only natural, but likely to result in the development of business.

BALANCE-SHEET ITEMS.

Turning to the figures of the balance-sheet and comparing them with the corresponding figures of December 31, 1920, you will notice that there has been a decrease of £2,500,000 in the amount due on current, deposit, and other accounts. This decrease is apparently of a temporary nature. There is also a decrease of £3,000,000 in the bank's acceptances, due to the dull condition of trade and the fall in the value of commodities, against which acceptances are given. The total of the balance-sheet has accord-

ingly fallen from £91,000,000 at the end of 1920 to £86,000,000 at the end of 1921.

On the assets side the cash in hand and at the Bank of England is £3,000,000 less, but the investments in first-class securities, which include Treasury Bills, have increased by £3,800,000. Our investments in war issues have diminished by £2,000,000, owing to the sale of some short-dated investments during the year. Bills of exchange are £5,300,000, against £7,000,000 last year, a decrease which, again, is due to the dull condition of trade.

The most important change in the figures, however, is the reduction of £180,000 in the net profit for the year. In considering this decrease, one has to remember that the year 1920 was a "boom" year; when the bank's customers were doing a large business, which was reflected in the activity of their bank accounts; whereas the year 1921 was one of profound depression, when the turnover in business accounts diminished to an extraordinary degree. This is indicated in the figures of the bankers' clearings:—

In the Liverpool clearing the decrease was 45.7 per cent.

In the Manchester clearing the decrease was 48.8 per cent.

In the Newcastle-upon-Tyne clearing the decrease was 54.7 per cent.

and so on, while the country cheques cleared through London showed a reduction of 26.2 per cent. In other words, business was stagnant, and our commission account naturally suffered. Further, the margin of profit in interest account declined as the year went on, until, towards the end of the year, it was difficult, in respect of money lying in London, to make enough to cover rates allowed to customers on their balances.

DIVIDEND MAINTAINED.

Taking these adverse circumstances into account, the directors are gratified that the profits enable us to pay the usual dividend of 16 per cent. per annum, to provide £150,000 for the bank's contingent fund, and to increase the balance of profits carried forward by about £23,000. The contingent fund is the internal reserve fund of the bank, and our reason for making a transfer to that fund is that, in the present depressed condition of trade, it is desirable to keep the internal reserve strong.

INVESTMENTS.

With regard to our investments, the very conditions which so adversely affected commercial business led to a recovery in the price of gilt-edged securities, and we have no occasion this year to provide for any depreciation. On the contrary, the value of the bank's investments shows a substantial surplus beyond the amount at which they stand in the books.

TRADE DEPRESSION AND ITS CAUSES.

The year 1921 was a year of unexampled business depression, not only in this country but in most of the commercial countries of the world. The fall in the trade barometer began about April, 1920, and had reached such a point by the end of that year that many observers hoped that the bottom had been touched; but during the opening months of the year 1921, and until the month of April, the fall in values and the curtailment of business continued without interruption. From April until the end of the year, while conditions have shown no marked improvement, they have not become worse, and one is tempted to hope that the bottom of the depression has at last been reached. As prices fell, many buyers of goods, especially foreign buyers, failed to fulfil contracts. Especially was this the case where buyers had to face not only the loss in the market value of the goods, but a further heavy loss in exchange. The result was that huge quantities of textile and other goods, which had been shipped out to fulfil definite orders, were left on the hands of exporters to be sold for what they would fetch, or to lie encumbering the quays and warehouses of distant ports. Fresh orders were few and far between. Prices fell below the cost of production, and serious losses were incurred by many of our industrial concerns.

INDUSTRIAL DISPUTES.

To add to our troubles there were during 1920-21 a large number of industrial disputes; I have seen the number quoted as 4,000. The engineering trade was seriously crippled by the

moulders' strike. The shipjoiners' strike, which lasted nine months, threw all shipyard work into confusion, and drove an enormous amount of repair work out of the country; and the coal strike put an end for the time being to our export trade in coal, and closed down the blast furnaces throughout the country. Trade has not yet recovered from these shocks. One is, however, glad to observe a better spirit in regard to labour questions and signs of a happier co-operation between employers and employed.

Another cause of the depression, and especially of its long duration, is that we have not succeeded yet in this country in getting down the costs of our leading lines of manufactured goods to a basis low enough to compete successfully for foreign orders.

When we add to all this the fact of the general economic dis-organisation of the world, we have no difficulty in accounting for the unsatisfactory state of trade and the deplorable extent of unemployment.

This being the background of the picture, I hope you will allow me to fill in some of the details by referring to individual trades and industries.

AGRICULTURE.

I take first the industry of agriculture. The year 1921 was disappointing for farmers. They suffered from heavy depreciation in the value of livestock and from a great fall in price of agricultural products. Roughly speaking, in our area, the fall in values ranged from 40 to 50 per cent. The drought of last summer, although not felt so severely in the North of England as in other parts of the country, also greatly interfered with successful farming, and increased the expense of stock feeding. In some quarters it is felt that although prices may still have to drop further, the fall will not be great, and that steadier prices are likely to be seen during the current year. Speaking generally, the farming industry throughout the North of England has stood the adverse conditions well, and with prudence, economy, and favourable weather will probably get safely through any depression still in front of it.

COAL, IRON, AND STEEL.

During the greater part of 1921 the coal, iron, and steel industries, which I treat together because they are so closely interwoven, have been more or less in a moribund condition. In the first three months of the year most of the steel works were kept busy on old orders at profitable prices, though not much new business was coming to hand. During the same period very little money was being made in the coal trade, but as a proportion of the pre-war standard of profit was guaranteed by the Government, the trade as a whole had not taken any harm. Then, on March 31st, came the end of the Government guarantee, and the disastrous coal stoppage, which paralysed trade in every direction. Some of the iron and steel works kept going as long as supplies of fuel lasted, but there was a gradual closing down, and eventually that important industry came to a complete standstill. Old orders for steel were cancelled on all sides, and our foreign competitors began to get busy to such an extent that more coal and iron was imported into this country than has ever been known. As much as 20,000 tons of iron were imported into the Tees in a single month. Since the coal settlement, foreign competition, coupled with the poor demand, has made owners chary of starting their works and collieries. In many districts miners' wages have now come down to the minimum under the national agreement, and that being so, the coal owners have not found themselves able to further reduce quotations for fuel, and no further reductions in the price of iron and steel can be made without loss. It is the general opinion, however, that prices of iron and steel have dropped to such an extent as to prevent any further imports from abroad. As soon as these facts are recognised, it is possible that the demand will expand. Inquiries are certainly more numerous, although, so far, not a great deal of business has resulted. The one satisfactory feature is that we are recovering our trade in export coal.

SHIPBUILDING.

This leads me to speak of the allied industry of shipbuilding, which in its turn is dependent upon the position of shipping. Shipping has been seriously affected by two main considerations—namely, the enormous increase in the tonnage of the world and the decrease in the quantity of cargo to be carried. Before the war the steam tonnage of the world was 43,000,000; it is now 59,000,000. The quantity of cargo moving before the war was just enough to keep steamers employed. The quantity is now only 80 per cent. of pre-war quantity, while the tonnage has increased 36 per cent. The consequence is that many ships are idle, many only half-full, and new ships are not wanted. The high

cost of new steamers has also checked the demand. The result is that the various shipbuilding yards are gradually completing tonnage under construction, but orders for new tonnage are not being placed, except by a few liner companies who must have tonnage for their special trades. Many builders are now becoming short of work, and are prepared to contract at figures which only leave the smallest margin, if any, of profit; but owners of cargo steamers do not consider prices sufficiently low as yet to justify contracting for further tonnage. It is the opinion in some well-informed quarters that the bottom of the shipping slump has been reached, and that we shall see a slow but steady improvement, and there is undoubtedly some inquiry now regarding new tonnage. There is also a certain amount of repair work in progress, and this department of the industry will probably be the first to participate in any revival, because ships which have been laid up will require overhauling before being replaced in commission.

COTTON TRADE.

Turning now to the cotton trade, the year under review was the worst since the days of the American Civil War. It began with a falling-off of the 1920 demand, and both consumption and price continued to fall until August. Stocks of raw material, as well as manufactured yarn and goods, accumulated, and a cessation of buying for export, together with postponement of deliveries on contract for both home and foreign markets, compelled most mills to run much short time. At the end of the summer a mistaken estimate of the American crop by the accepted authorities caused wide and continual price fluctuation, and mills and merchants, in guarding against a shortage, placed themselves in a worse position than before.

To give you an idea of the fall in values which spinners had to face:—Egyptian yarn (60's), which in February, 1920, was quoted as high as 12s rod per lb, was in 1921 purchasable at about 2s per lb, and American cop twist (32's) fell not less than 75 per cent. in value. It follows that in the spinning industry very few dividends have been earned during 1921, and the losses have been heavy.

Manufacturers also suffered severely. Overseas purchasers either refused or were unable to take up cloth ordered at high prices in 1920, and the existence of these unsold stocks proved a dead-weight on the market for cloth. The Indian (Native) Piece Goods Association refused to meet their engagements, except on the basis of a 28 rupee, to which our merchants could not see their way to agree, whilst in Calcutta and elsewhere the Ghandi boycott presented a great impediment to trade. Accordingly, exports of piece-goods show a heavy fall in practically all the principal markets as compared with the year 1920.

A MORE ENCOURAGING OUTLOOK.

With regard to the future, the impediments in the way of increased trade are that there are still considerable stocks of undigested goods in various parts of the world; finishing prices are still high, though I am glad to see that reduction is now contemplated; taxation, both local and Imperial, is a heavy burden, adding greatly to the cost of production, and the dislocation of the foreign exchanges makes trade in many cases almost impossible. Taking the trade as a whole, however, there is, according to a well-known trade authority, every likelihood of 1922 being more encouraging than 1921, but business will probably be irregular, and progress towards better times slow. A favourable feature is that we must be approaching the point where the markets of the world will require to replenish their stocks, but when that point will be reached it is impossible to say. Another bull point for spinners, though not for manufacturers, is that during recent months exports of yarn to India, Germany, and Roumania show a considerable increase.

WOOLLEN TRADE.

The course of the woollen trade was similar to that of the cotton trade. The boom in the industry attained its height about April, 1920, and the remainder of that year witnessed traders making every effort to overcome the difficulties which threatened the whole industry. The period of depression reached its culminating point in April, 1921, when there were heavy stocks of wool in this country and abroad, and very heavy stocks of finished cloth manufactured from raw material bought at the highest prices, and for which there was no demand whatever. The formation of the British Australian Wool Realisation Association, at the end of 1920, for the disposal of the Government's surplus wool, probably prevented wool from falling to its economic level at the point of greatest depression of the industry; had it done so, the result in other sections of the trade would have been disastrous. The Emergency Tariff in the United States in the early months of 1921 created a heavy demand for tops, and the recovery of the German wool textile industry brought about a sustained demand for raw material, and for tops and yarns during the remainder of the year.

PIECE GOODS.

The experience of manufacturers and merchants of piece goods has been, and is, a sorry one. From the termination of the boom in 1920 to April, 1921, they were inundated with cancellations of orders for piece goods, which were either made or in process, and since then the trend of values for finished cloth has been downwards without interruption. Their difficulties were increased by Germany entering into our market for semi-raw materials at the point of lowest values, and offering the resulting manufactured goods in competition with British manufacturers' stocks made from raw material bought at high prices. The liquidation of finished cloth has therefore been, and is, very difficult, and heavy losses have been made.

The end of the year 1921 closed favourably so far as top-makers and spinners were concerned, and machinery which had been approaching a standstill began to run again. The outlook for makers of tops and yarns is accordingly better than it has been for some time past, and while the prospect for manufacturing and piece merchanting is not yet encouraging, it is felt that the worst is over. Reports received from our branches indicate that the chief obstacles to a revival of the trade are again high taxation and fluctuating exchanges.

If I were to touch upon other markets and trades, I might tell you a more cheering story about some of them, such as foodstuffs, textile machinery, and others, but, nevertheless, I could not avoid the conclusion that the year 1921 witnessed the greatest depression in our economic history. If it had not been for the patience and resource of our business men, and the generous way in which buyers and sellers often agreed to cancel contracts and share losses, and if it had not been for the power to recover losses to the extent of excess profit duty previously paid, the results would have been calamitous. As it is, the country weathered the storm, and will, I trust, now enter calmer water.

MONEY MARKET.

During the year conditions in the money market underwent a considerable transformation. At the beginning of the year Bank rate stood at 7 per cent. and Treasury bills were being sold at 6½ per cent. From March onward Bank rate was reduced by gradual stages to 5 per cent., at which it still stands, and at the end of the year Government was able to borrow on Treasury bills at slightly over 3½ per cent. The fall in the value of money afforded the Treasury the opportunity of borrowing upon Treasury bonds, the total sales of which up to the end of the year amounted to over £175,000,000, which will be a valuable assistance to the Chancellor of the Exchequer in balancing his Budget. The prospect for the new year is that money will continue reasonably cheap, except perhaps during February and March, when taxes are being collected.

After what I have said about the state of trade, I think you will realise some of the problems which bankers have had to face, and you will agree with me that it is a tribute to the soundness of our banks that they have passed so successfully through the difficulties of the year. Our financial system, tried by the test of the war, by the test of the boom which followed it, and by the test of the depression through which we have just passed, has not been found wanting.

EXCHANGE RATES AND TRADE RECOVERY.

Unfortunately, the economic recovery of our own country does not depend alone upon the soundness of our banking system or the solvency of our Government's Budget. It depends also upon the financial and economic conditions prevailing in other countries. While our transactions with America are running on a more even keel, as evidenced by the recovery and comparative steadiness of dollar exchange, our trade relations with Europe are being interrupted and curtailed by the chaotic conditions which prevail in most of the European countries. In many of these the reprehensible practice of inflating the note issue has continued practically unchecked throughout the year, and, if not stopped, is bound, according to all past experience, to end in the economic, commercial, and even social collapse of the countries where the practice prevails. It is not too much to say that the very existence of the economic system of Europe depends upon the abandonment by Germany and other countries of the policy of increasing their issue of inconvertible notes. But what concerns us more directly is that the depreciation of these currencies has led to violent fluctuations in the exchange rates as between the currency and the pound sterling or the currency and the American dollar. The extraordinary effect of such fluctuations upon the internal and foreign trade of the countries concerned is puzzling even to those experienced in such matters. Booms of greater or lesser volume appear and die away, and appear again. Great apparent prosperity exists alongside of very real distress, and in the case of all the countries whose exchanges are subject to the violent

fluctuations I have mentioned, the difficulties in the way of foreign trade are becoming very great. In pre-war days, when the gold standard prevailed in the leading commercial countries, exchange fluctuations were limited by the cost of shipping gold. Thus, if we were becoming too heavily indebted to America, the rate of exchange moved against us until it fell to the point where it was cheaper to draw gold out of the Bank of England and ship it to New York, than to remit money in the form of dollar bills or cable transfers purchased in London. Such shipments of gold not only checked the fall in exchange, but produced a train of remedying influences which, in the old days, protected the economically stabilised countries against the effects of any tendency on their part to overtrade, whether in goods, credit or finance.

DISAPPEARANCE OF GOLD STANDARD AND ITS EFFECT.

The trouble is that with the practical disappearance of the gold standard from the countries of Europe, there is now no link between the currencies of one country and another, no automatic limit to the fluctuations of exchange, and none of the restraining and correcting economic influences which, as I have said, were evoked when international indebtedness reached the point at which gold had to be shipped. Further, in the old days, the trend of prices was fairly uniform throughout the world, and sudden and excessive movements of price were the exception. Now there is no guarantee that in countries where the currency is inflated prices may not move suddenly, violently, and in a direction quite at variance with prices in the rest of the world. It follows that transactions between this country and, say, Germany, which when originated showed a profit to both buyer and seller, might end in severe loss to either the one or the other. Under such conditions business becomes impossible. Again and again during the year we have found business men prevented from undertaking desirable transactions, which would have yielded both profit to themselves and employment to others, by the uncertainty as to the course that prices and rates of exchange would take during the currency of the transaction. In my opinion this uncertainty is now the chief obstacle to business recovery.

GENOA CONFERENCE.

I therefore welcome the approaching international Conference at Genoa in the hope that it will accomplish the following necessary things:—Settle the amount of Germany's reparation at a figure which she ought to pay, but which she can pay; fix the method of payment so as to cause the minimum of disturbance in the foreign exchange market; induce the several Governments to balance their Budgets and cease further issue of inconvertible notes; abolish tariff walls and similar restrictions upon international trade; and, establish peace. The task before the Conference is stupendous, but the Conference will be helped by the conviction which is growing in many minds in all lands, that the welfare of all the nations depends upon the restoration of economic stability and the reopening of the channels of international trade. To achieve such a restoration and such a reopening would be no mere economic gain, it would bring comfort and hope into countless homes in this country, which are at present desolated by want of work, and it would do more than anything else to promote order and contentment not only here, but in the distracted countries of Europe. But if this great end is to be accomplished, the work of the Genoa Conference must be supplemented by earnest effort to reduce our own local and Imperial taxation, which is such a handicap to industry, and to remove all other obstacles which in this country stand in the way of trade recovery. Then we may confidently look forward to a return of that commercial prosperity which, for the sake of every class of the community, is so much to be desired.

Mr Isaac H. Storey, one of the deputy-chairmen, seconded the adoption of the report and accounts, and the motion was carried unanimously.

Messrs G. E. B. Bromley-Martin, W. R. Glazebrook, W. H. Hustler, and A. Allan Paton, C.B., were re-elected directors.

VIEWS OF SIR JAMES HOPE SIMPSON.

Sir James Hope Simpson, general manager, responding to a vote of thanks to directors, management, and staff, said the past year had probably been the most difficult in his experience, not even excepting the war years. During the war when problems arose there was generally only one thing to do. Last year the problems were due to so many cases that it was not always easy to select the right one. However, they had got through, and got through well, and he hoped this year would be commercially a calmer one. Sir James acknowledged the loyalty and support of the managers and staffs of the bank, and announced that the long-wished for widows' and orphans' fund was now established. The meeting concluded with cordial thanks to the chairman.

The meeting concluded with cordial thanks to the chairman.

THE UNION DISCOUNT COMPANY OF LONDON, LIMITED.

SATISFACTORY YEAR'S BUSINESS—INCREASED PROFIT.

SIR ROBERT BALFOUR ON FINANCIAL AND TRADE CONDITIONS.

NEED FOR UNIVERSAL ECONOMY—OUTLOOK BRIGHTER.

The sixty-fourth ordinary general meeting of the shareholders of the company was held at Cannon street Hotel, London, on Thursday, January 26, 1922, Sir Robert Balfour, Bart., M.P., presiding. The secretary read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—I presume that you will take the report as read. It is scarcely necessary to remind you of the adverse industrial and business conditions which have prevailed in this country during the past year, and you are aware that much more adverse conditions exist in many other countries with which we were accustomed in happier times to carry on large and mutually advantageous trading operations. Under all the circumstances, we feel that we are fortunate in being able to submit for your approval the satisfactory reports and accounts for 1921 which are now before you. The restriction of industrial production and trading operations has led to comparatively large supplies of short employment money being available for the purposes of the discount market, and although the supply of bankers' and commercial bills has been limited, as the natural result of trade depression, this deficiency has been made good by free offerings of Treasury bills, which have enabled the discount houses to obtain suitable employment for the funds at their disposal.

NORMAL TRADE CONDITIONS DESIRED.

While, however, the discount market has been able to carry on a satisfactory business under the adverse conditions to which allusion has been made, we would welcome a return to the more normal position which may be expected to result from renewed industrial and commercial activity. In this connection it may be of interest to refer to the Board of Trade returns for 1920 and 1921. In 1920 the export of imports was of the value of about £375,000,000, whereas in 1921 it was about £275,000,000, an improvement in the trade balance of about £100,000,000, which is advantageous from the point of view of restoring the gold value of the £ sterling and the par basis of exchange; but, unfortunately, there are other considerations. These are brought into view by a comparison between the total volume of trade, as disclosed by the Board of Trade returns, for the years 1920 and 1921 already mentioned. The value of the combined imports and exports in 1920 (including re-exports) was a little under £3,500,000,000, whereas in 1921 it was rather less than £1,000,000,000. It is proper to point out that these figures represent values, not quantities, and that the heavy depreciation in values, which came into effect during the past year, is, in part, probably in substantial part, responsible for the fact that the combined import and export trade for 1921 in respect of value did not greatly exceed one-half of that of 1920. The greatly reduced volume of foreign trade demonstrated by these figures has materially added to the general depression which is responsible for the deplorable amount of unemployment and short-time employment which now exists.

INDICATIONS OF BRIGHTER TRADE OUTLOOK.

There are, we venture to think, indications of improving trade conditions. Production has greatly diminished, owing to the restricted demand, and stocks (both at home and abroad) are being reduced under the pressure of discriminating credit facilities and the lack of confidence resulting from continuously declining prices. Consumption, however, has been going on, although, doubtless, on a smaller scale than in more normal times, and it is reasonable to expect that trade will gradually reach a broader and sounder basis of development than it has enjoyed for a considerable time, especially if substantial progress is made in rehabilitating the industrial and commercial life of other countries. It is well to remember that the prosperity of one country is not obtained from the adversity of other countries, and that all countries are mutually interdependent from a trading point of view. There is ground for hope that good results may be obtained from the proposed Conference at Genoa in establishing more friendly international business relations.

NEED FOR GOVERNMENT AND PRIVATE ECONOMY.

It is essential to the recovery of our prosperity that the national expenditure should be reduced to the narrowest limits consistent with efficiency, and likewise personal expenditure of a wasteful character should be avoided. There is reason to fear that we are

becoming so accustomed to the depreciated value of our current money as to be indifferent to the national discredit which this implies. The remedy is in our own hands. It may be assisted, it cannot be accomplished, by artificial means, and will be found in increased production and exportation of marketable commodities and reduced consumption of unnecessary things. There is a further remedy, that of increasing the home production of food, which there is reason to believe could be largely augmented to the national advantage.

INTERNATIONAL RELATIONS.

With reference to questions of wider significance, the progress which has been made in the organisation of the League of Nations is a subject for congratulation, and there seems good reason to believe that the establishment of harmonious relations between the countries represented at the Washington Conference may be of invaluable assistance in laying a foundation on which the more comprehensive purposes of the League of Nations may be developed.

MONEY MARKET.

Referring now more particularly to our own affairs, the year opened with the Bank of England rate at 7 per cent.; on April 28th it was reduced to 6½ per cent., on June 22nd to 6 per cent., on July 21st to 5½ per cent., and on November 3rd to 5 per cent., at which rate it now stands. The Treasury bill rate in January was 6½ per cent., afterwards reduced in March-April to 6 per cent.; since then the issue of Treasury bills has been mainly in response to weekly tenders, and liberal applications have recently been accepted at an average differential at about ¼ per cent. below the Bank of England minimum for the time being. The discount market, therefore, has been confronted with the unusual position of the Bank rate minimum, which governs the deposit rates, being maintained at 5 per cent., while the market discount rate, which has followed the Treasury bill rate, was about ¼ per cent. lower, or practically the current rate paid for weekly loans. But, while the working margin of the discount houses under the circumstances has been on a meagre basis during the past few weeks, market conditions were exceptionally favourable during the greater part of the year, owing to the fall in the Bank rate from 7 per cent. to 5 per cent., and to the still greater fall in the rate for Treasury bills. Moreover, they have gained substantial advantage from the appreciation in Government securities.

The average discount rate for the year was £5 4s 3d, the average deposit rate £4 2s 4d, and the average rate for short loans was £4 12s 8d.

BALANCE-SHEET ITEMS.

Turning now to the balance-sheet and profit and loss account, and comparing the figures with those of 1920, I have to make the following observations.

The position of capital account is unaltered at £1,000,000. An addition of £100,000 has been made to reserve fund, which now amounts to £1,100,000; and in explanation of this appropriation, it is sufficient to say that the directors' object is to strengthen the financial position of the company, having in view its increasing business and responsibilities.

An appropriation of £10,000 has been made to provident fund. It is desirable that due regard should be given to the prospectively increased claims on this fund.

Loans and deposits, including provision for contingencies, amount to £33,417,986, as compared with £31,669,392, an increase of £1,748,594. Bills rediscounted are £12,660,345, practically the same amount as last year.

Rebate on bills discounted amounts to £643,535, being £319,955 more than last year. The amount of bills subject to rebate is not materially different; but the average maturities are more extended.

PROFIT AND LOSS ACCOUNT.

Balance at credit of profit and loss account for appropriation is £399,650 12s 6d, as compared with £323,044 4s 3d last year, an increase of £76,606 8s 3d. I have referred already to the appropriation of £100,000 to reserve fund, and of £10,000 to provident fund. An appropriation of £5,000 has also been made to premises account, which now stands at £169,884.

The other side of the balance-sheet shows cash at bank and in hand, £1,256,489, as against £1,259,557 last year, being £3,067 less.

INVESTMENTS, &c.

British Government (including Exchequer Bonds and National War Bonds) and other securities amount to £4,517,666, as compared with £3,019,944, an increase of £1,497,722, which is mainly attributable to increased holdings of comparatively short-dated Government securities.

Loans on securities at call and short dates, &c., are £2,339,478, as compared with £1,558,415, an increase of £781,063. These loans are secured by negotiable securities with adequate margins.

Bills discounted, &c., amount to £40,882,932, as compared with £41,079,452, a decrease of £196,520.

THE DIVIDEND.

We propose to pay a final half-year dividend at the rate of 16 per cent. per annum, less income-tax (making 15 per cent. for the year) and a bonus of 3s per share, free of tax, which will, we venture to think, be satisfactory to the shareholders. The balance to be carried forward amounts to £149,650 12s 6d, as compared with £155,044 4s 3d.

After some remarks by Mr Chalmers, to which Sir William Plender, one of the auditors, replied, the Chairman put the resolution to the meeting, and it was carried unanimously.

The Chairman: I have now to move that Mr A. J. Fraser and Mr A. Louis Allen be re-elected directors of the company.

The Hon. Sir W. H. Goschen: I have much pleasure in seconding that.

The motion was put to the meeting, and carried unanimously.

The reappointment of the auditors, Sir William Plender and Mr A. T. Turquand-Young at a remuneration of 200 guineas each per annum was proposed by Mr Tomkinson, seconded by Mr Nicholas, and carried unanimously.

VOTES OF THANKS TO MANAGERS AND STAFF.

The Chairman: It is now my duty, and, indeed, my privilege, to move a vote of thanks to the managers and staff for their services during the past year. It is very largely due to their efficiency and carefulness that we are able to present to you so satisfactory an account. I am sure that you will join with us heartily in passing this vote of thanks.

The resolution was seconded by Mr Holland-Martin, and carried unanimously.

With a vote of thanks to the chairman the proceedings terminated.

THE NATIONAL BANK, LIMITED.

SUCCESSFUL RESULTS DESPITE UNFAVOURABLE CONDITIONS.
INCREASED DEPOSITS—STRONG LIQUID POSITION.

The annual general meeting of the National Bank, Limited, was held, on the 26th instant, at the head offices, Old Broad Street, London, Sir John Purcell, K.C.B. (the chairman), presiding.

The secretary (Mr M. J. Cooke) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—We meet again to take stock of the position of the bank after an eventful and strenuous half-year—a period full of gloom, anxiety, and difficulties all round. Unhappily, in Ireland, we have had unsettlement—political, financial, and economic, affecting all interests. None have felt the strain and suffered more than the farming industry, mainly due to unpropitious and fitful weather as well as contributory causes such as labour, difficulty of transport, fewness of fairs, and the like, with the result that prices of agricultural produce and of stock fell all round, involving a considerable reduction in the heretofore ordinary profit of the farmer. Indeed, the paralysis which has overtaken Irish commercial and industrial development has, I do not hesitate to say, led up to immense and cumulative loss both to Ireland and to Great Britain. Then, in England, we, like others, have had a setback in having to contend with grave and great depreciation in trade of universal extent and financial stagnation in all directions without precedent. It is true that there has been a rise in British funds and other high-class fixed interest stocks, but accompanied, as I have already indicated, by a heavy fall in industrial and other speculative securities. Well, ladies and gentlemen, in spite of the difficulties of the situation, and the unfavourable circumstances ruling during the past half-year to which I have drawn your attention, the bank has continued to be active, and I venture to think that when I have placed before you certain facts and figures by way of analysis and contrast, you will be of opinion that our operations over the half-year have, in all the circumstances, been fairly satisfactory.

BALANCE-SHEET FIGURES.

I now proceed to deal with the figures in the balance-sheet. There is no change in the "paid-up capital." It remains at one million five hundred thousand pounds. The "rest" has not been touched. There is no change in the "special reserve." It still stands at £180,000. "Notes in circulation" have fallen by £924,000. This decrease is due to the shrinkage of general business in Ireland, fewness of fairs, and to reduction in the prices of

BRANCHES OF THE COMMERCIAL BANK OF SPANISH AMERICA, LIMITED.

commodities. "Deposit and current accounts" show an increase of close upon three millions. The figure of "acceptances to bankers' drafts" shows a small reduction of £32,000.

Now turn to the assets side of the balance-sheet. In "cash on hand" there is a reduction of £1,200,000, but this is more than set off by an increase of £1,700,000 in "money at call." "National War Bonds, Treasury Bonds, and Exchequer Bonds" maturing 1922 to 1930 have gone up by over two millions. "Government securities" remain approximately at the same figures. The item "corporation, railway, and other stocks" is lower by £183,000. This is due to an exchange of securities into National War Bonds. "Advances on securities" have gone up by £439,000. "Bills discounted" show a decrease of £962,000. This arises from the fact that trade bills were not so readily available. The item of "bank premises" is increased on the year by £128,000. At our meeting six months ago I called attention to an addition of £61,000 owing to necessary expenditure on this building (Old Broad street), and on certain new branches. At the same time I mentioned that further expenditure was being incurred on several other branches, and that the matter would be dealt with at to-day's meeting. Thus I explain the figures of increase in this item. As you are aware, our bank premises form a very valuable asset.

Here, ladies and gentlemen, I would ask you to note the very liquid position in which the assets of the bank now stand. It will be seen by a study of the balance-sheet that a sum of practically 22 millions appears under the headings of "Cash, money at call, and early maturing Government bonds," the whole of which may be regarded as available cash.

PROFIT AND LOSS ACCOUNT.

On reference to profit and loss account, the item, "Total expenditure at head office and branches has gone up by £29,000. This is mainly due to additions made to staff salaries and increase of staff owing to the opening of new branches. We again, as in the previous half-year, provide £70,000 for taxation and contingencies, and we have made suitable provision for bad and doubtful debts. Finally, we pay the usual dividend of 12 per cent. and carry forward £27,604 to "profit and loss new account." It will be seen that our aggregate means stand at close upon 51 millions, an increase of nearly two millions. Ladies and gentlemen, on the whole, I venture to think you will agree with me that—looking to the difficulties which had to be contended with over the half-year with which I am dealing—we have fair grounds for being satisfied.

It will be seen, ladies and gentlemen, from the fourth paragraph of the directors' report, that during the past half-year my friend, the Right Hon. Alexander Carlisle, has resigned his seat upon the board, and that this vacancy has been filled by the co-option of Mr Higginson, who had retired from the management of the London office. It has been a source of much gratification to me that during my term of office as chairman of the bank, I have had an opportunity of recommending to my colleagues the selection of two members of the staff for promotion to seats upon the board, who, by their industry, their hard work and devotion to the bank's interests were, in my opinion, eminently fitted for that position. My recommendations were unanimously accepted by my colleagues, and carried through. The first advanced to the directorship was my friend, Mr O'Connell, general manager in Ireland. His promotion has been—after the usual practice—confirmed by the shareholders in Dublin; and now we advance Mr Higginson, whose promotion, also, I am confident, will be as surely confirmed.

Needless to say, ladies and gentlemen, that the past half-year has been an anxious and trying one for your directors, as it also has been a period of watchfulness and caution for the members of your staff; and I know that I express the feelings of my colleagues—and I am sure that I voice the sentiments of the shareholders—when I thank them—one and all—for their loyalty and devotion to the bank's interests during the difficult half-year with which we are to-day dealing.

And now, ladies and gentlemen, I ask to be pardoned for making a new departure. As chairman of this bank, it has always been my policy and practice, when addressing the shareholders at our meetings, to abstain from introducing political matters; but to-day I should like to express my sense of personal gratification at the Treaty that has been ratified as between England and Ireland, which I earnestly hope may bring to an end long-subsisting troubles and bitter memories between the two countries; and, speaking as a banker, I cannot but think that at no distant date it will lead up to a free and ready exchange of commodities and the like, not only between Great Britain and the Free State of Ireland, but also between the North and South of Ireland. This latter is a development earnestly to be desired, not only in the interests of trade and industry, but likewise of the business of the

banker. The pact recently come to between Mr Michael Collins and Sir James Craig is, I am sure, ladies and gentlemen, you will agree with me, a happy omen.

Speaking for this bank, I desire to say that if we can be of any assistance either in Ireland or England to the Government of the Irish Free State it will give us the greatest pleasure to help in any way possible.

Mr J. B. Meers, C.B. (deputy-chairman), seconded the resolution, which was carried unanimously.

The formal business having been transacted, a cordial vote of thanks to the chairman and directors terminated the proceedings.

PROVINCIAL BANK OF IRELAND, LIMITED.

STEADY WIDENING OF THE BANK'S INTERESTS.

HOPEFUL OUTLOOK FOR AGRICULTURE.

The annual general meeting of shareholders of the Provincial Bank of Ireland, Limited, was held, on the 26th instant, at the offices of the bank, 8 Throgmorton avenue, London, E.C., Mr Richard Durant Trotter presiding. Other directors present were: Mr William Thomas Brand, Mr Walter Spencer M. Burns, Mr Robert John Fitzgerald, Hon. Sir William Henry Goschen, K.B.E., Mr Henry Samuel Howard Guinness, Mr Alexander Broderick Leslie Melville.

The secretary (Mr Hume Robertson) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I presume that you will, as usual, take the report as read. It covers a period which has been one of considerable disappointment to the farming community both in the North and South of Ireland, and the fall in the value of livestock especially represents a large aggregate loss, which has not been made good as yet to the farmer or grazier by successful results in other operations. Crops were affected in a varying degree by the drought, and statistics as to yields give unfavourable comparisons with the results of recent years. In the linen trade no decided improvement can yet be reported. There has been heavy depreciation, which has necessitated writing down of values during the year. Fortunately, failures have been few. Stocks in the hands of retailers and merchants continue to decrease, but we still await the active demand, which is needed to fully revive the industry.

IMPROVED CONDITIONS FOR TRANSPORT.

With improved conditions for transport and a more general reopening of fairs and markets the outlook for agriculture gives cause for hopefulness, but there can be no doubt that the last 12 months mark a halt for the time being in the years of profitable production and trading which had assisted so many of our customers, and had brought about the expansion of our business reflected in our reports to you from time to time. Apart altogether from these matters, however, since our last meeting in Dublin in the summer, Ireland has passed through an anxious and trying time, and during the negotiations which have been conducted between the two countries intervals of intense anxiety occurred.

IMPORTANCE OF THE IRISH SETTLEMENT.

Owing to the patience and conciliatory spirit shown by the plenipotentiaries of both nations a conclusion was happily reached, with the result that there is at present in power in South Ireland a provisional Government appointed by the representatives of the Irish people themselves in that part of the country. This Government must necessarily have great difficulties before it, but the national record justifies the confident belief that these difficulties will be wisely surmounted, and we feel assured that it will be recognised that all citizens of the Irish Free State, whatever their political views may have been hitherto, must co-operate in the efforts to make Ireland a great and prosperous nation. The settlement arrived at is a matter of the greatest importance to us, as the more prosperous the Irish nation becomes the more prosperous the bank should be. From the Irish Free State our thoughts turn naturally to Northern Ireland. There we see a Government in power, led also by Irishmen who love their country, and there are already signs that the differences that at present divide North and South are becoming less acute, and may eventually be settled, as is indicated by the recent agreement.

The course of the money market during the half-year has been towards lower rates, and within the past few days the Government terms for bond issues have been further reduced.

CONTINUED GROWTH OF THE BANK'S CONNECTIONS.

We are glad to be able to report continued growth in the bank's connections, and a steady widening of our interests. Maintaining the dividend this half-year at 13½ per cent. per annum, we have

HEAD OFFICE:

OFFICES IN ALL THE CHIEF COMMERCIAL CENTRES

applied £5,000 to write down bank premises account, and have thought it well to carry forward the balance available of £17,358 10s 8d, increasing the balance of undivided profits to £48,862 9s 5d. The principal changes compared with the position at the corresponding date of 1920 are an increase in the reserve fund of £15,000 and of £780,438 in deposits. Advances are lower by £714,845. Against this you will observe that investments are higher by £1,093,487, giving a total now of £6,751,576, which includes a large proportion of short-dated securities, and in this connection I may mention that all our securities are valued at market prices current at close of the year. Cash immediately available exceeds £5,000,000, being higher by £315,529. Circulation is lower by about £100,000, about 5 per cent. upon the total. This tendency was to be expected having regard to the prevailing depression of trade and agriculture.

NEW BRANCHES.

Bank premises account is higher by about £25,000, caused mainly by the expenditure for new branches. We have referred at our recent meetings to these prospective outlays. Some of the workings are still in progress, and you will notice that since our last meeting new branches have been opened at Grafton street, Dublin, and at Kingstown, and the development of business in Limerick made it desirable to open our second office there as a permanent branch to meet more fully the needs of the district.

The balance-sheet probably does not need any further comment or explanation from me, and I may close my remarks by observing that should the new conditions in Ireland tend, as we hope, towards the encouragement of industrial enterprise and commercial activity, the bank's resources will enable us to afford legitimate assistance where we are satisfied that such can be given.

APPRECIATION OF THE STAFF'S SERVICES.

I wish to express the appreciation of the board for the zeal and efficiency of the staff at all our branches, and for their loyal service and attention to the bank's interests, to which the continued progress of the institution must be largely due.

I shall be pleased to answer any inquiries that any shareholder may desire to make. There being no questions, I now formally move: "That the report and statement of accounts, as already in the hands of the proprietors, be adopted."

Mr William Thomas Brand seconded the resolution.

The resolution was carried unanimously.

The Chairman: I now have the pleasure to propose that the two directors who retire by rotation, the Hon. William H. Goschen, K.B.E., and Mr Alexander B. Leslie Melville, be re-elected directors of the company. The Chairman added that the extensive banking experience of these gentlemen had been of the greatest possible assistance to the board.

Mr Henry Samuel Howard Guinness seconded the resolution with pleasure.

The resolution was carried unanimously.

Mr Charles Sebag Montefiore proposed the re-election of Messrs Ernest Cooper and J. Harold Pim as auditors of the company. Mr Crisp seconded the resolution.

The resolution was agreed to unanimously.

VOTE OF THANKS TO THE CHAIRMAN AND DIRECTORS.

Mr Edmund Sebag Montefiore said that he would like to move a vote of thanks to the chairman and board, and remarked that while he was waiting for the meeting it had occurred to him mind that his father attended a meeting of the company so far back as 1847. He had much pleasure in moving the vote of thanks.

A Shareholder: I have much pleasure in seconding that resolution.

The Chairman, in acknowledging the compliment, said on behalf of his co-directors and himself he thanked them very heartily for the resolution just agreed to.

VOTE OF THANKS TO THE STAFF.

The Chairman said he would like before they separated to propose a very hearty vote of thanks to the staff of the bank.

The Hon. Sir William Henry Goschen, K.B.E., seconded the motion.

The meeting voted unanimously.

The secretary, in response, said that on behalf of the staff generally he begged to return hearty thanks for the vote of thanks they had been good enough to pass to them.

The proceedings then terminated.

IMPERIAL BANK OF PERSIA.

SATISFACTORY YEAR—INCREASED PROFIT.

BANK'S SOUND FINANCIAL POSITION.

The thirty-second ordinary general meeting of the Imperial Bank of Persia was held, on the 23rd instant, at the Cannon street Hotel, London, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (the chairman), presiding.

Mr Sydney Rogers (manager and secretary) read the notice convening the meeting and the auditors' report.

The Chairman, having referred to the loss which the bank had sustained by the sudden and unexpected death of Mr A. O. Wood, said: You will remember that when I addressed you a year ago there was still a small British-Indian brigade in Northern Persia, and that at our annual meeting some anxiety was expressed as to the result that might follow from its premature withdrawal. Indeed, at one time so alarming did the situation appear that early in January all European women and children were advised to leave Teheran. The brigade, however, was unable to move during the winter, which happened to be a very severe one, and it was not actually withdrawn until the following May. It is satisfactory to be able to record that the fears entertained proved to be unfounded, and that the Persian Government showed itself equal to the task of maintaining order.

At the beginning of the year the Sipahdar's Government was still in power, but on February 21st a force of 2,000 Persian Cossacks, under their commander, Reza Khan, marched from Kazvin and occupied Teheran, ostensibly with the object of insisting upon the establishment of a strong military Government that would be able to protect the country from aggression after the departure of the British troops. The Sipahdar's Ministry was compelled to resign, and a journalist named Zia-ed-Din, the editor of a local newspaper, was appointed Prime Minister. This gentleman at once announced a very ambitious programme of reforms, many of which, no doubt, were urgently needed, but he was given no time to carry them out, for on May 25th his Ministry fell, and he himself had to flee across the frontier.

CHANGES IN THE MINISTRY.

In his place the Ghavam-es-Saltaneh was appointed Prime Minister, with the Cossack leader, Reza Khan, as Minister of War. This Government was still in power when I prepared this speech, but since then the Ministry has fallen, and the Mushir-ed-Dowleh, who was Prime Minister once before, has been appointed in his place. The Ghavam-es-Saltaneh, who is the brother of the former Prime Minister, the Vossough-ed-Dowleh, was very favourably known for the excellent work he did in aid of the Allies while he was Governor of Meshed during the war. He has certainly proved himself to be a strong and able administrator. He had the courage to call together the Persian Mejliss, or Parliament, which was to open by his Majesty the Shah on June 22nd. The Cossack Brigade was reorganised under the Minister of War, and a rebel lion which broke out in Khorassan in the autumn was speedily quelled and the leader killed. Later on Resht was reoccupied by the Persian forces, and Kuchik Khan, the leader of the insurgents in Chilan and Mazanderan, was killed and his followers dispersed. It has also been reported that the Cossacks have succeeded in quelling some local risings in the Tabriz district. Khorassan, the Caspian districts, and Azarbaijan are the richest parts of Persia, and to have restored order so speedily in these provinces is a feat of which the Persian Government may well be proud.

Our branch at Resht had been closed for some months because of Kuchik Khan's unwelcome activities. Also, owing to the disturbances in Khorassan, our staff at Meshed were compelled to leave that place last February, but following the success of the energetic measures taken by the Persian Government business has been resumed at Meshed, Resht, and Tabriz, and all the branches of the bank are now open and at work.

FISCAL REFORM NEEDED.

Under the Anglo-Persian agreement the British Government

undertook to lend a financial adviser to the Persian Government, and Mr Armitage-Smith, C.B., went out to Persia to take up that post. The Persian Mejliss refused to confirm the Anglo-Persian agreement, and as a result Mr Armitage-Smith's mission terminated last September, to our great regret, for I have no doubt that if he had been invested by the Persian Government with the necessary powers he would have carried through a series of administrative reforms which would have been of great benefit to the country. The Persian Government are now anxious to obtain the services as financial adviser of the American gentleman, Mr Shuster, who occupied that position some years ago. I cannot tell you at this moment whether Mr Shuster has accepted the position, but I need hardly say that what is urgently needed in Persia is administrative and fiscal reform and strong financial control, and that from the point of view of the bank we shall gladly welcome anyone, English or American, in the post of adviser who is able to persuade the Mejliss to devote its attention to these objects and to sanction the measures necessary to bring them about.

During the year under review the import trade, both through the Gulf ports and *via* Bagdad, has been active. But so far the export trade has shown very few signs of revival. This is the main cause of the falling off in the total in our balance-sheet of bills receivable. Needless to say, it is of great importance to the prosperity of the country that an effort should be made to stimulate the export of Persian commodities, as at present the balance of trade is heavily against Persia. According to the figures received for the year ended March 20, 1921, the total imports amounted in value to £82,000,000 kranas, or approximately £9,500,000 sterling, of which no less than £7,500,000 represents British and Indian trade.

OVER-TRADING AND ITS EFFECTS.

The evil effects of over-trading during the short-lived boom immediately following the war have been to a great extent disclosed during the past year, and I am afraid there is still a good deal of clearing up to do generally. The heavy fall in the price of manufactured goods and the enormous stocks accumulated in foreign markets, shipped at the time prices were greatly inflated, have had the effect of locking up a very considerable amount of capital, with the result that stagnation in trade has followed, and the restriction of credit has brought about for us, as for others, a smaller turnover.

The due proportion of the heavy tax on income levied during the previous good years now falls to be paid in the lean ones, which tends to make the position of business men more difficult. The question of taxation in this country deserves the grave consideration of all of us, and every possible support ought to be afforded to the efforts of the committee appointed to recommend the economies so urgently needed in the spending departments of the State.

The total of the balance-sheet for the year under review stands at £7,172,369, and, compared with the figures of the preceding year, £8,260,996, shows a reduction of £1,088,626. Our note circulation has risen from £670,204 to £733,327, while deposits are down from £3,228,336 to £2,805,374. Bills payable, endorsements, and adjustments are smaller this year, showing a reduction from £3,378,404 to £2,616,712. This is mainly owing to slightly better facilities and greater rapidity of communication in Persia, and a return to more normal conditions.

BALANCE-SHEET ITEMS.

The net profit for the year shows an increase from £80,242 to £88,195, and permits us to carry forward £31,955, as against £29,051 brought in. This result is obtained after paying to the Persian Government £5,291, against £4,000 last year, the interim and final dividends aggregating 8s per share, and the allocation of £30,000 to reserve account. Although we have this year transferred £10,000 to premises account, this item shows on the assets side a reduction of only £5,302. This is due to some necessary expenditure on new premises. Cash in hand at bankers and in transit stands at £3,055,204, as against £3,339,574, a reduction of £284,369. Investments are slightly lower at £1,499,172, compared with £1,535,222 last year; these, in accordance with our usual practice, have been adjusted at the lowest quotations of the day on September 20th last. Bills discounted, loans, and advances at £1,872,801, however, show an increase compared with £1,738,789, which was the figure of last year. Since September 20th a rather large advance to the Persian Government, made against special security and included in the figures given, has been repaid. Bills receivable at £695,073 show a considerable reduction on the previous figures of £1,591,989. I hope that, in the future trade recovery to which we look forward, this item in our balance may improve. Our reserve account now stands at £310,000. In view of the serious depression in trade I think we are fortunate in being able to place so considerable a sum to this account again this year. But we are not satisfied with the total reached, and hope that we may be able to continue to add to it yearly in the future.

In conclusion, I think you will agree with me that the accounts disclose a strong financial and liquid position, which will enable us to take advantage of all opportunities which may offer good openings for new business, and I have much satisfaction in adding that this position is arrived at after having made every provision necessary for bad and doubtful debts.

The Chairman concluded by moving the adoption of the report and accounts.

Mr W. A. Buchanan seconded the motion.

Sir J. D. Rees spoke at some length upon the importance of studying the Mohammedan subjects of the Empire, and of arriving at a just and generous peace with the Turkish Empire in the interests of trade.

The motion was carried unanimously.

On the motion of Mr V. A. C. Hawkins, seconded by Mr H. E. R. Hunter, the retiring directors, Sir Hugh S. Barnes and Mr E. A. Chettle, were unanimously re-elected.

A vote of thanks to the directors and staff terminated the proceedings.

THE METROPOLITAN TRUST COMPANY, LIMITED.

BOARD'S INVESTMENT POLICY JUSTIFIED.

THE OUTLOOK—NEED FOR RE-OPENING EASTERN MARKETS.

The twenty-fourth ordinary general meeting of the Metropolitan Trust Company, Limited, was held, on the 27th instant, at the offices, Gresham House, Old Broad street, London, Mr Robert Fleming (the chairman) presiding.

The secretary (Mr H. Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Dealing briefly with the main points of the report, I might refer first to capital account.

VALUES OF INVESTED FUND.

The book cost of the invested fund is little changed from last year, but the value on the Stock Exchange of the securities forming that fund, of course, fluctuates from year to year. On January 1, 1922, that market value was about 24 per cent., less than on January 1, 1921. We still have, as you see from the report, about 24 per cent. of our capital in the United States. In 1914 we had 61 per cent., and last year 25 per cent. in that country, so that while slow to part with old holdings which sell at prices that still sound cheap, we continue to reduce our total holdings there as good opportunities offer. Prices in New York have risen very substantially during the year, but exchange has also risen from 3.53 to 4.21½. Had we been able to sell at present New York prices, and at the exchange of a year ago, there would have been no decrease in our market valuation, but some increase.

EXCHANGE RATES.

The course of exchange during the year has been a puzzle to the most knowing. One course, besides cheaper money in New York, has been that the Americans have been lending to Governments and municipalities all over the world, and buying quoted foreign securities in the London market. Another, that the congestion in the Eastern demand for our manufactured cotton fabrics has reduced the demand for raw cotton, and consequently the offering of cotton bills. America will probably continue to find it in its own interest to part with some of its enormous stock of gold, either by loans or purchase of existing securities, or, what we would wish far more, buying goods from impoverished Europe.

BOARD'S POLICY JUSTIFIED.

Returning again to a consideration of our capital account, I sometimes ask myself whether, in its results, we have justified our management of your funds in the 22 years during which we have had charge of them.

When we consider, on the one hand, the prices that ruled in 1899, when this company was formed—Consols, 105, now 53; L. and N.W. 3 per cent. Debenture Stock, 108, now 57; New York Central 3½ per cent. Bonds, 112, now 75 in New York; and, on the other hand, note that the £1,692,000 which you placed in our hands then and later (when prices were still high, though not so high as in 1899) is now represented by Stock Exchange securities having a market value at the end of the world war of £1,802,000; and consider also that we have had no other business the profits from which could absorb losses or depreciation in the market quotations of our securities; when we consider all these things, and the fact that we have paid dividends from the start, I think the directors are justified in answering in the affirmative the question I put to myself.

Other things being equal, the success of an investment trust such as ours, formed to buy Stock Exchange securities of an investment character, depends largely on conditions at the time of making its investments, that is to say, whether we are then on the crest or in the trough of those price waves—billows during the war—hat mat financial history.

REVENUE.

Turning from capital to revenue, you will observe that, after deducting all expenses, interest on debenture stock, and dividend on preferred stock, there remains out of the profits of the year a sum of £52,786. This is £1,577 greater than last year. After paying 14 per cent. dividend, the surplus for the year is £13,586, or almost 5 per cent. on the ordinary stock. This would, in normal times, justify some increase in dividend, but the present time is a very abnormal one. It is, I think, almost certain that the revenue for 1922 will show some reduction in that surplus; how much I cannot say; not so much as to endanger the continuance of the present dividend, but enough to suggest the wisdom of delay in making any change in it.

THE OUTLOOK.

The outlook is dark just now, but one large hopeful element is the commencement of a realisation on the part of the workers of the fact that we are but one in the community of nations, that we are not self-contained, and that we can only live by having our portals wide open to the world, and selling to all in order that we may buy from all. In our third most important industry, iron and steel, the reductions in wages and profits have really been great, and not unready agreed to. One outstanding element in cost still remains too great—transport—when that comes down in line with the reduction in other costs, our ability to compete with Europe will be greatly increased. But further reductions, though necessary, may be hard to accomplish. Another, an easier and a more popular, way of reducing costs and stimulating business, some quarters suggest. They suggest reduction of taxation even at the cost of adding to the National debt, but I cannot imagine that while our bankers keep demanding, as a first step to solvency, that the distressed countries of Europe balance their budgets, we can adopt the opposite course.

NEED FOR RUSSIAN AND EASTERN EUROPEAN MARKETS.

But not only must we be able to sell the products of our workshops as cheaply as others, we must also have the whole world for a market.

The population of the world is round 1,600 millions. Of this total Russia, before the war, had 173 millions. That large part of the whole is practically "down and out," and the populous countries adjacent to Russia nearly so.

The world's loom of trade will not roar as it was wont till that great part of its web and wool are woven into its web. Some day it will be so woven. Let us hope that that day will be hastened. In that hastening Germany can help. It helps little to put Germany on her feet in order that she can sell her goods to us and other nations West of her. But if she can have, as she used to have, a big trade in Eastern Europe and Russia, then she, as well as the countries East of her, can also again become big customers of ours. But all this will take time. The way through the wilderness may be long before we reach promised prosperity.

With these remarks, gentlemen, I beg to move: "That the report and accounts as presented be, and they are hereby received, approved, and adopted, and that a dividend of £8 10s per cent. on the ordinary stock, less income-tax, making, with the interim dividend, 14 per cent. for the year ended January 1, 1922, be and the same is hereby declared."

Mr Henry A. Vernet seconded the resolution, which was carried unanimously.

On the motion of the Chairman, seconded by Viscount St Davids, the retiring director (Mr Henry A. Vernet) was re-elected.

On the proposition of Mr T. E. Nalty, seconded by Mr D. A. Joseph, Messrs Deloitte, Plender, Griffiths and Co. were re-appointed auditors.

A hearty vote of thanks to the chairman and directors concluded the proceedings.

BALDWIN, LIMITED.

COAL PRICES, TAXATION, AND TRANSPORT RATES.

The annual general meeting of Baldwin, Limited, was held, on the 26th instant, at Birmingham, Sir John Roper Wright, Bart. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, having referred to the retirement of Mr Roger Beck, after a connection with the company extending over 45 years, said the year's working had been carried on under most difficult and trying conditions. The collapse in selling prices which occurred in the second half of the company's financial year, and the disastrous coal strike, which closed down the company's works for a period, combined with the present burden of taxation and the heavy drop in the value of stocks and raw materials, were factors which had adversely affected the year's results. The great problem which confronted the iron and steel industries of the country was the unparalleled competition which had made itself felt during the past year. Germany, France, and Belgium were now not only in a position to produce but also to export at prices which were lower than our own.

but even to undersell us in our home markets. The factor largely responsible for this condition of things was the depreciation in the exchanges of the three countries named, and while this great disparity existed we should suffer serious handicap in our competition in the world's trade. There were, however, other factors contributing to our disadvantage, the chief of which were (1) price of coal; (2) cost of transport; (3) taxation. The last few months had witnessed considerable reductions in the price of coal, but further substantial relief from this quarter was essential to re-establish our industries on anything like a satisfactory scale.

OUTPUT AND PRICE OF PRODUCTION.

He suggested that it would be in the interests of the miners themselves to consider seriously the advisability of reverting to the eight-hours' day, which would mean a greater output per man, with consequent reduction in standing charges, and possibly avert a further drop in wages while the cost of living remained at its present high level. Wages had come down, but the output per man, although improved of late, was still much below the pre-war figures. With the lower-paid men in the coal industry at the present time he had every sympathy. He feared they were suffering severely during the transition period the country had to pass through before economic affairs adjusted themselves, but he hoped the day was not far distant when the industry would be restored to normal prosperity, in which the wage-earners would receive their due reward. Other important factors were the effects of new obligations imposed—namely, increased contributions under the Insurance Acts, increased workmen's compensation, payments to the Betterment Fund under the Mining Industry Act, &c. The cost of stores and materials, although declining, had still a very long way to go, and railway and dock companies would certainly have to give more adequate relief in the matter of railway rates and dock charges. Again, local rates and taxes had increased enormously, while income and corporation profits tax, though not, strictly speaking, items of cost, were, nevertheless, a crushing burden upon the industries that had to be nursed towards recuperation. Coal markets were now being slowly recovered, but the instability of the exchanges and the unsettled financial and industrial conditions now prevailing all over the world made business precarious.

TRANSPORT CHARGES.

Slight concessions had recently been granted in the matter of transport, but the present rates compared with those ruling before the war constituted an additional heavy burden. For example, the cost of transport from the company's Oxfordshire mines to the furnaces at Margam had increased by 2s 4½d, equivalent to 8s 4d per ton of pig. This applied equally to other raw material, and the cumulative effect was very serious. In the case of imported ores they were faced with greatly increased freight, dock charges, and transport from docks to works, altogether equivalent to 10s 5d per ton of pig. As for taxation, it was now acknowledged to be so oppressive as to constitute a definite check on industry, and he hoped some practical relief would soon be granted. Baldwins, Limited, and its subsidiary companies paid in Imperial taxes and other compulsory charges more than the amount required to pay the whole of the debenture interest, the whole of the preference dividend, and 5 per cent., free of tax, on the ordinary capital. The gravity of the situation at present was such that there was urgent necessity for railway companies, dock authorities, manufacturers, and the community generally to assist in bringing about a resumption of work in the stable industries now at a standstill, and in increasing the activities of those only partially operating.

The report was adopted, and an ordinary dividend at the rate of 5 per cent. per annum, free of tax, was declared.

Do New Shares	..	..	..	..	..

(a) This dividend is approximately equivalent to the quarterly returns the Merchants Bank shareholders will receive in ordinary course in future after they before the shareholders. (b) Increased capital.

BRITISH DYEWORKS CORPORATION announce that owing to the depression in the textile and other colour-consuming trades, and the heavy fall in stock values, the trading results are such as do not permit of any payment in respect of preference dividend for this period.

CONSETT IRON.—Company is not paying interim dividend on ordinary shares. Preference dividend will be paid as usual.

ELTRINGHAM announce the impossibility of paying at present any further dividend on the preference shares.

RICHARDS, LIMITED announce that this is the first time the company has incurred a loss, and it is the first occasion it has failed to pay a dividend on the ordinary capital. The rate last time was 26½ per cent., and during the war period it was 3½ per cent.

SUN LIFE ASSURANCE.—Anticipate that in the absence of unforeseen circumstances they will be able to declare half-yearly dividends (inclusive of bonus) of 12s 6d per share, free of tax, payable July 1st next, and on expiry of each subsequent half-year until January 1, 1927, inclusive.

Reports and Notices.

At a general meeting of the Life Offices Association held on January 23, 1922, Mr A. Levine, actuary of the Alliance Assurance Company, Limited, was re-elected chairman, and Mr A. D. Besant, general manager and actuary of the Clerical, Medical, and General Life Assurance Society, was re-elected deputy-chairman.

Sir Percy Wilson Newson, Bart., of Messrs. Jardine, Skinner, and Co., of Calcutta, and Messrs. Matheson and Co., Limited, London, has accepted a seat on the board of Commercial Union Assurance Co.

Mr Thomas Frazer, F.F.A., has been appointed joint assistant secretary of the North British and Mercantile Insurance (London.)

At the half-yearly meeting Mr W. Hutton, F.I.A., F.F.A., general manager of the Scottish Amicable Life Assurance Society, was elected chairman of the Associated Scottish Life Offices in succession to Mr Owen D. Jones, whose term of office has expired.

Sir James Farquharson Remnant, Bart., M.P., has been elected to a seat on the board of the Continental Union Gas Company, Limited, rendered vacant by the death of Sir Arthur Lucas.

We are officially informed that, as from March 28th next, the present general manager, Mr James Hamilton, has been appointed managing director of the Yorkshire Insurance Company, Limited; Mr W. T. Maudsley, the present sub-manager, is made general manager; Mr James Dallas is made manager of live stock department, Mr R. M. Hamilton is made manager of foreign department, Mr G. E. Howard is made manager of accident department. Mr E. A. Birks continues secretary at the head office in York.

After January 31, 1922, the address of the chief office of the British Gas Light Company, Limited, will be 2 The Abbey Garden, S.W. 1.

Following the resignation of Mr E. C. A. Sharper as managing director of the British Central Africa Company, Limited, the board, in consultation with the committee of shareholders, have appointed Mr C. Ponsonby as general manager in London.

Mr W. E. A. Williams, underwriter of the British and Foreign Marine Insurance Company, Limited, and Mr E. L. Jacobs, underwriter of the Alliance Assurance Company, Limited (Marine Department), have been elected chairman and deputy-chairman respectively for 1922 of the Institute of London Underwriters.

GOVERNMENT STOCKS, &c.

REPUBLIC OF PERU 5 PER CENT. GOLD BONDS, 1920.—The Ethelburga Syndicate, Limited, announce that the Foreign Office, through the medium of the British Minister in Lima, have received an assurance from the President of Peru that the overdue payment of the service on the above loan will be made without delay.

RAILWAYS.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED.—Holders of debenture bonds to bearer of this company, amounting to £445,000, and falling due on January 31, 1922, are notified that the directors, with the sanction of the Secretary of State for India in Council, are prepared to renew such debentures for a further period of two years with interest at the rate of 5 per cent. per annum, with a discount of 1½ per 100, provided the holders of the said debentures intimate their acceptance of this offer, and send their bonds to the office of the company, 132 Gresham House, Old Broad street, London, E.C., for endorsement before noon on January 30, 1922. A commission of 5s per £100 will be allowed to brokers and other recognised agents.

BANKS.

CONTINENTAL AND COMMERCIAL NATIONAL BANK OF CHICAGO.—December 31, 1921:—

THE DOMINION BANK (CANADA).—The London branch of the Dominion Bank are advised by cable that the profits of the institution for the year ending December 31st last are \$1,016,262.

UNION BANK OF CANADA.—The report for the year ended November 30, 1921, shows a net profit of \$1,342,390, to which is added \$149,208 brought forward from previous year, making \$1,491,598 available. The dividend of 10 per cent. for the year absorbed \$800,000. There is a memorial appropriation of \$10,000 to perpetuate the memory of members of the staff of the bank who lost their lives in the great war, and \$10,000 goes to officers' pension fund, and \$30,000 to officers' guarantee fund. War tax on bank note circulation to November 30, 1921, absorbed \$80,000, and a balance of \$541,686 is carried forward. The bank has over 400 branches in Canada and agents in the principal cities in America.

INSURANCE.

SCOTTISH WIDOWS' FUND.—The new assurances completed during 1921 with the Scottish Widows' Fund Life Assurance Society, amounted to £2,455,000 gross, and £2,365,000 net after deducting re-assurances.

UNITED INSURANCE COMPANY (INCORPORATED IN AUSTRALIA, 1882).—The total receipts for the year ended September 30, 1921, were £627,425; less agency and general expenses, commissions, discounts, and re-insurances, £396,200—making £231,225. The expenditure—Fire, marine and accident losses (including provision therefor), £97,325; expenses of management, &c., £49,925; leaving £83,975; which the directors propose to dispose of as follows:—To reserve fund (making £140,000), £5,000; to reinsurance reserve fund (making £118,000), £2,000; to special distribution, £50,000; to dividend for year of 10 per cent., £25,000—£69,500 leaving balance £1,975, which is transferred to contingent account. At the special general meeting of the shareholders, held on September 7, 1921, the following resolution was unanimously passed:—“That the capital of the company be increased to £1,000,000 by the creation of 50,000 new shares of £10 each,” which increase of capital has been duly registered. The board has decided, subject to confirmation by the shareholders, to issue 10,000 unallotted shares, and to distribute same in proportion as far as possible of one new share for every five shares held, and to appropriate from profit and loss account the sum of £50,000 as a special distribution to be applied in payment of the sum of £5 per share on the above-mentioned 10,000 shares. This distribution will make the paid up capital £300,000.

MISCELLANEOUS.

HOULDER LINE, LIMITED.—The report for the year 1921 shows that the insurance fund has been debited with £2,828, being claims and returns in respect to the lines underwritten by the company, and a similar amount has been transferred to profit and loss account. After making provision for general maintenance expenses, directors' remuneration, audit fee, and dividends paid and accrued on preference share capital, there remains a credit balance of £68,223. A sum of £10,000 has been transferred to insurance fund (increasing that reserve to £110,000). An amount of £9,468 has been transferred to depreciation (increasing that fund to £225,000). These allocations leave an available balance of £48,755, to which must be added a sum of £2,751 brought forward from previous accounts, making £51,506. A dividend of 7½ per cent. (free of tax) is recommended on the ordinary shares, which will absorb £20,625, and leave an amount to carry forward, subject to income-tax, &c., of £30,881.

MINES.

MASON AND BARRY, LIMITED.—Referring to their circular, dated September 28th last, the directors state that the negotiations for the proposed sale of the company's property in Portugal have fallen through. The directors take this opportunity of further informing shareholders that, although shipments of pyrites during 1921 were slightly less than during 1920, they have no doubt that the result of the year's working will be entirely satisfactory.

NOTE.—The value of the gold output fluctuates each month in accordance with the amount of premium which may be declared to the Mines Department of Southern Rhodesia in that month.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Seasonable weather continues to prevail, with milder conditions following a cold snap, while reports from most districts are favourable respecting the growing wheat crop. Supplies of native wheat were on a moderate scale, and prices ruled fully steady, best samples selling at 48s to 50s per 504 lbs, free on rail. Imported descriptions ruled firmer in sympathy with higher c.i.f. values, at which trade was in a measure checked. No. 1 Northern Manitoba quoted 57s, No. 2 hard winter 54s 6d, Rosaf 64 lbs, 52s to 54s, all ex ship to arrive per 480 lbs, and Australian 53s to 54s landed per 496 lbs. In the floating and forward cargo market a fair business transpired at irregular prices, though same are firmer on balance. North American grades sparingly offered, while Argentine qualities

* Half-year.

† Free of tax.

advanced mainly due to adverse exchange rates. Steamers of Australian on passage sold 50s, loading 50s 9d, No. 1 Northern Manitoba arrived off coast 53s 6d, Rosaf 64 lbs end January 48s 9d, ditto February 25th 48s 6d to 49s to U.K., and Australian cargo afloat at 50s 6d to India. Offerings from Argentina and Australian new crops now begin to make their weight felt, and will no doubt exercise a predominating influence for some time to come, and although neither crops are above the average, liberal quantities will be available for export, while quality leaves little to be desired. North American visible supplies show a substantial decrease, but floating supplies are increased by liberal shipments from Australia and South America. Flour continues quiet of sale, though prices showed no material alteration. London standard straight run quoted 43s, town households 41s, patents 45s-46s, all English straight run 40s per sack delivered London district. All-English country straights 35s to 38s free on rail at London stations. Imported makes steady. Manitoba export patents 43s, straights 40s, Kansas patents 41s to 41s 6d, and Australian in small supply, while firmly held at 43s 6d to 44s, all per 280 lbs, ex store terms. On c.i.f. terms, Australian new crop February quoted 37s, Canadian patents February 41s, straights 39s, Kansas top patents 40s per 280 lbs. Millers' offers steady. Broad brand quoted £9 15s, ordinary £8 10s to £8 15s, middlings £8 15s ex mill, fancy Plate middlings £9 ex ship, and Plate pollards £7 15s to £8 per ton landed. Maize firmer and reservedly offered. Yellow La Plata quoted 39s, yellow African 38s, white flat ditto 35s 6d all landed, and American ex ship to arrive 31s 6d to 32s. Floating and forward cargoes firmer while in moderate demand, the market being influenced by lighter Argentine shipments and adverse rates of exchange. Steamers of La Plata expected to load end January sold 35s 9d, and March shipment at 35s 3d per 480 lbs. Barley steady, but generally quiet. Native malting ranges from 43s to 65s, and grinding sorts 37s to 41s, Irish 43s 6d per 448 lbs. Morocco 30s to 31s, La Plata 30s 6d, No. 4 Canada Western 34s, Canada feed 28s 6d, all landed per 400 lbs. Oats in good demand, and prices firmer in sympathy, with other feeding stuffs. Native varieties range from 29s 6d to 34s 6d, as to sample per 336 lbs, free on rail. Of imported, Plate, f.a.q., quoted 29s, clipped 29s 9d, Canadian 30s to 31s, and Chilean tawny 28s to 29s 6d per 336 lbs. Oatmeal steady, while in moderate demand. English all cuts quoted £18 to £19, rolled oats £20 to £21, American oatmeal £17 10s to £18 10s, rolled oats £19 to £20 ton. English peas firm. Maples range from 70s to 80s, Duns 55s to 62s per

504 lbs. Of imported, Japanese hand picked 35s to 36s, Tasmanian "A" 18s to 22s, New Zealand blue 18s to 22s, and Dutch blue 22s to 28s per cwt. English beans firmly held, winters at 50s to 52s, springs 57s to 62s per 532 lbs. Homeward grain freights generally firm, and a fairly active chartering business transpired. The River Plate section is still the chief centre of attraction, and steamers to load heavy grain at Upper ports, spot, fixed at 37s 6d, early February cancelling done 36s 3d, all February 35s, early March 34s 3d, March 32s 6d, April 15th 30s to U.K./Cont. America quiet, and represented by 16 cents range to Antwerp/Hamburg, February, 20 cents West Italy, and 30 cents per 100 lbs to Baltic ports, the latter being on account of the Russian Relief Committee. To U.K. 4s to 4s 3d quarter is the nearest indicated, with 6d extra if loading in the Gulf. Eastern markets quiet, and Bombay easier at 21s 3d paid on dead weight to U.K./Cont. Australia fully steady, with a fair demand extending to March loading, and fixtures were recorded at 50s for wheat to U.K., and charter business was on a fair scale, and modern steamers of suitable size rule at 4s 9d to 5s 3d for a period of six to twelve months general trading.

COMPARATIVE AVERAGES OF GRAIN.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated January 26th is as follows:—Pig-iron: The anticipated revival in the iron and steel trade at the turn of the year still "hangs fire." Buying is very limited, indeed, and is confined to prompt delivery. A favourable feature is that pressure of foreign iron and steel on the home market has ceased. Prices are as follows:—No. 1 Cleveland iron, 95s per ton; No. 3 Cleveland G.M.B., 90s per ton; No. 4 Cleveland foundry, 87s 6d per ton; No. 4 forge, 82s 6d per ton. East Coast hematite mixed numbers, 95s per ton. East Coast hematite being relatively cheap, there is more business in this iron than in Cleveland foundry. Manufactured iron and steel: Business slow and orders very scarce. Steel ship plates, home, £10 10s; steel ship angles, home, £10; iron bars, home, £12 10s; steel rails, home, £9 10s net. Iron ore: The market for imported ores is rather easier. A small business, principally in Mediterranean ores. Best Bilbao Rubio is now quoted about 25s per ton c.i.f. Middlesbro'.

Our Sheffield correspondent writes:—While there is no reduction in local unemployment, the outlook for trade is distinctly better. That several of the large firms can see business ahead is evident from their decision to start up some of the idle steel furnaces, and it is a fact that orders for the cheaper classes of steel are being booked. Some of these come from the Far East. Another encouraging incident is the placing of contracts locally by the Midland Railway Company for 16,000 tons of heavy rails, as it indicates a recognition that prices of such material are now fairly stable. The British railway companies are in need of rails, rolling-stock, and all sorts of materials, but they have only bought on hand-to-mouth lines for a couple of years. It is expected that they will now resort to their traditional practice of placing contracts for three or six months' supplies. The contract obtained by Metropolitan Vickers Electric Company for the supply of 70 electric locomotives and other electric apparatus to the South African railways will bring a good deal of work to Sheffield, where the motors of the engines will be made. The crucible steel department is as stagnant as ever. The trade done with the United States in such material last year was the smallest ever recorded. Should it continue at that level the market will not be worth cultivation. Prices of German iron and steel products have been steadily rising for some time. Now that the Germans are compelled to buy raw materials abroad, their costs have gone up very considerably, and their competition with this country is becoming less intense. Agricultural engineers are experiencing the worst spell of depression in the history of the trade, and at the moment there are no signs of recovery. In spite of the severe weather, the demand for house coal is comparatively small. The qualities most in request are the best and the poorest. Many householders are buying the smallest possible quantities. The inland demand for steam coal continues at a low level, nor does the export demand expand, although inquiries are increasing. Small fuel and coke are unchanged.

Our Glasgow correspondent (writing on Thursday) says:—The industrial situation remains unsatisfactory, yet there is hope about that things have seen their worst. This is no doubt due to the fact that since the middle of December manufacturers of iron and steel have been accumulating slices of work here and there. In the proper sense of the term, however, there has been no placing of running contracts or provision been made for covering periodical needs of consumers, and therefore the course of the situation at the moment rests on how long and how short the sort of temporary or jobbing bookings of the season lasts. Over the past fortnight leading shipbuilders and engineers have been reducing their staffs, going as far as discharging hands who have been in asso-

ciation with the firms for life-times—steps that are never taken unless in the direst circumstances. These measures show that the work on hand is light, and that recent business operations are not accounted to be of consequence. Machinery builders, valve and pump engineers, oil engine constructors, and such are stated to have come to an understanding, according to which they aim at combining (without amalgamating) their several interests. Latest official details indicate that there is more shipbuilding work for finishing on the Clyde than was understood. The new total includes three Clan liners, which are to cost about £800,000, and be delivered during 1922-23. Much interest attaches to the restart next week of the several steel works that have been idle since the New Year holidays began. Most of the rolling mills will be set agoing, but unless a good few big orders come along the resumption will be of short duration. Rumour has it that a number of inquiries are on circuit for heavy bridge work, for which the English competition is very keen, prices there being several pounds cheaper than here, where the rates rank at £10 10s for ship plates, £10 for sections, and £14 for boiler plates. At the same time dealing here has been reported in ship plates at under £9 10s a ton. Demand for Scotch foundry pig-iron continues indifferent and in sympathy with the tone of the Midlands, prices are off fractionally, Scotch No. 1 being called £5 10s and No. 3 £5 5s, as compared with £5 12s 6d and £5 7s 6d last week. Scotch iron bars are nominally £12 10s. The export terms for black sheets have been shaded a bit, despite some inquiry for various sizes from South America, Australia, China, and the Far East generally. It may here be mentioned that inquiries for bridge building material for Australia are spoken of, with the rate for plates called round about £9 a ton, those for ½ in. sheets being given at £10 10s and 22 GG £13. Exporters to India of light and heavy stuff are more in evidence, but they cannot be described as eager dealers.

P.S.—Since the above was written has come the announcement by the Holt Line that they have placed an order for a large boat with Scott's Shipbuilding Company, Greenock. It appears that the new steamer is to be equipped with the Scott's Still Engines—a combination of oil and steam, from which great propulsive results are anticipated. It is a feature of the day that marine

engineers are devoting every energy they control to the improvement of the oil engine, and that they look for large developments in this direction.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

There is still very little business stirring in the Cumberland and North Lancashire hematite pig-iron market, and the number of furnaces in full blast numbers only six. One of these, which was lighted last week, is on ferro-manganese, a metal which has not been smelted for twelve months. A demand which is largely American has sprung up for ferro-manganese, and it is not at all improbable that a second furnace may be put on to a manganese alloy. The stagnant condition of the hematite iron trade may be judged by the fact that while nearly all the make is of ordinary iron some portion of it is going into stock. Midland and Scotch requirements of low phosphorus iron are negligible, and but for local requirements of ordinary iron production would have to be reduced. It is not an unhelpful sign, however, that West Coast ironmasters at their monthly meeting this week decided to make no alteration in the price of Bessemer mixed numbers, which stand at £5 8s 6d per ton at works. There is a disposition to regard this decision as a token that smelters expect shortly to have a fair volume of business at command, and, indeed, there is a belief that needs will be considerably larger in the spring, and that a revival of trade may set in before the end of April. It need hardly be said that the iron ore industry in West Cumberland and in the Furness district is also very dull. Most of the ore being used at the furnaces is foreign ore, and the demand is mainly for low phosphorus and hand-picked ores for special purposes. There is little doing in the steel trade. Small orders are being booked and part of the plant at Barrow is in operation, but at Workington the steel works are idle and are not expected to start rolling again until March at the earliest. The coal trade is slack. Collieries depend almost entirely upon the Irish market for a living. Competition with Scotland and Lancashire, however, is so keen that the pickings are very small. Scotch owners are quoting 20s per ton against Cumberland's 27s 6d per ton, f.o.b. The difference in quality alone enables Cumberland coalowners to secure what business they possess. There is practically no market for small coal, and what is not sent to the 120 by-product coke ovens that are drawing has to be dumped on the ground, though this week there has been a small shipment to the Continent. The chemical industry is standing, the distillation of a little tar and the manufacture of a small quantity of sulphuric acid being all that is going on.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is a growing feeling among users in the principal consuming centres that the advance in wool prices is being pushed too far. Judging from the strong competition at the London sales, there is a very big demand for the best combing merinos on home, American, and Continental account, and it is obvious that buyers have confidence in the present position, as otherwise they would not be prepared to pay current prices. It is a mystery, however, as to what is being done with the wool, for it is evident that new business in Yorkshire is being largely curtailed owing to the inability of users to follow the upward movement. In the United States, of course, supplies of fine wool are getting very scarce, and the mills will be compelled to buy in spite of the tariff. With regard to the position in Bradford, the great scarcity of spot merino tops is having its effect on quotations, and where lots are available the question of price is merely a matter decided by the needs of the buyer. For forward delivery, however, tops can still be bought at late rates, though some of the largest firms are out of the market for the time being. Difficulties with regard to price begin to make themselves felt in the yarn trade, and it is an undoubted fact that new business is scarce at to-day's level of values. Manufacturers cannot afford to follow the upward movement, and although worsted spinners have plenty of work in hand for the next two or three months, there is not much to be done for delivery during the subsequent months. The reduction in wages may help matters to some extent, and the reduction of ad in dyeing charges for union gabardines is also a step in the right direction. It is hoped that reductions will soon be announced in other cloths, and the trade is also awaiting a reduction in combing charges.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales are being continued with most classes of wool in strong demand, without much change in the course of values. Now that the most urgent needs of the trade have been satisfied, it is to be expected that steady values will continue. The offerings this week of merinos have not been equal to those of the previous week, and for the time being it looks as if the cream of the merino wools on hand have been catalogued. Still, some very good prices have been paid, particularly for Queensland wools. There can be nothing wrong with the market when up to 42d is being paid almost daily for good ordinary clean lines of scoureds, this figure being exceeded several times for really choice parcels. I hardly think there is the same keenness to acquire medium and faulty merinos as during the earlier part of the series, but all the same they are selling readily enough. Many Yorkshire topmakers would be glad if they could buy wool for 64's tops on a 4s basis, but that

is impossible. A limit of at least 4s 4d is needed to buy even ordinary topmaking wools, and many who have sold forward at 3s 6d to 4s must be "landed" unless they have covered their forward sales by large purchases in Australia on a lower basis than is current in London to-day. The depreciation in the mark has somewhat affected the operations of Germany; many expected to see larger operations on German account this series. France has been a good buyer, and Belgian and Switzerland have given a fair measure of support, but when all is said and done, the home trade has been the mainstay of the market. Surely this is proof of returning prosperity in textile manufacturing circles, this notwithstanding the complaints of manufacturers that they cannot obtain orders for pieces on to-day's prices. America has bought reasonable quantities of the best merinos, and one is pleased to see competition centred upon the best lines coming from Queensland. We have been accustomed to expecting American buyers to concentrate upon West Victorian light conditioned merinos, but Central Queensland wools have commanded their support, and wools giving up to 54 per cent. clean yield are well worth attention.

Crossbreds have sold very freely, the offerings being good in all qualities; 56-58's have commanded strong support, the rise in these qualities being well maintained. The competition for crossbred qualities is better than the majority expected. Bradford topmakers are maintaining their interest in medium and coarse crossbreds. The improvement in slipped lambs of fine quality is particularly well sustained, and good half-breds at 18d to 19d are about 3d dearer compared with the closing days of the December series. In both Lincoln and Leicester lambs there is often 1d per lb improvement, but some of the slipped B.A. wools fared rather badly, due largely to increased limits.

A feature of the sales this week has been the offering last Monday of 5,000 bales of Government-owned South African wool. These met an encouraging sale, far better than they would have done in December. If to-day's values are maintained for these wools, the Government should make a nice profit on them, and it is to be hoped that they will be put upon the market when buyers are prepared to operate. One regrets that, owing to the slackness among woollen manufacturers, there is not a stronger demand for scoured Cape wools. It is just possible that these short clothing Capes will have to be marketed judiciously in order to maintain to-day's standard of values.

THE COTTON TRADE.

MANCHESTER, January 26.

Prices throughout the market have continued to favour buyers, and as is usual in such conditions, operations have been very limited. Although curtailment of production in both spinning and weaving is on a very large scale, the output of yarn and cloth this week has not been sold. Miscellaneous sales have occurred in piece goods for China, but no weight of trade has been done. Not more than sorting up lots have been put through for the several outlets of India, and news from the other side remains discouraging. The political situation in Egypt causes anxiety, and trade is being impeded, but some moderate lines have been booked for Constantinople. Home trade buyers continue to limit their purchases. It is understood that the reduction in the charges for dyeing cloth is to be followed almost immediately by a fall in the prices for calico printing and bleaching. It has been a flat week for spinners of yarn. Prices have given way, and demand has been dull in both home counts and export descriptions.

THE MONEY MARKET.

THE Bank Return confirmed the market's impression that
the Government had found it necessary to borrow tem-
porarily from the Bank to meet its payments at the
beginning of February, which included the repayment of
some maturing 5½ per cent. Exchequer bonds. Money
was easy all the week, and markedly so from Wednesday
onwards, when the regular rate for old day-to-day loans
fell from 3½ to 3 per cent. Banks bought March and

* Additional to those offered by tender the preceding week.

The Bank Return showed evidence of heavy Government borrowing. The stock of gold rose by £305,200 and the circulation by £1,380,800, so that the Reserve was £1,075,600 lower. Government securities were £29,125,000 higher, but Other securities fell by £3,077,900. Deposits were thus £24,942,900 higher, of which £1,122,000 went on to Public and £23,820,900 on to Other. The circulation of currency notes was reduced by £698,000 to £304,306,000, which includes £1,698,000 for notes called in, but not yet cancelled. The fiduciary issue is £254,658,100, or £55,330,300 below the maximum.

THE STOCK MARKETS.

Under the influence of disquieting news from India, liquidation of one or two large accounts, and reaction after the great new issue rush of last week, high-class investment stocks suffered a set-back in the early days of the week. This was followed by a rally in the gilt-edged market, which recovered some of the lost ground, and India stocks fluctuated widely. Business in the markets generally has been quieter this week. But the home railway market has derived strength from some favourable dividend announcements. Oil shares weakened on the Shell's proposed increase of capital, rubber shares remain dormant, and the insurance group has been disturbed by the City Equitable Fire affair.

COMMODITY MARKETS.

The fall in cotton prices has been checked. There is some improvement in the Indian demand for cloth, but at unfavourable prices. Prices at the wool auctions are not closing at the highest point. Quotations for tops are unchanged, and yarn prices are unchanged, spinners being well employed. Stocks of piece goods are still heavy. Reports from Sheffield indicate but a very slight revival, and there is little change recorded from other iron and steel centres. The possibility of closing down steel works is again mentioned. The vegetable oil market has reacted after its recent sharp advance. Some scarcity of hides is anticipated in Bermondsey as a result of restrictions on cattle-slaughtering owing to the outbreak of foot and mouth disease. The boot trade is slack. Detailed reports from special correspondents will be found in later columns.

FOREIGN EXCHANGES.

On the foreign exchange market there has been rather more business than during the past few weeks, although, of course, compared with many periods last year things are still very quiet indeed. The chief feature has been the rapid rise in the dollar rate, which has gone up steadily from 4.24½ on the 27th to 4.30 yesterday morning, the highest point reached since the middle of August, 1919. We have suggested for some weeks past that this improvement was likely to take place, but the rise has been even more rapid than might have been expected, and there is a feeling for the moment that in the immediate future there may be rather more steadiness, although the general tendency for some time to come, at least, will probably be towards an appreciation in the value of sterling. An incidental feature of the rise,

which is unfortunate for the English exporter, is the fact that American goods on the world market have been brought down, for the time at least, to a lower-price level. The German mark has been irregular, with an upward tendency, sufficiently explained by the continued uncertainty as to the reparation settlement. How far the rate will be affected by the railway strike in North Germany is not yet clear. Paris, somewhat surprisingly, in view of the movement in marks, showed a rather rapid downward tendency until February 1st, since when the rate has gone up again to 51.45, as compared with 51.77½ on the 27th. Possibilities of internal difficulties over the military budget and the postponement of a settlement of the Turkish difficulties with England are not very hopeful signs. Italy has appreciated some 3½ lire to 92½, and so far the resignation of the Cabinet has produced only a slight reaction. Among neutral countries, Amsterdam has jumped sharply in our favour to 11.61, Madrid has depreciated very slightly again after its recent improvement, and Switzerland, for the first time for some long period, has moved up to just over 22. Helsingfors, on the week, is rather lower, and the other three Northern currencies (Christiania, Copenhagen, Stockholm) have all moved slightly against us. In Central Europe, Vienna, after its recent dramatic rise to £43,000 (Inlandskrone) is down again to 33,000. The London (Auslandskrone), after recovering to 13,000 from 16,000, is up again to 14,000. Warsaw is practically unchanged, and Budapest a little better. Prague, on the other hand, shows a slight reaction from its recent rapid recovery, while Belgrade still remains high, with uncertain dealings. Bucharest and Athens show little change, and Sofia continues to depreciate. In the East the rupee is very slightly cheaper on uncertainty as to the political outlook, and Yokohama has again depreciated a little. The absence of Chinese business, owing to the New Year, a sharp spot demand from India and few sellers, brought up the silver rate somewhat, but the market is quiet, and Shanghai and Hong Kong are both actually a little lower. In South America, Buenos Ayres, after suddenly rising to 46½d, has now eased again to 45½d, but there would seem to be indications of a steady, if slow, improvement. Montevideo and Valparaiso, on the other hand, are slightly cheaper.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 28, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	27,787	Supply Services	10,848
Taken from Exchequer balances	3,402	Interest on Debt	2,257
		Sundries	125
		Reduction of Debt	17,939
	31,189		31,189

These operations reduced the National Debt by the sum of £17,959,199, and caused the following changes:—

Treasury Bonds	Min. £	Treasury Bills	Min. £
National Savings Certificates	+ 18,400	Surrenders of Bonds, &c.	- 22,626
Sundries	+ 1,950	Public Departments Advances	- 13,879
	+ 20,350	Unemployment Insurance	- 610
		Depreciation Fund	- 1,008
			- 38,364

Property and Income-tax yielded £10,622,000, Customs and Excise £4,040,000, Estate Duties, &c., £1,029,000, and Special Receipts £8,788,862. The floating debt was reduced by £36,424,000 to £1,154,436,000. Sales of 5½ per cent. Treasury Bonds amounted to £17,230,000 and of the 5 per cent. Treasury Bonds to £1,170,000 during the week.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO JANUARY 28, 1922.

Total spent	845,463,466	Raised by revenue ..	784,023,383
Inc. in balances	540,127	Net borrowings	61,980,210
Total	846,003,593	Total	846,003,593

ESTIMATES FOR YEAR 1921-22.

Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000

Surplus*

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £176,922,000.

NOTE.—These figures have now been revised in accordance with a recent Treasury return on internal debt.

POSITION OF THE FLOATING DEBT.

	Out.	Jan. 29, '21.	Mar. 31, '21.	Jan. 28, '22.	Movement week ended Jan. 28, '22.
Temporary Advances	40,750,000	154,469,000	115,865,000	115,865,000	115,865,000
Advances by Bank of England ..	201,072,000	1,130,841,000	1,038,571,000	1,038,571,000	1,038,571,000
Advances by Public Departments	1,145,049,000	1,130,841,000	1,038,571,000	1,038,571,000	1,038,571,000
Treasury Bills outstanding	1,386,871,000	1,275,330,000	1,154,436,000	1,154,436,000	1,154,436,000
Total Floating Debt	2,772,662,000	2,591,441,000	2,348,842,000	2,348,842,000	2,348,842,000

SOME TASKS OF THE COMING SESSION.

THE speech of the Lord Chancellor on Wednesday was one of the most illuminating of the series with which the leaders of various parties have recently entertained us, for it revealed the state of mind of a large body of opinion current among the senior partners of the Coalition. The great part of the speech was devoted to an attack upon the parties in opposition and by a vigorous defence of the thesis that if there was justification for the Coalition five years ago, there is the same justification to-day. But the Lord Chancellor evidently has no liking for this state of affairs, for after declaring that every consideration of political decency and political gratitude makes it impossible for the Unionist party to dissociate itself from the men with whom it had fought in the last four years, and that he himself felt "bound in honour as long as no great divergence of principle manifests itself between me and them—to march on with them," added the significant sentence that "As far as I am concerned, I shall so march until a divergence of principle emerges which offers the means of an honourable escape." Lord Birkenhead, like his fellow orators, was not very clear on these questions of principle, but was concerned rather with electioneering than with the grave problems which will compel the immediate attention of Parliament, be the session short or long.

In the forefront stands the question of national finance. So long as the Geddes Report, together with the Government views thereon, are withheld from the public, comment upon detailed departmental estimates would be idle speculation. But there are one or two provisional observations which may be made on the general Budget position. In the first place, we are not pessimistic as to the balancing of the current year's accounts. The estimated surplus of £175 millions will not materialise owing to the shrinkage of revenue. But, on the other hand, in spite of the unforeseen charges involved in the coal strike, and in the de-control of the mines and railways, expenditure is also well below estimate, and the position appears to be that even if receipts from E.P.D. do not improve, receipts and expenditure will approximately balance, while if arrears of E.P.D. come in at all freely there may be a small surplus. The latter contingency is by no means improbable, for one of the effects of the depression has been

to convert much of the floating capital—stocks, work in hand, &c.—of industrial concerns into cash, with which arrears of taxation may be paid. The expectation that there will be no large deficit does not, however, lessen the difficulty of drawing up a Budget for next year which will meet the demand for lower taxation. The cuts proposed by the Geddes Committee are intended to balance the Budget if carried out intact; but it is believed that some compromise has already been made involving some modification in the reductions proposed for the Military and Naval services and in the vote for Education. A suggestion has been made that pensions, which, including administration, are costing £110 millions in the current year, but will be a steadily diminishing charge, can properly be imposed to a greater extent upon future generations by paying them out of newly-raised capital and charging only interest and sinking fund on the present Budget. This specious but inadmissible demand does not differ in principle from any other excuse for borrowing to meet current expenditure. It has been urged in some quarters that the reduction of the income-tax to 5s or even less in the £ should in any case be made on the ground that the relief to the country generally would encourage trade, and the yield would very soon recover. But, in the meantime, if the Government has not reduced its outgoings, it must meet its expenses by borrowing from the public, and there will not be any net addition to the purchasing power available in the country, unless the methods employed for raising such loans involve currency inflation. In any case, the normal reaction from reduced taxation is less likely to be effective this year than at any other time. The abundance of money for investment on the Stock Exchange shows that we are not at the moment suffering from insufficiency of capital available for industry, and if the funds available were in some way increased by, say, 50 millions, it would not in present circumstances do anything to remove the underlying causes of industrial stagnation, which are mainly international in character. So long as our Budget includes £450 millions for interest (excluding foreign obligations) and pensions, and the prices and salaries which govern the cost of the Army and Navy and of the Civil Services remain far above pre-war level, the Budget will inevitably involve very heavy taxation. Temporary sources of revenue such as the excess profits duty have gone, and so long as trade, which determines the yield of indirect taxes, remains sub-normal the main source of revenue must be the income-tax. If, as seems probable, it proves impracticable to reduce Government activities down to the "Geddes line," the alternative will be between maintaining the present level of direct taxation and suspending the various sinking funds or actually increasing debt. This we believe to be the true financial issue, and much as we should all welcome a lower income-tax, any offer, whether from the Coalition or the Opposition, of a reduction on any other terms will need to be most closely scrutinised.

A number of international economic questions will equally demand the attention of Parliament. Every day there arise new obstacles against holding the Genoa Conference on the appointed day. No European country, except Great Britain, is ready with its plans, while the technical preparations—in any case difficult to arrange

in the short time available—will be upset by the resignation last Thursday of the Italian Coalition Cabinet, whose demise after a few months of office was not unexpected. A more fundamental objection to carrying out the full scheme according to programme is the need for time to compose differences between Great Britain and France. The meeting between the Foreign Ministers, which was to have taken place this week, has already been postponed in order to allow of more careful study of the issues raised by M. Poincaré in regard to the Near East, while M. Poincaré has now raised some important queries on the Agenda of the Conference itself. Evidently the Conference cannot succeed in its original purpose so long as the embargo on the discussion of reparation is maintained by the French. This veto is, we believe, unlikely to be removed until we have made and persuaded France to accept a proposal for a new and final settlement dealing with the war debts as well as making substantial concessions in our share of reparation. The change in the tone of the French Press indicates that if the proposal increased the prospect of future receipts, France would be ready to listen. Any such conversations should, however, obviously be carried on between England and France alone, and can hardly be expected to have reached finality before March.

We suggest that the way to meet these very serious difficulties, without abandoning altogether the idea of a Conference, and so giving the impression of a hopelessly divided Europe, is to confine the Agenda to the limited objective of re-establishing commercial relations with Russia. We agree with Mr Walter Leaf in his categorical assertion at the annual meeting of the London County and Westminster Bank that "our first policy should be to help Germany on to her legs again, to bring her nearer to the position of our best customer outside the Empire which she used to hold." But the Russian question can be isolated. The German problem cannot. It is commonly supposed that the Russian Government intend to recognise pre-war debts and the rights of private property in Russia. As this recognition is the only fundamental assumption on which discussion can be carried on, it must be full and complete. The Russian Government, which is clearly anxious that the Conference should have definite results, would immensely improve its prospects if it would give the necessary undertaking before the Conference meets. If this were done, there is some hope that the present scheme for an International Corporation, whose parent, M. Loucheur, will presumably not now represent France at the Conference, might be modified into a workable plan for commencing the long task of restoring the economic activities of Russia.

The question of aid for Austria, on the other hand, should not be postponed for the Conference. The imminent passing of the Funding Bill by Congress will remove the barrier which has prevented the scheme of the Finance Committee of the League of Nations from being carried into effect. England and France are considering the case for immediate assistance, and it would be very undesirable to delay action pending the problematical decisions of a Conference which is by no means assured of a successful issue.

On the political side, the Irish settlement, whose smooth progress has been checked by the failure of Sir J. Craig and Mr Collins to reach agreement on the boundary question, and the situation in India and Egypt, in both of which the doctrine deduced from Ireland that Downing Street can be convinced by force but not by reason has greatly complicated matters, provide topics of the utmost moment. It is on such questions as these that we look for guidance from our political leaders rather than the personal debates which inevitably recur at election time.

WHOLESALE PRICES STILL RECEEDING.

The month of January saw a further decline in the wholesale prices of commodities, our Index Number falling by a further 73 points to 4284, which is the lowest point recorded since the middle of the year 1916. The present total compares with 5617 a year ago and 8352 at the end of March, 1920. As will be seen from the appended table, which shows the monthly movements since the

beginning of last year, each of the groups, with the exception of subsidiary foodstuffs, fell during January:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oil, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0

In the group of primary foodstuffs, all cereals except rice are a little higher, but there was a further decline of 2s per sack in flour, which brings it down to 42s. An increase in mutton was more than offset by declines in beef and pork, but the serious outbreak of foot and mouth disease is already having an effect on meat prices, which have risen since the end of the month. The rise in the group of subsidiary foodstuffs was very largely due to a reaction in the quotation for butter, after its sudden decline in December. There was also a small advance in sugar.

In the textile group, cotton and cotton yarn and cloth have again fallen, but wool is higher. With reference to cotton piece goods, Messrs Robert Barbour and Brother, Limited, report that: "No relief has come from Bombay, Karachi, or the North-West either in the shape of liquidation of the enormous debts still outstanding or of fresh inquiry, and sales have been almost entirely confined to country-made qualities. The only business really worth mentioning has been that done for China, and some quite good lines in greys, bleaching cloths, and dyed and printed goods have been booked. Demand from Singapore, Java, Egypt, and the Levant continues very limited, but reports from several of the South American markets are distinctly more encouraging, even though actual transactions have not amounted to much. Cotton has been consistently weak, with no measure of support from any single quarter." At the wool sales, on the other hand, prices were higher in some cases by 20 per cent. than at the previous auctions, and spinners and top makers are now well employed. Silk and hemp are again higher, but flax is unchanged, and jute has relapsed to the end of November level. According to Messrs Wigglesworth and Co.'s fortnightly report, the constant fluctuations in the Philippine exchange have an unsettling effect on the market for manila hemp, "but it is considered that present prices should prove a workable basis."

In the minerals section, pig-iron is again lower, but iron bars and steel rails are unchanged. The low level to which prices have fallen is very slowly beginning to have an effect upon the placing of orders in this country. Our Middlesbrough correspondent, in our Commercial report, notes the significant fact that 2,000 tons of foundry pig-iron have this week been sold to Germany, while a large maker of galvanised sheets stated at the annual dinner of the London Iron and Steel Exchange that he was beginning to sell sheets in Belgium. Steam coal is a little easier, and each of the minor metals has given way.

Changes in the miscellaneous group were small, declines in leather, rubber and tallow being sufficient to counteract a small increase in oils and oilseeds. The table below shows how each of the groups and the total stand in relation to the level at the outbreak of war, which is taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914....	100	100	100	100	100	100
Dec., 1918....	226	222	293	186	241	236
Dec., 1919....	249	250	396	247	263	287
March, 1920....	261	260	484	269	309	325
June, 1920....	261	263	415	278	281	305
Dec., 1920....	233	229	209	261	230	231
March, 1921....	209	206	167	216	203	198
June, 1921....	203	188	158	210	185	188
Sept., 1921....	193	195	204	189	178	192
Dec., 1921....	159	180	180	164	168	170
Jan., 1922....	157	186	173	158	167	167

"Other Food" still lags behind in the downward movement, principally owing to the consistently high level of sugar and tobacco.

While our Index Number shows an increase of 67 per cent. in wholesale prices in this country since the beginning of the war, *Bradstreet's* Index Number as at January 1st last shows an increase of 30 per cent. for the United States. This compares with 27 per cent. at the beginning of August, 1921, the lowest point since 1916, 44 per cent. a year ago, and 140 per cent. at the beginning of February, 1920, the highest level recorded.

A NATIONAL INDUSTRIAL COUNCIL.

THE need for creating and giving expression to a corporate industrial opinion which may be brought to bear in the event of industrial disputes, and may influence the legislature in the wide and growing field of economic legislation, is responsible for the numerous proposals put forward both in England and abroad for the establishment of a national body representative of employers and employed. As the question is once more being discussed, it will be of interest to remind our readers how the matter stands in this country. In 1911 the Government established an Industrial Council, the members of which were drawn from employers and workers in the staple industries of the country. The Council was set up for the purpose of "considering and of inquiring into matters referred to them affecting trade disputes, and especially of taking suitable action in regard to any dispute referred to them affecting the principal trades of the country, or likely to cause disagreements involving the ancillary trades, or which the parties before or after the breaking out of a dispute are themselves unable to settle." The members of the Council included, on the one hand, Sir Hugh Bell, Sir (then Mr) Gilbert Claughton, Sir Thomas Ratcliffe Ellis, and Sir Charles Macara, and, on the other, Thomas Burt, C. W. Bowerman, J. R. Clynes, H. Gosling, Arthur Henderson, and John Hodge, all of them serving in their individual capacities. It will be observed that the Industrial Council was in effect an extension of the conciliation machinery of the country, and that its members were not representatives of employers' organisations and trade unions. Since the publication, in 1913, of its Report on an inquiry into industrial agreements, the Industrial Council has been moribund, and is, in fact, now dead, though Sir Charles Macara has made many efforts to restore it to life.

During the war the Garton Foundation issued (in 1916) a Report urging the establishment of national and district joint bodies in each industry, a proposal which was developed further in the Reports of the Committee on Relations between Employers and Employed, better known as the Whitley Committee. Industrial Councils have as a result been set up in many industries, while in less organised or in lowly paid industries the establishment of trade boards has provided them with standing joint bodies endowed with statutory powers and duties. There is no need here to attempt to appraise the work of these Councils and Boards, though it may be pointed out that, notwithstanding the efforts of the Ministry of Labour, Industrial Councils have not been adopted by all the staple industries, though it is

true to say that in almost all of them there is some kind of national joint body holding fairly frequent, if not regular, meetings for consultation and negotiation.

It is not surprising that many people should have turned to the possibility of a further development by the establishment of a national joint body covering industry as a whole. But what most of those who have considered the matter have in mind appears to be something much more than a piece of conciliation machinery. Since the days of the old Industrial Council the developments which have taken place suggest a body with wider interests. One of the many difficulties in the past in the way of the formation of a national council has been the absence of any effective and comprehensive organisation which brought together for common purposes the organised employers in different industries. During the war, however, this condition of affairs was changed, and at the present time the authoritative representation of employers as a whole would undoubtedly be achieved.

When the war ended it seemed probable that a national industrial council would come into existence. In February, 1919, the Government called together a Conference of employers' and workers' representatives to consider the post-war situation. This Conference appointed a joint committee, consisting of equal numbers of employers and workers, to report upon hours, wages, and general conditions of labour, unemployment, and its prevention, and "the best method of promoting co-operation between Capital and Labour." The Joint Committee set up three sub-committees, one of which was instructed to make recommendations concerning "the method of negotiation between employers and trade unions, including the establishment of a permanent Industrial Council to advise the Government on industrial and economic questions with a view to maintaining industrial peace." It will be observed that the body contemplated was to possess much wider and more constructive powers than the old pre-war Industrial Council had enjoyed.

In its Report the Joint Committee declared that, "for the purpose of carrying on future investigation into matters now affecting the industrial situation, and of keeping such matters under continuous review in the future and advising the Government on them, it is the unanimous view of the Committee that there should be established some form of permanent National Industrial Council." The Committee recommended that such a body should not supersede any of the existing agencies for dealing with industrial questions, but that it should be an advisory body possessing the knowledge and experience of all sections upon the problems affecting industrial relations as a whole. The Council should be recognised "as the official consultative authority to the Government upon industrial relations," and should be "the normal channel through which the opinion and experience of industry will be sought on all questions with which industry as a whole is concerned." It should, if it thought fit, "issue statements on industrial questions or thought for the guidance of public opinion." It was disputed for the guidance of public opinion. It was thought that the Council should consist of 400 members "fully representative of and duly accredited by the employers' organisations and the trade unions, to be elected as to one-half by the employers' associations and elected as to one-half by the trade unions. The Minister of Labour would be president, and the Government would appoint a chairman of the Standing Committee of 50 members. In accordance with the general practice on similar bodies, it was suggested that the two sides of the Council should vote separately, and that no resolution should be declared carried unless approved by a majority of those present on each side. It was also proposed that the expenses of the Council and its Standing Committee should be borne by the Government. The trade union side of the Joint Committee worked out in detail a scheme for the trade union representation on the National Industrial Council.

The Conference which reassembled in April, 1919, to consider the report accepted the whole of the Joint Committee's proposals under the various terms of reference. Unfortunately, however, the Government, which had led the Conference to believe that it would give effect to any joint recommendations

which might be made to it, did not adopt the programme laid down. The Joint Committee dragged out a weary existence for many months, until in disgust it wound itself up, and with its dissolution the proposal for a National Industrial Council was for the time being at least thrown to the scrap-heap of unaccepted schemes. Although it is true that the Joint Committee which prepared the scheme did not represent every industry of importance, its Report was a unanimous document, and therefore represents the views of a large body of employers and workers.

Definite proposals in the direction of the formation of a National Industrial Council or Parliament have recently been made by Mr Arthur Henderson, who was the chairman of the Joint Committee set up by the Industrial Conference of 1919. Whether any further steps will be taken in the near future, it is impossible to say. But we believe that the general opinion among employers is not unfavourable. It is possible that the constitution and powers of such a body would be somewhat different from that proposed nearly three years ago; but there can be no doubt that it would have a full and important agenda, and that it might contribute substantially to the solution of some of our current economic problems.

CHINA'S MINERAL POSSIBILITIES.

(FROM A CORRESPONDENT.)

THE wealth of modern nations is created principally by the manufacturing industries, and the prosperity of the manufacturing industries is based mainly on the exploitation of minerals, among which coal and iron stand easily first. Even the wealth and income of the United States with their gigantic production of foodstuffs of every kind, and of cotton, tobacco, and timber, are derived chiefly from their manufacturing industries, the power and prosperity of which are due to the extraordinary wealth of the country in coal and iron.

China has been almost exclusively an agricultural country. Restricting themselves to the arduous pursuit of the rural industries, the teeming millions of the country have learned to work intelligently and indefatigably, and to live frugally. That hard training has moulded their character, and will be of inestimable advantage to them in the pursuit of modern commerce, industry and mining.

China is a highly mineralised country, and it is particularly rich in coal, which is far more valuable than all other minerals combined. Its mineralogical pre-eminence in Asia may be seen from the following figures which were placed before the International Geological Congress of 1913:—

COAL RESOURCES OF ASIA.

	Tons Available.
China	995,587,000,000
Siberia	173,879,000,000
India	79,001,000,000
Indo-China	20,002,000,000
Japan	7,970,000,000
Persia	1,858,000,000
Manchuria	1,208,000,000
Korea	81,000,000
Total	1,279,586,000,000

If the figures given are correct, China alone should have 75 per cent. of the coal of Asia, and should have fully five times as much coal as the United Kingdom. The estimate regarding China, which was made by Messrs Drake and Inouye, has been severely criticised by some. The China Year Book of 1921-1922, for instance, considers the figures relating to China to be "in many ways misleading," and gives instead "extremely conservative figures," relating to a very fragmentary survey. On the other hand, the very important Commercial Handbook of China, published by the United States Government in 1919-20, states on page 264 of Volume II:—

"According to Mr V. K. Ting, Director of the Geological Survey of China, a minimum estimate of China's wealth in coal indicates that it is sufficient to supply the world's consumption at its present rate of 1,000,000,000 tons a year for a period of 1,000 years."

In view of the absence of a thorough geological survey of China, it is idle to speculate as to whether the country

possesses more or less than 1,000,000,000,000 tons of coal. However, so much is certain that China occupies an absolutely unique position in the world with regard to that mineral. Anthracite is the most valuable coal, and the percentage of anthracite is very small in this country, and still smaller in the United States, which possess only a trifle of that kind of coal. On the other hand, anthracite is common in China, about one-third of the known deposits consisting of that precious fuel. Of China's non-anthracite coal, a very large proportion is exceedingly rich in those by-products which are more valuable than the fuel itself, and the country contains a large supply of excellent coking coal suitable for iron smelting.

In most countries coal occurs only in a few localities, and as the manufacturing industries tend to establish themselves about the coal pits, heavy or bulky raw materials, such as iron-ore, limestone, copper-ore, cotton, wool, &c., have to be carried at great expense over long distances to the localities which supply the requisite fuel. The bulk of the coal of North America, which possesses about two-thirds of the world's coal, is of poor quality, and occurs in the far away interior where exploitation is difficult and transport very costly. China has the unique distinction of having vast stores of coal in every one of her numerous provinces, and the wonderful system of inland waterways, which can be greatly improved, assures cheap transport for China's future industries and trade, the more so as cost of transport depends not only on the configuration of the country and its waterways, but also on the national wage level, which affects both the cost of railway construction and the cost of handling traffic.

The value of minerals depends on the cost of bringing them to the surface. In this respect China has a unique advantage, for her labour is super-abundant, very efficient and extraordinarily cheap. At present the United States produce half the world's coal. It seems by no means impossible that within a relatively short time China may take the lead among the coal producing nations of the world, especially if she becomes a large consumer of her own fuel. As she has almost ten times as many inhabitants as the United Kingdom, a relatively small consumption of coal per head of population would make her the foremost coal producer in the world. Besides, China might become a coal exporter on a very large scale. The position of her coalfields, and the facilities offered by her rivers, ports and cheap labour invite the creation of a great coal exporting trade.

China has iron ore, copper ore, lead, tin, zinc, gold, mercury, asbestos, petroleum, and numerous other minerals. Apparently the country is highly mineralised, but it is difficult to form any opinion as to the quantity of minerals possessed because a thorough geological survey has not been made, and cannot be made for a great many years. The fact that numerous concessions for mining minerals of all kinds have been granted and the keenness with which mining concessions are sought indicate that China's mineral possibilities must be very great indeed. As regards the value of minerals produced, coal ranks easily first, and it is followed in order of their importance by antimony, tungsten, iron, tin, gold, zinc, mercury, copper, lead, alunite, manganese, magnesite, arsenic, talc, gypsum, asbestos, silver, petroleum, molybdenum. China is extraordinarily rich in limestone, and the various earths required for making porcelain and pottery ware.

In short, China has the advantage of an exceptional abundance of valuable minerals, and especially of coal, which are well distributed through the whole country and can be exploited easily and cheaply owing to their accessibility, the cheapness and abundance of labour, and the possibility of cheapening transport very greatly by the improvement of waterways and the building of railways. We cannot wonder that enterprising men of all nationalities have gone to China with a view to developing the resources of the country. The foremost financiers of the world have recognised the chances offered by China's mineral resources, and leading manufacturers and engineers have embarked upon mining, manufacturing, and the creation of railways, harbour works, electrical power stations, &c., in connection with the mines, which

are an asset of almost unmeasurable value. The Chinese market, with more than 400,000,000 thrifty, industrious, and shrewd inhabitants, is potentially the most valuable market in the world, and it offers unlimited opportunities to British trade and industry, provided the productive power of China is so developed as to enable the Chinese to pay for vastly increased foreign imports with equally greatly increased exports of their own. All trade is exchange, is barter. England has a most excellent chance of obtaining the foremost place in China's economic life by developing the mineral resources of the country. The exports thus created will pay for imports of English manufactures into China.

Politically and economically, the Chinese have been badly treated by many foreign nations. Among the Chinese England has the reputation of fair dealing. The Chinese hesitate to allow foreigners to exploit their huge latent mineral wealth because they are afraid of unfair dealing on the part of those who seek concessions, and who would monopolise all the wealth derived from them to China's hurt. In order to overcome that natural reluctance, English financiers, manufacturers, engineers, and traders will be wise to work hand in hand with leading and trustworthy Chinamen on a partnership basis. The Chinese are anxious for such co-operation. They have recently created a special organisation, the Sino-British Trade Association, which is financed and directed by some eminent Chinese domiciled in Hong Kong, Singapore, Rangoon, Kuala Lumpur, Penang, Amoy, &c., which aims at creating a community of interests between leading Chinese business men and those western business men who are interested in the development of their country. Western capital can hope to develop the mineral wealth of China only in partnership with the Chinese, and those who wish to open mines, factories, &c., in China will do well to avail themselves of the invitation extended to them by Chinese native organisations such as the one mentioned.

HOTEL AND RESTAURANT COMPANIES.

If the progress of an industry is measured by the payment of dividends to ordinary shareholders, the results of a representative group of English hotels and restaurants which are given below will convey a curious impression of what is often regarded by many people as a profitable industry. It may be that the business of hotel and restaurant management is one which lends itself more readily to private control than to the operations of an incorporated body. But if results achieved under limited liability are generally unsatisfactory from the shareholders' point of view, the profits of one important group of undertakings warns us against too sweeping a generalisation.

The following table gives the dividends distributed by these companies from 1912-13 onwards:—

	1912-3	1913-4	1914-5	1915-6	1916-7	1917-8	1918-9	1919-20	1920-21
Burlington Hotels	%	%	%	%	%	%	%	%	%
Carlton	8	6	nil	nil	nil	nil	nil	15	8
Frederick Hotels, ord.	2½	3	nil	nil	nil	nil	nil	nil	6½
Gordon Hotels	3	3	nil	nil	nil	nil	nil	nil	nil
Holborn and Frascati	11	11	8	2½	2½	8	11	11	15
Piccadilly Hotel	193½	50	25	75	135	150	150	135	nil

Savoy Hotel	5	5	nil	2½	4	6	10	15	15
Short's, def. ord.	6	5	3½	2½	4	6	10	15	15
Smedley's Hydro	15	12½	17½	12½*	12½*	17½*	12½*	12½*	12½*
Strand Hotel, pref. ord.	9	9	9	9	9	9	10	10	11
Waldorf Hotel, 6% pref.	6	6	3	nil	nil	nil	6	13½	3½

* Free of tax. † Ordinary.

The high rate for the Piccadilly Hotel is explained by the method of capital finance adopted. The debenture capital amounts to £425,641, while the share capital is but £15,000. Thus a comparatively small surplus profit after paying debenture services is sufficient to pay a substantial rate of dividend. On the other hand, a slight fall in profits leaves little for shareholders. In our table, Holborn and Frascati, Short's, Smedley's, and the Strand show an excellent record of dividend distributions.

But in spite of the general trade boom, which naturally benefited the hotel and catering industry, ordinary shareholders only participated in earnings in a few cases, as

arrears of preference dividends absorbed profits to a considerable extent.

The next table shows profits for the past two years, and for purposes of comparison gross income and net profit for 1913-14 are given:—

Company.	1913-14.		1919-20.		1920-21.	
	Gross Income.	Net Profit.	Trading Profit.	Net Profit.	Trading Profit.	Net Profit.
Burlington Hotels	£ 44,285	£ 1,750	£ 27,559	£ 18,192	£ 24,885	£ 13,088
Carlton	75,797	35,441	117,864	85,665	80,601	46,964
Frederick Hotels	339,549	31,906	171,436	130,756	164,885	122,587
Gordon Hotels	161,665	81,690	204,121	124,244	138,682	48,012
Holborn and Frascati	171,068	39,348	309,947	91,942	322,062	66,411
Piccadilly Hotel	246,492	22,220	76,378	41,844	43,239	7,623
Romano's	245,460	5,065	34,402	9,278	24,065	Dr 2,319
Savoy Hotel	182,891	42,239	316,096	Dr 287,266	248,393	124,511
Short's	23,265	21,704	44,355	42,732	43,811	42,511
Smedley's Hydro	50,938	10,072	9,640	8,073	8,085	6,564
Strand Hotel	69,507	28,376	136,325	80,565	104,514	92,964
Waldorf Hotel	36,512	17,165	75,526	43,070	44,215	34,194

* Trading profit.

Net profits of the Burlington Hotels are down by over £5,000, but from this sum and the balance brought forward, 1½ years' arrears of preference dividends were paid, which absorbed £5,625, leaving £9,370 to be carried forward. Fortunately, the Carlton, with reduced profits, was not encumbered with the heavy arrears which had previously accumulated, as a year ago six years' dividends on preference shares were cleared off. Accounts of the Frederick Hotels do not include the final claim of the company against the Government for compensation over the occupation of the Hotel Great Central. Shareholders will, however, no doubt be pleased with the favourable result, announced on Thursday, of the Frederick Hotels' case in the War Compensation Court. Gordon Hotels' activities are not reflected in the accounts, as two big hotels could not show full-year workings. The Holborn and Frascati Company continues its successful career, and has yet a claim against the Government for dilapidations to be settled, the proceeds of which will help to reimburse the company for redecoration already carried out. The adverse year experienced by the Piccadilly is probably of more than passing significance; unfortunately, to what extent trading profits are lower through lessened takings is not revealed by the accounts. Romano's show a falling off in gross receipts. Figures for the Savoy are perhaps better understood if the trading profit is considered; for arrears of interest and dividends have been paid with spasmodic efforts, and a big balance in 1919 was brought forward for this purpose. Smedley's profits are slightly down, but the Strand Hotel records a substantial improvement; the actual profit of this latter company for the past year is shown as £104,314 after providing for "depreciation, redemption, and contingencies." The year before profits were £136,325, but out of this £42,000 was allocated for depreciation and £2,400 to redemption account. The Waldorf under the scheme approved by the Court has paid off arrears of preference dividends, and appears to be making satisfactory progress. Hotel Cecil figures are omitted from our group this year, the directors holding back accounts to enable them to include the award results of the War Compensation Court.

Balance-sheets, on the whole, reveal few striking changes. The Burlington, with total assets of £324,855, shows stocks, including wine, at £3,565. The Carlton, with assets of £1,282,890, gives stocks as £140,584. The Frederick Hotels include stocks and debtor balances in one item. The Gordon Hotels present informative accounts; with total assets of £4,612,781, stocks of wine, spirits, &c., are given, at cost or under, as £175,928, while linen, china, &c., appear as £50,808, valued in the same way. Holborn and Frascati, out of total assets of £1,012,247, values stocks of £342,725 at cost. This company possesses a reserve fund investment account. The Piccadilly includes stocks at £37,544 in total assets of £624,034; the most marked change in the balance-sheet of this company is the reduction of "cash" from £20,454 to £6,115. Romano's, with assets of £114,901, lists stocks at £29,963, which compares with stocks of £36,186 out of assets of £126,478 for the previous year. Smedley's balance-sheet is a model of lucidity, but the revenue account reveals a remarkably narrow margin of profits; gross receipts were £91,949, while working expenses absorbed £83,863. The financial affairs of the Savoy have already been referred to in the

Economist (see our issue for April 16, 1921, page 775). Short's records stocks at £116,202, and total assets at £591,515. But this undertaking, be it remembered, specialises in the sale of wines. The Strand Hotel, with assets of £1,238,459, shows stocks at £26,334, but gives investments at £99,754, without mentioning the basis of valuation; cash appears as £84,808. The Waldorf has assets amounting to £578,821, including stocks valued at £14,595, while furniture, plate, linen, and glass are shown separately from property as one item at £87,076. Figures of stocks have been dealt with at some length, because the extent to which the acquisition of these have been limited to a hand-to-mouth buying policy, and the amount by which they have been written down to market values, will influence future profits.

Notes of the Week.

The Naval Agreement.—Cables from Washington state that on Wednesday, at the fifth plenary session of the Conference, Mr Hughes announced the settlement of the Shantung controversy, reading the full text of the treaty under which the province is returned to China, and Mr Balfour stated that Great Britain was ready to return the leasehold of Wei-Hai-Wei. At the same meeting the delegates of the five Great Powers, the United States, Great Britain, Japan, France, and Italy, expressed the formal assent of their respective States to the naval treaty. It is to come into effect on the deposit of ratifications, and remain in force until December 31, 1936, or indefinitely beyond that date, unless and until one of the signatory Powers shall have given two years' notice of its intention to terminate it. In closing his speech, Mr Hughes said: "This treaty ends, it absolutely ends, the race in competitive naval armaments, but at the same time it leaves the relative security of the great naval Powers unimpaired. In this treaty we are talking of arms in the language of peace, and the best thing about the engagement we have made is the spirit which has made it possible, and which has been manifest throughout our deliberations. We are taking perhaps the greatest forward step to establish the reign of peace." The brief treaty embodying the declarations in regard to submarine and poison gas warfare was presented by Senator Elihu Root, and also assented to.

Security Values.—According to the calculations of the *Bankers' Magazine*, the aggregate value of 387 representative securities quoted on the London Stock Exchange rose between December 19, 1921, and January 18, 1922, by £113,751,000, or about 2 per cent., the aggregate total values at the two dates being £5,393,349,000 and £5,507,100,000 respectively. The list of securities on which this calculation is based has now been revised and brought up to date by the inclusion of war loans and other important issues of recent years. The list only covers about one-half of the total of Government loans, but in the Government loans included the rise on the month is well over £70 millions, or 2.4 per cent. One of the most important gains in the list is recorded by the ordinary stocks of British railways, which rose by 7.8 per cent. Home railway preference stocks advanced by 6.6 per cent. and the debentures by 3.5 per cent., while the rise in Colonial Government stocks was 3.6 per cent. The record of rubber and oil shares, which fell by 7.4 per cent. and 4.2 per cent. respectively, is dismal, but miscellaneous mining shares head the list of proportionate gains with a figure of 11.5 per cent.

Home Railway Dividends.—Activity in the Home railway market has recently been very pronounced, and prices of ordinary and fixed interest bearing stocks have advanced considerably in price. The upward movement has been assisted by the dividend declarations now being announced. The declarations made this week are shown in a table below:—

	Final Dividends.			Whole Year.			Price of Ord. Stock.	
	1919.	1920.	1921.	1919.	1920.	1921.	Feb. 3, 1921.	Feb. 3, 1922.
	Rate	% per Annum.	%	%	%	%		
Great Northern Def.	..	..	..	22	22	22	27½	28
Lancashire and York.	52	52	6	4½	4½	4½	53	55
London, Brighton, and	8	8	6	4½	4½	4½	54	56
ton, Brighton, and	11	11	3	4½	4½	4½	44	44½
Metropolitan Def.	11	11	3	4½	4½	4½	42	42½
Midland Def.	62	54	64	4½	4½	4½	45	45½
Taff Vale	4	4	5	4	4	4	43	45

The Great Northern, whose accounts have now appeared, transfers £80,000 from reserve and £127,264 from "Increased merchandise rates suspense account," net income having amounted to £2,173,958, as compared with £2,480,541 for 1920. The maintenance of the dividend on Brighton deferred came as a pleasant surprise to the market, and the announcement of an increase by the Metropolitan stimulated prices. The dividend for the full year on Midland deferred is the same as for 1920. The announcement states that £1,500,000 has been appropriated from the compensation payable by the Government under the Railways Act.

Stock Exchange and Pre-War Conditions.—A Stock Exchange correspondent writes:—The Stock Exchange Committee appointed a sub-committee of their members to consider proposals for making such various alterations as may be deemed desirable when the Stock Exchange reverts to its pre-war position of independence from Treasury control. This sub-committee has been hard-worked for the past six weeks, hearing evidence and views, and exploring a number of methods, some of them highly technical, which Stock Exchange business may follow as soon as the House is free. There remains a remnant of the pre-war account still unsettled, and this week the Stock Exchange Committee have received returns that enable a rough idea to be obtained of the extent of the open account. As the return embraced only such stocks and shares as those which were included in the pre-war "clearing-house lists," it is incomplete, and of service only as a guide to the present position. The Committee have appealed lately, and on several previous occasions, for every effort to be made in order to get this account liquidated, for until it is out of the way the hope of returning to pre-war conditions must be delayed. But the Stock Exchange Committee do not intend to let the grass grow under their feet, and on Wednesday and Thursday in this week two special meetings were held at which the report of the sub-committee has been considered. This report contains the recommendations of the sub-committee in regard to such matters as those relating to re-establishment of contangoes and all the mechanical sequelæ arising therefrom. Hours of business, Saturday closing, and matters of similar detail are discussed. Such novel suggestions as the provision of cover on clients' speculative transactions come under the sub-committee's purview. It now remains for the full Stock Exchange Committee to put before their fellow-members the official recommendations which, it was promised last November, should be published by the beginning of next month. The Stock Exchange financial year ends on March 24th, and a Committee election takes place on March 20th. The close proximity of the election to the date on which the Committee will lay their scheme before the Stock Exchange is likely to cause the forthcoming election to have for its central point of interest the proposals that the Committee put forward as desirable in the interests of the public, and of the Stock Exchange, for reversion to pre-war conditions with whatever modifications are considered to be desirable. The report of the sub-committee is to be regarded as nothing more than a guide, because the full Committee alone can initiate legislation, but the latter will be awaited with keen attention by everyone interested in Stock Exchange matters. The Committee of to-day take a broad and liberal-minded view of Stock Exchange obligations, mindful of the fact that House Rules and Regulations need to be drawn in such manner as will provide the public with the fullest protection, as well as facility of dealing, that is possible. The student of Stock Exchange matters may be forgiven an expression of opinion that, in the course of dealing with the momentous questions which face the Committee, a thorough overhauling of the Rules could not fail to have the effect of purging them from much that is redundant, anomalous, and unduly complicated.

The City Equitable.—Mr Bevan, chairman of the City Equitable, announced, in a paragraph which appeared in one of Thursday's newspapers, that bankers and insurance companies were working out a scheme to help the company over its difficulties. Whether he had any serious hope of persuading the public that the troubles of the company were being surmounted we do not know, for before the paragraph had appeared in print the first steps had already been taken for the company's liquidation. Hopes of salvage still remain, but the original expectation that other companies and banks would come in and carry the burden has been disappointed, for the farther matters were looked into the more serious the situation was seen to be. Shareholders of the City Equitable Associated are at last taking action and demanding a general meeting, with a view to appointing a committee of shareholders to investigate the position. It has been a current belief ever since the trouble of the company were first mentioned that a very large sum had been invested in a Brazilian ranch, and that unsaleable industrial shares had somehow taken the place of sound, reliable securities among the company's holdings. What happened to these sound securities will be a matter for close investigation, and it may prove that policyholders will recover a certain amount of salvage from those who lent too readily and without sufficient inquiries into the collateral's place of origin. With the City Equitable are closely bound up the Greater Britain, First National and another direct insurance company, all of which were controlled by the big concern, and are said to have paid dearly for a connection, which was supposed to add greatly to their strength. At the time of writing the exact legal position of these companies is not clear, but, in fact, though not in theory, at least one of them is under the direction of accountants, who have been examining its books, and little hope can be entertained. From the point of view of London as a centre of careful finance and insurance, the whole episode is deplorable. It illustrates the danger of allowing the funds of an insurance company to be the object of a speculative investment policy, and it may perhaps suggest to our insurance managers the possibility of carrying too far the modern fashion of re-insurance. The soundness of our old insurance offices is, of course, unquestionable, but re-insurance forges a chain that can be snapped at any of its links, to the great inconvenience of every one connected with it. It is to be hoped that the scrutiny of the conduct of this group of companies will be complete, and that adequate steps will be taken to protect the public against recklessness on the part of those who assume positions of public responsibility.

The Sun Life Office's Surplus.—Life policyholders have suffered so severely by the depreciation of their assurance companies' assets, and by the inevitable suspension of bonuses, that the valuation report of the Sun Life Assurance Society will come to them as a bright ray of sunshine through clouds. The Sun itself went into eclipse at the end of 1917, when it suspended bonus distributions. Now, upon a 3 per cent. valuation, it shows a divisible surplus for policyholders of £1,265,748 (in addition to the interim bonuses paid on claims of £177,138). The life assurance fund increased during last year by £637,026 to £12,009,991, after £31,616 had been written off for depreciation. The actuary, Mr Salmon, declares—actuaries, it may be noted, are a cautious folk—that "the character of the investments and other assets would appear to preclude the risk of material loss or depreciation for some years to come, and that the normal profit-earning power of the society has been recovered." We have indicated more than once during the past year those favourable factors, now in operation, which are tending to restore the profit-earning power of life offices. With the return of the Sun to the ranks of bonus distributors, policyholders generally in good life offices may reasonably contemplate the end of their winter of discontent. The actual amount of the Sun's surplus for policyholders is £1,265,748, against £843,306, divided ten years ago, and the actuary hints that the reversionary bonuses to which participating policyholders become entitled will be larger than those declared in 1912. They will, of course, be declared in respect of ten years for policies of that or of longer duration.

Marine Insurance Losses.—It was expected that the marine underwriting year of 1920 would work out badly, and the reports of marine companies which are now coming out reveal how badly. The first is that of the Sea Insurance Company, which stands alone now among the leading offices in the market as a purely marine insurance company. The account of 1920, after £100,000 had been set aside to run off the liabilities, showed a loss of £1,672 on a premium income of £954,959. The account of 1919, with premiums of £986,074, showed a surplus of £67,397. An interesting feature is that the difference between these accounts, the difference which turned a surplus into a deficit, was due to the first year's claims. On 1920 they were £299,435, against £171,097 on 1919. The second year's claims were almost identical—£501,825 and £502,037—and the provision made for the future was twice as large for the 1919 account as for that of 1920. It was the heavy first year's claims for 1920 on a smaller premium income which caused the trouble. We see the same, or much the same, influence at work in the figures of the Indemnity Mutual Marine Company. Here the account of 1920 needs, apparently, the whole balance of the premium income of £2,297,340, and £200,000 taken from profit and loss to run off the liabilities. In other words, the estimated deficiency for 1920 is £200,000, as against a surplus of £119,114 on premiums of £2,150,219 for 1919. Just as with the Sea Company, the greatest difference between the two accounts was in the first year's claims—£453,742 for 1919 and £794,842 for 1920. Both companies show large reductions in premium incomes for 1921. The Sea has come down from £954,959 to £501,760, and the proportion of first year's claims for 1921 (£132,745) is lower than it was for 1920 (£299,435). With the Indemnity Mutual the premium income has dropped from £2,297,340 to £1,206,315, and the first year's claims for 1921 (£357,955) are also lower in proportion to premiums than were the first year's claims (£794,842) for 1920. Both these companies have been taking in sail, and have, it would appear, been of late making better weather of their passage through the storms of the market.

Dunlop Rubber.—The report of the Dunlop Rubber Company for the year ended August 31st last states that "the result for the year shows a net loss of £8,320,007." It appears, however, that this enormous deficit arises from the methods adopted in the two previous years, for the directors admit that in 1919-20 a large programme of expansion was entered upon, and when the fall in prices came "the company found itself over-bought to a large extent at most unfavourable prices." A comparison of results reads as follows:—

	August 31.	1914.	1918.	1919.	1920.	1921.
Net profit	£	£	£	£	£	£
Brought forward ..	381,919	649,503	1,368,432	2,163,896	Dr 8,820,007	1,700,324
	37,679	103,457	122,760	402,593		
	419,598	752,960	1,491,192	2,566,489	Dr 6,619,693	
Preference dividend	26,200	196,450	249,849	278,125		77,187
Written off	36,055	121,250	120,000			
Reserve	175,000		250,000	335,500		1,623,137
Ordinary dividend..	149,102	312,500	468,750	252,540		
	(15%)	(23½%)	(31½%)	(15%)		
Carried forward	33,441	122,760	402,593	1,700,324	Dr 8,820,007	

The amount required to reduce the cost price of stocks held by the company and by subsidiary and associated companies to market price at the date of the balance-sheet was £8,262,351, to which is added £616,171, "representing non-trading debits of an abnormal or non-recurring character, and losses on exchange." The profit and loss account shows that royalties, dividends on investments, &c., brought in £77,797, but interest required £197,392, and head office expenses, losses in subsidiary companies, depreciation on stocks, and other charges, "less profit on trading," figure at £8,200,411. The directors state that the turnover for the year shows a reduction as compared to the previous year, but not to the extent which might have been anticipated. Out of the balance brought forward, one quarterly dividend on the preference shares was paid, and the remainder, £1,623,137, is carried to reserve, which now amounts to £2,767,645. The report states that all depreciation in the value of raw materials in hand has now been dealt with, and that the reserve fund is sufficient to provide for losses on the balance of forward contracts outstanding on the basis of market prices at August 31st last. Below we set out the balance-sheet, together with the changes in comparison with last year:—

LIABILITIES.		ASSETS.

Thus the paid-up ordinary capital has been increased from £2½ to £14½ millions, partly by the capitalisation of the reserve fund, which shows a net reduction of nearly £4½ millions. The £3 millions of new debenture stock has been deposited as collateral for the bank overdraft. The increase of £4½ millions in investments is chiefly due to the appearance for the first time of "American Company, including advances, £3,779,704." The rubber estates and investments in associated companies each show an increase of over £200,000. The reserve fund is already ear-marked against prospective losses on outstanding contracts, and shareholders will doubtless be anxious to know what relation this large item of over £9 millions of investments bear to current market values. The report and accounts are otherwise a candid admission of a state of affairs which results from bubble finance. The company is said to be in a position to meet "all competition of a normal character," but there will have to be some drastic reduction of capital if the present loss is to be written off.

"Kaffirs" and the Strike.—Our mining correspondent writes:—A phenomenon in connection with the labour trouble on the Witwatersrand has consisted in the firmness displayed by the share market. It is true that at the first shock quotations were marked down to a moderate extent, and on one or two occasions when the outlook appeared threatening dullness prevailed. But at no time was the market really weak, and any item of news capable of a favourable interpretation—even a vague rumour—resulted in a measure of recovery. The confident attitude of holders of Rand shares is due partly to the fact that quotations are now at a very low level, and partly to an inherent belief in the ultimate victory of economic forces. Although the details are somewhat technical, the broad position is perfectly simple. It is that on the basis of current costs and of the normal price of gold over one half of the 39 mines now in operation would be unpayable. Even in December fifteen properties showed losses, or profits of merely negligible proportions. No amount of "hot air" from extremists can make any impression upon these concrete facts. Very opportunely the Transvaal Chamber of Mines issued in December a statement with statistics as to the position of the gold

industry. Copies of the documents are now to hand; a few of the more striking figures are tabulated below:—

	1914.	1920.	Difference.
Tons of ore milled.....	21,943,700	22,592,700	+ 649,000
Working costs, per fine oz recovered.....	54/10	77/6	+ 22/8
Do per ton milled.....	17/1	25/8	+ 8/7
European salaries and wages ..	£7,170,960	£11,356,150	+ 58/4
Native and coloured wages....	£5,359,360	£6,014,428	+ 12/2
Stores.....	£10,219,300	£14,288,250	+ 39/8
Tons milled per European employed.....	1,205	1,079	- 126

It will be seen that a very large percentage increase in the expenses for 1920 as compared with 1914 has been accompanied by a decrease in efficiency. Amongst the tables prepared by the Chamber is one showing that in June last the wages of contractors ranged from 37s 11d to 79s 7d per shift. Such a scale of remuneration is obviously out of all proportion to the work performed. Even taking the white miners as a whole, the pay is more than 50 per cent. above the 1914 ratio, whereas the increase in the cost of living now stands barely 20 per cent. higher. As a basis upon which the industry can restart "with a reasonable prospect of prosperity both for the bulk of the mines and for the community dependent upon them," the Chamber's proposals are, briefly: (1) That the ratio of whites to natives on producing gold mines should be fixed at 2 to 11, but that the mines shall have the right to reorganise the work and to dismiss employees not required; (2) that the daily rate of pay shall be, until the end of June only, supplemented by one-half the present "cost of living" addition; and (3) that May Day and Dingaan's Day—which cost the industry £80,000 per annum in wages alone—be no longer paid holidays. At one of the meetings of the abortive conference recently held under the presidency of Judge Curlew's the Labour representatives cast reflections upon the statistics issued by the Chamber of Mines, and imputed bad faith; but they made no attempt to substantiate their assertions, and they refused to listen to any explanations. However, it is stated that despite all the efforts of the strike committee, colliers in the Tweefontein district are filtering back to work, and according to private cables received from Johannesburg, the gold miners are beginning to follow the same course. Hence the sharp rally in the share market.

Bawra's Operations.—In a report by the London directors on the first year's operations of the British Australian Wool Realisation Association no financial results are given, but these will doubtless appear in due course. All questions, some of them of a delicate and anxious character, which had arisen between the British and Dominion Governments out of the telegraphic agreements arrived at during the last two years of the war, were finally settled in the early part of the year, and by the distribution amongst the Australian Wool Growers of scrip for the £22 millions which constitute the capital of Bawra, the claims of the great majority of the interested parties have been fully satisfied. The third section of the programme in the constitution of Bawra was to enable the Wool Section of the Ministry of Munitions to be dissolved, and to provide "an appropriate commercial agency for conducting the sale of old wool" belonging to the British Government and to the Australian Wool Growers respectively. The stocks handed over at December 31, 1920, were 775,045 bales of New Zealand wool belonging to the British Government and 1,836,243 bales of Australian wool belonging in half shares to the Australian Wool Growers and the British Government. The disposal of the old wool is being executed to the best ability of the directors of Bawra, but not, of course, to the entire satisfaction of everybody. The problem is so complicated and the interests involved are so divergent that a certain amount of criticism has occurred and will inevitably continue." The directors further express the hope that "on a broad view the most instructed opinion will be that a fairly successful effort has been made to conduct this huge realisation business to the

best advantage of those immediately interested and with as little disturbance as possible to all other interests indirectly affected." During the past year 660,230 bales of Australian, 799,120 bales of New Zealand, and 2,329 bales of Falkland Islands wool were sold. Of the Australian wool sold, 484,031 bales was merino. This leaves wool still to be disposed of to the amount of 1,890,378 bales, of which, apart from 80,550 bales of South African wool, less than 423,000 bales is merino. Thanks to the vagaries of fashion the consumption of fine wools is seriously outstripping supply, while, on the other hand, the unremunerative prices for medium and coarse wools are tending to reduce production to a material extent. The directors estimate that the Bawra merinos available for sale in London will be totally disposed of by the end of July. There is, on the other hand, no intention of attempting to sell out the stocks of crossbred wool (nearly 1,400,000 bales) within any period arbitrarily fixed beforehand. "The Association will contentedly carry over into 1923 the remainder of its stocks of crossbreds, feeling quite confident that next year or early in 1924 the surplus will be readily absorbed and the position of crossbred wool will be completely rectified, and will cease to require any artificial support whatever." As regards the Association's selling policy, the directors maintain that, although wool buyers have shown a tendency to condemn Bawra for selling its wool too slowly, any greater pressure to sell Bawra wool would have excited violent opposition and resentment in Australia and New Zealand, and the directors "do not regret the consideration which, within the permissible limits, they have steadily endeavoured to show to the legitimate interests of the wool growers of the British Empire."

South Africa's Trade.—A cable from the Cape Town office of the National Bank of South Africa states that for the 11 months ended November, 1921, imports into South Africa declined by £38½ millions and exports by £20½ millions as compared with the corresponding period of 1920. Imports of cotton manufactures fell by £4½ millions, of woollen manufactures by £1¼ millions, of food and drink by £7½ millions, of motor-cars by £2 millions, and of hardware and cutlery by £2 millions. Machinery imports increased by £500,000. Shipping returns for the Union ports for the 11 months show that oversea cargoes landed were 715,573 tons below and cargoes shipped 819,978 tons above the corresponding period of 1920. What little improvement there was in general business conditions has been checked by the Rand strike.

The Japanese Budget.—In his financial statement to the Imperial Diet on January 21st, the Finance Minister of Japan said that, although the result of the accounts for 1921-22 were rather difficult to forecast, the receipts from the business tax, sugar excise, consumption tax on textile fabric, Customs duties, profits on monopolies were expected to show an increase, while the receipts from income-tax, stamp duty, and postal, telegraphic and telephone services were expected to show a decrease. The general revenue prospects, he said, were not satisfactory. The Budget policy for the coming year he described as "mainly based on the point that the expansion of administrative expenses should be checked.....and that the foundation of State finance should be placed in a more stable condition." The estimates for 1922-23 are as follows:—

REVENUE.		Yen.
Ordinary.....		1,244,000,000
Extraordinary.....		221,000,000
Surplus from preceding year.....		111,400,000
		1,465,000,000
EXPENDITURE.		
Ordinary.....		939,000,000
Extraordinary.....		526,000,000
		1,465,000,000

The naval estimates apparently reflect the results of the Washington Conference, for the ordinary navy vote is reduced by 22,500,000 yen and the extraordinary by 84,200,000 yen. It will be seen that 111,400,000 yen out of previous surpluses are taken into the revenue account to provide a balance. The estimate of loans and advances

INTERNATIONAL BANKING

PARIS OFFICE
3 & 5, PLACE VENDOME
CABLE ADDRESS: BANKTRUST, PARIS

to be applied during 1922-23 to public works, &c., is 188,400,000 yen, the largest individual items being 80,000,000 yen for the construction and improvement of railways and 31,800,000 yen for telephone expansion. Of the total sum, 12,000,000 yen will be raised otherwise than by offer for public subscription. After reviewing effects of European unsettlement on world trade, the Finance Minister said:—"Japan cannot, also, stand out of this influence. What we consider to be the most urgent thing at this transitional period is to relinquish unnecessary extravagances and indulgence in luxury to which people have been accustomed during these several years of boom, to encourage the habit of thrift and saving, to make endeavours to readjust and reform the organisation and management of business, to cut down the cost of production, and to promote efficiency, in order to improve the real economic power of Japan."

Pekin Syndicate.—The report of the Pekin Syndicate, Limited, for the year ended June 30, 1921, records receipts "comprising interest on Chinese bonds and sundry investments" as £37,977, while expenditure amounted to £14,122 in London, £4,119 in Paris, and £14,960 in China. To these sums must be added a debit balance, representing difference in exchange, of £18,334 and sundry small items, making the total outgoings £52,771. This makes a loss of £14,793 on the year's working. But as appreciation of investments is valued at £5,339, the balance at credit of profit and loss account has only been reduced from £531,124 to £521,669 in the year. Total assets are £1,908,542, as against £1,927,004 a year ago. Cash is down from £359,887 to £297,886. Sundry debtors, including the Banque Industrielle de Chine, £19,282, amount to £136,280, as compared with £68,780 for 1919-20. But other items in the balance-sheet show no striking changes. In the informative lists of investments given, which total £308,199, the Banque Industrielle de Chine figures at £159,052, the same amount as a year ago. All share investments, amounting to £266,429, are taken at cost, while £41,751 of Chinese Government Tientsin-Pukow Railway Loan is taken at current value. The report states that "Negotiations in conjunction with the French Government are proceeding for the reorganisation of the" Banque Industrielle de Chine. The directors are apparently well satisfied with the development of the Li Feng coalfield. They state that "the coal, of which over 2,000,000 tons has now been opened out from the main shaft, is of excellent quality and hardness, and exists under conditions peculiarly suitable for economical production. For the purposes of the balance-sheet, it is interesting to observe that floating assets and liabilities in China and Paris have been taken at 2s 5½d to the dollar and 46.67½f to the pound respectively."

S.T.D. Motors.—S.T.D. Motors, Limited, was formerly the old Darracq Motor undertaking, which recently acquired control of the Sunbeam and Talbot factories and also absorbed two smaller companies. For the year ended September 30, 1920, profits amounted to £325,205, and dividends were paid on £2,700,000 of share capital,

at the rate of 20 per cent. on ordinary and 10 per cent. on preferred ordinary shares; £66,572 was brought into accounts as against £57,740 carried forward. For 1921 profits are recorded at £151,382, or approximately 5 per cent. on a paid-up share capital of £3,223,408. Taking into consideration the abnormal conditions, the directors consider this result satisfactory, and while proposing to pay a dividend of 7 per cent. on £1,829,800 preferred ordinary capital, have decided not to recommend payment of dividend on ordinary shares. The payment of preferred dividend leaves £76,220, which is carried forward to next year's account, including the balance brought forward. Total assets have increased from £3,624,258 to £4,008,784. Cash at bankers has fallen from £559,892 to £231,383, but loans to subsidiary companies have increased from £1,421,869 to £1,654,987, and shares in subsidiary companies have also increased from £1,472,573 to £1,995,981. All investments are valued at cost, including shares in subsidiary undertakings. In a footnote to the balance-sheet it is explained that fixed investments in France are taken at 25.20f to the pound. It would be well perhaps if the company specified the particular assets which were so taken into the accounts. Valuing assets at the normal rate of exchange is a practice followed by several British companies owning property abroad. It may perhaps be contended that fixed assets acquired in pre-war times—in France, for instance, where prices have considerably more than doubled—can be reasonably taken into accounts at 25.20f to the pound, providing fixed assets have not been revalued in accordance with post-war prices. But if it is to be applied to all fixed assets indiscriminately without regard to the date of acquisition, the practice is not commendable if we are to have a true picture of the position of affairs presented in such balance-sheets as these. The balance-sheet will be found analysed in our usual column. The directors state, in their report, that "the trade depression, continual and ever-increasing, of 1921 is a matter of common knowledge not only to our own shareholders, but to shareholders in all industrial undertakings in every country in the world, but in no country more pronounced than our own, and in our own country in no industry more than the motor industry." The last few words of this paragraph are significant, in view of the fact that it was considered in some quarters that the imposition of a tariff would place motor-car manufacturing companies in a favourable position.

Gas Light and Coke Results.—The directors of the Gas Light and Coke Company are able this year to present to the proprietors substantially improved accounts as the result of the year's working. Receipts, expenditure, and dividends are set out in the following table for the past seven years:—

	1915.	1916.	1917.	1918.	1919.	1920.	1921.
Gross revenue ..	£5,293,731	£6,052,366	£7,029,550	£7,740,844	£8,854,028	£12,790,821	£11,232,360
Expenses	4,059,378	5,021,438	6,000,370	6,690,745	8,008,164	11,877,286	10,134,881
	(77 %)	(83 %)	(85 %)	(86 %)	(91 %)	(93 %)	(90 %)
Net revenue ..	1,234,353	1,030,928	1,029,180	1,050,099	845,864	913,535	1,097,479
Int. sinking fund, pref. div., &c. ...	467,277	440,865	520,880	436,862	417,668	421,939	519,102
Balance	767,076	590,063	508,300	613,237	428,196	491,576	578,377
Ordinary dividend ..	686,372	685,169	608,765	483,531	488,969	488,970	760,618
Rate per cent. ...	84 1/4 %	84 1/4 %	83 1/4 %	82 1/4 %	83 1/4 %	83 1/4 %	84 1/4 %
Carried forward ..	80,704	95,106	100,465	129,700	56,773	2,627	182,241

It is satisfactory to find that expenses in relation to revenue have left the high-water mark, and have fallen from 93 to 90 per cent. The increase of ordinary dividend from £3 to £4 13s 4d per cent. will also be welcomed by stockholders. Sales of gas show a decrease of 5 per cent. This, the report observes, "is due to the coal dispute, to the general depression in trade, and to the extraordinarily fine weather prevailing throughout the year." It is estimated that the cost of the coal stoppage to the company "was not far short of £500,000," but it is stated that "neither the pressure nor the quality of the company's gas was interfered with during this period." Application is being made to the Board of Trade to authorise the acquisition of the Ilford Gas Company.

Postal Charges.—The Federation of British Industries has addressed a letter to the Postmaster-General laying stress on the importance of reducing current postal, telegraph, and telephone charges, which are a severe handicap to the revival of trade. They urge that particular attention should be given to a prompt reduction of the postcard and printed paper rates, which not only most seriously affect the printing industry as producers, but also affect every other industry as consumers. "In making this request, the Federation desire to support most emphatically the representations which have already been addressed to you on this subject on behalf of the printing trade. If, as they understand, the inland printed paper rate is not at present remunerative on account of the elaborate sorting which it entails, they consider that serious attention should be devoted without delay to the simplification of the regulations governing the postage of printed matter, in order that the expense of sorting may be reduced."

The 1921 Fish Harvest.—The returns of fish landed by British vessels at ports in England and Wales during 1921 show a marked falling off. The total of wet fish was 11,174,076 cwts, as compared with 14,584,413 cwts, a decrease of 3,410,337 cwts, equal to 23.3 per cent., and occurring under all the principal heads. The curtailment of operations during the three months of the coal stoppage, when bunkers were not available or could only be imported at exorbitant prices, is the leading factor in the adverse result, and the failure of the herring fisheries another. The landings of herrings amounted to only 2,835,924 cwts against 4,636,536 cwts in 1920, a decline of over 1,800,000 cwts. The total value of the wet fish is returned at £15,997,944 against £21,202,521, a decrease of £5,204,577, and of shellfish £556,706 against £615,949. The general average of the wet fish was 28s 7 1/2d per cwt, which is only slightly below the figure of 29s 1 1/2d in 1920, but 20 per cent. less than 1919, when it was 35s 10 1/2d. The following shows the average value of the principal kinds over the past three years:—

	1919.	1920.	1921.
Per Cwt.	Per Cwt.	Per Cwt.	Per Cwt.
Prime fish (soles, brill, turbot) ..	140 0 ..	107 6 ..	108 4 1/2
Plaice	81 1 ..	72 0 ..	71 6 1/2
Haddock	42 1 ..	30 8 ..	29 0 1/2
Codfish	47 7 ..	32 3 ..	32 8 1/2
Herrings	14 0 ..	11 10 ..	7 3 1/2
Average of all fish	35 10 1/2 ..	29 1 1/2 ..	28 7 1/2

Haddock, codfish, and herrings were, as usual, the most numerous, and contributed over seven million cwts to the aggregate. In addition to the foregoing there were landed at English and Welsh ports from foreign-owned fishing vessels 327,103 cwts of wet fish having a value of £680,929, the busiest months being during the summer, when the coal strike was in progress. The quantity in relation to the total landings by British vessels was equal to less than 3 per cent., and the value to 4 per cent., from which will be gathered the true measure of the competition the English industry has had to meet. Most of the foreign caught fish was brought in by small motor boats using a seine net, and their success and economical working have so impressed the fishing vessel owners at Hull and Grimsby that they are going in for this method of fishing on the North Sea grounds. Already two such vessels, of rather heavier build than the Danish boats, have been launched, and ten more are under construction. A vessel of this description is worked by eight or nine hands at the most, and stays out at sea on the average a week or less, and is eminently suited to summer fishing. The larger steam vessels are much more expensive to run, and the building of these has come to a full stop, not one being put into the water from the Humber shipyards last year, whereas ordinarily there would be 20 to 40 in a year. The heaviest type, of course, still go to Iceland and into the Arctic circle, several recently having returned from the Behring Sea to Hull and Grimsby with huge catches of plaice, realising £5,000 to £6,000 each cargo. The outlook for the fishing industry is considered fairly promising. All but about 12 or 15 per cent. of the fleets are now in commission, and there will be no lack of supplies. The

urgent need is pre-war facilities and rail rates in order to get the fish to the inland consumer quickly and at the lowest possible price.

MR EDGAR CRAMMOND will deliver an address to the National Union of Manufacturers on Monday, February 6th, at 2.30 p.m., on the Economic Problems before the British people.

Oversea Correspondence.

UNITED STATES. — FOREIGN TRADE FINANCING CORPORATION ABANDONED—WAGE REDUCTIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 21.

EFFORTS to finance foreign trade by creating what was to be known as the Foreign Trade Financing Corporation, with a capitalisation of \$100,000,000 have been definitely abandoned. The official announcement to this effect by the committee which has been in charge of the organising work has occasioned no surprise in well-informed quarters, since it has been known for months that subscriptions to provide the necessary capital were coming in very slowly, and it became increasingly evident that the raising of such a large amount under existing conditions would be an impossibility. Many had thought that the corporation would actually be formed, though with a greatly reduced capital, but the general slump in business, together with the demoralisation in foreign exchanges, especially those of European countries with which the United States would have done business through the proposed corporation, prevented the carrying out of the plan even on a smaller scale. In its announcement the organisation committee expresses the belief that its efforts of the past year have been valuable; that ultimately they will bear fruit, and that extensions of long-term credit to foreign buyers of American goods will be made on a large scale. "It is with a great deal of satisfaction," the announcement reads, "that the committee contemplates the growing sentiment in favour of providing ample machinery to finance our foreign trade. Whether remedial measures will eventually take the form of more or less paternalism on the part of our Government, in co-operation with other Governments, remains to be seen, but we are hopeful that they will not, and that eventually the financial equipment will be supplied (as we firmly believe it ought to be) by the industrial and banking interests of the country, not alone in furnishing adequate capital, thus putting it outside the pale of political interference, but by giving it sufficient support to make it the success it ought to be."

The problem of further wage readjustments in an effort to reduce operating costs is receiving increasing attention. Textile mills in Connecticut announced rather extensive and additional cuts in wages this week, and the movement seems likely to spread to other textile mill centres in New England and elsewhere. The treasurer of one of the largest groups of mills in Massachusetts predicted this week that a more or less general downward revision in wages of textile operatives was inevitable, notwithstanding the American Woollen Company's recent assurance to its employees that their pay would not be further reduced this year. Railroads are holding conferences with different classes of their union labour over the proposed cuts in wages now paid to railway workers. As expected, no agreements are being reached, and indications are that the whole matter will be referred to the Railroad Labour Board for settlement. There appears to be a deadlock between employers and union miners in the bituminous coal industry over the question of lower wages, and in many quarters a general strike in unionised coal districts on April 1st is considered inevitable.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

FRANCE.—FOREIGN TRADE—BANQUE INDUSTRIELLE DE CHINE—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, January 31.

OFFICIAL figures showing the French trade returns for 1921 are now available, and speak eloquently as to the disastrous effect of the continued low price of the franc on French commercial exchanges. The falling off in the total volume of trade, as compared with that for 1920, was represented by a drop of over 26,356,000,000f in imports (out of a total for 1920 of, roughly speaking, 50,000,000,000f) and of over 5,341,000,000f (out of a total for 1920 of 26,894,000,000f) in exports. The detailed comparative figures, dissected into the chief categories of foreign trade, are as follows:—

	1920.	1921.	Difference in 1921.
IMPORTS.	Francs.	Francs.	Francs.
Foodstuffs	11,874,910,000	6,205,898,000	— 5,669,012,000
Raw materials	25,156,544,000	12,398,040,000	— 12,758,504,000
Manufactured goods ..	12,873,443,000	4,944,555,000	— 7,928,888,000
Total	49,904,897,000	23,548,473,000	— 26,356,424,000
EXPORTS.			
Foodstuffs	2,612,799,000	1,932,366,000	— 680,433,000
Raw materials	6,113,814,000	5,558,626,000	— 555,188,000
Manufactured goods ..	16,962,574,000	12,808,951,000	— 4,153,623,000
Postal parcels	1,205,751,000	1,253,158,000	+ 47,407,000
Total	26,894,938,000	21,553,101,000	— 5,341,837,000

It should be pointed out that the value of the imports and exports for 1921 are based on the valuation rates of 1919, while those for 1920 are based on the values then prevailing.

The comparative weights of the imports and exports for the two years, which afford another interesting subject of comparison, were as follows:—

	1920.	1921.	Difference in 1921.
IMPORTS BY WEIGHT.	Tons.	Tons.	Tons.
Foodstuffs	6,195,261	4,066,434	— 2,128,827
Raw materials	41,871,777	32,448,478	— 9,423,299
Manufactured goods	2,464,888	1,458,774	— 1,006,114
Totals	50,531,926	37,973,686	— 12,558,240
EXPORTS BY WEIGHT.			
Foodstuffs	1,257,615	1,227,133	— 30,482
Raw materials	9,709,081	12,858,481	+ 3,149,400
Manufactured goods	1,865,215	1,890,778	+ 25,563
Postal parcels	23,327	25,036	+ 1,709
Totals	12,855,238	16,001,428	+ 3,146,190

The balance of trade against this country during 1921, therefore, amounted to only about 2,000,000,000f, as compared with an adverse balance in 1920 of over 23,000,000,000f. It may also be mentioned that this excess of imports over exports began to be recorded only from September last, the first eight months of the year showing, roughly speaking, almost a level balance between exports and imports, there being, as a matter of fact, during six of the eight months, a surplus of exports. In 1913 imports into France had a value of 8,421,322,000f, with a tonnage of 44,220,386 tons, while exports for the same year were valued at 6,880,217,000f, with a weight of 22,074,513 tons.

The manner in which trade between France and the principal foreign countries was modified during 1921, as compared with 1920, is shown by the following figures:—

(In 1,000's of Francs.)

	1920.	1921.	Difference in 1921.
Imports into France from—			
Great Britain	10,318,193	3,166,585	— 7,151,608
Germany	2,667,963	2,476,446	— 191,517
Belgium	3,325,484	1,793,337	— 1,532,147
Switzerland	1,043,905	398,493	— 645,412
Spain	1,052,480	509,378	— 543,102
Italy	1,282,549	567,657	— 714,892
United States	10,866,102	3,581,789	— 7,284,313
Brazil	901,107	557,065	— 344,042
Argentina	2,991,686	832,875	— 2,158,811
Exports from France to—			
Great Britain	4,233,267	3,354,837	— 878,430
Germany	1,502,118	2,356,271	+ 854,153
Belgium	4,478,937	4,090,876	— 388,061
Switzerland	1,791,931	1,169,142	— 622,789
Spain	969,531	589,309	— 380,222
Italy	1,248,742	771,334	— 477,408
United States	2,256,515	2,039,711	— 216,804
Brazil	362,846	129,503	— 233,343
Argentina	445,323	249,285	— 196,038

The long-drawn-out Parliamentary controversy over the re-floating of the Banque Industrielle de Chine has been advanced another step nearer solution by the passing of a short Bill in the Chamber authorising the Government to negotiate with the Chinese Government with a view to an agreement being drawn up for the balance of the French share in what is known as the Boxer indemnity being devoted to placing the bank on its feet again. According to a report drawn up by M. Outrey, Deputy for Cochinchina, on behalf of the Colonial Commission of the Chamber, the amount of this balance now amounts to 391,000,000, which has been held in suspense for some years, but which, under a recent agreement, China should this year begin to pay off by annual instalments. In his report M. Outrey suggests that 70,000,000 of this amount should be utilised to reimburse the notes issued by the Banque Industrielle and cable transfers, and the balance to reimburse the small depositors in full, the larger depositors being reimbursed half in cash and half in shares in the reconstituted bank.

These suggestions, in view of the terms of the Bill passed last week, must obviously be left for future consideration. The object of the Chamber, the discussion showed, is to utilise the money in question in the best manner possible for the purpose of safeguarding the moral and material interests of France in the Far East. Whether the moribund bank will actually be re-floating remains to be seen, but the first step, apparently, is to repair the damage done to French credit through the failure of an institution whose collapse proved to be one of the underlying causes of the fall of the Briand Cabinet. The Chinese Government itself, on the foundation of the bank in 1913, subscribed 14,500,000, or one-third of its share capital, but a much more important fact, as is now admitted, is that at the time when the institution was hopelessly insolvent and on the verge of collapse French consular agents in the Far East regarded it as their duty to assure native depositors of its soundness. This fact may explain why M. Guernier, the *rapporteur* on behalf of the Foreign Affairs Commission of the Chamber, in urging the passing of the Bill, insisted that "France is now playing her last card in the Pacific," and appealed to the Chamber not to allow this "last chance" to escape it. M. Tardieu and other Deputies argued that public money should not be used for re-establishing an insolvent bank. M. Poincaré, in reply to other speeches, insisted that any agreement that would be arrived at would provide for France to participate in the future profits of the reconstituted bank, and that the money so received would be devoted to French educational and other organisations in the Far East.

The Bourse this week has remained calm and depressed, chiefly, if not entirely, because of the announcement of so many new capital issues. Thus the Crédit National is offering investors interest at 6½ per cent. free of all taxes and the chance of early repayment. Various industrial undertakings of approved value are also offering invest-

ments at 6 per cent. free of taxes, with the issue price standing well below par. Dividends declared recently have been satisfactory; but, unfortunately, from the immediate standpoint, they reflect rather the state of trade in 1920 than that in 1921, and it has to be expected that the depression of last year will continue to make itself severely felt. French Three per Cents. this week are rather stronger, the price quoted being 56.65 as against 55.90, but the price of War Loan has rather declined, owing to the market having absorbed the amounts required for the payment of war taxes. Foreign stocks have fluctuated, following for the most part the exchange markets. At the beginning of the week there was some activity in Russians, but these closed depressed. Banks have declined, Union Parisienne falling from 700 to 680, Banque de Paris from 1,240 to 1,205, Crédit Lyonnais from 1,425 to 1,400, and Crédit Foncier from 790 to 775.

CANADA.—INDUSTRIAL CONDITIONS—THE MERCHANTS' BANK—STOCK MARKETS—SALES OF CANADIAN BONDS—EXCHANGES AND THE TRADE BALANCE—NATIONAL DEBT AND REVENUE—MARKING REGULATIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 16.

A MORE optimistic spirit is beginning to prevail in the industrial world of Canada. At any rate, one hundred and fifty prominent Canadian manufacturers, who have reviewed the conditions and outlook for 1922 in *Industrial Canada*, the official organ of the Manufacturers' Association, profess a generally hopeful view of the situation. Most of them assert their confident belief that the worst of the depression has been surmounted, and that henceforward a slow but steady improvement can be anticipated. Estimates vary according to the line of industry as to when a resumption of normal activities can be expected. Some industries can show concrete evidence of the turn already having taken place; in others the turning-point is placed about March or April, but it is only a very limited number of pessimists who postpone the possible date of betterment till a new crop has been harvested next autumn. There is comparative unanimity that the two chief obstacles in the way of a more rapid trade recovery are high freight rates and the impaired purchasing power of the rural community due to the decline in prices for farm products.

The disaster to the Merchants' Bank is still attracting public attention, and some extraordinary evidence given at the inquiry into the bankruptcy of Thornton, Davidson and Co. has had a very disturbing effect. Under cross-examination both Sir Montagu Allan, the president of the Merchants' Bank, and Senator Lorne Webster, one of its directors, declared that at the time of the failure of that firm in 1920 they had no idea that it owed the bank about \$3,600,000. This evidence has left an unpleasant impression, and the *Financial Post*, of Toronto, declares that the present auditing system as laid down by the Bank Act is a farce. It joins the *Toronto Globe* in a demand for an inquiry by the Federal Government into the whole business, and, as confidence in the whole banking system has been badly shaken, the Government can scarcely avoid some action.

Stock markets have shown some activity since the turn of the year, but it has been chiefly confined to bonds and investment securities of acknowledged merit. Conditions are still unfavourable for the speculator. The *Monetary Times* estimates Canadian bond sales for 1921 at \$403,591,156, classified as follows:—

Governmental	160,746,400
Municipal	84,766,931
Railroad	96,733,000
Corporation	61,335,825

The total bond sales for 1920 amounted to \$324,914,667. But there has been a significant change in the relative source of the borrowings. In 1920 Canada sold 68 per cent. of her bond issues in the United States, but the exchange situation made the process burdensome, and

this last year only 45 per cent. of Canadian bond issues were placed in the United States, the balance, with the exception of \$12,151,000 sold in Britain, being absorbed at home.

This change has contributed to the great improvement in the Canadian exchange in New York. On December 31, 1920, the Canadian dollar stood there at 86½ cents, and on December 31, 1921, it had risen in value to 94½ cents. Another helpful factor has been the recent improvement in Canada's trade balances. During the months of October and November of 1921, thanks to heavy grain exports, the trade figures actually showed a favourable balance of \$42,000,000, and for the first 11 months of the calendar year the unfavourable balance had been reduced from 128 millions, the figures of the same period in 1920, to 23 millions.

Figures published by the Finance Department show that during the calendar year ended December 31st the net debt of Canada actually increased \$58,642,790, and now stands at \$2,366,861,252. The total revenue collected in the month of December was \$28,549,000, as compared with \$48,260,000 in the same month of 1920. The decline is partially accounted for by the fact that income-tax was collected in the early months of this fiscal year instead of being deferred till towards its close, as in 1920. There was some relative improvement in Customs returns during December, but the loss on them for the whole year will exceed \$70,000,000. As a revenue producer the tariff has now become comparatively unimportant. Mr Fielding will have a hard problem to balance his next Budget without some increase in direct taxation, and his one source of comfort must lie in the fact that the deficit on the national railway system, which exceeded \$70,000,000, will probably be reduced to less than \$50,000,000. Since 1919 there has been a substantial reduction in the amount of Government notes outstanding, but the position can hardly be said to have improved in light of the subjoined figures:—

	Government Notes Outstanding.	Gold Held.	%
March 31, 1914	114,000,000	92,000,000	81
" 1916	175,000,000	114,000,000	65
" 1919	329,000,000	118,000,000	39
" 1920	312,000,000	100,000,000	32
" 1921	278,000,000	80,000,000	29

British exporters will be interested to hear that the new Government has decided upon a suspension of the obnoxious marking regulations, and their ultimate repeal seems a certainty. The general expectation is that the Government which is committed by its programme to Tariff Reform will endeavour to leave the matter in abeyance for the present year. They have available the data collected by the Drayton Commission, which toured the country in the winter of 1920-21, but will probably desire to supplement it by a fresh inquiry.

POLAND.—PUBLIC FINANCES—FRENCH CAPITAL IN UPPER SILESIA—TEXTILE INDUSTRY—DANZIG—EXCHANGES IN 1921.

(FROM OUR CORRESPONDENT.)

WARSAW, January 25.

DR MICHALSKI last week made a statement to the Financial Committee of the Diet on the financial situation of the country. Since October a marked improvement may be noticed. While in September the advances of the Polish National Bank to the Government increased by 20 and in October by 20.5 milliards, the respective figures for November are 15½ and for December seven milliards. This reduction is principally due to a better working of the system of taxation. The amount of collected taxes, amounted to four milliard Polish marks in the first quarter, to eight milliards in the second, to 15 milliards in the third quarter. For the last quarter of 1921 the revenues are estimated at 20 milliards. At the same time, expenditure has been cut down.

According to reports published by the Press, Dr Michalski estimates the revenues for the current year at 450 milliards and the expenditure at 600 milliards, leaving a deficit of 150 milliards. To this 250 milliards for interest and amortisation due in payment of liabilities contracted

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital (Paid Up) - - £1,250,000
Reserve Funds - - £1,350,000

Head Office: EDINBURGH.

R. G. THOMAS, General Manager. K. J. MORTON, Secretary.

Over 150 BRANCHES THROUGHOUT SCOTLAND.

London Office: 38, Threadneedle St., E.C.2.

JAMES FORREST, Manager. J. E. FANSHAW, Manager.

Every Description of Home and Foreign Banking Business transacted.

abroad must be added. Dr Michalski has undertaken steps for the reduction or postponement of certain of these liabilities. Probably in the middle of February the Diet will discuss the preliminary estimates for the current year.

Dr Benis, the delegate of the Polish Government, has returned from Paris after having concluded negotiations with French bankers relating to their co-operation in Upper Silesia. A Franco-Polish syndicate, with a capital of 500 million German marks, is to be established for taking over the coal mines which belonged to the Prussian State. One-half of the capital is to be contributed by French and the other half by Polish banks. There is also a plan for forming a bank for Upper Silesia, with a capital of 200 million German marks, to be subscribed by French and Polish undertakings. It is officially announced that the negotiations for the signature of a commercial Treaty with France have been brought to an end. The signature of the agreement, which has been delayed by the illness of the Polish Ambassador in Paris, is expected to take place in a few days.

The Polish textile industry, after a short crisis, is regaining its normal activity. The great factories of Lodz are working six days a week, and short time has been abandoned. This trade revival is especially due to orders received from Rumania and from the Eastern districts of Poland. For the first time a transport of cotton goods manufactured at Lodz has been sent to Palestine.

Statistics of the port of Danzig show that the shipping tonnage entered and cleared is steadily progressing, and that during the last two years it has been greater than before the war. As far as the nationality of the ships is concerned, a great change in comparison with pre-war conditions, when the bulk of goods was imported by German ships, has taken place. Now the Danish flag ranks first and the German second. During the last months of the year American shipping has lost ground in the movement of the port, while French shipping has made steady progress. In 1921 84,000 passengers have arrived and 56,000 have left the port. The respective figures for 1920 were 68,000 and 59,400. The passenger traffic with the United States is very important. In 1921 35,000 persons came from New York and 15,000 left Danzig for this destination.

Below are given the average quotations of foreign exchanges in Warsaw in the first and last months of 1921:—

	London.	Paris.	Munich.	Vienna.	Prague.	Berlin.	New York.
January, 1921 ..	3,000	53	130	125	10	12	800
December ..	12,750	235	590	50	38	15	2,950

The one favourable movement in 1921 has been the rise of the mark in comparison with the Austrian krone.

FINLAND.—FINANCES—BANKING—EXCHANGE—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, January 22.

FINLAND'S population at the end of 1920 is officially reported as 3,367,542 persons, whereof 536,374 are in the towns. The birth rate of 25.3 in 1920 considerably exceeded that of 1919, and regained the pre-war level. The death rate fell to 15.9, being lower than in any year except 1914. The Social Insurance Commission has submitted to the Cabinet a Bill providing for compulsory sickness and pensions insurance.

The State ordinary estimates for 1922, as published in August, compare with the Budget of 1921 as follows:—

(In Finnmarks.)		
	1921.	1922.
Revenue	2,154,855,650	2,065,662,650
Expenditure	1,808,631,305	1,885,345,535

The Public Debt in November, 1921, was Fm. 1,935,927,838, details being:—Consolidated Foreign Debt, 535,979,365; Consolidated Home Debt, 955,785,400; Floating Foreign Debt, 149,172,073; Floating Home Debt, 294,991,000. The total debt at close of 1920 was Fm. 1,971,259,487. This decline is satisfactory, as in 1920 the debt increased by Fm. 485,376,198, of which increase, however, Fm. 350,000,000 represented an earlier loan contracted for strengthening the Bank of Finland's position. A supplementary Budget of half a milliard was presented in November, the largest item of which was for writing off claims upon Russia. At the close of last year was sanctioned a tax of 8 per cent. upon dividends and bank interest drawn by foreigners, to be remitted if the foreigner is an income-tax payer. The estimated yield is Fm. 6,000,000. The motive given for this tax is that the depressed Finnmark exchange has enabled foreigners to acquire stocks at below their value.

In view of the restored foreign trade balance, of a relatively stable price level, and of reduced monetary stringency, the Bank of Finland (without reducing its discount rate) was able to pursue a moderate deflation policy in the later part of the year. At the close of 1920 circulation totalled Fm. 1,341,000,000. It rose to Fm. 1,493,300,000 on March 15th, and ended the year at Fm. 1,346,400,000. Of any desire to deflate on a great scale there is no sign, and business interests oppose such suggestions, apparently with good reason. In December was submitted a Bill limiting the Bank's circulation to Fm. 1,500,000,000 more than the Bank's gold reserve, plus its claims upon its foreign correspondents, the circulation not secured in either of these ways to be covered with three months' bills or State bonds. The pressure for credit upon the private banks declined in the last few months. On January 31, 1921, the private banks' loans totalled Fm. 5,584,800,000, and deposits Fm. 3,657,900,000. The comparable figures for November 30th were:—Loans, Fm. 6,094,600,000, and deposits Fm. 3,732,700,000. The private banks' rediscounts increased from month to month, being Fm. 183,100,000 on January 31st, and Fm. 290,400,000 on November 30th. In the last months, the banks' net debt to abroad declined, being Fm. 954,200,000 on November 30th, against Fm. 999,500,000 on October 31st, and Fm. 1,050,400,000 on September 30th. This improvement is apparently in connection with the active trade balance established in the second part of the year.

As a result mainly of the heavy passive balance in early 1921, the Finnmark's exchange fell until September. The Helsingfors rate on London at beginning of the year was around 112, and on New York 32; on September 15th the quotations became 300 and 80½, after which there was a recovery to around 200 for London, with relative stability thereafter. The future of the Finnish mark depends upon maintenance of exports; but as the recent heavy exporting is due largely to the advantage over Sweden and Norway given by the present low mark, it seems likely that export would be threatened by a material exchange recovery. M. Frey, a bank director and good authority, expresses the view that complete stabilisation, on the basis of resumed gold payments, will not take place in less than 30 years. Stabilisation by means of a dollar loan is being discussed in the Finnish Press, but this would prove effective only if reversion to a passive trade balance can be prevented. The Helsingfors Bourse last year was reactionary, stocks quoted at Fm. 1,738,900,000 on December 30, 1920, being quoted on November 30th at Fm. 1,303,900,000. That Finland should so break the rule that a falling exchange means rising stock quotations can only be explained by local tightness of money. The price-level in 1921 was nearly stable. The index cost of living rose only from 1,103.2 in December, 1920, to 1,161.5 in November,

1921, and was lower in November than in October. The index price of imports (Customs Department's figures) fell in the same time from 1,387 to 1,344, while the index price of exports rose from 1,053 to 1,202. All these figures indicate greater stability than in 1920.

Towards end of 1920 the international demand fell off, and low exporting continued far into 1921, so that the first part of last year also showed heavy import surpluses. After that there was a great recovery, and, as a result, on the whole of 1921 the import surplus was relatively smaller than in any year since 1895. The trade figures for 1920 and 1921 compare as follows:—

	Imports.	Exports.	Import Surplus.
1920	3,620.3	2,906.6	713.9
1921	3,583	3,386	197.0

Germany has replaced England and the United States as chief seller, while England remains chief buyer.

The resumption of paper export to Russia, begun early last year, has been checked by the Karelia dispute. In December negotiations were begun for transport of 10,000 railway car loads of wood to Petrograd. The proposed definitive Customs tariff has not yet been worked out. The tariff for 1922 is provisional, with new basic rates, and with power to the Government, with the aim of controlling luxury and some other goods, and of negotiating freely with foreign countries, to quadruple certain rates, and to reduce others to half. The Government is also empowered to forbid imports of unnecessary goods. Export duties are still levied, but only for fiscal reasons. The Government has exercised its right to raise duties. The rates for luxury goods are very high, but for about a quarter of the scheduled classes are lower than last year.

Letters to the Editor.

"THE BANKERS DIAGNOSIS."

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your interesting article with the above title, which appeared in your issue of the 28th inst., you state, with reference to Sir Harry Goschen's argument against devaluation of our currency as equivalent to repudiation, that he did not "appreciate" the other horn of dilemma and deal with the argument that by lowering prices to a level which would permit return to the old gold parity, the country would be imposing upon itself the heavy burden of paying back to holders of the War Loan, both in principal and interest, a much greater amount of wealth than the equivalent of the original loan." The problem is difficult, as you point out, but if you will allow me to state so, I think the argument you refer to is a fallacious one. It is true that the restoration of the old gold parity and the re-establishment of the par of exchange with gold standard countries such as the United States of America will enable us to buy our raw cotton and food cheaper than before, and thus increase the wealth of the War Loan holder, but it will also benefit everybody else as well. The burden of repayment of debt will therefore not be increased but lightened by such a restoration, as the production of wealth will be stimulated by the reduced cost of production. Secondly, a resumption of specie payments by this country will, I believe, vastly improve British national credit, and an improvement in national credit, which will enable this country to refund a large part of the debt at 1 per cent. under the present rate of interest, will save the State about £50,000,000 in interest charge. This will still further lighten the burden. Finally, the lender of money to the State who has suffered from the depreciation of his capital and the rise in the cost of living which has resulted from inflation and unsound finance is entitled to participate along with the rest of the community in the benefits which may be expected to follow from the pursuit of a sound policy.

You write also as if the restoration of the old gold parity will mean a lowering of prices to the pre-war level. This does not follow by any means. Restoration in this country merely means establishing equilibrium between gold and

paper. Gold prices of nearly all commodities have risen. The world's production of gold is declining, and I do not anticipate that gold prices in many cases will fall to the pre-war level for some time to come. The restoration of the old gold parity will give, I believe, stability to prices.—I am, Sir, your obedient servant, D. M. MASON.

Chairman Executive Committee Sound Currency Association.

115 Cannon street, E.C. 4, January 30th, 1922.

THE RISE IN VALUE OF THE £ STERLING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On January 30th the rate of exchange between London and New York was quoted in both places as about 4.27 dollars to the pound, and as the gold in a sovereign is equivalent to the gold in 4.87 dollars (the par of exchange), this means that the British paper pound is now worth about 88 per cent. of the value of the gold in a sovereign. On the same date the gold, the export of which is permitted, sold in London at 97s per fine ounce—that is, at 4.85 pounds sterling; and, as a fine ounce of gold makes, with the alloy, 4.25 sovereigns, this quotation also makes the paper pound worth 88 per cent. of the gold in a sovereign. The sovereign contains 113 grains of fine gold, but the paper pound now buys only about 99 grains, either in London or New York. On February 1, 1921, the corresponding quotations were:—3.84 dollars to the pound and 107s 2d per ounce of fine gold in London. According to these quotations the pound sterling was then worth only about 79 per cent. of the gold in a sovereign—that is, about 89 grains of fine gold. It follows that, in the last twelve months, the value of the British paper pound, whether measured in American dollars or in fine gold, has risen by over 11 per cent.

One effect of this rise in the gold value of the paper pound is to enable the importer of goods from abroad to sell them in this country at a price in sterling about 11 per cent. less than he could have afforded to sell them had there been no such rise in the value of the pound. And if the paper pound were suddenly restored to the value of a sovereign, the present prices in this country of many imported articles would fall further by something like 12 per cent.

According to the currency note return, on January 25th the total quantity of currency notes outstanding was 303 million pounds, as compared with 340 on the same date last year, and this reduction of the supply of currency notes by over 11 per cent. is no doubt one of the reasons for the rise in the value of the paper pound. Further, this reduction in the supply of notes must have given the world generally a feeling of confidence in the continuance of the British currency policy. If the Government were to increase the issue of notes to any considerable extent, that confidence would be shaken, and the value of the pound (whether measured in gold or in commodities) would tend to fall, and prices in sterling would tend to rise.

Broadly speaking, a fall in prices is advantageous to consumers, as their money will buy more commodities, and their increased demand for commodities will in time tend to benefit trade and increase employment. But, on the other hand, a fall in prices, especially if it is rapid, causes loss to producers and manufacturers, and thus tends to discourage new production, and so to lessen employment. It is best for the community as a whole that prices should continue fairly stable, without any rapid rise or fall. At the same time, it must be borne in mind that prices can never be really stable until we have got our currency back to a gold basis, and that it is incumbent on this country to restore the British pound to the value of a sovereign, and thus to remedy the injury caused to so many people by the depreciation in its value, to pay the country's lawful debts, and to maintain British credit, on which the prosperity of our trade so largely depends. I, therefore, recommend that the British Government should now continue to make a slow but steady reduction in the quantity of paper currency outstanding, and a slow but steady building up of a gold reserve, until the relations between the quantity of paper currency and the gold reserve, and between the pound sterling and the United

States dollar make it possible to abolish all restrictions on the free export of gold (both sovereigns and bullion) without causing too sudden a fall in the prices of commodities in this country. If at any time the level of prices showed a tendency to rise, the process of reducing the quantity of currency outstanding should be accelerated.

J. WILSON.

Annieslea, Crieff, Scotland, January 31st, 1922.

BUSINESS HOURS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Whatever may be the experience of the Stock Exchange in the matter of the early closing of the London banks, to the general public it is a serious impediment to business. This is more especially the case in the big industrial centres, because in those cities customers must bank still earlier than in London if prompt clearing is required, and notices are posted in the provincial banks to that effect.

The London banks now close on Saturdays at noon; that is to say, two hours earlier than in pre-war days—not one hour earlier.

It must be admitted that the worst offenders from the point of view of example to other workers are some of the older insurance companies, with their hours of 10 to 4 and one hour for lunch. There are also the questions of early overtime and of the relief of the employees in financial houses of their personal income-tax burdens. These extravagant concessions are the cause of discontent in industrial quarters.

At least one Government Department excuses its three o'clock closing to the public by reference to the three o'clock closing of the London banks. Of that I have written confirmation, and it affords evidence of the force of bad example.

Bank holidays on the first of any month are exceedingly exasperating to those concerns who settle with their employees on a monthly basis.

Whether we like to admit it or not, the fact remains that the war has taught us nothing. We continue to require improved social conditions while possessing less love for work than formerly. In this respect all classes are equally at fault, and unfortunately those who are the better educated display the least imagination—of which the present banking hours are a visible manifestation. Pre-war conditions were our economic conditions, and unless and until we get back to those conditions, there is little hope of lasting improvement in the industrial situation; and certainly no hope whatever of social conditions permanently in advance of pre-war days.—Yours faithfully, G. O. PARSONS.

London, E.C. 4, February 1st, 1922.

Books and Publications.

REVIEWS.

"Economics for the Accountant." By Kemper Simpson, Ph.D. (New York and London) D. Appleton and Co. 8s 6d net.

THIS book is of interest both to the economist and to the accountant. The author feels, with good reason, that through his contact with accounting principles he has been able to present certain more or less important contributions to economic theory. It is true to say that the economist who gives consistent thought to accounting will find that he must be more careful in defining capital, interest, and profit. It cannot be claimed that this work throws much further light upon the vexed question, What is profit?; but the question is perhaps too wide. Profit, in its widest economic meaning, is service rendered by man and by capital in supplying all required for man's wants. It thus includes wages, interest, and rent. If the meaning is narrowed, difficulties begin. The real difficulty of defining profit arises from the fact that the word profit is generally used to indicate something much less than economic profit. It is commonly intended to mean the share of one particular co-operator, or class of co-operators, in co-operative industry. It is the share which goes to the entrepreneur or, better word, enter-

priser. It is easy to criticise; but the author has here dealt, in a simple and lucid manner, with a wide and complex subject. And it is safe to say that those interested—and they are many—will, if they get the book, read it through. They may not be wholly in agreement with the author's views, but the work will be found suggestive and interesting, and certainly does not need the apology which is modestly offered for its publication. We observe a new word—schematize—which we think has not yet reached us.

"American Corporations." By John J. Sullivan, A.M., LL.B., LL.D. (New York and London) D. Appleton and Co. 15s net.

This book is a revised edition, and contains a clear statement of the practical rules of American corporation law, and a discussion of its broader principles. The author points out that the changes in American corporation law have been many and fundamental; new federal laws, many new State laws, new judicial decisions and interpretations, and the coming into use of new practices. In this revised edition all these have been taken into account, and the book thus becomes the latest authority on the subject. Among the outstanding changes dealt with are such matters as the issue of shares without par value, bankruptcy proceedings, the obtaining of a charter, laws concerning foreign corporations, and the conception of the criminal responsibility of corporations. In regard to the practice of issuing shares of stock with no par value, it is interesting to note that many States have passed laws permitting the issue of such shares. The author thinks that probably most of the other States will do so within the next few years. This work forms a concise and valuable reference book on its subject. The index is, unfortunately, somewhat meagre.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
February 8.

ACCOUNT.
February 9.

Two main factors are governing the course of Stock Exchange markets at the present time. One of these is India, where the political developments proved sufficiently grave in the early part of the week to cause a good deal of uneasiness, to check the investment buying which has been taking place in gilt-edged stocks, and to bring in a fair amount of selling orders, especially, of course, in those stocks and shares connected with India. The second factor has been liquidation of one or two big accounts, and the selling broke out in various parts of the House, coming, as usual, at the time when markets were un-

willing to take much extra stock in view of the political tendencies abroad.

After the gilt-edged list had been put down somewhat sharply, a general rally occurred. For a steady stock like India Sevens to fall a couple of points in one day, and to advance 2½ points on that following, is something so unusual as to excite comment. The War Loan touched 92½ before it started to recover. Scrip stocks of the recently issued Colonial and Corporation loans lost a little of their premiums, and India Government stocks underwent a general fall of 2 to 3 points before reaction occurred that restored part of the loss. The end of the week found the Consol markets still rather disturbed. Business has suffered a check; in most markets of the Stock Exchange trade remained quiet during the week.

The foreign market is almost idle. Day-by-day movements are mostly confined to rises in Scandinavian bonds, in which there is, of course, comparatively meagre public interest. Brazilians and Chinese have been moving with irregularity and within a narrow compass. Neither French nor German descriptions attract any notice worth mentioning. Uruguay issues are better; the premium on the new Chile scrip dwindled under the pressure of stag sales.

The excellent dividend on the deferred stock announced by the Brighton Railway came as a tonic to Home Railway stocks as a whole, and brought about a sharp rise in Berthas, other Home Railways enjoying a moderate reflection of the strength. The Metropolitan's declaration added another pleasant surprise. Yesterday's announcement from the Midland Company excited quite as much attention. The Home Railway pre-ordinary stocks have halted in their upward stride, though prices are well maintained. In Canadian railways, the only feature is a decline in what are called the dollar stocks. Argentines have been steady, while Brazilian railways are dull, owing to the Brazilian President having vetoed the Budget. His right of veto is now being challenged.

The rubber market remains dormant, and amongst oil shares the principal interest of the moment centres upon the preliminary underwriting arrangements for 5,000,000 Shell 7 per cent. second preference shares, which, it is expected, will be offered to the public at 20s if the proprietors sanction at next Friday's meeting the proposal to create 10,000,000 of these shares. The oil market became heavy, on the proposals, and with a jump to conclusions, the Stock Exchange began to ask whether the Mexican Eagle Company may also follow the example of the Anglo-Persian, and of the Shell, with an increase of capital. Dunlops dropped to 5s sellers, on the dismal showing made by the report, and the debentures gave way from 99 to 92½. In both cases a partial recovery occurred. A long string of falls in the insurance group shows the apprehension aroused by the happenings in connection with the City Equitable Fire Company. Some people have been giving the latter shares away, with a few shillings per share, in order to escape the liability of 16s per share that attaches to them. Indian banking shares dropped sharply, on the events reported from India, and the tea share market became flat for the same reason. Tea shares have recently had such a dramatic rise that the reaction in their case is less surprising than it is in that of some of the other markets connected with Indian stocks.

Gas issues are better, it being expected that the next batch of dividends, six months hence, will show increases. Falls occurred in British Oil Cakes, on a disappointing dividend, and in textile shares, on the liquidation already mentioned. The shipping market is quiet, and the stages of African Steamship Debenture caused a slight discount to develop on the scrip as they pressed it for sale when the market opened. Harrods have weakened, and other stores shares are inclined to be dull. The drop in the dollar brought in British American Tobacco sellers; the price gave way to 3, influencing others in the same market, though the weakness did not last long. The United States buying of Radio Corporations has ceased, and prices reacted from the best, as British holders of the old American Marconis came in to take advantage of the unexplained advance in the new shares. The banking market, apart from the weakness of Indians, shows no particular feature, but the speeches of the chairmen at this week's meetings have been carefully studied, and are quoted widely throughout the Stock Exchange. The iron and steel market is inclined to be heavy. The various new electrical issues maintained their substantial premiums, and electricity supply shares are better in a number of cases.

South Africans, after being acutely flat on the strike news, hardened up noticeably upon unofficial cables reporting that the miners had begun to drift back to work in small numbers at a time. This brought about a complete change of sentiment. Gedulds stand out as one of the best features, owing to the developments recently reported by the company. Rhodesians and diamonds are neglected. Russians are quiet. Malayan tin shares show a slight inclination to recover, but no fresh support is forthcoming at present for Cornish or West African descriptions. Mexican mining shares developed a little activity, and greater firmness at the end of the week. Broken Hills are again lower.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	144,188,765			
TREASURY BONDS.				
Total receipts, 5-15 Year, 1925-35				1,062,317
5½% 1929 receipts to January 21, 1922				266,205,611
Week to January 28, 1922 (new series)				17,330,000

1917	21,317,806	1916	585,436,850	
1916	101,962,190	1915	685,236,326	
1915	10,840,096	1914	512,522,653	

Five per Cent. Treasury Bonds.—Issued at 99 per cent., payable on application. Repayable at par on February 1, 1927. Interest will be exempt from corporation profits tax. Full particulars of these bonds appeared in the *Economist* for January 28, 1922.

France.—Department of the Seine.—Issue at 95 per cent. of £3,000,000 7 per cent. 30-year Sterling Bonds to bearer. This loan will be redeemed by a cumulative sinking fund, to be applied by half-yearly drawings at par, beginning with the year ended July 1, 1925, and it is calculated that redemption will be completed in 1952. Repayment of principal and payment of interest are payable in London, free of all French taxation. The Department has power to repay the whole loan (but not a part) on January 1, 1935, or any interest date after, at 103 per cent. The Department of the Seine comprises the City of Paris and suburbs, and an official estimate made in 1910 places the value of land and buildings at 20,718,000,000, which the prospectus gives as £402,682,210, while the annual rentals are estimated at 1,471,507,000, or £28,600,719. As these figures are taken at the average rate of exchange prevailing on January 14, 1922, it will be noticed that the values are very moderately priced. The General Council of the Department is under statutory obligation to levy by taxation annually the amount necessary to maintain the service of this loan, and taxes for the payment of the service are collected "simultaneously with other Government and municipal taxes by Government tax collectors." Including this £3,000,000 and \$25,000,000 of a similar issue made in New York, the total outstanding debt of the Department amounts to £27,871,720, for which an annual service of £2,798,833. The proceeds of the New York and London issues will be devoted to extensions "of the newly-acquired transport systems." This is an excellent issue in its class, and worthy of the investor's attention.

The Bengal Iron Company.—Authorised share capital £2,500,000, of which £2,074,033 has been issued. This is an issue at 96 per cent. of £600,000 7 per cent. first debentures, forming part of a total authorised issue of £1,000,000. The company was formed in 1919 for the purpose of acquiring the Bengal Iron and Steel Company, Limited, which has been carried on since 1890 in Bengal. Profits are given from 1916, "subject to taxation," and show that debenture service charges are well covered on the basis of these figures, while net assets are valued at £2,310,565. These debentures are to be secured by a trust deed, constituting a first specific charge upon fixed properties of the company in India.

Although it is provided that the company shall not create charges ranking *pari passu* or in priority to these debentures, it will be noticed that the value of the property which is to be offered as specific security is not stated. The prospectus mentions that these debentures "will mature for repayment at par on July 1, 1947, and will also be repayable at the same price by means of a cumulative sinking fund of 2 per cent. per annum." The company has the option to redeem at 102 per cent. after July, 1931, on giving six months' notice. The issue has been underwritten for 2 per cent., with a "broker's fee" of ½ per cent. It may be that in the present mood of the investing public the issue will be well received, but the rate of interest offered is by no means excessive in view of the general political and economic situation in India.

The Universal Business Agencies, Limited.

Authorised capital £25,000, divided into 15,000 10 per cent. participating cumulative preference and 10,000 ordinary shares, all of £1 each. The participating rights are not clearly stated, but the secretary of the company informs us that it is the intention of the directors "that the preference and ordinary shareholders should participate equally in surplus profits." The company has been formed to acquire various small speculative undertakings. The details given of these concerns are voluminous, and though each one may have a profitable career in front of it, there is little to distinguish them from many similar ventures which have come to grief. It would be interesting to know if the object of printing the term "ex-service men" in black type in the prospectus is to attract a sympathetic attention beyond that which commercial prudence would otherwise be inclined to follow. In a slip attached to the prospectus it is stated that this is "an excellent opportunity for large and small investors to earn good dividend." The small investor would be unwise to risk his money in this undertaking, while large investors will be probably mainly actuated by philanthropic motives if they subscribe.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

COMPANY MEETINGS, &c.

LONDON COUNTY WESTMINSTER AND
PARR'S BANK, LIMITED.

MR WALTER LEAF ON TRADE POSITION AND PROSPECTS.

ULSTER BANK AND THE IRISH BOYCOTT.

NEED FOR RECOVERY OF OVERSEAS TRADE.

GERMANY'S DIMINISHING EXPORTS AND GOVERNMENT TARIFF POLICY.

The annual ordinary general meeting of the shareholders of the London County Westminster and Parr's Bank, Limited, was held, on Thursday, February 2, 1922, at the head office, 41 Lothbury, London, E.C.2, Mr Walter Leaf (the chairman) presiding.

The Chairman said: Ladies and gentlemen,—Twelve months ago I spoke to you of the year 1920 as a year of disillusion. What shall I say of 1921? It has been a year of crises, of acute contests, of heavy losses in many directions, of hope deferred; but I think we may fairly claim for it that it has been a year of courage. Facts have been boldly faced, formulae have been cast aside, principles have been fought out to the end; and in many directions we have good hope that peace is, if not actually won, at least well in sight. Peace is what the world needs more than any other boon. It is perhaps too soon to speak of a general spirit of peace, but it is a great deal that here and there, in regions of the highest importance, we should have won at least a partial peace. We have, I trust, won peace in that region which we can still fitly call by its old name of the Pacific. We hope, too, that peace has been won between England and Ireland; let us trust that it may be followed by peace between the two parts of Ireland itself.

BETTER LABOUR OUTLOOK.

And we have won some peace, for the moment at least, in those labour disputes which, to the mind of the social philosopher, 12 months ago presented the gloomiest point of a gloomy horizon. The outstanding event of the year in our internal economy has been the great coal stoppage. That happily ended, not in a complete victory for either side, but in an agreement to set on foot a system of profit-sharing which constitutes, I suppose, the greatest experiment in partnership between Capital and Labour that the world has yet seen. That system has, I believe, been honestly accepted by both partners with a determination to make it a success. It has been followed by a notable easing of the industrial strain in many other directions; and the labour outlook no longer overshadows all other problems in our own country.

THE INDUSTRIAL OUTLOOK.

Meantime, however, we are still in the midst of acute industrial depression, with its accompanying curse of unemployment; and though here and there we can see signs of a lifting of the clouds, the prospect of a return to conditions of active prosperity can hardly be described as immediate. The reason for this is plain. The past year has done little enough towards clearing up that large sector of the horizon which covers Central Europe, and of which the darkest point at the moment centres over Germany. Till that gloom is lightened we cannot say with any confidence that we are on the way to good times. It is in the export trade of the country that there is most need, and at the moment least prospect, of immediate recovery. Till we regain our export trade the outlook must remain far from cheering.

THE BANKING YEAR.

For the banks the year has been one of great anxiety, of diminished profits, and considerable losses, at home and abroad. All our own losses, whether realised or anticipated, we have, of course, amply provided for. They have been well within the limits which, considering the close and intimate connection between the banks and commerce and industry, we may regard as reasonable; indeed, it is not too much to say that a bank which has made no losses during the year would only prove that it had not done its duty in assisting the general cause. For the losses made in industry and commerce have been immense; it is fortunate that they have been, on the whole, so well borne, thanks mainly to the equally immense profits which were made during the preceding years. There have been no great disasters in Great Britain, and no sign of panic; we have all pulled together in the common interest, and we have good reason to hope that the worst of the storm is weathered.

THE BANK'S BALANCE SHEET.

It is a noteworthy feature of the year that the aggregate deposits in the banks, instead of decreasing, as one might expect, have

actually risen; in our own case the amount of £317,000,000 which we show at the end of the year is a record, exceeding by £12,000,000 the amount in our last annual balance-sheet. That is a measure of the real resources of the country; it largely consists of money placed on deposit awaiting investment, and cannot be taken as a sign of inflation, for there has been no increase in the total borrowing of the country, and the currency notes have, in fact, been materially reduced. And it has been accompanied by a marked fall in the demands for banking loans. Early in the year our advances to customers were about 45 per cent. of our liabilities to the public; this is, in our opinion, a safe and reasonable proportion. At the end of the year they represented only about 35 per cent., which is far less than we should like to see. The result is that we have been unable to use our resources in such advances, which represent the most profitable, and I venture to think the most useful, part of our business, and have been driven to employ our spare money in buying Treasury bills, which have shown only a bare margin of profit over the amount which we allow on deposits. The difference between 45 per cent. and 35 per cent. means for us about £32 millions, which we have had to put into Treasury bills, returning us at the end of 1921 barely over 3 per cent., instead of lending to our customers at rates averaging about 4 per cent. over Bank rate. We held in Treasury bills at the date of the balance-sheet no less than £77 millions, and that amount alone is quite sufficient to account for the fall in our profits. £35 millions more in advances and less in Treasury bills would bring in an additional 2 per cent., or at the rate of £700,000 a year, just about the amount by which our profits fall short of last year. That is the way in which the banks suffer from the general stagnation of trade. On the other hand, we benefit by the appreciation in the value of gilt-edged securities. Our internal fund to provide for the depreciation of investments shows a good credit balance, after valuing all our holdings in our balance-sheet at or under the prices at which they stood on December 31st, and further provisions for this purpose are no longer needed.

AFFILIATED BANKS.

It is not only at home that we have been suffering from the depression of trade. Our two affiliated institutions, the Foreign Bank and the Ulster Bank, have had much to suffer. Trade has been even worse than at home, and we have had to face some considerable losses. The Ulster Bank in particular has had a most trying time; and in our opinion it is highly to the credit of the management that they should have been able to make so good a showing as that contained in the balance-sheet and report which has been circulated. Trade in Belfast, like the shipbuilding and the linen industry, has been going through a severe crisis. In the linen trade there have been some short and transitory indications of revival; but no sooner has there been a promise of fresh orders than the manufacturers have found themselves faced by a shortage of flax; and it does not seem that the position can be thoroughly remedied till trade with Russia is re-established. Of this, the prospect is far from bright, as you know.

THE IRISH BOYCOTT.

But in addition to these trade troubles the Ulster Bank has had to suffer from the deplorable internal state of the country, which has recently led to a determined boycott of Belfast by the South. In many districts our customers have been forced, sorely against their will, to withdraw their accounts, by threats, by heavy fines, and even by actual violence. We have been in frequent communication with the Irish Office and have kept them advised of the facts. They have met us very sympathetically, but the matter has been subordinate to larger issues, and we can only hope that the new departure may bring about the peace which that sorely tried country so urgently needs. Meanwhile, the effects of the boycott are visible in the drop in deposits from £24,800,892 to £24,287,432—not a large amount in itself, but significant in comparison with the considerable increase, averaging about 10 per cent., which is found in the case of those Irish banks which have escaped the boycott. We await with hope the effects of the agree-

(a) This dividend gives for the whole year: 4 per cent. on preferred converted ordinary stock, 6 per cent. on "B" stock, 2 1/2 per cent. on the deferred converted ordinary stock, and 2 1/2 per cent. on "A" stock.
(b) In addition, a capitalised bonus of 60 per cent. (d) Increased capital.
(e) 5 % tax free.
BURNELL AND Co. state that owing to loss disclosed in accounts for last year, they have resolved to pass preference dividend.
FARMER AND Co., Limited, recommend payment on February 28th, of a dividend for the past year on the preference shares of 5 per cent. (fixed rate), less income tax. They regret that the results of the year's trading do not permit of a dividend upon the ordinary shares.
S.T.D. MOTORS.—The half-year's dividend on the preferred ordinary shares at the rate of 7 per cent. per annum has been paid, making 7 per cent. for the year. The directors do not recommend a dividend on the ordinary shares for the past year as it is in the interests of the shareholders to conserve the cash resources of the company in order to meet the demands which will be made on the company by the improving conditions of trade in the motor industry.

ment which has been entered into between the North and the South of Ireland, and believe that the spirit in which it has been received on both sides is an excellent omen for the future.

SOUND POSITION.

Meanwhile, we are perfectly satisfied as to the soundness of the Ulster Bank. Losses have been liberally written off, and there is a good reserve in hand. I should like to add one remark. We have carefully watched the assets of the bank, and are satisfied that the valuation which we put upon the shares in our balance-sheet is justified by actual tangible assets, with a solid margin beyond, no account being taken of anything in the nature of goodwill, and in this our auditors concur. The directors are fully justified in maintaining their dividend, which has been well earned on the year's working, and on this we shall all congratulate them.

THE INTERNAL AFFAIRS OF THE BANK.

Of the internal history of the bank during the last 12 months there is little to say. The end of the year saw the retirement of Mr Barthorpe, of which I spoke to you at our last meeting. Alderman Barthorpe, as he now is, has our hearty congratulations on the important civic post to which he has been chosen, and our best wishes for his long life and health; and we part from him with grateful recognition of the services he has rendered to the bank in the past, from the day when he entered it as a boy to the last critical phase when it was his task to pilot our institution through the manifold troubles of the war. He has proved himself throughout a loyal and devoted upholder of the honour of the bank, and we offer him our hearty thanks. In Mr Rae, who succeeds him in the chief post, we have a most capable chief general manager, who commands the entire confidence alike of the board and of his colleagues, and who has already during the many difficulties of the year shown himself a complete master of the position. May he long hold it.

BECKETT AND CO.

Since January 1, 1921, as you know, we have been carrying on the business of Beckett and Co., in Yorkshire. We are happy to think that this amalgamation has fully answered our expectations, and we can congratulate our new colleagues on the excellent and thoroughly sound connection which they have handed over to us. The transition has been effected without friction, and we believe that nothing but good has come of it. Our position in Yorkshire is as well established as anywhere in the United Kingdom.

REBUILDING OF HEAD OFFICE.

The process of rebuilding our head office has begun. It will take a long time, and must be done in sections; the cost will be great, and we have thought it necessary to set aside this year, as we did in 1921, a sum of £200,000 to be held in reserve against future expenditure. We are also on the point of rebuilding the fine site we own in Threadneedle street, and the cost of this will also be chargeable to the rebuilding fund, as we have christened it. You may possibly have seen at the Royal Academy Exhibition the striking design which we chose in competition for the new head office. It will be, I hope, fully worthy of the site and the dignity of the bank; and we have entrusted the Threadneedle street designs to the same architects, Messrs Mewes and Davis.

NEW BRANCHES.

We have been also busy in extending our branches, of which we have opened 35 during the year. Most of these are in our own districts, where we can count on comparatively early success. Some of them, however, are in the nature of experiments on new ground, where we feel it necessary to be represented, as, for instance, at Lincoln and Newcastle-on-Tyne; but as a matter of general policy we do not consider it wise, at the present moment, to launch out into unlimited competition with our rivals. The expense of new branches and of necessary repairs and additions to old ones has been heavy, and we have taken from profits £250,000 to write off as a substantial portion of the cost of work, much of which has had to be paid for at very high prices.

PROSPECTS FOR 1922.

The other large item of our appropriations, namely, £500,000 to contingent fund, is a measure of precaution, in view of the uncertain prospect of the coming year. With trade in its present condition, we are bound to look forward to a lean year, and there may possibly be further losses in front of us, though on this point we are moderately hopeful. But it is hardly expected that the convalescence of our sick commerce can be rapid, though we trust it may be steady. Our attitude is, therefore, one of extreme caution, and while hoping for better things, we are bound to provide for eventualities. We frequently have appeals from our shareholders to increase the dividend. With all sympathy for the loss which they, like all the community, have to suffer in taxation and the decreased purchasing power of money—though the latter

difficulty is gradually curing itself—while recognising to the full the natural desire for increased income, the board strongly feel that their first duty is to ensure stability.

REPORTS FROM INDUSTRIAL CENTRES.

I should like to give you some idea of the reports we are receiving from the great industrial centres about the state of trade. They are unanimous as to the badness of trade during the year. Our Liverpool manager says:—"The trade depression in Liverpool during the past year has been of a nature more serious than in living memory.....while we are at least hopeful for some sort of improvement in 1922, we are far from expectant of great things. This improvement may well result from the failure, or partial failure, of the Gandhi boycott, as we look to India as our most important customer to much increase her takings of cotton piece-goods. Again, China is reported to have more or less digested what were large stocks, and will probably re-enter the market, if only upon a limited scale."

MANCHESTER.

Manchester reports are to the same effect:—"The whole conditions during the last 12 months have been of the most depressing nature. The few gleams of hope that have arisen have been short-lived, and the year closed with considerable anxiety. The outlook in the cotton and weaving trade presents a gleam of hope, but progress must of necessity be slow. The general opinion, however, is that we have seen the worst."

BRADFORD AND LEEDS.

Bradford reports:—"Top makers and spinners have work in hand for some months, but manufacturers and merchants are having a lean time, and the best that can be said at the moment is that there appears to be a better tone prevailing, and that a gradual improvement may be looked for." Leeds says of the wholesale clothing and woollen trades that they are "certainly showing signs of better times, and we hear hopeful views, but we are afraid that there is no very substantial ground for hope of any early revival. We hear of one or two mills working full time, but this is not yet typical."

NOTTINGHAM.

In textiles, in fact, the one bright spot appears to be the hosiery trade. We hear from Nottingham that in hosiery "the conditions improved in the home markets as the year progressed, and orders for all classes of heavy underwear enabled the factories to be worked on full time; a continuance of steady business is anticipated. Generally speaking, the prospects are bright, as business is being done to an increasing extent with the Dominions, Holland, Norway, and Sweden." In the lace trade the position is bad, but manufacturers are mostly optimistic, and are hoping for a moderate revival during the coming year.

COAL INDUSTRY.

In the coal industry reports vary. The South Yorkshire district is doing very well. From Doncaster we hear that all the collieries in the neighbourhood are working full time, that there is little or no distress, and very few failures. From Cardiff we are advised that the demand will show an expansion over last year, and that the output will be larger, with increased employment, but the supply will be ahead of the demand, and prices will be kept at low figures. In the poorer fields the prospect is not so good, and it is as much as the collieries can do to make both ends meet.

SHIPPING AND SHIPBUILDING.

The shipping and shipbuilding interests are the most depressed of all, and it is rare to find a gleam of hope. One of our managers quotes the reply of a large owner: "Prospects? There are none." From every port we hear of large tonnage laid up, and of excellent ships which are offered for sale at prices per ton at something like half the cost at which they can be built. It seems to be in this direction that recovery will be slowest, and that a large expansion in our overseas trade is most needed.

IRON TRADE.

In the iron trades we are told that inquiries are being made; but in the meantime, though some more furnaces have been put in blast, stocks of pig-iron appear to be accumulating. The output is very far below the normal, and competition from the Continent, notably from Belgium, is severe. On the other hand, Sheffield reports that the cutlery trade is fairly active, and that there are signs of a Colonial revival, and from Cardiff we hear that the tin-plate prospects are brighter.

ENGINEERING.

The engineering trade, though depressed, seems to be turning the corner; we have such answers as "Moderate employment, but few orders"; "Outlook doubtful, but it is believed foreign competition is being overcome"; "Work fairly plentiful, but dependent

on the locality"; "Trade stagnant, except textile machinery for export to France and India"; "Textile machinists very busy for export"; "More numerous inquiries, and shops kept going; it is believed that the bottom has been touched."

AGRICULTURE.

Finally, agriculture, our most important industry, though it has had a very bad year, seems also to have touched bottom. The farmers have borne their losses very well out of accumulated profits in the past; and with large reductions of wages, are probably able to make both ends meet. Dairy-farming in particular seems to be on a paying basis, and here, also, the spirit of hope is abroad. That is, I think, a fair summary of the position. The past year has been, I repeat, a year of courage in facing losses; and the coming year is likely to be a year of courage in recovering lost ground. The spirit of British enterprise has not been broken; and the "will to prosperity," if I may use a somewhat hackneyed formula, is no bad foundation for prosperity itself. But it is not a moment when one can be unduly sanguine. Recovery will come, but it will come slowly, and there may yet be troubles to face, and it behoves us to walk warily. That is why the board have decided to place a sum of £500,000 to the credit of our fund for future contingencies.

OVERSEAS TRADE.

The great need of the country is the recovery of our overseas trade, which has so seriously fallen off during the year. And when I speak of overseas trade, I mean imports as well as exports; for you cannot have one without the other. The great markets of the Far East are still in a far from healthy condition. Stocks in India show but little sign of reduction, largely from political reasons. In China, it is believed that they are being reduced, and have nearly reached the point at which fresh orders will be placed—the more so because it is being recognised that prices have approached the irreducible minimum, and that no further fall can be looked for. But what we need most is the restoration of the markets of Central Europe and Russia. Of Russia I fear I can say little that is hopeful; I should be sorry to stake much on any result that may come from the promised conference at Genoa. It is to Central Europe, and notably to Germany, that we must look for recovery. Germany before the war was our best customer outside the Empire. Until we recover our trade with her, we can have no hope of a commercial boom.

THE POSITION OF GERMANY.

For the last six months we have heard very little about German competition—and with good reason. Germany's external trade has fallen off in an extraordinary way. Although the latest figures seem to show that the corner has been turned, she has been importing far more than she can export. This in itself goes far to account for the great fall in the mark. Certain raw products and foodstuffs she must buy abroad; as she is unable to send her exports in exchange for them, she must buy her foreign currency by the issue of fresh paper marks; the value of the mark in exchange, therefore, cannot recover, and the sudden fluctuations in it have produced speculation in the mark on a most gigantic scale. Fortunes have been made, and fortunes to the same extent have been lost, both within and without Germany.

Within Germany itself national speculation has taken the form of the "fight from the mark." Everyone who possesses a paper mark has been eager to get rid of it in exchange for some manufactured article which will retain some value in utility whatever may happen to the mark—to keep ahead of the constant fall of the mark and the consequent rise in prices, which always lags a little behind. Hence the activity of the German factories, which are full of work in supplying the products required by their own people to an extent far beyond the normal and legitimate requirements of consumption.

FALSE PROSPERITY.

The appearance of prosperity which German factories are showing is thus a morbid and fallacious symptom, and must before long come to a disastrous end. It may well be that wealthy Germans are taking the opportunity to remove from Germany as large a portion of their capital as they can. If so, I fancy it is being put into raw materials for present use. At all events, we can find no evidence here that any large amount of German money is being held in London; perhaps neutral countries' capitals, such as Amsterdam, may have a different story to tell.

In speaking of the great falling off in the German exports, I am not depending on German statistics, which might be misleading; I take the figures of German exports to this country as given in our own Board of Trade returns. They are sufficiently eloquent. We will compare the figures of the second half of 1913, a year of booming trade; of 1920, when the effects of war were beginning to pass off; and of last year. They are roughly as follows:—1913, £41½ millions; 1920, £18½ millions; 1921, £8¾ millions. In the second half of last year we imported nearly £10 millions less

than in the same half of 1920, and just one-fifth of what we imported in a really good year.

EFFECT OF GERMANY'S TRADE LOSS.

What does this mean from our point of view? Clearly that Germany's purchasing power for our own products is almost annihilated. Germany must get her raw materials and foodstuffs which we do not supply; she is quite unable to purchase the manufactures which we want to send her. Think of the meaning in this aspect of the figures I have just given you. That her imports to Great Britain have fallen from £18½ millions to £8¾ millions, means that she has £10 millions less sterling at her command to use for the purchase of British goods. In other words, it is roughly true that Lancashire and Yorkshire have in the six months lost £10 millions worth of orders as compared with the same period of last year, to say nothing of the £32 millions lost as compared with 1913. Can we wonder at trade depression under such circumstances? Would not an extra £10 millions of orders in a single half-year have been of appreciable value in improving the condition of our manufactures? Until Germany recovers at least a large portion of that trade which she had in 1913 there seems to be little prospect of our return to normal prosperity.

GOVERNMENT'S UNSOUND TARIFF POLICY.

It would follow that our first policy should be to help Germany on to her legs again, to bring her nearer to the position of our best customer outside the Empire which she used to hold. Unfortunately, our legislature has seen fit to follow an exactly opposite course, and the Safeguarding of Industries Act is so designed as to diminish, so far as possible, what little purchasing power Germany has left—to deprive her of the possibility, either of buying our manufactures or of paying the reparations which we are all the time demanding. Moreover, we are driving her to compete all the more keenly with us in other markets. The latest German figures show that on the whole her exports increased during the last months of 1921, though her exports to Great Britain were less, as I have mentioned. That is to say, we are shutting her out from buying here, and making her a more formidable rival abroad. Is that the object at which reasonable men would aim?

NEED FOR PEACE.

I return again to the theme with which I started; that what we need is real peace. Of that peace international commerce is at once the sign and the stimulus. It can only be attained by free intercourse, untrammelled by any artificial restrictions. Our own country should lead the way. I am happy to think that saner views, though they have not yet expressed themselves in legislation, are growing apace among men of sense; we are all learning that the nations have need of one another, that none can stand by itself, and the free interchange of commodities is only the first step towards the realisation of that high aim which, however distant, we must never leave out of sight, the union of all countries for the common good.

Ladies and gentlemen,—I beg to move: "That the report be received and adopted."

Sir Montagu Cornish Turner (one of the deputy-chairmen) seconded the motion.

THE DISCUSSION.

Mr Deputy Millar Wilkinson thanked the chairman for his interesting survey of the position, and, speaking with regard to the principal banking institutions of the country, said that it was a matter of great satisfaction that they had never been in a sounder condition than they were at the present time.

Sir J. D. Rees, Bart., M.P., asked for an explanation of the items in the balance-sheet with reference to the notes in circulation in the Isle of Man. Reference had been made by the chairman to the fact that the hosiery trade of this country was prosperous as compared with the lace trade, but he had not indicated any methods of making the latter more prosperous. That, perhaps, would be outside the function of chairman, but he (the speaker) could indicate one cause which militated against not only a good lace trade in Nottingham, but good trade in almost any direction. That was the fact that at the present time, owing to our not having concluded, so long after the Armistice, a Treaty of Peace with Turkey, and owing to circumstances placing us in a condition of perpetual opposition to Mahomedans, the 100,000,000 Mahomedan subjects of the British Crown, and the Mahomedan world generally, were being estranged from us. As a result, our overseas trade was adversely affected to a vital extent.

Mr Edwards remarked that the last speaker seemed to have ignored the fact that Turkey was one of the Powers which fought against us in the late war, and asked whether anything had yet been done with regard to dealing with bogus banks.

Mr J. E. Allen said that, as the staff of the bank were being paid larger salaries than was the case prior to the war, he thought:

the shareholders should receive an increased dividend, or bonus, corresponding to the reduced purchasing power of money.

Mr Wood urged that the time had arrived when consideration should be given to the question of keeping the banks open to the public later than was the case at present.

REPLY TO QUESTIONS.

The Chairman, in reply, said that the Isle of Man was autonomous, and the Bank Act which controlled the private issue of notes did not extend to the Isle of Man. Consequently, when Parr's Bank went there in 1900 and took over a bank in the island, they had Government authority to issue notes under the provision that security was to be lodged to the amount of the note issue. With regard to the remarks of Sir J. D. Rees as to the treatment of Turkey and its effect on our trade, it was always a problem with a bank chairman how far he should embark on politics. Personally, it had been his endeavour to keep to the purely economic side of the question, as far as possible, and to leave politics to politicians. Of course, one had his own opinion, and they all regretted what they saw going on in India, and that there should be hostility between our Muslim fellow-subjects and the Government. No one regretted more than he did that peace had not been concluded between Great Britain and Turkey, but those were matters which, as chairman of the bank, he would not enter upon.

BOGUS BANKS.

In reference to the question put by Mr Edwards about bogus banks, as was stated by him (the chairman) last year, the banks had done all in their power to assist the Government, who, he believed, had drafted a Bill on the subject. Owing to the exigencies, he supposed, of public business, that Bill did not seem to make its appearance, although he believed it had been drafted for one, if not two, years. He had seen various drafts of it, and it had been very much altered. How it stood at present he did not know. The banks had heard nothing about it from the Board of Trade for some time past. It was clearly a matter which could only be dealt with by the Government, to whom the banks were always willing to give assistance when their advice was asked for, as it often had been.

STAFF PAY AND WORKING HOURS.

As to the staff, at present they were working, so far as the war bonus was concerned, on a system of a sliding scale which was suggested by the staff themselves, and was accepted by the directors in its entirety. He thought that system had worked very well. Mr Allen had spoken of a desire on the part of the shareholders for something in the nature of a bonus. He (the chairman) might venture to say that the directors might also put in a word there. They, he thought, were the only members of the staff who had not received a war bonus. With regard to banking hours, if it should become apparent that the course of trade in the country necessitated their returning to the former hours, they would have to do it. He did not think the banks could be urging everyone else to work on pre-war terms without being ready to do so themselves, if called upon. Up to the present, however, there did not appear to have been any very strong desire on the part of the public for an extension of the present banking hours.

The resolution was then put and carried unanimously.

Mr Robert H. Tennant (one of the deputy-chairmen) then proposed the re-election of the retiring directors—namely, Mr C. F. Parr, the Hon. Hugo Baring, Mr N. ff. Eckersley, Mr H. R. Arbutnot, Mr H. C. Hambro, and Mr E. Clifton Brown.

Mr H. P. Sturges seconded the motion, which was unanimously adopted, and the auditors were also reappointed.

VOTES OF THANKS TO THE CHAIRMAN AND DIRECTORS AND TO THE STAFF.

On the motion of Mr F. Tomkinson, seconded by Mr Lees, a cordial vote of thanks was passed to the chairman and directors for their services during the past year.

The Chairman, after acknowledging the compliment, proposed that the thanks of the meeting be presented to the officers and staff of the bank, who, he said, had carried out their duties to the entire satisfaction of the board. He had already spoken of Mr Barthorpe, and need make no further reference to his valuable work for the bank. That day, for the first time, the vote of thanks to the staff would be responded to by their valued colleague, Mr Rae, who was for many years in the service of Parr's Bank. He left them to take up an exalted position—that of treasurer to the Bank of Scotland—and he had now come back to this bank to "take up the reins." He could only say that Mr Rae had the entire and hearty confidence of the board, and that it was a great pleasure to them to be associated with him.

Mr Hargraves seconded the vote, which was unanimously accorded.

Mr John Rae (chief general manager) said:—I have to thank you, Mr Chairman, and Mr Hargraves for the resolution which

you have submitted, and for the appreciative terms in which you have spoken. For the cordial endorsement which your words have received from this representative gathering of the bank's shareholders my thanks are also due. I am sure that such words of commendation will be most warmly appreciated by our large and widely-spread staff. I could not find, nor could I hope to find, more efficient or congenial associates than my colleagues in the general management; and it is gratifying to record that the same spirit of friendly and loyal co-operation is evidenced in every section of the service. On behalf of the general managers, the assistant general managers, the superintendents, the chief accountant, the secretary, the branch managers, and the officers, one and all, who have contributed their best energies to the success of the bank, I tender to you their warmest thanks.

Mr W. H. Skeel proposed a cordial vote of thanks to the chairman for presiding, which was seconded by Mr Deputy Millar Wilkinson, and passed unanimously.

The proceedings then terminated.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES, LIMITED.

SATISFACTORY YEAR—RESERVES INCREASE POLICY.

A meeting of the East India Distilleries and Sugar Factories, Limited, was held on the 31st ultimo, at 54 Old Broad street, London.

Mr E. S. Ormerod (the chairman) presided.

The Chairman, in moving the adoption of the report and accounts, said:—Gentlemen,—Profits on trading are £74,928 less than they were last year. On the other hand, we are relieved from the payment of excess profits tax for which, last year, we reserved £85,000. On the debit side we have made depreciation on buildings, plant, &c., of £23,649. I think it is sound policy that while we are making good profits, we should make heavy depreciation, but I do not think that in leaner years we should, in justice to our shareholders, consider ourselves bound to depreciate to a like extent. In the appropriation account we propose to place £6,000 to reserve, bringing that account to £50,000. We also propose to place £10,000 to contingency reserve fund, bringing that up to £25,000. Our reason for advising this is that we are paying a high rate of income-tax under our three years' average, our last two years having been, as this year, good ones, and though it may not be wanted for next year, we consider it a prudent course to adopt. In the balance-sheet you will notice that debenture stock has been redeemed to the amount of £87,000, while goodwill has been reduced by £10,000 to £75,000. The loan account is £4,420 higher than it was last year, but, on the other hand, stocks on hand are £14,332 higher. With regard to the obsolescence reserve fund of £20,000, we are endeavouring to obtain on this a rebate on what we paid last year for excess profits. We shall probably obtain something, but matters have not yet progressed far enough for me to be able even to guess at the amount.

The year under review has been an anxious one for your board. Throughout the year sugar prices steadily declined, and in the last two or three months of the year they fell heavily, but, as I told you last year, we were prepared, and I hope you will agree with us in being expected. Our anxiety has not been caused so much by the fall in sugar prices, as by the fact that we were not able at once to reduce the prices of our raw material in equal proportion. We cannot go on to the market and buy our material as we want it, or when prices are low, but have to buy our jaggery when it comes on to the local markets. We have now 1,200 acres of our own cane, and cultivated by our own labour, is independent of market fluctuations. Our Abkhari business has been quite satisfactory, and several expiring contracts have been renewed on satisfactory terms. Our three other concerns, carbonic acid gas, chemicals and confectionery have all done very well. The latter has been a very great success. Started at a fortunate time, we have been able to obtain a firm hold on the markets, where the good quality of our goods finds them a ready sale.

With regard to our light railway, which has lately only been "marking time" owing to the failure to commence the Tinnevely District Board Railway between Tinnevely and Trichendur, I am glad to say that the commencement of this line has been sanctioned by Government, and will shortly be begun. Our line is quite ready to link up with it, and when this is done I hope the new life will be given to the whole of our system.

Looking back over the history of the company to its inception in 1897, I think you will agree that very substantial progress has been made. Looking to all the factors in the case, your board have confidence that the progress already made will be maintained.

Mr A. J. Yorke seconded the motion, which was carried unanimously.

LLOYDS BANK, LIMITED.

SATISFACTORY RESULTS DESPITE DIFFICULTIES.

INTERNATIONAL ECONOMIC CONDITIONS.

IMPORTANCE OF FOREIGN TRADE TO THE NATION.

BRUSSELS CONFERENCE RESOLUTIONS IGNORED.

The sixty-fourth ordinary general meeting of the shareholders was held, on Wednesday, February 1st, at the Queen's Hotel, Birmingham. Sir Richard Vassar-Smith, Bart. (chairman of the bank), was unable to be present on account of indisposition, and the speech which he had prepared was read by the deputy-chairman, Mr J. Beaumont Pease, who presided.

CHAIRMAN'S SPEECH.

Sir Richard Vassar-Smith's speech was as follows:—

The past year has been one of great anxiety. The great fall in prices, unexampled since 1815, repudiation of contracts, difficulties in America, and other reasons, have caused severe losses to the manufacturer and trader, and rendered the position of bankers and dealers in credit dangerous. But I think we may claim that the manner in which these troubles have been met shows the soundness of our methods, both mercantile and banking, and that our credit at the close is sounder than at the commencement of the year. The forbearance shown by all—manufacturers, merchants, and bankers—has contributed to this result, and we must be thankful that no great commercial breakdown has occurred.

THE BALANCE-SHEET.

I will now give you the figures of the bank compared with last year, and will remind you at the beginning that the fall in rates during the year, while helpful in trading circles, decreases the earnings of the bank.

The current, deposit, and other accounts are £347,507,410, as compared with £345,028,984, an increase of £2,478,426. Acceptances, &c., £8,174,113, as compared with £17,867,529, a decrease of £9,693,416. Cash in hand and at the Bank of England, £39,821,416, as compared with £51,153,076, a decrease of £11,331,660. There is, however, a new line of £10,474,953—balances with, and cheques in course of collection on, other banks in the United Kingdom—which explains to some extent the difference. Money at call and short notice, £15,952,385, as compared with £14,747,688, an increase of £1,205,197. Bills of exchange, £90,619,462, as compared with £76,037,123, an increase of £14,582,339. War Loans and other British Government securities, £71,769,513, as compared with £64,041,038, an increase of £7,728,475. Indian and Colonial Government securities, &c., £1,584,619, as compared with £1,697,099, a decrease of £112,480. The total of these assets is £230,222,850, as compared with £207,676,026 in 1920.

There are increases, not large, in the number of shares held in the National Bank of Scotland and the London and River Plate Bank. There is no alteration in the holding of the Foreign Bank shares.

ADVANCES TO CUSTOMERS, &c.

The advances to customers, &c., amount to £130,847,130, as compared with £151,079,173, a decrease of £20,232,043. Bank premises, £4,552,347. This amount requires explanation. In 1920 the amount was £4,141,759, after writing off £250,000. The increase during 1921 was £1,660,588, made up as follows:—Fox, Fowler and Co. premises, £85,970; properties acquired for new branches, £577,245; cost of alterations and expenditure on buildings on existing sites, £290,272; properties acquired in connection with existing branches, £449,862; alterations, &c., £344,246. From this total must be deducted proceeds of sales of properties and other credits, £87,007, leaving £1,660,588, which, added to last year's figures, makes a total of £5,802,347. As stated in the report, £250,000 from the profits of the year has been placed to this account, and a special transfer has been made from the contingency account of £1,000,000 in further writing down, in view of the extensive outlay, at high prices, which has had to be incurred in London and elsewhere, reducing the amount to £4,552,347.

PROFIT AND LOSS.

If I may now refer to the report, to the paragraphs relating to the disposable balance of £3,072,088, £200,000 has been applied in writing off the bank purchase account, which is closed, and £200,000 to a reserve for income-tax. It is considered prudent to do this, by reason of an average of three years being taken to assess the amount on which we shall have to pay for the current year. A further £100,000 has been allocated to the widows and orphans fund, and £100,000 to the staff pensions fund. This is a new appropriation,

as hitherto the pensions have been paid annually out of the profit and loss account. It is, however, thought desirable to build up a special fund, and this amount is intended as a commencement.

The business of Messrs Fox, Fowler and Co. has been absorbed with satisfactory results.

THE STAFF.

I shall have an opportunity later on of referring to the work of the staff of the bank, and of expressing the board's appreciation of the way in which that work is done. I may just say here that it has been the desire of the directors throughout the year, as formerly, to uphold the reputation of the bank as a studiously fair and even generous employer, and to make all the conditions of service as satisfactory as possible.

The freely-elected Staff Representative Committee has direct access to the Board through myself, and every request or suggestion that it puts forward has our most careful and sympathetic consideration.

PENSIONERS.

The retired members of the staff have not been forgotten, a special allowance towards the increased cost of living having been made for some considerable time past to those whose pensions are of moderate amount.

WORLD LETTER OF CREDIT.

I would like to mention, before turning from our own domestic matters, that we made an interesting departure in August last in the issue of a new "World Letter of Credit." These letters of credit entitle our customers and others carrying them to facilities all over Great Britain and Ireland as well as in all foreign countries. They are easily bought, easily carried, and easily availed of, and they have been, and are, in large demand.

After the usual report upon the business and trade conditions of the country during 1921, Sir Richard's speech continued:—

NEED FOR CO-OPERATION BETWEEN CAPITAL AND LABOUR.

It is a sorry tale of disappointment and depression that has to be faced to-day. Serious as are the difficulties, and grave as is the depression, however, there is no doubt that the nation can successfully face them both provided that there is a united willingness to do so. This means that both capital and labour must recapture the spirit of co-operation engendered by the peril of war, but subsequently dissipated. Of late there have been welcome signs of endeavours to find again this desirable comradeship, and much will depend upon the result. The solidarity of the nation is a very real thing, and the application of the truth applies equally to capital and labour. With a sincere desire to secure cordial co-operation, the first step is taken towards the restoration of prosperity. Without it the situation can only get worse. I believe that sturdy, sound, British common sense will triumph over the reactionary and extremist. Coupled with hard work and a willingness on the part of all to practise economy, not only will the foundations for a return of prosperity be well and truly laid, but a substantial start will be made towards the erection of the actual framework of the edifice. I am glad to notice there are signs of improvement.

FOREIGN TRADE.

The total value of exports has been £703,196,282, or little more than half those for 1920. The total net imports amounted to £979,635,000. The aggregate visible excess imports for the twelve months are therefore £276,439,000. This figure is less than in 1920.

THE BRUSSELS CONFERENCE.

In my address to you a year ago I alluded to the International Conference at Brussels in the autumn of 1920, gave the composition of its members, all versed in financial and economic affairs, and representative of 39 countries whose inhabitants comprised three-quarters of the world's population. Ten resolutions proposed by the Committee on Public Finance were unanimously agreed to, and also other resolutions with regard to the restoration of industry and commerce. One would have thought that the advice of such an authority would have demanded immediate attention and action, but what do we find—despite the appeal by bankers of the United Kingdom in May, 1921, the appeal by merchants, manufacturers and shipowners of the United Kingdom in July, 1921, resolutions passed at a public meeting of business.

men at the Mansion House, London, in the same month, the same questions are being debated at recent meetings and conferences as if they were quite novel and only now demanding attention.

NECESSARY MEASURES.

But we must hope that the seriousness of them has come home to the Government, and that the necessary measures required from them to enable us to overcome our difficulties will be adopted. We all know what measures are required; the chief are:—

Curtailment of National expenditure.
Decreased taxation.
Cessation of State interference with commerce and industry.
Political differences between Continental countries have prevented the recovery to normal conditions of production and commerce. These required settlement. Outstanding international liabilities should be adjusted, national budgets should be balanced, currency inflation stopped by the scrapping of printing presses—the first steps towards the stabilisation of exchanges. When all this is accomplished, a system of credit might be set up to enable countries to obtain means of production recovery and a return to conditions of trading power.

TER MEULEN SYSTEM.

At the Brussels Conference one system of credit, the ter Meulen system, to which I alluded at some length last year, was discussed and recommended. It was adopted by the League of Nations, and Sir D. Drummond-Fraser appointed as organiser. The scheme has been approved by the National Association of American Bankers, by the International Chamber of Commerce at the London Conference of 1921, by the British bankers, as announced in the House of Commons by the Chancellor of the Exchequer in March, 1921, and by the British Government, who have framed their export credit plan so that it may dovetail into the ter Meulen plan if it comes into operation. At the recent meeting of the Association of British Chambers of Commerce the responsibility of making replies was left to individual Chambers of Commerce.

I may add that other schemes are being considered.

EXPORT TRADE REVIVAL.

With regard to the efforts made to revive and increase our foreign export trade, I should like to express my appreciation of the assistance given by the Government Department of Overseas Trade. It has obtained much valuable information from abroad, which has been of great help to manufacturers and merchants, and has watched carefully all legislation affecting business.

Nearly all I have said refers to the difficulties on the Continent, which prevent markets being opened there, but I must add that there are markets in our Dominions, in South America, &c., and other places, where trade really could be done if our cost of production were not so high. This fact must be recognised, and efforts made to enable us to meet our competitors.

DEPUTY-CHAIRMAN'S SPEECH.

The Deputy-Chairman said:—
I suppose not the least interesting part of an annual report and balance-sheet to the shareholders is the amount of profit earned. In this respect we have not such a satisfactory figure to present to you this year as we had last. I do not suppose, however, that this comes as a surprise. Trade showed a considerable falling off in 1921 as compared with 1920, the demand for loans and banking accommodation was much smaller, and the margin between the average deposit interest rate allowed and the average discount rate received was 12s 6d per cent. less. All things considered, therefore, our available profit of £3,072,988 cannot be considered as unsatisfactory, and it is interesting to remember that this is about three times the amount of our last pre-war figure.

TRANSFERS TO BANK PREMISES ACCOUNT.

A still more interesting part of our report, to my mind, and one which must be unique in our history, is the transfer from our internal resources of £1,000,000 to our bank premises account. This in effect means that future additions to our bank premises—and we have considerable operations in view under this head in the immediate future—can to this extent be made out of past profits. But the implications involved in this transfer are even more noteworthy than the transfer itself. It is a tradition generally in banking to treat a contingency account as a thing unmentionable, whether because of its extreme sanctity or because of the temptations it might present to the avaricious I will not stop to inquire, and I do not dispute that there is wisdom in a certain reticence on the subject. I do not, however, see why we should not get the credit of our internal strength, and I think I may without impropriety state that you would be justified in inferring that, if we can afford to make such an allocation from our contingency account, there must be many more pillars of similar size and strength left to increase the stability of our great edifice.

PRESTIGE OF ENGLISH BANKING.

It is an inference which I think is tacitly generally admitted, and it is a matter of legitimate pride to all our great banks that, throughout a period of great difficulty and danger, when in many countries banking troubles have been experienced, the prestige of English banking never stood higher, and in my opinion justly so. Not only is it a matter of legitimate pride to those who are responsible for the conduct of banking affairs, from the chairmen down to the newest recruits in the ranks, but it is a matter of thankfulness for the whole nation, for without a sound banking system neither the country nor the commerce of the country can prosper. Soundness and strength alone, however, are not sufficient. They are, it is true, essential, and a first essential; but we must also have enterprise and initiative in their proper degree, and a wise sympathy with the needs of trade and a sincere readiness to help in finding a solution, even though it may be only a slow solution, of the many new and complicated difficulties of present-day finance.

MOST URBAN COMMUNITY IN EXISTENCE.

Other nations have their own special difficulties, but in one respect we are almost unique. I remember reading some months ago an article in a review on last year's census returns. It was very suggestive and interesting, and I am going to take the liberty of making some quotations from it. It pointed out that four-fifths of our population live in towns. We are not only an urban community, but we are the most urban, and therefore the least agricultural and the least self-supporting, that has ever existed. By our own action in this respect we have given immense hostages to fortune. No other nation in the world is in anything like this position. None draws its means of subsistence from such varied and distant sources as we do. None lives as we do by what it exports. None has staked so much on the ability of its manufacturers and its merchants to hold their own against all rivals in all quarters of the globe. None, again, is anything like so dependent as we are on the smooth working of those processes of international trade by means of which, for instance, meat from New Zealand is paid for by the export of cotton goods to China.

IMPORTANCE OF OUR FOREIGN TRADE.

The loss of their foreign trade would be a blow to all countries, but to us it would be an irreparable disaster; for it is our chosen part to eat in these northern isles what has been grown thousands of miles away, and to turn into a finished product the raw material that has reached us from the other side of the world, and to settle the account by the goods we send abroad, the shipping services we render, and the capital we lend and invest in any land where capital can be profitably employed.

We took enormous risks—how great they were we realised during the war—but time has justified them. We sacrificed security in the matter of home-raised food for the sake of a world-wide trade; and but for that sacrifice hardly more than 15,000,000 people would be living in Great Britain to-day.

So far the gamble has come off, but it must never be forgotten that we stand or fall by the ability of our towns to sell their manufactures all over the world in rivalry with all other peoples. Anything that prevents us from exporting the products of our factories in payment for the food without which we should starve, and the raw material without which we cannot work, throws our entire economic system into disorder.

Other nations are more self-supporting, and do not depend for their food on distant lands. Other nations may suffer revolutions, privation, and anarchy, but their agricultural millions will save them eventually from any injury it is within the compass of their industrial hundreds to commit. In our case our life depends upon our capacity to sell our manufactured goods abroad in exchange for our daily bread; and the article concludes by saying that the census returns show exactly 42,767,530 reasons why we should have industrial peace at home and unrestricted trade with the world outside.

BANK'S ASSISTANCE IN BUILDING UP FOREIGN TRADE.

Banks can do much in assisting in building up and maintaining our foreign trade. This bank has made special efforts in that direction. We own practically all the shares of the National Bank of Scotland, 98 per cent. of the shares of the London and River Plate Bank, operating in South America, New York, Lisbon, Paris, and Antwerp. We are partners with the National Provincial and Union Bank of England in our Foreign Bank, with branches in France, Belgium, Switzerland, and Cologne, and, to mention some others, we have large interests in the Bank of British West Africa, the British Italian Corporation, and the National Bank of New Zealand. By our ownership in full or part of our affiliated or auxiliary banks operating abroad, we believe we are in a position to give as full facilities, and provide as ready and economical machinery for foreign trade, and to bring these islands into as intimate and close touch with the countries named as we

can devise. We hope, therefore, we are playing our part in conducting to our country's welfare, and that we shall continue to do so not without a reasonable profit to ourselves.

THE RESOLUTION.

I now beg to move: "That the report just taken as read be received and adopted, and that, in accordance with the recommendation of the directors therein, a dividend for the half-year ended December 31st last of 1s 8d per share, being at the rate of 16½ per cent. per annum on the paid-up capital of the company, be declared, such dividend to be payable on and after February 2nd, less income-tax.

The resolution was seconded and carried unanimously.

RE-ELECTION OF DIRECTORS AND AUDITORS.

The retiring directors, Sir Richard V. Vassar-Smith, Bt., D.L.,

Mr C. E. Barnett, Mr J. Howard Fox, Sir Austin E. Harris, K.B.E., Mr A. E. Pattinson, and the Right Hon. the Earl of Selborne, K.G., G.C.M.G., were re-elected, and Messrs Price, Waterhouse, and Co. were re-appointed auditors for the year 1922.

VOTES OF THANKS TO DEPUTY-CHAIRMAN, DIRECTORS, AND STAFF.

A vote of thanks to the deputy-chairman for presiding, and to the directors for their services during the past year, was carried unanimously. The Deputy-Chairman, in acknowledging the resolution, asked that a vote of thanks to the general managers and staff might be passed. This was cordially agreed to, and the proceedings then terminated.

THE MANCHESTER AND LIVERPOOL DISTRICT BANKING COMPANY, LIMITED.

WORLD CONDITIONS—FINANCIAL AND INDUSTRIAL PROBLEMS.

COST OF PRODUCTION—LABOUR'S SANER ATTITUDE.

RATES OF EXCHANGE AND THE GOLD STANDARD.

The annual meeting of the shareholders of the Manchester and Liverpool District Banking Company, Limited, was held at the head office, Spring gardens, Manchester, on January 27, 1922.

In the absence of the chairman, Sir E. Tootal Broadhurst, Bart., through indisposition, the deputy-chairman, Mr Angus A. G. Tulloch, D.L., presided.

CHAIRMAN'S SPEECH.

In moving the adoption of the report and balance-sheet, the Deputy-Chairman read the chairman's speech, as follows:—

I regret to report that during the past year we have lost by death Mr P. J. Ramsay, who was a director of the bank for 16 years, during nine of which he was a managing director. He was well known to the shareholders and to the customers of the bank, but he was known best as the former manager of our King street branch. He had won the affection of a wide circle of friends, and was ever ready to help where help was needed. His name will long be remembered in Manchester.

Mr J. F. Knott has felt compelled to resign his seat on the board owing to indifferent health. He joined the board of the bank in 1881.

Sir D. Drummond Fraser, who has since the early part of last year been engaged on important international work, has expressed a wish to be relieved of his duties as a managing director of the bank. In acknowledging the valuable services rendered by Sir D. Drummond Fraser as managing director, the directors are pleased to be able to announce that he will remain on the board. He has not spared himself in advocating and explaining the Ter Meulen scheme both here and abroad. Up to now one must say that neither the Ter Meulen nor any of the other schemes for the rehabilitation of European credit has received any general measure of material support; but whatever may be the direct result of the propaganda work conducted by Sir Drummond Fraser, the commercial community must gratefully recognise the great energy and ability with which he has discharged the duties imposed upon him.

The directors have elected Mr William Ralph Easterby to a seat on the board, and have appointed him a managing director.

WORLD CONDITIONS.

It may not be inopportune before dealing with what may be called the domestic affairs of the bank to consider for a moment the general world conditions as they present themselves to us to-day.

It is, I think, true to say that the year 1921 ended in a welcome reaction from what I might almost describe as a state of despair. After nearly three years of peace we had seemed further away than ever from the better conditions which it was universally assumed the cessation of hostilities would bring. We seemed to be slipping backwards. The Treaty of Versailles was not working in accordance with expectations. Russia was paralysed, Germany in a state of political uncertainty, and Austria bordering on financial collapse. Worse than all this, our relations with France, on a perfect understanding with whom it is not too much to say the peace of the world depends, were to all appearances very much strained. Something had to be done; some attempt at least made to get things on a better footing, and it was with feelings of intense relief that the civilised world followed the discussions at the Washington Conference, discussions based on a recognition of the broad fact that in a community of nations peace and good relations cannot be

maintained unless each is prepared to subordinate individual interests and aspirations to what appears to be for the good of all.

WASHINGTON CONFERENCE AND THE CANNES MEETING.

The hopeful results of Washington were followed by a momentous discussion at Cannes, at which a proposal was put forward by Great Britain for a definite defensive pact with France. It is earnestly to be hoped that the French people will ultimately consent to the general conditions on which the proposal was based, for such a treaty would seem to be the very foundation on which to reconstruct—so far as they can be reconstructed—the economic conditions of Europe. For if France is to stand alone, it cannot be expected that she can give the fullest acquiescence in the establishment of the conditions necessary to the economic reconstruction of her late enemy; but with the knowledge that Great Britain stands with her, that in any unprovoked attack upon her this country is by her side, then it may reasonably be anticipated that France, free from the menace of possible aggression in the future, may feel that the barriers to her acquiescence in the policy of economic reconstruction of her hereditary enemy have been removed.

ECONOMIC RECONSTRUCTION OF CENTRAL EUROPE.

Let us make no mistake about it; the trade of the world, the prosperity of this country, has been built up on a gradual commercial development of each nation, and we have to realise that the laws of economics are immutable—that if the world is to get back to anything like the old level of interchange of commodities the great nations must be in a position to deal freely in the world's markets. Reparations, where reparations are called for, there must be, within the limits which are reasonably possible, but a condition precedent to reparation is economic reconstruction, and until Central Europe is placed on a basis infinitely sounder than that which exists to-day it is idle to talk of reparations, idle to suppose that claims which we believe to be reasonable can be met, at all events met in full.

THE FUTURE.

The opening of the year 1922 is marked by a suggestion of optimism, by the assertion in many quarters that things are improving; indeed, that we may in certain departments of commerce expect, if not something in the nature of a boom, at all events greatly improved trade. It may be so, but I must say that I can so far see nothing which warrants any grounds for this view. Indeed, the general conditions are, I think, against any rapid revival in so far as this country is concerned. It is not that the rest of the world does not desire to purchase our goods; it is the unfortunate fact that the world cannot afford to pay for them, and that our export business is very greatly hampered by the chaotic state of the foreign exchanges.

FOREIGN EXCHANGES.

In considering the question of the foreign exchanges, one must go back to the original basis of commercial dealings, viz., barter of goods, which in course of time gave place to the exchange of goods for a commodity universally desired, that is to say, gold, which finally became the universal standard in which values of commodities were expressed. The gold content of the sovereign, the dollar, and the respective gold coinages of other countries

was fixed, so that the trader in this country, buying or selling in a foreign currency, knew, with small variations, in terms of sovereigns, what he would have to pay or receive. Of course, so far as he was concerned, there was no question of actually shipping gold; in order to pay for his purchases abroad he bought the currency of the country in question at the exchange rates of the day, and the exchange rates fluctuated within narrow margins for the reason that if, owing to the balance of trade being against a country, the exchange moved against that country beyond a certain point it would ship gold in discharge of its obligations. There was thus stability and certainty.

NEW CONDITIONS.

To-day there is no universal standard of value. Impoverished nations of Europe, in order to meet their internal obligations, have had recourse to the printing press, with the result, as there has been no relative increase in the commodities which such currency was designed to pay for, that there has been an enormous rise in prices in the countries concerned. The paper money thus created cannot be exchanged for gold, and it becomes necessary, therefore, for anyone who exports into these countries to fix his price (in the absence of payments here in sterling) on the basis of the currency of those countries. This currency, as we have seen, has fluctuated in the wildest manner. Now it is obvious that this instability of the exchanges presents the greatest hindrance to international trade, and we naturally ask ourselves what, if anything, can be done with a view to putting matters on a more satisfactory footing. We hear much talk of "stabilising the exchanges," and if by that expression is implied a suggestion that artificial means should be adopted we may brush it aside, for the position of the exchanges is but a symptom, a reflection of the internal conditions of the countries concerned.

THE GOLD BASIS.

It has been suggested, with a view to getting back to a universal standard of value—i.e., a gold standard—that the gold content of the standard coinages should be reduced so as to bring them into accord with the relative position of the exchanges. A sovereign, for example, should be made to contain the equivalent of the gold in 4.20 American dollars, the present rate of exchange with America. It may be that some of the European nations may be driven to that expedient, but no such experiment should be attempted without the most searching consideration. Such a change might have far-reaching results of a totally unexpected character, and, in any case, it is unthinkable that this country should even consider a course which would involve nothing more nor less than a debasement of our currency. It would seem that only through a slowing down in and ultimate cessation of the creation of credit by the nations of Europe can the situation be met, and to this end it is imperative that the necessity for the creation of credit should be obtained by drastic internal reforms which shall result in the balancing of the budgets of the nations concerned. I trust that at least it will be made a condition of any assistance, in the form of credits or otherwise, which this country may think it desirable to give directly or indirectly to any State in Europe, that there shall in that State be an absolute cessation of currency inflation. Sooner or later the world has to get back to a gold standard, for it is the only common standard upon which international trade can be based.

COST OF PRODUCTION.

There is no question that we are at a great disadvantage in the world's markets in relation to our prices, which are high relative to those of most of our competitors, and if we are to resume our position in those markets it is necessary that we should carefully examine and, where possible, eliminate the causes which tend to maintain the cost of the commodities which we have to offer or may in any way hamper our freedom of production or ability to produce. For if we are to have a large and possibly increasing number of unemployed, if we cannot get back to the position we once held, then our condition as a manufacturing community will indeed be desperate, for this country cannot support the bulk of its population unless we are in the position of being able, by means of our exports, to obtain from abroad the greater portion of the food we need.

LABOUR DEMANDS.

Much has been said during the past year with regard to the demands of labour in relation to the cost of production, and it is not too much to say that the future of this country depends upon the recognition of labour of the existence of the economic facts upon the basis of which alone commerce can be carried on. That labour should be entitled to its full share in the product of industry no sane man will deny, and to determine what that share is, it ought not to be necessary to resort to the suicidal procedure which, during past years, has been so much in evidence. It is of the greatest significance and is the happiest augury that in the past weeks

there has been a good deal of clear thinking and plain speaking on the part of responsible leaders. It is recognised that the cost of production must be reduced, and it is becoming recognised that if it be necessary in relation to such reduction that wages must come down, then wages must fall; it is also recognised that action by one section of labour, irrespective of the general interest of the rest, may cause great suffering and unemployment in other quarters, and that effect must be given in greater degree to considerations of common interest; it is realised that the aftermath of a stoppage in a vital industry is loss of trade and of markets, which can only be recovered with difficulty.

BURDEN OF TAXATION.

Another important point is taxation. It is scarcely necessary to say that the burden of taxation under which industry is staggering is most detrimental to the recovery of trade. It is necessary that this burden be lightened if industry is to have the means for its natural development, and it is imperative, therefore, that steps should be taken so to shape our policy, domestic and otherwise, as to allow of this being done. What can be done and what must be done at the least is to cut down those departments of State which experience has shown we can do without, and to rigorously examine all proposals, however desirable in themselves, which involve expenditure which we cannot as a nation afford. It is to be hoped that the report of the Geddes Committee on reduction of expenditure will be made public, so that public opinion can make itself felt in a demand that all necessary reductions shall be carried out. Public expenditure in the nature of doles and allowances has been carried to an extent which, unfortunately frees many from the necessity of making any real effort. This state of affairs is bad, and cannot be too strongly condemned; it not only imposes an additional burden upon industry, but it saps the virility of those it is intended to benefit, and in the long run must prove to be disastrous to all concerned.

FREEDOM OF TRADE.

As a last word on this matter of production, I must refer to the Safeguarding of Industries Act now in operation. The commerce of this country has been built up on the principle of freedom, and one would have thought that no measure in the nature of protection for this or that industry could have had any chance of being adopted. Yet it was considered by the Government that industries which are subject to what may be thought to be unfair competition owing to conditions of exchange, and so on, must be given a measure of protection, and such protection was, as you know, given by the Act passed some three months ago. The restrictions imposed on imports under the Act are vexatious in their application and harmful in their incidence and of necessity breed the evils which under any system of protection become apparent. It is to be hoped that instructed public opinion will, before long, make an end of restrictions which one must believe were only imposed as a matter of so-called political expediency.

EXPORT CREDITS.

A good deal has been heard lately on the subject of Government credits for the encouragement of exports from this country. The schemes in existence have been made use of to a relatively small extent only, and in the absence of the imposition of somewhat stringent conditions it is difficult to see how the export of goods under any such scheme can take us very far along the path of reconstruction. Not only should exports under such credits not be encouraged unless the country of import has ceased to inflate its currency or credit; they should only be sanctioned where the goods imported are destined, as in the case of railway material, to assist in the rehabilitation of the conditions necessary to set the wheels of commerce revolving in the country of import.

THE DIRECTORS' REPORT AND BALANCE-SHEET.

I now refer to the figures in our report and balance-sheet, which with your approval I will take as read.

The profit for the year, after a payment of all expenses, and after making provision for bad and doubtful debts, is £539,274. From the balance brought forward—viz., £264,152—there has been deducted the bonus to the staff—viz., £119,421—leaving a disposable balance of £684,005. After taking the dividend for the year, amounting to £347,600, there remains a balance of £336,405, and of this it is proposed to place £100,000 to our reserve fund, and to carry forward the balance of £236,405.

At this stage I may say that we have decided to pay dividends in future on February 1st and August 1st. We believe that the fixed dates will be welcomed by the shareholders generally.

As you know, rates in the money market had up to the end of the year been dropping steadily for some months, and we thought it prudent in order to get the best rates to purchase securities which would give us higher rates than those obtainable from Treasury Bills. We accordingly bought last year £4,200,000 3½ per cent. Conversion Loan and £3,060,000 5½ per cent. Treasury Bonds. These purchases were made at the most opportune time, their

present market value being substantially higher than the price we paid.

In view of the general appreciation of gilt-edged securities, we have not had to make any provision this year for depreciation of the bank's investments.

STAFF BONUS.

The bonus to the staff was due for revision on June 30th last, but was continued until December 31st. The increases to meet a rise in prices had always been made some months in arrears, and we considered it was only right that when a fall occurred we should agree to a certain amount of delay in the relative reduction of the bonus. I think I have on a previous occasion explained to you that a specially appointed committee of representative members of the staff gives careful attention to matters of this kind and makes representations to the board. It has now been decided that as from January 1st there shall be a reduction of the bonus by one quarter, and it is proposed that a further reduction be made in the second half of the year of a similar amount.

LIABILITIES.

Our current, deposit, and other accounts stand at £62,116,777, which is a larger amount than we have had at any previous balance. These increased credit balances represent, of course, in part the capital, which is at the present time unemployable in business. This, in spite of the fact that there has been a steady drain for investment in sound fixed interest bearing securities. This process in the absence of a marked revival of trade is likely to continue, and it will have the effect of causing a considerable fall in the rate at which the Government will be able to borrow, and to effect conversion of its floating debt. It is to be observed, however, that the process of investment by the public in fresh Government securities must have the effect of reducing the deposits in the banks so long as the Government are not, in fact, increasing the amount of their obligations, for the reason that money so found by the public and drawn from their deposits at the banks is used by the Government for the reduction of its short-dated obligations held by the banks; thus the result of the operation is a reduction in the deposits of the banks on the one hand, and, relatively, of their assets on the other hand.

The bank's Acceptances, standing at much the same level as a year ago, reflect the state of the cotton trade, having relation to the corresponding item of over five millions in our balance-sheet two years ago.

ASSETS.

Turning to the assets side of the balance-sheet, I may say that commercial bills form the smaller proportion of the amount of bills held. This, of course, is owing to the falling off of business and reduced prices.

Our advances, at £28,889,379, are less than the corresponding figure of last year, while our bank property stands at the figure at which it has remained for some years. It has been suggested to us that this figure should be brought into accord with something approximating to the real value of the bank property. On consideration we have thought it the sounder policy to leave the balance-sheet item very considerably below the real value. We have, in fact, continued during the year the process of adding to our new branches. Our adjoining property between this and Market street is now used entirely for bank purposes, and comprises, as you know, our Foreign Department. But however we may increase our accommodation, we are continually in want of further space, and with a view to future development we have purchased the block of property between the site of this bank and

Fountain street. That property, when developed in accordance with our requirements, should satisfy our needs for many years to come. I may say that if any of the shareholders would like to go over this and the adjoining building after the meeting, members of the staff will be only too ready to conduct them. There has, during the year, been a good deal of interesting alteration and improvement to the property.

STAFF WAR MEMORIAL.

On your way to this meeting you will have observed in the hall of the bank a bronze tablet on which is inscribed the names of the men of the district bank who fell in the war. Young as they were, they completed a great task; they have attained to their eternal rest in the noblest way of all. Their names are held in honour and perpetual remembrance.

The Deputy Chairman then moved the adoption of the report and balance-sheet. This was duly seconded, and carried.

The retiring directors were re-elected, and the auditors, Messrs Halliday Pearson and Co., reappointed.

After the usual votes of thanks, the meeting terminated.

MORTGAGE COMPANY OF THE RIVER PLATE, LIMITED.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

The thirty-fifth ordinary general meeting of the Mortgage Company of the River Plate, Limited, was held, on the 31st ultimo, at 52 Moorgate street, London.

Mr James Anderson (the chairman), who presided, in moving the adoption of the report and accounts, said that the accounts showed that their business had been fairly active during the past year. The loans on mortgage at the close of the year amounted to £950,216, an increase of £78,544 over the total of the preceding 12 months. The rates of interest during the year were also somewhat higher. These two favourable factors had enabled the company to show an increase in the revenue, notwithstanding the very low rates of exchange which prevailed during the greater part of the year. At the beginning of the year the rate was 50d, at the close it was slightly over 43d, having for a short time touched 41d. Were the present low rates likely to continue there would be some grounds for anxiety, but this was not likely to be the case. The products of the Argentine were such as all the world required, and exports would doubtless in time reach their previous volume, although war values might not be reached. There was every reason to hope, therefore, that with a little time the balance of trade would again swing round in favour of the Republic, and exchange rates improve accordingly.

As usual, he was able to report that the mortgage loans were well secured, and not likely to involve any loss either in capital or interest. The investments, totalling £762,924, of which £354,000 was represented by British Government securities, stood in the balance-sheet at their market value on December 31st. This was something to be thankful for in these days of heavy depreciation in all classes of stock, and there had been substantial advances in market prices since the valuation was made. The net profit showed an increase of £6,456, and was sufficient to provide the usual dividend of 15 per cent., with a surplus of £8,630, which had been added to the carry forward. Last year was one of stagnation and depression in the Argentine, and as yet there was little improvement to record. The economic position in the Republic would in time right itself.

Sir A. E. Bowen, Bart., seconded the motion, which was carried unanimously.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

AFFILIATIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

CARRERAS, LIMITED.

SUCCESSFUL RESULTS UNDER DIFFICULT CONDITIONS.

The eighteenth annual general meeting of Carreras, Limited, was held, on the 31st ultimo, at Arcadia Works, City road, London, Mr Louis B. Baron presiding.

The Chairman, in moving the adoption of the report and accounts, said: The year under review has been one of great difficulties and depression, not only at home, but throughout the world. Last year the outlook for the future was not at all bright, and there were many obstacles in front of us. The results shown in the accounts will prove to you that we were able to overcome many of the obstacles, but that was only accomplished by the inauguration of a bold and aggressive policy. Owing to this policy, and the efficient organisation at our command, I think you will agree that we have come through very well. I am pleased to say that our well-known brands, particularly "Black Cat" and "Craven A" cigarettes, as well as "Craven Mixture" tobacco, are making continued and steady progress, and smokers are very appreciative of the fact that all our goods are of absolute purity, and that our guiding principle in manufacture is to give the highest quality possible and to maintain the goodwill of our customers rather than to make temporary big profits.

Since the commencement of the current financial year we have, at the request of the late Sir Arthur Pearson, taken charge of the manufacturing and distribution of "St Dunstan's" cigarettes. We were very desirous of helping that great institution—St Dunstan's—in every possible way; and although from a commercial point of view there were considerable risks in the proposition, we were persuaded to undertake the work for them, and I am pleased to say that, taking into consideration the short time the "St Dunstan's" cigarette has been on the market, it has met with a very satisfactory response from the public.

Our export trade during the past year has suffered considerably, as might have been expected, from the general world depression, but during the past month or two there have been signs of improvement in several overseas markets, and we have so organised our arrangements throughout the world and secured the co-operation of excellent agents and representatives that I think if, and when, there is an improvement in trade we may look forward to getting our full share of business in export markets.

Mr William J. Yapp, in seconding the resolution, congratulated the shareholders on receiving a very satisfactory dividend and an excellent balance-sheet.

The resolution was carried unanimously.

E. W. TARRY AND CO., LIMITED.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The annual general meeting of E. W. Tarry and Co., Limited, was held, on the 1st instant, at the Cannon street Hotel, London, Mr John Varley presiding in the absence, through indisposition, of Sir J. Fortescue Flannery, Bart., M.P. (chairman of the company).

The Chairman read the speech which had been prepared by Sir Fortescue Flannery, in the course of which he said:—

In South Africa financial difficulties have been very acute; many firms have been compelled to place large quantities of goods upon the market and to sell irrespective of cost, while, on the other hand, customers have been buying from hand-to-mouth while waiting for the expected continued reduction in prices. Selling prices of most of the articles in which this company deals have for many months past fallen in South Africa in far greater proportion than prices have fallen at home.

The old-established connection of this company and its high reputation throughout the whole of the Dominion has enabled your undertaking to come through these difficulties with comparatively much better fortune than many other firms.

Compared with the previous year's figures, the reductions in the year just passed have amounted as follows:—Gross profit, about 35 per cent.; net profit, about 75 per cent.; but this last figure is subject to adjustment of the excess profits duty, as there is a possibility of obtaining a considerable refund from the Government. There is a question which, you will remember, was referred to at the general meeting a year ago, of colonial income-tax, and the present position is that the High Court say that preference shareholders are not entitled to participate. Appeal has been made to the House of Lords, and until judgment is given, this company is holding back from preference shareholders any amount which might be payable. If the appeal should go in their favour the amount will be adjusted as between the preference and ordinary shareholders in due course after the judgment of the House of Lords has been given.

You will remember also that at the general meeting a year ago some observations were made about the reserve fund, and that the large amount of £15,000 was voted in 1917 to this fund, as well as

other amounts year by year, so that the directors have felt fully justified, in this year of exceptional difficulty, in withdrawing a small proportion of the total reserve fund and placing it to the credit of current account, so that a dividend even of reduced amount might be distributed.

Having dealt in detail with the accounts, Sir Fortescue Flannery concluded: "I am sorry not to have a better showing, but there is much consolation in the fact that we are no worse than our neighbours and much better than many of them, and that we have a sound business which we may, with confidence, believe will be as prosperous again in the not distant future as it has been in the past."

Mr M. Logan seconded the resolution, which was carried unanimously.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

GOVERNMENT RETURNS.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

NOTICES.

A branch of the Banque Française et Italienne pour l'Amérique du Sud (head office, Paris) has been opened at Valparaiso.

The National Provincial and Union Bank of England has opened branches at 4 West street, Havant—resident officer, Mr W. A. Bowler; at High street, Newham—resident officer, Mr F. D. Oldfield; and at 120A Lower Clapton road, E. 5, and at 5 and 7, Eastcheap, E.C. 3. A weekly agency of the bank is also now open on Thursdays at Madeley.

A branch of the Eastern Bank, Limited, was opened in Madras on February 1, 1922.

The London Joint City and Midland Bank, Limited, announce the opening of new branches at 398 High road, Lee, S.E. 12, and Fakenham (Norfolk), under the management of Mr W. W. Hill and Mr Herbert Lord respectively. New offices are also open in Jersey at 2 Bank place, St Aubin, and Old Bank House, Gorey Village.

The opening is announced of a branch of the London County Westminster and Parr's Bank, Limited, at 15 Seething lane, E.C. 3, under the management of Mr H. R. Horn.

Reports and Notices.

Mr Richard N. Salter, the business manager of Blades, East, and Blades, Limited, has been elected a director of the company, in the place of Mr Laurence H. Blades.

The offices of Messrs Lewis and Marks, Limited, have been removed from Threadneedle House, E.C. 2, to Stafford House, King William street, E.C. 4.

On and from January 30th, the offices of the following companies will be situated at Stafford House, 14 to 20 King William street, E.C. 4:—African and European Investment Company, Limited; Imperial Cold Storage and Supply Company, Limited; Lonely Reef Gold Mining Company, Limited; Vereeniging Estates, Limited; Cia do Nyassa; Nyassa Consolidated, Limited; East Rand Mining Estates, Limited; Rhodesia Gold Mining and Investment Company, Limited; South African Diamond Corporation, Limited; Swaziland Corporation, Limited.

Messrs Franklin, Wild, and Co., chartered accountants, announce that they have removed their offices from Broad street avenue to Orient House, New Broad street, London, E.C. 2.

Messrs William Jacks and Co. have removed to Winchester House, Old Broad street, London, E.C. 2.

Mr G. N. Foster and Mr L. A. Judd have been elected directors of Walter Judd, Limited, the financial and general advertising agents, of 97 Gresham street, London, E.C.

GOVERNMENT STOCKS, &c.

GUAYAQUIL AND QUITO RAILWAY.—Six per cent. Prior Lien Mortgage Bonds.—Tender of bonds for redemption.—The twenty-sixth amortisation of the above bonds took place this afternoon at the banking house of Messrs Glyn, Mills, Currie, and Co., by public tender, the amount to be applied being £16,530 12s 8d. Tenders amounted to £127,000 ranging from £194 to £205 15s per bond. Tenders at £199 10s and under were accepted in full.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to November 30th (new style, January 14th to December 13th), 1921:—

	Monopolies, Tobacco, Stamps, Stamp Paper, Naxos Emery.	Piræus Customs.
Gross receipts, November, 1921 ..	Drachmæ. 6,392,332.19	Drachmæ. 8,520,070.60
Do do 1920 ..	5,294,190.19	4,255,134.15
Estimated receipts for eleven months (Law of Control)	26,491,666.67	9,808,333.33
Actual receipts for 1921, eleven months ..	67,625,219.18	65,634,539.25
Actual receipts for 1920, eleven months ..	60,116,467.25	52,408,561.20

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49½ per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. The products of the sales of naxos emery have been paid in paper drachmæ since August, 1920. In the case of the Piræus Customs, the receipts in gold are included in the above statement at par.

BANKS.

ALLIANCE BANK OF SINGAPORE, LIMITED.—The net profits for the six months ended December 31, 1921, amount to Rs.5,73,757.12.2, to which is to be added the amount brought forward from last half-year, Rs.3,31,154.4.9, making a total of Rs.9,04,912.0.11. The directors propose to pay the usual interim dividend at the rate of 14 per cent. on the ordinary shares, and at the rate of 6 per cent. on the preference shares (both free of Indian income-tax), which will absorb Rs.4,07,039.1, leaving a balance of Rs.4,97,872.15.11 to be carried forward.

LONDON JOINT CITY AND MIDLAND BANK, LIMITED.—Average weekly position during January, 1922:—

SKANDINAVISKA KREDITAKTIEBOLAGET.—The net earnings of the Skandinaviska Kreditaktiebolaget for the year 1921 amount—after writing off on debts Kr19,711,202.39 and on shares Kr8,443,133.10—to Kr18,703,569.44, to which has to be added Kr3,893,950.98 brought forward from 1920, making a total of Kr22,597,520.42. Having set apart for taxes Kr3,300,000, the board of directors recommend a dividend of Kr25 per share (17.60 per cent.)—last year, Kr30 per share (21.13 per cent.)—leaving a balance of Kr3,947,520.42 to be carried forward to new account. On del credere account still remain Kr15,000,000.

RAILWAYS.

NORTH-WESTERN OF URUGUAY.—Information has been received by cable that, in reply to the company's claim, the Government of Uruguay have decided that the guaranteed period will extend to July 30, 1925.

MISCELLANEOUS.

LENNARD'S, LIMITED (BOOTS AND SHOES).—The twenty-fifth annual report for 1921 to be submitted to the shareholders on February 9th shows that the dividend for the year is 6 per cent. on the preference, and 12½ per cent. on the ordinary shares. £1,000 is given to the staff. The general reserve fund stands at £50,000, and the capital reserve fund at £150,000. £1,328 is carried forward to next account. Sir Thomas Lennard has retired as managing director, but retains his position as chairman. Percy Steadman, J.P., is appointed managing director, and the board nominate Major E. W. Lennard as a director. The report states that £97,809 has been written off the stock to reduce prices to present day values.

SOUTH METROPOLITAN GAS COMPANY.—We extract the following from the directors' report for the year ended December 31, 1921:—“As a result of the three months' stoppage in the coal industry, the company, while maintaining the quality and quantity of its gas supply throughout, was involved in an additional expenditure for coal of over £350,000. The price of gas, therefore, was increased by 1d per therm at midsummer, representing an additional revenue of about £150,000, and the balance has been charged to suspense account, to be liquidated during the current half-year. Under these circumstances the directors cannot recommend a higher dividend than at the basic rate of 5 per cent. per annum. There has been a decrease of 1.8 per cent in gas sales, whereas in the previous year there was an increase of 5.4 per cent. This is attributable in part to the exceptional weather conditions of the last six months, and in part to the general depression in trade and industry. The high price of gas (although the lowest in the London area) has also undoubtedly been a contributing factor, and it is for this reason that it is proposed to spread the exceptional charges due to the coal stoppage over two half-years. The falling cost of coal, materials, and labour must soon react in cheapening production, thereby enabling gas to be sold at a figure more within the spending power of the consumers. It is gratifying to report that consumers have increased in number by 3,386, and that 10,278 additional stoves, in addition to a large number of other appliances, have been sold or let on hire during the year. The copartnership has come triumphantly through a very difficult period, and it has to be placed on record that during the very disturbed labour conditions existing in the early part of the year the loyalty and devotion of the employees were never for a moment in question. It is unfortunate that they, like the shareholders, have to suffer from the effects of the coal stoppage, for the proposal not to pay any increment of dividend equally precludes them from receiving any increment of wages.”

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, January 25, 1922, amounted to 944 tons.

"ALL-IN" POLICY

affords the Householder the most complete cover yet devised.

The method of covering household risks by a diversity of Insurance is wasteful, to say the least. By covering all your household risks by the "All-In" Policy, you are economising in the true sense of the word—£100 per annum (Minimum Premium, 7/6) will cover practically every serious risk in respect to the contents of your home. List of risks and full particulars post free. Address:—"All-In" Policy Dept.

KABLE, STAN AND BRITISH DOMINIONS INSURANCE CO., LTD.,
41 THREADNEEDLE ST., LONDON, E.C.2.
ASSETS EXCEED £19,000,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have remained unsettled with further rains, though the additional moisture will benefit growing crops. Ploughing operations, however, were interrupted, but preparations for spring sowings are well forward. Supplies of native wheat were on a moderate scale at the principal Statute markets, and prices somewhat irregular, while steady here for good milling samples at 48s to 50s per 504 lbs, with inferior qualities down to 44s free on rail. Imported descriptions ruled firmer in sympathy with higher c.i.f. offers, but trading slow at the advance. No. 1 Northern Manitoba 59s, River Plate 62½ lbs 54s 6d, Rosafe 64 lbs 53s 6d to 54s, and Barusso 64 lbs 54s to 54s 6d, all ex ship to arrive, and Australian 54s to 54s 6d ex store per 496 lbs. A good business transpired in the floating and forward cargo market, both Australian and La Plata qualities being dealt in at firmer prices, owing to dearer foreign advices and increased purchases

GRAIN AND SEED TRADE.—The Editor of a leading agricultural journal wishes to get in touch with a gentleman thoroughly conversant with the home and foreign seed and corn trade, who would supply him weekly with reports on the Mark Lane market. Letters, which would be regarded as strictly confidential, should be addressed to "Editor," c/o Herbert Smith, Esq., Secretary of the Agricultural Seed Trade Association, 60, Mark Lane London, E.C.3.

by U.K., Continental, and Mediterranean countries. Cargoes of No. 2 hard winter February sold at about 52s 3d to Lisbon, Rosafe 64 lbs January 28th at 52s 6d to Italy, River Plate 78 kilos March-April 49s Continent, Australian February 12th 51s Continent. To U.K. Australian afloat 51s 6d to 52s, loading 51s 7½d, early February 51s 3d, Rosafe 64 lbs February 20th 50s 9d, last half February 50s 6d, early February 51s per 480 lbs. Parcels were also well supported at full to dearer prices. North American stocks show a moderate decrease, while U.K. arrivals continue small. Crop reports are maintained with regard to India, Australia, and Argentine, but the American hard winter crop is adversely reported. Flour quiet, but prices were advanced by 2s per sack for home milled. London standard straight run quoted at 45s, town households 42s, patents 47s. All English straight run 42s per sack delivered London district. All English country straights 37s to 38s free on rail London. Imported makes steady, while reservedly offered on the spot. Manitoba export patents 44s, straight 40s, Kansas patents 41s 6d per 280 lbs ex store. On c.i.f. terms, parcels of Canadian patents February seaboard quoted 40s, straight 39s, and Australian February 37s 6d per 280 lbs. Millers' offals firm. Broad bran quoted £9 5s to £9 10s, middlings £8 15s, ex mill. Fancy Plate middlings £9, and Dutch pollards £9 17s 6d ex ship, per ton. Barley quietly steady. English malt ranges from 43s 6d to 66s, and feeding sorts 37s to 42s per 448 lbs free on rail. Of imported, Morocco 30s to 31s, Plate 30s 6d, No. 4 Canada Western 34s all landed per 400 lbs, Irish 43s 6d, and Californian 36s to 50s ex quay per 448 lbs. Maize very firm and spot supplies in small compass. Yellow La Plata 39s, yellow round African 38s, white flat ditto 36s, all landed, and American mixed ex ship to arrive 31s 6d to 32s, landed 34s per 480 lbs. Cargo market firm, but quiet, and small sales include Plate steamers early February loading at 35s 9d, and No. 1 and No. 2 white flat Rhodesian arrived at 31s per 480 lbs. Oats also very firm, especially La Plata qualities, with a fair business passing. Native steady at 28s 6d to 33s 6d as to sample per 336 lbs. Of imported, Plate f.a.q. quoted 29s 6d, clipped 30s, Canada Western 30s to 31s, New Zealand 35s to 38s all landed terms per 320 lbs. Oatmeal quiet and occasionally easier. London made coarse pinhead £18 10s to £19 10s, medium cut and whole groats £18 to £19, other cuts £17 to £18, American £17 10s to £18 10s, ordinary Scottish £18 to £19 per ton. English beans firm, but quiet, Springs 56s to 60s, Winters new 49s to 52s per 532 lbs. Native pease in good request, especially seeding qualities. Duns quoted 55s to 62s, and Maples 75s to 84s as to quality per 504 lbs. Of imported, Tasmanian quoted 19s to 23s, and New Zealand blue 18s to 22s, Dutch ditto 22s to 28s per cwt ex quay. Lentils quiet. No. 1 split 32s to 33s, No. 2 27s to 28s, and Egyptian 27s 6d to 28s 6d per 100 lbs. Homeward freight markets quiet, and rates irregular. Heavy grain American Northern Range to Antwerp/Hamburg February done 15½ cents, ditto Denmark 24 cents, and to Greece 24 cents per 100 lbs. River Plate opened easier, but steadier since on renewed chartering. Up river to U.K./Cont. February roth done 33s 9d, March 10th 32s 6d, and April 25th 28s 6d ton heavy grain basis. Eastern markets steady. Bombay on dead weight paid 21s to 22s according to size U.K./Cont. Liner parcels of rice Saigon to Hamburg done 25s, and Madras Coast kernels 20s ton to usual Continental ports. Australia fairly active, and rates maintained, large tonnage being taken from Sydney prompt and February-March at 48s 9d, with handy sizes worth 1s 3d ton more money. Alexandria cottonseed is open at 9s per 60 cubic feet to Hull.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919.

You cannot keep him out of your house!

THE Commissioner of Police declares that he cannot offer the public any guarantee against burglarious entry.

What you can do is to make sure that even when the burglar does break into the house he is still as far as ever from laying his hands upon your most valuable possessions.

However clever and well-equipped he is, THE CHATWOOD SAFE—the one really burglar-defying contrivance known—will defeat him.

What THE CHATWOOD SAFE has it holds—for delivery only to the keeper of the key.

SINCE 1858.
THE CHATWOOD SAFE

THE NEW CHATWOOD SAFE BOOK contains 58 pages, many in full colour, and includes the fullest particulars of each model of THE CHATWOOD SAFE and STRONG ROOM. A post card brings a copy gratis.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated February 2nd, is as follows:—Pig-iron: The home market for foundry pig-iron is still very unsatisfying. It is reported that 2,000 tons of Cleveland foundry iron have been sold to Germany—quite an unusual occurrence. At the same time, our foundry iron is meeting with but little success in home markets. Hematite is a better market, but in the event of more hematite furnaces being put in, the supply might easily exceed the demand. The present quotations are:—No. 3 Cleveland G.M.B. pig-iron, 90s per ton; East Coast mixed numbers hematite, 95s per ton. Manufactured iron and steel: The steel position is bad, and if orders do not come along soon it will mean steel works closing down again. Steel ship plates, home, £10 10s; steel ship angles, home, £10; iron bars, home, £12 10s; steel rails, home, £9 10s net. Iron ore: Very limited prompt business. Best Bilbao Rubio nominally 25s to 25s 6d per ton.

Our Sheffield correspondent writes:—Hopes of a substantial expansion of buying in the iron and steel trade have been disappointed, as the revival so far is slight and the development painfully slow. It is now certain that the present quarter's operations will not show much improvement on the closing quarter of last year. The rolling mills are working well, while the steel foundries have little to do. The crucible steel branch remains in the same moribund condition as obtained last year. The demand for heavy steel is rather more brisk, and quite a crop of promising inquiries are reported. Makers are cutting prices severely to obtain business. The bulk of the trade being done in mild steel at the moment is unremunerative, or even done at a loss. There is a fair demand from the Far East for low-grade quality steels. Orders for files and tools continue to arrive from Russia. A revival in Irish buying is anticipated shortly now that the various trade boycotts have been called off. Ireland is ordinarily one of our best markets for farm and general tools, cutlery, and plate, and the buyers there have remained loyal to their suppliers throughout the late troublous years. Last month there were reductions in the selling prices of all descriptions of tools, cutlery, and plate. Makers of hematite iron on the North-East Coast have made substantial reductions in their quotations lately, and mixed numbers can be bought delivered here at £5 5s, compared with £13 a year ago. The price of foundry iron delivered has dropped to £4 10s, or probably £4 9s 6d. The house coal department is exhibiting more stability than for a long time past, and there is a continuous demand for best qualities. Some of the London merchants are taking deliveries in excess of the quantities provided in their contracts. The steam coal market is also improving steadily, and further expansion in the near future is considered to be probable. An improvement in the export demand is being reflected in values. A marked improvement is noticeable in the demand for blast furnace coke, chiefly owing to export contracts, and prices are firmer. Quietude is the rule in small fuels.

Our Glasgow correspondent (writing on Thursday) says:—Conditions in the iron and steel trades, at least, as appears on the surface, have not improved during the week. At the same time, they cannot be regarded as worse, yet it is difficult to say positively. If anything, there is probably more business passing in steel circles, owing to the fact that the various large producers have again got their rolling mills set a-going, and are turning out fair quantities of tonnage, mainly ship and boiler plates. These outputs are mainly on account of old contracts, chiefly placed before the beginning of the year. There are no contracts of any consequence being given out, no orders that can last for a period of weeks, and the future of the position rests on the question of how long the bookings will hold out. It is affirmed in informed quarters that several good merchant-class orders are being held up, pending the issue of a new, a bottom, level of prices, at least, in Scotland, where it is admitted costs are a pound to two a ton higher than they are in the South. Here some steelmakers have this week lowered their home rate for ship plates to £9 10s a ton, and that for export business to £9 a ton, still leaving a disparity that should not exist. Quite a number of shipyards are still busy on the re-fitting and reconditioning of steamers, and it is through that way that a big proportion of the steel produced is finding an outlet. A fair volume of constructive work is in the hands of boilermakers, bolt, nut and rivet makers, especially tube makers, wire rope makers, motor builders, and general machinery makers. Foundries are the turn better, but they are draining supplies of pig-iron more freely from Cleveland—probably the cheapest iron presently in the market—than from Scottish furnaces. Only a paltry total of 220 tons of Scotch iron was shipped last week, 134 tons foreign, and the balance coastwise, and that though makers are credited with showing generous treatment to buyers. Last month's launches on the Clyde numbered 10 steamers of 58,614 tons. This constitutes the largest tonnage ever put into the river in one month, but the other side of the picture discloses a dispiriting array of additional empty berths and a big shrinkage of tonnage in hand.

MANCHESTER, February 2.

The conditions prevailing in the market have not been any worse than last week, and in certain quarters an increased inquiry has been experienced. The downward movement in raw cotton rates has been checked, and some buyers seem to be of opinion that now is the time to purchase manufactured articles, as there is less probability of any immediate further fall in values. In cloth for India inquiry has been on a larger scale, and some fair lines have been put through for Calcutta, but, of course, at prices which mean a loss to manufacturers. Occasional orders have also been booked for Bombay and Madras. Trade with China has not been at a standstill, and moderate contracts have been arranged in white fancies. Of the minor outlets, Constantinople has been a little better, and business has also been done for Egypt, but demand is slow in developing for South America. A slack feeling has prevailed in American and Egyptian yarns for home consumption, and prices have been very irregular when tested. Less activity continues to show itself in shipping yarns.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Reports from London this week indicate that values have sagged a bit, and apparently the auctions are closing with prices not quite up to the highest point touched during the series. The general demand, however, has been good throughout, and a considerable weight of wool has been lifted by home and foreign buyers. There is a good deal of doubt as to what is being done with the wool that has been purchased so freely in recent weeks both in this country and in the primary markets. Judging from the present state of the piece goods trade, the raw material is not being consumed in the looms, and it follows that the hosiery trade and the export markets are providing the principal outlets. There is every reason to believe that consumption has been considerably increased during the past few months, but it is doubtful if wool is being consumed as fast as it is bought. The probable explanation of the recent keen buying movement is that most firms have been carrying exceedingly light stocks, and they have been covering actual sales, and at the same time buying to stock. In other words, it is possible that there is an exaggerated idea of machinery consumption, but that much of the wool has been transferred from London to users' premises in the consuming centres. Top quotations are unchanged on the week, and for spot 64's, which are scarce, 4s 6d can still be made. A good 64's for delivery in March-April is obtainable at about 4s 3d to 4s. 4d per lb. Yarn prices are steady at late rates, and spinners are well employed on old orders. The piece goods trade does not show a great deal of improvement, though some firms report more inquiry, and even men's wear is attracting rather more attention. Stocks, however, are still heavy, and cut prices make it impossible to sell at replacement cost.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The auctions throughout have lacked nothing, both competition and the values ruling indicating a very strong situation. Though exact particulars are not available as this is being written, it will be found that the home trade has taken the lion's portion of the offerings, the Continent also being a large purchaser. Everybody has been very much impressed with the well-sustained demand for the raw material. There seems to be no end to the buying power of the trade, and on the whole the auctions have left nothing to be desired. One of the outstanding features of the series has been the offering of good wools grown in Queensland; but for the merinos from that State, the offerings would have been very much wanting. Queensland has sent along some of her best clips, and full justice has been done to them by home and Continental buyers, while occasionally America has purchased some of the lightest conditioned parcels. It almost looks as if United States buyers are preparing to extend the scope of their operations, and instead of concentrating their buying power upon the best Victorian grease, good wools from New South Wales and Queensland are likely to come in for a reasonable measure of support. Where a buyer wants quality he must look to Queensland to supply it, and with the present Australian clip being somewhat better grown, those requiring 70's will get their chief supply from the Northern State. Practically everything is finishing at the highest point of the series, and although slight halfbred lambs have not sold this week up to 10d, as was the case earlier in the series, the character of this class of wool catalogued has hardly been as good. All the same, the bulk of the wools have made excellent figures, and the opening advances are in evidence at the finish.

Cable news from Australia and New Zealand indicates a very strong market, with prices ruling practically on a parity with those current in Coleman Street to-day. At Brisbane this week an excellent sale has been experienced, and the same at Dunedin. The advances in both centres are in harmony with what had been seen previously at Sydney and Invercargill, and prices for both

merinos and crossbreds appear to be very firm. Judging from the values cabled as ruling for good crossbreds, it looks as if they are on a parity with those ruling in Coleman Street, and taking an impartial view of the future, we think crossbreds can be safely bought at to-day's prices. It is true there are big stocks of old wool still to liquidate, but all the same these must continue to go still more largely into consumption, and both the home and Continental trades will find a developing inquiry for both tops and yarns. Even reports from South America indicate stronger markets, with Germany an active buyer, and everything indicates a sound situation. We have been very much impressed with the more aggressive attitude of all Continental buyers, and the very fact that more have been in attendance this series is clear evidence of increasing interest in the sale of wool in Coleman Street on the part of countries which had to retire.

VEGETABLE OILS AND OILSEEDS.

(BY OUR HULL CORRESPONDENT.)

Following the sharp advance in linseed and linseed oil, consequent on "bullish" reports from Argentina, and small shipments of seed, there has been some reaction, though the undertone of the market still appears quite steady. Plate linseed on spot is now quoted 10s below the highest, recent arrivals having removed the pressure somewhat. For seed afloat and December-January shipment, £19 is asked, falling to £18 for February-March, but at these figures business is practically stopped in the absence of buyers. Crushers whose requirements against oil commitments were met last week at £17 10s to £18, are disinclined to follow the rise in view of the uncertainty as to the outlook. The oil product firmed up in sympathy after a good trade done at the lower levels, both on home and American account. The highest points reached for raw linseed oil on spot were £33 15s in London, and £32 5s ex Hull mill, since when prices have declined about 30s per ton. A fair business has been done for forward delivery at about 20s discount off spot prices. Egyptian cottonseed has been irregular, being affected by political news, and the fall in cotton. It has, however, apparently rallied again, but little business has been done at the advance. Cotton oils have recovered from the recent set-back, when as low as £30

was accepted for February crude at Hull, present value now being £33. Refined is also firmer and somewhat dearer. A little interest has been shown in English crude soya bean oil and rape oil on Continental buying has advanced to £50. Other vegetable oils are dull, and prices nominally unchanged.

The shipments of linseed from Argentina in the first four weeks of the year ending January 28th are returned at 13,600 tons to the U.K., and 34,000 tons to the Continent, together 47,600 tons, against 59,375 tons same period last year; and those from India 11,525 tons to the U.K., and 4,250 tons Continent, together 15,775 tons, against 2,000 tons a year ago. The quantity of Plate linseed afloat is 25,500 tons to the U.K., and 61,900 tons Continent a total of 87,400 tons, against 91,900 tons last week, and is likely to still further decrease in view of the small shipments.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR CORRESPONDENT.)

The hide market was fairly steady in Bermondsey on Thursday, although best ox hides dropped ½d to ¼d. Heavies made from 7½d to 7½d, and lights from 6½d to 7d. Cows, best, advanced 6d-6½d, prices being ¾d to ¾d up, as against last quotations. Calf were slightly firmer, and advanced ¾d to ¾d. Wools were steady at last prices, hogs showing a decline of ¾d. It is feared the restriction of cattle slaughter, owing to the outbreak of foot and mouth disease, may cause a temporary shortage of hides, and tanners are nervous as to a probable advance just as values were settling down. In imported hides buying has been rather more active, especially on Continental account. Liebig Colons have sold at 12½d, landed weight, Liverpool, and a sale of 5,000 salted saladeros is reported to the Continent at 10½d, shipping weights. Dry hides are selling a little better, but there is no marked change in prices.

Reports as to the state of trade vary somewhat as regards leather; Bermondsey merchants are rather despondent, as the demand for bands has fallen off, whilst tanners are eager sellers, and are making large offers of bands at lower prices. There is, however, a fair trade doing in the provinces in small lots, which make up a good total, and prices are fairly well maintained. Upper leathers are quiet, and curriers in many places are talking of closing down, as the demand for wax kips and semi-chrome is very bad. Glacé kid is dragging, but there is quite a fair business passing in suede stock from 18d to 36d per foot.

The boot trade is rather slack, as retailers are only buying in small lots. The result of the ballot of the Shoe Operatives Union will be known this week, and if a strike is decided against, manufacturers will have more confidence in the position.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, February 3.

The markets for the chief part continued in a quiet state, buyers showing no disposition to depart from the hand-to-mouth policy followed for some considerable time past.

SUGAR.—General trade ruled quieter this week, but with only small quantities of refined available on the spot prices showed but little alteration on balance. Messrs Tate and Lyle's, 51s 6d to 52s 6d; granulated, 46s 9d to 47s 3d; caster, 48s 9d to 49s 3d; yellow crystals, 41s 3d; granulated, April-June, 46s 6d; pieces, 33s to 42s. West India crystallised, 39s 6d to 42s, as to sample; muscovado and syrups, 33s to 36s. American granulated, February, sold, 18s 6d to 18s 9d; ditto, February-March, 18s 6d, c.f. and i. terms, U.K.; white Natal, 44s 3d to 45s 6d, as to quality. Belgian crystals nominal. Czechoslovakian, ordinary granulated and crystals, prompt, 19s; cubes, 21s 6d, f.o.b., Hamburg. Dutch granulated, prompt, 19s 6d; cubes, 23s 6d, f.o.b., Amsterdam. Cuban basis, 96 per cent., February-March, 22s 3d, c.f. and i. terms, U.K. Terminal market, after ruling quiet, became steadier. Raw, August, sold, 13s; white, May, 18s 1½d to 18s 3½d; 18s 3d, 18s 7½d; August, 18s 3d to 18s 4½d, 18s 6d; Cuban basis, 79,900 tons, against 318,500 same time last year.

COFFEES.—The market ruled steady, with more support accorded Costa Rica descriptions, and fair quantities of this description were brought to auction during the week. Costa Rica, middling to good ditto, sold, 10s 6d to 11s 6d; bold, 10s 8d to 11s 3d; peaberry, up to 17s 6d. Uganda, bold greenish, sold, 9s; Nairobi, bold, 11s 6d to 11s 8s. Futures quiet. May sold, 51s.

COCOA.—In moderate request, and a steady tone ensued. Estate Ceylon sold, 97s to 100s. Butter steady, at 1s 8d per lb.

TEA.—Public sales of Indian embraced some 48,700 packages. With a quieter demand, prices in most cases manifested a weaker tendency. Larger quantities than of late were withdrawn, as some importers were not prepared to meet the market. 17,300 packages Ceylon were submitted, and, while all the finer qualities fetched steady prices, lower descriptions went in favour of the buyer.

RUBBER.—Only quiet trading resulted, but sellers required steady prices. Two Stars Rangoon, spot, sold, 14s 3d to 14s 6d; No. 1 arrive, 14s to 14s 6d. Bran quiet, and new crop Burma, to arrive,

quoted £6 per ton, ex ship terms. Beans quietly steady. Rangoon hand-picked, spot, 8s; Japanese peas, spot, 35s 6d.

SPICE.—After being steady, the pepper market assumed a quiet and easier tone. Fair black Singapore, spot, sellers, 3½d; ditto, March-May, steamer, sold, 3½d to 3½d; Aleppy, spot, 4d; Tellicherry, 4½d; white Singapore, spot, 7½d; ditto January, steamer, sold, 7d; Muntok, spot, 7½d; ditto March-May, sold, 7½d; Zanzibar cloves, spot, 1s 5d; ditto February-April, steamer, 1s 2d; pimento, spot, 2½d; flake tapioca, spot, 1½d, all per lb. Fair Penang seed pearl tapioca, spot, 18s; small sago, 24s to 25s 6d; sago flour, spot, 20s; January-March, 14s; February-April, 13s 9d. Desiccated coconut steady. Fine cut, spot, 40s; medium, 40s 6d; halves, March-April, sold, 39s 6d. Ginger quietly steady. Fair Japanese lime, spot, 45s.

FRUIT.—A quiet, steady tone governed the market for currants. Pyrgos, 55s; Amalia, 57s to 60s; Gulph, 62s to 73s; Vostizza, 72s to 84s. Valencia raisins slow. Half boxes, 115s to 120s; quarters, 130s to 145s. Sultanias quiet of sale. Smyrna, medium to good, 122s to 128s; fine to choice, 130s to 140s. Dates steady, quiet. Sial, 28s 6d.

JUTE.—Actual business was confined to a narrow compass, demand from spinners being merely for assorting purposes, and rates tended weaker. New crop, first grade, January, continental ports, £24 12s 6d; ditto, February-March, £24 7s 6d; March-April, £24 10s; new lightning grade, February-March, £20 10s; heart grade, £16 5s. Hessians steady but quiet. 10 oz, spot, 23s; 8 oz, 17s 6d; A twills, spot, 78s; B, 61s.

HEMP.—A dull and featureless market resulted. Of Manila, D grade, January-March, quoted £51; E, £48; F, £43 10s; G, £39; J, £38 10s; K, £37 10s; L, £37; M, £34; streaky threes, £39 10s. New Zealand high point fair, spot, £37; January-March, £35 10s; fair spot, £35 10s; January-March, £34. African sisal, No. 1 G.E.A., January-March, £38; B.E.A., ditto, £37.

SHELLAC. met with a fair inquiry, chiefly forward, and market ruled steady. Fair free T.N. standard, spot, sold, 330s; March, 310s to 315s; and May, 302s 6d to 300s.

COPRA.—Market rather irregular, and only a moderate amount of business was effected this week. F.M.S. Straits, January-March, Rotterdam, sold, £25 5s to £25 10s and £25; February-April, £25 10s to £25 2s 6d; March-May, £25 15s to £25 2s 6d. F.M. Straits, February-April, Marseilles, £25 to £24 5s. Ceylon, February-April, London, quoted £26; Cebu to Hamburg, £24 10s; South Sea Islands to London, £24. Palm kernels quietly steady. February-April, sold, £17 10s to £17 5s.

RUBBER.—Irregular movements characterised this market, though a fair volume of business resulted. Standard crepe and sheet, spot, sold, 8½d to 9½d, 8½d and 8½d; March, 8½d to 9½d, 8½d and 8½d; April-June, 9½d to 10½d, 9½d and 9½d; July-September, 9½d to 10½d, 9½d and 9½d. Fine hard Para, spot, 11½d; soft fine, 11½d; Caucho ball, 7d.

EGG PRODUCTS.—Market quietly steady. Prime liquid yolk, spot, 11s; April-June, 7s 5d per cwt. Albumen, spot, 2s 10½d; April-June, 2s 5½d; dried yolk, spot, 3½d to 4d; native dried whole egg, spot, 3d; and spray, 5d per lb.

MENTHOL.—Spot, 23s 6d; forward, 23s; Japanese peppermint oil, spot, 5s 3d; aniseed, 1s 1½d; slab camphor, spot, 3s 7d; crude, 3s 3d per lb. Japanese wax, spot, 95s per cwt.

OILS.—Linseed firmer, but irregular. Spot, net, naked, 34s; February-April, 32s 9d; May-August, 32s 9d. Rapeseed. Crude, spot, 50s; refined, 57s. Cotton dull. Crude Egyptian, 35s; Bombay, nominal; common edible, 42s. Chinawood: Hankow, spot (barrels), 61s 6d to 62s; and shipment, 58s 6d. Coconut quiet. Ceylon, spot, 44s; February-March, 40s 3d; Cochin, ditto, 44s. Soya quiet. Oriental, barrels, ditto, 33s. Japan fish quiet. January-February, cases, 21s. Cod quiet. English, spot, 29s. Groundnuts quiet. English crushed, naked, spot, 44s; deodorised, barrels, 56s. Turpentine in fair request at an irregular advance. American, spot, 73s; February-April, 73s 6d. Rosin quiet. American, grade B, 14s 6d; F, 14s 6d; G, 14s 6d; WW, 20s 6d, French, F/G, 14s 9d; WW, 18s; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market opened firmer, but unsettled. Calcutta, January, sold, £20 to £19 15s; January-February, sold, £19 10s to £19 5s, £19 10s. Plate, spot, Hull, quoted £19 5s; afloat, sold, £20 to £19; January-February, at £19 to £18 7s 6d to £18 15s. Rapeseed unsettled. Toria, January-February, £15 15s;

February-March, £15 10s; March-April, £15 7s 6d. Cottonseed steady. Egyptian black, February, quoted £11 15s; and white, sold, £11 2s 6d to £11 5s. Bombay, January-February, £8 17s 6d. Gingelly quiet. Chinese, January-February, Continent, £23 15s. Castor, Bombay, February-March, £14 10s. Groundnuts easier. Coromandel, machine-dried, January-February, Hull, £19; Continent, £19; paid Chinese decorticated, f.a.q., ditto, Continent, £20 10s per ton.

METALS.—Tin: The market exhibited activity, while firmer and irregular from time to time early in the week, when cash fluctuated up to £159 15s, and three months' to £162, while finally registered at £161 15s; selling pressure followed on Wednesday, and prices eased with dealing on a further large scale. Cash changed hands at £157 7s 6d to £158 5s, and three months' at £159 15s to £160 5s. At Thursday's meeting cash relapsed to £156 5s, and three months' to £157 15s. At Friday's session prices again relapsed. Cash changed hands at £155 5s to £154; late April, £156 10s; and three months' at £157 to £156. English ingots, £153 to £153 10s. Copper occupied good attention last Monday, with business in standard cash at £64 to £64 15s, and three months' £65 to £65 7s 6d. Values were lower until the middle of the week, when these dates settled down at £63 7s 6d and £64 5s respectively. On Thursday, cash declined to

£62 10s, and three months' to £63 7s 6d. At Friday's session standard cash eased to £61 15s, and three months' to £62 12s 6d. Electro, £69 to £71; best selected, £65 to £67; strong sheets, £64. Wire bars, £70 to £71. Lead easier at £21 5s. Spelter lower at £24 2s 6d to £24 12s 6d, according to position. Antimony: English regulus quoted at £34 to £37. Aluminium: Home delivery, £120. Export, £125.

DEPARTMENT OF THE SEINE

(COMPRISING THE CITY OF PARIS AND SUBURBS).

£3,000,000 7 PER CENT. 30 YEAR STERLING LOAN.

Authorised by Law of the French Republic dated 29th September, 1919, and by Decree of the President of the Republic rendered in Council of State dated 14th January, 1922.

Bonds will be to Bearer in denominations of £1,000, £500, £100 and £50, with interest payable 1st July and 1st January. Principal and interest are payable in London in sterling free from all French taxes or other French deductions, present or future.

The Loan will be redeemed by a cumulative sinking fund to be applied by half-yearly drawings at par, commencing with the half-year ending 1st July, 1925, and calculated to complete the redemption by 1st January, 1952, with power to the Department to repay the whole loan (but not a part) on 1st January, 1935, or any interest date thereafter at 103 per cent. on 90 days' notice.

HELBERT, WAGG & COMPANY, LIMITED,

37, Threadneedle Street, London, E.C.2,

offer the above Bonds for sale through

THE LONDON JOINT CITY AND MIDLAND BANK, LIMITED,

or any of its Branches, at the price of £95 per £100 Bond, payable:—

On Application	£10
On Acceptance	£25
On the 15th March, 1922...	£30
On the 20th April, 1922 ...	£30
	£95

Payment in full may be made on or before the 17th February, 1922, under discount at the rate of 5 per cent. per annum as at that date. Thereafter payment in full may be made at any time. In respect of prepayments between the 17th February, 1922, and the 15th March, 1922, inclusive, discount will be allowed at the rate of 5 per cent. per annum as at the 15th March, 1922.

Scrip Certificates to bearer will be issued on and after the 27th February, 1922, in exchange for Letters of Acceptance duly receipted at the Counting House of Helbert, Wagg & Company, Limited.

Fully paid Scrip Certificates will be exchangeable at the same place on or after the 15th June, 1922, for definitive bearer Bonds with coupons attached.

A coupon will be attached to the Scrip for 16s 8d per £100 nominal payable 1st May, 1922, representing interest at the rate of 7 per cent. per annum on the instalments paid up. The first coupon on the Bonds will be in respect of the period 1st May to 1st July, and will be payable 1st July, 1922.

The numbers of Bonds drawn for redemption in accordance with the provisions of the Sinking Fund will be published in "The Times" and two other English daily newspapers.

Notice of repayment of the loan under the power of anticipation reserved to the Department will be similarly published once a week for 12 successive weeks before the date of repayment.

All drawings will take place in London at least four weeks prior to the dates fixed for repayment, which will correspond with the dates of interest payment.

No interest will be paid on drawn Bonds after the day fixed for repayment.

All unmatured coupons must be attached to drawn Bonds, when presented for payment. The amount of any missing coupon will be deducted.

Application must be made on the form enclosed with the Prospectus, in multiples of £50, and forwarded to the LONDON JOINT CITY & MIDLAND BANK, LTD., Threadneedle Street, E.C.2; the CLYDESDALE BANK, LTD., Glasgow; the BELFAST BANKING COMPANY, LTD., Belfast; or their respective Branches, accompanied by 10 per cent. on the nominal amount applied for.

In the case of partial acceptance the balance of the amount paid on application will be applied towards the amount payable on acceptance. If there should be a surplus after making that payment, such surplus will be refunded by cheque.

Failure to pay any instalment on its due date will render all previous payments liable to forfeiture and the contract for sale to cancellation.

Interest at the rate of 8 per cent. per annum will be charged on instalments in arrear.

A brokerage of 1 per cent. will be allowed to Bankers and Stock-brokers on acceptances in respect of applications bearing their stamp.

Application will be made to the Committee of the London Stock Exchange for permission to deal, and an official quotation will be applied for in due course.

Prospectuses and forms of application can be obtained from HELBERT, WAGG & CO., LTD., 37, Threadneedle Street, E.C.2; the LONDON JOINT CITY & MIDLAND BANK, LTD., Threadneedle Street, E.C.2; the CLYDESDALE BANK, LTD., Glasgow; the BELFAST BANKING CO., LTD., Belfast; or their respective Branches; and from MULLEN, MARSHALL, STEER, LAW FORD & CO., 13, George Street, E.C.4.

LONDON, 6th February, 1922.

Under the above-mentioned decree of 14th January, 1922, an issue of \$25,000,000 7 per cent. 20 year Bonds of the Department has recently been made in New York by a group of Banks and Bankers headed by Kuhn Loeb & Co.

The following information has been supplied to Helbert, Wagg & Company, Limited, by the Prefect of the Seine under date of 15th January, 1922:—

The Department of the Seine is by far the greatest in point of wealth and population of the Departments of France, comprising as it does the City of Paris and its suburbs, as well as many important industrial districts.

The Population of the Department on 6th March, 1921, the date of the last census, was 4,411,691.

The latest official estimate—made in 1910—of the value of the lands and buildings situate in the Department was Frs 20,718,000,000 (£402,682,210), while the annual rental values of such properties (upon which the assessments for taxation are based) were then estimated at Frs 1,471,507,000 (£28,600,719). On present-day valuations these figures would be very considerably exceeded.

The estimated budget of the Department for the year ending December 31st, 1921, amounts to Frs 350,000,000 (£6,802,721), the Departmental Taxes for that year being Frs 44 (17s 1d) per head of the population.

The General Council of the Department is under a statutory obligation to levy annually by taxation such an amount as may be necessary to balance the yearly budget, in which will be incorporated the service of the present loan. These taxes are collected simultaneously with other Government and Municipal taxes by the Government Tax Collectors.

No money can be borrowed by the Department without the sanction of the French Government.

The outstanding debt of the Department as at December 31st, 1921, together with the £3,000,000 Loan sold in London and the \$25,000,000 Loan sold in New York (which constitute the only external debt of the Department) amounts to Frs 1,434,000,000 (£27,871,720).

The annual charges for interest and amortisation of this debt, including annuities for Frs 32,520,000 (£632,069), payable in respect of newly-acquired transport systems, will amount to Frs 144,000,000 (£2,798,833).

The proceeds of the present New York and London Loans are to be spent on betterment and extensions of the newly-acquired transport systems and will thus be utilised entirely for reproductive purposes.

N.B.—The sterling equivalents of the above figures supplied by the Prefect (which are all in round amounts) have been taken at the average rate of exchange ruling on January 14th, 1922.

THE MONEY MARKET.

THE Bank Return showed that the Government had not been able to repay the money borrowed at the beginning of the month. Since the amount of Treasury bills offered was so much less than the maturities, even an excess of tax receipts over expenditure would not have prevented money being easy. Nor did it, for the average cost of loans was hardly 3½ per cent., and surplus balances were available each afternoon down to 1 per cent. On Thursday ease was so pronounced that a fair amount of the 5 per cent. Treasury bonds "on tap" seems to have been

taken. But even this knowledge did not serve to maintain the discount rate, which fell to $3\frac{1}{4}$ per cent. owing to the further increase in the banks' need for bills and the smallness of the supply. Bank rate remains unchanged, in spite of the arguments put forward in some quarters that the present rate is not only a tax on industry, but is a factor in the rise of the dollar exchange at a rate too rapid to enable the price levels between the two countries to be adjusted.

	Feb. 10, 1922.	Feb. 3, 1922.	Jan. 27, 1922.	Jan. 20, 1922.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	5% (Nov. 3, '21)
Banks Deposit Rate	3	3	3	3	3% (Nov. 3, '21)
Discount Call	3	3	3	3	3% (Nov. 3, '21)
Houses Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$ (Nov. 3, '21)
Treasury Bills, 3 months ..	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$ (Nov. 3, '21)
Market rate (3 months' bill)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

* Additional to those offered by tender the preceding week.

The Bank return showed a reduction of £3,900 in the stock of gold and of £919,900 in the circulation, the Reserve being thus £916,000 higher. Government securities were £8,020,000 higher, but other securities fell by £164,100, so that deposits were £8,739,200 higher, Public being reduced by £924,900, while Other rose by £9,664,100. The circulation of currency notes was reduced by £143,200 to £304,162,800, which includes £1,693,600 of notes called in but not cancelled. The fiduciary issue is £254,519,200, or £55,469,200 below the maximum.

THE STOCK MARKETS.

All other movements in the stock markets have been overshadowed this week by the strength and activity of gilt-edged stocks. British Government securities have improved day by day, while Colonial and Corporation stocks have generally advanced, Indian stocks, owing to the disquieting cables, being the exception. The strength of the gilt-edged section was not broken by the absence of a reduction in Bank rate, which the House had been inclined to expect. The Home Railway market developed activity on the favourable dividend announcements. Insurance shares remain heavy. Rubber shares remain a dead market, while interest in the oil market centred on the early dealings in the scrip of the new Anglo-Persian issues, both of which went to a quick premium. The favourable reception of the Department of the Seine loan, the lists for which were closed by lunch-time on Monday, should assist the political discussions with France. The Stock Exchange Committee has issued its proposals for the future system of dealings, and these are discussed on a later page.

COMMODITY MARKETS.

The tone of the cotton markets is no worse, and in some lines rather more business inquiry has been noted, but in Lancashire weaving towns curtailment of production is increasing. The easier tendency in wool values continues. Spinners are not booking much in the way of new orders, but in the dress goods trade business is fairly good. A problem of the moment in the woollen industry is the inadequacy of the output of tops. The demand for pig-iron has shown no sensible improvement, but such change as there is in the general position of the iron and steel trade is in the direction of improvement, and our Sheffield correspondent is optimistic as to an approaching revival. There appears to be a definite improvement in the demand for Welsh export coal, but prices remain unchanged. Speculative dealings produced some excitement in the vegetable oil and oilseed markets. Although higher prices were expected at the Bermondsey leather auctions owing to the outbreak of foot and mouth disease, no changes, other than a slight decline in values, are recorded in the hide and leather trades. Detailed reports from special correspondents will be found on later pages.

FOREIGN EXCHANGES.

With the impetus of a rising dollar rate the foreign exchange market has been far more active than for some time past, but it is doubtful whether this outburst of energy will continue. The chief feature was, of course, the dollar, which rose steadily from \$4.32 $\frac{3}{4}$ on the 4th to over \$4.38 at one time on Thursday. After that there was some unsteadiness, and by Friday morning there was a reaction to \$4.36 $\frac{1}{2}$. There was no doubt that the upward movement had been too rapid to last, but it is not very likely that the reaction will go far, and, for reasons that have already been discussed here, we may probably still look for a further appreciation in the value of sterling, but at a more sober pace than during the last few weeks. Dollars one month ahead are at present quoted on a parity with spot, two months $\frac{1}{8}$ cent. over spot, and three months $\frac{1}{4}$ over spot. The Paris rate for the time being is very puzzling, and its tendency towards recovery is probably due more to the sentimental effect of the absence of expected political complications than to anything else. The rate for futures is at present on a parity with spot. After climbing up to 880 during the railway strike the Berlin rate fell on Thursday to 840 as compared with 872 on the 4th, but there was a reaction again yesterday morning to 855. Future quotations are at present 2 marks per month below spot. Italy at 88 $\frac{1}{2}$ shows a good recovery, and there are signs that the lira is working down definitely to a lower level. On the whole, it would appear that in spite of the Banca di Sconto troubles the position has considerably improved, and that the temper of labour is much better. Among the neutral exchanges Amsterdam continues to go in our favour, and has now climbed up to 11.70. Switzerland also is moving upwards more rapidly than for some time past. On the other hand, Madrid and the three Scandinavian exchanges have all moved somewhat against us. In Central Europe Vienna has reacted, but less than might have been expected, to the news that Great Britain is to make an advance of £2,000,000, the Inlandskrone rate being now round about 30,000 as compared with about 33,000. The Auslandskrone (London rate), however, shows little change at about 13,500. Warsaw has remained steady, Budapest has recovered a little. Prague, on the other hand, has moved up slightly, perhaps owing to the delay in any announcement as to the reported foreign loan. Belgrade and Bucharest remain very dead at about the same levels, and Athens also is unchanged. In the East, India is slightly cheaper at 15 3 21-32d, and Yokohama has again fallen away a little. The silver market has been weak, owing to sales by China and the United States, and there has been little demand from India. Hongkong and Shanghai rates are both lower. In South America, Buenos Ayres, after falling away, is up again to 45 $\frac{1}{2}$ d. Valparaiso has gone somewhat against us, and Montevideo has risen rather sharply to 43 $\frac{1}{2}$ d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 4, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	35,249	Supply Services	12,633
		Interest on Debt	14,457
		Sundries	340
		Reduction of Debt	7,688
		Added to Exchequer balances ..	137
	35,249		35,249

These operations reduced the National Debt by the sum of £7,681,902, and caused the following changes:—

	Min. £		Min. £
Treasury Bonds	+ 3,245	Treasury Bills	- 26,509
National Savings Certificates ..	+ 1,300	Surrenders of Bonds, &c.	- 502
Bank of England Advances ..	+ 17,750	Exchequer Bonds repaid	- 23,818
Public Department Advances ..	+ 19,800	Depreciation Fund	- 500
Unemployment Insurance	+ 1,340		
Sundries	+ 112		
	+ 43,647		- 51,329

Property and Income-tax yielded £17,166,000, Customs and Excise £3,589,000, Estate Duties, &c., £1,101,000, and Special Receipts £7,608,394. The floating debt was increased by £11,175,000 to £1,165,611,000. Sales of 5 per cent. Treasury Bonds amounted to £3,245,000. Exchequer Bonds amounting to £23,818,313 were repaid during the week.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO FEBRUARY 4, 1922.			
Total spent	872,893,419	Raised by revenue ..	819,272,365
Inc. in balances	677,254	Net borrowings	54,298,308
Total	873,570,673	Total	873,570,673

ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

THE PERILS OF "SAFEGUARDING" INDUSTRIES.

THE King's Speech at the opening of Parliament on Tuesday contained no surprises, and was scanned unsuccessfully by old political hands for further evidence as to the probable date of the General Election. Economy, Ireland, and Lords' Reform are the chief dishes on the Parliamentary menu, and the insistence which the Royal Speech laid on the first marks out finance as *par excellence* the controversial subject of the session. The Geddes Report has been published to-day, and will be hotly debated in both Houses, while some light on the Government's hopes of reducing taxation may be expected from the Chancellor's reply to the deputation of the Federation of British Industries, which is to wait upon him next week. There is, however, one subject not mentioned in the King's Speech which is likely to evoke before the session is old a certain Parliamentary liveliness. We refer to the farcical results of attempts to administer that futile and haphazard attempt at Protection, which masquerades under the entirely misleading title of the Safeguarding of Industries Act. Now that Parliament is again in session, and we are reaching the stage when Orders "safeguarding" certain minor industries are likely to be presented to the House for approval in terms of the Act of last year, it is important to examine the procedure, and to estimate the judicial value of the inquiries which are now being held. A good many of the minor trades have, we understand, made application to the Board of Trade to be considered worthy of protection under Part II. of the Act. Several applications have been rejected, others have been referred

to committees, others are in suspense. Let us take those which have been referred to committees of inquiry: they relate to aluminium and enamelled hollow-ware, to gold and aluminium (bronze) powders, to fabric gloves and glove materials, to domestic, illuminating, and mounting glassware, to gold leaf, and to toys. The great trawl of the Act has so far yielded only these poor little fishes.

The committees have sat in public; we have seen them at work. We may say at once that the Board of Trade has shown sound judgment in choosing able men to serve. These committees would have been of great value in sifting applications had their hands not been tied. But their terms of reference were so narrowed by the Act itself, and their procedure has been so restricted by the Board of Trade, that as courts of judicial inquiry they have been almost derisory. They have not been permitted by the terms of the Act to examine the real case for or against applications for 33 $\frac{1}{3}$ per cent. duty on competing imports from Germany of toys, aluminium saucepans, fabric gloves, and the other great staple products of British industry which are being inquired into; but have been limited to the following points: (1) Whether the goods in question are being offered for sale in the United Kingdom at prices which, by reason of depreciation in the value in relation to sterling of the currency of the country in which the goods are manufactured are below the prices at which similar goods can be profitably manufactured in the United Kingdom, and whether by reason thereof employment in any industry in the United Kingdom is being, or is likely to be, seriously affected; (2) the effect which the imposition of a duty under Part II. of the Act on goods of the class or description covered by the complaint would exert on employment in any other industry, being an industry using goods of that type or description as material; and (3) whether production in the industry manufacturing similar goods in the United Kingdom is being carried on with reasonable efficiency and economy. No opposition to any application for a tariff is allowed except from industries which "use" as "material" the goods which are under consideration. The real consumer, the miserable man in the street, has no *locus standi* before the committees.

Then, again, most of the evidence is on paper and is not revealed. Applicants fill up the minds of the committee with *ex parte* statements which are not disclosed to their opponents. The paper case of the opponents is not disclosed to the applicants. Counsel are allowed to appear, but are not allowed by the regulations of the Board of Trade to cross-examine. No one, except members of the committee, is permitted to sift the evidence, and these committeemen are, by the Act itself, compelled to be gentlemen who have no special familiarity with the industries under inquiry. We are not surprised to find one of the chairmen, Sir William Acworth, complaining this week that the embargo on cross-examination by counsel is a great disadvantage to the inquiries. Over and over again one has seen statements pass at these public inquiries which a properly instructed counsel could have torn to pieces. The Board of Trade has not packed the committees, but—we are sure quite unintentionally—it has made their inquiries almost farcical. Without rules of evidence, and without skilled cross-examination, no

statements by applicants or opponents are worth the reams of paper on which they are typewritten.

So far we have dealt with these inquiries generally. We will now take a particular case which reveals with what disastrous absurdity inquiries so conducted operate in practice. It is the case of fabric gloves imported from Germany. The inquiry has been closed, and the committee, of which Sir Henry Rew is the chairman, is considering its report. In this case, under the limitations of the terms of reference, the applicants have shown that German gloves are being sold in this country at prices with which the immature British industry cannot compete, and have also shown that many workers in British fabric glove works have, in consequence, been thrown out of employment. There was no opposition within the terms of reference, since no industry in this country "uses" fabric gloves as a "material." The users are the public, who are not heard at all. It seems, therefore, practically certain that the committee will report in favour of the application of a duty of 33½ per cent. on German fabric gloves imported into this country.

And yet if the Board of Trade, in the exercise of its permissive powers—it is not compelled to make an Order—should in this case make an Order for submission to the House of Commons, the fat would be in a very hot fire. For the committee, happily, though quite irregularly, allowed evidence to appear to the effect that German fabric gloves, made in Saxony and sold all over the world, are manufactured from yarn spun in Lancashire mills. All the fine yarn for these German gloves, or nearly all, comes from Bolton, and its manufacture is an important part of Lancashire's export trade in fine cotton spinning. So in order to protect a mushroom British industry, which employs some 2,000 people, and never has employed more than 10,000, a blow would be struck at the great staple industry of Lancashire, which is already suffering from most serious depression.

Lancashire's case against a tariff on German fabric gloves is unanswerable. Germany cannot buy Bolton's fine yarn unless it can pay for it by selling fabric gloves in Great Britain. The British industry in fabric gloves is in no condition to take Germany's place as a buyer of Lancashire's yarn. It is a product of the war, and as yet a feeble, undeveloped product. Protectionists may say: Ignore Lancashire; but no Government—especially one dependent upon Lancashire Unionist support—can ignore Lancashire. This is an admirably example of how good an *ex parte* case for a tariff may appear until its implications are set forth, and the certain loss to the country is balanced with the problematical gain.

Lancashire is marshalling its forces, and if the committee report in favour of a duty, and an Order be made imposing a duty of 33½ per cent. on German fabric gloves, there will be a first-class excitement in the House of Commons. No Order can take effect, the House being in Session, until the Commons have confirmed it by resolution. Confirmation in the teeth of Lancashire is unthinkable. And yet, if the Act cannot be made to operate in a case like this—an exceptionally good case from the point of view of the Act—it might just as well be consigned at once to the oblivion it deserves.

A SOLUTION OF THE REPARATIONS PROBLEM.

EVERY road we explore in pursuit of a solution of the world's economic difficulties leads us into the jungle of the Reparations problem. The Genoa Conference is shorn of its main purpose by the natural refusal of France to have the question discussed by all the Powers of Europe, while discussions of our own internal difficulties run up against the dislocation of external trade traceable to the same cause. It is, therefore, of first importance to concentrate upon finding a way through the maze. To this end the proposals of the author of "The Economic Consequences of the Peace" must clearly be carefully studied by adherents and opponents alike. By calling his latest volume* a sequel, Mr Keynes frankly recognises

* "A Revision of the Treaty." By J. M. Keynes. Published by Macmillan and Co., St Martin's street, London.

that it is impossible for him or for any other writer on this subject to repeat the feat, achieved by a combination of rare talent and favourable opportunity, of swaying and diverting opinion in all parts of the world away from the illusions of the Peace Conference in Paris to the realities of the aftermath of the war. But if Mr Keynes had not been the author of the former work, "A Revision of the Treaty" would have put him in the front rank of economic writers, for the present volume, which sets out in convenient and lucid form the history of the Reparations question from the beginning of 1920 until the present time, with occasional essays on subsidiary issues, such as the economic effects of payment in kind, the effect of endeavouring to control the direction of German exports, or the effect on national wealth and production of receiving indemnities, is written with an exceptional gift for succinct exposition illuminated by philosophical comment and by glimpses of great depth of feeling.

But the positive contribution of this book to the present difficult *impasse* is contained in the chapter on "The revision of the treaty," in which Mr Keynes sets out his definite proposal both for a revised total and for its distribution among the Allies. Recognising that the ability of Germany to pay cannot yet be determined, Mr Keynes proposes to adopt a figure based on his contention that the conditions on which Germany agreed to the Armistice preclude the Allies from including pensions in the total chargeable to Germany. After giving grounds for reducing the Reparation Commission's total of 132 milliards of gold marks to 110 milliards by reason of overvaluation of damages, he deducts from the latter figure 74 milliards in respect of pensions and allowances, leaving 36 milliards as the definite sum payable under his interpretation of the rights of the Allies. If an abatement below this figure proves advisable, it could be made by the parties directly concerned. But this is, in Mr Keynes' view, the sum to which the Allies are strictly entitled. This sum is, in his view, distributable as follows:—

	Damage.	Belgian Debt.	Total.
British Empire	9	2	11
France	16	2	18
Belgium	3	..	3
Italy	1	..	1
United States	..	2	2
Others	1	..	..
	30	6	36

He adds, however, that "the payment by Germany of 5 per cent. interest and 1 per cent. sinking fund on this total sum is not, in my judgment, theoretically impossible. But it could only be done by stimulating her export industries in a manner injurious and irritating to Great Britain, and by imposing on her Treasury a financial problem of such difficulty that it would tend to unsound finance and to weak, unstable Governments. Even though this payment is theoretically possible, I do not think that it is practically obtainable over a period of 30 years."

He therefore proposes that Great Britain should waive the whole of her claim except the milliard to be lent to Austria (whose reparation debts should be cancelled) and to Poland to enable her to restore her currency. Great Britain should also square the claims of Italy and minor claimants by cancelling their debt to her, leaving Germany to pay 18 milliards to France and Belgium. Mr Keynes considers that 5 per cent. interest and 1 per cent. sinking fund could be paid on this sum, either in goods or cash, without hurting anyone, provided an arrangement were made that in the event of a rise or fall in the value of gold the payments should be adjusted by an impartial authority. The scheme would be completed by terminating the occupation and waiving all rights of occupation. But, in return, Great Britain and U.S.A. should guarantee to France and Belgium all reasonable assistance short of warfare (though presumably including an economic boycott) to enforce these reduced claims, while Germany should consent to the demilitarisation of the Rhine.

In considering what inducement France has to accept this proposal, Mr Keynes points out that under the London settlement the French share under the current arrangement is between 1.85 and 2.39 milliards of marks, according to the state of Germany's exports; whereas 5 per cent. interest and 1 per cent. sinking fund on her debts to Great Britain and U.S.A. amounts to 1.48 milliard gold marks per annum—leaving France a net .91 milliard gold marks under the most favourable assumption as to Germany's export trade. If the inter-Allied debts are cancelled, and the revised scheme adopted, "she would not only be entitled to a greater sum, namely 1.08 milliard gold marks (£54,000,000) per annum; but, inasmuch as she will be accorded a priority on Germany's available resources, and as the total charge is within Germany's capacity, she may reasonably expect to be paid." Mr Keynes is able to show that Belgium and Italy would also benefit from this arrangement.

On these proposals, which have many attractive features, the following comments suggest themselves. Opinion in this country to-day generally recognises that the representatives of Great Britain blundered badly in forcing pensions into the Reparation Bill, as by so doing they swelled the treaty figures to unworkable dimensions, which, if enforced, would be prejudicial to British interests—have, in fact, by encouraging unrealistic hopes, produced the present divergence of view between ourselves and France. Moreover, we agree with Mr Keynes in his interpretation of the negotiations which led up to the Armistice. We are equally convinced that the basis of the current figures of inter-Allied indebtedness is without any rational justification whatever. Indeed, we believe that very few would be prepared to argue that France, which did not provoke the war, but yet paid far the heaviest tax, not merely in the devastating of her territory, but in man power, morally owes to Great Britain and the United States the great indemnities which she legally owes us. Frankly, however, we despair of being able to write off the slate the history of the last three years and reopen this question *de novo*. Claims against Germany, of which the pensions item forms a very large part, have been accepted by the various German Governments which have held power since the Armistice. Even Dr Simons' offer through America to the Allies in April, 1921, implicitly includes something for this item. To challenge the whole basis of the Treaty of Versailles, though it might be in the ultimate interests of humanity, would postpone the question indefinitely during the present generation. To the French and the Belgian voter the sums fixed last May in London is a definite debt, and to secure a change of mind on this question would be as impossible as for Mr Keynes to explain to them his economic argument as to the means by which international payments can be made. Moreover, a reopening of the debt question as a matter of principle would mean very lengthy discussion with America, who is unlikely to accept the point of view indicated above for many years to come.

In our opinion there is more prospect of attaining a radical modification of the impossible payments demanded from Germany by means of negotiation. For if Great Britain is prepared, as we believe she is, to waive a great part of the reparations due to her, and if, as is possible, France is prepared to accept as a matter of principle the setting off of inter-Allied debt against her reparations claim, the reparation figures can be reduced, if not exactly to Mr Keynes' figures, to something of that order of magnitude.

A bargain of this kind must start from the London settlement of May, 1921, and be based upon the annual payments under that agreement. In practice these will substantially whittle down the total fixed by the Reparations Commission; for the postponement of the issue of the "C" bonds until the annual sums from Germany are sufficient for their service in effect reduces the total to the present value of the annual payments—whatever these may prove to be. The extent of this reduction cannot exactly be calculated because the payments depend upon Germany's exports. But in the most favourable conditions as to Germany's export surplus, the annuity cannot be expected to attain 5 milliards of gold marks, of which the French share would be 2½ milliards. The interest and

sinking fund on the French debt to the Allies is equivalent of about 1½ milliards of gold marks. The difference between these two sums is a figure which, if British reparation claims were almost entirely waived, would bring the problem within bounds of practicability, and at the same time would hold out to France the prospect of a revenue substantially in excess of the net amount she could obtain if her debts as well as her claims were paid. Such a plan would give her revenue without calling for any further sacrifice of her specific claims, while she would have the further satisfaction of feeling that she had not had her debts cancelled by her Allies out of charity, but had set them off against her definite assets.

The recent manifesto of the members of the Association France-Grande Bretagne, appealing for a fuller understanding of the view points of the two nations confirms us in the conviction that this is the sound line of approach. The co-operation of the United States in such a settlement is an essential condition which we by no means despair of attaining in the near future.

THE DEPRESSION IN THE IRON AND STEEL INDUSTRY.

THE statistics of iron and steel production in 1921—viz., 2,611,000 tons of pig-iron (the lowest total since 1850) and 3,626,000 tons of steel—have already been published in the *Economist*, and, indeed, the severity of the depression in the industry, which with the closely associated industries of mining, shipbuilding, and engineering is responsible for half the unemployment in the country, is now well understood. A survey of the markets which the industry serves will, however, serve to throw some light not only on the prospects of the industry itself, but also on the general situation.

In the home market no measurement of the depression in demand is possible except in the case of the shipbuilding industry. One ton of iron or steel is required for every 2.1 tons of gross shipping tonnage. Hence it is not surprising that the fall in the total tonnage of vessels commenced during 1921 to 568,438 tons compared with 2,396,819 tons in the previous year was accompanied by a fall in the sale of plates in Great Britain from 1,611,700 tons in 1920 to 648,600 tons in 1921.

But the iron and steel industry is essentially an export one. In 1913 5 million tons of iron and steel were exported, in addition to the more highly finished products of the engineering and electrical industries. In 1921 only 1,700,000 tons were exported. The year 1920 was a year of high demand, and had the output been available, exports, which, in fact, only amounted to 3½ million tons, might have approached the record of 1913. Production was, however, checked by difficulties with regard to coke supply and transport, and by the miners' strike in the autumn. The trade was also encouraged by the Government to supply home consumers first, so that the tonnage of iron and steel exported was only 65 per cent. of that of 1913. Prices naturally "soared," but as soon as the congestion of goods in distant markets began to shake faith in the continuance of the boom, and the reconstructed works of France and Belgium began to put their products on the market, the bubble burst. All our export markets fell away, but the market that suffered most was the European market. Excluding Germany, Europe took in 1920 practically as much iron and steel as in 1913—France and Belgium actually buying more than in 1913 for reconstruction purposes. But when the turn of the tide came, the high prices of English material, coupled with the depreciated currencies, made a most formidable barrier to export trade with the Continent. Of the main classes of iron and steel, Belgium took 46,364 tons in 1921, compared with 201,936 tons in 1920; France, 32,923 tons, compared with 170,317 tons; and Italy, 21,864 tons, as against 104,676 tons.

It is unfortunate that complete details as to our foreign markets are not available until 10 or 11 months after the end of the year, but with the aid of the December trade

accounts we have estimated the 1921 exports in the following table:—

EXPORTS OF IRON AND STEEL IN 1913, 1920, AND 1921.

	1913. Tons.	1920. Tons.	1921. Tons. (Estimated).
To European foreign countries ..	1,308,000	1,118,000	240,000
To non-European foreign countries ..	1,352,000	723,000	360,000
To British possessions ..	2,309,000	1,410,000	1,100,000
Total ..	4,969,000	3,251,000	1,700,000

The table brings out the fact that our European market suffered most, exports to European countries amounting to less than 20 per cent. of the exports in 1913. Non-European markets were also severely hit, and amounted to 27 per cent. of pre-war, while the British possessions, which were the least affected, took somewhat less than half the quantity they bought immediately before the war.

Outside of Europe our best foreign markets for iron and steel were the Argentine, Japan, Brazil, and the United States of America; in all these the United States obtained a firmer hold during the war, so that in 1920 our exports to foreign countries outside Europe were only 53 per cent. of the volume in 1913; in 1921 exports fell still further, and of certain products Japan took only 88,406 tons, compared with 149,715 tons in 1920; the United States, 17,123 tons, compared with 77,500 tons; Brazil, 1,934 tons, compared with 6,573 tons; and the Argentine, 72,725 tons, against 85,440 tons. In the last-named market we are now again meeting America's competition successfully. To a lesser extent foreign competition was felt in certain Colonial markets, and, coupled with decreased purchasing power and with the expanding home production in the case of India, Australia, South Africa, and Canada, led to South Africa taking 73,052 tons of certain iron and steel products in 1921, as against 131,754 tons in 1920; India (including the East Indies), 384,541 tons, as compared with 560,441 tons; and Australia, 138,904 tons, compared with 184,743 tons.

Comparing 1920 and 1921, the following are the variations in production and export of the chief product of the steel industry:—

PRODUCTION AND EXPORT OF PLATES, RAILS, &c., 1920 AND 1921.

	1920.				1921.			
	Production.	Export.	Import.	Home Consumption.	Production.	Export.	Import.	Home Consumption.
Plates	1,069,700	198,800	155,800	1,611,700	670,000	131,000	109,800	648,800
Rails—Trans.	35,300	3,500	10,000	42,800	29,400	6,500	21,600	44,500
Rails—Baltic	534,200	130,700	4,400	407,400	388,900	176,400	25,000	237,500
Timber, &c.	608,500	389,200	..	219,300	291,000	240,600	..	50,400
Galvanised	460,300	410,800	..	49,400	297,200	211,600	..	85,600
Sheets	261,000	..	54,900	315,900	83,200	..	25,100	58,100
Wire rods ..	..	..	..	..	..	..	..	..
Hoops and Strips ..	252,800	66,500	32,900	229,200	120,200	22,800	31,800	129,200

Although both in France and Belgium production and imports of iron and steel were less in 1921 than in 1920, the restricted home demand enabled both countries, as well as Germany, not only to enter into competition with our export trade, but also to invade our home market, and we imported during the year no less than 681,955 tons of pig-iron, most of which was of Continental origin; in 1913 imports of pig-iron had been only 216,700 tons.

The following statement compares the exports of iron and steel from the United Kingdom, France, Belgium, Germany, and the United States respectively in 1913, 1920, and 1921:—

EXPORTS OF IRON AND STEEL FROM UNITED KINGDOM, FRANCE, BELGIUM, GERMANY, AND UNITED STATES OF AMERICA, 1913, 1920, AND 1921.

(In Tons of 2,240 lbs.)

	United Kingdom.	France.	Belgium.	Germany.	United States.
1913	4,969,235	619,800	1,546,400	6,202,400	2,906,500
1920	3,251,225	930,000	894,000	1,723,200	4,706,700
1921	1,700,497	not complete	not complete	not complete	not complete
January	332,400	89,300	..	..	540,200
February	165,900	125,800	294,000	..	353,300
March	498,700	122,700	..	..	226,200
April	169,100	117,400	..	127,800	138,100

September	133,100	171,300	..	242,500	102,700
October	126,800	188,300	..	230,800	122,900
November	291,200	..	..	..	..
December	261,200	..	..	..	..

* No returns published.

These figures show a definite recovery in British exports in a more marked degree than is yet appreciable in the exports of any of our leading competitors. Further, we had occasion to refer last week to the fact that sales of galvanised sheets of pig-iron, and even of shipbuilding material, are now being made in Belgium and Germany. At present these sales are, of course, in very small quantities, but they indicate that the enormous disparity of prices between British and foreign products which existed a year ago has been almost bridged in, in the case at all events of Belgium and France, by the very large reductions made in Great Britain. The price of Cleveland pig-iron has fallen from 225s per ton in December, 1920, to 90s per ton. Steel rails have fallen from £25 per ton to £9 10s per ton, and considerably less has been accepted for export orders. Steel plates have fallen from £25 per ton to £10, and other products in similar proportions. In fact, prices are now only 30 to 50 per cent. above pre-war. Manufacturers have been helped in these reductions by reductions in the cost of fuel (e.g., blast furnace coke is now less than 25s per ton, as against 62s early in 1921) and by the loyal way in which the iron and steel workers have accepted the reductions in wages under the sliding scales, which have fallen more severely than the fall in the cost of living. When we contrast our position with that on the Continent, we find that the index numbers of retail prices (comparisons of which are only possible at present up to the end of October, 1921) show that whereas British prices fell between January, 1921, and October, 1921, by 24 per cent., French prices fell only 18 per cent. and Belgian prices only 9 per cent. In neither country is there machinery comparable with our sliding scale, and wage changes have, therefore, to be separately negotiated, the cost of living playing the dominant part. Similarly, while British prices of coke fell 60 per cent., French prices in sterling equivalent fell 52 per cent. and Belgian prices fell 25 per cent. On the other hand, German steel prices when converted into world currencies are still some way below British figures, but they are rising rapidly in marks, and production is held up by many internal difficulties. Purchasers of German material cannot, therefore, rapidly get delivery, and are disposed to turn back once more to the British market.

These considerations, together with the fact that during the last year of reduced output stocks abroad have been steadily used up, are the grounds on which opinion in the iron and steel industry believes that the bottom of the depression has been reached, and that in certain lines we may look for a slow but steady recovery.

NITRATE COMPANIES' RESULTS.

THE year 1920 was a fairly good one for producers of nitrate, for after the severe dislocation which the industry experienced at the close of the war and throughout the year 1919 there were signs of a return to more normal conditions and of a substantial revival in agricultural consumption. Although the highest hopes were not realised, the profits of companies whose financial year coincided with the calendar year earned considerably better profits in 1920 than in the previous year, as we were able to show in an article on the subject six months ago. But something in the nature of a crisis developed in the early months of 1921. Production quickly outstripped consumption, and prices began to fall rapidly. During the year the price of nitrate of soda has fallen from 18s 6d to 13s per cwt. According to Messrs Aikman (London), Limited's, annual figures, production in Chile in the year ended June 30th last amounted to 2,140,000 tons, as against 1,927,000 tons in 1919-20, while the total supply in sight on December 31st last was 2,615,500 tons, of which 1,441,000 tons consisted of stocks in Chile. This compares with 2,235,000 tons a year ago and 1,685,000 tons at December 31, 1913. The same authority states that negotiations between the holders of the heavy stocks carried over in Europe and America at June 30th last and the Nitrate

Producers' Association continued during the first half of the year, and that an agreement was finally reached on October 12th by which the association was released by the buyers from the pledge given in January that prices up to March, 1922, would not be fixed at less than 14s per quintal. As a compensation the buyers were given an indemnity of a minimum of £1,500,000, to be collected by a levy on all new sales made by the association of 1s 8d per quintal up to March, 1922, 1s on April-June shipments, and 4d per quintal on all further shipments up to June 30, 1923. Prices up to June 30th next were fixed as follows:—October, 10s 6d per quintal; November to April, 1922, inclusive, 11s; May, 10s 9d; and June, 10s 3d. Production during the year was reduced to 30 per cent. of the normal, and at the beginning of the current year only 34 oficinas were in operation, and most of these at less than half their capacity. In these circumstances it is not surprising to find that nitrate-producing companies whose financial year ended on June 30th last do not make a very brave showing. In the table below will be found the profits and distributions of six of these companies for each of the past two years:—

Name of Company.	Net Profits.		Dividends, Ord. and Pref.		To Reserve, &c.		Carry Forward.	
	1919-20.	1920-21.	1919-20.	1920-21.	1919-20.	1920-21.	1919-20.	1920-21.
Amelia	25,982	11,651	34,300	13,920	16,584	15,054	52,176	49,907
Lagunas Synd.	16,584	15,054	..	..	..	..	..	..
Liverpl. Nitrate	126,997	113,843	90,720	51,748	..	..	42,344	96,771
London Nitrate	19,183	22,554	15,000	15,000	7,610	7,144	13,175	20,730
Pan de Azucar	1,698	29,846	11,000	11,550	7,144	21,136	3,088	..
Santa Catalina	25,085	30,879	15,800	15,800	10,272	10,000	1,590	6,669
	287,535	223,627	166,720	107,418	34,466	32,198	130,421	206,165

The Liverpool Company absorbed the San Lorenzo Nitrate Company in 1920, and the accounts of the latter are now incorporated with the Liverpool Company's figures. Every report but one speaks of closed oficinas, while that of the Amelia, whose profits show a very heavy decline, states that no sales were made for delivery after January, 1921. The London Company, which earned higher profits, states that a cancellation of lucrative sales, owing to congestion on the Nitrate Railways system, resulted in a direct loss of profit of over £35,000. The Pan de Azucar Company's profits represent sales of 231,000 quintals as against 374,000 quintals for the previous year. The average price obtained, however, was 16s 0½d per quintal, against 10s 4d for 1919-20. The report states that since June 30th 110,000 quintals have been shipped and paid for at 16s per quintal. The Santa Catalina Company sold 143,243 quintals as against 318,756 quintals. As will be seen from a later table, the Amelia and Liverpool Companies have reduced their rates of dividend, the London and Santa Catalina Companies pay the same rate and the Pan de Azucar increases the rate from 10 per cent., free of tax, to 15 per cent., less tax. Reserve appropriations have not been increased, but substantial additions have been made to the balances carried forward, except by the Amelia Company, where a slight

reduction is made. The next table shows the principal balance-sheet items:—

Name of Company.	LIABILITIES.			ASSETS.			
	Share Capital.	Debs. and Loans.	Re-serves.	Pro-perties.	Stocks.	Cash & Bills.	
	1919-20	1920-21	1919-20	1920-21	1919-20	1920-21	1919-20
Amelia	206,000	206,000	182,256	94,869	206,502	275,942	46,713
Lagunas Syndicate	550,000	550,000	69,867	794,401	121,582	122,502	69,587
Liverpool Nitrate	75,000	75,000	335,256	460,013	27,475	231,102	93,858
London Nitrate	200,000	200,000	192,000	475,373	66,044	105,907	67,969
Pan de Azucar	110,000	110,000	58,604	92,371	99,680	114,814	110,965
Santa Catalina	79,000	79,000	20,000	42,029	39,813	25,338	9,516

The values of stocks in hand show, with two exceptions, a substantial increase, but cash is very much lower, though two of the companies show largely increased holdings of bills. The Liverpool Company's balance-sheet includes, as already mentioned, the San Lorenzo Company's figures, and this accounts for an increase in the property item of the Liverpool Company from £322,600 to £460,000. In view of the violent fluctuations to which the industry is liable the reserve funds do not in some cases seem adequate.

The final table gives dividends, share prices, and yields:—

Name of Company.	Am't of Share.	Dividends.			Prices of 1921.		Price Feb. 5, 1922.	Present Yield.
		1918-19.	1919-20.	1920-21.	High'st.	Lowest.		
Amelia	10	2	20	7	..	..	..	..
Lagunas Synd.	1	nil	nil	nil	..	..	..	..
Liverpool	5	140+	140+	100	34	28	28	9 1 9
London	1	5+	7+	7+	14	14	14	8 19 0
Pan de Azucar	1	10+	10+	15	24	18	18	15 0 6
Santa Catalina	1	20	20	20	17	17	17	17 15 6

† Paid free of income-tax.

Present quotations are considerably below the highest of last year, but show some recovery from the lowest. Yields show a strange divergence, an exceptionally high return being obtainable on Santa Catalina shares, which has a good dividend record.

As regards the immediate outlook, Aikman (London), Limited's, report points out that the usual purchases in September and October were delayed by the negotiations to which we have already referred, and consumption in 1921-22 may prove less than it would otherwise have been. On the other hand, sulphate of ammonia is in short supply and at high price, and consequently competition from this material, which was acute a year ago, will be less keen. But there are large stocks of nitrate still to be liquidated, and until these are exhausted it is unlikely that prices will be fixed at a low figure. When production starts again costs should show a substantial reduction, it being estimated that nitrate could be produced to-day at from 6s to 7s 6d per quintal. During the year 1921 the Chilean exchange, an important item in the cost of production for these companies, dropped from 9½d to 6d. While prospects for the next six months are somewhat uncertain, there seems no reason to doubt that when surplus stocks have been absorbed and production restarted, the companies will again be able to show a normal earning capacity.

STOCK EXCHANGE CONTANGOES DECISION.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THREE weeks in advance of the date at which the Stock Exchange Committee had promised to lay before their members their considered views on the manner in which Stock Exchange business shall be carried on when the Treasury removes what temporary regulations still remain, the House authorities have announced their preliminary intentions in the following official statement:—

The Committee for General Purposes have carefully considered the suggestions as to the conditions under which business is to be conducted on the removal of the Temporary Regulations, which members have submitted in response to the committee's invitation of November 8th last.

The principles on which the committee's proposals for any alterations to the Rules are based will be as follows:—

1. The resumption of fortnightly accounts with contango business, except that in view of the state of foreign exchanges dealings for foreign clients resident abroad and foreign arbitrage business will for the present be only allowed for cash.

2. The prohibition of options for a longer period than three months, the present disability beyond the third ensuing account from the date of the bargain being maintained.

3. The retention of the present method of settling bargains in new issues, which will involve the abolition of special settlements.

4. The resumption of the Rules under the heading "Failures."

5. The re-establishment of the Settlement Department, to which all members dealing as brokers or dealers in securities undertaken by the department must belong.

Rules to carry these principles into effect will be posted in the House prior to confirmation.

Minor alterations will be made in the Rules relating to:—

The method of the election of members, the fixing of account days, hours of business, the delivery of bearer securities, buying-in and selling-out, requirements for official quotations, marking of bargains, and failures.

The importance of the Committee's announcement will be the better appreciated when it is remembered that all the provincial stock exchanges of the country will most probably follow the example set by London in the matter of reverting to such pre-war practices as the London Stock Exchange Committee deem desirable. After the controversy that has raged around the question of the desirability of re-introducing carrying-over, it is useful to have the official view of the question so plainly set forth as it is in the above statement. Opinions have been sharply divided on the point. Time after time since the outbreak of war the Stock Exchange has been saved from financial catastrophe and disaster by the fact of dealings being for cash only. This regulation prevented the building up of those rickety bull accounts which in days gone by proved too often a veritable sieve through which the profits of Stock Exchange members poured like water when days of panic caught men unprepared to pay differences on larger amounts of stock than they ought to have opened. The lessons of the war are hardly likely to be forgotten, however, by the Stock Exchange, and the practice of dealing for cash during 6½ years has proved of what sterling value the practice is for re-establishing credit and building up the good name of the House as a whole. But the Committee have done their work with the utmost circumspection, and it is clear that, in their judgment, the system of cantangoes can be reinstituted without detriment to the House.

The London Stock Exchange has received the proposals with singular lack of excitement and singularly little opposition. Unless the rules that arise out of these principles should appear to differ from the latter in any pronounced manner, it is hardly too much to say that the odds are heavily in favour of the principles being confirmed. Stock Exchange criticism is directed to some of the minor points—the limitation, for instance, which will still restrict entire freedom of action in connection with arbitrage business, and also to that which is imposed upon lengthy options. Some amongst the jobbers are anxious to see the marking of bargains made a purely voluntary matter, and they would not be dissatisfied if the present Supplementary Stock Exchange official list were to be given up. Other minor points arouse opposition, and possibly the forthcoming Stock Exchange Committee election, which will take place next month, may be utilised as the rallying-ground around which various debatable points will be fought.

As to how soon new rules can be put into force is a separate question altogether. Were the Treasury to remove at once the insistence upon cash dealings, it is not

improbable that the Stock Exchange Committee would find a way for setting up the new state of affairs without waiting until the end of August this year, the latest date upon which all pre-war liabilities will have to be discharged. The average member of the Stock Exchange may be said to regard the suggestions with favour. While he does not expect them to have the immediate effect of bringing about a greatly increased volume of business, he looks for increased activity as a result of the new rules to be passed. Moreover, he is thankful that the time draws near when the Stock Exchange will once more be a free agent, untrammelled by Treasury regulations, imposed as a war measure, and irksome in their operation now that the war-necessity for them is no longer imperative.

TRADE DEPRESSION AND COSTS OF PRODUCTION.

THE Federation of British Industries has issued an illuminating report by a sub-committee on the subject of "Earnings of Labour and Costs of Production Before the War." The report covers a great deal more ground than its title might suggest, goes deeply into an analysis of the causes of the trade depression, traces the path of this country through inflation to boom and down into stagnation, tells hard economic truths to Governments, and refutes economic fallacies that are still unfortunately entertained among the rank and file of the industrial army. Space forbids us to follow the committee through the numerous points of a survey closely packed with fact and argument, but we commend to the attention of our readers the full report, of which we have summarised the section containing an exposition of the situation in the last few years.

At the outbreak of the war, three-quarters of our imports consisted of foodstuffs and raw materials. We were normally importing three-quarters of our wheat supply and approximately half of our aggregate cereal and meat supply, as well as all those tropical and semi-tropical foods which furnish so large a part of the ordinary comforts of all classes. This food, upon which depended not only the standard of living of the people of this country, but its national existence, could only be obtained by exporting an ever-increasing volume of commodities and services. Almost the whole of the commodities exported consisted of manufactured goods.

There were some who maintained that the working classes were not receiving their fair share of the national wealth, and that somewhere there lay concealed a great surplus of wealth which might be employed to increase that share. That this surplus did not exist can be demonstrated by reference to Professor Bowley's "Division of the Product of Industry." The standard of living before the war represented a very great advance on that which prevailed during the early part of the last century. This progress was mainly due to:—(1) The great improvement during this period in the methods of production due to the application of capital to the development of machinery. (2) The very rapid development of the food production of the world through the opening up of new countries. (3) The consequent development of our export trade. The prosperity of no other great nation depended to so great an extent upon export trade. In short, our standard of living had only been obtained by developing high production at low cost and by the large share which we had secured of the world's international commerce.

How has the war affected the situation? In the first place there has been no substantial reduction in our dependence on foreign countries for our food and essential raw materials. On the contrary, this has to some extent been increased, and our position relative to the other countries with which we exchange our products adversely affected by the following factors:—(a) Certain of the world's sources of raw materials and food have been disorganised by the war—e.g., Russia and Central Europe. (b) We have been compelled to sell the bulk of our foreign investments, the interest on which was an important means of securing additional purchasing power abroad. (c) A tendency had become evident in the years immediately preceding the war for food to become dear relatively to industrial products. (d) At the same time there

has, since the war, been a reduced demand from such countries as Russia and Central Europe for the manufactured products which we used to exchange for food and raw materials, while many countries which were formerly our customers have, as a result of the war, learned either to do without the goods which we formerly sent to them or to produce them for themselves. These developments must tend to make it more difficult for us to secure food and materials in exchange for the products of our manufacturing industries, and therefore more difficult to maintain our previous standard of living.

The reaction of these influences has, however, to a large extent been postponed by the extraordinary effects of the post-war boom. At the beginning of 1920 there were more workers engaged in production than ever before in the history of the country, but these workers were working shorter hours and on the whole producing less per hour than they had done before the war. None the less, they were able to maintain, and in some cases even to improve upon, the standard of living to which they had attained during the war. The explanation is that although there was considerable delay in the resumption of the normal flow of orders for manufactured goods after the war, the demand was more than the capacity of the manufacturing countries, hampered and reduced as it was by the effects of the war, could supply. At the end of 1918 a boom in manufactured goods was experienced in Japan, which passed to the United States, and later, in turn, to Great Britain, to France, and Belgium, and finally to Germany. In these circumstances, and with Central Europe very largely unable to import at all, Great Britain was in a relatively fortunate position for obtaining imports of food and raw materials. In 1919 the necessary foreign credit was secured in the first few months by a continued borrowing abroad and subsequently to a large extent by the very high earnings of our shipping and the abnormal prices we were able to secure for our coal exports. In 1920 the demand for our manufactured goods was so intense that though the tonnage exported was small compared with 1913, the total value was very much larger, the average price being nearly four times the average pre-war price.

In times of rapidly rising prices it is usually anticipated that profits will increase more rapidly than wages. But in the boom of 1920 this result was prevented by exceptionally heavy taxation, which was largely disbursed in the form of pensions, army gratuities, out of work donations, and subsidies. These two points, viz., the fact that we were able to secure the necessary food supplies on favourable terms, and the unusual measures taken to maintain distribution in favour of the employed classes, are responsible for the fact that the standard of living was improved in Great Britain up till the autumn of 1920, in spite of an actual diminution in our productivity.

But this artificial state of things could not last indefinitely. In Japan and in the United States depression followed hard upon the heels of over-speculation, and as soon as France and Belgium, who had hitherto been occupied in restoring their destroyed factories, began to place goods on the market at lower prices than ourselves, it became evident that the world's effective demand was, in fact, still far below normal. These developments were accentuated by the fact that many countries had heavy accumulated stocks of raw materials which they were unable to realise, as these were largely materials normally taken by the Central Empires and other countries which were still out of the market. These countries in turn were unable to buy the manufactured goods they required, and the normal circle of commerce was interrupted. The effect was immediately to prick the bubble of prices. Purchasers all over the world ceased to buy our goods, and as prices fell tended to defer purchasing altogether until they could see some sign that prices had touched bottom. On the one hand, therefore, manufacturers were left with high-priced goods for which the demand had suddenly ceased, while, on the other hand, there were heavy accumulations of unsold agricultural products and raw materials in the hands of potential buyers in distant parts of the world. Mention must also be made of the disturbing factor of the International War Debts and Indemnities, which mean that many nations are under obligations to discharge liabilities by a large

export of goods without corresponding imports. There is also the very serious factor of unsound Government finance in many countries.

The three great underlying causes of the present world depression are therefore as follows:—(1) Lack of balance in the world's markets with consequent general under-production, (2) unsound Government finance resulting in chaotic exchanges; and (3) in certain countries the low ratio of output to wages, which means that at present relative values the individual is producing less than he consumes.

On the first point, Governments can do little in a positive way except by assisting the credit of distressed countries. But they can do much in a negative way, for example, by modifying the reparation payments in such a way as to make the least possible disturbance of the world's trade, and by removing hampering restrictions upon commerce. On the second point expenditure on armaments must be reduced, Government activities curtailed to the minimum, international pressure brought to bear to secure the balancing of budgets, and a currency policy adopted which would aim at stabilising prices.

As regards the third problem, its solution is a necessary preliminary to the restoration of normal trade conditions. This involves the raising of output per head in the United Kingdom to a level at least as satisfactory as that attained on the Continent of Europe, and can only be secured by better concentration on the part of workpeople and improved organisation on the part of their employers.

When financial equilibrium is once again secured it is obvious that we shall only compete successfully if our real costs are comparable with those of producers abroad. In the meantime, and while abnormal conditions continue, we must go further and call upon the community to work for less than a normal return whether in the form of wages or profits in order to tide over this crisis in our affairs. Indeed, in the absence of an improvement in the exchanges, the only direction in which we can in any way help to increase employment is by reduction in prices.

Notes of the Week.

The Air Conference.—The Air Conference that was held at the Guildhall on Tuesday and Wednesday fell at a moment when a new chapter is opening in the history of aviation. The vast battle fleets of the air have been largely disbanded, and civil aviation, still in its embryo stage, is the cynosure of expert attention. The features of the conference were the announcement by Lord Gorell of the decision to form a Civil Aviation Advisory Board, and the cautious view of the Air Secretary, Captain Guest, as regards the development of commercial aviation. As regards general aircraft traffic, Captain Guest sees little or no hope of a real commercial success being obtained in Europe. "England," he said (see *Times* of February 8th), "in the last few years had shown herself to be so well railroaded as to render it unattractive, and certainly unprofitable, to develop aircraft from the commercial point of view." This he thought was true of Europe also—a view supported by Lord Weir in an interesting speech on Wednesday—and in a lesser degree of America, and, in his opinion, primary attention should be turned to spanning the great distances separating different parts of the British Empire. In accordance with this policy, the cost and practicability of an Imperial air-mail service is to be the first problem for the consideration of the new Advisory Board. Naturally enough, the limitations imposed by the official view came in for severe criticism from various speakers. Much was said of the large sums being spent by France and other countries in subsidising civil aviation, and comparisons drawn with Government policy here. For our part, we welcome Captain Guest's refusal to countenance large and costly experiments at the present juncture. Apart from the powerful reasons for retrenchment in public expenditure, support for a cautious policy may be found in Lord Gorell's hint that French opinion was not satisfied that value was being obtained for the 184½ million francs of subsidy. We cannot afford to overlook the potentialities of the air—an argument which Colonel Armstrong, President of the Federation of British Industries, advanced

from the commercial point of view. Equally we cannot afford to waste money on fruitless experiment and unproductive enterprise. Lord Gorell defended at great length the Government policy of closing down the airship service, of concentrating upon research, and of confining subsidised commercial experiment to the London-Paris route; while Major Scott put in a plea for airships, which will doubtless receive the careful attention of the new Advisory Board. The necessity for research was dwelt upon in papers read by Major Green, Lieut.-Colonel Bristow, and Brigadier-General Bagnall-Wild, among the problems discussed being the substitution of metal for wood in aeroplanes, safe landing, alighting on water, engine development, and improvements in navigation. After describing the scope and method of State research work, Major Green said:—"The work carried out at the National Physical Laboratory, the Royal Aircraft Establishment, and the Testing Stations of the Royal Air Force could not possibly be done by private enterprise, and it is by the information gained and the standard set by this work that the industry is enabled to produce aeroplanes which cannot be rivalled in any other country. It is the opinion of the writer that help of this kind is of greater value than direct subsidy." Civil aviation can only be run at a loss at present. This fact will remain until demand from the public for air transport greatly increases, and there is much force in the contention of Lieut.-Colonel Bristow that flying must not only be made safe, but must also be made to look and feel safe. Not until then, and not until charges are greatly reduced, will the public be attracted in sufficient numbers to make their carriage by air a paying proposition. Air transport has the advantage over land and sea transport in the matter of speed. Its development obviously depends upon the power to compete in the matters of safety and cost.

Trade Facilities.—The Committee, composed of Sir Robert Kindersley, Sir William Plender, and Colonel George Schuster, appointed to advise the Government under the Trade Facilities Act, have now been at work for about ten weeks, during which time they have examined over five hundred proposals. The progress report points out that the committee have had to steer a line between applications from companies who were in such a strong financial position that they could raise the necessary money on their own credit without a Government guarantee, and, on the other hand, those companies which were in so weak a financial position as to involve an excessive risk. Apart from this, as everyone with business experience will recognise, when once a proposition has been selected for serious consideration, the whole matter has to be studied very thoroughly, and lengthy negotiations have to be gone through before all the material conditions are agreed. The committee have made it their aim in every case to obtain for the Government a good commercial security, and this has not always been forthcoming. In many cases necessary formalities, such as the obtaining of the requisite borrowing powers by the applicants, have involved considerable delay. Further, as regards applications from sound undertakings, the difficulty in many cases is not so much in raising the money on reasonable terms, as in carrying out the construction work at the present high level of prices for a figure which will show a reasonable return on the capital invested. In such cases what has really been required by the applicant has not been so much a Government guarantee as a Government subsidy, which the committee have no power to recommend. In spite of these difficulties, however, the Committee have made the following progress:—

(1) Amount for which guarantees have been passed ...	2,100,000
(2) Amount of applications as regards which the Committee is prepared to recommend a guarantee after having examined the propositions with great care; but in respect of which there are technical, Parliamentary, or other difficulties which the applicants have not in every case surmounted	14,000,000
(3) Other serious applications as to which the Committee have stated generally the terms on which they could be prepared to recommend a guarantee	10,000,000
(4) Further serious propositions still under discussion (chiefly Foreign Government loans)	7,500,000

The Committee is, of course, limited under the Act to recommending guarantees for a total sum of £25,000,000, but they are proceeding with the investigation of all serious applications which they have received so as to be able to forward their recommendations in those cases which are the first to be brought to a head. The serious propositions before the Committee cover work to be carried out in the United Kingdom, Ireland, India, four Continental European Countries, and Africa. If the work is carried out outside the United Kingdom, the amount guaranteed will be determined by the sum which is to be expended on labour and materials in this country.

The Gold Standard.—In a written reply to a question in Thursday's Parliamentary papers, the Chancellor of the Exchequer makes the following statement as regards the Government's currency policy:—"It is the intention of his Majesty's Government to permit the re-establishment of an unrestricted market for gold in London at the earliest date at which the state of the exchanges renders this course possible and desirable. The question whether, and to what extent, the public will then return to the use of gold coins in place of notes for ordinary purposes of currency is one which must ultimately depend mainly on the action of the community itself." If we may read into this answer the intention to restore the free gold market at pre-war par, the statement is a reiteration of what is generally understood to be the Government's policy. Whether it would be wise to restore the free gold market at the first occasion on which the dollar-exchange touches or comes near to touching par, is one on which varied opinions have been expressed even by those who definitely support a return to a gold basis at the old par rate. The terms of the answer quoted above suggest, however, that this is the intention of the Treasury. This point is one which may become of practical importance in view of the fairly widespread opinion that the dollar exchange may touch par during the present summer. The policy, as announced by the Chancellor, is in accord with the memorandum issued this week by the Sound Currency Association, which says:—"This country should aim at the early restoration of the old equivalence between the pound sterling and 123½ grains of standard gold. Such restoration would tend to give stability to prices and encourage countries with still more depreciated currencies to take the necessary steps to stabilise them in relation to gold and so cause a gradual resumption of steadiness in international trade. The resumption of gold specie payments in this country would immediately have a beneficial effect on British national credit. An improvement in national credit which would enable this country to refund the National Debt would save the State many millions per annum in interest charges." The Association, however, recognise that it will be impossible for some countries to return to pre-war parity, and that a "fresh parity may have to be established."

Supplementary Estimates.—On Thursday a number of supplementary estimates were issued, the demands reaching a total of £6,724,104. The principal items in these estimates are as follows:—Board of Trade, £601,200, for services arising out of the war, principally in connection with Australian zinc concentrates; £1,130,000 under the heading "grant in aid of miscellaneous services to be administered by the Provisional Government" in Ireland; Royal Irish Constabulary, £1,474,370; Middle Eastern Services, £1,737,600, of which more than half represents "the deficit on Civil Administration account before the independent Irak Government came into existence"; superannuation and retired allowances, £455,000; payment of land purchase annuities, £265,024; miscellaneous war services (Foreign Office), £465,868, of which £300,000 is required for maintenance of Russian refugees; and "criminal injuries (Ireland) compensation," £215,000. Some of the estimates disclose savings under different sub-heads, which prevent the supplementary demands from reaching larger totals. But the 50-page White Paper (No. 1, price 1s. net) presents opportunity for the close scrutiny by Members of Parliament, especially, perhaps, in connection with the activities of the Colonial Office in Mesopotamia and Arabia.

Taxation and the National Income.—In an address before the National Union of Manufacturers on Monday last, Mr Edgar Crammond, with whose general views we are in sympathy, made an estimate of the national income for 1921, which he put at from 2,700 to 2,800 millions sterling, as compared with an estimated national income in 1913 of 2,400 millions. From this estimate Mr Crammond concluded that, after deducting 345 millions for interest on the National Debt, presumably on the ground that the payment of interest out of taxation on that portion of the National Debt which is held at home is merely transferring wealth from one section of the public to another, the burden of State expenditure in the past year on Imperial and local services (942 millions) amounts to 34 per cent. of the total national income. We are, however, of opinion that in making this estimate Mr Crammond has gravely overstated his case by under-estimating the total of the national income in 1921. He has arrived at his conclusion by examining three indices of production, viz., the volume of foreign trade, the statistics of production of those industries for which output statistics are available, and the carriage of goods by rail. It happens, however, that these particular aspects of economic activity are those which contracted most severely during the depression, and are, therefore, least representative of the reduction in the volume of goods and services produced during the year. This is evident in regard to the first two indices, while in the case of tonnage of goods carried by rail the reduction compared with 1913 is chiefly due to the use of road transport for short distance traffic. We venture to guess that the total national production of goods and services can hardly have fallen more than 25 per cent. under the pre-war level, even when full allowance is made for the industrial effects of the coal strike. In view of the level of wholesale and retail prices, cost of transport, cost of postal services, rating for local services, &c., it would be an under-estimate to assume that the average level of values was as low as 100 per cent. above 1913. On Mr Crammond's estimate of the pre-war income this would bring the figure for 1921 up to 3,600 millions, and it is probable that more exact methods of estimation would bring the figure up to 4,000 millions. Adequate statistics for estimating the national income by direct addition are not yet in existence, but we believe it will be found that the wages bill, which must have exceeded 2,000 millions sterling in 1920 by a substantial amount, fell last year by between 25 per cent. and 30 per cent. The large item of salaries and earnings other than wages is unlikely to have fallen so much as the wages bill, and there are large spheres of national economic activity, and forms of income, the totals of which will show for the year hardly any contraction at all. If our figures of the national income were correct, Mr Crammond's estimate of the burden of taxation would be reduced to 23½ per cent. This we believe to be nearer the truth than Mr Crammond's figure. Indeed, we are convinced that it is not a practicable proposition for any Government (with the assistance of local authorities all over the country) to abstract from the nation 34 per cent. of its total income, plus an additional 12 per cent. transferred from the taxpayers to investors in the National Debt. Our own estimate of a 23½ per cent. burden, plus 8½ per cent. transferred from one set of the people to another in the form of interest on debt, is a sufficiently alarming figure compared with pre-war standards. The case is weakened rather than strengthened by over-statement.

China's Problems.—As was expected by experienced observers of Chinese politics, the Peking Government has partially surmounted the political and financial difficulties which lately threatened it with collapse. Liang Shih-Yi, the reactionary Premier set up in December by Chang Tso-Lin, the military Governor of Manchuria, has resigned under pressure from Wu Pei Fu, the military chief in control of Hupeh, Honan, and Shansi, and has thus averted a fresh civil war. The most urgent financial difficulties of his Ministry have been met by borrowing locally at 40 per cent., and most of the proceeds have gone to the troops. An attempt has been made to meet other creditors by a financial operation

involving a loan on the security of the salt surplus, by converting short-term obligations into 8 per cent. bonds to be given in payment of claims already secured on that sum. These bonds, according to the *Times* Peking correspondent, are of the nominal value of \$96,000,000, or about £12,000,000, and are issued at 90, the bankers receiving 6 per cent. commission, so that the actual rate of interest on them is about 9½ per cent. They are said to be readily accepted by the creditors, many of whom are Japanese. Meanwhile the salaries of many officials, including the foreigners employed in the Customs and Salt administrations, are still several months in arrear, and it seems possible that prior claims on the salt surplus may prevent the loan from going through. The resignation of Chang Hu, the Finance Minister, announced on Wednesday, still awaits explanation. The outlook, however, appears to be more hopeful, provided that the contending factions can come to terms. The Shanghai market, we are informed, is improving; the increase of Customs duties, sanctioned by the Powers, may become effective about three months hence, and the settlements effected by and through the Washington Conference bid fair to free China from any recurrence of that danger of partition which was acute at the end of the last century, and from that of Japanese domination which was indicated by the presentation of the notorious "twenty-one demands" in 1915. The most extravagant of these, requiring the employment of Japanese advisers and police, the concession to Japan of the right to supply munitions and to construct certain railways, and preference for Japanese capital, were then postponed and are now formally abandoned, and the Shantung question has been settled by direct negotiations between Japan and China; but we understand that the treaty, though read at the Conference, will not be published at present in Europe. The treaties and conventions agreed to at Washington aim at establishing "the open door" for all foreign enterprise, and provide an authority to keep it open in the shape of a Board of Reference; at averting any approach to partition, and at enabling China to emerge from her financial difficulties, and to secure her independence. It remains to be seen from a study of their text whether any loopholes are left for the frustration of these aims in the future. But it seems clear that such loopholes cannot be taken advantage of unless China herself remains distracted and divided through the fault of her political leaders or the ambition of her military chiefs.

The Bank Statements.—From the monthly statement of average weekly balances of the London clearing banks for January, reproduced in detail in another column, we have compiled the following comparative table, which gives the totals for the nine English banks:—

	March, 1921.	June, 1921.	Sept., 1921.	Dec., 1921.	Jan., 1922.
Capital and reserves	115.6	115.9	115.9	115.9	115.9
Acceptances	69.4	57.7	47.2	65.3	63.6
Deposits (incl. undivided profits, &c.)	1,715.0	1,768.4	1,771.4	1,818.6	1,826.0
Total liabilities	1,900.0	1,942.0	1,934.5	1,999.8	2,005.5
Coin, notes, balance at bank, and cheques in course of collection	244.8	265.1	250.4	273.5	254.5
Money at call	82.6	98.0	98.9	105.7	114.1
Investments	336.1	335.9	332.7	343.3	357.0
Discounts	282.1	346.2	394.3	424.3	439.6
Loans and advances	862.6	815.4	786.2	762.3	752.0
Cover for acceptances, premises, &c.	91.8	81.4	72.0	90.7	88.3
Total assets	1,900.0	1,942.0	1,934.5	1,999.8	2,005.5

Deposits have reached the highest total recorded since these monthly statements were published, and are also higher than the total shown in the balance-sheet dated December 31st last. It may be assumed that the increase is due almost entirely to activity in the Stock Exchange and new issue markets. On the assets side there has been a further increase in bills discounted, presumably as a result of larger holdings of Treasury bills, but advances have dropped by another £10 millions. Cash is down by £19 millions, and the ratio to deposit liabilities is now 13.9 as against 15 per cent. for the December averages, and 16.3 per cent. for December 31, 1921. Money at call has risen by £8½ millions, and investments are over £13½ millions higher, which may be accounted for by

purchases of $5\frac{1}{2}$ per cent. Treasury Bonds. As compared with the averages for January, 1921, deposits are £16 millions higher, acceptances £25 millions lower, money at call £15 millions, investments £16 millions, and discounts £68 millions higher, and advances £93 millions lower.

The Western Railway Group.—A preliminary scheme for the amalgamation with the Great Western Railway Company of the Cambrian, the Cardiff, the Rhymney Railway Companies, and the Alexandra (Newport and South Wales) Docks and Railway Company is to be submitted for the approval of the proprietors of the Great Western Company at a special meeting to be held on February 23rd. The scheme provides for the issue of stock of the Great Western Company in exchange for the securities of the several companies on the following basis:—

CAMBRIAN RAILWAYS COMPANY.

For each		
£100 4% "A" Db. Stk.	£100 4% Deb. Stk.

£100 Con. Ord. Stk.	£45 Con. Ord. Stk.	

If the stockholders of any of these companies fail to approve the scheme, the latter is to be modified so as to provide for the amalgamation of the remaining companies.

More Home Railway Dividends.—A further batch of home railway dividends have been announced this week, and are set out in the following table:—

	Final Dividends.			Whole Year.			Price of Ord. Stock.	
	1919.	1920.	1921.	1919.	1920.	1921.	Jan. 31, 1921.	Feb. 8, 1922.
	Rate % per Ann.			%				
Great Central, 5% 1894 Pref.	4	4	4	3	3	2	29	36
Great Eastern	4	4	4	2	2	2	29	30
Great North of Scotland	1	1	1	1	1	1	12	11
Highland	1	1	1	2	2	2	20	23
London and North-Western	9	9	10	7	7	7	7	7
London & S. Western, Ord.	8	8	8	6	6	6	61	68
Do Def.	8	8	8	2	2	2	21	23
London Chatham, 4½ 2nd								
Pref.				4	3	4	28	35
North British, Def.				1	1	1	11	10
North-Eastern	8	8	9	7	7	7	7	81
North London	6	6	7	5	5	5	51	64
South-Eastern, Def.				2	2	2	25	26

Two increases have been made, the London Chatham paying the full rate on the $4\frac{1}{2}$ per cent. second preference stock as against 3 per cent. a year ago, and the North London increasing the rate from $5\frac{1}{2}$ to 6 per cent. Other distributions are at the same rate as last year, with the exception of the North British and Great Central. The directors of the former are postponing declaration of dividends on stocks after the 1884 preference until all disputes with the Government are settled.

The Underground Dividends.—The Underground Railway dividends for 1921 were announced on Thursday evening. The following table shows how the dividends compare with those for 1920, and the amounts carried forward in the past three years:—

	Final Dividends.		Dividend for Whole Year.		Carried Forward.		
	1920.	1921.	1920.	1921.	1919.	1920.	1921.
Central London (Def. Stock)	..	..	1	4	£	£	£
London Electric (£10)	2	3	1	3	11,762	15,161	59,600
City and South London	2	2	1	3	20,912	22,350	39,700
London General Omnibus	10	7	5	8	19,750	18,820	25,000
Met. District, Ord.	..	..	nil	1	59,726	58,843	67,900
Do 5% 2nd Pref.	3	5	3	5	22,098	20,537	60,550
Underground, 6% Inc. Bonds	2	4	2	4	34,000	20,137	26,600

† Paid free of income-tax.

Most of the distributions for the full year compare favourably with those for 1920. The dividend on Metropolitan District ordinary stock of 1 per cent. is the first since 1882, when $\frac{1}{8}$ per cent. was distributed. This company places £65,000 to reserve as against £45,000, and carries forward £40,000 more. The London Electric also increases its reserve allocation by £20,000 to £65,000, and carries forward £17,000 more. The City and South London reserves £36,000 as against £25,000, and increases the carry forward by £6,000, while the London General Omnibus Company reserves £335,000, or £50,000 more, and carries forward £67,900 as against £58,800 brought in. The 6 per cent. Underground Electric income bonds receive 4 per cent., free of income-tax, the carry forward being increased by £6,000.

The Insurance Share Market.—We have received the interesting review of the insurance share market which is prepared every year by Messrs Maclean and Henderson, of Stirling. This review covers 1921, and, of course, misses the collapse of the City Equitable group. It is maintained by the authors that insurance shares are a more attractive investment to-day than ever they were. At the close of 1920 the shares were at a lower level than they had been since 1918, but during the early part of last year a gradual recovery took place, which, in spite of setbacks brought the general level of values in December last higher than it had been since March, 1920. An important point made is that the strong offices are less than ever dependent upon underwriting profits for their dividends. Ten years ago about one-third of the money needed for dividends came from the trading accounts, but last year the interest receipts upon invested funds more than provided for the whole of the increased payments in dividends. Millions have been written off the book value of securities held, so that any improvement in market prices of the assets adds to the hidden reserves of the companies. Taxation has been very heavy, but, after all, the big insurance offices—other than the purely life companies—benefited greatly from the war, and were fit subjects for war taxation.

The Baldwins-Sperling Dispute.—The evidence given in the action by certain shareholders in Baldwins, Limited, for specific performance by Messrs Sperling and Co. of the undertaking entered into in 1920 to buy at £3 their shares, which are now worth 17s, has given a somewhat unpleasant impression of the haphazard way in which business deals of enormous magnitude were carried out during the riotous times of the recent boom. Our readers will remember that at the beginning of 1920 there were many people foolish enough to suppose that the acute shortage of steel plates which then existed was likely to get steadily worse, ignoring entirely the fact that on the one hand some of the largest plate mills in the world (commenced during the war) were only beginning to come into operation, and, on the other hand, that the conditions causing the scarcity of shipping tonnage were obviously transitory, and would soon be overtaken by the enormous tonnage of ships under construction throughout the world. Some of the optimists endeavoured to place ships-plate orders for two or more years ahead, while others, like those associated with Sir Edward Edgar, endeavoured to make their position secure by buying up steel works. In 1919 and early in 1920 Sir Edward

Edgar was occupied in building up a great industrial organisation, the apex of which was a series of large shipyards. The securing of the blast furnaces, steel works, and plate mills at Port Talbot was one of the foundations of the scheme, and an offer was made in February, 1920, in the name of Messrs Sperling and Co. to buy the ordinary shares of Baldwins, which in that month varied between $2\frac{1}{8}$ and $2\frac{1}{4}$, for 60s a share. Shortly afterwards, however, Sir Edward Edgar changed his mind, owing to the increase in excess profits duty and possibly also influenced by a changed opinion as to the course of trade. Messrs Sperling and Co., accordingly, indicated their unwillingness to complete the deal, and after some litigation a considerable number of Baldwins shareholders agreed to release the purchasers from their undertaking on payment of damages of 5s per share. This arrangement was accepted by most of the shareholders concerned. Certain of them, however, insisted upon the sale being carried out, and Mr Justice Coleridge, sitting in the Court of the King's Bench, has confirmed their claim. Fortunately for Messrs Sperling, there are believed to be less than 300,000 shares to which the judgment, if upheld on appeal, is applicable, and as the difference between the price in the contract and the present price of the shares is just over £2 per share, the total amount involved, though very large, is much less than has been suggested at times in the Press. The case turned to some extent on the conflict between the recollections of Sir Charles Wright, managing director of Baldwins, and Sir Edward Edgar as to the terms of the agreement, the latter maintaining that though no mention of conditions was made in the written contract, there was a verbal understanding between him and Sir Charles Wright that the basis of the deal was that the excess profits duty would be repealed in the Budget of 1920 and that the profits of Baldwins would increase to two millions in 1921. These contentions were dismissed by the judge as unproven, and his review of the evidence on these points, and, indeed, his judgment as a whole, seem to us unquestionable. We also agree with the comments which he was moved to express on the business method which the case revealed. It is true that an enormous volume of business not only in the City of London, but also in commercial and industrial circles throughout the country, is done by means of the spoken word, and it is the pride of British commerce that the bargain is practically never repudiated. But verbal deals are commonly recorded within a few hours, and, in a case of this description, where the principal actors were negotiating in the capacity of trustees for a large body of shareholders, we can only concur with the judge in his criticism of the giants of finance who "transact business with each other involving millions in the most unbusinesslike way."

The Situation on the Rand.—Our mining correspondent writes:—It is much to be regretted that no progress can be reported in the direction of a settlement of the disastrous labour trouble on the Witwatersrand. Early in the week an interview was arranged between General Smuts and representatives of the Industrial Federation. The conference broke up without result. Subsequently the Chamber of Mines offered to limit the abolition of the *status quo* agreement to those mines whose cost of production has exceeded 85s per ounce, postponing the general application of the change pending the outcome of further inquiry. As the majority of the poor mines are already working at a low ratio of whites to natives this offer represented a very substantial concession; it was, however, ignored, and has since, apparently, been withdrawn. Meantime the repatriation of the natives continues, and some of the mines are flooding. Much expense will be entailed in the resumption of operations, even should a *modus vivendi* be arrived at without further delay. A hopeful sign is that on several of the mines the strikers are manifesting a disposition to return to work. The question was raised a week or so ago whether the companies would actually distribute the dividends declared in respect of the past half-year. However, two of the more important groups—the Rand Mines and the Johannesburg Consolidated—duly sent out their warrants. The date of payment on the part of one of the smaller

groups has not yet been announced, and what course will be followed remains to be seen. It may be noted that the Simmer and Jack has just notified that its dividend will be deferred owing to the position on the Rand. No return in respect of the nine days worked during January will be made either by the Chamber of Mines or by the individual companies.

Empire Cotton Growing Corporation.—The Empire Cotton Growing Corporation has just completed the first year of its existence. The Administrative Council, in its report, says that the agreement with the Board of Trade relating to the Government grant, set out as a schedule to the Charter has been duly sealed and the sum of £978,715 has been received. Pending the formation of a finance committee, the sum has been placed on deposit at the British Overseas Bank, less the sum of £3,000 allocated by the Council to meet expenses incurred up to the date of the first general meeting. The Liverpool and Manchester Cotton Associations began the collection of the levy from spinners on September 1, 1921. In the first four months the sum thus collected amounted to £15,067, and the Liverpool and Manchester Cotton Associations have decided not to put into force the power taken by them under their by-laws to deduct from the sum collected the expenses incurred by administration. Considerable difficulty was experienced early last year in disposing of the West Indian crop of Sea Island cotton. Prices fell considerably, and, owing to the lack of demand, it seems probable that at the end of the present picking a large proportion will have to remain on the growers' hands. The prospects of the successful growing of cotton in the Tanganyika territory appear to be very considerable. The Governor feared that private individuals would not be able to buy this year's crop, and that if this year's crop was not purchased from the natives they would be discouraged from planting any cotton next season. He therefore asked the Colonial Office to obtain permission from the Treasury for part of his grant in aid to be advanced for the purchase of the cotton, provided that the Empire Cotton Growing Corporation would take over responsibility for repayment. This the Empire Cotton Growing Committee promised to recommend to the consideration of the Corporation if the Treasury would agree to Government purchase up to date. The Treasury decided that they could not give the Governor permission to employ his grant in aid in this manner unless the Empire Cotton Growing Corporation agreed to accept this responsibility. In anticipation of this support by the Corporation, this decision was cabled to the Governor and the mind of the native grower set at rest. Interesting reports have recently been published with regard to the prospects for cotton growing in Nigeria and Nyasaland. As regards the Sudan, the position from the point of view of practical cotton growing, is described as of special and immediate promise. The committee have awarded from the grant made to them by the Board of Trade certain studentships to enable graduates to undertake advanced study and research on subjects connected with cotton growing.

Agricultural Conditions.—The monthly report of the Ministry of Agriculture and Fisheries for January states that owing to wintry conditions field work was delayed, but crops have benefited as a rule, as winter corn was very forward and will be better for the check. Water supplies have improved, and few farmers are now short of water for their stock. Autumn-sown wheat is almost always a good, healthy plant, though the rains of January have caused some loss of colour on the wettest lands, and late-sown crops do not look very well in some districts. Oats also are very promising, and beans are strong and healthy, though in some districts they are rather backward. Lambing prospects are considered favourable, and early lambs are vigorous. Most of the Dorset Horn flocks have now finished lambing, the fall of lambs being about average. The ewes are giving a good supply of milk, and the lambs are consequently doing well. Reports as to the number of breeding ewes vary; in the North and in Wales there seem to be quite as many as last year, but in other parts of the country it is reported that there are rather less. The frosts and snows of January have made it necessary to feed larger

quantities of fodder to livestock, but in most districts it is anticipated that stocks of hay and straw will be sufficient for the rest of the winter. Turnips are now practically finished in many districts, and feeding sheep are being put on the market quickly in consequence. Both cattle and sheep have done well during January, and are in healthy condition, apart from the effects of the serious outbreak of foot and mouth disease.

Imperial Tobacco Company.—The accounts of the Imperial Tobacco Company (of Great Britain and Ireland) for the year ended October 31st last show that this enormous concern is passing apparently unscathed through the vicissitudes of trade stagnation and oppression, and in whatever light the steady increase in profits may be viewed by the consumer (who has seen no reduction in prices), shareholders can feel nothing but gratification at the company's highly successful record:—

The appropriation of profits is practically the same as last year, £100,000 going to pensions fund, £500,000 to additional depreciation, and £500,000 to general reserve. Changes in the balance-sheet are increases of £1,310,000 in creditors, of £1,063,600 in cash, and of £883,400 in stocks, which stand at the high figure of £32,722,000, and are taken "at or under cost, less amounts set aside to meet fluctuations in the value of leaf tobacco." Goodwill and patent rights remain unchanged at £9,422,600. Information given in the report is scanty, but it is stated that a large outlay has again been necessary, both in this country and America, upon buildings and factory equipment, to meet the requirements of the business. The property item shows an increase of £1,366,300 at £4,190,600.

National Provident Institution.—In the report of this institution for the year ended November 20th we find much what is to be expected now in the reports of high-class life offices. We see some falling off in new business from the "record" figures of 1920, a steady advance in the net yield from interest and an exceedingly favourable mortality experience. The last factor is one which must have great influence on the profit-earning power of our life assurance offices. The amount paid in death claims last year by the National Provident, including bonuses, was only 66 per cent. of the amount expected under the tables used. The advance in the net rate of interest is also a favourable factor. The net rate three or four years ago was about 3½ per cent.; last year it was nearly 4½ per cent. The ratio of expenses to premiums at 13½ per cent. is favourable under present-day circumstances. The new assurances were £897,445 net, and the funds advance by £225,378 to £7,799,178. Altogether, an encouraging report for those policyholders who will be looking for bonuses at the end of this year.

Bovril Report.—Beyond a statement to the effect that the figures of the sales of Bovril exceeded all previous records the company's report for the year ended December 31, 1921, gives no information as to the year's trading operations. The accounts, however, show that the trade depression has scarcely touched this concern, for gross trading profits, including receipts from associated companies, are nearly £30,000 higher at

£708,000, while expenses, including advertising, were £2,000 less at £430,100. Results for the past seven years are set out below:—

	1915.	1916.	1917.	1918.	1919.	1920.	1921.
Gross profit.....	£371,468	£341,405	£349,164	£384,087	£512,016	£609,709	£650,274
Associated cos., &c.	33,161	44,931	70,358	80,417	67,304	69,793	58,168
	404,629	386,336	419,522	464,504	579,320	679,502	708,442
Net profit.....	146,296	147,809	152,298	158,558	216,895	179,239	208,606
Reserve.....	22,500	35,000	35,000	35,000	55,000	50,000	40,000

	(3%)	(3½%)	(4%)	(4½%)	(8%)	(8%)	(9%)
Carried forward.....	+17,835	-3,482	-2,702	-301	+21,895	-10,761	+8,231

* 7½ per cent.

With the exception of 1919 the past year's profits are the highest recorded. Debenture interest absorbs £22,500, and interest on the 6 per cent. five-year notes £18,000. The dividend on the cumulative ordinary shares has been raised from 7 to 7½ per cent., the distribution for the past year being 7½ per cent. The deferred dividend is raised from 8 to 9 per cent., and £28,400 is carried forward. The balance-sheet, an analysis of which will be found in the usual column, shows that the reserve amounts to £500,000, and that the property item, which includes goodwill, trade marks, &c., has been increased by £126,900 to £2,787,450. Creditors show a reduction of £297,800 at £444,700, and stocks are £176,800 lower, £875,778, being taken "at or below cost." Debtors are £73,200 higher, while cash at £72,500 is £12,900 lower. The £300,000 of 6 per cent. notes mature on May 1, 1924, but may be redeemed early at 102½ on six months' notice from the company.

Australia's Trade Balance.—In recent months Australia has returned to an export balance on her overseas trade. The latest figures available, for November and December, are as follows:—

	Imports.	Exports.	Export Balance.
1921.			
November	7,656,363	10,629,169	2,972,806
December	8,809,579	12,004,393	3,195,314

For the calendar year 1919 Australia's export balance was £47,603,583; but this changed to an import excess of £12,949,558 in 1920. This swing of the pendulum continued, and the figures for the twelve months ended June 30, 1921, show an import excess of no less than £31,408,386. Now again, as is shown by the latest trade figures set out above, the pendulum is swinging back. This change of the trade balance in favour of Australia explains the announcement by the Associated Australian Banks in London of a reduction to 3 per cent. in their charges for sight bills on Australia and New Zealand. The re-establishment of an export balance eases the position with regard to remittances, and the reduction in rates mentioned denotes a movement favourable to exporters of goods to the Australian market.

Japanese Trade and Finance.—Cabled advices from Tokyo state that towards the end of January the money market developed great stringency on account of the coincidence of the demand for money for the monthly settlement and for the lunar calendar settlement in the Western provinces. The rate for day-to-day loans rose to 10½ per cent., while the discount rate went to 9½ per cent. In general trade conditions no improvement is reported. The cotton yarn market is weak on the disappearance of demand for the textile districts, the rice market is amply stocked and dull, and the silk yarn market very quiet. The stock markets are uncertain and price movements narrow.

Valuation of Gold Imports and Exports.—The Board of Trade announce that the average values of imports and exports of gold bullion during 1921 have been as follows:—Imports of gold bullion, unrefined, 82s 7d per ounce troy; refined, 108s per ounce troy. Exports of gold bullion, refined, 106s per ounce troy. In Volume II. of the Annual Statement of Trade for 1920 (Cmd. 1504) both the quantities and values of the imports and exports of gold coin and bullion are given in detail, and these

show what is the general practice of record. Imports and exports of all gold, except British coin, are entered at the market value returned by the importers and exporters, who are responsible for the correctness of their entries, and the averages resulting from a comparison of the declared weights and values correspond with sufficient precision to the means of the market quotations to demonstrate that the general practice is, in fact, in accordance with the official regulations.

THE International Labour Office announces that the British Government has nominated Mr Neville Chamberlain, M.P., and Sir Lynden Macassey, K.B.E., K.C., as "Assessors for Labour Cases" for the Permanent Court of International Justice, which has just been inaugurated at the Hague. The representation of Great Britain is now complete, the governing body having already nominated Mr J. H. Thomas, M.P., for the workers, and Sir Alexander Rae Duncan, vice-president of the Shipbuilding Employers' Federation, for the employers.

Oversea Correspondence.

UNITED STATES.—BANKING POSITION STRONGER—BOND MARKET QUIETER—NEW FRENCH ISSUE.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 28.

SINCE the turn of the year the general banking position in this country has shown further marked improvement. For the entire Federal Reserve system the ratio of reserve to note and deposit liabilities now stands at 77.2 per cent., the highest point reached since the United States entered the war against Germany. The New York Federal Reserve Bank's ratio this week, namely, 89.6 per cent., is also higher than at any time during that period. The improvement has been due to heavy reductions in outstanding note circulation and in rediscounts, rather than to increases in gold reserve; the latter, in fact, has shown relatively small increases in recent weeks. Note circulation is now \$259,000,000 less than it was at the end of last year, and \$1,650,000,000 less than it was a year ago, while rediscounts have been reduced by \$329,000,000 since the beginning of this year, and are \$906,000,000 below the total at this time in 1921. Notwithstanding that the Federal Reserve banks have greatly strengthened their position in the past few weeks, money rates have continued about as firm as they were a fortnight or so ago. For the shorter periods fixed date funds command 4½ to 5 per cent., and the longer maturities 4½ per cent. Since the beginning of January there have been expectations of a further cut in rediscount rates by the central reserve institutions. While no action in that direction has thus far been taken, it is believed in many quarters that next month will see a more or less general lowering of such rates, which will be followed, if not preceded, by some relaxation in money from present levels.

The fact that greater easiness in money has not developed is considered partly responsible for the lessened activity in the bond market. Investment demand for outstanding bonds is not so broad or vigorous as it was a week or two ago, and the advancing tendency has been checked lately by considerable liquidation after each rise. Demand for new securities also is not quite so brisk, possibly because the market has been flooded with many offerings which it will take time to digest. The recent liquidation is believed to have been largely for the account of mercantile houses and others who have use for funds at present, or who, for income-tax reasons, deferred the taking of profits until after the end of last year. Furthermore, the knowledge that a large amount of additional new issues is likely to be brought out in the near future may have caused many investors to hold off. The present lull in buying is also accounted for in a measure by the fact that the January reinvestment demand has now been pretty well filled. Still another factor, which may become more of an influence in the bond market later on, is the prospect of soldier bonus legislation being enacted by Congress, which contemplates a large new Government

bond issue. Such an offering, it is thought in some quarters, would tend to depress outstanding Government issues, notably the Liberty bonds and Victory notes, much depending, of course, upon the interest rate and terms of any new offering.

One of the largest foreign issues brought out here for some time past consists of \$25,000,000 Department of the Seine 20-year 7 per cent. external gold bonds, which were offered this week by a banking syndicate headed by Kuhn, Loeb and Co. The bonds, which are the direct general obligation of the Department, are redeemable as a whole upon 90 days' notice at the option of the Department, on January 1, 1932, at 105 per cent. and accrued interest, or on January 1st of any subsequent year at 105 per cent., less ½ per cent. per annum for each year after 1932. They were offered for subscription at 90½ per cent. and accrued interest to date of delivery, to yield 7.95 per cent. to maturity; if redeemed before maturity the yield increases gradually to a maximum of 8½ per cent., if redeemed on January 1, 1932, which is the first redemption date. It is understood that this offering has met with a very good response from investors.

FRANCE.—BANQUE INDUSTRIELLE DE CHINE—DEVASTATION STATISTICS—WIESBADEN AGREEMENT—COMMERCIAL TREATY WITH POLAND—PRIVATE BANK SUSPENSION—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, February 8.

Discussion by the Finance Commission of the Senate of the Bill authorising the Government to draw up proposals for re-floating the Banque Industrielle de Chine (which measure has already been passed by the Chamber), shows that the Upper House is by no means of the same opinion as the Chamber on this question. The Chamber, in principle, has agreed that the moribund bank should be re-floating, and that the balance of the Boxer indemnity,

due by the Chinese Government to France, should be used to reimburse depositors, and thereby help to restore French influence in the Far East. The Senate, on the other hand, judging from the opinion of its Finance Commission, takes the view that it would be useless to place the bank on its feet again, and that all that should be done is to utilise the balance of the indemnity, so far as it will go, for the purpose of recouping the money lost by the depositors, beginning with the smallest of them. It is understood that the available money, if used in this way, will be insufficient to repay more than about 50 per cent. of those who had deposits in the bank. The significance of this conflict of opinion between the two Houses is that in the Senate the Radical Socialist Party commands a majority, which may possibly be utilised against the Poincaré Ministry. The Senate, in a word, is Radical, while the Chamber is Nationalist. The Radical and Radical Socialist (or Socialistic Radical) Parties, which form the Left of the Chamber, refused M. Poincaré's offer to occupy any Ministerial post in the new Cabinet, and intimated that, although they would give him general support on questions of foreign policy, they would follow their own line in internal problems. It is unnecessary to emphasise what serious repercussions such a situation as now exists in the two Chambers may have upon French foreign policy, and consequently upon the whole European economic and political situation.

In the course of the discussion of the Budget for the devastated regions (the special budget of expenditure recoverable from Germany) which is now proceeding in the Chamber, M. Loucheur has this week given some interesting figures in regard to the amount of damage done to industrial property by the war. The total amount of damage of an industrial character, the former Minister for the Liberated Regions stated, was 6,500,000,000f, estimated according to the values of 1914. If an average coefficient of from 3.5 to 4 is applied, for the purpose of arriving at present-day values, it would be found that between 24,000,000,000f and 25,000,000,000f will be required to make good the losses incurred. Of this amount the sum of 11,200,000,000f, or 45 per cent. of the whole, had been advanced to sufferers, 6,000,000,000f being in the form of payments in kind through the intermediary of the Central Purchasing Agency (Comptoir Central d'Achats). These figures, it should be explained, do not include damage done to mining property or railways.

Striking figures indicating the slow but steady progress of the work of restoring the devastated areas were given during the same debate by M. Reibel, the new Minister for Reparations. The number of houses that had been destroyed at the date of the Armistice was 280,147, while 422,736 had been more or less seriously damaged. Of the latter, 278,834 had been repaired by January 1, 1921, and 335,479 by January 1, 1922. Of the 53,976 kilometres of road that had been destroyed, 27,740 had been reconstructed by January 1, 1921, and 31,965 by October 1st last. Of the 4,677 bridges, embankments, &c., destroyed, 2,653 had been reconstructed on January 1, 1921, and 3,175 on October 1st last. The 1,112 kilometres of waterways destroyed have now all been reconstituted. Of the 4,484 industrial establishments (employing a minimum of 20 persons) that were destroyed, 3,543, or 79 per cent., were again under exploitation on January 1, 1921, and on November 1st last 3,986, or over 80 per cent., the persons occupied in them numbering 423,744, or one-half of the number employed before the war. Agricultural land to the extent of 3,337,000 hectares was rendered uncultivable by the war, and of this amount 2,900,593 hectares had been reconstituted on January 1st this year, while 1,500,000 hectares were again under culture.

The question of the Wiesbaden agreements is again exciting interest, but these agreements between France and Germany for the payment of a proportion of the indemnity in kind cannot, of course, come into operation until they have been formally ratified by the Chamber, and that ratification is apparently, as matters stand at present, subject to their acceptance by the Allies as a whole. French opinion in general (with the exception, perhaps, of a section of the commercial world) is distinctly in favour of these agreements being applied. It is realised that if Germany does not, or cannot, pay in cash, it will be in

every way advisable for France to accept payment in kind. Whether or no part of this payment will be in the form of labour is not yet clear. The question has arisen more than once in the Chamber, without any definite solution being suggested. At present a great deal of unskilled labour, principally for agricultural work, is being imported into France from Belgium, Italy, Czechoslovakia and Poland, and circumstances are such that it is evident this policy must continue. France also suffers from a serious shortage of skilled labour, however, and this shortage will become acute when financial and other considerations render it possible for the work of reconstitution to be taken up on a larger scale. M. Reibel expressed the opinion in the Chamber a day or two ago, when questioned on the matter, that German labour ought to be accepted, at any rate, in the more deserted areas and in places where no objection was raised by the inhabitants. In any case, he said, the wages of these men would not be paid by France, and would be charged to the Special Budget.

The first practical step in the direction of new commercial agreements was taken by the French Government on Monday, when a commercial convention was signed in Paris between this country and Poland. It will be remembered that all existing commercial treaties were denounced by the French and other Governments as the result of the war, leaving the ground clear for entirely fresh accords, of which the one between France and Poland is the first to reach completion. This agreement will come into operation, it is announced by the French Minister of Commerce, a week after its ratification by the Polish Parliament is notified to the French Government. Under the new convention France obtains the benefit of a most-favoured-nation clause, and the minimum tariff for her exports to Poland. Similar benefits are given to this country in regard to certain products not of direct French origin, such as colonial foodstuffs, that are exported to Poland through French or Polish firms. A large number of French products, including wines, liqueurs, jewellery, machinery, yarns and piece goods, will be admitted to Poland at reduced rates, which in some cases amount to 50 per cent. in favour of French exporters. On the other hand, a certain number of Polish products (notably agricultural produce and mineral oils and their derivatives) benefit by the French minimum tariff, while some 40 categories of goods included in List C of the French tariff will be admitted at rates that are fixed between the minimum and the general tariff, the percentage of difference varying from 25 per cent. to 75 per cent. The agreement provides further for the creation of certificates of origin, or of verification, designed to ensure to the products of the two countries the exclusive benefits of the new accord. Other clauses concern commercial travellers, emigration, and goods in transit through Poland.

The suspension of payment by the private bank known officially as the bank of M. Claude Lafontaine, and unofficially as the Comptoir de Charleville, has been received in Paris not with consternation, but with very deep regret. For months past it has been known that the bank in question was in a difficult situation, partly because of loans that had been extended to customers and partly because of the very difficult financial and industrial position that exists here to-day. The fall of the bank is deplored, particularly because it means the disappearance of one more link with the financial history of France. Claude Lafontaine's bank was established some 75 years ago, and is one of the oldest existing private banks here. It has been regarded in financial circles for some months past that a catastrophe was inevitable, but the actual immediate closure of the bank was due, so far as I can learn, from the action of a single depositor in withdrawing a large balance. The disappearance of Claude Lafontaine's bank, if it does disappear, deserves attention as indicating a further encroachment of joint-stock company banking, and on sentimental grounds provokes regret, because Lafontaine's bank had all the charm and cachet of a counting-house of old world times as we conceive the counting-houses to have been, looking at them with the kindly perspective of a hundred years of time. The deficit is stated to amount to 15 million francs, but there is a hope that when assets are liquidated the depositors may be paid in full.

The Bourse, as was to be expected this week, has been poorly sustained, owing fundamentally to the high rate of interest paid on Government securities. French Three per cents. have dropped from 56.65 to 56.50, while the war stock has been weaker owing to there being no special reason for the maintenance of the artificial demand. Foreign Government stock has not been in great demand and the tendency has been backwards, the exception being in Russians that have shown more vitality, and that on an irregular market ended better than they started, the Consolidated rising from 23.35 to 23.75 and others moving correspondingly. Banks have been dull without, however, there being any very marked general decline, Union Parisienne falling from 680 to fluctuate between 640 and 653, Crédit Mobilier dropping from 397 to 390 and Crédit Foncier recovering from 760 to 770. Transports are dull, P.L.M. receding from 821 to 812, Nord from 914 to 909, and Orléans from 105 to 891. Shipping is equally depressed, Chargeurs Réunis standing at 445, Transatlantique at 190, and Messageries at 192. Suez is also back to 5,800 as against 5,820. Electrical undertakings have followed the general fashion, Thomson having started at 744 to fluctuate between 728 and 744, and Compagnie Générale d'Electricité having begun at 820 to conclude between 784 and 797.

AUSTRALIA.—COMMONWEALTH AND STATE FINANCES—WOOL AND WHEAT.

(FROM OUR CORRESPONDENT.)

MELBOURNE, December 31.

The public accounts of the Commonwealth and the six States for the year ended June 30, 1921, have been issued during the last few months. Owing to transactions between the Commonwealth and the States there are some duplications of figures, but setting this aside the net result may be shown as follows:—

	Revenue.	Ordinary Expenditure.	Loan Expenditure.	Debt, June 30, 1921.
	£	£	£	£
New South Wales	34,031,396	34,476,892	16,916,441	168,577,927
Victoria	18,522,534	18,522,534	11,099,694	97,317,830
Queensland	12,601,031	12,591,201	4,251,248	80,382,051
South Australia	7,151,366	7,543,640	4,238,520	48,556,552
West Australia	6,789,565	7,476,290	2,586,404	49,039,667
Tasmania	2,105,448	2,189,156	2,717,452	18,776,305
Six States	81,201,340	82,799,713	41,809,759	462,650,332
Commonwealth	57,766,195	56,872,674	12,326,371	401,720,024
Total	138,967,535	139,672,387	54,136,130	864,370,356

* Including expenditure under Surplus Revenue Act.
† Deducting £56,121,076 for duplications, the net total debt is £808,249,280.

The ordinary expenditure for 1920-21 charged against revenue, £139,672,387, compares with £114,676,033 in 1919-20 and £96,580,742 in 1918-19, the growth being due to higher wages and expenses in the railways and other branches of the public services, and to the increase in the annual interest on public debts (owing partly to fresh borrowings and partly to the higher rates of interest at which loans had to be issued for the redemption of older loans at relatively low rates as the latter mature), in addition to matters of Government policy involving expenditure. The loan expenditure, £54,136,130, includes £8,448,459 for war purposes by the Commonwealth in addition to a considerable amount for repatriation purposes, the disbursement of which is in the hands of the States out of loans raised by the Commonwealth.

Out of the total revenue of £138,967,535 taxation amounts to £70,318,921, against £55,328,307 for 1919-20 and £44,305,501 for 1918-19. The estimates for 1921-22 show total revenue for the Commonwealth and States (after allowing for duplications) £139,629,511, and expenditure £143,614,434, the estimated revenue including about 66 millions from taxation.

Exchange on London has recently been somewhat easier, favourable factors being the steady progress of wool sales and exports, the good wheat harvest, and the liberal exports of butter in point of quantity, together with the proceeds of loans issued in London by various

HARRISONS & CROSFIELD, LIMITED

Agents and Secretaries of TEA, RUBBER, and other PRODUCE ESTATES and COMPANIES.

Australian Governments. On the other hand, the value of wheat and butter exports will be much lower than for last season, owing to the decline in prices, whilst the value of frozen meat and metals can only be moderate for some time to come. In addition there has been a tendency for importers to order with more freedom after the restriction necessitated by the over-importation of a year ago, though against this there is the set-off that fresh ordering is at lower prices, so that the aggregate value should not be nearly so heavy in future months as in the first half of 1921.

The production and exports of wool for the 1920-21 season, according to the annual review of Dalgety and Co., Limited, compare with those for the previous season as follows:—

	Production.		Exports.	
	1919-20.	1920-21.	1919-20.	1920-21.
	Bales.	Bales.	Bales.	Bales.
Australia	2,046,912	1,635,086	2,146,345	1,401,565
New Zealand	580,093	520,000	518,933	472,686
	2,626,005	2,155,086	2,665,278	1,874,251

Exports during the 1920-21 season include a considerable quantity previously paid for by the British Government. The quantity sold in Australia during the twelve months was 791,409 bales, and in New Zealand 198,641 bales, together 990,050 bales, at an average of £15 12s 7d per bale. So far as the value of the whole clip is concerned, this average is subject to further realisations made since June 30, 1921. In 1919-20 the average under the British Government purchase was £22 15s 7d per bale. In 1913-14 the average at the Australian and New Zealand sales was £13 4s 11d. After the decline of 410,826 bales in Australian production last season the 1921-22 clip shows a recovery, being estimated by Dalgety and Co. at 1,913,000 bales, or an increase of 278,000 bales.

The Australian wheat harvest is expected to yield about 130,000,000 bushels, which will leave an exportable surplus of about 90,000,000 bushels after providing for local requirements. Purchases of new crop wheat for January shipment to India have been of fair extent, and owing to this reason the market in Australia has not yet settled down to United Kingdom parity. During the past season the exports of wheat from Australia, including flour reduced to the equivalent in wheat, have amounted to 2,885,000 tons, including 2,673,000 tons to Europe, 184,000 tons to India, and smaller quantities to South Africa and the East.

SWITZERLAND.—GOVERNMENT LOAN OVER-SUBSCRIBED—AGRICULTURAL TROUBLES—UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

GENEVA, February 7.

THE 5½ per cent. loan of the Federal Government was a success in so far as instead of the 100 millions asked for no less than 300 millions was subscribed. There is now controversy in the Swiss financial Press as to whether the Federal Government should accept only the sum for which it asked. Those who hold the latter opinion state that there are sufficient public bodies in the country who need to issue loans, and, furthermore, the interest of 5½ per cent. is far too high for the present conditions of the money market. If the Federal Government were to accept only 100 million francs the Stock Exchange quotation of the new loan would immediately rise above par, so that the subsequent loans, especially the loan which the Federal Railways are preparing for April or May, could be issued at the rate of 5 per cent. This argument is very strongly supported by the organs of the Peasants'

Union, which is beginning a campaign against high mortgage rates of interest. A substantial fall in prices of Swiss agricultural products is inevitable, and only a considerable reduction in mortgage interest can compensate the peasants for the sacrifices they must make. These sacrifices are the consequence of the Protectionist system against imports of foreign foodstuffs applied during recent years by the Swiss Government. Under such conditions prices of agricultural land were increased by the artificial maintenance of prices of products. Now the crisis in the Swiss export of cheese and condensed milk has made the Swiss agricultural producer in an indirect way dependent on the fluctuations of the world market, and a collapse in prices is imminent. Therefore the political leaders of the Peasants' League, which is the most important factor in Parliament, are asking for drastic measures for the reduction of mortgage interest.

Unemployment during the month of January was still increasing. Only last week considerable numbers of workmen were dismissed from the chocolate factories. In the cigar industry 28 per cent. of the workers are on short time, and 14 per cent. actually out of work. In the tanning industry one-fifth are on short time, and in boot-making only 50 per cent. are working. The prospects in the cabinet-making trade are very bad. In the silk clothing industry 35.5 per cent. are working short time, and 10 per cent. completely unemployed. In the silk ribbon industry all hands are employed, but in the cotton industry unemployment has slightly increased to 19.2 per cent. The situation in the embroidery industry is so bad that it is practically impossible for the Federal statistician to find shops that are working. In the woollen industry 22 per cent. are on short time as against 28 per cent. last month, and export shows a slight recovery. In the knitting trade 40 per cent. are working short time and 5 per cent. totally unemployed. The straw hat industry, which has important exports, is fully employed, and hopes to keep so at least up to the end of the season, namely, the end of March. There are still 40 per cent. on short time in the paper industry. The legal measures for financial assistance to watch manufacturers have not yet had any effect in reducing the very heavy unemployment.

DENMARK.—THE BANKING SITUATION.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, February 6.

AN example of the difficulties of the financial and economic situation was afforded a few days ago, when one of the main Danish banks, the Copenhagen Diskonto and Revisions Bank, was forced to call a meeting of the heads of the leading banks to consider the question of complete reconstruction. On the other hand, the fact that this arrangement was successfully accomplished is a proof of the presence of important active financial forces in the Danish banking world. The reconstruction of the Diskonto and Revisions Bank was carried through in the course of a single day, the share capital of 48 million kroner being cut down to 22 million kroner. The National Bank have expressed their readiness to take over new shares to the amount of 14 million kroner. In addition to this, the leading banks have agreed to grant a loan of 20 million kroner, at one-half per cent. below the National Bank rate (at present 5½ per cent.), to be repaid in instalments of four million kroner annually. When this arrangement—which means a complete rehabilitation of the Bank—has been approved by the shareholders, the Copenhagen Diskonto and Revisions Bank will possess a share capital of 36 million kroner and a reserve fund of 2 million kroner.

For the sake of comparison, it may be added that at the close of last year the share capital and reserve fund of the Danish Landmands Bank were 100 and 50 million kroner respectively; of the Privat Bank, 60 and 20 million kroner; and of the Handels Bank, 50 and 28 million kroner respectively. In conjunction with the National Bank, the 14 Copenhagen banks showed total assets of roughly four milliard kroner, of which 3.6 milliards fell to the credit of the five leading banks (of which, again, 342 million kroner came from the Diskonto

and Revisions Bank) and 430 millions from the nine other banks. The aggregate deposit accounts of the five main banks at the end of last year amounted to 2,432 million kroner, as compared with 2,729 million kroner a year ago. The pace of this decline slowed down somewhat, however, as the year advanced, the fall from January to July reaching some 218 million kroner, and during the second half of the year barely touching 80 million kroner. The mainstay of the Danish banking world at present is the National Bank. At the close of last year the National Bank was in possession of a gold supply of 228 million kroner—or slightly more than at the close of 1920. At the same time, however, the issue of paper money was considerably reduced, viz., from 557 to 471 million kroner, compared with 156 million kroner in July, 1914.

News is just to hand concerning an important bank fusion which has taken place in Copenhagen. The largest Danish bank, Den Danske Landmandsbank—whose most important figures are mentioned above—has made an agreement to take over the Copenhagen Private Laanebank. For Landmandsbanken this fusion will mean an important extension of its scope of activity. The Laanebank, which has been taken over, was founded in 1854, and is thus the oldest private banking institution in Copenhagen. Its share capital is 12 million kroner, and its total assets 100 million kroner. Two years ago this bank took over the savings bank Danske Arbejderbank. The Landmandsbanken does not intend to increase its share capital.

GREECE.—SERVICE OF THE DEBT—REVENUE INCREASE.

(FROM OUR CORRESPONDENT.)

ATHENS, January 29.

FOR the first 11 months of 1921 the gross receipts of the revenues assigned for the service of that part of the Greek Debt, which is under the control of the International Financial Commission, show the following increases over those for the corresponding period of 1920:—

(In Million Drachmæ.)				
Receipts from—	1920.	1921.	Increase.	
Monopolies.....	35	46	11	
Stamped paper.....	23	23	..	
Tobacco.....	36	45	9	
Customs.....	97	118	21	
Totals.....	191	232	41	

The steady increase in the yield of these revenues is shown in the following table:—

(In Million Drachmæ.)					
	1916.	1917.*	1918.	1919.	1920.
Receipts from—					
Monopolies.....	16	14	13	26	39
Stamped paper.....	10	11	15	19	25
Tobacco.....	14	14	16	30	39
Customs.....	46	27	46	83	106
Totals.....	86	66	90	158	209
Service of the Debt and expenses of the I.F.C. and the Monopolies Co.	51	48	53	63	96
Balance handed to the Greek Govt.	35	18	37	95	113

* Blockade of Greece by the Allies.

Gross receipts for 1921 are estimated at 260 million drachmæ, or an increase of 50 millions, as compared with 1920. Receipts from Customs for the whole year are estimated at about 133 millions, as against 106 millions in 1920. On the other hand, receipts from the same sources in the new territories (not including Thrace) and from Custom houses not controlled by the I.F.C. yielded 80 millions drachmæ for the first 10 months of 1921, while the total yield for the year is put at 100 millions. These revenues constitute an income for the Government free of any lien. During the current year Custom duties will amount to about 180 millions. If, however, the ratio of gold to the paper drachma—now fixed as low as 1 to 2.50—should be raised, the revenue from Customs would increase accordingly. The system of levying Custom duties in gold on all imported goods has been adopted in order to secure the service of the debt in gold,

and annual receipts from Customs and payments for the service of the debt in gold are roughly equal. If we deduct from the gross receipts from the assigned revenues for 1921 the yield of Customs for the same period, and reduce further the balance by the amount required for the service of the debt in drachmæ effected by the I.C.F. (some 7 million dr), there remains a sum of 120 millions, which, together with the estimated yield of the revenues above referred to (which are free of any lien), make a total of 220 million drachmæ available for the service of new loans. This figure may even be considerably higher for the current year.

Letters to the Editor.

"THE BANKER'S DIAGNOSIS."

TO THE EDITOR OF THE ECONOMIST.

SIR,—In connection with the important leader in your issue of 28th instant, I ask you to allow me to point out (1) that not one of our eminent bankers has alluded to the fall in the price of silver from 89d to 39d as a contributing cause of the trade depression which immediately followed it and has continued ever since.

From the time the two metals—gold and silver—were harnessed together when Sir Isaac Newton was Master of the Mint, to the time when they were unharnessed by Robert Lowe's Currency Act of the year 1870, the two metals ran together as one joint standard of value. During that period the Mint valuation prevented any greater fluctuations between gold and silver exchanges than between two gold exchanges. It is the unharnessing of the two metals that has left each one free to take its own course to the confusion of international trade.

In the year 1919 the world was hungry for manufactures which we were ready to supply, and there was booming prosperity until the silver exchanges fell and created chaos in trade. It is now being said that our merchants wildly shipped more goods than could find customers; but the fact is that the disorganisation of the currency threw importers and exporters in the Far East into a chaotic tangle, as much to their detriment as to that of our merchants; and it is clear to me that the fall in the price of silver was the overmastering cause of the trade depression which immediately followed it. Business negotiation was blocked, and our manufacturers and merchants have not yet recovered from their disasters.

(2) The first step now requisite is to coin silver at our Mint as unlimited legal tender at the old ratio of 15½ to 1. The Mint would make large profits at first, which should be applied to redemption of Treasury notes. If the old rates were restored before all the notes were redeemed a loan would be required to redeem the balance; and if silver did not come to the Mint to fill the currency vacuum, gold would do so and make the joint standard a working standard not only for ourselves, but for the trade of the world.

(3) The joint standard is necessary. "The exploded fallacy of forty years ago has become the economic necessity of to-day."* It is wanted to prevent recurrence of disaster; but it cannot remove existing difficulties. The £450 million per annum for fifty years, imposed on us for interest and charges on our National Debt, is more than the industrial enterprise of the country can stand without a gradual flitting of capital to escape it. The moral is: distribute that debt *pro rata* among us. If the joint standard does not prevent any unfair enhancement in the weight of the debt at the old rates it will have to be altered. A not improbable demand in Asia might make a ratio of 10 to 1 expedient.

(4) To understand our position since the Armistice, it must be borne in mind that during the war the Government obtained resources chiefly from moneylenders looking for an investment; so that financing was smooth. The money has been paid away. It is irretrievably spent. The method above indicated of distributing the debt equally *pro rata* among us, to let each man manage his share and write it off at his convenience, is the sane business

* The Times, July 15th, and The Times Trade Supplement, July 16, 1921.

ness way of dealing with bad debt. But, instead of that, the Government two years ago proclaimed their programme of getting all the spent money out of our pockets again by taxation of incomes—by forced *instant* levies on income—which are so heavy as to be crushing the spirit of enterprise in the country. Again I say—and I shall continue to repeat the assertion—that is mad finance. It is a deliberate creation of fifty years of financial trouble which has no reasonable *raison d'être*. If any banker managed his accounts in such a manner he would soon find himself liable to twenty years of penal servitude; and, in fact, the magnitude of the iniquity is greater in our national accounts than in those of any banker.—I am, Sir, your obedient servant,

WM. LEIGHTON JORDAN.

Royal Societies Club, January 31st, 1922.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Mason seeks to disprove your statement that a fall in prices adds to the burden of debt, on the grounds that low prices stimulate production, and that, with improved credit, the rate of interest will fall. It is difficult to imagine that the absolute level of prices can have any influence whatever on production, for it makes no difference to the quantities of different articles which exchange for one another. We know by bitter experience that rapidly falling prices check production, so that the creditor class takes a larger absolute amount out of a diminished flow of goods. The rate of interest will come down as capital accumulates, whatever the price level may be.

It is becoming recognised that the need of trade is a reliable standard of value. There is no such thing as a general rise or fall in values; if coal rises in value as compared with wheat, wheat falls as compared with coal. Therefore a reliable money should be such that the mean of the ratios of change of the prices of all important commodities (weighted according to importance), from any one time to any other, should always be 1.

The problem which faces the world to-day is to provide each country with a reliable unit of value, and to fix the ratios of exchange between these units. The piecemeal re-adoption of the gold standard without any co-ordination would increase the monetary demand for gold on a falling gold production, and would bring about a fall in prices like that produced by similar conditions in the 'seventies.

The wide movements in the purchasing power of gold since 1914 show the degree in which this is affected by monetary policy. The value of gold measured in goods depends upon the supply, and upon the demand (a) for the arts, and (b) for money. The demand for monetary purposes depends on the volume of trade, and also upon the degree in which the use of gold is economised by the use of fiduciary money and cheques. Suppose for a moment the world was one unit, the monetary demand for gold could be controlled by regulating the proportion of fiduciary money, bank deposits, &c., to gold. Thus the price level could be controlled, within a lower limit at which the dwindling output of gold from the mines would be absorbed by industry, and an upper limit at which all fiduciary money would have been withdrawn from circulation. That is, the value of gold could be regulated within far wider limits than is actually necessary. Any one country under a gold standard with a free gold market cannot have a different price level from other gold standard countries (except so far as the movement of goods is obstructed by tariffs). Therefore Professor Gustav Cassel's proposal to regulate the monetary demand for gold by international agreement seems to offer the only satisfactory solution of the monetary problem, if we are not yet advanced enough to drop the gold standard altogether.

The necessary steps would be:

(1) To fix the purchasing power of gold to be maintained throughout the world by regulating the circulation of fiduciary and bank currency, by the guidance of price index numbers calculated on a uniform plan.

(2) The fixing of gold equivalents of each national currency unit, and the general adoption of a free market in gold.

(3) The loan of gold by richer to poorer countries on condition that budgets were balanced. Thus the richer countries would have to be content with a smaller percentage of gold reserves, in order to give the poorer countries gold reserves without forcing down the price level.

The great commercial need of steady exchanges with Asiatic countries tempts me to carry the speculation further, and to suggest that the possibility of a general adoption of a joint standard should be explored. Probably the purchasing power of both silver and gold could be regulated internationally. The snag seems to be that if silver were much over-valued a great strain would be imposed on Governments and banks in contracting fiduciary currency in order to counteract the increasing circulation of silver certificates.—Your obedient servant,
C. CRAIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I agree with your correspondent, Mr D. M. Mason, that the consideration that the burden of the National Debt as expressed in goods would be thereby somewhat increased is not a sufficient reason against deflation. On the question of fairness, I would ask what proportion of the total indebtedness was borrowed in a depreciated currency? Inflation of currency and rise in prices did not become marked till a fairly late period in the war. Even of the 1917 and later loans a large proportion was conversion of earlier loans, or even of Consols, and this applies to post-war borrowings. Can it really be contended that justice requires that, lest the lenders of the limited amount of new money lent after, say, 1916 should get back, in effect, a little more than they advanced, all holders of Consols and other pre-war securities, all pre-war debenture stockholders, mortgagees, and owners of ground rents are to continue indefinitely to be robbed? See Mill's article on the currency juggle dealing with the similar situation that arose after the Napoleonic wars. And what is the alternative? Are we ever to get back to the gold standard or are we not?

As Mr Mason points out, possessors of pre-war securities or other fixed incomes do not ask to be secured against any and every rise on pre-war prices. All they ask is to be restored against rise of prices due to Government tampering, as expressed in the dollar exchange or the premium on gold.—I am, &c.,

A. A. MITCHELL.

7 Huntly gardens, Glasgow, February 7th, 1922.

[The answer to our correspondent's enquiry is of some interest in this discussion, and we therefore set out the net increase in the National Debt in each financial year since the outbreak of war, and place beside it the variation in prices as shown by our Index Number:—

Debt.	Index	Debt.	Index
In Million £.	No.	In Million £.	No.
1914	710 .. 100	1917-18	+ 1,499 .. 220
Aug. '14 to Mar. '15 ..	390 .. 113	1918-19	+ 1,344 .. 237
1915-16	519 .. 139	1919-20	+ 549 .. 270
1916-17	+ 1,623 .. 184	1920-21	- 216 .. 272

—Ep., *Economist*.]

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Wilson and Mr Mason, who speaks for the Sound Currency Association, both look at only one side of the currency question, the effect on imports. They overlook that our exports are just as much affected as our imports, but in an adverse sense. The improvement in the value of the pound sterling certainly cheapens our imports, and enables us to that extent to export more cheaply. But unfortunately it does not reduce our war-borrowings; on the contrary, as the creditors of these huge liabilities can claim a larger proportion of the national production, the effect of the rise in the pound sterling is to make it more difficult than ever for our merchants and manufacturers to compete with America. Our national debt now amounts to £7,700 millions, and we have to reserve nearly £350 millions per annum for the service of that debt, plus £100 millions for pensions, plus £100 millions for out-of-work doles, out of a national income which, according to Mr Crammond, was no more

than £2,400 millions in 1913, and which to-day he estimates to be only 65 per cent. of this amount, although at present values it would work out at £2,700 to £2,800 millions.

It is evident that industry cannot carry the burden of such a payment on a gold basis, and, in truth, it cannot even carry the modified burden of to-day with the sovereign at 18s. This is proved by the extraordinary decline in our production and by the excessive amount of unemployment. In terms of 1913 values we exported only half the amount in 1921 that we exported in 1913. Even if we cut down wages to pre-war figures, industry would be unable to face the burden, for the simple reason that we cannot get a quart out of a pint pot, and the larger the proportion of the national production that is reserved for the service of the National Debt, the worse it will be for trade and employment.

A wealthy nation can set aside its profits from industry to pay its debts, and can thus improve the value of the currency, in the same sense that a wealthy individual can improve his credit by this means. But this can only be done out of earning power, and the first consideration must be to get the industries of Great Britain into such a condition of activity that a surplus will be available for the payment of debt. Monetary deflation is quite ineffective when there is no reduction in the national liabilities, which are the real cause of inflation. This is proved by the fact that the currency and bank deposits show very little shrinkage, although values have fallen 54 per cent. since 1920. A further effort to write up our liabilities to a higher value in terms of commodities at a time when everyone is groaning under the excessive burden of taxation might surely be postponed to a more seasonable time, especially as the vast bulk of these liabilities was borrowed in a currency of much lower value than we have to-day.—Yours faithfully,

FREDERICK WIGGLESWORTH.

CHINA'S MINERAL POSSIBILITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of the 4th you have an article under the above heading, which gives an exceedingly optimistic account of the position. I have spent years in China and have come in touch with a great many Western and Chinese business men, engineers, &c., and I am afraid that the figures and estimates supplied will not find unanimous approval. With regard to Chinese mineral possibilities there are optimists and pessimists. All those who have acquired concessions give glowing accounts as to the mineral wealth of the country, while all those who wish to prevent the exploitation of minerals and those who have not succeeded in obtaining the concessions which they have sought tell us that China's mineral possibilities have been grossly exaggerated. Many eminent Chinese are afraid that the working of their mines will lead to the economic and political enslavement of the country. Hence patriotic Chinese administrators, politicians, and private men will proclaim that China's mineral wealth exists chiefly in the imagination of concession hunters. It is difficult to form even a vague estimate as to China's mineral riches. Iron, copper, petroleum, &c., have been produced in considerable quantities for thousands of years. However, the ill-constructed workings have fallen in or have become water-logged. Hence scientific exploration is difficult. Besides, superstition and the fear of foreign penetration have largely prevented the opening of the ground. However, both European and Chinese geologists who have no axe to grind are convinced that China's mineral wealth is gigantic. The mere fact that coal is found in every part of the country is of the very greatest importance, especially as Chinese coal is of the highest quality.

Towards the end of the article it is urged that the time calls for the co-operation of English and American business men on the basis of equality, and partnerships between English and Chinese business men are recommended. I have before me the second volume of the Commercial Handbook of China, published by the United States Department of Commerce in 1920. Under

the heading "Suggestions to American Manufacturers" I read the following:—

"If there is to be international co-operation in China let that co-operation be of the most natural character, a co-operation between American merchants and those of the country in which they seek to do business. The Chinese welcome such co-operation.....No people would be as welcome to the Chinese in co-operative enterprise as Americans. There are numerous industrial development opportunities of a very inviting character which offer splendid inducements to American capital in conjunction with Chinese participation. The opportunities in manufacturing enterprises are particularly inviting."

Further on, under the heading "Methods of Strengthening American Position," it is urged: "Joint Chinese-American enterprise in China should be encouraged."

Not only the American representatives in China, but the representatives of many other nations, have urged the co-operation of Europeans and Chinese. A great deal has already been done on these lines, but far more may still be done. I trust that English business men will read the signs of the times correctly, and that they will not fail to work hand in hand with the Chinese. Otherwise a great deal of English business may be lost to those nations who are willing to work in partnership with the keen but fair-minded business men of the East.—I am, Sir, your obedient servant,

L. E. HAYNES,

Secretary, the Sino-British Trade Association.

Books and Publications.

THE STRATEGY OF OIL.

"Oil: Its Influence on Politics." By Francis Delaisi. Translated from the French by C. Leonard Leese. The Labour Publishing Company, and George Allen and Unwin, Limited. 1922.

ALTHOUGH it is nearly eighteen months since M. Delaisi's "Le Pétrole" was published in Paris in *Le Producteur*—and his subject is one on which one can quickly get out of date—we commend this translation to our readers. Written for Frenchmen with typically French clarity of statement, interspersed with reflections drawn from a realistic and at times even cynical philosophy, M. Delaisi has given in very short compass a survey of the expansion and consolidation since the war of British oil interests, the awakening of America to the possibility of finding herself shut out from new fields when her own resources begin to dwindle in the near future, and the part which France played between the two great parties in the drama. Although a few of the chief documents are appended, it would be wise to wait for a more authentic and complete history of these important events before passing judgment; but in the meantime this book is an illuminating example of the attitude of a brilliant Frenchman towards current commercial politics.

Of his own country his complaint is that her leaders have not guided the country in the direction of industrial development, but have always been content with the traditional policy of supplying the capital and leaving other nations to take the responsibility. He complains that at San Remo, when France, instead of taking advantage of Anglo-American rivalry to build up an independent oil group of her own, went into partnership with Great Britain, she suffered great industrial defeat. For bankers the compact offered lucrative commissions, for stock-brokers the chance of profitable speculation, and for the middle classes the opportunity of investment in the high-yielding shares of the British trust. "But who among those in high places gives a thought to our workshops and our manufacturers?.....it is a pernicious and often denounced policy which by the divorce of banking and industry turns aside the nation's capital from national enterprise.....In this important matter of oil they have followed the line of least resistance: an association of investors and men of action in which the latter should have the work and the risks, and also the power; the former a modest profit without trouble or exertion." This indictment is completed by a vigorous exposure of the anti-social results of

the tariff which protects the home market of the French oil-distributing companies.

To point his moral the author throws into sharp contrast the policy of Great Britain, which in a few short months created what he calls an "oil empire." "Ten years ago France and Great Britain were in exactly the same position as regards petroleum. Each had a few millions invested in distant enterprises.....Suddenly it was noticed that a technical invention, the introduction of oil fuel in the furnaces of ships, was about to give the United States the power to make all other nations its tributaries. At once a few British business men, technical experts, and diplomatists joined forces. They decided to wrest from America the mastery of this new force. Why? To gain money or honours? No! Sir Marcus Samuel and Lord Cowdray count their wealth in millions; Lord Curzon is at the height of his diplomatic career; Sir John Cadman still remains a University professor.....But in Britain, as in America, there is a tradition that a successful business man has obligations towards the society in which he has amassed his millions. He must make a personal contribution to its greatness.....The Empire is an undertaking whose prosperity and development he wishes to ensure, even though he reaps no personal benefit therefrom. Beyond a certain degree of wealth money is for him not an end, but a means.....Very probably the Lord Cowdrays and Lord Curzons are not animated by love of humanity, or even by love of country. These same leaders who hazard their repose or their fortunes for an impersonal dream of greatness are capable of allowing the men who drive their machines or navigate their ships to rot of tuberculosis or alcoholism in the slums of Liverpool and Glasgow. To ensure success to their vast designs they are capable of fomenting revolutions in Mexico or sowing civil war in Asia. From this point of view their imperialism is a universal danger. But since it is neither cowardly nor purely egotistic, it does not lack a certain greatness. And though their efforts may cause widespread harm, they do, at least, tend to develop to the utmost an economic equipment which may be turned one day to the profit of the masses of mankind.

"The French business man does not understand this kind of idealism. As soon as he has reached a position of sufficient importance in his own industry he has only one preoccupation: to come to an understanding with his colleagues in order to put an end to all competition in the home market (that is the only kind of association he is able to conceive), then to obtain from the Government a protective tariff so that he may be free of all foreign competition.....At the bottom of his heart he believes that the proper function of the country is to defend his capital. He has no idea that his capital may have duties towards the country."

The general thesis that British commercial expansion is subject to conscious and unified direction ruthless and unswerving in pursuing its objective—which is illustrated by M. Delaisi in other fields of industry—is nearer the truth in the case of oil than in any other direction. But even in this case it is only a part of the truth. The author entirely failed to find among the French or British delegates of the International Chamber of Commerce any sympathy for the American view that "free opportunity should be given to all people to explore for this useful product, and that all Government restrictions be removed, and that Governments, and particularly democratic Governments, should not join in business enterprises, creating privileges by combination or otherwise to their own citizens." But if our author had looked more deeply he would have seen that this point of view is an essential ingredient in British psychology, and has not only coloured the subsequent history of the oil question, but has been a governing influence of British policy at the Washington Conference.

PRECEDENTS FOR DISARMAMENT AGREEMENTS.

"A League of Nations." Vol. IV. No. 5. October, 1921. Published bi-monthly by the World Peace Foundation, 40 Mt. Vernon street, Boston, U.S.A. 5 cents per copy; 25 cents per year.

THE importance of the international agreements reached at Washington for restriction of armaments appears to have led many people to overlook the fact that international agreements similar in nature, if not in scope,

have been made before. This little magazine refreshes the short memory of the public by recalling certain precedents that have their place in history. The most important of these precedents, perhaps, is the agreement between Britain and the United States, which has resulted in the maintenance for over 100 years of an unfortified frontier between the latter and Canada. After the war of 1812 the United States wished to withdraw her armed vessels from the Great Lakes for reasons of economy, while Britain proposed to increase her naval strength there in view of possible recurrence of trouble. President Madison therefore instructed Mr Adams, the American Ambassador in London, to discuss the matter with the British Government. Negotiations began with an interview between Mr Adams and Lord Castlereagh in January, 1816. Subsequently discussions were opened between Mr Bagot, British Minister at Washington and Secretary of State, afterwards President, Monroe, and an Anglo-American agreement restricting armaments on the lakes to small police vessels was signed in April, 1817. The agreement was sanctioned by the United States Senate and the Prince Regent, and "for more than a century has in practice precluded war between two neighbours, which have had a fair amount of provocation for friction, and which have the largest continuous boundary line in the world."

An interesting precedent for international naval agreement is provided by the convention for a limitation of fleets between Argentina and Chile, which was reached through ordinary diplomatic channels in a short space of time, and was signed in May, 1902, but was varied before ratification in the autumn of that year. Of land disarmament agreements in which Washington this year was unfortunately unable to achieve results, except in the case of fortifications on Pacific islands—there are some notable instances. In 1894 Great Britain and China in agreeing on the demarcation of the boundaries of Burma and Tibet engaged "neither to construct nor to maintain within 10 English miles from the nearest point of the common frontier.....any fortifications or permanent camps, beyond such posts as are necessary for preserving peace and good order in the frontier districts." Of greater importance is the clause in the Treaty dissolving the union between Sweden and Norway in 1905, which provided for an unfortified neutral zone between the two countries. The Washington agreements are therefore by no means without precedent, but they are apparently unique in that they are the first armament restriction agreements of first-rate importance to proceed from a spectacular international conference.

COMMUNISTIC THEORY AND PRACTICE.

"The Economics of Communism, with Special Reference to Russia's Experiment." By Leo Pasvolksy. (New York) The Macmillan Company. 1921. 12s 6d.

THIS book is of special value inasmuch as the materials upon which it is based are in a large degree the official publications and statistics of the Soviet Government. Mr Pasvolksy does not believe in Communism. He expounds in brief (and not altogether intelligibly) the theory which he understands to lie behind the Russian Soviet system; and illustrates fully how, and with what results, the Unified Economic Plan has been applied to agriculture, to industry, to trade, and to transport. Especially with regard to the organisation of agriculture and the remuneration of labour have the Communists been obliged to make serious departures from principle. Mr Pasvolksy admits that the task of the Soviet leaders has been made very much harder by the frequent invasions of their richest territories by foreign and domestic enemies, and by the fact that even before the Revolution the economic system of Russia was far gone in decay. We gather that he thinks that the Soviet leaders no longer deny the appalling state of Russian conditions, that they are zealously planning for the rebuilding of the country, but that the execution of these plans will in effect involve the surrender of the most fundamental principles of Communism.

Forward rates and special offerings on request

Foreign Branch: 168, Fenchurch Street, E.C.3.

The Kaffir market is hoping for an early settlement of the Transvaal strike, and deduction of dividends from about 15 various shares in the list brought in a little scattered support, the Cape also contributing buying orders in Randfontein and Gedulds. But South Africans are out of favour, and there is nothing of real interest passing in this market. Colombian Minings were a good spot, on the hope of what the company may be able to do when its new plant gets into operation. Another fall in the price of tin depressed shares connected with the metal, and Broken Hills, together with various Indian mining shares, gave way for want of support. Copper shares are also lower on the week.

Orange River Asbestos Mines, Limited.—Incorporated under Isle of Man laws. Authorised capital £100,000, divided into 95,000 10 per cent. participating preference shares of £1 each, of which 25,000, it is stated, have already been allotted.

COMPANY MEETINGS, &c.

THE PEKIN SYNDICATE, LIMITED.

CHAIRMAN ON SYNDICATE'S POSITION AND PROSPECTS.

BANQUE INDUSTRIELLE AND THE SYNDICATE.

RECONSTRUCTION OF THE BOARD.

The ordinary general meeting of the Pekin Syndicate, Limited, was held at the Cannon street Hotel, London, on the 6th inst., Colonel Brinsley J. H. FitzGerald, C.B., presiding.

The assistant secretary (Mr Charles Price) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—It is scarcely necessary for me to tell you that those representing the interests of your company have been passing through a period of tense and extreme anxiety, but I have been fortunate in having with me throughout these negotiations your Agent-General in China, Mr John P. Kenrick, than whom I can assert no company could have a more faithful and loyal officer in their employ, and in connection with these matters it would be unfair if I were to omit to mention the name of M. Mater, our legal adviser in France, who has given us the very greatest assistance.

He then dealt with the accounts, and, continuing, said: It will be in your recollection that at our last meeting, in answer to a shareholder, I stated that the board had no objection whatever to sending a copy of Mr Hassam's report, when received, to all shareholders. When this report was in course of preparation certain events occurred which made it extremely likely that the policy outlined in that report would be materially modified. The report was, therefore, held back. The new policy has actually been adopted, a measure which, in my opinion, will be of very material benefit to the company.

FU CHUNG CORPORATION'S COAL SALES.

Regarding the Fu Chung Corporation, the coal sales effected by them during their financial year ended March 31st last, though only 970,075 tons, as compared with 1,057,197 tons for the corresponding period last year, a decrease of 87,122 tons, can, I think, be considered satisfactory when we take into account the great difficulties with which the corporation have had to contend. The main factors that have delayed the expansion of the coal sales are the famine in China, military disturbances and occupation of the railways, and the shortage of railway coal wagons, the latter difficulty restricting the sales by limiting the transportation of the coal to the corporation's various depôts and marts, which are spread over a wide area.

TIENTSIN WHARF AND GODOWN CO., LIMITED.

With regard to our interest in the Tientsin Wharf and Godown Co., Limited, I am glad to say our purchase of additional shares in this company has been fully justified. Since we obtained control in 1919 the company has made excellent progress, and, to enable the directors to continue their progressive policy, further land adjoining the property has been purchased. The results achieved in respect of the company's financial year ended June 30th last are satisfactory.

After paying for the additional land, writing off depreciation, and placing certain amounts to reserve, there remained a balance available at profit and loss account sufficient to enable the directors of the Tientsin Wharf and Godown Co., Limited, to pay a dividend of 8 per cent. on the shares of the company.

BANQUE INDUSTRIELLE DE CHINE.

Having dealt with these more or less formal matters, I will revert to what you have no doubt realised was in my mind when I began addressing you, and to what is no doubt uppermost in your minds, and that is our position as regards the Banque Industrielle de Chine.

It is perhaps needless for me to remind you that the Banque Industrielle de Chine was formed in 1913. The Pekin Syndicate, together with the Chinese and a French group, were responsible for the formation of this bank. From that time on your company and the bank were linked together by the closest ties, and it became the fixed policy of your company to work in association with the bank. This policy may now be attacked as having been a bad policy, and not perhaps without reason; but it was the policy of your board, and whether some of its members did not quite agree or not makes no difference. The whole board is responsible. All the reports received from time to time were most favourable as regards the bank's business, and to show you how utterly unexpected was any trouble in this quarter, I cannot do better than

quote from our chairman's speech at our meeting of September 13, 1920. He said:—

"The Banque Industrielle de Chine continues to make excellent progress. They have now 22 branches open, including 10 in China, one in Eastern Siberia, one in Japan, three in Indo-China, one in the Straits, three in France, one each in England, Belgium, and America. To give you an idea of the progress made, I cannot do better than quote in round figures from their report on the financial year of 1919. The total of their balance-sheet was:—

	Frs.
On December 31, 1914	98,000,000
" " 1915	100,000,000
" " 1916	162,000,000
" " 1917	247,000,000
" " 1918	380,000,000
" " 1919	1,089,000,000

The current and deposit accounts ran from 124 in 1914, representing 1,148,000f, to 20,000 in 1919, representing 675,000,000f, the bills receivable account from 45,000f in 1914 to 235,000,000f in 1919, advances on goods account from 31,000,000f in 1914 to 282,000,000f in 1919. The reserves and profits carried forward increased from 16,000f in 1914 to 16,000,000f in 1919. The capital of the bank has since been increased to 150,000,000f, the new issue being a great success."

DISQUIETING RUMOURS.

In December of that year some very disquieting rumours reached us, owing to which the board called for a full statement from Mr A. Berthelot, who was our managing director and chairman of the Banque Industrielle. Mr Berthelot confirmed that the banque had found itself in temporary difficulties, but laid the utmost stress on his contention that this had been caused by a combined attack by interested parties, and that these temporary financial difficulties were such as could easily occur in the case of any bank.

He said that the position had been taken over by a group of banks in Paris of the very highest standing, and gave us the names. This I had confirmed through an independent source.

You will have noticed that I did not touch on all this at our last general meeting. I saw no good purpose to be served by doing so, and, on the other hand, I saw the possibility of doing much harm.

There was not the slightest reason to think that with the assistance of such powerful banks, and with the active support of the French Government, the bank would not quickly recover from its difficulties. It is even now hard to understand what may have militated against the successful carrying out of the project, but we are having a most careful scrutiny made into this part of the transaction.

CORRECTION IN THE REPORT.

I want here to correct two words in the directors' report which may easily be misleading, and which, I confess, escaped my notice when I looked over the proof. Page 4, eighth line of last paragraph—"To what extent, if any, the syndicate's financial position will be affected." When the words "if any" were inserted, we had been shown a scheme under which the syndicate should recover all the money on deposit, though repayment of part would have been spread over a period of years. But it has been pointed out that these words are tantamount to an expression of opinion by the board that no money will be lost; if that is so, I wish at once to correct that impression.

PRESENT POSITION.

Now I come to the immediate. As you are no doubt aware, the Banque Industrielle was granted a "règlement transactionnel" on July 25th of last year. Now, a "règlement transactionnel" does not imply bankruptcy, it is more in the nature of a moratorium, and meanwhile negotiations with the French Government have been moving in the right direction. M. Briand obtained a large majority in the Chamber on December 27th in favour of allowing the Government to carry out a scheme which would mean the reconstruction of the bank, and M. Poincaré, head of the new French Government, has since then brought the question of re-establishing French credit in the East before the Chamber in connection with the Banque Industrielle failure, but in a more guarded form, and again a large majority voted in favour of the Government negotiating with the Chinese in order to enable what is due of the

"Boxer" indemnity to be used for that purpose. The Government proposals, when put into concrete form, will have to be again submitted to the Chamber.

SITUATION HOPEFUL.

On the whole, then, I think we may consider the position as regards the bank as fairly hopeful, or rather more hopeful than in July last. I might here mention that I am taking every step personally, through our lawyers and our auditors, that our interests will be safeguarded, and am getting in these negotiations the active support of our French colleagues. We are to all intents in partnership with the Chinese in this matter.

But I prefer to look at the worst side of things, and assume that you lost the whole of the money, either on deposit or invested in the Banque Industrielle, what is going to happen? My answer is—and this answer I make with a due sense of the very serious responsibility which I assume—that we are solvent, and in a perfectly sound position to carry on our legitimate business.

Outside the coalfields we have already obtained concessions which are of value, and negotiations for others are far advanced.

FAILURE OF NEGOTIATIONS WITH EASTERN PIONEER COMPANY.

At our annual general meeting, held on December 17, 1918, the chairman congratulated the shareholders on working arrangements having been made, after protracted negotiations, with the Eastern Pioneer Company, Limited, for dealing with that company's concession in the Szechuan Province of China. This statement was challenged on the following day by those responsible for the administration of the Eastern Pioneer Company's affairs, and although negotiations were renewed some 18 months afterwards, those negotiations came to nothing, and at a subsequent annual meeting it was announced by the chairman that negotiations had been actually broken off. It would be idle to pretend that the failure to come to terms with the Eastern Pioneer Company did not give us disappointment, if not actual annoyance.

AGREEMENT WITH YANG-TSE CORPORATION.

However, many things have happened since then, and during the past 12 months the whole of the interests owned by the Eastern Pioneer Company have been taken over by the Yang-tse Corporation, Limited, and it is with no little gratification that I am now able to announce the successful conclusion of arrangements which will ensure the active co-operation by the Pekin Syndicate and the Yang-tse Corporation in the development, modernisation, and expansion of Chinese industries under some of the rights conferred by the concession lately owned by the Eastern Pioneer Company. The methods by which these very important interests will be turned to account differ materially from those adopted by the administration of the Eastern Pioneer Company. In view of the prominence of Chinese matters in the minds of the most intelligent and far-sighted commercial men throughout the world, and the energy now being devoted, and likely to be devoted, to the expansion of Chinese enterprise during the next decade, we regard the conclusion of these arrangements as most opportune. It is a great satisfaction to me, and it will doubtless be to yourselves, that at last we have an opportunity, working in conjunction with the Chinese, of developing, at any rate, part of the resources of perhaps one of the richest provinces in that wonderful country.

RECONSTRUCTION OF BOARD AND FUTURE POLICY.

Now we come to the future policy and the reconstruction of the board, and with me this has become rather a personal matter, as it is the reason which induced me at the time to remain on the board; for it is scarcely necessary for me to remind you that directors' emoluments, after deduction of income-tax, could not be considered sufficient return for retaining a position on this board, which, it was as clear as daylight, was going to require an endless amount of time and cause an endless amount of worry. Soon after I joined the board, I formed the opinion, rightly or wrongly, that what I looked on as certain obligations by the company to our Foreign Office had not been carried out, and ever since then what I might describe as three-cornered negotiations have been going on between the Foreign Office, the French group, and myself, and you should here remember that the Pekin Syndicate, though an English company, was actually under French management, which was an entirely anomalous position.

CONSTRUCTION OF THE NEW BOARD.

It is needless for me to trouble you with the details of the negotiations. I will merely give you the result which was arrived at last October; and in connection with this, I wish particularly to pay tribute to the assistance received from, and the courtesy shown by, my French colleagues, and also to the support given me by a large number of English shareholders, as represented by Mr Percy Heybourn.

The arrangement arrived at is as follows:—

There are in future to be an equal number of English and French directors; the chairman is to be British, with a casting vote; the managing director is to be British; and there is to be a French official representing the majority of French shareholders.

I consider this arrangement as permanently binding on our company *qua* the Foreign Office, and therefore, also permanently binding as between the English and French shareholders.

I am happy to tell you that the Foreign Office are now satisfied with this arrangement.

This has enabled us to effect economies in administration in Europe and China.

M. Berthelot has already resigned as manager and director, and of the two directors who retire by rotation, Comte G. du Chaylard and M. H. Lejeune, Comte du Chaylard does not offer himself for re-election. Mr Kenrick, our Agent-General, has been appointed manager, and comes up for election as director, and to his name I would propose to add that of Mr Percy F. Heybourn to fill the vacancies on the board created by the retirement of M. Berthelot and Comte du Chaylard.

Mr Barson, in order to enable all English directors to record their vote, and as his absence in China precludes him from doing this, has resigned, but I am happy to say we retain his services in China and his full application to the company's interests, which he has so much at heart.

THE NEW CHAIRMAN.

Then comes the question of a chairman. I might mention that Mr Barson has pressed me on several occasions during the last three years to relieve him of this responsibility, but I do not see my way to accepting this position, even if you were kind enough to invite me to do so. I will certainly carry on temporarily, but, as a matter of fact, negotiations are already on foot to secure you a chairman, who, from a banking point of view, might be of immense assistance to your company.

Close association with one or other of the powerful banks is most desirable, as from time to time we shall require financing for the carrying out of the work offered to us under Government concessions, but for our ordinary requirements I am glad to say we are quite independent.

FUTURE PROSPECTS.

Ladies and Gentlemen,—I hope you will be satisfied from what you will hear that the prospects of increased revenue from the collieries are excellent, and when the time is opportune, personally, I am confident we can use the excellent organisation of the Fu Chung Corporation to much greater extent—half the capital being held by us and half by the Chinese—and they are well established for internal trading in a great many centres north of the Yangtse River.

Some interesting figures have been given lately about the enormous possibilities of trade in China. I see no reason why working in close conjunction with our Chinese friends we should not get our full share of any favourable development. We congratulate ourselves on our relations with the Chinese, and we trust sincerely that they have the same feelings towards us.

With the goodwill of the Chinese, the support of our Foreign Office, and, I trust, also that of the French Government, to whom we are prepared to give our loyal support in their effort to re-establish French credit in the East, and this we can do by assisting in every way the reconstruction of the Banque Industrielle, I see no reason why we should have to encounter such troublous times again.

Before closing, I would like to remind you of the services of Mr R. R. Brown, resident engineer at the collieries, and of Mr E. W. Fitchford, general manager of the Fu Chung Corporation, and their staffs, both European and Chinese, whose loyal devotion to the interests of your company deserve your sincere thanks. I will now call on Mr Kenrick to address the meeting.

Mr John P. Kenrick: As the position at the collieries is fully described in Mr Hassam's report, there is no necessity for me to go over the ground again; therefore I will, with your permission, confine my remarks to the reasons for the change of policy which has recently been adopted to the general situation and to the prospects for the immediate future.

With regard to the first, it will be necessary to give a brief outline of our methods of disposing of the coal. You will no doubt remember that, under the terms of the agreement of May, 1915, the Fu Chung Corporation was formed to open markets and sell the coal produced by the two concerns—the Chung Yuan Company, and ourselves—and, to all intents and purposes, act as a sales agency. This corporation, which is managed by a board comprising three representatives of the syndicate and three of the Chung Yuan Company, requisitions the coal it requires from the two companies in agreed proportions, and takes delivery of it at the pits at prices fixed by the two companies. The corporation's sales may be divided into two main divisions—land sales and rail sales. The former consists of coal sold at the pits to consumers and small dealers in the district, and the latter, which is the far greater proportion, is conveyed by rail to the numerous depôts and sub-agencies which have been established by the corporation at every available point along the railways and navigable water-

ways in the provinces of Honan, Hupeh, Kiangsi, Anhui, and parts of Chihli and Shantung, where it is sold to the consumer and small retailer at prices fixed by the corporation, which vary according to the cost of transport, local conditions, and other considerations. In addition to these interior sub-agencies, the corporation has established depots at Hankow, Shanghai, Tientsin, and other centres, from which a considerable business in the better-class grades of coal is done.

The land sales, which consist entirely of dust and inferior grades of mixed coal, are limited by the distance the coal can be carried by cart or barrow, which is not very great, but now that the independent native pits that have been operating in the district in contravention of the terms of the agreement have been stopped, the whole of the trade will pass to the corporation, and although it is not a very remunerative one, the increased tonnage that will be disposed of by the elimination of the competition will be beneficial to the mines, inasmuch as it will necessitate a corresponding increase in the output, and consequently a reduction in the cost of production.

QUESTION OF TRANSPORT.

On the other hand, the rail sales, which include practically the whole of our production of the better-class grades, are limited only to the ability of the railways to haul the coal from the pits to the depots and sub-agencies, for there undoubtedly is a very much larger market awaiting it than we have as yet been able to tap, not only in the interior, but also at Hankow, Shanghai, and along the Yangtze River between those points, and I am quite confident that, in addition, were we able to guarantee delivery of regular supplies, we could secure a large coast and overseas trade at remunerative rates.

So long, however, as the present unsettled conditions in the country, the frequent interference with the railways by the military of one political faction or another, and shortage of rolling stock on all the lines—conditions which have very seriously impeded the commercial development of the country practically ever since the establishment of the Republic—are permitted to continue, I am afraid we cannot look for any appreciable expansion in the sales, at any rate not an expansion that would justify the retention of the collieries on the production basis they had reached, and therefore it was considered advisable to adjust the position to meet those conditions by suspending the operations at Jameisen. Fortunately the advanced stage of the developments at Li-Feng enabled us to do this with considerable advantage, for although the suspension of the operations at Jameisen must necessarily result in the loss of certain small areas of unworked coal by the permanent closing down of our No. 4 pit, and the lying idle for a time of a large part of our winding and other equipment, the net gain will be very great, for not only do we effect a considerable saving by the stoppage of the pumping operations, but, by producing all our requirements from the Li-Feng area, we obtain a higher-priced coal at a lower cost. Therefore, provided there is no greater disturbance in the economic conditions of the country than has occurred during the last 20 years, the collieries, even under the present restrictions on transport, will from now forward do very well, and any possible extension of the markets which can be very easily dealt with from Li-Feng, will be so much to the good.

I should like to say here that the credit of successfully carrying out the suspension operations is entirely due to Mr R. R. Brown, the resident engineer, and the members of his staff, who ably and loyally assisted him. Owing to the presence of the large bodies of water, part of the work had to be done under extremely difficult conditions, and the fact that it was completed without loss of life and without the loss of a single unit of plant speaks very highly for all concerned in the operations.

NEW MARKETS.

The prospects, however, of extending the sales are by no means discouraging. The Kin-Han Railways, on which we are very largely dependent, had, before I left China, obtained an additional 500 40-ton wagons, and had ordered 35 more locomotives, which were to be delivered at the end of last year and the beginning of this. Other railways had also placed large orders for additional rolling stock. Then the extension of the Lung-Hai railway from Hsu Chow to Hai Chow, which is under construction, and the extension of the Tao-Ching Railway westward, the survey of which has now been completed, will bring us new markets. That an improvement is already taking place is indicated by the latest reports I have received from the Fu Chung Corporation, which show that the sales for the months of November and December—November 141,000 tons, December 144,000 tons—were a considerable increase on those for the corresponding months for last year—November 114,000 tons, December 97,000 tons—and Mr Fitchford, the joint general manager of the corporation, expects very good sales during the next four months. Therefore, provided that no serious political trouble occurs—a contingency which, unfortunately, in the existing disturbed state of the country must always be taken into account

—there is every reason to hope that a gradual and increasing improvement may be anticipated in the sales from now onwards.

FU CHUNG CORPORATION—GENERAL TRADING.

In addition to selling coal, Fu Chung Corporation has set up a general trading department, but, owing to lack of the necessary capital, together with the depressed conditions of trade generally, this part of its business has not been developed, and has now been restricted to a few paying lines only. The following extract from a letter I have recently received from Mr Fitchford in this connection may be of interest:—

"Sugar is going very well this year, and I have cut down the commission to our agents to 2 per cent., which increases the commission to us 3 per cent., instead of 2 per cent. as formerly. We sold more than 30 20-ton car loads last month—almost 10,000 piculs; we ought to make \$20,000 from this line alone this year. Last month our commission and earnings on this line was pretty nearly \$4,000. Since arriving I have also completed arrangements with the Texas Company for handling their kerosene oil south of the Yellow River, and up from Hankow. We have stocks out and started sales a week or so ago, and now we are competitors of the Asiatic and Standard Oil Company. I think we should make another \$20,000 a year out of this without any risk. The godown at Hankow will soon pay for itself; we are now making about \$1,500 per month out of this, and it only cost us 6,000 taels odd. I am reorganising the Shanghai office, and we have engaged Mr Brooke, of the California Packers' Corporation, who is about the best salesman we know of in China. I am rather confident we shall get another account, the trade for which is tremendous. There are also one or two other things on the tapis. Whatever we do, however, are all lines without risk and without need for capital expenditure."

The corporation possesses facilities for trading in the interior of China which are unequalled by any other firm in the Far East, and there is no doubt that, with adequate financial support and an efficient staff, a very large and remunerative business could be done. This is a matter which I propose to take up on my return, with Mr Barson and our Chinese associates, with a view to the formation of a separate Sino-British organisation for its further development in conjunction with the corporation.

OTHER ACTIVITIES.

With regard to some of our other activities, we have been carrying on negotiations with the Chinese authorities for the establishment and development of certain industrial enterprises on joint Sino-British financial and working arrangements. When these negotiations are satisfactorily completed—and they have now reached a stage when they may reasonably be anticipated within the immediate future—our interests in the country will be very considerably extended.

We also propose to continue the negotiations which we have been carrying on with the Honan authorities for the development of the industrial resources of that province on joint account, an arrangement which, if it be possible to effect, would be mutually beneficial, having regard to our large interests in the province. The survey for the extension of the Tao-Ching Railway to Huaiking fu has, as I have previously stated, been completed, and we are now considering arrangements to finance its construction under the terms of the agreement with the Chinese Government, and, when that is done, we propose to approach the Chinese Government with regard to the extension to Ping Yang fu in Shansi, which concession was granted to us in 1916. This latter is for a line of some 100 miles in extent, through a country offering great mining and industrial possibilities.

ECONOMIES FROM REARRANGEMENT IN ADMINISTRATION.

The rearrangement in the administration referred to by the chairman will enable us to effect considerable economies in this respect, both here and in China, which I estimate will not be less than £10,000 a year. Some of these economies have already been effected, and the others will be carried out immediately. The rearrangement will also very materially strengthen the management, centralise control and generally increase the efficiency of the company.

The syndicate has established a position in China for itself which possesses great potential value, and, with the support that the new Administration is now assured of receiving from the Foreign Office, we may look forward to the future with absolute confidence.

DIVIDEND OUTLOOK.

We are practically certain of earning a substantial profit on the collieries as they are at present constituted, even should the economic conditions of the country become no better than they have been during the last few years, and our prospects of securing other business of a constructional, industrial, and financial character, on joint account with the Chinese Government or provincial authorities, are extremely promising.

We are, therefore, well on the way to a dividend-paying point, and, once that point is reached, most of the difficulties we have had to contend with in our negotiations with the Chinese in the past will be materially lessened.

In conclusion, I wish to record my thanks to the assistant secretary and our staff in London for the assistance they have rendered me during my visit here, and also to the resident engineer at the mines, the joint general managers of the Fu Chung Corporation and the members of their staffs, both European and Chinese, for the loyal and able support I have never failed to receive from them. (Applause.)

Comte de Seguier seconded the resolution, and the Chairman having replied to questions, it was carried unanimously.

The Chairman next proposed the re-election of M. Henri Lejeune as a director of the syndicate.

Comte de Férol seconded the motion, which was unanimously adopted.

M. René de Cèrenville moved that Mr John P. Kenrick and Mr Percy F. Heybourn be elected directors of the syndicate, which was seconded by Comte de Seguier and carried unanimously.

On the proposition of Mr Hobbs, seconded by Mr Bristow, Messrs Cooper Brothers and Co. were reappointed auditors.

The proceedings then terminated.

DORADA EXTENSION RAILWAY, LIMITED.

TEN YEARS' DIVIDEND RECORD.

INCREASED BORROWING POWERS.

Presiding at an extraordinary general meeting of the Dorada Extension Railway, Limited, held on the 10th inst., Mr Nathaniel Geach Burch (chairman), in moving the resolution sanctioning an increase of the borrowing powers by the amount of £50,000, said that during recent years the company had been able to provide out of revenue a large amount of new rolling stock and to effect considerable improvements in the railway, without, at the same time, encroaching on the dividend distributions. These, in fact, as well as the appropriations for reserves, had been substantially increased during the past ten years. The time, he thought, had now come to make such provision as would enable the board to devote their revenue to what really should be its proper purpose, namely, the payment of dividends.

CONTINUED PROGRESS OF THE LINE.

Dealing with the continued progress of the line during the past 10 years, he stated in 1912 their traffic receipts amounted to £89,044. That year there were sums expended on new works, rolling stock, &c., and transferred to reserve account amounting to £21,000 out of an available appropriation of £38,717. In 1917 their traffic receipts rose to £106,949, and in 1920 they amounted to £198,800. In the latter year the expenditure on improvements and reserves amounted to £34,968 out of an available amount of £55,200 after providing for first and second mortgage debenture interest, the dividend having in the last two years been increased to 5 per cent. Last year their receipts continued to expand, and they had expended on new works and improvements over £25,000 out of an expected available balance, subject to final audit, of £75,000, after making the usual provision for the first and second mortgage debenture interest. During the past 10 years their profits amounted to £445,000, after deducting first mortgage debenture interest, income-tax, and corporation profits tax, while their expenditure on the works and improvements, &c., absorbed £206,773. He thought, therefore, they were justified in saying that the company had been placed on a permanent dividend-paying basis.

THE DORADA RAILWAY ROPEWAY EXTENSION.

The Dorada Railway Ropeway Extension, in which they had a large interest, was now completed. This was 45 miles long, and connected the town of Manizales, which is situated in a large coffee-growing district, with their company's system. During 1921, when only 37 miles were in operation, the traffic interchanged with their railway amounted to approximately 18,000 tons—the gross revenue thereon being about £50,000. Now that the line had been completed he felt sure the present traffic figures would be materially increased.

THE REPUBLIC OF COLOMBIA.

The Republic of Colombia, in which their property was situated, had an area of about 461,606 square miles and a population of

approximately 5½ millions. As was well known, the country abounded in mineral wealth. Large portions of the soil yielded abundant crops of coffee, cotton, bananas, tobacco, &c. For many years past the conservatism of its Government and the care with which its finances had been managed had been in striking contrast with several of the other South American States, it having since 1910 redeemed £1,123,000 of its 3 per cent. consolidated external debt, or nearly 42 per cent. of the principal of its foreign indebtedness. The United States of America and Colombia had at long last come to an arrangement of the Panama question, with the result that Colombia would receive from the United States £1,000,000 per annum for the next five years. This would prove a valuable addition to Colombia's own revenue for the development of its vast natural resources. The country, therefore, possessed enormous prospects, and its development would make unto gain for their line, which was on the main route from the coast to Bogota, the capital and commercial centre of the country.

Arrangements were being made for the issue of £250,000 of second mortgage debenture stock. The proceeds of the issue would be utilised in making provision for the discharge of the present second mortgage debentures maturing next year and for the general purposes of the company.

The resolution was unanimously adopted.

SOUTH METROPOLITAN GAS COMPANY.

COAL STRIKE—THERM SYSTEM TO STAY.

The ordinary general meeting of the South Metropolitan Gas Company was held, on the 8th inst., at the Cannon street Hotel, London, Dr Charles Carpenter, M.Inst. C.E., the president of the company, in the chair.

The Chairman, in moving the adoption of the report and accounts, said that in the beginning of April in the year under review the country was engaged in the greatest industrial struggle it had ever had to face, for during three months the whole of the coal-mining industry was at a standstill. To meet it they had taken the most complete steps. They had bought all the coal that could be obtained, actually putting into stock about a third of a million tons, and as it became apparent that the strike would be extended they had imported coal in large quantities from abroad. The price that had to be paid was heavy, but they had fulfilled their duties as a statutory undertaking, since they had given full pressure and quality throughout the period of the struggle.

How the cost was to be met was a matter of policy. The board could have provided the money by raising the price of gas by 2d per therm for the half-year, or they could have reduced the figure by one-half and spread the increase over double that period. The latter course had been chosen, and was the explanation of £150,000 of the extra cost being paid during the period under review, payment of the balance being deferred until the current half-year. He thought stockholders would understand why the board could not see their way to recommend a higher dividend than the basic rate of 5 per cent. Had the coal stoppage not occurred there was no doubt but they would have been able to pay a dividend little, if any, short of the pre-war rate. It was, however, no small achievement to have substantially held their business, as was proved by the fact that they had experienced a lower reduction of output than any of their neighbours. They would, moreover, certainly reap benefit from the consideration they had shown to the company's consumers. We might say that nothing that had happened reflected detrimentally in any way upon the company's changed Parliamentary powers.

PRICE OF GAS.

As to the present price of gas, no one with an understanding of the business of gas supply would express any other opinion than that the price was to-day too high. In their own interests, as well as those of the public, they must strive by every means to bring it down quickly and substantially, but that would take time. Stocks of coal purchased at a much higher figure had still to be liquidated. The attitude of the company's consumers was, on the whole, very favourable. They were increasing in number, and the figure of the increase in sales stated in the report was very satisfactory. It showed that the public's faith in gas was by no means a diminishing quantity, and in that connection he might say that the method of selling gas according to its thermal value, which had certainly come to stay, had been conceived wholly in the interests of the consumers. Town gas might have very different thermal or heating values, according to its method of production. To-day it was the thermal value which counted, whether the problems were to light a room or street with incandescent mantles,

or to cook a dinner or warm a room. Fortunately, thermal value was much more easily tested than was illuminating value when gas was supplied as being the equivalent of so many candles. The Therm system put all supplies of town gas upon one uniform and comparable basis. On the water gas question the company was able to take an absolutely impartial view, for they had never, except experimentally a very great many years ago, made any water gas. He would say that statistics had proved that the fears of wholesale trouble arising from its presence in some town gas supplies were, at any rate as far as Great Britain was concerned, unfounded. In their own South London district they had not had a fatal accident due to gas poisoning for over 20 years, and they were ever seeking to improve the purity of the gas.

THE GAS LIGHT AND COKE COMPANY.

CHEAPER GAS: THE TURN OF THE TIDE.

NO GROUNDS FOR ALARM AS TO DANGER FROM GAS.

The two hundred and fifteenth ordinary general meeting of the proprietors of the Gas Light and Coke Company was held, on the 10th inst., at Horseferry road, Westminster, London. Mr D. Milne Watson (the governor of the company) presided.

The secretary, Mr W. L. Galbraith, read the notice convening the meeting.

The Chairman said: Before I deal with the accounts I wish to refer to the loss which the board has sustained in the past year by the death of two directors. Mr Miles had been associated with the company since 1898, during which time he acted as deputy-governor for three years, then as governor for two years in succession to the late Sir Corbet Woodall. In 1918 he resigned the governorship owing to failing health, but remained a director until the time of his death. Mr Waterlow had been a director since 1906, and acted as deputy-governor for six years. These two gentlemen were most able directors, and their extensive knowledge of business affairs was of great value to the board. They were both most pleasant colleagues to work with; they are very much missed, and their loss is deeply regretted.

The vacancies thus caused were filled by the appointment of the Hon. Clive Bigham, whose acquaintance with public affairs will be of much service to the board; and of Mr Goulden, who has been chief engineer since 1904, and whose great knowledge of the company's business will be most useful.

The year that has just closed has been one of the most anxious and extraordinary in the annals of the company. As I told you at our meeting in February last, owing to the unprecedented slump in residuals, the company found itself in a position of difficulty, and I explained to you at the time why an advance in the price of gas had become absolutely necessary. We knew then that a bad time awaited us, but it was not long before our troubles were still further accentuated by the stoppage in the coal mining industry, which occurred at the beginning of April, and lasted until the end of June. Fortunately at the beginning of the stoppage we had good stocks of coal and oil, but after two months our stock of coal became exhausted, and we were therefore forced to purchase large quantities of Continental and American coal in order to keep going. The directors determined that so long as coal could be obtained, whatever the price might be, it was their clear duty to keep London supplied with gas without any diminution of quality or pressure, and it is with a considerable amount of pride that we are able to record the fact that the company continued to supply its gas throughout the whole period without any interruption whatsoever.

THE COST OF THE COAL DISPUTE.

The cost to the company of doing its duty was, however, very serious. We not only had to pay a high price for the foreign coal, but owing to its inferior quality we had to bear the additional expense of purchasing almost a double quantity. The result was that we lost nearly £500,000, without reckoning the loss of business which was a direct consequence of the restrictions placed upon the consumption of gas. The after effects of the coal dispute, moreover, were almost as bad as the dispute itself, and the trade of the country was so dislocated that for a long time afterwards we suffered from serious decreases in consumption. Fortunately, however, some financial relief came with a gradual fall in the prices of coal and oil, and this enabled the company to end the year without such a heavy loss as was at one time anticipated.

You will see that the company has spent a considerable sum of money on the capital account—namely £315,000; of this £185,000 was spent upon new mains, meters and stoves, business getting and revenue earning expenditure, and the balance of £130,000 was spent mainly upon the completion of the payments for the company's fleet of steamers.

CO-PARTNERSHIP SCHEME.

After dealing at some length with the question of residuals and foreign competition, in conclusion, the Chairman referred to the company's co-partnership scheme, remarking that while its bonds might be truly described, in Burke's words, as light as air, they had certainly proved strong as iron in binding together the interests of employers and employees. They might hope that a wider application of the principles of co-partnership would set capital and labour generally in the light with which for over 30 years they had been regarded by that company.

Mr Frank H. Jones, M.Inst.C.E. (the vice-president), seconded the motion, which was carried unanimously.

A STRONG FINANCIAL POSITION.

When it is considered that we have passed through the greatest coal dispute that has ever afflicted this country, the result of the year's working, as shown in the revenue account, is one of which the company has no reason to be ashamed, and is good evidence of its strong financial position generally. Under the altogether abnormal circumstances which attended our working during the year comparative detailed figures are of small value. You will see, however, that we paid less for coal. This is partly due to the fact that we used less coal—1,800,000 tons instead of 2,279,000—and also to the fact that during the second half of the year the price of coal dropped considerably. The figure for oil has more than doubled, due to the larger quantity used, especially during the period of the coal stoppage.

The sale of gas during last year shows a decrease of 5 per cent. While this is much to be regretted, it is not a matter to be wondered at, and is due to three principal causes—first of all, the coal stoppage and the necessity for strict economy in the consumption of gas; secondly, the depressed state of trade during the whole of the year, accentuated as it was by the coal dispute; and, thirdly, the extraordinary weather which we experienced during 1921.

FALLING REVENUE FROM RESIDUAL PRODUCTS.

The outstanding adverse feature of the accounts is the falling off in the revenue from the company's by-products. The revenue from these has fallen from £4,839,000 to £2,498,000, a decrease of £2,341,000 in the year, and had it not been for the exercise of the greatest care in every direction the results would have been less satisfactory. This decrease in the revenue from residuals was anticipated by me at our last meeting, and this anticipation has unfortunately come true.

NO CAUSE FOR PESSIMISM.

There is no occasion, however, for pessimism. There is no doubt in my mind that as far as the company's business is concerned we have turned the corner, and that we as a company have seen the worst. The prices of our principal raw materials, coal and oil, have, as I have already pointed out, fallen considerably, and we have, I am glad to say, come to an arrangement with the principal unions concerned by which the wages of our employees are regulated on a sliding scale on the basis of the cost of living.

As you are probably aware, the company had to give up the hiring out of stoves during the war owing to the large capital cost involved. We have, however, resumed our usual practice, and I am happy to say that the result has been most satisfactory, leading to a very great demand for gas apparatus of all kinds.

REDUCTION IN THE PRICE OF GAS.

Towards the end of the year the general position of the company was such that the directors felt justified in announcing a reduction in the price of gas to 1s 1d per therm as from the taking of the meter indices at Christmas. This will mean a saving to the consumers of £600,000 a year. The announcement of this reduction in price, together with the resumption of hiring facilities, has produced an increased demand for gas, which is most encouraging.

The prospects of the company are, I consider, excellent. The increase of 4,981 in the number of consumers shows that the basis of our business is ever growing, and the increase of 39,065 in gas stoves sold and let on hire indicates that there undoubtedly is among the existing consumers a large field in which to extend our business.

The internal position of the company is also very satisfactory. We have now a large fleet of steamers carrying coal from the North, which is a continuing source of economy to the company.

The works, I am glad to say, are being rapidly brought back to the pre-war standard of efficiency, and the company generally is in a healthy position, and eagerly awaiting a revival in trade.

THE NEED FOR NATIONAL ECONOMY.

Many chairmen have recently, when dealing with the affairs of their companies, pointed out the necessity for national economy in expenditure in order to relieve the burden of taxation upon industry, and I should like to add my appeal to the Government upon this subject. It used to be the pride of this country that it was one of the least taxed; to-day our taxes are amongst the highest, and, if ever this country is to regain its prosperity, it is absolutely essential that there should be a great reduction in the national expenditure.

It is proposed now that public utility companies should in future be subject to the corporation tax, and I desire to protest in the strongest possible way against this proposal, as putting an additional burden on the gas consumers.

THE ALLEGED INCREASED DANGER OF GAS.

I dare say you have noticed that there has been a great deal of prominence given in the Press recently to the composition and quality of the gas supplied in this country generally, and a suggestion has been made that the gas now being supplied is a danger to the public. Ladies and gentlemen, there is absolutely no ground for this suggestion. Not only in the interests of the shareholders in gas undertakings throughout the country, but also for the purpose of restoring the confidence of any consumers of gas who may possibly be alarmed by the comments which have appeared in the Press, I feel it my duty to place on record the true position.

AN INDEPENDENT INQUIRY.

Gas companies have never been under any restriction with regard to the proportion of carbon monoxide which the gas supplied by them should contain, and as recently as six months ago the question was reviewed in all its bearings by a Committee appointed by the Board of Trade, under the chairmanship of Sir William Pearce, M.P. As a result of a thorough and careful hearing and consideration of full evidence, both for and against restriction, this Committee, composed as it was of responsible and independent scientific men, decided that it was neither necessary nor desirable to impose any restriction on the gas industry in respect of the percentage of carbon monoxide in the gas supplied.

Unfortunately, many of the statements which have appeared in the Press recently have been incorrect, and I would like to draw attention to the following facts which can be established beyond all doubt:—

NO CHANGE IN MANUFACTURE.

1. This company has been supplying a mixture of coal gas and carburetted water gas for many years past, and, indeed, was the first gas undertaking in this country to do so. No change in our methods of manufacture has been made since the passing of the Gas Regulation Act, and all suggestions to the contrary and all fears based on these suggestions are unfounded.

2. The percentage of carbon monoxide in the gas now being supplied by the company is practically the same as was supplied in 1914 and previously, and it is quite untrue to say that the recent accidents have been due to any alteration in the composition of gas.

CARBON MONOXIDE IN AMERICA.

In this connection you will be interested to hear that throughout the United States of America carburetted water gas alone, without any admixture of coal gas, is very largely distributed. In Washington, the capital and seat of the Government and one of the principal residential cities, carburetted water gas alone has been distributed for many years past, and in an official memorandum from the Bureau of the Public Health Service of the U.S.A. it is expressly stated that the presence of carbon monoxide up to 30 per cent. is not considered to be prejudicial. The most recent analysis of the gas distributed in Washington showed the presence of 28.7 per cent. of carbon monoxide, which is approximately double the percentage distributed in this company's area.

3. The accidents due to the escape of gas are lower now in proportion to the number of users of gas than they have ever been before. I would like to draw your attention to the following facts:—

Fatalities due to gas do not exceed two per annum per million of the population.

Fatalities due to railways are 22 per annum per million of the population.

Fatalities due to street accidents in London are 100 per annum per million of the population of that city.

I think you will agree that these figures alone show very clearly that there is no possible cause for alarm.

NO ODOURLESS GAS SUPPLIED.

4. It has been suggested that many accidents are caused by reason of the gas supplied being odourless. This is absolutely incorrect. It is true that pure carbon monoxide may be odourless in itself, but pure carbon monoxide is not, and could not possibly, be supplied by gas undertakings by itself, as it is mixed with several times its volume of other gas of considerable pungency, from which it cannot be separated in the process of distribution. It is inconceivable, therefore, that an escape of gas with its unmistakable smell could avoid detection. Any suggestion to the contrary is absurd, but it is one that has been repeatedly made in recent letters and statements written on the subject.

NO CAUSE FOR ALARM.

Speaking as I do with a full sense of my responsibility as governor of the largest gas company in this country, I assert with the utmost confidence that there is nothing in the composition of the gas now being supplied which need give the slightest cause for fear.

There is one other matter of public interest to which I should like to refer, and that is the attitude of the gas industry to what is called low temperature carbonisation.

LOW TEMPERATURE CARBONISATION.

To those who are not familiar with the subject, I should like to say that gas undertakings generally now produce gas by what is known as high temperature carbonisation, that is by carbonising coal at a temperature of 2,000 deg. to 2,200 deg. Fahr., as against a temperature of 1,000 deg. Fahr. used in low temperature carbonisation. Gas undertakings are constantly being attacked because they do not carbonise coal at a low temperature, and it is assumed by the advocates of the latter method that gas undertakings are antagonistic to low temperature carbonisation. Nothing is further from the fact. The gas industry as a whole is not antagonistic to any particular method of production of gas, and I can safely say that there is no prejudice against low temperature carbonisation as such. It is no doubt an excellent method of obtaining an increased production of liquid by-products, and I can well believe that in some cases it might be useful in dealing with coal at the pit heads, where there are large quantities of shale and small coal available. The public are led to believe that the reason why gas undertakings do not adopt low temperature carbonisation is because they are unduly conservative. I think it would be well if I gave a few reasons why we do not adopt this method.

The principal reason is that it is not an economical gas-making proposition, but a process that has for its objects first the production of increased quantities of tar oils and free burning coke, gas being the residual of manufacture. This is essentially different from our own process, which is for the purpose of obtaining the maximum quantity of gas from the coal. The high temperature process produces 70 therms per ton of coal, while the low temperature production of therms is rarely more than 40. To compensate for the decreased efficiency of gas production by the low temperature process, we should, were it adopted, throughout our works need to purchase nearly double the amount of coal we now carbonise, which is about two million tons per annum. New carbonising plant would be required to replace that now in use, carbonising plant would be required to replace that now in use, necessitating the expenditure of very large sums of money. The low temperature gas is also in practice entirely unsuitable for use in ordinary gas appliances by itself owing to its excessively high calorific value. It is for these reasons that we in this company do not consider that the adoption of low temperature carbonisation would be in the best interests of either the shareholders or the consumers.

As I told you at the beginning, the directors have elected Mr Goulden to a seat on the board. I should just like to say a word or two about Mr Goulden and his splendid services to the company in the past. He entered the company's service 38 years ago, and has occupied a position of great responsibility as chief engineer for the last 18 years, during which time the company's business has increased almost by 50 per cent. He has had great responsibility, and has carried out his duties in an admirable manner. We felt sure that his services ought to be retained, and had great pleasure in electing him as one of our colleagues. I am certain that the company will benefit largely by his great knowledge and long experience.

We have, we believe, found an excellent successor to the great office of chief engineer in Mr Thomas Hardie, who came to us with a reputation already made in Newcastle. He has already proved that we have in him a valuable officer, in whose charge the engineering interests of this company will be fully maintained.

With regard to the staff generally, I cannot speak too highly of their work. They are ably backing up the directors in their great and earnest endeavour to carry the company through the difficult times in which we find ourselves.

THE DIVIDENDS RECOMMENDED.

In conclusion, the result of the company's working for the year, after paying the statutory dividends in respect of the June half-year, is that there remains a balance of £661,000, out of which the directors recommend the payment of the full statutory dividends on the preference, maximum and ordinary stocks, viz., 4 per cent., 3½ per cent., and £4 13s 4d per cent. per annum respectively. This, with £10,000 to the redemption fund, will absorb £517,000 and leave £144,000 to be carried forward to the credit of the current year, as against £326,000 at this time last year. You will see that the dividend that will be paid for the whole year on the maximum stock will be at the rate of 3½ per cent. cent., as against £2 12s 6d for 1920, and the dividend on the ordinary stock will be at the rate of £4 13s 4d, instead of 3 per cent., to which we were restricted under an Act of Parliament that has now been superseded by the Gas Regulation Act. As you will see, we have made a start again with the redemption fund, which was created for the purpose of getting rid of this company's obsolete capital. A sum of £20,000 in all—viz., £10,000 set aside in June and £10,000 contributed for the December half-year, will be available for the purchase and cancellation of ordinary stock.

HOPE OF CHEAPER GAS.

With regard to the future, ladies and gentlemen, I believe we have seen the worst, but the price of gas is still too high to be good for business, and it is the hope of the directors that during the present year the lower prices of coal and oil and the reductions in working expenses will enable us to reduce the price below 1s 1d per therm, to which we reduced it in December. I feel assured, as I said earlier in my speech, that the tide has turned and that we have every reason for confidence in the company's future.

The report and accounts were adopted.

LONDON AND LIVERPOOL BANK OF COMMERCE, LIMITED.

YEAR'S RESULTS—PRE-WAR DEBTS.

The ordinary general meeting of the London and Liverpool Bank of Commerce, Limited, was held, on the 9th inst., at the offices of the bank, 34 Old Broad Street, London, the Lord Ritchie of Dundee (chairman of the bank) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—

You will remember that I indicated last year that it would be necessary eventually to make some provision from reserve fund against pre-war debts. It is not possible to speak with certainty, but having very carefully considered all the circumstances connected with every debt which still remains unpaid, we have come to the conclusion that the sum of £70,000, which, as explained in the report, we have transferred from reserve fund to contingencies, will provide amply for all bad and doubtful accounts. The liquidation of German debts has been slow, not so much owing to delays on the part of individual debtors, but mainly through the obstacles which are constantly being raised by the German Clearing Office. The transfer of £70,000 from reserve fund still leaves the substantial sum of £100,000 at the credit of that account.

ACCEPTANCES.

Our acceptances, including advances under the Government Scheme of 1914—£1,403,000—show a slight decline compared with last year, but in reality our current acceptances are higher and the advances lower. Our acceptances are the barometer of our business, and these figures indicate that we are not very active. Indeed, we are like every other institution or individual engaged in any branch of finance and trade, and we have suffered from the general depression. I indicated last year that we were exercising great caution in view of the crisis through which the trade of the world was passing. We have followed that policy throughout the year, and all the transactions which our acceptances represent receive the approval of the board only after the most careful consideration.

ASSETS.

On the assets side we have cash in hand and at bankers £55,284, bills receivable and bills discounted £47,444, and money at call and short notice, including amount deposited with the Bank of England, £441,230. This last item perhaps requires some explanation. Last year I explained that there was included amongst accounts current important sums which we had from time to time paid into the Bank of England as a set-off against pre-war debts. Further payments on the same account have been made during the past year, and we thought it appropriate that they should now appear more prominently in the balance-sheet, in view of the fact that the advances from the Bank of England under the Government Scheme of 1914 are due for repayment in August next. We understand that the Bank of England is prepared to give favourable consideration to applications for the extension of the time for re-

HEAD OFFICES: LIVERPOOL AND LONDON

ROYAL

INSURANCE COMPANY, LIMITED

ALL CLASSES OF INSURANCE EFFECTED

payment, but, as stated in the report, we could, if the necessity arose and we were called upon to do so, liquidate all our indebtedness to the bank to-day.

Investments amount to £259,877, of which British Government securities account for £218,359. It will be remembered that during the last few years our investments in British Government securities have been taken at cost, whereas market values were considerably lower, especially at the end of 1920. They now appear in the balance-sheet at or below market prices on December 31st, since which date they have appreciated. Current accounts and other securities are in the main the contra to our liabilities under acceptances on the other side, and it is here that we have made provision for bad and doubtful accounts by the transfer of £70,000 from reserve fund.

RESULTS OF YEAR'S WORKING.

The results of the year's working show a net profit of £18,894, an increase of rather more than £1,000 as compared with the previous year, which is more than accounted for by a reduction of about £1,500 in expenses. We paid an interim dividend of 3s per share in July, and we now recommend a final dividend of 5s per share, making a total distribution for the year of 4 per cent. and leaving £20,739 to be carried forward.

Bearing in mind the very difficult conditions which have ruled throughout the year, and the burden of the pre-war debts which still remain unsettled, I hope the shareholders will agree that the results are not unsatisfactory. Conditions are not quite so bad as they were a few months ago, but I am afraid that is the best that can be said at the moment. A return to anything like normal conditions is not even within sight, and cannot be expected so long as some hundreds of millions of people in Eastern and South-Eastern Europe are, for all practical purposes, out of the world's markets. In the meantime let us console ourselves with the reflection that there has been some improvement, and that we have left the worst of the depression behind us.

The resolution was carried, and the usual formal business having been transacted the proceedings terminated.

THE BRITISH INVESTMENT TRUST, LIMITED.

A SATISFACTORY YEAR.

EXCHANGES AND TAXATION.

The thirty-third annual general meeting of the British Investment Trust, Limited, was held in the Princes Street Station Hotel, Edinburgh, on Monday, February 6th, Mr John Cowan, W.S., chairman of the company, presiding.

The secretary having read the notice convening the meeting and the auditors' report,

The Chairman said: I do not think I need go into details of the report which has been before you for some time. It is as good as we can expect in these times. I propose to move the adoption of the report and the following motion, and to ask Mr Fleming to second the resolution and make some remarks about the report. I beg to move: "That the report and accounts for the year ending January 1, 1922, as audited and circulated among the shareholders, be adopted, and that the following dividends be declared—namely, a final dividend of £2 10s per cent., to be paid, less income-tax, on £1,200,000 preferred stock (making, with the interim dividend, £5 per cent. for the year), and a final dividend of £8 10s per cent., to be paid, less income-tax, on £800,000 deferred stock (making, with the interim dividend, £15 per cent. for the year)."

REVENUE AND CAPITAL.

Mr Robert Fleming, in seconding the motion, said: Any remarks on the annual report of the directors of an investment trust—if one is not to expand on national and international financial conditions as to which the Press has of late provided enough mental pabulum, especially in the speeches of the leading London bankers—must run in the usual lines:—The revenue and the capital of the trust: How they stand.

Well, as to capital; the chief change for the year is in its geographical distribution—the further selling of United States securities and their reinvestment in securities on this side of the Atlantic, mainly of a preferential character. During the year we have further reduced our holdings in America by £243,461. We expect to continue in the same direction to a considerably further extent. New York prices during the year have risen very much,

and, had it not been that exchange had gone the other way, our total market value would have shown an increase. We must face the consideration of both elements, of course.

EXCHANGE CONDITIONS.

A year ago I felt fairly confident that bond prices in New York would improve, but I did not anticipate that exchange would rise as much as it has done during 1921. Taking the whole 312 securities together, and taking the New York exchange of January 1st, the market value is practically the same as a year ago. I hope it may prove that we have got to the end of the down grade. But whether we have or have not does not matter so very much. It always will be going up or down.

As you know, the main thing is the divisible revenue which these securities yield. A year ago I said it would probably be less for 1921 than for 1920. I was wrong. It is this year, deducting corporation tax from each year, a little more for 1921, viz., £2,761 more. But I am not inclined to do more than postpone the date for some falling off. The ½ per cent. from the Government on deposited securities has stopped, and exchange will probably not be as favourable as the average of 1921.

DISTRIBUTION OF RISKS.

Besides these elements, I do not see how we can expect to go through 1922, with trade the world over as it now is, without being hit here and there. One of the main objects of the trust was distribution of risks and the comparative steadiness of income that results. The directors might have adjusted receipts quite legitimately so as to increase that steadiness, but they have preferred that each year should show the actual cash receipts of that year, knowing that we must look for variation from year to year.

THE FUTURE.

All this does not mean that we do not expect to have a fair surplus for 1922 over the 15 per cent. dividend, but it will not reach the surplus of 6 per cent. or more which we have had during each of the last two years, thanks largely to profit on exchange. That is my personal view, but I hope I may be wrong in it as I was in my estimate for 1921. I am quite sure the directors will do what they can to put me in the wrong, and I will co-operate myself.

THE CORPORATION TAX.

As you see from the accounts, the corporation tax has taken away nearly the equivalent of 1 per cent. dividend. If there is to be

any reduction in taxation, it should begin with the abolition of that tax. Corporations, as a class, are the most active industrial, commercial, and financial forces of the country, and that they should be specially singled out for a super income-tax is as unwise in policy as it is unfair in its methods of application.

Gentlemen, with these remarks I beg to second the motion which has been made by the chairman.

The resolution was carried unanimously, and after the re-election of the auditor the meeting closed with a vote of thanks to the chairman.

STERLING TRUST, LIMITED.

TRUST'S AMERICAN RAILWAY INVESTMENTS.

The fifth ordinary general meeting of the Sterling Trust, Limited, was held, on the 7th instant, at Winchester House, London, Baron Emile B. d'Erlanger presiding.

The Chairman, in moving the adoption of the report and accounts, after apologising for the absence of Mr Fleming and Mr Macrae, said that the Sterling Trust differed from the usual company of the kind, because about two-thirds only of their total investments were spread over the wide field that a trust company generally strove for, the remaining one-third being represented by American Railroad holdings which descended to them from the company under its old name. This fact was brought home to them by the results for the past year, which showed a considerably reduced income as compared with that of the previous year. After the close of 1920 the position and outlook in America were such that the boards of the railroads in which the trust was interested decided that they had no option but to conserve their resources and defer for later consideration the question of dividends, which, if then paid as usual, would have formed part of the income of the trust for 1921.

POSITION DURING 1921.

For the six months January to June, 1921, conditions were so bad and expenses so high that the railroads were at one stage failing to earn these expenses and the fixed charges, with the result that any interim dividends for that six months seemed out of the question, and a further deficiency in the income of the trust for the year became a probability. Dividends from these sources in 1920 amounted to some £50,000, and it appeared in the circumstances that this receipt for 1921 would be entirely absent. In the latter part of 1921, however, an improvement was perceptible, and

a steady reduction in expenses month by month became apparent. Net earnings were such, and the situation had so improved in November and December, that the railroad boards found it possible to release funds sufficient to pay dividends for the second half of 1920 on the common stock of the Alabama and Vicksburg and the preferred stock of the Vicksburg, Shreveport and Pacific, and almost immediately afterwards to pay a half-year's dividend on the former in respect of 1921.

In consequence the trust received during 1921 these three dividends, amounting to some £23,000, in mitigation of the expected deficiency of £50,000. It was a little difficult to express an opinion as to the prospect of receipts from these railroads during the current year, but, as far as could be foreseen, the trust would certainly do no worse than they had done in 1921, and there was reasonable prospect of their doing better. What he had said with regard to the American dividends explained a reduction of some £27,000 in their income for the year from that source, and this amount, as a matter of fact, represented very nearly the aggregate decrease in their income from all sources, apart from tax adjustments of one sort or another, thus indicating that, in spite of reductions arising in consequence of the improvement in exchange and the non-receipt of dividends from a number of companies which, owing to depression and bad trade, were either unable to release the necessary funds or had not even made the necessary profit, their aggregate income from sources other than the railroads was practically maintained. The actual figures of the revenue account showed a decrease only of £23,257, the difference between this and the £27,000 mentioned being accounted for by the tax adjustments referred to. In the balance-sheet their investments stood at £3,897,192, after deducting contingent fund, which included profits on sales of securities, and so on.

RESULTS OF VALUATION.

A valuation at December 31, 1921, taking, as last year, the Alabama and Vicksburg and Vicksburg, Shreveport and Pacific holdings at their book value, showed a depreciation of 5½ per cent., or £221,197, against which they had the reserve fund of £100,000, leaving a balance of £121,197. Last year he had to refer to a depreciation of 7½ per cent., or £200,000, after allowing for the reserve fund of £100,000, so it would be seen that some considerable part of the improvement then anticipated had already taken place. Apart from the American railways and British Government securities, over 27 per cent. of the investments were represented by bonds, debentures, debenture stocks and notes; and, if Government securities were added, the percentage was increased to over 54 per cent. Their American railway holdings represented over 30 per cent. of the investments. As regarded the revenue account balance of £76,396, the directors were proposing a dividend of 6 per cent. on the consolidated stock, the same as last year, carrying forward £23,896, which he hoped would be acceptable to the stockholders.

Mr John Varley seconded the resolution, which was carried unanimously.

The retiring director (Mr John Varley) was reappointed, as also were the auditors (Messrs Price, Waterhouse and Co.).

The proceedings then terminated.

DUNLOP RUBBER COMPANY, LIMITED.

YEAR'S RESULTS—CAUSES FOR LOSS.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The twenty-third ordinary general meeting of the members of the Dunlop Rubber Company, Limited, was held, at the Hotel Cecil, Strand, London, on the 10th instant, Mr F. A. Szarvasy presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: It has fallen to my lot to present to you both the best and the worst balance-sheet in the history of your company, and whilst your present board can neither take the credit for the one nor, indeed, the blame for the other, I can confidently say, based on a close study of your company's affairs now extending over nearly 16 months, that given reasonable care in the management of the business, it is inconceivable that such a disastrous report should again be presented; while, on the other hand, granted a general restoration of the world's trade and continued development of road traction, there does not seem to be any reason why the substantial profits earned by the company in the past should not be reached again.

It would be idle for me to conceal the fact that the past 12 months have been full of anxiety and difficulty. The truly appalling loss which is shown as a result of the past year's operation—arising from those obligations, to which I referred in my speech last year, having come to maturity subsequently in a period of worse depression than could possibly have been foreseen—must not in fairness be attributed to that year's trading; far less can it be taken as an index of the company's prospects as a whole; it is due in the main, as is pointed out in the directors' report, to the

unprecedented depreciation in the stocks of raw materials carried by the company and contracted for in 1919-20 for a period of years in advance.

I have no reason to vary what I said to you last year, viz., that the policy of over-expansion adopted by the company in 1918, 1919, and 1920 was a serious error of judgment, but I think the time has now arrived to look into these matters a little further. No responsibility is disclaimed by the permanent officials for the adoption of that policy so far as a share of the responsibility can properly be attributed to them; but you must bear in mind that the business policy of a company is dictated by its board as a whole.

Those of you who listened to my remarks a year ago will remember that I outlined the position of the company as it then appeared to me, which was that hard upon a record year's trading an utter collapse of trade followed, which left the company high and dry with colossal stocks and large capital commitments without adequate provisions for finance. Our first duty, therefore, was to provide the necessary funds to enable the company to continue its trade undisturbed, and this was accomplished by the issue of £3,000,000 debentures, and by the provision of adequate banking facilities. The Dunlop Company has met all commitments promptly and without a moment's delay, and has thus maintained its credit unimpaired.

Our next task lay in curtailing the widely extended and much varied activities of the company. This must necessarily be a slow process if it is to be done without inflicting permanent injury to the organisation and prospects of the business; it is not yet completed, but is gradually being proceeded with. Under this head come also matters regarding the internal reorganisation of the company, effecting of economies in all directions, and a general harmonising of all departments.

REMUNERATION OF BOARD CURTAILED.

The remuneration of the new board (I am not alluding to the ex-officio members) was cut a year ago by 64 per cent., as compared with that of the old board, and your managing director, Mr Rergin, had already sacrificed 70 per cent. of an amount of commission due to him for past services, and other important officials of the company also freely consented to substantial reductions in their remuneration with a view to assisting the company through these difficult times.

The third problem was to retain for the Dunlop Company that premier position in the trade which it has always occupied, and which was so much in danger through the affairs of the company having been freely discussed in public.

We have proceeded far in all these directions, but I cannot say that we are as yet absolutely satisfied that we have accomplished everything we set out to do. I trust, however, that by the end of our next financial year we shall be in a position to say to you that all is safe and sound, and that, granted a revival in trade conditions generally, you need have no fear of the future.

The Chairman then dealt with the accounts in detail, and analysed the position of each of the subsidiary companies. In the course of his remarks he said that stocks, &c., stood at £2,900,000, and showed a reduction of £1,500,000, as compared with last year, but the stocks of raw materials this year were far greater in quantity than last year, so that this reduction was no real indication of the heavy writing down which took place. In the item of stock is to be found the explanation of the losses which the company has suffered. The company had, in spite of the greatest difficulties, made a trading profit which, in itself, was satisfactory. The position of the company on January 31st last, five months after the date of the balance-sheet, was only altered so far as the bank loan was concerned, by an increase of about £1,000,000, and, on the other hand, the investment in the American company was up by about £560,000; the balance of £440,000 was accounted for mainly by additions to freehold land and buildings contracted for some two years since, and payments for raw materials.

PROSPECTS.

The Chairman continued: I know you will naturally expect me to say a few words as to the future, but though I am reluctant to indulge in prophecy, I think I can make a few observations which will help you to form your own opinion as to the prospects of this great undertaking.

You know that you have first-class works capable of cheap and economical production. Your management assure me that all the manufacturing difficulties incident to the starting of new works and the production of new models have now been overcome; and that the quality of the new Dunlop cord tyres is beyond reproach. What the user thinks he has expressed, and that in very definite terms. During the last few months the company has received most gratifying testimony to the merits of the Dunlop cord tyre from the great leaders of the British motor industry—and others prominent in the motor world—as those of you who have followed our publicity will have observed.

You possess magnificent cotton mills and fine rubber estates,

and though both rubber and cotton may be under a cloud just now, in the long run these two assets will ensure to you the raw materials at lowest market prices. Then you have a sales organisation all over the world which should find the best market for Dunlop tyres.

Starting with these advantages, backed by capable management and a proper policy dictated by your board, and raw materials written down to a conservative figure, I think you will probably agree that the company is in a strong position to meet competition, and that, granted any reasonable revival in trade, it can look forward with confidence to an early restoration of its earning power.

During the last eight months we have worked out and put into practice a completely new costing system, and we are now able to gauge the profit or loss on trading much more quickly. I am glad to say the results of the first three months' trading are encouraging.

QUESTION OF DIVIDENDS.

Now that you are fully conversant with the accounts, the value of your assets, and as far as is possible, with the future prospects of the company, it is obvious that what must be most prominent in your minds is the question of dividends. But how can dividends be distributed so long as a debit balance so formidable is obstructing the way? This naturally brings me to the question as to whether a re-organisation of the company's capital should be undertaken, and if so, on what lines, and when.

Your board has given very careful consideration to this question, and is of the unanimous opinion that to attempt a reorganisation at the present moment, based on the balance-sheet which is before you, would neither be right nor fair, nor indeed possible, and that therefore the question of a rearrangement of the capital account must be left over to such a time, not necessarily very far distant, when it can be carried through with a more certain knowledge of future prospects, and a better understanding of the value of the assets with which we have to deal.

REORGANISATION OF CAPITAL.

The necessity for reorganisation of capital can be viewed from various angles; and according to the view taken and the particular circumstances which may prevail, the advisability or otherwise of such a measure must be decided. There are companies which are brought into being at a time of inflation, or which have passed through the hands of the promoter, and see the light with a balance-sheet representing assets obviously not worth the capital which figures against them. Such companies at their very inception have the hall-mark of reconstruction stamped on them. Other companies, whose capital account is in perfectly good shape, may make heavy losses on stocks, but these losses may be of a temporary nature only, and thus only represent abnormal and temporary depressions in trade conditions. There is a hope, therefore, in such a case, that with the re-establishment of normal conditions, the capital account will right itself. Again, there is the company whose assets stand at a normal figure when the reserves against them are considered, but become inflated during a period of an exceptional trade boom through the distribution of such reserves by way of bonus shares. In this case, as values again reach normal, and the period of deflation is progressing, the capital account should be readjusted, unless, of course, exceptionally large trading profits justify such a permanently increased capitalisation. A wise management provides against contingencies in such a case by putting a large proportion of the profits to reserve, and restricting distributions of dividends until the proper balance is once more re-established.

I cannot say that the problem we are faced with in the Dunlop Company comes, strictly speaking, under any one of the foregoing categories, but of necessity it represents a combination of nearly all of them, and the question, therefore, of reconstruction must be considered with exceptional care. I doubt whether it is possible to come to any well-balanced decision unless world conditions in general are also taken into account. What, then, are these conditions to-day? Surely values all over the world have changed completely during the last 18 months, and all standards—including the very standard which is accepted as measure of values, viz., gold—have changed.

Everything is still in the melting pot, therefore to-day's values of commodities cannot in fairness be taken as a measure or standard in justification of a permanent rearrangement of a company's capital. It is quite possible that commodity values will experience a further fall; it seems almost certain that wages and salaries, as a measure of services, will also come down concurrently with a reduction in the cost of living, and an increase in the purchasing power of money as in turn expressed in goods and services, so that a further period of probably six to eight months should elapse during which it will be possible to more closely gauge the ultimate level upon which values are likely to settle down, or when they might show a little more stability, before recommendations are made for a permanent rearrangement of

your capital which a reorganisation would involve. We have therefore come to the conclusion to advise you to wait until the balance-sheet at August 31st next is available before you ask us to put before you any scheme of reorganisation.

COMPANY'S ASSETS.

I think that the properties of the company (apart, of course, from the American investment, which presents special features with which I have already dealt) represent as a whole fair values at the figures at which they stand in the books, if regarded in the light of a valuation as a going concern, which is the more justified by the brighter prospects and possible good profits later on, when conditions once more turn to normal. Sufficient time has not yet elapsed since the big "collapse" occurred in the fortunes of your company, and we are not yet near enough to normal condition, in which, with a complete rearrangement of the internal organisation, which is now in process, the real earning power of your company can make itself felt. In the opinion of your board, as I have already said, a reorganisation of the Dunlop Company's capital should only take place when the value of all your assets can be ascertained with a fair amount of certainty, and when the prospects of all the subsidiary and allied undertakings can be properly gauged, and world conditions are more settled and the reorganisation of your internal affairs is complete. I do not hesitate to say that time has not yet arrived, and therefore we have presented no scheme of reorganisation to-day.

QUESTION OF CRITICISM.

Before I resume my seat there is one further matter in some sense personal to the board to which I wish to refer. It is not unnatural that such a report as it has been our duty to present to this meeting should occasion more than the usual criticism. It would be remarkable if it were otherwise, but I regret that recently criticism has reached me which not only affects those responsible for the management in past years, but even extends much further. I am not prepared, nor do I think it would be wise to discuss the various matters which have formed the subject of this criticism, but I think, as a result of my further experience during the last twelve months in the conduct of the company's business, and here I speak for the whole board, that it is in the interest of the company, as well as of the shareholders, that all questions of doubt should be either brought to the light of day or else buried once and for all.

INDEPENDENT INVESTIGATION.

Having carefully considered the matter, I would strongly urge that some eminent accountant, such as Mr William Cash, Sir William Plender, or Sir Arthur Whinney, should be invited to undertake this investigation. All of these gentlemen are entirely independent. The matter has not been mentioned to them so far, but if one of them, or someone of equally high standing, will undertake it, I consider that the terms of reference should be of the widest, and that all information and documents should be placed before them for consideration, and that any shareholder should be permitted to suggest any subject fit for inquiry.

I want to feel that I have this meeting with me on that proposal. If it is your view that this inquiry should be conducted by one of these gentlemen, then the board will arrange the appointment, and you can, if you desire, appoint a committee of, say, three of your number to act with him. The result of the inquiry may, as I have said, produce tangible results, but in any case it would clear the air and dispose of rumours and gossip, which is harmful to the company.

After considerable discussion, it was unanimously resolved that the report and accounts be received and adopted, on the terms only that the board should appoint an eminent accountant for the purpose of making an inquiry into the circumstances under which the present loss on trading of £8,320,000 had been incurred, and the present position of the company had been brought about, such investigation to be conducted with a small committee, consisting of Mr James M. Thompson, Sir Josiah Stamp and Mr F. Sobey.

S.T.D. MOTORS, LIMITED.

"IMPROVEMENT IN CONDITION OF MOTOR TRADE."

The sixteenth annual ordinary general meeting of S.T.D. Motors, Limited—formerly A. Darracq and Co. (1905), Limited—was held, on the 7th instant, at Winchester House, London, Mr James Todd, J.P., F.C.A., chairman of the company, presiding.

The Secretary (Mr A. A. Yeatman, F.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman said that whilst the results shown for the past year were not what they all hoped for a year ago, he thought the shareholders would agree with him, after he had further explained some of the difficulties they had had to contend with, that they were, nevertheless, as satisfactory as could have been expected, having regard to the prolonged period of trade depression, unprecedented in the motor industry, through which they had passed. When they met 12 months ago, he pointed out that the board fully realised the extremely difficult period ahead of them, and they took every precaution which experience had taught them to meet the difficulties in front of them. He would not dwell on the extent of those difficulties, but he could assure them that they had passed through many months of extreme tension and anxiety, as for a long time it seemed impossible to judge as to when, if ever, the slump was going to end, but there was now reason to hope that the worst had passed, and they were now seeing a slow but certain improvement in the conditions of their trade.

The two concerns in which they held practically all the shares (whose activities were not solely confined to the motor industry, namely, Messrs. Heenan and Froude, Limited, engineers, of Worcester and Manchester, and Messrs. Jonas Woodhead and Sons, Limited, spring makers, of Leeds) had had results during the past year—despite the general trade depression prevailing—which were satisfactory, and with the orders already on their books, they were looking forward to the continuation of a satisfactory year's trading.

Their company always carried a large stock, which was necessary to maintain their output. Thus stock stood at the aggregate value of over £1,000,000 at the stocktaking in August, 1920, and when it was considered that the depreciation necessary to be written off in order to arrive at the now existing values amounted to over £200,000, it would be seen from those figures that it was hardly possible to show a net profit under the circumstances. Sales in France were also in excess of anything previously experienced. The larger the demand the more necessity there was to conserve their resources in order to finance the huge programme of manufacture which they had embarked upon.

The report and accounts were unanimously adopted.

HOME AND COLONIAL STORES, LIMITED.

RECORD RESULTS.

The twenty-seventh ordinary general meeting of the Home and Colonial Stores, Limited, was held, on the 9th inst., at the offices, 2 and 4 Paul street, Finsbury, London. Sir Charles E. G. Philipps, Bart. (the chairman), presided.

The secretary (Mr George J. Faro) read the notice convening the meeting.

The Chairman said that it was particularly gratifying to the directors to present a report of such a satisfactory nature as that now submitted, marking, as it did, a further improvement on the results of any previous year in the history of the company. The net profit for the year was £309,875, and with the amount of £31,643 brought forward from the previous account, there was a total available of £341,518. They had placed to reserve, as usual, 10 per cent. of the net profits, namely, £30,987, and the reserve fund now stood at the substantial figure of £532,689. They recommended the payment of a final dividend of 1s 9d per share on the 400,000 ordinary shares, making, with the interim dividend, 15 per cent. for the year, and also a special bonus of 2s per share. They were adding £10,000 to the benevolent fund and setting aside £25,000 to provide for income-tax, leaving £46,531 to be carried forward. It was a matter for congratulation that the valuation which had been made of the company's plant, machinery, fixtures, fittings, and freehold and leasehold properties largely exceeded the present book values. It was not proposed to utilise the excess either as capitalisation or in payment of dividends on the share capital, as the weight of legal opinion was against either method,

but by writing down the item of goodwill. According to the *Times* review of the year, food prices fell from 178 per cent. to 95 per cent. above the pre-war level. In a business such as theirs, with nearly a thousand branches, each branch of necessity carried a certain amount of the various commodities they sold, which, at a minimum, must in the aggregate amount to a very considerable item. Taking these conditions by themselves, falling markets were not calculated to benefit the shareholders, especially as the directors had never departed from their policy of giving to the company's customers the full and immediate benefit of any fall in prices. But it was just by means, and as a result, of that policy, coupled with the high standard of quality which characterised the goods sold by the company, that they had attracted an ever-increasing number of customers, with the further result that they were able to record a large increase in the volume of their trade and, as a direct consequence, a satisfactory increase in the profit realised.

Mr T. W. Davidson seconded the resolution, which was carried unanimously.

GOVERNMENT RETURNS.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	Estimate for the Year 1921-22. (See Note.)	Total Receipts into the Exchequer from Apr. 1, 1921, to Feb. 4, 1922.	Total Receipts into the Exchequer from Apr. 1, 1921, to Feb. 5, 1922.	Week Ended Feb. 4, 1922.	Week Ended Feb. 5, 1922.

NOTICES.

The directors of the London Joint City and Midland Bank, Limited, announce that Mr Alexander H. Goschen has retired from the office of deputy-chairman, and that Mr Stanley Christopherson (director) has been elected a deputy-chairman in his stead. Mr Goschen retains his seat on the board. A new branch is being opened at 23 High street, Malmesbury, Wilts, under the management of Mr W. McClure.

The National Provincial and Union Bank of England has opened a branch at 4 and 5 South parade, Melton Mowbray, the resident officer being Mr A. W. Tattersall.

ASSOCIATED EQUIPMENT.—Trading results for the year do not justify the directors in recommending the payment of a dividend on the ordinary shares. For the previous year the dividend was 14 per cent.
COOK, SON, AND CO. (ST. PAUL'S).—Report for year 1921 shows a loss of £400,282 and regret that it is impossible to declare a dividend, but feel that more normal conditions have now been reached, and look forward to the future with every confidence.
SOUTH STAFFORDSHIRE MINE (Power and Heating) Company regret that owing to the depression in trade throughout the year, the disastrous effects of the coal strike, and the continued fall in prices of residuals, there is a serious loss on the year's working, and that the payment of the dividend on the preference shares for the past year will have to be deferred.
UNDERGROUND ELECTRIC RAILWAYS OF LONDON.—Full interest on six per cent. first cumulative income debenture stock, and 2 per cent., free of income-tax, on six per cent. income bonds of 1918 for the half-year.

Reports and Notices.

Messrs Ford, Rhodes, and Ford, chartered accountants, 4B Frederick's place, Old Jewry, E.C. 2, have admitted into partnership Mr William H. Percival, A.C.A., A.S.A.A., who has been associated with them for many years.

The Johannesburg Consolidated Investment Company, Limited, announces that owing to the miners' strike there will be no publication of the ordinary mining output returns for the month of January.

Cable advice from New York states that Mr James Sheldon will shortly retire from active business relationship with Messrs Lee, Higginson, and Co., whose New York office he opened 15 years ago.

At an extraordinary meeting of Alexanders Discount Company, Limited, the resolution to increase the authorised capital to £1,250,000 was confirmed.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated February 9th, is as follows:—Pig-iron: The demand for pig-iron has not sensibly improved, and is barely sufficient to absorb the present restricted output of both Cleveland foundry and hematite pig-iron. Prices have undergone no change this week, and remain at 90s per ton for No. 3 Cleveland foundry pig-iron, and 92s 6d per ton for mixed numbers East Coast hematite pig-iron. Manufactured iron and steel: With only about one-third of the steel works in the country at work, and orders still very hard to get, the steel position is a very difficult one. Makers assert they are selling below cost now. Steel ship plates, home, £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s net. Iron ore: A few prompt orders for ore cargoes are passing. Best rubio is quoted at 26s 6d to 26s per ton.

Our Sheffield correspondent writes :—The general position of the steel trade has not altered much since last week, but such change as there is is undoubtedly towards improvement, and a substantial revival is now believed to be imminent. A number of unemployed have been set on again at certain works, but this gain has been more than balanced by further discharges. The unemployment roll is now larger than at the end of last year.

Our Bradford correspondent, writing on Thursday, says:—The easier tendency in wool values noted during the last week of the recent sales in London has been confirmed by the auction in Liverpool to-day, and this is tending to restrict business in tops. It is probable that most firms will be prepared to hold off the market for a time in order to see how values move, and many may wait for the re-opening of the London sales. In the meantime, even spot lots of merino tops can be bought on more advantageous terms than those obtainable a week ago, while for future delivery most firms are quoting from 1d to 2d less than a week ago. Of course, the restricted supplies of fine tops is affecting values, and many traders think that the inadequate output from the combs will tend to maintain top quotations, even though wool is cheaper. Unfortunately, spinners are not booking much new business, and it is asserted that current prices of yarn are definitely checking development in the piece goods trade. Worsteds spinners are still well employed, but the outlook after March-April is at present anything but promising. In the manufacturing section fairly good business is being done in dress goods, the fine soft-handling fabrics still being preferred. Some good orders have been booked on Japanese account, and firms engaged on this class of trade are well occupied; but the fact remains that something like one-half of the looms in the West Riding are idle. It is hoped that the proposed scheme for the relief of distributing houses will be carried through, and it is thought in well-informed quarters that financial assistance such as that proposed under the scheme will help to restore confidence and place merchanting houses in a position to resume business on something approaching normal lines.

The last London sales closed with prices somewhat under the highest point, a good 5 per cent. being lost on most descriptions during the last few days. Buyers had apparently got all they needed, but good combing merinos were practically 15 per cent. above December prices, this advance applying to 56's quality and upwards. For anything below 56's the advance ranged from 5 to 10 per cent. Throughout the series a very good buying spirit prevailed, and all things considered, there is evidence that the wool industry is at last getting on to its feet. Consumption must be considerable, otherwise there would not have been such strong competition. There is a good deal of truth in what Sir Arthur Goldfinch has repeatedly stated—namely, that at the present rate of offering and absorption the stock of merino wool will be entirely cleared by the end of July, which suggests the question as to whether the trade can absorb prospective offerings of wool without values suffering.

Messrs Dalgety and Co. have received the following cable from their Auckland branch, dated February 8th:—"At the sale held on the 8th instant the attendance of buyers was good, and competition very animated. 10,000 bales were offered, and 95 per cent. were sold. Southern prices were maintained. The following is the range of prices realised:—Fine crossbred, 46/48, good to super, 10d-12d; ditto, low to medium, 8d-10d; crossbred, 44/46, good to super, 8½d-9d; ditto, low to medium, 6½d-8½d; crossbred, 40/44, good to super, 6d-7d; ditto, low to medium, 4d-6d."

Markets for both linseed and the oil product have been all the week in a state of keen excitement, and largely in the hands of speculators. The continued strength of Argentine options has had a marked influence on this side, and Plate linseed has been dealt in up to £20 5s for January-February shipment to Hull, with £19 paid for March-April, and £19 10s April-May. Seed on spot, meanwhile has firmed up to £21, and £20 10s asked for afloat. More attention has been given to Indian linseed, up to £21 10s being paid for Bombay to Hull, and the same figure to London January-February loading.

With regard to raw linseed oil, it advanced strongly in sympathy, £35 10s being recorded at Hull and £37 10s in London for spot and "near," since when there has been an easier tendency both for prompt and forward oil. Linseed oil has thus advanced 90s per ton on the week, but even at the higher level it is barely more than its intrinsic value, and leaves crushers but a small margin of profit.

Cottonseed, after a fair trade done, Egyptian is steady at £12 on firmer advices from Alexandria. Bombay is inactive, and quoted rather higher. Cotton oils have been in better request, and are somewhat dearer, crude having moved up to £34 10s, and edible refined to £40, ex Hull mill. Soya bean oil is firmer and slightly more money, as is also ground nut oil. Rape oil is still scarce on spot, and is quoted £50, and about £8 below this for forward delivery. Palm kernel and castor oils dull and unchanged in value. Coconut oil quiet at late prices.

Owing to the small "crush" of late linseed, cakes are in small supply, and are dearer at £16, ex Hull mill. Cotton cakes are, however, a slow trade and easier. Meals appear to be in rather more active demand.

(BY OUR OWN CORRESPONDENT.)

It was rather expected that hides would have advanced in price this week, owing to the restrictions placed upon slaughter of cattle by the outbreak of foot and mouth disease; this, however, has not happened, and at Thursday's Remondsey auctions values were steady to a slight weakness. Best heavy ox at 7½d to 7½d showed no change; light were unsold, whilst best cows showed a decline of ¼d at 6½d per lb. Heavy calf showed slight declines, whilst in lights the changes were quite unimportant. There has been a slight improvement in imported hides, but the market is not active. Argentine frigorifics have been sold at 10½d ex store, and sellers are offering at 10½d, with tanners holding off. This week's cables from the U.S.A. report the hide position as weaker, with values nominally unchanged, with the exception of light cows which show a decline of a cent.

The demand for sole leather is patchy, but on the whole tanners are finding trade a shade better. Repairers have been in the market for suitable bends owing to the spell of bad weather, but with the wide divergence in values, shoe manufacturers are not at all inclined to book forward. Rough dressing leather is still very quiet, and curriers of split hides seem badly affected by the quiet state of the motor industry. The demand for upper stock is not good, and curriers are either still curtailing or closing down altogether. Suede and patent are the only lines moving with freedom, and both being very active.

The boot trade is only moderately well employed, but now that the prospect of a strike is over, manufacturers are hopeful of a revival in business.

Mincing Lane, Friday, February 10.
A generally quiet tone pervaded the markets, demand, particularly for raw materials, being measured by wants of immediate necessity, and a featureless condition of affairs prevailed.

800AR.—Business in spot parcels of refined was on a moderate scale, and prices on the week are mostly 6d per cwt lower. Messrs Tate and Lyle's cubes sold, 51s to 52s, as to quality; granulated, 46s 3d to 46s 9d; caster, 48s 3d to 48s 9d; crushed, 48s 3d; yellow crystals, 49s 9d. Granulated, April-June, held for 46s 3d. West India crystallised quiet, with small sales at 39s to 41s 6d, as to sample. American granulated, afloat, sold 18s 6d; February-March, steamer, at 18s 1½d, c.f. and i. terms, U.K. White Natal, spot, sold, 44s 3d; white Mauritius, 44s; ditto, afloat, 20s, c.f. and i. terms, London. Czecho-Slovakian ordinary granulated and crystals, prompt, 19s; cubes, 21s 6d, f.o.b., Hamburg. Dutch granulated, prompt, 19s 6d; cubes, 23s, f.o.b., Amsterdam. Belgian crystals nominal. Terminal market steady, quiet. May sold, 18s 3d to 18s 4½d, 18s 1½d; August, 18s 1½d to 18s 4½d, 18s 3d. Of raw kinds, Brazilian basis 80 per cent., March-April shipment, sold, 9s, c.f. and i., U.K. Cuban stock, 770,000 tons, against 351,300 at same time last year.

COFFEE.—With an improved demand for the better qualities the market disclosed a firmer tendency. Nairobi, bold sizes, sold, 1225 to 1285 6d; Uganda ditto, 845 6d to 955; Costa Rica, 1035 to 1335 6d. Futures in quiet support, but market steady. December, sold, 535.

COCOA.—There was no new feature to note in this market, business being conducted quietly with but little change in prices. Butter steady at 1s 84d per lb.

TEA.—Supplies of Indian brought to auction this week amounted to 44,100 packages, which met with fair competition at rather irregular rates. Good medium to fine qualities denoted a firm tendency, but common to medium experienced a slow market. 17,400 packages Ceylon aroused increased support, and a very steady tone governed the auctions.

RICE—Market steady, though actual business was on a small scale. Two stars, Rangoon, spot, sold, 145 3d; ditto, new crop, February, steamer, held for 145 6d. Broken kinds slow of sale. Bran steady, quiet. New crop Burma, February-March, sellers, £15 7s 6d per ton, ex ship terms. Beans steady, with Rangoon hand-picked, on spot, held for 8s. Japanese peas firm, and spot quoted 38s. Dutch peas quiet at about 20s.

SPICE.—A steady tone prevailed in the pepper market, and fair black Singapore, spot, sold, 4d; March-May, steamer, 3½d; Aleppy, spot, 4½d; Tellicherry, 4½d; white Singapore, 7½d; Munok, ditto, 7½d; ditto, March-May, at 7½d. Zanzibar cloves, spot, 15 ¼d; ditto, February-April, 15 ¼d, c f and i. Pimento, spot, sold, 2½d. Flake tapioca, spot, sellers, 1½d per lb. Fair Penang seed pearl tapioca, spot, 17s. Sagó flour, January-March, 14s; February-April, 13s 6d. Desiccated coconut, fine cut, spot, 40s; medium, 40s.

FRUIT.—The market for currants remained slow, at unaltered prices. Sultanais and also Valencia raisins were dealt in quietly, at rates showing no material alteration.

JUTE.—A steady but quiet tone predominated, demand from spinners manifesting little or no revival. New crop, first grade, February-March, Hamburg, sold, £24 5s; ditto, March-April, £24 5s to £24 7s 6d; and lightning grade, February-March, £20 7s 6d. Hessians quiet. 10 oz, spot, 22s 9d; 8 oz, ditto, 17s 6d. A twills, spot, 26s; R 58s.

HEMP.—Manila in slow request, and quotations for the chief part nominal. C grade, January-March, £53; D, £50 10s; E, £47; F, £43 10s; G, £38; J, £38 10s; K, £37 10s; L, £36 10s; M, £33 15s. streaky, ones, £43; twos, £41; threes, £39. New Zealand idle. Fair, January-March, quoted, £34. African sisal dull. No. 1 G.E.A. and No. 2 F.E.A. January-March, £38.

also B.E.A., January-March, £30.

Correspondence solicited.

The Economist,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XCIV.

SATURDAY, FEBRUARY 18, 1922.

No. 4,095.

SHELLAC quiet. Fair T.N., spot, 330s; March, sold, 315s to 320s; May, 300s to 310s.

COPRA—Only quiet trading ensued, and the market at times proved rather unsettled. F.M.S. Straits, January-March, Rotterdam, sold, 24 1/2 to 25 1/2; February-April, 24 1/2 to 25 1/2; March-May, 25 1/2 to 26 1/2; F.M. Straits, February-March, to Marseilles, sold, 24 1/2 to 25 1/2; Ceylon, February-April, Hamburg, done, 25 1/2 to 26 1/2; South Sea Islands, to London, quoted, 24 1/2; and Cebu, to Hamburg, 24 1/2. Palm kernels quiet. February-April, Liverpool, sold, 17 1/2 to 17 3/4.

MENHOL—Spot, 23s 6d. Japanese peppermint oil, spot, 5s 3d. Aniseed, 2s. Slab camphor, 3s 10d; crude, 3s 3d to 3s 4d per lb. Japanese wax, spot, 90s per cwt.

RUBBER—There was a moderate trade doing at slightly irregular rates. Standard crepe and sheet, spot and also February delivery, sold, 8 1/2, 9d, and 8 1/4; March, 9d to 9 1/4; April-June, 9 1/4 to 9 1/2; July-September, 10d to 9 1/2; October-December, 10 1/2 to 10 1/4. Wild dull. Fine hard Para, spot, 11 1/4; soft fine, 11d; Caucho ball, 7d.

OILS—Lineded firmer, but irregular. Spot, net, naked, 38s 6d; February-April, 36s 6d; May-August, 36s. Rape nominal. Crude, spot, 51s; refined, 58s. Cotton dull. Crude Egyptian, 35s; Bombay, nominal; comm n edible, 41s. Chinawood: Hankow, spot (barrels), 61s 6d to 62s; and shipment, 58s 6d. Coconut quiet. Ceylon, spot, 43s 6d; February-March, 40s; Cochin, ditto, 44s. Soya quiet. Oriental, barrels, ditto, 33s. Japan fish quiet. January-February, cases, 21s. Cod quiet. English, spot, 29s. Groundnuts quiet. English crushed, naked, spot, 44s; deodorised, barrels, 56s. Turpentine quiet and easier. American, spot, 69s 6d; March-April, 69s. Rosin quiet. American, grade B, 14s 6d; F, 14s 6d; G, 14s 6d; WW, 20s 6d. French, F/G, 14s 3d; WW, 18s; extra pale, nominal. Petroleum quiet. American standard white, 1s 4 1/4; and water-white, 1s 5d per gallon.

OLSEEDS—Lineded market active, and prices advanced sharply at first, but subsequently a quieter tone prevailed and values irregular. Bold Bombay, afloat, sold up to 21 1/2; February 15th, 21 1/2; January-February, 21 to 21 1/2; April-May, 20 Plate, January-February, 20; February-March, 19 1/2; April-May, 19 1/2 to 18 1/2; 6d and 6d. Chinese, prompt, 18 1/2; 6d; February-March, 18 1/2 to 18 1/2; 6d. Rapeseed firmer. Toria, January-February, quoted 16 1/2; February-March, 15 1/2 to 16; March-April, 15 1/2 to 16. Cottonseed firmer. Egyptian black, February, quoted 12 1/2; and white, 11 1/2 to 12 1/2. Bombay, January-February, 9 1/2. Gingly steady. Chinese, January-February, 9 1/2. Continent, 23 1/2. Castor, Bombay, February-March, 14 1/2 to 15. Groundnuts steady. Coromandel, machine-dried, January-February, Hull, 19; Continent, 19; Chinese decorticated, f.a.q., ditto, Continent, 20 1/2 to 21 per ton.

METALS—Tin occupied good attention until the middle of the week, when cash fluctuated to £158, settling down at £157 10s, and three months' to £159 15s, while finally registered at £159 5s. The tendency was easier on Thursday on a fair amount of selling. Cash changed hands at £156 5s down to £154 10s, and three months' at £158 down to £156. At Friday's session values eased on free selling. Cash fluctuated down to £153, late April sold at £154 15s to £154, and three months' from £155 to £154, while finally registered at £154 15s. English ingots, £152. Copper in steady demand, being rather dearer until last Wednesday, cash moving up to £61 12s 6d, and three months' to £62 12s 6d. Little change occurred at Thursday's market, business being on a moderate scale. Standard cash sold at £61 5s, while three months' settled down at £62 2s 6d. At Friday's meeting rates tended rather dearer. Standard cash sold at £61 12s 6d, late April £62 5s, and three months' chiefly at £62 10s. Lead easier at £20 15s to £20 12s 6d. Spelter steady at £24 to £24 15s, according to position. Antimony: English regulus, £34 to £37. Aluminium: Home delivery, £120; export, £125.

TALLOW—Messrs Colchesters and Woolner write as follows on February 8th:—The tallow market was fairly active during the week, and prices are mostly 6d dearer. The better kinds are receiving a little more attention, while inferior sorts continue to find ready buyers. At auction to-day 2,317 casks tallow were offered, and 1,507 were sold. Quotations are:—Australian mutton: Fine, 42s; good to fair, 40s 6d to 39s; dull to dark, 35s to 33s 6d; hard, 41s 6d. Australian beef: Fine, 41s; good to fair, 40s to 38s; dull to dark, 34s 6d to 33s; sweet, 42s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 40s; and mixed, 43 1/2 c.i.f. London, 39s. The market letter is unchanged for tallow, stuff is dearer. Town tallow, 33s 6d per cwt. Rough fat, per 8 lbs, 4d; melted stuff, 23s per cwt. Quotations are:—Town: 33s 6d net cash, naked, ex works. Country: Frail casks, 33s; home melted, shipping casks, net f.o.b., good coloured, none; fair to dull, 34s 6d to 32s. Bone fat: White, none; pale, none; benzine, 29s; melted stuff, 29s, f.o.b.

go on with the policy of reducing the amount of Treasury bills outstanding, and the general view is that unless fresh borrowing of some other sort is renewed this will not be possible for long. The pressure of money had been causing a demand, which is in some quarters regarded as too widespread, for Treasury and National War Bonds, and an increase in the supply of Treasury bills should help to remedy this, while the reduction in bankers' deposit rates may stimulate the necessary investment buying. Commercial bills seem better in quality, but not in quantity, and the rate, therefore, after being $3\frac{1}{2}$ per cent., fell to 3 per cent. after the reduction in the Bank rate. Yesterday conditions were not quite so easy, thanks largely to the payment of Treasury Bond money, and the market rate recovered.

	Feb. 17, 1922.	Feb. 10, 1922.	Feb. 3, 1922.	Jan. 27, 1922.	Previous Rate and Date Changed.

Market rate (3 months' bills)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..

* Additional to those offered by tender the preceding week.

Repayment of Government borrowings to the Bank was indicated in Thursday's return, Government securities being £17,798,100 lower. Other securities were increased by £140,400. The Reserve was £928,400 higher, thanks to a decline of £914,300 in the circulation, and deposits were thus £16,761,800 lower, more than the whole of which came off Other. The circulation of currency notes was reduced by £1,760,400 to £302,402,400, which includes £1,687,400 of notes called in but not yet cancelled. The fiduciary issue is £252,765,700, or £57,222,700 below the maximum.

THE STOCK MARKETS.

The suspension of the sale of 5 per cent. Treasury bonds and the reduction in Bank rate have brought a large volume of buying orders to the gilt-edged market, and prices have gone ahead rapidly as the supply of stock diminished. War Loan, Funding Loan, and Victory Bonds have been over their issue price, and there has been a keen demand for Conversion Loan. Strength in British Government stocks spread to other investment markets, but in the speculative sections business has been very quiet. Home Rails have maintained their recent rises, but the volume of dealings has dwindled. The Shell, Swansea, and Siam issues were rapidly oversubscribed, while last week's issue of Seine Department bonds has risen to 3 premium.

COMMODITY MARKETS.

Conditions in the cotton market during the past week have been slightly better, the tendency of raw cotton rates to harden stimulating inquiry for yarn and cloth. The weakness which recently developed in raw wool values has apparently not yet been checked, prices recorded at the Hull wool auctions showing a general decline when compared with the sale at Liverpool in the previous week. No change is recorded in the price of Cleveland pig-iron, although owing to the small output it is rather scarce, and it is possible that more furnaces may be started. In the iron and steel trades there is no improvement, but it is stated that orders have been placed for several new ships. The demand for Welsh steam coal has improved, the price of best Admiralty increasing from 24s 9d to 25s 6d per ton. The wheat market was firm, and prices hardened, but buyers were inclined to hold back. Raw linseed oil fell from 20s to 40s per ton after the heavy American buying of the previous week. In the hide market prices were steady, and no changes are recorded. The shoe trade is reported as a little better. Further particulars of market news and movements from our special trade correspondents will be found on later pages.

FOREIGN EXCHANGES.

As was suggested a week ago, the last seven days have shown a reaction from the recent outburst of activity, and business has been very much quieter. On the 11th the dollar receded, even more sharply than had been expected, to 4.32 $\frac{1}{2}$, and though it had risen again by Tuesday to 4.36 $\frac{1}{2}$, there was still a feeling of uncertainty with unsteady movements, and the rate of 4.35 $\frac{1}{2}$ yesterday morning was again somewhat lower. Apart, however, from the influence of incalculable political factors, there would seem no reason to expect a violent reaction, and a slow appreciation would appear more probable. The general level of prices in the States continues to show a quiet upward movement; on the January trade figures the export surplus was again heavily reduced, and there is no belief in America as yet in a revival of export trade. The rate for one and two months forward is on a parity with spot, three months being about $\frac{1}{8}$ cents. From the sudden jerk upwards to 51.07 $\frac{1}{2}$ on the 11th, the Paris rate has moved downwards to 50.10 yesterday, and there would seem, on the whole, to be a slightly stronger feeling of confidence, a confidence hardly justified at least by the Budget position. Francs one month ahead are quoted at one centime under spot. Brussels has moved, as usual, with Paris, but the spread between the two rates is slightly wider than before. Italy this week has been irregular, but ends rather better than before. Among neutral exchanges Amsterdam, after moving rather sharply against us, has gone up again, but is still below the best of the week before. Switzerland has gone in our favour, while the peseta has appreciated slightly. Among the Scandinavian countries Christiania shows a distinct recovery, and both Stockholm and Copenhagen have moved downwards a little. Helsingfors at about 220 shows little change. Berlin, after some irregularities, owing largely to uncertainties as to the position of the Government, has ended much the same as before. In Central Europe, Vienna, strangely enough, after appreciating on the news of credits from Czechoslovakia and England, and promises from France and Italy, has risen again, the inland rate at 30,000 being the same as the previous week and the Auslands rate at 14,500, some 1,500 higher, this latter movement being only one more illustration of the utter artificiality of the Auslandskrone. Warsaw, after a longish period of steadiness, has also begun to move up again, and is now back at 15,250. Budapest is steady, and little more than nominal. Prague also has kept close to 230. Belgrade and Bucharest are a little higher. Athens has slightly improved, but Constantinople is again somewhat higher. India is just slightly better at 1s 3 $\frac{1}{2}$ d on more reassuring news of the Gandhist movement. The yen, on the other hand, has again slightly depreciated. Silver has been very quiet indeed, and only kept up by bear covering. Some selling by China brought the price down later, and the market does not seem at all firm. Hong Kong and Shanghai are both lower. In South America Rio is a little cheaper, Buenos Ayres about the same as last week, but Montevideo and Valparaiso are both dearer.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 11, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	35,295	Supply Services	5,746
		Interest on Debt	3,689
		Road Fund	3,948
		Sundries	380
		Reduction of Debt	18,990
		Added to Exchequer balances ..	142
	35,295		35,295

These operations reduced the National Debt by the sum of £18,990,108, and caused the following changes:—

	Min. £		Min. £
5% Treasury Bonds	+ 4,075	Treasury Bills	- 21,945
National Savings Certificates ..	+ 1,850	Surrenders of Bonds, &c.	- 345
5% Treasury Bonds	+ 1,062	Depreciation Fund	- 660
Public Department Advances ..	+ 8,350	Unemployment Insurance	- 570
		Sundries	- 687
		Bank of England Advances ..	- 9,750
	+ 14,337		- 33,377

Property and Income-tax yielded £21,500,000, Customs and Excise £4,341,000, Estate Duties, &c., £790,000, and Special Receipts £4,940,728. The floating debt was

reduced by £23,320,000 to £1,142,291,000. Sales of 5 per cent. Treasury Bonds amounted to £4,975,000.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO FEBRUARY 11, 1922.

Total spent	889,055,731	Raised by revenue ..	854,566,972
Inc. in balances	819,441	Net borrowings	35,308,200
Total	889,875,172	Total	889,875,172
ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure ..	974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

THE GEDDES REPORT.

We have much sympathy with the argument voiced by Mr Asquith in the debate last Tuesday that the submission of the estimates to an external body before they are approved by the Government and submitted to the House must tend to weaken the responsibility of the Cabinet for financial policy, and therefore for policy in general, and to trench upon the prerogative of Parliament. But in present circumstances we share in the general satisfaction that these considerations have been disregarded, and that the Government has given an opportunity for the pressure of public opinion to become effective before finally making up its mind on its financial plans for next year. The Report of the Geddes Committee is a document without parallel in our recollection in the realm of financial literature. The Budget statements and speeches of the year are always a subject of interest, and occasionally become a great political document. But estimate statements and speeches are always dull and a matter of indifference except to those immediately concerned and to a handful of experts. This attitude is due partly to the fact that the estimates do not see the light until all the important decisions have been taken, and partly that they are never surveyed as a whole, and therefore their bearing upon the general financial position is only remotely discerned. On the present occasion, by the appointment of the Committee and the publication of its report, the Government have made it possible for the public to focus the situation in advance, and has furnished the critics of expenditure with more effective weapons than have ever before been at their disposal. The experiment may have a far-reaching influence on subsequent financial procedure.

A more deep-seated reason for the widespread interest in the Report is the public recognition of the imperative need for curtailing expenditure. So far as we are able to judge, this interest seems to be much more vigorous than in any other country. The reason for this in

our opinion is that both the richer and the poorer classes in Great Britain have for some years past borne a heavier burden of taxation than in any other country, and that with the fall in prices, wages, profits, and income generally, the demand for some relief is rising to an irresistible flood. At the same time, British opinion is fully alive to the evil results to a country of living beyond its means or of indulging in inflation, and we have seen no serious evidence of a tendency to push the Government into the policy of relieving taxation by borrowing. Indeed, the country is proud of the fact that it began last year to repay its war obligations. The desperate anxiety for lower taxation has therefore rightly concentrated upon the expenditure side of the national accounts.

The Report itself is of an unusual kind. Concise, and at times almost telegraphic in style, it bears on every page the stamp of the mentality of its signatories. These are business men who not only had risen to high distinction in their various spheres, but have also had considerable experience, and in the case of the chairman a very varied experience of departmental administration during and since the war. This gave them a very great advantage in probing into the detailed proposals of the various services. But they resisted the temptation to go into matters of minor importance, and have been very successful in seeing the problem all the time in a large way. The Report is, therefore, one of the most readable of Government documents we have ever had occasion to study.
