The problem of the Committee was to take the preliminary estimates for 1922-3 which the departments, in response to pressure from the Chancellor, had already reduced from 603 millions to 528 millions (or 510 millions if figures for the Irish Department are omitted), and to suggest further cuts amounting to 100 millions. The Committee observe, however, that the reductions proposed by the departments were, in many cases, automatic, being due to the fall of wages or prices, to windfalls, or to the cessation of special war expenditure. The Committee had the more difficult task of recommending savings arising out of the "curtailment of activity or of economical administration, and this point cannot be too clearly borne in mind." This phrase is indeed a significant one; but the Committee itself does not appear to have altogether grasped the distinction between the two kinds of saving mentioned. If the Government desires a service to be performed and pays an unnecessarily high price for it, that is waste. If the Government carries on with reasonably efficient administration a service which the nation cannot afford—that is to say, a service whose value to the country is less than the alternative uses to which the money would be put if left in the pocket of the taxpayer—that is extravagance. We might add that if the Government for electoral reasons curtails economically administered services which add to or are needed to maintain the industrial and intellectual resources of the country, that is folly. The Geddes Report would have been an even more valuable document if these categories had been more clearly in mind.

The two reports now published cover departments whose total estimates amount to 408 millions out of the 510 millions referred to. The cuts proposed by the Committee in the main items are as follows:—

	Provisional Estimates. (Min. £).	Pro- posed Cuts. (Min. £).		Provisional Estimates. (Min. £).	Pro- posed Cuts. (Min. £).
Navy	81	21	Trade group	21	5
Army	78	20	Exports credits	10	5
Air Force	13	5.5	Agricultural group	30	9
Education	60½	18	Police and Prisons	10½	1
Health	24½	2.5	General group	16	1.6
War Pensions	56½	3.3	Pension and University grants		1.2*

* This represents fresh reductions made by the Pensions Ministry and the Board of Education, after allowing an increase of a million as the result of unemployment.

It will be observed that the proportionate reductions vary very greatly, but before any inference is drawn in this connection, two qualifications are needed. In the first place, the estimates for the Navy include 11 millions for new capital ship construction, which will not now be required owing to the Washington Agreement. The true comparison for the Navy is with an estimate of 70 millions, on which a cut of 21 millions—or 30 per cent.—is proposed. The other point is that the figure given for education refers only to expenditure out of taxation. If we add expenditure provided out of the rates it is estimated that the total public expenditure on education for the year would be 104 millions. The proposals of the Geddes Committee contemplate that 3.7 millions of expenditure from local rates could be saved, making the total cut 21.7 millions, or 21 per cent. The total cost of the Police is also more than twice the charge on the Exchequer.

These reductions raise in almost every case very far-reaching questions of policy, for we venture to think that the real cases of waste, as we have defined it, account for the smaller part of the proposed cuts, and in most cases the discussion will turn upon the relative advantages of the service under discussion. It could not be expected that the Committee's proposals should in all respects be proof against criticism, and, in any case, the Government must make up its own mind on the principles involved. We therefore propose to take the major problems and discuss them individually.

In the meantime, we may repeat that, assuming the Committee succeeds in proposing cuts amounting in all to 100 millions, and that the Government accepts these or alternative proposals, we are far from being assured of a reduction of taxation in the coming Budget. It is doubtful if more than half the Geddes cuts could become effective in the next financial year. A reduction of 50 millions in addition to the 75 millions proposed by the departments would bring the estimate of an expenditure of 1,146 millions in the current year to 1,021 millions, to which must be added something for interest on the war debt to the U.S.A.—which would amount to nearly 50 millions in a full year. The current revenue, estimated at 1,216 millions, is not likely to bring in more than 1,120 millions, and maybe substantially less than this. Next year the receipts from direct taxes will be lower, as the three years' average for income-tax will include one bad year. Arrears of E.P.D. are not likely to make a better showing than in the current year, and receipts from war sales, which have been a most important factor in producing last year's surplus, and in balancing this year's accounts, will certainly dwindle rapidly. Even with the full Geddes cuts, a margin for tax reduction is not yet in sight.

ECONOMY AND ARMAMENTS.

FIFTEEN months ago the financial representatives of forty countries, who met at the Brussels Conference, declared emphatically that one of the most important conditions of any improvement in the international situation was a drastic reduction of expenditure upon armaments. They pointed out that the statements presented to the Conference show "that on an average some 20 per cent. of the national expenditure (of the countries represented) is still being devoted to the maintenance of armaments and to preparations for war. The Conference desires to affirm with the utmost emphasis that the world cannot afford this expenditure." This demand has since been echoed by financiers and business men at various national and international financial gatherings, and it was therefore to be expected that the main attack of the Geddes Committee would be concentrated upon this particular stronghold of extravagance. It may be noted in passing that the figure of 20 per cent. quoted in the Brussels Report was, and remains during the current year, approxi-

mately true for Great Britain. But from the point of view of possible reductions the two important items of interest on war debt and war pensions are at present only susceptible of minor cuts. If we deduct these two items from the total estimates of expenditure for the current year the remaining supply services only amount to about 500 millions. Of this amount, military and naval expenditure accounts for over 200 millions or, say, 40 per cent. The truculent and regrettable memorandum of the Admiralty, which followed hard upon the heels of the Geddes Report, is perhaps to be explained by the fact that the senior service appreciates the gathering forces of public opinion in this matter. Of our two main fighting services the task to be performed by the Navy has been much more definitely curtailed by the result of the war than is the case with the Army. On sea we were formerly struggling to maintain our world supremacy against keenest competition. As regards land forces, we were satisfied to stand altogether outside the competition in armaments, and this tradition is doubtless responsible for the comparatively sympathetic attitude of the Army which may be traced in the chapters on the land and sea forces respectively. However justified the Admiralty may be in their detailed criticisms of the Committee's Report, which are described as based upon "a serious misconception of the character and requirements of our naval organisation, and the effect upon these requirements of our experience in the late war," and embodying "every possible error in the series of calculations leading them to the conclusion that only 86,600 men were required for the services of the fleet," the intervention of the department is unseemly, and will undoubtedly prejudice the public against it.

The discussion of the problem of armaments and of defence in relation to economy falls under three heads, namely—

(1) The man power and administrative machinery required to secure and to maintain a given offensive or defensive war strength.

(2) The possibility of economy by considering this war strength, not merely in terms of naval, military, or air strength separately, but by regarding these three spheres as a unity, and treating the problem as a whole.

(3) The degree of war power which this country needs to maintain, in view of the new conditions created by the world-war.

As regards man power, the Committee devoted a good deal of their detailed analysis to criticising the establishments maintained by all three arms. Of the Navy they state:—

That the Estimates for 1922-23 provide for man power on a lavish scale, and that without in any way interfering either with the manning of the fighting ships of the Navy, from capital ships to submarines, as laid down by the Admiralty, there is an excess of over 33,000 officers and men in the Navy which, having regard to our recommendations in paragraph 8 respecting officers' servants class, would justify a reduction of 35,000 officers and men.

That the Admiralty, with a smaller Navy, are maintaining far larger shore establishments, both naval and civilian, than they did before the war, and we think that there are many ways in which economies could be effected by employing the naval ratings and marines held for mobilisation on the work now done for the Admiralty by civilians and Metropolitan Police.

In regard to the Army, they conclude:—

That man power has been estimated on a lavish scale for 1922-23, and that a reduction of 50,000 officers and men could be made, without in any way reducing the forces employed by the War Office on foreign service.

That there has been an increase in all the ancillary and auxiliary services of the Army, which the country cannot afford, and in which drastic economies should be made.

In regard to the Air Force, they observe that, "although we have no pre-war figure with which to compare the staffing of the Air Ministry and its establishments, considerable room for economy exists, both in administration and in policy."

The Committee, however, go further and lay great stress upon the point to which we recently called atten-

tion in the special case of tanks, namely, that new weapons and forms of warfare have greatly increased the military strength of a given unit. In so far as many of our imperial liabilities are concerned with countries where these advantages are not available to possible enemies, the size of our forces can be reduced without diminishing their military effectiveness for the purposes they have to undertake. On this point the Committee states that "the introduction of new arms and corps, and of the Air Force, which have been created with the object of increasing the fighting efficiency of the defence forces of the Empire, is not reflected in corresponding reductions in other directions, and that savings could be made on that account." Further, the very special knowledge which the chairman possesses of the provision and transport of stores and equipment for both the Army and Navy has enabled the Committee to make some very trenchant comments on these questions. They call attention, for example, to the very heavy expenditure proposed by the Government for the manufacture of shells for the larger guns of capital ships in order to complete a reserve "outfit" on shore of this type of shell in addition to the complete "outfit" held on board. "Apart from this new type of shell, it is proposed to spend £1,000,000 on other ammunition, and we think that this is susceptible of great reduction in view of the large surplus stocks of ammunition which are held in excess of the authorised reserves. We are informed that in the four years of the war the Navy fired only half an outfit out of the three outfits which were then authorised. At this rate of expenditure, the two and a-half outfits which remain are equivalent to 20 years' consumption on the basis of the late war, and yet it is proposed next year to spend close on £2,000,000 on ammunition alone." Similar comments are made upon the standard of provision of stores of all kinds for the Army.

On this question the Committee might have added the further criticism that such large reserves, involving man power in maintenance and replacement, are unnecessary, both because the country has acquired a knowledge of war production which for the next 10 or 20 years would make the mobilisation of industrial resources much easier than in 1914, and also for the reason that as the Government is basing its policy on the assumption "that no great war was to be anticipated within the next ten years," the weapons required, if and when war comes, will be quite different from those which the forces are now hoarding.

A conclusion of more far-reaching importance is that in regard to the overlapping of the three services.

In our opinion full economy in the fighting services cannot be realised under existing conditions. There is overlapping and duplication throughout. In order to fully realise these economies, the three forces must be brought together by the creation of a co-ordinating authority, or a Ministry of Defence responsible for seeing that each force plays its part and is allotted appropriate responsibility for carrying out various functions. The theory of such a Ministry in embryo appears already to exist in the Committee of Imperial Defence. With the creation of a co-ordinating authority or Ministry of this description it would be possible to ensure that corresponding reductions in expenditure were realised when either of the older services was relieved or assisted, and no additional expense or extra Ministerial appointment need, in our opinion, be involved, as the Minister and his staff could all be drawn from existing organisations. All the arguments of an economic character which have been urged for the absorption of the Air Force into the two older Services apply, in our opinion, also to the fusion of all three Services under one Minister. Complete co-ordination in supply, transport, education, medical, and other services would then be possible.

The development of new means of carrying on war will, in our opinion, make this recommendation of increasing importance, even if, as Mr Chamberlain stated on Thursday, it cannot be carried out forthwith. In our opinion this reform is primarily necessary in the interests of war power, or as we prefer to say, of policing power, for it is imperative that some co-ordinating authority

should be instituted to maintain unity of command among the various military arms, in view of the technical and tactical changes in methods of war which are certain to occur. But the suggestion is obviously of importance also in regard to administration and supply. It would be in the highest degree discreditable for the country ever to find itself again in the position of having its various fighting services competing for supplies or establishing three or more separate organisations for dealing with all these economic problems which war involves.

There remains the most far-reaching problem of all, viz., the question as to the war power which this country needs. In this connection it cannot be too much insisted that the cuts proposed by the committee were suggested without reference to the Washington Conference decisions. These agreements are commonly assumed to have involved the cancellation of the 11 millions sterling proposed for new expenditure upon capital ships during the present year. We must not, however, forget that the Washington Agreement permits Great Britain to build two new ships not exceeding 35,000 tons. The Government has not declared its intention on this matter, but Parliamentary and public opinion are making it quite clear to the Government that until the financial situation is very much improved there must be no question of commencing either of these ships at present.

Mr Balfour, however, reminds us that the Washington Conference failed to come to any arrangement upon the subjects of land armaments and submarines. In regard to land forces, the Committee has gone so far as to outline possible reductions of our overseas liabilities as shown in the following table:—

	Cavalry Regiments (including 3 of Household Cavalry).			Infantry Battalions (including 10 of Foot Guards, 9 in 1914).		
	1914	1922- 1923.	Com'ttee's Sug'stions.	1914	1922- 1923	Committee's Suggestions.

Total Units	31	27	19	157	158	130
			Reduction 8 Regiments.			Reduction 28 Battalions.

In regard to the home forces, the present necessity for the Cardwell system of "linked battalions" is questioned. We are told that "the War Office hold the view that this is the most economical way of providing for the alternation of foreign service and home service, and on the assumption that the number of units which this system gives at home is needed either at home, or as an Expeditionary Force, that may be so. But if there is no real necessity for the full number of units at home, the system cannot, in our opinion, be an economical one, and so far as our information goes, there is no need for six divisions, complete in all arms and services, to be held either for the maintenance of order in this country or for an emergency abroad which is likely to arise in the next few years."

Finally, the Committee draws special attention to the

very heavy expenditure which is being incurred on forces in Constantinople, Egypt, and Palestine, in regard to which the following provision is made in Army Estimates for the present year:—

Constantinople	£ 3,117,000
Egypt	5,944,000
Palestine	4,219,000
Total	13,280,000

"Apart from an estimated reduction in the cost of the force in Palestine to about £2,750,000 in 1922-23, it does not appear that any substantial reduction in the other items of this expenditure is anticipated. The only force which was maintained in these areas before the war was one cavalry regiment and five infantry battalions in Egypt, the provision for which at present day costs would not, we understand, have exceeded £1,450,000." Thus is it emphasised once more that expenditure is linked up with policy.

FOREIGN TRADE IN JANUARY.

THE trade returns for January confirm the view previously expressed in these columns that the fundamental conditions of British industry are to-day more favourable for a slow but steady recovery than has been the case for some time past. The three features of the trade figures for the past month are the reduction of the import surplus to a figure far below the normal pre-war condition, the steady inflow of raw materials at a rate equal to that which prevailed in 1920, but at enormously reduced prices, and finally a satisfactory recovery in the volume of our exports compared not merely with the last few months, but with January, 1921.

As regards the import surplus, the figures for the month show a balance against this country of less than £5 millions, which compares with an average per month of from £10 to £15 millions in the years preceding the war:—

MONTH OF JANUARY.

	1921.	1922.	Decrease in 1922.
Imports	£ 117,041,115	£ 76,488,231	£ 40,552,884 — 34.6
British exports	92,756,094	63,146,949	29,609,145 — 31.9
Re-exports	9,955,119	8,458,866	1,496,253 — 14.9
Total exports	102,711,213	71,605,815	31,105,398 — 30.2
Excess of imports over total exports	14,329,902	4,882,416	9,447,486 — 66.0

The corresponding balances which averaged £31 millions in 1920, and £23 millions in 1921, have shown the following variations during the year:—

	Import Surplus in Million £.	Import Surplus in Million £.
January, 1921	14.3	28.2
February, "	20.7	27.2
March, "	18.1	23.3
April, "	21.5	12.1
May, "	36.0	16.5
June, "	42.8	16.8

This figure is by no means the only influence on the course of the foreign exchanges, but the value of the dollar has in the past 12 months fluctuated fairly closely with the variations in the monthly trade surplus. The recent appreciation in sterling coincides with the marked fall in the balance since Michaelmas.

As regards raw materials, the figures for a single month are less indicative of the trade situation than almost any other section of the return owing to the substantial variations of stocks in hand. Thus in the present instance the importation of iron ore, for which at the moment there is practically no market, and of raw cotton, are both much less than in January, 1920, and in the case of ore much less even than in 1921. Iron ore is, however, always a variable import during the winter, and the only point of interest that can be drawn from the figures is that, whereas the average import value both in January, 1920, and in January, 1921, was about 47s, the average import value last month was less than 29s. Similarly the average value of raw cotton has fallen from over £23 per cental in 1920, and a little under £9 in 1921, to £6

last month. In the case of wood and timber, the quantity imported was approximately equal to 1920, and was substantially better than 1921. The minor textile materials were imported in even smaller quantities than 1921, but on the whole the general tendency in the other trades of the country is a definite increase on the figures for January, 1921, but a lower total than in January, 1920.

When we turn to exports we find that the exports of coal have recovered practically to pre-war level. In iron and steel the figures are nearly up to the 1920 level, but still substantially below the pre-war figure. Cotton goods have made a definite recovery, and other textiles are moving in the same direction. The actual figures of these main trades are as follows:—

	Jan., 1913.	Jan., 1920.	Jan., 1921.	Jan., 1922.
Coal (thousand tons)	6.07	3.36	1.70	4.02
Iron and steel (thousand tons) ..	437	257	232	253
Non-ferrous metals (thousand tons)	141	161	81	121
Cotton piece goods (milln. sq yds) ..	649	415	249	339
Cotton yarn (million lbs)	19	161	7.2	14.8
Paper (thousand cwt)	323	158	221	147
Jute piece goods (million sq yds) ..	15.7	15.6	5.1	8.6
Linen piece goods (milln. sq yds) ..	20.8	14.5	2.3	7.8
Woolen tissues (million sq yds) ..	11.6	18.5	9.8	8.9
Worsted do. (million sq yds)	8.1	5.9	4.0	6.7

Compared with these figures, however, some of the minor industries show less satisfactory results. Exports of boots and shoes, leather goods, hats and hosiery, are still dwindling. The same is true of paper, hardware, tools, watches, and other similar trades. As regards machinery, the comparison is vitiated by the low level in January, 1920, as a result of the moulder's strike, but compared with 1921 exports are substantially down, with the single exception of textile and electrical machinery.

The returns show that the most substantial progress compared with a year ago has been made in those trades where wages reductions have been made on the basis of the ability of the industry to pay, or in those industries such as the cotton trade, where British labour cost is a small item in the total value of the finished product. In the engineering trade reduction of wages has been less rapid, and the same would probably be found to be the case in other industries, such as boots and shoes, and hosiery, which cater more for the home market rather than for foreign trade.

LESSONS OF THE CITY EQUITABLE.

ONCE again Mr H. G. Wells has proved his genius for anticipating history. In his novel "Tono-Bungay" he made the great financier whose schemes had fallen to ruin leave the country by aircraft and come to rest in Spain. Mr Bevan, chairman of the City Equitable, is now reported to be in France, now in Brazil, now in Spain, but wherever he may be it is certain that, following the precedent of Mr Wells' Ponderevo, he left this country unexpectedly and by aircraft.

Much still remains to be disclosed in connection with this extraordinary failure. The company itself and two of its subsidiaries are in process of liquidation, while Messrs Ellis and Co., Mr Bevan's firm, filed their petition in bankruptcy on Wednesday, but so far there has been no official story of the disaster, and probably no one, not even the accountants, have yet got all the facts in their proper order and perspective. But enough is known to indicate a grave scandal, a scandal probably more serious than this generation of insurance men has ever believed to be possible. The City Equitable itself made up its balance-sheet as at February 28th, and at that date last year it showed the following imposing list of securities:—

British, Government, and Treasury Bills	£ 783,717
Indian and Colonial and Foreign Government ..	55,749
U.S.A. Government Municipal and Railway	160,831

Some of the other securities were less attractive in appearance:—

Insurance companies' shares	£ 150,764
Miscellaneous securities, debentures, &c.	686,926
Loans	514,633

These items have a rather vague look about them, and it will be interesting to discover exactly what the loans and miscellaneous securities consisted of, but the auditors' certificate was emphatic and satisfactory:—

"We certify that in our belief the assets set forth in the balance-sheet are in the aggregate fully of the value as stated therein."

In face of these figures and this certificate how comes it that within so short a time the assets are exhausted or unrealisable, and the company in liquidation? The answer appears to be that the securities of which the company had control through its own holdings and those of its subsidiaries were used for purposes that were, to say the least, unjustified, and that good realisable assets had their place taken by rapidly depreciating industrial shares. Government securities belonging to subsidiary companies were borrowed by concerns in which the chairman had an interest, and employed in a manner which in course of time will doubtless be revealed, while the most extraordinary banking arrangements were entered into for the convenience of anyone but the policyholders. The result is that those subsidiary companies which, unlike the City Equitable, were direct insurers and issued their

policies to the public, instead of being strengthened as they were supposed to be by the new connection, had their resources drained and were rapidly involved in the common disaster. The details of the story cannot yet be filled in, but these are the broad facts, and we may trace the failures directly to a most regrettable connection between insurance finance and an altogether unsound industrial boom. In these operations Messrs Ellis and Co. as brokers, were heavily involved, holding money and good securities that had been borrowed from the insurance companies, and giving in return shares of inferior quality, some of which are believed now to be worth less than nothing. Hence their failure.

In fact, the most obvious lesson of this collapse is the danger of leaving the control of an insurance company's assets and the direction of its investment policy to men who are heavily interested in any speculative form of finance. It may be desirable to have on the board men with financial experience and connection who can help the company to make sound investments not obvious to the general public, but rather than have clever financial directors with heavy commitments of their own, and with axes of their own that will constantly need to be ground, a company had better be content with a few commonsense men who think of nothing but security, and are content with a humdrum investment policy that leads to no brilliant results, but can never impair the company's safety.

Another moral that may be drawn from the City Equitable concerns the habit of re-insurance, especially treaty re-insurance, which has grown considerably in the past 20 or 30 years. During this period it has become more and more common for companies to accept big lines on individual risks with no intention of keeping the whole or even half of the lines themselves, but in order to re-insure the bulk of the risk with others and run only a tiny fraction in their own books. By effecting re-insurance "treaties" with these other companies, they give themselves the right to pass over or "cede" to them any part of the risks that they have accepted at rates lower by a considerable percentage than those they get from their own clients. This percentage represents their profit on the deal, and they are really acting as brokers or business getters on behalf of their fellows. They have the expense of securing the order, and they must provide the public with security good enough to be generally attractive, and in return for this they get from the company to whom the risk is ceded, which is probably less well known and less stable than themselves, a turn on the transaction.

Where the credit of the original company is unshakable (and the credit of all the leading British companies happily is) its re-insurance arrangements are not of any interest to the public, for whether it retains or cedes, the policyholders will be paid in the event of loss. But carry the system of re-insurance beyond a certain point and it becomes impossible to tell from the published figures whether a company of the second class is really strong or weak. If, for example, such a company publishes, as most companies do, only the figures of net premium income, i.e., the premium income after deduction of the sums paid away in re-insurance, the picture given in the accounts of the scope and nature of the business may be altogether misleading. Assume, for example, a company which retains an average of 20 per cent. of what it writes and cedes 80 per cent. to other concerns, it will have a real premium income of £500,000, but show in its accounts a net income of only £100,000. The figures might run on these lines:—

Marine insurance fund, £	Claims paid and outstanding	£
1920 150,000	 60,000	
Premiums net 100,000	Expenses and commission	20,000
	Marine insurance fund,	
	1921 170,000	

These figures look beautifully strong and successful, but they deal only with one-fifth of the income and one-fifth of the claims. The remaining four-fifths relate to the re-insuring companies, and if they were to collapse, our hypothetical company would be unable to meet its liabilities and would go down with them. What we really want to know from the company is not "What assets and

reserves have you got?" but "What assets and reserves have your re-insuring companies got?" In other words, the insurance accounts and the balance-sheet tell us very little, for everything turns on the strength of the re-insurers who are running four-fifths of the risk. To get at the true position we should need to examine not one balance-sheet but 20 or 30 balance-sheets, testing each link of the chain before we can tell the strength of the whole.

Of the troubles that the insurance market has gone through recently—the failure of the Norske Lloyd, the Essex Union, and other companies of the same or lesser standing—many can be traced directly to re-insurance treaties. In Norway, which supplied a good many links in the re-insurance chain, there has been a veritable cataclysm of credit, much, if not all, of it arising from reckless underwriting in one London office, which radiated bad underpaid risks through a whole circle of re-insurers, and so not merely brought them down, but embarrassed our more careful companies who had placed their re-insurance treaties in the same quarter. The ramifications were so elaborate and the give and take of risks here, there, and everywhere so confusing, that no single man could, while the system was working, have calculated its strength or its weakness; but when the liquidator is called in and begins to examine the books, the extent of the connection and the hold that each of the companies gives to the others to make or mar it becomes apparent. A list of the re-insurance contracts placed by some of the companies, especially by the not quite first-class companies, is as good as a lesson in geography.

It should perhaps be repeated that the first-class British offices have built up for themselves so strong a position that the failure of a few re-insurers can leave scarcely a ripple on the surface, but it might not be a bad thing if the habit of treaty re-insurances became less popular everywhere, and a larger proportion of the risks remained where they were originally placed.

THE UNDERGROUND GROUP.

THE results of the operations of the five companies comprising the Underground Railway group show a substantial increase in net receipts for the year 1921, which accounts for the very satisfactory dividend announcements made at the end of last week, and summarised in our last issue. Traffic receipts were £12,498,600, and expenditure £10,425,900, leaving net receipts of £2,072,700. In consequence of Government control of the Metropolitan District Railway in 1920, the traffic receipts and expenditure for that year are not comparable with those for 1921. The net receipts and appropriations for 1920 and 1921 for the five companies are given below:—

	1920.	1921.	Inc. or Dec.
Net receipts	£ 1,222,381	£ 2,072,711	+ 850,330
Miscellaneous receipts (net)	693,999	586,916	- 107,083
Total net income	1,916,380	2,659,627	+ 743,247
Deduct—			
Interest, rentals, & fixed charges	825,911	867,628	+ 41,717
Appropriations to reserves	420,000	530,000	+ 110,000
Dividends on guaranteed and preference stocks	360,077	389,477	+ 29,400
Total deductions	1,605,988	1,787,105	+ 181,117
Balance	310,392	872,522	+ 562,130
Add balances from last year's accounts	134,278	135,711	+ 1,433
Total amount available for dividends on ordinary stocks and shares for other purposes ..	444,670	1,008,233	+ 563,563
Amount paid in dividends on ordinary stocks and shares representing an average rate of 3.92 per cent. in 1921 and 1.66 per cent. in 1920	308,959	755,091	+ 446,132
Balance carried forward to next year's accounts	135,711	253,142	+ 117,431

During the first half of the year 1921 the dividend on the second preference stock of the Metropolitan District Railway Company, amounting to £36,750, was met out of

that company's share in the common fund. If this amount is added to the balance shown above, namely, £872,522, the total represents the common fund for the year 1921. How the common fund was divided among the five members may be seen from the following comparative table:—

	1919.		1920.		1921.	
	%	£	%	£	%	£
Central London	21	99,278	20	70,898	18	164,483
City and South London	6	29,783	6	21,270	6	54,556
London Electric	30	148,916	30	106,348	35½	320,552
Metropolitan District	12	59,566	12	42,539	12	109,113
London General Omnibus	32	158,844	32	113,437	28½	260,568
	100	496,387	100	354,492	100	909,272

Since July last the agreement in respect of the division of the common fund has been modified, and the dividend upon the second preference stock of the Metropolitan District Railway Company, hitherto payable out of that company's share in the common fund, is now deducted by that company from its revenue before payment into the common fund, or if its revenue should be insufficient for the purpose is met out of the common fund before distribution.

Each of the companies shows a substantial expansion in net receipts, owing partly, it is to be presumed, to the increase in fares. We give below a comparison of the revenue, expenditure, and fixed charges of the four railway companies, the figures of the Omnibus Company being shown on a later page.

	Revenue.		Expenditure.		Fixed Charges.	
	1921.	Inc. or Dec.	1921.	Inc. or Dec.	1921.	Inc. or Dec.
Central London	£ 729,551	+ 131,151	£ 468,428	- 16,704	£ 48,039	- 8,032
City and South London	481,308	+ 103,895	301,441	- 70,470	46,811	- 2,808
London Electric	2,176,804	+ 325,392	1,368,771	- 18,523	255,544	+ 9,278
Metropolitan District	2,013,760	..	1,351,308	..	326,760	- 611

The Metropolitan District was under Government control, but Government responsibility for net revenue ceased on September 26, 1920, when the new scheme of fares came into operation. Its receipts from the common fund, thanks to the modification mentioned above, have been substantially increased, and it is able to make the first distribution on its ordinary stock since 1882.

The next table shows net income, preference, and ordinary dividends:—

	Net Income Less Charges.		Pref. Dividend.		Ord. Dividend.	
	1921.	Inc. or Dec.	1921.	Inc. or Dec.	1920.	1921.
Central London	£ 215,083	+ 102,585	£ 21,600	..	£ 67,500	2½
City and S. London	133,056	+ 44,286	42,500	..	22,200	1½
London Electric	512,499	+ 234,204	126,947	..	104,938	1½
Metropolitan Dist.	335,793	+ 123,324	198,430	+ 29,400	nil	..

After payment of dividends, each of the companies is able to carry forward a substantially larger amount, the aggregate increase for the four railway companies being £108,300. The number of passengers carried by the five companies in 1921 was 1,099.9 millions, of which the L.G.O. Company was responsible for 761.3 millions. The total shows a decrease of 71.8 millions in comparison with 1920, the London Electric showing a decline of 31.6 millions, the Metropolitan District of 17.4 millions, and the L.G.O. of 6.7 millions. The net amount spent by the railway companies on improvements and additions during the year was £837,000, of which £707,000 was for additional rolling stock for the Metropolitan District.

Our final table shows the movements in the securities of the Underground railways:—

Name.	Year 1913.		Year 1921.		Price Feb. 9, 1921.	Price Feb. 15, 1922.
	Highest	Lowest	Highest	Lowest		
Central London, Def. Stock	86	72½	32½	17½	17½	37½
Do Pref.	..	..	42½	27½	27½	43½
City and South London 5% Pref., 1903	110½	94½	60½	50½	52½	68½
London Electric, Ord. (£10)	80½	70½	5½	44½	48	34
Do 4% Pref. Stock	44½	27½	22½	12½	16	23½
Metropolitan District Ord. Stock	..	..	..	..	..	..
Underground Electric Income Bonds, red. 1948*	96½	87½	83½	60½	67½	72½

* Dividend free of tax.

In common with other railway securities, there has been a substantial advance in quotations in the last two months, an additional stimulus being given by the announcement of the increased dividends.

ECONOMY—A LABOUR VIEW.

(FROM A LABOUR CORRESPONDENT.)

THE Geddes Report has been received with both wild approbation and qualified criticism, but in no quarter has it met with general condemnation. The attitude of Labour is one of qualified criticism. From the Labour point of view the problem of national economy cannot be divorced from the wider question of national policy. Behind the Geddes Report lie Versailles and a series of abortive or virtually futile conferences. National economy is not an alternative to a final solution of the question of reparations, the cancellation of inter-Allied debts, substantial assistance to Russia, and to other action essential to the restoration of the world's normal economic life. The international situation remains the root economic problem, and drastic cuts in the public services do not provide even the semblance of a sticking plaster to cover the gaping wounds of the world. The various mistaken military enterprises in which Britain has been engaged since 1918 are, of course, partially responsible for the present state of the national finances; but there need be no similar adventures in the future, and it is no use crying over spilt milk. The international situation, however, remains, and it can be neither obscured nor substantially mended merely by the economies of a chastened Government.

Perhaps the two most appalling examples of waste today are to be found in the spectacles of twenty million Russian people starving to death, and nearly two million British workers unemployed. A 10 per cent. cut on the Budget—and it is doubtful whether that will be achieved—will not appreciably relieve starvation in Russia and privation amongst the unemployed at home. Indeed the immediate effect of the proposed economies will be to swell the army of the unemployed. Unemployment is too subtle a disease to be cured by taking a shilling off the income tax, though ultimately it may be that reduced taxation would lead to the enlargement of production. The firm conviction of the Labour Movement is that whilst economy is essential, the stimulation of industry and commerce is even more essential, and that whilst the former may contribute to the latter, the restoration of production is the main problem. The policy of economy aims at reducing public expenditure; the policy of production, which is bound up with the international situation, aims at the enlargement of the national income which provides the public revenue.

These wider considerations are, unfortunately, being forced temporarily into the background, but they are ever present in the mind of organised Labour. On the narrower question of national economy there can be no two opinions. Certain newspapers have attempted an obviously stupid classification of the public into two categories—the economisers and the wasters. The former include a number of prominent people whose scale of personal expenditure is in direct contradiction to their views on national expenditure; whilst the so-called "wasters"—a synonym for the Labour Movement—have been unflinching opponents of waste. Their crime appears to be that they discriminate between different forms of public expenditure. Broadly speaking, Labour welcomes reductions in expenditure on the fighting services, and supports such other restrictions as can be carried out without injury to the public services; but it opposes "cuts" on the education, public health and similar social services. The attack on education is regarded with the gravest misgiving. It is not denied that there may be directions in which expenditure could be diminished, but it is urged that a "cut" of over £16,000,000 on State grants on education in England and Wales strikes at the foundations of the educational system. What the proposals amount to is turning the children under six out of the schools, increasing the size of classes in elementary schools, and discouraging the development of secondary

and higher education. That, in Labour's view, is a suicidal policy. It is not economy; it is the maddest sort of short-sighted extravagance.

Labour parts company with the economisers at the point where the latter threaten those public services which minister to the education, health and amenities of the people, and the provision made for the non-abled-bodied section of the community. It appears probable that there will be a great struggle over certain of the items of the "economy budget." It must be remembered that the passage of the estimates will not end the matter. If the Government adopts the proposals of the Geddes Committee regarding the raising of the age of entry to public elementary schools, and the reorganisation of the system of education grants, legislation will be necessary, and the necessary measures will be fought by those who are opposed to "making the children pay."

The view is growing that the Government's economy policy will end in smoke, or that, at the most, the reductions will be far smaller than was contemplated. The Government has put the Geddes Report into cold storage, so far as the public is concerned, for a couple of months. It has not yet declared its own policy, nor does it appear likely that it will until it actually presents its Budget, by which time we shall be on the threshold of the new financial year. Certain minor restrictions may be made in the interim, but it is pretty certain that the various Departments will not show any marked eagerness to forestall the Budget. Once the Budget is introduced, and such legislation as is necessary is passed, it will clearly take some time to carry the various proposals into effect, and it may well be that a quarter or even a half of the financial year may have rolled by before there is any real relief to the public purse. In consequence, either there will be a deficit at the end of the financial year, or the savings will be on a smaller scale than the whole-hoggers have demanded. Moreover, the Government may very well find on reflection that certain of the Geddes proposals are impracticable, and that as regards other suggestions public opinion is too strong for it to accept them; in either case, the total "cut" which the Government encouraged the country to expect will not materialise. On the whole, therefore, it appears that the economisers will be disappointed; the practical limit of restriction of expenditure will be reached sooner than was anticipated.

The moral is that the improvement of the national situation does not depend so much on a substantially reduced Budget as on a revival of trade, which will enable the community to face a heavy national expenditure. The Labour Party would take the view that the income-taxpayer is now reaping the results of his opposition to the "capital levy," which would have reduced the annual national expenditure by an amount larger than the economisers are likely to achieve. It is still true that the reduction of the National Debt is a more hopeful line of approach than clumsy cuts at education and other socially productive services.

There is another aspect of the question of economy to which reference must be made. The rank and file of trade unionists are hardly likely to be impressed by the urgent need for reducing expenditure on what the Geddes Committee call the "social services" whilst the rich betake themselves to St. Moritz, and the ladies of Mayfair spend extravagantly on dresses (no doubt in the belief that it is "making work" for the poor), whilst luxury still flourishes and large sums are expended directly and indirectly on a forthcoming Royal wedding. It is true that if all money spent in these various ways was saved, the total would be relatively small; but the psychological effect of such forms of expenditure is important. Why should the education of a single elementary school child suffer in any way whilst extravagance reigns amongst the well-to-do? The question demands an answer. In "Labour and the New Social Order," the pamphlet containing the Labour Party's reconstruction policy, it is suggested that no one should have cake until everybody had bread. That point of view will have to be reckoned with if those economisers who receive no direct benefit from the social services insist upon depriving those who do of the full value of them.

Notes of the Week.

The Debate on India.—Mr Gandhi's sudden suspension of the non-co-operative movement enabled Ministers to take the spirit out of the ultra-Conservative attack on them in Tuesday's debate. But the attack was futile from the first, for it exhibited the limitations alike of the narrowest type of politician and of the least instructed reader of history. The mover and seconder of the amendment to the Address, which was essentially a vote of censure, concentrated on the outstanding personages in the contest, and totally ignored the political and historical conditions which have generated the existing situation. The Indian Secretary and the Prime Minister had a ready and overwhelming reply. In the 87 years since Macaulay secured that the lines of Indian education should be European, the intellectual and social conditions of British India have inevitably prepared the way for self-government. That part of the Indian sub-continent cannot be governed, as Sir William Joynson-Hicks seems to desire, after the autocratic fashion of the Native States. The progress towards self-government under British tutelage has been hastened by the education of Indians in England, by India's share in the war, by the call for "self-determination," and by the race-consciousness fostered by the recognition of the rights of nationality in Europe. The process must be carried out gradually, without compromising its necessary condition, the sovereignty of Great Britain symbolised by the Emperor-King. On the other hand, political and economic conditions, beyond the control of any British Ministry, have generated unrest. The beginnings of industrialisation have set up labour disputes, embittered, as elsewhere during similar transitions, by inexperience on both sides and the weakness of the labour unions. Two years of agrarian scarcity have been followed by the impoverishment due to the war; taxation is heavy, and is increasing, and, as Mr Lloyd George pointed out, the Report of the Commission on Indian Railways alone shows how much has still to be done by new lines and new rolling stock to facilitate production and traffic. The evils of the transitional stage are resented by idealists in India, as elsewhere, and Mr Gandhi has drifted from legitimate social reform to illegal and unjustifiable resistance. Resentment at the Turkish peace terms—which are now certain to be revised—has estranged the Mohammedans, and the hindrances to Indian immigration into the Dominions and East Africa have intensified Indian impatience with British rule. And Bolshevism cannot be kept out of India any more than out of Irak or Glasgow, but its efforts have not been very successful. In India, as in Irak in 1920, the Moderates have been thoroughly alarmed by the vista of anarchy opened up by the extremists whom Mr Gandhi cannot control. He has admitted the danger by his "postponement" of non-co-operation and by proclaiming a fast in atonement for the riots at Chauri Chaura. To arrest him now would make him a martyr, and lead to worse disturbance. The situation is improving, but India is too large in any case for a combination of the forces of disorder, and the masses are unarmed. Both sides must patiently aid in developing a real combined Indian people, capable of working an effective native government, and must expect incidental friction and occasional and temporary loss of efficiency in the administrative machine.

Financial Aid for Austria.—An important decision has been taken by the British Government in regard to the problem of giving financial assistance to the Austrian Government. In reply to a question in the House, the Financial Secretary of the Treasury stated on Wednesday last:—"The Austrian Government, in co-operation with the Financial Committee of the League of Nations, has proposed a scheme for the grant of private credits to Austria, the execution of which is delayed because the liens on Austrian assets in respect of reparation and relief credits have not yet been released by the Governments concerned. In order to enable Austria in the meanwhile to continue its programme of financial reconstruction with an assurance of reasonable stability for the exchange value of the krone, his Majesty's Government have agreed to make an advance of £2,000,000 to Austria. By agreement with the Austrian Government the expenditure from the loan is

to be controlled in Vienna by Mr G. M. Young on behalf of the British Treasury. It is understood that the Italian Government are considering the grant of a credit to Austria and that the French Government are asking the French Parliament to vote the funds required for an advance of 50,000,000 francs to Austria with a similar object, and that the Czecho-Slovak Government propose to make an advance of 500,000,000 Czech crowns. The Finance Committee of the League of Nations will be meeting very shortly to consider the situation created by the grant of these new credits." In reply to further questions, Mr Hilton Young added that the duties of Mr G. M. Young, who has for some time past been attached to the commercial side of the Austrian Embassy, would be not merely an adviser, but in effect a "substantial controller." Clearly no Government would in present circumstances be prepared to make an important loan to the Austrian Government without requiring some assurance not merely that the money advanced is properly spent, but also that the Government is proceeding with an internal financial policy calculated to restore stability to the exchanges and a return to a more normal condition of commercial affairs. But it is equally clear that a number of countries could not appoint separate Controllers for bringing pressure of this kind to bear upon the Austrian Government, and the statement outlined above obviously points to an early understanding between the lending Governments concerned in regard to Austria's internal policy. Indeed, we understand that it is the British Government's intention to co-operate with other lending Governments to put into substantial effect the scheme developed by the Financial Committee of the League of Nations, in which assistance to Austria was made contingent upon certain undertakings, such as the ultimate balancing of the Austrian Budget, with financial equilibrium maintained in the meantime by an internal loan, in respect of which the Government were prepared to give a second mortgage of 2 per cent. on all real estate, and the surrender of the right of further note issue, which would be transferred to a new and independent Central Bank. It is hoped that the formal surrender of the liens upon Austrian resources by creditor Governments may, in fact, be concluded very shortly, and that the way will then be clear for putting into effect the scheme of the League with such minor administrative changes as recent experience may have shown to be desirable. In spite of the deplorable condition of the exchange, the Austrian Government has made extremely laudable efforts to put into effect the principles laid down by the Finance Committee, and the assurance of definite advances will now give added stimulus to these efforts.

The Mine Owners and the Mines Act.—It is of the greatest importance that employers should not abuse the power in dealing with labour which the desperate state of trade has temporarily placed in their hands. We therefore regret the somewhat high-handed tone in which the Mining Association of Great Britain inform the Government that "the fullest measure of co-operation between employers and workers consistent with the proper and efficient management of the mines.....will not be secured by compelling the industry by Act of Parliament to adopt a particular scheme of administration," and that "the Mining Association, speaking as representative of the colliery owners of the United Kingdom, desire to make it clear beyond any possible doubt that in no circumstances will the colliery owners operate Part II. of the Act." This is strong language to use to the Government in regard to an Act of Parliament. But Mr Bridgeman's report to Parliament upon the matter makes it clear that there is more to be said for the owners than appeared from their letter, and that the undignified position in which the House is placed is due to the lack of conviction in Government policy two years ago. Part II. of the Act, setting up Pit and District Committees, with functions and procedure to be prescribed in the regulations, was regarded as the Government alternative to nationalisation, but as the miners would not at that time accept the Government scheme Parliament made these provisions of the Act permissive by inserting the following clause:—"If at the expiration of one year from the passing of this Act it appears to the Board of Trade

that the scheme of this part of the Act has been rendered abortive by reason of the failure on the part of those entitled to appoint representatives as members of the Pit and District Committees, Area Boards, and the National Board to avail themselves of such right, the Board of Trade shall issue a report of the circumstances, and that report shall be laid before Parliament, and at the expiration of 30 days during the session of Parliament from the date when it is so laid all the provisions of this part of this Act shall cease to have effect unless in the meantime a resolution to the contrary is passed by both Houses of Parliament." For various reasons, the issue of the regulations was delayed until after the coal strike, when the miners informed the Government of their willingness to work the Act. The owners, however, raised objection, urging that their voluntary arrangements were securing the object desired. Mr Bridgeman admitted this argument in regard to the fixation of wages according to profit, and to district settlements of wages, but failed to see that it dealt adequately with the question of Pit and District Committees. In any case, he was bound by the Act to issue regulations which appeared last month, and provoked the categorical negative to which we have referred. This attitude is based above all upon the determination to end any Government control over wages and allied questions, and the fear that the Department will be drawn into disputes. The matter is one to which Parliament must give consideration. The circumstances have radically changed, and if the Mines Department is not to be left in a false position the House must adjust its attitude to the new circumstances.

Foot and Mouth Disease.—An agricultural correspondent writes:—"Contagious diseases which invade the country without warning, and sweep across it apparently unchecked, excite, and most deservedly, the sympathy of the nation for all who suffer from what often appears to be a mysterious scourge. The disease thus far has led to the slaughter direct and precautionary of .2 per cent. of our cattle, .015 per cent. of our sheep, and of .22 per cent. of our pigs, but these official figures create an undue effect, seeing that if there had been no disease, the animals would have gone to the butchers in a large majority of instances. When, however, we come to the indirect effects of the outbreak there is nothing that admits of being minimised. Most unfortunately it occurs at a time when liberality in spending is all but impossible on the part of the Executive, otherwise this very real danger could be met, coarsely but quite effectively, by paying the farmer for slaughtered animals on a really liberal scale. In that case he would not be "put off feeding stock" because of their slaughter in "an unfinished condition." What butchers call "finishing" does not always pay, and "sure money is sure money." If the disease should unfortunately escape from the control, which at the moment of going to Press seems firmly established, a private subscription to supplement what the State can allow might have its advantages, and reassure the farmer. Fears for pedigree animals are not grave. The disease can be fought if isolation and treatment are warranted by the value of the animal itself. Nor need great regret be felt at the cancellation of the various spring shows of animals. The purse of the public is so depleted that their success as business propositions was by no means assured. The most serious danger of all is with respect to the future. Agriculturists will be tempted to reduce their risks, and especially is it feared by those who study the economics of the countryside that horses and sheep, which are largely immune, and pigs, the value of which is small, will gain greatly on the average mixed farm at the expense of cattle where the loss on a dozen animals slaughtered may "run into three figures," while the unconsumed stores left on the farmer's hands may also be considerable. Ministers and public men are perhaps a little too pessimistic over the probability of keeping contagion out of the country. Anarchy in Ireland must not be accepted as itself endemic, and the normal Irishman has a keen eye to the main chance. We may look forward to North and South agreeing at least on one thing, that a clean bill of health is vital to the island. Then there are our troops occupying Continental places from Silesia to the

Rhine, and with every granting of leave bringing the chance of infection from areas where disease is chronic and rampant. This danger in turn will pass. Straw and other articles imported can be disinfected, or, at the worst, dispensed with. A determined and systematic campaign against imported disease was successful when the nation was roused over rabies; it should be so with foot and mouth disease. One economic effect of the outbreak is hardly to be accounted an evil; the incessant moving of cattle up and down the country is largely a waste of time, energy, and money, in ordinary times. Hopes of a little more money at one place than another lead to these shiftings of live stock, which, when once disease has broken out, are so difficult to follow up. It is not improbable that those who move cattle about on the whole fulfil the old saying about "going farther and faring worse," the ultimate higher price on the final sale being as a rule more than eaten up by the costs incurred. Hope, however, "springs eternal," and we are still some way from the day of the butcher-farmer, who will kill and cut up his meat on the farm, and send it in a jacketed, chambered, lorry into the town where the consumer awaits it. In the meanwhile, we shall lose little by the Ministerial orders forbidding the constant road and rail migrations of live animals up and down the country.

The Stock Exchange Programme.—Were it not for the boom in gilt-edged stocks and the amount of business which this is bringing to a good part of Stock Exchange membership, there would certainly be more discussion than there is at the present time of the principles for returning to pre-war business on the part of the House. We published the Committee's decision last week (page 224), and members of all the stock exchanges now await the first definite step that shall put the principles into practice. To begin with, writes a Stock Exchange correspondent, it will be necessary for the Treasury to intimate some date at which the Temporary Regulations will cease to operate. The Stock Exchange Committee could not introduce a rule providing for periodical accounts and contingencies if, at the same time, there were left remaining the Treasury's fiat that dealings must be for cash only. Nevertheless, the House is being set in order for a return to normal times. Carpenters are busy in the settling room underneath the Stock Exchange, where, in pre-war days, a good deal of the business of the Stock Exchange Clearing House used to be conducted, and the re-establishment of the Clearing House is a necessary adjunct to starting carry-over business. In the Consol market the dealers there refuse to have anything to do with contango business. In the old days, the number of stocks in which they were accustomed to deal extended over a list exceedingly short, as compared with the long catalogue of stocks dealt in by the Consol market at the present time. The dealers declare that it would be a physical impossibility to cope with the work involved by fortnightly settlements if these were to become the rule, or if the market were to go back to its pre-war system of a Consol account once a month. Dates of this Consol account are still officially fixed, it may be incidentally observed, and possibly there is still stock open which remains as the legacy of the pre-war position. A good many brokers are advocating that there shall be no such contango account opened as existed before the war on behalf of people who put up no cash,

and against whose commitments brokers had no security. It is maintained, with a fair share of reason, that banks make themselves amply secure before they will lend money to a man, either for stocks, shares, or anything else, and the pertinent question is asked whether stock-brokers should not take similar steps to protect themselves against the dishonesty of a certain class of client whose business undertaken by the broker, through stress of competition, usually ended in loss to the House. The Committee have the matter under consideration, but there are obvious difficulties in the way of asking for cover, or margin, from those who have been in the habit of dealing without giving such security. The hours of business are another matter which engage no little public attention. It may be stated that the Stock Exchange Committee are alive to the necessity for setting an example to the community at large in the matter of attention to business, and the same principle will be applied to the question of keeping the House open later than is done at present, when these particular subjects come up to be reviewed for inclusion into the new rules. It is remarked as singular that the Committee should not put forward suggestions for altering the scale of commission at present returnable to agents by stock-brokers, the 50 per cent. gross commission being regarded as an unduly large proportion to pay away, considering that the broker's expenses eat up so substantial a proportion of his remaining moiety. The banks, which are probably the recipients of more half-commission than other agents, are known to acquiesce in the argument that 50 per cent. gross is too heavy a percentage for them to be credited with, especially as it tends to lead to somewhat discreditable practices in country districts, where competition for Stock Exchange business is particularly keen. The present time would seem to be appropriate for bringing about a reform which deserves a prominent place amongst others which figure in the programme of the Stock Exchange Committee this month.

Conditions in Czecho-Slovakia.—Information supplied to the Department of Overseas Trade shows that Czecho-Slovakia had an export surplus in 1920 of 3,156½ million kronen, while the trade returns for 1921, which are not yet available, are expected to be even better. On the other hand, while 1921 was a favourable year for trade, it is stated that since December the sudden rise of the Czech krone has created a situation which is not without grave danger, and many experts in Czecho-Slovakia are now predicting that 1922 will bring in its train the most serious crises which Czecho-Slovakia has yet undergone. The jubilant optimism regarding the rise of the krone appears already to have been dropped. The Minister of Finance appears to consider that the krone has now reached a point beyond which any further advance would be dangerous to the country's trade. Hopes are entertained that the krone may be maintained at its present level for at least six months, in order that the Government may be enabled to adjust wages and the cost of living to the new situation. It remains to be seen, however, how far the limited means which this country can employ will be sufficient to present further speculation.

Coal, Iron, and Steel Output.—The production of coal from the mines of Great Britain continues to expand, the total for the week ended February 4th amounting to 4,803,100 tons, as compared with 4,738,700 tons in the previous week. In the corresponding week of last year the figure was 4,418,200 tons. Statistics published by the National Federation of Iron and Steel Manufacturers show that the pig-iron output for January was 288,000 tons, as against 275,000 tons in December, and a monthly average of 669,500 in 1920. The production of steel ingots and castings fell from 381,000 tons in December to 327,500 tons in January. The monthly average in 1920 was 755,600. As these figures coincide with an improvement in export, it would appear that home consumption is very stagnant. In particular the consumption of plates by the shipbuilding industry is deplorably low.

French Coal Production.—His Majesty's Consul at Lille has forwarded to the Department of Overseas Trade figures showing the production during the year 1921, as compared with that for 1920 and 1913, of those coal mines in the Lille district which were, during the occupation, in the hands of the Germans, and were subsequently damaged by them:—

	Production per Annum—			Percentage of Group Production for 1921 in relation to 1913 Production.
	1913.	1920.	1921.	
North Mines	6,814,801	1,965,920	3,538,881	52
Pas-de-Calais Mines	11,847,766	482,033	1,826,381	15
Total for Nord & Pas-de-Calais Mines	18,662,567	2,447,953	5,365,262	29

It will be seen that the total production has not yet quite reached one-third of pre-war production.

Swedish Iron and Steel Industry.—The annual report issued by the Swedish Iron Works Commercial Association shows that 1921 has been an extremely bad year for the Swedish iron and steel industry. Iron ore mines and steel works have to a large extent been entirely closed down, or have only been working part time. At the end of 1921 only 22 blast furnaces out of a total of 133 were working; of Lancashire hearths, 37 out of 201 were working, and of Martin furnaces 15 out of 80. The year's production of pig-iron was 308,600 tons, which is only 42 per cent. of the 1913 figure. The production of blooms, bars, and ingots amounted to 230,900 tons, which is 31 per cent. of the production in 1913, and the production of rolled and forged iron and steel was in 1921 122,900 tons, which is 30 per cent. of the 1913 production. The export during 1921 amounted to only 147,600 tons, as compared with 502,600 during 1913. Sales on the home market were even more inconsiderable, owing to the fact that the small requirements were filled from abroad. In spite of heavy cutting of all prices, countries with a depreciated exchange had been able to undersell as long as high quality was not essential. Iron ore production figures are not yet available, but the export for the year only amounted to 4,330,000 tons, compared with 6,440,000 tons in 1913. The present figure is substantially lower than the war level, and is due not only to the depression in the British and other markets, but also to the depreciation in the mark which makes Germany turn increasingly to her own meagre resources of ore.

Manchester Ship Canal.—The state of trade and the coal stoppage had a marked effect upon the traffic of the Manchester Ship Canal for the year 1921. Sea-borne traffic declined by 981,857 tons, and total traffic by 1,093,693 tons. Receipts from canal tolls, dues, &c., dropped from £1,461,900 to £1,197,100. The following table shows traffic and receipts since 1910:—

Year.	Sea Borne Traffic. Tons.	Barge Traffic. Tons.	Total Tons.	Ship Canal Tolls, Ship Dues, and Miscellaneous Receipts.	
				Tons.	£
1910 ..	4,618,070	319,561	4,937,631	555,735	
1911 ..	4,894,670	323,142	5,217,812	580,841	
1912 ..	5,021,691	318,193	5,339,884	605,179	
1913 ..	5,457,218	322,943	5,780,161	654,937	
1914 ..	5,109,285	315,447	5,424,732	656,237	
1915 ..	5,115,954	318,092	5,434,046	757,268	
1916 ..	4,540,167	318,582	4,858,749	831,684	
1917 ..	3,843,324	309,430	4,152,754	861,996	
1918 ..	3,229,293	268,702	3,497,995	990,923	
1919 ..	3,313,620	275,423	3,589,043	1,203,361	
1920 ..	4,099,326	288,037	4,387,363	1,461,909	
1921 ..	3,117,469	176,201	3,293,670	1,197,075	

Gross receipts from the whole undertaking, including the Bridgewater Canal and the railways, amounted to £1,861,100, as against £2,448,800 in 1920, and expenditure at £1,324,500, compared with £1,659,000, so that net revenue amounted to £536,600, as against £789,800. After payment of rentals and other fixed charges, there was an available balance of £247,800, including £44,300 brought forward. The 3½ per cent. dividend on the corporation preference stock requires £37,100, the preference dividend is reduced from 10s to 6s per share, and absorbs £120,000, and £56,300 goes in payment of an

ordinary dividend of 3s per share, as against 10s last year, leaving £34,400 to be carried forward. In the following table we show highest and lowest prices of the ordinary and preference shares since 1910, the pre-war price and present price and yield:—

	Prices 1910-1921.		Price July 30, 1914.	Present Price.	Div. for 1921.	Yield.
	Highest.	Lowest.				
Manchester Ship Canal, Ord. £10 Do Pref. £10	7½	4½	1½	4½	5%	3 s 8 d 6 5 2 0

War conditions brought prosperity to the canal, and the resumption of dividend payments after an interval of some 14 years had a pronounced effect on the prices of the stocks. In recent months quotations have remained fairly steady.

Cotton Cloth Trade in China.—Our Manchester correspondent writes:—By the China mail just to hand some particulars have been received relating to trade in cotton piece goods during last year. It is stated that in 1921 the imports amounted to 8,630,782 pieces, against 13,365,412 pieces in 1920, 10,158,737 pieces in 1919, and 7,784,625 pieces in 1918. The stocks at the beginning of last year amounted to 4,274,156 pieces, and on December 31st supplies totalled to 3,347,164 pieces, consisting of 2,276,879 pieces of English goods, 804,028 pieces Japanese, and 266,257 pieces American cloths. Last year the offtake in Shanghai amounted to 12,152,723 pieces, against 11,528,462 pieces in 1920, 10,657,509 pieces in 1919 and 10,753,377 pieces in 1918. These statistics indicate that the China market is not over supplied, and it is of interest to mention that in Manchester this week shippers to China have bought more freely than for some time back.

The London General Omnibus.—The accounts of the London General Omnibus Company for the year ended December 31st last show traffic receipts, "after the operation of the common fund" of the Underground group, reference to which is made in a leading article. The total of these was £7,500,572, which compares with £6,934,331 for the previous year. After payment of expenses, which represent 95 per cent. of total receipts, as against 98.5 per cent. a year ago, there is a balance of £386,260. A summary of accounts in the past few years is appended:—

	1913.	1916.	1917.	1918.	1919.	1920.	1921.
Total receipts ..	£ 3,258,198	£ 3,092,736	£ 3,401,708	£ 3,979,799	£ 5,924,905	£ 7,066,137	£ 7,657,342
Expenses—

† Paid free of income-tax.

The amount available for distribution is over £190,000 higher at £471,885. Debenture interest and sinking fund require £105,000. Expenses in connection with new issues amounting to £9,412, are written off, and loss on realisation and depreciation of investments absorbs £37,816. Maintenance expenses on rolling stock, tyres, &c., amounted to £2,008,198, as against £1,861,355 in 1920, and £335,000, as compared with £285,000, has been set aside to reserve, "having regard to the increased cost of new motor omnibuses and equipment." The company spent £1,465,000 on improvements and additions during the year, of which £1,186,000 was for new 'buses and equipment, and £204,000 on the new repair works at Chiswick. The latter is an interesting innovation, and centralises the work of overhaul and repairs hitherto carried out at garages in various parts of London. At the new works the annual overhaul required by the police regulations can be carried out in four days instead of the

16 days previously required in the local garages. The report states that on December 1st 1d fares were reintroduced on all the company's 'buses, but that "it is too early to indicate what the result will be."

Home Railway Dividends.—The remaining dividend announcements made this week, which complete the list, are set out below:—

	Final Dividends.			Whole Year.			Price of Ord. Stocks.	
	1919.	1920.	1921.	1919.	1920.	1921.	Jan. 31, 1921.	Feb. 15, 1922.
	Rate % per Ann.			%	%	%		
Caledonian, Ord.	4½	4½	7	3½	3½	3½	36	35
Do Def.	3	3	2	2½	2½	2½	7	7
Glasgow & S.W., Def. Ord.	3	3	2	2½	2½	2½	21½	18½
Great Western	9½	9½	9½	7½	7½	7½	73	73
Hull and Barnsley	6	6	5½	4½	4½	4½	47½	45

The Great Western maintains the 1920 rate of 7½ per cent., but the two Scottish lines and the Hull and Barnsley reduce their distributions. We hope to examine the annual accounts of the home railway companies next week, but may here mention that they have all drawn upon the amounts paid by the Government as compensation in January to pay dividends, the proportion of the compensation money used for this purpose varying from 39 per cent. in the case of the Lancashire and Yorkshire, and 37 per cent. by the London, Chatham and Dover, to 4 per cent. by the Great Western.

Selfridges' Report.—A falling off in profits is shown in the accounts of Selfridges, Limited, for the year ended January 31st last, but the decrease is considerably smaller than might have been expected in a period such as the past year. Net profits have fallen from £375,000 to £342,600, but the latter figure includes part of a reserve of £90,000 allocated for excess profits duty a year ago and not now required. The following table shows the record of profits and appropriations:—

	Net Profits.	Deb. Int.	Pref. Div.	Ord. Div.	Pref. Ord. and Staff Part. Shares.	Balance
	£	£	£	£	£	£
1909-10	14,984	19,310	23,998	..	..	Dr 88,824
1910-11	36,261	17,099	23,998	..	..	Dr 4,836
1911-12	50,247	19,810	23,998	..	..	6,439
1912-13	104,029	19,668	24,000	..	..	60,361
1913-14	131,547	19,151	24,000	25,000	..	63,396
1914-15	134,791	18,960	32,337	25,000	..	58,494
1915-16	150,222	18,627	42,000	30,000	..	59,595
1916-17	225,137	18,175	42,000	35,000	..	129,962
1917-18	258,763	17,932	42,000	35,000	..	163,831
1918-19	322,825	17,130	42,000	35,000	..	228,695
1919-20	372,479	16,744	63,360	50,000	..	242,376
1920-21	375,031	16,210	77,882	50,000	25,899	207,040
1921-22	342,665	15,943	78,000	50,000	104,996	93,726

† 10½ months. * Not including £28,500 contributed by Mr Selfridge.

The report states that the volume of business has been as satisfactory as could reasonably be expected. In spite of drastic reductions made in stock values in 1920, in the first six months of 1921 further serious reductions had to be made owing to the continual drop in market values. Out of the past year's profits, £15,000 is allowed for depreciation of fixtures, investments are written down by £25,000, and the reserve fund again receives £25,000, which raises it to £200,000. The staff participating shares receive a dividend of 12 per cent., while the dividend on the preferred ordinary shares, one million of which now rank for dividend, accounts for £99,470. The principal changes in the balance-sheet, analysed elsewhere, include a decline of £103,500 in the E.P.D. reserve, an increase of £370,800 in the property item, and a reduction of £475,100 in cash. If the whole of the £103,500 by which the E.P.D. reserve has fallen has gone to profits, the decline in the year's earnings was much more severe than would have been gathered from the profit statement.

Rand Derelicts.—Our mining correspondent writes:—One effect of the prolongation of the labour dispute on the Witwatersrand takes the shape of the premature closing down of a number of properties which might

otherwise have continued in operation for several years—thereby providing a large amount of employment, and possibly some small dividends. In the recently published report for the quarter ended December 31st, the directors of the Roodepoort United announced their decision to close down. The news can scarcely have come as a surprise to the shareholders, the concern having had a struggle to keep its head above water for some time past. The company being heavily in debt to its sponsor, the General Mining and Finance Corporation, there can be no question of any winding-up return to the general body of shareholders. Another mine of the same group—the New Goch—which has been in a somewhat similar position from a mining standpoint, is also expected to throw up the sponge. This company has cash resources which, in conjunction with the proceeds from the sale of the plant, &c., might be calculated to provide liquidation distributions in excess of the present price of the shares. Whether the directors will recommend an early winding-up remains to be seen. Then during the week the board of the Luipaards Vlei Company has issued a notification to the effect that owing to the general position on the Rand it has determined upon the suspension of operations; in certain contingencies work may be resumed on a portion of the property. In the event of winding-up the shareholders would receive little, there being a debenture issue of £56,000. Finally, the management of the Robinson Gold Mining Company intimate that when work is resumed after the strike it will be on the greatly reduced basis of milling 12,000 tons per month. This will exhaust the reserves of better-grade material in about six months. One factor in the case is a fall of rock, but the main point is that the considerable tonnage of low-grade material remaining in the mine cannot be profitably worked under prevailing conditions. The Robinson, of course, ranks among the richest gold mines of the Rand—indeed, of the world—having distributed to date something like £12,000,000 in dividends. Liquidation should provide more than sufficient to cover the present market price, the surplus cash assets shown by the last balance-sheet representing 6s 3d per share, irrespective of what may be fetched by the leasehold property, plant, &c. As regards the strike, the latest advices are to the effect that work is being resumed on a partial scale at a number of the principal properties.

The Norske Lloyd.—On Thursday the Official Receiver presided over a meeting of creditors of the Norske Lloyd Insurance Co., Limited, and explained that the English liabilities amounted already to about £500,000, with more claims to follow. The assets consist of £20,000 deposited with the Board of Trade, a small sum in cash, and money due from re-insurance companies, some of which are unable to meet their obligations. The position of the Norwegian company is not yet known in England beyond the fact that the company is also in liquidation, and that optimistic views of its recovery are expressed in Norway. The American policyholders are secured, but there will probably be no balance out of the American funds to pay European creditors. No dividend can be expected for at least a year, and it does not seem likely that any considerable dividend will ever be paid. The Essex Union, which was written for by the same underwriter as the Norske Lloyd, is also in difficulties, but the meeting of creditors has not yet been held, though there is a hope of a 12s 6d in the £ dividend.

THE eighth British Industries Fair organised by the Department of Overseas Trade, which is to be held from February 27th to March 10th next, will again consist of two sections, one for engineering stock, hardware, tools, &c., at Castle Bromwich Aerodrome, Birmingham, and the other for lighter goods, at the White City, London.

A PUBLIC meeting on the questions of the Genoa Conference, the relations of this country and France, reparations and Russia, will be held by the Fight the Famine and European Reconstruction Council, in the Central Hall, Westminster, on the evening of March 3rd. The speakers will include Lord Beauchamp, Mr J. M. Keynes, Mr Clynes, and Mr Brailsford. Lord Parmoor will be in the chair.

Oversea Correspondence.

UNITED STATES.—STEEL CORPORATION'S EARNINGS—AUTOMOBILE PRICE-CUTTING—NEW GOVERNMENT AND CORPORATE SECURITIES—RECORD BUSINESS FAILURES.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 6.

FOR the fourth quarter of last year net earnings of the United States Steel Corporation amounted to \$19,612,033, as compared with \$18,918,058 in the preceding quarter, and \$43,877,862 in the corresponding period of 1920; with the exception of the third quarter of 1921, they were smaller than for any three months since the first quarter of 1915. It is quite evident that the lower prices which then prevailed for steel products largely offset the increased production in the fall and early winter. Perhaps the most noteworthy feature of the corporation's report is the progressive monthly decline in profits, which fell from \$8,204,358 in October to \$6,440,438 in November, and to \$4,967,237 in December. The decrease in earnings may be regarded as seasonal, since it reflected the usual year-end falling off in demand; other factors partly responsible for the poor showing were the drop in railroad profits due to the cessation of the ore movement and the smaller revenue derived from cement, one of the corporation's by-products. The surplus available for dividends for the fourth quarter, after adding year-end adjustments, was \$7,377,801, equivalent, after the preferred dividend, to only 21 cents a share on the 5,083,025 shares of common stock outstanding, as against \$5,693,196 surplus, equivalent to \$1.58 a share on the preferred stock in the third quarter of last year, and \$27,140,148, or \$4.09 a share on the common stock in the fourth quarter of 1920. The fact that something was earned for the common shareholders in the last quarter is regarded as encouraging, although most of the common dividend will have to be paid out of accumulated surplus. In the third quarter the corporation earned nothing for the common stock, and even had to draw on its surplus to some extent to meet the preferred dividend payments. For the complete calendar year the Steel Corporation's net earnings amounted to \$92,708,829. After all charges, adjustments, and other deductions, and after preferred dividends, the balance available for common stock dividends was equal to \$2.24 a share, as against \$16.62 per share earned in 1920. Earnings for the 12 months ending December 31, 1921, as compiled from the quarterly reports and compared with 1920, are shown below:—

	1920.		1921.
Net earnings	176,686,898		92,708,829
Dep., sinking fund, &c.	46,684,364		36,729,707
Net income	130,002,534		55,979,122
Int. U.S.S. bonds, &c.	20,940,892		20,427,042
Balance	109,061,642		35,552,079
Adjustment credit	632,585		1,081,555
Total	109,694,227		36,633,634
Preferred dividends	25,219,677		25,219,677
Common dividends	25,415,125		25,415,125
Deficit	*59,059,425		14,001,168
Appropriations	†30,000,000		..

Deficit

* Surplus. † Appropriated for account of expenditures made on authorised appropriations for additional property and construction.

Because of the marked shrinkage in unfilled orders on the books of the corporation since last autumn, and the heavy decrease in earnings in December, it is interesting to note that lately there has been a decided increase in demand for steel, and that the corporation's plants are now working on the average at about 46 per cent. of capacity, as against 40 per cent. a few weeks ago.

Probably none of the leading industries in this country has suffered more—if as much—from the general depression and "hard times" of the past year or so than has the automobile industry. In their competition for

business leading companies have made drastic reductions in prices during the past year and a half, the cuts ranging from 13 per cent. to as much as 42 per cent. on standard makes of automobiles, the average amounting to about 25 per cent. Some manufacturers have made five different reductions in that period, while numerous concerns have made two or three. Strange to say, the greatest cuts have been on the comparatively low-priced cars. In some quarters the opinion is expressed that the price-cutting war is about over, and that the spring selling season will witness a recovery. Much depends, however, on the extent of the demand. Unless business revives a further slashing of prices may be expected.

A vast amount of new securities has been floated here during the past week, consisting of both Government and corporate issues, and to some extent foreign bonds, and additional offerings are now being made. The largest issue was the Government's offering of \$400,000,000 Treasury 4½ per cent. three-year non-callable notes, and at the same time an additional \$200,000,000 for which subscribers were allowed to tender payment in Victory notes of the 4½ and 3½ per cent. issues. Total subscriptions exceeded \$1,200,000,000, and of the \$601,599,500 allotted (including the \$200,000,000 exchanged for Victory notes) the New York Federal Reserve district received \$254,213,300, or much more than any of the other districts throughout the country. The offer to exchange the new notes for Victory notes was a part of the Government's refunding plan, the purpose being to retire as many as possible of the outstanding Victory notes before maturity. The response to that offer, however, was apparently not up to the Government's expectations, since the time within which Federal Reserve banks may purchase Victory notes at par and accrued interest from holders up to an aggregate amount not exceeding \$100,000,000 has been extended to February 16. Another big offering, of a semi-Governmental character, is now being made. It consists of a new issue of \$75,000,000 of Federal Land Bank 10-20-year 5 per cent. bonds, which are being handled by banking syndicates in all the principal financial centres of the United States. The bonds, which are exempt from all Federal, State, municipal and local taxation, are dated November 1, 1921, are due November 1, 1941, and are not redeemable before November 1, 1931. Interest is payable semi-annually at any Federal Land Bank or Federal Reserve Bank, the principal being payable at the bank of issue. They are offered to investors at 102½ and interest, netting about 4.70 per cent. to the redeemable date (1931), and 5 per cent. thereafter to redemption or maturity. The United States Supreme Court has held that the 12 Federal Land Banks were legally created as part of this country's banking system, and that the bonds issued by them are instrumentalities of the United States Government which owns over \$5,500,000 of their capital stock, while the Treasury has purchased more than \$183,000,000 of Federal Land Bank bonds. The latter are acceptable by the Treasury as security for Government deposits, and are lawful investments for all fiduciary and trust funds under the jurisdiction of the Government, and for all public and private funds in many States. On December 31, 1921, after 3½ years of active operation, those banks had a combined capital of \$28,707,170, reserves of \$1,690,000, undivided profits of \$2,499,108, and total assets of \$473,799,410. Naturally the floating of such large issues as the \$600,000,000 Treasury notes and the present issue of \$75,000,000 of Land Bank bonds has checked temporarily the offering of many new short-term securities. It has not interfered, however, with the output of new long-term bonds. Following their offering last week of \$30,000,000 Chicago, Burlington, and Quincy Railroad first and refunding series "A" 5 per cent. bonds due in 1971, at 97, to yield 5.17 per cent., J. P. Morgan and Co., the First National Bank of New York, and the National City Company are now receiving subscriptions for \$30,000,000 Great Northern Railway Company general mortgage 5½ per cent. gold bonds, series "B," dated January 1, 1922, and due January 1, 1952. The price to investors is 96½ and interest, to yield approximately 5.75 per cent. One of the first foreign industrial concerns to seek funds in this market is the

Melbourne Electric Supply Company, Limited, of Melbourne, Australia. An issue of \$2,500,000 7½ per cent. 24-year first and general mortgage of that company was recently offered here at 101, to yield 7.40 per cent., and was well taken. The Province of Ontario also entered this market with an issue of \$1,500,000 15-year 5½ per cent. gold bonds, maturing in 1937, which were offered at par.

The total of business failures for January broke all records as to number, while the aggregate of liabilities was second only to the largest on record. According to Bradstreet's, the total number was 2,705, which exceeded the previous record of December, 1921, by 278, or 11.4 per cent. The liabilities for January were \$115,301,371, an increase of 42 per cent. over last December, and of 76 per cent. over January a year ago. Commenting on this showing, the authority mentioned says that both the number of failures and the liabilities represent what has come to be known as the annual clean-up totals following a time of stress, while the liabilities undoubtedly include many crippled concerns hitherto carried along in hopes of final restoration to business health. Compared with January a year ago, the South reports 203 more failures, the West 163 more, and the middle group 167 more, while other groups report smaller increases. The total of failures for the calendar year 1921 are given as 20,014, which exceeded by 979, or slightly over 5 per cent., the hitherto record calendar year of 1915. The liabilities for 1921 are placed at \$755,777,685, or 17 per cent. greater than the previous high record in 1920; they were more than double the aggregate of 1914, and nearly double the totals for the panic years of 1893 and 1907.

FRANCE.—BANQUE INDUSTRIELLE DE CHINE—INCOME-TAX—WAGES AND PRICES—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, February 14.

FINANCE has bulked largely in both the Chamber and the Senate this week. In the Upper House the vexed question of the Banque Industrielle de Chine has been the subject of discussion by the Senatorial Finance Commission, which has heard statements from both M. Poincaré and the Finance Minister, M. de Lasteyrie, as to the negotiations in progress with the Chinese Government with a view to applying the unpaid balance of the Boxer indemnity to reimbursing depositors in the moribund bank. It was stated that the total amount to be thus reimbursed will be about 400,000,000f, of which 310,000,000f are due to depositors in China and 90,000,000f to those in France. The distribution of the money, the Finance Minister asserts, will not be made by the French Treasury, but by a new consortium, the basis of which has not yet been decided. It is understood that the shareholders are to be called on to pay the outstanding balance of their subscriptions, amounting to 50 per cent. of the share capital, and that every effort is to be made to bring home responsibility to those persons to whom the failure of the bank was due. Whether the concern will actually be refloat or not is not yet clear, but, in any case, M. Poincaré announced, the French Govern-

ment regards itself as bound by the cables emanating from the Quai d'Orsay at the moment when the position of the Bank became critical (and which were the direct cause of the resignation of M. Philippe Berthelot, the Permanent Secretary at the French Foreign Office). In reply to questions, M. Poincaré also stated that the Washington agreements have placed all nations on an equal footing in China, but that he did not anticipate this would be likely to cause difficulty, unless some other organisation were substituted for the Banque Industrielle de Chine.

In the Chamber, the Finance Commission has been occupied with the examination of supplementary credits, not provided for in the Budget for the current year, and amounting to a total of about 1,500,000,000f. Three of these additional credits are especially interesting. The most important is one for 332,000,000f in respect of the interest payments at the rate of 6 per cent. on the issue of two-year Treasury bonds. This issue has yielded a total of 5,500,000,000f odd. Another Supplementary Credit asked for is of 127,000,000f, to meet interest and sinking fund charges on the loan of \$100,000,000 contracted last year in the United States, and on the issue in that country of two-year Treasury bonds. These two operations were carried out in June last year, but it was not until some months later that the results were definitely made known, by which time it was too late for these new charges to be provided for under the Budget for 1921, which was passed in April last. The third important credit, amounting to 190,000,000f, is in respect of the cost of the mobilisation of the French 1919 class, in support of the last ultimatum to Germany. It was the intention of the French Government to hold the German Empire responsible for the payment of this amount, and it was accordingly proposed that it should be included in the Budget of Expenditure Recoverable from Germany. Considerable sensation was caused in the Finance Commission when it was disclosed that strong opposition to this proposal had been shown by the other Allied Powers, who insisted that as France had undertaken alone the responsibility for mobilising the class in question, she must pay the money from her own resources. The 190,000,000f have accordingly been included in the list of Supplementary Credits.

It will be remembered that during the progress of the last Budget Bill through Parliament it was decided that, instead of imposing fresh taxation for the purpose of meeting the estimated deficit, systematic steps should be taken to ensure a better yield from the existing taxes. It was disclosed, among other things, that at present there are more people in France paying taxation in respect of touring motor-cars than there are income-tax payers, which obviously is due to defective methods of collection. The Finance Minister, M. de Lasteyrie, has now, in furtherance of the policy laid down by Parliament, issued an important circular to the officials of the inland revenue service, urging greater energy in detecting persons who are defrauding the revenue by non-compliance with the law, and advocating the imposition of severe penalties against all who are found guilty of such offences.

In view of the Finance Minister's circular, it is interesting to note that revised official figures have this week been issued, showing the amount of income-tax levied for during 1921 and the total sum collected in respect thereof during the same period. (These figures correct and complete the approximate figures issued a few weeks ago.) During 1921 demand notes were issued for income-tax amounting to 2,792,257,500f, to which must be added 28,160,400f for the three departments of Alsace-Lorraine. In 1921 the total yield from income-tax in France proper (exclusive of Alsace-Lorraine) was 1,150,356,500f, out of the total of 2,792,000,000f levied for. Of these 2,792,000,000f levied for, 2,127,957,400f was in respect of income-tax in respect of the current year, the balance being for sums unpaid during the previous five years (3,624,200f for 1916, 8,726,800f for 1917, 39,208,700f for 1918, 73,844,200f for 1919, and 537,896,200f for 1920).

French manufacturers and others interested in national commercial affairs are complaining seriously as to the extraordinarily high scale of wages that continues to rule in the various public services of the country. At present all Government employees, as well as those engaged on

the railways and other public services, receive, in addition to their ordinary scale of wages, a special allowance of 720f a year in respect of the high cost of living. Attempts were made during the last Budget debates to bring about the suppression of this extra allowance, in view of the recently substantial decrease in the cost of necessities, but for various reasons it was decided for the time being to leave matters as they stand. It is now argued that, even if this extra allowance were suppressed, the employees of the State and in the various public services would still be very much better paid than workers employed in private industry, where wages have in many cases been brought down consistently with the fall in commodity prices. An exhaustive inquiry into the wages paid respectively to unskilled workers on the railways and men of the corresponding category in the metallurgical and mechanical industries shows that the former are in a very much more favourable position. The inquiry shows that workmen employed by private firms are paid a wage of from 10f to 14f, as against from 20f to 22f received by the railway worker. These comparative figures do not take into account the extra allowance of 750f a year paid to the public service worker, but not to the employee in private industry, but does include the various accessory advantages enjoyed by the railway men and other public service employees (such as payment for periods of illness, pension contributions equal to 15 per cent. of the normal wages, and other payments by employers, amounting to a further 5 per cent. of the wage paid). Complaint is being made in many quarters that private industry is now faced with a serious shortage of labour, owing to the natural tendency of unskilled labour to seek employment in the highly paid public services.

The district Commission d'Etudes relative to the cost of living in Paris at its meeting on January 12th maintained at the same level for the fourth quarter of 1921 the Index figures established for the preceding quarter, except in the category relating to rents, which were raised from 121 to 133. This confirms the universally recognised fact that rentals, which were maintained at pre-war figures down to the first three months in 1921, are now rapidly increasing in respect of all kinds of tenancies. The following table, based on an Index figure of 100 in respect of the first half of 1914, shows the variations quarter by quarter since then in principal categories of expenditure:—

	Food.	Light and Heat.	Rent.	Clothes.	Sundries.	Mean Total.
1st half, 1914	100	100	100	100	100	100
Do 1919	260	164	100	296	228	238
1st quarter, 1920....	306	200	100	405	356	295
2nd do 1920....	344	296	100	485	444	341
3rd do 1920....	358	349	100	518	510	363
4th do 1920....	389	349	100	445	510	370
1st do 1921....	350	319	100	398	510	338
2nd do 1921....	323	308	110	353	400	307
3rd do 1921....	310	306	121	318	400	295
4th do 1921....	310	306	133	318	400	297

The Bourse continues to be weak largely owing to holders of stock realising with a view of taking up the 6½ Crdit National loan which, being free of interest, has naturally offered a great attraction to investors. French 3 per cents., however, have been stronger, the 3 per cents. standing at 57.90, as against 56.50. Foreign State funds have been depressed, the Argentine 4 per cents., for instance, being at 127 as against 129.60, and the Japanese 1905 4 per cents. at 168 as against 172. Banks have shared in the movement, Union Parisienne dropping from 653 to 627, Banque de Paris from 1,205 to 1,175, Crdit Lyonnais from 1,390 to 1,375, and Crdit Mobilier from 390 to 388. Crdit Foncier de France, however, is stronger at 800, having risen from 770. Railways have shown no uniform tendency, P.L.M., for instance, being at 821 as against 812, Nord at 911 as against 909, and Orlans at 886 as against 891. Shipping has fallen back, Chargeurs Runis quoting 385 as against 445, Transatlantique at 183 as against 190, and Messageries at 185 as against 192. Suez is unchanged at 5,800. Electrical undertakings have shared in the general depression, Thomson dropping from 745 to 733, Compagnie Gnrale d'Electricit from 797 to 785, L'Electricit et Gaz du Nord from 298 to 283 and Tlphones from 608 to 582. Metal-

lurgical undertakings are similar, Thomson being typical in falling from 745 to 733, and Tlphones in declining from 608 to 582. Metallurgical undertakings are also weak, Longwy dropping back from 995 to 975 and Creusot from 2,140 to 2,090. Mines have been heavy, Tintos declining at 1,285 and Utah dropping from 800 to 733.

GERMANY.—POLITICS—BUDGET—EXCHANGE AND BOURSE—IRON AND COAL—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, February 6.

THE appointment of Dr. Rathenau as Foreign Minister, though in general well regarded, has not improved the prospects either of financial reform or of the reconstruction of the Wirth Cabinet on a broader basis. The German People's Party, which had consented to the amended financial reform, the chief feature being the forced loan of one milliard gold marks, which was ready in principle to re-enter the Cabinet, held that no Cabinet appointments should be made without its consent, and it reacted to Dr Rathenau's nomination by declaring that in tax questions it again claims a free hand. It is not likely that the forced loan plan will be prejudiced by this action. A partial railway strike, aggravated by a strike of Berlin municipal employees, has continued for some days. The strike was decided on by a small majority in only one Labour organisation, and is against the majority of Labour and Socialist opinion. The Cabinet has proclaimed that State officials have no right to strike, and if it holds firm the success of the strikers is unlikely.

The Forced Loan Bill has not yet been submitted. A condition of the agreement concerning the loan is that it shall be assessed according to the Emergency Levy of 1919; but probably there will be an entirely new valuation of property. The Emergency Levy (that is the unpaid part) is to be dropped, as was provided for in Dr. Wirth's plan of financial reform before the Forced Loan proposal came up. This reform provided for replacement of the levy by a permanent, triennially assessed and collected property tax (*vermögenssteuer*), with rates varying from ¼ to 10 per mille. To compensate for the lost levy to these rates during the first 15 years were to be added 300 per cent. supplements. As a condition of the Forced Loan compromise, the supplements are reduced to 200 per cent. The proposed Post-War (1919-1921) Increment of Property Tax, also a feature of Dr. Wirth's reform, is to be let drop. The expected yield was only 3 milliards. No difficulty in financing the Forced Loan, which is estimated at 40-50 milliard paper marks, is expected; but financing may take the form of presentation for rediscount to the Reichsbank of part of the 138 milliards of Treasury bills in circulation, and in so far as this is done, the total State indebtedness would not be reduced, but only converted from floating into funded debt. The deposits in all private banks at end of 1920 were 84 milliards; the total to-day is much greater.

The Budget for 1922 differs only slightly in totals from the forecast lately sent to the *Economist*. For the first time are three separate revenue and expenditure budgets—(1) General Administration, (2) State Undertakings (Posts and Railways), and (3) Reparations, officially called "For Execution of the Peace Treaty." Each in turn falls into an ordinary and extraordinary budget. No. 1, Ordinary Budget shows revenue of 103.21 milliards, expenditure of 86.71 milliards, surplus of 16.5 milliards. Of this revenue, 68.2 milliards come from continuing taxes on property and business, the greatest items being 23 milliards Income-tax and 24 milliards Sales Tax. Customs and taxes on consumption yield 25.5 milliards (where among the Coal Tax, now at 40 per cent., yields 10 milliards). To the States and Municipalities go 22.5 milliards, of which 15.5 milliards are compensation for the abolished State and Municipal Income-taxes. No. 2, Ordinary Budget balances, Posts and Telegraphs, with 16½ milliards, and Railways with 72 milliards, but No. 2 Extraordinary Budget requires subsidies of 2½ milliards for Posts and 6.8 milliards for Railways. These subsidies are booked in No. 1 as Extraordinary Expenditure. No. 3, Ordinary Budget expenditure totals 147.7 milliards, extraordinary 39.8 mil-

liards, in all 187½ milliards. As revenue against the last sum is booked the 16½ milliards surplus of the General Administration Ordinary Budget, leaving here a deficit of 171 milliards, which is to be covered by loan. "Loan" here means the 40-50 milliards Forced Loan, the yield of a possible further voluntary home loan, and lastly, increase of the Floating Debt. Budget No. 3 is a fiction, because the raising of this vast sum in paper marks would not make it possible really to cover the 187½ milliards expenditure which is largely a gold liability. The whole deficit on all three Budgets is over 183 milliards, consisting of 171 milliards deficit on the Reparations account, 9.2 milliards on State undertakings, and a further sum of 3.1, the deficit on Budget No. 1, Extraordinary. The Budget cannot be considered definitive. It depends on future price-level conditioned by mark exchange movements, which cannot be foreseen, and also upon the definitive amount of Reparations payable before March 31, 1923.

The floating debt of discounted Treasury bills in the second ten days period of January increased by 4,188,010,000 marks, in the third period (11 days) by a further 2,241,020,000 marks. As in early 1921, the early weeks of this year showed a decline in circulation (in the first three weeks of 2,063 millions), due to money market conditions; but the Reichsbank's report for January 31st shows an increase over the preceding week of 3,520.2 millions, and a large increase in discounted Treasury bills. The Reichswirtschaftsrat has passed a resolution in favour of abolition of the so-called "deposit compulsion" (Law of 24.10.19), under which coupons and dividend warrants are redeemable only at banks where the bonds or scrip have been deposited. This measure was one of several directed against tax evasion. The Berlin Bourse has since February 1st been opened five days a week. The reversion to daily bourses (Saturdays excepted) is due to the decline in activity which followed the mark exchange recovery of November-December. Stocks have moved very little in the past fortnight, one exception being (as reported from here on January 23rd) potash stocks, and another, in the last week, Silesian papers—in this case the activity and rising quotations are ascribed to growing participation of foreign capital. The Osram Electric Lamp Company, which is a creation of the General Electricity Company and of Siemens and Halske, has issued a new kind of variable-interest bond, the minimum interest being 5 per cent., to which a supplementary rate of ½ per cent. is added for every 1 per cent. exceeding 10 per cent. of dividend paid on the two latter companies' ordinary stocks, the maximum supplement being 5 per cent., and therefore maximum interest 10 per cent. This bond, of which 300 millions have been issued, is an attempt to provide the usual security of bonds without the disadvantage caused by fall in the buying power of the currency to holders of fixed-interest papers. Prices of leading stocks on February 3rd were:—

Dresdner Bank	320	Hoesch Iron	1,040
Deutsche Bank	474.50	Hohenlohe	835
Disconto	410	Howaldt	670

Gelsenkirchen	860	Siemens and Halske	770
Harpener Mining	1,488	Vereln. Glanzstoffe	2,149

Coal prices have again been raised, and as a result, partly also as result of a new 30 per cent. increase of railway freight rates on February 1st, the prices of pig-iron, steel, and rolling mill materials have also been put up. The coal price for standard Ruhe (*Fettförderkohle*) has been raised by 50m a metric ton, which, together with 80m additional brought by the doubling of the coal tax from 20 to 40 per cent., and by the increase of the sales tax from 1½ to 2 per cent., makes an addition of 130m in all. This brings the coal mentioned to 535m a metric ton, as against 13.75 in 1914. Brown coal and briquette prices are correspondingly raised. The new and pre-war iron and steel prices (pig-iron prices being compulsory maxima, all others "guiding prices") in marks per metric ton are:—

	New.	1914.		New.	1914.
Hemetite	3,979	79½	Slabs	4,785	97.50
Foundry iron I.	3,447	75½	Construct. forms	5,440	110
Do III.	3,371	70½	Bar-iron	5,550	97.99
Siegerland steel-iron ..	3,064	79	Bands	6,130	105
Spiegelisen	3,186	75	Wire rods	6,000	117½
Ingots	4,210	82.50	Thick sheets	6,220	105
Blooms	4,550	87.50	Medium sheets	7,100	110
Billets	4,680	95	Thin sheets	7,400	125

The State railway receipts in December totalled 4,329 million marks, against 1,441 million marks in December, 1920; the receipts for April-December inclusive were 24,329 millions, against 12,279 millions in the same months of 1920, the receipts from passenger traffic having increased 51 per cent., and from goods traffic 117.3 per cent. The condition of industry is good, but partly on the basis of old orders; and unemployment is slowly increasing. Of 6,075,755 members of trades unions, 97,689, or 1.6 per cent., were unemployed on December 31st, as against 1.4 per cent. and 1.2 per cent. at end of November and October respectively. The November rate is lower than was reached in any of the seven last pre-war years. In 1913 the lowest rate for any month was 2.3 per cent., and the December rate was 4.6, or three times that of last December. Despite the relative exchange stability, prices are on the whole rising, and, as result of the reduction of bread subsidies and higher charges for State services, the cost of living is rising. This upward movement has caused consumers in many branches, particularly metals, to resume buying, so that the effect of the relatively favourable exchange movements has been partly nullified; and with rising prices, or fear of rising prices, trade activity has been encouraged. The Prussian Ministry of Trade's monthly report states, however, that certain classes of producers show reserve, as they fear a collapse in the public's buying power. The December trade report shows, for the first time, a surplus of exports (in values), which is due to a large fall in quantity of imports, as result of which the value of imports remained practically unchanged, while exports, changing little in quantity, rose in value considerably. The figures and balances since May (January-April not yet reported) in double-centners of one-tenth metric tons, and in millions of marks, are:—

	Quantity.			Value.		
	Imports.	Exports.	Import Surplus.	Imports.	Exports.	Import Surplus.
May	15,340	11,452	3,888	5,486	4,558	928
June	18,746	15,091	3,145	6,409	5,433	976
July	19,245	15,582	3,662	7,580	6,208	1,372
August	21,109	18,277	2,832	9,418	6,584	2,734
September	25,326	18,707	6,619	10,668	7,519	3,149
October	30,048	19,731	10,317	13,875	9,711	4,164
November	25,300	19,100	6,200	12,300	11,900	400
December	20,900	19,300	1,600	13,700	14,600	900

The main declines in imports in December, as compared with November, were:—Food from 947,500 metric tons to 633,500 metric tons; and minerals and mineral oils from 1,425,800 metric tons to 1,281,200 metric tons. Exports of chemicals and dyes increased from 185,300 metric tons to 200,600 metric tons, and of machines and vehicles from 42,800 metric tons to 55,600 metric tons.

CANADA.—TRADE RETURNS—AN INTERESTING LAWSUIT—GRAIN MARKETING PROBLEM—CATTLE EMBARGO—FINANCES OF QUEBEC—ST LAWRENCE DEEP WATERWAY—MORATORIUM LEGISLATION IN THE WEST—THE MERCHANTS' BANK DISASTER—DEMAND FOR INQUIRY—LA BANQUE NATIONALE—THE FEDERAL FINANCES.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 30.

The depression experienced by both rural and urban industry in Canada is reflected in the trade returns just issued for the calendar year 1921. Canadian imports for consumption in that period were valued at \$799,394,598, as compared with \$1,336,921,021 for 1920, and \$941,013,613 for 1919. Exports from Canada for 1921 reached a value of \$802,699,820, as compared with \$1,272,657,442 for 1920, and \$1,240,995,606 for 1919. Each monthly return showed a steady decline, and the only encouraging feature is the slightly larger volume of exports than imports, as compared with the substantial adverse balance of trade in 1920. In the later months of the year there was a marked betterment in the ratio of exports, but the earlier date of the harvest in some districts was partially responsible for this, and on the other hand, the slump in manufacturing industry produced a decline in the volume of raw materials imported. The United States are still easily Canada's best customer, but Great Britain is a good second, and in her case the balance of trade is very favourable from the Canadian point of view, for exports to the mother country totalled \$308,866,848, as against imports valued at \$123,149,009.

The Saskatchewan courts have just given a decision that will be of great interest and importance to British holders of Canadian bonds. In January, 1920, the City Council of Regina decided to pay interest coupons on its sterling bonds at the current rate of exchange rather than at the par rate of \$4.86 per £. The bonds amounted to £710,904, and are expressed in terms of sterling. Each coupon attached to a bond was for £2 10s, payable in Canada or London. When sterling fell large numbers of these and similar bonds were brought back to Canada, and \$4.86½ was demanded for each £ by the holders. But the construction of the Regina Solicitor meant that in January, 1920, when the exchange rate was \$3.50, each coupon only brought \$8.75. The Toronto General Trusts, acting for certain bondholders, had recourse to a legal action to enforce par exchange for the coupons, and their counsel contended successfully that by the terms of the Canadian Currency Act \$4.86½ of the currency of Canada should be the equivalent of £1 sterling. It is probable that the case will be appealed to the Supreme Court of Canada, and eventually to the Privy Council, but if the verdict is sustained, hundreds of British bondholders will profit because many cities issued bonds in London on exactly the same terms as Regina.

The recent Convention of the United Farmers of Manitoba discussed the question of the British embargo upon Canadian cattle, and following the example of the Western Livestock Union, passed a resolution urging the Government to press for permission to ship Canadian cattle to the inland cities of Britain for immediate slaughter, which is some recession from the demand for a complete removal of the embargo. The farmers also asked that the Canadian Merchant Marine be used for the cattle trade, with a view to forcing a reduction in ocean freight rates, which were denounced as exorbitant. Quebec is to-day in much the happiest financial position of all the Canadian provinces. Mr Nicol, the new Treasurer, was recently able to announce a financial surplus for 1921 of \$1,230,433, the revenue being \$15,914,521, and the expenditure \$14,624,088. The Treasury of the province has profited greatly by the decision to remain outside the "Dry belt" in respect to the sale of alcoholic liquors.

The International Joint Commission, to which is entrusted the settlement of all problems concerning the boundaries and joint waterways of Canada and the United States, has, after hearing a large volume of evidence, and examining various plans, reported favourably upon the project for a deep waterway along the St Lawrence route, which would allow ocean-going steamers free access to the Great Lakes. It favours a scheme which will give a

25-foot waterway at an estimated cost of \$252,000,000, and at the same time could be made to generate at least 1,800,000 hydro-electric power. Canada's recent expenditure on the improvement of the Welland Canal would be taken into account, and while she would receive a smaller share of the power made available, she would have to bear a slightly lesser part of the cost. The publication of the report has opened up a violent controversy in the United States. President Harding has given the project his blessing, and a Bill to further it has been introduced at Washington. It is reported that the U.S. Government intend to open up negotiations with Canada on the question; their object is partly political, as they want to placate the Western agricultural bloc in Congress, whose representatives all favour the waterway as a means of lowering freight rates. On the other hand, very strong opposition to the scheme has developed in New York and other Eastern cities, which fear the impairment of their commercial position. The New Yorkers declare that if a better waterway is needed a large new ship canal should be constructed from Oswego on L. Ontario to the Hudson River, near Albany, where navigation to New York is simple. This is an old route, freely used a century ago. In view of the serious agricultural depression, and the inability of thousands of farmers to meet their obligations, a demand has arisen in the Western Provinces for the enforcement of a temporary moratorium on certain classes of debts. It is unlikely that the provincial governments will accede to this request, but they are seeking by conferences to induce the banks, mortgage companies, and implement firms to suspend any rigid enforcement of their claims. Many British investors have been seriously inconvenienced by the working of the various Moratorium Acts passed during the war, which practically suspended all legal procedure on pre-war mortgages and real estate contracts. A group of shareholders of the semi-defunct Merchants' Bank have asked the Federal Cabinet to hold an investigation of the circumstances surrounding the disaster which forced their institution to seek amalgamation with the Bank of Montreal, but no definite reply has been given. There has been some uneasiness about the position of La Banque Nationale of Quebec. But it is now understood that generous support, which will enable it to tide over its difficulties, has been forthcoming, and the directorate has been reorganised and strengthened by the accession of four figures of high standing in the financial world. Meanwhile, criticism of the banking system of Canada does not abate, and the United Farmers of Alberta, at their recent convention, set up a vigorous demand for the establishment of a State bank in which the provincial government of Alberta would hold most of the stock.

The National Debt of Canada has for the first time in recent years shown an actual decrease during the month of December; the decline was very small, only \$1,925,893, but it was encouraging to the new Government. The net debt of Canada stood at \$2,366,861,252 on December 31st, an increase of \$58,642,790 over the figure for December 31, 1920, which was \$2,308,518,462. The revenue for the nine months of the fiscal year ending December 31, 1921, shows a decline of over 15 per cent. in receipts, and the comparative figures for the two periods are as follows:—

	NINE MONTHS ending DECEMBER 31.	
	1920.	1921.
Customs	134,807,860	77,174,599
Excise	28,788,467	28,566,149
War-tax—Inland Revenue	57,477,323	56,259,516
Business profits tax	25,723,276	16,934,714
Income-tax	19,736,286	72,636,727
Other war revenue tax	1,148,081	1,528,599
Post Office	16,500,000	17,100,000
Other revenue accounts ..	23,743,628	23,151,056
Total	344,354,675	294,270,639

The Customs duties for the nine months showed a decline of 42½ per cent., but in December the fall was only 18 per cent., as compared with December, 1920, and it seems probable that the returns will henceforward increase. It is noticeable that income-tax, which Sir Thomas White, the late Finance Minister, declared in 1915 was impossible to apply in Canada, now yields almost one-fourth of the total revenue.

ITALY.—CABINET RESIGNATION—POLITICAL CRISIS—BANCA ITALIANA DI SCONTO.

(FROM OUR CORRESPONDENT.)

TURIN, February 11.

H.M. THE KING has invited the Premier, Signor Bonomi, and the Cabinet to obtain an open vote from the House of Deputies. This was the end of an extraordinary performance of the numerically strongest party in the House, the democratic party, which, at the eve of the reopening of Parliament, due for February 2nd, declared by a sudden caucus vote a want of confidence in the Cabinet. Out of a total of 535, the democratic party number about 150 votes, the popular (Catholic) party 110, the Liberal (Conservatives, Nationalists, and Fascisti) party about 70, while the Socialists are 125, the Communists 15, and the other little parties (Agrarian, Social Democrats, &c.) about 65. No Cabinet can live without a coalition between Democratic, Popular, and Liberal parties, or Democratic, Popular, and Socialist, yet no one party is willing to submit to the necessity of a compromise with other parties.

The move of the Democratic party against Signor Bonomi's Cabinet was engineered, as it appears, by Signor Giolitti's followers. But, when Signor Bonomi resigned, the Popular (Catholic) party, which were greatly incensed by the rupture of the alliance, pronounced against a Giolitti Cabinet. So it happened that neither Giolitti, nor De Nicola, Speaker of the House, nor Orlando and Meda, have dared to form a new Cabinet. In the end, the King was obliged to refuse the resignation of the Bonomi Cabinet, so that the House can, by an open vote, express its wishes and opinions. General elections would not mend the matter, as the existing proportional system of election does not allow sudden changes in the composition of the House; and the swing of the pendulum is almost without effect.

Discontent against Bonomi's Cabinet had manifold origins. The conclusions of the Cannes Conference were displeasing to a section of Italian public opinion, which appeared to think that Italy was ignored when Great Britain and France were concluding a pact of alliance between themselves.

Irritation against the popular (Catholic) party, which has obtained the introduction of a Bill purporting to establish the so-called freedom of education, but in reality giving to the private (Catholic) schools the right to be the legal centre of final examination in secondary education. Last, but not least, the Banca di Sconto moratorium. Newspapers and political circles are, after December 29, 1921, full of stories about the cause of the fall of the Banca di Sconto, and the inability of the Government to come to the rescue. The Government has done all in its power to bring the affair to a satisfactory conclusion. The judicial commissioners have circulated a scheme on the following lines:—The Banca Italiana di Sconto is to go into liquidation. A new Banca Nazionale di Sconto is to be formed with a capital of 270 millions lire, of which 150 millions are to be subscribed by creditors of the old Banca di Sconto with 7 per cent. of their credits, and 120 millions by the ex-directors. The capital may be successively raised to 420 millions with an option to creditors to subscribe the increase.

Deposits will be repaid to creditors on the following basis:—(1) Creditors up to 1,000 lire will be fully repaid after a month; (2) creditors between 1,001 and 5,000 lire will receive 70 per cent. of their credits not later than December 31, 1922; (3) creditors of upwards of 5,000 lire will receive 60 per cent. in instalments up to December 31, 1923. For the unpaid 30 or 40 per cent., a scrip will be given to creditors, which gives a right to the distribution of the assets of the old Banca eventually remaining after payment of the above instalments. The creditors' representatives are not satisfied with the scheme, and claim the aid of the Government. Political parties, un mindful of the public interest, have caught up the problem as a weapon against the Government.

But how the creditors of the Banca di Sconto can be given more than the above scheme proposes to give, i.e., all that can be realised from a winding-up of the assets, without laying an unjust burden on taxpayers, is difficult to see. It is, therefore, to be hoped that the Government, which will be formed after the vote of the House on February 16th, will do nothing prejudicial to the public exchequer.

Letters to the Editor.

THE BANKERS' DIAGNOSIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Craies well states in your issue of the 11th inst. "that the need of trade is a reliable standard of value." No one contends that gold is absolutely stable in value, but I think it will be admitted that over a long period of time it has proved to be the most stable and most suitable standard for the purpose. What is more, mankind desire it, and mean to have it. I entirely disagree with your correspondent's statement that "Professor Gustav Cassel's proposal to regulate the monetary demand for gold by international agreement seems to offer the only satisfactory solution of the monetary problem," and regret very much that this gentleman has been described by the present Prime Minister as, if I remember rightly, the most brilliant economist of the day. The description is an indication of the Prime Minister's knowledge of economics. Adam Smith demonstrated, and history has confirmed it, that when inconvertible paper money issues are controlled by a set of men, or by a Government, the control is invariably abused, and the same applies to the proposal to regulate the demand for gold by international agreement. Through the courtesy of the Lord Mayor, the annual meeting of the Sound Currency Association will take place at the Mansion House, on Tuesday, March 7th, and I have every confidence that British bankers will there declare for a free market in gold in this country as soon as it is practicable to have it.

I thank Mr A. A. Mitchell for his support, and you, Sir, for the interesting table you supply of increase in National Debt and Index Number, at the end of his letter. If you had added the increase in inconvertible paper money or Treasury notes, it would have been complete, and would have shown, as Lord D'Abernon showed in these admirable papers issued by the Board of Trade, that an increase or inflation of the currency coincided, or was followed by, a rise in the prices of commodities.

Mr Wigglesworth thinks that I look at only one side of the question—i.e., "the effect on imports." I can assure him that that is not the case. If we can secure cheap imports, exports will, I believe, take care of themselves. British cheapness and durability will command the markets of the world in the future, as they did in the past, and anything which legitimately helps to reduce the cost of production should surely receive our support. In conclusion, may I emphasise the fallacy of the argument that we will increase our liabilities, or the burden of our National Debt, by reverting to an effective gold standard? On the contrary, to state it thus is to look at only one side of the question, as the advantages which I endeavoured to indicate in my first letter far more than outweigh anything that can be advanced by those who support such an argument.—I am, Sir, your obedient servant,

D. M. MASON
(Chairman Executive Committee Sound
Currency Association).

115 Cannon street, E.C. 4, February 13th, 1922.

Books and Publications.

THE SOCIALIST IDEAL.*

THIS is a study of Socialism not in its political and economic aspects, but as an ideal of life. Somewhat strangely, the author does not explain what his conception of the Socialist ideal is, but leaves us to piece this together in the course of our reading. We learn, for example, that Socialism regards theology and metaphysics as a branch of anthropology; that it "proposes to make life entirely a matter of the present"; and that "it rejects history when it is not in harmony with Socialist ideas, but adopts it willingly when it promises to be of any use." Moreover, "it is one of the limitations of Socialism that in its economism it knows no such thing as independent spirituality, or treats it merely as an appendage of the material"—in other words, it is materialistic. We fancy that the author will secure for himself a smaller measure of agreement in regard to his conception of what the Socialist ideal is than in his criticism of Socialism as he sees it. The influence of Karl Marx has doubtless persisted to a large extent, especially in Germany, and the author's strictures on Marxian crudities are no doubt largely justified; but there is a large and growing school of Socialist thought which has thrown over materialism, advocating nationalisation of the means of production for the purpose of enabling life to be freed from the obsession of merely economic considerations. The author seems hardly to recognise the existence of this body of opinion. In general, his view is that while the Socialist ideal will remove many evils, and effect many improvements, promote education, and mitigate the crudities and injustices of the existing order, its tendency to treat the spiritual substance of life as a means to advance the welfare of men is very injurious. "It overlooks the depths and complexities of human nature, and its action could affect only part of the surface of life."

The book is stimulating, and contains many arresting passages, while the style even in translation retains the eloquence and force which one would expect from an author who has received the Nobel Prize for literature.

* "Socialism: An Analysis." By Rudolf Eucken. (London) T. Fisher Unwin. 9s net.

CRISES AND THEIR CAUSE.*

THIS work, by a professor in the Polytechnic School at Tiflis, was translated into German, and reviewed at some length in these columns, as long ago as 1908. It elaborately describes various kinds of limited crises—monetary, industrial, agricultural, and others—and assigns their causes, but its most important portion deals with the general crisis which results from the over-capitalisation of industry, and is the culmination of a periodic cycle. This over-capitalisation arises from the desire of individuals to provide for their future, or increase their command of commodities, by saving; it leads to over-production, followed by "decapitalisation" and a fall in prices, and the remedy for it is the more intelligent and more general consumption which would be facilitated by a better distribution of wealth, for the over-investment comes mainly not from wages or salaries, but from profits and rent. The book is an exhaustive examination of its subject, designed for economic specialists, and the extremely abstract treatment occasionally gives point to Auguste Comte's attack on the "scholasticism" of economic theorists, but it has a sound and wide historical basis, and incidentally throws interesting sidelights on Protectionism, the mercantile system, and other aberrations of economic policy.

* "Les Crises Economiques." Par Mentor Bouniatian. Paris: Marcel Giard. 1922.

COPARTNERSHIP.*

MR WALLS believes in idealism, symmetry, and mathematical formulæ. To him the solution of the industrial problem lies along the lines of settling the distribution of the proceeds of industry in consonance with the last two principles, and in the spirit of the first. The first charges on a business should be the payment of a bare subsistence

wage to "human capital," and a bare minimum interest to "material capital." All the divisible profit then remaining is to be shared between these two kinds of capital (a valuation of the amount of human capital embodied in a firm's labour force having been scientifically calculated) at the same rate per cent. In this way wages and "wage slavery" will recede in importance before the more dignified payment known as profits. Profit-sharing, however, is not co-partnership. Mr Walls anticipates great development of co-partners' councils, though he indicates quite definitely what matters of "control" are, and must be, the exclusive concern of "the management." The book is enriched by detailed accounts of important co-partnership schemes of the present and past, and by Mr Walls' great practical knowledge of his subject. The author writes, however, rather as one who clings to his faith in spite of circumstances, and somewhat also in spite of himself.

* "Progressive Co-Partnership." By Ernest Walls. Nisbet and Co., Limited. 1921. 12s 6d.

BANK CLEARING HOUSES.*

THIS little volume, apparently intended as the first of a series of economic handbooks, elaborately describes the mechanism of bankers' clearing houses in London, Paris, the United States, Canada, Germany, and elsewhere. It aims ostensibly at promoting the establishment of similar arrangements in Spain; the only approach to them at present is in Barcelona. Credit instruments are fully described, and interesting particulars are given of the rise of banking in Spain and elsewhere. Details of existing clearing-house arrangements are very fully given, with translations of the banking laws of various countries, and even a plan of a clearing house. More might perhaps be said of the bearings of the British and American systems on the national banking reserves. In its present dress the book can hardly appeal to students outside Spain and Spanish-America, but it deserves commendation as a sign of Spanish enterprise in the modernisation of the machinery of the national commerce and finance.

ACCOUNT.
February 23.

The Consol market of the Stock Exchange has almost been swept off its legs by the extraordinary volume of business induced by the strength of prices in British funds, Corporation stocks, Colonials, and other gilt-edged securities outside those of India. The fall in the Bank rate was heralded by the suspension of the Treasury bonds which were on offer at 99, and the gilt-edged market responded to the announcement of the latter with a vigorous movement upwards.

The War Loan yesterday touched 96, National War Bonds, the Funding Loan, Victory Bonds, and practically everything in this category went up with a rush under the stimulus of buying of stock by the fifty and hundred thousand pounds at a time. Small investors are eagerly laying in further supplies of stock, and, with the prospect of money remaining cheap for some time to come, holders will not sell unless they are obliged to do so. This limits the amount of supply available for the buyers, and every day has seen a remarkable diminution of the amount of stock which dealers have been able to offer.

As one striking illustration, it may be observed that in a list of gas companies' preference stocks issued by a well-known firm of Stock Exchange jobbers, there is no single instance of any being obtainable at the present time, while the amount of debenture stocks in the shipping market, for instance, is strikingly meagre. In these circumstances, it is scarcely necessary to add that the speculative and gambling markets have relapsed into quiescence, the public paying so little heed to them that the markets may be said to have become practically the hunting grounds of semi-professionalism. This does not apply, of course, to the pre-ordinary shares and stocks, because the public are not only willing, but eager, to acquire any good issues offering a fair rate of interest, the idea being that such are bound to improve in price as time goes on.

The strength of British Government stocks became reflected to a minor degree in the list of India issues, although the news from the country continued grave. Indian banking shares are also better, and there has been a mild recovery in some of the mining shares. Mexicans, on the other hand, are dull, in consequence of the statement in the House of Commons to the effect that nothing definite had yet been done in regard to recognition of Mexico by this country, which is evidently waiting upon a lead from the United States.

The foreign market is being searched for investments likely to improve in value, and the 7 per cent. Seine Department Bonds rose from $\frac{1}{2}$ discount to 3 premium. The Siamese offer of 7 per cent. bonds at 100 was over-subscribed in less than a quarter of an hour, and the lists immediately closed. Swansea Corporation was equally successful. The newly issued City of Sydney 6 per cents. started in the market at $1\frac{1}{2}$ premium, and the price quickly doubled. German bonds have been a little firmer, and amongst South Americans the new Chile $7\frac{1}{2}$ per cent. scrip rose to $1\frac{1}{2}$ premium. There has been good inquiry, too, for Chinese, and some of the Japanese bonds are better.

The Home Railway market is disappointing to holders, inasmuch as it fails to attract support from outside. Recent rises are well maintained, but there has been little fresh attention. The chairmen's speeches, following upon the issue of the reports, have not galvanised interest on the part of the

public, and the market is quiet. Mexican Railway stocks are easier, owing to the House of Commons answer mentioned above. Argentine railways move erratically. Grand Trunks are a little lower.

Rubber has again receded, and rubber shares are dormant. The Shell company secured immediate success with its issue of five million pounds 7 per cent. second preference shares at 20s, but the ordinary shares are quiet, although it is known that the Shell pool has just completed the sale of 143,000 shares taken over last November from the Public Trustee, at 4½ cum dividend. Mexican Eagles have been a better market: there are hints of a possible new issue from this company, following the example of the other leaders. Burmahs, after being depressed by realisation of a big account, recovered when the selling pressure relaxed, and the Trinidad group stiffened a trifle. City Equitable Associated preference have fallen to a florin, and other insurance shares are on the dull side, though the banking market is better, various London shares advancing owing to the boom in gilt-edged stocks. Shipping debentures are in favour, and P. and O. deferred rose sharply. Several of the outside gas companies' stocks were marked up liberally, Croydon "A," for instance, gaining 35 points in a day, and the "B" stock adding 25 points simultaneously. The iron and steel market is steady but neglected. Dunlops and other gambling counters aroused little attention from a public which is buying investment stocks with both hands. Stores shares are firmer, though the reduction of the dividend on Harrods caused dulness in the price of the ordinary. The textile market derived a little liveliness from erratic movements in Courtaulds. Tobacco shares have fluctuated narrowly, and, in the cable group, Radio Corporations responded to renewal of buying orders from America.

South Africans cannot escape from the effect of the protracted Transvaal strike, still unsettled. Yet diamond shares are firm, on statements that there is some revival of demand in America for the gems. Tin is a trifle below £150 per ton, which depresses shares in tin companies. Animation accompanied a brisk jump in Esperanza and Columbian Mining shares. Russo-Asiatics, with other Russians, are neglected. Indian mines, as already noted, have strengthened after their earlier weakness.

We are officially informed that Mr Gerard Lee Bevan, Mr Harold Holcombe Gordon, Mr Neville Forth O'Brien, Mr Frederick Edward Owen Tootal, the Hon. Reginald Ailwyn Fellowes, Mr Donald Johnson Pirie (Ellis and Co.) have ceased to be members of the Stock Exchange.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded ..	174,887,430			

TREASURY BONDS.

5½% 1922 receipts to January 28, 1922 ..	283,435,611
Further receipts ..	62,499
Total receipts 5½% ..	283,498,110
5% 1927 receipts to February 4, 1922 ..	4,415,000
Week to February 11, 1922 ..	4,075,000
Total receipts to date ..	8,490,000

NATIONAL SAVINGS CERTIFICATES.

1929 ..	10,840,096	1914 ..	612,522,633	

Swansea Corporation 5½% per Cent. Redeemable Stock, 1935-1945.—Issue of £850,000 stock at 98 per cent. The prospectus states: "If not previously redeemed, the stock must be redeemed at par on March 31, 1945," the corporation having the option to redeem at par on giving three months' notice on or after March 31, 1935. The proceeds of the issue will be used for repayment of existing loans amounting to £200,000, for housing, extension of electricity and water undertakings, and other purposes. The debt of the borough, after deducting sinking funds in hand, was £3,087,198, of which £1,926,131 represented liabilities for "reproductive works." Properties and other assets are valued at £2,875,000. The rateable value of the borough is estimated at £800,000, and a penny rate produces £3,150. The prospectus would have been more informative if the nature of the sinking fund and the annual amount required for debt services had been stated. A trustee security, which was quickly absorbed when offered.

Royal Siamese Government 7 per Cent. Sterling Loan of 1922.—This is an issue of £2,000,000, issued at £100 per cent. The loan "will be repayable" at par within 40 years from March 1, 1922, by drawings beginning in 1928. But the Government has the option to redeem at par at any time on or after March 1, 1932, on giving three months' notice. The loan is exempt from Siamese taxation. On September 30, 1921, the total national debt of Siam amounted to £7,312,560. The Government undertakes that if any special security shall be given for any other foreign loan such security shall also be "concurrently applicable to the present loan." The proceeds of the loan will be devoted to the further extension of the Government railway system, which at March 31, 1920, extended to 2,215 kilometres, also for irrigation and other purposes. Although the yield may not be considered on the excessive side, Siam, if small, is a progressive State. The issue was quickly oversubscribed.

The "Shell" Transport and Trading Company, Limited.—Share capital £43,000,000, divided into 300,000 5 per cent. first preference shares of £10 each, of which 200,000 are issued, 10,000,000 7 per cent. second preference shares of £1 each, of which there are now offered 5,000,000 shares at par, and 30,000,000 ordinary shares of £1 each, of which 19,365,144 are issued. The company has no debentures outstanding or authorised, but the decision for such an issue would, of course, rest with ordinary shareholders, who easily outnumber the other shareholders in voting power. The undertaking was founded in 1897, and has participated actively in the development of the oil industry. It holds a 40 per cent. interest in the Royal Dutch-Shell group of concerns, and is now entirely a holding company. Profits are given from 1913, and it is stated that dividend distributions from this date have been at the rate of 35 per cent. per annum. No statement of assets and liabilities is given. The shares were underwritten at the rate of 2½ per cent. on the par value. The shares form a good industrial risk, and were subscribed for by 11.15 of the morning of issue.

Scottish Power Company, Limited.—Authorised share capital divided into 125,000 ordinary shares of £1 each, £125,000 ordinary stock, and 250,000 8 per cent. cumulative preference shares of £1 each. All the ordinary stock and 200,000 preference shares have been issued. The borrowing powers of the company are limited to the amount of the issued capital. An issue of £50,000 debenture stock, part of £120,000 authorised, was made in July, 1918, at 95 per cent. This stock is secured by a trust deed, which provides for redemption by means of a sinking fund. The company was incorporated in 1909, and owns the issued share and loan capital of three Scottish electricity supply companies. A scheme of reorganisation was approved by the Court and carried into effect in 1916. Net revenue is shown for the three years to December 31, 1920. The ordinary capital received a 4 per cent. distribution in 1919 and 6 per cent. in 1920. This information is extracted from a published statement made to comply with the regulations of the Stock Exchange and may probably show steady progress.

The Apollo Player and Piano Company, Limited.—Authorised share capital £250,000, in shares of £1 each. This is an issue of 150,000 shares, of which 130,000 are now offered to the public at par. The company has been formed to acquire the assets, goodwill, patents, &c., of the Apollo Piano

Company, Limited, and to develop the New Apollo piano-player. The past financial history of this company is, however, meagre. The purchase price has been fixed at £28,325, of which £8,326 is payable in cash and the balance in shares. An independent valuation is submitted. Net profits are estimated at £33,500 for the first year. A speculative industrial risk.

Sea Bank Hotel and Hydro, Limited.—Authorised share capital £50,000, in ordinary shares of £1 each, of which 34,500 has been issued. The authorised loan capital is £22,000, and this is an issue of this amount in 8 per cent. first mortgage redeemable debenture stock at £95 per cent. The stock will be secured by a trust deed, and constitutes a specific charge on the fixed assets, and the company undertakes not to make any charge in priority to or *pari passu* with the present issue. Debentures are repayable at £105 on or before December 31, 1934, by annual drawings beginning in 1923. The company was formed in September, 1919, to take over an hotel in Glamorgan, and it is stated that £36,200 has been expended upon it. An independent valuation of £48,000 has been made of the hotel and contents. The prospectus is a clear statement of affairs, but regard should be paid to the narrow market for so small an issue.

Theatre Royal Cinema (Manchester), Limited.—Authorised capital £160,000, divided into 154,000 12½ per cent. cumulative participating preference shares of £1 each and 120,000 ordinary shares of 1s each. This is an issue of 145,000 participating preference and 36,250 ordinary shares, at par. Application for ordinary shares only will not be considered, but applicants for participating preference shares have the right to demand one ordinary share "for each four preference shares applied for." After both classes of shares have received a dividend of 12½ per cent., holders of participating preference shares are entitled to 50 per cent. of profits. The company has been formed to acquire a 99 years' lease of the Theatre Royal, Manchester, "which is now being converted" into a cinema theatre. The promoters have had considerable experience in this kind of undertaking, and they have agreed to underwrite the present issue of preference shares at 7½ per cent. The profit accruing to them as vendors, it is stated, amounts to £8,587. Preliminary expenses amount to £12,000, and are payable by the company. Even though the promoters have "never yet been associated with a cinema hall that has not been a success," and estimated net profits are stated at a sum which is over one-third of the share capital, the shrewd investor will no doubt have considered the highly speculative nature of companies engaged in the entertainment industry.

The "Big Four" Pari Mutuel, Limited.—Authorised capital £100,000, divided into ordinary shares of £1 each, of which 80,000 shares are offered to the public at par. The company has been formed to acquire and develop a business of betting on the Pari-Mutuel system for £20,000, payable in shares, of which £17,000 is for goodwill. Preliminary expenses are estimated at £5,000, and will be paid by the company. The prospectus states that "this offer of shares is made to the public not with the object of acquiring capital, but to increase the company's clientele." The minimum subscription on which the directors may proceed to allotment is 50,000 shares. A novel feature about this issue is that the directors jointly and severally guarantee, if called upon, to do so within three months after the first annual general meeting of the company, to purchase any shares of this issue at the price of the amount paid up on such shares. This is an unusual offer, and not devoid of merit, if subscribers consider the guarantee by itself sufficient security. The legal position of betting as a business being so uncertain, the issue will only appeal to confirmed optimists in this direction. It has, we understand, been oversubscribed.

The British International Film Corporation, Limited.—Authorised capital £150,000, divided into 135,000 10 per cent. cumulative participating preference shares of £1 each and 300,000 ordinary shares of 1s each. Participating rights consist of one-half of surplus profits after payment of 10 per cent. per annum on both classes of shares. All ordinary and 31,000 preference shares have been allotted, and 100,000 preference shares are now issued at par. The company was formed to take over the business of Windlesora Films, Limited. It acquires the share interest in Windsor Films, Limited, and other companies. Surplus assets are valued at £57,030, of which negative and positive films and rights are stated at £43,451, while studio valuation, made by independent people, is given as £23,112. Goodwill—Lionel Phillips business—appears separately at £5,000. It would be interesting to have a separate valuation of film rights. The net turnover and gross profits of the Lionel Phillips Company are given for two years. Other figures are given of investments in a United States and Canadian company. The shrewd investor is more concerned to know the definite net profits made by the company in the last two years from its gross assets, now valued at £79,014, than general statistics about the film industry and estimated profits of £93,400, which may and may not accrue in the future.

Yorkshire Amalgamated Products, Limited.—Authorised share capital £300,000, of which £230,432 has been issued. This is an offer for sale of £120,000 first mortgage 8 per cent. registered debentures at 95 per cent. They are "to be redeemed" in January, 1942, at 105 per cent., but the company has the right to redeem at 105 per cent. at any date in or after 1925. The company was formed with the object of amalgamating businesses "operating mineral deposits" in demand in the iron, steel, building, and glass trades. Profits are shown for the past four years, but before charging depreciation and many other outgoings. The debentures will be secured by a trust deed constituting a specific first mortgage on the company's fixed assets. These fixed assets were valued in February, 1920, at £285,578 by an independent valuer, but it is difficult to understand the statement in this "offer for sale" that the value of these "has depreciated very little (if at all) during the interim." Other fixed assets acquired since this date bring the total value up to £412,164. Thus there appears to be a fair margin of security upon the figures given. Under the title of Sand, Glass and Foundry Materials (Amalgamated), Limited, in our issue of June 26, 1920, we reviewed the prospectus of what is apparently the same company. We then pointed out that the statement of past profits of the companies to be acquired was weak, and that there was not sufficient information to attract the careful investor. In this "offer for sale" no mention is made as to Stock Exchange quotation for these debentures, nor can we find the price paid by the present vendors for the issue.

ACTIVE SECURITIES.

ARIZONA COPPER COMPANY'S report for year to Sept. 30, 1921, discloses a debit profit and loss account of \$344,090. The company received from the Phelps-Dodge Corporation a payment equal to \$11,918, subject to British taxes, but this sum is not sufficient to cover a dividend to the ordinary shareholders.

WINDSOR STEAM COAL have decided not to pay interim dividend on the 6 per cent. or 10 per cent. preference shares.

THE PAST YEAR.

For Great Britain, 1921 has been one of the worst years of depression since the industrial revolution. The rapid fall in prices, the shrinkage and, in very many cases, the complete disappearance of profit, and the unprecedented contraction of production were accompanied by the unemployment of nearly two millions of the industrial population, and in the last half of the year by a drastic reduction in wages which, in many cases, far outran the fall in the cost of living. Fortunately, the deplorable social effects which might have been expected to follow from so drastic a decline in earning power have, to a large extent, been mitigated partly by the individual and corporate savings which the working classes had accumulated during the war and the subsequent boom, but still more by the national scheme of unemployment insurance, supplemented by local relief works, and finally outdoor relief from the Poor Law Guardians. The troubles of the year were made more severe than they otherwise might have been by the complete stoppage in the coal industry, which lasted for three months—from the beginning of April until the end of June.

But, disastrous as this stoppage undoubtedly was,

it was only an aggravation, and not the cause of the year's depression. In January and February there was a very prevalent opinion that the economic situation would improve in the spring, and several public forecasts were made that trade revival would commence by April or May. This reading of the situation had, however, not taken sufficient account of the ephemeral nature of the post-war boom, and of the difficulty there would be in restoring Central and Eastern Europe to their normal position in the world circle of trade. The low level to which production had fallen all over the world, and the lack of co-ordination between production and consumption, as evidenced by the accumulation of unsaleable raw materials in distant parts of the world, and of unused manufacturing capacity in European and American industrial centres, were factors masked from general observation by the high level of prices, which made it appear that the turnover of trade was greater than ever during the boom, whereas, in fact, it was quite subnormal. Early in the year a blow to confidence was given when it appeared that even a small recovery in Continental production was sufficient to undermine the level of prices and to cause buyers to retire from the market. In the middle period of the year, when British industry was at a standstill on account of the coal strike, world prices were in a state of the greatest uncertainty, mainly because it was not yet clear how far cost of production in the countries with depreciated exchanges would govern the market, and set up a new price standard. But as internal prices and the exchanges tended to adjust themselves, and the difficulty of importation of materials by countries with low exchange became apparent, it seemed that some sort of equilibrium might be established. In September, however, a further check was received as a result of the disastrous collapse in the mark, which for 12 months had shown signs of steadying itself in the neighbourhood of 240 marks to the £. This slump was accompanied in Germany by one of the most phenomenal short-lived booms of recent years. But the moment the depreciation ended the internal boom based on speculation collapsed as quickly as it arose, and foreign buyers, who had purchased in Germany at ridiculously low sterling prices, were unable to get delivery, and orders began to return once more to Great Britain and other competing countries.

The year ended on a more hopeful note. For some the only reason for this optimism was the feeling that it was impossible to repeat the record of so disastrous a year. But there were, in fact, more substantial grounds for encouragement. In the first place the congestion of stocks all over the world had been appreciably relieved, a typical example being the case of Australia, whose trade position now shows a substantial balance of exports. Again, in spite of many disappointments there have been notable improvements in the political situation. The Washington Conference has removed, for the present, at all events, the overhanging fear of trouble in the Pacific, and has relieved us from the threat of a new competition in Naval Armaments. The Irish settlement has rendered highly improbable the necessity for this country to engage in a further long period of guerilla warfare, while the events of the last four months of 1921 made it clear to the most hardened believer in an enormous indemnity that the question of reparation must be reconsidered in the light of the economic position of other industrial countries. Finally in the industries of Great Britain the lax methods of the war and of the post-war boom have had to be given up, and managers have devoted themselves, with the assistance of the cost sheet, to increasing productivity. Wages are being reduced—very irregularly, it is true—but it is significant that in two of our most important export industries, namely coal and steel, rates of wages are now definitely fixed upon the basis of what the industry can afford to pay, and this is greatly assisting producers in meeting the prices of their foreign competitors. The futile provisions of the Safeguarding of Industries Act have fortunately not yet had any influence upon the prices of food, and our Free Trade system has therefore been once more a powerful factor in permitting the cost of living in Great Britain to fall

to the lowest level which world conditions permit. These considerations are responsible for the fact that the new year opens with a few though significant reports of orders placed in Great Britain in open competition with foreign countries.

As regards finance, a noteworthy feature is the unshaken stability in a period of unexampled strain of our great banking institutions. Nor have there been any failures of any commercial or industrial firms of the first rank. Not only stockholders, but banks and insurance companies have had their position strengthened by the remarkable appreciation in the value of gilt-edged securities during the year. Industrial securities, on the other hand, have continued the depreciation which started in 1920.

The circumstances of the year played havoc with the national finances, and with prices falling and profits non-existent taxation—largely assessed on the results of previous years—became an almost intolerable burden on industry. The financial year 1920-21 showed a surplus of revenue over expenditure sufficient to repay £259 millions of the National Debt, including £117 millions of foreign debt. For the current year the budget estimated a surplus of £177 millions, though it was admitted that an actual surplus of about £80 millions was the best that could be hoped for, owing to undetermined obligations to the railways, and unknown liabilities in connection with the coal strike. But the prospect of a surplus of even 80 millions faded as the year progressed, and the best that can be hoped for now is a balance between revenue and expenditure. The Conversion Loan operation added a nominal £100 millions to the National Debt, and it is unlikely that the year 1921-22 will see any net reduction in the total. On December 31, 1921, the total floating debt showed a reduction of £143 millions on the calendar year, and £67 millions of foreign debt were paid off. These repayments were made possible by heavy subscriptions in the later months of the year to 5½ per cent. Treasury Bonds, which had been on continuous sale since July. The outlook for the coming financial year is far from hopeful, for while admittedly relief from the present crippling rates of taxation is a pressing need of trade and industry, the Chancellor will have to face a declining yield from income-tax, excess profits duties arrears, and sales of war stocks, whereas a new expenditure of £50 millions for interest on American debt is likely to appear. How the Chancellor will face these problems is, however, a matter not of history, but of current controversy.

OVERSEAS TRADE.

Apart from the stagnation of trade, the fall in commodity prices had a marked effect upon the value of our overseas trade for the year 1921, the total turnover amounting to £1,896,935,600, as compared with £3,489,871,500 in the previous year, a decline of about 47 per cent. The summary of the year's total imports, exports, and re-exports, as compared with those of 1920, is as follows:—

	Calendar Year.		Decrease in 1921.
	1920.	1921.	
Imports	£ 1,932,648,881	£ 1,086,687,213	— 845,961,668 — 43·7
Exports	£ 1,334,469,269	£ 703,196,282	— 631,272,987 — 47·3
Re-exports	£ 222,753,331	£ 107,052,072	— 115,701,259 — 51·8
Total exports	£ 1,557,222,600	£ 810,248,354	— 746,974,246 — 47·9
Excess of imports over total exports	£ 375,426,281	£ 276,438,859	— 98,987,422 — 26·3

These figures refer to merchandise only. The coin and bullion figures for the past two years are given below:—

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1920	£ 50,678,283	£ 92,565,137	£ 9,923,034	£ 11,493,266
1921	£ 49,676,327	£ 59,348,158	£ 10,282,693	£ 12,046,272

The reduction of nearly £100 millions in the adverse merchandise balance in a year in which the long coal stoppage struck so severe a blow at our export trade, may seem surprising. But the trade depression caused

a severe restriction of our purchases of raw materials, and the import figures were also reduced by the specially large fall in the prices of some leading food products and materials. The reduction in the import excess occurred during the first half of the year, as will be seen from the following table:—

MOVEMENTS OF MERCHANDISE TRADE BALANCE.

Month.	Imports in 1921.	Total Exports in 1921.	Excess of Imports in 1921.	Excess of Imports in Corresponding Month of 1920.
	Million £.	Million £.	Million £.	Million £.
January	117·0	102·7	14·3	52·0
February	97·0	76·2	20·8	61·8
March	93·7	75·7	18·0	45·9
April	90·0	68·4	21·6	40·4
May	86·3	50·3	36·0	26·8
June	88·2	45·2	43·0	33·8
First half-year ..	572·2	418·5	153·7	260·7
July	80·8	52·5	28·3	7·8
August	88·6	61·3	27·3	25·0
September	87·1	63·8	23·3	22·0
October	84·7	72·7	12·0	21·2
November	89·3	72·7	16·6	11·7
December	85·3	68·6	16·7	10·2
Second half-year ..	515·8	391·6	124·0	97·9
Full year	1,088·0	810·2	277·9	358·6

The slight discrepancy between these figures and those in the first table is due to certain adjustments made in the official monthly figures. An estimate of "invisible" exports has not been published by the Board of Trade for some time. For 1920 the value of shipping services, interest on foreign investments, insurance and commercial services, &c., was estimated at £500 millions, and even allowing for the fall in freight rates, and the smaller tonnage carried, it is safe to assume that the real balance of trade in 1921 was on the right side.

The detailed figures show that our purchases of materials were considerably less than in the previous year, but that the importation of food, &c., was not substantially reduced. The table below gives the quantity and value figures of certain leading imports in 1920 and 1921, and thus indicates the extent of price changes in the different items:—

	Quantity.		Value.	
	1920.	1921.	1920.	1921.
			£	£
Raw cotton ..centals	18,972,224	11,725,521	253,997,742	72,461,969
Sheep & lambs wool ..	8,728,799	7,610,440	87,623,962	41,539,603
Flax, hemp & jute, tons	383,350	180,797	32,263,320	9,692,152
Rubber	2,481,910	1,903,756	24,517,721	9,242,336
Beef	10,668,463	12,166,907	51,870,074	45,068,675
Mutton and lamb ..	6,398,942	6,810,151	26,760,522	28,973,658
Wheat	109,328,326	80,246,994	146,753,350	70,355,481
Wheatmeal & flour ..	11,969,740	15,840,455	21,245,981	19,067,049
Sugar	27,427,116	25,590,292	73,140,456	35,283,957
Butter	1,702,203	3,523,998	24,518,748	42,528,399
Tea	431,196,236	445,519,602	26,957,802	23,017,425
Tobacco	219,042,927	227,620,930	32,767,209	22,192,947
Pig-iron—				
Forge & foundry tons	49,581	411,744	705,884	2,802,016

Similar figures for exports show how the depression was concentrated on various industries:—

	Quantity.		Value.	
	1920.	1921.	1920.	1921.
			£	£
Coal	24,931,853	24,660,558	99,627,146	42,951,591
Pig-iron and ferro-alloys tons	579,509	135,998	10,002,701	1,686,461
Railway material	311,211	339,603	9,835,488	10,571,882
Total of iron and steel and manufactures thereof tons	3,251,225	1,700,407	128,907,361	63,772,453
Textile machinery	63,314	156,965	9,158,773	25,148,438
Textile yarns	461,663	506,008	63,432,368	74,630,495
Cotton yarns	147,432,400	145,904,900	47,585,814	23,928,459
Cotton piece goods ..sq. yds.	4,435,405,000	2,902,659,000	315,717,631	137,168,336
Wool tops	237,703	346,898	5,036,621	4,401,655
Woolen tissues	187,232,900	76,626,600	75,166,330	24,638,719
Worsted tissues	77,354,900	40,818,400	26,683,079	11,227,527
Linen piece goods ..sq. yds.	93,044,700	39,995,900	14,935,201	5,251,573
Boots and shoes	818,969	313,269	7,116,030	2,946,830
Leather	271,257	228,063	8,153,959	3,339,647
Paper and cardboard ..cwt.	2,560,132	1,464,995	12,810,405	7,735,444
Locomotives	43,296	47,468	5,987,396	7,935,903
Motor cars and chassis ..No.	8,433	3,800	6,404,545	3,296,234

The extent to which price changes have affected the total value figures is shown by statistics published in the *Board of Trade Journal*. The table below compares the aggregate trade of the last three years with that of the year preceding the war, on the basis of 1913 values throughout:—

	Values on Basis of 1913 Prices.		
	Total Imports.	Re-Exports.	Exports (U.K. Goods).
	Thousand £.	Thousand £.	Thousand £.
Trade of 1913	768,735	109,567	525,254
Trade of 1919	679,786	85,726	288,105
Trade of 1920	679,274	98,909	372,476
Trade of 1921	570,912	85,612	261,647

These figures reduced to percentages are a convenient way of showing the variation in the volume of overseas trade:—

	Volume of Trade, Per Cent. of that of 1913.		
	1919.	1920.	1921.
Total imports	88·4	88·4	74·3
Re-exports	78·2	90·3	78·1
Exports (United Kingdom goods)	54·9	70·9	49·8

Imports, which were approximately of the same aggregate volume in 1919 and 1920, were less in 1921 than in these years by about 16 per cent., and were approximately three-quarters of the quantities imported in 1913. Re-exports, which had expanded in 1920, were again in 1921 of equal volume to that recorded for 1919. Exports, taking the year as a whole, were barely half the volume of our 1913 export trade, and even taking the last quarter by itself, when the coal export trade had made considerable recovery, a falling off of 39 per cent. from the 1913 aggregate volume is recorded.

In actual weight the reduction is even more than these figures indicate, since the greatest decline compared with 1913 was in coal exports, which affect the tonnage more than value totals. The tonnage imported and exported, together with the entrances and clearances of British and foreign shipping, was as follows:—

	Total Tonnage Entered and Cleared with Cargoes.	Weight of Imports. Tons.	Weight of Exports. Tons.
1913	116,884,000	56,023,000	93,824,000
1920	73,108,000	45,542,000	41,175,000
1921	73,507,000	39,436,000	33,598,000

The shipping tonnage was only 62 per cent. of the figure for 1913, while the weight of imports was 70 per cent., of exports 36 per cent., and of imports and exports combined 49 per cent. of the corresponding figure for 1913. Excluding coal, the weight of exports fell to 80 per cent. in 1920 and 45 per cent. in 1921.

HOME TRADE.

Home trade is not susceptible of the exact measurement which is available in regard to foreign trade, but there are several important industries in regard to which definite figures are available. In the first four of the following trades, actual production figures exist, while in the case of textiles, net imports give a fair measure of consumption, and therefore of the volume of production:—

	1913.	1920.	1921.
Coal	287,430,000 ..	229,295,000 ..	164,354,200
Pig-iron	10,250,000 ..	8,007,900 ..	2,611,400
Steel	7,660,000 ..	9,056,800 ..	3,624,800
Shipbuilding—			
tonnage launched	1,932,152 ..	2,055,624 ..	1,538,052
Imports (net)—			
Raw cotton ..centals	19,166,544 ..	16,475,501 ..	10,216,045
Flax, hemp & jute, tons	413,882 ..	300,281 ..	134,343

The trade reports printed on later pages trace the history of these and other industries during the year 1921, and show that in nearly every case production has fallen to the lowest ebb recorded for many years past. It must, however, be noted that these particular trades are those which have declined most, and cannot be taken as typical of the whole trade of the country.

Statistics of the profits of industry down to the end of the year are not yet available, but the figures of com-

pany profit and loss accounts published in the year, while not an indication of actual earnings during the exact period, show that trade stagnation has already affected the published accounts very seriously. The table below shows how the profits of the companies whose reports were published in the year declined in comparison with the previous year:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports published in		Increase.		Decrease.	
		1920.	1921.	£	%	£	%
First quarter	412	41,915,998	43,387,538	1,471,540	3.5	3,705,798	8.4
Second quarter	355	44,173,294	40,467,496	..	..	10,245,001	42.4
Third quarter	232	24,157,772	13,912,771	..	..	16,004,104	52.9
Fourth quarter	311	30,272,382	14,268,278	..	..	..	..
	1,310	140,519,446	112,036,083	..	..	28,483,363	20.1

All classes of company shared in the decline, the most prominent decreases being shown by iron and steel, motor, rubber and textile companies. The percentage earned on ordinary and preference capital and the distribution on ordinary capital has naturally been reduced, as may be seen from the figures below:—

PROFITS ON CAPITAL.

	Return on Preference & Dividend on Ordinary.		Dividend on Ordinary Capital.	
	%	Capital.	%	Capital.
1909	7.4	4.3	6.3	..
1910	8.2	4.5	7.0	..
1911	9.9	4.9	8.5	..
1912	10.2	5.2	8.5	..
1913	11.7	5.1	10.2	..
1914	10.9	5.0	10.0	..
1915	10.2	4.8	9.0	..
1916	13.2	5.1	11.0	..
1917	13.3	5.1	10.3	..
1918	13.6	5.1	11.1	..
1919	13.0	5.3	10.7	..
1920	15.2	5.0	12.6	..
1921	10.3	5.2	10.2	..

In the last quarter of the year the amount distributed on ordinary capital amounted to only 7.6 per cent., as compared with 9.7 per cent. in the third quarter and 11.6 per cent. in the corresponding quarter of 1920. On the whole, these figures are applicable to profits earned in the 12 months ending at midsummer. Our detailed analysis of these figures shows, however, that the rate of dividend paid in the last quarter of the year was paid out of balances or reserves.

The falling off in trade is also clearly reflected in the figures of the London Bankers' Clearing House, which are set out below:—

	1920.	1921.	Decrease.
Grand total	39,018,903,000	34,930,559,000	4,088,344,000
Town clearing	32,852,933,000	30,268,214,000	2,584,719,000
Metropolitan clearing	2,093,750,000	1,660,166,000	433,584,000
Country cheque clearing	4,072,220,000	3,002,179,000	1,070,041,000

The decline in the figures is to be attributed in the first place to worldwide trade depression, while other causes have been the fall in prices, the greatly reduced number and amount of new issues, and the stagnation of Stock Exchange business. On the other hand, there has been considerable business passing in foreign exchange, and the repeated maturing and renewal of Treasury bills has also called for a large turnover of money. The issue of Treasury bonds, especially during the closing months of the year, has also made itself felt. Of the total decline, 65.2 per cent. occurred in the first six months, but it must be borne in mind that the large increase of 1920 over 1919 was mainly in the first half of the year. In reading the figures it is well to remember that, while the town clearing is mainly concerned with the large financial transactions of the Money Market, the Metropolitan clearing is indicative of the retail business of the Metropolis, and the Country Cheque Clearings of the general trade of the country.

Figures of the tonnage carried by the railways of Great Britain have usually been regarded as a good index of internal trade. But comparison with pre-war figures

is in present circumstances affected by the very substantial transfer of short-distance traffic to the roads. The figures for the full year 1921 are not yet available, but we give below the tonnage during the eleven months ended November 30, 1921:—

General Merchandise.	Coal, Coke, and Patent Fuel.	Other Minerals.	Total.
Tons.	Tons.	Tons.	Tons.
47,130,500	113,175,700	35,201,300	195,507,500

These figures compare with the following tonnages of merchandise and minerals conveyed over the standard gauge railways during the year 1913:—

	General Merchandise.	Coal, Coke, and Patent Fuel.	Other Minerals.	Total.
	Tons.	Tons.	Tons.	Tons.
England and Wales	56,591,861	190,980,113	59,512,229	307,084,203
Scotland	11,152,070	34,573,971	11,352,114	57,078,155
Manchester Ship Canal	1,516,045	27,795	474,017	2,017,857
Total	69,259,976	225,581,879	71,338,360	366,180,215

The large decline in the total as compared with 1913 is principally due, it will be seen, to the low totals for coal and other minerals in the first eleven months of 1921. As regards general merchandise, an eleven months' figure for 1913 would be about 63½ million tons. A very substantial part of the difference between this figure and the 47 millions shown above is undoubtedly due to the cause we have mentioned.

COMMODITY PRICES.

The downward movement in the prices of commodities, which began in the early part of the year 1920, continued almost unchecked throughout 1921, our Index Number falling from 5924 to 4357, a drop of 1567 points, or just over 26 per cent. The decline was more pronounced in the early months of the year, the fall in the first six months amounting to 1114 points. In the autumn there was a slight check to the downward movement, an increase being recorded in the total both for August and for September, as a result almost entirely of a sharp advance in the textile group. This was the consequence of the publication by the American Government of unfavourable cotton crop reports and estimates which quite upset the nerves of the Lancashire cotton market. Since then cotton quotations have become steadier, but the textile group is still very much higher in relation to the other groups and to the total than it was. The table below shows the monthly movements in each of the groups and in the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Tin, Ber. Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)	500	300	500	400	500	2200	100.0
End July, 1914	579	352	516	464	553	2565	116.6
" Nov., 1918	1289	782	1848	908	1389	6212	282.6
" Dec., 1919	1441	881	2442	1145	1453	7364	334.7
" Mar., 1920	1808	914	2974	1246	1709	8392	379.6
" June, 1920	1511	929	2562	1289	1555	7847	356.7
" Dec., 1920	1344	805	1284	1216	1275	5924	269.8

The highest point in the price level for the United Kingdom was reached in March, 1920, and, as will be seen from the adjoining chart, which also shows the

movements in the United States according to *Bradstreet's* Index Number, the decline from the peak has been much steeper than the rise.

At the end of 1921 our Index Number showed that wholesale prices were 70 per cent. above the level ruling at July, 1914, and, as will be seen from the table below, in which the indices for the various groups at the outbreak of war are taken as 100, this figure would have been still lower but for the high level of the subsidiary foodstuffs group, which includes sugar and tobacco, and of the textile group:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100
Dec., 1918	226	222	293	186	241	236
Dec., 1919	249	250	396	247	263	287
Mar., 1920	261	260	484	269	309	325
June, 1920	261	263	415	278	281	305
Dec., 1920	233	229	209	261	230	231
Mar., 1921	209	206	167	216	203	198
June, 1921	203	188	158	210	185	188
Sept., 1921	193	195	204	189	178	192
Dec., 1921	159	180	180	164	168	170
Jan., 1922	157	186	173	158	167	167

The largest decline during the year has occurred in the minerals group, the percentage increase over July, 1914, having dropped from 161 to 64 per cent. In cereals and meat, the excess has fallen from 133 to 59 per cent. Heavy periodical cuts in iron and steel prices, made with the object of countering foreign competition, have been principally responsible for the decline in minerals, while reductions in both home and foreign wheat and in flour account largely for the fall in primary foodstuffs.

A further table gives some indication of the movement of prices in other countries. The figures, which are taken from the Statistical Bulletin, published by the League of Nations, represent percentages of the 1913 average:—

	(PERCENTAGE OF 1913.)	Beginning of 1921.	Latest.
United Kingdom	231	310	208
United States	205	227	135
France	358	591	409
Italy	438	679	636
Germany	..	3,487	1,439
Sweden	367	366	267
Japan	214	322	201

In appendices to this issue will be found the monthly movements of our own and several foreign index numbers, and also the monthly quotations for the commodities used in compiling the *Economist* Index Number.

The year saw a steady decline in retail prices in the United Kingdom, though they have lagged some way behind wholesale prices. The following table shows the Ministry of Labour's cost of living index number, which is the average percentage increase since July, 1914, in food, rent, clothing, fuel, and

light, &c.:	1920.	1921.	Beginning of 1920.	1921.
Beginning of—	125	165	July	152
January	130	151	August	155
February	130	141	September	161
March	132	133	October	164
April	141	128	November	176
May	150	119	December	169

In the twelve months there has been a decline of just over 40 per cent., which has been continuous, with the exception of a slight check in July.

An element in the cost of production which is not covered by our Index Number is the level of railway and shipping freights. In September, 1920, the Ministry of Transport raised the increase in railway rates which it had imposed in the previous January to an all-round increase of 100 per cent. over the pre-war level, plus a small flat rate addition varying with

the class of goods. In the case of coal the increase was limited to a 4s per ton maximum. These new rates, which were admittedly somewhat higher than would otherwise have been justified, were imposed in order to restore the railways to solvency before decontrol by raising 16 months' revenue in 11 months, and it was intended that they should be reduced in August, 1921. The situation has, however, been so much worse than was anticipated that these rates have continued throughout the year, with the exception of a reduction amounting to about 15 per cent. for the carriage of iron ore and materials going into the blast furnace, which took effect on November 1st. Further small concessions affecting the coal export trade and other short-distance coal traffic, semi-finished products in the iron and steel industry, and certain materials for the chemical trade, were granted in November, but only took effect on January 1, 1922.

As regards shipping freights, the increase in the world's gross tonnage, which amounted in the middle of 1921 to 62 million tons, compared with 57½ million tons the year before, and with 49 million tons in 1914, on the one hand, and on the other the reduction in the volume of goods carried, which in the case of Great Britain amounted to 73 million tons weight in 1921, compared with 87 millions in 1920, and 148 million tons in 1913, produced a heavy fall in freight rates which, according to the Chamber of Shipping, amounted on the average to less than 30 per cent. of the level obtaining 12 months previously.

MONEY MARKET.

The strain on the machinery of finance and credit exerted by the industrial and commercial developments of 1921, though quite as severe as in any period during the war, was borne in a manner which is a tribute to the soundness of mercantile and banking methods in this country, for at the end of the year the credit position was sounder than it was at its beginning. Thus, though the authorities were able to reduce the Bank rate from 7 per cent. (by four reductions of ¼ per cent. in each case on April 28th, June 23rd, July 21st, and November 3rd) to 5 per cent., the price of gold, fell from 116s 10d on December 31, 1920, to 97s 10d on December 28th, and the price of silver fell from 40½d per ounce to 35½d. If we consider also that Treasury bills were reduced from £1,102 millions to £1,008 millions (on December 24th), and Ways and Means advances from £306 to £186 millions (all from Public Departments), it is clear that the financial strength of this country has survived as severe a test as it had to face during the war. The trade depression was accompanied by a decline in the demand for currency notes. The total of these outstanding fell from £367.6 millions on December 29, 1920, to £311.6 millions on October 26, 1921, and had only risen to £325.6 millions on December 28th. Similarly, the total of bank-notes in circulation fell during the same period from £132.8 millions to £126.5 millions. Without the support given in 1920 from the reserves of other banks in the United Kingdom, the Bank's gold holding showed no further increase, being £128.4 millions on December 28th, compared with £128.2 millions at the end of 1920, and the gold in the currency note department remained at £28½ millions, the proportion of gold to notes being consequently higher in each case.

The fall in the value of money here has followed that in New York, and has been accompanied by a fall in most Continental centres. When the year began banks and financial houses were still experiencing the aftermath of 1920's demand for credit, so that the margin between the rates of three months' bills and short money was about 1½ per cent. At its close three months' bills and short money were each, on the average, worth about the same, so that the margin had disappeared. On April 21, 1921, the Treasury re-introduced the "tender system" of selling Treasury bills and also introduced the arrangement of offering

"additional" bills at fixed rates. The average rate of discount for "tenders" varied between £5 19s 4d in April to £3 5s 3d in December, the limits of the rates for additional bills being 5½ and 3 per cent.

The annual figures of the joint stock banks show that there has been a slight increase in deposits during the year, but that acceptances, a sure index to the state of trade, have fallen substantially, while loans and advances are very much lower than they were a year ago. The table below shows the summarised figures for the nine English clearing banks:—

	Weekly Average.				
	Dec. 31, 1920.	March, 1921.	June, 1921.	Sept., 1921.	Dec. 31, 1921.
Capital and reserves.....	115.0	115.6	115.9	115.9	115.9
Acceptances.....	87.9	69.4	57.7	47.2	65.3
Deposits (incl. undivided profits, &c.).....	1,804.6	1,715.0	1,768.4	1,771.4	1,818.6
Total liabilities.....	2,007.5	1,900.0	1,942.0	1,934.5	1,999.8
Coin, notes, balance at bank, and cheques in course of collection.....	304.1	244.8	265.1	250.4	273.5
Money at call.....	113.0	82.6	90.0	98.9	105.7
Investments.....	339.1	336.1	335.9	332.7	343.3
Discounts.....	296.3	382.1	346.2	394.3	424.3
Loans and advances.....	845.1	862.6	815.4	788.2	762.3
Cover for acceptances, pre-mises, &c.....	109.9	91.8	8.14	72.0	90.7
Total assets.....	2,007.5	1,900.0	1,942.0	1,934.5	1,999.8

Deposits, it will be seen, fell considerably in the spring, but have since steadily increased. Discounts fell and advances increased in the first three months, but since then the movement has been reversed. An increase in bills discounted is to be attributed to larger holdings of Treasury bills, which are included in this item, for the volume of commercial paper held was almost certainly reduced during the year.

FOREIGN EXCHANGES.

While in normal times, the influence of the trade figures upon the movements of the foreign exchanges could be watched, the complicating political and economic factors of the present day upset the statistical relation between the two with the exception of the American exchange, which still fairly closely reflects changes in the trade balance. During the past year the feature has been the collapse of the German mark exchange, and with it most of the Central European exchanges, and the recovery in the value of sterling in New York, especially in the closing months of the year. On balance, the French, Belgian, Italian, Spanish, and other neutral exchanges, with the exception of Norway, show practically no change on the year in relation to sterling, and thus have improved in terms of the dollar. The Norwegian Exchange fell almost continuously throughout the year, as did also the Greek drachma rate. The South American exchanges show a considerable fall on balance, while the premium on the Eastern exchanges has been much reduced. The following table shows the highest and lowest points of the principal

exchanges, together with the quotations at the beginning of each quarter:—

London on	Rates of Exchange.

(a) Pence to pesos.

(b) Pesos to £1.

The fall in the mark, which was most pronounced in the autumn, resulted partly from the approach of the payment of the January instalment of reparations, partly from the disorganisation of Germany's internal finances, and also from enormous speculation all over the world in the mark. The improvement in the dollar exchange in the last two months of the year was largely a result of improvement in the political outlook, and the optimistic atmosphere produced by the Washington Disarmament Conference.

The following table is extracted from statistics published by Messrs Samuel Montagu and Co.:—

RATE OF EXCHANGE AS COMPARED WITH PRE-WAR PARITY OF THE £ STERLING.

NEW CAPITAL ISSUES.

New capital applications in the London market in 1921 totalled £389 millions, against £367½ millions in 1920. But of this total British and Colonial Governments absorbed £276 millions, and commerce and industry a great deal less than in 1920. The figures for each quarter for a number of years past, and the purposes to which the new capital issued during the past year was put, are set out in an appendix.

British Government borrowings consisted of £173,866,300 5½ per cent. Treasury bonds, £17,900,000 3 per cent. Local Loans stock, and £11,130,000 representing excess sales over encashments of Savings Certificates. These figures cover the year up to December 24th, and exclude temporary borrowings by Ways and Means advances and Treasury bills. Almost every branch of trade, commerce, manufacture, and miscellaneous enterprise figure very much less prominently than in 1920, a fact clearly explained by the existence of high money rates during the first

part of the year and the great trade depression extending over the whole period. Colonial Governments were exceptionally active in the December quarter, raising in that period over £41 millions. A feature of the latter part of the year was the almost universal warm reception of these issues. So far as industrial borrowings are concerned, the year was notable for the prominence of debenture issues and the rarity of issues of ordinary shares or of the short-term notes and "participating" preference shares, so popular in 1920. The average rate paid on new industrial debentures was 8.09 per cent. in 1921, as against 7.92 per cent. in 1920, and 5.5 per cent. in 1913. The average rate paid on new issues of preference stocks and shares was 8.39 per cent. in 1921, as compared with 8.09 in 1920, and 5.74 in 1913. Of the total capital issued in London in 1921, £347 millions was in form of debentures, bonds, &c., £21 millions in preference stock and shares, and £20½ millions in ordinary stocks and shares.

GOLD PRODUCTION.

The world's output of gold continues to decline, the only satisfactory feature from the British standpoint being that the proportion of gold contributed to the world's production by the British Empire is increasing. Thus out of a total estimated world's production in 1918, amounting to £79 millions, the British Empire contributed £51 millions, or about 64½ per cent., while if the estimate for 1921 is taken at £66 millions and the estimate for the British Empire is put at £46½ millions, the percentage of gold production by the Empire works out at over 70. The Transvaal maintains its output in marked contrast with other fields. Out of an estimated world's production for 1921 of £66 millions the Transvaal is estimated to have contributed £34½ millions, or considerably more than half. In 1918, when the total output was £79 millions, the Transvaal's yield was under £36 millions. And the figures of actual output are even more significant when examined. For 1919 output was 8,330,000 ounces of fine gold; in 1920 the total was recorded as 8,154,000, or a decrease of 176,000 ounces. In 1921 the figures are given as 8,115,000 ounces, or a decline of but 39,000 ounces. It is, however, curious to find Australasian production falling from 5 to just over 3½ millions, while Canada improved from over 3½ to nearly 3½ millions.

The table given below is taken from Messrs Samuel Montagu and Co.'s Annual Bullion letter for 1921, and shows the estimated world's production from 1913 to 1921:—

(Millions of £'s)

Year.	Transvaal.	The Rest of the Empire.	Total British Empire.	Foreign Countries.	Total for World.
1913.....	37.4	21.4	58.8	35.9	94.7
1914.....	35.6	20.9	56.5	33.9	90.4
1915.....	38.7	22.0	60.7	35.7	96.4
1916.....	39.5	20.1	59.6	33.9	93.5
1917.....	38.3	17.8	56.1	30.2	86.3
1918.....	35.8	15.2	51.0	28.0	79.0
1919.....	35.4	14.6	50.0	25.2	75.2
1920.....	34.7	13.5	48.2	21.3	69.5
1921 (est.) ..	34.5	12.0	46.5	19.5	66.0

For the purposes of this table gold is taken at 84s 11½d per fine ounce. From 1916 to 1919 the United States production has tended to fall away, dropping from 4,479,000 ounces in 1916 to an estimated 2,829,000 for 1919. Yields from Russian and Mexican mines are comparatively unimportant, Russia contributing in 1913 1,282,000, and Mexico 934,000 ounces.

The price of gold, normally 77s 9d per ounce, fell from 116s 10d on December 31, 1920, to 97s 10d on December 28, 1921, and, as Messrs Samuel Montagu and Co. point out, the "price of gold carrying an export licence has varied principally with the fluctuations of the United States exchange, the country to which the bulk of exports has been consigned..... The quotation for gold not carrying an export licence ruled considerably below that more favoured, until in

the latter part of the year, the United States Mint agreed to accept any gold bearing the stamp of an official Mint or State Bank. As a consequence, supplies of non-exportable gold for trade purposes were reduced, and the two quotations consequently approximated."

THE STOCK EXCHANGE.

During the early part of January trading on the Stock Exchange had the result of lifting prices substantially in most of the markets round the House, and in February the announcement of the abolition of Excess Profits Duty was well received. But it was a brief spell of prosperity, and markets were again soon overtaken by fits of nervousness. The coal crisis during April, May, and June produced a feeling of great uneasiness, but no noticeable pressure of selling accompanied the announcement of the various precautionary measures taken by the Government, miners, and mine-owners, while the difficulties arising over reparations and the Allies' threat in April to occupy the Ruhr Valley had singularly little effect upon markets. In spite of the coal stoppage, money continued to be placed into sound gilt-edged securities, but Consols gave way on account of the new Conversion Loan in the early summer. Favourable features towards the end of the year, namely, the Washington Conference in November, followed by disarmament proposals and the signing of the Irish Peace Treaty early in December, stimulated markets. The recovery in gilt-edged securities was very noticeable in the closing month of the year; the Five per Cent. War Loan improved from 83 at the end of 1920 to 92½ by the end of 1921. Consols advanced from 45 to 50½, and Local Loans from 50½ to 56½.

During the greater part of the first half of the year the foreign market was under the influence of the reparation developments, and most issues moved closely in sympathy with the exchanges. French Three per Cent. Rentes opened the year at 26, and closed at 27, while the Five per Cents. rose from 40½ to 42. Italian 3½ per Cents. improved from 21 to 22½, but Spanish Fours declined from 76½ to 72½. The continued depreciation of the mark, with its sudden recovery in the autumn, caused heavy speculation in German bonds. Chinese issues suffered from the involved financial conditions prevailing in that country, while Russians, which for the greater part of the year had remained quiescent, were marked up by reason of the changed policy of the Soviet Government and the proposed meeting of representatives of European States. Mexicans varied according to statements and rumours from New York, Mexico, and elsewhere.

In March a small boom in Home Rails began. Depression had become so noticeable that it was generally considered that railway directors had depicted the position of English railways in rather too dismal colours. The sympathetic attitude of the Government towards the railways was encouraging, while the course of the Railways Bill provided much food for discussion. But these influences failed to infuse life into the market. Prices, however, advanced in the last month of the year for ordinary and prior-charge railway securities. Great Northern Deferred on the year fell from 27 to 22, and Great Western declined from 75 to 73. North-Western opened at 74, and closed at 70. South-Western improved from 59 to 60½, and Midland deferred moved from 33 to 36. In the first half of the year American Railroad shares recorded pronounced declines, movements reflecting the somewhat depressed conditions prevailing in New York. Quotations have,

however, mainly followed in the wake of the American exchange rate. The threatened strike of railroad workers in America at one time produced a feeling of pessimism, but it was evident that holders were not seriously alarmed. Grand Trunks gave way when the results of arbitration became known. Canadian Pacific have followed the downward course of many other railways in British Dominions overseas. Mexican Rails benefited from the strength of Mexican Government bonds, which advanced on the strength of favourable news from that country. Argentine Railways displayed erratic tendencies, and were governed by labour conditions and adverse exchanges, while Brazilian issues were affected by the position taken up by the Brazilian Government against foreign-owned railways. But towards the end of the year both Argentines and Brazilians showed signs of marked improvement.

The year was thoroughly unpleasant for the industrial markets, and the dismally long list of company reports showing losses was amply reflected in quotations for shares in industrial undertakings. Writing down finished stocks and materials to prices in keeping with current values had a depressing effect upon shareholders generally. The Oil and Rubber markets both had their measure of trouble to contend with. But while oil shares were inclined to improve, rubber investments experienced but little demand. Iron, coal, steel, and shipping issues declined, but banking and insurance shares were better on the year's balance. The Mining markets also had much to contend with during the year. The need for lower working costs, enemy-held shares and other factors, and the fall in the price of gold, were sufficient to smother activity. Continental demand at times may have occasionally produced optimistic hopes, but the fact remains that the general public would not accept the invitation to speculate.

THE AGRICULTURAL YEAR.

Those farmers who paid boom prices for their land are now considering ways and means by which they can obtain a profit from farming whilst paying interest on borrowed money and selling their produce at the present comparatively low level of prices. The position can be seen at a glance by examining the following table of the average monthly prices for first quality English beef, mutton, and pork, per cwt. of 112 lbs, during 1921, as given in the following table, which we take from the *Land Agents' Record*:-

1921.	Average Price for First Quality English		
	Beef.	Mutton.	Pork.
January	168 6	228 6	194 0
February	168 0	224 0	172 0
March	165 6	219 0	174 0
April	167 6	215 0	174 0
May	156 0	197 6	163 6
June	148 6	178 6	148 0
July	129 0	148 6	141 6
August	128 6	142 6	144 0
September	119 6	131 6	147 6
October	95 0	121 0	132 0
November	88 0	116 6	127 6
December	93 4	116 8	121
Year 1921	135 7	169 0	153 1
" 1920	148 6	179 0	216 0
" 1919	125 6	132 6	150 0

It is pointed out that the prices in the early part of the year in the above table were influenced by control, but these figures show the fall in values when the control was lifted.

The acreage of crops and grass in England and Wales in 1921 and 1920, compiled from returns collected annually by the Ministry of Agriculture on June 4th, is as follows:-

Distribution.	1920.	1921.	+ Increase - Decrease.
Total acreage under all crops and grass ..	Acres. 26,507,000	Acres. 26,139,000	Acres. - 368,000
* Rough grazings	4,162,000	4,555,000	+ 393,000
Arable land	12,020,000	11,618,000	- 402,000
Permanent grass—			
For hay	4,395,000	4,054,000	- 341,000
Not for hay	10,092,000	10,467,000	+ 375,000
Total	14,487,000	14,521,000	+ 34,000
Wheat—Autumn sown	1,793,000	1,911,000	+ 118,000
Spring sown	82,000	67,000	- 15,000
Total	1,875,000	1,978,000	+ 103,000
Barley	1,637,000	1,435,000	- 202,000
Oats	2,272,000	2,145,000	- 127,000
Mixed corn	147,500	136,400	- 11,100
Rye	95,600	79,400	- 16,200
Beans	257,100	246,600	- 10,500
Peas	165,700	142,400	- 23,300
Potatoes	544,600	557,400	+ 12,800
Turnips and swedes	991,400	894,300	- 97,100
Mangold	385,900	374,800	- 11,100
Cabbage, savoy, and kale	52,100	58,000	+ 5,900
Kohlrabi	11,000	9,500	- 1,500
Rape	100,300	81,500	- 18,800
Vegetables or sars	121,700	103,700	- 18,000
Lucerne	44,500	47,400	+ 2,900
Mustard	71,900	45,200	- 26,700
Brussels sprouts	12,600	12,500	- 100
Cauliflower or broccoli	8,800	8,600	- 200
Carrots	9,600	8,200	- 1,400
Onions	4,500	2,900	- 1,600
Sugar beet	5,300	5,300	—
Plum for fibre	1,700	1,700	—
Linseed	12,900	6,100	- 6,800
Hops	21,000	25,100	+ 4,100
Small fruits	58,800	73,300	+ 14,500
Clover and rotation grasses—			
For hay	1,674,000	1,757,000	+ 83,000
Not for hay	774,000	791,000	+ 17,000
Total	2,448,000	2,548,000	+ 100,000
Bare fallow	567,000	506,000	- 61,000

* Mountain, heath, moor, down, and other rough land used for grazing.

Conditions for sowing seed in the spring were favourable for good crops. Hay crops were light, while the results of cereal crops would have placed farmers in a difficult position but for the bounty paid by the Government. Root crops were uncertain, and farmers were given further anxiety by water scarcity, which in some districts seriously affected cattle.

The *Farmers' Red Book* has not an encouraging account to give of the measures taken by the various authorities to bring people back to the land:-

Ex-Service men placed on the land as smallholders have had a trying year, but County Committees are going on finding more land for more men, and we most earnestly hope that the latter will be able to live in comfort on the land they have fought for. Most of the schemes adopted for training men who fought in the war, in agricultural pursuits, are coming to a close, and we wish that all the men so trained could now find occupations that would bring them in an adequate financial return.

The table given below shows the estimated total produce and yield per acre of the corn, pulse, and hay crops in England and Wales in 1921, with comparisons for 1920, and the average yield per acre of the ten years 1911-20:-

Crops.	Estimated Total Produce.		Average Estimated Yield per Acre.		Average of the Ten Years 1911-1920.
	1920.	1921.	1920.	1921.	
England—	Quarters.	Quarters.	Bushels.	Bushels.	Bushels.
Wheat	6,515,000	8,586,000	28 4	35 5	30 5
Barley	5,982,000	5,069,000	31 1	29 9	31 1
Oats	9,846,000	9,267,000	39 1	38 4	39 0

Meadow hay	556,000	355,000	22 6	14 7	19 8

The next table shows the *Gazette* average prices of the three principal cereals over a series of years:-

AVERAGE GAZETTE PRICES OF CORN for the YEARS 1914-21.									
	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.	
Wheat....	s d 34 11	s d 53 0	s d 58 4	s d 75 10	s d 72 10	s d 72 11	s d 80 10	s d 71 6	
Barley....	s d 27 2	s d 37 5	s d 53 4	s d 65 0	s d 59 0	s d 59 0	s d 75 9	s d 52 2	
Oats	s d 20 11	s d 30 4	s d 33 8	s d 50 2	s d 49 4	s d 52 5	s d 56 10	s d 34 2	

Last year's averages are the lowest since 1916, and in the case of wheat and barley are about double the 1914 figure.

EMPLOYMENT, WAGES, AND DISPUTES.

The first quarter of the year 1921 witnessed a continuance of the decline in employment which was in progress during the latter part of 1920. As will be seen in the table of trade union unemployment percentages given below, by March employment in many industries had assumed serious proportions. The coal dispute during April, May, and June, owing to lack of fuel supplies, caused severe depression in other industries, and *The Labour Gazette* states that at the beginning of July of nearly 11 million workpeople in industries insured against unemployment other than coal mining, 19 per cent. were unemployed, and large numbers of others were on short time. The iron and steel, tinplate, and pottery trades were almost completely brought to a standstill. But the settlement of the coal stoppage in July was quickly followed by improvement all round. The better conditions, however, were of short duration, for by October employment was recorded as bad, and during November and December the position gradually became worse. The proportion unemployed in industries covered by the Unemployment Insurance Act at the close of the year amounted to over 16 per cent., as against 6 per cent. at the opening of 1921. In the following table, which is compiled from figures given in *The Labour Gazette*, is shown the percentage of trade union unemployment month by month from 1913 to 1921:-

TRADE UNION UNEMPLOYMENT PERCENTAGES.

End of—	1913.		1916.		1917.		1918.		1919.		1920.		1921.	
	%	%	%	%	%	%	%	%	%	%	%	%	%	%
January ..	2.2	0.6	0.3	1.0	2.4	2.9	6.9							
February ..	2.0	0.5	0.3	0.9	2.8	1.6	8.5							
March	1.9	0.5	0.3	1.2	2.9	1.1	10.0

December ..	2.6	0.3	1.4	1.2	3.2	6.0	16.5							

* Excluding coal miners. † Revised figure.

One of the most striking features of this general trade depression has been the large number of workers placed on short time. This, as *The Labour Gazette* points out, has been done in such a manner as has enabled workers to obtain benefit under the Insurance Act. In January, the percentage of insured persons claiming benefit in respect of systematic short time amounted to 5 per cent. By May the figure had grown to 11, but by July it had dwindled to 4, and after touching 2 ended the year at 3 per cent.

The decline in wages began in January, and continued throughout the year, until by December a reduction in wage rates had been made in nearly every industry, while in many trades successive wage cuts had been effected. The following table shows the remarkable change in rates of wages of certain trades and services in 1920 and 1921:-

Group of Trades.	Approximate Number of workpeople whose rates of wages were reported as changed in		Total Net Increase or Net Decrease in the weekly wages of those affected.	
	1920.	1921.	1920.	1921.
Building	400,000	450,000	(Increase) £361,000	(Decrease) £304,000
Mining and quarrying	1,280,000	1,230,000	1,329,000	2,588,000
Iron and steel smelting & manufacture	240,000	240,000	304,000	475,000
Engineering, shipbuilding, & other metal	1,620,000	1,730,000	637,000	1,064,000
Textile	1,060,000	1,010,000	645,000	651,000
Clothing	730,000	730,000	230,000	48,000
Transport (excluding tramways)	900,000	910,000	574,000	388,000
Paper, printing, &c.	200,000	200,000	128,000	54,000
Chemical, glass, brick, pottery, &c.	270,000	280,000	122,000	139,000
Other trades	640,000	420,000	301,000	171,000
Public utility services	380,000	340,000	171,000	134,000
Total	7,780,000	7,100,000	4,797,000	6,006,000

Unfortunately although valuable figures by themselves, these statistics are by no means complete, as they do not include agricultural labourers, police, Government

employees, domestic servants, shop assistants, and clerks. It has been, however, estimated* that it is probable that the weekly disbursement of wages to-day is from 25 to 33 per cent. less than a year ago, while on the figures given in the above table it is calculated that coal mining and the iron and steel industries have had the largest reductions made, in which industries average earnings were highest during the boom. It is estimated that the cut in mining and quarrying amounted to £2 per head per week, followed closely by the iron and steel trade of 39s 7d per head; next in proportion of cut comes the building and allied trades with a reduction of 13s 6d per head per week,

* See *Economist* for January 21st, page 76.

TRADE REPORTS.

I.—THE CORN TRADE.

Speaking generally, supplies of agricultural foodstuffs were more plentiful in 1921 than in either 1920 or 1919, but with regard to those which came on the markets, it is not possible to speak with any degree of exactitude, and for the simple reason that at times Government stores were put on the markets, and these quantities were neither to be found in the details of our imports nor in the statistics of our harvests at home. Wheat, for example, appears from the imports and the home harvest to have amounted to 4½ million quarters in the harvest year 1920-21, or 3½ million quarters below the pre-war average supplies. The wheat harvest at home was, in 1920, one of seven million quarters, while that for 1921 was one of nine million quarters, and it has been assumed that we shall therefore require less in the present harvest year (1921-22) than the 2½ million quarters imported that sufficed for our needs in the last harvest year. This, however, leaves out of account the stored supplies which the Government released, but of which we do not know the amount. It was sufficient to depress prices to an extent that it led, from the outcry that followed, to the repeal of the Agriculture Act at Midsummer. So far as supplies are concerned, it is certainly safest to assume that they have been in sufficient quantity generally to bring about a general and pretty considerable decline in prices.—*Live Stock Journal*.

The *Agricultural Market Report* published by the Ministry of Agriculture and Fisheries, states that the average price of wheat in 1921, as ascertained from the weekly returns received under the Corn Returns Act, 1882, was 71s 6d per imperial quarter (480 lbs), being 9s 4d lower than in 1920. The prices paid for British wheat of the 1920 crop by millers were regulated by instructions from the Ministry of Food, and from August 2, 1920, millers were authorised to pay for wheat of sound milling quality an average of 90s 6d per quarter of 480 lbs (95s per 504 lbs), and until the middle of November of that year this price was regularly obtained. After this time, however, the price of 90s 6d per imperial quarter was not realised, owing to farmers offering large quantities of wheat for sale, and millers showing a disinclination to buy. An announcement had, however, been made by the Prime Minister in March, 1920, that so long as wheat was still controlled and thereby deprived of a free market, the price of British wheat should not be less than the above amount, provided that the c.i.f. cost of imported wheat, after allowing for difference in quality, did not fall below that price; and steps were taken to ensure that growers should, until August 31, 1921, receive on the average for home-grown wheat of sound milling quality sold for milling into flour for human consumption, a price based upon the cost of wheat imported during the three preceding months. The average prices properly receivable for good wheat by growers calculated on this basis remained at 95s per 504 lbs in April, but fell to 92s in May, 86s 6d in June, 82s in July, and 80s up to August 13, 1921, after which date the sale of British wheat was entirely free from control. This scheme did not come into operation until March 7, 1921. In the case of sales of British wheat which had been made between November 8, 1920 (the week in which the average price first fell below 90s 6d, being the week ending November 6th, and the beginning of March, 1921, special arrangements were made for the payment of additional allowances to the growers, but these additional payments are not included for the purpose of striking the average prices under the Corn Returns Act.

Excluding these additional payments, the average price of British wheat was 84s per 480 lbs from January until the week ended August 13, 1921. With the fall in price

followed by textiles with 12s 11d. Other industries vary from a reduction of 7s 10d to 12s 3d.

The number of recorded trade disputes during 1921 amounted to 800, in which 1,773,000 workpeople were directly involved, while 21,000 additional workers were thrown out of work as a result of these disputes. The aggregate number of working days lost was 86 million. The stoppage in the coal mining industry involved over 1,100,000 workers, and beginning early in April lasted until the first week in July. Over 70 million working days were involved. In 1920 the number of disputes recorded was 1,715, in which 2,024,000 workers were concerned, and 27 million working days lost.

which occurred in America when the 1921 harvest began to come on to the market, a corresponding rapid reduction set in in this country; so much so that prices in this country dropped by 20s per quarter between the middle of July and the middle of August. They continued to fall, though more slowly, until the beginning of November, when a minimum average of 44s was reached, and the year closed with an average of 44s 7d. The average price made by the new crop, i.e., during the period from mid-August to the end of the year, has been 51s 7d per 480 lbs.

Barley at the commencement of the year was averaging about 74s per quarter of 400 lbs, but this naturally included a large proportion of brewing barley, and as this proportion diminished prices showed the usual normal decline until July, when they reached 40s to 45s. With the demand for the best brewing sorts of the new crop, prices rose again during August, and the maximum *Gazette* average of 63s 6d was reached during the week ended September 10. They then fell away again, and the year closed with an average of 45s 7d. The average for the entire year showed a heavy fall of 37s 3d per quarter from the high average price of 89s 5d in 1920.

Oats showed far less fluctuation, and their decline was more progressive. From 43s to 44s per quarter of 312 lbs in January they fell to about 35s in March, recovering somewhat to about 39s in June and July. Thereafter, however, prices for the new crop fell steadily until a minimum average of 24s 5d was reached in the week ended October 29. A recovery took place in November, and the year closed with oats at 28s 1d, or 15s less than the opening price 12 months previously.

The following statement shows the average prices per imperial quarter of British corn as returned under the Corn Returns Act, 1882, in certain years.—

	Wheat. (480 Lbs.)	Barley. (400 Lbs.)	Oats. (312 Lbs.)
1913	31 8	27 3	19 1
1916	58 5	53 6	33 5
1917	75 9	64 9	49 10
1918	72 10	55 0	49 4
1919	72 11	55 0	49 4
1920	80 10	59 5	52 10
1921	71 6	52 2	34 2

It may be of interest to observe that, apart from the preceding four years 71s 6d was the highest wheat average since 1855 (the Crimean War); oats the highest since 1813, and barley, apart from the preceding five years, the highest average since 1818.

The following table shows the amount of our imports of wheat, &c., for 1913 and 1920:—

	Wheat. Quarters, 480 Lbs.	Flour, Sacks, 280 Lbs.	Barley, Quarters, 400 Lbs.	Oats, Quarters, 312 Lbs.	Mais. Quarters, 480 Lbs.
1913	24,705,000	4,791,000	6,283,000	6,356,000	11,470,000
1920	25,510,000	4,788,000	3,544,000	2,136,000	7,835,000

FLOUR.—The Baker and Confectioner remarks:—January commenced with a drop of 1s per sack. That appeared to check trade, as further lapses were expected. Country-milled G.R. was in poor request. Free imported flour was in good demand. February saw no revival of business, and American cables reported a lower trend in market prices. Flour prices in London were much higher. At New York prices dropped 5 cents a barrel. The London millers were receiving good supplies of country-milled G.R. just for mixing purposes. April found bakers buying from hand to mouth. The imports up to date were 1,112,390 sacks, against 947,440 sacks for the same period of 1920. May opened with a pretty good demand. Imported kinds rather declined, country-milled was not pressed for sale. The spread of unemployment and the scarcity of fuel induced a run on bread, which, after all, is the cheapest food. Still it was noticed that bread consumption did not appear to in-

crease, and the question was widely asked what is the substitute for the reduction in bread consumption? June started with a slow business, and London millers raised their prices. Demand was better for home-milled flours. Town millers put up flour by 1s. July found London Straight at 70s. The production of flour in the United States amounted to 1,106,000 barrels for the week ending with August. The market was inactive, and the cabled American production was larger than ever. At Liverpool prices receded, and there was no improvement in the consumption of bread. With September we had the Bakers' Exhibition, which was largely a social gathering, but with the customary market of old. Thrice in one week the London millers reduced their prices. October brought with it an entire absence of activity, and prices appeared to be dwindling away. Seaborne flour was quite hard to sell. Bread consumption continued slow, and the mild weather induced a weakness all round. Town Straights were selling at 57s. All imported flours were in poor request. December, in fact, found flour weak and left it so. The home trade was certainly dull. The production of flour in the United States continued very large indeed.

The following table shows the amount and sources of our imports of wheat, &c., for 1913, 1920, and 1921:—

	Quantity.			Value.		
	1913.	1920.	1921.	1913.	1920.	1921.

FRUIT AND VEGETABLES.

We extract the following from the *Fruit Grower*:—**Home-Grown Apple Prices.**—Compared with the figures given 12 months ago in our columns, the prices obtained for apples in 1921 represent an extraordinary drop in values, being down, in many instances, to a quarter of what they were in the previous year. Here we see the undoubted influence of the crop governing prices, a factor well known to growers, for, whereas in 1920 the yield of apples was probably only 25 per cent. of the normal, the crop of the past summer was a bumper one. Taking the popular varieties marketed in half-sieves, the price of Allington Pippin during the past season ranged, according to the list from which we quote, from 4s 6d to 6s 6d, as against 16s to 25s in 1920. Beauty of Bath, 4s to 8s (10s 6d to 19s in 1920); Cox's Orange Pippin, 5s to 15s (20s to 25s); Blenheim Orange, 5s to 8s (10s to 14s); and James Grieve, 10s to 14s (10s to 20s); and King of the Pippins, 4s to 6s (15s to 30s). Among those varieties more generally in demand and packed in bushels may be mentioned Lane's Prince Albert and Wellington, each 4s to 10s, compared with 4s to 22s in 1920; Bramley's Seedling, 4s to 8s (4s to 23s); Newton Wonder, 4s to 6s (6s to 22s); Lord Derby, 2s 6d to 8s 6d (6s 6d to 22s); and Warner's King, 2s 6d to 8s (18s to 22s). Blenheims in bushels realised the same price in both years—viz., 6s to 16s. Worcester Pearmain, in halves, are returned at 2s 6d to 8s., the comparative figures for 1920 being 10s to 22s. Nothing in the way of prices for boxed apples is mentioned in the Covent Garden list, but Mr W. P. Seabrook, in a letter which appears in our current issue, quotes some interesting figures for Worcester Pearmain, showing that on one day halves returned him 6s to 7s and boxes 20s to 20s 9d, and on the following day 5s to 6s and 17s 2d to 18s respectively.

Other Fruits.—Plums were a short crop, consequently there is not the marked difference in the returns to growers as with apples; in fact, some varieties reached higher figures than in 1920. Rivers's Early secured 18s to 20s, as compared with 14s to 15s per half-sieve; Czars, 20s to

22s (11s to 14s); Monarchs, 20s to 28s (14s to 16s); and Victorias, 18s to 25s (9s to 25s) the half. English green-gages averaged 20s to 26s per half-sieve, or nearly double the figure of the previous season. A few Pershore Egg plums sold in their own district at 30s to 32s a pot early in the season, and on July 20 touched 52s per pot. The pear crop last year was a variable one, but, on the whole, the yield was better than that of the previous year. English Williams made a much better showing in samples, but the range of prices was slightly down, being 10s to 18s half-sieve, as against 12s to 22s in 1920. Doyenne du Comice at 20s to 30s, Conference at 10s to 20s, and Pitmaston Duchess at 20s to 23s half-sieve, were substantially the same, with the exception of the top figure for Conference, 10s less. Beurre Clairgeau realised 8s to 10s, Clapp's Favourite 14s to 18s, and Louise Bonne 14s to 25s per half-sieve. In Cherries less values ruled, Early Rivers's coming out at 18s to 22s; Waterloo, 14s to 16s; and Napoleons, 28s to 32s the half, with White Hart 11s to 15s at the other end of the scale. Black Currants were round about 25s to 30s per half-sieve, and red commanded, in the main, 10s to 12s, representing a slight reduction on the previous year's values. Gooseberries and currants escaped the frost, but suffered from the subsequent drought. Green gooseberries returned 5s to 20s per half, and 10s to 12s per strike, and other sorts which came later fetched between 5s and 12s per half-sieve. The strawberry season was a quick one, owing to the spell of sunshine and general high temperature, and Southampton fruit averaged 1s 3d to 2s per 2-lb chip, and 2s to 4s for chips of 4 lb, Cambridgeshire bringing 3s to 4s for 4½-lb chips, while Kent ranged between 3s and 4s per 4-lb chip, or 8s to 10s the peck. All these figures are below the 1920 returns. Forced strawberries varied from 6s to 15s per lb, there being none of the fancy prices obtained in the previous year. The yield of raspberries was below the average, but returns were unchanged at 100s to 140s per cwt tub, and at 4s to 5s per 4-lb chip. Grapes had to stand heavy dumpings of foreign produce. Alicante realised 1s to 3s, Canon Hall 2s to 10s, Gros Colmar 1s 6d to 4s 6d, Hambro 1s to 8s, and Muscat 2s to 25s per lb, these representing the principal English market varieties marketed. Tomatoes were likewise heavily handicapped, the minimum prices ruling representing a 50 per cent. cut compared with 1920. The best grades ranged from 3s to 18s per dozen lb, and whites 2s to 17s, the lower figures largely predominating.

Potatoes.—We take the following from the *Farmers' Red Book*:—When the land was being worked for potatoes the outlook was promising, but in many districts not a spot of rain fell after the tubers were planted, with the result that the tubers were small and their development was further checked by super tuberation. Probably potatoes swelled more after September came in than they did all the time before, so results were not so disappointing as they would otherwise have been, and the prices offered for potatoes at the moment of writing suggest anything but shortage. One fails to see, in fact, how potatoes are going to pay much money when one remembers the price of the seed and the cost of planting and cultivation. There has been very little disease and practically no spraying, while the comparative absence of wart disease suggests that this trouble is largely influenced by climatic conditions.

LIVESTOCK.

The following table is published by the Board of Agriculture, showing the numbers of livestock in England and Wales in the years 1921 and 1920. These figures are collected annually by the Ministry of Agriculture on June 4th:—

	1920. No.	1921. No.	Inc. + or Dec. — No.
Horses—			
For agricultural purposes (including mares for breeding)	788,900	822,500	+ 33,600
Unbroken horses (including stallions)	235,500	233,200	— 2,300
One year and above	97,300	92,300	— 5,000
Under one year	244,000	236,400	— 7,600
Other horses	1,358,700	1,364,400	+ 5,700
Cattle—			
Cows and heifers in milk	1,827,700	1,875,900	+ 48,200
Cows in calf, but not in milk	243,000	251,800	+ 8,800
Heifers in calf	282,100	373,600	+ 91,500
Other cattle	1,177,900	1,001,300	— 176,600
Two years and above	1,109,000	893,400	— 215,600
One year and under two	907,100	1,119,600	+ 212,500
Total of cattle	5,946,800	5,815,800	— 131,000
Sheep—			
Ewes kept for breeding	5,108,500	5,308,300	+ 199,800
Other sheep	3,004,800	2,861,900	— 142,900
One year and above	5,269,400	5,636,000	+ 366,600
Under one year	907,100	1,119,600	+ 212,500
Total of sheep	13,382,700	13,808,200	+ 425,500
Pigs—			
Bows kept for breeding	289,500	335,800	+ 46,300
Other pigs	1,704,400	1,369,900	— 334,500
Total of pigs	1,993,900	2,505,700	+ 511,800

HORSES.—*Shires.*—There has only been one important home sale during 1921. This was the dispersal of Mr R. L. Mond's stud at Combe Bank, Sundridge, Kent, in October. The prices exceeded expectations; 3,100 guineas was given for the three-year-old stallion Sundridge Nulli Secundus; 800 guineas was paid for the two-year-old filly Princess Childwick of Sundridge; and 700 guineas for the four-year-old mare Treasure of Sundridge. Special interest was taken by the numerous visitors to this sale in Childwick Champion, now 18 years old, the most successful of the numerous stallions owned by the late Lord Rothschild. Mr Mond gave 2,300 guineas for him six years ago, and he proved to be well worth the price. He went at 775 guineas to join Mr F. W. Ibbotson's stud in Notts. It may be mentioned that he is hired by the Melton Mowbray Society for 1922 at £1,000. This proves that Shire-horse breeders are looking hopefully forward.

Thoroughbreds.—According to statistics worked out by Mr Edward Moorhouse in the *Sporting Life*, there was a distinct falling off in the values of the yearling bloodstock sold at Doncaster this year compared with the prices made in 1920. The respective figures are:—

	1921.	1920.
First day.....	53	55
Second day.....	75	78
Third day.....	74	71
Fourth day.....	53	57
Total.....	254	271
Yield.		
Gd.	21,015	31,255
Gd.	44,635	41,030
Gd.	58,280	33,170
Gd.	41,280	89,150
Average.		
Gd.	404	568
Gd.	648	782
Gd.	787	1,312
Gd.	779	1,304
Average.	666	1,013

The 16 yearlings from the Sledmere stud made in all 38,450 guineas, or an average of 2,403 guineas apiece. The seven colts averaged 1,278 guineas, and the nine fillies 3,277 guineas. Twelve months ago 13 yearlings from Sledmere made an average of 4,204 guineas, but 1919 and 1920 transactions in yearling bloodstock generally were absurdly inflated, and breeders are resigning themselves to the change that has occurred.

Hackneys.—There have been no real auction sales of Hackney breeding stock this year; the sale at Crewe in July consisted mainly of ponies and harness horses, but Mr Kenyon's young stallion, Cudham Leader, was sold, and brought 135 guineas, and Mr Jones's three-year-old, Huntingdon Merrylegs, 102 guineas. Representatives of the Japanese Government have again visited this country, and have made extensive purchases of typical good-limbed young stallions, while home trade has been quite good, some big transactions having taken place.—Summarised from *Live Stock Journal Annual*.

CATTLE.—Taking the result of the first nine months of the year 1921, we find that during that period but 1,600 head of cattle were exported, or 62.57 per cent. less than during the corresponding period of the previous year, when 4,275 head realised an average of £213 18s 6d. No comment is needful to the expert to show what a vast difference the absence of a similar demand to that of the year 1920 has made in connection with 1921. Further, the record for 1921 to September 30th shows that it is the smallest number of cattle that has been exported during the first nine months of the year since the year 1901.

Shorthorns.—First for notice comes Mr W. Duthie, whose average for 38 calves works out at £312 10s, a heavy reduction on last year's top average, which was £780 14s 3d, made by the Balcairn herd. The top price for Mr Duthie's bull calves was 2,000 guineas, others making 1,150 and 1,100 guineas. His bulls, we may note, averaged £444 14s. Mr George Harrison comes next with the highly satisfactory average of £220 11s 5d for 29 head. This average was all the more remarkable by reason of the general evenness of prices. The highest price for yearling bulls was 520 guineas, and for yearling heifers 310 guineas. Colonel Ogilby, for 35, averaged £218 3s 9d, the females ranging from 400 guineas, and the bulls from 420 guineas. The Balcairn herd, which last year headed the average list, comes number four this year with the capital average of £209 18s 6d for 59 head.—Extracted from the *Farmers' Red Book*.

SHEEP.—For Suffolk sheep 5,161 shearling ewes sold at the five principal sales averaged £7 3s 3d per head. At the society's sales at Ipswich, on August 3rd, buyers attended from Scotland, Ireland, Shropshire, Hampshire, the Midlands, Kent and other parts, and the 1,792 shearling ewes average £8 7s 9d.—Summarised from *Live Stock Journal Annual*.

During 1921 some 138 head of Shropshires have been exported abroad—i.e., 52 to U.S.A., Canada, and Newfoundland; 58 to South America; 5 to South Africa; and 23 to Continental countries. In 1920 the total was 297: in 1919, 372; in 1918, 898; in 1917, 594; in 1916, 368; in 1915, 155; in 1914, 553; and in 1913, 702.

Some of the best prices obtained for this breed at the annual show and sale at Shrewsbury were:—Mrs Inge up to 35 guineas, Mr R. E. Birch to 51 guineas, Mr W. Everall to 20 guineas, Lieut.-Colonel Atkins to 12 guineas, Mr Nunnerley to 20 guineas, Mr W. Dee to 14 guineas, Mr E. C. Tanner to 37, 27 (twice), and 25 guineas, Mr Everall to 25 guineas, Mr J. Minton to 53 guineas, Mr K. W. Milnes to 46 guineas, Mr E. Nock to 30 guineas, Mr Bibby to 10 guineas. Ewes:—Messrs Bibby 6 guineas, Mr E. C. Tanner 5½, 5, and 5½ guineas, Mr E. Nock 6, 5½, and 5 guineas, Mr K. W. Milnes 5½ and 5 guineas, Executors of Mr Jos. Everall 7 and 6 guineas, Mr Bickley 5 guineas, Mr R. E. Birch 8½ guineas (twice), Mr E. J. Rank 5½ guineas, Colonel Sykes 5 and 4½ guineas, Mr C. L. Coxon 5½ and 4 guineas, Mr J. Minton 6 guineas.

In Hampshire Downs the highest prices were obtained at the Breed Association's sales at Salisbury in July, when consignments of ram lambs from the leading flocks sold at an average price of £40 10s. The association concentrated this year upon a one-day sale instead of two, with eminently satisfactory results. Exceptional prices paid were:—200 guineas and 100 guineas given by Major J. A. Morrison for two lambs from Mr Thompson's flock; 100 guineas given respectively by Mr J. Flower, Lady Hulse, and Mr Bishop (Pendley Stock Farms) for three from the same flock; 175 guineas and 110 guineas paid by Mr Bishop and the Lord Wandsworth Institute respectively for two of Mrs Jervoise's lambs; 175 guineas given by Mr Thompson for one of Lady Hulse's lambs; 105 guineas given by Mrs Jervoise for a lamb from the Lord Wandsworth Institute; and 140 guineas paid by the latter institute for a ram from Mr G. Philippi's flock.

PIGS.—In large whites Mr Chivers heads the average list with £41 2s 6d for 60 head; the sale was most successful, prices ranging from 115 guineas for sows and 44 guineas for boars. Next on the average list comes Mr R. P. Haynes, 40 making £31 16s 11d, with 75 guineas for the top-price sow and 34 guineas for the top-price boar.

In middle whites we have not a record to equal last year's notable sale at Dalmeny, but there are two with averages over £40. Mr Chivers averaging £49 10s 10d for 55 head, boars making up to 200 guineas, two sows making up to 180 guineas, another 130 guineas, and others from 70 guineas; and that of Mr A. C. Holmes in Scotland, where £43 5s 8d was averaged for nine head.

In Berkshires the principal average at a home sale has been secured by Mr A. Hiscock, whose 64 head produced an average of £34. The high appreciation of this blood is seen by the fact that no less than five sows and gilts ranged about the century, 150 guineas being the top price, whilst the boars secured 40 guineas downwards. Mrs Jervoise, from the Herriard Park herd, sold two choice sows at 35 and 27 guineas, whilst at Mrs Chester Beatty's sale 49 head averaged £27 14s 6d, the top-priced female realising 210 guineas.—Summarised from the *Farmers' Red Book*.

II.—COLONIAL AND FOREIGN PRODUCE.

TEA.

Messrs Brooke Bond and Co., Limited, write in their annual review of tea in 1920-1921:—

During the year 1919-20 the tea trade was carried on under great difficulties, many of which have continued throughout the present year. Strikes at home, labour and other troubles in India, alterations in the rate of exchange, enhanced cost of production and distribution, have all helped to hamper trade. The greatest of these troubles has been exchange, which at one time—and at a time when Indian producers, in particular, were in the habit of arranging their remittances—was as high as 2s 8d per rupee. There is little doubt that at between 2s and 2s 8d a good deal of money to finance the crop of 1919-20 went to India, because the coolies must be paid, and there is no doubt also that had not exchange fallen the result to the tea trade (and to many other Eastern trades as well) would have been catastrophic. The danger is still a present one, as, if the new par of exchange—2s—is again reached, tea will go to a price which must seriously curtail consumption. Economies will, we think, resolve the situation, and sooner or later the value of the rupee will have to be reconsidered.

This time twelvemonth there was in this country a stock of 227,000,000 lbs of tea, the normal stock being about 90,000,000 lbs. Much of this stock was very poor stuff, picked and manufactured just after the time of control, when Government bought at a fixed price almost without regard to quality. Some of it had been kept at the gardens or in Calcutta, where there was no proper provision for storing it, or on arrival in England had been sent to some other port to relieve the congestion at the London Docks. This tea, also, had been kept in places quite unsuitable for its storage, with the result that all

of it had deteriorated, and some of it was quite unfit for consumption.

It is impossible to give as full and definite statistics with regard to production and consumption throughout the world as we were able to furnish before the war. We cannot give the exact output of the various tea-producing areas, but it is estimated that the three countries—India, Ceylon, and Java—are about 80,000,000 lbs behind their normal production.

The following table gives the distribution of Indian exports for the last three seasons and for 1913-14; the last complete pre-war return:—

	1913-14.	1918-19.	1919-20.	1920-21.

The following table gives the exports from South India for eleven months, the figures for the last month of the season not being obtainable:—

	1913-14.	1918-19.	1919-20.	1920-21.
United Kingdom.....	10,766,086	19,019,893	25,024,534	23,717,041
Colombo.....	3,119,973	1,188,867	1,567,686	2,913,957
Other ports.....	5,542,110	12,945,832	676,909	4,333,352
Total.....	19,428,169	33,054,592	27,269,129	27,064,350

The total crop from India for the season 1920-21 showed a decrease of 9.71 per cent. The Indian Tea Association had suggested that the output should be restricted to 9 per cent. of the average, which is practically what was done.

It will be noticed that the only places to which exports are not less in 1920-21 than in 1919-20 are Bombay and the Persian Gulf and from Southern India to Colombo.

The following table gives the exports of Indian tea from the beginning of the season, April 1st to September 7th. These are the latest figures available. It will be noticed that exports are recovering, especially to places outside the United Kingdom:—

	Season 1919-20.	Season 1920-21.	Season 1921-22.
United Kingdom.....	99,195,203	72,918,061	78,798,300
Australia.....	604,887	1,186,524	2,972,246
Canada.....	1,183,623	2,541,424	4,269,135
United States.....	751,626	973,152	4,212,014
South America.....	770,762	1,734,010	277,795
Hong Kong.....	144,676	10,180	1,000
Russia.....	60,297	500	33,736
Hamburg and Bremen.....	459,712	103,236	226,429
Continental Ports.....	2,152,671	4,694,440	4,760,294

Total.....	107,406,190	86,308,967	101,021,144

The following table gives the exports of tea from Southern India to July 31st:—

	1913-14.	1918-19.	1919-20.	1920-21.
United Kingdom.....	6,237,709	8,275,229	6,564,330	..
Colombo.....	564,811	454,192	1,392,033	..
Other places.....	263,976	47,350	44,109	..
Total.....	7,066,496	8,776,771	8,001,342	..

The quality of the 1920-21 crop was not in any way remarkable. As mentioned above, a great deal of very poor tea was sent to the United Kingdom, but as time went on the quality improved, but never rose to any distinction.

The following table gives the distribution of the Ceylon crop for the two years 1919-20 and 1920-21:—

	1919-20.	1920-21.
United Kingdom.....	130,828,580	113,241,400
America.....	50,941,000	21,773,079
Australia.....	26,629,570	17,127,913
Russia.....	90,786	..
Continental Europe.....	4,699,473	1,417,267
All other places.....	15,726,850	14,951,318
Total.....	210,813,687	168,510,977

The following table gives the distribution of exports of Java tea for the years 1919-20 and 1920-21:—

	1919-20.	1920-21.
United Kingdom.....	25,531,000	22,497,200
Holland.....	50,941,000	28,630,800
Australia.....	24,331,000	13,352,600
United States.....	1,393,800	6,047,800
Canada.....	1,047,200	402,600
Singapore.....	409,200	..
China.....	1,793,000	756,800
Other places.....	..	..
Total.....	133,313,200	72,122,600

The decrease in exports of Java tea during the twelve months is remarkable. Java felt the economic crisis more than India and Ceylon, and many estates had to close down, some temporarily, but a few probably for good.

Planters are making great efforts to gain new customers, by improving their methods of cultivation, &c. An International Tea Congress is to be held at Bandoeng from May 6 to 21, 1922. The Government is responsible for the scheme. Conferences are to be held for the discussion of all subjects, scientific and commercial, connected with tea. There are also to be demonstrations of various methods of cultivation and manufacture; prizes and diplomas will be offered. Awards of these are to be made by a jury of international character.

Tea from Sumatra has won for itself a good reputation in the world's markets. The following table gives the exports of tea from Sumatra for the two years 1919-20 and 1920-21:—

	1919-20.	1920-21.
United Kingdom.....	6,645,548	7,748,568
Holland.....	3,094,577	2,886,603
United States.....	156,077	104,273
Singapore.....	21,736	198,132
Other places.....	54,502	11,744
Total.....	9,970,538	10,946,332

In spite of high prices and a duty of 10d on British-grown and 1s on non-British-grown tea, there is no diminution in the consumption of tea in the British Isles. The following table gives the imports of all teas into London for the last three seasons:—

	1918-19.	1919-20.	1920-21.
United Kingdom.....	378,000	269,313,000	255,657,000
Ceylon.....	1,000	110,937,000	111,373,000
China.....	1,000	27,455,000	8,464,000
Java.....	1,000	35,177,000	30,309,000
Other places.....	1,000	2,804,000	2,377,000
Total.....	378,000	445,688,000	408,180,000

The following table gives the deliveries—i.e., home consumption for the three seasons—with percentage contributed by each of the countries of production:—

	1918-19.	Percentage.	1919-20.	Percentage.	1920-21.	Percentage.
United Kingdom.....	378,000	100.00	269,313,000	63.09	255,657,000	61.18
Ceylon.....	1,000	0.27	110,937,000	26.34	111,373,000	29.23
China.....	1,000	0.27	27,455,000	3.17	8,464,000	2.14
Java.....	1,000	0.27	35,177,000	7.06	30,309,000	6.29
Other places.....	1,000	0.27	2,804,000	0.34	2,377,000	0.57
Total.....	297,218,000	100.00	410,234,000	100.00	389,687,000	100.00

The following table gives imports to the United States for the years 1918, 1919, and 1920. We have no reliable figures for the current year:—

	1918.	1919.	1920.
Imported from.....	..	..	..
United Kingdom.....	381,799	534,647	13,931,177

COFFEE.

Messrs McMeekin and Co., in their annual review, write:—

The past year has been more or less one of liquidation. The large accumulation of coffee held by the Government under the control of the Admiralty Marshal was practically disposed of during the year, and the Board of Trade returns indicate that the stock in the country at the end of December was equivalent to only about 50 per cent. of that carried over from 1920. Business, however, showed extreme fluctuations, short periods of activity having been followed by those of extreme depression, but from the month of May a more or less steady appreciation in values may be recorded. The marked feature of trading during the last quarter was the sudden realisation by the trade that the quantity of high-grade coffee in the country was insufficient for market demands, and prices for these grades

appreciated very rapidly between August and December. Private and official forecasts received during November and December indicated a distinct falling off in the Santos crop likely to be available for season 1922-1923. Estimates varied widely, but even conservative authorities reduced their earlier estimate of the possible crop by as much as 10 to 15 per cent. The world's deliveries for the twelve months showed an advance of about 2,000,000 bags over those of 1920. The probable shortage in supplies was reflected in the price of Brazilian coffee obtainable on the London market, but although an advance was recorded, it was supported, apart from sales of Government coffee, by transactions of comparatively small importance.

The quantity taken for home consumption was practically the same as during 1920.

The quantity exported from the United Kingdom to various foreign markets showed an advance of about 11 per cent. on the figures of 1920 and of about 8 per cent. on those of 1913.

The following are based upon the papers issued by the Board of Trade made up from the Custom House returns for the whole of the United Kingdom:—

	1913.	1917.	1918.	1919.	1920.	1921.

COCOA.

Last year Germany took 91,500 tons of cocoa, or thereabouts, and this consumption has been the main prop to the cocoa market generally for some 14 months or so. Without its support, prices, never good from a producer's point of view, would have gone quite flat. This was shown by a statement made early in January by the native planters of the Neawam Planters' Association (of the Gold Coast), when they told General Guggisberg, the Governor, that they thought of burning their cocoa rather than accept current low prices—say 12s 6d load of 60 lbs, equal to £34 ton f.o.b. Accra, or £41 in Liverpool. To-day, owing to American and German demand, the price here is 46s.

Generally speaking, throughout last year the home trade was not over-enthusiastic in its welcome to incoming supplies, nor too generous to the cocoa when here. America up to last year had made increases in her consumption, but last year a decline set in. The demand at the start of 1921 was certainly all that could have been desired, but the market eventually fell into an apathetic mood.

With regard to prices, fine Grenadas are now selling for 55s at public auction. Not long ago, buyers would not give 50s for them, then took long lines, and so cleared up the older supplies at that price (50s). Fair fermented Accras used to drag at 39s or lower, and are now 46s, on account of outside demand.

The Gold Coast's export for 1921 was 131,800 tons. This makes the average export during the past four years amount to just under 125,000 tons per annum. Those, therefore, who have been publishing reports broadcast that this colony exported 200,000 tons in 1920 must have misled buyers.

Of fine and choice South American cocoas very little is heard, but attempts are still being made to get manufacturers more interested in such growths.

Concluding with figures, here are the Board of Trade returns for the twelve months. We give the three years since the war for better comparison:—

MOVEMENTS OF RAW COCOA in the U.K. in TONS.

	Landed.	Delivered.	Exported.

SUGAR.

The following is extracted from Messrs William Connal and Co.'s annual review of the sugar trade in 1921:—The import of raw sugar into the Clyde, according to the bill of entry returns from January 1st, less 12,524 tons exported coastwise, amounts to 198,016 tons, against 252,280 tons in 1920, and 220,617 tons in 1919, and for the present year comprises 9,685 tons British Colonial, 48,690 tons Mauritius, 3,280 tons Brazil, 95,657 tons Cuba, 36,575 tons Java, and 4,129 tons other foreign cane sugar. The meltings for home consumption in the Clyde during the past 12 months have been 182,878 tons, against 216,907 tons in 1920, and 259,642 tons in 1919. Those for the three ports of London, Liverpool, and Clyde (according to trade circulars) during the same period have been 950,000 tons, against 937,325 tons in 1920, and 1,043,648 tons in 1919. The stock of raw sugar in Clyde is now 15,138 tons, against 49,086 tons in 1920, and 13,713 tons in 1919. That in the three ports is 54,600 tons, against 217,685 tons in 1920, and 185,000 tons in 1919.

On Monday, February 28th, the British Royal Commission on sugar supply brought its business, for the purpose of raw sugar, to a close. A special agreement was, however, made with refiners, that although they were at liberty to make what purchases of raw sugar they desired, yet these they could not use until the Government's stock had been exhausted, and it was then estimated that these stocks might last till September. In March the Cuban Commission obtained 44c, cost and freight, for their sugars, and it was understood that it was their intention to maintain their selling price during the season at 44c to 5c. During March and first half of April they were successful in doing so, and occasionally obtained 54c, cost and freight, New York, the equivalent of 30s per cwt. An easier tone, however, was then developed, when 26s 6d, c.i.f., United Kingdom, was accepted for sugars in quantity. At the close of April there was a severe relapse, on dull American markets, and extreme apathy on the part of buyers, and 34c was then accepted, cost and freight, New York, the equivalent of 21s 10d, and remained the quotation till the close of May.

The American beetroot crops had been produced at a high cost, in the hope of arriving at a favourable market, but the slump in prices which had taken place proved deeply disappointing, and fabricants as well as agriculturists, anxiously hoped for the passing of the Emergency Bill then before Congress, as, if passed, the bounty they had enjoyed of 4s 7d per cwt would be raised to 7s 4d per cwt. To their extreme satisfaction, this Bill became law early in June. In April it had become evident that trouble was to be expected in the labour world, and fears were entertained of a strike, involving the coal, railway, and transport workers, but, fortunately, this strike was latterly confined to the coal miners. The effect of this strike on all trades was, however, disastrous, and it compelled the closing of the Clyde refineries from the end of April till the first days of July.

It was in this emergency that many English refiners, when the catastrophe seemed inevitable, adapted their works to the use of oil instead of coal, and they were thereby prevented from stoppage during the period when coal was unobtainable. The American market continued to droop during the next three months, June, July, and August, trade was unsettled, and unemployment prevalent, and Cubas, which early in June were quoted at 34, remained with unimportant fluctuations at this figure till the end of August.

In July and the first half of August an improved demand was experienced for refined sugars. During previous months of depression dealers had reduced their stocks to a minimum, as their operations till then had resulted in continuous loss, but, on revival of demand, on new fruit arriving, and for the replenishing of exhausted stocks, there was an active market, with daily improving prices, which continued till the middle of August. It was then that Clyde refiners, in view of the exhaustion of Government stocks in September, made a beginning of the purchase of raw sugar for their own account, and they succeeded in securing a considerable quantity of Cuban, for early shipment, at 21s, c.i.f. Greenock. During August and September the Cuban quotation was maintained at about 3.25, cost and freight, New York, the equivalent of 19s 9d, but the Commission preferred to offer their sugars sparingly in the hope of commanding the market when supplies from Porto Rico and other American colonial sugars came to an end. There was, however, a continuous arrival of these sugars during these two months, which were moved off at about 4.50, c.i.f., the duty paid equivalent of 2.90 for Cubas. On September 30th Clyde refiners completed their melting of Royal Commission sugars, and during the seven years of their work for the Government they melted in all 1,565,000 tons of raw sugar. The Royal Commission during these seven years of anxiety and difficulty succeeded in keeping the refiners well supplied with raw sugar, and they so arranged that consumers never wanted sugar, sometimes

doubtless in a curtailed ratio, but still always in sufficient quantity for necessary requirements—frequently, also, consumers were supplied, by skilful management, at a price under the world's market value. Had the Royal Commission been allowed to maintain the values of their last purchases of raw so as to cover costs, until these were exhausted, there would have been no loss on their operations, but under Government instructions they were obliged, for several months, to give the consumers the benefit of a falling market, by invoicing raw sugars to refiners at the value on the day of delivery, and hence the ultimate loss.

It became evident in October, as centrals were closing up with outturns better than original estimates, that the crop was likely to prove about 4,000,000 tons, and, having this in view, the Cuban Commission reduced their selling limit to 24, cost and freight, New York, the equivalent of 15s 7d, followed by a further reduction to 24, at which they were enabled to make considerable sales to American refiners. At the same quotation of 24, but with an improving American exchange, it became possible to make considerable sales to both British and French buyers at 14s 9d, c.i.f. At the close of November a further improvement of exchange admitted of business being done for export at 14s 6d, and shortly afterwards 14s, c.i.f. At the close of November a petition was presented to the Cuban Senate requesting the dissolution of the Cuban Finance Commission, on the plea that its purpose had not been fulfilled, seeing that, at its formation in February, 5c was the value of Cubas, but now only 24, and that about 1,600,000 tons of the crop remained unsold. From uncertainty as to the continuance of the Commission, and with a still improving exchange, Cubans were offered early in December at 13s 6d, c.i.f., at which several cargoes were taken by London refiners, and afterwards, when 2c were accepted for new crop, cost and freight, New York, the equivalent of 10s 11d at 4.10 exchange, there were sellers at 12s, c.i.f., but buyers preferred to await further developments. On December 22nd, when the Cuban President signed the petition for dissolution of the Cuban Commission on December 31st, there was some pressure to sell at 11s, c.i.f. At the close the market is easier, and business has been done at 1.75, cost and freight, New York. All control, therefore, of the sale of about 1,200,000 tons of old crop sugars will have ceased on December 31st and owners will then be at liberty to dispose of them as best they can.

When the cost of producing the crop, just closed, is taken into consideration—expensive labour, inflated prices for material, and supplies—all of which have been estimated to involve an average price of 5c—namely, of 23s per cwt, and, as it is likely that half the crop may not realise more than 2c, or 10s 3d per cwt, it will be realised how serious the loss must be to the Cuban planter. Looking to the future, it should not be forgotten that, whereas this year was commenced with large invisible supplies, it ends with the trade working from hand to mouth, and should any feeling of confidence arise at present low prices, and should dealers in consequence resolve to hold their accustomed stocks, a great absorption of present visible supplies would rapidly take place. The Cuban crop now commencing has sufficient canes in sight to produce 4,000,000 tons of sugar, but it is doubtful if many planters will have sufficient resources to admit of working their centrals. Messrs Willett and Gray, therefore, estimate that this crop may not produce more than 3,000,000 tons.

The West India Crown Colonies have decreased in their production during the past two years. Three years ago their crops amounted to 266,117 tons, followed by a crop of 237,238 tons, and last year by only 225,000 tons. The cause is said to be dry and unfavourable weather, as well as a plague of insects. These crops have all been produced at cost much above present market value, and have left severe losses. The balance-sheets of some Trinidad estates show most unfortunate results, and some estates, which changed hands at the highest point of the market, are not now worth one-fourth of their cost. Jamaica has been equally unfortunate, and planters there have petitioned their Government for a loan of £400,000 to enable them to reap the coming crop. They hope for a much better result next season, as the expense of cultivation, which for last crop cost about £30 per ton, they expect will now be covered by about £12. Barbados, where many estates changed owners, has been unfortunate, both as to the yield of their crops, and also from unlooked-for expense in necessary repairs and renewals of plant. Demerara, where immense crops might be produced, has gone back in its cultivation, having only yielded 90,000 tons, against 96,168 tons the previous year. It seems hampered from insufficiency of labour. Mauritius, which during the two previous years made large profits, can now afford a reduced crop, only 200,000 tons, against 260,000 tons, and a greatly reduced revenue as compared with last year, when its crop realised £90 per ton. Australia promises to have an excellent crop, and, having abundant labour, can produce a satisfactory result.

United States beetroot crops gave promise of an increase

over the 970,000 tons produced last year, but unfavourable weather has, latterly, reduced its outturn to 900,000 tons. The American beetroot crop has never yet produced more than about 1 ton of sugar per acre, and without the bounty, which it enjoys along with American native and colonial sugars, it evidently could not exist. In comparison with the yield of cane sugar per acre its yield seems most disappointing. Java yields 4 tons, Hawaii 5 tons, and Cuba and Porto Rico 2.20 per acre. The Canadian crop makes no progress, having only been 23,000 tons this year, against 35,000 tons last season.

Continental beetroot crops show an increase of 255,175 tons over those of last season, having been 3,974,500 tons, against 3,719,325 tons. They at one time gave a promise of greater increase, but drought made a decrease in the Czechoslovakia and French crops. The abnormal sunshine enjoyed on the Continent this year, while reducing the weight of the roots, has greatly improved their quality. France will have to import about 300,000 tons to provide for its consumption, and about 40,000 tons of this has already been received from Czechoslovakia. The latter country may still have 90,000 tons to export. Belgium, Holland, Sweden, and Italy have had excellent crops, and of good quality. The prices obtained for their crops seem to have been satisfactory to continental fabricants.

British Beetroot Crops.—The Cantley factory, in Norfolk, expects to produce this season about 4,000 tons of fine granulated sugars of excellent quality, which has brought a good price in the London market.

It has received increased support from the growers in Cambridgeshire, Norfolk, Suffolk, and Essex, and has obtained nearly twice the weight of roots compared with the receipts of last year. The Kelham factory, in Nottinghamshire, commenced work in their new factory this season, but their results, so far, have been far from satisfactory. It could scarcely be otherwise with roots costing them £4 per ton, and the cost of the factory loading it with an overwhelming debt.

American consumption, which last year was 4,084,672 tons, shows an apparent decline of about 500,000 tons, but the invisible supply existing at the beginning of the year will doubtless have assisted in reducing, if not of wiping it out.

Consumption of the United Kingdom, as shown in the accompanying table, has slightly improved, having been 1,420,000 tons, against 1,278,000 tons in 1920. This is satisfactory, seeing that the duty remains at the high figure of 24d per lb, which does not admit of a lower retail price than 54d to 56d per lb for granulated.

The following tables give the latest estimates of the beet and cane crops for the present year, compared with those on the three previous years, along with the stocks carried over on August 31st, and constitute the supply for the current campaign:—

The world's supplies of beet and cane, as estimated above, together with stocks carried over at August 31st, will therefore stand as follows:—

	1918-19.	1919-20.	1920-21.	1921-22.
Stock in statistical countries car.	Tons.	Tons.	Tons.	Tons.
ried over on August 31st	1,500,000	1,000,000	1,500,000	2,000,000
European beetroot crops	3,858,432	2,594,166	3,719,325	3,912,500
American beetroot crops	897,192	689,457	1,004,019	923,000
Cane crops	11,998,106	11,904,586	11,831,715	10,784,500
	17,853,730	16,188,209	18,055,059	27,620,000

* Estimate, in absence of reliable Continental statistics.

The following table is intended to show how much of these supplies has been consumed during the past three years, and will enable a rough idea to be formed of the relative position of the world's supply and demand till the end of the sugar year on August 31, 1922:—

	1918-19.	1919-20.	1920-21.	1921-22.
Visible supplies on Aug. 31,	Tons.	Tons.	Tons.	Tons.
1919, 1920, and 1921	1,500,000	1,000,000	1,500,000	2,000,000
Production of beet and cane	16,353,730	15,188,209	16,555,059	15,620,000
Deduct visible supplies on	17,853,730	16,188,209	18,055,059	27,620,000
Aug. 31, 1919, 1920, & 1921	1,000,000	1,000,000	1,000,000	1,000,000
Total consumption for	18,853,730	17,188,209	19,055,059	28,620,000
year ending Aug. 31st				

* Estimate, in absence of reliable Continental statistics.

The following table will give an idea of the total consumption of sugar in Great Britain during the past three years:—

	1919.	1920.	1921.
Meltings of raw sugar, by the brokers' circulars, in London, Liverpool and Greenock	1,043,648	937,325	950,000
Probable consumption of foreign refined, West India, &c.	497,000	350,000	470,000
Less refined, of home manufacture, exported	1,540,648	1,287,325	1,420,000
		8,663	

Consumption of United Kingdom 1,540,648 1,278,662 1,420,000

The home consumption of the Clyde ports during the past five years has been as follows:—

MELTINGS OF SUGAR IN CLYDE REFINERIES.

	West India.	Mauritius.	Brazil.	Cuba and Porto Rico.	Beet-root.	Java.	Surinam and Other For.	Total.
1917....	8,474	..	3,040	157,238	..	60,979	7,454	237,186
1918....	34,830	..	1,501	158,539	1,500	31,376	11,375	236,521
1919....	16,789	..	2,257	216,762	..	18,487	7,347	235,642
1920....	212	5,188	2,342	151,110	..	51,420	5,535	216,907
1921....	2,491	48,590	2,380	81,715	..	36,575	4,129	182,278

Decrease in meltings of raw sugar in 1921, 34,029 tons.

Refined.—Five refineries have been at work in Greenock during the year. The refinery of the Brewers' Sugar Company has been dismantled, the site having been acquired for shipyard extensions, and their business has now been amalgamated with the Manbre Sugar and Malt Company, of London. Melting was suspended in all the refineries during the coal strike, from about the end of April till early in July. This stoppage and a shortage of raw sugars in November and December have accounted for the total melt for the year having been only 182,878 tons, a reduction of 34,029 tons as compared with the previous year. During January and February, when under Government control, the price of granulated was 72s per cwt, duty paid, and this was continued till the last week of control, when it was reduced to 67s 6d. Free sugars in this period realised the same price as was paid for Government granulated. On decontrol of the article on February 28th there was a fall of 1s in Greenock granulated, and the price of American was then 38s, c.i.f. These easier prices were of short duration, and were followed by a gradual improvement until the middle of March, when the price of Greenock fine granulated was 68s 6d, duty paid, and of American 40s 6d, c.i.f. The coal strike in the United Kingdom, and consequent unemployment, together with the huge Cuban stocks, brought down prices rapidly, until at the beginning of July 27s, c.i.f., was the value of American granulated. Greenock sugars were not then available, the refineries having been off work all May and June. At the expiration of Government control, the Royal Commission had large stocks of Canadian and American granulated in warehouses in Glasgow, and these stocks were largely drawn on during the coal strike. There was a great increase in demand when the strike ended, as stocks in the hands of dealers had been practically exhausted, and this imparted firmness to the market, and prices advanced each week, until at the middle of August 31s 6d, c.i.f., was paid for American granulated, and Greenock fine granulated was then quoted at 60s 6d, duty paid. From this date till the close of the year there was almost constant sagging of prices, and at the close Greenock fine granulated is quoted at 45s 3d, duty paid, and arrived at the equivalent of 19s, c.i.f. Quotation for the latter for January-March shipment is 17s, c.i.f. Weakness in the American markets and pressure to sell was the cause of this great decline.

FROZEN MEAT TRADE.

The annual review of Messrs W. Weddell and Co., Limited, states:—

A year ago the view was expressed that "the world-wide tendency of food prices to recede to lower levels was not likely to be resisted for long in the case of meat." It was not; but the extent and the severity of the collapse that took place in 1921 greatly exceeded anticipations. The year was a disastrous one for most traders, and there is already a universal desire to forget its bitter experiences, even if its hard lessons cannot be ignored.

Trouble began early in the year—even before the withdrawal of the last vestiges of Government control, with its artificially high basis of values, on March 29th, and difficulties multiplied as the year advanced. The collapse of the American and Continental markets threw unexpected and, to some extent, unsuitable supplies upon this market. Labour unrest in New Zealand interfered seriously with the movements of refrigerated shipping, both at home and abroad, and the same factor in this country contributed largely to the creation of unemployment, which, later in the year, checked consumption. Storage difficulties followed upon interference with the normal sequence of sailings, and for months there was congestion at the principal British ports. When that was relieved late in the autumn, home supplies were at their maximum, and the market simply could not withstand the resulting avalanche, under which prices collapsed in the closing months of the year.

The extent of the débâcle is shown by contrasting January values with those ruling in December, which reveal an all-round shrinkage of just 50 per cent., some descriptions suffering even more than that. Having regard to the average reduction of 30 per cent. established in wholesale prices of other commodities during 1921, this breakdown in meat prices was unduly severe; but some indications of recovery began to show themselves before the year closed.

The 1921 index figure of wholesale prices for all kinds of imported beef, mutton, and lamb is 180 as compared with 240 in 1920, 272 in 1919, and 295 in 1918. These figures are arrived at on the basis which would have produced 100 as the corresponding standard in 1913. Important though the average yearly reductions thus revealed may be, the prices actually ruling at the end of 1921 disclosed a still more noteworthy approach to pre-war parity. That index figure was 123, or only 23 per cent. above the 1913 standard, which was by no means a low one.

It cannot be suggested that retail prices have shrunk to anything like the same marked extent; and though it may be exceedingly difficult to support that view by definite proof, there can be little doubt that consumers generally have not as yet enjoyed the full benefit of the very material reductions which have taken place in wholesale prices.

Naturally this slump produced consternation amongst producers in all parts of the world, and remedies were formulated according to the circumstances of the various producing countries. British, Australian, New Zealand, and Argentine farmers had their several ideas as to what would be most effective. Guaranteed prices, Empire preference, compulsory or voluntary pooling, nationalisation of the industry, were demanded in turn—but as yet without definite results. Most Governments are fighting shy of such calls, realising that their main function is to govern and not to trade.

The number of cattle and sheep in the United Kingdom increased by 122,600 and 866,400 head respectively during the twelve months ending June 4th last. Although these figures represent additions of only 1 per cent. and 3.5 per cent. respectively, they may be accepted as very welcome signs of a recovery in the position of domestic supplies. New Zealand alone furnished us with fully as many carcasses of mutton and lamb as were supplied by the flocks of the Old Country.

Importations in 1921 exceeded all previous records. Excluding livestock and fresh-killed meat, which amounted to 26,330 tons, no less than 917,414 tons of beef, mutton, and lamb were imported into the United Kingdom as compared with 810,415 tons in 1920, 528,354 tons in 1919, and 720,257 tons in 1913. With a home production estimated at 1,056,400 tons, 47 per cent. of the total consumption was imported last year. In London district, 80 to 85 per cent. of the meat marketed came from overseas. In other words, only one Londoner out of seven can now reckon upon having British-fed meat to eat.

Any bias against imported meat which may have existed before the war has been removed under the stress of these past seven years of world-wide unrest; and in view of the increased and still growing dependence of our people upon foreign sources of supply for their daily food, they cannot now afford to indulge any lingering prejudices on the subject, even if they so desired. Ten years ago little more than one-third of our meat supply was imported; to-day the proportion is practically one-half.

The world's export output of mutton, lamb, and beef (frozen and chilled) was somewhat curtailed in 1921 as a direct result of the falling-off in Continental requirements. Shipments from all sources aggregated 970,300 tons, as compared with 1,076,700 tons in 1920 and 1,111,500 tons in 1919. In 1913, only 764,900 tons were shipped from all sources.

The Continental trade was a disappointment as compared with the records for 1919 and 1920. The importations of frozen meat (including pork) into France, Belgium, Holland, Germany, and Italy are estimated at 186,000 tons, against 300,000 tons in 1920. Several factors combined to bring about this reduction in imports, but more especially the state of chaos in international rates of exchange. Other contributory causes were the lack of money in most European countries, the improvement in the status of local flocks and herds, definite efforts put forth on the part of some countries to check imports of meat, and, finally, the relatively high prices demanded by exporters during the greater part of the past year. Evidently, the Continent of Europe is not in a position to absorb nearly so much overseas meat as was hoped for after peace was established.

Top quotations in 1921, compared with 1920 and 1913 prices, averaged (over the twelve months) as follow:—

	Australia.			New Zealand.			Argentine.		
	1913.	1920.	1921.	1913.	1920.	1921.	1913.	1920.	1921.
Mutton.....per lb.	4	9½	7½	4	9½	7½	4	9½	7½
Lamb.....	52	10½	11½	52	10½	11½	52	10½	11½
Frozen beef (fore)	32	84	64	32	84	64	32	84	64
Frozen beef (hinds)	4	11½	6½	4	11½	6½	4	11½	6½
Chilled beef (hinds)	..	..	..	..	..	..	..	..	..

The prices ruling at the close of 1921 were much below the average recorded above, being actually 50 per cent. lower than in January last. New Zealand mutton and lamb suffered relatively less severely than other descriptions.

So far as supplies are concerned, the outlook is by no means reassuring. In the case of beef, it may be less disconcerting than in the case of mutton and lamb; but in neither is there any promise of abundance in the near future. It may be taken for granted that, under ordinary conditions, home supplies of beef will be relatively short in the coming year, for the reason that the number of cattle in the country of suitable age for slaughter is greatly reduced. Home mutton must also be scarcer, because the flocks are standing still or receding relatively to the population, which, in ten years, has increased from 45,000,000 to about 47,000,000 persons.

Apart from the home supplies, the United Kingdom draws more or less freely from eight overseas countries. The herds in these countries numbered 163 million head in 1911 and 178 millions in 1921, while the flocks, which aggregated 326 million head in 1911, now total only 261 millions. Only comparatively small percentages of these animals can be exported, and it must be recognised that mere numbers are not so important as financial results in determining the volume of supplies destined to reach this market. Even if the flocks and herds which could be drawn upon were much greater and were increasing more rapidly than they are, there could be no certainty of large importations resulting; but with comparatively stationary livestock figures and a steadily increasing population, the position of supplies, broadly speaking, must be deemed unsatisfactory from the consumers' point of view.

The general outlook as regards the world's demand is not, however, so unfavourable for the British consumer. Two years ago there existed an important and apparently assured Continental trade. A year ago its position was becoming somewhat unstable. By the middle of 1921 it had become of no great importance, and by the close of the year it had shrunk to very small dimensions. The principal reason for this withdrawal from the market must be sought for in the post-war financial condition of Europe rather than in any definite lack of desire on the part of Continental people to import refrigerated meat. It is impossible at present to say when stability in the exchanges is likely to be restored, but until that barrier to trading is removed, importations of meat are not likely to be renewed in any volume.

The opportunity of opening up Continental markets created by the war was unique; and although the check now met with may be a fortunate happening for the British public, it is a serious misfortune for producers generally, and especially for those in the Southern Hemisphere who have enlarged their plants and widened their whole outlook in anticipation of a big demand from Central Europe.

The United States is more likely to import than to export meat in any quantity, and a revived inquiry for New Zealand mutton and lamb from American buyers is not unlikely to arise, despite the heavy tariff recently imposed.

Turning to the home market, there are undoubted evidences that a strong consumptive demand springs up the moment prices reach a reasonably low level. This feature presented itself in a somewhat erratic fashion during 1921 because of strikes and unemployment; but throughout the year there was always a ready outlet for the best qualities. The undercurrent was especially noticeable in the case of mutton and lamb; but in beef also—except for the lower grades of quality—there were considerable elements of strength. That being so, and the immediate future of home livestock being very uncertain, a serious position might be created for consumers if any falling off in importations should follow the recent drop in values. Unless as much meat is imported into Great Britain as is produced in the United Kingdom, some sections of the public must go short. For these needed supplies we must look to Australia, New Zealand, and the Argentine Republic. All other sources together, welcome and necessary as they are, cannot furnish more than one-tenth of our import requirements, or one-twentieth part of our total consumption.

Not only is this country becoming more and more dependent upon outside sources for its meat supply, but considerably more than half of what must be imported comes from foreign countries. The dangers latent in this position of dependence hardly need to be pointed out, they are so obvious; but, notwithstanding the recommendations of more than one committee of investigation appointed by the present Government to report on the matter, nothing is being done officially to apply any remedy.

Prospects for 1922.—With the probability of less abundant supplies in the aggregate at home, and from overseas, the position would be entirely favourable for sellers, were it not that an increased proportion of the world's output of beef may have to seek a market in this country, for lack of Continental outlets. A dull general trade must have some restrictive effect upon the consumptive demand; but, on the other hand, even a slight increase of employment will doubtless set that demand going again, unless prices generally were to advance materially. If the popular taste could be diverted for a time from mutton and lamb, which are scarce and not likely to become over plentiful, to beef (of which there are large stocks that could be quickly replenished) it would be an advantage to all concerned.

While some recovery from the exaggerated depression in values established towards the close of 1921 is almost certain to be made, the average level of the past year is not likely to be approached, except temporarily. The general tendency must be towards re-establishing the popular prices of 1913. Working costs at all stages must be brought down further if producers are to be tempted to send to this market the increased shipments so necessary to keep prices at a moderate level.

Manufactured and snuff	261	2,316,874	7,244,842	71,482	685,874	424,924

The Manchester Guardian Annual Commercial Review states:—

According to the latest available official statistics, the crops in 1921 were smaller by one-third than those of the previous year. But this reduction has failed to stay the fall in leaf prices which had set in before the year opened, and in leaf prices which had set in before the year opened, and although there were a few brief periods in which the demand for small to medium size leaf brightened up, the general situation may be characterised as one continual slump. The fall in leaf prices, whilst appreciable, did not lead to any reduction in the cost of the manufactured article. Substantial reductions can, indeed, hardly be expected when it is remembered that on every ounce of tobacco the consumer indirectly pays a tax of about 6d., taking a medium grade brand selling at 9½d. or 10d. per ounce. Until this heavy duty is reduced we cannot look forward to any considerable improvement in consumption.

From a financial standpoint the year has been a lean one, and shareholders have suffered accordingly, particularly those of the independent manufacturers—that is, those outside the Imperial Tobacco Co., Limited.

Notable progress was made last year in tobacco growing in England, particularly in Hampshire. In British colonies, too, the industry is going ahead, particularly in South Africa and Canada. It is estimated that in 1921 the total crops of colonial tobacco were 100,000,000 lbs, of which the growers exported one-half to this country and kept the other half for their home trade. It is expected that in 1922 they will grow 200,000,000 lbs, in 1923 300,000,000 lbs, and in 1924 400,000,000 lbs. The greater portion of these crops will be grown in Canada.

RUBBER.

The following is extracted from Messrs S. Figgis and Co.'s annual review of the India rubber market, 1921:—
SHIPMENTS OF PLANTATION RUBBER FROM CEYLON, INDIA, BURMAH, MALAYA, SUMATRA, BORNEO, AND JAVA.

Exported from—	1916.	1917.	1918.	1919.	1920.	1921.
Ceylon (and India).....	Tons. 23,500	Tons. 25,000	Tons. 23,000	Tons. 43,000	Tons. 37,200	Tons. 40,100
Malaya, &c.....	Tons. 102,000	Tons. 146,000	Tons. 134,000	Tons. 219,000	Tons. 187,800	Tons. 159,800
Java.....	Tons. 14,000	Tons. 16,000	Tons. 17,300	Tons. 35,500	Tons. 31,000	Tons. 29,800
Sumatra (Belawan).....	Tons. 8,700	Tons. 13,200	Tons. 12,900	Tons. 26,500	Tons. 22,400	Tons. 29,500
Total.....	Tons. 148,200*	Tons. 203,200*	Tons. 187,200*	Tons. 324,000*	Tons. 278,500*	Tons. 259,500*

* These figures do not include shipments on through bills of lading from "outside" Malay ports via Singapore, and which are very difficult to estimate. Some authorities state the shipments from the Federated Malay States to be considerably more than we do, but we believe this difference is largely accounted for by much of this rubber appearing again in the Singapore figures, where it has been transhipped. A new method has been started in Singapore for the return of these statistics, which we think will give a more accurate result.
† November and December shipments estimated.

The total shipments from the East for 1921 we estimate at 268,000 tons. The stocks in London and Liverpool have increased from 56,000 tons to 77,850 tons, but the stocks in the East and America are reduced—we estimate by about 40,000 tons altogether—so that we have consumed this year the new rubber we have received, and have taken from the total stocks of England, America, and the East about 18,000 tons (allowing for an increase of 22,000 tons in England). The stocks in New York are still probably considerable, but we believe the invisible supply in manufacturers' hands is small, as they have taken deliveries from the ports as they required them. The stocks of manufactured goods, which were large at the beginning of the year, have also been considerably reduced, which is an important factor.

The agreement made in October, 1920, by the Growers' Association to restrict the output by 25 per cent. has continued throughout the year, and practically the whole of the reduction has taken place in the Malay. As occurred a year ago, the Government are again considering whether it is necessary to bring in legislation with respect to the Eastern plantation industry.

It is encouraging to report a revival in the motor trade in the latter half of the year, particularly in England, where it has been more pronounced than in America; this is most satisfactory, considering the financial state of Europe.

Germany has probably taken as much or more rubber than before the war; we estimate 25,000 tons. France has taken about 14,000 and Italy 6,000 tons, but Russia and Austria very little. Japan has imported direct from the East more than she has ever done previously—probably quite 20,000 tons; her previous largest imports were in 1919, when she took nearly 11,000 tons.

We have again had a difficult year to go through, and during the first six months the buying by manufacturers both here and in America was very largely curtailed, and many of the big ones almost stopped buying; they had already made large forward contracts, which were more than sufficient for their then requirements, and they also held large stocks of manufactured goods. It speaks well for the London market that it was able to take all the rubber that was thrown on it without any serious trouble.

We started the year with the highest prices—1s 3d for crêpe, and 1s 2d for sheets—and the market then declined fairly consistently, till we reached in June the lowest—8d for crêpe and 7d for sheet. In July we had a quick recovery of 2d per lb, which was partly lost in the following month, though since then there has been a firmer tendency, with a good inquiry from America, prices gradually rising up to 11d, which was paid in December for both crêpe and sheet on the spot.

The Rubber Growers' Association issued a circular in November asking the growers to continue the restrictions of 25 per cent. for a further six months, as it is evident that without restrictions more rubber can be produced than is wanted at the present time; but this has not been passed.

The collection of wild rubbers, except on the Amazons and in the Congo, has virtually ceased, and Para shipments again show a heavy decline—only 18,000 tons, against 29,000 tons.

The reclaiming of old rubber has very largely gone out, and if rubber continues at about this price it is not likely to revive.

Quality.—There have again been a large number of

claims for quality on ribbed smoked sheets from New York, and it is possible that there has not been quite so much care taken in the preparation and packing, but bad stowage and atmospheric conditions were again sometimes responsible. Allowances have been numerous, but often only small.

The Rubber Trade Association and the Growers' Association have had a busy year. The settlement contract passed by the Rubber Trade Association came into force on December 1st, and is suitable for speculative business.

From Brazil, the Amazons, Bolivia, Peru, and (Wild) Medium Rubber.—The supply from the Amazons has fallen off by nearly one-third, but in spite of this shortage in Para grades there has been little demand, and the market has shown very little activity, possibly on account of the "thread" trade being still very slow. The price of hard fine Para fell to 10d per lb in May, and recovered to 1s 2d in November in sympathy with Eastern Plantation.

The supply from Brazil shows a decrease. The total receipts in Para from the Amazons, Bolivia, Peru, &c., were:—

	1915.	1916.	1917.	1918.	1919.	1920.	1921.
Tons.	37,500	36,500	39,350	34,350	34,300	28,160	20,217

	Imports.	Deliveries.	Stocks, Dec. 31st.	Prices, December 1st.
	Para, Manaus.	Para, Manaus.	Para, Manaus.	Para, Manaus.
1917.....	7,892	2,119	7,892	251
1918.....	4,498	182	4,498	289
1919.....	6,782	1,041	6,782	100
1920.....	6,515	770	6,515	40
1921.....	3,480	918	3,480	730

Shipments from Para, of Para grades, including Caucho Ball:—

	1917.	1918.	1919.	1920.	1921.
Tons.	40,300	25,400	38,500	29,000	17,900

Imports of medium descriptions have practically ceased, except from the Congo. During the past two or three months there has been a little more demand for these descriptions, and some of the old stocks have been sold, but prices are still too low to attract fresh collecting of wild rubber.

South America.—Except from Bolivia and the Amazons, shipments have almost stopped, and what has come has been lying in foreign ports for some time.

The same applies to Central America.

Guayule.—The production has practically stopped. Imports into New York only 58 tons.

West Coast Africa and Congo.—Shipments from the Congo were only 700 tons to Antwerp, being less than one-third of 1920. From other West Coast districts supplies have practically ceased.

East Africa and Madagascar.—We have had practically no new arrivals of either the wild rubbers or the plantation Ceara.

India, the Malay, and Dutch East Indies have almost stopped sending Rambong.

Sarawak Jelutong in small supply; shipments for the whole year were about 2,400 tons. To-day's value £32 per ton, c.i.f., Palembang £50 per ton, c.i.f., and compressed Jelutong value 9d per lb.

Balata, unlike other produce, has kept its high price, though the business has been smaller and the market quiet. The crop is a small one, which has helped to keep prices firm, though we close with more arrivals and prices rather easier. To-day's value of f.a.q. sheet is about 3s 6d per lb. Venezuela block has been very quiet for months, with sellers to arrive at about 2s 11d per lb, but parcels of fine quality have sold well. From Panama during the year we have had regular supplies, and the quality has improved since the beginning of the year, when it was very inferior; good quality to-day is worth about 2s 5d per lb.

Gutta Percha is limited in demand at steady prices throughout the year.

India Rubber Statistics for 1921.—Total imports, &c., of all sorts were:—

	England.			London.		
	Imports.	Deliveries.	Stock Dec. 31.	Imports.	Deliveries.	Stock Dec. 31.
1917.....	Tons. 67,036	Tons. 64,668	Tons. 13,030	Tons. 55,069	Tons. 53,488	Tons. 11,764

* Plantation rubber to Liverpool included. Estimated stock in Liverpool about 9,000 tons.

III.—BEER, WINES AND SPIRITS.

BEER.—Brewery companies, though showing declines in profits in some instances, do not, on the whole, reveal that degree of slump in earning power which marked the year in so many branches of industry. The following extracts are taken from the annual review of Messrs White, Tomkins, and Courage:—At last all war-time restrictions have been withdrawn, the Central Control Board has been abolished, and maximum prices no longer exist. Unfortunately, the enormous duties on spirits, wines, and beer are still with us, and for that reason—a reason which the general public appear to forget—there is no hope of an early reduction in the prices of these commodities. Neither the brewer nor the retailer is making enhanced profits. If there is any profiteering, it is done by the Chancellor of the Exchequer. Before the trade gets any profit they have to collect from the consumer and hand over to the Government £5 per standard barrel of beer—13 times as much as in pre-war days, when the tax was 7s 9d. In those days, when a man spent 6d on beer less than three farthings went to the State. Now, out of every 6d so spent the State takes more than 3d in taxation. The spirit duty is 7s 6d per gallon. Before the war it was 14s 9d. The man who buys a bottle of whisky for 12s 6d pays 4s for the spirit and bottle, and no less than 8s 6d to the Government. Last year the Government took £124,000,000 from beer, £71,000,000 from spirits, and £7,000,000 from wine, liquor licences, &c., or a total of £202,000,000.

The war-time restriction of the output of beer was brought to an end so far as volume was concerned, on June 30, 1919. The restriction of average gravity, however, remained until June 30, 1921, the permitted average gravity of each brewer being 1,044 deg. in Great Britain, and 1,051 deg. in Ireland. For the years named the quantities of beer produced, and the rate of duty per standard barrel, have been:—

Year ended—	Duty, s. d.	Standard Barrels.	Bulk Barrels.
Sept. 30, 1914.....	7 9	36,165,000	34,736,000
March 31, 1915.....	23 0	33,099,000	32,110,000
1916.....	23 0	30,292,000	30,163,000
1917.....	24 0	26,626,000	26,626,000
1918.....	25 0	18,816,000	18,816,000
1919.....	50 0	12,921,000	12,921,000
1920.....	70 0	25,115,000	25,115,000
1921.....	100 0	26,731,000	26,731,000

HOPS.—The Board of Trade estimate the hop crop for the year to be 224,000 cwt. The Hop Controller has fixed the average price of the English crop to growers at £18 per cwt. American markets were quiet, with slightly easier prices. The condition of trade was such that brewers did not have to draw on their stocks to the extent expected. It seemed, therefore, that the English crop, together with stocks, would be sufficient to enable everyone to carry on until another crop was harvested. It should be added, however, that although there were 4,000 more acres planted up, the crop was 57,000 cwt. below that of 1920.

WINES AND SPIRITS.—The Budget removed the ad valorem tax on sparkling wines, and substituted a flat rate of 15s per gallon. The Licensing Act, which received the Royal Assent in August, abolished the Control Board, removed restrictions on the prices of beer and spirits, allowed whisky to be sold at 3s 5d. under proof, and made some extension in hours during which liquor might be sold. The Board of Trade returns show that the total clearances of wine from bond fell from 15,155,804 gallons in 1920 to 11,242,213 gallons in 1921, the decline being contributed to by practically every description. The following table is given by Ridley's Wine and Spirit Trade Circular:—

	1913.		1920.		1921.	
	Imports.	Clearances.	Imports.	Clearances.	Imports.	Clearances.
French (Still) ..	Gallons. 1,903,807	Gallons. 1,812,477	Gallons. 3,499,342	Gallons. 3,344,033	Gallons. 1,447,499	Gallons. 1,581,041
Do (Sparkling) ..	1,148,448	1,008,051	1,177,285	1,177,285	402,348	403,787
Port	3,889,411	3,185,987	5,739,572	6,100,774	4,638,809	5,450,848

Brandy	1,490,027	1,507,074	1,329,301	1,331,521	469,356	881,385
Rum	4,709,463	3,331,007	3,882,400	3,132,207	4,324,349	2,036,632
Other sorts	962,845	804,031	1,164,593	973,586	581,836	593,371
Total	7,162,335	5,642,112	6,376,294	5,437,314	5,375,541	3,511,288

Exports of wine from the United Kingdom in 1921 were 2,065,184 gallons, as compared with 1,255,848 gallons in 1920, and 786,376 in 1913. The following information about various sections of the trade is extracted from Ridley's Wine and Spirit Trade Circular:—

FRENCH STILL WINES.—There can be no doubt that claret has been very difficult to sell, and it is not easy to say why such should have proved the case, for although prices have ruled considerably higher than in days gone by, they have not been very excessive, and it might well have been thought that these wines would be among the last to feel

the strain of the present high cost of living, onerous taxation, and in so many cases reduced incomes. However, the fact remains that a great falling off has been experienced, and we are driven to the conclusion that many of the community who formerly drank wine with their meals, have for economy sake either banished it from their tables altogether, or else consume it in sparing fashion. With better times—when they come—we have little doubt that consumption will return to more normal dimensions.

Burgundy has been a trifle easier of sale, but here, again, business has been disappointing, and although the prices realised at the sale of the hospice wines in November were a good deal lower than in 1919, they were sufficiently high to suggest that cheap, and at the same time good, beverage wines will not be easily obtainable for some time to come. Happily, the tendency of the trade is to substantially reduce their quotations for these wines, and also for clarets, and it should be recognised that such is a matter of necessity in order to stem the present slump.

As regards French still white wines, we can write more cheerfully, for they have certainly grown in public estimation during recent years, and, of course, since the war commenced their reduced consumption and, moreover, the limited supplies of Hocks and Moselles in this country have been all in their favour, and as they have become better known, so have they been more appreciated. Proportionately, red claret has mainly been responsible for the decline that we have to record. French white wines much more nearly held their own last year in comparison with 1920.

Business in champagnes has been throughout the year extremely quiet, with the result that clearances have fallen from 680,715 gallons in 1920 to 350,969 gallons in 1921, and the arrivals from 995,619 gallons to 358,473 gallons. In Saumur an even worse state of affairs has been manifested, the duty payments having been on only 37,872 gallons, as against 94,530 gallons, and the imports 32,844 gallons, as against 117,733 gallons. Sparkling burgundies have also fallen in the case of clearances from 48,505 gallons to 14,866 gallons, and that of imports from 63,933 gallons to 10,031 gallons. At the same time, it is satisfactory to note that, as we stated last month, the demand seems to have improved towards the end of the year, especially for the best known brands, and this remark applies, not only to the hotel and restaurant trade, but also for consumption at the private home. Many dealers are hung up with stocks purchased at high prices, which are difficult of sale, and also, in some instances, with speculative purchases made in Paris of wine not intended for this market, and until these have been disposed of holders are unwilling to enter into further commitments. Many have found it necessary to cut their loss, and even to sell below cost price, and although the advice may be unpalatable, we think their example might well be generally followed, so as to make room for other wines which present greater attractions.

PORT.—Although the figures furnished by the Board of Trade show that a certain falling off occurred last year in Portuguese wines as compared with 1920, both as regard clearances from bond and importations, yet statistically its record for the 12 months is decidedly better than that of wines emanating from either France or Spain. The only deduction to be drawn as to the demand for port last year as against pre-war years is that it has been well maintained, and that the figures relating to the years 1919 especially, 1920, and 1921 must be regarded as very abnormal. The obvious reason why the community turned their attention so much to port during the three last-named years was because of the high prices ruling for low-strength spirits, and, of course, specially for whisky; this gave port a great opportunity, of which merchants were not slow to take advantage. With a lowering of the spirit duty, if such an event should occur, a further decline in port might logically be expected.

BRANDY.—Throughout 1921 business in this market has been on very quiet lines, the high cost of the article, occasioned by the present heavy duties, having largely reduced consumption. As seen in the table quoted above, both imports and clearances declined sharply.

RUM.—Business was on very quiet lines throughout the year for all descriptions. About the end of August and the beginning of September the export branch brightened up a little, but this speedily slackened, and, taking the 12 months as a whole, business was disappointing.

SCOTCH MALT WHISKY.—In line with nearly all other industries, Scotch whisky distilling was not an unqualified success during the past year. There can be no doubt that malt distillers had an exceptionally prosperous season in 1919-20—when distilling was resumed—but 10s 6d per proof gallon was probably too high a price for new whisky, even with barley over 100s per qr. The reduction of 1s per gallon in 1920-21 did not tempt bonders to lock up more capital, which was badly needed in financing the Government for the excessive duties payable in advance.

Then when whisky was again allowed to be put up to auction its market value was to some extent proved by the low prices that the young or immature makes fetched. Notwithstanding this, holders who bonded these new malts would be well advised to hold on to them, even with the apparent temporary depreciation. During the year the old competition began to creep in, and for the ordinary three-year-old blended whiskies very low prices were given. But for really fine malts from four to 15 years old very high prices were paid, and there was a genuine demand for them. As much as 30s per original proof gallon was realised for fine specimens under the hammer. In the autumn, after Highland distillers had fixed their price at 6s, there was an unexpected fall in barley, and the price of new whisky was reduced to 5s 6d. The large buyers took full advantage of this, but the smaller bonders hesitated on the fall in consumption.

THE VINTAGE.—Speaking generally, the last vintage in France has, so far as quantity is concerned, proved a disappointment. Initial prospects were all that could be desired, but spring frosts in the middle of April played havoc with the early promise. Then came an abnormally hot summer, with but very little rain, and this caused many of the remaining grapes to shrink up and fall, which meant further reduction. The gathering took place under excellent conditions, with rain shortly preceding and during it; but it came too late, and the grapes yielded only an indifferent amount of juice. A redeeming feature was the almost entire absence of cryptogamic diseases, and the grapes were quite sound and ripe at picking time. Quality was thus ensured, and in all districts not only have good wines been made, but many of them are likely to develop into really fine specimens, and 1921 may in some districts rank as a vintage year. So far as France is concerned, the yield has proved of but poor dimensions, but everywhere the quality of the wines is, to say the least of it, well above the average. Portugal suffered from an unusual paucity of rain and excessive heat, especially during the middle and end of the summer. The yield is larger than that of last year and above the average, but the wines in the Douro district are thin and unlikely to take vintage rank. In marked contrast, Spain had abundant rains in the early portion of the year, and the summer proved cooler than usual; a rather abundant crop was obtained, and the quality is fairly good. Reports from Germany suggest excellent wines—both of Hock and Moselle—being made. In Italy the yield was a good one, and the quality satisfactory, but in Marsala the amount garnered was quite small, and for the most part the wines indifferent. Madeira also produced only a modest crop of wines of about an average quality. In Australia a record was established in all respects, and never has the wine industry there appeared more hopeful.

IV.—RAW MATERIALS. COTTON.

The year 1921 in the Lancashire cotton industry will long be remembered as probably the worst 12 months ever experienced in the history of the trade. Quite apart from the limited demand met with, the losses of merchants, mainly through the depression in values, were of a serious character, and for some time leading firms have felt the financial stringency very acutely. Recently failures have increased in number, and, from week to week, rumours are being circulated of old-established firms being in a tight position. Spinners and manufacturers were unable throughout the year to secure orders at prices which cover the cost of production, and most producers on several occasions had to go into the question very closely as to whether it was more economical to close down entirely, or accept contracts at a loss, in order to provide employment and keep the operatives together.

Fully middling American cotton on the spot in Liverpool was quoted on January 3rd at 9.99d. Trade demand was poor, and prices tended to be easier, the lowest quotation of the year, 7.13d, being reached on February 28th. There was comparatively little change in values during the next month or two, the figure on June 30th being 7.85d. A more bullish feeling prevailed in August, and by the 31st the price had advanced to 11.05d. The upward movement continued, and on September 29th the highest price of the year, 15.71d, was registered. A distinctly easier tendency followed, the figure on October 31st being 12.49d, whilst on November 30th 11.30d was posted. On December 30th the quotation was 11.71d. The outstanding event of the year was the way in which traders were misled by the Agricultural Bureau of the United States Government. In the middle of the summer it looked as though the crop for the season was a complete failure. The rise in prices which began at the end of August, and continued throughout September, stimulated demand in yarn and cloth, and a larger business was done in the belief that lower values were most improb-

able. More recently it has been found that the Agricultural Bureau miscalculated the probable yield, as a result of faulty acreage returns. At the beginning of October, according to the Government, the output would only be about 6,500,000 bales, but in December an official forecast of the crop of 8,430,000 bales was published. Trade organisations in Lancashire have passed strong resolutions about the discrepancy, and protests have been made to the United States Government. On January 3rd the quotation for fully good fair Sakellaridis Egyptian cotton on the spot in Liverpool was 21d. On February 28th the lowest quotation of the year, 13d, was posted. By the beginning of June the rate had advanced to 16d, and the market was steady for several weeks. The month of September brought higher values, and on October 4th the highest rate of the year, 30.75d, was registered. There followed a rapid downward movement to 23d on November 3rd, and 20.50d on December 1st, whilst on December 30th the quotation was 21.50d. The Egyptian crop for this season is expected to be poor, and the Government has estimated the yield at only 3,300,000 cantars.

The following table shows raw cotton and yarn quotations at the beginning of each month:—

	Cotton.	Yarn.	Cotton.	Yarn.
	Fully Middling American.	32's Twist.	32's Twist.	60's Twist.
January 7	11.17	23 1/2	22	21.00
February 4	9.20	21	20	19.00
March 4	7.31	17	15 1/2	13.00
April 1	8.14	17 1/2	16	17.50
May 6	8.36	17 1/2	16 1/2	17.00
June 3	8.12	17	16 1/2	16.00
July 1	7.85	17 1/2	16 1/2	15.50
August 5	8.94	17 1/2	16 1/2	16.00
September 2	11.70	19	18 1/2	19.00
October 7	14.66	23 1/2	22 1/2	28.75
November 4	12.51	20 1/2	20 1/2	23.25
December 2	11.07	18 1/2	18	20.00
December 30	11.71	18 1/2	18 1/2	21.50

Figures of the world's cotton crops have been published by Professor J. A. Todd, from which we have extracted the following table:—

	1915-16.	1916-17.	1918-19.	1920-21.	1921-22.
America	12,953	12,976	11,603	12,218	13,750
India	3,738	4,502	3,978	5,795	3,556
Japan	861	1,022	964	1,114	3,750
Russia	1,480	1,058	383	200	660
China	2,000	2,000	2,000	1,500	1,500
Others	1,043	1,120	1,533	1,695	1,500
Total	22,175	22,678	20,461	23,023	21,787

WOOL.

Twelve months of almost continuous anxiety, doubt, and uncertainty lie behind us, but at the close the impression remains that some progress has, after all, been made along the road leading to sane and normal conditions of trade. More than this, perhaps, we could hardly have looked for. The preceding year had left the trade suffering from excessive stocks and from a deficiency of demand, more especially from Germany, owing to her financial difficulties for which various remedies were being suggested, none of which have since crystallised into a practical proposal. Indeed, the situation there has continued to grow steadily worse.

The uncertainty as to the control of prices by the British Australian Wool Realisation Association (B.A.W.R.A.) also helped to unsettle the market. At first the Government wool were limited considerably above current values. In fact, the opening sale of the year was a fiasco, and loud protests were evoked from the trade generally, leading ultimately to a reduction of reserves towards the end of the series. The rumour that B.A.W.R.A. and the importers of free wool had agreed upon certain limits in common caused some disquiet, especially in view of the purchase by the Government, at that very moment, of 100,000 bales of Cape wool (a transaction stated, later, to be for political reasons). Later on it was announced definitely that offerings were (wisely enough) to be regulated for a long time ahead, and also that certain average limits had been decided on for both B.A.W.R.A. and free wools; while, by a proclamation under the Australian Customs Law, unsold wool could not be exported from Australia unless the exporter undertook to sell only at the agreed limit, plus freight and charges. After six months' experience, however, the scheme has been abandoned, though proposals were actually made to continue it for a period of anything from one to five years. Most fortunately the market, during the short limits fixed, and, consequently, no practical difficulty was experienced. The big coal strike in the spring and early summer was another serious blow to the development of the trade, and the reduction of the American demand, owing to the coming tariff legislation, helped further to depress

the market. If we add to these factors the serious drought in Belgium (hampering very considerably the wool-scouring establishments in that country) and the strike in the North of France, it is hardly surprising that the year has been such a disappointing one. Prices, which had already fallen from 50 to 60 per cent. in the previous year, continued to recede steadily till May, when a better demand set in and confidence appeared to be returning. In July, however, a set-back occurred—partly due to excessive offerings—but renewed confidence was manifested in the September sales, and the situation generally began to look decidedly more hopeful when the sudden heavy decline in the value of the mark (due to political difficulties) brought German competition in the October sales almost to a standstill. The largely increased home demand, however, saved the situation, and prices were not only maintained, but actually enhanced. In the last series of sales a certain reaction set in, but the demand was strong on the new basis; and at the close of the year the best merinos are 30 per cent., topmakers' wools 20 per cent., fine crossbreds 25 per cent., medium 45 per cent., and coarse crossbreds 35 per cent. lower than in December last. Capes have fallen 10 to 15 per cent. Prices, however, for merinos and fine crossbreds show a marked recovery from the lowest point.

We give below our usual statement of the value per lb clean of a few representative descriptions in December in certain years, in July, 1914, just before the war, in April, 1917, which saw the temporary close of public auctions, and in December, 1919, 1920, and 1921:—

	Pt. Phillip.	Adelaide.	B. Ayres.	Short Cape.	Fine Fairly Good.	Austr. Crossbred.
	Good.	Average.	Average.	Washing.	(Super.)	Fine. Medium. Coarse.
Dec. 1899	33 1/2	31	26 1/2	24	25	20
1900	19 1/2	17	14 1/2	13 1/2	15	12 1/2
1901	21	18 1/2	15 1/2	14	16	11
1910	27 1/2	25	22	20 1/2	23	19 1/2
1911	26 1/2	24	22	19	22	18 1/2
1912	29	26	22 1/2	20 1/2	24	20
1913	28 1/2	25	22 1/2	21	22 1/2	18 1/2
July 1914	33 1/2	28	27 1/2	23 1/2	26	22 1/2
Dec. 1915	45	35	31	26	37	34
1916	63	57	48	39	51	47
April 1917	75	63	50	38	54 1/2	50 1/2
Dec. 1919	138	103	97	68	95	70
1920	65	40	34	28	45	30
1921	45	38	30	23	35	21

As compared with July, 1914, merino fleece is now about 30 and pieces 15 per cent. higher, while medium and coarse crossbreds are 40 per cent. lower. The Australian clip has shown a decrease of some 400,000 bales, while the Cape production remained nearly stationary. The weather in Australia has been quite exceptionally favourable. In Queensland and New South Wales good falls have taken place throughout the year, and advices just to hand state that the valuable monsoonal rains, so essential to a good season, have duly occurred. In Victoria, too, the weather has been satisfactory. In South Australia conditions have been most favourable, and rain has fallen consistently even in areas considered the most droughty. In most parts of Western Australia the season has been one of the best ever known, though in the Ashburton, Upper Gascoyne, and Upper Murchison districts a very dry period was experienced until the rains in May and June put a better complexion on things.

Value of Colonial Supply.—The following gives the yearly total value from 1909 to 1916 of the Colonial supply, based upon a fairly trustworthy average value per bale. After 1916 no figures are obtainable:—

	Australasian.	Cape.	Total Colonial.	Average Value per Bale.	Total Value.
Year.	Bales.	Bales.	Bales.	£	£
1909	2,296,000	380,000	2,676,000	15	40,140,000
1910	2,411,000	377,000	2,788,000	16 1/2	45,305,000
1911	2,224,000	376,000	2,600,000	15	39,000,000
1912	2,463,000	463,000	2,926,000	15	43,890,000
1913	2,296,000	484,000	2,780,000	16 1/2	45,870,000
1914	2,332,000	499,000	2,831,000	17	48,127,000

JUTE, FLAX AND HEMP.

ITALIAN HEMP.—The Italian hemp market has suffered very severely from the collapse in trade, and it has had for the most part to dispense with the support of Great Britain and America. The French and Italian spinners, however, have maintained their interest in this article, and must have accounted for most of the consumption, and Germany has also been a considerable buyer. It is estimated that there are at present about 130,000 tons of hemp warehoused in the various producing districts in the country. Great efforts are being made to induce the growers to diminish the sowing considerably for the next crop, and a reduction to one-third of the last crop is advocated. This proposal has brought about a more hopeful tone on the market during the last fortnight of the year, with a corresponding stiffening in values and some revival in activities, but the banking crisis through the operation of the exchanges has left sterling prices much as they were.

FLAX.—Flax and its associated trades have had a most disappointing year. The drop in values which took place cannot be accounted for by the statistical position; in fact, if it had not been for the depression in trade the flax spinning industry would have been in a very serious plight as regards its supply of raw material. The Linen Trade Circular presents the position very clearly when it states in its issue of January 7th: "If trade fails to improve we can drag on with a reduced consumption of raw material, but if, as seems the general consensus of opinion on the part of those best qualified to judge, world trade is going to expand in a very marked fashion towards the middle of the year, there will only be two courses open to the linen industry, either to put up prices to such a point as will choke off buyers and prolong the producing period or to keep prices down, accept all the business offered, use up the available flax, and then take a prolonged holiday.....It is futile to contend that as matters have worked out fairly well in the past they will do so in the future, and that linen will be available when wanted. No amount of windy argument will take the place of 200,000 tons of flax, which are lost to the trade just as thoroughly as if they had gone up in smoke."

The fall in the value of flax, which commenced in May or June, 1919, continued with the speed of an avalanche during the early months of 1921, and reached bottom about May, when good flax, which was selling at £600 per ton a year previous, could be bought at under £120 per ton. The consequence of these very unprofitable prices was a decrease of about 75 per cent. in the flax sowings in 1921 compared with the previous year in those countries upon which the world is now dependent for its supply, such as Holland, Belgium, and Ireland. In June demand began to improve, and by October prices had advanced about 40 per cent. from the bottom. Since then they have been steady, and have recently shown a further upward tendency. The trade has been working up flax from the large stocks of 1920 straw, but as these are becoming exhausted the supply will be dependent on the small output of 1921 straw, and in a few months Ireland, Belgium, and Holland will have very considerably depleted the supplies available.

The uncertainty of the Russian situation still makes it impossible to place any reliance on supplies in any quantity from this region. The Baltic States, which may possibly have 15,000 tons of flax available for export in 1922, are the only assured source of supply. There will undoubtedly be some flax from Soviet Russia, but information is conflicting, and at the most 10,000 to 15,000 tons are all that can be expected. As Russia formerly exported about 300,000 tons per annum, i.e., 80 to 90 per cent. of the world's flax requirements, the deficiency is so serious that there is no possibility of replacing it from any other source.

Trading in manufactured goods is much healthier than it was 12 months ago; very large clearances of yarns and

linens have been made, the demand is now steadily improving, but unfortunately prices are stated to be unprofitable to spinners and weavers, while flax prices are still too low to encourage an increased output.

EAST INDIAN HEMP.—The demand for Indian hemp throughout the year 1921 has been much below normal, and prices in some cases have fallen to a lower level than pre-war values. Last season's was a half crop, but owing to poor trade demand there has been sufficient to meet requirements.

The present values of all Indian hems are unremunerative to growers, and in consequence India is producing less fibre this season than last. There is, therefore, no great pressure to dispose of old crop stocks in Bombay and Calcutta. Many Indian shippers have entirely stopped baling.

CALCUTTA JUTE.—The crop this season is not expected to yield more than 4,000,000 bales, against an average crop of 9,000,000 bales, and it is estimated that the carry over of old crop in Calcutta amounted to 1,000,000 bales, making a total of 5,000,000 bales for the world's requirements. Early in August the market became very excited on account of the short crop, and many purchases were made, the market rising almost daily until it reached by the end of September £37 per ton for First Natives. Owing, however, to the heavy supplies of jute cloth and yarn held by Calcutta and Dundee, the trade demand for raw jute fell away, and prices declined rapidly, touching £23 10s per ton in December. Since Christmas, Dundee and the Continent have bought some jute, and fair quantities have been placed. These operations have strengthened the market.

MANILA HEMP.—The year under review has been conspicuous for the rapid drop in prices, and may be considered unsatisfactory to the producer, the merchant, and the spinners alike. In January, 1921, "C" grade of Manila was quoted at £104 per ton, and it ended the year at £55 per ton, c.i.f., forward shipment, while "J" was quoted at the beginning of the year at £56 per ton, and ended at £38 per ton.

Never in the history of the trade has there been more trouble over deliveries, a large number of parcels which arrived proving inadequate in strength, and containing perished fibre. This has brought about a great number of claims, which have been adjusted by arbitration with very heavy allowances. That these were generous is evidenced by the present inquiry for all kinds of allowedance hemp. A scientific inquiry was set on foot by the London Manila Hemp Association with a view to ascertaining the cause of the deterioration in strength, and investigations were made independently by officials in Washington and Manila. Those competent to judge have come to the conclusion that the deterioration is due to long storage in ill-ventilated warehouses. The low-grade hems, which contained too large a percentage of cellulose, and may have been imperfectly dried, suffered most. The delay in shipment, which necessitated this long storage, may be attributed to the decline in demand, which caused holders to keep their hemp back rather than ship it when produced as formerly.

SISAL.—A feature of the year has been the increased consumption of Sisals of all kinds in Europe, and it is now evident that spinners have learnt to appraise African Sisal at its true value, and that they have largely supplanted Manila with this material for the manufacture of binder twine amongst other articles.

Sisal, like Manila, underwent a considerable change in value. No. 1 East African was quoted in January, 1921, at £53 and ended the year at £39 per ton, the lowest point touched being £34 to £36 in November. These prices were unremunerative to producers, only the best organised estates situated near the coast being able to hold their own, and the more expensively run properties were put out of gear, thus to a large extent curtailing production. There is reason to believe that this industry has seen its worst days, and that 1922 will tend to stabilise values, while the reduced cost of production may be expected to bring the industry back to a more remunerative basis.

MEXICAN SISAL.—(HENEQUEN).—Unsatisfactory trade conditions in the United States led to a great reduction in the consumption of Henequen, with the result that the market was unable to absorb the Mexican production—400,000 bales which had been bought by a syndicate some time before, and had to be held right throughout the year. The price fell to 2½ cents, Gulf ports (equal £25 10s, c.i.f.), comparatively little business was done, not so much through lack of buyers, but because the sellers were only prepared to take an interest in the article on account of the low price, and several thousand tons have been imported into U.K. and Continental ports. Buyers, however, are accustomed to the better grades of African Sisal, and there has been

little satisfaction in the use of Mexican. Claims have arisen, and Americans allege these are due to the European consumers not understanding that Henequen is not the same plant as Sisal, and can never produce fibre of equivalent value. In the last days of the year news was received from America to the effect that the American banking interests had transferred their large stock of Sisal to a Mexican syndicate, which would co-operate with the central-selling organisation of the Yucatan Government. Already private sellers had been eliminated, and the control of this trade is now entirely in the hands of the Yucatan Government, who at once imposed an export duty of three cents per lb. Henequen jumped up accordingly to 6½ cents per lb, which makes it dearer for European users than African Sisal. It would seem, therefore, that this sudden incursion of Henequen into this country is not likely to prove a permanent factor in the industry.

NEW ZEALAND HEMP.—Has been of little or no interest throughout the year. Wages and the general cost of production rose so much during the war, that this fibre cannot now compete with African Sisal. Unless it is possible to adjust the cost of production to meet the new conditions, it seems likely that New Zealand may cease to be a factor in this market. At the beginning of 1921, it stood at £52 per ton, c.i.f., for "High Point Fair," and ended the year at £37 10s per ton.

MAGUEY.—An interesting feature of this fibre is that the Philippine Bureau of Agriculture is taking steps to prevent the production in its present form by introducing modern decorticators to clean the leaf. These convert it into a fine fibre of the Cantala variety, and replace the former process of rotting in sea water and preparing by hand. The resulting fibre is much softer and finer than Sisal. America is at the same time endeavouring to increase the production of Sisal in the Philippines, so that they may not depend entirely upon Mexico for their supply, and considerable quantities have already been shipped to U.S.A. So far, only samples have reached the European market.

HIDES AND LEATHER.

The following is extracted from the review by Mr James Powell (T. J. and T. Powell, Bermondsey) in the *Chamber of Commerce Journal*:—

RAW HIDES.—In the report for 1920 it was stated that that year had proved a disappointing one for all engaged in the handling of raw hides. The year 1921 has shown little improvement, and its end was greeted by many with much relief, in the hope that the new year may show a turn towards better times than have been experienced during the last 18 months.

ENGLISH HIDES.—In the same report it was pointed out that the fluctuations in prices of English hides during that year had established a record, but that the year closed with prices below pre-war level. These prices continued to rule in 1921, with some slight fluctuations, till the middle of April. A continuous advance then took place until the end of September, prices at that time reaching 10½d per lb for first heavy ox, which showed an advance of 50 per cent. over the prices of 1914. In the beginning of November a decline of fully 20 per cent. took place, prices suddenly dropping in one sale from 10½d to 8d for No. 1, and correspondingly for other grades. It was, however, felt that this fall was overdone, and a gradual recovery has since been taking place, and at the last auction of the year No. 1 heavy ox realised 8½d, seconds 7½d.

The export of English hides showed a big increase over the figures of 1920, as will be seen from the following statistics:—

1913.	1920.	1921.
Cwts.	Cwts.	Cwts.
217,754	88,825	130,469
1914.	1920.	1921.
July (outbreak of war).	December.	December.
1st ox, 7½d to 7½d	1st ox, 6½d to 7½d	1st ox, 6½d to 8½d
2nd ox, 6½d to 6½d	2nd ox, 5d to 5½d	2nd ox, 5½d to 7½d

LEATHER.—As for more than six months during the latter part of 1920 a gradual fall had been taking place in the values of leather, it was generally expected that the opening months of 1921 would at least show a steadier market, with firmer quotations as the spring trade developed. This was, however, entirely falsified, as, owing to the continued stagnation in the demand, weakness of values naturally followed during the opening months. Further falls were recorded for most descriptions, and the volume of trade passing was very small. This state of things lasted until July. After the August bank holiday a distinctly better inquiry set in. A larger volume of trade was done, and a firmer tone prevailed. Owing to the continued rise referred to in the report on the market for hides, tanners at this time tried to raise their prices substantially, but their efforts were unsuccessful. Owing to the higher prices asked, the demand for leather subsided, and stocks began to accumulate. A very quiet time ensued. Eventually the pressure to sell resulted in substantial reductions in prices, and larger sales were effected. Stocks were considerably reduced by these clearances. Prime quality leather was scarce, and prices of such were particularly firm, but all descriptions shared in the improved demand, and at the close of the year tanners found themselves in a position to decline further business at the lowest prices accepted. The outlook assumed a healthier tone than at any time during the year.

With regard to stocks of leather generally, tanners have probably rather less than their normal amount, owing to the large sales recently made. The quantity held by factors and merchants is not large, and boot and shoe manufacturers, because of careful buying, have kept their purchases very restricted. The unknown factor in the situation is as to what extent the prospects of increased imports of leather, specially from America, will affect the position. The following comparisons may be useful in reviewing the situation.

The imports of leather during the first three quarters of the year were small, but in the closing months there has been a remarkable increase from the United States and Canada—in the aggregate, however, the quantity of leather brought into the country amounts to less than a third of pre-war figures—the total quantity imported last year being 218,396 cwts, compared with 371,790 cwts in 1920 and 774,298 cwts in 1913. There is every chance of considerably increased imports of leather from this quarter, especially if the value of the pound sterling continues to improve.

The exports of leather do not hold out the same hope of expansion. The figures for last year were 228,063 cwts, as against 271,257 cwts in 1920 and 255,699 cwts in 1913.

BOOTS AND SHOES.—The most prominent feature during the year under review has been the lack of export

business, the exports last year being only 313,252 dozen pairs, compared with 818,969 dozen pairs in 1920 and 1,452,815 dozen pairs in 1913. Added to this, in consequence of the gradually lessening spending power of the people here, the demand for the home trade has been inactive. Also, because of the increased capacity for output, there has been considerable difficulty for the greater part of the year in keeping factories working, and those who cater specially for the export trade have, of course, suffered most. Competition for business has been extremely keen, and prices have gradually been reduced. The lower values of most descriptions of leather have at last affected the price of boots and shoes, which are now being sold at considerably reduced rates. The standing charges of manufacture, rates, coal, &c., added to increased wages, do not yet allow of goods being sold at pre-war prices, but there is little doubt that the rate of profit to the manufacturer is to-day as low as it ever has been. The immediate prospects of any substantial increase in the export trade are not good, and no great increase in the home market can be expected, so that the outlook so far as this section of the trade is concerned promises strong competition, and a continued difficulty in obtaining sufficient business to keep factories running on the most economical basis.

The following is a statement of imports and exports of hides and leather during 1913, 1920, and 1921:—

CHEMICALS.

Nitrogen prices during the year have fallen heavily, nitrate of soda having declined from 18s 6d per cwt, c.i.f., to about 13s per cwt, and the prices of sulphate of ammonia having fallen to 15s per cwt in the United Kingdom, about 17s, f.o.b., for export from the United Kingdom, and the equivalent of about 13s 6d per cwt for consumption in the United States. German nitrogen products, on the other hand, have, owing to the depreciating value of the mark, been gradually raised to about 250 marks per cwt, but, naturally, the sterling equivalent is now considerably lower than what it was last year, and works out at the parity of about 7s per cwt.

NITRATE OF SODA.—The following is a comparison of the figures for the six months ending December 31, 1913, 1919, 1920, and 1921, and the nitrate years ending June 30, 1914, 1920, and 1921:—

	1913-14.	1919-20.	1920-21.	1921-22.

The United States Government have recently sold 10,000 tons surplus war stock nitrate of soda at \$1.46 per 100 lbs, ex store, and 80,000 tons at prices ranging from \$1.75 to \$2. The cost of reconditioning, rebagging, and delivering the stuff must be very heavy, and the price realised is misleading if compared with current market quotations. The above 90,000 tons was part of the 300,000 tons of nitrate held by the United States Government, and was sold because it was lying in public warehouses. The balance is understood to be stored in Government warehouses, and will not be placed on the market. This nitrate was sold by tender, and it is interesting to note that the total quantity bid for amounted to over 250,000 tons.

The improved financial conditions in Japan have resulted in this country again importing, and fair quantities of nitrate have already been bought for shipment over the next six months. Stocks in Japan amount to only a few thousand tons.

The Producers' Association having made no sales during the year, the f.o.b. market has been in the hands of resellers, but transactions have been on a limited scale. Starting in July with sales of ordinary quality at 9s 5d, the market remained dull with business done down to 9s 3d per quintal, but by the end of September the probability of an agreement between the Pool and the association becoming more apparent, the market quickly responded, and buyers soon absorbed all the cheap nitrate offering. By October business had been done in ordinary at 10s 8d per quintal, and in refined, which was in particularly short supply, at 11s 3d. Subsequently, the market reacted, and transactions have been reported in ordinary at 10s 2d to 10s 4d, and in refined at 10s 9d per quintal, which remain the closing values.

With the large stocks in Europe cargo business has naturally been on the smallest scale, and mainly confined to business outside Europe. Transactions were, however, reported in a refined sailer cargo at 13s per cwt, c.i.f., and various liner parcels at 12s 8d, c.i.f., to 13s, c.i.f.

Nitrate freights have further declined during the six months, and liners have been forced to accept 25s per ton in order to find nitrate cargo. Very few tramp steamers have been fixed, but tonnage could be secured at 32s 6d per ton basis Bordeaux-Hamburg range.

Exchange, which was 9½d at the beginning of the year, declined to 6½d in June, recovered to 7½d when the agreement between the association and Pool was signed, and has since fallen to 6d.

SULPHATE OF AMMONIA.—The price has steadily risen during the past six months from £13 3s to £15 for home consumption, and for export from about £15 to about £18, c.i.f., other consuming countries. The coal strike and the resulting depression in the iron and steel trades reduced production to a far greater extent than had been anticipated, and by the end of September a fair demand from the East had absorbed surplus stocks, and supplies in Europe for the coming season appear to be barely sufficient to meet the probable demand, with the monthly production in the United Kingdom now reduced to about 25,000 tons.

In America the price for home consumption is quoted about £13 10s per ton, and prices for export correspond, except in a few isolated cases, to those quoted from this country. The heavy stocks existing at June 30th have now been disposed of, and as production has fallen off greatly owing to the general trade depression, being now only about 30,000 tons monthly, the estimated surplus available for export during the coming season will be negligible.

SYNTHETIC NITROGEN PRODUCTS.—The production in Germany has been materially reduced by the destruction of the Oppau factory in September, whose productive capacity amounted to 40,000 tons of sulphate of ammonia monthly, and although the Leuna factory is reported to have further increased its production in consequence, it is improbable that the total German production for the current year, July, 1921-June, 1922, which was estimated at 1,800,000 tons of nitrogen products, will much exceed last year's figure of about 1,200,000 tons, which should barely prove sufficient to supply the home demand, and the possibility of export next season is precluded. Latest reports from Germany announce that the Oppau factory has started producing again.

In Norway the total production is estimated at about 150,000 tons per annum, of which 70 per cent. is consumed in Scandinavia.—*Extracted from the report of Aikman (London), Limited.*

From the report of Sir S. W. Royle and Co., Limited, we extract the following:—Sulphate of copper has fallen steadily during the year, the price in January having been £39 10s., and now being £28 per ton. Home trade requirements have been below normal, and, although the overseas demand has been irregular, the returns show exports for January to November last 25,514 tons, value £942,253, as against 18,865 tons, value £744,410, for 1920. These figures compare unfavourably with those for 1913, viz., 74,751 tons, value £1,681,955. Green copperas was in short supply during the first half of the year with the stoppage of the tinplate works, but production has since overtaken demand and values are lower. Acetates of lime have been offered freely, and price has fallen steadily—in January brown was £15 and grey £24 and to-day £7 and £10 per ton may be taken as the values. The price of acetate of soda was about £47 per ton in January and fell gradually to £23 10s in August, when, owing to this article being affected by the Key Industries Bill, price advanced to £27. Some good shipments, however, arrived about the end of September, and forced sales and limited demand have brought the price down to £24 per ton. Lead compounds have had only a poor inquiry, and prices have fallen steadily during the year. Acetate of lead was about £65 in January, and is to-day realising about £42 per ton. Nitrate of lead has dropped from £56 to about £46 per ton. Litharge and red lead were £46 5s twelve months ago, against present price of £39 per ton. Carbonate of potash has been in only moderate demand, which has been met by ample stocks. Values of 80-85 per cent. have fallen from £65 per ton in store in January to about £23 at the present time. The inquiry for caustic potash has been poor, and prices dropped from £90 per ton in store in January to about £30 in October, since when they have risen to the current figure of about £35. Little has been doing in Montreal potashes, and price is now about £90 as compared with £195 per ton a year ago. Prussiate of Potash was 1s 6d in January, but has gradually eased to about 1s 1d per lb. Business has been mostly confined to small lots. Prussiate of soda commenced the year at 11½d, fell to 6½d in August, and has firmed up to about 8d per lb on a better inquiry. Good export business has been done for next year's shipment at full figures, and makers are well sold. Cornish white powdered arsenic was £72 10s at the beginning of the year, but, the demand continuing small, price fell away to about £36 in September; latterly there has been an improved demand, and

price is now about £43 per ton. Supplies have been coming in from the Continent at below cost of Cornish. Tartaric acid was 2s 3d per lb in January, and has gradually fallen away to 1s 4d, and, in spite of the hot weather, demand has not overtaken supply. Business at present is confined chiefly to English makes, the imports for this year showing 988 tons, value £149,811, against 1,876 tons, value £352,693, for 1920. There has, however, been a corresponding fall in exports, viz., 426 tons, value £118,471, as against 1920 figures of 1,357 tons, value £454,806. Cream of tartar has been in steady request, but there have been heavy stocks on the market which have affected values. Price in January was £200, and present figure is £120 per ton. Citric acid was 2s 9d in January, and, in consequence of fall in raw material, to-day's figure is 2s 1½d per lb. Bichromates of potash and soda have been in small request, and British makers have reduced their prices to meet the strong foreign competition. Prices a year ago were 1s 3d and 10½d respectively, as against 7½d and 6d, which are also the figures fixed for contracts over 1922. Oxalic acid has dropped from 1s 3½d at the beginning of the year to 8d per lb now. Business has been mainly for small lots, and there is a doubt as to future Continental supplies. Borax and boracic acid have been in regular inquiry. Borax was £41 and boracic acid £74 per ton at end of 1920. Prices have been reduced from time to time, and values to-day are £31 and £65 per ton respectively. Some shipments of borax have been coming in from the United States. Phosphate of soda has been in little request, and resale parcels have been continually pressed for sale. Values have fallen from £33 in January to the current price of £19 per ton. Alum and sulphate of alumina have been inactive, and prices have fallen in consequence of keen Continental competition. Lump salamoniac has moved only slowly, and price for firsts is now £65, as against £110 per ton twelve months ago. Muriate of ammonia has also been quiet, and the exports for the eleven completed months are only 2,323 tons, against 6,903 tons for the corresponding period of 1920. Price was £60 in January, as compared with £35 per ton at the present time.

TAR PRODUCTS.—This market has naturally been considerably affected by the exceptional conditions which have prevailed during the year, and prices have had a consistent downward tendency. Consequently buyers have adopted the safe policy of covering only their immediate needs. The production of benzole having been reduced by the closing down of a large number of coke ovens resulting from slackness in the steel trade, available supplies have been readily absorbed for motor fuel purposes. Prices have declined from 3s 5d in January to 2s 7d per gallon at the present time, in sympathy with the reduction in the price of petrol. Toluoles have been scarce, but the demand has been only moderate. Solvent naphtha has shown an erratic tendency, the price falling from 2s 9d in January to 2s 4d in May, and, through short supplies and the sudden demands of the waterproofers for spot lots, advancing to 2s 8d in July, since when it has maintained a fairly strong position till quite recently. Creosote has gradually dropped from the beginning of the year, when value was about 1s 1½d, to the current price of 5½d per gallon, largely through cessation of overseas shipments. Crude carbolic acid has been lifeless throughout the year and production small, makers finding no inducement at prices ruling. However, with the decline in the price of creosote, it is reasonable to think that makers will find crude carbolic more interesting in the near future. Liquid carbolic has also been quiet throughout the year, although values have remained steady. Naphthalenes have been only in moderate demand, there being more call for the crude than the refined. In pitch fuel makers, both in South Wales and on the Continent, were fairly well covered when the year opened, and with little demand for briquettes and a steady fall in the prices of coal and pitch, were not disposed to make further purchases until expiration of current contracts. Up to the coal strike consumers generally were able to take up some portion of their commitments against contracts, and in addition some small quantities were bought at reduced figures. After the settlement of the coal strike many briquette makers were obliged to close down through absence of demand, and at the same time German pitch was being offered freely on the Continent at prices that English makers were not disposed to compete against, and in the month of October the fall in price was accentuated. Values have latterly hardened, and the prospects for the remainder of the shipping season are better. In sulphate of ammonia the home trade inquiry has been only limited, the reduction in price in July having failed to stimulate business to any extent. A fairly steady trade has, however, been done for export, with more inquiry latterly, and the returns for the eleven completed months show 116,115 tons, as compared with 99,613 tons

for the same period of 1920. The figures for January-November, 1913, were 295,930 tons.

HEAVY ALKALIES.—Bleaching powder has been in only poor demand for the home trade during the year, and a considerable reduction in price was made for contract deliveries over the last six months. Some further concessions have been made for next year's contracts. White caustic soda has been in fair inquiry, mostly for export, but has had to meet the competition of outside supplies. Home trade contracts for 1922 consumption are being booked at reduction of £2 per ton for solid and 15s per ton for liquid. Requirements of ammonia alkali have been only limited, and manufacturers are booking contracts on favourable terms to consumers for delivery over the next five years. The inquiry for bicarbonate of soda and soda crystals has been small. In the eleven completed months the exports of bleaching powder were 7,486 tons, as against 20,096 tons for the corresponding period of 1920. The exports of soda compounds were under half those of last year, the figures being 197,056 tons, value £2,953,257, to end of November this year, as against 408,503 tons, value £6,579,615, for the same period of 1920. Little business has been doing in chlorates of potash and soda, and values have fallen during the year from 9d and 5½d to 4½d and 3½d per lb respectively.

Of chemicals, drugs, dyes, and colours, the value of the exports from January 1st to December 31st were in 1919 £27,015,153, in 1920 £40,535,725, and in 1921 £19,057,281. The value of the imports for the same period were in 1919 £21,041,551, in 1920 £34,329,497, and in 1921 £12,682,196.

SUNDRIES.—American pearl starch has been in good supply during the year, and values have fallen from £27 in January to about £12 10s per ton. Prices stiffened somewhat during the summer with an improved demand, but fell away again, and last month were as low as £11 per ton. Farina has fluctuated during the year—in January Dutch makes were offering at £26 per ton in store, and this is about the price to-day. In August and September, however, with the drought on the Continent and absence of supplies from Japan, the price was as high as £32 per ton. Dextrine has been in steady request, but business latterly has been confined to the cheaper maize qualities. The returns show imports of starch, dextrine, and other farinaceous materials for this year 70,863 tons, value £1,400,082, as against 77,936 tons, value £3,155,053 for last year. China clay has been in only limited demand, the home trade having been poor and several important foreign markets being still impracticable. There have, however, recently been increased shipments to America which have helped to reduce stocks somewhat. British makers of sulphate of barytes have had to meet keen competition from Continental supplies, and price for best white is now £6 as compared with £9 10s a year ago. Blanc fixe has also fallen considerably, the figures for pulp being about £17 per ton in January compared with about £11 per ton to-day. American turpentine has fluctuated considerably during the year. It was selling at about £100 twelve months ago, but fell to about £55 per ton in March. A temporary shortage advanced the figure to about £115 in July, since when it has eased to £67 10s per ton. During the season there was a good demand for superphosphates, and heavy shipments arrived from the Continent.

VEGETABLE OILS AND OILSEEDS.

The production of vegetable oils in the United Kingdom in 1921 was on a somewhat smaller scale than in the two immediately preceding years. Likewise, exports and imports were less, and reflected the general depression in trade, both here and in foreign markets. Based upon the net imports of raw material, the estimated home production was as follows over the past three years:—

	1919.	1920.	1921.
	Tons.	Tons.	Tons.
Linseed oil	175,500	125,000	154,400
Cotton oil	77,600	75,300	62,754
Rape oil	26,100	9,260	9,413
Castor oil	6,000	4,325	5,567
Other seed oils	4,000	8,000	10,543
Palm kernel oil	138,000	128,200	100,193
Ground nut oil	43,000	48,200	33,733
Colonial oil	40,809	24,700	22,000
Other nut oil	5,000	2,000	690
Total	514,500	425,980	399,283

Although seed oil production increased by nearly 21,000 tons, thanks to the larger quantity of linseed and soya beans crushed, nut oils, which are absorbed mainly by the margarine and soap trades, aggregated only 156,616 tons, or 52,500 tons less. For the oilseed crushing industry, 1921 was a chequered year. It opened with strained financial

conditions and serious failures, and had only begun to recover when trade was again throttled by the prolonged stoppage in the coalfields from April to June. Emerging fairly successfully from this, the mills being kept going on oil fuel, business was steadily satisfactory until a break took place in September, due to the collapse of European exchanges and the consequent cessation of demand for export. Throughout the year the domestic demand in every department was very disappointing, though prices all round were on a much lower level than in 1920—in some cases actually below pre-war—leaving crushers no more than a bare margin of profit. They, however, in the circumstances of falling and at times irregular markets, safeguarded themselves by working only on small stocks and by only buying seed against their oil commitments. Linseed oil, generally speaking, was a fair trade, and although paint and varnish, linoleum, and other consumers here bought but sparingly, a brisk business was done on export account in the summer with the Continent, and in the later months with America, whose importers bought considerable quantities (probably 20,000 tons in all) to supplement the States' own production. Early in April raw linseed oil fell to £21 5s per ton naked, ex Hull mill, but later recovered to £38 10s in August and September, but subsequently £25 was accepted, the year closing round £27 10s. The range of value was about £18, and the average spot price ex Hull mill £31 per ton. Cotton oil was in good demand throughout the year, with one or two periods of scarcity. Egyptian crude moved between £23 15s and £48, but never fell as low as linseed oil, and the average was £35 per ton. The market for soya bean oil was again ruled to a great extent by shipments in bulk from the Far East, which have been in strong competition with English crude, the range of the latter being between £25 (in February) and £47 (in October), and the average £35 10s. The demand for rape oil was irregular, but the export houses found a ready sale on the Continent and in America. Castor oil was a poor trade, the depression in the textile and allied trades being responsible, while the rates of exchange curtailed the activities of foreign buyers. Castor oil of foreign origin offered freely, but it is considered doubtful whether the imported oil found a ready sale, even when offered at a substantial discount, so well favoured is the English article. The demand for palm kernel oil was by no means constant, but when present was sufficient to absorb the full manufacture, trade being confined chiefly to the margarine makers of this country. The average price £45 15s ex Hull mill. Ground nut oil was, as a rule, in good request, but was difficult to work, owing to the quick fluctuations in prices, the extreme range of value being £22, and the average £42 per ton. The greater part of the work done by the refineries was in cotton and soya bean oils, the Continent being a good buyer. American grades of refined cotton oil were considered dear by comparison, and offers were small; hence France, Belgium, and Holland were constantly in the market for the English makes of soap and margarine oils. With stabilised exchanges in Europe, it is anticipated that Germany will also be a buyer in the coming year. Generally speaking, crushers are looking forward with confidence to a revival of trade, and believe that, following good harvests, easier and healthier conditions for trade will obtain.

Supplies of raw material in 1921 were plentiful and the mills fairly well employed, although the gross imports (1,358,345 tons) fell short of 1920 by 137,081 tons, and of 1913 by 208,050 tons. Linseed, of which 85.5 per cent. was derived from Argentina, was a large import, viz., 469,791 tons, or 80,424 tons more than in 1920. Cotton seed, on smaller imports from India, totalled but 376,522 tons (64.9 per cent. being Egyptian), a decline of 66,320 tons on the year. Nuts and kernels at 394,631 tons were down 82,963 tons. The re-exports of all kinds were but 4.5 per cent. of the aggregate.

The exports of vegetable oils manufactured or refined in the United Kingdom for the year were 12,906 tons refined (against 17,678 tons), and 97,186 tons unrefined (against 96,434 tons) in 1920. Of the latter, linseed oil accounted for 55,360 tons, against 48,421 tons. The imports of vegetable oils from abroad were 29,567 tons refined and 138,334 tons unrefined, together 167,901 tons, of which 25,847 tons were re-exported, against 188,908 tons and 39,842 tons re-exported in 1920. The position of the vegetable oil supply of the U.K. is, therefore, as follows:—

	1919.	1920.	1921.
	Tons.	Tons.	Tons.
Home production	514,500	425,980	399,283
British exports	113,189	114,112	110,092
Balance	401,311	311,868	289,191
Net imports	219,705	187,971	142,054
Total remaining in the U.K.	621,016	499,839	431,245

The quantities thus available for the United Kingdom was 67,593 tons less than in the preceding year, and 188,770 tons less than in 1919.

TIMBER.

TEAK.—The past year has been a very disastrous one for holders of this wood, owing to the set-back in shipbuilding and the holding back of rolling stock construction. That the renewal of rolling stock, both at home and on the Continent, is very necessary is indisputable, but the deplorable condition of trade generally and the transition state of our own railways have served to discourage any radical dealing with rolling stock renewals. Also, the financial inability on the Continent, caused by the utter disruption of the exchanges, has dictated temporary starvation to the foreign railways, as an inevitable evil until the seething financial questions awaiting world-wide consideration have received some practical adjustment.

Owing to the above political and financial difficulties, a costly wood like teak has been largely excluded from practical business, and holders have not only ceased to import, but have scrambled to supply the small United Kingdom demand at ever diminishing prices, resulting in very heavy losses.

The undermentioned figures for London will serve to show the shrinking into insignificance of this branch of the timber industry, and the other depots for teak, like Liverpool, Clyde, and Tyne, show the same discouraging contraction of consumption.

All the figures of the total imports of Europe during the year are not yet available, but in respect to London *per se*, the imports into and deliveries from the London Docks during the 12 months ending December 31, 1921, show as follows:—

	Imported Loads.	Delivered into Consumption Loads.
Logs	525	1,138
Planks and conversions	1,633	1,860
Total	2,158	2,998

NOTE.—The above figures deal only with landed stocks, and are exclusive of overseas deliveries, which are not noted by the Port of London Authority.

The following is the analysis of the dock stocks at date:—

	Loads.	Same Date Last Year Loads.
Logs—		
Burmah and Siam	3,100	3,695
Java	13	31
Total	3,113	3,726
Planks and Conversions—		
Burmah and Siam	4,525	4,730
Java	31	53
Total	4,556	4,783
Total	7,669	8,509

MAHOGANY.—On the whole, this market has been disappointing, prices having fallen away to an unexpectedly low level, especially for the lower-grade qualities. The demand generally appears to be steadily improving, but unless there is a marked revival in consumption, stocks here would appear to be relatively sufficient.

	1921.	1920.	1919.
Imports	9,283,000	7,716,000	11,706,000
Sales	6,928,000	8,482,000	8,414,000

CANADIAN TIMBER.—*Waney Pine.*—Owing to the falling away in demand, stocks have increased, and the present holdings on this side appear to be sufficient for all likely requirements. *Oak.*—London is bare of stock, but there has been a fairly good demand during the year, which has been supplied by the outports, where the stocks are sufficiently low to promise their disappearing before the winter is over, even should the falling off in the railway demand continue. The likely supply for next season in Quebec is reported to be very short. *Elm.*—The volume of business has been small, but, owing to the very modest stocks, cost prices have been well realised, and holders are favourably placed.

Spruce.—Stocks, except in Scotland, have been considerably reduced, and are at a rather low level, owing both to the light import during the year and, in the closing months, the increased consumption occasioned by the fall in prices. A big proportion of the spruce held by the Associated Importers, Limited, still has to find a market, but the outlook is more favourable, and shippers seem to be generally of opinion that prices during the coming season will show an improvement.

Pitch Pine.—Apart from a temporary decline early in the year, c.i.f. prices have been steadily maintained, and only during the closing month of 1921 showed a slight downward tendency in sympathy with the great appreciation of American exchange. Consumers have confined themselves to

purchases of a very hand-to-mouth character, and U.K. stocks, although modest, are, therefore, sufficient for immediate needs.

Oregon Pine.—This has been a lifeless market, and prices for logs have slumped heavily. Lower freights present no temptation to import because of the absence of demand. Stocks are ample.

BALTIC GOODS.—The experiences of the past year have undoubtedly been unique, even in the memory of the oldest members of the trade, owing to the unprecedented fall in values, which reached a climax during the month of August, and exceeded the expectations of the most pessimistic.

The year opened with a heavy stock and very poor demand, but with hopes that this demand would improve. These hopes were never realised, for, if anything, the position became worse, and consequently the tremendous pressure to realise resulted in a feeling of uncertainty, a rapidly falling market, and an entire cessation of buying, except for immediate needs. This state of affairs continued until the end of August, when prices reached a level which in some cases was very nearly pre-war. During this period shippers made tremendous efforts to maintain their prices, but buyers in the U.K. were more concerned with reducing their stocks on this side, and, coupled with this, the feeling that at the prices for which shippers were holding, the position was entirely unsound, very little buying for fresh imports was done, except as regards a small proportion of the highest-class stocks.

During August shippers began to realise that they had got to make heavy reductions in order to effect sales, and, starting on the Finnish side, a basis was arrived at which made business possible, with the result that a good deal of purchasing was done from Finland, and from this period onward the market steadily improved. The Swedes to a certain extent met this competition, but not sufficiently to effect heavy sales, preferring rather as a whole to adopt a waiting policy, in the hope that the market would recover, thus enabling them to secure a better result for the heavy stocks they held. As a consequence of this, the shipping season closed with the Finnish shippers practically sold out and the Swedes still carrying a very heavy proportion of their old stocks.

This new level of prices restored confidence, and on this account created a considerably improved demand, principally from merchant buyers who had during the early part of the year allowed their stocks to run down to a minimum, owing to the uncertainty as to the future, and the result of this has been that right up to the end of the year a steadily improving market was maintained, with a satisfactory consumption, at any rate from the point of view of importers. At the same time, it should be borne in mind that a big proportion of the goods sold by importers has gone into the hands of merchants, who again will have to find an outlet with consumers, and probably this has created a somewhat optimistic impression as to the real improvement in demand from the point of view of consumption.

The early closing of the ports last year has undoubtedly left this country with a much lighter stock than would otherwise have been the case, and, therefore, helped the spot market considerably, but here again the position so created is, perhaps, a dangerous one, as giving a wrong impression to shippers of the level of prices at which business will be possible during the coming season. An unusual quantity of goods was sold from Finland during the closing months of last year for delivery next season, principally upon the basis of "cash on signing contract," such purchases starting at the lowest level of prices ruling during last season, and steadily creeping up until shippers' increased ideas brought such business to a standstill.

It was a matter of some surprise to the trade that a certain quantity of Russian timber was shipped during the closing months of last year, and this makes it difficult to estimate what supplies will be available during next season from this source. This, of course, is a serious factor in the situation.

Chartering has been a much easier matter during the past year, boats being plentiful and rates ruling at a reasonable figure, which, as usual, improved somewhat during the late autumn, probably more than would otherwise have been the case, owing to the exceptionally early closing of the ports.

The outlook is certainly more promising, as stocks in importers' hands are comparatively light, and stand at such a value that the prospects of seeing a fair return on such stocks are good. It would be unwise to try to forecast the course of the market, but perhaps a warning note is needed that if values are forced up too rapidly from the lowest level which they reached during the worst period of last year, another reaction is bound to follow, and it is to be sincerely hoped that the importers in this country—who undoubtedly have the position in their hands—will not allow such a disaster to fall upon the trade.—*Denny, Mott, and Dickson, Limited.*

SILK.

Prices declined in Lyons during the first two months of 1921, manufacturers complaining of slow sales and slow payments. In March, the United States of America, where the general situation was improving, began to experience some difficulty in buying in Japan owing to the measures taken there to strengthen prices, and they became interested in European silks. Stocks of these were not heavy, and were soon absorbed, prices regaining in the meantime half of the ground lost since January. After that period of effervescence, quotations receded again, and they sank at the end of May lower than they had been for the past two years. Such a decline was partly connected with an improvement in the value of the franc. Since the beginning of June prices have constantly risen, except during a short period of reaction in October. At the end of December they stand higher by 30 per cent. than a year ago, and higher by 80 per cent. than last May. The main causes of that advance can be found in the better demand from America, the gradual recovery of the European silk goods market, the reduction of the world's crop, the very light stocks of raw silk on the consuming markets, and, occasionally, the temporary rise of the Eastern exchanges and of the other foreign currencies. Canton silks have benefited by the situation more than any others, being privileged by the new outlets recently opened for them in America, and also by the vogue of crape; they are held now at the same price as the best Italian silks. Thrown silks, too, which for awhile were so neglected that they could not be sold any higher than raw silks, have regained in recent months their normal position.

The official figures published for the crops of 1920 and 1921 are liable to mislead. In fact, the crop of 1920 has reached the equivalent of nearly 27 million kilos of silk, but, the exports from the East having been curtailed by 25 per cent. owing to the closing down of filatures in China and Japan, and to the action of the Japanese syndicate, the crop has been estimated at 20 million kilos only. The supplies stored up on the Eastern markets would have become a dangerous burden had the crop of 1921 proved to be a large one. On the contrary, it was reported as showing a deficit upon 1920 of 15 per cent. in Japan, 30 per cent. at Shanghai, more than 10 per cent. in Italy. The production of the Levant is now less than 1 million kilos, against 2½ millions before the war; that of Central Asia has for a time disappeared from the silk map. Upon the whole, barely 25 million kilos of silk, including the reserves of the previous crop, will be available for the 1921-1922 season—that is to say, less than during any of the three preceding years. Thanks to those circumstances, the important stock of Yokohama, which had long acted as a permanent menace, has found its way little by little into consumption; recently, when reellers began to close down for the winter, it did not exceed 15,000 bales. Besides, the Japanese syndicate has succeeded in selling half of its holdings at a good profit, and does not own to-day more than about 20,000 bales.

If we now turn to silk consumption, we find it has been reduced everywhere in Europe—in Lyons, conservatism has been at the order of the day throughout the year, and the entries of the Silk Conditioning House are inferior by one-third to last year's; in Switzerland, factories have either been stopped or put on short time; in Germany, business has been difficult; in Austria, consumption of silk now amounts to very little, and in Russia it has gone down to nothing. At the same time, the weaving industry is developing every year in the Far East, thanks to low salaries and long hours. But the most striking fact this year is the increase in the American consumption, the United States alone importing about 19 million kilos of silk, half of which have gone to the hosiery and underwear trades.

The rise of silk since the beginning of 1921 has been more or less conspicuous in the various countries according to the value of their respective currencies, but it has been important everywhere. All over the world the retail buyer, heavily taxed and hampered by the high cost of living and by the industrial crisis, finds it hard to ratify the prices asked for silk goods. Whatever happens, silk manufacturers, lightly supplied with raw material, will find an unusually small quantity of silk available until the next crop. Prices will be governed by the aforesaid situation, but, at the same time, they will depend mostly upon the fluctuations of exchange, which cannot be forecast.—*Chabrières, Morel, and Co., of Lyons.*

V.—METAL AND COAL TRADES.
THE COAL TRADE.

The Board of Trade Journal publishes the following figures of the production of coal in the mines of Great Britain in the year 1921:—

1921.	Tons.	1921.	Tons.
January 5	4,344,500	August 20	4,527,800
January 15	4,897,700	August 27	4,101,700
January 22	4,691,600	September 3	4,141,900
January 29	4,606,700	September 10	3,939,800
February 5	4,418,200	September 17	4,161,700
February 12	4,345,400	September 24	4,273,100
February 19	4,284,100	October 1	4,118,200
February 26	4,321,400	October 8	4,287,900
March 5	4,259,000	October 15	4,237,200
March 12	4,277,200	October 22	4,236,600
March 19	4,240,400	October 29	4,210,200
March 26	3,650,000	November 5	4,182,400
April 2	1,950,100	November 12	4,372,500
April 9	179,100	November 19	4,646,300
April 16	2,352,700	November 26	4,673,600
April 23	3,335,200	December 3	4,693,300
April 30	4,334,200	December 10	4,855,100
May 7	4,592,500	December 17	5,030,700
May 14	3,623,200	December 24	4,965,400
May 21	4,536,600	December 31	5,099,000

This makes a total of 164,354,200 tons, distributed in the four quarters of the year as follows:—

1921.	Tons.
First quarter	54,996,300
Second quarter	199,100
Third quarter	52,438,600
Fourth quarter	57,440,300
	164,354,200

The second quarter covers the period of the three months' coal strike, which started on April 1st and was terminated on July 4th.

In 1920 the total production was 229,295,000 tons, and in 1913 287,430,000 tons. From the following table it may be seen that home consumption was about 130½ million tons in 1921, as against 187 million tons in 1920 and 190 million tons in 1913:—

	1913.	1920.	1921.
Output of coal	287,430	229,532	164,354
Imports of coal	7	4	3,434
Exports of coal	73,400	24,932	24,661
Exports of coke and briquettes	3,288	3,931	1,586
Foreign bunkers (coal and briquettes)	21,032	13,923	11,060

The course of prices during the year was uniformly downward. The high-water mark of f.o.b. values was reached in September, 1920, when the f.o.b. price of all the coal exported from the United Kingdom was 89s 9d. By the end of January, 1921, there had been a reduction to 65s 4d, while in March the average f.o.b. price was 43s 6d. The coal strike did not interrupt this falling tendency, for in July the average price had further decreased to 38s 2d, while in the last month of the year it was about 27s. The decline in values had been greater in the coal exporting than in the inland districts. In the March quarter the average pit-head price in South Wales was 38s 1d. In December it was about 21s, a decrease of 17s; in Scotland the pit-head price fell during the year from an average figure of 32s 1½d in the first quarter of the year to 19s in November; Northumberland, from 34s 1d to 19s; Durham, from 34s 4½d to 22s 3d; but the English Federated Area only from about 31s 4d to 25s 1d—a decrease of only 6s, compared with the decrease of 17s in the South Wales coalfield. Taking the year as a whole, the working of the industry involved a very considerable loss. In the first three months the debit balance as shown in the statistical statements of the Mines Department was £16,637,028, exclusive of approximately £6 millions due to the colliery owners under the provisions of the Mining Industry Act; during the three months' strike the maintenance expenditure of the colliery companies is estimated to have amounted to at least £10 millions; while the monthly ascertainment between July and November showed a net nominal profit of £5,400,000, subject to commercial expenses and to those profits surrendered where the proceeds were otherwise insufficient to enable the collieries to pay the miners their minimum rates of wages. If we assume the net profits for the last six months of the year at £5 millions, we arrive at an approximate loss on the working of the industry for the 12 months of £27 millions.

The only coalfield where wages did not fall appreciably below the pre-war level, after allowing for the diminished purchasing power of money, was that of the Eastern Federated Area. With decontrol the Sankey wage of 2s per day, the war wage of 3s per day, and the 20 per cent. increase of March, 1920—involving a minimum rate of 2s per day—were withdrawn. The terms of the national settlement secured for every district a minimum wage equal to 2½ per cent. above the average earnings in July, 1914. In the Eastern Federated Area, in which are included the Yorkshire, Nottinghamshire, Derbyshire, Leicestershire,

Cannock Chase, and Warwickshire coalfields, the general wage rate payable in December was 109.54 per cent. on the standard, or 77.54 per cent. above the minimum wage for that area; in South Wales, South Staffordshire, Cumberland, Bristol, Kent, and the Radstock district of Somerset the wages in December were at the minimum; while in Scotland they were only 26.44 per cent. above the minimum, in Northumberland 27.35 per cent. above the minimum, in Durham 30.73 per cent. above the minimum, in Lancashire, North Staffordshire, and Cheshire 42.76 per cent., and in North Wales 12.5 per cent.

Under the terms of the settlement of the coal strike, the Government came to the assistance of the miners with a subsidy up to £10 millions spread over a period of three months, in order to mitigate the effect of the reduction which the financial condition of the industry had rendered unavoidable. By the aid of that subsidy, the reductions in wages in July were limited to 2s per day below the wages in March, to 2s 6d per day in August, and to 3s per day in September. Moreover, the colliery owners had agreed to surrender their July and August profits to the extent to which wages had been subsidised in those months from the Treasury, and as the result of this arrangement the wages in September and October were maintained at a much higher level than otherwise would have been the case. The great change in the permanent system for the regulation of wages in the industry introduced under the settlement of last July was that of the substitution of profits for selling prices as the main wage-regulating factor. The miners were given a minimum wage as well as a standard wage, and the owners a minimum profit equivalent in money amount to 17 per cent. of the amount of money represented by the standard wage, or to approximately 8 per cent. on the capital employed in the industry. All the surplus proceeds left in each district after meeting these standard labour and capital charges, as well as the other costs of production, were distributable in the fixed proportions of 83 per cent. for labour and 17 per cent. for capital, but in any case the colliery companies had to meet the minimum wage charge before they could retain any profits, and the concession to the coalowners as a compensation for this sacrifice was that of the right to carry forward any deficiencies in their standard profits as a charge to be met out of future profits before the granting of any further increases in wages. In the ascertainment of the working results of the industry the workmen's representatives were given an equal voice with the colliery-owners, and all the items to be treated as costs were determined jointly by the two sides.

The Colliery Guardian points out that exports, taking trade and the year as a whole, were barely half the volume of our 1913 export trade, and even taking the last quarter by itself, when the coal export trade had made considerable recovery, a falling off of 39 per cent. from the 1913 aggregate volume is recorded. Exports of goods other than coal showed, in the first quarter of the year, a reduction of 44 per cent. from the 1913 standard. In the second quarter they fell away further to 58 per cent. below the pre-war volume, but had recovered in the fourth quarter to a point notably above that of the first quarter, showing 39 per cent. reduction from 1913. Coal exports, which were only 31 per

cent. of those of 1913 in the first quarter of 1921, reached a figure representing 59 per cent. of the 1913 record in the final quarter of the year. One of the most striking features of 1921 has been the complete repulse of American coal from our pre-war markets. In the European zone, towards the end of the year, coal from the United States was being imported in large quantities only by Egypt and Italy, and then under long-dated contracts, and not only had we largely recovered our ascendancy in South America, but the introduction of British bunkers at the North Atlantic ports—a business run at some sacrifice, no doubt—has recently created dismay amongst American operators. The margin between British and American coal in a stronghold of the United States such as the West Indies is now 1½ to 2 dollars per ton in our favour, and we have the prospect of concerted action on the part of the coal, shipping, and railroad interests to repel this invasion, which may prove to be short-lived. Much depends on the outcome of the negotiations over railway rates and miners' wages, the existing agreement expiring in April of this year, and the course of international exchange, but the prospect of a renewed onslaught by American exporters upon the European markets is not a contingency of 1922 that can be seriously contemplated.

The percentage increase in output that took place just before Christmas was three times greater in South Wales than that for the rest of the country. Obviously, in this case the reduction in the export price has been a potent factor in augmenting output. In the aggregate the Bristol Channel ports exported over 12 million tons of coal in 1921, a third of which went to France, and these are not unsatisfactory figures, taking all the adverse circumstances into account, even if the total is well below those for the previous three years.

There is a seeming contradiction of the above argument in the fact that whereas the South Wales export returns for the complete year are well below those for 1920, the following table shows that the other districts in 1921 have surpassed the figures for the preceding year:—

	1913.	1920.	1921.
	Tons.	Tons.	Tons.
Bristol Channel ports	29,875,916	15,470,392	12,246,650
North-western ports	751,819	8,220	88,382
North-eastern ports	23,023,810	7,508,854	8,730,221
Humber ports	8,883,353	470,233	1,126,675
Scottish ports—			
East coast	8,253,023	1,227,374	1,996,857
West coast	2,184,174	108,613	423,740
Total from the U.K.	73,400,118	24,931,853	24,600,552

Taking the period of six months from the conclusion of the strike, it will be seen that 9,117,086 tons of coal have been shipped as cargo from South Wales, or 2,408,288 tons more than in the corresponding period of last year; but the coal shipped from all British ports in these six months amounted to 18,635,104 tons, an increase of 8,134,784 tons; so that there has been an increase of 35.9 per cent. in the case of South Wales, as compared with a general increase of 77.4 per cent. for the whole country.

The recovery in the export trade has undoubtedly been greatly helped by the fall in freights which began in the summer of 1920. Thus the average rate of freight paid from the North-East Coast to Genoa was 15s 10½d in 1921, as against 50s 9d in 1920, whilst to Port Said it fell from 41s 3d to 15s 4d, and to Bordeaux from 38s 10d to 8s 11d. As the year closed, 11s 9d was being paid from the Tyne to Genoa. Between January and December the rate from Cardiff to Genoa fell from 20s to 11s 6d, and that from Cardiff to Marseilles from 17s to 11s 6d. Some of the distant freights were more stable. The average return freight from the River Plate dropped from 118s 6d to 35s 8d, and that from Bilbao to Middlesbrough from 28s to 8s 3d.

The following is extracted from the annual review of the Iron and Coal Trades Review:—

The salient feature of the pig-iron trade for the past year has been the remarkable contraction in production, which commenced about the end of January. Both locally and nationally, the January figures of output were fully up to the average of 1920; indeed, on the North-East Coast 257,100 tons of pig-iron were produced, compared with an average of 218,900 tons for the 12 months of 1920, but thereafter the slump set in, and month by month there was a diminishing quantity produced, until by the end of June not a single blast furnace was in operation. During the three months of the coal strike only 74,000 tons of pig-iron were produced in Great Britain, and as the July output was only 10,200 tons, it would not be an exaggeration to say that the three months' coal stoppage involved a four months' loss of output. The total production of pig-iron in the United Kingdom for the past year is just about one-quarter of the output for 1913, when 10,260,000 tons were produced. The causes of the decline have been two-fold. There has been the diminished demand for pig-iron at home, and the almost complete loss of the overseas trade. Further contributory factors have been the import of considerable quantities of foreign iron from abroad, which, owing to the operation of the exchanges, could be landed in this country at prices considerably below the cost of the home product, and also utilisation in the steel furnaces of enormous quantities of war scrap from the battlefields of Europe, which to no inconsiderable extent had taken the place of pig-iron. At the end of 1920 the number of blast furnaces in operation indicated that the country had reached the first stages of the slump, there being then only 274 blast furnaces in operation, as compared

with 300 three months before. By the end of January the number had fallen to 232, and on March 31st, the day before the country was plunged into the coal war, the number of furnaces operating had fallen to 116. The cessation of fuel supplies involved the immediate stoppage of most of these, and whilst a few firms endeavoured to avoid the serious consequences which so often ensue upon the blowing out of old blast furnaces, the protracted nature of the struggle with the miners rendered all their efforts nugatory, and before Mr. Hodges had appended his signature to the terms of settlement, only one blast furnace in the country was in operation. It took some weeks after the miners had returned to the pits to ensure the continuous flow of fuel which is essential to successful blast-furnace practice, and consequently the restoration of even the first of the blast furnaces to activity was somewhat delayed, only 15 blast furnaces having been lighted up by the end of July. In many instances very grave difficulties attended the operation, for though bulky, the blast furnace is in many respects a most delicately sensitive structure, and the reheating process was a cause of much anxiety, and in some instances of physical risk. In the ensuing month the return to activity was further retarded by a general absence of any demand for British pig-iron. Manufacturers had turned to the Continent for supplies of pig-iron when they could not get them at home, and, having found that the quality was almost equal to that of the home product, and the price considerably below, they continued to use foreign pig-iron in preference to that produced at home; indeed, in many instances steel manufacturers with their own blast-furnace plant were content to keep the latter idle, notwithstanding heavy establishment charges, and to purchase from the Continent the cheap basic iron which was being offered in considerable quantities. However, by the end of August 46 blast furnaces were operating in this country. A month later the number rose to 68, at the end of October to 82, on November 30th to 85, and on December 30th there were about 90 blast furnaces working.

At the opening of 1921 Cleveland pig-iron prices were at the highest level which the trade has ever known. Until the abolition of the State subsidies on April 30, 1919, a firm control had been retained upon prices, and No. 3 Cleveland G.M.B. was kept at a fixed maximum of 95s per ton, but immediately the subsidy was withdrawn, and prices were left to find their own level, the figure was immediately advanced to 140s, and although by the end of that year the

price had only risen to 160s, the Cleveland ironmasters, though reluctant to do so, found themselves swept off their feet by the rising tide of prices and working costs, with the result that by the end of 1920 the home price of No. 3 Cleveland pig-iron had reached 225s per ton, or about four and a-half times the pre-war figure, whilst to the foreigner there was quoted in addition an export premium of 22s 6d per ton.

The first reduction, which came into force on January 7th, amounted to 12s 6d on No. 1, 10s on No. 3, 11s on No. 4 foundry, 12s 6d on No. 4 forge and mottles, and 15s on white. The export premiums were also reduced, and ranged from 20s per ton in the case of No. 1 and siliceous iron to 5s for forge, mottled, and white. Frankly, these reductions were regarded as totally insufficient, and although makers subsequently offered a "rise and fall" clause in contracts, giving buyers the benefit of any further fall in prices from the date upon which they become operative, consumers continued to hold off the market. As a further concession, on January 25th the export premium on all classes of Cleveland iron was reduced to 5s per ton, at which figure it has remained almost continuously ever since. But these reductions had come too late; not only was the foreign market lost, but pig-iron from Belgium and Luxemburg was pouring into this country at pounds per ton below the price of the Cleveland product. A further reduction of 20s per ton all round on February 1st was followed a week later by another drop of 5s in the price of No. 1 and siliceous iron. These reductions were largely the outcome of the fall in the price of coke from 62s 9d to 54s 6d per ton, and a reduction of 2s per day in the wages of the Cleveland miners. Still there was no response from buyers, and another step in the process of deflation was taken on March 1st, when a reduction unparalleled in the history of the trade was resolved upon. A cut of 45s per ton came as an earnest of the determination of the Cleveland ironmasters to meet the abnormal situation, and this brought the price of the ruling quality down to 150s per ton, a figure which was stated to be actually below the cost of production. Be that as it may, it was still considerably above the Continental producers' price,

and on April 5th another 30s was lopped off the price, thus making a total reduction in three months of no less than 105s per ton. This brought No. 3 Cleveland pig-iron to a minimum of 120s per ton, and for seven months that official minimum remained in force. During the period of the coal strike the gradual exhaustion of the stocks of Cleveland foundry pig-iron led to a temporary rise in values, and about the end of May as much as 140s was paid for small parcels, but this was entirely due to the famine conditions, and as soon as the manufacture of pig-iron was resumed, prices quickly relapsed to the earlier official minimum. Throughout the year supplies of the lower qualities of Cleveland iron had always exceeded the demand, and they have been offered relatively cheaply without reducing to any substantial extent the heavy stocks in makers' hands. On November 1st the Cleveland Ironmasters' Committee announced an all-round reduction, ranging from 5s per ton in the case of the better foundry qualities to 14s per ton for the lower, and, finally, on November 28th, a cut of 10s per ton brought the prices down to the figure which still rules at the turn of the year.

IRON ORE.—In the Cleveland ironstone mining districts such a period of depression has never been known within living memory. For nine months the great bulk of the mines have been standing completely idle. Even to-day only six mines are working, and at these the men are employed no more than three or four days per week. Thus out of the 8,000 odd miners in Cleveland fully 75 per cent. are still unemployed, and the remainder are only working on short time. It is probable that the 1921 output of the Cleveland mines will barely reach 1,000,000 tons, and the following table shows the comparative output in previous years:—

Year.	Tons.	Year.	Tons.
1903	5,677,499	1912	5,158,440
1904	5,786,976	1913	5,940,965
1905	5,934,283	1914	5,574,788
1906	6,102,223	1915	4,746,000
1907	6,230,987	1916	4,315,700
1908	6,216,733	1917	4,810,000
1909	6,191,172	1918	4,544,135
1910	6,152,825	1919	3,712,648
1911	6,003,957	1920	3,730,000

The fact that the proportion of foreign ore used in the furnaces on the North-East Coast is larger than that of the native ores is due to the very much bigger proportion of the hematite output as compared with Cleveland and basic

APPLICATIONS FOR AGENCIES INVITED.

pig-iron. During most of the year it has been found more profitable to smelt the richer hematite ores from overseas than to produce pig-iron from the leaner Cleveland ironstone.

The trend of prices during the year has been steadily downward. Opening at about 49s per ton on a 17s freight basis, best Rubio ore was offered at the end of January at 40s per ton, c.i.f., the freight having fallen to 9s. A month later the quotation was down to 37s 6d, and that figure continued to rule until the coal strike put a stop to all business. For full six months thereafter there was scarcely a single transaction in foreign ore, but when an occasional cargo was required, usually to preserve the proper mixture at the furnaces, business was done at about 28s per ton on an 8s freight basis. Since then the Bilbao freight has eased to about 6s 9d, and Bilbao ore of 50 per cent. quality is now available at 26s per ton and less.

MANUFACTURED IRON AND STEEL.—It may be observed that we reached high-water mark in output in 1917, and had the war continued throughout the following year there is no doubt that we would have reached for the first time in history an output of 10 million tons; but, when the impelling necessities of war were withdrawn, there commenced the necessary transition to peace conditions, and it was not surprising that for a time production should dwindle. The reduction in output was not really alarming until 1921 dawned. With the advent of the present year, unfortunately, slump conditions immediately ensued. To some extent they were world-wide in their operation, and at best 1921 must have been a lean year owing to the sudden stoppage of all orders for new ships; but here, again, the coal strike made matters infinitely worse, and production has reached the lowest ebb recorded for many decades. Most of the steelmakers have either had to close their establishments entirely, or at best have only been able to work intermittently, and whilst in South Wales there was experienced in the later months of the year a somewhat marked revival of activity, the slump in other districts became really more accentuated, and on the North-East Coast the position seemed to go from bad to worse. Even now it cannot be said that any certain improvement is in

sight. On the contrary, many big firms have practically cleared off all the orders upon their books, and unless an immediate revival sets in the outlook is dark indeed. There is, however, a general belief that with the turn of the year business will be more brisk, but that at present is not more than a pious hope.

This at least can be said, that the bulk of the British steelworks have been so remodelled and reconstructed as to embody the most up-to-date methods for economic mass production. Upon the North-East Coast in particular there have been completed during the past two or three years two modern steelwork plants which stand as models to the entire industry, and these facts encourage the hope that when trade is once more booming Britain will be able to take a still greater share in meeting the world's requirements for manufactured iron and steel. Those requirements are greater than ever. Her needs are just as urgent. It is merely that in many directions she lacks the capacity to pay. But that is a passing phase. The demand for steel will surely be re-created, and when it comes there is no country so well situated as Great Britain to meet the need.

The trend of prices during the year has been continuously towards lower levels, and the end of the movement has not even yet been reached, although prices have already descended to a level considerably below that of the controlled period.

For the purposes of comparison, the following table of prices per ton will be found of interest:—

Description.	Control Prices.		Jan. 1.		Dec. 30.	
	£	s d	£	s d	£	s d
Common iron bars	15	10 0	27	10 0	13	0 0
Steel boiler plates	12	10 0	29	10 0	14	10 0
Steel ship, bridge, and tank plates	11	10 0	24	10 0	10	10 0
Steel angles	11	2 6	24	0 0	9	10 0
Steel joists	11	2 6	24	0 0	10	0 0
Heavy steel rails	10	17 6	25	0 0	9	10 0
Fishplates	15	17 6	30	0 0	14	10 0
Billets (soft)	10	7 6	23	0 0	7	5 0
Billets (hard)	11	0 0	24	0 0	8	5 0
Black sheets	..	..	28	0 0	14	10 0
Galvanised corrugated sheets	..	..	30	0 0	16	10 0

The principal cuts in steel prices were made in the earlier months of the year, steel, plates, for example, being reduced £2 per ton January 21st, again on February 18th, and once more on March 21st, whilst in April there was a further cut

of £3 per ton. This brought steel plates down to £15 per ton, at which figure they remained stationary until August 23rd, when the quotation was reduced to £14, and then on October 17th came the biggest and last cut of all, makers fixing the price of steel plates at £10 10s per ton in a last desperate effort to stimulate demand and restore activity to their idle works. Even that does not represent the full extent of the reductions which the steelmakers have been prepared to shoulder, for they have been quoting as much as 30s per ton below the home prices in order to secure the export orders.

Wages constituted one of the most serious factors in the inflation of iron and steel prices during the boom period, for there was at that time no limit to the demands of labour. Not only was there a phenomenal advance in the actual wages paid, but the wage costs of production advanced still more steeply, for the rise in the workers' rate of pay was, unfortunately, accompanied by a steadily diminishing output. In other words, the worker, instead of giving more work for more money, actually gave less. Thus at the last meeting of the shareholders of Messrs Bolekew, Vaughan, and Co., Sir Johnson Ferguson, the chairman, was able to show that the wage cost of producing a ton of pig-iron advanced from 29s 10d in 1913 to 123s 9d in 1920. In the same period the wage cost of a ton of steel advanced from 68s 5d to 296s 6d.

Since the dawn of 1921 the decline has been continuous, and it may be regarded as the supreme test of the sliding scale as an effective means of adjusting wage rates that reductions unparalleled in any other branch of the industry should have been effected without a sign of disagreement.

The foreign trade in steel has been no more than about 50 per cent. of the pre-war standard, but last year's figures have been maintained, and having regard to the abnormal situation, that is a not unsatisfactory achievement.

Of the total foreign shipments, which will probably exceed 285,000 tons for the year, nearly half went to India and Ceylon, the estimate being 121,662 tons, which is almost precisely the same quantity as we shipped in 1920. A total export of 32,165 tons to South and East African ports represents a decline of nearly 12,000 tons on the 1920 figures, and Belgium, Italy, and France have all taken smaller quantities, whilst Japan's total of 14,700 tons is about half her previous total. On the other hand, the fall in freights has enabled the Australian and New Zealand trade to advance from 6,003 tons to 29,243 tons. The Straits Settlements requirements advanced from 6,447 tons

to 9,612 tons, and the new trade which was opened up with the Argentine in the later months of 1920 has been developed to the extent of 25,000 tons. Shipments of 6,000 tons to West Africa, and 2,476 tons to Uruguay also represent new business, and they bear evidence that if old markets have temporarily at least been lost, new avenues of trade are being opened up. The monthly aggregate shipments of pig-iron, manufactured iron and steel, from the port of Middlesbrough during 1921 have ranged from 10,200 tons in July to 61,237 tons in November, and the monthly average has been about 36,730 tons.

MINOR METALS.

SILVER.

We extract the following from Messrs Samuel Montagu and Co.'s Annual Bulletin Letter:—

On January 3rd, the first working day of 1921, the price was quoted 41½d for cash and 41½d for two months' delivery, as compared with 40½d and 41½d respectively on the concluding day of 1920. Prices, however, did not continue long to advance. The price fixed for both deliveries on January 6th—42½d—proved to be the highest point touched until the first nine months of the year had almost elapsed. After hovering round 40d for some weeks, by February 1st prices descended sharply to 34½d for cash and 34d for two months' delivery. A notable feature of this period was the growth of visible stocks in Shanghai, which, eight days before the Chinese New Year—February 6th—reached a total of 69,000,000 ounces, including sycee, dollars, and bars. This accumulation represented previous purchases made in preparation for squaring debts on that auspicious occasion. The fall encouraged a more active demand from the Indian bazaars—which had been more or less the mainstay of the market—and a measure of stability was assured. Not only did demand come to London, China and San Francisco were drawn upon for considerable quantities. On February 7th, the prohibition upon the export of silver bullion without a licence was removed, but that upon foreign silver coin—freed in 1920—

HEAVY TAXATION.

On all sides it is agreed that 6/- in the £ income-tax is too heavy a burden. The State, however, allows a reduction to encourage thrift by giving a rebate of income-tax in respect of Life Assurance Premiums on a man's own life, and everyone should take advantage of this to the full.

An Endowment Assurance Policy with £2 per cent. Guaranteed Bonus and Double Accident Benefit, as issued by the PRUDENTIAL ASSURANCE CO., LTD., gives the valuable protection of Life Assurance combined with investment, and can secure for you the full advantage of this rebate of income-tax. The rebate is limited to premiums not exceeding one-sixth of a man's taxable income, to a rate of premium not exceeding £7% of the capital sum payable at death, and is at half the standard rate of tax.

EXAMPLE: Age 35 next birthday, 20 year term Endowment Assurance with £2% Guaranteed Bonus and Double Accident Benefit.
PAYMENTS: Annual Premium £60 3 4 The total amount paid in 20 years, after allowance as above of 3/- in £ (present rebate allowance), £1,022 16 8.
SUM PAYABLE: £1,400 at maturity; or, £1,000 and £20 for each completed year of assurance at previous death; or, £2,000 and £40 for each completed year of assurance at previous death by accident.

PRUDENTIAL ASSURANCE CO., LTD.,

ALL CLASSES OF INSURANCE BUSINESS TRANSACTED.

was again established; whilst the embargo upon other silver coin remained. Demand from the Indian bazaars failed to be maintained with vigour, the reason being the ease with which silver became available in the various silver centres, another the continued increase of visible stocks at Shanghai—temporarily eliminating competition from that quarter. The fall in the value of silver reacted upon the Indian exchange, which, about the middle of February, approximated 1s 4d—as compared with 1s 6d, at which it stood at the beginning of the year. A rapid fall in the value of silver continued until, on March 5th, the lowest quotations of the year were reached, namely, 30½d for cash and 30½d for two months' delivery. These were the lowest rates reached since the Armistice. On March 5th the gold premium was about 23½ per cent. Adding that proportion to 25½d—the average value of silver during the five years before the war—the figures 31½d are obtained, showing that the price had actually dipped below its pre-war value.

A fortnight after the lowest quotation of the year the stock in Shanghai reached so colossal an amount that a record was established. It was returned as about 46,200,000 ounces in sycee, 39,000,000 dollars, and 550 silver bars. The combined total is equal to about 77½ million ounces. Still, there is very good reason why—apart from activity of trade—the stock in China should be larger than a decade or so ago. Then there were only five foreign banking institutions, now the figure is about 25. The same reliance cannot now be placed upon the total of the stock as published, because it is not easy to be assured of the exactitude of individual returns derived from so many diverse sources. A more or less steady flow of silver set in for India or China, sometimes at the same time for both, and prices remained fairly steady round about 33d for about a month, until specially keen inquiry from China upon an unwilling market suddenly carried quotations on April 12th to 36½d and 36d for cash and two months' delivery respectively. In the case of India, the demand was not on account of trade; the main cause was an exchange of the yellow metal for the white. In the case of China, civil strife was undermining public confidence, and silver stocks at the treaty ports had to be replenished, for material had to be sent to the Canton and other mints for coinage into dollars, which did not return coastward, but disappeared into the interior. The Indian bazaars declined for the time being to compete, and preferred to realise purchases already made, whereupon the market drifted into a somewhat lifeless condition, with the quotation a penny or so lower—round about 35d—during the next four weeks.

Although silver prices began to tend downward, the Shanghai exchange kept remarkably steady. The official

quotation remained from April 19th to May 17th at 3s 3d the tael, after which it moved lower in sympathy with the value of silver. In the meantime the visible stocks in China shrank considerably, owing to heavy coinage by Chinese mints, and the need for fresh supplies kept China more or less in the market, though other demands remained scanty. Some revival of demand from India set in toward the end of May, but, supplies from the Continent being more plentiful, the inquiry failed to lift the price appreciably, which indeed eased to 34½d by the 30th of that month. The appreciation of the U.S. dollar then began to render bears somewhat nervous, and encouraged the United States to hold back supplies for higher prices calculated in sterling. Quotations moved up to a 35d-36d level, and ruled thereabout until the middle of July.

Meanwhile rumours became current that about a million kilos (32,150,000 ounces) of German demonetised silver coin would come into the market. Bankers in several countries were approached, ostensibly to lend money upon the specie, but really, so it was said, to hold the metal until the silver could be conveniently realised. As a consequence of the Government decision that silver bullion from this source brought to the United Kingdom on German account would be subject to 26 per cent. reparation duty, some of the silver in question was shipped to the United States and there pledged, the profits of marketing and refining the metal here being therefore lost to this country. It was astonishing how tranquilly the market regarded the possible sale of this large amount, and also the probability that the Royal Mint would have supplies to spare; for the reduction of the quality of the United Kingdom and other similar British coinage from .925 to .500 fine was found to create a substantial surplus. If all the coins (£37,095,905 net value) issued since the commencement of the reign of King Edward VII. alone were reminted, there would remain over no less than 57,330,035 fine ounces. Of course, what proportion of these and of the Victorian issues will find its way back can be but a matter of conjecture. An arrangement with the great Anglo-Eastern banks was made by which consignments of silver derived from such re-coinage were despatched from time to time for absorption in the East.

On July 28th competition by the Indian bazaars with China carried the quotation up to 39½d for cash and 38½d for two months. The large premium on cash delivery showed that the Indian demand was for a special settlement date on the other side. The high prices obtainable for silver suggested to the Mexican Government the propriety of imposing a duty on the export of the metal. The rate was fixed at 5 per cent. when the price in New York ruled 60 cents or under, and 5½ per cent. when a higher figure was recorded. The tax was imposed as from August 1st. During the month of August the level of prices was rather lower—round 38d—and business was largely speculative. The balance of trade now began to move in favour of India, instead of having been as previously adverse. This was attributable to gold exports, not trading transactions, Indian produce being difficult to sell abroad owing to the poor ability of Europe and the United States of America to buy and to the vagaries of the Continental exchanges. Bullish speculative interest taken by the Indian bazaars, as well as actual shipments

to that quarter, created a very good tendency during September. This was enhanced by bear covering and a sudden strong demand from China, which carried the cash quotation to 43½d on the 27th of that month. Producers and holders of silver being slow to respond, prices would have been forced very much higher had not the pressure from China been relaxed as suddenly as it arose.

The market now became very irregular, Chinese and Indian operators did not confine themselves to the one attitude of buyer or seller; frequently groups acted in opposition to each other, and both China and India would each buy and sell on the same date. The air became charged with speculative activity. America and the Continent entered into similar double operations with zest, and no reliance could be placed from day to day upon the tendency of the market. Amid this uncertainty came a collapse in the value of the German mark, starting in its intensity and thoroughness. Chinese speculators veered round and bought sterling—i.e., sold silver—and sharp movements ensued in the China exchange. The necessity, however, for providing against unusual calls upon stocks in China caused steady buying by the great Anglo-Chinese banks, which held the price fairly steady in the neighbourhood of 40d until the end of the first week in November.

The departure on November 22nd of the s.s. "Egypt," due to arrive in Shanghai in comfortable time for the New Year, which on this occasion falls on January 28th, 1922, synchronised with a fall in the price, whereupon a gradual descent took place until 34½d was fixed for both deliveries on December 8th, the market being fairly well supplied from the Continent and elsewhere; direct Eastern inquiry was almost absent. Meanwhile bear covering was the main support. Some recovery—not, however, substantial—ensued on the receipt of orders from the Indian bazaars to buy for arrival in India at the January settlement. Though the amount was large, the cash quotation did not exceed 36½d—so free were offerings from the Continent, America and China. The tone of the market continued dull until the end of the year. The closing quotations were 34½d for cash and 34½d for two months' delivery.

During the greater part of the year, silver for prompt delivery commanded a premium—not very substantial, except in February—when 2d was quoted on the 4th of that month. The range of prices was less than during 1919 and 1920. It was almost exactly one quarter of that in 1920—12½d, as against 50½d. The highest quotation during the year—43½d—was less than half 89½d, the remarkable highest record in 1920.

SILVER IMPORTS AND EXPORTS.—UNITED KINGDOM.—Twelve Months Ending December 31, 1921.

Other American countries	614	386,117
Egypt	4,986	38,721,561
British India	5,235,113	457
Canada	2,079,142	856,932
Other countries	46,032,408	62,562,944

In addition to the above imports, over £2,000,000 Imperial and West African coin was imported and demonetised, thus becoming available for export as bullion.

COPPER.

What may safely be regarded as the worst year in the history of the metal trades has been brought to a close. Copper has been free from any spectacular price movements during the year, the difference between extreme prices amounting to little more than £10, whereas last year it was about £47, as will be seen from the following quotations for standard cash:—

	Jan. 1.	Highest.	Lowest.	Closing.
1920	£ 8 8	£ 18 2	£ 5 0	£ 17 6
1921	£ 7 12	£ 12 6	£ 5 0	£ 6 17

Standard copper was fairly steady in the first few weeks of the year, easing somewhat towards the close of the first month, when cash stood at £68, electrolytic in New York being around 13½c. In February the plan was completed whereby 175,000 tons of copper were removed from the danger of forced selling. To ensure its success production was generally curtailed, and by the beginning of March the United States mine output had dropped to 50 per cent. of normal. During the spring consumption was very poor, and in spite of a filip on news that E.P.D. would be abolished, values showed a lack of resiliency. In May there appeared a tightness of cash warrants, resulting in a maintenance of a premium on prompt until the end of the month, and at one time standard cash stood at £75 12s 6d, the highest point of the year, this being only 5s below the quotation of electrolytic.

A healthier position developed in June on reports from America to the effect that sales were in excess of consumption, which, together with a more hopeful view of the labour situation here, induced more confidence, but later very heavy offerings of scrap copper caused some depression. The settlement of the coal trouble did not bring the anticipated improvement in demand, though Germany continued to make large purchases in America, and by August production had fallen below the average monthly exports, as out of the 50 chief producing copper companies only eight were in operation. At this time spot electrolytic in New York had fallen to 11½ cents, but this proved the turning point, and with gradually increasing sales, both on domestic and export account, values slowly but steadily improved, until at the beginning of December business was reported in electrolytic at 14 cents f.o.b. Price fluctuations on the standard market here were within narrow limits in September and October, the sale of 160,000 tons of scrap brass by the Government creating temporary depression, and at the end of October cash was no better than £65 5s, and for the following few weeks prices moved within a 40s range, prices showing no disposition to follow the upward movement initiated in America.—Glasgow Herald.

LEAD.

With supplies of lead from Broken Hill cut off owing to the fire at Port-Pirie Smelting Works, and only a quiet demand in this country, values of soft foreign lead in January receded about 20s, near dates closing the month at £23 2s 6d. From this point prices gradually weakened, until at the end of February under heavy selling near dates fell to £16 10s, the lowest price recorded since 1913. The severe fall from the high point of last year will be seen from the following quotations for foreign prompt:—

	Jan. 1.	Highest.	Lowest.	Closing.
	£ s d	£ s d	£ s d	£ s d
1920	45 15 0	52 7 6	22 10 0	23 10 0
1921	24 5 0	26 0 0	16 10 0	25 12 6

Under a fair consumptive demand prices advanced by easy stages until May, helped by the dearth of lead from Australia, near dates at one time touching £24 7s 6d. In June business felt the effect of fuel exhaustion, and prices began to sag, but in the following month stocks had fallen to 13,278 tons, and, apart from speculative purchases, a steady consumptive demand induced a fresh upturn in values. During August and September near dates were always somewhere near £23. October opened with near metal at £23 5s, with forward at 2s 6d less. At this time fears of a shortage became apparent, and the prompt position became increasingly tighter, with the result that at the end of November near dates commanded a premium of 15s, and also recorded the highest price of the year at £26. The feature at the close is not an excessive demand (though consumption for sheets and pipes is steady at about 5,000 tons per month), but the scarcity of supplies, and we now depend, as in pre-war days, entirely on imports. English lead throughout has maintained a premium over foreign, selling up to £27 in December, whilst the lowest price of £19 was recorded in February. The tendency of values in America is upwards, as no material increase in output either in the United States or Mexico is expected for several months. The Board of Trade returns for the year show imports 132,602 tons, and exports 28,069 tons.—*Glasgow Herald.*

SPELTER.

Table of prices:—

	Jan. 1.	Highest.	Lowest.	Closing.
	£ s d	£ s d	£ s d	£ s d
Spelter prompt—	58 10 0	62 10 0	25 15 0	26 7 0
Per ton, 1920	58 10 0	62 10 0	25 15 0	26 7 0
Per ton, 1921	26 12 6	28 5 0	23 10 0	27 7 6

Values fluctuated slightly until September. The demand from galvanisers both in this country and America showed a steady improvement in October, and after being idle for a long period some of the spelter works in South Wales resumed operations. Exceptional steadiness was displayed in December.

At the close the outlook is somewhat obscure owing to the uncertainty of supplies. Norway and Germany offer very sparingly, whilst Belgian sellers' prices are above London parity. Stocks at the end of November amounted to 14,052 tons, of which 5,734 tons were held by his Majesty's Government, which compares with a total of 10,953 tons a year ago. The Board of Trade returns for November show imports for 11 months at 66,590 tons, compared with 106,538 tons for the corresponding period last year.—*Yorkshire Post.*

TIN AND TINPLATE.

TINPLATE.—The year opened with things at a very low ebb, and with the whole trade fighting for its life, with its back against the wall. A few of the headlines used in giving the market reports during the first months of the year will give a good idea of the position: "Outlook most depressed," "Situation extremely serious," "No demand," "Business practically stopped," "As depressed as ever," "Business practically dead." It was in the midst of these unique circumstances that the makers attempted to find salvation in what became known as the Central Selling Agency, a scheme which involved the elimination of the merchant as at present constituted, and which proposed to celebrate its birth by collecting a contribution from each maker of £2,000 per mill—say £1,000,000 in all. It did not appear to outsiders to be a very workable scheme, but one could understand

the eagerness of the maker to adopt almost any expedient in such difficult circumstances. It was discussed at several meetings of the makers, and at one time seemed likely to be adopted, as it was favoured by a large majority, but finally it was announced about the end of February that the whole scheme had fallen through.

It is an interesting question as to how far the makers have been covering their costs during the year. There is no doubt it has been a very lean thing, where good management in many cases might make all the difference between a loss and a profit. Two shillings and 5s, and even more, per box has been mentioned as the makers' loss at different times, and there is no question that they have strained a point through the year to keep works going where possible, not only out of consideration for the employees, but also because they might possibly have lost almost as much or more in various ways by closing down. The consolidation and grouping of works has gone on during the year. This may be *pro bono publico*, or it may not: it is another case where everything depends upon the management and the principles on which amalgamation is worked.

There has been great fluctuation during the year in the relative price of Wasters as compared with primes. The two sizes in which the largest business is done are 28 by 20 and 18½ by 14, and the variation in relative values applies to both. With regard to 18½ by 14, for instance, in the first quarter of the year the Wasters were selling at rather less than half the price of the primes, while at the close of the year, owing to short supply and good demand, the difference between the two was reduced to something like 1s.

There is nothing very new to report as to tinplate development in other countries. Rather contradictory reports have reached us as to the position with regard to the new works in Norway. The papers have told us of prosperity, completion of first large orders, and contemplated extension, whereas the general impression we have gathered elsewhere has not been so satisfactory. A statement was circulated in October to the effect that the Russian Soviet

Government had bought some Czecho-Slovakian tinplates, but no details were given as to quantity, makers, or terms. Like ourselves, the Americans have been suffering from a lack of orders, and have been working short time, though probably on the whole rather better employed than we have been here. We have not found them competing with us so strenuously as usual, and, speaking generally, throughout the year foreign competition has been conspicuous by its absence. Three of the new mills in Canada have been working, but the results are not available. A little competition from Germany was reported in the last quarter of the year, especially in Denmark. We cannot be surprised at this, considering the geographical contiguity of the two countries, nor is it a matter for great regret. No news has come through to us of the development in India and Australia, to which reference was made in our last report.

Prices.—The year opened with Cokes at about 34s; it was, indeed, the highest price of the year, and immediately began that decline which, with very small exception, continued until the close of the year, when the price stood at 20s. By the end of March the price was 25s, and then came the Coal Strike, which at first had a hardening tendency, the advance during April being to 27s, or even higher. It did not continue, however, and by the end of June the market value was 25s to 26s. Thereafter the decline was definite to the end of the year, when 20s seemed to be pretty firmly held, for the time being.

Bars.—There has again been a large increase in foreign bars offering, and quite a big business has been done, chiefly Belgian and French, although the German import has increased to over 5,000 tons, as compared with 34 tons last year. The Americans seem to have been practically off the map in this connection. The quality appears to have given general satisfaction, and large quantities were used, until during the last four months of the year the British manufacturers made strong efforts to win the business back, and have been very successful in doing so. With the best attention there is bound to be considerably more delay in getting bars

through from some works in Belgium or France than in securing deliveries from a maker, comparatively speaking, at one's own door, and who in a matter of urgency is sometimes able to roll right away on a telephoned specification and deliver in two to three days. So unless the foreign bar can be delivered at a distinctly lower figure it does not stand much chance.

With regard to values, the maker's price was £17 10s at the beginning of the year, as against the foreign bar at £12. By successive stages the price was reduced to £13 in April, £9 10s in July, and £7 15s in November, which is the official price at the time of writing. Foreign bars have been quoted at about £7 (in July), but are now about £1 dearer.

Wages.—The first few days of the year saw the beginning of the gradual reduction in wage rates, which was followed by the several others, usually at quarterly intervals, and based, as mentioned in our last report, on the net selling price of steel bars.

The first reduction, which came into force on January 2nd, left the wages at 133.75 per cent. premium on base rates. This was reduced by successive stages of 12 per cent. and 25 per cent., 85 per cent., and 45 per cent., to 7½ per cent. in November, although it should be stated that this was supplemented by a special bonus of 10 per cent. as a temporary assistance to the employees, it being recognised that they had been very severely hit by the action of the sliding scale. In this connection it should be borne in mind that the base rate was increased by 25 per cent. in July, 1920.

TIN.—A feature of the tin market during the year has been the smallness of the fluctuations, particularly as compared with 1920. The difference between the highest and lowest prices during the year (we take the closing price each day) is only £62 10s, viz., £210 10s on January 7th, and £148 on March 9th. This compares with a total fluctuation of £220 in 1920. It is also noteworthy that in October the total variation in price was only £3—£158 to £155, and that while the variation in January was £46 10s,

in no succeeding month did it touch £25. Yes, with all its faults, the year has spared us the intense gambling and the feverish fluctuations which so often characterise the tin market. Of course, it may be said that there was not much to get excited about, and that no doubt is true, but to genuine consumers the change is not unpleasant.

The average price for the year was £165 5s 7d, a drop of £136 10s 8d, as compared with £295 16s 3d of 1920. The average prices for the four quarters of the year were:—January to March, £170 19s 1d; April to June, £169 12s; July to September, £158 17s 2d; October to December, £161 14s.

It is understood that the Government of the Federated Malay States and the Dutch authorities have been holding up a large quantity of tin during the year—10,000 tons is named—and that they have come to a mutual agreement not to put it on the market at a loss. It is supposed to stand at between £200 and £240 per ton. Whether they will be content to hold to it indefinitely is questionable, but the very fact that such a large quantity is there in the background, ready to be thrown on the market at a time to be arranged by the holders and their friends, is bound to be an element of weakness. The Chinese stocks at the end of 1921 are supposed to have been about 3,000 tons. America seems to have bought sparingly and spasmodically. Germany has been the best Continental customer, and of course has had to struggle with a shocking exchange. It is of interest to note that 20 tons German-smelted tin arrived in London towards the close of the year. It is also interesting to mention that 600 tons of American electrolytic tin (said to be smelted from Bolivian ore) arrived in Liverpool in February. The statement that the quality "has the advantage of not adhering to the plate" must not, we suppose, be taken too literally by tinsplate makers.

It was reported in September that the famous Mount Bischoff mine in Australia was going to close down, but whether this was to be permanent or temporary, and when it was to take place, was not stated. It was also rumoured in October that some of the Banca and Billiton mines were

to be closed. A proposal (said to emanate from Wales) was made to impose a special duty of at least £50 per ton on all tin exported from the Straits Settlements for consumption in countries outside the Empire. The committee of officials, &c., who have been inquiring into this have unanimously turned down the suggestion, which, they think, "would inevitably prove seriously detrimental to the local tin mining and tin smelting industries." Tin ore smelted at the Straits comes from China, Siam, Dutch East Indies, Alaska, Bolivia, &c., as well as the local ores.

The stocks of tin during the year have averaged 4,376 tons in London, and 1,686 tons in Liverpool, as against 2,386 and 523 tons respectively in 1920—a large increase.

Exports.—The wholesale character of the slump is reflected in the export figures, which show, only too clearly, how sick the world has been. The Far Eastern market has been perhaps our best; in fact, the tremendous increase shown by Japan is surprisingly satisfactory. The few other countries that show an increase over last year are Roumania, United States, Argentina, and Canada. The others all tell the same tale of retrogression, in varying degree.

ENGINEERING TRADES.

AVIATION.—The *Engineer*, in their review of aeronautics for 1921, refer to the extended scheme of subsidising civil aviation which the Government brought into force in June. That measure enabled the British companies operating the cross-Channel services to compete on even terms with their foreign rivals, and, being more than a mere temporary expedient, served to increase confidence in the financial side of the undertakings. Traffic certainly grew after the scheme came into being, but even so, the demand for commercial machines required to carry on such services as now exist, or as are at all likely to be started in the near future, would not justify anything like a dozen or more aircraft manufacturing firms keeping their works open and looking with something approaching confidence to the coming months.

Just as in the matter of research and experiment, so, too, in the matter of actual construction, the military side of aviation is rapidly becoming the mainstay of the industry. Indeed, it cannot be denied that during the past 12 months the closing down of important aeronautical works, a process initiated on a threatening scale towards the end of the previous year, would have continued but for the Government work that was given out. Little may be published regarding the designs of the military machines that have been or are being so built, but sufficient is known to permit us to say that the Air Ministry is showing every sign of fostering progress and of taking advantage of the results of recent research, and is far from resting content with the best designs of the war period.

locomotives or roads, there is little to say. Mr Gresley continued to build three-cylinder engines, and there is little doubt that his success will lead to the further use of three-crank locomotives. But the only important engines of the year are as yet incomplete—a large steam locomotive being built by the Yorkshire Engine Co. and the electric passenger locomotive, illustrated by a drawing in our last issue, which Sir Vincent Raven is completing at Darlington. In railway engineering little has been done. The congestion at many of the London termini is worse than ever, and a solution for the difficulty will have to be sought. In some cases, notably at Liverpool street, the adoption of a double-deck station, in order to get over the trouble of the bottleneck, may be suggested.—*The Engineer*.

COMMERCIAL MOTORS.—In the course of an article on Commercial Motors, the *Yorkshire Observer* points out that: "Prices came down very substantially during the year—practically to pre-war levels; but there is still a big margin of reconditioned war lorries to be absorbed at prices which put the new vehicles almost out of reckoning. This is certainly unsatisfactory from the point of view of the commercial motor manufacturer, though there is reason to hope for an improvement in the near future. It cannot be said, with any degree of certainty, that the show of commercial motors which was held at Olympia in October influenced trade in new vehicles."

MOTOR-CARS AND CYCLES.—The British motor trade has always depended very largely on the home market, but what export trade has existed has dwindled this year to small proportions, and this applies equally to motor-cycles, and even to pedal bicycles, in which in pre-war days a substantial export trade was done. On the other hand, imports of foreign—in this case chiefly American—cars have also fallen to a very low level. The 33½ per cent. import duty, and the high tax which the practically "square" American engine has to bear in comparison with the smaller bored and high compression British engine, has certainly eased, for a time, the strain of foreign competition. Taking the figures, both of exports and imports, from the Board of Trade returns for the 11 months to the end of November for 1921 and 1920, we find the following results, in comparison with pre-war days, taking the 1913 figures as the best representative year:—

	IMPORTS.		
	1913.	1920.	1921.
Motor-cars and parts ..	4,401,541	22,018,555	5,487,866
Motor-cycles and parts ..	148,186	390,609	182,554
Cycles and parts ..	204,482	419,888	168,559
	EXPORTS.		
	1913.	1920.	1921.
Motor-cars and parts ..	3,388,868	7,435,512	4,833,371
Motor-cycles and parts ..	872,246	2,189,939	939,718
Cycles and parts ..	1,557,511	4,473,938	1,666,308

It will be seen that, allowing for the substantial increases in values, both imports and exports are, in reality, below the pre-war level, while the export trade, compared with last year, has dwindled to very small proportions. As for the home trade, inquiries I have made among a considerable number of leading agents lead everywhere to the same answer—about the poorest year the trade has known.—*Extracted from Yorkshire Post*.

SHIPBUILDING AND SHIPPING.—VI.

In its review of shipbuilding in 1921, the *Glasgow Herald* writes that there has been a pronounced decline in the production of the shipyards of the United Kingdom. There has been a very marked falling off in the amount of tonnage launched, and in almost every country there has been poorer trade than in the average of previous years. But it is not the decrease in output which is concerning shipbuilders and all others interested in shipping, shipbuilding, and engineering, so much as what the immediate future holds in store. At present trade is poor, and the decrease of one and three quarter million tons launched shown in the table given below indicates that it has been generally poor all over the world. Even those countries which had increases were nothing like so busy as they might have been, while the leading shipbuilding nations of the world—with the possible exception of Germany—must continue to regard the year as one of a retrograde character, so far as statistical progress is concerned. The tables given under the headings of the respective countries show the position better than any comment here would. Those relating to the United Kingdom show decreases in practically all the areas; and an overall decrease of more than half a million tons. In that of America, however, there may be found the principal explanation of the world decrease, while that of Germany appears to show that in

that country there is a very large amount of work, and that those engaged in it are doing everything in their power to restore their nation to a leading position. But in no country in the world can anyone say, with even an approach to certainty, what the prospects are, and it is in this dominating note of uncertainty that the new year will open. The following table shows the output of the world's shipyards, according to our returns:—

	1921.			1920.		
	Vessels.	Tons.	I.H.P.	Vessels.	Tons.	I.H.P.
England ..	466	897,365	733,230	620	1,214,319	957,816
Scotland ..	313	580,216	515,458	446	778,914	673,040
Ireland ..	25	118,691	70,100	33	147,695	69,250
U.K.	804	1,596,272	1,318,788	1,169	2,140,928	1,700,106
Dominions ..	181	153,490	78,576	307	287,493	116,880
Empire ..	985	1,749,762	1,397,364	1,476	2,428,421	1,816,986
Foreign ..	1,417	3,439,731	3,155,279	1,798	4,518,763	4,920,914
	2,402	5,189,493	4,552,643	3,274	6,947,184	6,737,880

The Leading Countries.—Lower though its production is, and handicapped as it has been by trade depression and by many industrial and economic difficulties, the United Kingdom has an easy lead among the shipbuilding nations. Germany has now dropped definitely to second place, and America has now dropped definitely to third place. Ger-looks like remaining there, if not falling lower still. The many is already third—three years after the close of the war—and will in all probability be back in her old position of second within a comparatively short time. The following are the countries whose output is over 200,000 tons:—

	Vessels.	Tons.	I.H.P.
United Kingdom ..	804	1,596,272	1,318,788
United States ..	292	1,303,735	1,150,894
Germany ..	241	622,762	569,811
Japan ..	119	424,284	177,851
Holland ..	292	223,574	129,135
France ..	119	205,594	91,730
Italy ..	62	205,594	91,730

British Rivers.—Within the United Kingdom first place among the shipbuilding areas continues to be held by the Clyde, with the North-East Coast rivers and Belfast following. The production all round is lower, and that of Belfast is lower relatively than that of any other area. It may be noted that, apart from the United States and Germany, the Clyde, even in this poor year, has a tonnage higher than that of any foreign country:—

	Vessels.	Tons.	I.H.P.
The Clyde ..	249	511,185	478,760
The Tyne ..	73	335,947	283,202
The Tees ..	34	160,508	133,800
The Wear ..	30	144,868	63,083
The Luggan ..	13	93,494	70,100

As regards the movement of the shipbuilding industry during the course of 1921, Lloyd's Register Quarterly Returns show that at the opening of the year 3,708,916 tons were under construction in the United Kingdom, and the March returns showed an increase of about 90,000 tons, the totals reaching 3,798,593 tons, the highest figures ever recorded in the society's returns. Since then a steady decrease has taken place, the figures for the end of December, 1921—viz., 2,640,319 tons—being the lowest since June, 1919, and showing a reduction of 1,158,274 tons during a period of only nine months.

As regards other countries, there have been launched during the year 951 merchant vessels of 2,803,627 tons (698 steamers of 2,537,976 tons, 108 motor vessels of 204,286 tons, and 145 sailing vessels and barges of 61,365 tons). The figures show a decrease of 1,002,415 tons as compared with those for 1920, and of 2,720,480 tons as compared with 1919, but are 1,402,898 tons higher than those for 1913, the pre-war record year.

Taking the output of 1913 at 100, the figures for the last four years are as follows:—1918, 292.6; 1919, 394.4; 1920, 271.7; and 1921, 200.2.

We extract the following from Messrs H. E. Moss and Co.'s Steam Ship Circular:—

We regret to report that the shipping depression still continues, and at the present time there are some three million tons of British ships alone laid up. Undoubtedly a large amount of this tonnage would in normal times have found its way to ship-breakers, but, on the other hand, there are hundreds of good modern-built vessels for which owners cannot find payable employment.

Prices for good modern second-hand steamers are exceedingly low, and for those who can afford to wait until an improvement takes place in the shipping world there are many bargains to be obtained.

Orders for new tonnage are not being placed, except by a few liner companies, who must have tonnage for their special trades. It is estimated that on December 31st the amount of merchant tonnage under construction in the United Kingdom was about 3,000,000 gross tons, but this includes a considerable amount of tonnage on which work has been suspended by agreement between builder and owner until such time as costs and labour are automatically reduced to a workable level. There is also a certain amount of tonnage partly built, of which the completion has been postponed owing to failure or default by the owners; but most builders are to be congratulated in that,

although the slump came on them like an avalanche, they have been caught by really very few defaulting owners.

Many builders are now becoming very short of work, and are prepared to contract at very low figures, which only leave them the smallest of profit, but none of our tramp owners consider that prices are as yet sufficiently low to justify their contracting for further tonnage. Until the cost of labour and material is still further considerably reduced, we fear that many builders are faced with a very quiet time.

Builders can now bring down their actual ship costs, exclusive of any profit, to perhaps two and a half times in excess of pre-war, but the marine engine builders cannot yet in any way approach that reduction, their costs being still nearer four times pre-war, the result being that the engineers' problem is even more difficult of solution than that of their shipbuilding colleagues. We, however, hope and believe that within the next few months builders will succeed in further cutting their prices to about twice pre-war costs, when a renewal of orders for our staple industry must inevitably come.

The price of coal has now almost reached reasonable limits, from an owners' point of view, being at least 50 per cent. cheaper than six months ago, with the result that practically all tramp oil-burning tonnage has been perforce obliged to reconvert to coal in order to avoid laying up, and surely this factor should be an object-lesson to our leading oil groups—that, if they are to hope to retain and increase their fuel bunkering business, their price per ton must drop to not exceeding twice the cost of coal bunkers. A striking example of the danger of lost trade to the oil groups is that practically all tankers, outside the big companies, have been likewise forced to return to coal burning.

It is now the opinion of many shipping experts that the bottom of the slump has been reached, and that with the turn of the year we shall see a slow but steady improvement generally. We partly share these views in that we also consider the bottom in prices has now been touched, but we anticipate a considerable halt and many months yet before the improvement is visible and our locked-up tonnage can be released in any large quantities.

BUILDING TRADE.

Mr Herbert Jeans, writing in the *Chamber of Commerce Journal*, says that the two outstanding events in the building industry during the past year were, undoubtedly:—

(1) The collapse of the Government housing schemes in England and Wales.

(2) The reduction in wages in the building trades.

These two events must, necessarily, have a far-reaching effect upon the industry, for the reasons that the former practically brings with it the end of Government control in building, whilst the latter marks the first step towards that reduction in the cost of building which is so necessary for the industry's return to normal conditions.

The Housing Schemes.—The collapse of the Government housing schemes, which came about with such dramatic suddenness last July, will, doubtless, be impressed on the public memory by the heated Parliamentary debates with which it was attended. It will be remembered that the Premier, on being twitted with the non-fulfilment of his promise to make this country "a land fit for heroes to live in," retorted that we have done more in the United Kingdom for the housing of the people than has been done by any other country in the world. This being so, a halt was called to the enormous public expenditure on housing. At that time some 25,000 to 30,000 houses, out of the 80,000 that we were assured in 1920 was the minimum requirement, had been built, at a cost of £800 to £1,200 each. These might have been built before the war at about a quarter of the price. It was obvious that such a rate of expenditure could not be allowed to go on, especially in view of the fact that falling wages in all industries were making it increasingly difficult for the tenants of the cottages to pay anything approaching an economic rent. It was, therefore, very prudently decided to finish only those schemes for which approval had already been given, but to enter into no further commitments for the time being. This decision, however, applied to England and Wales only. Scotland has an extension in regard to its housing programme for a period of two years; and some excellent schemes are going forward in that country.

Considerable ingenuity is being shown in devising new building methods, both as regards materials and plant, as visitors to the building exhibitions at Olympia, which are now being held for three years in succession instead of biennially as hitherto, must be aware. Concrete and ferro-concrete are coming more and more into favour as a build-

ing medium, and the developments in systems of construction consist mainly of variations of the concrete block and slab. In factory construction it is becoming the custom to build on the "sectional" system, whereby a building can be planned and designed in such a manner that it may be commenced on a small scale and added to, section by section, as the needs of the business grow, the main architectural features of the building being preserved throughout its growth.

The Prospect.—With falling wages and the very much better spirit among the men that exists at the present time than was the case twelve months ago, the prospect for the building trade is certainly brighter than it has been at any time since the war. There is a large amount of building work in the country waiting to be done. The one stumbling-block is the high cost of materials. Manufacturers' costs are not dependent upon wages alone; increased rents, rates, postal and telephone charges, in addition to the burden of taxation, all add to the selling price of the manufactured article, yet there are not lacking signs that the cost of materials will be considerably reduced in the near future, and when that comes about those engaged in the building industry may well look forward to a long period of prosperity.

FURNITURE TRADES.

According to the *Cabinet Maker* :—

"The past year has been one of considerable difficulty for the furnishing trades, and though there have been welcome signs of improvement during the past three months, the period under review has been full of the anxiety attendant upon a period of deflation. On the manufacturing side of the industry, the more far-sighted of its members saw the way in which business was tending, and wrote down their stocks very considerably."

After discussing the economic aspects of trade conditions generally, this journal then proceeds :—

"Owing to the circumstances attendant on the coal strike, business was distinctly bad during the spring and summer. This was not only the case with regard to the home trade, but exports of furniture also decreased steadily, and a great deal of 'slump' talk was indulged in. In some cabinet-making centres steps were taken for the relief of operatives who were suffering as a result of the general depression. Every section of the trade realised that no improvement could possibly take place until a more normal price level was reached. As soon as circumstances forced the trade to the conclusion that wage readjustments must take place trade revived, and has been undeniably better during the autumn. Exports of furniture are steadily on the increase, and there is a welcome optimism in the air. Following the wage adjustments, prices have come down and raw materials have come into the market much more freely at lower rates, and although there is as yet no indication that the trade is abnormally busy, it is certainly in a very much healthier condition than it has been during the year. All sections of the trade have felt the conditions which have existed, but the difficulties have been specially felt by those concerns which during the war were engaged upon munitions, and following the Armistice sought to utilise their plants in the making of cabinet work.

"It may be noted that the wage reductions referred to

have, for the most part, been negotiated without any stoppage of work, as would probably have been the case in pre-war days. A scheme has been devised, and is now in fairly general operation, whereby wages rise or fall in accordance with the cost of living index figure published by the Ministry of Labour."

POTTERY TRADES.

The British pottery industry has come through the year 1921 much better than was anticipated during the dark days of the coal strike, when production came to a complete standstill for the first time for many years. During the stoppage the various firms, especially those producing ordinary domestic ware, &c., were daily receiving cancellations of orders or instructions to delay delivery. It would be difficult to describe the state of the industry when the coal strike ended. It is sufficient to say that it had never before received so disastrous a blow, and it has not recovered from it yet.

When all the circumstances are considered, one realises that the overseas business in pottery-ware has been maintained to a remarkable degree. The statistical "curve" indicates that though extensive business was done in the first half of 1920, the latter part of that year created the highest record of exports for the industry. It was in the first six months of 1921 that the first falling off was noticeable, but even so, the business done was in excess of the first six months of the previous year, while the returns for the last half-year are indicative of a "slump."

The total export business in all classes of pottery-ware during 1921 amounted to £6,390,393, compared with £7,929,689 in the previous year, being a decrease of £1,539,305. Up to June 30, 1921, the exports amounted to £3,541,453 (1920, £3,153,396; an increase of £388,057). During the remainder of the year the shipments amounted to £2,848,940, being a decrease of £692,513 on the first six months, and of £1,927,362 when compared with the second half of 1920. The purchasers in order of volume were the United States, Canada, Australia, British East Indies, Argentine, South Africa, New Zealand, Brazil, France, and Germany.

The home market was never brisk at any time during the year—a fact which is easily understood in view of the widespread unemployment.

The final act of the old year was the official announcement of reductions in selling prices. The "cuts" range from 10 per cent. to 23½ per cent., and it is hoped they will result in a greater volume of business.—*Manchester Guardian Commercial Annual Review.*

BRUSH MAKING.

The British brush trade is fighting manfully against Continental competition, and there is still no saying which way the contest will go. Home manufacturers are doing their utmost to retain overseas connections, and where quality is a consideration they are in many cases victorious. The reorganised methods of production, adopting machinery wherever possible, is something worth recording. Machinery for punching and other operations is being more widely used, and when the time comes for Germany to compete with British buyers in the market for bristles the exchange advantage in selling the finished product will

begin to cut the other way. There has been a fall of from 20 to 25 per cent. in bristles and other materials during the year; it is possible that another 10 per cent. may be shaded off in 1922; and wages in the industry have fallen 7½ per cent. as from January 2nd, with larger cuts in the case of unskilled operatives. The lower prices consequent upon these developments must help to stimulate demand. The shortage of Russian bristles, however, is affecting the good-class export and home trade, with the consequence that whalebone hairbrushes are being made to some extent in place of bristle lines. An interesting development in the British industry is the use of a trade-mark denoting standardised, high quality finish in certain exporting firms' toilet and paint brushes. Free packing is also being introduced—a point of considerable advantage to shippers.—*British Trade Review.*

VII.—TEXTILES. THE COTTON TRADE.

The year 1921 in the Lancashire cotton trade will long be remembered as probably the worst twelve months ever experienced in the history of the trade.

Spinners of yarn throughout the year had a wretched experience. The position became worse almost from month to month. It was impossible to sell the output of the machinery at figures which did not show a loss. Short time on an organised scale was started in the Egyptian spinning section in October, 1920, when it was decided to run the mills only 35 hours a week instead of the usual 48. In the following December spinners using American cotton resolved to work only 24 hours a week. This organised curtailment of production continued until last July. About that time there was a slight improvement in trade, and it was decided to abandon the official scheme of short time. There was no real improvement in business, and the mills worked very irregularly. Rather more orders were booked in September, but the increased demand soon fell off, and in November there was another ballot of American spinners as to restricting the production by 50 per cent., but on the result being made known it was found that the Masters' Federation had not secured a sufficient majority to put the proposed scheme into operation. Throughout the year it was a struggle for spinners of both American and Egyptian yarns to make ends meet, and most of the contracts secured were at prices very little better than stopping machinery. Owing to the large number of looms idle for want of orders, the total consumption of twist and weft was comparatively small. During the latter half of the year there was a distinct improvement in the demand from abroad. A big business was done for China, especially in twofold descriptions, and more recently buying has been on a much freer scale for India. Trade was also rather better in cops for Germany and Holland.

The following is a comparative table of yarn shipments, particulars being given of 1913, the year before the outbreak of war, and the two last years:—

	1913	1920	1921
Lbs.	192,968,400	135,226,200	129,856,900

December 30	31 0	30 6	18 9	18 0

During 1921 Germany, Bombay, Roumania, and Bengal increased their takings of yarn, but there was a falling off in the exports to France, the United States, Belgium, Turkey, and Sweden.

It was a deplorable year for manufacturers of cloth. Compared with the boom period of 1919-20, a remarkable change presented itself. Now and again there were spurts of buying, but the activity did not last very long, and the orders secured were not sufficient to strengthen the position of sellers.

One of the outstanding features was the extensive depreciation in the value of stocks, and this led to great trouble in the completion of contracts. The demand from India was very discouraging. The political unrest abroad was largely responsible for the dull state of affairs. The Gandhi agitation and the boycott of foreign goods had a serious effect upon Lancashire trade. The monsoon was excellent in every respect, and the good crops should have a favourable effect upon trade in the near future. Buying for China was very irregular. Since the turn of the

half-year there has been more activity in standard goods and fancies. Stocks in Shanghai are much smaller than a year ago. Recently there has been rather more business for Java and the Straits Settlements. The outlets of the Near East were adversely affected by the uncertain political situation, but in September there was an extensive buying movement for Egypt, the Levant, and Persia. Trade with South American outlets was blocked by the unfavourable position of exchange. A few months ago there was an improvement in the demand for certain of our colonies, and houses with connections in Australia and Canada reported a larger turnover. In view of the trade depression, it can easily be imagined that unemployment in the weaving towns of Lancashire during the year was on a very extensive scale. The home trade houses experienced big losses, especially during the first half of the year. A slack state of affairs prevailed for calico printers, bleachers, and dyers. Although several cases of financial difficulties were reported, it is satisfactory to know that no really important failure took place.

The following is a comparative table of cloth shipments:—

	Yards.	Square Yards.
1913	6,644,866,100	90,292,766
1920	4,188,511,700	295,630,641
1921	2,572,885,600	125,293,291

During 1921 exports increased, compared with the previous year, to Bengal, Morocco, Germany, and Roumania, but there was a big falling off in the shipments to Bombay, China, Turkey, British West Africa, Egypt, and the Argentine Republic.

The following table shows the Board of Trade figures of total imports of raw cotton and their value during the years 1913, 1919, and 1920:—

Messrs Robert Barbour and Brother write in their annual review:—"India, by virtue of its being the largest outlet for cotton goods, naturally influences the position on this side to a much greater extent than any other country, and to its complete lack of support must be put down in large measure the general stagnation which has characterised the year's trading. The difficulties which confronted Lancashire in the closing stages of 1920 by India's deplorable attitude in respect to obligations it had contracted at the height of the boom have been enormously aggravated during 1921. Dishonoured drafts on a scale hitherto unknown, and amounting to many millions of pounds sterling, still present an impenetrable barrier which nothing so far, save in some instances the grant of exorbitant allowances, has been able to break down. Political propaganda, non-co-operation, 'Swadeshi' in its worst form, the cult of the Gandhi movement, with the boycott of foreign piece-goods imports as its foremost tenet, have all combined to make bad worse and increase the general unrest. Bombay and Delhi have been the headquarters of the trouble, Calcutta has not escaped the contagion, but Madras, generally a law unto itself, did not fall into line with the other large centres, and by going about things in its own way has been the gainer thereby. China has been labouring in troubled waters like every other market, firms only, have been terrific, whilst political intriguing, famine, lawlessness, and wholesale looting have been more rampant than ever, and aggravated later by dear money. None the less, there are more hopes for China than for most quarters, stocks in the interior are light, and if the Washington Conference satisfactorily disposes of a number of questions in which she is particularly interested a healthy business may not be far off. Java and Singapore, have been no exceptions to the general run of the Far Eastern markets, but for the Near East—particularly Egypt—operations for a time assumed quite respectable

proportions. The Western hemisphere, overbought at the top of the market like everywhere else, has had its quota of trials and afflictions to contend with, and Cuba, Haiti, and the West Indies generally have come off badly. The same may be said of South America, though the latest reports indicate an improved outlook, and several of the old-established firms, who, to their credit, have consistently met their engagements, are gradually working off old orders and preparing the way, it is to be hoped, for a resumption of normal trading.

WOOLLEN AND WORSTED TRADES.

The *Yorkshire Observer* writes:—

The year 1921 will be memorable in the annals of the woollen industry.

There was a vivid contrast between conditions governing the trade at the beginning of the year and those that obtained 12 months previously. From a state of unprecedented activity industry had been reduced to almost negligible dimensions, with resultant losses to employers and employed alike. The mills of the Heavy Woollen District, in which there had been a continuous roar of machinery during the war in the production of the cloth for the British, Allied, and American Armies, were comparatively silent.

It is satisfactory to record that at a time when the orders which are keeping mills in better action than for some time past are of only small dimensions and requiring quick fulfilment, there is a growing feeling of confidence that the corner has been turned, and that better times are almost immediately ahead.

Business in and values of tops during 1921 formed a marked contrast with those of the former year. The height of the boom was reached in April, 1920, and following its climax there was a precipitous decline in value, almost uninterrupted until the end of that year, the only deviation from this being a slight temporary improvement between July and August. The year 1921 has presented no such almost unrelieved tale of depression. Two factors exercised a pre-dominating influence upon production and prices. The first of these, the introduction of the Emergency Tariff in the United States, was of comparatively short duration, but the second, the recovery of the German wool textile industry, had far-reaching and more durable consequences. The year opened with an improvement in values, but subsequently weakness supervened until the preliminary effects of the projected United States tariff against wool and manufactures began to influence the market. With the object of escaping the impending duties, American users began to buy heavily, and Bradford firms also sent considerable weights of tops on consignment to the United States. About the middle of March the demand upon Bradford from this source was so considerable that an appreciable improvement in values occurred.

Some idea of the extent of this trade is to be gained from the fact that whereas in December, 1920, the value of tops exported to the United States was £42,933, the values in subsequent months, during which the pre-tariff influence existed, were as follows:—January, £326,127; February, £478,803; March, £398,484; April, £355,342. In May, at the end of which month the Emergency Tariff came into operation, the value of the tops exported fell to £91,021.

As the Board of Trade returns for the United Kingdom in regard to exports of tops do not specifically mention the United States, but include the exports in those to "other countries," there is no record of the weight sold during this unusual demand, which raised the total exports of tops to the high level of 5,845,100 lbs in April, but an American record of United States imports shows that the following weights were received in the five months mentioned:—December, 1920, 40,456 lbs; January, 1921, 571,580 lbs; February, 2,825,786 lbs; March, 4,122,208 lbs; April, 4,805,558 lbs. These figures may be compared with the United Kingdom exports to "other countries" (including the United States) in the three months indicated; February, 991,800 lbs; March, 3,465,800 lbs; April, 4,812,500 lbs. There is no doubt that the greatly preponderating bulk of these exports went to the United States. German demand for tops, and also for considerably larger weights of worsted yarns, resulted in a great improvement in the earlier stages of the Bradford industry. Progress in this respect will be gathered from the following table, illustrating the month exports of tops to Germany in the first 11 months of the year, the exports for the year 1920 being appended for comparison:—

	1920.	1921.
	Lbs.	Lbs.
January	351,900	841,300
February	266,400	490,300
March	281,700	681,000
April	450,300	309,900
May	583,500	311,800
June	578,000	654,000
July	426,200	814,500
August	890,600	1,093,500
September	1,331,900	876,200
October	2,137,500	1,187,400
November	1,065,700	928,800
Total	8,369,700	7,889,600

* Coal mines stoppage.

The general export trade in tops improved in the latter part of the year, and in October nearly all countries took more. The following table shows the progress of the export trade in tops, and includes for comparison the weights exported in 1920 and 1921, during the first 11 months:—

	1920.	1921.
	Lbs.	Lbs.
January	3,983,000	2,175,500
February	4,019,800	1,772,300
March	3,805,600	1,397,500
April	3,822,200	1,672,400
May	3,882,600	2,213,100
June	3,092,500	1,545,300
July	3,505,200	1,611,300
August	3,705,700	2,091,800
September	3,299,500	1,975,000
October	3,871,800	3,449,600
November	3,685,700	3,045,600
Total	40,671,600	21,742,300

* Coal mines stoppage.

WORSTEDS.—Throughout the year the demand for Huddersfield woollen and worsted textiles ran mainly on worsteds, so that the worsted manufacturers suffered less severely from the general stoppage of ordering than their colleagues in the woollen section. The reason for the marked preference that was shown throughout the year for worsted cloths was the comparatively slight difference in price between the two cloths, and the fact that the greatly increased cost of the making up of garments caused such buyers as there were to favour the better quality fabrics.

The following table shows the exports of woollen, worsted, and mohair and alpaca yarns in the 11 months of the year, the total quantities and values for the corresponding period of 1920 and 1921 being appended for comparison:—

YARN EXPORTS.

	Woollen.	Worsted.	Mohair and Alpaca.
	Lbs.	Lbs.	Lbs.
1921.			
January	418,000	1,394,500	248,700

Values	£431,707	£4,596,089	£1,988,158

MOHAIR.—Pre-war trade in mohair was dependent in a preponderating degree upon the use of Bradford's semi-manufactures on the Continent, mainly in Germany and Russia, and the fact that the year just closed has witnessed comparatively little business in the fibre is directly due to the abnormal conditions obtaining in these two countries.

As far as Russia is concerned, business in mohair semi-manufactures has been practically non-existent, owing, of course, to the incapacity of Russia to trade on anything like normal pre-war lines in consequence of the chaotic political and economic conditions in that country.

In pre-war days, however, the bulk of the mohair yarns produced by Bradford spinners found an outlet in Germany, where, to a large extent, the yarns were employed in the production of plushes of all descriptions, which, being in the nature of a luxury trade, is, of course, one of those which have made slow recovery since the war. The trade with Germany showed some signs of returning activity at one time during the year, but it did not develop on the lines of its opening promise.

PIECES.—In the production of tops and yarns the Bradford trade experienced a much more satisfactory year than the manufacturing and merchanting section of the industry, which is still slowly recovering from the cumulative effects of several heavy blows, a full recital of the consequences of which would make a gloomy narrative.

That the piece trade is suffering from an inundation of misfortune is an apt simile, and, tracing the flood back to its source, the discovery is made that it consists of the confluence of two or three parallel tributaries.

When wool, tops, and yarns were falling in 1920, Bradford endured a hailstorm of cancellations of orders for piece goods, already made, in process of production, or in prospect. This in itself reacted upon raw material and semi-manufactures, and from the middle of April last year the trend of values of these was downwards almost without interruption. About 12 months later, wool had become relatively very cheap, and, in many instances, actually cheaper than in the period immediately prior to the war.

Not long afterwards German users seized the opportunity to re-clothe their machinery, and became the heaviest buyers of raw material, and also very large purchasers of tops and yarns.

Accordingly, the position arose in which Germany resumed production out of cheap wool simultaneously with the period when Bradford was burdened with extraordinary stocks of finished goods, made out of the highest-priced semi-manu-

factures. Large blocks of Bradford capital were locked up, fresh potential financial resources were frozen at the source, while, on the other hand, a vigorous Continental competitor was obtaining raw material extraordinarily cheap in sterling, and was soon able to offer finished fabrics, made subject to the advantage of lower costs of production, against Bradford's goods left high and dry by the effects of the slump.

The foregoing is an outline of circumstances which necessarily have made trade extremely difficult and harassing. Foreign competition has arisen when many factors have been in favour of the Continental seller, and simultaneously the Bradford trader has been badly handicapped by the financial aftermath of the boom. In addition to this, the general depression of home industry resulted in but a poor internal market.

The value of the export trade in woollen and worsted tissues in the first 11 months of the year appears to bear favourable comparison with that of the last pre-war year. For instance, the worsted tissue exports in the period January-November this year were of the value of £10,346,378, as compared with £5,579,742 in the corresponding period of 1913, while woollen tissues exported this year were of the value of £23,097,835, compared with £13,315,799 in the first 11 months of 1913.

In regard to quantities, the following tables show the exports of woollen and worsted tissues in the first 11 months of the year:—

WORSTED TISSUES.			
	Sq. yds.		Sq. yds.
January	3,990,800	July	2,763,600
February	3,596,500	August	2,947,400
March	2,833,800	September	3,303,400
April	3,926,200	October	3,958,000
May	2,432,700	November	4,026,600
June	2,740,900	Total	36,519,900
WOOLLEN TISSUES.			
	Sq. yds.		Sq. yds.
January	9,768,200	July	5,221,200
February	7,128,400	August	5,284,800
March	6,222,800	September	6,104,200
April	6,249,100	October	7,058,100
May	5,058,700	November	6,961,800
June	4,352,500	Total	66,459,900

The exports of worsted tissues in the corresponding period of 1920 amounted to 73,086,600 square yards, and those of woollen tissues amounted to 178,121,300 square yards. Although there are no statistics available to afford accurate information upon the point, there is little doubt, in consideration of the relatively small employment of the looms this year, that a great quantity of the piece goods exports

during the year consisted of deliveries from stock, and that, therefore, the export figures are illusory in reference to the extent of new business.

COLNE VALLEY.—The tweed trade of the Colne Valley has passed through the most disastrous year experienced in its history. The demand for low and medium-class woollens was extraordinarily small. Such demand as did exist was largely for the better classes of woollens. The output of military and standard cloths, also, was remarkably small, unemployment and under-employment were rife throughout the year, and in every way there was a marked contrast between existing and normal conditions. In the old days there was a local saying that the Colne Valley manufacturers were not happy unless their machinery was being run night and day, and, during the war period, the mills were open almost continuously. During 1921 the exact opposite was the case, and except in the first two and the last month of the year, the manufacturers were greatly exercised in finding work of any sort on which to keep their operatives employed.

The position at the beginning of the year was worse than it appeared, for the reason that, owing to financial upheavals and consequent cancellations of orders on an unprecedented scale in 1920, there was practically no new business, and the mills were only run a few hours per week. Work was proceeding on orders booked months previously, and no new orders were being brought forward to take the places of those which were expiring. Orders placed in November and December, 1920, helped to give work during the first two months of the year. The goods then being manufactured were mainly standard cloths and military goods.

RAGS AND SHODDY.—When the year 1921 opened auctioneers, merchants, and the shoddy manufacturers alike declared that in their own and their predecessors' experiences conditions were never so adverse. The boom during the war brought remarkable profits, and in many cases fortunes had been amassed of which the most sanguine could never have dreamed. Some to-day are in comparative affluence as a result of the boom. But, it must be confessed, they are a minority, and they were fortunate enough to unload their stocks before the slump set in.

BLANKETS AND RUGS.—Like other sections of the woollen textile industry, the blanket trade suffered considerably in the slump that set in during 1920, though in a lesser degree than the cloth trade. When 1921 opened the industry was at a low ebb. Prices were falling, and it was found ex-

tremely difficult to influence new business. There was, however, a big scarcity of blankets in the world, otherwise the blanket factories would have experienced an even leaner time.

Some substantial foreign orders kept certain mills nicely engaged in the earlier months, but the coming of the coal stoppage made matters difficult. There was a period during which, for the first time on record, all the mills at Earlsheaton—notable for its production of rugs and blankets—were completely closed down.

Since the settlement of the coal dispute, however, fairly good running has been maintained in most mills, and for a period in the autumn the blanket departments of some were in action day and night. A month ago there was another slackening, but the last fortnight of the year has seen a revival, within limited dimensions, and there is a quiet optimism among manufacturers that in itself is a good augury. The particular line that has kept machinery going has been white blankets, principally for the home market.

The reversible Botany wool blankets, which are among the luxurious products of the Dewsbury mills, have again commanded some nice orders from China, where, despite the high price, they have been popular among people of means for several years. The blankets are remarkable for their richness of quality and their beauty of design and colour, and they make a strong appeal to the cultured classes in China.

With Japan, also, an acceptable amount of business has been transacted, though financial circumstances and the fact that Japan has herself taken to the production of blankets in recent years have kept exports to that country far below pre-war proportions.

JUTE TRADE.

The following is extracted from Messrs W. F. Soutar and Co.'s circular:—

JUTE.—During the year 1921 prices for first marks have fluctuated from £40 per ton to £25, then up to £34, and now close at £28 per ton. The outstanding features of the year have been continued depression in the cloth and yarn markets, with unremunerative prices, and a short crop of jute, that would have been insufficient for the world's needs but for the large reserve stocks held in Calcutta and also in Dundee. Exchange a year ago was at 1s 5½d for telegraphic transfers, and after rising to 1s 6½d gradually fell to 1s 3 1/32d, though in September it rose to 1s 5½d,

but fell later, and the rate closes for the year at 1s 4d for T.T. Freight in January last year were at £5 5s per 50 cubic feet, and after being as low as 35s are now at 40s per 50 cubic feet.

Cloth and Yarns.—During the first half of the year prices for Hessian steadily fell until 3 30-48d per yard was reached for 40 inch 10½ ounce, and 8-lb cops were sold as far down as 2s 6d per spl., but prices rose in September to 4½d per yard and 3s 6d per spl. respectively. Unfortunately, they fell away again, and the past year closed with Hessian at 3 42-48d to 3 45-48d per yard for 40 inch 10½ ounce, and 8-lb cops at 2s 11d to 3s per spl. Absence of demand for the manufactured article necessitated the curtailment of production for the greater part of the year to about half the normal output of the city, and in consequence there is considerable unemployment. Stocks of jute in Dundee were at the maximum for the year in April, and were estimated at 1,000,000 bales, but in consequence of only trifling arrivals during the summer the estimate fell to 700,000 bales, but recent arrivals have increased stocks by about 50,000 bales.

Estimated stocks in Dundee (including unsold in brokers' hands and standing stock in spinners' hands):—

	1918.	1919.	1920.	1921.
	Bales.	Bales.	Bales.	Bales.
At December 31st	600,000	800,000	750,000	750,000
Arrivals at Dundee (direct and coastwise), July 1st to December 31st	871,806	722,052	234,813	209,296
At sea to Dundee	86,000	218,281	204,995	63,326
Vessels loading and to load for Dundee to December 31st	50,000	50,000	40,000	20,000
	1,007,806	990,335	479,808	292,622

Closing prices at December 31st:—

Jute 1st Marks.	Hessians—	8-lb Cops.
C.L.F.	40 in. 10½ oz.	Per Spl.
£ s d	Per Yard.	Per Spl.
1913	35 7 6	2/11 to 2/11½
1914	18 10 0	1/11
1915	27 10 0	3/10 to 3/10½

LINEN DURING 1921.

There have been dull years before in the history of the Irish linen trade, but none so depressing as the period of 1921. The fall in values began to manifest itself in autumn, 1920, and though it was hoped fortunes would turn with the New Year, matters even got worse, and reached the climax in July last, since when the situation has been easier, though as yet it is far from what might be desired. As a matter of fact, while the United States,

which in normal years takes around 50 per cent. of total British linen goods exported, are beginning to show more activity in buying, a real revival can only come when the exchanges for Europe show a big improvement. With linen fabrics at prices highly prohibitive to home buyers, it cannot be expected that people overseas financially embarrassed will be eager to pay, owing to the adverse exchanges, two and even three times these quotations. It must be remembered, also, that linen at all times is regarded rather as a luxury commodity than as a necessity. Although a gleam of brightness began to show itself with September's oncoming, the activity continued only gradually, and not with sufficient briskness to compensate for the heavy decline during the earlier eight months. As in the sister textile industries, the financial strain was acute, and might have been disastrous to many concerns but for the assistance rendered by the Linen Trade Corporation. This organisation, with its board of directors composed of leading men in the industry, all of them heads of linen firms—acting in co-operation with, and having the goodwill of, the various North of Ireland banks—fulfilled excellent purpose in stabilising the trade by providing concerns carrying heavy stocks with financial accommodation, so that failures and the utter demoralisation of prices have been prevented. Nevertheless, very few linen companies were able to declare their usual dividends. How moderate was the buying of linen last year is best revealed by the Board of Trade returns of exports:—

	1920.	1921.
Linen piece-goods	11,344,130	3,601,739
Table linens	2,351,149	1,805,183
Handkerchiefs	1,135,521	742,769
Linen thread	1,704,663	620,287
Unenumerated	5,707,733	2,882,500

Hence the total value of exports of all linen good for last year was only £9,652,470, against £22,144,196 in 1920 and £8,247,763 in 1913.

As regards imports of flax and tow, these only reached 3,620 as against 20,888 tons for the previous year and 84,270 for the year 1913. Undoubtedly, had buying been in any degree active, last year's scanty raw material supplies would have been quickly exhausted, and it is just this scarcity, with no hopes of further replenishment, which is the menace threatening the prospects of the linen industry during the present year. However, those concerned are in general optimistic of steady improvement in business.

APPENDIX.

(A) WHOLESALE PRICES OF COMMODITIES.—SELECTED DATES, 1914-1920; AND MONTHLY, 1921.

NOTE.—The following tables give the variations in prices of the commodities on which the Economist Index number is based. In cases where the exact quotation ceased to be given during the war the nearest available quotation has been given.

Value of Imports	£27,561,071	£23,238,993	£44,690,590

WATCH NEW SOUTH WALES GROW!

AUSTRALIA'S AMBITION is to MANUFACTURE and export as a FINISHED ARTICLE as much as possible of her WONDERFUL PRIMARY PRODUCE; the Governments of the Commonwealth and of New South Wales are anxious to assist, and public opinion sustains the adoption of a policy by which this ambition may be achieved.

NEW SOUTH WALES PRODUCES THE MATERIAL, and MEN OF FORESIGHT, BUSINESS ABILITY and CAPITAL are required to assist in BRINGING IT TO FRUITION.

Many POWERFUL INTERESTS have already BROKEN NEW GROUND. During 1920, £20,000,000 was subscribed to establish new industries, but the field is still large and inviting.

TURN TO THE NEW WORLD FOR OPPORTUNITY!

(D) THE FOREIGN TRADE OF THE UNITED KINGDOM.

	Imports.		British Exports.	
	1920.	1921.	1920.	1921.
I.—Food, Drink, and Tobacco—				
A. Grain and flour	231,635,600	138,084,686	2,773,296	3,903,897
B. Feeding-stuffs for animals	8,899,802	6,599,366	1,075,209	1,529,614
C. Meat	141,527,296	132,968,634	829,515	865,516
D. Animals, living, for food	..	2,804,427	13,889	45,126
E. Other food and drink, non-dutiable	174,795,109	165,590,765	37,165,402	26,053,292
F. Other food & drink, dutiable	174,030,078	98,384,473	..	..
G. Tobacco	34,919,890	22,814,296	9,129,149	5,060,711
Total, Class I.	765,807,875	567,246,641	50,936,451	37,467,956
II.—Raw Materials and Articles mainly Unmanufactured—				
A. Coal	26,633	12,129,951	99,637,146	42,951,591
B. Other non-metallic mining and quarry products and the like	9,669,828	6,329,123	2,403,370	1,152,801
C. Iron ore and scrap	20,797,171	5,071,928	626,360	228,753
D. Non-ferrous metalliferous ores and scrap	17,705,166	8,089,664	2,201,244	1,591,369
E. Wood and timber	82,145,214	30,039,165	1,011,566	367,003
F. Raw cotton & cotton waste	256,678,879	73,529,907	3,075,571	728,152
G. Wool, raw, and waste, and woolen raws	33,099,664	43,405,690	8,768,294	4,530,748
H. Silk, raw, knubs and noils	4,067,632	953,480	94,169	32,326
I. Other textile materials	32,720,333	9,874,044	634,090	616,953
J. Oil seeds, nuts, oils, fats, resins, and gums	82,157,280	36,196,788	15,538,497	6,050,851
K. Hides and skins, undressed	31,967,112	10,925,201	4,034,117	1,291,453
L. Paper-making materials	33,250,413	13,856,238	2,510,119	818,541
M. Rubber	26,730,706	10,497,839	520,946	120,340
N. Miscellaneous raw materials and articles mainly unmanufactured	19,339,904	8,478,630	6,472,584	3,078,375
Total, Class II.	710,365,635	271,176,698	145,515,803	63,569,856
III.—Articles Wholly or Mainly Manufactured—				
A. Coke & manufactured fuel	10,540	241,615	20,692,095	3,428,482
B. Earthenware, glass, abrasives, &c.	11,113,226	7,014,346	18,290,663	12,080,036
C. Iron & steel & manufactures thereof	29,016,755	22,887,372	128,907,361	63,772,453
D. Non-ferrous metals and manufactures thereof	39,132,561	18,467,560	25,781,789	11,733,687
E. Outlets, hardware, implements, and instruments	10,603,510	6,657,742	13,596,004	8,954,338
F. Electrical goods and apparatus	1,826,177	1,931,362	11,601,150	13,065,415
G. Machinery	19,963,798	10,785,006	63,432,368	74,630,495
H. Manufactures of wood and timber	8,630,915	4,921,938	2,830,583	1,905,839
I. Cotton yarns and manufactures	9,820,277	5,890,647	401,440,272	178,709,912
J. Woolen and worsted yarns and manufactures	17,688,151	7,694,043	134,859,043	55,103,762
K. Silk and silk manufactures	36,909,099	19,337,337	5,194,476	2,283,196
L. Manufactures of other textile materials	23,116,430	8,194,001	46,009,262	18,538,381
M. Apparel	15,094,112	9,600,918	48,963,339	18,391,826
N. Chemicals, drugs, dyes, and colours	34,389,497	12,682,196	40,535,722	19,067,241
O. Oils, fats, and resins manufactured	76,853,313	56,589,249	13,626,432	5,230,435
P. Leather and manufactures thereof	20,445,154	5,666,549	11,664,944	4,760,506
Q. Paper and cardboards	30,243,744	11,601,303	12,810,406	7,736,444
R. Vehicles (including locomotives, ships, & aircraft)	27,221,754	6,907,281	60,098,318	57,611,112
S. Rubber manufactures	7,102,553	4,919,737	11,520,255	4,669,378
T. Miscellaneous articles, mainly or wholly manufactured	34,398,274	20,155,352	49,005,338	27,104,968
Total, Class III.	463,439,840	245,045,553	1,119,739,723	548,664,977
IV.—Animals, not for food	401,739	393,813	4,806,512	3,448,525
V.—Parcels Post, non-dutiable articles	2,643,792	2,825,502	13,471,780	10,065,668
Total.	1,332,648,881	1,086,687,213	1,334,469,269	703,196,282

(E) ANALYSIS OF CAPITAL APPLICATIONS ON LONDON MONEY MARKET.

Analysis of New Capital Applications.

	Year 1921.			
	Whole Year 1920.	Three Quarters to Sept. 30.	Fourth Quarter.	Total for Whole Year 1921.
British Government Loans	37,530,700	59,248,800	143,647,500	202,896,300

CHARLES ARCHIBALD, President.

AUDITORS' CERTIFICATE.

H. A. RICHARDSON, General Manager.

We have examined the books and accounts of the Bank of Nova Scotia at its Chief Office and have been furnished with certified returns from the Branches, and we find that the above statement of Liabilities and Assets as at December 31st, 1921, is in accordance therewith. The Bank's investments and the securities and cash on hand at the Chief Office and at several of the principal Branches of the Bank were verified by us at the close of business, December 31st, 1921. In addition we visited the Chief Office and certain Branches during the year, when we checked the cash and verified the securities and found them to be in agreement with the books. We have obtained all information and explanations required, and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank. And we certify that the above statement of Liabilities and Assets as at December 31st, 1921, is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

Toronto, Canada, 16th January, 1922.

AUDITORS' REPORT TO SHAREHOLDERS

We have compared the above Balance Sheet with the books and accounts at the Chief Office of The Dominion Bank and the certified returns received from its Branches, and after checking the cash and verifying the securities at the Chief Office and certain of the principal Branches on December 31st, 1921, we certify that, in our opinion, such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs, according to the best of our information, the explanations given to us and as shown by the books of the Bank.

In addition to the examinations mentioned, the cash and securities at the Chief Office and certain of the principal Branches were checked and verified by us at another time during the year and found to be in accord with the books of the Bank.

All information and explanations required have been given to us and all transactions of the Bank which have come under our notice have, in our opinion, been within the powers of the Bank.

Toronto January 19th, 1922.

THE INVESTOR'S MONTHLY MANUAL. 1864.

NEW YEAR DOUBLE NUMBER.

The Double Number of *The Investor's Monthly Manual*, published on January 3rd, 1922, gives, in addition to the usual information,
the highest and lowest prices of all stocks and shares for 1917, 1918, 1919, 1920 and 1921, the latest quotations for 1921, a tabulated chronicle of
the half-year's events, the names of the markets where each security is chiefly dealt in, besides memoranda relating to the financial position of Foreign
and Colonial Governments, to Railways, &c., &c. In addition, there will be furnished the addresses of the various companies, with the names of the
Chairmen and Secretaries or Managers.

TO ADVERTISERS.

The Investor's Monthly Manual is published at the beginning of each month, and is by far the MOST COMPLETE PERIODICAL RECORD in
existence of the dealings, throughout the United Kingdom, in every description of stocks and shares, &c., &c. Over 4,000 securities are dealt with each month,
showing recent dividends and yields at latest prices. The *Manual* also contains a valuable summary of Profit and Loss Accounts each month.
It is absolutely free from any connection with any financial house or speculative agency, and it is subscribed to by Investors of all classes, as well as by
Banking Houses, Chambers of Commerce, Mercantile Firms, Stockbrokers, Railway, Insurance, Shipping, and other Companies throughout the United
Kingdom, the Colonies, and abroad.

Its circulation, therefore, is of a widespread and influential character, and it is a most valuable medium for advertisements of all descriptions.
The *Manual* will be found especially suitable for advertising debentures of every kind, prospectuses of limited liability companies, and investments of
all descriptions; and for giving publicity to the announcements of banking, insurance, and other companies, publishers and auctioneers. Its importance to
the general advertiser can hardly be over-estimated.

The above number has a LARGE ADDITIONAL CIRCULATION, and, being greatly used as a work of reference, it affords an excellent
opportunity for giving a PERMANENT PUBLICITY for advertisements.

Post Free 2s. 3d. (Ordinary numbers, Post Free 1s. 8d.) Annual Subscription £1 1 0.

COMPANY MEETINGS, &c.

MIDLAND RAILWAY COMPANY.

CHAIRMAN ON COMPANY'S POSITION AND PROSPECTS.
ANSWER TO AGITATION FOR REDUCTION IN TRANSPORT CHARGES.
NECESSITY FOR LOWER WORKING COSTS.

CHAIRMAN'S RETIREMENT—THE NEW CHAIRMAN.

The annual general meeting of the Midland Railway Company was held at Derby on the 16th instant.

The Chairman of the company, Mr Charles Booth, in moving the adoption of the report and accounts, stated that the memorial erected to the memory of the company's employees who gave their lives in the Great War was completed and unveiled in December last. He had no doubt a large number of the shareholders had already seen the memorial, and hoped that those who had not yet done so would take an opportunity of viewing it before leaving Derby. He felt sure they would all agree that it was a monument worthy of the best traditions of the Midland Railway Company. It would stand for all time to the honour and glory of those to whom it was dedicated, and would be a constant reminder to posterity that when the country asked its sons to come forward in its defence, the men of the Midland Railway were not appealed to in vain.

HOSPITAL FINANCE.

Continuing, he said that the proprietors were no doubt aware, from Press reports, of the critical financial position in which the hospitals now found themselves, a position which threatened to break down the whole voluntary system throughout the country, and to throw the hospitals upon the already overburdened ratepayer and taxpayer, with the consequent blighting influence of Government control.

The Midland Company had always subscribed to hospitals in the large towns on its system, and the directors had made occasional large grants to the Derby Infirmary with the sanction of the shareholders.

A financial scheme had recently been put before the Midland Railway Friendly Society, and unanimously approved by it, which involved a weekly contribution from all weekly-paid employees, supplemented by a contribution on the part of the company.

The board had considered this scheme and approved in principle of the proposals embodied in it, and, subject to its being generally adopted by the staff, they were prepared to recommend it to the shareholders.

On the basis suggested the company's annual contribution, if the scheme were universally applied, would substantially exceed the present subscriptions, but the alternative would be a much greater sum in rates, and he was confident that the shareholders would approve of the policy of the board in the matter.

Mr Booth then referred to the Railways Act, 1921, and explained its provisions having reference to grouping and the amalgamation of the constituent companies in the various groups. He pointed out that since the passing of the Act the board had been giving their most careful consideration to the many important points which arose on the application of the statute, and that as soon as it was possible, after consultation with the other constituent companies, for the board to lay before the shareholders any scheme or schemes which they could recommend for acceptance. He further explained the agreement come to between the railway companies and the Government, under which the compensation paid by the latter had been fixed at the figure of £60,000,000, and dealt with the arrangement arrived at with the employees as to the establishment of central and local councils. He also paid a warm tribute to the valuable services rendered to the railway companies by Major Hills, M.P., a member of the board, during the passage of the Bill through Parliament.

Proceeding, the Chairman said:

TRANSPORT CHARGES AGITATION.

I am sure the shareholders will expect me to say something in regard to the agitation which is going on in the Press throughout the country for a reduction in transport charges.

I am one of those who hold the strong opinion that the sooner not only railway charges, but also the cost of everything else is brought down the better. Better for trade, better for the public, and better for the railways.

Roughly speaking, the position is this. Railway freights at termination of the war were, on the average, up—merchandise about 116 per cent., coal about 75 per cent., passenger fares were at a figure of 75 per cent. over pre-war.

Certain reductions have already been made in the rates for heavy traffic, such as coal, ironstone, limestone, &c., to the extent of reducing the percentage of increase from 100 per cent. to 75 per cent., and the flat rate from 6d to 4d per ton.

The operation of these reduced charges will, as the Midland Company are large carriers of raw materials, if the volume of traffic does not increase, mean quite a considerable loss in revenue; but we, and the other railway companies in England, having carefully considered all the circumstances, came to the conclusion that some relief should be given.

IMPOSSIBLE REDUCTION DEMANDS.

Considerable disappointment has been expressed because no general all-round reduction has been made, and certain trading federations and councils are demanding that the companies should make a general substantial cut in all freights, the reduction asked for being a minimum of 50 per cent. off the increases put on during the war. Some say nothing short of a 75 per cent. reduction will do, while others demand pre-war rates.

My first observation shall be that I wish we could meet their demands to the full. My next statement shall be that under present conditions the suggestions, as a whole, are impracticable, and that it would be impossible for the railway companies to live under them.

Whatever opinion traders may hold from their point of view, your board have very decided opinions of what their duties to the shareholders are, and they will not do anything which will in any material way adversely affect the dividends at present paid to the shareholders.

The traders should remember that when Parliament in 1914 took over the railways they limited the profits of railway companies to their 1913 figures, and this limitation operated for seven years. During the greater part of the time practically every other industrial undertaking was paying increased dividends, or at any rate was making largely increased profits.

I am sure no one in this room will say, and I certainly do not think anyone outside is entitled to allege, that railway shareholders are receiving exorbitant dividends. In fact, I agree with the generally expressed opinion that the return on the capital invested in British railways is very modest, and, unlike many other industrial concerns, the railway companies have no big wartime profits to set against current losses.

In dealing with the proposal that rates must be reduced, your board can only deal with the case on the facts as they exist. Let me give you a few figures showing exactly how we stand.

RAILWAY WORKING COSTS—WAGES.

There is no getting away from the fact that wages are by far the most predominating feature of railway working costs, and to show you what has happened and how those costs are working against profits let me give you the following information.

Before the war, the number of staff employed on the Midland Railway was roughly 73,000, and the total salaries and wages bill was £5,690,000. In January, 1921, the number had increased to 80,900, an increase of 11 per cent., whilst the salaries and wages bill had reached a figure of £17,800,000, or a percentage increase of 214 per cent. over pre-war. In January of this year the total staff was 72,500, or a decrease of 0.7 per cent. on pre-war figures, and assuming that this number of staff continues to be employed during the whole of the year, the salaries and wages bill will approximate to a figure of over £13,000,000, or 130 per cent. over pre-war.

It may seem strange that we are for the moment able to work the line with a less number of staff than that employed in 1913, but this arises entirely from the reasons which I will explain.

POSITION AT END OF GOVERNMENT CONTROL.

When Government control ceased to exist in August, 1921, matters were in an extremely unsatisfactory position. Traffics were bad, we were committed to the end of the year on our coal contracts at very high prices (200 per cent. over 1913), with stores at more or less similarly inflated prices, and it was absolutely necessary to cut down costs. We had to place our shops on short time, and ruthlessly cut down in other directions, including the discharge of several thousands of our employees.

You will realise, however, that such drastic treatment could only be of a very temporary character, and we shall during the present six months have to make up at least some portion of this lee-way. In spite of continued reduction in cost of stores I really do not see, from the information I have received, that we can look for very much, if any, reduction in the near future in our working costs.

With regard to wages, as a commercial proposition I believe you will agree with me that it is impossible for the present condition of things to continue indefinitely. Under the agreements existing, which were agreements made by the Government, a sliding scale of reductions operating against wages in ratio to the decreased cost of living is in force, but even allowing for these agreements operating to the full, the result is that the wages are on the average fixed at a base rate equal to practically 100 per cent. over pre-war. This it must be borne in mind is the base rate, but having regard to other concessions given in the same agreements as to payment for overtime, Sunday duty, night duty, &c., the earnings of the men are brought up to a larger figure of percentage than 100 per cent.

I don't want, for the moment, to labour this point. I believe the union officials are seized with the importance of it. I hope I am not going too far in saying that they fully realise the importance of it from a national point of view, and that from a mutual consideration of all the facts some method will evolve by which, without serious trouble or strife, a revision of existing conditions will be carried out.

To sum up the whole position with regard to rates, I wish to say that the board is fully alive to the fact that present conditions as to charges are abnormal and should be adjusted as quickly as possible, and in so far as may be consistent with their obligations to the shareholders they will do their utmost to assist the traders in the direction they suggest.

ACCOUNTS—EXPENDITURE ON CAPITAL ACCOUNT.

Turning to the accounts, you will see from statement No. 4 that the expenditure upon capital account for the year amounted to £116,024, the principal item being for rolling-stock. We have continued to restrict capital expenditure to works urgently required, and the total for the year is less than half the estimate shown in the 1920 accounts.

NET RECEIPTS.

Passing to statement No. 8, it will be seen that the decrease in net receipts, taking them to the line above which the Government guarantee operated, and comparing 1921 with 1920, is £516,820. If we compare 1921 with 1913—the base year—the reduction is £607,604. The proprietors must not, however, assume that the whole of this loss of revenue arose in the post-control period of four and a-half months, for such was not the case. You must remember that the full net receipts of 1913 were not guaranteed. The companies had to bear part of the war bonus paid to employees, and there are in addition certain amounts which cannot be charged against the Government account under the agreements, and must be borne by the company. There are, further, items of expenditure in the control period which may be in dispute between the company and the Ministry of Transport.

ALLOTMENT FROM COMPENSATION FROM GOVERNMENT.

If, after making allowance for these debatable points, we make a separate comparison of the net receipts, to the line, for the control and post-control periods respectively, with the corresponding periods of 1913, we find the decrease for the period January 1st to August 15th was £193,953, and for the period August 16th to December 31st £413,651. To make this good, and to enable last year's dividend on the deferred stocks to be paid, we have appropriated £500,000 from the £2,900,000 which I have already referred to as having been received from the Government. The Act of 1921 lays down that these moneys may be applied for any purpose for which the earnings of the company may be properly applied—the payment of interest or dividend being specifically mentioned as one of them.

DIVIDENDS.

Statement No. 9 shows the proposed appropriation of net income. We recommend the same dividend as was paid 12 months ago, being at the rate of 2½ per cent. per annum on the preferred converted ordinary stock, and 4½ per cent. per annum on the deferred converted ordinary stock, equal to 7½ per cent. per annum on the old unconverted ordinary stock, and we carry forward £165,334 to the next account.

BALANCE-SHEET ITEMS—ASSETS.

Passing over statements Nos. 10 to 17, which are omitted under the authority of the Ministry of Transport, and about which I shall have something to say before I sit down, we come to No. 18, the general balance-sheet. Dealing first with the assets, you will be pleased to note that the large decrease in cash at bankers and in hand, which I referred to a year ago, has been made good. There is a decrease in investments in Government securities, owing

to realisations. Stock of stores and materials is reduced in value, owing to fall in prices. The only other item on the assets side which shows a striking variation from the 1920 figures is accounts receivable, in which is included the amount allocated to the company in the recent distribution of compensation from the Government.

LIABILITIES.

Turning to the liabilities side, the increase in amounts due to railway companies and committees is owing to the cessation of Government control and the reintroduction of the divisions of receipts from through traffic, the Midland Company being a large cash-taking company in respect of through traffic.

The savings bank and superannuation fund show normal growth. Accounts payable are less by reason of the fall in prices.

Compensation under the Railways Act, 1921, appears on this side of the balance-sheet as a special item, the amount being £2,411,286, which is the net figure after deducting the £500,000 appropriated to revenue.

As to the depreciation funds, while the figures shown may be regarded as satisfactory, I do not consider them any too large in view of the heavy arrears of maintenance which have to be overtaken. The general reserve stands at £2,244,162, but we are not in a position to recommend a further appropriation to it this year.

CHAIRMAN'S RETIREMENT.

Before I close it is my duty to tell you that I am now retiring from the position of chairman of this company, which I have held for the past three years. The course taken by last year's railway legislation, with the consequent great increase in the responsibilities falling upon the Midland chairman, and the possibility of still greater pressure in the future, made it incumbent upon me seriously to consider my personal position in view of the call which my own business at Liverpool made upon my time and energy. After much thought, I came regretfully to the conclusion that it had become necessary that I should hand over my responsibilities as your chairman at the earliest possible moment to a successor, who, being a London man, would be able to devote more time and attention than I possibly could to the difficult and intricate negotiations in which we were involved.

NEW CHAIRMAN.

It gives me great pleasure to announce that the board have chosen Sir Guy Granet as their new chairman, and I am confident that the shareholders will agree that no better selection could have been made. Sir Guy's experience as a recent and most successful general manager of the company will stand the shareholders in good stead in these difficult times, and they may look forward to the future with the fullest confidence in his guidance.

TRIBUTE TO BOARD.

In conclusion, I desire to add a few words concerning my colleagues on the board and the officers of the company. It is unusual for a chairman to say nice things to the shareholders about the members of his board, except in cases of death or retirement, or sometimes when he is proposing retiring directors for re-election. I feel, however, that I am justified to-day in taking advantage of a unique opportunity. I assure you that no chairman could have had a more loyal or more capable board than myself, and I am deeply grateful to my colleagues for the united support which they have invariably given me. In these days few people have much that is good to say of railway directors, who indeed have to put up with a considerable amount of not very friendly criticism. As far as your board is concerned, the directors all give close and frequent attention to the affairs of the company, and, in my opinion, they deserve confidence and not criticism.

THANKS TO GENERAL MANAGER, OFFICERS, AND STAFF.

Coming to the officers, I thank them one and all for the support they have given me during my term of office. The company is very fortunate in its present chief officers. They are all devoted to its service, and their ability and high-standing are recognised throughout the railway world. I shall mention one name only—that of Mr Tatlow, our general manager. Ladies and gentlemen, you owe more to Mr Tatlow than you have any idea of. His long experience, great ability, and splendid enthusiasm have been unreservedly devoted to your interests. A better man to work with I have never met. His recent election to the chairmanship of the General Managers' Conference of the Railway Clearing House was a gratifying and well-deserved tribute from his brother general managers.

With the officers I would include the whole staff in my expression of gratitude for good work done during the past year, and throughout my chairmanship.

I regret that it is apparently inevitable that in the near future a considerable change should have to take place in the organisation of the Midland Railway Company, but I hope and believe that the old Midland tradition will be carried on in the new corporation of which this company will form no small part.

PRIVILEGE TICKETS.

I am asked by a shareholder, Mr McAdam, for information as to the number of privilege tickets issued during the year 1921. The answer is 1,676,626.

These tickets, which are charged at one-quarter of the ordinary fare, are issued universally by all the railway companies to the members of their staffs, their wives, and to those members of their families dependent upon them. It is a privilege which is highly appreciated and not abused, and incidentally brings in quite a large revenue to the company. Last year it reached a figure of nearly £93,000.

The number issued, viz., 1,676,000 odd, appears on the face of it to be very large, but when you realise that the staff of the company last year was over 72,000 persons, you will see that the average number of tickets issued to each employee per month is a little less than two. A large proportion of the tickets issued are used by the wives of our servants living in urban and rural districts for the purpose of shopping at the nearest towns, and by the men living in the large towns for the purpose of taking themselves, wives, and children for trips into the outlying country districts on Saturday afternoons. The board have no intention of depriving their employees of this privilege.

Mr McAdam also asks at what number of stations platform tickets are sold. At the present time there are 30 stations on the railway which are "closed" stations, and in connection with which a charge of 1d is made to persons not being intending passengers who desire to go on to the platforms. The number of tickets purchased at these stations last year was 1,610,000.

COAL CONSUMPTION PER TRAIN MILE.

A further request is made that I will give the average coal consumption per train mile during the years 1913 and 1921.

The figures are:—

1913	72.40 lbs
1921	81.76 lbs

In 1913, we were getting our normal supplies from Yorkshire, Derbyshire, and Nottinghamshire collieries. The enginemen, always getting the same class of coal, knew its qualities, knew what they could get out of it, and regulated their firing accordingly.

In 1921, we were for a considerable portion of the year burning just what we could get. A considerable amount was obtained from abroad, some of which was really rubbish, but we had to take it and make the best of it, or close down at all events a portion of our railway. The enginemen complained very strongly. They could not keep up the necessary pressure of steam to enable them to run to time even by burning abnormal quantities, and the whole business was in every way very unsatisfactory.

For these reasons, the figures I have quoted are of no value for purposes of comparison, but now that we are getting back to our 1913 position as to quality, proper supervision can usefully be exercised in respect of the quantity consumed, and I have no doubt much better results will obtain.

FURTHER INFORMATION DESIRED.

Requests have been received from six proprietors that, in submitting the accounts for the year 1921, the company, in respect of the period August 16th to December 31st, should furnish the information provided for in account No. 10 and abstracts A to F. The shareholders are aware that during Government control the accounts had of necessity to be presented in an abridged form.

The period of control continuing until the middle of August, leaving only four and a-half months out of the 12 of independent working, it was the unanimous opinion of the railway companies that the preparation of the 1921 accounts should be on the same basis as those of the preceding year, and the Minister of Transport, being of the same opinion, sanctioned this course being adopted.

The information is asked for on the ground that it would enable shareholders to see whether or not the railway was being economically worked, but I desire to point out that any figures given for this short period would, for the purpose of comparison, be altogether misleading and of no use.

OPERATION DURING 1921 ABNORMAL.

The circumstances operating through the whole of 1921 have been entirely abnormal. Wages were inflated, cost of materials very high, and, although in the latter part of the year, prices showed a steady decrease, they were hardly felt for the reason that we were, up to the end of October, using stores purchased in the first half of the year (it is impossible in a concern of the magnitude of the Midland Railway Company to live from hand to mouth, and adequate stocks must be held), which are charged out at the prices at which they were purchased. Take coal, for instance, owing to the strike, which as you will remember lasted from April until July, we had to purchase considerable quantities of coal at prices going up to 70s a ton; and some of this fuel was used after August 15th. The conditions now, however, are quite different, and we are beginning to feel the effect of the drop in prices.

Further, the control by the Government having extended over a period of seven years, and the conditions as to traffic and working with other companies having radically changed, it has not been possible in the time available definitely to fix in detail the terms of division of receipts and of working expenses with other companies on traffic carried since August 15th, and therefore it has been necessary to include in the accounts a number of estimates of balances. We are convinced that these estimates have been carefully prepared, but whilst they may not prove to be accurate in detail, there will not, we feel certain, be any great divergence between the estimates and the actual figures in total.

1922 ACCOUNTS AS IN NORMAL TIMES.

I hope the shareholders do not think that the board desire intentionally to withhold information from them. At any rate, such is not the case, and it is only because the whole of the companies came to the definite conclusion that it would be undesirable to give information, which, under any circumstances, could only apply to four and a-half months of the year's working included in the accounts, that the figures asked for have not been furnished.

So far as the year 1922 is concerned, unless something unforeseen happens, there will be nothing to prevent the accounts being rendered as in normal times.

I believe the shareholders, as a body, will agree that what has been done is reasonable and sufficient under the circumstances.

The resolutions adopting the report and accounts and declaring the dividend were carried. The retiring directors and auditor were re-elected, and the audit committee was reappointed, the proceedings closing with a cordial vote of thanks to the chairman and directors.

LONDON, BRIGHTON, AND SOUTH COAST RAILWAY COMPANY.

CHAIRMAN'S CRITICISMS OF RAILWAY BILL.

BILL'S ADVERSE EFFECT OF INDEPENDENT ACTION.

ELECTRIFICATION BILL WITHDRAWN.

The one hundred and forty-third ordinary meeting of the London, Brighton and South Coast Railway Company was held on the 15th inst. at the London Bridge Terminus, London.

Mr C. C. Macrae (the chairman) presided.

The secretary (Mr J. J. Brewer) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said: You will remember that my last address to you was at a special meeting summoned in the early summer to consider the provisions of the Railways Bill shortly after its introduction to Parliament, when, after an endeavour to make its complicated provisions clear to you, you were good enough to leave it to us, in concert with other companies, through the agency of the Railway Association, to do what we could to mould those provisions into a form as acceptable to all the companies as might be possible.

It was found that the best, if not the only, mode of fulfilling this task was to entrust it to experts acting for all the companies, and a committee was accordingly appointed for that purpose by the Railway Association.

I shall have more to say presently upon the Act, and I simply refer to it now by way of reminder that, as the Government control of railways came to an end on August 15th last, when we regained full possession of our undertaking, we have become subject to the provisions of the Act and the duties and obligations they impose upon us.

RESULTS OF YEAR'S OPERATIONS.

I will now give you as briefly as possible the results of those operations as set forth in Accounts Nos. 8 and 9. You will see therefrom that the receipts in respect of railway working and separate businesses, together with miscellaneous receipts, after deduction of expenditure, give a net income of £1,344,256, and a comparison of that with the similar figures for 1920 shows a decrease last year of £191,194, while on a similar comparison there was an increase last year in interest, rentals, and other fixed charges amounting to £16,268. This brings the decrease to £207,462, but against that has to be set a sum of £2,622, by which amount the balance brought into the 1921 account exceeded which amount the balance brought into the account for 1920, so that the final result as compared with 1920 is that there was a net loss last year of £204,840.

The actual gross receipts from railway working have increased in comparison with 1920, although there was a considerable falling off in passenger train traffic, and there are increases in gross receipts from separate businesses, that is to say, steam-boats and docks, harbours and wharves, as well as in the miscellaneous receipts. These latter receipts include rents, and from that source alone the return has improved by nearly £66,000.

The total expenditure has decreased by over £208,000, mainly

upon the charges in respect of maintenance and renewal of rolling stock, the expenses connected with docks, harbours and wharves, and in traffic expenses. In these circumstances it is obvious that the net loss I have given you is attributable to the cesser of the State guarantee at the end of the period of control, that is to say, it is the difference between the net receipts from railway working and other businesses during the 4½ months of free working and the net receipts from the same source during the corresponding period of 1913, the standard year under the Government agreements. The cause of that difference is in part the falling off of business, but mainly it is the heavier expenditure due to the increased cost of labour and material with which we are now face to face as compared with our pre-war liabilities under these heads.

RISE IN EXPENDITURE.

As illustrating the rise in expenditure since 1913, I take three of the heavier items—namely, locomotive running expenses, traffic expenses, and rates and taxes, and I find that on a comparison of the figures of last year with those of 1913 there are increases of no less than 178 per cent., 202 per cent. and 106 per cent. respectively.

One of the outstanding features of the account is its indication of the effect the set-back in trade that became so apparent during the past few months has had upon the business of the company, and a significant fact in support of this statement is that there was a decrease of over 9,000,000 passengers carried over the line as compared with 1920, the decrease not being limited to one class, as it extended to first, third and working-class travellers.

There has been an increase of expense in the engineering department, brought about in the main by the fact that we have had to make up arrears in the repairs and renewals of the line, station buildings, bridges, tunnels, and other works, which accrued during the period of the war, and although the greater part of this expense has been met by Government payments under agreements, it has been swollen by the cost of exceptional repairs, such as the important work in the Oxted tunnel, which has been proceeding during the greater part of the year, of which cost an unsubsidised part has been borne by the company.

SAVING IN COAL.

In the locomotive department one item of increase in the running expenses was the greater cost of coal, a cost that was augmented very considerably by the deplorable strike of miners which lasted from April 1 to July 1, and necessitated our purchasing coal from the Continent and from America at very high prices and of inferior quality. I am glad to say that we have been able to place our contracts for this year on a much more favourable basis, and there ought to be a very substantial saving in the cost of the coal consumed on our railway during the current year.

RAILWAYS COMPENSATION ACCOUNT.

The total sum available for division amongst all the controlled companies out of the first instalment of compensation under the Railways Bill was £24,500,000, of which the sum of £720,971 has been allotted to this company as its share. Out of this latter sum the board determined to appropriate the sum of £205,000 to make good the deficit of £204,840 I have told you was the net loss on the year's working as compared with 1920, and so to be able to recommend a dividend at the rate paid in that year.

I need hardly say that the fact of this dividend being payable only by drawing on the sum received from the State in the circumstances I have mentioned caused us to consider whether it would be better to reduce it. On full consideration, however, of the whole of the circumstances, and having especial regard to the fact that the proprietorship is a shifting body, the proprietors of this year not necessarily being those of the future, it seemed to us that those now on the register were entitled to receive out of the resources available to the company at the end of the year as much as would enable the dividend to be maintained at its old level, and we trust that the course we have taken will meet with your approval.

DIVIDENDS.

The board therefore recommends dividends equal to those paid in 1920, and that a sum slightly in excess of that brought into the 1921 account shall be brought forward to the year now current. Thus we are left with a balance out of the allocated sum of a little over half a million for the current year, and in addition there will be our share of the second instalment of the compensation account due at the end of the year, which will be allocated amongst the companies in proportions based upon the extent to which they were in arrear on December 31st, 1920, in respect of the maintenance and renewal of way and works and rolling stock.

The position for the present year is fairly satisfactory, that is if our traffic receipts are not too seriously anected by the existing slump in trade, but thereafter, as we shall be without any Government subsidy and whether or not amalgamation may have taken place, dividends will depend largely, if not entirely, upon economies effected in expenditure and upon such increase of revenue as it may be hoped can be obtained from improvement in trade.

It is impossible to foretell what the future has in store for us, but with every desire not to take too gloomy a view of our prospects, I am afraid unless there is a substantial improvement of the general business of the country that brings to us the increased trade I have mentioned, of which I confess I see little prospect, and it is found possible to come to some arrangement with the trade unions which will modify to some extent the existing conditions relating to hours of work and rates of wages, that the outlook is not hopeful.

I may interpolate here that yesterday—since drafting that paragraph in my speech—I was present at a meeting at which were represented some of the captains of industry in the country—men with peculiar knowledge of the conditions prevailing in the great industries throughout the country. For what it is worth, I may say that I was very much encouraged to hear that they agreed that there are signs of more favourable results in the various great commercial and trading industries of this country. It does not do to be too sanguine, but it was the first ray of sunshine of which I have heard from competent authority during many months of gloom and depression such as I have never known in my long career.

ELECTRIFICATION SCHEMES.

I do not think there is anything upon the capital account to which I need call your special attention, but I should like to make one or two observations on the electrification schemes, the cost of which forms one of the principal items in that account.

As stated in the report, the extension of our electrical system to the railway from Balham Junction to West Croydon, which passes through the congested area served by our stations at Streatham Common, Norbury, Thornton Heath, and Selhurst, is nearing completion, and it is hoped that this section will be open for electrical traction by September 1st next. We anticipate a very considerable increase of traffic with the additional facilities we shall be able to give when those services are in operation.

This section, however, forms only a very small part of the scheme to which the report refers, which has been prepared after months of careful investigation by our consulting electrical engineer, Sir Philip Dawson. It has been submitted to the Minister of Transport, and includes the electrification of the whole of our suburban area extending to Coulsdon towards Brighton, and to Cheam towards Portsmouth, as well as the equipment of the main lines with which, in course of time, it is hoped we may proceed at any rate as far as Brighton and Lewes.

We have received favourable reports on the commercial and financial results likely to be attained if these works be carried out, but the outlay of capital, I need scarcely say, would be very considerable, and as the present time is not opportune for raising money the board has determined that until the times improve extension of electrification shall be confined to those sections of the suburban system where the needs are greatest.

CRITICISM OF RAILWAYS BILL.

You will remember that at the special meeting I said I feared there was little prospect of any radical change being secured in the main provisions of the Railways Bill. Unfortunately, this prophecy has proved to be true, and I find that in its principal features the Railways Act, as passed, is the Railways Bill we criticised, and that it retains (practically unaltered) the whole paraphernalia of bureaucratic control to which I called your especial attention and against which we protested so strongly.

We have now had some months' experience of the effect of this Act upon our independent management, although we have not so far come before any of the tribunals.

I am going to be quite frank and outspoken about this matter, and as a result of such experience as we have acquired and of the fullest mature consideration, I unhesitatingly assert my own conviction that, in the interests both of this company's proprietors and of the public whom we serve, it would have been far better if we had been left with our independent management unfettered by the provisions of the Act.

Having shown how the Amalgamation Scheme had interfered with the electrification of their railway, the Chairman, after dealing at some length with the reasons leading to the withdrawal of their Parliamentary Bill for increased capital powers, in answer to two questions—namely, whether their Bill had been withdrawn under pressure from one of their prospective partners, and whether the board were unanimous in that withdrawal. Sir Robert Perks, whose knowledge of railway matters was unsurpassed, had to a

certain extent forced his hand in answering the first question by disclaiming on behalf of two of the three prospective partners of the company any connection with any pressure which had been brought to bear upon them. As to whether the board was unanimous, they were; he would not have mentioned the fact if there had been any dissension.

It was impossible for the company to promote a Bill to upset the Act, as it was a national matter.

The resolution was carried unanimously, and the usual formal business terminated the proceedings.

BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY, LIMITED.

YEAR'S RESULTS—RECORD GROSS EARNINGS.

WARNING TO INVESTORS IN WATERPOWER PROJECTS.

The twenty-fifth ordinary general meeting of the British Columbia Electric Railway Company, Limited, was held, on the 14th instant, at the Great Eastern Hotel, Liverpool street, London, Mr J. Davidson (deputy-chairman) presiding in the absence of Mr R. M. Horne-Payne, owing to ill-health.

The Chairman, in moving the adoption of the report and accounts, said: The gross earnings of the enterprise, which exceeded \$9,500,000, constitute a record in the history of the company. Their continued growth is to be attributed to a steady growth in the population and development of the territories served, and to the energy and resourcefulness displayed by the management and staff in British Columbia.

COMPANY'S PROGRESS.

As illustrating the development of the territories served the following figures will be of interest to you. In 1920-21 we carried 71,065,275 passengers, as compared with 66,411,030 in 1919-20. In 1920-21 we delivered 140,285,620 k.w. of electric energy for light and power, as compared with 120,173,919 k.w. the previous year. In 1920-21 45,770,600 cubic feet of gas was sold, as compared with 41,746,000 the previous year. The only department which has fallen backward slightly during the year is the freight department, where 412,534 tons were carried, as compared with 430,931 tons the previous year. This was due principally to the falling off in the volume of lumber and other building materials carried, and is, we believe, only a temporary setback.

With regard to the other factor which has played such a large part in increasing the company's earnings—namely, the energy and resourcefulness of the management—I may mention that as a result of a continuous campaign of public education in the use of electricity and electrical appliances, of which the public have had the advantage, your company has benefited by the increase in the consumption of electric power arising from an increased consumption by individual users, as well as from an increase in the number of users, the number of meters connected having increased from 44,720 in 1914 to 64,190 in 1919-20 and 67,999 in 1920-21.

The net earnings which your company makes are not the result of high charges. They are due to the high standard of efficiency in which your plant and equipment is maintained, to consistently sound and cheap finance throughout its entire history, to constant and vigilant attention to every detail of the business, and last, but by no means least, to most economical and efficient management.

The tramway fares charged by your company in Vancouver, Victoria, New Westminster, and North Vancouver are, as you know, a flat 6 cents. In only two other cities in Canada—namely, Sarnia and Moose Jaw—are the fares so low as 6 cents, and in no city are they lower.

In the leading cities of Montreal, Toronto, and Winnipeg, which have much larger populations than Vancouver, 7-cent fares are authorised and charged, while in such important cities as Regina, Calgary, Saskatoon, St John, N.B., and others fares are 10 cents.

EXTENSION OF PERIOD FOR 6-CENT FARE.

We claim, therefore, that our fares are the lowest in Canada, and that prevailing conditions of operation are such that it will be impossible to operate a proper service, much less consider any extensions, unless the 6-cent fare in Vancouver, which has been the subject of so much discussion, is extended beyond July 1, 1922, to which date the present right to collect the same extends. During the early months of 1921 lengthy negotiations took place between the company and the Council of the City of Vancouver. The negotiations reached such a stage that I had absolutely the best grounds for believing that an agreement had been reached satisfactory to the City of Vancouver. This agreement, while not every-factory to the City of Vancouver, was an honest attempt to place the company in such a position that a reasonable measure of

stability of revenue would have been assured and the credit of the company would have been placed upon such an established basis as would have enabled us in the future to raise on current market terms any additional capital which might be necessary. This agreement, however, negotiated after great labour and much ability, both on the part of your management and the members of the Council of the City of Vancouver, was not acceptable to the people of Vancouver, mainly, I am convinced, because it was not understood.

Secondly, with regard to lighting rates, you are well aware of the increases in electric light and power rates which have been imposed by companies throughout this country since the war. Not only has your company not increased its lighting rates, but since 1914 two reductions have been made, and the lighting rates charged in Vancouver are now nearly 23 per cent. below pre-war rates. I should think this constitutes a record among the cities of the world, and there are now only nine cities in Canada and the United States with a population of 50,000 or more which have lower lighting rates than those charged by your company.

Thirdly, with regard to gas, the Vancouver and Victoria gas companies, owned by your company and supplying gas to Vancouver and Victoria, are the only two companies in Canada which have neither increased their prices for gas since 1914 nor asked for an increase.

ELECTRIC POWER DEMANDS.

With regard to the increasing demand for power to which I have referred, I am glad to say that, owing to our purchase, in 1920, of the undertaking of the Western Power Company of Canada, we have a present and potential supply of power sufficient to meet the requirements of the communities we serve for many years to come. A recent expert examination of our existing power plants indicates that for a relatively moderate capital expenditure we may reasonably expect to add an additional 10,000 k.w. to the capacity of these plants. We are now erecting an additional unit in the Western Power Company of Canada, which will give us a further 7,500 k.w. In addition to the foregoing, expert opinion also is that it should be possible for us to obtain as much as 80,000 h.p. from the development of the second power site owned by the Western Power Company of Canada.

The management are actively considering plans to make available these water power resources, but the time at, and extent to, which development work can be undertaken will depend upon the growth of the demand for power, and to a very great extent upon the encouragement which we receive to develop further resources. We must have such reasonable payment for the company's services as will enable us to be satisfied that there will be a fair return on any new capital outlays.

WATER POWER—A WARNING.

I should like to utter a word of warning on the subject of water-power developments generally. Arising out of the high prices of coal and fuel oil during the past few years, it has become fashionable to represent that, given a water power, you have only to develop it in order to turn it into a money-earner. This is very far from being the truth. There are many water powers which, from their nature and location, could not be developed to produce electric power so cheaply as it could be produced by steam plant, and there are many others which could be economically developed, but which, if developed at the present time, would have no adequate market for the sale of the power produced for years to come, either because the communities within their reach are already fully provided from other sources, or because there are insufficient population and manufactories within reach to take the quantity of power which it would be necessary to market to pay working costs and interest upon the capital employed. There is a danger that water-power development in Canada may, instead of keeping just ahead of demand, proceed too rapidly. If it does it will become a burden to the community, instead of the immense advantage which it ought to be, and I therefore advise that when you are asked to provide capital for water-power developments you should make very sure before doing so that the power development proposed has a convenient market for its output within a reasonable distance.

In conclusion, the message which we send to the people of Vancouver to-day is this: They know of what value our enterprise has been to them; they know the value of abundant electric power efficiently distributed to their manufactories and industries; they know the value of rapid and convenient transportation. It is for them to choose between having these services in the hands of a company able to work with ceaseless and unlimited energy for the advancement of the cities and districts it serves, or in the hands of a company the extension of which is restricted and crippled by lack of inducement and consequent shortage of capital. The choice lies with the people of Vancouver, not with us. If they choose the former alternative, they must put it in our power to demonstrate

to investors that we can with reasonable certainty rely on sufficient income to maintain our present interest and dividend payments and to pay 8 per cent. on all new capital raised, which is the rate now demanded in the money markets of the world by money for investment in sound public utility enterprises. The people of Vancouver can do this either by supporting our forthcoming appli-

cation to be transferred from provincial control to the control of the Dominion Railway Commission, or by simply granting us the right to charge a 6-cents fare for a period of 10 or 12 years. We look to them for a wise decision.

Mr T. Blundell Brown seconded the resolution, which was carried unanimously.

THE LONDON MERCHANT BANK, LIMITED.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

FOREIGN CONNECTIONS MAINTAINED AND STRENGTHENED.

DIFFICULTY OF COLLECTING PRE-WAR ACCOUNTS.

The fiftieth ordinary general meeting of the shareholders of the London Merchant Bank, Limited, was held, on the 16th instant, at the offices of the bank, 38 Lombard street, London.

Mr Frederick Lubbock (the chairman) presided.

The secretary (Mr Frederick Poole) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, when we met last year I made a few remarks on the extraordinary and rapid change we had seen in every sphere of trade in the preceding year. The past year, so far from showing any recovery, has in almost every direction been a period of continued depression and consequent heavy losses, from which few, if any, trades, even under the most careful and experienced management, have escaped scot-free. But I need not take up your time by enlarging on this subject, which is too well known by everybody, and which has been dealt with fully in the interesting speeches which have been delivered recently by the chairmen of the big clearing banks. There seems to be a general agreement that any recovery must be slow and gradual, and can only be brought about by steady work and rigid economy, together with greater stability in foreign exchanges, the constant fluctuations in which continue to hamper and impede the normal course both of import and export trade. There is this to be said, that the inflated values that ruled in the early part of 1920 are now a thing of the past. Probably the swing of the pendulum has, in many cases, gone too far in the other direction, but we are at any rate now on a safer and healthier basis of prices.

HEALTHY EXPANSION OF BUSINESS.

Turning to our own affairs, considering the difficulties that present themselves at every turn in times like the present, we think we have no reason to feel dissatisfied with the results of our current business. We have had losses—I imagine few people can say they have had none—but we have fully maintained and strengthened our connections with our many valued clients in different parts of the world, with whom, under the prudent management of our manager and sub-managers, our daily business shows a healthy expansion. It is always a pleasure to me to express our appreciation of these gentlemen. They enjoy the full confidence of the board, they are entirely devoted to the interests of the bank, and I cannot speak too highly of the ability and experience with which they carry on the management of our business. We are also fortunate in having a thoroughly loyal and contented staff, who do their work admirably, in spite of some inconvenience due to our office arrangements having become insufficient to accommodate adequately the increase in our staff that has become necessary. In connection with this subject, we have for some time past realised the need of better office accommodation, and, in view of this, we took advantage of an opportunity to acquire the lease, for 28 years, of the rest of this building, including the ground floor, which will place us in a position to occupy premises more adequate and convenient both for our staff and the public.

COLLECTION OF PRE-WAR ACCOUNTS.

The rate of collection of pre-war outstandings, to which we allude in our report, has been a source of general complaint and disappointment. Whilst it is true that further amounts have been received through the Clearing Office (Enemy Debts), the admission of a number of claims is still held up for reasons which are not always readily appreciated by the man of business. I mentioned last year that there existed a difference of opinion between the British and German clearing offices with regard to the rate of interest on claims arising out of pre-war acceptances. A test case was decided in 1921 in favour of the British creditors, and it was generally thought that this would dispose of the matter. As it is, however, contended by the German Clearing Office that the decision covered a comparatively small number of cases only, a suitable further test case has been brought before the Mixed Arbitral Tribunal, and will, we understand, shortly be heard by them.

Although clearing offices have been established for the present territories of Austria and Hungary, the collection of claims against these countries is likely to prove a very slow process.

With regard to Poland, the Baltic States, as well as Trieste, &c., the progress in the liquidation of pre-war accounts has been hampered in many respects. When we remember the extent of the business transacted by this country, for many years prior to 1914, with manufacturing and trading centres such as Lodz, Riga, and Trieste, and how high the credit of their leading manufacturers and merchants was rated in the City of London, it is regrettable to think that the delay in devising workable schemes of settlement is likely to react unfavourably upon the credit of the districts in question. Whilst making due allowance for the exceptional economic and financial conditions, we are of opinion that the Governments of the countries concerned should actively co-operate in this question of the settlement of pre-war indebtedness of their constituents, because post-war trade with these countries cannot assume that magnitude which is desired by all whilst the settlement of the old accounts remains in abeyance.

BALANCE-SHEET ITEMS.

In going through the figures of the balance-sheet, you will find that acceptances on account of customers amount to £1,562,314, current and other accounts and advances under the Government scheme of September 5, 1914, to £1,089,679, and pension fund to £27,867, making an aggregate of £2,679,860, as against £2,978,574 last year. There is thus on balance a reduction in these items of £298,714; but the acceptances on account of customers, which, for the sake of greater clarity, are this year set out separately, are slightly higher than they were last year.

In passing to the assets side, cash at bankers and loans at call and at short notice amount together to £256,998; and bills receivable to £198,170. These figures are approximately the same as last year's.

Investments at £72,568 show a decrease of about £34,364, which is due to our having pursued the policy previously mentioned of realising investments when suitable opportunities occur. The favourable trend of prices of investments has this year relieved us of the necessity of making provision for depreciation.

Current and other accounts amount to £1,734,842, and liabilities of customers for acceptances to £1,562,314, making a total of £3,297,156, as against £3,601,967 last year, thus showing a decrease of £304,811, which was only to be expected in view of the state of trade and the lower level of prices.

PROFITS AND DIVIDEND.

The gross profits at £94,344 show a decrease of £5,850, whilst expenses at £48,149 show an increase of about £8,000, mainly due to income-tax. This leaves a net profit of £46,194, which, compared with last year's figure of £60,044, shows a reduction of about £14,000. This result will, we trust, be considered by you as not unsatisfactory, taking into account the altogether exceptional circumstances which have prevailed during the year 1921. After adding £67,588 brought forward from last year, and deducting, on the other hand, the interim dividend of £18,750 paid in July, an amount of £95,033 is available, of which £50,000 has been transferred to reserve for contingencies. As you will, no doubt, have seen from the reports of other banks, this course has been almost generally adopted this year. There then remains £45,033, of which it is proposed to apply £26,250 in payment of the final dividend of 7s per share, making, with the interim dividend, 6 per cent. per annum, less tax, and to carry forward £18,783.

I beg to move: "That the report and balance-sheet be adopted, and a dividend of 7s per share (less income-tax, making, with the interim dividend, 12s per share, or 6 per cent. for the year) be sanctioned."

Mr John Roberts seconded the motion, which was carried unanimously.

Mr Leon Rueff proposed the re-election of Mr Philip Fleming and Mr Frederic Lubbock, the retiring directors, which was seconded by Mr Edward H. Tootal, and unanimously agreed to.

On the proposition of Mr Charles H. Biscoe, seconded by Mr E. J. Cousins, Messrs Turquand, Youngs, and Co., were re-appointed auditors.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr F. Fuller Higgs, in moving a vote of thanks to the chairman, directors, officers, and staff of the bank, said that the past year had been one of unexampled difficulty to the management, and the fact that it had emerged so successfully was in itself a proof of the ability with which the affairs of the bank had been conducted. He was glad to notice that the dividend remained the same, and regarded that as a happy augury—an indication, in fact, that the management had matters well in hand, and looked forward with confidence to the future.

Mr F. H. D. Mann, O.B.E., seconded the vote, which was unanimously accorded, and, the Chairman having made a brief acknowledgment, the proceedings terminated.

THE CANADIAN BANK OF COMMERCE.

PRESIDENT ON CANADA'S FINANCIAL AND ECONOMIC POSITION.
SIR JOHN AIRD ON BANK'S POSITION AND PROSPECTS.

The fifty-fifth annual meeting of the shareholders of the Canadian Bank of Commerce was held in Toronto on January 10, 1922. The president (Sir Edmund Walker) took the chair, and after the report, which has recently been made public, had been read, the general manager (Sir John Aird) addressed the shareholders.

GENERAL MANAGER'S ADDRESS.

Sir John Aird spoke, in part, as follows:—
The net profits of the bank during the year amounted to \$3,116,136. We have been able to provide the regular dividend of 12 per cent., and a bonus of 1 per cent. paid last December. We have set aside \$325,000 for the very heavy burden of taxation levied by the various Governments under whose rule we transact business, and carry forward into next year's accounts a balance of \$1,946,745, or \$162,766 more than a year ago.
The decrease of somewhat over \$7,000,000 in notes of the bank in circulation is the direct result of lower prices for commodities and of the contraction in the volume of general business. The same influences have had their effect on deposits, which now stand at \$353,155,200. Acceptances under letters of credit show a large decrease owing to the inactivity of foreign trade at the present time.

Cash on hand and in the central gold reserves stands at \$65,162,871, and represents an increase in proportion to our present liabilities by way of deposits and note issue, from 15.9 per cent. to 17.3 per cent. We have thought it well to maintain ample reserves at all times under present unsettled conditions. Loans and discounts in Canada, other than call and short loans, amounted to \$206,588,328, and those elsewhere to \$23,334,479. Our total assets show a decrease of between 10 and 11 per cent., as compared with the figures of a year ago, which is more than accounted for by the decrease in commodity prices.

RELIABILITY OF THE ANNUAL STATEMENTS.

There has recently been some discussion in the public Press of the reliability of the annual statements published by the banks and of the auditors' certificates attached to them. I wish to say emphatically that the safety of your investment does not depend upon my own unaided judgment, nor upon that of any other single officer of this institution. The policies deliberately adopted by this bank to govern its methods of lending money, with a view to protecting it from bad debts, have proved most effectual, so that the ratio of bad debts to total loans over a series of years shows a marked decrease.

As to the auditors' certificate, the auditors whom you elect each year are chartered accountants belonging to well-known firms of established reputation. They visit a number of the principal

offices of the bank, and carefully examine all slow or dragging loans and investments, and are placed in possession of the evidence upon which our estimate of the value of such assets is based. If this does not satisfy them, they are at liberty to make such independent investigations as their judgment may dictate. In our opinion their work is well and thoroughly done.

In conclusion, I may say that the year through which we have just passed was undoubtedly a difficult one. The burden of taxation is a heavy one, made unduly so by inequitable distribution. It would be well if our Governments would direct taxation more at what people are spending and less at what they are saving. The soil and other natural resources of Canada are as ready as ever to respond to the efforts of her people. Granted a favourable harvest in the coming year, we may confidently look for a steady return to more normal conditions.

PRESIDENT'S ADDRESS.

Sir Edmund Walker, C.V.O., in the course of his address, said: For the fiscal year our total foreign trade was \$2,450,587,000, but while in 1918 we had a surplus of \$623,647,000, in exports over imports, in 1921 we actually imported to the value of \$29,730,000 more than we exported. Our excessive imports were only possible because we exported more grains to the extent of 123 millions, and more wood, wood products, &c., to the extent of 70 millions. Of the great total of imports, valued at a billion and a-quarter of dollars, we should make a very large proportion ourselves, and if we are to prosper and pay our debts abroad we must plan to do so in future. Any other course will be ruinous to Canada.

The field crops of Canada for 1921 are estimated in value at \$1,017,675,000, as compared with revised figures for 1920 of \$1,455,244,000.

The revised figures of our mineral production for 1920 are much in excess of the estimate of 200 millions, reaching, indeed, a total of \$227,860,000, the largest figures on record. There was a handsome increase in the production of gold, and silver held almost the same position as to quantity as in the previous year, although the price was much lower, while copper, nickel, asbestos, zinc, coal, and all other non-metallic minerals show a reduction in quantity, or in value, or both.

The public debt of the Dominion at March 31, 1921, was \$2,340,878,000, as compared with \$2,298,784,000 at November 30, 1920. Against this, non-active assets, chiefly railway loans, amounting to \$393,937,000 are held. Great Britain at November 30th last still owed us \$136,647,000, which is deducted from the figures given above, while foreign Governments still owed \$46,050,000.

During the year our "Monthly Commercial Letter" has endeavoured to give to our customers, correspondents, and the Press information as to finance, home and foreign trade, the process of deflation, the details of production, and the markets and prices of many national products, together with facts regarding national expenditures, immigration, &c. When I have also referred to our "Review of Business Conditions," which this year is more exhaustive than ever, I feel that I need not add much about the trade and financial position of Canada and of the world generally.

TAXATION.

I spoke at some length last year on the subject of taxation, particularly as to the method of distributing the burden so that it may be borne without ruining those who have done so much to build up our country, and to whom we must look for the creation of new enterprises and for the extension of those now in existence. We have steadily urged that a tax of 1 per cent. on sales of commodities should be adopted. It might be well to divide the national Budget under two headings, one for the service of the country's ordinary expenditures and the other for the war debt. If the turnover or

commodities tax of 1 per cent. were levied entirely for the war service, I am sure that the man does not exist who would complain at paying his share of the cost of the war in this indirect and comparatively easy way.

THE FUTURE.

Despite the world-wide experience of the pains of contraction by whole nations, we have during the year passed through many remedial stages which were absolutely necessary, whether agreeable or not. We are adjusting ourselves to the creation of our products at a cheaper cost, and to the necessity for the maximum of efficiency in every effort of industry. If we have due regard to the world's experiences since the war and accept the lessons to be drawn therefrom, we shall soon again achieve the success in material things which has happily distinguished our past. With our unused acres and our natural resources, our many centres of manufacturing, our established character for industry and energy, and our really great ability to economise, when aroused, we of all nations can surely view the future with courage and confidence.

The report was adopted unanimously.

Messrs T. Harry Webb, C.A., and Douglas Dewar, C.A., were appointed auditors, and the usual vote of thanks to the directors and staff were passed. The meeting then adjourned.

CAMBRIAN RAILWAYS COMPANY.

AMALGAMATION WITH G.W.R. APPROVED.

A special general meeting of the proprietors and debenture stockholders of the Cambrian Railways Company was held, on the 14th instant, at the Great Western Royal Hotel, Paddington, London, to consider a preliminary scheme in pursuance of the Railways Act, 1921, for the amalgamation with the Great Western Railway Company of the Cambrian Railways Company, the Cardiff Railway Company, the Rhymney Railway Company, the Taff Vale Railway Company, and the Alexandra (Newport and South Wales) Docks and Railway Company.

Major David Davies, M.P., who presided, in moving a resolution for the adoption of the scheme, said that the terms of the amalgamation had involved very difficult negotiations. Under the scheme the 4 per cent. "A" debenture stock would receive an equal amount of the Great Western Company's 4 per cent. debenture stock. Having regard to the market value on December 30th last, that showed a capital appreciation of a little over 13 per cent. With regard to the "B" debenture stock, the proposal was that the Great Western Company should give 4 per cent. debenture stock of that company to produce 3½ per cent., and here, again, there was an increase in cash value of 13 per cent. The "C" debenture stockholders were to receive 5 per cent. consolidated preference stock of the Great Western Company to produce 3½ per cent., a capital appreciation of 13½ per cent. With regard to the "D" debentures, it was proposed that the holders should be given 5 per cent. consolidated preference stocks to produce an income of 3 per cent. per annum.

With regard to the No. 1 preference stock, which had been in existence since 1885, and on which the total dividend paid had only equalled about 38 per cent. per annum, it was proposed that each £100 should be exchanged into £28 11s 5d of Great Western consolidated ordinary stock, which would bring in an income equal to £2 per cent. per annum. They had had to ask the holders of the three lower debenture stocks to make some concession in their income, and the reason was this: The amalgamation Tribunal were instructed to take into account, in assessing the value of the line, its value on a net revenue-earning basis, and that feature had made the negotiations very difficult in dealing with the ordinary and the Nos. 2, 3 and 4 preference stockholders. After very difficult negotiations with the Great Western Company, it was agreed that a sum of £250,500 deferred Great Western ordinary stocks should be created, to rank for dividend from January 1, 1929, and that that stock should be divided amongst those stockholders in ratio to the market value of their holdings on December 30th last. The scheme was unanimously approved.

SUN LIFE ASSURANCE SOCIETY.

SATISFACTORY YEAR—RESULTS OF QUINQUENNIAL VALUATION.

A general meeting of members of the Sun Life Assurance Society was held, on the 14th instant, at the chief office, 63 Threadneedle street, London, the Hon. Sir William Henry Goschen, K.B.E. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that in the past year new business had been well maintained, notwithstanding the adverse conditions prevailing. The new sums assured of £5,345,000 reached a total slightly in excess of that of the preceding year, while the number of new policies and the amount of the new premiums were slightly less. He considered this an excellent testimony to the vitality of the

institution, and a sure promise that its policy of progress would be sustained. The premium income showed an increase of £120,000, and net dividends and interest an increase of £49,000. Death claims had again been very satisfactory, numbering only 58.40 per cent. of the expected. The net result of the year's operations was the handsome addition of £550,000 to the fund. Referring to the salient features of the valuation, he said that of the total invested assets of £15,216,000 no less than £10,173,000 was invested in British Government securities purchased at favourable prices and maturing in the course of comparatively few years. Apart from the British Government securities, their holding in Stock Exchange securities had been reduced to comparatively small dimensions, and their holding of railway and other ordinary stocks totalled only £66,000. It will be seen that the society's assets were thoroughly sound and invested to yield a profitable return.

VALUATION FIGURES.

The number of insurances in the life account in force at December 31st last was 98,081, assuring £36,086,788, inclusive of bonuses, being 35 per cent. greater than the amount in force at the end of the preceding quinquennium. Using practically the same bases of valuation as on the preceding occasion, the actuary certified a total surplus of £1,792,739, of which, on his recommendation, they had decided to divide in the proper proportions between the shareholders and policyholders the sum of £1,636,389, leaving £156,000 to be carried forward. Of that divisible surplus the policyholders' share amounted to £1,442,000, which, after allowing for the interim bonuses paid during the quinquennium, would admit of reversionary bonuses being added to their with-profit policies larger than those declared in 1912.

As no distribution was made at the end of the preceding quinquennium owing to the continuance of the war, it appeared only equitable that assurances which had been in force during the preceding quinquennium should in the current distribution receive, in addition to bonuses based on a normal rate of profit, such further bonuses as could be allotted after giving due weight to all the circumstances revealed by the valuation. That bonus notices would be issued in the course of two or three weeks to individual policyholders, &c., he had no doubt would be received with gratification. That the policyholders' bonus should be so satisfactory justified the view from which they had never wavered and the advice they had consistently given, that a "participating" policy afforded the best investment.

PROPRIETORS' SHARE.

The balance of £193,000 belonged to the proprietors' fund. Of this the fund had already received £28,000 by way of interim bonus, leaving £165,000 to be transferred. Unless unforeseen circumstances happened—and in these times one had to be cautious in prophecy—the directors expected to be able to declare during the current quinquennium half-yearly dividends of 12s 6d per share, free of income-tax. That 12s 6d was equivalent to 17s 10d gross, or £1 15s 8d per share per annum—by far the largest dividend they had hitherto paid—and he did not doubt that when the members read the report they received that forecast with a certain amount of gratification. For the past quinquennium the half-yearly dividends had been 3s 9d per share, or 7s 6d per annum, paid mainly out of the net interest received from the investments of the proprietors' fund.

As to the future, he could only tell them of his own confidence in the prospects of the office. The society had emerged from the grave difficulties of the last seven or eight years with increased business and normal profit-earning power. Its assets were of the highest character, and its assurance business of the most excellent quality. The directors had done all in their power to maintain the loyalty, enthusiasm, and efficiency of the staff, and the reports presented proved that they had heartily responded. There was no doubt that the Sun's methods of business were capturing the public favour. Their simplified system of assurance without medical examination had stood the test of 21 years, and with an experience extending literally to tens of thousands of policies they could say with confidence the system was perfectly safe and sound. All restrictive conditions under this system had been abolished, but he might state that the secret of its successful operation lay in the well-trained staff, who had shown themselves fully qualified to protect the society's interests both in the production of and in the selection of the business.

The report was unanimously adopted.

PAN DE AZUCAR NITRATE COMPANY, LIMITED.

OUTLOOK FOR THE INDUSTRY.

The twentieth annual general meeting of the Pan de Azucar Nitrate Company, Limited, was held, on the 13th instant, at Winchester House, London, the Hon. Herbert C. Gibbs presiding.

The Chairman, in moving the adoption of the report, said that the gross profit for the year to June 30th last was £48,367 on

231,000 quintals of nitrate. In the preceding financial year the gross profit was £23,439 on 374,000 quintals of nitrate. The improved result was due to the increased prices obtained last year, the averages being respectively 16s 0½d and 10s 4d per quintal f.a.s. Satisfactory as the figures were, they would have been much better but for the fall in the market value of their stocks of fuel, nitrate bags, and general stores. In addition to these special charges, they had set aside out of profits a reserve of £3,397 for stoppage expenses. On the whole the directors considered the position disclosed by the accounts to be favourable, more particularly as further profits had accrued to the company since the date of the balance-sheet from the realisation of part of the stocks of nitrate. One hundred and ten thousand quintals out of the stock of 313,877 quintals had been sold and paid for at the price of 16s per quintal. Therefore, should no more nitrate be disposed of during the current financial year, they would obtain a gross profit of about £33,000 this year, subject, of course, to necessary revenue charges. The dividend recommended was 15 per cent., less income-tax, which would absorb £11,550, leaving £32,088 to be carried forward. The balance-sheet might be justly described, he thought, as a healthy one. They had cash liabilities of about £135,400, and liquid assets, excluding grounds and fixed plant, valued at £255,280. The grounds had continued to yield satisfactory raw material, and the machinery had been maintained in excellent condition, so that apart from a few necessary repairs and additions no large capital outlay would be required when they restarted. The oficina was shut down on April 26, 1921.

With regard to the future position of the nitrate industry it was difficult to say anything definite, as the only thing that was certain was that normal conditions in this or any other trade would not return until the affairs of the world became more normal. At the present moment about half the commercial world was out of action owing to the depreciation of its currency and general impoverishment, so that, apart from the increase in synthetic products in Germany, which went far to supply the needs of that country, the low and fluctuating exchange, both there and elsewhere, made business in many places well-nigh impossible. For the present season they looked mainly to Europe west of the Rhine and Scandinavia to absorb the stocks which had been sold by Chile. In these countries the prospects of consumption were certainly brighter than they were last year.

As regarded the more distant future, it must be remembered that the present evils were temporary, and, generally speaking, the liquidation of stocks of produce which had proceeded during the past year had improved the basis of credit. As time went on they might look for still further improvement, and when normal conditions were restored there would not, in the opinion of some good judges, be sufficient nitrogen produced in the world to meet its requirements, whether in the form of sulphate of ammonia, nitrate of soda, or synthetic products. Unfortunately, the stocks of nitrate in the hands of nitrate producers continued to increase, as owing to the low Chilean exchange and the plentiful supply of labour, certain producers, with the help of the Government subsidy or with their own funds, were continuing production, thus postponing the time when healthy normal conditions would prevail. He thought that, even from the point of view of individual advantage, this company had adopted the wiser course in closing its oficina, for, with the loss of interest and other minor losses on stocks which had to be kept for any long period, it might well happen that those who continued production might find that the ultimate cost was disappointing. Moreover, he could not think that the present was a time either to borrow or to expand one's liquid resources, and he hoped, therefore, that the shareholders would support the board in the conservative policy which, after very careful consideration, they had adopted.

The report was unanimously adopted.

BOVRIL, LIMITED.

RECORD SALES AND PROFIT.

THE RESULT OF ANTI-PROFITEERING POLICY.

The twenty-fifth annual general meeting of Bovril, Limited, was held, on the 16th instant, at River Plate House, Finsbury circus, London, E.C.

Sir George Lawson Johnston (the chairman of the company) presided.

The Chairman, in moving the adoption of the report and accounts, said that the directors were glad to be able to meet the shareholders with such a satisfactory set of accounts.

The sales of Bovril in 1921 had been larger than in any previous year, and both the gross profit and the net profit had surpassed all previous records.

The public had a longer memory than some people gave it credit for. It had not forgotten that at a time when profiteering was rampant, and, in the case of an essential food product like

Bovril, would have been very easy, the company had stuck to its 1914 prices, and had maintained these right through the war. This was a policy as had urged upon the shareholders, although it involved renunciation of the certainty of making large excess profits, and their acceptance of that self-denying ordinance was now meeting with its reward, at a time when many were incurring losses even greater than the huge war profits they had gained. He thought the force of example was still worth something, and that it could not be doubted that Bovril's anti-profiteering stand had powerfully influenced public opinion, and had had a salutary effect reaching far beyond the immediate circle of the company's clients.

RECORD EXPORT BUSINESS.

It was not, perhaps, surprising that the home sales of Bovril continued to grow, but it might surprise some people to learn in view of the difficulties hampering export trade generally, that the company's export business in 1921 had also surpassed all previous records, and, further, that the export sales for the first seven weeks of this year nearly equalled those for the first four months of last year.

He had heard it suggested that last year's record sales in England were due to influenza, as people would not risk being short of Bovril when that scourge was about. He accepted the second part of that suggestion, which emphasised the unique position Bovril had attained in connection with influenza, but pointed out that the sales were well ahead in November, before influenza had got a footing at all.

"INFLUENZA SALES."

The real "influenza sales" had come in January, when the demand had become so great that the factory could not keep pace with it, and the directors, finding the shops had run practically out of stock, thought it right towards the end of January to issue an advertisement in the following terms:—

"Those who have a supply of Bovril are requested to refrain from buying more Bovril this week. Many shops have already sold right out, and it is important that in times of influenza Bovril should be evenly distributed."

Supplies were, however, now again available.

To permit pessimism to get hold of one was, he considered, fatal, especially in the case of influenza. A cheerful and moderately optimistic spirit was a wonderful safeguard, and it was the best panacea for many of the world's difficulties. Shareholders would have noticed the cheery fellow who, in the company's latest poster, was shown buoyed up in mid-ocean by a bottle of Bovril, with the accompanying legend, "Bovril prevents that sinking feeling." He had seen him in a dozen towns across Canada last October, and his smiling face had appeared in the papers or on the hoardings throughout the Empire. There had never been a time when a little humour and optimism were of more value than to-day.

VIEWS OF SIR JAMES CRICHTON-BROWNE.

Sir James Crichton-Browne, M.D., F.R.S., LL.D., said that the science of dietetics was now in a state of transition. Remarkable discoveries had been made recently, and remarkable discoveries were still to come, but it was a comforting reflection that all these discoveries went to confirm the wisdom and propriety of those food habits at which our ancestors had empirically arrived. Science, in its advance, elucidated and explained most of the customs and conclusions which old experience and common sense had bequeathed to us long ago.

Experience and common sense had recognised the protective power of Bovril. He did not claim that Bovril would cure cancer or tuberculosis in cases which the doctors had given up, or that it was an infallible remedy for baldness and bunions, but he did assert that it was instrumental in maintaining that vigour of constitution that was a barrier against disease and infirmity of all kinds, and that it often helped disease to run a favourable course after it had effected a foothold in the system.

The report and accounts were unanimously adopted.

SOUTH SUBURBAN GAS COMPANY.

CHAIRMAN ON CARBON MONOXIDE DANGER.

The annual ordinary meeting of the South Suburban Gas Company was held, on the 17th instant, at the Cannon street Hotel, London, Mr Charles Hunt, chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that last year he referred to the period they were then considering as having been a particularly eventful one as regarded the gas industry. The same remark applied to 1921, but with much greater emphasis, because that year had to its credit two such epoch-making events as the putting into operation of the Gas Regulation Act (and establishment of the therm as the basis of charge for gas supply), and a coal stoppage entirely without precedent as to its duration and its disastrous consequences. With

regard to the Gas Regulation Act, application was made to the Board of Trade for an Order placing this company under it, and for a new standard price for gas corresponding with the altered conditions as to cost of gas production and distribution resulting from the war. This Order was issued on April 21st last, and gave the company a new standard price of 15d per therm in lieu of 2s 9d per thousand cubic feet. This was better by 2d per therm, or something like 10d per one thousand cubic feet. A higher standard price even than 15d per therm was necessary for the immediate resumption of their pre-war dividend, consequently it was a little disappointing, although, as matters had turned out, they were not without hope of being in a position to improve the dividend before very long. This company did not employ water gas to any extent until after 1914, when owing to the war it was impossible to procure additional coal carbonising plant. This company and others learned to use it without enrichment, except that which it derived when mixed with the coal gas in its passage through the retort house mains. Everybody knew, of course, that it was a poisonous gas, but it was not meant to be inhaled, its function being to produce light and heat. They were prepared to fall in with any suggestion for safeguarding the public that might be proved useful, but no such proof had yet been forthcoming.

Reverting to the coal strike, the Chairman said the one redeeming feature of that disastrous business was the ultimate acceptance by the miners of a profit-sharing scheme which might in the course of time develop into co-partnership. It was a matter of satisfaction that the finances of the company bore the strain so well. They now found themselves in a better position than at one time they feared with regard to future dividends.

Sir J. Fortescue Flannery (deputy-chairman) seconded the resolution, and it was carried unanimously.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

GOVERNMENT RETURNS.

PUBLIC INCOME AND EXPENDITURE.

RECEIPTS INTO AND ISSUES OUT OF THE EXCHEQUER.

	40,387,074	

SIDNEY TURNER, Accountant-General.

India Office, February 11, 1922.

Messrs Samuel Montagu and Co. write on February 16th as follows:—

GOLD.

For the moderate amount of gold available there has been an exceptionally keen demand from the Indian bazaars, by whom practically the whole was taken. The gold dealt with this week was the last full shipment from South Africa which may be expected until the deplorable strike on the Rand has been settled. Gold valued at \$11,252,000 has arrived in New York during the week—\$6,050,000 from Sweden and \$5,202,000 from London. The following were the United Kingdom imports and exports of gold during the month of January, 1922:—Imports, £3,578,448; exports, £3,836,457. During a debate at Delhi last month the Finance Minister stated, on being asked to reopen the Indian mints to the free coinage of gold, that the Government was quite prepared to coin gold should a currency demand arise, but he pointed out that so long as there was a premium on gold freshly minted coin would not circulate, but go at once into the melting-pot. He also gave the interesting information to the Council that when the exigencies of Indian finance impelled the Secretary of State to place himself in funds by drawing upon the gold standard reserve in London, as probably would be the case during the year, an equivalent in gold would be taken from the gold held in the paper currency reserve in India, and placed in the gold standard reserve—in other words, gold standard reserve funds would be automatically transferred from London (in short, British Government obligations) to India into the form of gold. The exceeding importance of a return of currency in countries where great depreciation exists to a basis bearing some measure of stability with their pre-war gold standard renders any step in that direction full of interest. The Austrian Government commenced a few months ago to levy some taxes on the basis of the gold crown. The actual payment is to be made in paper crowns at a rate fixed weekly by the Treasury. This is a wise effort towards stabilising the exchange, but no satisfactory result can be assured until the continued increase in the issue of paper money comes to an end.

SILVER.

The main support of the market has still been obtained from bear covering, of which a considerable amount has been done on account of the Indian bazaars and elsewhere. China selling—sometimes of a rather free character—has rendered it easier to secure silver for two months' delivery than for cash. The Continent has been a poor seller, but the improved tendency of the United States exchange caused New York to offer silver.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Jan. 22, 1922.	Jan. 31, 1922.	Feb. 7, 1922.
Notes in circulation	17,287	17,440	17,343
Silver coin and bullion in India ..	7,332	7,484	7,485

Reports and Notices.

The resolution confirming the borrowing powers of the court has been passed *nem. con.* by the shareholders of the British North Borneo Company.

Messrs David A. Bevan and Co., of South Sea House, 37 Threadneedle Street, E.C., request us to state that neither they nor their senior partner, Mr David Augustus Bevan, who has been for many years a director of the Equitable Life Assurance Society, have any business connection whatever with Mr Gerard Lee Bevan, late chairman of the City Equitable Fire Insurance Company.

The directors of the Consolidated Gold Fields of South Africa, Limited, and of New Consolidated Gold Fields, Limited, announce that owing to ill-health Major H. L. Sapte resigns his seat on the boards of both companies on March 25th next. Mr Stanley Christopher-

on having become a deputy-chairman of the London Joint City and Midland Bank, Limited, will cease to take the active part which he has hitherto taken in the administrative work of the board of New Consolidated Gold Fields, Limited, but remains a director of the company. As from March 25th Mr John A. Agnew will be appointed a director of both companies in place of Major Sapte, and will devote his special attention to the supervision of the technical side of the companies' business.

Mr Charles Booth announced at the annual meeting of the Midland Railway Company that he was retiring from the chairmanship of the company. Sir Guy Granet is to be the new chairman of the Midland Railway.

BANKS.

BANK OF NOVA SCOTIA.—The ninetieth annual report to December 31, 1921, shows that \$932,595 was brought into the accounts from the report to the end of 1920. During 1921 the bank made a net profit

of \$2,111,733, losses by bad debts estimated and provided for. The amount available is thus \$3,094,328. The dividend for 1921 is 16 per cent., absorbing \$1,352,000. War tax on circulation to end of 1921 took \$97,000. Contribution to officers' pension fund amounted to \$80,000. The sum of \$300,000 has been written off bank premises account. The reserve fund has been strengthened by the addition of \$1,000,000, making that fund \$19,000,000. The sum of \$65,329 is carried forward to next account.

DOMINION BANK (CANADA).—The 51st annual statement for year ended December 31, 1921, reveals a net profit of \$1,016,262, to which is added \$669,218, making \$1,685,480 available. The total distribution to shareholders is 13 per cent. for the year, which absorbed \$780,000, while contributions to officers' pension fund took \$40,000. The sum of \$150,000 has been written off bank premises, and a balance of \$715,480 goes forward to next account. The capital stock paid in stands at \$6,000,000, and the reserve fund is \$7,000,000.

NATIONAL BANK OF NEW ZEALAND, LIMITED.—At an extraordinary general meeting of the shareholders, held on 15th inst., the following resolution was passed unanimously:—That the capital of the company be increased to £4,500,000 by the creation of 200,000 new shares of £7 10s each, and that such shares may be issued at such times and on such terms and conditions as the directors may deem advisable.

GOVERNMENT STOCKS, &c.

BULGARIAN 4½ PER CENT. 1907 LOAN.—The Bulgarian Government announces that it is prepared to pay to French, British, and Belgian bondholders the coupon No. 30 of the above loan, maturing on February 1, 1922, at French francs 11.25 each, and the bonds drawn for redemption on that date at French francs 500 each. Holders of bonds which have been in British ownership since August 1, 1914, who are desirous of availing themselves of the offer thus made by the Bulgarian Government should present the above-mentioned coupons and drawn bonds (to which all coupons due after the date of redemption must remain attached) for payment at the counting house of Messrs Stern Brothers, 6 Angel Court, E.C. 2.

ORIENTAL REPUBLIC OF URUGUAY CONSOLIDATED 3½ PER CENT. DEBT.—Tender of Bonds for Redemption.—Messrs Glyn, Mills, Currie, and Co. are instructed by the Government of Uruguay to announce that the 31st amortisation of the Consolidated Debt of the Republic will take place by public tender in London on Wednesday, the 22nd instant, the amount applicable being £58,433. They are prepared to receive tenders of bonds for redemption on forms which may be obtained at 67 Lombard Street, London, where the tenders will be opened on the 22nd instant. Messrs Glyn, Mills, Currie, and Co. reserve the right of accepting or rejecting the whole or part of any tender, and, in accordance with instructions received from the Government of Uruguay, they may require the deposit of the bonds offered for sale under this tender. All bonds must have attached the coupons due May 1, 1922, and subsequently.

RUBBER.

UNITED SERDANG.—The report for the year ended August 31, 1921, shows that the crop of rubber harvested from the company's estates for the year amounted to 2,876,188 lbs, against an unrestricted estimate of 3,750,000 lbs. As from November 1, 1920, the crop was restricted in accordance with the restriction of output scheme promulgated by the Rubber Growers' Association. The average net sale price, including the estimated value of the unsold portion of the crop, was 9.18d per lb. The cost of production, f.o.b. at port of shipment, including loss on rice (2.61d per lb), but excluding loss on exchange (.73d per lb), was 1s 1.97d per lb. Under normal conditions and without restriction a crop of 3,760,000 lbs could be secured during the current year, but in view of the necessity for continuing restriction of output, no reliable estimate of the company's probable output during 1921-22 can be given. The cost of production has been reduced by several pence per pound as compared with the past year. During the year 1,000,000 shares of 2s each were issued at par to the shareholders and fully taken up. The unappropriated profits brought forward from last year amount to £83,353, less loss for year £60,607, leaving £22,745; less excess profits duty for year to August 31, 1920, with adjustment of prior assessments, £3,819; this leaves available £18,926, which the directors recommend should be dealt with by writing off the expense of new issue, £828; leaving to carry forward to 1921-22 (subject to Nederland-Indies war profits tax, if any) the balance of £18,098. The company has substantial claims pending for repayment of E.P.D.

MISCELLANEOUS.

MONTEVIDEO WATERWORKS.—Negotiations are in progress for a transfer of the company's undertaking to the Government of Uruguay. No agreement has as yet been signed. The sum which the directors are prepared to accept as purchase price, subject to approval of the stockholders, would, after providing for all liabilities, current dividends, and expenses relating to the matter, leave something in excess of 125 per cent. for the ordinary stockholders. In the event of the company's liquidation the first and second debenture stocks would be repaid with accrued interest at par, and the consolidated debenture stock at 105.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY report that the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of January, 1922, amounted to 71,735 barrels.

COMMONWEALTH OIL CORPORATION, LIMITED.—Advice from Sydney reports for four weeks ending January 27, 1922:—Shale retorted, 1,850 tons. Crude oil and naphtha produced, 186,350 gallons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending February 8, 1922, amounted to 923 tons.

THE trappers and hunters who opened up the great North-West "cached" their stores, pelts and other belongings when desiring them to be left until called for.

The "caches" were often not very carefully hidden but they were seldom violated. The unwritten law of the wild held them secure.

No treasure hoard enjoys the same natural security to-day in more civilised countries. The modern burglar respects nothing, and can find a way in anywhere. The only thing that has been too much for him is THE CHATWOOD SAFE.

It is, in fact, the constant failure of his carefully planned and desperate attacks during the past 64 years that has established the unique reputation of THE CHATWOOD SAFE.

It is impossible to obtain a greater degree of security against all risks than that offered by this triumph of steel and ingenuity.

THE CHATWOOD SAFE Since 1858

THE NEW CHATWOOD SAFE BOOK contains 58 pages, many in full colour, and includes the fullest particulars of each model of THE CHATWOOD SAFE and STRONG ROOM. A post card brings a copy gratis.

the Clyde alone running smoothly it would require that at least one boat of goodly size should be secured per week. Of late the rate of new construction arranged for has probably not exceeded one vessel per month. And the stiffening-up of steel quotations will not go, it is feared, to an expansion of building amongst ship-owners. The large liner companies who, it was expected during the recent back-end would come to the trade rescue, seem to have entirely withdrawn from the market, for they are doing nothing, and hold out no prospect of an early change in policy. Instead, it appears that instructions to proceed with the completion of, and certain steamers "on the stocks" have just been cancelled, and it is understood will not be revived while prices of material remain where they are—£14 for boiler plates, £10 for ship plates, and £10 for sections. At these figures ship plates are full, 30s, and sections quite 20s per ton dearer than recently ruled—throughout the course of the price fight between English and Scotch producers. That contest, however, proved too serious for those concerned, and is now at an end; and it is authoritatively given out that there will be no concession from the values named until costs yield a bit, and steelmakers can operate freely without being involved in loss, far less than in booking a profit. Even at current rates, it is affirmed, ends are not met, unless in very exceptional instances. During the price dispute, when ship plates were sold down to £9 (for both home and export) per ton, a substantial quantity of material was disposed of; and in the last day or two steelmakers have been arranging for the execution of their bookings, and this has imparted an appearance of activity to the situation in the leading localities. The Lanarkshire Iron and Steel Company, after being closed down for a year (and which in normal times employs 2,500 men) made a re-beginning on Monday; so did Messrs. Beardmore at Mossend, adding largely to their effective staffs; the Northern Rod and Bar Company, employing 200 hands; and Messrs. Colville and Co., at Motherwell. It would be a mistake to attach too much importance to these movements—until it is realised that they are going to continue—of which, it must be recognised, some doubt is entertained. A large new foundry is being laid down at Falkirk, and an extensive iron and steel finishing establishment is being pushed forward at Parkhead, to the east of Glasgow. In quite a number of branches where it is believed expenses have been sensibly cut down—but particularly in bar iron and in black sheets—there has been a reversal of prices, and the lowest points recorded since pre-war days have been fixed. Ordinary brands of bars, Crown quality, are now called £11 10s per ton; best, £12; best horseshoe, £12 2s 6d; best B, £12 10s; extra best, £13; best cable, £13; extra cable, £13 5s. Generally these quotations reflect an all-round decline of £1 5s on those of last November. The new list rates for black sheets (which came into force on Monday) put £1 5s over £11 5s; £1 5s for gauge, £11 15s; £1 5s for 17, £12 10s; 16 to 20s, £13 5s; 20 to 24, £13 15s; 24 to 27, £14 15s. The departures which have been advertised to have not, of course, been without influence on various departments in the finishing lines, and the state in which they are to-day would afford the utmost satisfaction if there was more ground disclosed for founding reasonable hopes as to the future. The hope that does manifest itself is mainly based on the belief that success will yet attend the negotiations that have been in progress for months between employers and employed in the engineering, shipbuilding, and relative industries for a modification and readjustment of the wages scales. There is a distinct revival of animation on the export side of the coal trade. Continental countries are large buyers and inquirers, so much so that collieries in the East and West countries, while running full time, are declining to commit themselves to forward shipments, and that even at current conditions.

THE COTTON TRADE.

MANCHESTER, February 16.

The tone of the market during the past week has been firmer. The tendency for raw cotton rates to harden has stimulated inquiry in yarn and cloth. Although buying has been very irregular, more business has been done in certain quarters. In piece goods most of the activity has been for China, and for that outlet an encouraging turnover has taken place in standard cloths and fancies. Inquiry for India has been rather more plentiful, but sales remain unimportant. A fair miscellaneous trade has been done for certain minor outlets, and a few more lines have been booked in goods suitable for home consumption. Manufacturers find it very difficult to obtain relief, and poor prices continue to be accepted. Quotations in American and Egyptian yarns have been steadier, with a slight improvement in the turnover. Export yarns have been sold in fair lots for India, China, and the Continent.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Telegraphic advices from Hull, where a sale of B.A.W.R.A. wool is being held to-day, indicate that the weakness which recently developed in raw material values has not yet been checked. The offerings at the East Coast port were more suitable for the Continent than for the home trade, but Bradford topmakers and Belgian buyers operated extensively, and there were few withdrawals. Prices, however, showed a general decline compared with those ruling at the Liverpool auction last week, and users will now wait for the next London series to reveal the true position of values. In the meantime, business in tops is being restricted to the supplying of immediate needs, and few firms show any disposition to place forward contracts. Quotations are accordingly somewhat

irregular, but both for spot and future delivery concessions can be obtained in merinos. There is not so much doing in cross-breeds, the Continental demand having fallen off to some extent. Worsteds spinners report great difficulty in doing business, and in many cases quotations have been reduced with the object of tempting buyers. It is an undoubted fact that when 64's tops were selling at 4s 6d spinners could not make anything like a corresponding price for yarn, but it is thought in some quarters that quite a good business could be done if tops were steady on about a 4s basis. That level has not yet been reached, though it looks as if it will come in the near future. The piece trade shows some improvement; not the least encouraging feature being the steady expansion in exports of both woollen and worsteds goods. The Far East has been a very good market lately, and considerable quantities of cloth have also been sent to Canada. Dress goods are not difficult to sell, but large stocks of men's wear are still interfering with normal trade.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Although wool values generally have shown a slight ease, little concern has been caused in consuming centres, due largely to the belief that prices will not decline further. The whole trade is quietly looking on in the hope that merinos will drop to about a 4s basis, at which price there would be another large buying movement. A surprising amount of confidence is being shown in the future of fine wools, and this can be taken as evidence of improvement. Some spinners consider that 3s 9d per lb would be about the right basis for 64's tops, but the majority would be satisfied with the higher figure named above. Several Bradford topmakers went to Liverpool a week ago with a 4s limit, but bought practically nothing, it being noticeable that the big firms were out of the market, the bulk of the buying being done by the smaller firms who waited till the last week of the London sales in the hope of being able to operate at 4s 3d. That was the basis at which wool was sold at Liverpool, and but for the splendid prices of merinos and fine crossbreeds staged at Manchester prices would have declined still further. However, there is no real reason to find fault with the wool market, and although a somewhat disturbing effect was created in Bradford last Monday by Melbourne advices, Australian selling centres are not providing really cheap wool. Nobody need be surprised at the report from Melbourne indicating a 10 per cent. decline, this being no doubt due to American buyers being less active. Everybody realises that most of the merinos already bought for America will have to remain in bond until the permanent tariff comes into force, and June is now mentioned as the time this is likely to take place. The new tariff will no doubt be fixed according to what party has the strongest influence in deciding it, but 30 to 33 cents per lb., which is mentioned as the duty on the clean scoured content of imported merino wool, appears to be excessive. The Western State growers are responsible for the instigation of this tax, but we fail to see what real good can be accomplished by it. United States sheep men cannot produce anything like the weight of wool wanted by the textile industry of the country; 20 cents on 58's and upwards and 15 cents on all qualities below would give adequate protection. Excessive duties on imported wool, which United States mills need, can only result in an increase in the cost of fully-manufactured goods. It is obvious that this increased cost will ultimately have to be paid by the public, and as the wool growers themselves are as much a part of the community as any other section of the populace, they will have to bear some of the increased burden which they themselves are proposing indirectly to impose. It would be far better to reduce the import duties by one-half, or better still, to put wool on the free list. This cannot but help to ensure a big consumption of the raw material, and make fully-manufactured goods available at reasonable prices for everybody. United States growers are, of course, quite entitled to consider the question from their own point of view, and it is evident that they have a definite programme of their own, which they will probably persistently pursue. At the same time, we can scarcely refrain from expressing the hope that the interests of the manufacturing section will not be entirely overlooked.

AUSTRALIAN WOOL SALES.

Messrs. Dalgety and Co. have received the following cable from their Sydney branch:—"Wool sales: The market is easier and competition less animated. Medium and good merino wools are 10 per cent. lower. Inferior and faulty merinos 10 per cent. lower. Medium and coarse crossbreeds are also 10 per cent. lower."

VEGETABLE OILS AND OLSEEDS.

An easier feeling has come over linseed and linseed oil following lower Argentine options and reports of expected larger shipments. Consequently, sellers are more in evidence, and prices, both on spot and for shipment, are on a lower level. Little business has been in seed on consumptive account, present values being considered too high in view of the state of the oil market—in fact, crushers are reported to have re-bought oil on more favourable terms than they could produce it from seed at current market values. Raw linseed oil received something of a flip at the close of last week, when North America was an extensive buyer round £35 to £35 10s per ton, ex Hull mill, between 2,000 and 3,000 tons being taken up for prompt shipment. Prices advanced to £37 10s 10d and £40 London for spot oil, but have since receded 20s to 40s per ton, while forward delivery is at a slight discount off spot oil. Egyptian cottonseed on firmer markets in Alexandria has been

firm, and slightly more money is demanded, while Bombay has firmed up steadily to £10 on spot. Crude cotton oil is scarce and dearer at £36 for Egyptian, ex Hull mill, and refined is advanced. Soya bean oil firmer and 20s dearer, as is also palm kernel oil; but rape, coconut, castor, and ground nut oils are about unchanged.

Owing to the small "crush" of seed of late, linseed cakes are in short supply, and buyers are called upon to pay more for them. The imports of oilseeds, oil nuts and kernels in January aggregated only 88,005 tons, against 133,784 tons a year ago, the falling off being equal to 34 per cent., and chiefly under the heads of linseed and palm kernels. The exports of unrefined oil at 6,908 tons included 4,822 tons linseed oil and 1,421 tons soya bean oil, and were above last year. Exports of refined cotton and palm kernel oils showed a very decided decline, and with the reduced arrivals of seed indicate the lean times through which the oilseed crushing and allied industries are passing.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

the coming summer will show some startling examples in what are now called "jazz" shoes.

The shoe trade is a little better, but as the export of British footwear fell to £170,497 last month, against £311,129 for the first month of 1920, the outlook in this direction is not altogether hopeful.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, February 17.

There was a moderate business doing in some directions, but as a rule trade proceeded quietly, demand, particularly for raw materials, being confined to immediate requirements.

SUGAR.—There was a steady demand for all refined goods on the spot, and with only limited quantities of imported available, British makes were favoured. Messrs Tate and Lyle's cubes sold, 51s to 52s, as to quality; granulated, 46s 3d to 46s 9d; caster, 48s 3d to 48s 9d; yellow crystals, 40s 9d; granulated, March delivery, 46s 3d; ditto, April-June, 46s 3d. West India crystallised, sold from 39s to 41s 9d, as to sample. Muscovado nominal in absence of sufficient supplies. American granulated, February, steamer, sold, 18s to 18s 7½d, c.f. and i. terms, U.K. White Mauritius, spot, sold, 44s; ditto, adroit, held for 20s 3d, c.f. and i., London. White Natal, spot, sold, 44s 6d. Of Dutch makes, W.S.R., granulated, prompt, held for 19s; J. 18s 9d; and W.S.R. cubes, 22s 9d, f.o.b., Amsterdam. Czechoslovakian sugars scarcely offered during the week, owing to the difficulties attaching to transit, also labour troubles and lack of fuel supplies. Belgian crystals remain quite out of the market. Terminal market steadier. White, March delivery, sold, 18s 3d to 18s 9d; August, 18s 3d to 18s 9d. Cuban stocks, total 767,000 tons, against 325,000 tons same time last year.

COFFEE.—Spot market ruled fully steady, and supplies offered at public sale met a good reception. Bold new crop East India sold, 122s; bold Nairobi, 109s to 121s; Uganda, 94s to 95s 6d; Costa Rica, bold, 105s 6d up to 135s; fine peaberry, 152s 6d. Futures firmer. March sold, 50s 9d; May, 51s 10½d.

COCOA.—At auction, 9,848 bags were brought forward, of which 5,260 consisted of Grenada. A good demand prevailed for Grenada at 2s to 2s 6d per cwt advance, though otherwise a quiet tone ensued. Fine red Trinidad, sold, 61s; Grenada, common to good, 48s to 53s; fine, 55s to 56s; Dominica, fair to good, 49s to 52s 6d. Ceylon ordinary, sold, 88s. Butter steady, at 1s 9½d per lb.

TEA.—Quantity of Indian offered at public sale this week amounted to 43,945 packages. All the better descriptions sold well at a steady range, but inferior proved rather quiet, with prices occasionally in buyers' favour. 18,000 packages Ceylon attracted fair attention, but prices on balance disclosed some irregularity. Where quality was maintained, steady rates were secured.

RISE.—Market steady, and a fair volume of business resulted. Two Stars, Rangoon, spot, sold, 14s; No. 1 garden, Siam, spot, quoted 14s 6d. Broken kinds quiet, but steady. Bran slow. New crop, Burma, February-March, sellers, 6s per ton, ex ship. Rangoon beans quietly steady, and hand picked, spot, sold, 7s 9d. Japanese peas, on spot, 40s; Dutch, 20s to 25s, as to quality.

SPICE.—Pepper was dealt in to a moderate extent, and market ruled steady. Fair black Singapore, spot, sold, 4d; ditto, March-May, 3½d to 4d and 3½d; April-June, 4d and 3½d; ditto, April-June, Hamburg, 4½d; Aleppy, spot, London, quoted 4½d; Tellicherry, 4½d; white Singapore, spot, 7½d; Muntok, ditto, sold, 7½d to 8d; ditto, March-May, 7½d to 7¾d, and 7¾d; April-June, 7½d to 7¾d. Zanzibar cloves quiet. Spot, fair, sold, 1s 4d to 1s 4½d; February-April, steamer, 1s 2d, c.f. and i. Fair flake tapioca quiet of sale on spot, at 1½d per lb. Fair Penang seed pearl, spot, sold, 17s 3d. Sago flour quiet; January-February sold, 14s 9d to 14s 6d; January-March, 14s; and February-April, 13s 7½d. Desiccated coconut: Spot lots held for 40s per cwt. Ginger quietly steady.

FRUIT.—A very quiet tone again governed the market for currants. Pyrgos, quoted 54s; Amalia, 56s to 58s; Vostizza, 70s to 80s. Valencia raisins, also sultanas, steadily held, but there is only a small trade doing. Dates quiet but steady, and Siar, on spot, quoted 28s 6d for new crop.

JUTE.—Actual transactions effected this week were on a moderate scale, but in the absence of any undue pressure to sell values ruled tolerably steady. New crop, first grade, spot, Hamburg, sold 27; ditto, February-March and March-April, 24 to 24 5s; lightning grade ditto, 19 15s to 20 5s. Calcutta hessians and twills slow of sale.

HEMP.—With no recovery in demand from spinners, business proved quite retail in extent, and quotations in most instances were nominally easier. C grade, January-March, quoted 150; D, 148; E, 146; F, 142; G, 138 10s; J, 137 10s; K, 136; L, 135; M, 133 10s; streaky, one, 142 10s; two, 140 10s; three, 138 10s. New Zealand quite a dead-letter at the moment. Fair, January-March, sellers, 133. African sisal dull.

SHELLAC.—Market firmer forward, but spot trade moved quietly. Fair T.N., spot, 345s; March sold, 325s to 347s 6d; May, 315s to 342s 6d.

OPRA.—There was a fair trade doing, but market ruled somewhat unsettled. F.M.S. Straits, January-March, Rotterdam, sold, 25 15s to 25 5s; February-April, 25 17s 6d to 25 7s 6d; March-May, 26 2s 6d to 25 7s 6d. Ceylon, February-April, Hamburg, done, 26 15s; South Sea Islands to London, quoted 24 10s; Cebu to Hamburg, 25 5s. Palm kernels steady. February-April, Liverpool, sold, 18 15s to 19, and again at 18 5s.

RUBBER.—Market dull and lower on the week. Standard crepe

Commercial Times.—Weekly Price Current.

The prices in the following list are revised with the assistance of an eminent firm in each department.

LONDON, FRIDAY.			INDIA RUBBER.—lb.			PROVISIONS.—		
0000A—Duty, British grown			Para, fine, hard, spot			Butter—per cwt.		
35a foreign 42s. cwt.			Plantation crepe			Do factory

THE MONEY MARKET.

GREATER stability marked rates for money and bills. Up till Thursday loans were easy to get at 3 per cent. downwards, and though on that day further heavy collections of revenue, in addition to those revealed by the Bank return, caused 3½ to be charged by some lenders, and though a small amount was borrowed from the Bank, the discount rate was unmovable. Bills were scarce, and very little business was done above 3½ per cent., which figure, however, gave the market a small margin of profit. The amount of money, apart from day-to-day fluctuations, is

still large, and the course of discount rates would seem to depend on the amount of bills offered for tender by the Treasury.

* Additional to those offered by tender the preceding week.

Thursday's Bank return showed a further improvement. The circulation fell by £206,800, and the Reserve was £205,800 higher. Government securities were reduced by £15,880,000, while Other securities rose by £1,072,800. Deposits were thus £14,618,000 lower, Other being reduced by £27,514,400, while Public rose by £12,896,500. The Proportion stands at 18½ per cent., as against 16½ per cent. in the previous week. The circulation of currency notes was reduced by £4,126,100 to £298,276,300, which includes £1,679,700 for notes called in but not yet cancelled. The fiduciary issue is £248,646,600, or £61,341,800 below the maximum.

THE STOCK MARKETS.

Activity in the Stock Exchange has increased each day, and the volume of business is more than double that of a month ago. Thanks to scarcity of stock, spectacular rises in quotations have occurred, but the Consol and Home Railway markets close below the highest, owing to profit-taking. In the foreign market, French issues have been prominent, and the general activity has spread to all sections, with the exception of the markets for rubber shares and base metal mining issues, and there has been little reaction in prices. The price of rubber has touched a new low record, but there has been steady buying of good industrials. A considerable element of speculation has been imported into the markets, and there are many observers who would be glad to see a relaxation of the recent excitement.

COMMODITY MARKETS.

Prices in the cotton market continue firm, and though the demand from India is poor, some Manchester shippers have bought light fabrics speculatively. In the wool trade all sections of the industry are reported to be quiet, with a tendency to easier markets. At the Hull wool sale last week there was a decline of fully 5 per cent. on most merinos and a little more on crossbreds. The price of Cleveland pig-iron remains unchanged, but hematite has risen to 97s 6d per ton at works. Our Glasgow correspondent states that Scotch prices have moved in sympathy. Additional furnaces are going into blast in the Cumberland district, where it is stated that orders are being placed more freely. Reports from Sheffield indicate a better tone in the iron and steel trades, and there are signs of activity in the heavy branches of the engineering section. Welsh coal shows a further substantial advance on the week, best Admiralty moving up to 26s 9d per ton. The wheat markets were quiet, owing to the holiday in Chicago. Prices are still falling in the timber trade, consumers buying from hand to mouth. Easier conditions prevailed in the vegetable oil and oilseeds markets on the satisfactory official report from Argentina as to the crop yield. The home hide market remains steady, with slight unimportant alterations, but there is no improvement in the boot trade, export orders being rare. In the Belfast linen trade it is stated that buyers continue to act with caution, but linen sales in the United States are reported to be satisfactory. Detailed reports from our special trade correspondents will be found in later columns.

FOREIGN EXCHANGES.

Business in the foreign exchange market, although patchy, has been rather more active again. After the reaction, which, as we suggested, proved only temporary,

dollars moved up again, from \$4.35 to \$4.41½, on Thursday. The pace, however, seemed rather too rapid for the confidence of the market, and yesterday morning there was a slight reaction to \$4.40½. At the same time, there is an undercurrent of feeling that for some time to come the main direction will be upward. One temporary factor, the effect of which is probably not yet exhausted, would seem to be the moving of funds from New York to Holland in connection with the recent Dutch loan in America. At par for one month, 1-32 for two, and 1-16 for three above spot, future rates are about the same as last week. Interest for the last few days has concentrated on francs, which from just under 50f on the 17th fell to just over 48f on Monday, since when they have oscillated between that figure and 48.50f, being quoted yesterday morning at 48.35f. Coming at this moment, especially when M. Loucheur has spoken out so clearly with regard to France's attitude towards its American liabilities, optimism as to the franc is not easy to understand, and it is more puzzling to find that most recent buying comes from America. It is, of course, normal for the franc to appreciate in the spring, but the present movement and the general expectation that rates will go still lower would seem to have little real foundation. Francs one month ahead are quoted at parity with spot, two months ahead at one centime below. The lira, with one set-back on Wednesday, shows a sharp recovery in spite of political complications. Madrid and Amsterdam have both moved against us, but the Swiss rate has gone in our favour some 20c. In the North, Copenhagen, in spite of serious labour troubles in Denmark, continues to improve; Christiania and Stockholm, however, have both depreciated somewhat after their recent strong movement against us. Helsingfors remains satisfactorily steady. Berlin during the week has suddenly depreciated, going up on the 20th to not far short of 1,000, and although some recovery has taken place, it still shows at 960 a rising tendency. Disappointments over Genoa and the burden of the ten-day reparation instalments are quite enough to account for such movements on this very sensitive exchange. The Viennese rate has been particularly puzzling. In spite of advances and promises of advances from England and other countries, the recovery of the rate for inland kronen has been very slight, and an upward tendency to 28,000 appears to have set in again. At the same time, the London rate for Auslandskronen appears to have broken away completely, and has leapt up to 21,000. The only reasonable explanation is that the market has at last realised the folly of this almost entirely artificial quotation, and it is to be hoped that the rate may be brought near enough to the Inlands rate to allow the Austrian Government to abolish the distinction between the two without difficulty. Warsaw has depreciated to 17,000 and Prague and Belgrade are both higher again, the former in spite of persistent rumours of a loan. This rise in quotation will certainly be welcomed by Czech manufacturers whose business has been thrown into confusion by the recent too rapid recovery of the Czech krona. In the East the rupee is again rather cheaper at 1s 3½d and the yen at 2s 1 23-32d. The silver market has been irregular, with heavy future sales by China and strong spot buying for March settlements by India. On the whole, however, the tendency has been downward, and the immediate outlook is not hopeful. Hong Kong and Shanghai are both cheaper. In South America Valparaiso has moved rather sharply against us to \$40.80. Buenos Ayres is a little cheaper, Monte Video rather dearer at 45d.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 18, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	36,448	Supply Services	22,909
		Interest on Debt	263
		Road Fund	261
		Sundries	465
		Reduction of Debt	21,944
		Added to Exchequer balances ..	263
	36,448		36,448

Property and Income-tax yielded £17,900,000, Customs and Excise £11,216,000, Estate Duties, &c., £1,447,000, and Special Receipts £3,378,577. The surplus is smaller than in the corresponding week last year, but in most

items the revenue is keeping up to estimate. At the present rate there will be a slight deficiency on Income-tax receipts, but Customs and Excise may show a slight excess.

The week's operations reduced the National Debt by the sum of £21,743,405, and caused the following changes:—

	Min. £		Min. £
5% Treasury Bonds	+ 31,985	Treasury Bills	- 14,789
National Savings Certificates ..	+ 1,850	Borrowers of Bonds, &c.	- 499
5½% Treasury Bonds	+ 200	Depreciation Fund	- 500
	+ 33,635	Unemployment Insurance	- 500
		Bank of England Advances	- 8,000
		Public Department Advances ..	- 31,000
			- 55,378

The floating debt was reduced by £53,825,000 to £1,088,466,000. Sales of 5 per cent. Treasury Bonds amounted to £31,965,000.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO FEBRUARY 18, 1922.

Total spent	902,777,550	Raised by revenue ..	891,015,549
Inc. in balances	1,802,794	Net borrowings	13,564,795
Total	904,580,344	Total	904,580,344
ESTIMATES for YEAR 1921-22.			
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure ..	974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

POINTS IN THE ECONOMY CAMPAIGN.

THE attention of Parliament has this week largely been directed to questions of economy and finance, and though the main battle cannot commence until the Government makes the first move next week with an announcement of its intentions, there has been much preliminary skirmishing. First blood was drawn when the Government withdrew for reconsideration its proposal with regard to Civil Service pensions. These have hitherto been finally fixed by the rate of pay an official is earning at the time he leaves the Service. But Mr Hilton Young undertook to examine the possibility of making future pensions variable in accordance with the cost of living. He even undertook, though with greater reluctance, to look into the question of existing pensions, though this proposal encounters the difficulty of modifying existing undertakings. The principle raised is a far-reaching one, for all the arguments used clearly apply equally to war pensions. The problem illustrates the difficult questions that are caused by a fluctuating level of prices.

The defeat of the Conservative candidate in the Clayton and Camberwell by-elections is commonly attributed by both sides to a profound dislike on the part of the electorate for at least one of the major proposals of the Geddes Committee—the cut in the education vote. The suggestion to reduce the total charge for education by 18 millions out of 104 millions (of which 60 millions is chargeable to the taxpayer) is, indeed, one which in our opinion has no prospect of commanding the assent of public opinion, and is the least defensible on merits of the proposals of the Committee. We should be the last to deny that a vote which has risen since 1914 from 14½ to 50½ millions in England and Wales needs most careful scrutiny. Particularly is this necessary in a service in which 55 per cent. of the cost (44 per cent. in 1914) is found by the Exchequer, while the spending is in the hands of the local education authorities. Where so large a proportion is borne on central funds the incentive to local economy may be dangerously diminished. We, therefore, strongly sympathise with the recommendation that the block grant system should be reintroduced, and the burden of variation in expenditure thrown on the shoulders of those who are in the best position to control it. Moreover, the amount involved is so large that we have no doubt there is room for very substantial savings.

But the Committee rely for the greater part of the reduction on raising the age of admission to school, reducing teachers' salaries, and increasing the already high maximum number of pupils per teacher. The finance of these proposals is not discussed in detail, and only very general estimates of possible saving are given. We do not, however, think that they are the kind of saving that the country can afford to make except to a very limited extent. It has for decades past been realised that we cannot stand still in regard to education. The placing of political power in the hands of the mass of the community makes a high standard of general education imperative, while the stress of industrial competition between the nations and the high standard set by some of our chief competitors calls for great developments in technical education.

A serious feature of the pre-war situation was the low standard of pay of elementary teachers and the difficulty of attracting the best products of our educational institutions into a profession on which the nation's future so much depends. The proposal to increase the size of classes means that individual attention is impossible, and our schools will give merely a mechanical instruction. With a second rate type of teacher and excessive numbers we should be getting very poor value for our money. We should welcome a revised statement on this vital department based not on a reduction or dilution of the quality of education supplied, but on plans for getting the goods at a cheaper price by the elimination of waste.

Among the many minor changes recommended by the Committee, constant reference is made to the transfer of services from one Department to another, the tendency being to get back to the pre-war allocation of duties. Thus the Ministry of Transport and the Overseas Department are to revert to the Board of Trade, and the Department of Mines is to be broken up and its components returned to the parent Departments. The Committee even foresee the disappearance of the Ministry of Labour. With this general conception we are not altogether in sympathy. In many respects the pre-war allocation of

duties was illogical, and led to overlapping, and has been greatly improved during the war. This particularly applies to the Departments exercising some form or another of industrial control. Considerable overlapping could still be effected, especially in regard to factory and workshop inspection, by taking away from the Home Office all industrial functions and making it substantially a Ministry of Justice, and dividing the duties among the Ministry of Labour and the Board of Trade. We agree that the latter should be responsible for mines and railways, but it is not desirable to abolish the Labour Ministry.

In this latter connection, the Committee recognise that so long as unemployment insurance is administered on a national basis through the labour exchanges it will be necessary to maintain in being the Department controlling this organisation. The Committee, however, suggest inquiry into the idea of handing over unemployment insurance to the various industries in the hope that it may prove the prelude to the disappearance of the exchanges and the demise of a separate Ministry of Labour. This idea has been under discussion for some years, but the Department have this week again circularised the trade unions and employers' associations in the hope of eliciting some definite suggestions. The plan, however, cannot have the hoped for results, for reasons which can be quite shortly stated.

In principle the scheme has much to commend it. Each industry would be given an inducement to reduce its own unemployment, for by so doing it would lower its own insurance premium. The trade unions claim that they could administer the benefits at a lower administrative cost than the exchanges, and that they could more effectively check malingering. But the industries which suffer from violent fluctuations are not responsible for those fluctuations, and may reasonably require that part of the burden should be thrown upon the whole of industry generally; there is a very large field of unorganised industry where there is no responsible body capable of controlling such a scheme; the fluctuating margin of labour between various occupations is an administrative difficulty of a similar kind; and finally no industry would be prepared to start such a scheme at the bottom of a depression, when its funds would be nil and its liabilities very heavy. For these reasons, the conception can only be applied, in our opinion, to schemes for the payment of supplementary benefit in well-organised trades. Over the remaining field there must remain the national scheme, with the machinery of the labour exchanges as a means of testing the *bona fides* of the application by the offer of work.

These and other Civil Services, together with the cuts recommended in the naval, military, and air votes, furnish the 75 millions of savings recommended in the first and second reports. The third report published on Friday proposes the following reductions:—

	Proposed Cuts. (Mln. £.)	Proposed Cuts. (Mln. £.)
Colonial Group.....	2.3	1.1
Revenue Departments.....	2.5	3.0
Parliament and various Civil Departments.....	9.9	11.7
Works Department.....	3.6	7.1
Foreign Office.....	1.3	—
Stationery and Registrar-General Legal, Science, and Art, &c.....	1.1	—
		86.8

The reduction in the colonial group is in respect of the Middle East Department, the Revenue Department reduction is in certain Post Office services, those under the third head are the equivalent cuts in the Scottish Board of Health to those suggested for the English Ministry, while the Works Department cut is in respect of lower local rates and a restricted programme of Government office accommodation, especially in connection with labour exchanges. The totals do not, however, produce the 100 millions required, and the Committee conclude by looking to the Washington Conference, a review of foreign garrisons and a reconsideration of the oil storage policy to provide the additional 13½ millions. When the Cabinet have selected the cuts which they will adopt, and sufficient allowance has been made for the fact that all of the proposed economies will be slow in coming into effect, the reduction in expenditure by the supply services in the coming financial year will fall very far short of the 175 millions which the Chancellor has declared to be necessary.

HOME RAILWAY RESULTS.

THE dividend announcements of the English and Scottish railway companies have been recorded in the past three issues of the *Economist*, and it has been shown that no important changes have been made by the English companies, while the Scottish lines, with one exception, made reductions. The annual accounts, which have now appeared, are still in the abbreviated form to which the war accustomed us, many accounts being "omitted under authority of Ministry of Transport." At the meeting of the Midland Company, however, Mr Charles Booth, the chairman, said:—"I hope the shareholders do not think that the board desire intentionally to withhold information from them. At any rate, such is not the case, and it is only because the whole of the companies came to the definite conclusion that it would be undesirable to give information, which, under any circumstances, could only apply to four and a half months of the year's working included in the accounts, that the figures asked for have not been furnished. So far as the year 1922 is concerned, unless something unforeseen happens, there will be nothing to prevent the accounts being rendered as in normal times." Receipts and expenditure are, however, given for the past year, but only three companies give the 1920 figures for comparison—namely, the Lancashire and Yorkshire and the London and North-Western, which are now amalgamated, and the North-Eastern.

The dividends declared by the companies have enabled railway stocks to share in the boom which is at present in full swing on the Stock Exchange. But a closer scrutiny will give pause to anyone who is disposed to draw optimistic conclusions from the current reports. In the first place, the dividends have been maintained by drawing upon the first instalment of some £23½ millions of compensation money distributed by the Government under Section 11 of the Railways Act. This Act specifies that these moneys may be applied for any purpose for which the earnings of the company may be properly applied, mentioning specifically payment of interest on dividend. The table below sets out the amounts received by each of the important companies and the proportion transferred to revenue account:—

	Compensation Received.	Transferred to Revenue.	%
Great Central.....	£891,637	£225,000	25.1
Great Eastern.....	1,065,595	250,000	23.5
Great Northern.....	1,042,161	80,000	7.7
Great Western.....	2,916,546	125,000	4.3
Lancashire and Yorkshire.....	1,277,687	494,096	3.86
London, Brighton and S. Coast ..	720,971	205,000	28.5
London and North-Western.....	3,065,088	400,000	13.0
London and South-Western.....	1,046,161	250,000	23.9
Midland.....	2,911,286	500,000	17.2
North-Eastern.....	2,262,446	300,000	13.2
South-Eastern and C. Man. C'tte..	1,031,071	382,000	37.0
Caledonian.....	1,126,618	175,000	15.5
Glasgow and South-Western.....	403,638	130,000	32.3
Great North of Scotland.....	135,715	66,000	48.9
North British.....	1,192,988	400,000	33.5

The amount received by the companies enumerated was just over £21 millions, and of this £3,982,100, or 19 per cent., was drawn upon to meet dividend payments. The Great Western, it will be seen, takes only a very small proportion of the amount received, while the Great Northern takes £80,000 as an "appropriation from reserve (Railways Compensation Account—Railways Act, 1921)." This company also transfers £127,300 from "increased rates (net income suspense account)." The Scottish lines, it will be seen, appropriate much larger proportions from compensation funds than the large English companies.

But this is not all. If the compensation money is excluded, it appears that the ratio of expenses to receipts is 86 per cent. in England and 85 per cent. in Scotland, compared with 64 per cent. in 1913. But the receipts include an enormous Government subsidy during the period of control, and, taking the whole year, receipts are well below working costs. Figures are not available for disentangling the situation very exactly, but we can get a rough picture of it by the aid of the monthly finance statements issued during control. These figures,

in which the separate companies are not distinguished, are not strictly comparable with any which we can summarise from the reports, as some minor railways are included in the Government figures; but the error in this respect is very small. A more serious difficulty is that no figures relating to the subsidy were issued for the fortnight August 1st to 15th, as the monthly statements are in any case only claims for payment on account, and the Government has kept open the last fortnight for a final settlement after disputed items have been examined. But the published figures almost certainly are below rather than above the amount with which the railways have credited themselves in the item of gross receipts, which includes "estimated amount receivable under agreement with the Government in respect of the control of railways for the period January 1st to August 15th, 1921." Subject to these qualifications, the position is shown by the following approximations:—

	Mln. £
Net receipts available for dividend, &c.....	45½
Deduct transfers from compensation fund.....	4
" Government subsidy under control.....	47
(14 millions in first quarter; 33 millions April-July.)	
Deficit on year's working.....	5½

The deficit to the end of July was 20½ millions; it would therefore appear that the railways earned a surplus of 15 millions in the last five months of the year. The approximate position would thus appear to be, very roughly, as follows:—

	Jan. to March.	April to July.	Aug to Dec.
Receipts.....	56	59½	104½
Expenses.....	59½	76	90
Surplus or deficit.....	-3½	-16½	+14½
Ratio of expenses to receipts.....	106%	126%	86%

These percentages are not comparable with pre-war percentages, as the receipts include net proceeds of miscellaneous items, whereas the expenditure does not.

In the next table, which gives a comparison of net income, the amounts of compensation money transferred to revenue have been included:—

Company.	Railway and Other Net Income.	Increase or Decrease.	Miscel- laneous Income (Net).	Increase or Decrease.
ENGLISH.				
Great Central.....	£2,105,636	£19,890	£169,316	+22,734
Great Eastern.....	2,043,074	21,462	199,911	+73,082
Great Northern.....	2,156,434	93,706	224,785	+5,616
Great Western.....	5,504,568	174,881	683,865	+38,492
Lancs. and Yorks.....	2,414,463	34,648	215,800	+8,304
London, Brighton, and S.O.....	1,333,318	48,147	215,938	+61,953
London and North-Western.....	6,055,433	173,968	716,390	+82,492
London and South-Western.....	2,105,877	+33,868	216,387	+4,103
Midland.....	5,681,116	16,820	720,696	+82,057
North-Eastern.....	3,915,660	538,198	420,711	+98,613
South-Eastern and Chatham.....	2,030,172	1,064	19,644	+20,511
SCOTTISH.				
Caledonian.....	2,096,535	62,473	181,588	+16,505
Glasgow and South-Western.....	722,063	78,432	56,069	+9,993
Great North of Scotland.....	259,581	6,816	17,368	+556
Highland.....	256,309	1,347	4,021	+2,469
North British.....	2,398,678	23,111	80,078	+16,727

In all cases but two there is a decline in railway and other net income, which includes revenue from hotels, canals, docks, &c., but several companies show an increase in miscellaneous income, which comprises rents, tolls, and interest. The North-Eastern, after transferring £300,000 of compensation money, shows an exceptionally large decline in railway net income, but the South-Western by transferring £250,000 is able to show a small increase. A year ago all the companies, with the exception of the London and Brighton and South-Eastern recorded an increase. The past year was, of course, an abnormal one for the railways. The three months' coal stoppage caused great dislocation and loss of traffic, and a large increase in the price of coal during a considerable part of the year. It is impossible to tell from the accounts how each company has fared during the four and a half months of free working, as compared with the remainder of the year, when they were still under Government control. The chairman of the Midland stated at the meeting that, as compared with the corresponding periods of 1913, net receipts for the period January 1st to August 15, 1921, showed a decrease of £193,953, and for the period

August 16th to December 31, 1921, a decrease of £413,651. Whether this has been the general experience it is impossible to say.

Capital expenditure during the year was on a small scale, the total for the English railways being less than £4 millions and for the Scottish companies less than £100,000. The North-Western is prominent with an expenditure of £1,703,300, of which £911,700 was on steamboats and £297,600 on rolling-stock. The following table shows that there was a slight decline in the ratio of total net income to capital expenditure, and that the average rate of distribution on the ordinary stock of the English companies was unchanged:—

Company.	Total Capital Expendi- ture.	Net In- come.	Ratio.	Ordinary Capital.	Dis- tribu- tion.	Rate.
			1920.		1921.	1920.

* Excluding North British.

The directors of the North British postpone dividends on all stocks ranking after the 1884 preference stock until the dispute with the Government has been settled. The company has a claim for £690,000 in respect of the past year, but the directors do not feel justified in treating this item "as a good asset available for dividend."

None of the companies makes any appropriations to reserve or other similar funds, and only four of the English companies are able to make any addition to the balance carried forward after payment of dividends. The companies, however, have only received the first instalment of the compensation moneys due, and, as has been shown above, some of them have only drawn upon that instalment to a small extent.

All the reports refer to the amalgamations ordained by the Railways Act of last year. The schemes for amalgamation into four companies have to be formulated by the end of this year, and carried into effect before July 1, 1923. The Lancashire and Yorkshire has already been absorbed by the North-Western, and the Great Western scheme, set out in the *Economist* of February 11th (p. 228), for the absorption of companies comprising the Western group, was approved by Great Western stockholders on Thursday, but neither the Midland nor the North-Western reports confirm the rumoured agreement as to terms of amalgamation between these two companies. Other reports speak of negotiations that are now proceeding with other companies for the formation of groups.

We conclude with a table of dividends, prices, and yields:—

Name of Line.	1913	1920	1921	Prices of 1913.		Prices of 1921.		Price, Feb. 23, 1922.	Yield.

The remarkable rise in the price of ordinary stocks during the past week has not been equalled for many years. Throughout the greater part of last year the home railway market was in the depths of depression, but the pessimism was undoubtedly overdone. Whether the extent of the present upward movement is justified in view of some of the figures we have given seems open to question. Anything in the shape of a trade revival will, of course, have a pronounced effect on the companies' earnings. On the basis of the latest dividends, yields on the ordinary and deferred stocks are in the neighbourhood of 8 per cent., as against 10 to 12 per cent. at this time last year.

THE STOCK EXCHANGE BOOM.

(BY A STOCK EXCHANGE CORRESPONDENT.)

It is not difficult to understand the reasons for the extraordinary boom which has occurred in all Stock Exchange investment securities. The one point at which imagination is pulled up short, in conceiving the inevitability of such a movement, is the wonder whence all the money came to absorb the enormous amount of new issues poured out by Governments—British, Colonial, India and foreign—corporations, and manufacturing companies. Another point for surprise in the present situation is the extraordinary rapidity of the rise in most of the leading stocks. For such investments as home railway ordinary stocks, for instance, to gain 5, 6, or 7 points a day, as they have been doing lately, is enough to make even the hardened Stock Exchange man blink astonished eyes. Yet the explanation is simple enough. The main factor has been continually emphasised, week after week, in the "Stock Exchange News" letter that is one of the standing articles of the *Economist*. The reason resides in a couple of words: "No stock." Prices have got down to levels at which everybody who had to sell, or who was afraid of holding, was out of the market. They had cleared out of their investments, putting their money on deposit, or utilising it, perforce, in payment of taxes and of living. Those people who were left with the stock thus realised were of the class which bought without any intention of selling. The stock has been, in a word, permanently placed. Reduction in the Bank rate, with its concurrent lowering of the deposit rates to 2½ per cent., awakened the conscience of the investor to the fact that a Post Office rate of interest is not sufficient; and, moreover, that the Stock Exchange offered investments of good character upon which 5 to 7 per cent. might be obtained. At the beginning of the year the possibility of a General Election came into nearer focus, and, having regard to the apprehension which this held of a Labour Government being returned to power, it imposed a check upon the previous willingness to invest money in British Government funds. Various speeches removed the immediate possibility of an appeal to the country, and a fall in the Bank rate coming so quickly on the heels of such statements, the pent up impetus of money demanding investment became loosed. A flood of buying orders descended upon the Stock Exchange. There was no stock. There was a wild eagerness to invest. In the ordinary way, had trade been active, much of the capital would be flowing into commerce. But at present there is more optimism than orders in regard to trade, and notwithstanding an improvement noticeable here and there in various industrial circles, the capitalists, large and small alike, are not yet feeling the necessity for such expansion of business as would enable them to use money to substantial profit in their own businesses. Nobody, however, seems fully to have grasped the fact that the vast amount of capital piled up on deposit would have to be provided in course of time with employment in Stock Exchange securities. Had this been more generally appreciated, the present boom might have aroused less amazement; might even have been forestalled by judicious jobbers in some of the investment markets.

It is not as though the buying orders deal with small amounts. The newspaper story of three millions stock having changed hands, in a line, aroused comment and reserve, but a good many sums, ranging from £100,000

to a quarter of a million pounds stock, have been changing hands freely during the past ten days. Meanwhile, the small investor has been equally busy. Owing to the enormous amount of War Loan issued, a good deal of stock has been available to satisfy the buyers, although the rapidity of the rise in the price testifies to the pressure having been mainly on one side of the account. Prices became wild, and the War Loan has been moving, at times, with a difference of a point between the highest and lowest in a single day. The congestion in the market itself has recalled the days of previous booms in markets concerned with speculation and gambling. Heat, dust, crowds have been the portion of the Consol market day by day. The excitement overflowed into the Home Railway department. To get from one part of the House to another involved a struggle. Some members of the House declared that the markets had gone mad. At any rate, it has been no easy matter for jobbers or, for the matter of that, for brokers either. In the first case, the jobbers, finding themselves caught out of stock, have had to repurchase it sometimes points above the figures at which they sold. With the broker the difficulty has been to satisfy clients, who, sending orders to buy at best, are as amazed as exasperated to see the prices at which their instructions have been executed. It would be physically impossible for the markets to continue on the same plane of high excitement for any length of time. Prices cannot go on rising indefinitely. There comes a time when sellers will begin to ask whether their money cannot be more profitably employed in other things. But the great difficulty is to discover outlets into which money can be placed, when once it has been released from securities now sold. The books of jobbers in the Home Railway pre-ordinary section have been swept bare of stock. The lists of stocks on offer issued by jobbers in the markets for gas and shipping descriptions look almost ludicrous, owing to the array of dashes in the columns which, ordinarily, contain the amounts of stock available. It is the same everywhere. The inevitable result of the rise in gilt-edged stocks is to force investment-interest further and further afield. The foreign market has felt this effect, and the abrupt advances in French bonds afford testimony to the scarcity of stock and the urgency of the buyers; for people have been prepared to pay practically any price in order to get what they want. The standard of yield is being modified in the direction of higher prices and lower yields. The only thing which is likely to bring about a reversal of such conditions is general activity in trade circles. Of that, there is no immediate indication, and, therefore, while it is impossible for gilt-edged and investment prices to continue upwards, the mere fact of there being no stock offering in so many cases to supply the needs of the buyers will serve to maintain the strength of markets; the latter are, however, already acknowledging the possibility of an occasional setback should there be any unexpected political disturbance at home or abroad.

THE DIRECTION OF OVERSEAS TRADE.

AUSTRIA-HUNGARY, in some respects the most crippled of the belligerents in the late war, stands out among the 27 foreign countries of Europe, Asia, and America dealt with in the following tables as the one country from whom the United Kingdom increased the value of her purchases of imports, as well as the value of her exports and re-exports. By "Austria-Hungary" we mean the countries now known separately as Austria, Hungary, Czecho-Slovakia, and the Serb-Croat-Slovene State. In 1921 the value of our imports from these four States rose to £7,256,652 from £2,626,288 in 1920, an increase of £4,630,364, or 176.3 per cent.; the value of British exports to the same countries rose from £3,969,994 in 1920 to £4,382,393, showing an increase of £412,399, or 10.4 per cent., and the value of our re-exports rose from £1,689,009 in 1920 to £1,882,278, an increase of £193,269, or 11.4 per cent. In the tables below are shown the figures for the past six years, and those for 1913, taken from the official returns showing the direction of our overseas trade. From these tables we have com-

piled the following comparative figures, which show how the trade balance was divided between European countries, the United States, other foreign countries, and the Dominions. In making comparisons with the year 1913, allowance must be made for price changes. The figures for exports include re-exports:—

	1913.		1919.		1920.		1921.	
	Excess of		Excess of		Excess of		Excess of	
	Im-ports.	Ex-ports.	Im-ports.	Ex-ports.	Im-ports.	Ex-ports.	Im-ports.	Ex-ports.
Europe	£ 68.3	£ 85.1	£ 480.8	£ 279.7	£ 437.3	£ 165.8	£ 16.9	£ 211.5
U.S.A.	..	..	..	..	..	..	..	..
Other foreign countries ..	..	..	..	..	..	..	..	..
Brit. Dominions ..	..	..	..	..	..	..	..	..
Total	133.9	133.9	669.2	669.2	378.8	378.8	276.4	276.4

Our excess of exports to the Continent, which was much less in 1920 than in 1919, has been changed into a small excess of imports. On the other hand the excess of imports from the United States shows a great reduction, and the excess of imports from other foreign countries is less than a third of what it was in 1919.

The changes in the values of our imports from Europe are shown in the table below:—

IMPORTS (000's omitted).								
From—	1913.	1916.	1917.	1918.	1919.	1920.	1921.

Total	319,407	221,155	188,847	194,365	284,394	503,530	326,308	

The total value of our imports in 1921 was 43.7 per cent. less than the value of our imports in 1920. Of the 16 countries shown in the table, all but three showed a decrease in the value of the imports we bought from them, ranging from a percentage decrease of 76.7 in the case of Turkey, 61.7 in the case of Sweden, 60.8 in the case of Russia, to 32.7 in the case of the Netherlands, 32.1 in the case of Germany, 31.5 in the case of France, and 26.2 in the case of Belgium. Denmark showed an increase of 32.7 per cent., and Roumania an increase of 6.7 per cent. British exports to the same countries compare as follows:—

EXPORTS (000's omitted).							
To—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
France	£ 32,396	£ 98,272	£ 118,206	£ 29,273	£ 155,384	£ 146,600	£ 51,392

Austria-Hungary, or, rather, the countries grouped under that name, alone show an increase in 1921 of the value of the exports of British produce and manufacture consigned to them. In each of the other 15 countries the value of British exports taken was less than in 1920. The exports to Sweden decreased by 75.5 per cent., to Denmark by 67.1 per cent., to France by 65.2 per cent. through a descending scale to a percentage decrease of 28 to Russia, of 23.6 to Roumania, and of 17.8 to Germany.

The values of our imports from the United States and other foreign countries are shown in the next table:—

IMPORTS (000's omitted).							
From—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
United States	£ 143,854	£ 295,829	£ 380,287	£ 522,078	£ 546,672	£ 569,738	£ 276,990

Other countries	9,917	9,708	10,315	10,315	18,636	22,986	22,399
Total	236,417	424,679	516,287	699,953	763,037	872,481	429,390

The values of our imports from the United States and other countries of America, as well as from China, Japan, and the unenumerated foreign countries show a large percentage decrease from the values of 1920 as do the countries of Europe. Turkey in Asia has almost ceased to supply us with imports, her percentage decrease being 96.2. Cuba supplied us with goods to only one-fourth of the value of those sent in 1920, and the value of our imports from Japan fell by 70.6 per cent. China showed a decrease of 58, and Peru of 56 per cent. The United States and Brazil each showed percentage decreases of over 51, Chile of over 49, and Argentina of 46.7 per cent. The exports to these countries are shown in the next table:—

EXPORTS (000's omitted).							
To—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
United States	£ 30,478	£ 33,246	£ 33,721	£ 23,559	£ 34,416	£ 78,324	£ 45,061

Turkey (Asiatic) ..	5,291	336	708	1,286	9,871	18,861	1,400
Other countries	10,731	9,616	12,077	14,267	17,348	25,571	18,056
Total	126,195	91,541	94,105	97,569	140,431	291,922	165,564

Our exports to Mexico rose by 5.8 per cent., but in every other case there was a considerable falling off in the value of British exports, amounting in the case of the United States to 42.6 per cent., in the case of Argentina to 35.6 per cent., in that of Cuba 73.9 per cent., of Brazil 57 per cent., of Peru 54.8 per cent., of Chile 46.6 per cent., and of China and Japan 40.3 and 18.1 respectively.

The next table shows that our imports from the British Dominions last year were lower in value than in any year since 1916:—

IMPORTS (000's omitted).							
From—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
Canada	£ 30,488	£ 58,529	£ 84,385	£ 124,468	£ 115,295	£ 92,854	£ 62,287
Australia	38,065	36,178	64,289	45,696	111,589	112,709	67,828

Other Possessions ..	6,955	12,317	13,697	18,059	21,404	27,981	16,127
Total from Possessions ..	212,911	302,673	359,030	425,019	584,471	560,731	331,094

From New Zealand alone did we receive a larger value of imports last year than in 1920. India and Ceylon supplied us with imports less by 51.2 per cent. than in the previous year. Our imports from West Africa fell off by 64.6 per cent., from Egypt by 61.2 per cent., from Australia by 39.6 per cent., and from Canada by 33 per cent. The next table shows that our exports to the Dominions and Colonies were also of far less value than in 1920:—

EXPORTS (000's omitted).							
To—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
	£	£	£	£	£	£	£

West Indies	2,339	2,139	2,054	1,695			
Other Possessions ..	14,249	14,922	14,574	17,776	18,429	39,237	25,144
Total to Possessions ..	205,112	186,176	172,658	178,513	205,675	501,483	298,777

The value of our exports last year to the Dominions and Overseas Possessions was less by more than £200,000,000 than in 1920. The greatest percentage loss was that of our exports to Egypt—viz., 56.8. It was closely followed by that of our exports to Canada, 54.5, and by those to West Africa and New Zealand, 46.2 and 44 per cent. respectively. Our exports to India and Ceylon were less in value by 39.8 per cent., and to South Africa by 38.6 per cent. A final table shows that the value of our re-exports to the principal countries of the world has diminished in even greater degree than have our import and export values:—

RE-EXPORTS (000's omitted).

To—	1913.	1916.	1917.	1918.	1919.	1920.	1921.
France	12,072	14,904	16,500	13,742	35,814	40,097	12,899

United States	297	466	325	1,358	1,816	1,912	778
Japan	8,066	7,174	4,037	2,038	9,585	13,931	9,269
Other countries							
Total to foreign countries	95,801	83,033	62,183	25,872	154,680	196,940	94,011
British Possessions	13,774	14,533	7,494	5,084	9,642	25,466	13,041
Total	109,575	97,566	69,677	30,956	164,322	222,406	107,052

The total value of our re-exports last year showed a percentage decrease of 51.8 from the value of 1920. Of the countries shown in the above table, the percentage decreases in the values of our re-exports to them last year, compared with the values of 1920, were in the case of France 62.2, of Italy 70, of Belgium 50, of Germany 22.1, of Russia 38.3, of Sweden 62.3, of Norway 62.2, of Denmark 67.9, of the Netherlands 36.8, of the United States 62.2, and of Japan 59.3. Austria-Hungary (i.e., the countries under that title) alone showed an increase in the value of re-exports from us, viz., £193,000, or 11.4 per cent.

THE CITY LIFE ASSURANCE COMPANY, LIMITED.

An insurance correspondent points out that, owing to its very belated compliance with certain regulations of the Acts governing life insurance, attention has been recently directed to the published accounts of the City Life. During the last three years the following new business has been recorded by the company:—

INDUSTRIAL LIFE BRANCH.

	No. of Policies.	Sums Assured £	Annual Premiums £	Expense Rates.	Funds £
1918	23,587	385,004	160,077	58.6	105,677
1919	34,869	882,893	174,934	37.8	82,814
1920	31,132	842,845	188,662	39.4	80,417

ORDINARY LIFE BRANCH.

	No. of Policies.	Sums Assured £	Annual Premiums £	Expense Rates.	Funds £
1918	4,111	970,006	109,899	43.9	234,803
1919	8,981	2,767,006	182,644	69.7	309,636
1920	8,814	3,293,363	243,460	60.0	389,357

(a) Includes £54,449 transferred to establishment account.
(b) Includes £20,000 transferred to establishment account.

The above tables show that since 1917 the City Life has issued 89,588 industrial policies for a total of £2,110,742 and 21,904 ordinary policies for a total of £7,030,475. These are very big figures, and the question of the financial position of the City Life has thus become of great interest to thousands of families—most of them drawn from amongst the poorer classes.

The Assurance Act of 1909 made it compulsory for every life assurance company to have a valuation every five years at least, and to forward full particulars in prescribed form to the Board of Trade.

The last complete available returns of the City Life refer to 1912. After considerable correspondence, however, the Board of Trade obtained in January, 1920, a valuation—in an incomplete and summarised form—as at December 31, 1917, which disclosed an unsatisfactory position. The valuation of the ordinary branch was made on the H.M. table at 4 per cent., reserving 15 per cent. of the office premiums for future expenses. These assumptions were inconsistent with the actual facts, for the net rate of interest at present being earned is about 3½ per cent., and expenses absorb, not 15 per cent., but 60 per

cent. of the premiums. Even so, a liability of £290,009 was disclosed, against an actual fund of £189,039.

The industrial branch was valued mainly on the English Life Table No. 3, with interest at 4 per cent., reserving 40 per cent. of the premiums for future expenses.

Only a small proportion of the total business could be valued at all, for during 1917 the City Life had taken over the Law Integrity Insurance Company and the Irish United Assurance Friendly Society, and it was "found impracticable to afford any adequate data on which to base a reliable opinion as to the additional liabilities thus cast upon the company." The valuation, indeed, only referred to sums assured of £876,664, producing annual premiums of £42,287. The liability under these contracts amounted to £74,623, and the accumulated fund to £17,166, a deficiency of £57,461. These data refer, however, to the company before it came under the control of the present management. The City Life report for 1920—issued towards the end of October, 1921—stated that a valuation as at December 31, 1918, had been completed, and that it disclosed a material increase in the actuarial deficiency previously reported. At the City Life meeting the Chairman omitted to give any information as to the amount of this deficiency, and as the Board of Trade has not yet published the valuation statement, copies cannot be obtained either from the company or the Board of Trade. It has, however, been stated, and on inquiry from the Board of Trade we were informed that the statement was correct, that the 1918 valuation was made on a 4 per cent. basis, reserving 15 per cent. of the office premiums for future expenses in the ordinary department and 40 per cent. of weekly and 15 per cent. of monthly premiums in the industrial department. On this basis the liability in the ordinary department amounted to £375,547, as against funds of £234,803, while in the industrial department the liability amounted to £552,699, as against funds of £105,678. Thus by the end of 1918, on the far from rigid standard indicated, the deficiency in these two departments had risen to the large total of £587,765. Since that date the deficiency must have increased still further. In the first place, as our table shows, the expenses of the ordinary department have been not 15 per cent., but some 60 per cent. of the premium income, and, in the second place, the interest earned, even on the funds actually held, has been nearer 3 per cent. than 4 per cent., and has represented, of course, a very much lower rate on the full amount of the actuarial liability.

The 1920 balance-sheet showed the following funds:—

Life assurance funds—	£
Ordinary branch	389,357
Industrial branch	80,417
Endowment certificate fund	341,223
Mortgage redemption account	37,038
Total	848,036

The total balance-sheet assets amounted to £1,328,680, but this included the following paper assets:—

Establishment account	297,748
Office furniture, &c.	2,562
Shares in Law Integrity Insurance in liquidation	8,277
Total	308,587

The tangible assets are thus reduced to £1,020,093.

Against this, sums actually due from the company, including £110,563 loan against securities, amounted to £171,732, so that the free assets were reduced to £848,361, or just the amount of the funds.

The true position is, however, worse than this, for the City Life has incurred a contingent liability of £30,000 in respect of a guarantee, against which the company's securities have been deposited. Moreover, all investments are shown at cost, and no provision has been made for depreciation in values. Lastly, the assets include £160,000, the cost to the company of 320,000 shares of £1 each, 10s paid, in the United General Commercial Insurance. The report of the United General Commercial Insurance Company for the period December, 1919-June, 1921, showed a premium income of £145,964, of which £59,747 was derived from marine insurance. The issued capital of the company consists of 50,007 shares of £1

each fully paid and 431,993 shares of £1 each 10s paid, but after clearing up outstanding items on either side of the balance-sheet the net assets are reduced to £55,125, plus 99,556 ordinary shares and 9,950 deferred shares in the City Life.

It would thus appear that the United General shares are of somewhat uncertain value, and that, therefore, not only are the 320,000 shares held by the City Life not worth the £160,000 at which they stand in the balance-sheet, but also the liability of £160,000 on these shares is a very real one.

Those of our readers who have followed these arguments thus far will have grasped that the funds set out by the City Life in its accounts are still not adequate to meet its liabilities, and, further, that those funds include at least £160,000 which could not be realised, and that they are liable to be depleted by a further £160,000 in respect of uncalled liability on United General shares.

The policy of excessively rapid development, which has outrun the possibility of building up adequate funds, and the indication that the investments have not left the company in a sufficiently independent position are features which may reasonably give rise to anxiety.

THE FIVE-POWER NAVAL TREATY.

ALTHOUGH the general outlines of the Naval Agreement have been reported from time to time in the British Press, the text of this and of other arrangements made by the Washington Conference have received no publicity in this country. The final documents will shortly be published as a White Paper, but in the meantime it may be of interest to our readers to have before them a summary of the Five-Power Naval Limitation Treaty. It will be remembered that the figures originally proposed as the ultimate maxima for capital ships were 500,000 tons for America and Great Britain and 300,000 tons for Japan. But these figures would have involved the scrapping of the Mutsu by Japan, and as this ship appeals very strongly to Japanese public sentiment, having been built partly by public subscription as a memorial to the late Emperor, the Conference decided that it could not press this particular point. The retaining of this ship would, however, have given Japan two post-Jutland vessels compared with one for Great Britain and three for the United States, and the proposed ratio of war power would therefore not have been secured during the first ten years or so of the Agreement. The Treaty, therefore, now provides for ultimate maxima of 525,000 tons for America and Great Britain, 315,000 tons for Japan, and 175,000 tons for France and Italy.

In the first instance, the United States is to retain 18 ships (17 pre-Jutland and one post-Jutland) of a tonnage of 500,650. On the completion this year of two ships of the West Virginia class the North Dakota and the Delaware are to be scrapped, leaving America's tonnage at 525,850. Great Britain is to retain 22 ships (21 pre-Jutland and one post-Jutland) of a tonnage of 580,450, namely, Royal Sovereign (25,750), Royal Oak (25,750), Revenge (25,750), Resolution (25,750), Ramillies (25,750), Malaya (27,500), Valiant (27,500), Barham (27,500), Queen Elizabeth (27,500), Warspite (27,500), Benbow (25,000), Emperor of India (25,000), Iron Duke (25,000), Marlborough (25,000), Hood (41,200), Renown (26,500), Repulse (26,500), Tiger (28,500), Thunderer (22,500), King George V. (23,000), Ajax (23,000), and Centurion (23,000). In order, however, to bring Great Britain's strength in modern ships to an equality with the United States, the Treaty provides that "the British Empire may construct two new capital ships not exceeding 35,000 tons standard displacement each. On the completion of the said two ships, the Thunderer (13), King George V. (13), Ajax (12), and Centurion (12) shall be disposed of as described in chapter 2, part 2." In the detailed table for Great Britain, which we reproduce in detail, it is presumed that these new ships will be laid down in 1922, and that the four ships mentioned will be scrapped on their completion in 1925, thus reducing our strength in that year to 20 capital ships (17 pre-Jutland and three post-Jutland).

* The British Empire may retain the Colossus and Collingwood for non-combatant purposes, after complying with the provisions of Part 2, III. (b).
† Two 35,000-ton ships, standard displacement.

Note.—A, B, C, D, &c., represent individual capital ships of 35,000 tons standard displacement laid down and completed in the years specified.

Japan and the United States will not recommence construction until 1931, but France and Italy may lay down a ship each in 1927 and a second in 1929, in order that France in 1930 and Italy in 1931 may add a post-Jutland ship to their naval strength. The detailed tables, which run in the case of the larger naval Powers to 1942, are so designed that no Power lays down more than two ships in any one year, even when the period of re-building commences, while the scrapping is so arranged that by 1941 the United States and Great Britain will retain 15 post-Jutland ships each and Japan nine post-Jutland ships.

In connection with this programme, which relates to all vessels of war (other than aircraft carriers) whose displacement exceeds 10,000 tons standard displacement, or which carry guns with a calibre exceeding eight inches, the chief provisions are as follows:—

No capital ship exceeding 35,000 tons (35,560 metric tons) standard displacement shall be acquired by, or constructed by, for, or within the jurisdiction of, any of the contracting Powers.

No capital ship of any of the contracting Powers shall carry a gun with a calibre in excess of 16 inches (406 millimetres).

No vessel of war exceeding 10,000 tons (10,160 metric tons) standard displacement, other than a capital ship or aircraft carrier, shall be acquired by, or constructed by, for, or within the jurisdiction of, any of the contracting Powers.

No vessel of war of any of the contracting Powers hereafter laid down, other than a capital ship, shall carry a gun with a calibre in excess of 8 inches (203 millimetres).

Except as provided in Article IX. (permitting two vessels to be converted into aircraft carriers), no ship designated in the present Treaty to be scrapped may be reconverted into a vessel of war.

No preparations shall be made in merchant ships in time of peace for the installation of warlike armaments for the purpose of converting such ships into vessels of war, other than the necessary stiffening of decks for the mounting of guns not exceeding 6-inch (152 millimetres) calibre.

No vessel of war constructed within the jurisdiction of any of the contracting Powers for a non-contracting Power shall exceed the limitations as to displacement and armament prescribed by the present Treaty for vessels of a similar type which may be constructed by or for any of the contracting Powers.

If the construction of any vessel of war for a non-contracting Power is undertaken within the jurisdiction of any of the contracting Powers, such Power shall promptly inform the other contracting Powers of the date of the signing of the contract, and the date on which the keel of the ship is laid; and shall also communicate to them the particulars relating to the ship prescribed in Chapter II., Part 3, Section I. (b) (4) and (5).

In the event of a contracting Power being engaged in war, such Power shall not use as a vessel of war any vessel of war which may be under construction within its jurisdiction for any other Power, or which may have been constructed within its jurisdiction for another Power and not delivered.

Each of the contracting Powers undertakes not to dispose by gift, sale or any mode of transfer of any vessel of war in such a manner that such vessel may become a vessel of war in the Navy of any foreign Power.

The Treaty further provides for maintaining the status

quo with regard to fortifications and naval bases in the Pacific.

Vessels to be scrapped under the Treaty must be ultimately sunk, broken up, or converted for use as practice targets, except in the case of two ships which France may retain in a sea-going condition for training purposes. The first stage of scrapping which is to be immediately undertaken consists in the removal or destruction of guns, fire-control tops and revolving parts of all barbetstes and turrets, machinery for working hydraulic or electric mountings, fire-control instruments and range-finders, ammunition, explosives, mines, torpedoes, wireless telegraph installations, conning tower and all side armour, or alternatively all main propelling machinery and aviation accessories. The work of rendering vessels incapable of warlike service must be finished within six months. The final scrapping within eighteen months. As regards replacement, the contracting Powers undertake to communicate to each other the names and essential information in regard to new vessels laid down.

In order to deal with problems that will arise when the replacement commences towards the end of the ten years' holiday, the Treaty provides for a meeting of the contracting parties at the end of the expiry of eight years from the coming into force of the present Treaty, to consider what changes, if any, are rendered necessary by technical, scientific, or other developments. It also provides that if the national security of any of the Powers is materially affected by any change of circumstances, the contracting Powers will, at the request of such Power, meet to consider amendments. The present Treaty will remain in force until the end of 1936, and thereafter subject to two years' notice.

The Treaty also deals with aircraft carriers, which are limited to the following:—United States, 135,000 tons; British Empire, 135,000 tons; Japan, 81,000 tons; France, 60,000 tons; and Italy, 60,000 tons. No aircraft carrier is to exceed 27,000 tons standard displacement, except that any of the Powers may build not more than two such carriers with a displacement of 33,000 tons. No such vessel may carry a gun of more than 8 inches calibre. The number of anti-aircraft guns and guns of less than 5 inches calibre are unlimited, and no limit is placed if none of the guns exceeds 6 inches. But if this limit is exceeded there may be not more than ten guns in all of more than 5 inches calibre.

Owing to the attitude of France, the Powers were unable to reach any agreement upon the subject of submarines, and consequently were also unable to deal with the type of vessels required to deal with a submarine menace. Cruisers of less than 10,000 tons, torpedo boats and destroyers are, therefore, unaffected by the agreement.

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

PERU.—The introduction into the Peruvian Legislature of a Bill for the establishment of a National Bank—Banco de la Nación—represents the long projected design of the present Executive head, whose intimate knowledge of and association with European finance have enabled him to appreciate the serious drawback sustained by Peru by its lack of a national monetary institution. Until lately the Republic attracted but a small amount of foreign banking, owing in a measure to its comparative poverty, and, to a lesser degree, to its disadvantageous geographical situation. The opening of the Panama Canal greatly lessened the last objection, while, since the war, Peru has advanced materially in its foreign commerce. A certain amount of opposition to the establishment of a national bank had been met with on the part of local institutions, but this has since given way to offers of co-operation, it being recognised that a bank of issue is urgently needed to insure the stability of governmental economics. The proposed life of the new bank is 50 years, subject to prolongation. The capital will be £10,000,000, divided into one million shares, of £10 each, issued in two series, "A" and "B," in equal numbers. Of this capital, 20 per cent. will be paid up at the time of the bank's organisation, the balance being called as required by resolution of the directorate, to be passed by a minimum of

80 per cent. of its members. Operations by the bank may commence so soon as the Government shall have subscribed and paid in 20 per cent. on its stock. Over 18 different sections in the Bill serve to control the operations of the bank, rigorously curtailing the powers of the directors, all of whom must be Peruvians by birth possessing a well-established reputation for commercial knowledge and probity. The term of office is for one year certain, but this may be extended once or oftener. Both president and vice-president are to be appointed from among the members, in whose hands also will repose the appointment of the manager and the entire personnel of the staff, the Government making no claim to the exercise of influence in this direction. On the other hand, the Administration will have to approve of the articles of association before these are adopted.

CHILE.—In view of the present condition of Chilean Government finances, the announcement that the conversion of paper currency, so often deferred, has been further postponed until the last day of the current year, upon the recommendation of the Commission of the Exchequer of the Senate, has occasioned little surprise. Political and financial circles alike recognise the disadvantages of the country's unstable currency; but, while frequent promises of reform have been made, no definite steps have been taken since 1895, when the first law was passed to redeem the paper currency then outstanding at the rate of 18d. per peso. From June, 1898, until the end of 1904, however, Chile consistently accumulated a conversion fund out of the proceeds of certain taxes, the object being to provide for ultimate redemption in gold of all outstanding currency at the exchange rate mentioned. This conversion fund—never employed, but always accumulating—has served to give to Chilean currency a certain stability and resiliency which otherwise it could not have possessed. When in December, 1904, a fresh law was passed postponing conversion, from the date previously set (January 1, 1905), until the end of 1910, a blow was given to exchange values. Other decrees to the same effect have been passed at various dates, but conversion has been put off, owing, it is believed, to political influences, while repeated changes in the administrative personnel of the Chilean Government—many Cabinets remaining in power only for a few months—have still further adversely affected the situation.

It is stated that the Chilean Treasury—owing to various obligations—will this year be faced with a deficit of more than \$25,000,000 (gold), while some anxiety is expressed at the Governmental habit of adding loan to loan. The total of the loans contracted for during the past year are declared to have exceeded 623 million pesos (currency), while further loans, not yet carried into effect but arranged for, add to this sum a further 305 million pesos. According to Señor Echinique, a member of the Senate, the position of Chilean finances "is a very critical one." Notwithstanding the heavy borrowing, however, the credit and reputation of Chile remain inherently sound, a fact clearly demonstrated by the readiness with which the last loan offered abroad was subscribed.

BRAZIL.—The affairs of the Banca Italiana di Sconto possess particular interest for Brazil, which has attracted special attention as a field of operation. The clients of the bank seem to have suffered heavily, while the institution itself, during the three years of its operations, lost over 120,000,000 lire, of which more than 80,000,000 lire was debited to the first year's transactions in Rio de Janeiro, owing to unsuccessful exchange speculation. Both of the other branches, at Santos and Sao Paulo, suffered substantial losses, and are admitted by the bank's officials to be in liquidation, the advantages of a moratorium being denied to the institution in Brazil. It is regrettable to learn that many of the Italian emigrants, who have been labouring against heavy odds for some years past to save from their earnings, have now lost their accumulated hoards, with little prospect of any recovery. Nor does the Banca di Sconto stand alone in this respect. La Banque Française pour le Brésil is reported to have called its 1,200 creditors together. On the other hand, La Banque Française et Italienne, which is closely associated with the Banca Commercial Italiana, with widely distributed Italian and French interests in Brazil, Argentina,

Chile, and Colombia, seems to have carried on a sound and progressive business, enabling a dividend of 13 per cent. to be distributed for the past financial year, while maintaining a balance in hand exceeding 2,550,000 francs. The institution, for the most part, has confined its attentions to legitimate banking business, excluding all outside operations, with the exception of French and Italian Government loans. Speculation in exchange has been discouraged, and to this wise decision the success of the bank's trading may be largely attributed. Italian trade with Brazil continues to expand, even while it shows a sensible decline with other European countries, except those of Central Europe. There is little doubt that the new telegraphic cable to be installed between Italy and South America will further promote trade with the Kingdom. The Italian Government, having abolished the official monopoly of coffee, Brazilian interests in the berry will benefit, and an increased exportation to Italy will result. Brazil has also brighter prospects in regard to its principal export by reason of the permission lately granted by the Government of Czecho-Slovakia for the importation of coffee during the period of six months commencing in September last, and likely to be renewed. In the meantime, several new Italian Consulates have been opened on the West Coast of South America, including five in Ecuador. The Banca de Roma is arranging to despatch 3,000 Italian workmen to Bolivia to assist in the exploitation of important timber concessions held there.

Notes of the Week.

Genoa and Geneva.—The French Government has this week formally requested the Italian Government to postpone the Genoa Conference, and the arguments in favour of this course put forward in M. Poincaré's original Memorandum have been strongly reinforced by the failure

tour of Sir Drummond Fraser in America at the end of last year has largely dispelled the objections of American financial circles to the ter Meulen scheme and the Austrian plans of the Financial Committee of the League. There is now little reason to fear that Americans would be less ready to co-operate with the League in financial efforts in Europe than with a European group called by some other name. On the other hand, in the last few weeks it has become increasingly evident that, in contrast with the method of casual conference, the League, with its more formal procedure and more clearly defined status of the participating nations, has been acquiring a prestige among the large and small nations of Europe not fully realised by the British Cabinet. In the case of France, it is easy to understand that a body which takes its origin from, and has functions of the greatest responsibility arising out of, the Peace Treaties has many attractions for France. In the League, the rights of minorities and the standing of the members of Council are all very carefully defined and respected. It is these reasons, rather than a desire to take up an organisation that Mr Lloyd George appeared to have slighted, that explain the recent attitude of Paris. Again, the smaller countries of Europe guard with the greatest jealousy their prerogatives in the Assembly of the League, the constitution of which has been expressly designed to maintain their position against the Great Powers. These nations are highly suspicious of any attempt to displace this organisation, with its nicely balanced elements and its independent secretariat. Some of these considerations have doubtless been brought to the notice of the Prime Minister by the visit of the Czecho-Slovak Foreign Minister, M. Benes, and will be present to his mind when he meets M. Poincaré on Saturday at Boulogne for a private talk. If Mr Lloyd George can contrive to create at Genoa the atmosphere of Geneva and Washington, and not that of the Paris Conference and the Supreme Council, it may yet constitute another step towards an ordered Europe.

The Cost of Living.—The Labour Gazette's calculation of the cost of living for an average working-class family as at the beginning of February shows a decline of 4 points as compared with the previous month, the figure for February 1st being an increase of 88 per cent. over that in force at the outbreak of war. The table below gives the monthly movements since the beginning of 1918:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

		1918.	1919.	1920.	1921.	1922.
January	1st	85.90	120	125	165	92
February	"	90	120	130	151	88
March	"	90	115	130	141	..
April	"	90.95	110	132	133	..
May	"	95.100	105	141	128	..

October	"	115.120	120	164	110	..
November	"	120.125	125	176	103	..
December	"	120	125	169	99	..

any questions that are not finally settled at Genoa. Such an arrangement would put an end to the fears voiced by Lord Grey that an attempt might be made to set up a rival international organisation. If any such intention was ever seriously entertained by our Government, it has been dispelled by several recent events, which have strengthened the position of the League. In the first place, the Washington Conference has adjourned without any attempt being made to provide for a new Association of Nations, and those who have returned from Washington have gathered the impression that this idea is not now likely to be proceeded with. Moreover, Mr Balfour, whose two years' experience with the League is undoubtedly largely responsible for the new enthusiasm and international outlook which characterised his masterly handling of our affairs at Washington, declared on Monday that, in his judgment, "there is no conflict in ideals between these two great instruments. The most ardent devotee of the League never supposes, in his most sanguine moments, that the League could have done what has been done at Washington. The severest critic of the League would be equally ready to admit that the League has undertaken, and is carrying out, work for which no occasional conference could provide. The League supplies that continuing organisation which is required in order to carry out a continuing policy." Finally, the

The latest figure is the lowest recorded since January, 1918. The decrease during last month was mainly due to reductions in food prices, including eggs, butter, flour, bread and margarine. It may here be mentioned that an announcement has been made this week to the effect that the price of the 4 lb loaf in London is to be raised from 9d to 10d on Monday next. Food prices alone stand 79 per cent. above the pre-war level, as compared with 85 per cent. at the beginning of January.

Employment in January.—The statistics of unemployment in January show no improvement. Indeed, the Labour Gazette for February shows that there was a further increase in the percentage of members of trade unions unemployed—namely, from 16.5 per cent. at the end of December to 16.8 per cent. at the end of January. The monthly figures for a number of years are set out below:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

* Excluding coal miners. † Revised figure.

In practically all the principal industries large numbers were unemployed and short-time working was general. The percentage of unemployed among workpeople insured under the Unemployment Insurance Act was unchanged at 16.2 per cent. The total number registered at the Employment Exchanges on January 31st was 1,906,000, as against 1,868,000 at December 31st. In addition to those unemployed 288,000 were registered as working systematic short time.

The Building Guilds.—In connection with the recent issue of the first reports of the London and National Building Guilds, a correspondent writes:—Although the Building Guild movement is but two years old, it is already by far the most considerable experiment that has yet been made in the control of industry by the organised workers. It is, in its own words, an attempt at "industry organised for service" under the direct control of the operatives, and on a strictly non-profit-making basis. It arose directly out of the systematic propaganda of Guild Socialism which has been carried on for a number of years by the National Guild League. The Guild Socialists, who aim at a complete reconstruction of industry on a basis of "free and self-governing service by the organised producers," have always made their appeal primarily to the trade unions and to the professional workers. The peculiar situation of the building industry after the war afforded the opportunity, not merely for making plans, but for positive action. The first groups to take action were the various branches of building trades operatives in and around Manchester, who, with the aid of the Guild Socialist leader, Mr S. G. Hobson, formed in January, 1920, the Manchester Building Guild. Other areas speedily followed Manchester's example. In London, where Mr Malcolm Sparkes, formerly an employer-manager in the trade, and a group of trade unionists had for some time been attempting to get a guild started by consent between employers and workers, the failure to make progress on these lines led to the establishment of the London Guild of Builders, which has just issued its first annual report*. There are now in England, Scotland, and Wales about 135 local or regional building guild organisations, united, since last autumn, in the National Building Guild, which has its headquarters in Manchester. The Building Guilds have now in all about two and a-quarter million pounds' worth of work in hand. The bulk of this is work for local authorities on Government housing schemes; but it also includes a substantial amount of general building and decorating work. As practically all the large contracts undertaken by the Guild are still in progress, the reports issued can as yet give no final account of the financial results secured. But, on the work completed, a substantial saving has been made in each case on the estimated prices, which were the lowest competitive tenders submitted. The Guild does not work for profit, and it is a fundamental rule of its constitution that no profit may under any circumstances be distributed. It has two main forms of contract. Under the first, actual cost, including a percentage for administration, &c., alone is charged, i.e., the purchaser pays the actual cost of the job, whether it is higher or lower than the estimate submitted by the Guild. In fact, it has been uniformly lower. Under the second form of contract the Guild quotes a maximum price, which is not exceeded under any conditions. In order to cover its risk, it charges against all

* "The Building Guild in London." Price 6d. Published at 52 Russell square, London, W.C. 1.

contracts made on this basis a small percentage, which goes to an insurance fund. If the actual cost works out at less than the estimate, the balance is shared between the Guild and the purchaser. Local authorities in many cases have saved considerable sums on their estimates under these contracts. In the cost price charged by the Guild is included one item which is of vital importance. According to Guild theory, every worker belonging to an industry is entitled to continuous pay at the standard rate from that industry. This principle the Guild applies to its own workers, who receive pay in time of involuntary standing off or sickness. The guildsmen themselves believe that the Guild is capable of forming the basis of a new industrial system which will replace capitalism. Their conviction can be neither proved nor disproved on the basis of the experience so far available; but there seems to be evidence enough that the Guild operatives are working in a new spirit, under the stimulus of the new incentive of "self-governing service," to make the Building Guild well worth watching, and to render it very important that it should be afforded the fullest and fairest opportunity of proving its capacity, and thereby the capacity of the organised workers to "control industry," and thus implement the claim so often made on their behalf.

Engineering Crisis.—On Wednesday the Engineering and National Employers' Federation gave notice to the Amalgamated Engineering Union that from March 11th it would be a condition of employment that the workers should recognise the right of the management to decide when overtime and nightwork should be worked. The men have already rejected this demand by a ballot vote. The dispute is confined to the engineering industry, and hopes are entertained that a conference between the employers' and the workers' executives will shortly be convened to discuss the situation. The Engineering Union has a membership of 407,000, of which over 90,000 are unemployed, while a large number are on short time.

The Re-insurance Habit.—In dealing with the affairs of the City Equitable last week we commented on the fashion of re-insurance by treaty, which is now so popular among fire and marine insurance companies. At the annual meeting of Lloyds' Underwriters Association, held this week, the chairman, Mr Hargreaves, dealt with the same topic, considering it from the point of view of an underwriter who has no treaty to shoot his risks into, but carries what he writes. Mr Hargreaves pointed out the difficulty in which such an underwriter is placed on a risk which is started below the proper rate by a company which intends to shoot its line, and therefore cares very little whether the risk is adequately paid or not. It introduces an element of confusion into the market, and makes it almost impossible for the treatyless underwriter to conduct his business as it should be conducted, the risk being led by an underwriter who is acting really as agent for his re-insuring companies. In principle, this practice of writing to re-insure is not sound. It impairs confidence, disguises the true position, and makes the company which ought to be an insurer become little more than a jobber in credit, giving a policy with good security and covering its liability with inferior security. The answer given to this criticism is that risks of present-day size could never be covered unless the companies had a ready market for re-

insurance in which they could undo their bargains. As the market is at present organised, there is something in this argument, but as all the risks are covered ultimately the market must be large enough to carry the whole, even though some of the security given is not of the first class. If the market organised itself rather differently, and the companies who now fortify themselves with re-insurance treaties adopted the policy of running larger lines themselves, would not the difficulty of the big risk be solved? The resources of our big offices are very large indeed, and we should imagine that much larger lines than those actually run by some of them would be well within their scope. Some companies do actually run much larger lines than others of equal standing, and some have been able, without endangering their security, to increase very largely their lines within the past few years. Theoretically, at any rate, it is much more sound for the lines to be increased than for the risk to be handed on from one company to another down a ladder of diminishing credit. The underwriters on the lowest rungs of the ladder would soon die of starvation, but would the world be worse off by their death?

The Situation in Mexico.—While Washington delays its recognition of President Obregon's Government, disquieting rumours are reaching the outer world indicating a general revival of unrest. It seems certain that a revolution in Chihuahua has only been checked by the sudden arrest and execution last week of the Federal General Prudenias and a number of officers—two of whom were betrayed into the hands of the Federal authorities by ex-General Villa, now reformed and peacefully directing his own ranch. It has also been stated that 5,000 United States troops are encamped on the frontier, ready to act in case of an attack by revolutionists on Ciudad Juarez, opposite El Paso. But United States troops are always stationed on the frontier, and it is quite possible that the rest of the story may be merely conjectural and decorative. A message, however, has reached London from a trustworthy business source in Mexico City to the effect that disturbances are taking place in Puebla—an industrial centre, and repeatedly the scene in the past of strike riots, summarily and savagely repressed—and that there are risings all over the country, but that business is as usual in the capital. These reports are unconfirmed by Mexican official advices, and the disorders may be merely the outcome of the unsettlement and suspense existing everywhere and aggravated in Mexico by the delay of recognition. Last week it was announced that Mr Lamont, who visited Mexico last year in connection with the negotiations for a loan from United States bankers, had just expressed his expectation of a satisfactory understanding between the two Governments at an early date, and that Señor de la Huerta, Provisional President after the fall of Carranza and now delegate to a Conference with the authorities at Washington, had stated that arrangements were proceeding satisfactorily for the adjustment of the terms of the long-desired American loan, without which, apparently, the service of the Foreign Debt is not likely to be resumed. President Obregon has recently reaffirmed his hopes of an early resumption; but he has expressed them so often that European opinion is sceptical, and Mexican securities have not shared in the general rise which has marked this week in London.

Anglo-Czech Bank.—A correspondent writes:—It is reported from Prague that the negotiations between the Bohemian Banking Corporation, Prague, and an influential financial group consisting of representatives of the malt, spirit, and sugar industries have now been concluded. As a result, the management of the bank will be reorganised and its capital raised considerably. Among the new members of the board of directors will be Mr Hugo Schwarz, one of the managers of the Anglo-Austrian Bank, the branches of which will in the near future be taken over by the Anglo-Czech Bank, now in course of formation. Thus the Bohemia Bank will stand in close contact with the latter concern, and will take over 25 per cent. of its joint-stock capital. The remaining 75 per cent. will be subscribed by English financiers. In addition to this, the

Bohemia Bank has succeeded in concluding a favourable agreement with the Internationale Handelsbank in Vienna, according to which it will take over the Czechoslovak branches of this bank, thus acquiring a footing in the porcelain industry of Western Bohemia. The plan to utilise the branches of the Internationale Handelsbank for establishing a special bank for the porcelain industry, to be known as the Bank for Foreign Trade, has been abandoned, and the organisers intend to support the Bohemia Bank, which will carry out their original programme in this direction. In this way the Bohemia Bank has secured a strong foothold in the home industry which may soon prove to be of mutual advantage, as the industries mentioned above depend to a great extent on export trade, and the well-organised intelligence service of the bank will therefore be of great use to them. In addition to several branches at home, the bank has a branch in Paris, and is affiliated with the Bank of Europe and the firm of Brodsky and Sovak in New York, the Bulgarian Trading Company in Sofia, with branches in Varna, Rustchuk, and Plovdiv, the Import and Export Company at Belgrade, and the "Exportul" Import and Export Company in Bucharest. The intelligence service of the bank will be still further improved by the close co-operation with the Anglo-Czech Bank. As already mentioned, the Anglo-Czech Bank will be formed as a new concern, with headquarters in London, by taking over the branches of the Anglo-Austrian Bank, of which there are 30 in Czechoslovakia. The bank is specially interested in the sugar industry, and after its transformation it will be one of the biggest banking concerns in Czechoslovakia.

The New Baltic States.—Estonia and Latvia, with populations respectively of 1,750,000 and 1,503,000, will serve through their State railways as the chief outlets of Russian overseas trade. In Estonia, Reval—now officially called Tallinn—can take ships drawing 28 feet alongside the quays; a railway 210 kilometres (about 131 miles) in length connects it with Narva, on the Russian frontier, and gives access to Petrograd and Northern Russia: another line of 48 kil. (30 miles) with Baltic Port, which serves for winter traffic when Reval is closed. From Taps, on the Narva line, there is a branch of 195 kil. (122 miles) to Vulk, on the Lithuanian frontier, and on to Irbosha (120 kil., or 75 miles), on the Russian border; and the total of 651 kil. (407 miles) is completed by a line from Reval to Hapsal of 78 kil., or 49 miles. All these are of the Russian gauge of 5 ft. (A direct railway from Reval to Moscow hereafter is provided for by treaty with Soviet Russia.) The proportion of rolling stock to mileage compares favourably with that in Finland, Latvia, Lithuania, and Poland, which compete for a share in Russian through traffic. Last year that through Estonia amounted to 18,926 carloads, totalling 211,615 metric tons, mainly railway material, locomotives, machinery, tools, and food; from Russia only empty cars came till November, and of the 240 loaded cars in that month and December a large proportion carried the property of refugees. The Latvian system serves Central and South-Eastern as well as South-Western Russia. Three trunk lines, of the Russian gauge, terminate at Latvian ports: from Tsaritsin, on the Volga, through Tambov, Smolensk, and Vitebsk, to Riga; from Moscow, through Pskov, by Riga to Windau, which should eventually again carry much Siberian produce; and from Romni, in the Poltava Government, through Minsk and Vilna (now to be Polish) to Libau, thus serving much of South-Western Russia. Of these lines, the Latvian portion amounts to some 516 miles in all. Riga admits vessels of nearly 20 ft. draught, Libau of 27 ft., Windau of 28 ft.; normally both the latter are always, or nearly always, ice-free, though this winter ice-breakers have been needed, and one is to be obtained from Russia. Neither State can yet export much native produce beyond flax and timber, though Latvia also exports paper pulp and meat. Conventions have dealt with the relations of the two railway systems with one another and that of Lithuania; probably all three will be under joint management; and also with through traffic arrangements between Prague, Warsaw, Riga, and Reval. Agrarian reforms, specially drastic in Estonia, have substituted peasant holdings for the large estates of the "Baltic barons" of

German race and speech. Both States need foreign capital. A holding in the Bank of Dorpat (now called Tartu) has been acquired by the British Overseas Bank, and a British group has made inquiries with a view to purchasing factories in Latvia disused since the war. The Latvian Budget estimates of 1920-21 were only made to balance by the issue of paper currency and "prospective internal loans," and it is argued locally that taxation has reached its limit, that the rate of exchange (about 1,000 roubles to £1) hampers foreign trade, and that the only hope for economic reconstruction lies in a foreign loan. But the terms now would be onerous, if not prohibitive.

The Rand Strike.—The news to hand with reference to the progress of affairs on the Witwatersrand has been on the whole encouraging to holders of shares, both in coal and gold mining companies—who, however, should not lose sight of the point that time will be required for the restoration of normal conditions. At the collieries the trouble is virtually over, and, despite intimidation, the gold miners are filtering back to work. With the assistance of the enginemen and the officials, crushing is proceeding on a partial scale at a number of the properties. A fresh scheme put forward by the Industrial Federation—once again—overlooks the economic factor. More or less in correspondence with the improvement in the sterling exchange on the United States, the premium on gold continues to decline; the price of the metal is now more than 20s below last year's average. Half-and-half measures, consequently, are useless. And the proposals of the Chamber of Mines are quite moderate. Indeed, as pointed out by General Smuts in his detailed statement before the Union House of Assembly, the Chamber is in one important item merely acting in accordance with the report of the Low Grade Mines Commission.

Housing Problems in Germany.—The German Government has now carried through its new housing legislation. The official rationing of housing and the maximum rent system are to remain for four more years. The principle of the "basic rent" of 1914, to which is added a small supplement (in Berlin at present 70 per cent.) to compensate for the currency depreciation, is retained. At present, according to official statistics, the Berlin citizen pays in rent 1.8 per cent. of his income. As the houses are going to ruin, the new law provides for making tenants pay for repairs; but the present *de facto* complete expropriation of house owners is perpetuated. This is reflected in the reports of the mortgage banks for 1921. While between 1905 and 1913, with a stable currency, the total of mortgages outstanding rose from 8,668,430,000 marks to 11,893,240,000 marks gold, the total at the end of 1921 was only 12,181,100,000 marks paper. The mortgage banks refuse to increase mortgages, on the ground that the 30 to 50-fold rise in the paper-mark value of houses cannot, owing to the maximum rent system, be realised. The mortgage bondholders, like the house owners, have been expropriated. In September the Government planned to raise rents 600 per cent., and itself to appropriate the new revenue; but this has not been carried out, and at present the house owners have lost their property and the State and municipalities have lost a source of revenue, while the citizen lives practically rent free.

Lancashire Cotton Dividends.—The stocktaking results to the end of January of 78 Lancashire cotton firms engaged in the production of cotton yarn only, and having a total paid-up ordinary share capital of nearly £11,000,000 and a total spindles of more than eight millions, have been announced during the past few days. Dividends ranging from 3½ per cent. to 20 per cent. per annum, absorbing £122,500, have been declared by 35 mills, but the directors of 43 concerns have been unable to recommend any payment at all. Out of the companies whose reports relate to the three months trading to the end of January, 31 have been forced to pass the dividend. The average dividend per company for the quarter is 4.88 per cent. per annum, compared with 5.71 in October, 6.44 in July, 7.33 in April, and 22.11 in January, 1921, and the aggregate paid-up ordinary share capital amounts to £10,423,735. Of the remaining 22 mills, with a total paid-up ordinary share capital of £4,645,241, 12 firms

could not pay a dividend over a period of six months. The average per company for the half-year works out at 3.86 per cent. per annum, against 4.68 last July and 13.44 12 months ago.

Non-Ferrous Metal Prices.—Our mining correspondent writes:—This week several of the leading non-ferrous metals have touched quotations lower than those recorded at any time during the past eight years, apart from the collapse which occurred after the outbreak of war in 1914. To carry the comparison no further back, copper was over £9, tin about £35, lead £6 5s, and spelter £3 5s per ton below the levels ruling on December 16th, when the summit was reached of the little rally brought about by purchases in anticipation of better business in the new year. More particularly as regards copper and zinc, the recent fall has been contributed to by the continued appreciation in the sterling exchange, which facilitates shipments from the United States. But the governing factor consists in the slackness of demand, combined in several cases with the existence of large and increasing stocks. Although the accumulations of copper on the other side of the Atlantic are stated to have been reduced, they are still appreciable; and will shortly be added to through the resumption of operations on the part of several of the leading producers. The end-January tin statistics showed an expansion of over 1,000 tons in the visible supplies—to 25,350 tons. The stocks in the hands of the Malayan and Dutch East Indian Governments are estimated at 10,000 to 12,000 tons. This tin, it may be recalled, was purchased for the purpose of assisting the industry, and an official assurance has been given that it will be kept until it can be sold at a profit. Should, however, the period of nursing prove a long one, the Governments concerned may be unable to carry out their declared intentions. In any case, the known existence of these stocks casts something of a shadow on the market. With spelter an artificial position exists owing to the contract between the British Board of Trade and the Australian producers. This agreement was entered into for the very laudable purpose of preventing a return of the German domination of the zinc smelting industry; still, it is like to cost the taxpayer dear. Strangely enough, efforts on the part of home producers to secure terms equivalent to those granted to the Australians have been entirely without effect. Metal exchange experts take a very chastened view of the prospects for some time to come. No sustained improvement in values can occur until the demand expands, and an expansion in the demand waits upon a recovery in the purchasing power of the world.

Jute Industries.—In November, 1920, the "offer for sale" of shares in Jute Industries, Limited, appeared in which the value of the net assets of the various associated companies comprised in this undertaking were stated as £8,158,217. Combined profits of the associated companies were given from 1916, and these varied between £628,390 in that year and £1,497,557 for 1920. In the accounts and report now issued for the "period from the incorporation of the company to September 30, 1921," profits are given as £308,251. Of this amount £58,466 went in payment of interest on the purchase price, and after distributing the preference dividend of 9 per cent. and writing down expenses by £59,355, the directors have carried £12,693 to next year's accounts. The associated companies have advanced during the year £1,244,695 to the main undertaking to enable the directors to acquire certain shares "without increasing the capital of the company." Depreciation of stocks have been met by writing down all stocks to market values, which has been provided for, "except in the case of one of the associated companies," out of profits. The report states that the directors have revised the inventories of assets "on the basis of present prices, and after allowing for the full depreciation shown by these revisions there still remains a surplus of values of something over two and a-quarter million pounds over and above the issued capital." Total assets appear as £5,911,741, as against share capital of £4,500,000, advances from subsidiary companies at £1,244,695, unclaimed dividends £497, and a credit balance at profit and loss account of £166,548.

Conditions in Japan.—Cable advices from Tokyo state that, as a result of the quick return of money from the provinces after the turn of the month, the quotation for short loans continued to drop daily, having fallen at one time to 3½ per cent., but the rate has now hardened to 4½ per cent. Time money is 7½, with the discount rate unchanged. While there is a tendency for bank deposits to decline, the adverse balance of foreign trade, which has been increasing of late, foreshadows a stringency of money in the future, and rumours of a rise of bankers' deposit rate are increasing. The rice crop of last year is reported to be 55,000,000 koku (about 262,000,000 bushels), which shows a decrease of 800,000 koku for the previous year. The silk yarn market remains weak, while rice and cotton yarns are unchanged. The Stock Exchange has been dull, with little movement. The index number of wholesale prices in Tokyo for January was 271.63, as against 265.84 in the corresponding month of 1921.

By the courtesy of the Lord Mayor of London the annual meeting of the Sound Currency Association will take place at the Mansion House, London, on Tuesday, March 7th, at 2.30 p.m. The Earl Beauchamp, K.G., will preside, and a number of eminent bankers, economists, and merchants will take part in the proceedings. The meeting will be open to the public. Admission will be by ticket, obtainable upon application to the hon. secretary, Mr F. C. Goodall, 115 Cannon street, London, E.C.

At the fourth ordinary meeting of the present session of the Institute of Actuaries, on the 27th instant, at 5 p.m., at the Hall of the Institute, Staple Inn, Mr C. H. Maltby, F.I.A., will read a paper on the "Results of an Investigation into the Effects of Different Valuation Bases upon Surplus."

At the public meeting to be held on March 3rd, at 8 p.m., in the Central Hall, Westminster, under the auspices of the Fight the Famine and European Reconstruction Council, Professor Pigou, we are informed, will speak on Reparations, Lord Beauchamp and Mr A. G. Gardiner on the French Pact, and Mr H. N. Brailsford and Mr Arthur Ponsonby on the Fate of Russia.

Oversea Correspondence.

UNITED STATES.—FINANCIAL AND BUSINESS CONDITIONS.—RAILROAD OUTLOOK CONSIDERED BETTER.—ADVANCE IN FARM PRODUCTS.—BONDS ACTIVE.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 11.

VARIOUS developments during the past week or so have created a much more cheerful feeling in financial and business circles generally. One of the most noteworthy features is the continued strength of farm products, the advancing tendency which began in January having become more pronounced within the last few days. Wheat has advanced sharply, as have other grains, though to a lesser extent, cotton has rallied, and other farm staples have displayed increased firmness. As a result, farmers are marketing their products more freely, and at rising prices. The significance of the upturn in such commodity prices lies in the fact that for months agricultural sections of this country have been greatly depressed, the purchasing power of such communities having been diminished owing to the extremely low and unprofitable prices which prevailed for farm products generally. Obviously, higher and remunerative prices will increase the purchasing power of people in those districts, and in turn will serve to stimulate trade in many directions. Other factors which have contributed materially to the greater optimism are the vigorous rally in European exchanges, particularly sterling; that development has overshadowed all others in importance in financial markets. Railroad traffic is increasing, as is indicated by the heavy reduction

in the number of idle freight cars, and there appears reason to expect that railroad wage readjustments will be effected in more orderly fashion than heretofore, and without undue delay. Prospects are now much brighter for railway equipment companies; some of the largest railroad systems are planning to spend many millions for new rolling stock, and several substantial orders have already been placed. More activity is noted in the iron and steel industries, and a further increase in demand for steel products is confidently expected as spring approaches. In this connection it is worth noting that iron and steel prices have recently shown further weakness, and are now down to 1916 and 1915 levels respectively, and only 15 to 20 per cent. above pre-war averages. Both wholesale and retail distributive trade is steadily expanding, and the larger movement of merchandise and commodities is reflected in the increase in the number of railroad car loadings; from December 31st to January 28th the number of loaded cars showed a gain of 40 per cent., as against a gain in the same period last year of only 16 per cent. The building trades are evidently anticipating a big year; total building expenditure for which permits were issued last month, according to reports from 152 leading cities, amount to \$136,200,000 approximately, representing a slight increase over the total for last December, but a gain of 138 per cent. over January a year ago. The automobile trade is somewhat more active, with increased operation noted in leading manufacturing centres, where the total employment is about up to last year's maximum. A conspicuous exception to the improvement in most lines of trade and industry is found in textiles, although some branches of the latter are very active. Woollen and worsted dress goods, for instance, have enjoyed a marked revival, reflecting principally the spring demands of garment manufacturers, who are trying to make up for time lost during the recent strike here of garment-workers. There has been good buying of dress fabrics also for the autumn, 1922, season, the American Woollen Company's lines, which were offered at substantial reductions from the opening for last Fall, having been quickly sold up and withdrawn. In men's wear piece goods, fancy overcoatings for next autumn have moved briskly, but suitings continue relatively slow. Clothiers are confronted, on the one hand, by comparatively high costs of fabrics and high operating costs, and on the other by the popular demand for lower-priced clothing. Manufacturers of men's wear fabrics are endeavouring to meet the situation by naming lower prices on their products than a year ago, but they are greatly handicapped by the higher cost and scarcity of desirable grades of clothing wools. Print cloths, sheetings, and other unfinished cotton cloths are extremely dull in primary markets, buying being restricted by uncertainty over the possible effect of wage readjustments in New England mills. Prices generally for grey goods have weakened somewhat during the past few days, owing principally to slackening demand; but mills generally are reluctant to book far ahead at current levels. Broad silks that are being offered from stocks find a ready market, but at prices which are still far below replacement costs based on the present price of raw silk. The latter has declined sharply, especially Japan sorts, reflecting the slump in Yokohama; but raw material prices could decline fully one dollar a pound more without disturbing prices now prevailing for stock silk goods. Forward business in broad silks—that is, in goods to be made from raw silk yet to be purchased—is retarded by the uncertain price outlook for raws, and silk goods mills are still operating at a low percentage of capacity. There is widespread criticism here of the raw silk speculation indulged in lately on the Yokohama Bourse, which has been an unsettling factor in the American silk trade and industry in recent months. Leading authorities are strongly urging remedial measures to check such speculation.

During January there were many counter currents in different lines of trade and industry, which are reflected in the price records for that period. *Bradstreet's* index number for February 1st—namely, \$11.4190—marks a slight gain—four-fifths of 1 per cent.—over the January 1st number, which in turn showed half of 1 per cent. gain over the December 1, 1921, number. Reasons for the increase are found largely in breadstuffs, live stock and

textiles, which, with vegetable oils and naval stores, advanced, while prices of provisions, hides and leather, metal, building materials, chemicals, drugs and miscellaneous groups declined. The rise shown is the seventh gain in eight months since June of last year. The February 1, 1922, number, however, is still 7.7 per cent. above February 1st a year ago, and 45 per cent. below the peak point on February 1, 1920. Compared with the index number on December 1, 1918, after the Armistice, the current number is 40 per cent. lower.

The bond market has resumed its upward trend, and demand has steadily broadened during the past week. Activity has been stimulated by a number of developments, such as the heavy over-subscription to the recent offering of Treasury notes; the Government's action in calling the outstanding 3½ per cent. Victory notes (approximately \$400,000,000) for redemption on or before June 15, 1922; the rapidity with which investors have snapped up large offerings of new securities, including the \$30,000,000 Great Northern Railway 5½ per cent. first mortgage bonds and the \$75,000,000 Federal Land Bank 5 per cent. bonds; and the rise in sterling and other European exchanges, which served to lift prices of various European Government bonds which are traded in here. The recalling of the tax-exempt Victory 3½ per cent. notes—the first of a series of refunding operations by the Treasury in its plan to refinance gradually the Government's short-dated debt of some \$6,500,000,000—naturally stimulated demand for other Government issues, especially the tax-exempt bonds. Several new foreign loans are pending, and it is understood some may be floated here shortly, including a sizeable loan to Holland, and possibly one to Peru, and others to smaller countries.

FRANCE.—BUDGET BILL—INCOME-TAX—REDUCTION OF GOVERNMENT BOND INTEREST—M. LOUCHEUR'S SPEECH—NEW CREDIT NATIONAL BONDS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, February 21.

THE new Finance Minister, M. de Lasteyrie, has already given indications that he intends to follow the example set by his recent predecessors, and make every possible effort to secure the passage of the Budget Bill for the year 1923 before the coming financial year actually begins. The initial difficulty facing the new Minister is that the Treasury will be unable during the next twelve months to count on the exceptional resources derived from the liquidation of war stocks and the tax on war profits, which figure in the Budget for 1922 for a total sum of 3,500,000,000. Simultaneously with this decline in revenue, the Treasury has to look forward to an inevitable increase in expenditure in connection with the public debt.

Some part of the deficit due to these causes will no doubt be met by a more efficient method of collecting the revenue already provided for. Exactly what method the Finance Minister proposes to adopt to render the present taxes more productive has not yet been disclosed. An interesting proposal that has been made by M. Léon Bailby, in his journal, *L'Intransigeant*, however, merits reproduction. He suggests that the chief surveyor of taxes in every district should be empowered to select every year by ballot 100 names of taxpayers, and that the declarations made by each of these should be strictly verified by the Treasury officials. In the event of fraud being disclosed, the guilty parties should be compelled to pay three times the amount of their proper assessments, with other penalties that would ensure that few people would be inclined to follow similar practices in the future.

The reduction of the Bank rate in England has had the effect of drawing immediate attention to the possibility of the Banque de France following the same road. Nothing has apparently yet been decided in this regard, but opinion generally appears to be unanimous that a reduction in the price of money in this country would be followed, as in England, by an immediate improvement all round in the quotations for securities of all kinds, and by a marked revival in business on the Bourse. One direct effect of the step taken by the Bank of England has been the

announcement by the Finance Minister of his intention to carry out with the least possible delay two important operations—namely, a reduction of the rate of interest payable on Bons de la Défense, and the reopening of the Rente market. The existing rates of interest on Bons de la Défense National, which is payable in advance and free of taxation, is 5 per cent. on 12 months' bonds, 4½ per cent. on six months, and 4 per cent. on those for three months. It is understood that the Finance Minister is in favour of an all-round reduction of ½ per cent., as it is evident that a proportional reduction in connection with the existing three, six, and twelve months' bonds respectively would result in complications that would seriously upset the market in these securities that has been organised on the Bourse. It is significant that the formal announcement is made that this reduction will not come into effect until after the close on February 28th of the subscription lists for the issue of Crédit National bonds which is now in progress, in view of the repercussion such a step would have on the present issue.

It is understood that if the proposed reduction in the rate of interest in question results in the expected rise in security prices, the Finance Minister will then take into active consideration the possibility of declaring a free market in Rentes—which, as everybody knows, are officially quoted at entirely artificial fixed prices, that make anything like a volume of business impossible. The wisdom of this régime of fixed prices, when it was instituted, was recognised by all concerned, but there is now a large body of opinion in support of the belief that the time has come when such restrictions should be removed. While expressing his desire to render the Rente market free at the earliest possible moment in the near future, the Minister gives it clearly to be understood that the date at which such a step will become possible depends entirely on the measure of success that may attend his proposal to reduce the rate of interest on Bons de la Défense. He foreshadows further that, if both the projected operations proved successful, he contemplates, probably before the close of the present year, the issue of a huge consolidation loan, that will interest the holders of the 90,000,000,000 odd of existing Rentes.

In a striking speech at Lyons yesterday, M. Loucheur, the former Minister for the Liberated Regions, argued strongly that it is impossible for this country to borrow at present rates, in view of the enormous amounts which she will be compelled to raise during the next and following years to bring about the reconstitution of her devastated departments. He urged that the interest rate of future issues of Treasury bonds should be reduced to 4 per cent., and foreshadowed the reduction of the Bank of France rate to 3 per cent. Equally firmly, he opposed any reduction of the present note circulation, which, he said, he did not consider excessive, whereas in present circumstances its reduction would be as dangerous as its increase would prove.

Referring to the present unsatisfactory economic situation in Europe as a whole, M. Loucheur asserted that the original cause of the present state of affairs was over-production in the metallurgical industry immediately after the war, "and then, and above all, to the mistake of Mr Chamberlain, who in 1919 decided that the situation of Great Britain rendered further loans of one State to another impossible. That step brought about the slump in the exchange and precipitated the economic crisis. Neighbouring countries suffered the same crisis owing to the disordered condition of their currency, and especially in consequence of the absolute lack of equilibrium between production and consumption." M. Loucheur strongly condemned Customs barriers, which, he insisted, were obstacles to commercial currents and a negation of the economic independence of nations.

Coming to the question of French debts to Great Britain and the United States, M. Loucheur said that last December, at the Chequers, he proposed to Mr Lloyd George that France would forego part of her claim against Germany if Great Britain would cancel a corresponding amount of the debt owing by this country to her. Mr Lloyd George agreed, on condition the United States Government was willing to act in the same way with regard to Great Britain. Unhappily, at that moment

the United States decided to consolidate its war debt, and the proposal fell to the ground. "Nevertheless," he added, "the United States will certainly have to recognise that it is impossible for us to repay them. They have obtained all our gold, and they want no more, or scarcely any more, of our merchandise."

The new issue of Crédit National Bonds, referred to above as being now in progress, is on a basis entirely different from its predecessors. In those cases the bonds were long term bonds, and the issues were all accompanied with the usual monthly drawings, in connection with which "prizes" ranging from 1,000,000 of downwards were awarded to holders of bonds bearing the first numbers drawn. In the present issue the "premium bond" principle has been entirely omitted. The new bonds bear interest at 6 per cent., and are redeemable at the choice of the subscriber in ten, five, or two years, at 525f, 507.50f, or 500f, according to their term. The issue price is 497f.

The position on the Bourse shows very little change in comparison with last week, and the dominating features of the market are the new issues either actually made or proposed, and the considerable losses sustained by those who have had to realise securities. Speculators have been particularly hard hit, and have extended the depression by a series of forced sales. The French 3 per cents. are rather stronger at 58.60, as against 57.90, and Argentines, Brazilians, Egyptians and Japanese have been well supported, while Chinese 4 per cents. have advanced from 150 to 165. Banks have shown a certain improvement on last week, Union Parisienne rising from 637 to 650, Banque de Paris from 1175 to 1190, and Crédit Lyonnais from 1375 to 1390. There has been no very definite tendency in railways, P.L.M. being at 825, as against 821, Nord at 915, as against 911, and Orléans at 884, as against 886. Suez have dropped to 5600. Shipping shares are rather better, after a very long depression, Chargeurs Réunis rising from 386 to 400, Transatlantique from 183 to 190, while Messageries have dropped back from 185 to 175.

GERMANY.—REPARATIONS—DEBT—EXCHANGE AND BOURSE—INDUSTRY—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, February 21.

As the result of a division in the Independent Socialist party, nearly half of whom abstained from voting, the Wirth Cabinet last week gained a vote of confidence in the Reichstag. By demanding this vote of confidence Dr Wirth forestalled five votes of non-confidence submitted by the German Nationals, German people's party, Independents, and two Communist groups. Though the majority was only 35 in a Reichstag of 469 members, the Cabinet's position is materially improved. There is a new threat of a strike by railway employees, but the Government has threatened to take all possible measures against strikers. The fourth reparations instalment of 31,000,000 gold marks has been paid. Negotiations are again proceeding over the method of deliveries in kind. The method discussed is the so-called "free communication," under which individual foreign claimants have a right to make their own purchases of German goods, paying, according to one statement, only the value of the foreign raw materials used, while for goods containing home-produced raw materials the German deliverer will be compensated by his Government both for materials and for other production costs. The paper mark cost to Germany would be booked at its gold value to the reparations account. In so far as this would mean unrestricted export, Germany is believed to be unfavourable; at present, export of most goods is allowed only under licence, the reason being that, with the present disparity between home and world market prices, free export would denude Germany of necessities. According to an unofficial statement, this last objection is accepted as good by England, but not by all claimant countries.

The Bill restricting dealings in foreign exchange has become law. Such dealings must be carried out through banks, the dealer must be identified, and every deal must be reported to the taxation authorities. Purchases and

sales of exchange in violation of the law are declared void. The new income-tax formulas require the taxpayer to report every single sale of exchanges and stocks. A report on loans states that of 97,400,000,000 marks War Loans, 32,300,000,000 marks, or nearly a third, has been withdrawn, 17,542,000,000 marks being accepted in payment of taxes, in addition to which there have been intervention purchases for maintenance of the quotation totalling 6,810,000,000 marks, and sales of Army property of 4,207,000,000 marks. At the end of January the Floating Debt had increased to 270,269,452,208 marks, of which 255,678,210,300 marks consisted of discounted Treasury bills. These discounts increased in the present financial year (April, 1921, to February 10, 1922) by 93,781,123,000 marks. The Reichsbank's weekly statement for February 15th shows an increase in Treasury bill discounts from 124,829,121,000 marks to 131,955,141,000 marks, of State deposits from 4,001,492,000 marks to 5,985,017,000 marks, and of private deposits from 19,076,457,000 marks to 23,474,631,000 marks, while note circulation fell from 116,606,017,000 marks to 115,755,536,000 marks. "Kassenschein" circulation was 7,934,000,000 marks. Revenue in the first nine months of the financial year (ending December 31st) was:—

	M.
Property taxes, permanent	36,448,162,285
Do do non-recurring	4,458,236,169
Customs and taxes on consumption	40,966,398,454
Export duties	12,897,734,398
	1,288,065,140
Posts and Telegraphs	54,892,197,992
Railways	5,596,200,660
	24,396,764,000

The mark exchange, after slowly receding during the first weeks of the year, yesterday fell sharply, sterling reaching 953.50, a level not touched since November. The Bourse was firm. In the last few weeks stocks have moved upward, regardless of the fairly stable mark ex-

change. The reason seems to have been the general price rise, which has been going on also independently of the exchanges. Until lately the mark exchange was the predominant factor in all price movements, and with a falling exchange stocks appreciated, because the solid industrial and other properties which they represent rose in value as the currency depreciated, but it was plain that a price rise caused by any other factor than a declining mark exchange would also send up stocks. That has of late been happening. A special influence was heavy buying of Silesian industrials, mainly Laurahütte, for English account. Silesian stocks rose rapidly, Laurahütte moving from 1,605 to 2,490 between February 10th-17th, and the movement reacted on other industrials. The *Frankfurter Zeitung's* index for 15 industrials shows for the 17th 38,685 against 33,442 on January 5th, and a high point of 40,250 on November 10th. Buying of other industrials than Silesians is under way. Yesterday Silesians suffered a slight reaction, and this affected Western metal and mining papers, but other stocks, in particular chemicals and electricals, rose considerably. In State loans Federal 3 per cent. continue to lead, being yesterday 109.90, nearly their highest point so far. War Loan was 77.50, 4 per cent. 87.75, 3½ per cent. 75.10, colonial 4 per cent. 110.75, and savings and premium 80.10. A report of impending reduction of the 5 per cent. interest on War Loan has been denied. Such reduction before October, 1924, is forbidden by the conditions of the loan. Prussian loans continue depressed, 3 per cent. quoting only 59.75; and in the Diet the question has been raised whether measures should not be taken to support these loans.

Industrial conditions continue good. The setback which began after the mark exchange recovery of November-December has not developed. The stagnation tendencies formerly noticed after mark recoveries were caused by falling prices. In January, with prices still rising, the number of industrial concerns reporting good employment increased slightly. A campaign, directed mainly from Hamburg, is being carried on against the system of foreign trade control by the "Aussenhandelsstellen"; and accusations of corruption, betrayal of trade secrets, and inefficient fixing of the minimum export prices are made. The exporters complain that with home production cost rapidly rising, and the mark exchange holding or possibly recovering, they will be unable to compete. Sugar production for the sugar-year 1921-22 (September to September) is estimated at 12,858,000 double-centners (of one-tenth metric ton), against 10,994,679 double-centners in the preceding year. The area under sugar-beet has risen from 272,839 to 340,188 hectares, and the quantity of sugar-beet consumed from 64,760,980 to 73,882,500 double-centners. Smelters are reported to have contracted to import 3,000,000 tons annually of Canadian Wabana iron ore. The aim is to have an easily smeltable ore, coke being scarce and dear, and also to attain independence of Lorraine and Luxemburg minette, and to influence Swedish prices. The price-rise is fostering the foundation of new enterprises. Hitherto new capital has mainly gone on equipping existing concerns with additional working capital, made necessary by higher wages and dearer raw materials; but the greater increase in cost of building and equipping workshops than in selling prices of goods prevented the opening of entirely new works. Of late this disparity has decreased, and new industrial foundations are the result.

The price-rise described above as proceeding independently of the mark exchange may be ascribed largely to State measures aimed at meeting Ally complaints against "subsidies" to industry at the cost of the State finances, and at the supposed cost of reparations claimants. The Government has raised the price of bread by 75 per cent., the price of the 2,050-gramme loaf now being 13.80 marks, has announced a new increase of railway freight rates of 20 per cent. from March 1st, and has raised the gold supplement on Customs duties paid in paper marks from 3,900 to 4,400 per cent., so that the new paper-mark duty is 45 times the nominal. The gold supplement was 475 per cent. before March, 1920, 775 per cent. in November, 1920, 1,900 per cent. on October 20th last, and 3,900 per cent. after November 23rd. As Dr Wirth is doubling certain duties, the consumer will some-

times pay 90 paper marks in duty where he formerly paid 1 gold mark; and with incomes up only 15-20 fold, the effect will be to reduce the buying power for foreign goods. Like other measures taken under Ally pressure, this is not in Ally, certainly not in British, interests. Free prices and prices fixed by the compulsory syndicates are rising under the influence of the railway rate, and bread price increases. Potash prices have been raised from February 20th, and are now 100 per cent. over those of September, 1921, and about 2,000 per cent. over those of September, 1915. Produce market prices are also going up, in particular wheat. The *Frankfurter Zeitung's* wholesale index for February 1st shows 352 for 77 commodities, against 317 on January 1st, 298 on December 1st, 249 on November 1st, 143 on January 1, 1921, and 100 on January 1, 1920. Reckoned on the basis of 100 for 1914, the February 1st index figure is 3,955. The official index figure for middle of January is 3,492. Cost of living index figures are:—Food only for a working-class family, 2,219 in January; food, housing, heating, and lighting, 1,640, which is a rise of 73.7 per cent. over the figure for January, 1921. According to the municipal statistician, Kuczynski, the minimum cost of living, taxes included, for a family of four rose from 330 marks weekly in December, 1920, to 557 marks in December, 1921.

POLAND.—FRANCO-POLISH COMMERCIAL AGREEMENTS—TRADE RELATIONS WITH RUSSIA.

WARSAW, February 18.

On February 6th, M. Poincaré, the French Prime Minister, and Count Zamojski, the Polish Minister, signed in Paris three economic agreements. The first was a commercial agreement, the second an agreement with regard to private property and interests, and the third an agreement dealing with the petroleum industry. The negotiations lasted nearly one year, and the long delay in arriving at an agreement is explained by the divergence of economic interests. Poland is interested in retaining an open hand with regard to her oil deposits in Galicia; France, on the contrary, tried to secure a privilege. Poland is endeavouring to prevent the import of luxuries; France is opposed to such a policy, which is closing the Polish market to an important group of French products. The details of the agreements have not yet been made public, but it may be assumed as certain. The Polish Press is in this respect nearly unanimous that the economic agreements are more favourable to France than to Poland. This may partly be due to political concessions obtained by the Polish Republic. It is known that France refused to sign the political agreements without a preliminary signature of the commercial treaty. The commercial agreement contains the following clauses relating to Customs duties:—1. In respect of most of her imports France benefits by the most-favoured-nation clause. 2. The most-favoured-nation treatment is also accorded to certain articles not of French origin which are imported into Poland by French or Polish firms. Colonial products benefit in the first instance by this clause. 3. A large number of French products, including wines, liqueurs, jewellery, machinery, threads and textiles, will enjoy reduced duties not exceeding 50 per cent. As regards Polish imports into France, they enjoy partly the minimum tariff, partly abatements varying from 25 to 75 per cent. According to a special paragraph, certificates of origin will be introduced, so as to prevent producers in other countries from taking advantage of the reduced duties. As far as the emigration is concerned, Poland has undertaken to give the greatest facilities to ships sailing under the French flag.

Negotiations for the signature of a commercial treaty between Poland and Russia will shortly be opened in Warsaw. It is certain that such a treaty is necessary for regulating the commercial relations between the two countries, which already show some signs of activity. Mr Sortchakow, the representative of the Russian Wneshnorg (Office for Foreign Trade), has signed with the Lodz manufactory of Geyer an agreement for the delivery of textile goods of the value of half-a-milliard Polish marks. The first transport is already leaving Lodz this week. Mr Sortchakow is continuing in Lodz his

negotiations with other important firms. In the future economic relations between Polish Silesia and the Ukraine will become very intimate. The import of iron ore from South Russia is for Silesia very advantageous.

HOLLAND.—NEW ISSUES—NEW GOVERNMENT LOAN—BANKS—INSURANCE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 15.

NOTWITHSTANDING the "malaise," the total of new issues last month reached 35,582,000 fl, as against 50,465,000 fl in the corresponding month of 1921. The city of Rotterdam, the province of Gelderland, and the Netherlands Railway Company issued considerable amounts of 6 per cent. bonds at prices round about par, which were all well received by the investing public. The market situation for the new Government loan which is shortly to be launched is consequently fairly good. It may be expected that the rate of interest will be also 6 per cent., and as the loan will be a big one—the Finance Minister has authorised to float 300,000,000 fl—without any compulsion to subscribe, the price has to be attractive, and will probably be well under par. It would not be astonishing if American financial circles were also to be interested. The floating debt was at the end of January 855,000,000 fl, of which 727,000,000 fl was Treasury bills held by the public, and 57,000,000 fl placed with the Netherlands Bank.

The position of the banks in this country is good. For many months they have been occupied in eliminating bad and doubtful debtors, of which many have succumbed after having risen during the war to undeserved success. All losses in 1921 have been written down, and it may be expected that sufficient reserves have been put aside for possible further losses. One or two absorptions of smaller banks by some of the larger institutions may possibly occur, but, as a whole, the situation seems to be sound. Industry suffers badly from foreign competition, and steamship companies, especially those which are handicapped with building contracts, are not in an enviable condition. The insurance market is not as disquieting as it was a few months ago. Insurance brokers have been busy in transferring commitments with weak companies to such companies as appear to be in a stronger position. It must be said that the English companies during the time of crisis and failure were looked upon as first-class security, and it is therefore regrettable that events in connection with the City Equitable tend to make people feel a little uneasy also in this direction.

ARGENTINA.—TRADE IMPROVEMENT—RAILWAY RATES—LIVESTOCK—PUBLIC FINANCE.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, January 25.

WITHIN the last ten days the general commercial outlook for Argentina has brightened perceptibly, and the reaction is all the more noticeable, seeing that the first fortnight of the New Year accentuated, if anything, the extreme depression of November and December. This improvement is due to the sharp renewal of interest on the part of European buyers in Argentine cereals, to the firm demand of North American wool buyers, and to the consequent improvement that is already manifest in the exchanges; an improvement which should in due course tend to help the importers. Reports from Rosario and Bahia Blanca bear out the result of local observation, and confirm the fact that wheat is being shipped in ever-increasing quantity, and that the inquiry for maize is fast approaching the normal movement noticeable at this period of the year. It goes without saying that this will speedily react on the traffic returns of the great railway systems, as it has already reacted on the freight rates for overseas transport, which are firm both for February and March loading. Buenos Ayres to United Kingdom mid-February has been done at 30s; 32s 6d has been offered for March, and for North Italian ports 35s is recorded. The market is bare of prompt tonnage, and it is credibly reported that nothing unfixed is on its way to the Plate at the present

HARRISONS & CROSFIELD, Ltd.,

The Company offers the services of its organization to manufacturers and others desirous of establishing new connections in the East and elsewhere.

time—a statement which may or may not be an exact fact. There is also a sharp rise in freight rates to the United States, most of it parcel business. Wool is being booked at \$7, hides (salted) at \$12, quebracho extract at \$6, and so on down the list. Coming thus promptly, and almost unexpectedly in so far as the general mercantile community were concerned, the movement has acted as a tonic all round, which in a country where temperament plays such a large part, even in business matters, means far more than many people accustomed to the cooler and more deliberate views of the older countries are able to realise.

In the railway traffic receipts published to date the improvement is not yet visible, if one contrasts the takings between July 1, 1921, and January 14, 1922, with those for the corresponding period of last year. Meanwhile, the matter of the tariffs is being pressed on as fast as possible by Dr Torello, Minister of Public Works. The mixed committees, composed of shippers and railway interests, are meeting at frequent intervals, and although official statements have been made reviewing the many reductions which the railways must now be gaining in regard to their exploitation charges—e.g., in the matter of coal or oil fuel, and the drop in the price of material generally, there has also been an admission that the reductions have nevertheless been discounted by a heavy falling off in gross receipts. It is yet too early to do more than speculate as to what the finding of the committees will be, but local opinion believes that a fair increase on certain classes of cargo will be sanctioned, though it is safe to say that cattle freights, a most important item, will not suffer any change. This is due to the general depression which still weighs on the pastoralists, but it is satisfactory to be able to add that even here there is a slight improvement noticeable in the prices obtainable for cattle. The usual complaint that the freezing interests are deliberately forcing owners to sell at unprofitable figures has again been made, but it is not taken seriously by the best Argentine commercial opinion. Argentines are well aware that without the steady insistence of the freezers upon fine quality beef improvement in the horned stock of the Republic could never have been attained. Moreover, it is open to Argentine capital to compete to-morrow, if it will; but, as has been proved on more than one occasion, there is not the necessary cohesion and fixity of purpose available to make anything in the nature of a breeders' co-operative freezing and shipping company a workable proposition. Even the suggested Hispano-Argentine concern, which was to supply the Peninsula with Argentine beef and be financed jointly by Spanish and Argentine capital, failed to attract sufficient interest on the part of investors to enable its promoters to begin the erection of a factory. While on this topic one may add that the grandiose scheme for financing needy estancieros, which was detailed in this correspondence a month ago, has as yet made no further progress. Hence there is good reason to hope that it will not, as was first feared, lead to the locking up of far too much liquid capital in loans of a somewhat doubtful character.

It being now the summer period, and the Legislature in recess, there is nothing to record concerning the Government's views on the financial situation. Nothing, that is to say, of an official nature. Rumours concerning the Budget estimates for 1922 there are in plenty, and it is very evident that unless new forms of taxation that actually yield revenue can be enforced, the Administration will be hard put to it to meet its routine expenditure. The 1921 Customs returns show a drop of \$50,000,000 Argentine paper (£4,500,000), and this will perforce be accentuated during 1922, seeing that export dues have practically disappeared and imports are not likely to increase to any great extent. Some of the suggestions now before the Budget Committee have leaked out, but do not sound

very practical. They include a tax on unoccupied land, ranging from 3 to 24 per cent. on the estimated value, the idea being to encourage sub-division and exploitation, and the income-tax proposal is again to the fore, though there are neither the data nor the means available to render such a tax readily and equitably collectable. Heavy increases of the internal taxes are also mooted, but until the Budget estimates have been drafted and discussed by Congress any further expression of opinion is futile. It may be of interest to point out that the present Government, which took office in 1918, has never yet succeeded in getting the Legislature to accept its Budget estimates. Thus the country is still ruled financially under the last Budget of the Plaza régime, which has been renewed year after year by the passing of special monthly apportionments known locally as "duodecimos." The inevitable deficit has been made up by borrowing, and the floating debt is now generally assumed to be round about \$900,000,000 Argentine paper. Further discussion of the national finances may, however, be postponed until some authoritative figures are available, when Congress meets after the summer recess. Meanwhile, rates for money are distinctly easier. Banks have reduced their interest on deposit accounts to 3 to 4 per cent., according to whether the money is left for three or six months, while discount charges range from 5½ to 8 per cent. Sterling exchange is very firm at 44½, sight drawing by banks on London, with the United States dollar rate weaker at \$127 Argentine gold paper \$100 United States. Continental currencies have not improved in relation, and the mark is still weak. Incidentally, it may be mentioned that Berlin now quotes both the Argentine gold and paper dollar daily in its official exchanges. National bonds and the Cédulas of the National Mortgage Bank remain firm, but there is small interest shown in local industrial companies, many of whom have found it advisable to pass their profits, earned during the first half of the year, to meet subsequent losses or to strengthen their reserves against probable doubtful results during their next financial period.

Letters to the Editor.

THE REINSTITUTION OF CONTANGOES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Referring to the article on "Contangoes" (*Economist*, page 224), I think that many stockbrokers in the country, and their clients, would be interested to know why "some amongst the jobbers are anxious to see the marking of bargains made a purely voluntary matter, and they would not be dissatisfied if the present Supplementary Stock Exchange Official List were to be given up."

Surely these two temporary regulations have proved their usefulness, and should be retained. I hope that your Stock Exchange correspondent will enlighten your readers further on these points.—I am, Sir, your obedient servant,

L. M. SING.

February 17th, 1922.

THE BANKERS' DIAGNOSIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The attainment of a reliable standard of value is an issue of the utmost urgency, for without it the present economic dislocation and subnormal production will continue to afflict the world. For this reason, I cannot help feeling some indignation at Mr Mason's flippant and sweeping condemnation of Prof. Gustav Cassel and his proposals, more especially as his letter displays very little grasp of the problem.

Mr Mason's one ground for rejecting the proposal to regulate the monetary demand for gold by international agreement is that he thinks such control might be abused. He does not appear to realise in the very least how

greatly the purchasing power of gold has been affected at various times by changes in monetary policy on the part of different nations, and that the point at issue is not the choice between control and no control, but between co-ordinated international control and the chaotic vagaries of a score of Governments.

Mr W. T. Layton ("An Introduction to the Study of Prices") gives the following summary of price movements in the 19th century:—

	Percentage Movement.
1821-25	- 25 %
1846-50	- 25 %
1871-75	+ 20 %
1894-98	- 40 %
1906-10	+ 25 %

The striking fall of 40 per cent. in prices from 1871-75 to 1894-98 was due in a large part to monetary policy. Germany adopted the gold standard in 1871-73 and the Scandinavian Monetary Union in 1873. Between 1873 and 1878 the Latin Union countries stopped the free coinage of silver, and thus came on a gold basis, and in 1879 the United States came back to a gold basis. There is little room for doubt that the piecemeal return to the gold standard now will have similar results.

To come to recent history, the substitution of paper money for gold in so many countries during the war had (by May, 1920) reduced the purchasing power of gold in countries which maintained the gold standard by 60 per cent., and since then credit restriction in U.S.A. and elsewhere has raised it again to within 20 per cent. of the 1914 level. After giving those two instances, I ask Mr Mason to state whether he admits that the purchasing power of gold is liable to be affected by the policy of foreign Governments, and, if so, why he prefers this influence to be exercised capriciously, and not by international agreement?

Mr Mason makes too light of the injustice and economic and social dislocation which result from wide movements in the price level. It is impossible for any business man who has lived through 1920 and 1921 to deny that a sharp fall in prices checks the production of wealth. It is also sheer nonsense to say that a fall in prices does not increase the burden of debt. If a man borrowed £10 when he was earning £6 a week and shortly afterwards his wages were reduced to £4 a week, he would find it much harder to pay back the loan. Mr Mason seems to have a notion that good results flow from a low price level. It is quite obvious that the absolute price level makes no difference to anything except to the number of counters necessary to carry on the exchange of a given quantity of goods. It is only changes in the price level that matters, because of debts and money contracts.

The other day I heard Prof. Irving Fisher remark that rising prices produce the "profiteer" and falling prices the "battered bondholder." As the lion's share of the profits of rising prices were taken by E.P.D., justice demands, now that prices are falling and producers are losing, that a new form of E.P.D. should be devised to tap the appreciation in the purchasing power of money, and fixed interest securities. If the Chancellor of the Exchequer were to consider this proposal seriously it might do much to damp the ardour of the price deflators, and bring us nearer to that reliable standard of value to which I am glad to note Mr Mason renders at least lip service.—I am, Sir, your obedient servant,

C. CRAIGS.

4 Bunhill row, London, E.C., February 18th, 1922.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Mason in his letter to you this week has not referred to a very important possibility, namely, the extension of our banking system so that payments to and disbursements by weekly wage earners were made by cheque. This would be a big step towards the gold standard, while not requiring the handling of gold metal. To make it possible the stamp on cheques must be abolished.—I am, Sir, your obedient servant,

A. HOARE.

37 Fleet street, E.C., February 18th, 1922.

Books and Publications.

RECENT ECONOMIC LITERATURE—A MONTH'S REVIEW.

THE healthy man takes very little interest in medicine, whether in its preventive or curative aspects. So soon as there is anything the matter with him, however, he begins to take note of, to question and study, all that is written, whether by recognised practitioners or by quacks, on the science of health and the temporarily lost art of feeling fit. So now, one of the effects of the war and its terrible aftermath has been immensely to increase the output of books on, and the interest of ordinary readers in, economics. While the machine functioned normally, its workings were taken as matter of course; the profound shocks it has sustained, the doubt dimly felt as to whether it can, in the form in which we have been used to it, be got going again, is making more people interested in it than ever was the case before.

Obviously, it is impossible that, in the limited space available in the columns of a weekly periodical, notice should be given to more than a small fraction of the steady and growing stream of books, articles, and pamphlets—the revival of the pamphlet is one of the phenomena of our time—of a more or less economic character that pours from the Press, despite the groans of the publishers, who declare that they are ruined, and that nothing pays but works on psycho-analysis and auto-suggestion. All that can be done, through direct reviewing, is to notice works of outstanding merit. The average reader wants something more. He wants to be able to distinguish volumes of general interest, or accessible to the reader without special training, from those only readable by experts in this or that branch; and to have made for him some kind of rough-and-ready distinction between the works that are, in a broad sense, instructive only and those that have some sort of propagandist bias.

What is here aimed at is to give such a guide through the publications received by the *Economist* month by month. For this purpose it is necessary to adopt some broad principle of classification. Obviously, no such division can be quite water-tight, but, with that caution, it may be possible roughly to divide the publications of the last six weeks under the heads (1) Elementary, (2) Advanced and Technical, (3) Descriptive and Reference, and (4) Political and Propagandist.

(1) Elementary Books.

Too many of the books written for the elementary student are no more than boilings down of standard works, and so dull as to be repulsive. Writers of the "orthodox" school, in particular, have tended towards the repetition of a particularly unattractive style of exposition. Happily, however, a complete break with this bad tradition is represented by the two admirable volumes with which the series of Cambridge Economic Handbooks, edited by Mr J. M. Keynes and published by Nisbets and the Cambridge University Press at 5s, has been opened. Both Mr H. D. Henderson's "Supply and Demand" and Mr D. H. Robertson's "Money" are so written and arranged as to be readable, with pleasure, by anyone who is prepared to use his head as he goes along. The vitality of Mr Keynes' own style has, with the happiest results, been communicated to his disciples, and something of his dry wit. Originality of substance neither of these writers would claim; but each has achieved originality of treatment. In the endeavour to convey, in a form accessible to the untrained, and yet interesting to the trained, the general principles that underlie sound thinking on economics, they have been remarkably successful. A word of warning should perhaps be issued. Anyone who thinks that economics can be made as simple as A B C, that its whole "truth" can be put in a nutshell, advances a proposition whose absurdity he would at once perceive were he to apply it to any other department of scientific study. The same is true of any claim to have discovered some easy expedient for solving and removing, at a hand's turn, all the ills from which society is suffering. There is no short cut to economic or to any other truth. But the roads laid down by Mr Henderson and Mr Robertson are fairly

We transact a general foreign and domestic banking business and solicit your inquiries.

laid and solidly engineered; the reader who walks along them will have to take some trouble, but his map is reliable.

"A Primer of Taxation," by E. A. Lever (P. S. King, 2s 6d), is, as it claims to be, an introduction to public finance, clear and well arranged.

(2) Advanced and Technical.

Not for the general reader, but interesting and suggestive to the specialist, is the examination of the causes of cyclical trade fluctuations by Professor Bouniatian, of Tiflis, translated into German some fourteen years ago, and recently into French, under the title of "Les Crises Economiques" (Paris, Marcel Girard), reviewed in the *Economist* of February 18th. It represents the highly theoretical treatment of the subject. For specialists, again, but of a rather different kind, are intended such works as the new edition of Sir E. E. Spicer's "The Money Market in Relation to Trade and Finance" (H. Foulks, Lynch and Co., London, 8s 6d), "Economics for the Accountant," by Mr Kemper Simpson, published in the United States, but obtainable in London from Messrs Appleton at 8s 6d, who also publish (15s net), a new and revised edition of Mr John J. Sullivan's well-known study of "American Corporations." Alongside of this should be placed Mr Hemmatt's new edition of his "The Companies Acts, 1908-17" (Jordan and Sons, 10s). Of primary interest for accountants, and at the same time a work of reference that should stand upon the shelves of the up-to-date manufacturer is the revised and up-to-date edition of Garcke and Fells' "Factory Accounts in Principle and Practice" (Crosby, Lockwood and Son, London, 15s). With this might be placed the elaborate study of Industrial Waste, a report based upon the examination of a group of establishments in the building, clothing, engineering, and other industries, by the Federation of American Engineering Societies, with a preface by Mr Hoover. The reporters state, as their general conclusion, that of the very large degree of industrial waste that they found to exist, the responsibility for 50 per cent., in their view, lies at the door of manufacturers, the responsibility for less than 25 per cent. at that of labour.

In this same general category should be mentioned the study of French Banking, a most thorough and well documented work, by M. Edmond Baldy, "Les Banques d'Affaires en France depuis 1900" (Librairie Générale de Droit et de Jurisprudence, Paris, 25f); and Mr K. T. Shak's "Sixty Years of Indian Finance" (P. S. King 21s).

(3) Descriptive, and Works of Reference.

Many more or less technical works of a descriptive character are for the general student of "real" economics useful as works of reference. Between these categories no hard-and-fast line can be drawn.

A descriptive book, but one so interesting that it has a claim on the attention of the general reader, is Mr H. D. Henderson's account of the working of the Cotton Control Board, of which he acted as secretary. Published by the Clarendon Press at 10s 6d, on behalf of the Carnegie Endowment for International Peace, this is the latest work to appear in the series being published by the Committee responsible for the series of monographs dealing with the Economic and Social History of the World-War as it affected this country. Mr J. A. Salter's account of the working of Allied Shipping Control and Mr A. L. Bowley's study of Wages and Prices are earlier volumes in the same series. Similar works are

being prepared in France and in the group of countries of which Austria remains the centre. Mr Henderson describes a social experiment of remarkable significance, and describes it very well.

A work of reference in the stricter sense is the Swedish Year-Book, a new venture in English, printed by Messrs Williams and Norgate at 7s 6d net, and the report on Prices and Wages in India, issued by the Calcutta Department of Statistics (2 rupees). With the Report, by the Labour Research Department on "Wages, Prices and Profits" (Labour Publishing Co., 6s), with a preface by Mr Sidney Webb, and Mr J. T. Sutcliffe's admirable "History of Trade Unionism in Australia" (Macmillan, 6s), one passes from the descriptive across to the political.

(4) Political and Propagandist.

It is indicative of the state of the world that this should, at the moment, be much the largest category. Appropriately enough, the first work of any importance to appear in the New Year was Mr J. M. Keynes' supplement, to use his own modest description, to the now classic "Economic Consequences of the Peace"—the work entitled "A Revision of the Treaty" (Macmillan, 7s 6d). This is, of course, an examination of the basic cause of European economic malaise, the Treaty, unexecuted but unrevised; of the modifications in its impossible terms effected at the long series of Allied Conferences; with a clear and simple plan for revision, on lines that will make economic recovery, at home and abroad, possible. Incidental to this is an argument about inter-Ally debt. In connection with this there are passages of the highest interest in Mr Elisha M. Friedmann's monumental "International Finance and its Reorganisation" (Dutton, New York, \$7), in which the whole question of the debts is examined from the American standpoint. As the descriptive work tends to become technical, so the political tends to become propagandist. This propaganda may be for or against the existing system. In two little books issued by the Labour Publishing Company—"The Foundation of Imperialist Policy," by Michael Pavlovitch (3s 6d), and "Oil," by Francis Delasi (3s 6d), it is, of course, wholeheartedly against. M. Pavlovitch is an official exponent of Bolshevik theory. His book consists of lectures delivered to their general staff, on perfectly familiar lines and in perfectly familiar phraseology. Mr Delasi, author of a remarkable study of the French armour plate interest, errs in his study of British oil expansion, as theorists so often do, in attributing too much consciousness to the process he describes. His book was reviewed in the *Economist* of February 11th.

A very readable and engaging little work is Mr George Radford's "Labour and the Moneyed Man" (Hodder and Stoughton, 6s net). Mr Radford is an agricultural authority of some standing, and his argument that "English land is a manufactured article" is probably the most interesting and original part of his book. His view of the moneyed man may be compared with those set out in the current number of the *Nineteenth Century*, in an article on the Millionaire, by Mr G. R. S. Taylor. Other articles in the reviews worth attention from an economic point of view are that by Mr A. W. Kiddy on the Exchanges, in the *Edinburgh*; on Cinnamon, in the *Bulletin of the Imperial Institute*; and in *Economica*, issued terminally by the London School of Economics, a discussion on Probability between Professors Wolf and Bowley.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 14.	March 15.

The activity in the Stock Exchange markets has been increasing cumulatively from day to day. If animation died down for a time in the Consol market, it sprang up in another part of the House. Where investors have been unable to buy Colonials, they have turned their attention to other stocks. If they found no Home Railway Debentures on offer, they have not been unwilling to embark upon more speculative purchases. Scarcity of stock is a predominant feature in the investment markets. Speculation has caught the infection from investment, and is rearing its head in some of the hitherto neglected sections. Many hundreds of rises have occurred in the Stock Exchange lists this week. The amount of business done has more than doubled, as compared with that of a month ago. Brokers and jobbers are working at high pressure, and only the markets for rubber shares and base metal mining issues fail to exhibit any trace of vitality.

After touching 97½, the War Loan gave way upon large lines of stock coming in. National War Bonds are lower on the week, and the tendency in the Consol market proved to be a trifle hesitating after the almost perpendicular rise which had taken place previously. Stock Exchange men have been too busy to discuss possibilities of a Government funding scheme. Every energy has been required to cope with the rush of business, and the great difficulty presenting itself in the minds of every broker in the House is to furnish sufficiently attractive lists of obtainable investments for those clients who, day after day, anxiously demand stocks and shares into which they can place the money which they are removing from deposit accounts.

French issues are amongst the prominent features in the foreign market. Practically every day there have been long strings of rises in Argentine, Brazilian, Chilean, Uruguay, Japanese, Chinese, Norwegian, and other such bonds. A five million sterling issue is projected by the famous P.L.M. Railway.

Home Railways went up in spectacular fashion, the rises including every stock in the market from Little Chatham to

North-Western Debentures. It is impossible to particularise, and, although the fine fervour of the rise was qualified by a cautious amount of selling towards the end of the week, there are many gains on balance. Canadians have been neglected. Mexican Railways shot up on Wednesday, and Argentine Rails have been spectacularly strong, with Brazilians keeping them quieter company.

Rubber shares are dormant, rubber itself having touched the lowest price recorded. The oil market is busy with orders in its good-class Preference shares, but the more speculative section is quiet. Textiles advanced sharply, and South Wales has been buying its iron, coal, and steel favourites. In the shipping market, prices have materially recovered. Banking shares further improved, in consequence of the appreciation in gilt-edged stocks. The insurance market has shaken off its recent depression, and prices show many good rises. The catering group exhibits pronounced strength. Gas stocks have been rising by points per diem. Electricity supply shares came into favour, in consequence of the excellent results being shown by the companies' reports now current. Recently issued Debentures and Preference shares gained substantial premiums in most cases. India stocks—Government, railway, manufacturing, tea, and banking—are somewhat heavy, though a fair number have rallied since last Saturday. Cable stocks are buoyant. It would be monotonous to reiterate the rises which have occurred in other parts of the Stock Exchange.

South Africans, including diamonds and Rhodesians, are generally firmer. The Transvaal strike, while still unsettled, ceases to disturb the market. Tin shares have been flat in consequence of the weakness of the metal. Esperanzas moved spasmodically, and are well below the best price lately reached. Indian mining shares slightly hardened. Kihkland Lakes experienced a sudden advance. Russians attract little fresh notice.

We are officially informed that Mr Bernard Edmondson Bishop (trading as Booth, Bishop and Co.) and Mr Arthur Smith have ceased to be members of the Stock Exchange.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	..	189,324,642	..	..
TREASURY BONDS.				
5½% 1929 receipts to February 11, 1922	..	283,435,011	..	..
Further receipts	..	20,000	..	..
Total receipts 5½%	..	283,455,011	..	..

Liverpool Corporation Bills.—The Corporation of Liverpool hereby give notice that tenders will be received at the Chief Cashier's Office, at the Bank of England, London, on Monday, February 27th, at one o'clock, for Liverpool Corporation Bills, to the amount of £1,000,000, in replacement of bills falling due on March 4th. The bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated March 4, 1922, and will be payable at twelve months after date, viz., March 4, 1923. The tenders must specify the net amount per cent. which will be given for the amounts applied for, and the tenders of private individuals must be made through a London banker.

Government of Victoria 5½ per Cent. Stock.—This is an issue of £4,000,000 5½ per cent. stock at 99 per cent. The principal is repayable in London at par on October 1, 1940, but the Government of Victoria has the option to redeem at par on or after October 1, 1930. The proceeds of the loan will be used for the construction of railways and rolling stock, irrigation work, and water supply. The prospectus points out that the London loan liability of the State of Victoria has been reduced by £4,728,000 during the last three years. The revenue of the State for the financial year ended June 30, 1921, shows a surplus, and it is stated that this is the fourth consecutive year in which a surplus has been realised without increasing taxation. The stock is free of any taxation by the Victorian Government while held by people not domiciled in Victoria. A sound trustee security which had a remarkably good reception.

The Yorkshire Electric Power Company.—Incorporated by Special Act of Parliament. Authorised share capital £2,000,000, of which 83,000 ordinary shares of £10 each, and 54,328 6 per cent. cumulative preference shares of £5 each, all fully paid, have been issued. Thus the paid-up and issued capital totals £1,101,640. A Bill has been placed before Parliament to convert each £5 preference share into five preference shares of £1 each, and each £10 ordinary share into 10 ordinary shares of £1 each. It is proposed by the same Bill to increase the authorised share capital to £4,000,000. One half of the authorised share capital may be issued as preference shares provided that the nominal amount of the preference shares issued does not at any time exceed the amount actually paid up on the issued ordinary share capital, and this will apply also to the increased share capital. The Company's Acts authorise the company to borrow on mortgage of the company's undertaking or to issue debenture stock charged on the undertaking to an amount not exceeding in the whole one-third of the issued share capital upon which not less than one-half of the nominal amount has been paid up. Under these powers the company has issued 5½ per cent. redeemable debenture stock for £360,000, to be repaid at par on December 31, 1944, or earlier at the option of the company. This is an offer of 111,672 6 per cent. cumulative preference fully-paid shares of £5 each at £4 per share. Profits and dividends are given from 1914, and these show that for each of the last three years 8 per cent. has been paid on the ordinary capital. It is pointed out that the net profit for 1921 shows an increase of £9,577 on that for 1920, in spite of the coal stoppage and trade depression. The certified net assets on December 31, 1921, with the net proceeds of the present issue, total £1,587,226. The prospectus states that "the amount required to pay the dividend (less income-tax at 6s in the pound) on the preference shares already issued and those now being issued is £34,860, and the profit for 1921, after providing for income-tax liability and writing back interest on bankers' overdraft which will be repaid out of the proceeds of the present issue, is £79,979." The issue has been underwritten for 3½ per cent., and may be considered a reasonable offer in its class.

The North Metropolitan Electric Power Supply Company.—Incorporated by special Act of Parliament. Authorised share capital £1,500,000. There has been issued and paid up 599,980 6 per cent. cumulative preference shares of £1 each, 30,002 ordinary shares of £10 each, fully paid, and 10,000 ordinary shares of £10 each, £5 paid. This is an issue of £250,000 8 per cent. cumulative second preference stock at par. There are outstanding £231,800 5 per cent. mortgages and £228,460 7½ per cent. debenture stock. The second preference stock is limited to an amount not exceeding the paid-up ordinary capital of the company, but holders have no voting powers as long as dividends are regularly paid. The company undertakes not to create any further preference shares, ranking in priority to the present issue, except with the consent of a certain specified company. Thus preference stockholders have no voice in matters whenever their rights are threatened, and it will no doubt be observed that no mention is made as to obtaining preference share and stock holders' consent before making further loan capital issues. The company reserves the right to redeem this issue at par after January, 1927. Surplus assets available for security of the second preference stock are given as £518,696, not including the proceeds of the present issue. Profits are given from 1908, and the prospectus shows that there is a reasonable margin to meet the charges of the present issue after paying debenture interest service and dividends on the 6 per cent. cumulative preference

shares. The issue has been underwritten for 4 per cent., but the generous rate offered perhaps denotes that there is a slight element of speculative risk attached to the stock.

The Dorada Extension Railway, Limited.—Authorised share capital £350,000, all fully paid and issued. The company has outstanding £332,806 6 per cent. first mortgage debenture stock, and a second mortgage debenture stock which will be discharged out of the proceeds of the present issue. This is an issue of £250,000 8 per cent. second mortgage debenture stock at 95. This stock is limited to this amount, and will be secured by a trust deed constituting a specific charge on fixed assets subject to the existing prior charge and a floating charge on other assets. A part is also specifically secured on a first charge on the Dorada Railway (Ropeway Extension), Limited. It is "redeemable" on July 1, 1937, at 105 per cent., the company reserving the right at any time after July 1, 1927, to pay off the stock at 105 per cent., subject to six months' notice. The proceeds of the present issue are required for general purposes, as well as to provide for the discharge of the existing £155,200 6 per cent. second mortgage debentures, and the repayment of other loans incurred by the company for capital purposes connected with the railway and the aerial ropeway which has been built by the Dorada Railway (Ropeway Extension), Limited, to connect the town of Manizales with the Dorada Extension Railway system. The Dorada Extension Railway is 70 miles in length, and situated in the Republic of Colombia. It owns £150,000 Ropeway shares out of a total issued capital of £230,000. An excellent table of profits, dividend distribution and traffic receipts is given from 1912. Of course, the high yield on the issue must be considered in relation to the risks of the capital evolved.

Charles Marsden and Sons, Limited.—Authorised share capital £600,000, divided into 300,000 7½ per cent. cumulative participating preference and 300,000 ordinary shares of £1 each, all of which have been issued and are fully paid. The capital of the company is, it is stated, about to be increased by a further 200,000 ordinary shares of £1 each, mainly for the purpose of acquiring the business of Chadwick and Taylor. Six per cent. first mortgage debentures, interest free of tax up to 6s in the pound, for a total of £296,100 are outstanding, the authorised amount being £300,000. This is an offer for sale of £250,000 7½ per cent. "Chadwick and Taylor" mortgage debentures at 98 per cent. These debentures are to be secured by a trust deed as a specific first charge on Chadwick and Taylor's fixed assets, independently valued at £564,000, taking to-day's building costs as the basis of valuation. These debentures are, however, further secured by a floating charge on total assets of this company, valued at £1,505,664, also by a floating charge upon the assets of Charles Marsden and Sons, Limited, subject to the first mortgage debentures. They will be repayable on or before July 1, 1948, by annual drawings at 102½ per cent., or purchased at or under this price. The company reserves the right to pay off these debentures at 105 at any time on giving six months' notice. Charles Marsden and Sons, Limited, was formed in 1903 for the purpose of acquiring a business of paper and paper bag manufacturers which had been carried on for 70 years previously. Chadwick and Taylor was established in 1875, and manufactures news paper. Profits of both businesses are given from 1916. This offer for sale is an informative statement of affairs and subject to the future prospects of the paper making industry in this country, the debentures are attractive. The vendors acquire the issue for 91½ per cent., and it has been underwritten for 2½ per cent., with an overriding commission of ½ per cent.

H. Newsam, Sons, and Co., Limited.—Authorised capital £250,000, of which 100,000 ordinary and 20,000 6 per cent., income-tax free, cumulative preference shares, all of £1 each, have been issued. This is an additional issue of 100,000 6 per cent., income-tax free, cumulative preference shares of £1 each at par. The advertised prospectus states that the company was formed in 1894 to acquire a timber merchant's business carried on at Lincoln, Hull, Gainsborough, and London. Net profits are given from 1913. Surplus assets are valued at £183,915. In March, 1920, reserves were partly capitalised by issuing 25,000 ordinary shares to existing shareholders. This is a clear statement of affairs, but it is difficult to forecast the future for the English saw milling industry.

Ideal Sewing Machine Company, Limited.—Authorised capital £100,000, divided into 2,000,000 shares of 1s each, all of which have been issued and are fully paid up. The original capital was £50,000, but was increased in September, 1920, to £70,000, and in December, 1921, to the above amount. The company was formed in July, 1919, to acquire patent rights of a sewing machine. Between August, 1919, and January, 1922, 600,000 shares of 1s each were issued privately at par. The remaining 600,000 shares were offered in January, 1922, at 1s 3d per share, and were underwritten by a syndicate for a commission of 3d per share. These particulars are taken from an announcement in the Press made by the directors of the company to comply with the regulations of the Stock Exchange Committee. An underwriting commission of 3d per cent. may be taken as either a sign that the under-

writers have considerable doubts about the success of the issue or that the directors of the company have not made a good business deal. Although much information is given about the number of machines produced, the advertisement is singularly reticent over past profits.

British Pari-Mutuel, Limited.—Nominal capital £50,000, divided into 99,500 shares of 10s each, and 5,000 deferred shares of 1s each. This is an issue of 49,000 ordinary shares at par. Apparently a betting business is to be acquired for £25,250, payable in shares. It is, however, difficult to discover from the prospectus why this sum, or for the matter of that any other sum, should be fixed for the purchase price, as no past profits or figures of expenditure, assets, or liabilities are offered. No part of the issue has been underwritten, and the statement that "application may (the italics are ours) in due course be made to the Stock Exchange for a quotation of the shares" leaves one wondering if it is the intention of the directors to apply for a quotation. Assuming that the business is a lawful proposition, there is nothing attractive about the prospectus.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

COMPANY MEETINGS, &c.

LONDON AND NORTH-WESTERN RAILWAY COMPANY.

HON. CHARLES NAPIER LAWRENCE ON THE RAILWAY ACT.

ROAD MOTORS AND POSSIBLE LEGISLATION.

BURDEN OF RATES AND TAXES.

ECONOMIC AND INDUSTRIAL CONDITIONS.

The annual meeting of the London and North-Western Railway Company was held, on the 24th instant, at Euston Station, London, the Hon. Chas. Napier Lawrence, the chairman of the company, presiding.

The secretary, Mr R. C. Irwin, having read the notice calling the meeting and the auditors' report,

The Chairman said:—Ladies and Gentlemen,—In the first place, and before I come to the business of this meeting, I am sure you will all deplore with me the death of the late chairman, Sir Gilbert Claughton. You may remember that twelve months ago, when I took his place in this chair, I referred to his illness, but hoped with you that he would be restored to his accustomed health and be able to take his place amongst us again. To our great loss that hope was not to be fulfilled, and he died on June 27th last.

When Mr Claughton (as he then was) was appointed chairman of the company eleven years ago, he brought to its service a very wide and varied experience gained in great industrial and commercial concerns. Wise, conciliatory, and courteous, his was a lovable personality which we shall greatly miss, and we will always hold his character in affectionate remembrance.

Most of you will be aware that after acting as chairman since December, 1920, I was appointed chairman of this great undertaking in May last in succession to Sir Gilbert Claughton, and I need hardly say that I am fully alive to the responsibilities attaching to the position, and can assure you that no effort shall be wanting on my part to discharge the duties of my high office to the full satisfaction of the shareholders.

TRIBUTE TO MR RALPH BROCKLEBANK.

We deeply regret that death has also robbed us of Mr Ralph Brocklebank, who had so well served the company for over 38 years—longer than any member of the board, with one exception. In addition to presiding for many years over important committees, Mr Brocklebank imposed upon himself the task of keeping in personal touch with the company's establishments in the country, and of interesting himself in the welfare of the working staff.

Owing to the state of his health, he retired from the board in November last, and, to our sorrow, the end came on December 19th.

Words he never wasted, his advice always carried great weight, and we are very sorry to lose a colleague who has been so actively and agreeably associated with us, and to whom all his fellow directors were deeply attached.

THE LATE SIR EDWARD TOOTAL BROADHURST.

We have also to deplore the death of Sir Edward Tootal Broadhurst, who passed away on the 2nd instant, after a short illness, and whose loss to this company is irreparable. He represented our interests in one of the world's greatest commercial centres, and it is impossible to find words to adequately convey to you the invaluable assistance he rendered to the deliberations of your board. Apart from his charming personality, he was a man of sound common sense and good judgment, and in all matters his advice was a most valuable contribution to the deliberations of the board.

THE ACCOUNTS.

Turning to the accounts, of which you have all been supplied with a copy, I think it only right to say that the old North-Western Company, under the scheme of amalgamation, ceased to exist on December 31st last, and all that we can do to-day is to pass the accounts for the past year, and unless any shareholder has some question to raise I do not propose to trouble you with any reference to the figures, which you have all had an opportunity of considering, beyond pointing out that the company's revenue amounted to £38,492,619, whilst the expenditure for the year amounted to £32,837,186, leaving a net revenue of £5,655,433, to which should be added the sum of £400,000 appropriated from the £3,065,088 received from the Government under the Railways Act of 1921, the balance of the sum referred to

appears as a special item in the balance-sheet. We are thus able to declare a dividend of 5 per cent. actual, making 7½ per cent. for the year, carrying forward a balance of £269,461.

CAPITAL EXPENDITURE.

With regard to capital expenditure, we have spent during the year £1,703,000, of which £912,600 is in respect of steamers, £521,000 in connection with the electrification of the Euston to Watford Line, and the balance for sundry works.

I am glad to be able to say that for some time past the company's financial position has been appreciably improving, and has never stood higher than it does at the present moment.

RAILWAYS ACT.

Since the last meeting an Act has been added to the Statute Book, which in its far-reaching importance stands by itself in railway legislation. It consists of 86 clauses and 9 schedules, and I may allay any apprehensions on your part by saying at once that I have no intention of entering upon an analysis of these voluminous and complicated provisions.

You have had before you from time to time, by means of the various statements issued by the board, the different phases through which the question of the future of railways has passed since the proposals of the Government were first promulgated in the form of the White Paper with which we are all familiar, and which formed the basis of the legislation which resulted in the passing of the Railways Act. It is true the Act differs in some important respects from the proposals contained in the White Paper, but substantially it formed, as I have said, the basis of the Act.

I propose, however, only to refer now to the four main features of the Act, viz.:—

- The grouping of railways.
- The fixing of charges.
- The settlement of claims by payment of 60 millions.
- The machinery for adjusting the relations between the companies and their employees.

GROUPING OF THE RAILWAYS.

With regard to the grouping of railways, the Act, as you are aware, provides for a series of amalgamations and absorptions, which, when completed, will leave the British railway system divided into four large undertakings.

That in which you are immediately interested will consist of the following railways:—

- The London and North-Western,
- Midland,
- Lancashire and Yorkshire,
- North Staffordshire,
- Furness,
- Caledonian,
- Glasgow and South-Western,
- Highland,

and a number of minor railways which will be absorbed by the amalgamated or group company, which is called the North-Western, Midland, and West Scottish Group. I may say that this group is now constituted exactly as proposed by the Railway Companies' Association when criticising the proposals of the Government in December, 1920.

LONDON AND NORTH-WESTERN AND LANCASHIRE AND YORKSHIRE.

As you are aware, the machinery of the Act has already been brought into operation for the purpose of obtaining the approval of the Amalgamation Tribunal set up by the Act to a preliminary amalgamation of the London and North-Western and Lancashire and Yorkshire Companies on terms which, as you know, received the sanction of the proprietors of both undertakings. The tribunal consists of three members, viz., Sir Henry Babington Smith, G.B.E., Sir William Plender, G.B.E., and Mr George John Tabbot, K.C., gentlemen, it is almost needless to add, of high character and great ability.

The Act contemplates the submission to the Amalgamation Tribunal for their approval of agreed schemes of amalgamation, each of which will comprise the several companies in the group on or

before January 1, 1923, but in the absence of agreement the terms of amalgamation will be settled by the Amalgamation Tribunal.

You will, I am sure, appreciate that the problems calling for solution are difficult and complicated, and that the terms of amalgamation will require considerable negotiation for their adjustment.

But the advantages of presenting an agreed scheme to the tribunal are so obvious and overwhelming that the difficulties in the way of arriving at agreement should not prove insuperable, and I have good hopes that they will not.

In any case you may rely upon the board using every means open to them to safeguard fully the interests of the proprietors of this railway.

RATES AND FARES.

Now from the very beginning of railways the powers of the companies as regards their rates and fares have been controlled by statutory maxima, within which they could charge what they pleased. That arrangement had this advantage, that railway companies could, within the statutory limit, assist for instance a new industry by quoting a specially low rate for a time, without which the industry could not be developed, knowing as they did that as the industry prospered they could increase the rate (always within the legal maxima) to a standard which would provide a reasonable return for the services rendered; but in 1894 Parliament passed legislation which required the companies to justify before the Railway Commissioners any increase of charges, the reasonableness of which was challenged by a trader, so that in the very case I have illustrated we were liable to be called upon to justify any increase which we had ourselves proposed to make in the specially low rate which we had quoted, possibly without any profit whatever to the railway, to set an industry on its feet. Obviously that tied the companies' hands, and prevented them from assisting the trader to the extent they had previously done, and which reacted in turn upon the railway company.

In my judgment, that Act was not only useless but thoroughly mischievous. With scarcely an exception, the companies have always justified their increases, but the burden of doing so has been grievous, not only in time and in cost, but in the diversion of the energies of railway officers from their legitimate duties.

NEW METHOD FOR REGULATING CHARGES.

I am glad to say that the Railways Act gets rid of this objectionable method of control of charges, and substitutes another which I may shortly describe in this way:—

In future, charges will be fixed by a tribunal who are expressly directed so to fix them as to produce a standard revenue which will be equivalent to the net revenue of 1913, with certain additions specified in the Act.

There are provisions for periodical review by the tribunal, which, roughly speaking, amount to this: The Standard Revenue to be produced by the charges fixed can never be less than that of 1913, but may in certain events be more. For example, if the rates first fixed should turn out to have produced a surplus over the standard revenue, 80 per cent. of that surplus goes in reduction of charges, the remaining 20 per cent. being added to the original standard revenue, and therefore retained by the company, who, of course, also retain the entire surplus up to the date of revision. It must not, however, be forgotten that the most careful adjustment of charges by the tribunal will not necessarily result in the production of the standard revenue budgeted for, inasmuch as the charges fixed may possibly affect adversely the volume of traffic estimated to pass. That, however, is an ordinary commercial risk, which has always been incidental to any rates fixed, even when the fixing of such rates was in the hands of the companies subject to their statutory maxima. This scheme of rate fixing has two great advantages as compared with the system which it replaces. The rates have to be fixed with direct reference to a standard revenue which is reasonably satisfactory. They are to be fixed by a skilled Tribunal as compared with a committee of Members of Parliament who may or may not have any special knowledge of the subject.

THE TRIBUNAL.

The tribunal has been set up already. Two of the three permanent members, namely, Sir Frank Gore-Brown, K.C., and Mr W. A. Jepson, are members of the Rates Advisory Committee set up under the Ministry of Transport Act, 1919, and having regard to our experience of that Committee, I think the railway companies may rest perfectly satisfied that they will receive justice at the hands of the rates tribunal. The third member of the tribunal is Mr G. C. Locket, a large and representative trader, who comes to the position with a great reputation.

CLAIMS AGAINST THE GOVERNMENT.

I turn now to the provision for the settlement of the claims of the railway companies arising out of the Government possession of the railways.

No part of the negotiations with the Government has caused the representatives of the companies more anxious thought than this subject.

What I may call the current deficiency in net revenue during Government control was covered by the arrangement made on the outbreak of the war, and all that remains to be done in regard to this is the adjustment of the final account between the Government and the railways up to the end of that control.

But there were other very important matters not covered by the arrangement in respect of which the companies were advised that they had claims against the Government for compensation of considerable magnitude. But the establishment of these claims before the Railway Commissioners, however well founded they might be, must necessarily have been a matter of enormous labour and great cost.

What was even more important, payment of the sums ultimately found to be due would have been postponed to the end of a protracted litigation.

The advisers of the railway companies felt that if they could obtain by negotiation with the Government prompt payment of a reasonable sum, they would be doing better for the shareholders than by fighting for, possibly, a larger sum, the payment of which would certainly be postponed to a period when the money would be far less useful.

After protracted negotiation an agreement for a settlement was arrived at, which is embodied in the Act.

TERMS OF SETTLEMENT.

Omitting details of minor importance, the settlement amounts to this—the Government pay to the companies 60 million pounds in two equal instalments. The first 30 millions became due on December 31st last and has been paid, less certain deductions in respect of items which required adjustment; the second 30 millions becomes due on December 31st next.

In our judgment the settlement arrived at was, under all the circumstances, a wise and reasonable one.

COMPANIES AND EMPLOYEES.

I now come to the last of the four points I specifically mentioned at the beginning of my remarks—viz., the machinery for adjusting the relations between the companies and their employees.

This, in my opinion, is one of the most important features of the Act, for upon the satisfactory working of it depends very largely the prosperity or otherwise of the company and of our employees.

During the control of railways by the Government they set up as the machinery for the settlement of disputes between the Government and the railway employees a Central Wages Board, with a National Wages Board to settle questions upon which the Central Board were unable to agree.

The proposals of the Government which preceded the introduction of the Railways Bill included a proposal to continue this machinery after the end of the Government control, as a permanent institution, and a further proposal that representatives of the employees should be by them elected as directors upon the boards of the new amalgamated companies.

COMPANIES' OBJECTIONS.

Both proposals were objected to by the companies, particularly that relating to directors.

The companies' representatives early intimated to the Government that they regarded that proposal as cutting at the very root of the principle, hitherto universally accepted, that directors should be elected by those, and those only, who had subscribed or who held the capital of the undertaking, and they further intimated that this proposal would be strenuously opposed. On that point I think I need say nothing more than this, that an agreement was happily arrived at between the companies and their employees, which was subsequently embodied in the Bill and became a part of the Railways Act.

THE AGREEMENT.

The effect of that agreement is shortly this:—

The Central and National Boards are continued, or rather re-constituted, subject to determination by 12 months' notice on either side, such notice not to be given before January 1, 1923.

A system of councils on the lines of the Whitley Councils is to be established for each amalgamated company, consisting of officers of the company and representatives of the men employed.

I am bound to say that this settlement, and the way it was arrived at, constitute to my mind the most hopeful circumstances in the whole history of the relations between railway employers and employed, and I will tell you why I say so.

The men's representatives well knew that if they chose to press the question of employee directors they would have the full support of the Government. Indeed, attempts were made during the passage of the Bill to introduce into it the original proposal of the Government, but the men's authorised representatives in Parliament, to their honour, remained loyal to the agreement they had made.

They took the broad and statesmanlike view that a system arrived at by friendly discussion was more likely to lead to results beneficial to the men they represented than a system forced by Parliament upon the companies against their will.

I cannot help thinking that the exhibition of such a spirit in such circumstances augurs well for the success of the scheme which it has produced, and I invite you to join with me in heartily wishing it success, and our best endeavours will be given to make it so.

COMPARISON BETWEEN ORIGINAL PROPOSALS AND THE ACT.

I will only add a word of comparison between the original proposals of the Government and the Act as passed on the main features of its provisions.

The original proposals as to grouping were on a compulsory basis pure and simple, while the Act allows some 16 months from its passing for possible agreement.

It is true that in the absence of agreement compulsion comes in, but without it no comprehensive system of grouping of railways could be carried into effect so long as one or two companies, however small, might refuse their assent.

The original proposals as to rates and charges have been considerably modified during the passage of the Bill—mainly by agreement with the traders—in the direction of greater freedom in the quotation of exceptional rates to meet the constantly changing circumstances of trade.

The settlement of claims against the Government is a new feature which found no place in their original proposals. I have said all I need say about this.

There is one other important subject upon which the original proposals of the Government have undergone considerable modification, and that is the subject of future powers of the State in relation to railways.

It was originally proposed to confer upon the Minister of Transport powers of the most drastic character in respect to the granting of facilities and the provision of additional accommodation, involving the expenditure of capital, and the railway companies were to be under obligation to submit to the Minister for approval their proposals involving capital expenditure and also their plans for raising capital required.

Also the Minister was to have power to dictate to the companies as to the reserves they should provide.

These latter objectionable financial provisions, which would have practically withdrawn finance from the control of the directors, have found no place in the Act.

With regard to the other matters, the railway companies have now, as the Act stands, either the protection of a judicial tribunal, namely, the Railway Commissioners, or of a committee consisting of a representative of each of the amalgamated companies, and three persons of experience in the subject matter of the proposed order. The committee will, therefore, have a permanent majority of railway representatives.

With these safeguards the measure of State control embodied in the Act is far more tolerable than as originally proposed.

POSSIBLE AMENDMENT.

It is quite possible that the Act may turn out to require amendment in some details. Most Acts of 86 clauses do, especially when passed under considerable pressure as regards time. I believe, however, that in its main features the legislation is on sound lines, and will, in the results, be beneficial both to railway shareholders and to those who use the railways.

I am sure that I shall carry you with me when I say that a considerable debt of gratitude is due from railway shareholders to those upon whom has chiefly fallen the business of safeguarding your interests through the recent strenuous times.

LANCASHIRE AND YORKSHIRE AMALGAMATION.

You are, of course, all aware that special general meetings of the proprietors of the London and North-Western and Lancashire and Yorkshire companies were held on November 17th last, and approved the preliminary scheme for the amalgamation of the two companies. The matter came before the tribunal set up by the Railways Act of 1921, towards the end of December, when the scheme was approved with certain slight alterations which do not affect its principle.

Seven directors of the Lancashire and Yorkshire Company have joined the board of the new company, and the administration and reorganisation of the enlarged undertaking became effective as from January 1st.

Under the scheme stockholders of the Lancashire and Yorkshire Company are entitled to receive certificates for their relative holdings in the London and North-Western Company, but I may say it is unnecessary for the old certificates to be sent in for exchange until the new ones have been prepared, of which the stockholders will be advised in due course. As you are aware, in accordance with the Railways Act, 1921, further groupings must take place, and until this has been done it is impossible to arrive at any

finality as to the issue of new certificates. For current transactions on the Stock Exchange, Lancashire and Yorkshire certificates are deemed under the amalgamation scheme equal to relative London and North-Western stock, and they will be accepted in the secretary's office as good delivery in the event of any of the proprietors wishing to dispose of their interest. We have adopted this policy to save the company unnecessary expense.

ROAD MOTORS.

Your attention has no doubt been directed to a Bill to be promoted in the next Session of Parliament by the constituent companies in the North-Western and Midland group for the purpose of conferring powers on the companies in that group to provide and maintain transport services by road, similar to powers already possessed by certain railway companies, viz., North-Eastern, Great Eastern, and North Staffordshire. The promotion of this Bill will be submitted for the approval of the shareholders of the company at a special meeting to be held on February 28, 1922, but it is only right that I should explain quite briefly the nature of the proposals to be submitted to Parliament. It is a matter of common knowledge that the development of road transport during the last few years has created a new and very serious competition, and has resulted in the railway companies being unable to provide the facilities desired by the traders. Another factor to be borne in mind is that railway companies are, in almost every township, the largest contributors, through their rates, to the maintenance of roads to which they are not allowed the free use.

As the law stands at present, it is uncertain to what extent railway companies (unless they have special powers) may carry traffic in road vehicles, except such traffic as arises from or is destined for conveyance by railway, or, as it is generally called, "collection and delivery" traffic.

In the opinion of your board the time has arrived when it is imperative that, not only in the interests of the shareholders, but in the interests of traders generally, an application to Parliament should be made to define the powers of the railway companies as to the conveyance of traffic by road. The provisions of the Bill have received the careful consideration of the company's advisers, and, in the view of the board, ample safeguards have been inserted for the protection of competing road carriers and of the traders of the country.

RATES AND TAXES.

One of the heaviest charges a company of this character has to meet is that of "rates and taxes," as you will appreciate when I tell you that the payment in respect of the year 1921 was £1,435,880, or a sum equal to a dividend of 3½ per cent. on the ordinary stock.

This sum compares with an amount of £639,401 paid in 1913, and as there was practically no increase in the authorised assessments, the increase, which amounted to 125 per cent., is merely the increase in the poundage. You will all be glad to hear, however, that we expect some relief in the current year, an arrangement having been arrived at with the National Conference of Assessment Committees under which, if the net receipts for 1921, after allowing for the Government subsidy up to August 15th, fall below those of 1913, the assessments are to be reduced proportionately. As, however, this would not by itself provide for the enhanced amount of tenant's capital required to earn the receipts, by reason of the increased value of locomotives and rolling-stock, it has been agreed that a further deduction of 15 per cent. should be made from the reduced assessment arrived at in the way I have described. This arrangement will continue in respect of the years 1922-23 and 1923-24, by which time it is expected that the Bill which the Government is believed to have in contemplation will change the situation. It is, perhaps, needless for me to say that the Government proposals when formulated will receive careful consideration.

CORPORATION PROFITS TAX.

I have received a communication from our old friend, Mr G. Hamilton Hargreaves, intimating his intention of proposing the following resolution:—That this meeting views with much concern the prospect of the dividends on their ordinary stock being appreciably reduced by the corporation profits tax on the expiration of the present year. This meeting protests against the imposition of this tax, constituting, as it does, an additional income-tax upon that part of their incomes derived from a company whose charges are fixed or dividends restricted by statute, and calls upon the Government to exempt permanently railways and other public utility companies mentioned in Section 52, Sub-Section 2, paragraphs (i) and (ii), of the Finance Act, 1920, from corporation profits tax.

"That a copy of this resolution be sent to the Prime Minister and the Chancellor of the Exchequer."

Of course, as far as we are concerned, it is a resolution which has our hearty approval; but as many of the shareholders are aware, railway companies were exempted from the incidence of

the corporation tax of 1s in the £ on the net revenue for a period of three years, which expires on December 31st next. Public utility companies, such as railway companies, differ fundamentally from ordinary trading concerns, inasmuch as their charging powers are subject to State control, and there is no doubt that the object of the corporation profits tax is to spread a net for fluctuating trading profits in the nature of excess profits duty.

Although the matter is not one of immediate urgency, efforts are being made to secure the permanent exemption from this tax so far as railways are concerned. This is one of the most objectionable forms of taxation, seeing that it is the ordinary shareholder who is called upon to bear the burden of the tax, as if he had not already sufficient troubles on his back, and the railway companies expect to have a meeting with the Chancellor of the Exchequer on the subject shortly, and which in your interests I shall attend.

RETIREMENT OF MR BISHOP.

The shareholders will have noticed that Mr Bishop, who has been secretary of the company for the past 18 years, has retired, and I feel sure you would not wish to let the occasion pass without expressing to him your appreciation of the services he has rendered for so long a period, and your good wishes for his welfare in his retirement.

We have appointed as his successor Mr R. C. Irwin, who, many of you will be aware, has been secretary of the Lancashire and Yorkshire Railway for many years.

IRISH PRIVY COUNCILLORSHIP FOR MR BURGESS.

You will, I am sure, be pleased to know that Mr Burgess, the principal assistant to the general manager, was mentioned in the New Year Honours, the unique and well-deserved distinction, so far as railwaymen are concerned, of an Irish Privy Councillorship having been conferred upon him.

IRELAND.

Since I had the honour of last addressing you great changes have taken place in the Government of Ireland, which we all hope are destined to bring peace and prosperity to that unhappy country.

As the proprietors know, this company, in which there are many Irish shareholders, has expended a large amount of capital in the construction and equipment of railways in that country; and, in addition, they have provided, at enormous cost, a fleet of splendid steamships for the speedy transit of mails, passengers, merchandise, and live stock between Ireland and the Welsh and English ports.

Therefore, I look forward with great pleasure to the intensive development of Ireland's resources, and this company will in the future, as in the past, leave nothing undone to stimulate the development of that country, which will, of course, all tend to its prosperity and contentment.

RAILWAY BENEVOLENT INSTITUTION.

It may interest the shareholders to know that this year I have consented to preside over the Railway Benevolent Institution. It is the custom of the company whose chairman undertakes this duty to appeal to his shareholders for support on behalf of a charity which is doing a very useful work for railwaymen, and you will receive with your dividend warrants some particulars of the work performed by the Railway Benevolent Institution and an appeal for help on its behalf. May I take this opportunity of saying that, notwithstanding the great depression in trade and the many calls upon your generosity in other directions, I hope the response will be worthy of the cause, and of the company of which we are all proud to be shareholders.

In this connection I should like to express the keen appreciation of the board, in which I am sure you will participate, of the way in which the whole of the company's staff have worked through one of the most arduous years within our experience. From the highest to the lowest all have given whole-hearted and devoted service.

TRADE—POSITION AND PROSPECTS.

As you are all aware, trade has been very depressed, and the outlook still leaves a good deal to be desired, and whilst taking a long view, I have faith in the future. I think everyone in the room will agree with me that no considerable improvement in trade can take place until a solution has been found for the riddle of the international exchanges, and the currency of the countries with whom we wish to trade placed on a basis which will eliminate the fluctuations which at present make business almost impossible.

It is clearer than ever, and especially at this moment, that the business of Government is to keep the peace abroad, and to maintain social stability and security at home, leaving it to private enterprise, based on the interests of the trading parties, to develop and maintain the exchange of goods and services on which the world's wealth is ultimately based.

NECESSITY FOR GREATER PRODUCTION.

Production is the source of all wages, interest, replacement of capital, and, of course, of all private and public expenditure. The first step, therefore, towards economic health is greater production at a remunerative cost, both in the interests of the working classes as well as in that of the so-called capitalist, for there must be a reasonable return on capital employed, otherwise trade would be impossible. The loss of the productive services of the men who were unfortunately killed in the war, and of those who are unhappily permanently injured, and are now a charge on the community, must be made good by better organisation and more effective co-operation.

Another hindrance to the recovery of trade in this country is, of course, the present high scale of taxation. Therefore, it is of vital importance, in the interests of our shareholders, employees, and the country generally, that the currency and taxation questions should be dealt with, and I gladly recognise that the Government are fully alive to both these vital subjects.

In the peaceful but strenuous commercial struggle which will follow the settlement of questions arising out of the Great War, that nation will, in my judgment, win the prize of the most abundant and best remunerated employment of its people, and the greater progress and prosperity for itself, which will know how best to adjust its affairs in such a manner as to strike the right balance between, on the one hand the requirements of economics, the promotion of trade, and the stimulation of enterprise, and on the other hand the dictates of social justice and the welfare and contentment of the masses of the people.

I now beg to move: "That the report now read, with the financial accounts, be received and adopted."

The Hon. A. H. Holland-Hibbert seconded the motion.

The Chairman having invited questions,

SIR WILLIAM FRY'S SPEECH.

Sir William Fry, after a pause, said: Ireland naturally waits for England to give her a lead. I had expected that several speakers to-day would have voiced an expression of approval on the part of the proprietors to the chairman and other members of the board for the skilful manner in which the affairs of this great company have been managed during the past twelve months. Last year when we met here during the unfortunate illness of our late distinguished chairman you, feeling that the atmosphere was full of electricity, and that no one could tell what the effect on the future of this company or any other British railway might be as a result of the Government Bill, asked us to "wait and see." We followed your wholesome advice, and the result has been that, thanks to you and your colleagues, you have steered the ship of the London and North-Western Railway into comparatively safe water, and we see to-day that this company, given back into your hands in the month of August last, is freed to a great extent from the interfering hand of Government control, for which we are all truly thankful. Further than that, sir, congratulations are due to the board for the very careful and satisfactory result of their negotiations with the Lancashire and Yorkshire Company. Why, sir, one can imagine—for an Irishman's imagination is sometimes brilliant—a sea of litigation between your company and the Lancashire and Yorkshire before an agreement was come to. Thanks to the good commonsense of our board and the equally good commonsense of the board of the Lancashire and Yorkshire Company, we have seen satisfactory results, and to-day there is one harmonious whole. We can only hope that the result of your negotiations with that great company will be that the negotiations to take place with the other companies will be equally satisfactory, and that the outcome of the great companies that have to come in under the Railways Act will prove equally satisfactory to all the proprietors. I am glad you have taken the opportunity of referring to my unhappy country, because if ever a ray of sunshine was required—an encouraging word—it is required to-day. Ireland has undergone many troubles and many sorrows, but I am glad to think, as a resident in that country in the past, that your company has never failed in doing its best to develop Irish resources, and the magnificent fleet of steamers which have recently been launched, and which to-day are carrying the traffic between the Irish shores and the Welsh ports are second to none. I am glad to think and to hope that English tourists will find their way across to Ireland, and will visit that country, the beauty of which has yet to be revealed to many an Englishman. I am glad also to join with you in congratulations to my fellow-countryman, Mr Burgess, on the honour conferred upon him by his Majesty on January 1st last, and to think that the honour was conferred upon one who has done so much for Ireland, for if any man deserves credit from Ireland it is my friend, Mr Henry G. Burgess. You, sir, have referred to the danger of competition from motor traffic. To think that last year something like 4,500,000 people travelled by motors instead of by trains, and that 8,000,000 or 9,000,000 tons of goods were carried by them, is a

serious matter for the proprietors. Something like £1,300,000,000 of your money has been sunk in British railways, and surely we, as shareholders—and there are many hundreds of thousands of shareholders who to-day are dependent on the dividends from railways—ought to combine in every possible way to support our chairman and his colleagues on the board. I do believe that if we made our voices heard and our influence felt in the districts in which we reside, rates and taxes would not soar as high as they are doing at present, and there would be protest put forth to prevent the unfortunate dumb people—shareholders—from being crushed by oppressive taxation. To-day, sir, we go forth from this meeting encouraged by your words. You have lifted the veil a little, and told us things we did not know before. You have given us an analysis of the Railways Act in convincing language, and we see some prospect—some hope—that, untrammelled by Government control and uninterfered with by too many Committees, there is a great future for British railways, and shareholders ought to be slow in throwing away their stock. I have great pleasure in supporting the motion for the adoption of the report and accounts.

VIEWS OF SIR FORTESCUE FLANNERY.

Sir Fortescue Flannery, Bart.: I desire to say a very few words in support of the statement of our fellow-shareholder who has just sat down. He has uttered one of the most cheerful, in fact, the most cheerful, statement that I have ever heard coming from Ireland—the distressful country. I am sure that shareholders generally, and I myself from the point of view of one of the oldest ordinary shareholders, and from the point of view of a member of the House of Commons who took some part in the recent legislation to the best of my ability—I am sure the shareholders generally regard your speech, and the public, when it is made known, will regard your speech, as one of the most comprehensive and statesmanlike utterances that have ever come from the chair at a meeting of the London and North-Western Railway. There is not a single point that I know of in connection with the general records of the business of our great company that has not been referred to by you, both as regards the past, the present, and the future, and if our legislators and our Government will take their stand by some of the suggestions, if not by all, that have fallen from the chair of the London and North-Western Railway Company to-day, well, I think the community at large, as well as the shareholders and the employees of railway companies, will be benefited and wisely guided. There is just one point in connection

with the accounts to which I think attention has not yet been fully directed, but which has certainly struck me in reading them over, and that is that the expenditure in the year that we are dealing with is less than the expenditure in the previous year. The expenditure in 1920 was £34,000,000; the expenditure in 1921 was £32,800,000, which is a saving of one million and a quarter in expenditure, although you only got control of your enterprise in August last in the comparison of these two years. It is true that the traffic receipts have gone down very much, but here is my point; everyone of you who is in business knows perfectly well that it is easy enough for receipts to go down, but difficult enough, as a matter of management, to make the expenditure go the same way, yet we find in these figures of this great enterprise that the management have succeeded so largely that in a reduction of about £1,600,000 upon the receipts they have caused a corresponding—almost an equal—reduction of 1½ millions in expenditure. If that is not an indication of good management in detail, I do not know what is. However, I am not going to detain this meeting any longer, but I do think that there should be an expression from this side of the table of the great satisfaction of the shareholders with what has been done in their interests. Their confidence in you, sir, as chairman, their confidence in the board—the newly constituted board—which will be generally felt, should be voiced in a definite manner. From the point of view, therefore, of an old shareholder, from the point of view of one who is most anxious to see proper legislation in Parliament with regard to the railways, I do most heartily express to you the congratulations of all in this meeting upon what we have done and what we shall accomplish in the future.

The motion was carried unanimously, and further resolutions were passed approving the dividends recommended, and re-electing Mr H. W. Deacon, C.B.E., an auditor of the company's accounts.

Mr G. Hamilton Hargreaves then moved the resolution of protest with regard to the corporation profits tax, which had already been read by the chairman. In doing so he reminded the shareholders that if, in the approaching Budget, the present exemption of railways and other public utility companies was not made permanent, they would always be liable for this tax. The exemption would expire at the end of the present year, having been fixed for three years.

Sir William Fry seconded the resolution, which was unanimously adopted.

A vote of thanks to the chairman, directors, officials and staff concluded the proceedings.

SOUTH-EASTERN AND CHATHAM RAILWAYS. DIFFICULTIES OF THE MANAGING COMMITTEE. COMPLETE FUSION ADVOCATED.

A joint general meeting of the proprietors of the South-Eastern and London, Chatham and Dover Railway Companies was held, on the 23rd instant, at Cannon street Hotel, London, Mr H. Cosmo O. Bonsor (the chairman) presiding.

The Chairman, in the course of his speech, said that he had a difficult task, as he was anxious that every stockholder of each company should appreciate the position of the managing committee, its difficulties and its future. On August 16th last the Government had given them back their railways, after seven years of State control. To say the least of it, the damage done to them as a commercial undertaking was serious. Their working expenses during Government control had increased by over 300 per cent., and on the other side of the accounts goods rates had increased by only 110 per cent. and passenger fares by 75 per cent. The heavy lines had naturally the better of them because, having an increase of 110 per cent. on goods traffic, they could show a better return than this, which was practically a passenger line. The compensation given to the railway companies by the Government was £24,500,000, of which the managing committee's share was £1,031,000. They had had to draw £382,000 of that for the purpose of making up the revenue of 1920, and £649,000 remained over for use in the current year, and he presumed that there was a further sum of something over £1,000,000 to come to them when the accounts were made up in January, 1923.

LARGE ECONOMIES EFFECTED.

Large economies had taken place all over the system. As a proof of the economies effected, he might say that in 1921 they had carried three million more passengers than in 1913, but the train mileage was down 23 per cent. They had carried 8½ million passengers in 1921, which was 14½ millions less than in 1920. Their financial position was that, as a commercial company, they had a balance against them, and had to look to Government compensation to make up the difference.

AN EXTRAORDINARY POSITION.

He proceeded to deal with the position under the Railways Act, by which, he said, the managing committee was ordered to be a constituent company. It had no capital, and no shareholders, and yet was ordered to be a party to the fusion of the Southern Group under the Act. That Act was a most extraordinary production. For the first time in Parliamentary history commercial businesses were ordered to amalgamate, whether they liked it or not. They were given a year in which to come to a voluntary agreement, and, failing that, there was a tribunal appointed to compel them. That was an extraordinary position for any commercial undertaking to be placed in.

For the last six months the Managing Committee had been considering their position, and had also had discussions as to the machinery to be employed for amalgamation with the South-Western and Brighton Companies. The Managing Committee were agreed that the first step in the interests of both companies must be the fusion of the South-Eastern and Chatham Companies and the extinction of the Managing Committee. It was obvious that the position of the companies would be strengthened for purposes of amalgamation by complete fusion.

PROPOSED ELECTRIFICATION OF THE SYSTEM.

Dealing with the proposed electrification of their system, he said that a scheme had been in existence before the war, but the war had prevented it, and at the end of the war Government control had so diminished railway credit that it was impossible to raise capital for that most necessary undertaking. On the passing of the Trades Facilities Act they had made proposals to the Government whereby the necessary capital should be guaranteed by them as to capital and interest, and those proposals had met with favourable consideration. The money borrowed would carry Government guarantee. It was proposed to form a construction company to do the work, and that company would lease the undertaking to the Managing Committee or their successors on a lease for 25 years at a rent sufficient to repay capital and interest on the expiration of the lease, when the works would become the property of the Managing Committee or their successors.

SOUTH-EASTERN RAILWAY COMPANY. "STRONG FINANCIAL POSITION."

DIFFICULTIES OF THE AMALGAMATION.

The ordinary general meeting of the South-Eastern Railway Company was held, on the 23rd inst., at Cannon Street Hotel, London, Mr H. Cosmo O. Bonsor, the chairman, presiding.

The Chairman, in the course of his speech, said: You will see

that our miscellaneous receipts are up, and our rent roll is continually increasing, but it would be much better if it was not for the Rent Restriction Act. We have preferred a claim against the Government of some £24,000 on our hotel account, and a portion of the Eastbourne traffic. There is no doubt that we shall get a certain sum of money. We want it. As regards amalgamation, the difficulties which we allude to in the report are apparent, but they are not altogether common to the whole of the stockholders. Our financial condition compared with that of the Chatham Company is absolutely different. The South-Eastern Company is in a very strong financial position, and all our premier stocks, annuities, debentures and preference are trustee stocks in Great Britain, and are consequently held very largely by insurance companies, other corporations, and trustees.

The Chatham Company's debenture stocks are in amount far in excess of the ordinary proportion of debenture stocks to preference and ordinary stock, and, owing to that, and the fact that the Chatham ordinary stocks receive no dividend, the Chatham Company's debentures are trustee stocks in Scotland only. This creates great difficulty as regards the fusion of stocks. The South-Eastern shareholders are not going to be asked to consent to anything that will materially interfere with the securities that they now hold. Consequently the amalgamation must be on the question of revenue and not by putting debenture for debenture and preference for preference. Those are some of the difficulties, but our friends of the Chatham Company are just as anxious as we are to arrive at an equitable solution. There are other difficulties which will crop up when we come to deal with the Brighton and South-Western companies. It is a difficult subject altogether, and one which will require a great deal of care in bringing about an equitable solution. I presume that we shall be able to do it, but I will repeat that I am more or less in favour of the suggestion which Mr Macrae made to his stockholders that we should try to get the Act amended so as to have a fusion of income rather than of capital.

Our balance-sheet is a very satisfactory one, and I should like to call your attention to the fact that our capital is over-spent to the amount of under £200,000. If you look at the capital accounts of other companies that have been under control you will find them very considerably in excess. Here is another difficulty with which we have not to deal in amalgamating with other companies with overdrawn capital accounts, while we are in the position that we could wipe out our overdrawn capital account from reserve. It puts us in a very favourable position to negotiate.

The report and accounts were unanimously adopted.

LONDON, CHATHAM, AND DOVER RAILWAY COMPANY. ELECTRIFICATION OF SUBURBAN LINES.

The ordinary general meeting of the London, Chatham, and Dover Railway Company was held, on the 23rd instant, at Cannon street Hotel, London. The Right Hon. Sir William Hart Dyke, Bart. (chairman), presided.

The Chairman, in moving the adoption of the report and accounts, said that the number of passengers and season-ticket holders and tons of goods carried showed a considerable decrease as compared with 1920. The net result of the year's working of the two railways was a profit balance of £1,648,171, as against £2,031,236, so that in order to make up the difference a sum of £382,000 had been taken from the amount received under Section 11 of the Railways Act, 1921, leaving a balance of £649,071 in the hands of the managing committee. The board recommended the payment of the balance for the past year of the full dividend on the arbitration preference stock, and also the full dividend for the year of £4 10s per cent. on the second preference stock. This was the first occasion for many years that that stock had received its full dividend.

The stockholders would have seen in the managing committee's report that it was decided to amalgamate the resources of the Chatham and South-Eastern Railway Companies, the negotiations being based on the net income of both. Those net incomes must be adjusted, and the large asset of £94,000 which belonged to the Chatham Company stockholders would have the full advantage of when the scheme was framed and brought before them for consideration.

The managing committee had decided to seize the opportunity for availing themselves of the necessary capital to carry out a scheme of electrification for the suburban traffic. Ample evidence was forthcoming as regarded the financial success of such an enterprise. The electrification of their southern lines would be a valuable asset for the new group. They had unanimously resolved to amalgamate the resources of the Chatham and South-Eastern Companies.

The Chairman, in reply to criticisms in regard to the proposed scheme of amalgamation with the South-Eastern Company, said that much time had been devoted by the board in considering the

matter. In their opinion it would strengthen the position of the Chatham company, and, in any case, stockholders could rest assured that their interests would not be lost sight of. The report and accounts were unanimously agreed to.

METROPOLITAN DISTRICT RAILWAY COMPANY.

COMPANY'S POSITION AND PROSPECTS—DIVIDEND ON ORDINARY STOCK.

The ordinary general meeting of the Metropolitan District Railway Company was held, on the 23rd instant, at Caxton Hall, Westminster, London, the Right Hon. Lord Ashfield (the chairman) presiding.

The secretary and treasurer (Mr J. C. Mitchell) read the notice convening the meeting.

The Chairman, in the course of his speech, said:—When last I spoke to you upon the position of your company I was in hopes that a plan might be agreed which would secure the co-ordination of all the traffic facilities in London and bring to an end the vexed question of London transport. Unfortunately, for reasons which I need not trouble you with at this time, the hopes were not realised. But the question is reopened once again by the appointment of the Royal Commission on London Government, presided over by Lord Ullswater and now sitting. Your company, in concert with its associates, is giving careful consideration to the evidence to be submitted to the Commission at a later date, and here perhaps I may again affirm the principles upon which our action has been governed in the past. We do not object to an adequate and safeguarded measure of public control by an independent body. We believe that will tend to good results, but to ensure them we think that with control should also go a measure of protection. While agreeing with public control, we believe that only by private enterprise can the operation of London's transport facilities be carried out successfully. It is not at all a question of large profits. Urban transport is no field in which to seek such profits, for they can never amount to more than a reasonable return upon the capital invested, and this is all that we are seeking.

REVISION OF FARES.

When the fares were placed upon a revised and uniform basis on September 26, 1920, I confidently expected that a reasonable return upon the capital invested in this group of companies would have been secured. All our estimates at that time pointed to this result, and but for the disastrous coal strike extending from April to June of last year, and the subsequent growing depression in trade and industry, the actual results for last year would, I think, have reached our expectations. Certainly we were right in so far as the revised level of fares was concerned. Taking the four railway companies together, the passengers carried in 1921 amounted to 339,000,000 in round figures, or 65,000,000 less than in 1920, equivalent to a decline of 16 per cent. No fewer than 21,000,000 of these lost passengers were workmen, representing in their case a decline of 28 per cent., and indicating only too clearly the stagnation of trade and industry. In fact, it might be claimed that the volume of traffic carried in London is a barometer, closely measuring the country's prosperity. Taking the passengers carried by both railways and omnibuses in the common fund group, the total number for the year 1921 is 1,100,000,000, or 72,000,000 fewer than in the previous year, from which you will observe that the falling off in omnibus passengers is under 7,000,000, or less than 1 per cent. If I look at the reports and returns of other London traffic undertakings, I see a corresponding, if not a more marked, decline.

The depression in trade is reflected in other businesses dependent upon the prosperity of London. The year past has been unfortunate in theatrical, concert, and entertainment ventures. Hotels have experienced a poor season by the absence of visitors, and London has—I think undeservedly—earned the description of being dull. The time has come to counter this suggestion, and the common fund companies are able and ready to provide for all the traffic that may come to them from a brighter London. They are willing to join in any scheme which will assure this. The rolling stock and equipment purchased in previous years has all been delivered, and is more than sufficient to meet the needs of the present traffic. There is a reserve of accommodation available from which to augment the services now being run, and we can look forward to being able to deal effectively with many more passengers than are now carried.

After reviewing at some length proposals he made to the Government for providing employment for large numbers of men, he continued:—

As I have said, these proposals were not accepted, and the Government invited me to make new proposals to the committee which was set up under the Trade Facilities Act of last year. We have availed ourselves of this invitation, and a revised

scheme has been sent in to the committee, which I hope will be approved by them, and be one which they can recommend to the Government for acceptance. It would not be proper that I should at this moment disclose in detail what this scheme is, as it is still in negotiation, but I should assure the proprietors of the common fund companies that, while it is in every respect fair to the Government, it has due regard to their interests, and I and my colleagues will have no hesitancy in recommending it for their approval if it should become a practical measure.

CLAIMS AGAINST THE GOVERNMENT.

Your company, by reason of its special accounting arrangements with the Government consequent upon the institution of the common fund, was not a party to the general settlement with the Government by which £60,000,000 was set aside for distribution among the controlled companies in full discharge of all their claims. Your company has been allowed to retain the increased earnings which it secured in consequence of its increased fares in exchange for the surrender of its claim against the Government subsequent to September 26, 1920, with one exception—namely, the adjustment of its stores account. By agreement with the Government, on the advice of a committee of the Railway Association, this latter claim has now been settled for a payment of £40,000. I think from a survey of all the figures that the special arrangements were, if anything, beneficial to your company.

I ought to point out how much the common fund strengthens the position of your company and of all the other companies associated together in it. After all the companies' prior charge securities (other than the second preference stock of your company in respect of the first half of the last year) had been met in full and the agreed reserves had been put aside, there was for the year 1921 a sum of £909,272 to be distributed. This is the largest common fund that has been obtained since the institution of the scheme, and while it has not proved sufficient to pay a reasonable return upon the whole of the ordinary capital dependent upon the common fund, it represents a considerable advance towards that goal.

The gross receipts of your company for the year 1921 after the operation of the common fund amounted in round figures to £1,849,000. The working expenses were £1,351,000, leaving net receipts of £498,000, as against £334,000 in the previous year, an increase of £164,000.

CAPITAL EXPENDITURE.

The expenditure on capital account exceeds the receipts by £1,007,000, and during the year 1921 the net expenditure on capital account has been £773,000. The principal item here is an expenditure of £707,000 on rolling stock. This rolling stock was ordered as far back as the year 1918, but owing to difficulties of one sort or another, delivery was only completed during last year. It was impossible for your company to have refrained from ordering this rolling stock. The congestion of traffic during the years 1919 and 1920 necessitated the provision of additional accommodation, but it is unfortunate that this rolling stock had to be ordered at a time when costs of all kinds were at a maximum. The cost of this rolling stock represents an advance of about 27½ per cent. above pre-war prices of similar rolling stock. In order to meet the commitments of the company in respect of this expenditure, a temporary loan of £400,000 was secured from your company's bankers, Messrs Glyn, Mills, Currie and Co. You will therefore readily appreciate how it is that the receipts in respect of general interest have practically disappeared.

I should also point out that further expenditure is still being

incurred on capital account. With the provision of the additional rolling stock the car sheds and shops of your company were inadequate for the work of properly maintaining the rolling stock, and advantage was taken of the opportunity to provide accommodation for the overhaul and maintenance of the rolling stock of all the associated railway companies in a single centralised establishment with its resultant economies. A site has therefore been acquired adjacent to the Acton Town Station, upon which a commencement has been made in the erection of a new central works. The total amount which it is expected will be spent in the next two years upon these works is £176,000, making a total expenditure of about £350,000.

THE DIVIDEND.

Your directors recommend a dividend on the ordinary stock of 1 per cent. for the whole year. This dividend is practically paid out of the proceeds of the second half of 1921, as it was not until the distribution of the common fund was revised, as from July 1st of last year, that the ordinary stocks of the District Company had an immediate chance of earning a dividend. It must, therefore, be regarded as equivalent to a per cent. for the year.

Your directors are carrying over to next year's account an amount of £60,500, an increase of £40,000 over the previous year.

Having regard to all the circumstances of the year, the results are, I think, extremely satisfactory. It is the first time since 1882 that your company has declared a dividend upon its ordinary stock, and I am sure you will agree with me that we have much cause for satisfaction in the knowledge that after so many years your company should have at last achieved a position in which it can contemplate making some return upon its ordinary share capital. The dividend is not a large one, and may seem to those who so many years ago invested their money in providing traffic facilities for London a poor return for the patience which they have shown, but your directors have deemed it wise to pursue a cautious policy. No one can speak with a decided voice about the future, but with the knowledge which I have of the affairs of your company and those associated with it, I have reason to hope that having once succeeded in paying a dividend on the ordinary stock it should be possible to gradually increase the rate of dividend in future years.

The report was unanimously adopted.

LONDON ELECTRIC RAILWAY COMPANY. LARGE REDUCTION IN EXPENDITURE.

The ordinary meeting of the London Electric Railway Company was held, on the 23rd inst., at Caxton Hall, Westminster, London, the Right Hon. Lord Ashfield, the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said: I wish to refer especially to the economic factors which tend to improve and stabilise the position of your company as well as of the other railway companies in the group. The reductions in wages obtained in 1921 are equivalent to a saving of about £240,000 a year for the four railways. And with the reductions still in prospect the total saving in expenditure on this account in 1922 would seem to be about £400,000.

Many economies have been inaugurated during the last year. A committee of officers has been sitting from week to week reviewing in detail the whole of our organisation and methods. I should like to take this opportunity of commending the labours of this committee and of thanking them for their efforts.

COST OF MATERIALS.

Turning to the cost of materials, the fall in prices occurred rather late in last year, and as the companies necessarily carry large stocks the benefit from the fall has hardly accrued. In the coming year there should be appreciable savings under this head. The commodity in which we are mainly interested is coal. Owing to the regrettable strike extending over three months of last year the cost of coal during the year was abnormally high. The average price paid for the supplies at the power house (including the oil used experimentally) worked out at about 52s 6d per ton. I am happy to say that for the current year to date the cost is less than 32s 6d per ton, with a definite promise of a still lower price. The ratio of working expenses to receipts on the railways during 1921 was 70 per cent. This is much too high for remunerative operation, but from the explanations which I have given you, you will see that there is lively hope of its being reduced to a more normal proportion.

I have dealt with the question of expenditure at some length, because when the fares were increased in 1920 I recognised that there was a definite obligation cast upon those of us responsible for the operation of the companies to make sure that the expenditures were reduced to a minimum. You will see that we have taken this obligation seriously.

The one factor which prejudices the situation is a heavy falling off in the volume of traffic to be carried, and so far this year there have been practically no signs of a revival, though I trust these are not far off. At any rate, I can assure you that if nothing occurs still further to rob our traffic, the economies that we can now count on would appear sufficient to maintain the companies in their present position, so that if the revival comes, as come it soon must, your companies should occupy a strong position.

THE ACCOUNTS.

Your company received as its share of the common fund £320,552, as against £106,348 in 1920, an increase of £214,204. This is a substantial change for the good which it is hoped to maintain in future.

I must now ask you to turn to the accounts and statistics relating to your company. The debenture capital has been increased by £200,000, being the balance of the debenture stocks already created remaining unissued. You will also see from the note in account No. 4 that the expenditure in respect of which £785,472 has been received by way of loan from the London and North-Western Railway Company, as shown in Account No. 18, now amounts to £796,557, an increase of about £41,000 since last year. This represents the expenditure upon the completion of the Queen's Park Extension Railway. Altogether the net expenditure on capital account during the last year amounted to £66,121. From the revenue accounts, you will see that the receipts from railway working, after operation of the common fund, amounted in round figures to £2,040,000, an increase of £223,000 over the preceding year. The working expenses amounted to £1,369,000, or £19,000 less than in the preceding year, leaving net receipts of £671,000. The miscellaneous receipts this year were approximately the same as last year, and the total net income of your company is £808,000, an increase of £243,000 on the previous year. This, I suggest, is a very satisfactory result. The balance brought forward from the previous year's account is £22,000, which makes the sum to be dealt with £830,000 approximately. Interest, rentals, and other fixed charges amount to £296,000, very little more than in the preceding year. The reserve for contingencies and renewals set aside this year is £65,000, as against £45,000 in the previous year, an increase of £20,000, which is much needed to place the reserve funds upon a more satisfactory footing. The dividend on the preference stock is £127,000, the same as last year. When all these deductions are made the balance available for dividend on the ordinary shares is £343,000, an increase of £216,000. An interim dividend of 1½ per cent. has already been paid upon the ordinary shares in respect of the first half of the year, and it is now proposed that a further dividend of 1½ per cent. should be paid, making 3½ per cent. for the whole year. This requires a sum of £303,000, and leaves £40,000 to be carried forward to this year's accounts, as compared with the £22,000 brought in.

In conclusion, I consider that the year which has passed has been a satisfactory one from the point of view of your company, and while the traffics are now less than they were a year ago, and, therefore, are a source of anxiety to those engaged in the management of your undertaking, the continuing fall in expenditure is, in my opinion, sufficient to maintain your company in its present position.

The resolution was carried unanimously.

CENTRAL LONDON RAILWAY COMPANY. SATISFACTORY RESULTS OF YEAR'S TRAFFIC.

The ordinary meeting of the Central London Railway Company was held, at Caxton Hall, London, on the 23rd instant, the Right Hon. Lord Ashfield (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The year 1921 is the first year during which the extension railway from Shepherd's Bush to Ealing has been continuously worked. Under the agreement with the Great Western Railway Company that company maintains the railway and stations, and your company works the train service. For its services in working the train service your company receives a share of the traffic receipts attributable to the extension railway. I regret to inform you that this share of the traffic receipts has barely been sufficient to meet the expenses incurred during this last year. I think that the results of working this extension railway are very disappointing. This is due to the higher fares which are charged for journeys upon this route, and these higher fares are necessitated by the fact that the railway from Shepherd's Bush to Ealing Broadway is a part of the Great Western Railway, upon which the fares are based upon the pre-war rate of fare increased by 75 per cent. We have been in negotiation with the Great Western Railway Company for an adjustment of this fares situation, and while we have made some progress with these negotiations, we have not yet reached a settlement.

The expectations which were raised by the revision of fares in September, 1920, have not been realised. Experience has shown the general correctness of the level of fares then introduced, but the financial results have fallen somewhat short by reason of the acute depression of trade and industry, which, commencing with the regretful coal strike of last year, still continues.

Your company received as its share of the common fund £164,483, as against £70,898 in 1920—an increase of £93,585. This is a substantial change for the good.

Progress is being continued with the transfer of the power supply from the generating station at Wood Lane to the Lots road power-house, and further expenditure amounting to £11,900 is shown as contemplated in this connection.

The total net income is £261,122, as against £166,569 in 1920—an increase of £94,553. This result seems to be very satisfactory, especially if all the conditions affecting the traffic of last year are kept in mind.

After meeting all the prior charges in full and setting aside £29,000 to reserve, there is a sum of £179,644 available for dividends on the ordinary stocks. This is sufficient to pay dividends at the rate of 4 per cent. for the year upon all three classes of stock—namely, the undivided ordinary stock, the preferred ordinary stock, and the deferred ordinary stock—and represents a great improvement upon the position of your company in the years 1920 and 1919, and restores the position gained for the first time after many years in 1918.

There has been a decline in passengers, the number carried falling approximately from 50 millions to 43½ millions, or by 13 per cent. Having regard to the general fall in traffic upon other undertakings, this is not severe.

The resolution was carried unanimously.

CITY AND SOUTH LONDON RAILWAY COMPANY. CHAIRMAN OPTIMISTIC OF THE FUTURE.

The ordinary meeting of the City and South London Railway was held, on the 23rd instant, at Caxton Hall, London, the Right Hon. Lord Ashfield (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The revision of fares instituted in September, 1920, has proved to be successful and justified. Unfortunately, first the coal strike of last year and then the continued and growing depression in trade and industry led to such a restriction in the volume of traffic to be carried that the expected results were not secured.

Your company has joined with the London Electric Railway Company in putting forward an application to the Government under the Trade Facilities Act for a grant of sufficient money to enable this reconstruction to be carried out, and the line to be re-equipped with rolling-stock to modern standards and of larger size. The necessity for this has not grown any less during the recent year, and I would point out that in the supplement to the annual accounts and returns some particulars are given of the traffic carried upon the City and South London Railway in comparison with the traffic of the previous year, from which you will see that your traffic has declined by more than 9,300,000 passengers during the year, representing a drop of 23 per cent. It is most severe upon this railway of any of the railways in the group. We hope, therefore, that we shall receive a favourable answer from the Government to our application, and that we shall be enabled to proceed with this work during the course of the present year.

Your company received as its share of the common fund £54,556, as against £21,270 in 1920, an increase of £33,286. The total net income £180,000, as against £138,000 in 1920, an increase of £42,000. This result seems to me to be very satisfactory, especially if all the conditions affecting the traffic of last year are kept in mind. Resuming exact figures, the amount brought forward from last year's accounts is £18,820, so that altogether there is a sum of £198,687 to be dealt with. This sum has been applied in meeting the rentals and other fixed charges and in paying in full the whole of the interest and dividends upon the prior charge securities, and carrying to reserve a sum of £36,000, which is £11,000 more than the amount carried to reserve a year ago. In explanation of this I can only point to the general inadequacy in the reserves of your company which has been created by the enhancement in price of railway equipment occasioned by the war.

Your directors have felt it their duty to commence to take steps to put the reserves upon a post-war footing, making use of some proportion of the increased earnings attributable to last year. When all these payments are deducted there is a sum of £73,376 available for dividend on the consolidated ordinary stock. In August last an interim dividend, at the rate of 2 per cent. was paid, and it is now proposed to pay a further dividend of 1½ per cent., making 3½ per cent. for the year. This requires a sum of £44,000, and is an increase of 1½ per cent. over the distribution of last year. The balance carried forward to next year's account

is £25,276, or, in round figures, £6,500 more than the amount brought in. The falling off in earnings in the later months of 1921 is sufficient to account for the reduction in the rate of dividend as between the first and second half of that year.

Looking towards the future, I see no reason why the position of your company should not improve.

The resolution was carried unanimously.

PORT TALBOT RAILWAY AND DOCKS COMPANY. PROVISIONAL ARRANGEMENT WITH THE GREAT WESTERN.

The forty-sixth ordinary general meeting of the Port Talbot Railway and Docks Company was held, on the 23rd inst., at the Great Western Royal Hotel, Paddington, London. Colonel Sir J. R. Wright, Bart., presided.

The Chairman, in proposing the adoption of the report, said: Gentlemen, I must apologise for the absence of Mr Berry, who is unable to be present to-day. We deeply deplore that our old and valued colleague, Sir Thomas Watson, who had been a member of your board from its inception, has been taken from us owing to a regrettable accident which took place on May 1, 1921.

I now lay on the table the report of the directors and accounts for the year 1921. The accounts call for hardly any comment from me. The amount spent on capital account was £41,537, principally on deepening certain portions of the dock area in connection with the new works of Messrs Baldwins and the Phoenix Patent Fuel Company. The revenue account No. 8 is practically on all fours with the previous year, the balance of which permits of dividends on the ordinary and preference shares of 9 per cent. and 4 per cent. respectively for the year, with a carry forward of £2,647.

I am gratified to be able to inform you that terms for taking over your company by the Great Western Railway Company have been provisionally arranged, which will give to our ordinary shareholders for each £10 ordinary share £18 of Great Western 5 per cent. guaranteed stock. The £10 4 per cent. preference shares will be exchanged for £8 5 per cent. Great Western preference stock and the 4 per cent. debenture stock will be exchanged for an equal amount of 4 per cent. Great Western debenture stock. In the opinion of your directors these terms are satisfactory to both concerns. There is no doubt but that the exchange will be beneficial to the Port Talbot holders in their having a larger and better market for their new holdings when the exchange is completed, whilst the yield in interest and dividends will be the same as has been paid for some years past. In due course you will be invited to a meeting to consider and approve the formal agreement.

Mr S. H. Byass: I beg to second the motion.

Mr W. H. Skeel said that he had very pleasant memories of the way the directors had managed the affairs of the company for the shareholders, and he personally had to thank the chairman for the warning he had previously given that the shareholders would be wise to hold on to their shares.

The motion was carried unanimously.

The dividends as recommended were approved, the retiring directors, Colonel Sir W. Charles Wright and Mr Godfrey Lipscomb, were re-elected, and a vote of thanks to the chairman terminated the proceedings.

CHAMBER OF SHIPPING OF THE UNITED KINGDOM. COMPETITION BETWEEN AMERICAN AND ENGLISH SHIPPING.

The forty-fifth annual general meeting of the Chamber of Shipping of the United Kingdom was held, on the 24th instant, at Skinners' Hall, London, Sir Owen Phillips, G.C.M.G., M.P. (the retiring president), in the chair.

On the motion of the chairman, seconded by Sir Frederick Lewis, Bart., the report and statement of accounts for the past year were unanimously approved.

Sir Alan Anderson, K.B.E., then proposed the election of Sir Frederick Lewis, Bart., as president for the ensuing year, which was seconded by Mr. J. Denholm, and carried unanimously.

Sir Frederick Lewis, Bart., then took the chair.

A vote of thanks was accorded to the retiring president, and Sir Ernest Glover, Bart., was elected vice-president.

Sir Frederick W. Lewis, Bart., in the course of his presidential address, after referring to the services of British shipping during the war, said: British shipowners remain faithful to the traditions of the past. They still believe in the four "F's"—Freedom of seas, Freedom of ports, Freedom of trade, and Freedom of contract. Experience has taught them that these principles are the foundations of efficiency and prosperity. British shipowners ask no favours from their own or any other Government, but ask only for elbow-room to provide sea transport for trade cheaply and efficiently. In the future, as in the past, it is their ambition to look the whole world in the face with the assurance that

whatever success they may achieve will be due to their own efforts as shipowners, the heirs of priceless traditions, and to the support they have received from their incomparable officers and men.

BRITISH AND AMERICAN SHIPPING INTERESTS.

The situation at sea, as well as the balance of sea-carrying power, has undergone a dramatic change. A great deal has been said and written about the United States merchant fleet, and I am very glad to have this opportunity of assuring our friends across the water of one thing. British shipping interests have been pointed to as being the greatest opponents of the United States merchant marine, and it has even been suggested that active but secret propaganda is being conducted or encouraged from this side of the Atlantic. If such is the case, I for one have never seen or heard any evidence of it, and I can say with confidence that it does not exist. Even in the United States this propaganda, which is said to be more harmful to good relationships between the United States and Great Britain than the most effective German propaganda during the war, has never, so far as I know, been more clearly defined than by vague references to articles in English newspapers. We appreciate to the full the circumstances under which the United States became possessed of her present great merchant fleet, and we appreciate also the aspirations of the American people. We know that its construction followed an urgent appeal for tonnage from this country, and it would have been both futile and unreasonable to expect its destruction at the termination of hostilities. The administrators of this merchant fleet have been faced with a unique industrial problem—how best to organise a huge war-time built fleet of merchant vessels of all descriptions, from wooden freighters to big passenger boats, comprising some 1,800 vessels of about 11,500,000 deadweight tons, and apparently standing in their books at twenty-five hundred million dollars, or, say, an average of £50 per deadweight ton. The report of the Shipping Board, issued recently, records that for the year ended June 30th last the revenue fell short of expenses by \$82,419,000, or about £20,000,000, and this notwithstanding that the receipts included \$105,872,000 appropriations received from Congress and \$57,672,000 from sales.

RESULTS OF A NATIONALISED FLEET.

That is what a nationalised fleet means—burden on the general body of taxpayers. The United States, unlike Canada and Australia, have not sought to retain a nationalised fleet. The disadvantages of Government ownership have been recognised, and whilst it may be that the decision to sell the United States Government vessels has been arrived at a little late in the day, the fact remains that the principle has been recognised.

There have been suggestions to grant preferential railroad rates on cargo exported or imported in American vessels, and to impose dues on foreign ships in excess of the dues imposed on American vessels, or place taxes on cargo imported or exported in vessels other than American. In that connection one country's exports are other countries' imports, and buyers as well as sellers want the cheapest and most efficient transport that they can obtain.

SITUATION OF THE INDUSTRY.

An estimate of British tonnage at present laid up in 36 ports in the United Kingdom puts the figure at 2½ million gross register tons. The United States Shipping Board (apart from privately owned vessels and wooden and composite vessels) has, it is stated, some 1,000 vessels lying idle, representing possibly something over 4,000,000 gross register tons, and most other maritime countries are in much the same unfortunate position. Although it is said that figures can be made to prove almost anything, it is sometimes instructive to study statistics, and in the case of the shipping industry I think it is worth while noting the important changes that have occurred since 1914. In that year, according to Lloyd's Register, the world's total steam and motor tonnage was 13,443,000 gross tons less than at June 30, 1921, but of this difference 1,832,000 tons represent wooden and composite tonnage, so that for all practical purposes the increase can fairly be reduced to 11,611,000 tons. According to Lloyd's Register, of this increase 1,064,900 tons are British and colonial owned, and 11,417,000 are American. Most of the allied countries have also added to their tonnage since 1914, but on the other hand, Germany's quota stands at 4,480,000 gross tons less than in that year. When account is taken of the increased tanker tonnage—which represents 2,940,000 tons in excess of the 1914 figures—and the increased number of obsolete vessels over, say, 25 years of age, which are now on the register, combined with other considerations, it becomes apparent that the surplus of effective tonnage for carrying International trade is much less than the bare statistics suggest.

TONNAGE SUPPLY AND DEMAND.

On the one hand, the supply of tonnage has increased, and, on the other hand, the demand for tonnage for overseas trade has diminished. The Board of Trade Returns for 1921, whilst showing an increase in the value of both our imports and exports, as

compared with 1913, reveal that, when expressed in terms of weight, a serious decline in trade has occurred—something like 30 per cent. in our imports and 64 per cent. in our exports. Consequently, with other nations experiencing similar serious declines in trade, it is difficult—I had almost said impossible—to find any profitable employment for shipping, in spite of the great volume of tonnage at present lying idle.

I am not prepared with any sovereign remedy for the existing depression. Schemes for proportionate laying-up of tonnage, for breaking up—or even sinking—old and obsolete tonnage, have all been canvassed. But these schemes, excellent in their way, all start with the idea of cutting down the supply to meet the demand, whereas I think we should all like to see the demand increased up to and beyond the supply; and, so far as I can see, all that we, as shipowners, can do is to get our operating costs down to a minimum and raise the efficiency of cargo handling in our ports to the maximum.

During the past year the question of State-owned shipping and State subsidies for shipping have been very much to the fore. Great Britain had a State-owned fleet at the conclusion of the war, and our Government was fortunate in getting rid of all its vessels at high prices. The United States has not been so fortunate, although, as we have seen, the principle of private ownership in preference to State ownership is admitted. Canada also retains a considerable fleet of State-owned vessels, as well as Australia. All these nationalised vessels are to-day keenly competing with private interests; a great many of them are undoubtedly running at a loss, apart from depreciation, and the public purse is consequently finding an indirect subsidy. It has recently been disclosed that Dominion vessels pay no taxes to their own or the Imperial Government.

REDUCTION IN COSTS.

I have spoken of the need for reduction in costs in every direction as the first essential in bringing about a trade revival. I do not suppose anyone here would have the temerity to suggest that the Government should give shipowners a subsidy to enable them to perform public services profitably, which they can at present only perform at a loss; and if anyone had the temerity to make the suggestion I don't believe for one moment that any shipowner would support the suggestion, if for no other reason than that it would be creating a precedent and encourage every other industry to ask for similar assistance. We do not ask favours from the Government, but we do, in common with other industries, look to the Government to help us and the whole community by itself cutting down all unnecessary expenditure on the national services, subject only to the needs, as was stated in the King's Speech in opening Parliament, of "national security and efficiency." Shipowners look to the Government with great expectation to effect economies in administration, and to do everything possible to relieve industry from the present burden of taxation. We are admittedly the most heavily taxed nation in the world, notwithstanding that we were on the winning side in the war.

We are at the present time particularly handicapped by the existence of a great many circumstances entirely without precedent—an impoverished Europe, the big markets of Russia practically entirely closed, high taxation, coupled with chaotic exchanges and unstable financial conditions throughout practically the whole world. I am afraid that we shall have to possess our souls with a considerable amount of patience before these conditions fully adjust themselves.

Sir Wm. J. Noble, Bart., in proposing a resolution calling attention to the continued urgency of the need for early and substantial reduction in wages afloat and ashore, said that it was often said that if prosperity was to return to this country, all classes engaged in industry must pull together, and there must be goodwill and co-operation between employers and employed instead of antagonism, suspicion, and selfishness. The mere aspiration for goodwill did not carry them very far. It was often asked why employers, when it was imperative to reduce costs, always attacked wages. It was simply because nine-tenths of the cost of every commodity was directly or indirectly, a wage cost. The so-called attack on wages was not an attack on the workmen. Reduction in labour costs was a necessary step towards finding him more employment and a better standard of living by stimulating the demand for the work on his hands. A substantial reduction in the rate of wages afloat had been effected by open negotiations. He was far from saying that increased costs were the only cause of their decreased overseas trade, but they were undoubtedly the prime cause, and until their manufacturers could produce at a price that their buyers could afford to pay their export trade, as well as the shipping industry must continue to suffer and unemployment continue.

The resolution was seconded by Mr Cuthbert Laws and carried unanimously.

A resolution directing the attention of foreign Governments who had recently adopted or threatened measures of flag discrimination to the prejudicial reaction of such measures on the trade of the

world was carried, and a resolution urging upon the Government the need for establishing and maintaining the mutual recognition as between all the maritime countries of the principle that the profits of shipping were earned on the high seas, and as such were taxable in the country of domicile, was passed. A further resolution drawing attention to the unwisdom of the continued departmental interference with shipping was also passed.

A vote of thanks to the chairman concluded the proceedings.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED.

GRATIFYING RESULTS OF THE YEAR.

SATISFACTORY INVESTMENT POSITION.

Sir John M. Clark, Bart., presiding at the annual meeting, held in Edinburgh on 21st inst., said that, considering the acute commercial depression prevailing during 1921, it was particularly gratifying to be able to submit results of the most satisfactory nature. They and life offices, speaking generally, had felt the effect upon new business of the unfortunate state of trade. In 1919 and 1920 there was a boom in life assurance, due in no small degree to the period of apparent prosperity through which the country was then passing, but which they rightly anticipated would be followed by a reaction.

NEW BUSINESS.

During 1921 their new assurances amounted to £862,000, of which £79,000 was reassured, leaving a net business of £783,000. Although this showed a reduction on the figures of 1920 and 1919, it was nevertheless by far the greatest amount which they had done in any year with the exception of these two; indeed, it represented an increase of 50 per cent. above any pre-war total. The net life premium income was £346,000, showing an increase of £8,400. The interest on the funds, after deducting income-tax, showed a yield of £4 11s 8d per cent., being much the largest yet attained. It was an increase of 5s 6d on 1920, and the rise was only partly due to the writing down of securities last year. To the public that figure might not convey much, but it did to the insurance expert. Their actuarial valuation was made on the basis of a net rate of interest of £3 per cent., and if they were fortunate enough to maintain their net rate at, say, 4½ per cent., that would mean a profit for the present quinquennium of over £250,000 from interest alone.

MORTALITY EXPERIENCE.

Claims by death showed a ratio of actual to expected of only 67 per cent., being thus practically two-thirds of the amount expected under the mortality tables. The ratio of expenses (including commission) to premium income was 15.6 per cent., being a reduction of 1 per cent. for the year. This reduction was due mainly to the decrease in the new business, but he thought they might take a little credit for careful oversight in expenditure, because the ratio of expenses had been actually a trifle less than it was in any year before the war, although the new business was 50 per cent. greater. At the close of the year the life funds amounted to £3,239,000, the addition being the record one of £229,000.

INVESTMENTS.

It gave him great satisfaction to state that at the present time the market value of the investments of the company was very largely in excess of those at which they appeared in the balance-sheet. It was a welcome state of matters, because for so many years there had inevitably been a tale of depreciation to be told. With investments in this satisfactory position, with their low claim ratio, their moderate rate of expenses, and with the increased rate of interest which they were obtaining on their investments, the position was such that, whatever the future might bring forth, he felt that he was justified in expressing the belief that strong as the position of the company had been in the past, it had never been so strong as it was to-day.

The report was adopted, and a dividend of 15 per cent. declared.

NATIONAL PROVIDENT INSTITUTION.

RESULTS "ENTIRELY SATISFACTORY."

The eighty-sixth annual meeting of the members of the National Provident Institution was held, on the 24th inst., at the Cannon Street Hotel, London, the Hon. Vicary Gibbs (the chairman) presiding.

The Chairman, in the course of his speech, said: The report first gives details of the new business transacted. They show that new policies were effected for a net amount of £897,445, carrying an annual premium income of £38,369. These figures show an appreciable drop from those of the previous two years, but this only means that we have left behind us for the institution's good, and that of the country, the inflated values of 1919 and 1920. We

are now gradually returning to a normal condition of affairs. A more reasonable method for us to adopt, therefore, is to compare last year's new business with pre-war figures.

The mortality experience has again been quite favourable, the death claims representing only 66 per cent. of those expected according to the tables which we employ in measuring our liabilities. The incidence of the claims, too, has been favourable, and, as a result, a substantial amount of profit has accrued to the institution.

We are glad to be able to report some decline, although small, in our expense ratio, which is this year £3 10s 6d per cent. of the year's premium receipts against last year's figure of £3 13s.

I now come to the statement which appeals to the board as being the most satisfactory in the whole report, namely, that which tells you that the net rate of interest after deduction of income-tax has increased from £4 1s 3d to £4 4s. You would have to go back 40 or 50 years in the history of the institution to find an equally good rate, and you would have to bear in mind that in those happy times income-tax was about 6d in the £.

I should like to draw your attention to a new policy which we are issuing. We are calling it "the sixty policy." It is issued nominally as a whole-life policy without profits, subject to premiums ceasing before the age of 60, and is convertible at the end of five years into a with-profit endowment assurance, payable at age 60 or previous death; the assured having the option to continue it, as originally drafted, if he desires to do so. The payment of a small premium now will secure full cover, and will make immediate provision for dependents in the event of premature death. An increased premium in five years' time will convert the policy into an endowment assurance, thus combining family provision with an augmented income on retirement.

With regard to the bonus prospects, on November 20th last, after allowing for a net depreciation of £80,000, which then existed, we had surplus in hand quite sufficient to pay a full five years' bonus at normal rates without trenching on the profits of the current year, which, if a normal one, should amount to about £200,000. Since November 20th last, as you all know, securities, particularly of the gilt-edged type which we so largely hold, have substantially risen in value, and the £80,000 depreciation has long since disappeared.

The report was unanimously adopted.

WINTERBOTHAM, STRACHAN, AND PLAYNE, LIMITED.

HIGHLY SATISFACTORY RESULTS—BURDEN OF TAXATION.

The second ordinary general meeting of Winterbotham, Strachan, and Playne, Limited, was held, on the 24th instant, at 7 Argyle street, London, Mr H. B. Winterbotham presiding.

The Chairman, in proposing the adoption of the report and accounts, said: Our second ordinary general meeting is being held during a period of depression which is fortunately rare, and perhaps unparalleled in the history of world trade. It is necessary, before reviewing the accounts before us, that we should carry our minds back to a year ago. We had then passed through an anxious and trying period, and when better trading conditions were in sight the complete stoppage in the coal industry, lasting for three months, effectually checked all chance of revival. During the nine months that were left industry was seriously hampered by the high cost of production and a general loss of buying power, due largely to an entire lack of confidence in the future, while the abnormality of foreign exchange rates rendered export conditions practically impossible, much idle machinery, a further fall in prices, with a general shrinkage of profits, some failures, stupendous difficulties encountered by the high-class distributing houses, with whom the bulk of our business is done. Very little can be looked for in the way of increased buying capacity until substantial relief is given from the heavy burden of taxation under which the nation continues to stagger; indeed, the present 35 per cent. taxation basis for income and corporation tax unquestionably accentuates the unemployment and distress of the country, and is, perhaps, "one of the principal causes" of the stagnation of trade.

CORPORATION TAX.

The iniquitous corporation tax especially singles out for destruction the ordinary shareholder, who largely supplies the enterprise and backing of the commerce of the country, and it is sincerely to be hoped that after the able manner in which this has been brought to the attention of the Chancellor of the Exchequer, we may shortly be attending its obsequies, and be witnessing the removal of one of the obstacles to all healthy enterprise.

The pre-war predominance of British trade cannot be recovered until a system of taxation is evolved, which, seeking to promote and not retard industry, offers some inducement to the taxpayer to husband his resources, and some assurance that the main part of his income will not be swallowed up, as at present, in the upkeep of Departments which destroy but do not create, which to-day are unnecessary.

Given a relaxation of this stranglehold of taxation, and a resump-

tion of national policy to more sane economic conditions, the necessary confidence would be established, giving that impetus to the recovery of prosperity which the trade of the country so urgently needs.

The high costs of production are still preventing orders being available for British industry, though wage-earners are gradually becoming alive to the fact that the value of work can only be what it will fetch in the world's markets, and that the attempt to restrict production is only adding to the burdens already carried.

Turning, for a moment, from the more immediate causes and effects of trade depression at home, we cannot lose sight of the fact that the cloud which darkened the economic outlook of Central Europe and the Near East a year ago still exists, in spite of the many conferences held at salubrious watering-places. Some of the most valuable outlets for our productions lay in these more thickly populated countries, and until there is a possibility of free interchange of commodities between these nations and ourselves, we cannot hope for that full commercial revival which we all so ardently desire.

Our company is prepared to deal with any increased business; the plant and buildings are maintained at their usual standard of excellence; the reputation of our manufactures has never stood higher, and the excellence of our productions remains unequalled. Our financial position is strong, and we are, in every way, ready to bear our full share in whatever revival of trade the immediate future may hold.

THE ACCOUNTS.

We will now pass to the consideration of the accounts which have been in your hands for some days. This company has had to provide an amount exceeding £25,000 for income and corporation tax before the sum of £17,885 18s 2d (the profit for the year) is arrived at—a result which, having regard to the conditions prevailing during the twelve months covered by the accounts, your directors consider to be highly satisfactory.

The trading results of the year have been dealt with on the same prudent basis as heretofore. Before arriving at the profit of the associated companies, an amount of £16,120 13s 5d has been written off as depreciation from the buildings, machinery, and plant, and the total reserves of those companies now amount to £56,200 9s 8d. A sum of £1,846 3s 5d has been further expended in additional plant and machinery, and all necessary repairs and maintenance have been properly dealt with.

From the summary of assets before you it will be seen that the surplus assets stood on November 30th last, after deduction of all liabilities, at £537,628 5s 9d, an increase of assets of £2,127 13s 2d over those of last year.

The report was unanimously adopted.

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED.

INCREASED TRADING PROFIT.

SELLING PRICES AND THE DUTY.

The annual meeting of the Imperial Tobacco Co. (of Great Britain and Ireland), Limited, was held, on the 21st inst., at the head offices, Bristol, Mr George A. Wills, chairman of directors, presiding.

The Chairman, in moving the adoption of the report and accounts, said: During the last 48 hours we have heard by cable of the sudden death of Mr E. S. Carlton, one of the directors of the company, and the head of our organisation in the United States of America. Mr Carlton's unrivalled knowledge of tobacco and sound business judgment have been of inestimable value to the company for many years past, while his personality was such as to have endeared him to all who came in touch with him, both here and in his own country.

BALANCE-SHEET FIGURES.

Referring to the credit side of the balance-sheet, you will observe that the total assets of the company at October 31st last amounted to £63,380,108, an addition of about £2,000,000 to the corresponding total at October 31, 1920. The first item of land, buildings, plant, and machinery, now standing at £4,190,000, has been added to by £1,366,275, this increase being chiefly accounted for by substantial additions to buildings and plant in America, and extensions to several of our branches at home. Figures do not readily convey an appreciation of the actual assets which they represent. You will, however, have received during the last few days an album, in which many of the company's buildings and workrooms are illustrated, and which will, I think, have given you a very just idea of their extent and value. As usual, normal depreciation of buildings and plant has been provided for in the accounts, and this year, having regard to the high costs of building, we have written off out of profits, in reduction of these outlays, an additional sum of £500,000. Goodwill and patent rights remain unchanged at their book figure. The investments

in associated companies stated at cost—or below cost in those cases where depreciation has taken place—stand at £5,538,318—an increase during the year of £660,338. As stated in the balance-sheet, the aggregate market value of investments in associated companies is largely in excess of the book figure.

NET VALUE OF STOCKS £32,721,996.

Stock in trade now stands at a net figure of £32,721,996, as compared with £31,838,620 in the previous balance-sheet, an increase of £883,376. Payments on account of leaf in transit, &c., at £1,094,736, have decreased £1,537,897. This item is always a fluctuating one. Debtors stands at £6,142,603, and show a decrease of £341,935. Investments in Government and other stocks, valued at prices ruling on October 31st last, stand at £845,667—practically the same figure as last year. No depreciation has arisen between the values in 1920 and the values in 1921. Corporation loans, at £200,000, show a reduction of £50,000, that amount having been repaid during the year; while the cash at bankers and in hand, £3,223,297, has increased by £1,063,572.

Turning to the liabilities side of the balance-sheet, you will find that the issued capital amounts to £35,330,594, which is the same as last year. Creditors, including provision for taxation, estimated capital liability under dividend guarantees, employers' liability, marine and other funds, have increased by £1,310,044 as compared with the same item at October 31, 1920. The provision for pensions, &c., £1,410,367, has increased by £104,521. The increase is made up of £100,000, which we have transferred from the profit and loss account for the year, and £4,521, the difference between the year's interest upon the fund and the pensions paid during the year. The premium of £1 per share received on the issue of ordinary shares in April, 1920, remains at £5,595,446. The general reserve fund now stands at £6,178,877, a further sum of £500,000 having been added from the profits of the year.

PROFIT AND LOSS ACCOUNT.

The next, and perhaps the most interesting, matter to be considered is the profit and loss account, which you will find set out in pages 10 and 11 of the print. The net trading profit for the year, including sums derived from dividends on investments in companies operating abroad, which are substantially in excess of last year's figures, and after fully providing for all charges, including income-tax and corporation profits tax, amounted to £6,927,641, as compared with £6,659,791 for the previous year, an increase of £267,850. This, I think, may be regarded as a subject for congratulation, having regard to the difficult business conditions which obtained during the year throughout the country. The year's profits have been relieved of the burden of excess profits duty, the company's last accounting period being the year to October, 1920. On the other hand, the profits of the home trade have suffered from the smaller spending power of the public. On the debit side of the profit and loss account are charged the items of "provision for pensions," "amount written off freehold buildings," and "transfer to general reserve," to which I have already referred, leaving a balance of profit for the year of £5,827,641.

THE DIVIDENDS.

In the appropriation account you will find that the profit for the year has been added to the balance of undivided profits from the previous year, less bonus to customers paid thereout, leaving the balance of profit to be dealt with £5,867,489. Out of this sum the dividends upon the preference capital have been, or will be, paid—that is to say, 5½ per cent. upon the "A" cumulative preference shares, 6 per cent. upon the "B" non-cumulative preference shares, and 10 per cent. upon the "C" non-cumulative preference shares. Upon the ordinary shares an interim dividend of 5 per cent. was paid, free of income-tax, on September 1, 1921, and it is now proposed to declare a final dividend of 10 per cent., and a bonus of 6d per share, both free of income-tax, these dividends being the same as those for the previous year. Added, providing for these dividends, and an interim payment of £352,908 as bonus to customers, there will remain a balance of £729,657 to be carried forward, out of which will have to be met the balance of the bonus to customers for the year to October 31st last.

GIFT TO STAFF AND WORKPEOPLE.

For some years past, as you are aware, a gift has been made to the company's staff and workpeople, both at home and abroad, over and above their normal salaries and wages. The board have felt it to be a fitting thing to recognise in this way the part which the employees of the company play in maintaining and enhancing the value of your property, and you have always shown by your reception of the announcement of these gifts that you approve our policy in this respect. I may say, without fear of contradiction, that no company in the world can boast of a more loyal body of employees, and it is therefore with great pleasure that I am able to say that the board have again decided to make a gift to staff and workpeople in respect of the

financial year under review. Under this gift each person who has been in receipt of a salary or wage from the company during the twelve months, or any lesser period, ended October 31, 1921, and who still remains in the service of the company to-day, will receive a sum equivalent to 15 per cent. of the salary or wage received by him or her during the said twelve months or lesser period. I am confident that you will share the desire of the board to acknowledge in this way the contribution which each recipient has made and is making towards the success of our undertaking.

WAR MEMORIAL.

When you entered the building to-day you can hardly have failed to notice the memorial which, since our last meeting, has been erected at the end of the entrance hall. The memorial is the work of Sir Edwin Lutyens, R.A., and I am sure you will agree with me that, in the beauty and dignity of its design, it fulfils not unworthily the purpose for which it was erected, to keep fresh in our own minds and in the minds of those who come after us the memory of the 597 brave men whose names stand recorded there.

OUTLOOK FOR THE FUTURE.

I think you may wish me to express some opinion about the outlook for the future, and also in the same connection to say a word on the subject of selling prices. When Mr Gunn addressed you a year ago he was able to point to the fact that the course of the American leaf market during the autumn and winter of 1920 had given a welcome check in the long process of rising averages of our leaf costs. I am sorry to say that during the season now closing the leaf markets have again shown an upward tendency, and, failing a substantial reduction in the tobacco duty, which now stands at 8s 2d per lb, compared with 3s 8d at the beginning of the war, I see no possibility whatever of a reduction in prices.

Now as to prospects generally. Any statement on this subject must be made with great reserve, inasmuch as the directors of a company such as this are in no better position to predict the future than any member of the general public. We have no knowledge that is not common to everybody upon the broad questions, many of them international questions, which affect the trade of the country as a whole. We know, as you all know, that trade generally has been seriously depressed and that there has been, and still is, much unemployment in the country. As regards our company, I have indicated already that the profits from our home trade have to some extent felt the effect of this depression. That they have not felt it more is due partly to the fact that tobacco is a friend to man no less in bad times than in good, and partly to the strong position which a conservative policy, pursued over a long series of years, has secured for the company. Bearing these two considerations in mind, I know of no business undertaking, large or small, in whose future I should have greater confidence than in our own.

The Deputy-Chairman seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

LONDON GENERAL OMNIBUS COMPANY, LIMITED.

RESUMPTION OF PROGRESS.

The ordinary meeting of the London General Omnibus Company, Limited, was held, on the 23rd inst., at Electric Railway House, Westminster, London, the Right Hon. Lord Ashfield (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Considerable progress has been made in the replacement of the pre-war type of omnibus by larger omnibuses of modern and improved design. The seating capacity of the active fleet at January 1, 1921, was 95,000, and at December 31, 1921, 114,000, an increase of 20 per cent.

During the year the Central Overhaul Works at Chiswick have been opened. This has enabled the standard of maintenance to be made uniform throughout the whole fleet, and has added to its efficiency. With the purchase of the additional omnibuses it will be necessary to provide further garage accommodation. The development of the services in the north-eastern and eastern quarters of London will particularly require additional garage accommodation.

You will know that the London General Omnibus Company works and maintains, under agreement, the motor omnibuses of the Gearless Motor Omnibus Company, Limited, and the Tramways (M.E.T.) Omnibus Company, Limited. In fact, these companies share on a percentage basis with the London General Omnibus Company in a pool comprised of the earnings of all the motor omnibuses in the London area, and while these companies have to be kept distinct, having separate capital accounts and separate reports and returns, no useful purpose seemed to be served by this.

Your company has, therefore, taken steps to acquire, as from January 1, 1922, the shares and undertakings of these companies, so that there may be a further consolidation of interests.

PROGRESS RESUMED.

To summarise the principal feature of the year 1921, it has been a resumption of progress interrupted by the war, and the development of motor omnibus services to provide satisfactorily and fully for the whole of the Greater London area.

The number of passengers carried by your company during the year has been 761,250,000, or 6,700,000 less than in the previous year. The decline in traffic is of recent occurrence, as owing to the abnormally fine weather of the summer of 1921 the traffics carried during those months exceeded our ordinary expectations. If the motor omnibus companies of London as a whole are considered, the total number of passengers carried during the year was 931,750,000, or approximately one-third of the whole local traffic movement in the Metropolitan area. This compares with 936,000,000 carried in the year 1920. The decline is slight, though I regret to say it is continuing. It is necessary, therefore, for us to pursue a conservative policy.

The revised fares which were brought into effect on September 26, 1920, continued in force until December 1, 1921. These revised fares met, as was expected, the financial requirements of the companies, and served to put transport upon a reasonably remunerative basis. On December 1, 1921, the London County Council decided to revert to the fares which had been in force upon its tramways prior to this revision, and in order to protect their own traffic the omnibus companies were compelled to adopt similar fares in the London County Council's area. Since this alteration in fares it is admitted that the London County Council have not gained. I see one estimate is given that the loss is £10,000 a week.

If you will turn to the accounts of your company you will see that the expenses for the year 1921 are somewhat more than they were in the year 1920. The increase is 4 per cent. The mileage worked by omnibuses has increased from about 86 millions to 87 millions of miles, or by just over 1 per cent.

It will be in the recollection of the shareholders that in the session of 1920 the London County Council promoted a Bill for the acquisition of motor omnibus powers in London, and in particular they desired to have the power to run motor omnibuses upon short routes in the central area connecting the tramway systems north and south of the river across the central area. Your officers met the officers of the London County Council and have carried out during the last year various experiments in the way of short services and through bookings to see just what the requirements of the traffic were. I can only repeat now the undertaking that was given before the House of Lords Committee, that if there is any traffic in London which requires motor omnibus facilities, then your company is able and willing to give those facilities, but I think you will agree that we should not be asked to give facilities which it is clear are not required.

YEAR'S RESULTS.

Your company received as its share of the common fund £260,568, as against £113,437 in 1920, an increase of £147,131.

The traffic receipts after the operation of the common fund amounted to, in round figures £7,501,000, as compared with £6,934,000 in the previous year, an increase of £567,000. Miscellaneous receipts amounted to £157,000, as against £132,000 in the previous year, an increase of £25,000, which may be attributed chiefly to advertising upon the motor omnibuses. The total receipts of your company, therefore, amounted to £7,684,000. The

working expenses amounted to £6,936,000, leaving a net amount of £748,000 or £241,000 more than a year ago.

After all the expenses and charges for the year have been met, the balance available for dividend on the ordinary shares is £319,411, an increase of £146,248 over that available in 1920. An interim dividend of 4½ per cent., free of income-tax, was paid on the ordinary shares of the company in August last. This required £141,459, and leaves £177,952 available. Your directors therefore recommend the payment of a final dividend of 3½ per cent., free of income-tax, making for the year 8 per cent. free of tax.

The report and accounts were adopted.

MAPLE AND CO., LIMITED.

EFFECT OF TRADE DEPRESSION.

The thirty-second annual general meeting of Maple and Co., Limited, was held, on the 22nd inst., on the company's premises, Tottenham Court road, London, Mr. Clare H. Regnart, J.P. (the president), in the chair.

The Chairman, in moving the adoption of the report and accounts, said that in common with most businesses theirs had been affected by the generally adverse conditions which had prevailed during the last 18 months and more, and although they had not felt the depression in trade so much as some concerns, yet they had suffered pretty badly. The writing down of the values of stocks had been the most important factor in their deficiency. In a large house like theirs, the one great essential was to have a vast liquid stock. Such stock must needs represent a large figure, and although for the past 18 months they had been manufacturing and buying as little as possible, they had had to maintain a certain amount of current purchases, which within themselves assumed importance. On the other hand, they had been doing a large trade, and they had been forced to buy at the prices of the day. Consequently they had found themselves with an expensive stock in hand when prices began to decline. Then they had decided to reduce their selling prices, and when their stock was taken at December 31st last all goods had been reduced to the actual market value of that date.

That was the cause of part of the deficiency, and the rest was accounted for by a decreased turnover and a temporary loss of their shipping trade, and the selling of a considerable quantity of goods at reduced prices. They were doing all they could to effect economies. For instance, they had extended the system of delivery by motor-vans to 38 counties, which had resulted in a very important reduction in the cost of conveyance and delivery, and as a means of advertisement that had been of the greatest value, and again in the near future they hoped to be able to record a substantial saving in both the price of labour and the quantity of individual production.

The shrinkage of the profits in 1921 was due to falling values, temporary loss of their shipping trade, and a restricted home trade, owing to the reduced spending power of the public. Foreign trade had not yet re-established itself, and their shipments abroad had diminished to small dimensions. That had made a great difference to them, as their shipping trade in prosperous times represented a considerable proportion of their business. They were looking forward to better times, and hoping that circumstances would soon improve sufficiently to enable them to recover some of that trade.

The report was unanimously adopted.

NIGER COMPANY, LIMITED.

ENLARGED INTERESTS—COLONIAL POLICY CRITICISED.

The forty-first ordinary general meeting of the Niger Company, Limited, was held, on the 22nd inst., at the Cannon street Hotel, London, the Hon. W. Hulme Lever presiding. The directors present were Mr. H. R. Greenhalgh, Mr. L. H. Moseley, Brig.-Gen. A. McNulty, Sir Edgar Sanders, Mr. J. E. Trigge, and Mr. H. G. Shave. There were also present Mr. S. N. Braithwaite (solicitor), Mr. D'Arcy Cooper (Cooper Brothers, auditors) and Mr. W. G. Rand, secretary.

The Chairman said it was proposed to adjourn the meeting to a later date for the presentation of accounts for the two years 1920 and 1921. Last year, the then chairman, Lord Scarborough, stated that Lever Brothers proposed to bring into the Niger Company the whole of their West African interests, and this had been accomplished. They now tapped a coast line of over 3,000 miles, and touched spots as far inland as 1,500 miles. They owned and controlled 31 companies, and the accounts to be submitted later would show the position after the inclusion of all these extensive interests. They had also extended the home organisation, and were reorganising the West African end of the business as rapidly as possible. The difficulties caused by the slump had been accentuated by the fact that despite the great fall in value of pro-

duce, no effort was made by the Colonial Government to remove or even to modify the heavy export and differential duties which they imposed during the war. In addition, the Nigerian Government railway rates still remained at the high war figures for freight, the special surcharge of 30 per cent. imposed towards the end of hostilities having been merged into the standard rate. He could not over-emphasise the handicap under which British West Africa trade was suffering owing to this policy of the Colonial Government. The effect of the policy was shown in the steady decrease in the export from Nigeria during the past three years, and it was probable that the figures for 1921 would be only 75 per cent. of those of the previous year. Native producers in a French West African Colony were less heavily handicapped with excessive freights and export duties than the native producers in a British West African Colony, with the result that the latter were becoming sullen and discontented, and refused to work to produce his native goods under such unfair conditions. There were also heavy duties on all imported goods—mainly cottons—bought by the natives, so that the British West African natives were taxed twice over—on what he produced and on what he consumed. The policy of the Colonial Government, especially with regard to high railway freights, was seriously hindering the development of the country. The whole question of taxation in Nigeria had been inquired into by a Select Committee, and they were awaiting the findings of that committee with the greatest interest, and trusted that the recommendations of the committee would result in an entire abolition of export duties and an amelioration of the impossible conditions by which Nigerian trade was at present so severely handicapped. He concluded by moving that the meeting should be adjourned to a date to be fixed by the directors for the production of the accounts.

Mr. Trigge seconded the resolution, and it was carried unanimously.

UNITED SERDANG (SUMATRA) RUBBER PLANTATIONS, LIMITED.

INCREASE OF CAPITAL AGREED TO.

The fourteenth annual ordinary general meeting of the United Serdang (Sumatra) Rubber Plantations, Limited, was held, on the 23rd inst., at 38 Eastcheap, London, Mr. C. Heath Clark presiding.

The Chairman, in moving the adoption of the report and accounts, said that, with regard to the current year, they should, under normal conditions, harvest a crop of some 3,760,000 lbs, but no reliable estimate of production could be given owing to the necessity for the continuation of the restriction of crops. The heavy loss on rice had now practically disappeared, and with that, and the most drastic economies which had been introduced, their cost of production already showed a reduction of several pence per lb, as compared with last year, in addition to which their capital expenditure had been reduced to an absolute minimum. Last year's working had resulted in a heavy loss, amounting to rather over £60,000.

The report and accounts were unanimously adopted, and an extraordinary general meeting was then held to consider a resolution increasing the capital of the company.

The Chairman, in moving the resolution, said that the protracted depression of the rubber market had resulted in a considerable stock of rubber being accumulated, and the reduced production was still probably equal to the amount going into consumption. The duration of the crisis could not be estimated with any certainty, and meanwhile the problem before them was to maintain their estates as cheaply as possible. It would be agreed that considerable economies should result from the consolidation of estates in larger aggregates. Clearly a large group would have in that matter a great advantage over a single unit. It was with that in view that they were proposing to the shareholders to increase the nominal capital of the company from £750,000 to £1,000,000. They had not, in anticipation of such powers being granted, entered into any negotiations in any way committing the company, but, on being placed in a position to do so, they proposed to investigate opportunities, which they had reason to know existed, of acquiring additional properties on advantageous terms. It was their opinion that consolidation on those lines should still further improve the standing and eventual profit-earning capacity of the company.

In the course of a somewhat lengthy discussion, the policy of the board was criticised, but on the resolution being put to the meeting, it was carried by a considerable majority. A poll was demanded which was taken at once, and the Chairman announced that the result of the poll was a large majority in favour of the resolution.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the Economist, 3 Abchurch Lane, Strand, London, W.C.2.

NOTICES.

Barclays Bank, Limited, announce that as from Monday next they will remove their office at Gorseinon (South Wales) from High street to more commodious premises at 130 Alexandra road, under the management of Mr W. Scurlock. They also announce that they will open on Monday next, the 27th inst., a new branch at 349-351 Bethnal Green road, E. 2, under the management of Mr E. T. Anderson.

The British Overseas Bank is informed that the Reval branch of the Dorpat Bank was opened for business as from February 1st. The British Overseas Bank has recently acquired a shareholding interest in the Dorpat Bank, thus establishing the first direct banking connection between this country and Esthonia.

The London Joint City and Midland Bank, Limited, announce the opening of a new branch at Moorland road, Burslem, Staffs, under the management of Mr H. E. Wilde. It is also announced that the office at 99 Oxford street, Pontycymmer, Glam., has been converted into a full branch, with Mr V. A. Piercy as manager.

A branch of the London Joint City and Midland Bank will be open at the British Industries Fair, Castle Bromwich, Birmingham, from February 27th to March 10th.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, February 15, 1922, amounted to 869 tons.

(a) Capitalised bonus.

(b) Plus bonus in shares of 200 per cent.

ALLANDEALE AND SON.—Owing to miners' strike and depressed condition of trade during year, company has been unable to maintain normal output of works, and as outlook is still no brighter, directors do not consider it prudent to pay any dividend on ordinary shares.

BRITISH HYDRAULIC FOUNDRY has decided to pay no further dividend for past year. An interim dividend of 5s per share, free of tax, was paid in July last.

CROCKERS.—No dividend on preference or ordinary shares.

CROSSLAND BROS.—Interim dividend was paid on preference shares, but no further distribution is proposed.

J. AND N. PHILLIPS.—No dividend being recommended on the 700,000 ordinary shares of £1 each.

MANCHESTER COMMERCIAL BUILDINGS.—Dividend of 5s 9d per share on No. 1 Series, 6s 8d on No. 2, 4s on No. 3, and 3s 6d on No. 4.

UNDERGROUND ELECTRIC announce that, subject to final audit of the accounts, interest on the 6 per cent. first cumulative income debenture stock will be paid on March 1st next, less tax, at 3 per cent., and coupon No. 28 of the 6 per cent. income bonds will be paid, free of tax, at 2 per cent. on the same date.

UNITED TURKEY RAIL.—The directors are unable to recommend the payment of a dividend for the year 1921 on the ordinary shares. For 1920 the ordinary shares received 10 per cent.

VICKERS announce the following final dividends for half-year ended December 31, 1921.—2 1/2 per cent. on preferred 5 per cent. stock, less tax; 2 1/2 per cent. on 5 per cent. preference shares, less tax; 2 1/2 per cent. on cumulative preference shares.

WILKES OVERLAND CROSSLAND.—Loss for year 1921, £36,486. After paying dividend of 5 per cent. on 10 per cent. preference shares in March, 1921, a debit balance is carried forward of £84,275.

WOLSELEY SHEEP-SHEARING MACHINE COMPANY.—No interim dividend this year.

Reports and Notices.

At a meeting of the Council of the Nigerian Chamber of Mines held on the 17th inst., Mr James Gardiner was elected chairman of the Council in place of the Rt. Hon. the Earl of Scarborough, K.C.B., who has resigned that position, and Mr Oliver Wethered and Mr A. W. Berry were elected deputy-chairmen of the council for the ensuing year.

GOVERNMENT STOCKS, &c.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—With reference to the above bonds, the Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the February instalment of the debt service in accordance with the arrangement of May 25, 1912.

MISCELLANEOUS.

BRADFORD DYERS' ASSOCIATION.—The directors regret that they are unable to present the annual accounts until a settlement has been made with the Inland Revenue authorities regarding the final adjustment of excess profits duty. It will, therefore, be necessary to adjourn the meeting called by the notice until the accounts can be completed. When the directors declared an interim dividend in August last they announced that in arriving at their decision they were influenced by the amount of excess profits duty they are entitled to recover, and by the fact that substantial reserve funds had been accumulated, as otherwise, owing to the loss in working for the six months ended June 30th last, no dividend on the ordinary shares could have been paid. Although business in the second half of the year showed some improvement, were it not for

the same reasons, the directors would not be justified in recommending, as they now do, a dividend on the ordinary shares for the six months to December 31, 1921, at the rate of 1s per share, making, with the interim dividend, 2s per share for the year. Mr Herbert Shaw has resigned his membership of the board.

VICKERS, LIMITED.—The directors give notice that the following final dividends for the half-year ended December 31, 1921, will be paid to the holders of the preferred stock and preference shares of the company who are registered in the books of the company on Saturday, March 18, 1922:—2 1/2 per cent. on the preferred 5 per cent. stock (less income-tax); 2 1/2 per cent. on the 5 per cent. preference shares (less income-tax); 2 1/2 per cent. on the cumulative preference shares (free of income-tax up to 6s in the £). Payment will be made on Thursday, March 30, 1922. The transfer books of the company relating to these issues will be closed from Monday, March 20, to Saturday, March 25, 1922, inclusive.

INSURANCE.

NATIONAL BOILER.—The report for last year shows that the premiums, &c., were £268,261, and the claims and expenses £236,292. Interest yielded £11,155, and there was a balance on the revenue account of £41,059. The directors recommend a final dividend of 20s a share, making 32s a share, less tax, for the year. The reserve fund on December 31st last was £211,000, and the credit balance at profit and loss £23,709.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions have been generally favourable to agricultural pursuits, and recent rains have rendered the ground workable for ploughing, so that preparations for spring sowings are well advanced. Reports from most districts are very favourable respecting growing crops. Firmness was again the prevailing characteristic at market during the week, and prices continue to move in an upward direction, especially for breadstuffs, but demand restricted at the advance. Native wheat in moderate supply, and values further improved in sympathy with imported descriptions. Best milling grades quoted at 55s to 57s, and inferior down to 47s per qr 504 lbs, free on rail. Imported qualities were held for more money owing to higher c.i.f. offers. No. 1 Northern Manitoba quoted 69s 6d, No. 3 ditto, 65s, Argentine, 63s 6d to 65s, and Australian 63s 6d to 65s, all ex ship to arrive per 480 lbs. In the floating and forward cargo market values again advanced sharply on liberal buying, especially on Continental account, and some 100,000 tons of wheat were purchased by Germany, chiefly Argentine qualities. A large business also transpired in Australian cargoes, while North American grades were also dealt in at advancing prices. Sales included: Rosafe, 64 lbs, afloat, 59s 9d to 59s 3d as to position, loading 59s to 59s 3d, Australian arrived 60s 6d, afloat 57s 9d, March 15th 56s 9d, No. 2 Northern Manitoba, May, 59s, June 58s 9d, July shipment 58s 6d per 480 lbs. Parcels were also dealt in freely, chiefly Plate descriptions at dearer rates. U. K. stocks continue light, which tends to keep millers constantly in the market, but liberal quantities on passage should afford some relief on arrival. Flour continues very firm, and prices further hardened owing to the wheat position, while bakers operate very cautiously at the higher levels reached. London standard straight run was advanced to 52s, town households 50s, patents 55s, all-English straight run 49s per sack, delivered London area. All English country straights 43s to 45s, free on rail at London stations. Imported also firmer, but trade quiet. Manitoba export patents 49s, straights 46s, and Australian 45s to 45s 6d per 280 lbs, ex store. On c.i.f. terms Kansas top patents, March seaboard, quoted 50s, Canadian patents 49s, straights 47s, and Australian 41s 6d per 280 lbs. Millers' offers firm. Broad bran quoted 59 to 59 5s, ordinary 58 10s, middlings 58 15s per ton, ex mill. Fancy Plate middlings 59, pollards 57 to 57 2s 6d, Dutch pollards 57 10s 6d, all ex ship. Barley steady, but generally quiet. Native malting ranges from 43s to 70s, feeding bulks 39s to 44s per 448 lbs, free on rail. Irish 44s, Californian 40s to 49s, landed per 448 lbs. Morocco 32s, Plate 31s, No. 3 Canada Western 36s 6d, Danubian 37s, all landed per 400 lbs. Maize dearer owing to forward stability. Plate quoted 44s, yellow round African 42s, white flat ditto 38s, and American mixed 37s 6d, all landed. On c.i.f. terms a cargo of La Plata, January 11th bill of lading, changed hands at 40s 3d; ditto February 11th, 40s 1 1/2d, and ditto expected to load end February, 40s; March 15th, 40s 6d, and No. 6 yellow, African loading, 39s 4 1/2d per 480 lbs. Parcels in fair request, and prices irregular, but firmer on balance. Oats firmly held. Native ranges from 30s to 35s, as to sample per 336 lbs. Of imported, Plate f.a.q., 30s 3d; ditto, clipped, 30s 6d; No. 2 Canadian Western, 32s, No. 2 Canadian feed 29s 9d, and New Zealand 35s to 40s, all landed per 320 lbs. Oatmeal firm. London made, coarse 42s to 42 1/2d; medium cut, also whole groats, 41s 10d to 42s; fine cut 41s 10d to 42s; rolled oats 41s to 42s, flaked oats 42s to 43s, ordinary Scottish oatmeal 41s to 42s, and American 41s 10s to 42s 10s per ton. English beans firmly held. Springs quoted 57s to 62s, new winters 50s to 52s per 532 lbs, free on rail, and Madagascar 15s 9d to 21s per cwt. English peas in fair request at full rates. Maples 85s to 95s, Duns 65s to 70s per 504 lbs. Of imported, Tasmanian 23s-25s, New Zealand blues 20s to 24s, Dutch blue 23s to 30s per cwt. Lentils quiet. No. 1 Split, 31s to 32s; No. 2 ditto, 26s to 27s, Egyptian 26s to 27s per cwt. Homeward grain chartering was on a fair scale, chiefly from North America and Australia at full to firmer rates. The River Plate section, however, proved quiet, but tone fully steady. Steamers to load heavy grain prompt quoted 33s 9d, March 32s 6d, April done 30s to U.K./Continent, with options of light cargoes at proportionate increases. North America firm, especially for prompt loading, and steamers from Northern Range to Continent done at 18 cents one, 19 cents two ports of discharge, with 17-18 cents quoted March, West Italy 22 cents, three ports 24 cents, and Riga 30 cents per 100 lbs. To Ireland 5s was paid one port, and 5s 3d two discharging ports. There is some inquiry from the North Pacific at 42s 6d to 45s to Ireland, February-March, and 40s Continent. Montreal to U.K. May done at 4s per qr. Eastern markets quietly steady, and 22s paid on dead weight from Bombay to U.K./Continent. Rice ports and Dalry beans inactive. Australia firm, with a good demand, and handy steamers, loading at usual ports to U.K./Continent, done at 52s 6d, with rather more now indicated for early positions. Other markets without new feature.

COMPARATIVE AVERAGES OF GRAIN.
The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated February 23rd, is as follows:—Pig iron: There is a more optimistic tone prevailing throughout the market, and business in both Cleveland and hematite pig iron has showed considerable development, particularly in regard to the latter. In addition to the increased demand of home consumers, there has been a fair amount of new business done for export. The price of Cleveland No. 3 G.M.B. remains at 90s, but, whereas hematite could be bought a week or two ago at about 92s 6d, or even less, to-day's general quotation for mixed numbers is 97s 6d per ton at makers' works. Manufactured iron and steel: There is no improvement yet, but there are signs that some of the works may shortly be able to resume operations on a small scale. Steel ship plates, 10 to 10s; steel angles, 10 to 10s; iron bars, 12 to 12s; steel rails, 9 to 10s (home) net. Iron ore: There is very little new business doing, but deliveries are coming forward more freely, and with the increased demand for hematite we may look forward to further buying of small quantities of foreign ore, but makers will not commit themselves for forward delivery. They are content to buy odd cargoes at to-day's price. Best Bilbao rubio is quoted about 26s per ton, but Mediterranean ores are procurable at lower figures.

Our Sheffield correspondent writes:—A firmer tone has developed in the pig-iron department, and the output of the hematite furnaces is fully sold for a couple of months ahead. Prices have hardened. There is practically no foreign competition in hematite iron, and as steel-making extends more furnaces will go into commission. The demand for foundry iron, however, continues quiet. There are distinct signs of more activity in the heavy branches of steel and engineering, so that the prospects for the next quarter of the year are fairly good. Locally the position is not actually any better, gains in the heavy sections being outweighed by losses in the lighter branches. The unemployment roll tends to increase, and is heavier than at any time since the coal strike last year. The few orders coming in for tool steel can easily be executed from stocks. Makers are still suffering from the vast quantities of surplus war stores in existence. These stores also include all kinds of tools and hardware, and the liquidation of them is a slow process. The goods are being offered at absurdly low prices. The hand-tool trade is being badly hit by German competition. German prices being generally lower than British pre-war prices. Silver electroplate and cutlery makers are experiencing the most profound slump in the history of their trade. So far this year buying in the ordinary sense has not yet begun. Fortunately there are a few good contracts about from ships and hotels. The export trade is dead, with the promise of some early revival in the British colonies. The inland demand for steam coal continues limited, but a rather heavier tonnage is being exported, and the market is steady. Producers of coke have on hand a large number of orders for export, and there is a fair home demand at higher prices. The house coal market continues strong, but sales are disposed to fall off owing to the advancing season. Deliveries to gas companies are small on account of the limited consumption of gas in industry.

Our Glasgow correspondent (writing on Thursday) says:—Though one or two adverse influences, in labour connections, have come to the surface this week, there is no doubt as to the general industrial state having improved, and as to the tone in iron and steel trade circles being the turn cheerier. Ironmasters report a fair amount of buying during the past eight days, and at the same time an increase of inquiries for both Scotch No. 1 and No. 3 on foreign account. The former remains at 55s, and the latter at 55s, f.o.t. makers' works. Dealers, however, continue to operate only in small hand-to-mouth lots. In sympathy with the harder tendency of English hematites, Scotch hematite has been put up 2s 6d a ton at 55s 7s 6d, yet no business of value is passing. Local producers state that there can be no expansion of consumption locally until the heavy stocks of scrap accumulated are got rid of, and that won't be immediately, even though consumers are absorbing 80 per cent. of scrap in every 100 tons of manufactured material turned out. Speaking on the steel position to-day, a leading maker expresses the conviction that since last November there has been a marked, though not pronounced, change for the better throughout the Clyde district, adding that in his opinion the movement will be maintained. In support of these views the directors of Messrs. David Colville and Co. (the largest steel producers this side of the Border) write that "undoubtedly there are more inquiries from abroad for steel and iron," and that all now a-waiting to confirm improvement in that relation is some concession in shipping freights. Messrs. Beardmore also advise more hopefully as to the home outlook. They have just booked some decent orders from home buyers, including bridge and boiler material, and a respectable line for rails for the Caledonian Company. Beardmore's people are laying down a powerful up-to-date rail plant, with equipments. Good progress is being made at Clydebridge works with the big boiler-plate mill lately resolved upon. All things considered, the home demand for ship plates is as general as could be expected. That department rests mainly on the requirements of shipbuilders, whose state leaves much to be desired. A variety of rumours are in circulation as to inquiries concerning the placing of contracts for new steamers. There is no question as to several building firms having been sounded, but it does not appear that any of the negotiations have borne fruit. The most positive statement bruited about this afternoon is that a line for no fewer than 16 steamers of large size has been submitted to a combination of well-known and influential constructors here, and that the order will go through if a reasonable price can be agreed upon, which, it is added, will be found between 58 and 59 a ton. This story is a most heartening one, but it must be candidly said to lack confirmation in details, while at the same time it is vouched for in usually reliable quarters.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

A marked change has come over the iron and steel and allied industries in Cumberland and North Lancashire during the past few weeks. A further reduction of 10s in the price of ordinary iron, bringing the quotation for Bessemer mixed numbers down to 44 18s 6d per ton at works, has quickened business considerably, and though users are still exercising great caution, and are, in fact, declining to buy for forward delivery, they are placing their orders as regards immediate requirements with a good deal more freedom than has been the case for over six months. Most of the stocks that lay in the works' yards have been cleared away, and makers, possessing a fairly well filled order book, have been encouraged to increase their production. Four additional furnaces have been put into blast since the end of January, and two more will in all likelihood be blown in before the middle of March. Ordinary iron is, of course, in most active demand, if only for the reason that the steelworks at Workington resumed rolling this week, and the greater part of the output will therefore go into local consumption. But the Midlands also is taking a not inconsiderable portion of the make, and this district and Scotland are absorbing practically all the low phosphorus iron that is being smelted, though some small parcels are being shipped to the Continent. A furnace has also been put in on ferro-manganese to meet export needs, most of which come from America. Ferro stands at 14 10s per ton. There is quite a brisk inquiry in the steel trade, and the orders held represent between six and seven weeks' rolling at the rail, fish plate, axle, and tyre mills. The iron ore industry in West Cumberland is more fully employed than for 12 months past. Medium and ordinary sorts of ore are going to the local furnaces, and some of the high-class ore, but Scotland requires a good deal of the better class of metal. A substantial improvement has taken place in the coal trade. It is due in part to the lesser competition from Scotland in the Irish market, and in part to the restarting of the coking plants in West Cumberland. Some of the collieries are disposing of nearly two-thirds of their output in Ireland. The local land sale demand is brisk, and nearly all the small can now be taken at the coke ovens, two-thirds of which are in operation. There is a larger make of such by-products as benzol and sulphate of ammonia, and the chemical industry is working more than half time.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—All sections of the wool textile industry are much quieter than at the beginning of the month, but while values have declined since the beginning of February there is really no serious weakness. Top-makers are well sold ahead, and spinners have covered their requirements in most cases up to about the end of April, so there is no disposition on either side to force matters. Probably a good deal of latent business will be brought out when wool values have settled on the new basis, and most firms are waiting for the London auctions to establish values. It hardly seems possible for merinos to fall much more, and although spinners would like to see 64's tops at about 3s 9d per lb, that price is not yet in sight. For spot delivery topmakers are wanting about 4s 2d for 64's. There and business could be done for May delivery at about 4s. There is not much doing in crossbreds, and prices are again slightly in buyers' favour. Spinners are not doing much new business on current quotations, but it is believed that a fair amount of trade would be available at a lower basis. For one thing, there is an improving tendency in the manufacturing section, especially in dress goods, and it is probable that orders could be worked if

quotations were back to the old level which ruled before the advance in December. The output of tops is still inadequate, but it is interesting to note that, after extremely protracted negotiations, the Emergency Committee of the Industrial Council agreed at a meeting to-day to grant permission to woolcombing firms to employ "protected" persons overtime. It remains to be seen whether the operatives' leaders will place any further obstacle in the way of working longer hours, and thus affording much-needed relief to those who for several weeks past have been unable to obtain suitable supplies of tops.

COLONIAL WOOL. (FROM A CORRESPONDENT.)

Easier markets everywhere seem to be the order of the day, and yet the decline can only be regarded as a natural reaction from the activity and sensibly advanced values which have been experienced since last September. It is true we have had rises and falls since then, the present decline being at the outside 10 per cent. for good combing wools. This does not bring values to last December level, good topmaking wools last series appreciating 15 per cent., and often more. Last week 30,000 bales of only average merinos and crossbreds were disposed of at Hull, the selection being distinctly worse than at Liverpool the week previous. All the same competition was very good, much better than the majority expected. There was another decline of fully 5 per cent. of most merinos, and a little more on crossbreds. The general feelings of optimism expressed stood out in distinct contrast to what has been seen during recent months. It was plain to be seen that buyers still had confidence in the raw material, although all alike were certain that a lower level of values ought to operate. Nobody need be surprised at this. The complaints of spinners and manufacturers that they cannot sell yarns and pieces on a 4s 6d basis for 64's are quite genuine. There are spinners who, having had the pluck to buy heavily when 64's were at 3s 6d, and in some cases lower, can to-day offer yarns at sensibly below what can be accepted by those who adopted a hand-to-mouth policy, and only bought when a rise had taken place. We do not think much contracting was done on a 4s 6d basis, although this price was frequently made, even more being paid by those who could not get deliveries of earlier contracts, and were compelled to buy in order to keep machinery running. The outstanding feature is that combing and spinning machinery continues to be well occupied, consumption is fully maintained, and there are unmistakable signs of improvement in fully-made goods.

The depreciation in most of the currencies on the Continent during the past week has again raised the question of what is going to be Germany's attitude, as well as that of France and Belgium, when future sales are held. Antwerp this week should give a lead. Germany seems able to buy wool under almost any adverse circumstances, the resources of that country being remarkable. The latest deal of Krupp's is only one more evidence of selling German products and spending the money in the raw materials available in the country to which the goods are sold. The very fact of Hugo Stinnes establishing a wool-buying house at Cape Town shows clearly enough that Germany is making practical attempts at sound commercial development. German firms recognise how imperative it is that mills should have sufficient raw material to go on with. Given this the textile industry of that country cannot help but continue busy.

During the week B.A.W.R.A. has published a statement of the stocks of wool on hand on January 31st last, compared with the corresponding date of 1921. The total was 1,776,906 bales, compared with 2,521,160 bales a year ago. Of this total, 1,100,556 bales in Australia and 601,042 bales in New Zealand, as against 1,758,996 bales and 762,164 bales respectively at the end of January last year. This shows that the total number of bales of B.A.W.R.A. wool from all sources disposed of last year was 744,254 bales. If during the current year the same quantity of B.A.W.R.A. wool is disposed of as last, there will still remain on hand at the beginning of 1923 over 1,000,000 bales of wool. Everything points that this will consist almost entirely of crossbreds.

THE COTTON TRADE.

MANCHESTER, February 23.

The tone of the market continues much firmer, and in most quarters there has been more activity than for some time back. Buying has been patchy, but the tone is distinctly better, and in some districts more work is being found for the operatives. Cloth offers for India remain on a low basis, but some Manchester shippers have bought speculatively to a very fair extent in light fabrics and grey shirtings. Of course, they have got the goods very cheaply. A considerable demand has been met with in white shirtings for China, and a few more lines have been booked in grey staples for that outlet. Business has been of moderate extent for the minor markets of the Far East, such as Java and Singapore. Not much has been done for Egypt and the Levant, but some improvement is showing itself in the offtake for South America. There is a tendency to restart idle looms. Home trade fabrics have moved off rather more freely. An encouraging turnover has taken place in American yarns for home use, chiefly in coarse and medium counts, and quotations have hardened. Some fair contracts have been arranged in export yarns for Eastern and European markets. Egyptian spinnings have been in improved request, and rates are firmer.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

Import statistics for January show plainly that we are getting our timber material from abroad much cheaper than a year ago. In sawn wood, i.e., battens, boards, scantlings, and deals, the import last month was 222,300 loads, of the value of £1,234,000, compared with 133,000 loads, value £1,486,000, in January, 1921; planed and/or dressed boards 37,000 loads, value £245,000, against 28,810 loads, value £385,000 for the similar period of last year. While prices per load work out much lower, the imports of building timbers, it will be observed, are larger than those in January last year, contrary to expectations at November last, when climatic conditions then prevailing gave timber traders impressions of an early close of the shipping season, and only a moderate stock for winter requirements.

These larger imports have had some influence in weakening the

National Provident Institution.

Three good points

in favour of a Life Assurance policy.

1. It will show you a good return for your money.
2. It will give you no anxiety as to depreciation.
3. It will enable you to save Income Tax.

Full detailed particulars will be sent post free on application to—

48, GRACECHURCH STREET, LONDON, E.C.3.

Telephone: 1773 Avenue.

spot market for woods for the builder and packing-case maker, but undoubtedly the principal reason for lower rates is the bad state of trade generally. Consumers are buying only from hand to mouth.

The hint of "what will Russia do," in my last month's notes to the *Economist* has, since I wrote them, got to more definite shape, as specifications of timber from Russian agents are now in the hands of importers. I learn that "considerable quantities" of White Sea and other Russian timber will be shipped this season, which must have an influence on the f.o.b. market here.

As regards furniture woods, the imports of mahogany legs and lumber were much larger last month, compared with January, 1921, as the following statistics show:—

	1921.		1922.	
	Cub. Ft.	Value.	Cub. Ft.	Value.
Hewn mahogany	100,835	£ 61,743	243,382	£ 74,142
Sawn mahogany	39,248	£ 30,364	112,213	£ 47,617

This market is quiet, and at sales held in London prices weakened. Honduras logs sold average 8½d; African, 3½d to 6d per foot super. Many logs, both of Honduras and African timber, did not come up to holders' reserve prices, and were consequently withdrawn.

Other hardwoods were imported more freely last month, compared with a year ago, including increased imports to hand from the United States, which country supplied quite three-quarters of our sawn hardwoods. The market for these furniture woods is not brisk, notwithstanding that prices have decreased since this time last year.

But for the energies of the associations connected with the native timber trade, the latter would have by now retired into the insignificant position it held before the war. Praise is well deserved to those who are putting themselves to trouble and expense to improve, by co-operation of landowners, merchants and others, the conversion and sale of native woods—infinite compared with the way the regular timber shipping countries work, but commendable. The Geddes Committee state in their second report that "while we recognise the enthusiasm and public spirit of the (Forestry) Commissioners.....the scheme of the State should be discontinued." Unfortunately, even foreign pitwood is preferred to that growing within a few miles radius of our collieries.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The home hide market remains steady, with unimportant alterations. Best ox made from 6½d to 7½d at the Bermondsey auctions, with slight fractional alterations both up and down. Calf were also fairly steady at last prices, with the exception of lights, which fell ½d. Calf are again being bought for export to the United States, as there is little demand for shoe calf leather here at the moment. Wools sold at recent prices—viz., 3s 3d to 3s 3d each. The demand for overseas hides has improved, as importers are taking less money. Tanners are very cautious, and seem only to take bargain lots. The American market is cabled as weak, with best heavy packers now selling at 15 cents and dry hides offered at lower prices.

The tone of the leather market is better, and leather buyers have been more in evidence of late. Wet salted bends have sold fairly well, whilst the demand for cheap, dry hide bends is unabated. Tanners are firmer in their ideas of price, as there are very few accumulations now in the yards. Dressing leather is moving off better, and a little more export trade is doing. There also seems an improving business in upper stock, although glacé kid tanners have fallen slack of late. Suedes in grey and nigger brown are still the favourite upper stock, and quite a lot of this is coming over from France. Wax butts are dull, but a fair trade is passing in waxed and russet butt splits. Chrome patents are selling from 1s 3d to 2s a foot, the bulk of this material being imported.

The improvement in the boot trade is not yet very manifest, and export orders still rare. Light shoes are, however, being ordered for summer wear, and, judging by the big dividends paid by the distributing concerns last year, the margin of profit on this class of stock must be very considerable.

VEGETABLE OILS AND OLSEEDS.

The quieter tone in the market for linseed and the oil product has persisted throughout the week, being a reflex in part of easier conditions in Argentina and the official report that the new crop yield will exceed 800,000 tons. This about squares with recent anticipations on this side, although there have been estimates as low as 600,000 and 700,000 tons. Much, however, depends upon the weather and harvesting, which might easily turn the balance in favour of a larger outturn. The conflicting reports have caused a want of confidence, and with the uncertain outlook for consumption, active buying has been held up. Crushers with oil on their hands are not buying at the present high level of values and the poor demand for oil until the trade position shows some definite signs of recovery. The salvation of the market has been the considerable purchases of linseed oil for American account, but this demand appears to have been satisfied for the moment. Trade in this commodity for export to the Continent is seriously hampered by the state of the exchange, while the demand for consumption by the home allied industries is still very disappoint-

ing. Prices have eased off, and raw linseed oil is offering freely at £35 per ton prompt, and a discount is obtainable for forward delivery.

Cotton oils have continued firm, a good demand for deodorised having stimulated interest in crude, which is substantially dearer at £36 10s, ex Hull mill for Egyptians. Rape oil continues scarce on spot, and maintains its value, but quotations forward are at a considerably lower level. Crude soya bean oil has been a fair trade below current market prices, and is now rather more money to buy. Palm kernel and ground nut oils are steady and in moderate demand.

The demand for oil cakes has slackened, but linseeds are still in small supply, with prices maintained. Cottons steady, but a poor trade.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, February 24.

The markets again disclosed rather quiet features, though in some directions there was a slight increase of business, with but little alteration in prices.

SUGAR.—Spot parcels fully steady, and a fair amount of business was effected. With imported white descriptions still scarce, British attracted a good share of attention. Messrs Tate and Lyle's cubes, 51s to 52s; crushed, 48s 6d; granulated, 46s 6d to 47s; caster, 48s 6d to 49s; yellow crystals, 41s; granulated, March, 46s 3d; May-June, 46s 6d. Crystallised West India sold from 39s 6d to 42s 6d. American granulated, spot, sold, 46s to 46s 3d; March, and also March-April, 18s 10½d to 18s 6d, c.f. and i. terms. White Mauritius, spot, 44s to 44s 6d, as to sample; ditto, afloat, steamer, 20s 6d to 20s 9d, as to position, c.f. and i. terms. White Natal, spot, sold, 45s; W.S.R., granulated, prompt, 19s 6d; J. 19s; W.S.R., cubes, 23s, f.o.b., Amsterdam. Czechoslovakian sugars largely nominal, though some bids were accepted during the week at previous quotations. Terminal market after being firmer, became easier. White, May delivery, sold, 19s 10½d to 18s 7½d and 18s 9d; August, 19s 3d to 18s 9d. Cuban stock, 792,200 tons, against 517,300 same time last year.

COFFEE.—Spot market firm, with Costa Rica dearer on the week, and there is a fair demand for the finer descriptions. East India, fair bold, sold, 128s 6d; Costa Rica, bold, 125s 6d to 144s; peas, up to 166s. Futures dearer. March, sold, 51s 7½d to 51s 9d; May, 52s to 52s 9d; December, 54s.

COCOA.—Market quieter this week, and no auctions were held. Accra, F/F quality, February-April, quoted 46s, ex quay terms, Liverpool. Butter, 1s 1½d to 1s 1½d per lb.

TEA.—During the week 40,200 packages Indian were offered, and with a good demand for all desirable descriptions, full rates were obtained; but in the case of common, easier prices ruled, with some irregularity in attendance. 15,300 packages Ceylon aroused active support, and recent values were fully maintained.

RICE.—Market quiet, but steady. Two stars, Rangoon, spot, 14s; No. 1 garden Siam, 15s. Broken kinds quietly steady. Bran quiet, and Burma forward quoted £6 per ton, ex ship terms. Rangoon beans, spot, quoted 7s 9d. Japanese peas, spot, 45s; Dutch ditto from 25s to 27s.

SPICE.—Pepper market generally quiet, though steady. Fair black Singapore, spot, 4d; ditto, March-May, sold, 3½d. Aleppy, spot, quoted 4½d. Tellicherry ditto, 4½d; fair white Singapore, spot, 7½d, sellers. Muntok, 8d; ditto March-May, sold, 7½d to 7½d. Zanzibar cloves, spot, 1s 4½d; February-April, 1s 1½d, c.f. and i. terms. Pimento, spot, 2½d; fair flake tapioca, spot, 1½d, all per lb. Fair Penang seed pearl tapioca, spot, 17s 3d; sago flour, February-April, sold, 13s 10½d to 14s 4½d. Desiccated coconut, spot, lots sold, 40s for halves, and March-April held for 39s 6d.

THE MONEY MARKET.

SUPPLIES of money remain adequate for the market's re-
quirements, despite revenue collections, holding-up of
credit for dividend payments and other reasons, and a
slight increase in the supply of bills. The little due to
the Bank on Thursday was repaid, and the average cost
of loans is now under 3 per cent. The increased supply
of ordinary bills—some estimate a 50 per cent. growth
since the beginning of January—is balanced by the

FRUIT.—There was a moderate demand for currants, and market ruled steady. Pyrgos quoted 54s; Amalia, 56s to 58s; and Vostizza, 65s to 78s. Valencia raisins quietly steady. Half-boxes quoted 110s to 115s. Sultanias command steady prices.

JUTE.—Market easier. Actual dealings were on a moderate scale. More interest was shown this week in manufactured goods. New first grade, February-April, usual continental ports, sold, £24 7s 6d to £23 5s; lightning ditto, £20 5s to £19 15s; 10-oz hessians, spot, 22s 3d; 8-oz, spot, 17s 6d. A twills, spot, 75s; B ditto, 60s.

HEMP.—Manila generally slow, and quotations in some cases nominal. C grade, February-April, quoted £50; D, £48; E, £46; G, £38 10s; J, £38; K, £37 10s; sellers, L, £36 10s; M, £33 10s; and streaky threes, at £38 10s. New Zealand neglected, and nominal. African sisal ditto. No. 1 G.E.A., January-March, £37; B.E.A., ditto, £35 10s.

SHELLAC.—Market dearer, with a good demand. T.N., spot, sold, 350s; March, 345s to 350s; May, 340s to 350s and 335s.

COPRA.—There was only a moderate amount of business effected this week, but market ruled steady. F.M.S. Straits, February-April to April-June, Rotterdam, sold, £25 7s 6d to £25 12s 6d; F.M. Straits, February-April, Marseilles, done, £24 17s 6d; Ceylon ditto to London, £26 10s; South Sea Islands ditto, quoted £24 15s, and Cebu to Hamburg, £25. Palm kernels quietly steady. April-June, Liverpool, sold, £18 12s 6d to £18 10s.

RUBBER.—Market dull and easier on increased pressure to sell, and irregularity prevailed at times. Standard crepe and sheet, spot, sold, 8½d to 7½d and 8d; March, 8½d to 7½d and 8½d; April-June, 8½d to 8½d and 8½d; July-September, 9d to 8½d and 8½d. Fine hard Para, spot, 11d; Caucho ball, 7½d.

MENTHOL.—Spot, 23s 6d; forward, 22s 6d. Japanese peppermint oil, spot, 35s 3d; aniseed, spot, 2s; slab camphor, 3s 10d; crude ditto, 3s 6d per lb. Japanese wax, spot, 9s per cwt.

EGG PRODUCTS.—Market quietly steady. Prime liquid yolk, spot, 130s per cwt; albumen, spot, 2s 10d per lb.

OILS.—Linseed opened firmer, but irregular and easier since, with spot sparingly offered. Spot, net, naked, nominally 38s 6d; March-April, 35s; May-August, 34s 3d. Rape firm. Crude, spot, 51s; refined, 57s. Cotton firm. Crude Egyptian, 37s; Bombay, nominal; common edible, 45s. Chinawood; Hankow, spot (barrels), 60s; and shipment, 59s 6d. Coconut steady. Ceylon, spot, 43s 6d; February-March, 41s 6d; Cochin, ditto, 43s. Soya firm. Oriental, barrels, ditto, 36s 6d. Japan fish quiet. January-February, cases, 21s. Cod quiet. English, spot, 29s. Groundnuts steady. English crushed, naked, spot, 44s; deodorised, barrels, 45s. Turpentine inactive. American, spot, 68s 3d; March-April, 68s 3d. Rosin easier. American, grade B, 13s; F, 13s; G, 13s; WW, 19s. French, F/G, 13s; WW, 16s 6d; extra pale, nominal. Petroleum quiet. American standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed market dull, and values weaker. Bold Bombay, January-February, £21. Small Bombay, January-February, £20 10s. Calcutta, January-February, £20 10s; April-May, £19 7s 6d. Plate, January-February, £20; February-March, £19 10s; April-May, £18 15s. Chinese, February-March, £19. Rapeseed steady. Toria, February-March, £16 10s; March-April, £16 5s. Cottonseed firm. Egyptian black, February, sold, £13; and white, £12 10s. Bombay, February-March, £9 12s 6d. Gingly steady. Chinese, January-February, Continent, £23 15s. Castor, Bombay, February-March, £15 15s. Ground nuts quiet. Coromandel, machine-dried, March-April, Hull, £20 10s; Continent, £20 10s; Chinese decorticated, f.a.q., February-March, Continent, £22 per ton.

METALS.—Tin exhibited a sharp decline until last Tuesday on free selling, while cash fluctuated down to £140, and three months' to £142. An improvement characterised movements during the middle of the week, although values since the opening were below the best, cash sold £143 to £140 5s, and three months' at £144 10s to £142. Prices further hardened at Thursday's market, while somewhat irregular, cash realised £140 to £139 15s, improving to £142, and three months' at £141 10s to £144 10s, finally £144. At Friday's session renewed good buying led to a further rise. Cash changed hands at £143 to £142 15s, improving to £144 10s, with three months' at £145 to £144 15s, and settling down at £146 5s. English ingots, £143 10s to £144. Copper continued lower until last Wednesday, with a good business done, when standard cash moved down to £57 7s 6d, and three months' to £58 7s 6d. The tendency was steady at Thursday's market. Standard cash sold at £57 5s to £57 7s 6d, and three months' chiefly at £58 5s. At Friday's session cash sold at £57 15s and three months' at £58 15s to £59. Electros £63 10s to £65 10s; best selected, £61 to £63; strong sheets, £60 and wire bars, £64 10s to £65 10s per ton. Lead firmer, £20 10s. Spelter dearer at £24 10s to £24 15s. Antimony: English regulus quoted at £34 to £37. Aluminium, home delivery, £120; export, £125 per ton.

Treasury's temporary ability to repay some of its bills, so the rate is little higher at $3\frac{1}{2}$ per cent.

	Mar. 3, 1922.	Feb. 24, 1922.	Feb. 17, 1922.	Feb. 10, 1922.	Previous Rate and Date Changed.
Bank Rate	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	5	5 (Feb. 16, '22)
Banks Deposit Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3	3 (Feb. 16, '22)
Discount Call	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3	3 (Feb. 16, '22)
Houses Notice	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$ (Feb. 16, '22)
Market rate (3 months' bills)	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$

* Additional to those offered by tender the preceding week.

The Bank return showed an increase of £1,547,600 in the circulation, and a decline of £1,546,900 in the Reserve. Government securities were reduced by £560,000, and Other securities increased by £91,100, so that deposits were £2,112,100 lower, Public falling by £10,657,200, and Other rising by £8,545,000. There was an increase of £534,497 in outstanding currency notes to £298,810,833, which includes £1,674,041 for notes called in, but not yet cancelled. The fiduciary issue is £249,186,800, or £60,801,600 below the maximum.

THE STOCK MARKETS.

The feverish activity of last week in the Stock Exchange has given way to steadier conditions. Unconfirmed rumours have been current of a resumption of Treasury bond sales, the terms suggested being $4\frac{1}{2}$ per cent. at 99. This helped gilt-edged quotations after a dull opening, and India stocks moved up sympathetically. Attention in the Home Railway market has been turned to the prior charge stocks, but foreign railways have been dull. Nitrates have improved on reports that Germany is buying the commodity again. Industrials were irregular, and there was no improvement in the rubber market. The Kaffir market has been quieter than ever, following the disturbance on the Rand.

COMMODITY MARKETS.

The fall in raw cotton prices, and the easier tendency of the Eastern exchanges, adversely affected the cotton market during the week, and the volume of dealings is considerably less than a week ago. Markets in the wool trade have been quiet, and business has been limited to hand to mouth buying. The price of Cleveland pig-iron remains unchanged, but hematite has again advanced, the price now being 100s per ton, as against 97s 6d last week. Our trade correspondents take pessimistic views of the labour situation in the engineering and shipbuilding trade, while unemployment remains a very serious problem in Sheffield and other centres of the iron and steel industry. An active demand continues for Welsh coal, and the price has advanced to 27s 3d per ton. The position was easier in the wheat markets, and, with a poor demand, prices were slightly lower. Spasmodic buying, in the vegetable, oil, and oilseed markets for immediate requirements is the only feature worthy of notice. Further reductions were recorded at the Bermondsey auctions for hides, but shoe manufacturers are reported to be busier. Supplies of flax in the Irish markets were smaller, and weavers have received promising enquiries.

FOREIGN EXCHANGES.

Wedding celebrations, telephone disturbances, and holidays in Paris have somewhat interrupted business on one or two days, but on the whole dealings have been active. The dollar market has been irregular, and after a rise to over \$4.44 on Wednesday fell back again to \$4.41½ on the following day, to recover yesterday morning again to \$4.43. This uncertainty was perhaps to be expected, but on the whole a further upward movement may be looked for, although at a considerably less rapid rate than during the past few weeks. Future rates show a tendency to widen; one month ahead dollars are still on a parity

with spot, but two months have widened to $\frac{1}{2}$ cent., and three months' to $\frac{1}{4}$ cent. Paris has been even more irregular than New York, the rate being over 49 on the 25th, but after that moving up and down between 48.8 and 48.60, being quoted yesterday morning at 48.35. On the whole, although recovery is less certain than before, lower rates may still be expected. Future rates are unchanged at parity for one month, and one centime below for two. In the mark there is every appearance of another collapse, partly occasioned by disappointment over the exclusion of the discussion of reparation from the Genoa Conference, partly through a reduction of exports, following on the rapid rise in internal prices. From 971 a week ago the rate has moved pretty steadily upward to 108½ yesterday morning. In the lira the definite movement towards recovery, which has been shown during the last few weeks, continues, the rate having dropped from over 86½ to about 83½. Among the neutral exchanges Holland, after the fall, due perhaps to the movement of the proceeds of the recent Dutch loan from America, rose again, and remains about 11.56. It seems rather weak, however, and there is every chance of a further temporary fall. Switzerland, with some irregularity, has on the whole moved in our favour, and Madrid has also moved upward again after its recent recovery. In Scandinavia, Copenhagen and Christiania have improved slightly, while Stockholm has reversed its recent movement, and gone somewhat strongly in our favour. In Central Europe there has at last appeared the welcome information that the stupid distinction between the Austrian Inland and Auslandskrone is at last to be abolished. Unfortunately, no exact date as yet has been announced on which the distinction ends. In the meantime, the Inlands rate is being quoted at 28,000, the Auslands at 24,000 kronen. In Warsaw the recent renewal of depreciation continues, the rate having again reached 18,000 marks. Prague shows a further slight reaction to rather above 260, and information is still lacking as to the suggested loan on the London market. Belgrade, after being about 355, is suddenly quoted again at about 260. The recovery, however, is deceptive, being due apparently to the erection of a monopoly in exchange dealings for the National Bank, combined with an increased stringency on the control of imports, measures, which, as so many preceding ones in Jugoslavia, are almost certain to break down in a few weeks' time. Bucharest, Athens, Sofia, and Constantinople show little or no change. In the East the rupee is much the same, at 1s 3½d, Yokohama again a little cheaper. Silver was weak during the last seven days, and Hong Kong and Shanghai have both fallen in sympathy. In South America, Valparaiso has again moved against us (from 40.80s to 38.50s). Buenos Ayres and Montevideo show little change.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended February 25, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	34,570	Supply Services	11,885
Taken from Exchequer balances	664	Interest on Debt	4,090
		Sundries	1,515
		Reduction of Debt	19,230
	35,234		35,234

Property and Income-tax yielded £18,412,000, Customs and Excise £5,265,000, Estate Duties, &c., £1,849,000, and Special Receipts £5,663,528. The substantial surplus of revenue over expenditure which is normal at this time of the year has brought the total receipts for the year above the total expenditure. This will, however, be reversed in the current week by the payment of nearly 20 millions of interest, including the half-yearly dividend on Victory Bonds and certain series of National War Bonds.

The week's operations reduced the National Debt by the sum of £19,290,447, and caused the following changes:—

	Min. £		Min. £
5% Treasury Bonds	+ 975	Treasury Bills	- 12,176
National Savings Certificates	+ 1,775	Surrounders of Bonds, &c.	- 261
5% Treasury Bonds	+ 969	Unemployment Insurance	- 1,515
Sundries	+ 943	Public Department Advances	- 1,515
		Telegraph (Money) Acts	- 700
	+ 1,962		- 11,948

The floating debt was reduced by £19,600,000 to £1,068,866,000.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO FEBRUARY 25, 1922.

COALITION AND ECONOMY.

THE political storm which has been brewing for weeks past has burst at last. The continued stagnation of trade, the recommendations of the Geddes Committee in regard to education and other social services, and the failure of the Prime Minister to reproduce in Europe the dramatic success of the Washington Conference are the three chief causes of the Government's rapidly waning popularity. Even in Ireland the outlook is at the moment too unsettled to yield any electoral credit to offset these disadvantages. The by-elections, which appear to be equally fatal to Government supporters, whether they stand as out-and-out Coalitionists or allies reserving a right of independent action, have emphatically underlined this drift of public opinion. The signs can no longer be ignored, and Mr Lloyd George has issued a demand for discipline in the Conservative section of the Coalition, the response to which will determine within the next few days whether the Government can carry on. Even if the present crisis is adjusted, the Prime Minister's drift towards the left in both home and foreign politics is a factor which must very soon make inevitable a change in his relations to the Tory party.

In the meantime, the problems of the moment will not wait. The country has been clamouring to know the Government's decisions on the Geddes Report, and on Wednesday the Chancellor of the Exchequer let the cat out of the bag in a lengthy but well-constructed statement to the House. In total these have proved very disappointing to the business world, for they confirm our forecast that the Government would not embody more than half of the proposed cuts in the coming Budget. Indeed, it is a little worse than we expected, for the Cabinet have only found it possible to adopt half of the lower total of the Geddes Committee. The decisions may be seen in the following summary:—

	Miln.
Total economies proposed by the Geddes Committee	86
Deduct economies which are not definitely specified but are dependent upon policy (Navy, 7 millions; Army, 7 millions; Air Force, 1 million)	15
Deduct specific economies rejected by the Cabinet (including Education, 11½ millions; Navy, 4 millions; Air Force, 1½ millions)	18
Deduct estimated amount of economies accepted which will not become effective in the coming year	10

Net savings in the coming Budget

To this has to be added the 11 millions saved on the naval building programme as the result of the Washington Conference. Hence the net reduction from the Supply estimates will be 54 millions in addition to the 75 millions already saved by the departments.

The detail of the savings is as follows:—

	(Million £.)	Geddes Cut.	Government Out.
Navy	21	..	10
Army (excluding Middle East)	20	..	14½*
Air Force	5½	..	3
Education	18	..	6½
Other items	21½	..	19
Not applicable in 1922	..	..	10
Net cut	86	..	53
Net cut	..	..	43

* This figure includes 1½ millions representing an appropriation in aid receivable in respect of the Rhine Army. The figure quoted by the Chancellor includes 2½ millions saved in the Middle East.

On education the Government rejects the idea of raising the school age, and proposes to take no drastic step in regard to school teachers' salaries, except to deduct a premium for a pensions fund, but it is prepared to increase the size of classes wherever practicable. They have also undertaken to appoint a Commission to consider the question of percentage *versus* block grants to local authorities. Practically all the remaining cuts in civil departments have been accepted. The Government have also done well to accept the principle that the State should cut the very heavy loss on their post-war housing schemes by selling the houses at best market prices. But they have refused to abolish the Overseas Department, and have rejected the proposals to break up the Mines Department into its component parts, and to absorb the Ministry of Transport into the Board of Trade. In these matters we think the Government is well advised to look forward to a better grouping of State functions rather than to attempt merely to return to the pre-war grouping.

As regards the fighting services, the Government has compromised with the economists to an extent which is largely responsible for the whittling down of the Geddes recommendations. If we exclude expenditure in the Middle East, the three services were estimated to cost 158½ millions in the coming year. The Geddes Committee proposed to reduce this to 100 millions after allowing for the saving of 11 millions at the Washington Conference. The Government propose to reduce the figure to 120½ millions. These figures may conveniently be compared with the fact that in 1907 the combined cost of the British Navy and Army was 57 millions, and that the last pre-war estimate, when we were at the height of our naval competition with Germany, was 80 millions.

Industrialists and others who see in the Chancellor's declaration a blow to their hopes of lower taxation would

well to concentrate on this section of his statement, and ask the Government whether it has even yet given full weight to the diminished necessity for armaments under the new conditions, or have acted up to their own declaration that we may assume there will be no first-class war for at least ten years.

The Government decisions have been interpreted in some quarters as foreshadowing an early election. We do not think this is a fair deduction. Except as regards the fighting services, they seem to us the only possible conclusions at which the Cabinet could have arrived. The education cut is one which no Government could or should adopt, and many of the Geddes recommendations are of a kind which could not be introduced without a change of policy that would not produce results until after a substantial interval. The Committee themselves recall in their last report that though the current Budget is well over £1,100 millions, the items capable of being cut are a comparatively small part of the whole. Their division between the items which can and those which can not be substantially reduced is the following:—

Items Not Substantially Reducible.	Reducible Items.
Million £.	Million £.
Debt charges	345
Other Consolidated Fund services	213
Pensions (civil and military)	158
Expenses arising out of war	191
	710
Fighting services	167
Middle East	27
Civil services	241
	435

The first column the Committee describe as "in the main outside the effective control of the administrative machine," pensions and war charges automatically decline in the next few years, and some important items will drop out altogether. When the departmental and other cuts are compared with the size of the joint from which they are carved, a fair critic must recognise that they represent a very substantial commencement. In asking for a reduction of 100 millions, in addition to the 75 millions cut by the departments, the Chancellor admits that he "had some margin in view," and that he "named a figure which was well outside the actual sum of money which he expected to save." The country will probably regard this remark with suspicion, and it will rightly insist that the pressure must not for one moment be relaxed. But, except as regards the fighting services, the supply departments do not afford a source of further large reductions except in so far as wages, &c., may fall with a reduction in the general price level.

Sir Robert Horne was less successful in showing the relation of the Government decisions to the general financial position, and confused the issue by quoting figures which included supplementary estimates, some of which relate to special liabilities such as the railway subsidy, &c. His statement, however, does not in any way modify our view that a saving of about 50 millions in addition to the departmental economies would not do more than offset next year's declining revenue; and that any remission of taxation can only be achieved by reduction in items outside the supply services proper, notably in the debt charges, or in an unexpectedly favourable balance between receipts and liabilities in the war liquidation account. In saying this we assume that the Government will refrain from the unsound device of borrowing to pay pensions. Industry can only be assisted by reduced expenditure. The capital available for trade cannot be increased by merely substituting loans for taxation.

A BETTER OUTLOOK IN EGYPT.

WITH the Prime Minister's statement in the House of Commons on Tuesday, and the formation of a new Ministry in Cairo, Egypt emerges from the deadlock quite needlessly created three months ago by the rupture of the London negotiations and the British Government's departure from the statesmanlike recommendations of the Milner Commission. No Minister can probably be expected to confess to a complete reversal of policy, even when it is as clearly shown as in the two White Books laid before Parliament twelve weeks ago and this week, and one may dismiss as a mere piece of rather clumsy camouflage Mr. Lloyd George's assurance that the policy which he has now pronounced is only a development of the policy

which at the end of last year denied to Egypt, or at least postponed indefinitely, the far-reaching concessions now made to her. Nor is there any need to stress the point that the new policy has been clearly wrung out of Ministers by Lord Allenby's insistence that in his opinion, and in that of his British advisers on the spot, it is the only practicable policy at the present juncture, unless this country is prepared to do now what His Majesty's Government were not prepared to do during the war—i.e., to proceed to the formal annexation of Egypt. We prefer to take Mr. Lloyd George's latest declaration as it stands. His Majesty's Government desire forthwith to recognise Egypt as an independent sovereign State, and in view of the vital interest to the British Empire of the relations between His Majesty's Government and Egypt, they place the following principles on record—viz., that the British Protectorate over Egypt is terminated, and Egypt is declared to be an independent sovereign State; that martial law is to be withdrawn as soon as the Egyptian Government shall have passed the necessary Act of Indemnity, and that, pending agreements by free discussion and friendly accommodation on both sides, His Majesty's Government reserve to their own absolute discretion the security of the communications of the British Empire in Egypt, the defence of Egypt against all foreign aggression or interference, direct or indirect, the protection of foreign interests and of minorities, and, finally, the Sudan. Pending the conclusion of agreements on these reserved matters, the *status quo* in regard to them shall remain intact.

This is obviously not yet a solution of the Egyptian problem, which will only be reached when agreements are concluded in regard to the very matters on which an agreement failed to be reached during the negotiations last summer between Lord Curzon and Adly Pasha, then Egyptian Prime Minister. But the new declaration of British policy re-opens the door for "free discussion and friendly accommodation," which the British Note of December 3rd seemed to have closed with a bang, and it re-opens it—let us not hope once more too late—under conditions which, in so far as it constitutes a genuine attempt to meet Egyptian national aspirations, may be expected to promote in Egypt a reciprocal understanding of reasonable British demands. It would be unwise optimism, however, to forget that partly through our own blunders in the past, and partly owing to the prolonged and devastating agitation conducted by Zaghlul Pasha and his Extremist followers, a profound distrust of British good faith has grown up in Egypt, and a declaration, however satisfactory in terms, will not be accepted, perhaps, without very close scrutiny when it is seen to be in substance conditioned upon ulterior agreements of a still vaguely defined scope and purpose.

The best hope, that a sufficiently large body of responsible opinion in Egypt will at least give His Majesty's Government the benefit of the doubt in regard to the all-important matters still reserved for "free discussion and friendly accommodation," rests, it must be admitted, not so much on the effect which Mr. Lloyd George's statement itself will produce upon the Egyptian people as on the new-born confidence which the courage and determination of the High Commissioner has inspired, even amongst Egyptians who had begun to despair of British honesty of purpose. Lord Allenby has undoubtedly gone back to Cairo with an authority and prestige comparable only with Lord Cromer's at the apogee of his great career, and Egyptians will be all the more ready to rely on his determination to secure a real and permanent adjustment of the essential interests of Great Britain to the new status of Egypt as an independent sovereign State in that he has himself frankly recognised the impossibility of carrying on without the co-operation of a friendly Egyptian Government, which cannot be secured except on the basis of such an adjustment as our many promises before, during, and since the war, have led Egypt to expect. It is of happy augury for a settlement that Lord Allenby, who is a great soldier, evidently sees no insurmountable obstacle to it in the question of the British military force, to be retained in Egypt, which appears to have bulked unduly large at one time in the eyes of some of our amateur militarists in the Cabinet.

Hambro's Bank, Ltd.

From his own experience in command of the expeditionary force which conquered Syria, he knows better than anyone that if we were able to make free and full use of Egyptian territory during the war as a safe base of operations, it was due not merely to the presence there of a small army of occupation when hostilities broke out in 1914, but also the assistance abundantly rendered by the Egyptian Government and, whatever the sentiments of some sections of the population may have been, by the Egyptian people as a whole.

By no means the least noteworthy passage in the Prime Minister's pronouncement was his extremely emphatic "hands-off" to foreign Powers. It was a warning, however, not only to them but to the Egyptians, and one which it may be hoped the latter will take seriously to heart. For one of the many extraordinary anomalies of the Egyptian situation is that owing to the backwardness of the Egyptian people almost the whole financial, industrial and commercial machinery which ministers to the economic life of Egypt is still in the hands not of the Egyptians but of the large foreign communities established in Egypt. Under existing treaties concluded when Egypt was a province of the Ottoman Empire, the system of capitulations has conferred upon those communities a privileged position, which in many ways affects very prejudicially the fiscal independence and even the good government and administration of Egypt. It is not unnatural that Egyptians should resent the continuance of that system, and the British Government have undertaken to obtain its modification by friendly negotiations with the Powers concerned. But the Powers, on the other hand, cannot be expected to consent to its modification unless they are assured that the vital interests of their subjects resident in Egypt will be equally safeguarded without the capitulations by the effective maintenance of law and order in an independent Egypt released from obsolete Treaty servitudes. Here everything depends on the capacity of the Egyptian people for the self-governing institutions which are in a great measure to replace the control hitherto exercised by Great Britain. So far as internal administration goes, the standards of a self-governing Egypt may fall short in efficiency of those which the British control has done a great deal to establish. That may be said to concern in the main the Egyptians themselves. What is essential to everyone is that they should maintain sufficiently high standards to safeguard the legitimate interests of the foreign communities in Egypt—and the British community, it must be remembered, is only one amongst many, and not, in some respects, the most important—not only because Egypt cannot do without them, but because if she were to fail in her duty towards them no Monroe Doctrine that we may proclaim in relation to Egypt would avert the danger of foreign intervention, and that would inevitably mean, as it did in 1882, and in spite of all our best intentions, the assumption once more by this country of responsibilities which His Majesty's Government are now rightly anxious to devolve at last upon a free and independent Egyptian nation.

OUR INDEX NUMBER.

ANOTHER small decline in wholesale prices of commodities is recorded in our Index Number for February, the total falling by 25 points from 4284 to 4259. This compares with 5176 a year ago, 8352 at the end of March, 1920, the highest point, and 2565 at the outbreak of war. During February, movements were more irregular than in recent months, and as will be seen from the table below, two of the five groups show an increase on balance:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5)...	500	300	500	400	500	2200	100.0
End July, 1914....	579	352	616	464	553	2568	116.7
" Dec., 1915....	897	446	731	711	848	3634	165.1
" Dec., 1917....	1286	686	1684	839	1348	5845	263.8
" Nov., 1918....	1289	782	1848	903	1889	6212	282.8
" Dec., 1918....	1303	782	1805	866	1337	6094	277.0
" Dec., 1919....	1441	881	2442	1145	1453	7364	334.7
" Mar., 1920....	1508	914	2974	1248	1709	8352	377.6
" Dec., 1921....	1344	805	1284	1216	1275	5924	269.8
" Dec., 1921....	921	636	1106	762	931	4357	198.0
" Jan., 1922....	907	654	1066	730	925	4284	194.7
" Feb. "....	948	640	1037	696	936	4259	193.6

The indices for each individual commodity as at the end of February are set out below, together with the changes in comparison with the end of January figures. The figure 50 represents in each case the average price during the base period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	107	+ 12	Cotton A.	97	+ 5	Copper	484	- 5
English	89	- 7	Cotton E.	122	+ 5	Minerals	696	- 33
Flour	102	+ 18	Yarn	106	+ 1			
Barley	91	- 2	Cloth	189	- 1			
Oats	85	- 2	Wool, Eng.	92	- 2	Baltic timber	1114	..
Potatoes	89	- 1	Ass. Wool	184	- 1	Amer. timber	974	..
Rice	101	- 2	Silk	142	- 2	Leather	734	- 5
Beef	92	- 2	Flax	142	- 2	Petroleum	137	..
Mutton	92	+ 3	Hemp	54	- 2	Oils	79	..
Pork	100	+ 3	Jute	79	- 1	Oilseed	88	+ 15
						Tallow	63	+ 3
Cereals & Meat	948	+ 40	Textiles	1037	- 29	Indigo	149	..
						Crystals	125	..
Tea	103	- 4	Pig-iron	97	..	Rubber	114	- 1
Coffee	144	- 5	Steel rails	79	..			
Sugar cane	106	- 1	Iron bars	92	- 4	Miscellaneous	936	+ 11
Sugar beet	84	- 3	Coal, steam	122	- 4			
Butter	116	- 3	House coal	115	- 2	Total	4259	- 25
Tobacco	116	- 3	Lead	86	- 12			
			Tin	56	- 5			
Other foods	640	- 14						

Primary foodstuffs show an advance of over 40 points. Wheat, both home and foreign, and flour were responsible for this, for there were no other movements of importance. Mutton and pork were slightly higher, but beef dropped a little, and a slight rise in oats was offset by a small decline in barley. The advance in wheat prices has followed a similar movement in America, which has resulted from unfavourable crop reports from the United States and an increase in buying on the part of European

countries. In the second group of foodstuffs, tea, coffee, sugar, and butter all show slight downward movements.

In the textile division, cotton and cotton yarn were higher on balance, but cotton cloth was a shade lower, while a slight advance in home-grown wool was balanced by a drop in Colonial wool. The decline in the total for the group is due to a sharp fall in silk and flax.

The tone of the cotton market showed an appreciable improvement towards the end of the month. In their monthly cotton market report, Robert Barbour and Brother, Ltd., write:—

The amount of business booked is still far from sufficient to absorb existing output, reduced as this is, much less provide work for machinery at present lying idle, but still there is encouragement in the knowledge that inquiry has broadened out both in quantity and importance, and the new note of optimism which has spread over the market generally has, at any rate, something behind it to warrant the hope that relief may not after all be very far off.....Whilst China has again led the way in purchases of a more or less miscellaneous character, moderate in quantity and embracing principally grey and bleaching shirtings, there has been more activity displayed by India. Light fabrics have predominated, and Calcutta has been the principal buyer. In the majority of cases offers have had to be referred back, but there are numerous concerns prepared to keep their looms going at unprofitable rates rather than stop altogether, and, unsatisfactory as the prices may be at which transactions have recently been negotiated, so-called weak sellers are still sufficiently plentiful to account for bids from abroad being pitched on so low a basis.

In the wool trade, worsted spinners are still employed on old contracts, while several woollen and worsted cloth mills have resumed full-time working, and others are engaged on overtime. Further heavy reductions have been made in accumulated stocks.

In the minerals section, coal prices show little change on balance, but a considerable improvement in the export trade was reported at the end of the month. The output for the week ended February 18th reached the satisfactory total of 5,000,800 tons, as against 4,912,500 tons in the previous week. No change has been made in quotations for pig-iron and steel rails, but iron bars have again fallen. Reports from the North speak of increasing demand for pig-iron, and of the blowing in of additional blast furnaces.

Lead, tin, and copper are considerably lower on balance. The improvement in the New York exchange rate is partially responsible for the decline in copper, and excess of supply is one of the chief reasons for the weakness of tin quotations. Copper now stands below the basis figure, which is the average for the years 1901-5. In the miscellaneous group, leather and rubber were down, but there was a sharp advance in oilseeds.

The end of February total is 66 per cent. above the pre-war level, as may be seen from the following table, which shows how each of the groups at present compares with the level prevailing at the end of July, 1914, the figure for which is taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100
Dec., 1918	226	222	293	186	241	236
Dec., 1919	249	250	396	247	263	287
March, 1920	261	260	484	269	309	325
June, 1920	261	263	415	278	281	305
Dec., 1920	233	229	209	261	230	231
March, 1921	209	206	167	216	203	198
June, 1921	203	188	158	210	185	188
Sept., 1921	193	195	204	189	178	192
Dec., 1921	159	180	180	164	168	170
Jan., 1922	157	186	173	158	167	167
Feb., 1922	164	182	168	150	169	166

Last month's reduction in the minerals section has reduced the average to 50 per cent. above the pre-war figure, the lowest level which any group has yet touched since the end of the war. Subsidiary foodstuffs still remain the furthest from the normal, but the percentage increases in the three other groups approximate to that of the total. *Bradstreet's* index number of wholesale prices in the United States for the end of January, at \$11.4190, shows an increase of 31 per cent. on the pre-war level, a slight increase as compared with the previous month. The *Frankfurter Zeitung's* figure for Germany as at February 1st stands at 3955, as against 3585 at the beginning of January. The official figure for France for December shows an increase of 220 per cent. over 1914, as against 206 for November. The *International*

Labour Review, issued by the League of Nations, in an examination of retail food prices in various countries, states that while at the end of 1921 food prices in the United Kingdom were 1.85 times higher than in July, 1914, in France they were more than three times, in Belgium more than four times, in Italy more than five times, in Berlin more than twenty times, and in Vienna no less than 605 times as high as the pre-war level.

THE CASE FOR LOWER RAILWAY CHARGES.

In an article on Home Railway Results, last week, we endeavoured to analyse results for the year 1921, so as to show how the railways had fared since decontrol. The approximate figures, in which there is a considerable element of estimation which we explained last week, are as follows:—

	(Million £.)	Jan. to March.	April to July.	Aug. to Dec.
Receipts	56	59½	104½	
Expenses	59½	76	90	
Surplus or deficit.....	—3½	—16½	+14½	
Ratio of expenses to receipts....	106%	126%	86%	

Broadly, the analysis justifies the conclusion that the companies made since August a profit of nearly three millions sterling per month—i.e., at the rate of £36 millions a year. In order to pay dividends at the rate of 1921, the net income should be £45 millions, since the railway companies in the year that is past brought into account, by means of the Government subsidy, £45½ millions, and reduced their carry forward by nearly half-a-million. The statistics published up to the present are not very satisfactory as an indication of the trend of traffic, and the period is too short to draw very definite conclusions; but in four months of last year there is evidence of increased carriage of goods, though the number of passenger journeys did not increase:—

	Passenger Journeys. Millions.	Goods Carried. Tonnage.
August	115	22,961,199
September.....	104½	23,235,223
October	101½	23,699,158
November	95½	24,610,539

It is, however, significant that in comparing 1921 with 1920 the passenger train miles increased substantially, whereas the number of passengers was some 10 per cent. below the previous year. But as the economic situation improves and unemployment falls, there is likely to be an increased carriage both of goods and passengers, though the recovery may be slow. On the other hand, working costs are still falling through the reduction of wages (there was a fall of 4s per head per week as from January 1st), fuel and other commodities. These factors will steadily enlarge the present margin between receipts and expenditure of three millions a month in the direction of the four millions per month required to pay existing dividends out of current income.

There remains, however, at the disposal of the railway companies the very substantial sum of nearly £19 millions, the amount left over after using four millions as dividend out of the £23 millions which they have this year received from the Government. There will also be a second instalment, amounting to £28 millions, which the companies are to receive 12 months hence. In the Railways Act no limitation has been put upon the use of the compensation fund, which even specifically states that it may be used for payment of dividends. The compensation fund itself is the result of a bargain between the companies and the Government, and compromises a large number of claims based on the very vague agreement under which the Government assumed control at the outbreak of war. The nature of the negotiations makes it impossible to allocate the fund to any particular purpose, and its proper application can only be based upon general considerations of public policy. The justification for the payment is twofold. On the one hand, it may be claimed that the property returned to the proprietors in August of last year was a depreciated one

THE ENGINEERING CRISIS.

(FROM A LABOUR CORRESPONDENT.)

AFTER railways and mines, engineering. Since the end of the war there have been serious disputes involving stoppages of work in the mining and railway industries. And now it appears probable, at the moment, that there may be a national stoppage in the engineering industry. Should the efforts to end the dispute by negotiation fail, it is not unlikely that the engineering lock-out will be as serious in every way as the railway strike of 1920 or the long stoppage in the mining industry nearly a year ago.

The Engineering and National Employers' Federations have declared a lock-out of the members of the Amalgamated Engineering Union, the largest union in the industry, for March 11th. There is no doubt that if such notices to the men be not withdrawn the stoppage will involve the whole industry. The question at issue is not one of wages and hours, though these may be drawn into the dispute. Where wages and hours are concerned compromise is possible, and, as often as not, settlements are reached by compromise. The question in the engineering trade is one of principle, and on such questions what purports to be a compromise is in reality a defeat for one of the parties to the dispute. The issue which has been raised has been described by the Employers' Federation as one "which affects not only the engineering industry, but the whole industry of the country and other countries besides—namely, have the employers the right to exercise their managerial functions, or is industry to be carried on under dual control or subject to the right of veto by the union?" Sir Allan Smith, indeed, has gone so far as to say that "the issue at stake is no less than this: Is industry in this country to be carried on on a Soviet basis, or on the basis of private enterprise?"

This extravagant language may be intended to scarify the public into support of the employers, but it is not a statement of fact. No question of Sovietism or the abolition of private enterprise is involved. On the other hand, the unfettered right of employers to dictate working conditions is certainly raised. A difference has arisen as to whether the employers alone shall determine when overtime is necessary, or whether it shall be determined jointly by the employers and the workers. The employers interpret the agreement of September, 1920, as meaning that they shall, in the exercise of their "managerial functions," decide. Nearly a year ago trouble arose on the question of overtime, but open hostilities were averted. In November last the representatives of the Employers' Federation and the Amalgamated Engineering Union agreed to a memorandum as follows:—

"1. The trade union shall not interfere with the right of the employers to exercise managerial functions in their establishments, and the Federation shall not interfere with the proper functions of the trade union.

"2. In the exercise of these functions the parties shall have regard to the provisions for avoiding disputes of April 17, 1914, which are amplified by the shop stewards and works committees' agreement of May 20, 1919, and to the terms of other national and local agreements between the parties.

"3. Instructions of the management shall be observed pending any question in connection therewith being discussed in accordance with the provisions referred to. It is agreed that in terms of the overtime and night agreement of September, 1920, the employers have the right to decide when overtime is necessary, the workpeople or their representatives being entitled to bring forward, under the provisions referred to, any case of overtime they desire discussed. Meantime, the overtime required shall be proceeded with."

This agreement appears to be a complete surrender on the part of the A.E.U. executive. In fact, they submitted to *force majeure*. The union executive realised that nearly a quarter of their members were already unemployed, that during the previous eighteen months the union had distributed nearly two and a-quarter million pounds in out-of-work pay to members, and that its invested funds amounted only to three-quarters of a million. Anxious to avoid a stoppage, the committee recommended the

owing to inadequate renewals and maintenance, or because the stores were at a lower level than when the companies were taken over. On the other, it may be said that the companies were handed back an enterprise less capable of making profits than before, because labour and other costs, thanks in part to agreements made by the Government during control, are much higher than in 1914, while rates and fares are limited by Government action and by the state of trade. In so far as the compensation fund is justified by the first of these, a conservative financial policy would reserve the money for capital replacement. It is, however, the prevalent opinion—and we believe a well-grounded one—that the greater part of the war deterioration of the railways was made good before control ceased, and that if the whole of the present fund were used for capital purposes it would definitely involve the betterment of the property compared with its condition in 1914. In so far as the fund was intended to enable the companies to meet abnormally high and possibly temporary costs, the trading community may well urge that, in the interests of trade revival, rates and fares should be lowered and the fund used while it lasts to make good whatever deficit there may be below the £46 millions required for dividends.

This is, however, by no means the whole of the case of the traders and the travelling public. Evidence is accumulating daily that many industries are at a point where a slight reduction of cost or a little encouragement to enterprise will make the difference between the placing and non-placing of orders. The railway spokesmen, in discussing rates with the traders, have frequently urged that any concessions they might make are so small compared with the big margin between British and foreign prices, that lower rates would not produce larger traffic, and that therefore it would be better to wait for the psychological moment when trade is on the turn. We believe that moment has come, and that a bold policy by the railway managers would give a distinct impetus to trade generally, which, by increasing the volume of traffic, would maintain, or at the worst only very slightly diminish the railway companies' net receipts.

Even if the railways only contemplate subsidising dividends in January, 1922, from the compensation fund, to the same extent as they have done this year, the users of the railways can fairly claim that the whole reduction of costs since January 1st should be returned to them in lower rates and fares; while the argument as to the probable development of traffic, combined with the fact that the companies can in emergency draw on the compensation fund to a very much larger extent, are strong arguments for a policy of much larger reductions of rates and fares.

These arguments assume that it is necessary to maintain the present level of railway dividends, a course eminently to be desired by the railway shareholder. But we must remember that in passing the Railways Act of 1921 Parliament deliberately refused to concede the request of the railway companies that the doctrine of "standard revenue" should apply as from the passing of the Act. The complicated instructions to the rates tribunal on this subject are only applicable when the new rating system comes into force on the "appointed day." In the clauses dealing with the interim period which Parliament and the Minister of Transport realised would include a period of very bad trade, the Rates Tribunal was deliberately left a free hand. It is hard to see on what grounds of equity holders of ordinary railway shares can claim to receive an invariable dividend while every other undertaking in the country is suffering diminished profits. Still less have they a claim to retain that dividend by keeping rates and fares at a maximum and at the same time to put aside for the betterment of their property or use for supplementary dividends a very large sum of money provided out of the taxpayers' pocket. This is the case for the public as we understand it, and unless our general impression with regard to renewals and the present state of railway property is radically wrong, something more helpful is required from the companies than the *non possumus* attitude adopted by some of the chairmen in their recent speeches. The public is finding it a little difficult to reconcile the plea of poverty with the boom in all classes of railway shares.

members to accept the agreement. Before the agreement could become operative it was necessary to take a ballot of the members. Notwithstanding the recommendation of the A.E.U. executive 35,525 members voted for and 50,240 against acceptance of the employers' ultimatum. No doubt, feeling against the agreement was strengthened by what appears to the members of the engineering union to be the absurdity of men working overtime when others are out of work, but the decision of the ballot vote was primarily determined by the new temper and attitude of the active rank and file.

In no union has the idea of "industrial control" made more headway than amongst the engineers. It was in the engineering industry during the war that the shop stewards and workers' committees movement took the firmest root and coloured the outlook of the organised workers. The issue presents itself to them not as one between soviet government and private enterprise, but as one between industrial autocracy and an approach towards industrial democracy. It is not even, as the Employers' Federation suggest, a question of "the right of veto by the union"; rather is the question one of "the consent of the governed." Is overtime to be worked on the unchallenged fiat of the employers, or is it to be worked subject to joint agreement between the employer and the workers? To the employers it may appear that the principle of the "consent of the governed" would be unwarrantable interference with their "managerial functions," an attack upon their "divine right" to govern. But on the workers' side it appears as a straight issue between autocracy and democracy.

It will be clear, therefore, the point in dispute is one of principle, and consequently there can be no real compromise. Overtime will be worked either with or without the consent of the workers. Either the employers will have their way or they will be driven to concede the principle. It is, of course, possible that an agreement may be reached in which one side appears to have saved its face, but it will have gained the shadow and not the substance. It may be admitted that the Employers' Federation holds all the cards. Circumstances are against the Union; and whether a lock-out is averted or not, it seems likely that the employers will for the time succeed in upholding the theory of divine right.

It can, however, only be for the time. The conception of industrial democracy is rapidly spreading through the trade union movement, and it will not be stamped out by the victory of the Engineering and National Employers' Federations. On the contrary, it may but strengthen the new movement. A British monarch lost his head for defending the same principle as the Employers' Federation are now striving to maintain. It ought to be a warning to employers who believe that industry is static and governed by principles different from, and alien to, those which govern other sides of human activity and the life of the State itself. The day has gone by when the workers (many of whom are at least as well educated as their employers) will continue to submit to the dictatorship of employers and to admit that employers have undisputed rights to the exercise of "managerial functions." It is not suggested that the adaptation of industry to the ideas of democracy will be an easy business. It is not supposed that the transition can be made without at the same time the prevailing ideas of industrial democracy being modified in the light of experience. But it is certain that the new outlook of Labour will tend to press this question more to the front in the future. And future prospects will not be rendered any brighter by the temporary defeat of the engineers.

As regards the immediate situation, it is one of the utmost gravity. The A.E.U. asked for a meeting with the employers after the Federation had issued lock-out notices. The meeting ended in a deadlock. There is another complicating factor in the shipbuilding situation. The employers have suggested a reduction of 26s 6d per week, the first cut of 16s 6d to be made on March 15th. On a ballot vote the Engineering and Shipbuilding Trades Federation decided by 10 to 1 against acceptance of these terms. If no compromise can be reached it is expected that the shipbuilding employers will declare a lock-out which will synchronise with that declared by the engineering employers. It may be, therefore, that the

allied industries of engineering and shipbuilding will become involved in a common stoppage. This is the more likely since the Engineering and National Employers' Federations have intimated their intention of raising questions of wages and working conditions. If the engineering and shipbuilding industries both come to a standstill, a more serious social crisis will arise than arose during the last railway and mining disputes.

A FRENCH SUGGESTION ON REPARATIONS.

THE outstanding importance which is evidently assigned in the British financial and business world to the Reparations question is arousing discussion in France, where there is clearly a desire among many sections to see the problem as Great Britain sees it. This has given rise, as it did some months ago in this country, to many schemes and suggestions, one of which has recently come into our hands from a source representative of a liberal school of thought. As it brings out the points at which opinion in the two countries converges and diverges, we reproduce it in full.

Any practical scheme for the reconstruction of Europe must needs provide for a settlement of the Reparations problem which will allow France to rebuild her devastated provinces without being crushed under an iniquitous and disastrous financial burden; will exact the maximum effort from Germany without driving her to ruin, despair and bad faith; and will give both countries such security as to lead to their moral and material disarmament. The following scheme has been inspired by the above considerations:—

1. The whole of that part of the German indemnity which does not arise from the devastations is to be made the object of special treatment. It is impossible to cancel it as long as the Inter-Allied debts are being maintained. But a declaration must be made to the effect that this part of the German indemnity is to follow exactly the fate of the Inter-Allied debts as regards both interest and capital, and that any cancellation of Inter-Allied debts will immediately be followed by the cancellation of a proportionate amount of German indemnity.

2. The sums claimed for rebuilding the devastated area are to be revalued according to the experience acquired in the reconstruction work. Mr Keynes, while trying to reconcile what is just and what is possible, has adopted a figure of 21 milliards of marks. But he neglects the claim of Italy and of other small nations, and there are in his estimates obvious errors and omissions, the possibility of which he himself admits. France alone has already spent, on reconstruction only, a sum equivalent to 18 milliard gold marks, and the work is not even half completed; whatever waste there may have been can only be a small percentage of the total.

We believe that the revaluation will come to an approximate figure of 50 milliards of gold marks—i.e., about 35 milliards for France, 6 for Belgium, 6 for Italy, and 3 for the other smaller nations.

3. To redeem this debt of 50 milliards of gold marks on the basis of interest at 6 per cent. plus amortisation at 1 per cent., an annuity of 3½ milliards of gold marks will be necessary during 33 years. Germany can deliver yearly over one milliard in goods or services, and she can pay without excessive difficulties about another half-milliard in cash. This total amount of 1½ milliard marks she must go on paying every year to her creditors, as she is doing now.

This leaves an outstanding balance of 2 milliards, representing a capital of nearly 30 milliards of gold marks. Of course, we may hope that, with an amelioration in the economic conditions of the world, Germany will be able to increase her annual payments. But it is not certain, and it is dependent on the restoration of the general economic situation, which is itself conditional on the settlement of the Reparations problem.

But it is now or in the next few years that France and Belgium need capital, either to reimburse expenses already incurred or to pay for reconstruction work while it is going on. It is therefore necessary to issue from 1922 to 1930 a series of international loans for an amount of nearly 30 milliards of gold marks. Under present conditions, nobody will subscribe to any loan secured only with German annuities.

Additional guarantees are indispensable. The already suggested delivery of preference shares of German industries and mortgages on German property might be useful, but will be still insufficient as a guarantee.

Now, we appeal to the world's conscience and to the Government's sagacity, and we ask each of the countries interested in the salvation of Europe: Are you ready to take a comparatively small risk, or even to pay a sort of insurance premium for the world's peace and the restoration of economic stability? You need only yourself give an additional guarantee, each of you undertaking to pay a proportion of the interest on the loans in case of German default.

The answer to this question will, of course, depend upon the size of the commitments which the adoption of this proposal would entail. The following schedule will show approximately what each country's share would be according to the number of its population, its wealth, and the degree of interest it had in the settlement of the question. The co-operation of the United States of

America being doubtful during the first few years, column 2 shows the percentages in case they refuse to participate:—

United States of America	1.	2.
Great Britain and Dominions	30	..
France	25	..
Italy, Japan	15	..
Belgium	7	..
Spain	2	..
Holland, Sweden, Norway, China, Brazil, Argentine, each	3	..
Denmark, Switzerland, each, and smaller South American Republics	1	..
Czecho-Slovakia and Chile, each	1	..
Roumania	1	..
Poland, Greece, Yugo Slavia, each	1	..

NOTE.—The figure mentioned is a percentage, but the annuity to be guaranteed being £100,000,000 (gold), it also shows in million sterling the maximum annuity any given country may be called upon to pay in case of Germany failing to pay more than 1½ millions in any year.

Let us take, for instance, the case of Great Britain and her Dominions. If Germany defaulted, they would be called upon to make annual payments which would reach in 1930, when all the loans provided for are issued, a maximum of £25,000,000 (gold) in the first case, or £33,000,000 in the second. This maximum liability for Great Britain and her Dominions would not be more than 2½ to 3 per cent. of the British Budget alone.

Is it necessary to say that it is highly improbable that Germany will totally default, especially if Europe is restored thanks to the solution of the great problems, including that of Reparations? And even if this eventuality did arise, would it not be in the interest of Great Britain to bear this financial charge rather than see Europe's peace indefinitely threatened, both France and Germany ruined, and the world unable to regain its economic balance? Would not this comparatively small sum be easily recovered through economies in armaments or in unemployment doles; economies which the great progress towards the reconstruction of Europe will render possible?

One may take two different views. Either one believes that Germany can pay the sums necessary for Reparations—what objection can there be to underwriting a risk which will not materialise?

Or one believes that Germany will not be able to pay. Does this mean that Belgium, who saved the world in 1914, and France, who has paid more than her share in men, alone should bear the burden of devastation which they suffered in the struggle for a common cause.

A refusal to participate in the risk of a German default would be an admission that their former Allies do not care if France and Belgium, having nothing more than a bad debt in hand, alone pay the price of the common victory, even at the cost of their ruin. We have no doubt that the adoption of this scheme, since it would alleviate the crushing burden of the Reparations problem, would immediately be followed by the most favourable consequences, from the political, the economic, and the moral point of view. Its success would enable the Governments to deal with other problems, and to consider the advisability of adopting a similar plan for the reconstruction of Russia.

This scheme is interesting as giving expression to what we believe is now a widespread view in France, namely, that the French reparation claim should be written off *pari passu* with the inter-Allied debt. It also recognises that there is a case for revaluation of damage, though it does not go quite so far as Mr Keynes in appreciating that this revaluation may have to be made a variable figure depending upon changes in the value of gold. It is also significant as recognising the very definite limitation to the amount which it is practicable for Germany to pay as an annuity, at all events in the near future. In these matters opinion in the two countries is on common ground. We think, however, that there is little likelihood that, in addition to surrendering the Allied debt and her share of reparation, Great Britain would also guarantee an annual sum as is suggested in this article.

Notes of the Week.

The Preliminaries of Genoa.—The meeting of M Poincaré and Mr. Lloyd George at Boulogne on Saturday has confirmed the anticipation that the Anglo-French situation would become clearer, and that sharper definition was about to be given to the task of the Genoa Conference. The result of the conversation of the Premiers is briefly that revision of the Treaties is not to come up for discussion at Genoa, that reparation is to be excluded, that recognition of the Soviet Government is to depend upon the behaviour of the Soviet Government at the Conference, and upon the guarantees which it gives for the recognition of private property, and finally, that any developments arising out of the Conference will be brought into proper relation to the

League of Nations, which must remain the permanent machinery for international co-operation. It is said that as a result of this understanding, negotiations are proceeding which, it is believed, will enable an Anglo-French Pact to be signed within a few days. But, though the decisions are calculated to remove some of the causes of friction between England and France, and will certainly enable preparations for the Genoa Conference to proceed more smoothly, they do not remove the greatest of the difficulties between the two countries. In the first place, the problem of the Anglo-French Pact does not appear to have been simplified in any way. If Mr Lloyd George retains his old sense of the drift of public opinion he will have realised that no special Anglo-French Pact will be acceptable in Great Britain until the views of the two nations on outstanding political questions are harmonised. The chief of these are Reparations and the situation in Asia Minor. A Pact should be the keystone of an arch built upon the solid foundations of mutual understanding on either side. It is futile to attempt to build it from the top downwards. Moreover, it is contemplated that the Genoa Conference may give rise to a general undertaking to be entered into by many of the nations of Europe to prevent aggression. In other words these countries would undertake a more binding obligation than is imposed by Article 10 of the Covenant of the League. Such an undertaking would, it is hoped, be a preliminary to substantial land disarmament. But it would surely be a mistake to precede such an undertaking with a Two-Power Pact to be signed in the next few weeks. Its form would prejudice the discussion of the wider undertaking to be taken at Genoa, and if its observance is dependent upon the interpretation of the two Powers concerned, it may clash with the more general understanding whose interpretation must be subject to the Council of the League of Nations. As regards Reparation, the Chancellor of the Exchequer is to meet the Allied Finance Ministers on the 8th inst., to consider the division of the German payments, the assessment of the expenses of the Army of Occupation, the Wiesbaden Agreement, and the National Convention of August 13th. There is reason to believe that the attitude of the French Government, as well as opinion in France generally, is not so far from the British point of view as has recently seemed to be the case, and this meeting may, perhaps, be an important step towards a better understanding. But even if all difficulties were removed, there remains in the background of any discussion which may take place at Genoa, or elsewhere, the problem of the relation of politics to financial reconstruction. This is illustrated in the case both of Austria and Russia. In the case of Austria the loans shortly to be made to that Government must clearly be safeguarded by some sort of guarantee as to internal finance, but at the moment only one Government is definitely committed to an advance. It is, therefore, not unnatural that a representative of the lending Government should be in Vienna to secure the observance of the necessary financial conditions, and the Austrian Government has this week indicated to the Finance Committee of the League of Nations that it holds this view. But clearly there are serious difficulties in this principle, for if no other Government advances money, the borrowing country places itself in a position of undesirable dependence upon a particular lending nation, and we should be in danger of seeing once more a scramble for financial influence

over the various countries in Europe and elsewhere. On the other hand, if other countries lend and appoint their "controllers," there is confusion of policy. It was this consideration which led the Brussels Conference to conceive the idea of a League of Nations Committee which would be free from the suspicion of encouraging the interests of any one nation. It is most important to preserve this principle of reserving any financial pressure or guidance in the hands of a body with the neutral standing which connection with the League confers. The principle applies with equal force to the larger field of Russia.

Indian Budget Statement, 1922-23.—The Finance Member of the Indian Legislative Assembly, Sir W. M. Hailey, presented the Budget statement of the Government of India on March 1, 1922, according to a report issued by the India Office. He began by pointing out that the balance of trade for the 10 months ended January was 33 crores against India, and proceeded to state that the anticipated small surplus of 71 lakhs in revenue and expenditure for 1921-22 had turned into a deficit of 34 crores, revenue being down by over 20½ crores, and expenditure higher by 14½ crores. The chief item of the deficit was a reduction of 13 crores in railway receipts, "due partly to fall in traffic receipts from 87 to 83 crores, but mainly to high prices and purchase of foreign coal." The Finance Member explained that revenue and expenditure for 1922-23 were based on hopes of revival in trade. The total estimated expenditure was 142½ crores against revenue of 110½ crores, estimated on the existing basis of taxation. Exchange is assumed at 1s 4d per rupee and military expenditure at nearly 62½ crores, as before. In dealing with the problem of how to meet the deficit Sir W. M. Hailey observed that "during the past four years expenditure had exceeded revenue by 90 crores, and it was impossible to continue living on credit. Increasing the floating debt might create grave monetary stringency. Relying on sterling and rupee loans was impracticable, as these were fully required for financing existing capital liabilities and productive railway expenditure. The inevitable result of leaving the greater part of the deficit uncovered would be large issues of unbacked currency notes, with serious effects on prices and India's credit." He could not hold out much hope of reducing expenditure, and the only solution was to increase revenue by additional taxation. It was proposed to increase railway passenger fares by approximately one quarter and also increase inland postage charges. An additional yield of nearly 15 crores was estimated from Customs. This would be obtained from (1) increase of general *ad valorem* duty from 11 per cent. to 15 per cent., the cotton Excise duty being at the same time correspondingly increased from 3½ per cent. to 7½ per cent., with the object of taxing consumption of cotton goods in the present emergency and not for the purpose of counterbalancing the increase in the import duty; (2) increase of duty on sugar from 15 per cent. to 25 per cent.; (3) imposition of a 5 per cent. duty on imported yarn; (4) increase of duty on machinery, iron steel and railway material from 2½ per cent. to 10 per cent.; (5) increase of duty by approximately 20 per cent. on alcoholic liquors excepting wines; (6) increase of duty on matches from 12 annas to Rs 1½ per gross of boxes; (7) increase of duty on imported petroleum from 1½ annas to 2½ annas per gallon, with an Excise duty on Indian-produced kerosene of 1 anna per gallon; and (8) increase of duty on luxury articles from 20 per cent. to 30 per cent. The salt duty would be raised from Rs 1½ to Rs 2½ per maund, and is estimated to bring in over 4½ crores, while increases in the rates of income-tax on annual incomes exceeding Rs 30,000, "leading to new maximum of 18 pies in the rupee, and increases in the rates of super-tax on incomes over 4 lakhs, bringing maximum to 6 annas in the rupee on portion of income over 5½ lakhs," are estimated to yield 2½ crores. This additional taxation should provide 29 crores, which will leave an uncovered deficit of approximately 2½ crores. For Ways and Means 1921-22 the total liabilities were 90 crores, which were met by a rupee loan of 49 crores, a sterling loan of 15 crores and miscellaneous receipts of 23 crores; Treasury Bills with the public increased by Rs 2½ crores.

In Ways and Means for 1922-23, total liabilities at 58 crores, including 30 crores for railway capital, are mainly to be met by borrowings by means of a rupee loan for 25 crores and sterling loan for 17½ crores. The Secretary of State for India "will require remittances of funds from India of £18,000,000, which would be effected by transfer of sterling reserves to India or by sale of Council drafts." The Finance Minister, however, pointed out that "the former involved cancellation of notes in India, and too rapid deflation might lead to dangerously acute monetary stringency. Hence they might have to sell Council bills in addition, though no provision was made for this in the Budget."

Lancashire and the Indian Cotton Duties.—Our Manchester correspondent writes:—Details of the Indian Budget proposals were circulated late on Wednesday, and it must be said that, on the whole, Lancashire is pleased that things are not any worse, but it is recognised that the new cotton duties are now very high, and mean dear goods for the natives at a time when it was never more necessary to place goods in the bazaars at cheap rates. In the past there has not been any duty on cotton yarn entering India, but 2½ per cent. has now been put on for revenue purposes, and this may have a vital effect on Lancashire's important trade in yarn with India. Cotton spinners and manufacturers in this country are rather pleased at the increase from 2½ per cent. to 10 per cent. on machinery, iron, steel, and railway material. During the last year or two shipments from Lancashire to India of textile machinery have been heavy, and it is thought that the additional tax may check the mill extensions in Bombay and district, which threaten to injure Lancashire trade. The general outlook for Lancashire is causing much uneasiness, and the rise in the Indian import duties on cotton goods must mean another hindrance to a trade revival, and comes at a time when the industry is in a state of severe depression and extensive unemployment for the operatives.

The Financial Difficulties of Greece.—The failure of M. Gounaris to raise a loan, or even a trade credit, in London, suspends the controversy as to the attitude of Great Britain towards the Greek kingdom. The negotiations, it is stated, will continue, but we can hardly expect them to succeed. The obstacles to their success, however, are not so much financial as political. True, the Greek foreign debt exceeds £41,000,000, exclusive of the advances accorded in 1918 by Great Britain, France, and the United States, of which the equivalent of between 10 and 11 million sterling was paid before the return of King Constantine occasioned the "financial blockade." Of the £41 millions rather more than half is secured on the revenues assigned in 1898 to the International Financial Commission for the service of earlier loans; the remainder, now not much below £20 millions, is secured partly on the share (40 per cent.) of the surplus of these revenues which falls to the Government. But we believe that after providing for these charges there is a considerable balance available as a basis for further borrowing. Otherwise the financial position is serious. There cannot now be much margin. The Budget of 1920-21 showed a large deficit, though nearly 38 per cent. of the expenditure was met out of loans; the Government has been so pressed that it has resorted to illicit and petty methods of delaying or postponing payments of interest on certain of its bond issues; a leading Paris paper has even attempted to show that the whole revenue barely covers the debt service. With the Turkish Peace Treaty still unratified, and likely to be revised, the whole outlook is uncertain, except that the service of the issues supervised by the International Financial Commission is safe enough. But the Commissioners are appointed by the Allied Powers, and will follow their lead. Whether the British Government should afford facilities to Greece for borrowing here is a hotly controverted question, on political rather than financial grounds. While not officially aiding the Greek efforts, it has not checked them, and its inaction, it is argued, may be interpreted by Indian and Egyptian Mohammedans as

favouring Greece to the detriment of the Porte. On the other hand, if Greece is not enabled to obtain the means of resisting the Kemalist army at Angora—which has been allowed to obtain equipment, and has even received some war material from the French Government—that army, it is maintained, will be able to march on Constantinople, secure control of the Straits, and make an end, in spite of the Allied Powers, of Greek claims in Asia Minor. Then Greece, after having been used as a weapon against the Turkish Nationalists, will have been sacrificed by the Powers to the necessity of placating their Mohammedan subjects by bolstering up the decrepit Turkish Empire. All this emphasises more than ever the urgent necessity of revising the Turkish Peace Treaty, and clearing up the situation in the Near East.

The Financial Deadlock in China.—For the second time the Peking Government has defaulted on the £600,000 8 per cent. "Marconi" bonds, issued in 1918 on behalf of the Marconi Company to provide payment for wireless installations, and constituting, with the 8 per cent. bonds for £1,803,000 issued similarly in 1919 on behalf of Vickers, Limited, the only Chinese loans not specially secured which are quoted in London, though there are doubtless others, raised at home or in Japan. It appears that the British Bank for Foreign Trade, which issued the Marconi loan, was prepared to lend the sum necessary to pay the interest, on the security of the surplus of the salt revenue, but that the Consortium, revived in 1920 as an association of British, French, Japanese, and American banks acting through a representative committee, stopped the transaction by claiming a lien on this surplus in virtue of an engagement entered into by the Chinese Government with the Consortium as it existed in 1913. The bank in question stands high; but it is obvious that the needs of the Peking Government are so multifarious, and the pressure put on it by the various military leaders is so serious and so likely to recur, that, were it left free to pledge its revenues to any borrower, it would soon be the prey of other and entirely irresponsible financiers, and verging on bankruptcy. But the right of the Consortium to interfere has been questioned, on the ground that this body was in abeyance from 1914 to 1920, and is now reconstituted differently by the inclusion of the United States and the exclusion of Germany and Russia, in consequence respectively of the war and the revolution. But it was never dissolved; its existence has been continuous, and it may be mentioned incidentally that provision has been made for the re-entry of Russian banks whenever that country has again a stable Government. Its rights are unaffected by its reconstruction. It is not, as some observers have represented, a dog in the manger, refusing either to lend or to allow others to do so. Its "control" consists mainly in providing that money lent for a specific purpose shall not be diverted to something else; and, except perhaps for such strictly defined objects as railway construction, it cannot lend to a Government which does not represent the whole of China. More revenue, however, will shortly be available from the increased Customs duties, and, perhaps, from other sources; and it may fairly be expected that all foreign debtors, at any rate, will eventually be paid in full. The Marconi bondholders, therefore, must have patience. The postponement of the payments due them, indeed, may be regarded as an incident in the process of conserving the credit of the Chinese Republic.

Security Values.—A welcome innovation in the monthly computation by the *Bankers' Magazine* of the market value of Stock Exchange securities has been made in a division between fixed interest stocks and variable dividend securities. In February there was an increase in the total market value of 387 securities of 3.6 per cent., but while 94 fixed interest stocks advanced by 4.7 per cent., the remaining 293 variable dividend securities appreciated by only 1.4 per cent. Ten British and Indian Funds, representing about one half of the British Debt, increased by no less than £156 millions, or 5.3 per cent. It is pointed out that the total capital appreciation in British loans has been even greater, and that nearly

£1,000 millions of British debt is in the form of Treasury Bills, where the appreciation is shown not in the terms of market quotation but in interest yield. Most of the other fixed interest stocks have moved in sympathy with British Funds, but United States Gold Bonds, with a decline of 3.6 per cent., were an exception. In the variable dividend section the feature was the advance of 9.8 per cent. in 28 Home Railway ordinary stocks. Foreign Railway stocks also improved by 8.2 per cent. The security values index number compiled by our contemporary stands at 105.8, as against 102.1 for January, December, 1921, being taken as 100. Fixed interest stocks are 107.3 against 102.5 in January, and the remainder 102.8 as against 101.3.

Prudential Assurance Company.—If all companies and collecting societies which transact industrial life assurance business—for small amounts at weekly premiums—were as strong and well managed as the Prudential there would be small occasion for the threatened restrictive legislation. The trouble is that there is no legal power at present to deal with companies or societies which are conducted at excessive cost to the working classes, or are actuarially insolvent. The Prudential began in 1912 a "block system," under which agents were allotted specific areas and wasteful overlapping was greatly reduced. It was pointed out by the chairman on Thursday that this concentration of the industrial agents' work has enabled a smaller number to do much more collection at improved pay, and at the same time has reduced the company's rate of expenses. Last year 24 millions of premiums were collected by 14,408 agents, while in 1903 12 millions of premiums occupied the energies of 20,475 agents. The valuation of the industrial branch showed a surplus of £1,309,096, of which £200,000 is to be allotted to industrial policyholders as an addition of 2½ per cent. to sums assured which become claims during the next two years and are entitled to participate, provided that premiums have been paid for 10 years or more. In the ordinary branch there was a surplus of £1,779,146, and participating policyholders are to get a reversionary bonus of 26s per cent. against one of 20s per cent. last year. One of the most interesting features in the chairman's speech was his announcement of the pending developments in the recently established "general branch." The Prudential is to embark on fire reinsurance business in the United States under treaty with the Liverpool and London and Globe. A subsidiary American company will be formed for the purpose. Other reinsurance treaties for home and foreign business are also at the company's disposal. The paid-up capital is to be increased by calling up 2s on the "B" shares—which will yield £100,000 and make the total paid-up capital £1,200,000. The life funds cannot, of course, be used for "general" business, but the free resources of the company, in addition to the capital, consist of the general branch funds, £535,685, the common contingency fund of £400,000, and the profit and loss balance of £550,000. The premiums last year were £314,448 in the fire and miscellaneous accounts, and £339,320 in the marine account, so that the funds other than life are ample for present needs, and will allow of considerable expansion.

United Kingdom Provident Institution.—A feature of this strong life assurance society has always been its low rates of mortality, especially in the "temperance section." Last year the total death claims were 63 per cent. of the number expected, and 67.8 per cent. of the amounts expected. In the temperance section the percentages of actual to expected claims were 55.1 in number and 63 in amount. The new business done was smaller than in 1920 and 1919, but at £1,879,213 net was much larger than in the preceding years. The net rate of interest earned after deducting tax was £4 7s 4d per cent., as against £4 1s 11d per cent. in 1920 and £3 13s 10d per cent. in 1919. The guarantee of bonuses given in respect of premiums paid in 1921 has been renewed for 1922, and the scale of interim bonuses has been increased.

An Insurance Company's Investments.—The less well-known insurance companies might, in these days, do worse than follow the example of the British General, a London office allied with the Scottish Temperance of Glasgow. At the end of their report for last year the directors publish a detailed list of the securities in which the funds are invested. The nominal amounts of the stocks or shares are given, and also the market values at which they stood on December 31st last. It is explained that the book value on that date was £1,143,532, and the market value £1,126,634. A valuation made on February 22nd showed an appreciation to £1,169,440. In the New York State all insurance companies which make returns are required to set out their investments in full. We do not suggest that a legal requirement of this kind has yet been proved to be necessary in this country, but the minor and newer insurance companies will do well to adopt the system voluntarily in view of the suspicions aroused by the collapse of the City Equitable. The report shows that the total premium income of the fire, accident, and marine departments was £750,183, and that the reserves applicable to the liabilities of these departments were £757,253, or more than a full year's premium income. That is a sound position, especially as the liabilities in the marine account have been considerably reduced. The 20 per cent. dividend, less tax, absorbed £24,421, against net interest earnings of £39,441.

The Underground Electric Report.—The report of the Underground Electric Railways Company of London, Limited, for the year 1921, shows an increase in revenue of £190,323. Of this amount income-tax absorbs £43,089, compared with £35,897, and commission and discount on issue of 6 per cent. three-year notes £14,668, the same amount as in 1920. The following table summarises the financial history of the company for the past five years:—

	1917.	1918.	1919.	1920.	1921.
Revenue from—					
London Electric Railway	140,388	232,543	198,932	154,118	344,578
District Railway	35,438	76,650	61,950	47,250	94,465
City and South London	28,331	45,687	46,374	38,385	63,942
London General	112,034	179,758	160,048	114,320	251,483
Metropolitan Railway	250	250	250	300	450
London and Suburban Traction	126,000	205,468	208,571	208,571	5,320
Associated Equipment Co.	164,390	16,109	16,239	16,734	9,763
Surpluses (including income-tax returnable)	606,731	760,265	692,364	579,678	770,001
Appropriation—					
Directors', &c., fees and expenses	10,798	7,960	10,116	14,329	14,099
Loss on foreign exchange	13,180	31,932	67,932	65,171	89,926
Interest on 4½ per cent. bonds	109,944	115,766	117,797	117,797	117,797
Interest, &c., on 4½ per cent. 3-year secured notes	44,860	..	..	..	..
Interest on 5 per cent. 3-year secured notes	..	35,000	35,000	8,750	..
Interest on 6 per cent. 3-year secured notes	..	..	11,466	31,500	42,000
Central London guarantee	13,466	..	47,130	..	..
Interest on 6 per cent. income stock ..	76,320	76,380	76,380	76,380	76,380
Interest on 6 per cent. income bonds ..	337,602	448,910	361,717	180,859	361,717
	(4 %)	(5 %)	(4 %)	(2 %)	(4 %)
Inc. or dec. in balance forward	+ 508	+ 5,265	- 13,754	- 2,803	+ 6,106

The interest on the 4½ per cent. bonds and 6 per cent. income bonds is payable in New York at the fixed rate of exchange of \$4.86 2-3 and in Amsterdam at Fl. 12.12 to the £ sterling, and, as the interest paid on the 6 per cent. income bonds is 4 per cent. compared with 2 per cent. in 1920, an increase in "loss on foreign exchange" from £55,171 to £82,925 is accounted for. During the year a loan of £1,100,000 was obtained from the company's bankers "to meet capital requirements and the needs of subsidiary companies." This accounts for an expenditure item of "general interest (net) £11,220." Stocks and shares held increased by £609,232 during the year, the purchase by the company of 60,000 additional £10 ordinary shares of the London General Omnibus Company, Limited, accounting for the greater part of the increase. Treasury bills held decreased from £249,259 to £99,614, and cash at bankers and at short call shows an increase from £4,719 to £115,329.

Pearl Assurance Company.—There are two features of interest about the new report of the Pearl Assurance Company. The first is the substantial amount of business done. It is remarkable that a company which caters for the

working classes in its "industrial" branch, and for the lower middle classes in its "ordinary" branches, should have felt so slightly the prevailing depression in trade. In the ordinary branch there was, of course, a falling-off in the number of new entrants, but 34,504 policies assuring over six millions is a very substantial volume of business in a year like 1921. In the ordinary branch the premium income increased by £175,908 to £2,258,381, and in the industrial branch the premiums increased by £202,699 to £4,530,770. The second feature of interest is the fall in the ratio of expenses to premiums in the industrial branch. After the settlement with the agents some two years ago, following the strike, the percentage of expenses rose from 40.4 per cent. of the premiums to 45.5 per cent. Last year the corresponding percentage dropped back to 40 per cent. The annual valuation showed a surplus over liabilities of £530,076, including £121,841 brought forward. A sum of £325,121 is to be distributed among participating policyholders and ordinary shareholders. The dividends paid to ordinary shareholders last year amounted to £150,125, which nearly all came from the profits on the industrial business.

Harrods' Profits.—The report of Harrods, Limited, for the year ended January 31st last shows a sharp relapse in profits, the gross figures falling from £2,309,200 to £1,623,400, and the net figure from £532,500 to £196,100. The table below compares results for the past four years:—

Year Ended	1918-19.	1919-20.	1920-21.	1921-22.
January 31st.				
Gross profit.....	1,204,700	1,879,201	2,209,213	1,623,392
Net profit.....	335,143	552,955	532,503	196,072
Brought forward....	35,102	66,481	208,890	220,768
	370,345	619,436	741,393	416,840
Reserve.....	77,514	79,295	39,000	..
Prof. dividend.....	60,000	60,000	142,500	286,233
Ord. dividend.....	166,250	261,250	335,125	95,750
	(17½ %)	(20 %)	(17½ %)	(5 %)
Carried forward	66,481	218,890	224,768	34,857

The report says that the volume of merchandise sold showed a substantial increase over the previous year, but that owing to the decrease in prices the value of business done was less. Working expenses fell from £1,529,900 to £1,293,600, and the large decline in net profit is attributed to the necessity for writing off heavy amounts for depreciation in value of stocks. The latter shows a reduction of £543,000 in the balance-sheet, in which there is a general improvement. The preference capital was increased by £1,000,000 in March last, and a bank loan of £584,400 has been wiped out. On the assets side, cash has been increased by £265,400, and property is £494,000 higher, nearly all the leaseholds having been converted into freeholds by the purchase of the Brompton road site. The Belgian business, Harrods (Continental), Limited, has proved a failure, and the directors have wisely decided to close it down, and have written-off £480,000 from reserve, which they state "will amply provide for all losses, including the loss on trading, depreciation in exchange, and the liquidation of the remaining stocks." This reduces the reserve fund to £669,100. Deposit and current account balances in the banking department—the only blemish in an otherwise strong and liquid balance-sheet—stand at £1,078,400, or £5,000 more than a year ago.

Co-operative Business.—Last December we chronicled the results of the half-year's operations of representative distributive co-operative societies, showing that these concerns were not wholly immune from the difficulties besetting traders generally. Balance-sheets issued during the past month show that the slump in sales, profits, and dividends has not been arrested, and that in centres like Bradford, Birmingham, and Liverpool the committees need to concentrate on trading rather than politics if they are to continue their progressive development. At Barnsley the trade for 1921 was £2,997,414—a fall of nearly half-a-million as compared with 1920, while the dividend has declined from 2s 9d in pre-war years to 1s 9d in 1918, 1s 7½d in 1920, and 1s 4½d last year. This society, like

that at Liverpool, has about 60,000 members. At Liverpool, in 1921 the average weekly purchases per member were 9s 11d as compared with 14s 2½d in 1921. The trade fell from £2,160,000 to £1,840,000, and the dividend to 9d. Whilst it is generally assumed that lower prices have accounted for about 25 per cent. of the decreased trade, some societies have recognised that they have been affected by a degree of disloyalty as well as the general trade depression. The notable fact of the present position is the equanimity with which members are taking the declining dividend. At Leicester this has fallen to 1s; at Leeds (where sales fell £597,000 for the last six months) to 1s 7d; at Bradford to 9d; at Soho (Birmingham) to 5d; and at Grimsby to 3d. At Derby where close associations with the villages have widened the interests of the Co-operative Society, the dividend has been maintained at 1s 6d; and a larger volume of foodstuffs was sold than in the corresponding period. Expenses are still rising, and advanced from 2s 8½d to 3s 3d in the £—an advance that can be reduced mainly by the return of trade. The experience through which the co-operative movement is now passing should demonstrate to those who seek to add new expenses to its accounts that it has to operate in a competitive world, the consumer is still inclined towards the cheapest market, and all co-operators are not idealists.

Borax Consolidated.—For the year ended September 30, 1921, Borax Consolidated, Limited, show a net trading profit of £378,966, as against £476,581 for the previous year. The directors have, in consequence, decided to distribute only 12½ per cent. on the deferred ordinary shares as compared with 15 per cent. for each of the five preceding years. Fortunately, a year ago an additional amount was allocated to reserves, so that this year in allotting only £70,825 in this direction the approximate annual reserve allowance average is maintained. A summary of the company's results for the past 11 years is given below:—

Year Ended	Net	Depre-	Deben-	Total	Carried	Rate
Sept. 30.	Trading	ciation	ture	Divi-	Forward	on
	Profit.	and	Interest.	dends		Deferred
	£	£	£	£	£	%
1911.....	293,086	27,880	65,000	194,750	75,995	13½
1912.....	293,598	56,732	69,000	194,750	43,297	13½
1913.....	361,921	78,297	74,164	207,361	45,397	15
1914.....	344,050	90,692	82,909	147,500	68,345	7½
1915.....	349,357	81,290	87,678	170,000	74,171	10
1916*.....	569,907	227,331	87,850	215,000	112,913	15
1917.....	385,527	96,267	87,850	215,000	92,703	15
1918.....	431,342	115,825	87,850	215,000	105,370	15
1919.....	442,023	103,697	87,850	252,500	103,348	15
1920.....	476,581	120,062	87,728	252,440	119,639	15
1921.....	378,966	70,825	86,392	223,750	117,638	12½

* Excess profits duty, £134,470, included in these figures.

The report states that "the company has shared in the general depression in business during the past financial year. This has been widespread, and has extended to all the countries in which the company operates. There are indications of a somewhat better demand at the present time, but as the company depends largely upon the requirements of industrial users of its products, the recovery, in view of the general condition of trade, will in all probability be very gradual." Turning to the balance-sheet, the item "Mines" is up by £289,403 to £3,057,201, having been increased by a transfer from "Investments" for this amount. Stocks at or under cost are also up from £506,618 to £585,261. Advances, investments, shareholdings, &c., is a portmanteau item which might well be separated. At £941,236, after making allowance for the transfer to "Mines," it compares with £823,889 a year ago. The balance-sheet will be found on another page fully analysed.

Courtauld's Year.—The accounts of Courtaulds, Limited, for the year 1921 record a further decline in profits from the high-water mark figures of 1919, profits having fallen from £2,280,861 in the boom year, to £1,804,796 in 1920, and £1,684,593 in 1921. But all additions to plant and

buildings during the last three years have been written down to their approximate current values—an achievement which should be remembered when comparing profits with past years. How profits have been distributed during the last six years may be seen from the following table:—

	1916.	1917.	1918.	1919.	1920.	1921.
	£	£	£	£	£	£
Profit	1,099,078	1,173,891	1,184,938	2,280,861	1,804,796	1,684,593
Brought forward	329,684	315,894	62,935	148,211	229,078	383,874
	1,428,762	1,489,785	1,247,873	2,429,072	2,033,874	2,068,467
Debtenture int.	15,155	3,028	..	..	..	..
Ordinary div....	600,002	512,502	650,002	1,200,001	1,450,000	1,350,000
	(30 %)	(30 %)	(32½ %)	(30 %)	(25 %)	(11½ %)
Reserve	536,197	911,320	449,660	999,993	200,000	300,000
Carried forward	277,408	62,935	148,211	229,078	383,874	418,467

* Free of tax.

The dividend has been reduced from 25 per cent., free of tax, to 11½, free of tax, but it will be recalled that the company increased its capital in 1920 from £4,000,000 to £12,000,000 by capitalising £8,000,000 of reserves. Thus to pay this decreased rate of dividend a sum only £100,000 under the amount required for the ordinary dividend in 1920 was needed, as will be seen in the table set out above. Total assets are down from £18,652,620 to £17,999,200. The main item in assets is "Investments" at £13,229,217, which lumps together holdings of British Government securities and investments in commercial and allied undertakings, including the Viscose Company of America. It would perhaps be better if the directors could see their way clear to separate this big entry. The report states: "During 1921 the company has experienced an improving demand for artificial silk, and for some months past the plant has been working full time." The balance-sheet will be found analysed in the usual column.

The Finances of the Falcon.—In 1916, writes our mining correspondent, copper touched its record for recent years, and in respect of the twelve months ended June 30, 1917, the Falcon Mines paid its first and, so far, only dividend of 4s per share. Since then the record of the undertaking has been a struggle against adversity. The effects of decline in the value of the metals produced—copper, gold, and silver—added to expansion in working costs, have been accentuated by the requirements for debenture interest and redemption. Last year bonds to the nominal value of £30,100 were redeemed, and the balance of the issue—£68,000—falls due for repayment on July 31st next. Income-tax to the tune of nearly £25,000 is now payable. Hence the position will shortly become very embarrassing unless a marked advance should occur in the metal markets, and of this there is little purport. In the financial period ended June 30th last the company made a working profit of £15,750, which by taxation, interest, &c., was converted into a deficit of practically corresponding amount. A supplementary statement for the half-year to December 31st shows that, despite the reduction in costs due to the suspension of development, operations resulted in a loss. Doubtless the Gold Fields Rhodesian Development—the principal debenture holder—will accommodate the company by an extension of the date of repayment, but unless it also makes an advance the shareholders may be called upon to put their hands into their pockets. The latest balance-sheet indicates a cash deficit of £28,300.

The Corporation of Insurance Brokers announces that Mr H. A. Krailing, of Messrs William Owen and Co., London, will deliver a lecture on "Fire Claims from the Assessor's Point of View," on Wednesday, March 8th, at 5.45 p.m., at 59A London wall.

At the Royal Society of Arts, John street, Adelphi, on Wednesday, March 15, 1922, at 8 p.m., a paper will be read entitled "Certain Aspects of the Problem of Exchange Stabilisation," by Oswald Toynbee Falk, C.B.E. Sir Robert Molesworth Kindersley, G.B.E., will preside.

Overseas Correspondence.

UNITED STATES.—COTTON MILL STRIKE—DECEMBER RAILWAY EARNINGS—MONEY EASING.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 18.

THE strike of cotton textile workers, which began in Rhode Island about a month ago, spread to 40 or more mills in other New England States this week, when a 20 per cent. reduction in wages became effective. Fully 50,000 operatives are now idle. Practically all cotton goods mills in New Hampshire, where the wage cuts were accompanied by an increase in working time from 48 to 54 hours a week, have been affected by this week's walk-out. Many plants have shut down entirely for an indefinite period, while others have been obliged to go on shorter time than heretofore. Thus far mills in Maine, Vermont, and Massachusetts are not involved, with the exception of a few in the latter State. The strikers refuse to accept the reduction, notwithstanding the fact that for many months they have not shared in the general readjustment in all industries, but, on the contrary, have been receiving wages much higher than those paid by southern mills for the same kind of labour. New England wages have been at least 50 per cent. above southern. With their lower wage costs, mills in the south have been able to establish market prices for cloths of standard construction with which New England manufacturers cannot compete at a profit. The latter have cut wages as a last resort, and only after enforcing the most rigid economies and reducing overhead and operating costs, as well as executives' salaries. Any prolonged curtailment of production is likely to have an important effect upon the market for many constructions of printcloths and grey goods, and also numerous lines of finished cottons, for mills generally have not been accumulating stocks. That consideration is responsible in a measure for the increased firmness of prices for some cloths this week. The feeling in most quarters is, however, that unemployment, with all that it entails, will put an end to the strike before long.

December railroad earnings statements that have come to hand make a favourable exhibit. Reports filed by 189 of the 201 Class 1 carriers show total net operating income of \$42,652,398, as compared with only \$10,410,404 for the same number of roads in the corresponding month of 1920. Gross revenue aggregated \$302,118,733, as against \$507,427,358 in the same month of the preceding year, representing a decrease of 22.7 per cent. The increase in net operating income, therefore, was due entirely to a marked reduction in operating expenses, which, for the roads reporting, totalled \$326,694,642 for the last month of 1921, and showed a decrease of 29.6 per cent. from the figures for December, 1920. The greatest saving in expenses was effected by carriers in the eastern section of the country, which reported a reduction of more than 35 per cent.

Money rates are easier, the relaxation at present being more marked in call money than in fixed-date funds. Federal reserve banks' reserve ratios are again improving after recent declines, and one central reserve institution, namely, the Cleveland Federal Reserve Bank, has lowered its rediscount rate from 5 to 4½ per cent.; other bank rate reductions, especially in the East, are expected shortly.

Reflecting the lower tendency of money rates, the bond market is more active at rising prices. Other factors that have helped sentiment in that quarter are the further strength in foreign exchanges, notably sterling, and less likelihood of a big Government bond issue to finance the proposed soldiers' bonus.

FRANCE.—SPECIAL BUDGET—REPARATION—BOND INTEREST REDUCTION—NEW CAPITAL ISSUES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, March 1.

THE Chamber, during the past week, has succeeded in advancing by yet another stage the Special Budget for Expenditure Recoverable (from Germany), which was passed through the Lower House on Thursday last. It was hoped, in spite of the near approach of the end of the month, that even then it might be possible for the Senate to consider and approve the Bill, and thus render a third monthly Vote on Account (or *douzième provisoire*) unnecessary, but little optimism was felt by the Government in this regard. In order to be on the safe side, the Finance Minister took the precaution to make the necessary demand for a Vote on Account for the month of March, and on Friday the Chamber acceded to the request without a division. The credits asked for amounted to 634,810,473f on account of the Special Budget (Devastated Regions), and 46,852,000f on account of the maintenance of the armies of occupation in Germany, these figures being based on the estimates comprised in the Special Budget for 1922. The Minister's foresight proved to be justified. The Senate has, so far, found it impossible to begin its consideration of the Bill adopted by the Chamber last week, and has accordingly followed the example set by the Chamber and passed a Vote on Account for the amounts asked for by the Government.

The *Journal Officiel* has now published figures drawn up by the Ministry for the Liberated Regions, showing the total amount of the claims sent in for indemnities in respect of material losses suffered in the ten departments of the North and North-East of France that are known as the devastated regions. This total amounts to 114,034,399,415f, required to make good damage done, the 1914 value of which was 36,505,827,772f. Of this total, 92,226,992,718f remains to be dealt with. It is now hoped that the Senate will be able to complete its examination of the Special Budget by the end of the current or the beginning of the coming week.

Meanwhile, it is reported by the Reparations Commission that the fifth of the payments of 31,000,000 marks gold, which the German Government is required to make every ten days under the temporary arrangement concluded at Cannes, has been received from Berlin by the various Allied national banks, the payment, like its predecessors, being made in dollars, sterling, francs, and other non-German currencies. The Reparations Commission has now received back from the various Allied Governments the statement forwarded from Berlin, in which the German Government sets forth the financial reforms it is prepared to institute, the guarantees it proposes to give to ensure its future Reparation payments, and the list of payments it proposes to make during the rest of the current year if the moratorium proposals it has submitted are agreed to by the Commission. As already stated, the "temporary arrangements" agreed to at Cannes, which is in itself, for all practical purposes, a moratorium for Germany, is to continue until the Allied Governments, through the intermediary of the Reparations Commission, are satisfied with the proposals as to financial reforms, guarantees, &c., agreed to by Germany. The Reparations Commission is now busily considering these proposals, and upon its action in the immediate future depends whether they will be accepted or not.

The reduction of the rate of interest payable on *Bons de la Défense Nationale* and *Bons de Trésor*, which was foreshadowed last week as probable, has now become an accomplished fact. By a decree signed by the Minister of Finance and promulgated in the *Journal Officiel*, it is announced that on and after March 10th the rate of interest on all categories of these securities will be reduced by ½ per cent. M. de Lasteyrie has also repeated his statement to the effect that he hopes it will soon be possible to bring to an end the régime of fixed prices for the Rentes, and to throw the market freely open once more.

It is now possible to furnish complete figures showing how French savings responded during the past year to appeals made by the State and by private enterprises, as compared with 1919 and 1920. The total issues of new

capital by industrial undertakings during 1921 amounted to 10,730,800,000f, of which 4,437,200,000f was absorbed by banks and *Crédit Foncier* institutions, the next largest categories being the metallurgical industry (1,368,500,000f) and colliery concerns (1,366,500,000f), no other category of investments reaching to anything like half the latter amount. The important figure represented by banking issues included an issue of 1,200 million francs by the *Crédit Foncier* in February, and another of 3,000 millions by the *Crédit National* in October. In the other figures quoted, further, are included the important industrial issues made by groups of undertakings in, respectively, the colliery, metallurgical, sugar, and other industries. These issues, totalling to some 1,513,500,000f, ought properly to be regarded as State loans, since they were made for the purpose of reconstruction in the devastated areas, and their bonds are guaranteed by the State against payments to be received from Germany. If these issues are excluded it will be found that the regular industrial issues, properly so called, which amounted to 3,128,800,000f in 1919 and to 8,197,000,000f in 1920, totalled 6,530,800,000f only last year. The total issues for the year (including State guaranteed securities, railway stock, municipal and colonial loans, and industrials of all kinds) amounted to 38,975,800,000f, as compared with 45,421,000,000f in 1920 and 35,068,600,000f in 1919.

The enormous proportion of this total that was represented in each of the past three years by direct issue by the State will be seen from the table given below. The feature first to be noted is that simultaneously with a healthier form of Budget and with the progress of reconstruction in the North, the demands of the Treasury have decreased markedly. Another point to be noted is that the figures coming under the heading of "Treasury" by no means represent (as will be gathered from the foregoing) all the money that has been raised for national purposes, as the total under this heading must also include the *Crédit National* and some of the other items recorded. The detailed classification, showing the comparative figures for the past three years, is as follows:—

Issues.	1919.	1920.	1921.
Treasury	24,293.0	31,782.6	22,699.5
Colonies	..	..	275.0
Towns and Departments	1,500.0	230.0	2,164.7
Railway—			
State system	750.0	1,211.3	3,104.9
Private companies	1,396.8	..	..
French companies—			
<i>Crédit National</i>	4,000.0	4,000.0	3,000.0
<i>Crédit Foncier</i>	..	1,000.0	1,200.0
"Reconstruction groups" ..	..	..	1,513.5
Industrial concerns	2,930.5	6,856.7	4,799.7
French companies abroad ..	81.8	311.0	121.1
Foreign issues—			
Industrial companies	96.5	29.4	97.3
State Loans	20.0	..	..
Total	35,068.6	45,421.0	38,975.5

There has been a conspicuous recovery this week on the Bourse, owing to the announcement that there would be a reduction of ½ per cent. in the rate of interest for *Bons de la Défense Nationale*. The measure is as greatly welcomed on the Bourse as it is in circles connected with State finance, because the fall in the rate of interest will naturally improve the position of the various industrials that have fixed rates of interest. By a curious paradox, so far the effect of the change has been felt not by securities of this class, but by those of fluctuating interest, and buyers have been somewhat shy, influenced no doubt by the prospect of the issue of fresh loans. An important factor in the improved position is that advantage has been taken by buyers of sales inspired by panic, so that, unless real purchasers are found to take up the stock so acquired, one must expect the present improvement to be followed by a decline. Three per cents. have dropped back from 59.50 to 58.60. Banks have been in demand, *Crédit Lyonnais* rising from 1,385 to between 1,415 and 1,400, *Banque de Paris* advancing from 1,185 to between 1,225 and 1,208, and *Union Parisienne* from 654 to between 685 and 665. French railways, under the proposed reduction of interest, have advanced, P.L.M. fetching 845 against 825, Nord 955 against 915, and Orléans 915 against 886. Shipping has been very irregular, *Chargeurs Réunis* being typical in starting at 400 and fluctuating between 415 and 398.

GERMANY.—POLITICS—FINANCES—EXCHANGE AND BOURSE—TRADE—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, February 27.

THE announcements to-day made concerning the Boulogne Conference produced no visible effect on business. The belief held immediately after Cannes that the Genoa Conference might result in measures of alleviation for Europe generally and Germany in particular has of late been weakened. The definite announcement that on the question of the discussion of the Peace Treaties and of Reparations M. Poincaré has had his way caused some Berlin newspapers to declare that there is no object in Germany's going to Genoa at all. The final form of the Reparations Budget for 1922, which is still based on the London Ultimatum conditions, is:—

	Milliards of M. Paper.
General Reparations expenditure	135.0
Occupation Army	6.27
Interallied Commissions	1.85
Peace Treaty deliveries outside Reparations	20.72
Clearing	18.0
Home expenditure arising out of Peace Treaty	5.7

The total "for execution of the Peace Treaty" is put at 187.53 milliards, of which 147.69 milliards appear in the Ordinary Reparations Budget and 39.84 milliards in the Extraordinary. The 135 milliards at the top of the table are Reparations proper—that is, the estimated paper mark cost at 45 p m = 1 gold m, of 3 milliard gold m, consisting of the fixed 2 milliards, and 1 milliard, the latest valuation of the 26 per cent. levy on exports. In the Reparations proper, cash payments will cost 76.7 milliards; coal, benzol, dyes, &c., 13 milliards; living animals, 1.3 milliards; and goods for the restoration of devastated territory, 45 milliards. Of the total 187 milliards all but 16½ milliards will have to be raised by Funded Loan or Floating Debt operations.

The Floating Debt of discounted Treasury bills increased in the second ten days of February by 610,930,000m, and the total of discounted Treasury bills on February 20th was 259,738,240,000m. The Reichsbank reports clearings of 116,680,000,000m in January, as against 120,835,000,000m in December, and 79,971,000,000m in January, 1921. The Government has submitted a Bill prolonging until March 31, 1923, the Law against Capital Flight, which would have expired on March 31, 1922. The amount that may be taken abroad by travellers is raised from 3,000 to 20,000m. Negotiations are proceeding with several States for mutual help against tax evaders. An agreement has already been concluded with Czecho-Slovakia, but it seems that most of the former neutral States object to abandoning their tradition of secrecy for banking accounts.

The Bourse, despite growing tightness of money, was last week active and rising. Although the mark exchange is still considerably higher than in early November, a great many stocks quote higher than then. The *Frankfurter Zeitung's* Bourse Index of 15 industrial stocks shows for February 24th 38,705 against a high point of 40,250 on November 10th. Another index shows that

glass and pottery stocks stand highest, with an average quotation of 1,400, as against 575 in July, 1921, next mining stocks with 1,320, metal 1,250, textiles 1,150, machines 1,080 and chemicals 1,000. Other groups of stocks are mostly between 400 and 700. Under leadership of the Disconto Bank, the Aschersleben, Westeregeln and Salzdorf potash concerns are fusing into a syndicate which will control 152 out of 1,000 shares in the official potash syndicate, and will eclipse in size the Deutsche Kali and Wintershall concerns, which are at present the largest. Continuing favourable company reports encourage stock speculators. The average net profits of 30 leading industrial companies are 52 per cent. more than in the business year ending June, 1920. The real profits have, however, fallen, whether counted by the mark's gold exchange or, as is more reasonable, by its buying power at home. To-day, with the foreign exchanges rising, most stocks, in particular mining and chemical, made considerable gains. Home loans were firm, Federal 3 per cent. rising to 111, 3½ per cent. to 75½, and Colonial 4 per cent. to 115½, while War Loan remained at 77.50 and 4 per cent. at 88. Negotiations are being carried on with the Federal Coal Syndicate as to the desirability of raising the price of home-produced coal to the world-market level. The difference between these prices has been dwindling for some time past, and will be reduced to probably 200-300 marks a ton by the intended further increase of railway rates of 20 per cent. on March 1st, and by the increase of the coal tax from 20 to 40 per cent. *ad valorem*. The extra yield would be partly or wholly used, as recommended by Herr Stinnes, for creation of a fund for the opening of new mines. The plan to hold coal prices permanently at about the world-market level will not be easy to realise. If, as is intended, the German price is fixed in marks, the first considerable exchange variation will make the coal either too cheap again or too dear; and the fixing of the price in gold would lead to great oscillations in the paper-mark price at home. The present system of compulsory maximum prices was not designed in order to keep coal below world-market level, but in order to prevent the coal scarcity being exploited, and the maximum prices, being mainly based on cost of labour, were inevitably lower than foreign, as is the general price level. Higher prices would mean a considerable German gain on the Reparations account.

For January is reported a new active trade balance, the second in succession. Imports are valued provisionally at 12,800,000,000, as against 13,702,000,000 in December; and exports at 14,500,000,000, against 14,468,000,000; the export surplus being 1,700 millions, against 766 millions. In weight, January's imports were 2,310,000 metric tons, against 2,085,800 metric tons, in December; and exports 2,030,000 metric tons against 1,929,500 metric tons. Details for January are not yet published, but it is stated that the export surplus is due to a smaller proportion in imports of dear food and a larger proportion of ores and raw materials. Published also is a belated statement of values of imports in 1920. The trade account for 1920 is: Imports, 98,130 million m; exports, 69,311 million m; import surplus, 28,819 million m. As the import surplus in eight months of 1921 (for which only reports have appeared) is around 13 milliard marks, it is evident that the relation of exports to imports in all 1921 will be more favourable than in 1920. As compared with before the war, imports in 1920 and 1921 show an increase in food and a decrease in raw materials; while exports show an increase in the proportion of manufactured goods.

Railway receipts in 1921 were practically double those of 1920:—

(In Millions of Marks.)				
	Passenger Traffic.	Goods Traffic.	All Sources.	Thereof from State Railways.
1920	4,050.4	9,742.8	14,383.3	14,131.0
1921	6,220.5	21,049.0	28,604.6	28,104.9

With the new 20 per cent. rise, the average increase in the goods rates since 1914 will be 3,315 per cent., but the percentage varies between 2,316 and 4,243 for different chief classes of goods, and for certain goods and distances it is over 6,000 per cent. The number of State Railway employees provided for in the 1922

Estimates is 997,055, as against 1,122,505 actually employed in 1919. Traffic in 1922 is estimated at 865 million locomotive-kilometres, against 832.4 millions in 1921 and 746.9 millions in 1920; 32.8 milliard person-kilometres, against 31.4 milliards; and goods, 53.13 milliard ton-kilometres, against 50.6 milliards. The estimated receipts in 1922 are: Passenger traffic 11.6 milliards, goods traffic 58.6 milliards, total 70.2 milliards.

ITALY.—POLITICAL CRISIS—FINANCIAL SITUATION: EXCHANGES FALLING AND CONSOLS RISING—LEVY ON CAPITAL.

(FROM OUR CORRESPONDENT.)

TURIN, February 25.

THE debate in the House of Deputies ended in an overwhelming vote against Signor Bonomi's Cabinet, but the renewed efforts of Signori Giolitti, De Nicola and Orlando to form a new Cabinet were fruitless. Signor Giolitti encountered the veto of the popular (Catholic) party, and De Nicola and Orlando refused to give their support to Giolitti in the building up of a strong coalition. At the bottom the struggle is against Signor Giolitti, the old man, who for a long time was supreme in the Government of Italy, and without whose consent no one ever dared to form a Cabinet; and against whom no one revolted, save Signor Salandra on the memorable event of the declaration of war against Austria. But for this very reason Signor Salandra was ostracised. The man who has set his face against Giolitti and vetoes his return to power is a Sicilian priest, Don Sturzo, the organiser of the popular party. A little, nervous, indefatigable man in his forties, Don Sturzo is the soul and inspiration of the Catholic party, and keeps his party under an iron hand. In the meantime, Signor Bonomi, who remains in charge until the appointment of his successor, was obliged to postpone for a few days or weeks the Genoa Conference, perhaps interpreting the secret wishes of the Premiers of Great Britain and France.

The absence of a Government and the Banca di Sconto's crisis have not been obstacles to a marked betterment in the Bourse situation. A beginning was made by the reduction from 6 to 5½ per cent. in the rate of interest on nine-twelve months' Exchequer bills. The rates on three-five and six-seven months' bills were reduced respectively to 4.75 and 5.25 per cent. This move of the Treasury was the consequence of the improved situation of the public Exchequer, whose liquid funds passed, as may be seen in the last accounts, published February 17th, from 2,173 million lire at September 30, 1921, to 2,932 millions at October 31, 1921.

However much we may regret the delay in publication, these figures are a testimony to an improving situation. The difference between the public income and public expenditure, which in July, 1921, was 145.5 million lire, in August 195.2 and in September 521.2 on the wrong side, was in October 17.1 millions on the right side. The average monthly deficit, from July to October, was 212 million lire, or at the rate of about 2,500 million lire for the whole year. The Bourses at once instinctively felt the beginning of the improvement, and the hope that an end will at last be put to the usual huge increase of public debt sufficed to give new life to prices. Senator Wollemborg has recently calculated that public debt of all classes reached at December 31, 1921, the sum of about 120 billion lire, including 21 billions of external debt, taken at the par of exchanges. If the increase had continued at the rate of 12 billions a year there would have been little hope of salvation, but the efforts to put new burdens on the shoulders of taxpayers are bearing well-won fruits: 5 per cent. Consols rose in a few days from 75 to 78-79, and 3½ per cent. from 72 to 74. Foreign exchanges are falling: pounds sterling from 95-96 to 87-88, dollars from 24 to 20, Swiss francs from 450 to 390, and the tendency is towards lower quotations.

A new Royal legislative decree was published in the *Gazzetta Ufficiale* of February 15th modifying the extraordinary levy on capital. No changes are made in the sections relating to foreigners having possessions in Italy. They remain subject to the levy. A new term is fixed for compulsory declaration of assets for all taxpayers, who

have not as yet sent their declaration or who had sent an incomplete or inexact one: June 30th for residents in Italy, July 31st for residents in Europe, and August 31st for non-European residents. The declarations in foreign countries may be sent to Italian Consulates. As the decree contains many new regulations about valuations of land, houses, and securities, and gives reductions for immediate lump payment of the tax, I think that foreigners, who are taxpayers in Italy, should carefully read this legislative decree, which is dated February 5, 1922, and bears the number 78 of the official series of laws and decrees of 1922.

CANADA.—BUSINESS CONDITIONS—CATTLE EMBARGO DECISION—WESTERN AGRICULTURE—IMMIGRATION—MERCHANTS' BANK DISASTER—FEDERAL FINANCES—MR. FIELDING'S POLICY.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 14.

BUSINESS conditions throughout Canada show only a very slight improvement since the beginning of the year. In Montreal, Toronto, and other Eastern cities wholesalers report some increase in orders from country points, houses dealing in dry goods and hardware being the chief beneficiaries. In the West, business is not improving as fast as was expected; wholesale houses, having failed to collect more than a limited proportion of their debts, have been obliged to curtail credits, and this has naturally affected their orders. The disappointing returns from the last crop have left the farmers very short of money, and their expenditure is on a very meagre scale compared with previous years. However, as the result of unfavourable crop reports in the U.S., there has been a welcome rise in the price of grain, which will help such farmers as have not disposed of their crops. The price of live-stock is also a little better. Among the cattlemen the decision of the British Government to maintain the cattle embargo has come as a serious but not altogether unexpected disappointment. There is, however, general impatience with Sir Griffith Boscawen's effort to whittle down the value of the quite definite pledge given in 1917 by Lord Ernle. The cause is by no means abandoned as lost, for it is felt that with the embargo now resting on a nakedly protectionist basis the advent to power of a Liberal or Labour administration which might have no sympathy with protection, and be interested in a reduction of the cost of living, would procure the termination of the embargo. Mixed farmers have weathered the agrarian crisis fairly well, but agriculturists who concentrated upon the raising either of grain or beef to the exclusion of other products have been very hard hit.

Immigration policy is now a subject of constant discussion. There is general agreement that the settlement of the unoccupied lands of the West is necessary, not only as a stimulus to national development, but as a remedy for the appalling railway deficits. Even if the national railways were operated up to the highest pitch of efficiency they could not find profitable traffic in areas occupied only by a scanty population. From an economic standpoint, more population is a pressing need, but it is clear that there was a large element of waste and mismanagement in the old immigration policy. It is realised that Britain would gladly see hundreds and thousands of her present people comfortably settled in Canada, but unfortunately the transference has many difficulties. Most British immigrants to Canada are confirmed urbanites, and their record as settlers on the land is not altogether satisfactory. Yet there is no room for them in Canadian cities until Canadian agriculture is extended over wider areas and able to provide more work for manufacturing industries and mercantile services. On the other hand, the spokesmen of the farmers roundly declare that it is utterly wrong to bring more agriculturists into the country until better conditions and more satisfactory markets have been provided for the farmers already in the country. Labour also shows a disposition to be lukewarm to any immigration policy. At present Canada maintains very stiff barriers, and is spending practically no money upon immigration propaganda. Complaints are heard that she is missing a great opportunity, and that Australia and

THE MERCANTILE BANK OF INDIA, LTD.

Reserve Fund and Undivided Profits ... 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.

On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

New Zealand are securing thousands of most desirable colonists who, if any inducements had been offered, would have preferred Canada as being more accessible. The C.P.R. are understood to have worked out the details of a comprehensive immigration scheme, which will require the co-operation of the Government, and the King Government will doubtless give it consideration.

On February 8th a special general meeting of the shareholders of the Merchants' Bank ratified, with a small dissentient minority, the merger of their shattered institution with the Bank of Montreal. The transaction must receive the final endorsement of the Finance Department, but there is no expectation that it will be refused. The report of Mr H. B. Mackenzie, who had investigated the bank's position last autumn, was read. Sir Montagu Allan, the president, and Mr D. C. Macarow, the manager, made explanatory speeches, some well-known counsel conducted a rigorous and illuminating cross-examination, and as a result a worse state of affairs than was at first revealed is now disclosed. It staggers public confidence to find that a leading Canadian bank could drop four million dollars financing a brokerage firm, could lose another million in an effort to save \$65,000, and could lend two million more on security which was often seriously deficient. In August, 1921, Mr Mackenzie found \$7,343,302 of "manifest and probable losses from bad debts," and as in addition over four million dollars of other debts had already been met out of the bank's reserve, the total loss to the shareholders has been in excess of 12 million dollars.

At the meeting Mr W. F. Nickle, the same politician who headed the movement for the abolition of titles in Canada, voiced a popular demand for a public inquiry "to determine upon whom the responsibility shall rest, and what amendments to the Bank Act are required to protect shareholders and also the public." The Government have so far not acceded to this request, but if they fail to grant it they will properly come under the suspicion that they have succumbed to the pressure of the other banks, who naturally do not relish the prospect of such an investigation. In other quarters it is urged that criminal proceedings be immediately instituted.

The publication of the revenue figures for the first ten months of the current fiscal year up to January 31st provide some basis for a survey of Canada's financial position. They show that there has been an ominous increase of \$69,862,971 in the total net debt of Canada, which now stands at \$2,372,585,984. The total revenue collected on account of the consolidated funds for the ten months was \$318,489,889, as compared with \$383,835,567 in the corresponding period of the previous year, which means a decrease of \$65,345,678. There has been a steep decline of about 57 millions in customs receipts, but it has, thanks to the improved machinery and the rigorous collection of arrears, been largely offset by an increase of over 47 million dollars in the income-tax returns. The other items mostly show substantial decreases. The expenditure for the ten months amounts to \$260,313,250, which is a decline of \$44,496,028 as compared with last year. But it is plain that the revenues will not come within measurable distance of the \$435 millions which Sir Henry Drayton planned to raise in his last Budget. Taking the returns of revenue now available for ten months, it is estimated that Mr Fielding will have a total revenue for the whole fiscal year of about \$375 millions, which virtually means that the railway deficit, estimated for the current year at about \$57 millions, will have to be added

to the capital debt. But the problem of the financial year 1922-23 is viewed with considerable apprehension. The business profits tax, which was abolished last May, but has yielded almost 20 millions this year, will soon cease to bring in anything, and income-tax returns calculated on the incomes of 1921, when an acute industrial and agricultural depression prevailed, will be seriously lowered. It seems altogether probable that the existing sources of taxation, unless amplified, will leave in 1922-23 a grim gap between the revenue and the irreducible expenditure of the country. Mr Fielding, the new Finance Minister, is an experienced statesman, and is at present seeking to convince his colleagues of the need of the most drastic economies. They are doubly difficult for a newly-elected administration with hungry supporters clamouring for public works of all kinds, but a good beginning has already been made by the cancellation of some extravagant contracts given by the late Government for political purposes. There will also be a drastic cut in the military and naval expenditures, and all the defence services will be consolidated under one department. Mr Fielding is widely trusted, but unfortunately he is now 73 years of age, and it is doubtful if his health will stand the strain of such an onerous department for many months.

JAPAN'S FOREIGN TRADE IN 1921.

(FROM OUR CORRESPONDENT.)

TOKYO, January 20.

THE foreign trade of Japan for the twelve months ending December, 1921, has resulted in a very heavy adverse balance; and, indeed, trade for the period was unsatisfactory in almost every way. Exports for the year fell off more than 32 per cent. and imports more than 34 per cent., the decline in total trade amounting to over 34 per cent., but the adverse balance was some 9 per cent. less than in the previous year. The total value of the nation's foreign trade for 1921 was 2,865,111,000 yen, a decline of 1,418,677,000 yen on the previous year. Exports represented a value of 1,252,241,000 yen, a fall of 696,006,000 yen on last year, while imports reached a value of 1,612,870,000 yen, a decline of 722,671,000 yen on the previous year. The following table will indicate the situation at a glance:—

	1920. Yen.		1921. Yen.
Exports.....	1,948,247,000		1,252,241,000
Imports.....	2,336,541,000		1,612,870,000
Total.....	4,283,788,000		2,865,111,000
Balance.....	387,294,000		360,629,000

Unfavourable as the situation may appear in comparison with the war years, it is an improvement of about 116 per cent. on the pre-war record as far as concerns imports, and an improvement of over 98 per cent. as regards exports. The adverse balance, however, represents an increase of 264 per cent., compared with the pre-war situation. The following figures, representing Japan's foreign trade every five years during the last decade, will indicate the truth of the above statements:—

Year.	Exports. Yen.	Imports. Yen.	Balance. Yen.
1912.....	526,981,842	618,992,277	92,010,435
1916.....	1,127,468,118	756,427,938	371,040,208
1921.....	1,252,241,000	1,612,870,000	360,629,000

A detailed examination of Japan's export trade for the past year shows that a steady decline was registered every month except November and December, and in the import trade there was a steady decline during the first seven months of the year, with a gain in each of the succeeding months on the corresponding months of the previous year. While this may be taken as a sign of improvement, there is every reason to believe that it is but a temporary turn due to abnormal fluctuations in prices. Nor is the outlook any brighter when an analysis of the year's trade is made with regard to countries. In the export trade only shipments to Germany witnessed any degree of increase, those to all other destinations being on the wane. In the import trade, on the other hand, nine countries experienced an increase of trade with Japan, which are named in the order of importance: Germany, the Straits Settlements, Siam, Canada, Asiatic

Russia, Switzerland, Portugal, Mexico, and Austria. Trade with Asia declined, while that with Europe was cut down by one-half. Trade with South America fell off by about one-tenth, and with South Africa about one-fifth.

In the export list of 1921 it is clear that beer, copper, and raw silk are exceptions to the general decline, beer showing an increase of 1,211,000 yen, raw silk a gain of 34,480,000 yen, and copper a gain of 1,328,000 yen on the previous year. All other important commodities showed a decrease, the largest decline being in cotton cloth, which fell off by 131,297,000 yen. The second largest decline was in cotton yarn, which fell off to the extent of 71,788,000 yen. Next comes a decline in silk tissues to the extent of 68,523,000 yen. The decline represents some 28 of Japan's most representative items of export trade, including foodstuffs, which fell off to the extent of 63,882,000 yen; raw materials, which showed a decline of over 60,000,000 yen; semi-manufactured articles, which declined by 187,000,000 yen; manufactured articles, which lost by 438,294,000 yen. Cotton hosiery fell off to the extent of 22,990,000 yen. The situation clearly shows that the attempts of filatures and cotton mills to maintain prices and profits by artificial restriction on production and supply are chiefly responsible for much of the adverse tendency in the trade of 1921.

Turning to the list of imports it is seen that seven important articles register increases: rice, sugar, rubber, copra, lead, woollen tissues, and machinery. The largest increase was in rice, which gained by 10,706,000 yen; next comes sugar with a gain of 9,219,000 yen, and then machinery, which gained by some nine million yen. The biggest drop on the list is in raw cotton, which went down to the extent of 283,210,000 yen; next comes wool, which declined by 89,451,000 yen; steel shapes went down by 85,521,000 yen, oil cakes by 56,997,000 yen, and pig-iron by 22,926,000 yen. Speaking generally, it may be said that foodstuff imports declined to the extent of 37,079,000 yen; raw materials, 539,256,000 yen; semi-manufactured articles by 187,133,000 yen; and manufactured articles by 8,314,000 yen. The decline in semi-manufactured goods is attributed to the decline in iron and steel. The situation clearly reflects the depression that has so long prevailed in Japanese industry as well as the high cost of living, which, comparatively speaking, is now higher in Japan than in any other country in the world. Japanese authorities attribute the general decline in export trade to a decline in the world's buying capacity, the fall in silver, the instability of exchange, and the return of western industrial nations to the markets controlled by Japan during the war, to say nothing of the abnormally high prices prevailing in Japan. With regard to import trade, it was no doubt affected by the decline in consumption in Japan as a result of depression in export trade, a plentiful supply of home food products, and a reduced consumption of fertilizers by the farmers. It may be stated, further, that as there was an adverse balance of trade in Formosa and Korea to the extent of some 65,000,000 yen, the total adverse balance for the nation will amount to more than 420,000,000 yen. Bullion movements in 1921 showed 138,620,000 yen in imports, a decline of 266,107,000 yen as compared with 1920.

Letters to the Editor.

LABOUR AND A CAPITAL LEVY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Would your Labour correspondent (page 271) be kind enough to explain what he means by this sentence:—"The Labour Party would take the view that the income-taxpayer is now reaping the results of his opposition to the 'capital levy,' which would have reduced the annual national expenditure by an amount larger than the economisers (the Geddes Committee) are likely to achieve."

Does your correspondent really think that if this Government could have laid its hands on a lump sum of £500 or £1,000 millions, it would have used the sum to

reduce expenditure? I shall believe it when housewives keep their butter in the dog's mouth and entrust the cream jug to the cat.

Surely it is only the difficulty of getting money from the taxpayer which has brought this Administration to the death-bed repentance of the Geddes Report. If we are to have retrenchment we must make it more, and not less, difficult for the Government to get money.

Even supposing that the money obtained by a capital levy was not squandered, was there any guarantee that it would be used to lower the income-tax? Mr J. A. Hobson, I believe, expressly declines to give any such guarantee, and I should agree that certain other taxes are more oppressive. What we need, in fact, is to sweep away some of the indirect taxes altogether, to halve some of the rest, and to make up the deficiency by lowering the point of total exemption from income-tax to £100 a year.

—Yours, &c.,

J. E. ALLEN.

1 Mitre court buildings, Temple, E.C. 4,
February 20th, 1922.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The sentence to which Mr Allen refers is surely clear enough. If during the boom period a portion of the war debt had been liquidated in money of a value approximating to that which was borrowed, the taxpayer would not to-day and in the future be required to pay interest on the sum liquidated and to make provision for capital repayment in money of much greater purchasing power.

As to whether the sum raised by a levy would be used to reduce expenditure, the object of the scheme would be the repayment of a portion of the debt; and no Government would dare to spend the equivalent of the interest saved in some other way.

Those who support a graduated levy on wealth can obviously give no "guarantee" that income-tax would be reduced in consequence. Mr Allen's question on this point should be addressed to the Chancellor of the Exchequer.

Mr Allen would be supported by the Labour Party in his desire to reduce indirect taxation; but his proposal drastically to reduce the income-tax limit is another story.—I am, Sir, your obedient servant,

YOUR LABOUR CORRESPONDENT.

March 1st, 1922.

Books and Publications.

THE WAR AND FINANCE.

THE financial methods adopted during the great war and their subsequent effect upon currency, credit, and the foreign exchanges will furnish a theme for economic writers for many generations to come, and we are still too deeply involved in the different problems that have been created to be able to anticipate the judgment of history upon them. The task of recording and of studying these events is, however, a most suitable one for contemporary economists, and we therefore heartily commend the very thorough compilation which has been made by the Lecturer on Finance of the New York University. This painstaking record should be much appreciated by those who wish to have in convenient form a book which gives the substance of most of the important official publications, public speeches, &c., on war finance in Great Britain, France, and Germany.

Two-thirds of the 700 closely printed pages are devoted to exposition, in which such comment as the author permits himself is mainly directed to illustrating the soundness of British methods of financing the war as compared with those adopted on the Continent. He, however, recognises that France's difficulties were due to her pre-war fiscal policy, and to the expectation of a short war, which led her to shun the task of imposing burdens on her people

Every Description of Home and Foreign Banking Business transacted.

when facing the supreme test of national existence. Germany's policy of loan finance was also conceived in the same spirit, and though efficiently carried out, proved a failure. Dr Friedman is appreciative of the efforts made in Germany since the Armistice to restore a condition of solvency under very difficult circumstances. The author has not travelled far from what may be termed the average view, and it would be unreasonable to expect a strong personal opinion over so wide a field.

In the last portion of his book, however, Dr Friedman allows himself greater latitude, and discusses the pros and cons of a capital levy, the possibility of the German indemnity being realised, and the problem of cancellation of inter-allied war debts. On this last topic an interesting chapter is devoted to rebutting both the financial and political arguments urged in favour of cancelling either a part or the whole of the debt. Under the former category he deals with the claim "that our debtors cannot pay, that the sum is too great, that the Budgets of the debtor countries have deficits, that their exchange rates are upset, that Europe can only pay in goods, and will therefore resort to dumping in the United States, and that the United States sacrificed relatively least in the world war."

As regards ability to pay it is pointed out that the resale of British investments in the United States ceased when America came into the war, and that the greater part of these investments are still held by Great Britain; and again that since the Armistice the nationals of both Great Britain and France made large foreign investments—in Germany, Austria, the succession States, and Turkey—to an amount which, though unknown, probably exceeds the interest due to the United States Government. As regards the amount of the debt, it is pointed out that the total is much less than the Premiers of Great Britain and France decided in 1921 that Germany could pay, and that foreign debt is, in both countries, a relatively small fraction of the total debt. It is true that there are important differences between domestic and foreign debt, but it is pointed out that the greater part of the debt of the South American States has commonly been held abroad. The Budget deficit argument is dismissed, on the ground that the interest owed to the United States is only 1.6 per cent. of the total Budget expenditure of France in 1920, 1.7 per cent. of Italian expenditure, and 1 per cent. of Belgian expenditure. As to the effect upon exchange rates, it is pointed out that an important cause of the unsettlement of the exchange rates is the tremendous increase in the excess of imports, which in 1920 had grown for Great Britain threefold, for France eightfold, for Italy ninefold, and for Belgium twofold as compared with 1913. The interest on the United States debt compared with these import surpluses is only 11 per cent. for Great Britain, 6 per cent. for France, 4 per cent. for Italy, and 3 per cent. for Belgium. In any case, the interest, which has been deferred for three years, has no immediate effect on the exchange. As to the relative sacrifices of the various belligerents, the facts do not bear out the argument if account is taken of the respective periods of belligerency. "In 19 months the United States incurred a national debt of 25,000 million dollars, as compared with 34,000 million dollars, the war debt incurred by Great Britain during the four years and three months of war, or a debt of 24,000 million dollars incurred by France during the same period." Or, again, "during the six months of fighting after the battle of Chateau-Thierry, the actual loss of men in the United States was relatively as heavy as that of any

of the other belligerents." The author proceeds, that the threat to Great Britain's carrying trade has been removed, the spectre of the German Navy has vanished, Britain's Colonial Empire been strengthened, and the threat to India of German intrigue in the Near East is dispelled. France has gained territory, ships, dyes, coal, German property in Morocco, and a mandate over German colonies, in addition to her claim for reparation. The United States asked for nothing and obtained nothing. "Only from the point of view of wealth did the United States make a small sacrifice, though by no means the least.....The post-war debt, expressed in terms of national wealth, is 10.97 per cent. for Japan, 12.59 per cent. for Belgium, 13.01 for the United States. Similarly, the post-war per capita debt of the United States is not the least of the Allied Powers. The per capita debt of Japan is \$22.14, of Greece \$105.25, of Canada \$189.45, of Belgium \$246.67, and of the United States \$249.38."

On the question of the dumping of European goods in the payment of debt, the author concludes that "If the Allies pay us in goods we may also ultimately have an excess of imports of merchandise, but the economic conditions of the country will have become adjusted to it. The overturn of the balance of trade is a normal phenomenon of an industrially maturing country."

With regard to the political argument, the claim that victors should not be mulcted in an indemnity is met by the assertion "that if the inter-Allied debts are cancelled America will be paying the indemnity to the European Allies." The suggestion that such cancellation should be the contribution of rich countries towards the destruction of militarism is met by the declaration that militarism is very much alive. Finally, in reply to the argument that such debts are the cause of international irritation, it is urged that "A heavy foreign indebtedness to a peace-loving power like the United States is to a degree a guarantee of the peace of Europe. The world is temporarily insured against war by reason of the fact that the unsatisfied nations of Europe will have to pay off the debts of one war before they can obtain credit to enter upon another."

The author adds one or two positive arguments, of which the most important is that, just as a bankrupt's credit though temporarily improved after composition with his creditors is really weakened for a long period by the stigma of having failed to observe his obligations, so the proposed cancellation would weaken international credit in a crucial period.

This straight talking is a very useful corrective to misconceptions of American opinion which gain ready credence on this side of the Atlantic; and though there is another view widely held in America it is well to pay attention to those American publicists who hold that "the assumptions and hypotheses put forth by the advocates of cancellation are not convincing arguments for the release of the foreign Governments from their formal obligations, although they have value in supporting an attitude of reasonableness and moderation."

THE RESOURCES OF SWEDEN.*

This book describes Sweden from an economic standpoint in order to promote her foreign trade. The first issue contains a number of general articles dealing with the geography, people, language, history, Constitution, agriculture, and natural resources, and also more special articles on mining, manufactures, banking, shipping, finance, and State and private institutions, from the Jernkontor downwards, concerned with the economic life of the nation. Some of these will reappear annually, with the figures brought up to date; others will give place to articles on other subjects, so that the whole series will have to be read together, and no volume will ever be quite obsolete. This volume makes an excellent beginning; the geographical section is specially excellent, and that on the attractions for tourists should fulfil its purpose. Incidentally information is given as to coinage, weights and measures, and the diplomatic and Consular representation. Unhappily, it has been necessary to postpone illustrations and maps.

* "The Swedish Year-Book, 1921." First year of issue. (Stockholm) A. B. Svenska Teknologföreningens Förlag. (London) Williams and Morrow. 7s 6d net.

A MINING COMPANY DIRECTORY.*

THE "Mining Manual and Mining Year Book" for 1922 is, it is claimed, the only annual book published dealing with mining companies operating in all parts of the world. This year's issue contains particulars of 1,400 mining, exploration and mining investment companies, arranged in alphabetical order. Particulars given of each company include the directors and other officials, date of establishment, seat of operations, description of the property with the purchase consideration, plant erected or in course of erection, present working results, ore reserves, details of capital, calls, dividends paid, and the financial position as disclosed by the latest accounts. Highest and lowest prices of the shares for the last three years, and also latest price, are given. There is in addition a supplementary index of private and dormant companies, and also of those undertakings which have ceased to possess market interest.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
March 14. March 15.

The feature of the week is the manner in which the War Loan, after touching 95½, rose to 97, on expectations that were aroused of the Treasury putting on tap an issue of 4½ per cent. bonds at 99. Although the rumour was thought to be a little premature, the Stock Exchange considered that it possessed elements of probability. Consequently, gilt-edged stocks, after being rather dull and heavy on the chance of an early General Election, turned better. The presentation of the Government of India accounts, showing a heavy deficit for last year, failed to stop a sympathetic improvement amongst India securities, while the lists for Home Railway prior-charge stocks show many rises on the week, money flowing readily into this particular channel of security.

Various new issues are expected to be made in the near future by French Departments and railways. The instantaneous success of the five million pounds issue of P.L.M. 6 per cent. bonds, offered at 86, encouraged the idea that two or three of the big French railways will shortly follow the example of the P.L.M. With Seine 7 per cent. bonds up to 5 premium, it would be somewhat astonishing if other French Departments failed to accept the obvious hint. French Government bonds, however, are quiet, and Germans have been weak. Chinese issues gave way somewhat sharply on the postponement of a second interest payment on the 8 per cent. bonds commonly called the Chinese Marconi loan. Brazilians have been erratic; Argentines failed to hold all the strength developed early in the week. Siamese scrip, after touching 2½ premium, recovered to 3; and amongst Chileans, the outstanding feature is a sharp rise in the 7½ per cent. scrip.

Home Railway stocks are generally firmer. The strength of the Consol market led to the Home Railway list being searched for cheap-looking stock, with the result that the Heavies advanced steadily. Scottish railways are also noticeably better, and the Welsh stocks maintain their big rises of the past fortnight. There is nothing doing in Canadian railways. Argentines are languid, prices going back on a little selling. The same dullness spread to Brazilian railways, but Nitrates were better, on the strength of the market in the producing companies' shares, brought about by statements to the effect that Germany has started to buy nitrate once more.

The Rubber market is no better, and amongst oil shares the principal activity of the week centred in Shell new preference dealings. The small investor has been liberally dealt with by the Shell Company, and the price of 2s premium offers a tempting profit to the stag. The Courtauld report led to the company's shares giving way, though the price firmed up later on; the Textile market generally kept steady, although the much-discussed "textile boom" seems to tarry on its way. The Shipping market, after a display of strength, went back a little, and the movements amongst insurance shares make a mixed showing. The Bank Share market is undecided. Eastern banking shares were depressed at the beginning of the week, though buyers at the lower prices have come along during the past few days. Electricity supply shares are mainly better, in consequence of the excellent set of dividends now declared. Gas stocks have been further rising day by day. In the iron and steel group, South Wales is still something of a seller, and armaments show no special variation. There have been numbers of improvements in the stocks and shares of trust companies, land, finance and similar undertakings, the scarcity of stock being as marked as ever.

Bloodshed occurred on the Rand in a collision between police and strikers, but prices remained quiescent, and the Kaffir market merely became rather quieter than it was before. Rhodesians are dullish, and the slight activity in diamonds has given place to stagnation. Most of the tin shares are easier, where they have moved at all. Rio Tintos fell to 25. The Russian and Mexican mining markets attract no particular interest from the public. Broken Hills are better on the week.

Stock Exchange shares, credited with £25 paid, have risen to £100. Nominations, which generally advance in value on the eve of the Stock Exchange new financial year, stand about £35 to £40. Two years ago, with business booming, £650 was paid for a nomination.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded	£228,223,330	£	£	£

TREASURY BONDS.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

P.L.M. Railway Company (Compagnie des Chemins de Fer de Paris à Lyon et à la Méditerranée).—This is an offer of £5,000,000 6 per cent. sterling bonds at £86 per cent. The principal and interest are payable in sterling in London, and the bonds will be redeemed at par before the end of 1958 by the operation of a cumulative sinking fund, beginning January 1, 1929. The company has the option to redeem at 103 on or after July 1, 1932. Payment of interest and sinking fund is secured by (1) direct obligation of the company; (2) the joint fund of the large French railway systems; (3) undertakings by the French Treasury and French State. The company was formed in 1857, and owns 25 per cent. of the total mileage of all French broad gauge lines. Its share capital is 400 million francs, and the outstanding bonded debt consists of 16,131,601 bonds of 500 francs each. None of these bonds carry any special security, nor is any part of the railroad or assets specifically pledged, and the company undertakes not to pledge any assets without placing holders of the present loan on equal terms with such creditors. This is a well secured foreign railway bond, and deserved its popular reception.

Belfast Corporation 5½ per Cent. Stock.—Issue of £1,000,000 stock at £96 per cent. This stock will be redeemed at par on July 4, 1947, but the corporation has the option to redeem at par on or after July 4, 1937, on giving three months' notice. The corporation is bound by statute to pay into a consolidated loans fund every year the aggregate amount of all "dividends" payable in that year, and such further sums as shall be sufficient, with accumulation of interest, to redeem all issues of corporation stock at the end of the prescribed periods. For this latter purpose, a sum exceeding

BRITISH BROKEN HILL.—Mill returns for fortnight ended February 25th: 7,608 tons crude ore produced 1,400 tons lead concentrates, containing 855 tons lead and 35,700 ozs silver; also 1,020 tons zinc concentrates, assaying 9.3 per cent. lead and 10 ozs silver per ton; also 455 per cent. zinc.

BROKEN HILL SOUTH.—Four weeks ended December 31st: 12,210 tons of crude ore were treated, assaying 14.8 per cent. pb., 6.9 ozs ag. and 13.3 per cent. zn., producing 2,245 tons concentrates assaying 67.3 per cent. pb., 25.4 ozs ag. and 7.7 per cent. zn. Of the foregoing 1,926 tons came from the lead-concentrating mill, assaying 67.8 per cent. pb., 22.7 ozs ag. and 7.8 per cent. zn., and 519 tons were produced from current slime, assaying 64.4 per cent. pb., 41.6 ozs ag. and 7.3 per cent. zn. 8,643 tons of dump slime were treated, assaying 10.8 per cent. pb., 67.7 ozs ag. and 35.3 ozs ag. and produced 1,226 tons concentrates assaying 48.2 per cent. pb., 12.7 per cent. zn. and 1.6 per cent. sn. The despatches of zinc telluride were:—To Zinc Corporation, 25,020 tons; to Anglo-American, 1,000 tons; to Anglo-Siam, 1,000 tons.

ELECTROLYTIC ZINC CO. LTD., Australasia, Limited.—Cable dated March 1st: Production for the period November 22 to December 14, 1921—322 tons silver and lead product, for shipment to Port Pirie for realisation, containing 21 tons lead, 15,693 ozs silver. Production for four weeks ended January 1922—1,235 tons zinc and silver product for realisation containing 35 tons lead and 31,407 ozs silver. Production for four weeks ended February 8, 1922—400 tons zinc and silver product for realisation containing 223 tons lead and 36,377 ozs silver.

THE MERCHANTS' TRUST, LIMITED.

MR ROBERT BENSON ON NATION'S FINANCIAL POLICY.

EFFECTS OF DEFLATION.

SPECULATION. AND THE BANK RATE.

The thirty-third ordinary general meeting of the company was held at Winchester House, Old Broad street, London, E.C., on Monday, the 27th ult., Robert Benson, Esq. (the chairman), presiding.

The Chairman, in moving the adoption of the report, said: Gentlemen,—The net income, after payment of expenses, taxes, and fixed charges (interest on debenture and dividend on preferred stocks) is £59,238, or the equivalent of 12½ per cent. on the ordinary stock. We recommend a dividend of 9 per cent. and to carry forward the balance of £16,026, making a total carried forward of £48,230.

THE AFTER EFFECTS OF DEAR MONEY.

You will naturally be asking—why not 10 per cent.? Now we are quite as desirous to pay 10 per cent. as you are to receive it; but 1920 and 1921 were critical years, and will have after-effects. The experiments of the deflationists have contributed to beggar many, labour included; and though the process of arbitrary deflation, instead of a natural down-grade of prices as supplies of commodities increase, is unpopular now, and money is easy with a 4½ per cent. Bank rate instead of 7 per cent., we are not yet out of the wood.

The ex-Governor of the Bank, as Mr Chamberlain stated on November 10, 1919, "convinced him of the necessity of raising the rate to 6 per cent." Sir Charles Addis, speaking on November 8th last, on his inauguration as President of the Institute of Bankers, and with all the authority of a director of the Bank of England and member of the Cunliffe Committee on Currency and the Foreign Exchanges, warned the City of London that "the process of reduction of currency notes is to be continued." And he went on to quote the Chancellor of the Exchequer, that is Mr Chamberlain, as having stated (December 15, 1919) that: "It is his intention to continue the policy of accelerating the process of reduction, as opportunity offers, by further transfers to the credit of Currency Note Account of Notes from the Banking Reserve of the Bank of England." Do the present Chancellor of the Exchequer and the present Governor of the Bank endorse these belated quotations from their predecessors? What are the Treasury officials saying? It is important for the City of London to know.

THE BANK RESERVE BELOW 8 PER CENT

You realise that it was this policy of transferring Bank of England notes to form part of the Reserve for Currency Notes which reduced the Bank's Reserve at one time below 8 per cent. and scared the outside world. It had the same effect as an export of gold, depriving the Bank of the most saleable thing in the world, and therefore the best reserve in case of need to support the value of sterling exchange. Instead of maintaining a liquid stock of gold, these transfers locked it up where it is merely a window-dressing. Thus we have had the anomaly of a 7 per cent. rate leading not to an import of gold as in pre-war days, but to what was tantamount to an export. It would be wiser to wait till our position as a creditor nation is restored, along with a free market for gold, before monkeying with the banking reserve and the Bank rate, whose "effectiveness" Sir Charles emphasises "as an instrument for contracting speculative credit and reducing the inflation of prices." Indeed, so effective was it that prices "fell three times as quickly as they had risen." Whether *post hoc* or *propter hoc* he wisely did not pause to inquire.

THE WRECKAGE OF DEFLATION.

The point I am making is that before raising your dividend to 10 per cent. we must ascertain the extent of the wreckage caused by these official experiments and their effect upon the dividends to come from British industrial investments. The deflationists are "laying low" just now, being somewhat alarmed at their handiwork. But Sir Charles Addis's warning is explicit, to the effect that they have a rod in pickle, as opportunity offers, to check what they call "the speculative expansion of credit," forgetting that "a country without speculation is a stagnant marsh." Rise of prices may not be speculative at all, but due to an actual shortage of new supplies—the consequence of reduced production of commodities of which the world was, and still is, in dire need. But producers have been scared by the slump. Thus the American

cotton crop in 1921 was about half the pre-war number of bales. Why? Because of the slump in prices.

A Bank rate put up arbitrarily and intended to punish speculators must be distinguished from a rise in the Bank rate in pre-war days. It is time for the Old Lady of Threadneedle Street to stop sending her disciplinarians round with instructions to "Go and see what Tommy is doing and tell him not to." The $4\frac{1}{2}$ per cent. rate of to-day is the result of industrial stagnation, as after the Baring crisis of 1890, when the rate came down to 2 per cent. A lower rate now than $4\frac{1}{2}$ per cent., to encourage speculation in the best sense, is a condition precedent of the renewal of employment.

AFTER THE ARMISTICE

You remember the fair prospect after the Armistice when war production began to give way to peace production. Expansion of credit for war purposes appeared to have ceased and Government borrowing to be limited to finding the £244,000,000 needed to balance the Budget, and to cases where for reconstruction purposes State guarantees, or subsidies, had to be given, or subscriptions of capital for key industries.

Thus it seemed that the larger portion of Government borrowings would not be disbursed so as to create fresh deposits or renew old ones, but would be used to repay Ways and Means Advances at the Bank of England and Treasury bills held by the banks. If used to repay ways and means, the supply of deposits would be contracted much more rapidly than if used to repay Treasury bills, and the money market might again become even more capricious than when it depended on the manipulation of gold. That was the position which confronted your directors in the spring of 1919. We saw clearly that if the theory of the Cunliffe Committee was to be put in force, viz., "Raising the Bank rate in order to check a drain of gold abroad and the speculative expansion of credit at home, together with limitation by law of fiduciary note issues," our money market would become more rigid than Peel's at the very time when expansion by means of gold imports had ceased to exist. Therefore, it would be time to sell everything and buy money. But if, on the other hand, a supply of money—currency notes and loans with their correlative deposits—were provided to meet all legitimate demands of trade and industry, *pari passu* with the cessation of Government disbursements and the natural contraction of deposits as prices fell, then public confidence would not be imperilled, and reconstruction would proceed smoothly. But in April, 1919, prices ceased to fall and began to rise again. Costs of production, and consequently prices, became higher than consumers could pay. By March, 1920, the *Economist's* Index Number (wholesale) touched its highest point, viz., 325, against 100 in July, 1914.

THE DEAR MONEY POLICY.

Upon this situation the 7 per cent. Bank rate was maintained. It was a public announcement that a policy of restriction had been adopted with a view to lowering prices, and thereupon the consuming public decided to suspend purchases till the fall matured, thus greatly accelerating and intensifying the fall, and leading to a state of frozen credits which completely defeated the desire of the banks to liquidate their position.* You can see the precipitate slump in prices owing to what may be called a consumers' strike from 321 in April, 1920, down to 167 in January last, in the chart and statistics that accompany the report of this meeting, compiled for us by Mr John A. Todd, of Balliol College, and which you will find of permanent value whenever the official policy comes up for judgment at the bar of history. Was the slump *post, or propter* the 7 per cent. rate? However this may be, war loans and Government credit slumped too. The Government, as the largest borrower, had to pay 7 per cent. instead of 5 per cent. on some 1,300 millions of floating debt; all trade was penalised; production was checked; general depression ensued; unemployment became acute; doles were multiplied; the banking system got tied up with frozen credit.

THE MANIA AGAINST SPECULATION.

That is what the mania against "speculation" has cost. Are the deflationists going to be allowed to play this game again? Are they incorrigible, and still to be taken seriously? For the present

* *Anglo-Italian Review*, December, 1921, p. 199.

the experiment of deflation in a hurry is closed. Ease of money has superseded tightness, and the recovery which has taken place in Government credit and gilt-edged securities is proceeding to the next grade, and so on. As in the spring of 1919 it was time to sell securities and buy money, so now, apparently, it is time to sell money and buy securities.

But the rise in the stock market is not based on increased prosperity of the country; it is based on idle money because trade is idle—that is, upon unhealthy conditions. Nor is the rapid rise in sterling exchange an entirely favourable symptom. What will happen when the Americans begin to sell the sterling they have bought? Some opportunity may occur for the tight money party to regain control of the money market.

Suppose they put the Bank rate again to 7 per cent. Will the American who has bought sterling leave his money here to get a rate of interest, or will he make haste to take it away before his capital is affected? Probably the latter, for speculators think more of capital profit or loss than of income. But we don't know. We are landed in a monetary system more rigid than Peel's, for a rise in Bank rate no longer commands gold and brings relief. It is no use going back to the past, or what they call "the normal," along with the Cunliffe Committee; we have got to face the present and go forward.

In the pre-war days the balance of trade was fairly close to equilibrium all the time (including invisible items which were more or less permanent), and any temporary balance was met by credit movements—not necessarily gold movements. But now international war debts, and reparations, dominate the balance of trade. The tail is swinging the dog.

We are back in 1844, when the address of the thirty bankers was presented to Peel, pointing out that "in the practical working of a system of currency acting (as he proposed) as if it were exclusively composed of metal, there will be moments when sudden voids will be created in the circulation, which under such a system cannot be provided for with sufficient readiness, and which, if not in some way provided for, may be the cause at times of a total suspension of business throughout the country."

Much more is this true to-day, when the elasticity of Peel's system, viz., the command of gold, has ceased. Nothing but State credit in the form of a supply of Treasury bills continually maturing in the hands of the clearing banks, and acting as their second line of defence, enabled them to deal with the recent crisis. The Chancellor complained that he was not master in his own house. It was fortunate.

It is hoped that our authorities will remember that for reconstruction purposes the rigidity of currency or rapid contraction of credit may be even more dangerous than expansion, which was the natural and inevitable consequence of war.

The report was unanimously adopted.

SPARE COPIES OF THE CHART AND STATISTICS CAN BE OBTAINED AT THE COMPANY'S OFFICE, 4 CROSBY SQUARE, E.C. 3.

PRUDENTIAL ASSURANCE COMPANY, LIMITED.

TOTAL ASSETS INCREASED BY OVER £10,000,000

LARGE INCREASE IN INCOME.

The annual general meeting of the Prudential Assurance Company, Limited, was held on Thursday, March 2, 1922, at the chief office, Holborn Bars, London, Mr A. C. Thompson, the chairman of the company, presiding.

The secretary, Sir George May, K.B.E., having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen,—I now have the pleasure to present to you the report for the 73rd year of the company's operations. This report reflects, like many of its predecessors, the general commercial and economic conditions which the nation has experienced during the period under review.

That this must inevitably be so will become clear from a consideration of the magnitude of the figures and the wide range of Prudential activities.

In my address to you a year ago reference was made to the period of trade depression upon which we were even then entering. We did not hide from ourselves the fact that this depression was likely to prove of a serious nature, and I regret to say our anticipations in this respect have unhappily been realised. This depression was due primarily to the inevitable reaction from an abnormal period of apparent prosperity. In addition, the depression and consequent unemployment which naturally followed were much aggravated in the early part of the year by trade disputes, which indeed at one time threatened to bring the commerce of the country to a standstill.

CONCESSIONS TO POLICYHOLDERS.

Our policyholders in the industrial branch found it difficult in many cases to maintain their premium payments. Your directors, therefore, after careful consideration delayed lapsing policies when

it appeared that the inability to pay premiums was due to unemployment or distress.

Instances may, however, arise in which the assured are unable, owing to prolonged unemployment, to pay the arrears due. In such cases the company are willing to assist the policyholders in the industrial branch by cancelling the arrears and reducing the sum assured under whole life assurances, or extending the term of War Bond and other endowment assurances. Due provision has been made in the valuation for the cost of this concession.

In view of the difficult conditions, the results secured by the company in the past twelve months must be considered to be as remarkable as those previously achieved, even though the actual figures may in some instances fail to create fresh records.

TOTAL INCOME OF THE COMPANY.

The total income of the company for the year, as shown by the accounts, was £31,112,827, an increase of nearly two and three-quarter million pounds over that of the previous year. The various items which make up this income and the sources from which they arise are as follows:—

Premiums Industrial Branch	13,998,392
Premiums Ordinary Branch	9,367,063
Premiums General Branch	686,299
Consideration for Annuities granted	109,661
Interest and dividends	6,274,065
Payment received for administration of the Approved Societies	677,347

£31,112,827

A comparison of these figures with those for 1920 shows that an increase, in some cases a substantial increase, has been obtained in the income from every one of the sources mentioned.

INDUSTRIAL BRANCH.

In the industrial branch the increase in the premiums received over those for 1920 was £1,006,784. This figure is not so large as that shown in the two preceding years of active trade; it is, however, satisfactory to note that not only is the increase in this branch for 1921 greater than that for any year prior to 1919, but that it actually exceeded the increase for this branch in the whole quinquennium immediately before the war.

ORDINARY BRANCH.

The year's business in the ordinary branch is equally satisfactory. The new premium income is £1,138,447, which, while not so large as in 1920, is more than double that of our best pre-war years. The number of policies issued during 1921 was 93,522, assuring the sum of £15,968,378, of which £6,240,376 was for sums assured of £500 and over. The new sums assured are not so great as those for 1919 and 1920, which were our previous best years, but are sufficiently impressive to indicate the confidence of the public in Prudential Life Assurance.

Ten years ago the average sum assured for policies issued in that year was £93. In 1921 it was £171. This constitutes a fresh record, and lends emphasis to my previous remark.

LIFE ASSURANCE WITHOUT MEDICAL EXAMINATION.

It has been the aim and the practice of the Prudential to extend the comfort and protection of life assurance to those who have previously refrained or have been excluded from obtaining these benefits owing to their dislike of medical examination or by reason of actual physical disability. I mentioned in March last the steps we had taken in granting assurance to persons of subnormal health; during the past year these have been continued with results satisfactory to all concerned. For those who dislike medical examination we have hitherto endeavoured to provide by the issue of special forms of assurance which did not necessitate the intervention of the doctor. During last year we offered to consider proposals without medical examination under our most popular tables subject to some limitations in the amount of assurance and in the cover given in the first two years of the currency of the policy. The amount of business done with those who have taken advantage of this offer is very considerable, and the experience has proved satisfactory. Judging by the results already available, we are satisfied that we are supplying a real demand of the assuring public, and also that we are justified in extending the scope of the scheme. There is little doubt this will be appreciated by prospective clients, and will prove mutually advantageous.

CLAIMS.

During the past year the total amount paid by the company in claims and surrenders was more than ten and a-half million pounds in all branches inclusive. This is rather more than £1,200,000 in excess of the previous year's total, and includes a sum of no less than £4,118,713 paid under matured endowment assurances in the ordinary branch. The amount paid in death claims in the ordinary branch was £1,634,290, and in the industrial branch was £3,128,068.

We learn from the Registrar-General that the death-rate in the United Kingdom during 1921 was lighter even than that of 1920, the previous lowest on record, and this has also been our own experience in the industrial branch, notwithstanding the increase in the claims paid. In this branch the death claims were £13.24 per £1,000 of the sums assured at risk as compared with £13.55 per £1,000 in 1920. The ordinary branch naturally shows lower rates of mortality than the industrial branch, because the bulk of the assurances in the latter branch are of necessity granted without the advantage of the company of medical selection.

VALUATION REPORT.

Turning now to our liabilities, you will see from the valuation report that the company holds as a total reserve against all future liability under its insurance contracts the sum of £127,184,621, in the ordinary branch £61,379,431, in the industrial branch £65,269,505, and in the general branch £535,685. The total increase in the reserve held in the three branches collectively is just under ten million pounds sterling.

ORDINARY BRANCH BONUS.

The surplus shown in the ordinary branch is £1,779,146, of which £500,000 has been added to investments reserve fund, and £993,453 has been allocated to the with-profit policyholders. This is sufficient to provide a reversionary bonus of 26s per cent. of the sum assured for the year, being an increase of 6s per cent. on the bonus declared last year. We have every reason, after careful consideration, to believe that we are leaving behind us the lean years resulting from the war, and that the continuous progress in our ordinary branch bonus, so violently interrupted in 1914, will be resumed.

You will see from the valuation report that in the industrial branch the surplus is £1,309,096, this being a substantial increase over the corresponding item for last year. Of this amount, £300,000 has been added to the investments reserve fund and £200,000 has been carried to the common contingency fund. Under our profit-sharing scheme the sum of £200,000 is available for distribution among the industrial branch policyholders who are entitled to participate, and £50,000 will be distributed among the outdoor staff.

INDUSTRIAL BRANCH BONUS.

You will remember that the method adopted before the war of distributing the policyholders' share of profits was to declare a bonus payable only on the claims arising within the year in which the surplus was distributed. Now that it is possible again to put the scheme into operation, we desire to effect an improvement, so that, instead of the bonus being a mortuary benefit limited to the year of distribution, provision shall be made so that the additions may ultimately become permanent. This ideal is impossible of immediate attainment, but it is hoped in the course of a reasonable period to pass completely from one system to the other. As a step towards this end we are this year distributing the policyholders' share of the surplus as an addition of 2½ per cent. to the sum assured under all claims emerging whether by death or maturity of endowment during the two years, March 3, 1922, to March 6, 1924, provided that premiums have been paid for ten years and upwards, and that the policy was not issued with the express condition that it would not participate under the profit-sharing scheme. It is hoped further to extend year by year the period over which the bonus is spread. That is to say, it is the intention, so far as surplus is available in 1923, to spread any industrial branch bonus, which may then be declared, over a period of three years, and in the following years over a period of four years, and so on. When the accumulation provides a bonus of 10 per cent. on policies on which ten years' premiums have been paid, it is intended to apply the surpluses to increase bonuses on policies of longer duration, until a bonus of 1 per cent. for each year of duration has been attained. It must, of course, be understood that I am not attempting in any way to forecast the future rates of bonus, but merely indicating the method which we intend to pursue in allocating any profits available.

POPULARITY OF ENDOWMENT ASSURANCE.

In our ordinary branch we paid during last year more than four million pounds sterling under matured endowment assurances, and it is interesting to note that the popularity of this form of policy is rapidly extending to the industrial branch. There is a real demand for a policy which combines life assurance with a means of saving, and which normally will result in the assured securing the benefit of his thrift in his own lifetime. The rate of expense entailed by weekly or monthly collections of premiums has hitherto made it impossible to offer a table sufficiently attractive from the investment or savings point of view, but that difficulty is being solved by the success attending our efforts to improve the methods and reduce the costs of administration. We anticipate that endowment assurance benefits offered in the industrial branch will steadily improve and become entirely comparable to those offered in the

ordinary branch, subject only to whatever reasonable difference is caused by the unavoidable and irreducible cost of the additional services rendered.

MODEL POLICY.

During the past year a new endowment assurance table was added to the attractions offered by the industrial branch: it marks a further endeavour to supply the type of contract needed by many of our clients, both existing and prospective, and under the title of the "Model Policy" it has already achieved considerable popularity.

INDUSTRIAL ASSURANCE BILL.

Since our meeting a year ago a Bill has been introduced into Parliament based upon the Report on the business of Industrial Assurance by the Departmental Committee, presided over by Lord Parmoor. Many of the clauses of the Bill attempt to make general some of the improved conditions and benefits which have already been introduced by the most successful of the organisations engaged in the business, but there are other clauses to which fundamental objection must be taken, and which are receiving, and will receive, our close attention.

No real reform of the system under which industrial assurance business has been conducted in the past can be secured merely by the legislative adoption of principles which, however desirable in theory, arbitrarily regulate the rate of expenses or the division of profits or by any amount of autocratic inspection.

Real reform is not only highly desirable, it is absolutely necessary for the true welfare of the business, but it must be based upon sound commercial principles.

The main difficulty to be surmounted is not new; it arises largely from the unavoidably heavy cost of collecting the premiums. At the present day there are thousands of agents or collectors engaged in business similar to our own who could without increased labour collect three or four times the amount they are in fact collecting if the area over which they have to travel were sufficiently circumscribed.

BLOCK SYSTEM.

This is the problem to solve which the Prudential experimentally introduced in 1912 the block system of collecting; the problem in our case did not present so great a difficulty as in the case of other industrial companies or societies, because, being the largest organisation of the kind, a given area yields us on the average a larger sum in premiums; but, even so, we have a number of agencies where the advantage of the block system is inconspicuous owing to the population being so widely scattered.

In my opinion our business was only just large enough to enable us to derive the full advantage of the block system; the advantage already gained would have been more easily recognised in our expense ratio had it not been for the increased cost of labour and material which has prevailed during recent years. The system now applies to 89 per cent. of our collections, and we are convinced that in the near future it will enable us to effect further important reductions in the cost of conducting the business.

In 1913, when the premium income was £12,806,009, our staff outside the chief office numbered 20,475. Now that our premium income is £24,051,754, the staff numbers 14,408. We have already been enabled to increase salaries, to the general contentment of our staff, while at the same time realising a very considerable economy.

FINANCIAL CONDITIONS.

For many years past your chairman has had to speak of depreciation in securities, and it is therefore with pleasure that I am able to report a very considerable appreciation for the year 1921. Last year I told you that the depreciation for 1920 was the heaviest we had ever had to face, and it will therefore be very gratifying to you to hear that on December 31st last the depreciation of the year 1920 had been considerably more than wiped out, and that since December 31st further considerable improvement has taken place.

Although this is the case, it is still necessary to carry amounts to investment and other reserve funds in order that we may regain the strong position we held before the war, and without which our difficulties which arose out of the war would have been greatly increased. As already mentioned, we have therefore this year credited £500,000 in the ordinary and £300,000 in the industrial branch to the investment reserve funds, and £200,000 to the common contingency fund. Apart from writing down securities, the investments reserve funds would thus have been increased to £3,000,000 in the ordinary branch and £1,900,000 in the industrial branch. Since, however, we have applied £1,000,000 and £400,000 in the respective branches to writing down securities the figures stand in the balance-sheet at £2,000,000 and £1,500,000 respectively. The sums used in writing down have in the main been devoted to the reduction of the ledger values of securities of a permanent nature.

The common contingency fund stands at £400,000, and is appli-

cable on the direction of your board to the support of any or all of the branches.

RATE OF INTEREST EARNED.

Our general branch assets now amount to £700,000, of which nearly £600,000 have been invested during the last few years, and the ledger values are considerably under the market values. Our total assets now stand at the large figure of nearly £1,350,000 and the rate of interest earned on the assurance funds during the year was £4 6s 6d per cent., after deducting income-tax. This compares with the yield for 1920 of £4 4s 6d, thus showing an increase of 2s per cent.

INCREASE IN FUNDS.

You will see from the balance-sheet that our assets show an increase of about £10,000,000, but the actual amount of new investments during the year was very much greater.

The rate at which these vast sums are invested is, of course, of the utmost importance, and the responsibility for their investment is a task of no mean magnitude to your board. A guiding principle in their policy is to ensure as far as they are able the safety of the capital.

GENERAL BRANCH.

I have already quoted the amount of premiums received in our general branch, and a comparison of this with the corresponding item for 1920 shows an increase of £463,634. Last year we were satisfied to be able to report that in this branch we had secured double the premium income of 1919, and our satisfaction should remain undiminished, seeing that we have during 1921 succeeded in doubling the premium income of 1920. The increase in our premium income in this branch is due to our constant endeavour to develop this class of business on sound lines, and notably to our entry into marine insurance, which, as I told you last year, we are transacting through the medium of the Royal Exchange Assurance. It is impossible to declare at the present moment to what degree this business has been profitable, since a considerable proportion of expected claims is not ascertainable immediately. Marine insurance business, as many of you know, has been passing through a difficult time, and, moreover, we only commenced the business on January 1, 1921. In these circumstances, it would be inadvisable to express any opinion on the results, except that our underwriter is satisfied that our business is up to the average of its class.

GENERAL BRANCH RESERVE.

Whilst our general branch business is making satisfactory progress, we still feel that the wise course is to reserve the whole of the balance of income after payment of claims and expenses. We feel sure that it will be readily recognised that the adoption of this course is to the advantage of everyone interested in this branch of our business, whether it be as a present or prospective policyholder or as a shareholder, even though to the latter it means further deferment of declaration of dividend on the "B" shares.

We have now gained very considerable experience, and several new departures in our methods of obtaining and conducting general branch business are being inaugurated. These changes are largely matters of internal organisation, but we think you should know at this, the earliest possible moment, that we propose to become a tariff office.

FURTHER DEVELOPMENTS.

At the present time, owing to various causes, it is apparent that there are exceptional opportunities for extending our general branch business, more particularly by means of re-insurance treaties, both home and foreign. It is felt that we should be lacking in foresight, and should not be serving the best interests of all concerned if we failed to take advantage of these favourable circumstances.

We have been offered by the Liverpool and London and Globe Insurance Company valuable re-insurance treaties for fire insurance business in the United States of America, and these we intend to accept.

For the more convenient transaction of this business it has been found advisable to form a subsidiary company in the U.S.A., the share capital of which will be held by this company. Other valuable re-insurance treaties for home and foreign business already placed at our disposal and the extension of our business by means of direct agencies will be undertaken by our general branch in the ordinary course.

It is felt that this extension of business, although backed by the reserve held in our common contingency fund, will be more properly represented by a larger paid-up capital, and we therefore propose to call up a further 2s on our "B" shares during the present year by means of two separate calls of 1s each.

INCOME-TAX.

One of the subjects uppermost in the minds of business men at the present time is the high rate of income-tax now prevailing. Income-tax is a matter that affects the whole community, even

that portion of it which does not receive a direct assessment. Manufacturers, distributors, and retailers each in their turn are assessed for income-tax, and it follows that the higher the rate of tax levied the more difficulty these sections of the trading community have in conducting their business. Trade is in consequence much curtailed, prices are maintained at too high a level, and the purchasing power of the general public is considerably reduced. The holders of the 25 million Prudential policies at the present time in force in the United Kingdom are drawn from all classes, and are, of course, seriously affected by the adverse influences which the high rate of income-tax has on their business and domestic finances. I think that our industrial and ordinary branch policyholders in the main probably realise this, but it seems possible that the effect upon their individual life assurance contracts is only very imperfectly understood. In our ordinary branch the with-profit policyholders receive 90 per cent. of the divisible surplus, while in the industrial branch, now that the fixed dividend is again being paid to shareholders, the participating policyholders are entitled to two-thirds of the surplus profits. Our policyholders should, if they consider the magnitude of our invested funds, realise that the extra benefits to be received at the termination of their contracts will be considerably affected by the rates of income-tax prevailing from year to year.

NATIONAL ECONOMY.

One of the chief causes of the present rate of tax is the heavy expenditure now involved in the administration of the various national services. During the past few weeks considerable light has been thrown on the various items which go to make up this expenditure, and recommendations for drastic curtailment have been made. While expressing no opinion as to the merits of the individual recommendations made by the Geddes Committee, we do feel that in substance an unanswerable case has been made for the overhauling of our national expenditure in order to effect the economies necessary if the rate of income-tax is to be reduced. In our opinion the future welfare of our country depends very largely on the lead that is given in this matter and to the extent to which such lead is followed by the nation at large and its business organisations.

The Prudential is one of the foremost financial institutions in the country, and the references I have already made to our efforts to improve our organisation and effect economies is sufficient to indicate, I think, that the Prudential in this great matter will play its part.

Although your board fully recognise the present unsettled state of the world, and realise the vast number of problems remaining unsolved, and although they see before them a period of unsettled conditions, with its attendant fluctuations, they feel that, on the whole, the tendency will be for improvement, and having regard to the present position of the company, they look forward with every confidence to the future.

The Chairman concluded by moving the adoption of the report and accounts.

Mr Edgar Horne (the deputy-chairman) seconded the resolution, which was carried unanimously, and the usual formal business terminated the proceedings.

NORTH BRITISH RAILWAY COMPANY. UNFAIR TREATMENT FROM THE GOVERNMENT.

The annual general meeting of the North British Railway Company was held, on the 24th ult., at Edinburgh, Mr William Whitelaw (the chairman) presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: The salaries and wages bill of the company for the year 1921 was £6,023,148, compared with £1,660,154 in 1913, an increase of £4,362,994, equal to 263 per cent. The Government having put us, by their interference with our management, into a financial quagmire calmly declined to do anything to help us out of it. The sum of 60 millions, less a large amount of income-tax, granted by the Government to the railway companies under the Railways Act, was, in my view, much too little to be regarded as a fair substitute for our claims under the Act of 1871, but in any case it had nothing to do with the wage bill. Railway labour declines to help by submitting to reductions in remuneration similar to those accepted by miners and workmen in many other trades, and traders decline to open their steelworks or put in their blast furnaces unless they get reductions of rates. Obviously, the situation is a difficult one to handle. After prolonged investigation of the whole problem, we have recently decided to make certain reductions in rates for coal carried to steelworks, blast furnaces, and oil works; for steel in class B and for shale and crude oil between pits and works; we have also made some concessions in dock charges and demurrage, and have agreed to a reduction in rates for home-grown pitwood; in this way we hope

to contribute to the re-establishment of some of the staple trades of Scotland.

Doubtless the shareholders are more concerned about the continued refusal of the Government to pay the money they are withholding from us, which has caused, and is causing, very great hardship to so many of the proprietors. Having succeeded in justifying, on its merits, every penny of the claim we submitted to the Arbitration Court, we have been held up by an adverse decision upon a legal point. The whole case, therefore, will have to be submitted afresh to the Railway and Canal Commission as soon as the final claim has been put in and examined by the Ministry of Transport, or whatever other Government Department takes its place on the happy and timely conclusion of that ruinous experiment in bureaucratic government. Nevertheless, we have just reasons for thinking that our company has been and is being most unfairly treated by the Government. The whole real matter of dispute concerns the amount spent in repairing our rolling stock in 1920 and 1921; there is not, I believe, another point which cannot be settled without recourse to legal proceedings. The persistent refusal of the Ministry of Transport to allow this one matter of serious dispute to be decided without the delay involved in waiting for the final account covering all the items of all the years of Government control is, in our view, most unreasonable. Let me remark, in passing, upon a point which has never yet been cleared up in public, and to which in his judgment the Lord President drew attention. *Why, it has been asked, was the North British Company's claim for rolling-stock expenditure so much greater than that of any other company? We now know that this question should never have arisen, because it now turns out that our percentage of excess was not greater than that of some other companies.* Since we were in Court we have discovered that among the Scottish companies alone there were two which were more in excess than we were.

We have during the last few months done what we could to obtain reasonable treatment from the Government. The outcome of all this is just nothing. The Ministry persist in adhering to the power which they claim has been given to them by the judgment of the Court of Appeal to delay any hearing of the real dispute until the final claim for the whole period of control can be submitted, although they are perfectly well aware that there is no point calling for settlement by litigation except the single one of our expenditure on repair of rolling stock. The final figures of this expenditure are known, and the matter can be submitted to the Railway and Canal Commission without delay if the Ministry will waive their technical right to hold up the whole case. I would like every shareholder fully to appreciate this point, because whatever plausible reasons the Ministry may put forward in answer to our claim and our complaints of unfair treatment, their refusal to let the arbiters deal without delay with this question of our expenditure on our rolling-stock is altogether indefensible. The shareholders will readily understand that our final claim for a period of over seven years must necessarily contain a mass of detail involving time and labour in its preparation. *The real dispute is a sharp and isolated one, and all the Ministry say, and can say, to our request is that they have the legal right to have the whole final account tried at one time, and that they are not going to waive that right.*

The report was adopted.

SELFRIDGE AND COMPANY, LIMITED. MR SELFRIDGE ON THE DIFFICULTIES OF THE YEAR. BUSINESS CONDITIONS AND PROSPECTS.

The 14th annual general meeting of Selfridge and Co., Limited, was held, on the 27th ult., at the company's store, Oxford street, London, W.

Mr H. Gordon Selfridge (the chairman and managing director) presided.

The secretary (Mr A. H. Youngman) having read the notice convening the meeting,

The Chairman said: The 12 months just past have brought little joy to the merchant and man of business, unless indeed he finds pleasure in tackling a difficult proposition and wrestling with it against very heavy odds.

If looked upon as a sport or game—and this is always our attitude toward that fine thing called business—the past year has provided a rough field upon which swift playing has been next to impossible, or, to change the simile, it has been like a river upon which a race must be rowed, but against a strong tide and heavy wind.

LARGE INCREASE IN CUSTOMERS.

1921 has, for the most part, been a year of declining prices and a growing disinclination on the part of the public to buy any but the real necessities.

Our increase in yardage or in numbers of articles sold over 1920 or any previous year is very large. The actual increase in customers or in individual transactions is over 1,700,000, but the decrease in values has made it less easy to show an increase in actual returns. It has also been a period of abnormal departmental expenses.

Prices which began to drop in June and July, of 1920, continued their downward course until about October or November of 1921, by which time values of general merchandise—except food—showed signs of becoming stabilised. There have been few reductions since then, and it must be remembered that the daily prices quoted by ourselves and some of our neighbours have, for some time, been lower than could possibly be named by manufacturers or wholesale sellers unless they were overstocked and were prepared to take the loss—in other words, the consuming public has received the full benefit of our very low prices.

We do not desire continually to keep referring to matters and decisions which have passed, but we may perhaps once again and finally say that it is owing to the fact that we thought we saw signs of the end of rising prices and the possible resulting slump as far back as April or May of 1920, and acted accordingly, that this house has been so agreeably circumstanced ever since. But let that go.

BALANCE-SHEET FIGURES.

Now as to the figures themselves as shown by our 13th balance-sheet, which has now for some days been in each shareholder's hands. The profit as shown for the year is £342,665, and this amount includes £50,000 as a credit on over provision of excess profits duty. We have not finally settled with the Inland Revenue. Authorities concerning the amount due, but it will somewhat exceed the above sum.

We have *per contra* charged to current expenses nearly an equal amount as added income-tax. We have, therefore, gained on paper in one direction and actually spent it all in another. And we may add that for this iniquitous and unhappy excess profits duty this new business, less than 13 years old, had set aside and contributed during the several years over £400,000 (less the above £50,000), and this large amount has from time to time been deducted from our profits. But such is one of the penalties of war, and one of the privileges of the great businesses to help pay for it.

This amount—£342,665—many of our friends and critics have been kind enough to call good. We ourselves are, however, in no way over-impressed with it. These figures are, it is true, well within the safety zone, and have only been arrived at after a very conservative treatment of our stocks and book accounts, and, in fact, of each item on the credit side of the balance-sheet.

The last thing we want to do, however, is to deceive ourselves and thereby deceive others, and we are, therefore, always inclined to halt some distance this side of the border line of actual values, and thus carry a margin of safety which is ample or more than ample.

Whilst our preference shares are quoted and dealt in on the Stock Exchange they can in no way be called speculative shares. They maintain themselves at their above-par rates absolutely on their merits. Neither I nor anyone interested supports them or protects their price in any way except to guarantee the payment of their dividend. It is always earnestly our desire that as an investment our preference shares shall win and hold the blue ribbon as being absolutely as safe and sure as any investment can be.

ALLOCATION OF PROFITS.

To the profits (£342,665 1s) is to be added the amount brought forward (£141,242 19s 6d), making £483,908 9s 6d, and after paying debenture interest and preference dividend, we have a paying balance in hand with which to depreciate our fittings and fixtures by £15,000 instead of £10,000 as heretofore; to write down our investments by £25,000 instead of £15,000 as heretofore; to write down leaseholds by £10,000; to reserve £16,500 for that not very agreeable item the corporation profits tax; to make a further contribution of £25,000 to reserve account; to pay 12 per cent. on our staff participating shares; to pay the usual 10 per cent. on the ordinary shares, and to carry forward the sum of £143,468 11s 9d, which is somewhat larger than last year.

On the credit side the further cost of our new building in Orchard street has been added to the first item. The first section of our rebuilding scheme is completed, but at too great a cost to please us. We shall not begin work on the second section, no matter how badly we wish it, until building costs are more nearly what they should be.

The fittings and fixtures have, of course, been increased, so has their depreciation. The stock-in-trade has already been referred to.

SATISFACTORY CONDITION—QUICK TURNOVER OF STOCKS.

This would seem to be a satisfactory condition of matters as a whole, and so it is except that we think we should have done a greater turnover and made a larger profit. A business like this

is capable of practically anything one chooses and is able to make it. A great distributing house can, if sufficiently wisely and progressively managed, carry trade and consequently money-making ability to practically any extent. Aside from understanding the business it is largely a matter of conserving its finance; in other words, retaining as much as possible of its profits instead of paying them out in dividends; of being alive to opportunity; of looking after details; of giving of the best and most liberal service; of doing these and many other things which when all added together build this, the most complicated of all kinds and of business, into an undertaking of great size of infinite interest and fair commensurate profit.

Another secret of our last year's result is the quick turnover of stocks at a very moderate gross profit. (It is not usually known, but it is true that the low gross profit per cent. which we and a few of our neighbours get on our returns is far less in per cent. than is obtained in America or France.) We turned our average stocks last year between seven and eight times, which means that the entire amount of our great stocks was, on the average, sold every 35 or 40 full days. Of course, our average stocks stand at a much higher amount than the depreciated low figure in the balance-sheet.

BRANCHES.

Our branches have as a rule done well—not as well as we would like because nothing is ever done as well as we would wish—but well, with one or two exceptions.

We have treated the question of buying branches just as we have the buying of merchandise. When it looked, about 20 months ago, like stormy commercial weather ahead we declined to consider further undertakings in the provinces, and while very many inviting proposals have been made to us from all over these islands, we have made no additions to our list. Of course, in time we shall increase the number of branches, but not yet.

A LOYAL AND CHEERFUL STAFF.

Our staff has worked loyally and with that same spirit of good cheer for which it is famous. Representatives from practically every great distributing house in the world have been our guests from time to time, and all have noticed and applauded the delightful courtesy and atmosphere of goodwill; the spirit of co-operation; the absence of jealousies. Another point in which our members are setting an example to all others is in thrift and money-saving habits. In this they are showing a splendid intelligence. We assist them in this by various methods—such as the staff savings bank, staff shares, &c.—and they fully appreciate these opportunities. We are justly proud of the staff of this house.

THE FUTURE.

And now how about the future? The period required for recovering from the war will be longer than we anticipated. It could never come quickly, but must be gradual. The upward turn has not yet manifested itself, at least not conspicuously. Some manufacturing businesses are increasing their export orders, and plenty of this is what the country needs. The coming six months will, to say the least, certainly require all of our best care and attention, and for the remainder of the year we can only issue a conservative hope. But with still difficult times, and plenty of them ahead, this business looks into the future with entire equanimity, and it will be our endeavour to make this year of 1922, no matter what happens, as full as we can of splendid progress.

The Chairman concluded by moving the adoption of the report and accounts.

Mr Ellis W. Davies seconded the motion, which was carried unanimously.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED.

CHAIRMAN ON POSITION AND PROSPECTS OF THE INDUSTRY.

The forty-third ordinary general meeting of W. T. Henley's Telegraph Works Company, Limited, was held, on the 3rd inst., at the Abercorn Rooms, Great Eastern Hotel, Bishopsgate, London, Mr George Sutton, M.I.E.E. (chairman and managing director), presiding.

The secretary (Mr A. E. Salmon) having read the notice convening the meeting, and the report of the auditors having been read,

The Chairman, in moving the adoption of the report and accounts, said: The directors have once more the gratification of presenting a report which cannot but give you satisfaction. They desire to show you as well as time will permit the causes which have led to this report and the prospects for the business in the future.

The new issue of ordinary shares made in January last year you will see was sufficient for our needs, and the decision not then to issue the whole of the amount authorised is justified, as shown by the cash position to-day. On the other hand, because we have roundly £450,000 cash in hand, it must not be supposed that we were wrong in making an issue last year; at that time we were owing our bankers a large amount, and we desired to pay that off at once rather than wait until a possible further slackening of trade would increase our cash resources.

A careful perusal of the balance-sheet shows the falling off in trade we have experienced, notwithstanding that the result of the year's working shows, I think, the largest net profit the company has made in its long history, and that the assets have a higher value compared with the liabilities.

Let us see, then, how with this fall in trade we are enabled to produce a profit in excess of previous years. In the first case, and mainly, it is due to the circumstances which I reported to you at the last meeting that the value of orders we have brought into 1921 was a high record, so that in the earlier months of the year those orders, together with the current orders coming in, kept us busy; but gradually as the year advanced, and those old orders were completed, our factories became less busy. The next point to be observed is that the charges against revenue are in certain cases lower than they were a year ago.

HENLEY TYRE AND RUBBER COMPANY.

The Henley Tyre and Rubber Company has, I believe, in common with all other similar industries, had a bad year. Not only has there been a reduction in sales, but we have also had to maintain the trade by prices which are not as remunerative as they should be. The prices at which we sell must be principally governed by the prices at which our competitors sell, and there is the fact that our greatest competitor having made huge losses we cannot be entirely unaffected. I would say, of course, that if users want economy in tyres, due to durability, they should all buy ours, but users are not yet educated up to that, and we cannot expect to get better prices than are current in the trade. The business is improving, and we hope that this year will show us a better result. This company also makes the "Why Not" golf ball. The "Trellis" Why Not, which was put on the market last summer, has achieved a remarkable success.

Now, as regards the present position of trade, I regret to say that I cannot see any immediate prospect of improvement in the foreign trade; I told you last year that the outlook was not hopeful, and those anticipations have been realised. There is a demand in foreign countries; but we are unable to meet the low prices due to low wages and depreciated exchanges. What foreign orders we get are taken at unremunerative prices to enable us to

give as much employment in our factories as we possibly can; it is one of the contributions we make to set off against any sacrifice we have to ask our employees to make. Only one of our contributions, certainly a small one compared with the large sums of undivided profit which year by year we have set aside for the extension of our business, and consequent creation of new employment. Since 1914, it is true, these sums have not been so large as formerly, because so much has had to be provided for taxation.

POSITION AND PROSPECTS.

As regards the home trade, and trade with the British Overseas Dominions, there are decidedly signs of improvement. The demands for quotations have considerably increased in the past two months, and are many more than we were receiving in the latter months of last year. I do not think the home trade is going to boom yet, but it is satisfactory to be able to see signs of improvement.

In conclusion, let me say that, in my mature judgment, the future of the industry is very bright. That so far as the immediate future is concerned, I have no anxiety about maintaining dividends, and that, should circumstances be such as to admit of it, your board would not be averse to recommending a larger proportion of the profits being paid in dividend.

The report and accounts were unanimously adopted, and the formal business was duly transacted.

SPENCER, TURNER, AND BOLDERO, LIMITED.
COMPANY'S STRONG FINANCIAL POSITION.

The twenty-eighth annual general meeting of Spencer, Turner and Boldero, Limited, was held, on the 2nd inst., at 18 Duke street, Lisson grove, London.

Mr John Boldero, who presided, in moving the adoption of the report and accounts, expressed great regret at the serious reduction in the profits, remarking that the dominant cause was the unprecedented fall in price of the goods handled by the company. A contributing cause was the very large contracts for forward delivery placed by one of their departments dealing in Manchester cotton goods. For the previous two years this department had been very successful, but without the knowledge of the directors orders and repeats were placed, in a falling market, till an absolutely unjustifiable liability had been incurred. All these commitments had now been cancelled by arrangement or delivery accepted and all losses had been cut, and under different management this department had been trading for several months past at a normal rate of profit.

In spite of all adversities the company had made a net profit in the past year of £7,288, and with the large amount brought from the previous year they had a balance available of £53,864, and the directors recommended a final dividend on the ordinary shares at the rate of 7 per cent. per annum for the past half-year, making a total distribution of 6 per cent. for the year.

The balance-sheet showed a very strong and satisfactory position. In addition to cash in hand of £83,417 and investments £31,446, they had stock £207,334 and good book debts £350,723, making a total of liquid assets of £672,920. Against this large sum the total owing by the company—trade liabilities, deposits, and sundry creditors—came to only £81,800, so that the actual cash in bank sufficed to pay every liability and left a margin of £1,600 without trenching upon a single pound of their investments. Over and above all this, their reserves, which they had not drawn upon, came to close upon £140,000. In conclusion, he expressed the confident belief that a year hence the directors would be in a position to present more favourable results.

The motion was carried unanimously.

The National Provident Institution ask us to correct a figure which appeared in the report of their meeting in our issue of last week. The expense ratio was stated to be £3 10s 6d, as against £3 13s the previous year, but these figures should read £13 10s 6d and £13 13s.

OIL OUTPUTS.

COMMONWEALTH OIL CORPORATION, LIMITED.—Advice from Sydney reports for the four weeks ending February 24th:—Shale mined 2,305 tons. Shale retorted 2,099 tons. Crude oil and naphtha produced 212,270 gallons (equal to 101 gallons per ton of shale).

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending February 22nd amounted to 785 tons.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 3 Abchurch Lane, Strand, London, W.C.2.

GOVERNMENT RETURNS.

PUBLIC INCOME AND EXPENDITURE.

New rules for issuing bank notes have been given by Statute of November 2, 1920. We are authoritatively informed that the right of issue of the Bank of Norway is calculated at an amount of 250 million crowns above the stock of gold and at present extraordinary additional amount of 50 million crowns from July 25, 1921, until further order.

Through Royal resolution of February 3, 1922, it has been resolved that the extraordinary right of issuing bank notes has been reduced from 50 millions to 25 millions from February 4, 1922 (this day included).

British South Africa	71,556	Nil	Nil
British West Africa	42,396	Nil	Nil
Total value of imports of gold	113,952	Total declared value of exports registered in the week	Nil

Messrs Samuel Montagu and Co. write on March 2nd as follows:—

GOLD.

Most of the very moderate amount of gold on offer was taken for India and the Straits. Yesterday's price for exportable gold—93s 3d—represents a premium of about 10½ per cent. over the pre-war Bank of England buying price, and is the lowest fixed since September, 1919, when dealings in such gold were resumed. It is a matter of regret that the situation on the Rand has become more acute, but gratifying that some of the mines are able to continue working, though at a reduced rate of output. No arrivals of gold are reported in New York. The Dutch Minister of Agriculture, Industry, and Trade has suspended the operation of the Royal Decree of April 7, 1917, forbidding the export of all metals under any form, and of the Royal Decree of August 8, 1914, prohibiting the export of gold bullion, on the understanding that all such consignments take place through, or on account of, the Bank of Holland, and that the Minister of Finance offers no objection to such export.

SILVER.

Owing to the inactivity of the Indian bazaars pending the announcement of Indian Budget proposals, to the firmness of the American and to the weakness of the China exchanges, the tendency of the market has been distinctly heavy until yesterday, when the news arrived that no reimposition of an Indian import duty on silver was proposed. As silver does not figure in the list of commodities subject to the *ad valorem* duty of 15 per cent., it remains duty free. The effect was somewhat unexpected. The undertone continued poor, as a result of renewed weakness from China, and the rate for forward delivery drooped further to 3½d (the lowest price since March 17, 1921), but that for prompt delivery rose from 3½d (the lowest recorded for cash since March 11, 1921) to 3½d, owing to a spurt of Indian buying for immediate shipment coming upon a market rather short of supplies after the large shipment of last week. It is considered in some quarters that the very large consignments of silver to India during the last few months, prompted by fear of a fresh import duty, are really in excess of actual requirements, and that the bazaars will not be able to continue purchases on a large scale. Meanwhile, other

factors, such as China—where the stocks show a considerable increase—America, and the Continent, do not favour the look. When the mail just received left Bombay coined rupees were again returning to the currency offices; the latest currency return showed an increase of 152 lacs in the holding of silver. It is stated that the province which is returning the greatest number of rupees is the Punjab. This is probably owing to large imports of wheat, for which the people have to bring rupees from their hoards.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Feb. 7, 1922.	Feb. 15, 1922.	Feb. 22, 1922.

ALBION STEAM COAL COMPANY.—Directors recommend final dividend on preference shares for half-year ended December 31, 1921, at rate of 6 per cent. per annum, making 6 per cent. for year. Under present circumstances directors state they cannot see their way to recommend a dividend on ordinary shares for past year.

BELIZE MOTORS, LIMITED, in announcing that payment of the preference dividend is again postponed, report improving business, and express a hope in their ability to pay in the course of a short time.

BRIGHTON AND HOVE GENERAL GAS.—Final dividends, less tax, of £3 per cent. on "B" preference consolidated stock, £2 per cent. on "C" preference consolidated stock, £3 per cent. on "D" redeemable preference stock, £5 15s per cent. on "original" ordinary consolidated stock, and £4 5s per cent. on "A" ordinary consolidated stock, making, in case of last two, £11 per cent. and £8 per cent. respectively for year.

CONSOLIDATED CAMBRIAN.—Directors do not think it advisable to pay a dividend on ordinary shares, but recommend a dividend at the rate of 6 per cent. per annum on preference shares for half-year ended December 31st, less tax, carrying forward £43,198. The interim dividend on ordinary shares was at rate of 5 per cent. per annum. For previous four years dividends on ordinary shares were 10 per cent. per annum.

EMPLOYER'S LIABILITY INSURANCE.

Policies are issued by the "British Dominions" at most attractive rates. Each proposal is considered on its merits and special allowances in respect of premiums are made to employers who take precautions to ensure the safety of their employees. An enquiry involves no obligation; it may result in a considerable saving, more generous cover, and greater security.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated March 2nd, is as follows:—Pig-iron: Business is unsettled owing to possible trouble in the engineering trade, and prices of hematite pig-iron have been advanced, as coke is dearer now. Hematite makers have sold their limited output for this month. Prices are as follows:—No. 3 Cleveland G.M.B. pig-iron, 90s per ton; East Coast mixed numbers hematite, 100s per ton. Manufactured iron and steel: The steel trade, upon which after all we principally rely, shows no improvement. Steel ship plates (home), £10 10s; steel ship angles, £10; iron bars, £12; steel rails, £9 10s net. Iron ore: Imported ore is rather dearer as ore freights have risen. Any business is confined to prompt cargoes. Best Bilbao Rubio is 26s 6d, but good Mediterranean ores can be bought below this figure.

Our Sheffield correspondent writes:—There is a consensus of opinion among local business men that February was the worst month experienced since the slump in trade began. The aggregate turnover in that month was substantially below that of January, when business was interfered with by the lengthy holiday stoppage. The number of unemployed has been stationary for more than a month, but exceeds any figure recorded since the coal strike of last year. In spite of these depressing conditions there is a fair amount of optimism abroad as regards the prospects for next quarter. Steel makers have been buying hematite, and arrangements are in hand for re-starting blast furnaces and steel plants here and there, while the competition of Continental iron and steel has almost disappeared. Hints have been received of the general resumption of buying by the British railway companies, whose policy of starving their rolling stock, stores, &c., and allowing renewals and repairs to fall into arrears has reached its limit. Prices tend to stiffen, and buyers are beginning to realise that they cannot expect much further in the way of reductions. In the lighter branches regular trading is exceptional owing to the presence of war stores and the frequent unloading of stocks at cut prices to raise money. Many descriptions of material and tools can be picked up at below cost. The scrap market is quiet, but improving. Exports to Germany have lately reduced the accumulations of heavy steel scrap in this country. The breaking up of numerous discarded warships will, however, replenish the supply for home needs when consumption revives. The demand for steam coal for the home market is somewhat quieter than it has been, nor is the trade in house coal quite as good; nevertheless, the position at the collieries is fully as satisfactory as could be expected. Export trade is fairly good, and prices firm. The market for small fuels is irregular. There is still a certain amount of forced selling, but as more coke ovens go into operation the market will improve. The demand for coke is strong, and prices firm.

Our Glasgow correspondent (writing on Thursday) says:—The attitude of the engineers and shipwrights on the questions of wages and working arrangements is a matter of common knowledge, and until satisfactorily adjusted, not only must all hope of new work coming forward be abandoned, but prospects for the prosecution of work on hand become negligible. The situation created is probably the most serious in which the shipbuilding and engineering trades have ever been involved, and if it develops will unquestionably, in its intricacies, rope in more or less the steel, iron, coal, and related industries, particularly in the West of Scotland. It is nothing short of lamentable that this crisis should have loomed up at this time, when trade indications, as has been stated, were beginning to brighten a bit. There is nothing for it in the meantime but to trust that the clouds will pass. Official returns for last month show that only seven vessels of 20,500 tons were launched from Clyde yards, contrasting with 25 vessels of over 82,000 tons in February, 1921. There are still some new boats on the stocks waiting completion, and a goodly number of suspended contracts are being kept back. It is calculated that there are close on 50 steamers lying in the docks waiting on re-fitment, and in that operation a goodly quantity of steel plates and sections are absorbed, and that again benefits the steel works. Rolling mills are in operation in most of the establishments, but of heavy boiler plates production is indifferent, and is likely so to continue. Engine builders are kept busy on a variety of specialities, and machinery builders in general are fairly well off. Sheetmakers, and black and galvanised, have booked some good orders this week on both home and foreign account, and producers are hopeful as to the immediate future. Some very good lines continue to come to the hand from India and Australia. Trading in Scotch pig-iron is rather better. Over 1,000 tons of Nos. 1 and 3 have just been forwarded to Midland engineers, but the export inquiry is rather to the poor side. Hematite is in request for the Continent. This is believed to be for Germany, which Glasgow firms, with direct connections, are satisfied is genuinely short of this class of material. Of half-products in iron and steel, shipments from Bel-

Buried Treasure

THE pirate chief and bold buccaneers knew how to obtain treasure much better than how to keep it. The best most of them could do was to bury it in some handy spot—usually for somebody else to dig up.

If THE CHATWOOD SAFE had been available for their use they would not have lost the profits of their enterprising business.

It would not have been necessary to bury THE CHATWOOD SAFE. However accessible it might have been to ill-intention it would have held its contents secure—just as to-day it offers the highest degree of protection against the ravages of fire, the effects of fall, and the most desperate onslaught of the modern burglar.

THE CHATWOOD SAFE

Since 1858

THE NEW CHATWOOD SAFE BOOK

contains 58 pages, many in full colour, and includes the fullest particulars of each model of THE CHATWOOD SAFE and STRONG ROOM. A post card brings a copy gratis.

SUMMARY OF THE REPORT

Presented at the Seventy-Third Annual Meeting, held on March 2nd, 1922.

ORDINARY BRANCH.—The number of policies issued during the year was 92,522, assuring the sum of £15,968,378, and producing a new annual premium income of £1,138,447. The premiums received were £9,367,063, being an increase of £668,314 over those for the year 1920.

The claims of the year amounted to £5,753,003. The number of deaths was 10,845. The number of endowment assurances matured was 37,864, the annual premium income of which was £206,459.

The number of policies, including annuities, in force at the end of the year was 1,137,749.

INDUSTRIAL BRANCH.—The premiums received during the year were £13,998,392, being an increase of £1,006,784.

The claims of the year amounted to £3,588,321. The total number of claims and surrenders was 500,763 on 605,411 policies, of which 45,221 were matured endowment assurances.

The number of free policies granted during the year to those policyholders of five years' standing and upwards who desired to discontinue their payments was 104,577, the number in force being 2,151,409. The number of free policies which became claims was 52,458.

The total number of policies in force in this Branch at the end of the year was 23,802,250; their average duration is fifteen years.

GENERAL BRANCH.—The premiums received, after deduction of reinsurance, in respect of Fire, Sickness and Accident, Employers' Liability, and Miscellaneous Insurances, were £314,448, being an increase for the year of £103,604 over 1920. The claims of the year amounted to £138,823.

The premiums received under Sinking Fund policies were £52,531, being an increase of £20,710. The capital sum insured under these policies is £1,553,548.

The accounts now presented include for the first time particulars relating to Marine Insurance. The premiums received during the year on this class of business, after deduction of reinsurance, discounts, brokerages and returns, amounted to £239,320. The claims were £45,768.

The assets of the Company, in all branches, as shown in the balance sheet, are £134,827,239, which represents an increase for the year of £10,374,087 over 1920.

In the Ordinary Branch the surplus shown is £1,779,146, including the sum of £163,226 brought forward from last year. Out of this surplus the Directors have added £500,000 to the Investments Reserve Fund, which, after writing down book values of assets by £1,000,000, stands as at 31st December, 1921, at £2,000,000, and £176,996 has been carried forward.

A bonus of £1 6s. per cent. on the original sums assured will be allocated to participating policies in the Ordinary Branch which were in force on the 31st December, 1921.

In the Industrial Branch the surplus shown is £1,309,096, including the sum of £68,998 brought forward from last year. Out of this surplus the Directors have added £500,000 to the Investments Reserve Fund, which, after writing down book values of assets by £400,000, stands as at 31st December, 1921, at £1,500,000; £200,000 has been carried to the Common Contingency Fund, and £117,793 has been carried forward.

The profit-sharing scheme in the Industrial Branch provides that after payment of a fixed dividend to the shareholders any surplus profit shall be divided into six equal parts: one part

being retained by the shareholders, one distributed among the outdoor staff of the Company, the remaining four parts being allotted by way of bonus to the policyholders of the Industrial Branch.

The sum which has already been paid under this scheme by way of bonus to the Industrial Branch policyholders and outdoor staff amounts to £2,825,000.

It is with great pleasure that the Directors announce the resumption of bonuses under the profit-sharing scheme, which had to be suspended owing to the War.

A bonus addition of £2 10s. per cent. will be made to the sums assured on policies on which premiums have been paid for 10 years and upwards which become claims either by death or maturity of endowment from 3rd March, 1922, to 5th March, 1924, both dates inclusive.

The experience gained has shown the desirability of the bonus distribution being placed on a more permanent basis, especially having regard to the increasing numbers of endowment assurances entitled to participate in the Industrial Branch profits. Accordingly the distribution of the amount now allotted to policyholders is to be spread over a period of two years and succeeding distributions will be spread over longer periods. Thus it is intended that next year any bonus declared shall be spread over a period of three years instead of two years, and in the following year over a period of four years, and so on.

In order to make clear the effect of this method of bonus allotment, let it be assumed that each year the same rate of 2½ per cent. is maintained. The resulting total bonus rates following on the 2½ per cent. now declared would be 5 per cent. for second and third years, 7½ per cent. for fourth and fifth years and so on. When the accumulation provides a bonus of 10 per cent. on participating policies on which ten years' premiums have been paid it is intended to apply the surpluses to increase bonuses on policies of longer duration, until a bonus of 1 per cent. for each year of duration has been attained. These figures are used to illustrate the bonus method as there can of necessity be no guarantee as to future bonus distributions, which must depend on the profits earned by the Company; but aided by the more remunerative interest yield and by the more economical working of our business, it is hoped to be able to make bonus distributions in the future which will not only maintain but constantly increase the popularity of our profit-sharing Industrial Branch policies.

The total surplus of the two branches is £3,088,242. Of this amount £500,000 has been added to the Investments Reserve Fund of the Ordinary Branch, £500,000 has been added to the Investments Reserve Fund of the Industrial Branch, and £200,000 to the Common Contingency Fund; £1,793,453 will be distributed among participating policyholders in the Ordinary Branch, policyholders in the Industrial Branch, the Shareholders, and the Superintendency and Agency Staff in accordance with the Articles of Association of the Company, leaving £294,789 to be carried forward, namely, £176,996 in the Ordinary Branch, and £117,793 in the Industrial Branch.

The four Prudential Approved Societies have during the year paid to their members benefits amounting approximately to £2,742,400, making a total of over £15,059,000 paid since National Insurance was introduced. The number of persons admitted to membership of the Societies during the year was 311,596, of whom 127,816 were men and 183,780 women.

THE MONEY MARKET.

MONEY has again been quite usable this week, largely as a result of tax collections, which are becoming a daily rather than a weekly matter. There was a little more borrowing at the Bank on Monday, and with calls on various recent loans becoming payable, there was a considerable demand for short loans. In the middle of the week conditions became a little easier, and although 3½ per cent. was a fairly general rate, balances

were offered at much lower rates at the end of the day. On Thursday the usual heavy revenue collections caused stringency, but there was no borrowing at the Bank. Anticipations of firm money rates, in connection with the payment of taxes, until the end of the financial year have been responsible for a fairly firm tone in the discount market, which, on the other hand, was little affected by the prospect of easier conditions next month. Business, however, has been quiet, and there has been little change in rates. May and June Treasury bills have changed hands at about $3\frac{1}{8}$ per cent., but market rate has not been much below $3\frac{1}{8}$ per cent. The Port of London Authority is said to have placed a line of £500,000 3 months' bills at the latter rate on Wednesday. The result of the Treasury Bill tenders—the average rate was well over $3\frac{1}{8}$ per cent.—was higher than expected, and the discount rate was raised accordingly. The average price at which the £5 millions of 5 per cent. Treasury Bonds were allotted was £99 13s 7d.

	Mar. 17, 1922.	Mar. 10, 1922.	Mar. 3, 1922.	Feb. 24, 1922.	Previous Rate and Date Changed.
Bank Rate	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	5 (Feb. 16, '22)
Banks Deposit Rate	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Feb. 16, '22)
Discount (Call)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 (Feb. 16, '22)
Houses (Notice)	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	2 $\frac{1}{2}$	3 $\frac{1}{2}$ (Feb. 16, '22)
Market rate (3 months' bills)	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	3 $\frac{1}{8}$	..

A further improvement was shown in the Bank Return. An addition of £11,500 was made to the gold stock, and the circulation was reduced by £476,000, and the Reserve thus rose by £487,500. Government securities fell by £3,415,000, and Other securities by £786,000, so that deposits fell by £3,716,400, Other falling by £7,484,200. The Proportion now stands at 19 per cent., as against 18 per cent. last week, and 14 $\frac{1}{2}$ per cent. in the corresponding week of last year. The circulation of currency notes declined by £74,300, to £300,339,000, which includes £1,669,300 for notes called in but not yet cancelled. The fiduciary issue is £250,724,900, or £59,263,500 below the maximum.

THE STOCK MARKETS.

Business on the Stock Exchange fell off this week owing to the growing uncertainty in the political outlook and the temporary tightness of money. A fairly general decline took place in British Government stocks, although there was some recovery from the lowest points touched. Colonial and municipal issues remained firm, and the market for railway prior charges did not lose its favourable tone. French and German bonds reacted with exchange movements, while the relapse in the New York rate sent up quotations of American and Canadian rails. Rubber shares are a little better, and the improvement in the Rand position caused some recovery in Kaffirs. Among industrials, brewery shares were in strong demand, while quotations of engineering companies' shares were not greatly affected by the lock-out. The Stock Exchange Committee election takes place on Monday, March 20th.

COMMODITY MARKETS.

Activity in the cotton trade continues, and prospects for spinners and manufacturers appear to be brighter; the demand from India is good, and many inquiries are being received from China. A better tone predominates in the

wool markets, and though home traders are substantial purchasers, buying for Belgian and German account is a significant feature of sales. In the iron markets, no changes occurred in Cleveland or hematite prices, although there is still a good market for hematite, but in manufactured iron and steel there is no sign of improvement. Our Sheffield correspondent points out that, though most of the Sheffield steel and tool makers employ engineers, these are not affected by the engineering lock-out. There is much activity in the Welsh coal market, but best Admiralty remains unchanged in price at 27s 3d. In the wheat markets slight declines are recorded, owing to selling pressure from Argentina. Prices for vegetable oil and oilseeds have displayed erratic tendencies, values falling on the arrival of heavy shipments. Sales in the hide market were steady, and prices were inclined to harden, although the demand for imported hides is small. Further particulars of markets from special correspondents will be found on later pages.

FOREIGN EXCHANGES.

Although business on the foreign exchange market has remained quiet, there has been more activity than a week ago, and the promise perhaps of more business to come. The dollar rate, after reaching as low as \$4.27 $\frac{1}{2}$ on Tuesday, has picked up again, and yesterday morning was quoted again at \$4.34 $\frac{1}{2}$, as compared with \$4.36 a week ago. It would seem that the profit-taking by American investors has spent its main force for the moment, and there are some indications of another, although this time probably more modest, rise, helped, perhaps, to some extent by the moneys raised a few days ago in New York on account of French railways. Future rates for month have moved back to parity with spot, two months forward being quoted at $\frac{1}{8}$ over spot. After moving up to over 49 on Monday, the French rate has been somewhat irregular within narrow limits, and yesterday morning was back at 48.50 as compared with 48.72 $\frac{1}{2}$ on the 10th. In view of money raised recently abroad, and the normal spring improvement, the franc, apart, of course, from political influences, may perhaps be expected to maintain or even improve its present value. Future francs are quoted for the time on a parity with spot. The Belgian franc yesterday stood at 52.25, showing a wider spread than before between it and the French franc. The lira, after irregular upward movements, was, at 85 $\frac{1}{2}$, very little higher than the preceding week. Among neutral exchanges Amsterdam is practically unchanged, after moving for one day rather sharply against us. Switzerland has gone somewhat in our favour to 22.35, while Spain has also depreciated slightly again. Lisbon, on the news of a £3,000,000 credit to be arranged in London, has improved to 5d, after being recently down to 4 $\frac{1}{2}$ d. The three Scandinavian currencies have all moved upward, but Helsingfors shows a slight improvement on the expectation of a loan to be raised in London. We are informed by the Finlands Bank that no new exchange restrictions are imposed. The German mark shows a further depreciation to over 1,200, the natural result of the drain of reparation payments, and there is general expectation of a serious crisis in the near future unless some definite arrangement is made. At the same time, the recent meeting of Finance Ministers in Paris would seem to mark the beginning of a possible solution as reasonable as could be expected under the circumstances. After rising as high as 35,000, the rate for Auslands Austrian kronen has improved to 29,000, and the beginning of some attempt to secure stabilisation may now be expected. The Auslands and Inlands rate would now appear to have come together, but we are still unfortunately without any authoritative explanation as to the exact nature of the regulations remaining in force. The Warsaw rate is remaining moderately steady on its new level of 18,000, and, if anything, shows a slight tendency to improve. Prague is rather better at about 245, Belgrade remains little more than nominal. In the East the rupee, in spite of the troubled outlook in India, remains about the same, at 1s 3 $\frac{1}{2}$ d. Yokohama is rather dearer at 2s 2 $\frac{1}{2}$ d. Although there has been some reaction on the

silver market, buying from the Indian bazaars has kept prices moderately steady, and absorbed most of the Continental offerings. Hong Kong and Shanghai are both slightly weaker. In South America, Rio is slightly lower at 7 $\frac{1}{2}$, Buenos Ayres has dropped to 45, and Monte Video to 44, while Valparaiso has moved up again to 38.40.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 11, 1922:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	34,056	Supply Services	1,080
		Interest on Debt	1,080
		Sundries	204
		Reduction of Debt	20,793
		Added to Exchequer balances ..	497
	34,056		34,056

Revenue from Property and Income-tax is down on the week from £26,413,000 to £21,348,000, and compares with £20,667,000 for the corresponding period last year. Customs amount to £2,939,000, as against £1,845,000 last week, and £3,587,000 for the similar period in 1921. Excise at £1,145,000 shows little change. Special Receipts under Miscellaneous amount to £3,318,938, compares with £5,867,421 a year ago.

The week's operations reduced the National Debt by the sum of £20,792,854, and caused the following changes:—

National Savings Certificates	Min. £	Treasury Bills	Min. £
+ 3,300		Surrenders of Bonds, &c.	14,202
		Unemployment Insurance	530
		Public Department Advances ..	8,826
		Sundries	406
	+ 3,300		24,093

The floating debt was reduced by £22,976,000 to £1,937,731,000.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 to MARCH 11, 1922.

BRUSSELS AND GENOA.

THOSE who regard the Premier's attention to his Criccieth kitchen-garden as an earnest of early retirement have the logic of recent events on their side. Indeed, the trend of domestic and international politics appears to bring his resignation, as soon as the Irish Bill is passed, into the sphere of probability. Whatever view is taken of the Montagu-Curzon dispute, the indictment by the former of the methods of a Government of which, curiously enough, he remains a supporter, has not enhanced Coalition prestige. Of far more importance is the fact that the failure of Unionist members at their meeting on Monday to pass a vote pledging support to the Coalition throws Unionist discontent into clearer relief, while Lord Derby, in declining the offer to succeed Mr Montagu at the India Office, has refused to supply the cohesive element which might, even at this eleventh hour, have tided over the Coalition crisis. But if the domestic events of this week operate against the chances of the Premier's retention of office, international developments now seem to tilt the balance further on the same side. The one influence that appeared to bind Mr Lloyd George to office was the prospect of success at Genoa. But the clouds have spread over the blue Genoan sky. The Government of the United States have categorically refused to attend the Conference, a decision backed by the very strong section of American opinion which intensely dislikes the prospect of any recognition of the Bolshevik Government. The prospective usefulness and prestige of the Conference may possibly be further reduced if the rumoured decision of M. Poincaré not to attend in person proves correct. Thirdly—but by no means least important—the problem of Russia's participation has not been solved. The Russian Government is taking Genoa very seriously and basing high hopes upon it. The special correspondent of the *Manchester Guardian*, states that nothing else is being talked of in Moscow, and that estimates of the duration of the Conference range from six months to a permanent session as an economic council of Europe. But it cannot be assumed that Russia will come on the terms agreed between Mr Lloyd George and M. Poincaré, at Boulogne, which amount practically to attendance on probation. The Bolsheviks wish for full and equal participation, which France and other States regard as intolerable. The deadlock may be removed, but, on the other hand, Russia may after all stay away from Genoa. In any case it is likely—in spite of Mr Chamberlain's definite statement—that the Conference will be further postponed.

In recalling these difficulties, however, we have no wish to minimise the importance of international conferences; nor do we ignore the necessity of co-operation in the task of setting Europe on the road to economic recovery. Unfortunately the Genoa project was conceived in haste, and launched without proper diplomatic preparation, and in this respect contrasts sharply with Washington, which was preceded by the most careful sounding of the proposed guests, and was called to deal with an agenda of which one important item, at least, viz., the principle of naval equality between U.S.A. and Great Britain, had been subsequently agreed two years ago. The troubled history of the Genoa scheme justifies the view expressed by the Finance Committee of the

League of Nations, who, when asked by the Council whether it would be wise to hold a second financial conference in 1921, replied that time must be given for putting the ter Meulen scheme into operation, and for nations to apply the Brussels principles to their own financial administrations. When the question was repeated a year later (at the Assembly in September, 1921) by the Council of the League, the Committee, while recognising the importance of co-operative effort, advised that until certain preliminary conditions had been fulfilled, especially with regard to a settlement of the Reparations problem, the holding of a second conference would be premature.

These preliminary conditions have not yet been fulfilled. Progress with the task of clearing away the obstacles in the path is not rapid. But it is going on slowly, and certain very favourable signs have recently emerged. The Reparations problem is still the great stumbling-block, and the demand of the United States for payment of her Army's expenses on the Rhine out of the receipts from Germany has caused fresh irritation in France, where, however, it should have been realised that this priority claim was a contingent liability likely to be pressed as a reply to French policy at the Washington Conference. But, on the other hand, it is a fact full of high promise that the Allied Finance Ministers in their meeting at Paris have been discussing a most important and sane proposal by Sir Robert Horne, that the total German obligation of 132 milliards gold marks should be divided into two parts—one, corresponding to the amount of inter-Allied debts, to be postponed for future settlement, and to be dealt with on whatever principles may be applied to the inter-Allied debts, and the other of 70 or 80 milliards to be dealt with partly by payments in kind and partly through loans. If agreement can be reached on anything like this basis, a great step forward will have been taken. The discussions and decisions of the Allied Finance Ministers are reviewed by our Paris correspondent on a later page.

In other directions, also, progress is being made. The United States Senate has this week passed a resolution postponing for 25 years the collection of the \$50,000,000 lent to Austria. This step towards removing American liens on Austrian assets—the chief Allied countries have already removed theirs—paves the way to the application of the Finance Committee's scheme of Austrian financial reconstruction. Another favourable sign is the support that has been enlisted in the United States for the ter Meulen scheme. A highly significant reference to the question is made in the February issue of the *Federal Reserve Bulletin*. This official organ of the Federal Reserve Board, after criticising the proposed International Corporation, which was fathered at Cannes, and examining European and American schemes for regenerating Europe, says:—"None of these propositions has any considerable weight of public opinion behind it except the ter Meulen scheme." The article proceeds:—"This plan seems to have the support and approval of Western-European as well as American bankers and financial experts, probably because it appears to meet the needs of the various types of foreign trade financing. If the Genoa Conference could bring about a recognition on the part of potential borrowers of the necessity of domestic financial reforms, and on the part of the lenders of the desirability of the security furnished by the gold bonds, the necessary machinery could be almost immediately made effective." Such words from such a source are decidedly encouraging. For two or three years statesmen have been stumbling about in the dark groping for new specifics. The *Federal Reserve Bulletin* is unquestionably right in advocating, as it does in effect, that "Back to Brussels principles" should be the motto for Europe. What is to be the issue of these tangled events? The Baltic States, the Scandinavians, and the Little Entente are meeting in separate groups to consider their policy at Genoa, and such meetings are in themselves a step towards greater unity. These and other preparations have gone so far that the abandonment of the Conference would be a serious setback to the principle of co-operation and co-ordinated policy in international affairs. But the period of preparation must be substantially prolonged to give time for negotiation on the reparations and other issues, and to enable the ground to be properly prepared. Meanwhile, the Finance Committee's

scheme for Austria should proceed, and the possibility explored of useful undertakings by the International Corporation, whose functions should be carefully defined, and whose sphere, which is clearly non-political and should have nothing to do with the control of the finances of various countries concerned. To put the Genoa agenda in order requires the co-operation of the machinery of the League. This task should be placed in its hands, while the material arrangements for the conference remain, of course, with the Italian Government.

THE INDIAN BUDGET.

SIR MALCOLM HAILEY, the Finance Member of the Viceroy's Council, has many difficulties to get over, and there will be many criticisms and objections to be met before the Finance Bill containing the Budget provisions for the coming financial year is passed into law by the Legislative Assembly of India. The total estimated expenditure for the coming year is 142 crores 25 lakhs, against an estimated revenue of 110 crores 50 lakhs on the existing basis of taxation. The estimated deficit thus amounts to nearly 32 crores, or, translated into sterling at 1s 4d to the rupee, to over £21,000,000.

Of the estimated expenditure the cost of the Army, both European and Indian, accounts for 62 crores, almost exactly the same sum as figured in the Budget for the year now current, and this estimated Army expenditure is now being made the subject of bitter attack in the Assembly. Lord Rawlinson appears to have detailed in vain his drastic efforts to reduce expenditure—efforts which have been defeated by the rise in prices, and the necessity for an occupation of part of Waziristan as the only means of preventing raids and of protecting the inhabitants near the North-West frontier. Many speakers, according to the cabled reports, seem to have commented on the high percentage of the military expenditure, and to have compared it with the expenditure of other countries upon armaments. No just comparison, can, however, be made between the proportion of revenue which is applied by the Central Government of India to military purposes and that which is so applied by other countries, for while the whole of the military expenditure of India falls upon the Central Government, a very large part of the revenues of India are earmarked for Provincial purposes, and are used by the Provincial Government for such services as Police, Education, and Public Health. One reason why the military expenditure has been made the special object of attack may very probably be found in the fact that it is excluded, under the Government of India Act, from the vote of the Assembly, and the more ardent spirits of that body have consequently done what they can to produce a deadlock by threatening to refuse to vote other supplies which are under the control of the Assembly. The common sense of the members of the Assembly will, it is to be hoped, assert itself, for even the members who come from the South of India will realise, after the recent Moplah outbreak, that the wisdom of a spectacular reduction in the military forces in India is a question about which two views may be held. In the debates of last year it was a noticeable fact that the strongest opposition to military expenditure came from members representing constituencies in the Province of Madras, while those who represented constituencies in the Punjab realised with greater accuracy the dangers of the North-West frontier.

The estimated deficit of 31½ crores in the Budget is plainly due to stagnation of trade, for the largest losses of revenue are due to decrease in net railway receipts and in Customs. During the current financial year, with the exception of the months of July, August, and September, the balance of trade has been against India owing to the inability of the rest of the world to buy all the raw materials which India was in a position to offer; the result of this adverse balance of trade has been the low rate of exchange now prevailing, and the additional burden which has in consequence been thrown on the Indian Exchequer in respect of remittances to this country for the service of the sterling debt, for pensions, and other purposes.

Sir Malcolm Hailey, we are glad to note, proposes to deal with the estimated deficit in the only sound way—that is, by taxation. The general rate of Customs duty,

which was raised last year from 7½ per cent. to 11 per cent., is to be again raised to 15 per cent., and the cotton Excise duty is to be correspondingly increased from 3½ per cent. to 7½ per cent., "with the object of taxing consumption of cotton goods in the present emergency, and not for the purpose of counterbalancing the increase in the import duty." The duty on sugar is to be raised from 15 per cent. to 25 per cent. Yarn, which has hitherto been free, is to be subject to a duty of 5 per cent., and the duty on machinery, iron, steel, and railway material, which have hitherto only been liable to a duty of 7½ per cent., are in future to pay a duty of 10 per cent. Other proposals include an increased duty on alcoholic liquors, on luxuries, on matches, and on kerosene oil; the salt tax is to be doubled, railway fares are to be increased by 25 per cent., and postal charges, are also to be raised. Lastly, the income-tax and super tax on larger incomes is to be increased. The increases proposed in the Customs duties will probably be accepted with enthusiasm, for the average Indian politician is a believer in Protection, but the existing Excise duty on cotton piece goods has long been a point of soreness, and the increase of it from 3½ per cent. to 7½ per cent. is likely to give rise to much criticism and opposition. That the cotton mills of India are well able to bear the taxation proposed is not open to doubt, if we may judge from the dividends which are being paid and the quotations of the shares. To take a few examples among the cotton mill companies, the Ahmedabad Advance Company has lately paid a dividend of 200 rupees and the Central India Company a dividend of 380 rupees on each share of 500 rupees. The Khandesh S.W. Company, the Madras United, the Manackjee Petit, and the Morarjee Goculdas Companies, each with shares of 1,000 rupees, have lately paid dividends respectively of 500, 300, 300, and 350 rupees per share, while the Sholapur Mills have lately paid a dividend of no less than 1,400 rupees on each share of 1,000 rupees, and the quotation for the shares of this company stands at 17,000 rupees. Throughout the whole list it is difficult to find any mill which is not paying over 25 per cent. in dividends. This amazing prosperity has been in a great measure brought about by Mr Ghandi's advice to abjure foreign-made cloth; and as Indian mills cannot produce sufficient piece goods for the population of India, the mill owners have been able, in the absence of competition, to raise their prices, and the consumer has suffered proportionately. How long this will continue, no one can tell, but the elimination of Mr Ghandi's personal influence may have some effect, and, in any event, an increased world demand for Indian products must result in a general increase of the purchasing power in India, and with that general increase will come a demand at least for the finer cotton cloths which Indian mills cannot produce.

The largely increased tax on machinery, iron, steel, and railway material is to be regretted, but it will probably have but little effect on British trade, for India cannot yet produce steel cheaply, and has not so far been successful in building railway wagons at a cost which competes with builders in this country. The increase in postal rates and railway fares are both taxes on communications, and as such are bad taxes for the purpose of raising revenue, but, on the other hand, both postal rates and railway fares in India are as low as any in the world. At the present time a postcard can be sent from Peshawar to Madras, or from Rangoon to Aden, at a cost of a quarter of an anna—that is to say, a farthing—and a letter weighing about a third of an ounce can be sent the same distance at the cost of half an anna, the equivalent of a halfpenny.

Sir Malcolm Hailey's Budget is a courageous attempt to grapple with the financial position in India, and the burden of taxation has been distributed over all classes with an equal hand. It is to be regretted that he has been driven for revenue purposes to raise the Customs tariff to a protectionist level. In judging the merits or demerits of his Budget, we must, however, bear in mind that his choice of taxation is limited, for, though agriculture is the great industry of India, no income-tax can be charged on income arising from land; we must remember, too, that no one has yet been able to devise any system of death duties in India, owing to the legal difficulties arising from the Hindoo joint family.

OVERSEAS TRADE IN FEBRUARY.

FEBRUARY had two less working days than January, and the general level of prices still moves downwards. Those facts explain a part, but probably by no means all, of the decline in February import and export value figures as compared with the previous month. February imports were £7.1 millions lower, and exports of British produce and manufactures £4.8 millions lower than in January, but there was, on the other hand, a rise of £1.7 millions in re-exports of colonial and foreign produce. One feature of the February returns is the reduction of the import excess to the insignificant figure of £866,000. A summary of the value figures for February and the two months of 1921 and the present year reads as follows:—

MONTH OF FEBRUARY.

	1921.	1922.	Inc. or Dec. in February, 1922.	
	£	£	£	%
Imports	97,010,461	69,374,882	-27,635,579	-28.5
British exports	68,221,731	58,335,110	-9,886,621	-14.5
Re-exports	8,004,303	10,174,160	+2,169,857	+27.0
Total exports	76,226,034	68,509,270	-7,716,764	-10.2
Excess of imports over total exports	20,784,427	865,612	-19,918,815	-92.0

TWO MONTHS ENDED FEBRUARY 28.

	1921.	1922.	Increase or Decrease in 1922.	
	£	£	£	%
Imports	214,051,576	145,863,113	-68,188,463	-32.0
British exports	160,977,825	121,482,059	-39,495,766	-24.5
Re-exports	17,959,422	18,633,026	+673,604	+3.8
Total exports	178,937,247	140,115,085	-38,822,162	-21.7
Excess of imports over total exports	35,114,329	5,748,028	-29,366,301	-83.2

From a pre-war normal average of £10 millions or £11 millions a month, the import surplus on the merchandise figures for the first two months of the present year has fallen to an average of less than £3 millions, and approached vanishing point in February. Those whose hobby it is to play with figures note that if bullion and specie figures be combined with those for merchandise, February actually shows a visible export surplus. The combination is improper, but the result is one which probably cannot be matched from British trade history over a very long period. The exchanges in these times are subject to many and varied influences, but it can hardly be entirely fortuitous that the rise in sterling during the past two months coincided with this notable movement in the trade balance. The monthly surplus of merchandise imports averaged £31 millions in 1920 and £23 millions in 1921.

In many respects, it must be confessed, the February returns are disappointing. After allowing for the influences mentioned above, no encouragement can be derived from a decline of £4.8 millions in British exports or a fall of £4.5 millions in imports of raw materials, as compared with the previous month. On the other hand, it is very dangerous to draw conclusions from the figures of raw material imports in a single month, and some small consolation is provided by the increase in the activity of the *entrepôt* trade; while as regards the all-important figures of the volume of exports of some leading British industries, the February figures are not unsatisfactory. The following table gives some instances:—

BRITISH EXPORTS IN FEBRUARY.

	1920.	1921.	1922.
Coal.....(tons)	2,601,046	1,729,148	4,014,334
Iron and steel and manufactures thereof.....(tons)	226,387	166,869	223,616
Machinery.....(tons)	22,134	41,917	34,884
Cotton yarn.....(lbs)	11,902,700	8,525,700	14,913,200
Cotton piece goods.....(sq yds)	311,989,200	244,725,500	251,954,800
Woolen tissues.....(sq yds)	13,063,200	7,128,400	7,755,300
Worsted tissues.....(sq yds)	5,135,000	3,596,500	4,028,000
Linen piece goods.....(sq yds)	8,991,300	1,930,600	7,217,900

Coal exports are returning towards the pre-war level, and iron and steel exports are almost the same as those of February, 1920, when trade was brisk. Cotton yarn exports are larger than either one or two years ago, exports of cotton piece goods are better than in February, 1920,

while the last three items on the list show figures considerably better than a year ago, the increase in linen piece goods being remarkable. On the other hand, machinery export figures are not so good as of late, and figures in the immediate future will be adversely affected by the engineering dispute. But the figures at least suggest recovery in some leading industries from the depths of the depression.

At first sight the summary of the imports of raw materials appears suggestive of industrial stagnation; but closer investigation shows that this year's takings of certain important raw materials have increased in quantity as compared with the first two months of 1921, although value figures are, of course, affected by the great fall in prices. Comparing January and February of this year with the same period of last year, we imported 2,336,904 centals of cotton, against 2,307,392 centals, at a cost of £3.2 millions less; of sheep's and lambs' wool, 2,020,292 centals, against 1,407,816 centals, at a cost of £2.1 millions less; of hides, 150,374 cwts., against 92,661 cwts. Iron ore imports are still poor, being 419,183 tons for the first two months of this year, as against 853,354 tons in the similar period of 1921. Conspicuous among February re-exports are sheep's and lambs' wool, 415,568 centals against 233,725 a year ago, and rubber, 145,805 centals, against 37,900. Another promising figure is that relating to vessels clearing with cargoes during February, which was 3,903,142 tons, against 2,616,457 last year, and 3,098,909 two years ago. So that, altogether, the February returns contain some indications of betterment, such as is not suggested by a casual glance at the summary figures.

We append a summary of the value figures of imports and exports in February and the two first months of 1922 and 1921:—

IMPORTS (Value C.I.F.).				
	February.		Two Months, Jan. and Feb.	
	1921.	1922.	1921.	1922.
I.—Food, Drink, and Tobacco—				
A. Grain and flour	8,124,993	4,842,133	19,366,830	10,667,885
B. Feeding stuffs for animals	509,622	428,323	1,311,837	939,772
C. Meat	12,936,145	6,555,982	24,719,770	13,343,859
D. Animals, living, for food	77,048	77,048	163,002	163,002
E. Other food and drink, non-dutiable ..	18,192,460	9,938,624	34,009,959	21,451,850
F. " " dutiable ..	6,425,745	8,962,876	14,060,409	16,505,844
G. Tobacco	1,597,432	1,452,273	3,466,120	3,157,133
Total, Class I	47,786,397	32,257,259	96,934,925	66,229,305
II.—Raw Materials and Articles Mainly Unmanufactured—				
A. Coal	13,325	..	13,896	..
B. Other non-metallic mining and quarry products and the like	586,961	278,166	1,522,477	712,879
C. Iron ore and scrap	828,000	344,130	2,489,713	672,798
D. Non-ferrous metallic ores and scrap	1,169,442	468,240	2,172,164	921,408
E. Wood and timber	2,940,623	1,482,767	6,976,844	3,959,066
F. Raw cotton and cotton waste	6,564,525	6,239,646	18,162,863	14,850,994
G. Wool, raw and waste, and woollen rags	6,018,504	5,674,055	12,257,281	10,163,008
H. Silk, raw, knubs and noils	80,809	157,034	182,050	377,017
I. Other textile materials	1,330,755	655,487	3,377,155	1,382,309
J. Oil seeds, nuts, oils, fats, and resins ..	2,519,864	2,631,245	6,697,130	5,245,005
K. Hides and skins, undressed	664,526	871,860	1,777,233	2,633,905
L. Paper-making materials	851,995	258,133	2,264,284	1,156,749
M. Rubber	1,148,017	492,957	2,718,032	1,305,217
N. Miscellaneous raw materials and articles mainly unmanufactured ..	786,638	666,315	1,907,906	1,405,469
Total, Class II	25,503,984	20,220,035	62,509,028	44,784,824
III.—Articles Wholly or Mainly Manufactured—				
A. Coal and manufactured fuel	737,436	498,862	1,534,141	1,077,151
B. Earthenware, glass, abrasives, &c. ..	..	..	..	..
C. Iron and steel and manufactures thereof	3,042,867	772,872	6,601,320	1,835,029
D. Non-ferrous metals and manufactures thereof	1,682,569	1,301,285	3,764,570	3,116,507
E. Outfitters, hardware, implements, and instruments	677,767	415,868	1,310,135	844,317
F. Electrical goods and apparatus	217,335	89,442	459,878	201,152
G. Machinery	1,256,822	637,524	2,816,477	1,159,920
H. Manufactures of wood and timber ..	585,405	229,821	1,389,374	525,945
I. Cotton yarns and manufactures	469,925	491,328	993,657	969,643
J. Woollen and worsted yarns and manufactures	742,669	561,650	1,398,304	1,152,536
K. Silk and silk manufactures	1,861,398	1,732,933	3,605,875	3,471,944
L. Manufactures of other textile materials	960,331	733,477	1,840,197	1,533,631
M. Apparel	696,747	895,238	1,532,398	1,763,791
N. Chemicals, drugs, dyes, & colours ..	1,467,043	843,886	3,800,584	1,608,368
O. Oils, fats, and resins, manufactured ..	4,625,438	3,362,706	13,576,852	6,856,604
P. Leather and manufactures thereof ..	551,222	806,169	1,101,640	1,505,503
Q. Paper and cardboard	1,064,192	691,246	2,070,333	1,413,869
R. Vehicles (including locomotives, ships, and aircraft)	850,777	529,685	2,085,469	1,070,590
S. Rubber manufactures	294,292	501,567	692,435	816,429
T. Miscellaneous articles, mainly or wholly manufactured	1,631,287	1,576,985	3,487,307	3,355,514
Total, Class III	23,394,362	16,575,746	53,861,446	34,285,727
IV.—Animals, not for food	48,932	22,980	94,964	34,623
V.—Parcel post, non-dutiable articles ..	276,786	298,862	651,213	528,734
Total	97,010,461	69,374,882	214,051,576	145,863,113

LONDON ELECTRICITY SUPPLY COMPANIES.

THE London Electricity Supply Acts were passed in 1908 and 1910 with a view to improving and unifying electricity supply in the London area. By the terms of these Acts companies operating in London and its environs are purchasable by the London County Council in August, 1931. If, however, the option of purchase is to be exercised, three years' notice must be given, and all undertakings must be acquired at the same time. If not exercised in 1931 the right to purchase becomes operative at the expiration of any subsequent period of ten years. The Electricity (Supply) Act of 1919 was a further step in the direction of unified control. It provided for the appointment of Electricity Commissioners, and enabled the various companies, authorities, and others in areas to be agreed upon to combine to form a joint authority for districts. A further supplemental Bill was introduced into Parliament and withdrawn. It was, however, again introduced in the session of 1921, but made no progress. The Bill has now made an appearance in the House of Lords in a modified form. These Bills contain chiefly financial provisions relating to the Act of 1919, and the companies are mainly concerned in amending certain parts which are, it is contended, against the interests of existing undertakings. It is claimed by the companies that the electricity to be supplied in bulk, shall be sold to each dis-

tributing company at a price at least as cheap as each such company could generate it.

During 1920 the Electricity Commissioners provisionally determined the boundaries of the London Home Counties Electricity District, and invited schemes for the establishment of a joint authority over Greater London. But apparently no considerable amount of enthusiasm was shown. An inquiry was held during June and July of last year by the Commissioners, and various schemes submitted were considered. The companies interested formed an association under the name of the London Electricity Joint Committee, 1920, Limited, and its representatives gave evidence. After considering the various views put forward, the Commissioners published a report, but beyond confirming the provisionally determined district, and framing proposals, it cannot be claimed that the inquiry was productive of satisfactory concrete results. Apparently many of the big companies are not inclined to view favourably some of the proposals, but the chief complaint is against the small number of representatives allowed to companies on the joint authority. Meanwhile, it is stated that negotiations are proceeding in an endeavour to arrive at a satisfactory solution of the problem.

In the following analysis of the results of representative London electricity supply companies we tabulate from those reports which give the information the amount of Board of Trade units generated and sold:—

B.T. UNITS SOLD (in 1,000's).

	1913.	1915.	1916.	1917.	1918.	1919.	1920.	1921.
Charing Cross, W. End.	13,270	11,441	11,776	12,390	11,591	12,649	14,563	14,949
Do City	22,603	24,035	28,397	32,209	39,985	34,349	38,358	38,511
Chelsea	4,451	4,193	4,271	4,738	4,491	4,225	4,316	4,823
City of London	29,113	29,479	29,582	29,697	26,556	31,256	36,730	35,931
County of London	25,743	35,030	35,030	37,595	40,332	42,488	46,553	51,220
Kensington & Knightsbridge	5,671	4,800	4,697	5,149	4,581	4,628	5,811	6,507
London	35,336	50,758	49,810	49,014	46,357	42,908	47,366	47,491
Metropolitan	18,109	19,845	24,595	28,446	26,761	25,127	27,799	26,945
St James' and Pall Mall ..	11,605	10,675	11,472	11,986	10,594	12,190	13,510	13,464
Westminster	21,906	22,486	23,499	27,813	25,211	24,676	25,659	25,254
Total	187,807	208,274	222,329	239,037	226,553	254,496	264,265	265,101

The County of London as usual heads the list with 51,220 units, while the London comes second with 47,491, both companies having increased their output. On the whole the increase on the year is slight, although it may be contended that in view of the industrial depression it is surprising to find that most companies have not shown declines. Perhaps the movement for a brighter London has offset to some extent decreased demands for industrial and domestic supplies.

The next table shows gross annual earnings of the principal London companies for the past seven years. The figures for 1913 are appended for comparative purposes:—

GROSS REVENUE.

	1913.	1915.	1916.	1917.	1918.	1919.	1920.	1921.
Brompton & Kensington	56,482	56,469	55,878	61,898	58,759	74,045	103,372	110,130
Charing Cross, W. End.	151,240	138,964	150,473	166,136	193,858	265,855	311,045	312,532
Do City	149,819	158,357	176,464	212,542	238,074	331,323	418,746	439,772
Chelsea	72,602	71,480	76,314	86,602	86,698	92,629	115,404	120,416
City of London	311,822	309,050	330,752	347,979	389,899	521,116	649,391	676,456
County of London	255,670	298,269	343,066	379,836	451,811	576,116	698,625	769,634
Kensington & Knightsbridge	81,859	71,478	68,055	78,711	78,268	95,871	127,141	138,105
London	162,854	213,964	222,406	228,032	245,539	305,109	372,230	393,674
Metropolitan	217,605	225,201	277,509	318,215	348,726	415,059	516,594	538,471
St James' and Pall Mall ..	146,161	130,844	143,072	161,151	160,206	208,467	227,959	254,097
South Metropolitan	65,635	80,576	95,883	131,930	167,233	166,996	199,037	216,809
Westminster	256,800	247,060	262,624	306,184	286,712	362,839	404,010	437,093

Unfortunately, with the notable exception of the Brompton and Kensington Company, the companies do not give the average price obtained per unit over a period of years. Such figures throw an interesting light on figures of gross revenue. Thus the sale of electricity only in 1920 by the company mentioned brought in £97,610, and the price obtained per unit was 5.303 pence, while in 1920 sales of electricity amounted to £104,554, the price per unit being 5.236. In 1913 the price per unit was 4.08 pence, showing a comparatively steady fall from 1890, when the price was 8 pence. The general increase in revenue is not the least satisfactory part of these accounts, especially when compared with the figures of expenditure given in the next table:—

NORTH EASTERN RAILWAY.

HULL SERVING A POPULATION OF 12,000,000 PEOPLE

10 DOCKS · WATER AREA 235 ACRES

DEEP-WATER OIL-BUNKERING JETTY. 2 RIVERSIDE QUAYS. — WAREHOUSES TO HOLD 211,000 TONS. OPEN STORAGE 540 ACRES. COLD STORES FOR 345,000 CARCASSES. 34 COALING APPLIANCES. 154 CRANES—GRAIN SILO 40,000 TONS—WOOL SHEDS 144 ACRES

REGULAR STEAMSHIP SAILINGS TO ALL PARTS OF THE WORLD.

For further particulars of facilities and charges apply to:

Shares of electricity supply companies have been steadily advancing in price in the last month or so, and show a marked improvement as compared with a year ago. The rise in the preference shares is, of course, primarily due to the cheapening of money.

Future prospects may be regarded as satisfactory. It is true that the second reading of the Summer Time Bill in the House of Lords is not a favourable point as far as artificial lighting undertakings are concerned, but against this must be placed economies which could be effected under a sound scheme of association of all the London undertakings. Moreover, if as is indicated in the Commissioners' report, the joint authority is to raise fresh capital when required (and the joint authority is composed of representatives of Local Authorities, the London County Council, and companies), prior charge securities of London electricity supply companies are not without merit.

THE ENGINEERING LOCKOUT.

(FROM A LABOUR CORRESPONDENT.)

DURING the past three-quarters of a century there have been three big stoppages in the engineering industry, and in each case the fundamental issue has been the same. In 1851 the Amalgamated Society of Engineers, Machinists, Smiths, Millwrights, and Patternmakers came into existence. In the same year the Central Association of Employers of Operative Engineers was formed to resist the new union. At the beginning of 1852 the two bodies were at grips. The Amalgamated Society of Engineers had declared that systematic overtime and piecework were to be stopped. It offered to go to arbitration, but the employers declined. The members of the union declined to work overtime, and all the important engineering shops in London and Lancashire were closed against the men. The public took considerable interest in this lockout, and many people, including Lord Goderich (Marquis of Ripon) and the Christian Socialists, assisted the union financially. Not only did the employers insist on the full withdrawal of the men's demands, but also declared that before re-instatement the men must sign the "document" repudiating trade unionism. For over three months the bitter struggle continued, and then the men, utterly beaten, were compelled to return to work on the employers' terms. The employers remained masters in their own house, and overtime was worked according to their will.

The second struggle took place 25 years ago. The precipitate strike of the London engineers was met by a national lock-out of the workers in the federated shops. This stoppage lasted eight months, and the men were again beaten back to work on the employers' terms. Though the immediate question in dispute was the eight-hour day (and that only so far as the London district was concerned), the employers' federation retaliated that they would "admit no interference with the management of their business." Again they were determined to be masters in their own house.

The lock-out of 1922, if will be seen, bears a curious resemblance to the stoppages of seventy and twenty-five years ago, whilst the words of the chairman of the Engineering Employers' Federation in 1897 had the same ring and took almost the same form as the words of Sir Allan Smith in this present year of grace. It is interesting that the three great struggles in the engineering industry have not been wages disputes; they have centred upon the fundamental principles of "industrial government." In each case the particular point at issue has been thrust into the background before the emergency of a question of high policy.

The present lock-out is the result of a difference of interpretation of an industrial agreement—the engineering

agreement of September, 1920. It appears that, in point of fact, the employers themselves in different parts of the country have interpreted it in different ways. It became a bone of contention nearly a year ago, because it was suggested that the interpretation put upon the agreement by the union, viz., that apart from overtime in the case of breakdown, working against dates, &c., extra time should only be worked after consultation with the men, was a challenge to the authority of the employers. The union, however, were merely following the line laid down in a document of more general application signed by Sir Allan Smith, as chairman of the employers' side of the National Industrial Committee, set up on the initiative of Mr Lloyd George three years ago. In the unanimous report of the Committee it is recommended that unavoidable overtime should be worked under conditions to be determined "by the representatives of the trade."

The view of the engineering employers in the present case is that such a procedure would undermine their authority and encroach upon their "managerial functions." Hence the famous memorandum, which though it opened with a general statement regarding "managerial functions," was generally understood to have reference to overtime. On the very eve of the lock-out, however, a statement published by the Engineering and National Employers' Federations widened the area of the controversy. It refers to the vexed question of machine manning—a question far removed from that of overtime—and goes on to say that it is only one example among "a hundred and one other functions of management" to which the principle involved applies.

The wide front of the dispute renders a settlement all the more difficult. It appears in trade union circles, notwithstanding the disclaimers of the Engineering Employers' Federation, that the employers intend to take full advantage of their economic opportunity to deliver the A.E.U. a knock-out blow. The impression may be erroneous, but it exists, and in view of the tone of the various published statements of the Federation, it is hardly surprising. The impression has undoubtedly been deepened by the disclosure of the contents of the "secret" circular to employers, dated March 2nd. Both the date—for the circular was issued some days before the lock-out commenced—and the contents are important. It is suggested that "workmen who retire from membership of the Amalgamated Engineering Union, who intimated prior to the posting of the notice that they had done so, should be considered non-union men, and be allowed to continue at work." Further, "workmen who have retired from membership of the A.E.U. after the posting of the notice should be allowed to continue at work, providing they produce on or before the date the notice takes effect a membership card of another trade union." Lastly, "foremen are not affected by the notice, although they may be members of the Amalgamated Engineering Union. Opportunity should be taken to get foremen to become members of the Foremen's Mutual Benefit Society," which is, in effect, an employers' body. Trade union opinion is convinced that these proposals are an attempt to smash the Union, and the General Council of the Trades Union Congress has issued an appeal to all affiliated unions to prevent the policy of the employers taking effect. Suspicion has been further intensified by the employers' statement concerning machine manning, to which reference has been made above. It is regarded as a device to divide the semi-skilled workers in the general labour unions from the skilled men, for the interests of the two groups of workers on this question are not identical.

The stoppage has not, therefore, brought a settlement nearer. Persistent efforts have, however, been made on the trade union and Labour side to secure a termination of the lock-out. The most recent line of approach has been the proposal for an inquiry under the Industrial Courts Act, 1919. In the meantime, the ballot is being taken by the other unions concerned on the "managerial rights" memorandum. The Government have given no sign of an intention to intervene, though they have been pressed to do so by the Labour movement. It appears, therefore, at the moment that history is about to repeat itself, in a long and bitter lock-out.

THE RAND STRIKE.

THE capture of the suburb of Fordsburg on Tuesday, after a bombardment lasting over an hour, brings to a speedy end the armed revolt of the strikers on the Rand. The unwonted sight of a Prime Minister personally directing field operations has on this occasion been attended by brilliant success, and it is evident that the preparations for suppressing trouble had been carefully thought out and worked according to plan. The episode which, like the Rand strike of 1913, has been attended by loss of life, illustrates the greatly increased power which modern weapons have placed in the hands of Governments, for the rapid suppression of the revolt seems to have been the work very largely of aeroplanes and tanks.

The affair is somewhat outside the direct line of political controversy in South Africa. There are employed in the gold mines some 21,000 white workmen, of whom 11,000 work underground. Of the latter it is estimated that nearly 8,000 are Dutch, while a small number of the surface workers are also of that nationality. The Nationalist Party has not, however, been implicated in the disturbance, for though at the outset some sympathy with the strikers was shown by certain Dutch leaders on the ground that the strikers were standing for the status of the white men against the employers, who were trying to break down the colour bar, General Hertzog promptly dissociated his party from any sympathy with the strikers. Mr Cresswell, the leader of the 1913 strike, and formerly leader of the Labour Party in Parliament, appears to have taken no part in the contest, but the machinery of the Industrial Federation seems almost entirely to have been controlled by English officials, all but two of the delegation which has negotiated with the employers being English. It is believed by competent authorities that Bolshevik emissaries have been working behind the scenes and encouraging the movement, and as evidence the immigration statistics are quoted, which show that Russians form the second largest class of immigrants after Englishmen, and it is alleged that the atrocities recall those of the Russian revolution, that Russian agents have been captured in the recent operations. But, leaving that question aside, it is not necessary to go very far afield to explain the origin of the trouble in a community whose white population is of varied nationality, which is jealous in the extreme of anything savouring of the intrusion of the coloured man on the white man's prerogatives, and is faced with an economic crisis of peculiar intensity.

The economics of gold mining are complicated by the fact that gold is, or has been, the standard of value in most commercial countries of the world, and that the annual output, which forms a comparatively small proportion of the world's stock of gold, has only a moderate effect upon the relative value of gold and commodities. During the war the ratio of gold to goods has fallen very much—that is to say, prices have risen—not because gold has become more abundant, but because most nations have ceased to use gold for currency, and the European nations have between them shipped a very large fraction of their total stocks of the precious metal to the United States. Fortunately, the price level has not risen as fast in South Africa as in some other countries, otherwise production would have been materially curtailed. Native wages, which form a large part of the cost, have only shown a very slight increase, and though other costs, and particularly the wages of white labour, have risen much more, the total cost has only risen between 40 and 50 per cent. In an important but somewhat belated statement of the case by the Chamber of the Transvaal Mines, it is stated that early in February, 1920, the price of gold in British currency "reached 130s per fine ounce, which was the highest price touched, and is now below 95s, and that it has for some time been steadily declining and is believed (though no one who has carefully considered the matter will commit himself to any positive prediction) to be likely to decline further until the normal price of 84s 11d is reached.

Meanwhile the costs per ton of ore for Witwatersrand mines, which in 1913 were 17s 11d, have increased to

24s 11d in December, 1921, or more than 39 per cent." while, as shown above, the increase above normal of the price of the product is now less than 12 per cent. As a result, the cost of every ounce of gold produced by the mines has risen tremendously, in many cases to more than the amount which that ounce will fetch in the market. The following table shows the cost of production per fine ounce of each mine on the Reef in December, 1921:—

OLD RAND.		NEW RAND.	
	s d		s d
Meyer and Charlton....	42 6	Modder Deep	39 6
City Deep	68 10	New Modder	46 7
Crown Mines	79 1	Van Ryn Deep	49 1
Ferreira Deep (Nov.) ..	80 6	Government Areas ..	49 1
Cons. Langlaagte	81 10	Modder B	53 7
Langlaagte Estate	82 1	Geduld Prop.	58 10
New Primrose	83 0	Springs Mines	64 0
Robinson Deep	85 7	Brakpan Mines	66 9
Cons. Main Reef	85 8	Modder East	78 10
Witwatersrand Deep....	86 3	Van Ryn Estate	84 5
New Unified	86 11	New Kleinfontein.....	93 9
Witwatersrand Gold....	87 6		
Rose Deep	88 7		
Aurora West	91 0		
Knight Central	91 3		
Rodepoort United	92 2		
West Rand Cons.	92 3		
Nourse Mines.....	92 7		
Wolhuter	92 8		
Robinson	93 2		
East Rand	93 5		
Simmer and Jack	94 11		
Village Deep	95 8		
Randfontein Central ..	96 3		
New Goch	96 5		
Durban Rodepoort Deep	99 3		
Geldenhuis Deep	99 8		
Luipaards Vlei Estate ..	110 10		

The selling price is now less than 95s per ounce. The costs stated above are merely the working costs of the mine. Over and above these must in most cases be taken into account the gold realisation costs, amounting to about 1s 6d per ounce, and in some cases debenture interest and redemption.

The Chamber declares that the inevitable causes of increased cost were aggravated by slack methods of production which grew up during the war, together with a tendency on the part of the men to insist rigidly upon the doctrine of "one man one job," thus involving the employment of increasing numbers of white men, who very often were incompletely employed. The right of fixing prices for sub-contracts, which had always hitherto rested with the manager, was limited, and contract rates were not allowed to be changed, and finally the men succeeded in securing what has been called the *status quo* agreement, which means that if a particular job was then being done by a white man it must always be done by a white man, or if then done by a coloured man it must always be done by a coloured man. In view of the changing conditions underground which are met with as the workings extend, such a doctrine is in practice ridiculous. The owners, therefore, proposed last November to the South African Industrial Federation three measures:

1. Alteration of the existing contract system.
2. Reorganisation of underground working.
3. Modification of the *status quo* agreement.

It is particularly on the last point that the trouble has arisen, for the Chamber makes no secret of the fact that it intends, when the agreement is abandoned, to dispense with the labour of some 2,000 white men. This was subsequently modified in the first week in February by the offer of the Chamber to overcome the retrenchment of 1,000 white men on the higher grade mines until the whole question can be discussed by an impartial Government commission; but the Chamber is distinctly of opinion that unless there is a great change in the ratio between gold and commodities—that is to say, unless prices in gold-using countries fall—gold will only continue to be produced at a profit by employing the utmost amount of low-paid native labour. There is reason to believe that the force of economic arguments is realised by some of the leaders of the men, and it is clear that the white labour employed in Johannesburg was by no means unanimously behind the work of the strikers. This is shown by the fact that two mines on the New Rand, which opened in the third week of February, before the recent revolt, attained an output of 48 and 79 per cent. respectively in the third week of March. Nor is there

reason to suppose that the events of the last fortnight will permanently or seriously prejudice production. It is true that about 25 per cent of the natives have been temporarily lost, as no replacements have been made since the trouble began, but we are informed that these losses are likely to be replaced in a few months, and that output will almost immediately recover, since most mines have a reserve of development in hand, and will presumably put what native labour remains with them on to production, and get back to normal in regard to development, as opportunity allows.

The history of this revolt has more than a local interest to South Africa. During the war, the world's gold output has markedly declined, owing to the fact that with the high wages and prices which prevailed, mining in America and Australia, whose resources in any case were withering, has become unprofitable. South Africa is the one exception, her output, as the following table shows, having been very nearly maintained:—

(Millions of £'s.)

Year.	Transvaal.	The Rest of the Empire.	Total British Empire.	Foreign Countries.	Total for World.
1913.....	37.4	21.4	58.8	35.9	94.7
1914.....	35.6	20.9	56.5	33.9	90.4
1915.....	38.7	22.0	60.7	35.7	96.4
1916.....	39.5	20.1	59.6	33.9	93.5
1917.....	38.3	17.8	56.1	30.2	86.3
1918.....	35.8	15.2	51.0	28.0	79.0
1919.....	35.4	14.6	50.0	25.2	75.2
1920.....	34.7	13.5	48.2	21.3	69.5
1921 (est.) ..	34.5	12.0	46.5	19.5	66.0

Even in South Africa, the rapid tendency to the exhaustion of gold resources is illustrated by the enormous reduction which has taken place in the output from the old Rand. This has been replaced from the New Rand, which will shortly be responsible for half the output of South Africa; but there is very little sign that any big extension of production from the New Rand is imminent. It is believed by those competent to judge that the reduction in costs for which the Chamber is now contending will not increase output, but will only suffice to postpone the decline which must shortly be expected. These considerations have a most important bearing on international currency questions, for it is impossible to contemplate that any considerable number of the States of Europe can get their currencies back to a gold basis at a pre-war par of exchange unless gold prices rise—that is, gold becomes cheap in relation to goods.

Notes of the Week.

Navy Estimates.—The Navy estimates for the year 1922-23, issued this week, total £64,883,700, of which £54,774,200 is for "effective services." They have been prepared on the assumption that the Naval Treaty concluded at Washington will be effectively ratified by all the signatory Powers. The effective votes show a reduction of £20,791,000 as compared with 1921-22, and the non-effective votes an increase of £3,195,800, of which about £3,000,000 is for probable charges by way of pensions and retiring gratuities. The economies proposed include:—(a) The scrapping of 12 capital ships, in addition to the eight recently sold for breaking up, and the maintenance of only 15 in full commission (as compared with 38 in March, 1914). (b) The further reduction of the destroyer flotillas of the Atlantic Fleet. (c) The abolition of 27 submarines and the reduction of the number in full commission. (d) The abolition of two of the home commands (Coast of Scotland and Western Approaches). (e) The reduction of the personnel of the fleet during 1922-23 by over 20,000 officers and men. (f) The discharge of over 10,000 men from the Royal Dockyards, and a drastic reduction of civil staffs at the Admiralty and other establishments. (g) The rigorous pruning of all other services and Votes. The building of the four battle cruisers which had been sanctioned and commenced last year, has now been abandoned, and no provision is made in these Estimates for any new programme beyond the laying down early in 1923 of the two smaller battleships which are

specified in the Naval Treaty. The maximum personnel for the year, viz., on April 1, 1922, is given as 118,500, but it is to be reduced to 98,500 "as soon as practicable."

Army Estimates.—The net total of the Army Estimates for the year 1922-23 is £62,300,000, made up of £51,750,000 for normal current charges, £3,550,000 for charges arising out of the reduction in the Army, and £7,000,000 for terminal charges of the war, including settlements with other Governments for war services, &c. A sum of £4,930,000 in respect of the garrisons of Iraq and Palestine is balanced by a repayment from the Colonial Office. The gross total is £77,977,000, which compares with £130,285,000 for the current year, the latter being the revised estimate of May 30, 1921, together with supplementary estimates. The Geddes Committee recommended that the Army estimates for next year should be reduced to £55,000,000, a sum which, according to a Memorandum by the Secretary of State for War, is to be regarded as the sum recommended for the normal current charges of the Army in 1922-23, including the Middle East. The Memorandum further states that the establishment of British troops proposed in the Army estimates of the coming year is 152,800 officers and men, as compared with 186,400 in the sketch estimates communicated to Sir E. Geddes' Committee—a reduction of 33,600 officers and men. The total money provision is £62,300,000, of which £51,750,000 is for normal current charges, as shown in the Vote on Account. But the true figure for comparison with the £55,000,000 of the Committee's report is £58,500,000, as follows:—

Net provision for normal charges, as above	£ 51,750,000
Add Army charges in the Middle East, provided in gross	
Army Estimates and repaid from Colonial Office Votes	4,930,000
Provision originally made in Army Estimates to cover Indian troops and other military expenditure not in future to be administered by the War Office	1,820,000
Total	58,500,000

The reduction in British Army establishments, excluding Indian and Colonial troops, is 48,291—namely, from 201,127 to 152,836. Colonial and native Indian troops are reduced from 84,200 to 10,200. In a maiden speech in the House of Commons on Tuesday, Field-Marshal Sir Henry Wilson, late Chief of the Imperial General Staff, pointed out that, in spite of the drastic reductions in the German and Austrian armies, there are as many armed men in Europe to-day as in 1913, and that if the present estimates are passed "Great Britain and Ireland can produce in 15 days one division and a cavalry division, and then for the second division she has to wait anything between another 15 days and six weeks, and for a third and fourth division she has to wait months." He argued that the present is not the right moment to reduce the fighting forces, and pointed to the "dangerous state of affairs in Europe" and in many other parts of the world. From the military point of view, his arguments may be sound, but the financial and international situation is abnormal, and calls for exceptional measures of economy, risky though these may appear to military eyes.

Towards a Settlement in China.—The Chinese political kaleidoscope has shifted again. The next turn seems likely to bring the Northern and Southern leaders together, and possibly to effect their union. The Ministry set up in December under the ex-Monarchist Liang Shih-Yi and by Chang Tso-Lin, the Military (and reputedly militarist) Governor of Manchuria, appears, from the telegrams published by the *Times* last Saturday from its Peking correspondent, to have fallen to pieces under the stress of its financial difficulties and in view of the attack on Peking threatened by Wu Pei Fu. This military chief overthrew the Anfu party in 1920, and last year secured for himself the post of Inspector-General of Hupeh and Hunan, ousting Tsao-Kun, his former associate. The threat, so far, has not been carried out; and Chang Tso-Lin is now reported to be preparing a counter-attack with the support of the Anfu party, and with troops in Hunan and Kwangsi from Southern China. Wu Pei Fu was formerly regarded as a popular leader, the defender of the nation against the pro-Japanese Anfu party and of the Constitution against

the ultra-militarists of the North. Now the parts are inverted; he has alienated his provinces by his excessive taxation, and is regarded as an adventurer, bent on his own aggrandisement, while Chang Tso-Lin and his supporters are rallying to defend the Constitution and establish permanent peace. For Chang Tso-Lin announces that, after disposing of Wu Pei Fu, he proposes to summon the Parliament dissolved illegally by Tuan Chi Jui (who is now supporting him) in 1920, and since then in session at Canton, and leave it free to elect any President it pleases—whether Sun Yat Sen, the Southern leader, or anyone else. The cause of this general change of attitude is probably to be found in the financial difficulties of the Peking Government. It is urgently in need of money for current expenses; and the release by the Diplomatic Body of the surplus of the Salt Revenue for January goes only a little way to meet its needs. It has long been vainly endeavouring to raise an adequate internal loan. Security for an external loan will be provided by the salt surplus, and eventually by the Customs receipts from the increased tariff sanctioned by the Powers; but an adequate external loan can only be obtained from the Consortium, and the Consortium will only lend (except for railway construction) to a Government representing the whole of China. A loan will remove the difficulties of the Peking Government, and enable the military leaders to pay and disband their troops. It will also facilitate the consolidation of a number both of internal and of external loans, the latter chiefly held by Japanese financiers, but possibly including the Marconi loan. Hence the efforts of the military leaders and the Anfu party to establish peace and unity in China—and incidentally, no doubt, to obtain certain advantages for themselves. The richer classes, and above all the population of the occupied provinces, have everything to gain by a settlement. The contest with Wu Pei Fu is not expected to lead to serious fighting, and will probably be settled by a compromise. It remains to be seen whether the Southern leaders will respond.

Railway Traffic.—The Railway Statistics for December, 1921, show a considerable reduction in the total tonnage carried in comparison both with the previous month and with December, 1920. As will be seen from the comparative table below, the tonnage of coal and coke conveyed in December was higher than in November, the total of 16,240,000 tons being the highest monthly total of the year:—

(000's omitted.)									
1921.	General Merchandise.	Comparison with 1920.	Coal, Coke and Fuel.	Comparison with 1920.	Other Minerals.	Comparison with 1920.	Total.	Comparison with 1920.	Comparison with 1921.
October—									
Tons	4,934	-18.7	15,043	+66.6	3,722	-30.0	23,699	+16.0	
Ton miles	436,133	-18.5	702,208	+64.7	187,057	-29.4	1,325,398	+8.1	
November—									
Tons	4,971	-14.7	15,988	+8.4	3,642	-31.3	24,611	-4.9	
Ton miles	441,720	-13.1	745,538	+7.5	181,033	-30.0	1,368,291	-6.3	
December—									
Tons	4,506	-17.2	16,240	+6.1	3,325	-39.6	24,071	-14.8	
Ton miles	397,023	-14.1	742,740	+9.0	166,516	-38.0	1,306,279	-15.6	

As compared with the corresponding months in 1920, a heavy decrease is shown in each month in mineral traffic apart from coal. The large increase shown in October is due to the coal strike in 1920, which lasted from October 16th to November 3rd. In December freight train mileage was reduced by 1,137,335 miles, or 9.8 per cent., in comparison with December, 1920. The average wagon and train loads were 5.48 tons and 124.26 tons respectively, compared with 5.74 tons and 132.8 tons in December, 1920. The improvement in the rate of movement was maintained, and the net ton miles per engine hour were 420, as against 402 in the corresponding period of 1920. In November, 1921, the total freight receipts (less cost of collection and delivery) of standard gauge railways in Great Britain amounted to £10,581,241, as against £10,280,487 in October, and £10,343,554 in September. The number of passenger journeys in December, 1921, excluding season ticket-holders, was 103,143,131, as compared with 95,738,488 in

November, and 101,441,616 in October. These totals represent decreases of 10.8, 13.2, and 10.5 per cent. respectively on the corresponding months of 1920.

North British Railway's Claim.—We are informed by the Ministry of Transport that on Tuesday last Mr Arthur Neal, M.P., Parliamentary Secretary of the Ministry of Transport, received a deputation from the directors of the North British Railway Company, the representatives of the Scottish Railway Stockholders' Protection Association, and shareholders of the North British Railway Company, on the subject of the company's claim against the Government in respect of the repairs of rolling stock during the period of Government control of the railways. Mr William Whitelaw, for the company, complained of the action of the Government in withholding the payment of the excess expenditure of the company on the repair of rolling stock, and pressed that steps should be taken to expedite a settlement of the claim by the Railway and Canal Commission at the earliest possible moment. Mr Neal pointed out that when a railway company had incurred expenditure in excess of the 1913 expenditure, after allowing for the increased cost of wages and materials, that claim had to be justified, and the ordinary procedure agreed with the railway companies required that claims of one company should be investigated in the first instance by the accountancy staff of another company, who make a report to the Railway Accountants' Committee. That committee report to an accountant appointed by the Government, in the case of the North British Company Sir Albert Wyon, and that accountant in turn reports to the Ministry of Transport. In the present case the company have not yet formulated their claim, and when this has been presented it will have to undergo investigation by persons who are not under the immediate control of the Government. It cannot, therefore, be said with any precision how long the process of investigation may last, but the Ministry have already agreed that the investigation by the accountancy staff of another company should proceed in advance of the presentation of the final claim. There will be no delay on the part of the Ministry, when once matters take a final shape, in allowing the whole claim to go to arbitration if a friendly settlement cannot be arrived at in the meantime.

French Railways and State Support.—In view of the several French railway issues made and to be made in the London market, it may be of interest to set out the terms, as given in the prospectus of the Midi and Orleans Railway companies, of the agreement made between the French Government and the principal French railway companies in June last, and approved by the French Law of October 29, 1921. This agreement secures to the principal French railway companies the payment of working expenses and the service of capital and loans of every kind. In the event of the receipts of the system proving insufficient to meet charges, the deficit has to be borne by a common fund formed for the benefit of all the large systems. Into this fund excess receipts of all the systems are paid, and tariffs have to be adjusted to meet the requirements of the fund, but if this adjustment of tariffs should not produce sufficient income for the purpose, the deficiency has to be made good by the

French Treasury. Further, at the expiration of the concession, the entire service of any bonds which may be outstanding will be borne by the State.

Canadian Pacific Results.—The London office of the Canadian Pacific Railway Company has received a cable from Montreal giving the preliminary results of the line for 1921. These compare with those of the two previous years as follows:—

	1919.	1920.	1921.
Gross earnings—railways and lake steamers	\$ 176,929,060	\$ 216,641,349	\$ 193,021,854
Working expenses	143,996,024	183,488,305	158,820,114
Net earnings	32,933,036	33,153,044	34,201,740
Deduct fixed charges	10,161,510	10,775,409	11,519,072
Surplus	22,771,526	22,377,635	22,682,668
Deduct—			
Contribution to pension fund....	500,000	500,000	500,000
Net revenue available for dividends	22,271,526	21,877,635	22,182,668

The decline in gross earnings was more than balanced by the reduction in working expenditure, net earnings being more than a million dollars higher than in 1920. Fixed charges show a further increase, but the balance available for dividends is still over \$300,000 higher than a year ago. After payment of all dividends for the year, the surplus from earnings of the railway and lake steamers is \$755,400, as compared with \$450,359 for 1920, and \$844,250 for 1919. The special income for the year, after making allowances for contingent reserves, is \$10,987,199, as against \$10,966,448 and \$9,049,342 for 1920 and 1919 respectively.

International Cotton Statistics.—Our Manchester correspondent writes:—This week the half-yearly statistics of the International Federation of Master Cotton Spinners' and Manufacturers' Associations have been published, particulars being given of the consumption of cotton for the half-year ending January 31st last, and stocks of cotton in spinners' hands on February 1st, with previous year's figures for comparison. The officials of the Federation have obtained information from the several countries of the world with regard to the amount of short time worked in the spinning mills during the half-year ending January 31st, and the table shows very clearly that in practically all countries more machinery was worked in that period than in the previous six months. The consumption of raw cotton, therefore, has tended to increase. With regard to England, it is stated that the returns received represent 683 firms owning 51,162,519 spindles, of which 32,204,981 curtailed production during the half-year to the extent of 460 hours. This stoppage, calculated over the whole industry, means an entire suspension during six weeks, against nearly 13 weeks in the previous half-year. An analysis of the returns shows that generally the Egyptian spinning section has been more fully employed than the American section. Out of the 15,725,198 spindles reported as being entirely on Egyptian cotton, 4,598,231 spindles had no curtailment whatever during the six months under review. Amongst the returns of the American spinning section, out of the 35,436,321 spindles reported, only 3,103,380 spindles had been kept working full hours. It is of interest to point out that the consumption of American cotton in Great Britain during the half-year ending January 31st amounted to 1,003,772 bales, against only 520,393 bales in the six months ending July 31, 1921. The stocks of American cotton held by spinners in Great Britain on February 1st totalled to 181,493 bales, against 204,533 bales on July 31, 1921. The total number of spinning spindles in Great Britain is given as 56,420,078, and the International Federation has obtained returns from the owners of 51,162,519 spindles. In taking a broad view of the statistics published most people contend that they should have a bullish effect upon the market; the consumption of raw cotton has certainly been larger than was generally understood.

Cotton Trade Failure.—Our Manchester correspondent writes:—In Lancashire cotton trade circles this week there has been considerable comment with regard to the report of the failure of Messrs Alexander Graham and Co., Limited, cotton manufacturers and merchants, Manchester. A creditors' meeting was held on Tuesday last, and according to a statement of affairs prepared by Messrs Jones, Crewdson, and Youatt, chartered accountants, Manchester, the liabilities are £804,120, and assets £33,823, leaving a deficiency of £770,297. The firm was formed about four years ago, the directors being Mr Walter Pollard, cotton manufacturer, Nelson, and Mr Alexander Graham, of Manchester. At the meeting an offer was made by the firm to pay 4s in the £, extending over a period of two years, the proposal being subject to the cancellation of debts due to differences and the completion of contracts. A committee of inspection was appointed of the leading creditors, and Mr C. M. Skinner, of Messrs Jones, Crewdson, and Youatt, was appointed liquidator. It is understood that the largest creditor is Messrs Walter Pollard, Limited, cotton manufacturers, Nelson.

Merchants' Marine Insurance Company.—This carefully-managed company—which is now one of the associates of the Employers' Liability Corporation—is not exempt from the common lot in respect of the underwriting year of 1920. The premiums were £587,075; the first year's claims were £174,244 (29.5 per cent.), and the second year's claims £221,371. The whole balance, after providing for expenses, has been transferred to suspense account to meet unsettled claims, so that the company expects to come out all square on the year, without loss or profit. The revenue from interest of £28,543 nearly provides the dividend of £30,000. A more favourable appearance is shown in the figures for the underwriting account of 1921. The premiums have been reduced to £423,373, and the first year's claims are £92,715, or 21.9 per cent. The Merchants' Marine had no great war expansion, for it kept out of the war risks, but it has a string of very satisfactory surpluses to its credit—£92,338 for 1919, £43,431 for 1918, £68,105 for 1917, £68,311 for 1916, and £65,253 for 1915. The investments of £751,958 are taken at their market value as on December 31st last.

Employers' Liability Assurance Corporation.—Although this insurance company, through its purchase of the shares of the Merchants' Marine and the Clerical, Medical and General Life Office, has become a composite office of high standing, the accounts which it issues still chiefly relate to accident business. It is building up fire insurance connections, but it has ceased since December, 1920, to transact marine business under its own name. The premium income for 1921 was £5,568,328, a decline of £1,231,557, which is attributable in part to the world-wide trade depression, unemployment, and falls in values. The bulk of the workmen's compensation business is done in America, where there is wider unemployment even than in this country. The claims were £3,604,767, or 64.7 per cent. of the premiums. The reduction in premiums caused a corresponding reduction in the reserve for unexpired risks, so that at the end of the year, after providing for expenses, there was an underwriting surplus of £718,446. The dividend, which costs £287,818, was provided out of the receipts from interests, £291,897; taxes absorbed £521,694, and after writing £49,820 off the share values of the associated companies, there was an increase in the general reserve of £413,106. The corporation's reserves, other than capital, amounted on December 31st to £8,208,830. The directors point out that they have made a special reserve to cover losses which may arise through the default of British and foreign re-insurance companies, although a very small part is due at the moment. A new and interesting course has been taken with the particulars of investments. It is recognised that the public mind has become uneasy at recent revelations of the way in which the assets of the City Equitable disappeared like a mirage when it was sought to touch them. The Employers' Liability Corporation does not issue a complete list of its securities, but it shows clearly the categories represented by its nearly eight million pounds' worth of investments, and the principles

upon which they have been valued. We give this statement below:—

The investments, after writing down, amount to £7,862,110, as follows:—

- (a) £4,838,417 Trustee and other securities of the highest class—all redeemable at par within the next 30 years;
- (b) £775,933 Trustee and other securities of the highest class—all similarly redeemable at later fixed dates;
- (c) £73,716 Trustee and other securities of the highest class—perpetual and not redeemable at any fixed dates;
- (d) £72,634 Miscellaneous securities;
- (e) £547,367 Freehold and leasehold premises (occupied as offices by the corporation); and
- (f) £1,554,043 the shares of the associated companies, set out on the balance-sheet.

The value of the investments under headings (a), (b) and (c) stands in the balance-sheet at cost or under, and in no case above par; whilst that under headings (d), (e) and (f) is at cost or under. The value of the investments at December 31, 1921, has appreciated by £322,077 since December 31, 1920, and the total depreciation is now only £271,367, which is covered by the investment reserve.

Dividends Out of Reserve.—Early in 1920 the shareholders in the South African Gold Trust approved a scheme for the transfer of the assets to a new company, the whole of whose shares were to be held by the old one. This course was taken as an alternative to reorganisation, as the existing memorandum did not afford "adequate scope for the remunerative employment of the company's capital." Subsequent events suggest that the shareholders might possibly have fared better had matters been allowed to remain as they stood. For 1919 the Trust paid 2s 6d per share, tax free. In respect of the following year the rate was 1s 3d, but to permit this distribution—considerable depreciation having to be provided for—it was necessary to transfer £40,000 from the reserve. Last year's earnings on the part of the operating company were practically extinguished by further decline in the value of the investments. Hence the dividend of 1s per share declared by the holding company, besides the preference dividend, is mainly provided by the transfer of a further £40,000 from reserve; there were small receipts in the shape of interest, &c. Reserve has now been reduced to £50,000—a sum just about equivalent to the balance of cash assets over liabilities. The portfolio embraces over forty different undertakings—mining, industrial, oil, &c. The largest individual interest is in the American Trona Corporation, whose affairs have for some time past been under a cloud.

Redemption of Mine Capital.—Our Mining correspondent writes: Considerable discussion has at times centred round the question as to whether a mining company should or should not take measures for the repayment of its capital by the time the property is exhausted. A mine being a wasting asset, the scheme at first sight appears to have much to recommend it. In practice, however, the matter is not so simple. Only in a small minority of cases are the shareholders who are in at the end identical with those in at the beginning. *Force majeure* in the shape of death and the tax collector are responsible for much shifting of investment, to say nothing of "free will." Thus it would come about that those who took the risks in the early days of the enterprise would, in most cases, be deprived of a part of their profits for the benefit of posterity. The accumulation of large sums in this way would tend either to drive up the prices of gilt-edged investments or tempt the directors to speculate. In the latter case, many shareholders would prefer to operate for themselves. Of course, in theory the investor in mines should regard a suitable proportion of his dividends as in the nature of a return of capital, but in practice he frequently fails to do so. Large dividends are paid for a series of years, and on the strength thereof the shares command a high premium. Then suddenly it is realised that the mine is within measurable distance of exhaustion; the quotation comes down with a run, and the unfortunate holder who "gets left" finds himself faced with heavy capital loss. The subject has been brought to the fore again by the proposal of the Dome Mines—an important Canadian proposition—to return from time to time a proportion of its capital stock,

decreasing the par value of the shares correspondingly. This method of capital redemption is not only free from the objections pertaining to the old-fashioned idea, but possesses a particular advantage. Payments of such nature are exempt from taxation. As soon as this point is fully realised, it is probable that companies operating in other countries will take up the running.

William Whiteley.—A decrease in profits is shown in the report of William Whiteley, Limited, for the year ended February 14, 1922. Gross profits fell from £329,339 to £219,820, while net profits declined from £210,016 to £171,961. When the table given below is carefully studied, some striking changes are revealed, but the remarkable growth of the business in recent years is not without interest:—

Year end Feb.	1914.	1915.	1916.	1917.	1918.	1919.	1920.	1921.	1922.
Trading profit...	£ 129,478	£ 117,655	£ 113,479	£ 136,325	£ 219,239	£ 331,874	£ 329,339	£ 219,820	£ 219,820
Net profit.....	70,632	59,545	55,481	77,745	151,562	258,567	264,989	152,231	152,231
Brought forward.	13,917	14,244	14,215	12,345	19,651	54,808	210,016	171,961	171,961
Prof. dividend...	84,549	73,789	69,696	90,090	171,213	313,375	475,005	324,192	324,192
Ord. dividend {	20,250	20,250	20,250	20,250	20,250	20,250	20,250	20,250	20,250
Reserves, &c. ...	31,500	22,500	22,500	27,000	36,000	63,000	63,000	63,000	63,000
To main't shrs.	7%	5%	5%	5%	6%	8%	14%	14%	14%
Carried forward	14,245	14,215	12,122	19,651	92,808	210,017	171,961	203,834	203,834

Allocations to reserve are on a much smaller scale this year, but the dividend of 14 per cent. on the ordinary shares is maintained, while the £100 of management shares obtain £5,108 of profits, as a year ago. Deposit and current accounts of the banking department are up from £402,874 to £495,239. Cash in hand and at bankers amount to £60,240, and investments at market value are £367,426. Freehold land and buildings are valued at £1,331,966, but against this must be placed the 4 per cent. first mortgage debenture stock for £900,000. Stock-in-trade is taken at £394,104, and a mixed item, "leasehold buildings, goodwill, &c., less depreciation," appears at £243,138. Total assets are £3,294,998.

R. E. Jones, Limited.—When in March, 1921, the directors of R. E. Jones, Limited, appealed to the public for fresh capital, and issued 700,000 10 per cent. cumulative £1 preference shares, with participating rights, at par, those responsible for drawing up the prospectus estimated that the 10 per cent. preference shareholders should receive 14 per cent. per annum on their investment, while ordinary shareholders would have 56 per cent. per annum distributed amongst them. But modesty in estimating future profits has never been a striking feature in company prospectuses. It is true that for the half-year ended April 30, 1921, dividends at the rate of 20 per cent. per annum were paid on the ordinary shares, and a distribution on the partly paid-up preference shares, for two months, calculated at the rate of 10 per cent. per annum was made. But these payments were charged at the end of the year to the reserve of premium on shares. The loss on the year's trading recorded in the report is £193,863. As this amount is arrived at after charging £5,000 for depreciation of certain leases, £15,688 for doubtful debts, and setting aside £40,017 for reserve contingencies, the actual net trading loss for the year amounts to £133,158. But this latter loss must be considered in conjunction with the figure must be considered in conjunction with the auditor's report, which points out that "no reserve for depreciation of furniture, fittings, trade utensils, plant and machinery, and freehold property has been provided during the year under review." On turning to the balance-sheet, freehold properties are valued at £363,382 and leasehold properties at £296,521. Investments are taken at cost and amount to £729,908. In connection with this item the auditor's report observes that "the investment in respect of Morgan and Co., Limited, stands in the books of the company, at a value, in our opinion very considerably in excess of its true value at October 31, 1921," and the directors in their report make the significant admission that "the profits which your directors were led to believe were being earned (the

italics are ours), and could be earned, by this business have not materialised." Shareholders will probably be interested to learn what proportion the Morgan Company represents of total investments. According to the previous report and balance-sheet, contracts had been entered into to purchase the business of Morgan and Co., Limited, Leighton Buzzard, for £280,172, to be satisfied by the allotment of preference shares. Another matter which calls for some explanation is the item of calls in arrear of Mr Stanley B. Jones, managing director, for £21,946, and the entry "calls in arrear due from Mr Stanley B. Jones," amounting to £33,919, debited to the premium on share reserve. Incidentally the premium on shares account, which stood at £133,910, has now been reduced to nil, although it is only fair to say that £57,808 has been devoted to writing-off capital increases. Cash in hand amounts to but £1,023. The ordinary general meeting is to be held on March 20th, at Swansea, when no doubt the chairman will shed some further light on the position of affairs and future prospects.

THE Sixth Swiss Industries Fair will be held at Basle from April 22 to May 2, 1922. Information regarding Swiss manufacturers and their goods may be obtained from the Swiss Bank Corporation, 43 Lothbury, E.C. 2, and from the Commercial Attaché, Swiss Legation, 32 Queen Anne street, W. 1.

UNITED STATES.—CHANGE IN TRANSPORTATION ACT—BANK CLEARINGS INCREASE—FOREIGN LOANS.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 4.

THE provision in the Transportation Act which permitted railroads to earn an annual return of 6 per cent. on the valuation of their property as fixed by the Interstate Commerce Commission for rate-making purposes, expired by limitation on March 1st. It is superseded by sections in the same Act which require the Commission to make rates that will afford the carriers a "reasonable return on the value of property used in transportation." It will, therefore, devolve upon the Commission to determine what earnings constitute a "reasonable" return, and to fix rates accordingly. As has been shown by the monthly earnings reports of the railroads, nothing like a 6 per cent. return on their property investment has been earned. The percentage has ranged around 3 and 4; for the last calendar year the combined net operating income of all the first-class railways of the country was less than 3½ per cent. The Commerce Commission some time ago granted increases in freight and passenger rates, which were intended to give the carriers earnings equivalent to a 6 per cent. return, but despite the most drastic economies in operating expenses, they have been unable even to approximate that figure. Their failure to do so is generally attributed to the fact that the volume of traffic, owing to the business depression, has been below normal, and also to inability to effect a complete readjustment of wages, such as has taken place in other industries. The matter of further wage reductions is still pending. Numerous conferences between managements and union employees have been held, and the controversy will again come before the United States Railroad Labour Board for settlement in the not distant future. So far as any increase in freight rates is concerned, that seems to be unlikely in view of the widespread demand on the part of shippers for lower rates. Furthermore, the railroads have expressed an intention of lowering freight rates wherever possible if wages are reduced. In many quarters it is considered unfortunate that the law, as it now stands, since the 6 per cent. return provision has expired, is not more definite. Naturally, opinions will vary widely as to what is a "reasonable" return, and it is quite probable that the Commerce Commission will experience considerable difficulty in reaching a conclusion.

The first of the current month also marked the expiration of the period in which railroads that were under Federal control and operation during the war were allowed to apply for Government loans to aid them in continuing operations after their return to private control and management. Just before March 1st many applications for such loans were filed by various companies.

When the Interstate Commerce Commission, some time ago, authorised an increase in freight and passenger rates throughout the country, many State Railroad Commissions refused to allow increases within the borders of their respective States. A prolonged controversy ensued, and the matter was finally carried to the United States Supreme Court which, in a decision delivered this week, held that the Interstate Commerce Commission has authority over intrastate rates. Whether or not an effort will be made to amend the Transportation Act to meet the situation created by that decision remains to be seen. State Railroad Commissions have always claimed full authority over interstate tariffs, and have regarded any Federal regulation of such rates within their own jurisdiction as a violation of States' rights.

Reports of bank clearings during February are more interesting than usual. Clearings at 119 cities throughout the United States for that month, as reported to *Bradstreet's*, totalled \$25,497,000,000 for the 24 business days last month. The total shows a decrease of 11.7 per cent. from the January total for 26 business days. The noteworthy feature of the February exhibit, however, is that it is the first month since June, 1920, to show a gain over the corresponding month a year ago, the increase being 2.1 per cent., whereas January clearings showed a decrease of 8.2 per cent. on January, 1921. This may be taken to indicate the first real reflection of a turn in the tide of clearings. The detailed returns show that in three groups of cities—those in New England, the middle States, and the far western States—clearings gained 5.3 per cent., 4.9 per cent., and 3 per cent. respectively over February, 1921; in New York City alone the increase was 5.6 per cent.

In addition to the 75,000,000 guilders bonds of the Kingdom of Netherlands, two other foreign loans were floated here this week, namely, \$4,000,000 City of San Paulo external sinking fund 30-year 8 per cent. gold bonds, and \$1,000,000 City of Montreal 10-year general improvement 5½ per cent. bonds; both issues were offered to investors at par, and interest to yield 8 per cent. and 5½ per cent. respectively, and were readily taken. It is announced to-day that Argentina has sold to a New York banking syndicate an issue of \$27,000,000 five-year 7 per cent. gold notes, which will be offered for public subscription next week at a price to yield approximately 7 per cent. The syndicate is composed of the same bankers who handled the Argentine flotations here last year. Argentina has done no financing here since last October, when \$50,000,000 two-year 7 per cent. notes were sold to American investors at 99½. During the war that Government floated loans in the New York market aggregating approximately \$73,000,000; all of those war-time obligations which have matured have been paid off, it is understood. Another foreign loan is expected to be offered here shortly, consisting of 25,000,000 francs 6 per cent. bonds, foreign series, of the Midi Railroad Company of France; a similar issue, it will be recalled, was sold here last spring. Negotiations for the floating of several other foreign loans are now under way.

FRANCE.—THE CONFERENCE OF ALLIED FINANCE MINISTERS — REPARATION DECISIONS — AMERICA'S CLAIM—BANK RATE—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, March 14.

THE conference between the Allied Finance Ministers which took place in Paris last week, is generally regarded here as having cleared up in a satisfactory manner many of the outstanding questions that have stood in the way of a clear understanding between the British and French Governments since the conclusion of the much-discussed agreement of August last. That agreement, it will be remembered, M Doumer, then French Finance Minister, de-

clined to sign except under the reserve that it could not become effective until approved by the French Government. This approval has not yet been given.

The principal objection put forward by France was that the value of the Saar coal mines, which were provisionally valued at 300,000,000 gold marks, was to be debited to France against her share in the first milliard paid by Germany. This proposal, if carried into effect, meant that France would receive nothing in cash out of this first milliard to recoup her for the expenditure on her Rhine Army, while Great Britain would receive a large part of the total sum in hand, and the rest would be paid over to Belgium in satisfaction of her priority rights. Partial satisfaction was given to the French claim at the Cannes meeting of the Supreme Council, when it was decided that, in order to enable France to secure a certain amount of cash, the value of the Saar mines, which was still maintained provisionally at 300,000,000 gold marks, should not be debited to France until the current year, 1922. M Briand, it is understood, was prepared to accept this decision, but before he could return to Cannes for the purpose of formally signing the agreement his Ministry fell, and there the matter stood when last week's conference of Finance Ministers opened.

The outstanding event of that conference was a proposal suddenly put forward by M de Lasteyrie, the French Finance Minister, who presented a memorandum to his astounded colleagues asking, among other things, that the arrangement come to at Cannes in regard to the Saar mines should be entirely upset, and that instead of being debited to the French reparations account for 1922 the value of the mines should be set off against an equivalent amount of the German "Series C" bonds that will be allotted to her. It is no secret that this proposal was sharply opposed by the other Allied Finance Ministers, who unanimously insisted that they had merely come to Paris to dot the i's and cross the t's of the Cannes agreement. In the result, M de Lasteyrie accepted the Cannes decision, but it was agreed, as a small concession to France, that in the event of the Reparations Commission deciding that the value of the Saar mines exceeds 300 million gold marks, the surplus shall be deducted from the amount of "Series C" bonds that will be allotted to France (these being, it may be remembered, the last of the series to be issued).

This decision is significant from the fact that the German Government insists that the value of the mines is at least 1,057 million gold marks, on the ground that in July, 1914, the pits under exploitation were valued at 480 millions, while the unexploited part of the coalfield was estimated at a further 577 millions. The French argue against this that the reserves in sight make it probable it will be at least 100 years before the unexploited area will come into use, and that, instead of having a potential output of 19 million tons a year (as the German experts allege), the Germans themselves extracted only 13,217,000 tons in 1913, while last year, owing to the reckless manner in which the pits were exploited by Germany during the war, the output was only 9,823,000 tons, compared with 9,400,000 tons in 1920.

Another important decision came to by the conference of the Allied Finance Ministers was in regard to the Loucheur-Rathenau agreements signed at Wiesbaden (independent of the rest of the Allies), the object of which was to enable France to receive payments from Germany in kind, in order to expedite the reconstitution of the devastated area. (These agreements, it will be remembered, the British Government declined to approve, apparently as a retort to the French refusal to approve of the financial agreement of August last.) Under those agreements France was to be allowed to call on Germany, during any one year, for materials of all kinds to an almost unlimited value, it being understood that the value of these materials was to be debited to France against the sum of 1,400,000,000 marks gold which it was estimated Germany would have to pay to her every year on account of reparations, with the further proviso that this debit should not exceed 1,000,000,000 gold marks in any one year, no matter what amount of materials had been delivered. The conference agreed to the Wiesbaden agreement being brought into operation, but for a period of three years only (instead of, I believe,

INTERNATIONAL BANKING
IN ALL ITS BRANCHES
**BANKERS TRUST
COMPANY**
16, WALL STREET, NEW YORK
PARIS OFFICE
3 & 5, PLACE VENDOME
CABLE ADDRESS: BANKTRUST, PARIS

the five years originally stipulated). It was further agreed that the value of the materials delivered in excess of 1,000,000,000 gold marks, which are to be carried on to the next year's account, must not exceed 350 millions in 1922, 750 millions in 1923, and 750 millions in 1924; and that the other Allied Powers may make similar arrangements with Germany, subject to a limitation in the total value of payments of this kind that Germany may be called on to make. Another decision was that France will be entitled to 65 per cent. of the payments in kinds to be made by Germany during 1922.

France also received satisfaction in connection with the price to be paid for coal delivered to her by Germany, which by a previous decision was fixed at export rates. This has now been reduced to the much lower German internal rates, and it was decided that the lower rates shall be applied to the whole of the coal delivered to France from Germany since the treaty came into force.

As regards the reimbursement of the cost of the various armies of occupation before May 1, 1922, the amount to be paid by Germany has been fixed in national currencies as follows:—102,000,000 francs Belgian for Belgium; £2,000,000 to Great Britain, and 460,000,000 francs for France. The first milliard of gold marks paid by Germany, it was decided, will be divided as follows:—500,000,000 to Great Britain and 140,000,000 to France, in repayment of a portion of the cost of occupation prior to May 1, 1921; 172,000,000 paper lire to Italy; the balance towards the satisfaction of Belgian priority rights. The balances due to Great Britain and France in respect of their expenditure on their armies of occupation down to May 1, 1921, will be paid to them (after Belgian priority rights have been completely met) out of the first receipts in cash obtained by the Reparations Commission. Another decision satisfactory to France was that the cost (190,000,000 francs) of the mobilisation of her 1919 class (which was called back to the colours, it will be remembered, in order to support the last Allied ultimatum to Germany), shall be paid by Germany, instead of having to be paid by France herself, as had previously been decided.

The most disagreeable surprise of the conference was the letter put in by Mr Boyden, the American "observer," intimating that the United States Government, in view of the fact that the Allied Governments either have been or shortly will be reimbursed for their expenditure on their armies of occupation, expects to be repaid, with interest, the amount it has expended for similar purposes, down to May 1, 1921, before any portion of the future German payments is distributed for reparation purposes or other objects. The amount claimed by the United States is equivalent, to May 1, 1921, to 966 million gold marks, plus interest, of which it demands a first payment of 250 millions. It is argued here that the American claim is unfounded, if it is based on the Treaty of Versailles, which stipulated that the cost of the occupying armies was to be paid out of the 20 milliards Germany agreed to pay before May 1, 1921, whereas, as a matter of fact, she paid only eight. Further, the Spa agreement expressly provides only for the repayment of expenditure of this kind incurred by "the Allied Powers," and makes

no mention of the "Associated Powers," although subsequent clauses refer definitely to both "Allied or Associated Powers," in respect of other matters. The American argument appears to be that the claim is based, not on the Versailles Treaty, which the Washington Senate has never ratified, but on the terms of the armistice, which were approved by President Wilson. A section of opinion here is inclined to the view that the claim has not been put forward seriously, but merely in view of the pending American elections. Regarding the American claim as constituting a new interpretation of the Treaty, the assembled Finance Ministers decided to refer it to their respective Governments.

I understand that, incidentally, appreciable progress was made during last week's conference in the direction of bringing about the mobilisation of the German debt. This amounts, as is well known, to a total of 132 milliards gold marks, plus three milliards, the amount owing by Belgium to her Allies. During the conference Sir Robert Horne suggested that the total debt should be divided into two parts, in order to embody with it, in one settlement, the vexed problem of the inter-allied debts. The first of these two parts, corresponding to the amount of the inter-allied debts, should, it was suggested, be reserved for the time being, and utilised to serve in bringing about a settlement of the debts between the various Allies; this operation being, of course, subject to the consent of the United States, which so far has shown itself hostile to any such proposals. The second part of the total debt, amounting to between 70 and 80 milliards gold marks, should be the subject of an effort at mobilisation in the form of a series of international loans, the yield from which should be paid over to the Reparations Commission for distribution among the Allies, according to the proportions fixed at Spa (which gives 52 per cent. to France).

The Banque de France decided on Saturday to reduce the discount rate immediately from 5½ per cent. to 5 per cent. On the Bourse this week different categories of securities have reacted differently to the situation. Fixed interest, securities, and the leading industrials have benefited by the fall in the Bank rate, as have also railway shares, transports, and electrical undertakings. Those industrials, however, of a speculative order, are not affected by this cause, and the fact that in the last fortnight they have shown signs of recovery must be regarded as due to purchasers who found themselves uncovered. Banks have remained firm, transports are in marked advance, and shipping shares have been calm. Railway receipts returned as far from January 1st to February 18th show a marked advance on the figures for a similar period last year. Both metallurgical and mining securities have shown signs of strength, though advances in these groups have not been entirely consistent.

GERMANY. — POLITICS—REICHSBANK—EXCHANGE AND BOURSE—BUSINESS—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, March 14.

THE "mantle law," embodying the inter-party compromise on taxation and the forced loan, has gone through the Reichstag, whereby fourteen new taxes or amendments of existing taxes and the loan are ensured. The prospects of the forced loan, nevertheless, remain vague, owing to the difficulty of combining immediate payment with a satisfactory reassessment of property values. After the mantle law passed, the Reichswirtschaftsrat passed a resolution condemning the forced loan altogether, on the ground that it would injure the market for further loans, while not stopping inflation. The Reichswirtschaftsrat proposes instead a voluntary loan, which, like the forced loan, should be on a gold basis as regards calculation of capital yield, and also, unlike the forced loan, of interest. This would mean that the paper-mark interest on the new bonds would be increased in measure as the gold exchange of the mark depreciated, so that the new bondholders would have a great advantage over present bondholders.

This would probably ensure the loan's success. Dr. Hermes, until now Food Minister and provisional Finance Minister, has been definitely appointed Finance Minister. As a condition for ceasing opposition to the taxation and loan agreement, the People's Party made a long list of demands which the Cabinet in principle accepted. The chief is that a Ministry for Savings be created. In September, 1920, on Dr. Wirth's initiative, a high official was appointed with power to revise departmental expenditure, but this measure bore no fruit. The Government has been obliged to concede new increases of official salaries and allowances, imposing an additional burden of 30 milliards of marks.

The Reichsbank's price for gold has been raised to 850 paper marks per 20 gold mark piece. The Floating Debt on February 28th is reported at 277,318,320,498m, of which 262,817,520,300m consists of discounted Treasury Bills. The Berlin Disconto Gesellschaft announces an increase in its capital from 400 to 610 millions, so placing itself in regard to capitalisation at the head of German banks. The Dresdner follows with 550, and the Deutsche with 400 millions. Increasing stringency in the money market is reported. Manufacturers, especially in the textiles branch, are asking for part payment in advance. Industrial company foundations are increasing, most of which are not new concerns but conversions of private firms and partnerships. The form of the share company (*Aktiengesellschaft*) is being preferred to the limited liability company, partly because taxation is somewhat lighter, partly because the regular Bourse quotations of share concerns facilitate the frequent increases of capital which are necessitated by the continual price-rise. The promised Bill establishing autonomy for the Reichsbank has been published. Under the existing law (March 14, 1875), the Bank is under the "guidance" of the State, and the State's supervision is exercised through a curatorium, of which the Chancellor is President. The Bank's own president and directorate are entirely separate from the curatorium; and the State through the curatorium has hardly ever exercised its right to interfere with the directors' policy. The Bill now submitted abolished this dual system, and transfers full power and responsibility to the directorate. The President of the Bank will continue to be nominated by the Government (formally by the President of the Republic) on the recommendation of the Reichsrat, while members of the directorate will be nominated by the Government on the recommendation of the directorate and with the consent of the Reichsrat. The salaries of the directorate will be fixed by special law, being detached from the State Budget. This reform is being put through on pressure from the Allies, who persist in believing that inflation (the sole cause of complaint) is in some way an outcome of State control over the Bank, and that if the Bank were independent inflation would cease. The Wirth Cabinet, following its rule of conceding Ally demands, however doubtfully advisable they are, is therefore creating a fictitious Reichsbank autonomy, in the knowledge that the reform is a sham. The Bank's present obligation to discount Treasury Bills without limit, and, therefore when necessary, to print paper marks without limit, is an outcome of a special war law made on August 4, 1914; and the repeal of that law would at once stop inflation by the Reichsbank. Dr. Wirth does not propose the repeal; because its effect must either be suspension of payment by the State, or inflation by direct issue of State notes—a still more objectionable system than the present. A summary examination of the Budget, and in particular of the paper cost of Reparations payment, which constitutes the whole deficit, is enough to show that the alternatives are: Headlong inflation; and collapse of the State from want of means to carry on. Germany's condition here is the condition of a great part of Europe, including countries which have no Reparations payments at all.

The Reichsbank statement for March 7th shows an increase of circulation of 1,903,779,000m to

121,930,166,000m, and of "Kassenscheine" of 90,900,000m to 8,067,600,000m. The Bourse during the past week was at first weak and dull, later fairly active. The *Frankfurter Zeitung's* stocks index shows a decline of 15 dividend-payers, from 41,008 on March 3rd to 38,249 on March 10th. Exchange movements exerted no visible influence on stocks. Bull speculators have not yet recovered from the heavy fall in quotations which accompanied the mark recovery of November-December, and are afraid of surprises from Genoa. The end of the week saw a sudden demand for bank stocks. Among bonds, Federal Threes continued strong, reaching a new top point of 120, where they remain. War Loan was yesterday 77.50, Federal 4 per cent. 91.50, 3½ per cent. 82.75, Colonial 4 per cent. 113.75, Savings and Premium 81.50. The Leipzig Pattern and Technical Messes, held last week, were a great success. The number of registered visitors exceeded 140,000, and very large sales were made both to natives and foreigners; but many manufacturers, having sold their output for months ahead, refused to take further orders; and a great part of the orders taken were qualified with the usual condition, "freibleibend," leaving the seller free to change his prices and delivery terms according to future developments in production cost and to other conditions. On this question the Federal Court of Appeal has come to an important decision which foreign buyers should note. A seller who has agreed upon a fixed price, but has inserted "freibleibend" in his contract, the Court ruled, can insist that the buyer accept delivery and pay any price demanded, unless it be proved that the demanded price is unreasonable when judged by conditions at time of delivery. The contract also binds the seller to deliver the goods. It follows that in all contracts for future delivery a buyer must be prepared to pay what will at delivery date be a fair price, and that the price in the contract, which is usually based on production cost at time of conclusion of the deal, has no meaning at all. This ruling clears up the law on a matter which has of late caused many disputes with foreigners.

The Hamburg-America Line reports for 1921 gross profits of 96,200,000m against 55,300,000m in 1920; net 29,500,000m against 16,900,000m; dividend, 10 per cent. against 8 per cent. The North German Lloyd reports net profits 45,700,000m against 14,043,082m; dividend, 10 per cent. against 8 per cent. Gross profits were 100,400,000m. At the close of 1921, the company owned 25 sea-going steamers against 116 in 1913. Shipping journals state that the next development will be the creation of a large service of tramp steamers, in which before the war Germany, with her extensive regular line services, was far behind England. The iron and coal "Heavy Industry," not the existing shipping concerns, will here take the lead.

The movement of prices towards world-market level will, unless a new decline takes place in Reichsmark exchange, check plans of this kind. The official wholesale index figure (average of all) for February is 4,103, against 3,665 for January. The rise is general: the group breadstuffs and potatoes rose from 3,363 to 3,773; fats, sugar, meat and fish, 3,555 to 3,849; colonial goods, 4,819 to 6,139; agricultural products and foodstuffs together, 3,509 to 3,956; hides and leather, 4,668 to 5,761; textiles, 5,939, to 6,538; metals, 4,313 to 4,489; coal and iron, 3,307 to 3,687; industrial raw materials together, 3,955 to 4,377. Goods mostly produced at home rose from 3,383 to 3,763; goods mostly imported, from 5,075 to 5,800. The official cost of living index figure—for food, heating, lighting, and housing—for February is 1,989, against 1,640 in January—an increase of 12.8 per cent. The high price of bread threatens fresh labour troubles. Wheat, which under State regulation was kept as low as 85m a centner (1-20th metric ton) sells around 550m, and rye, which cost 75m, 500m. Here world-market prices have nearly been reached. The Socialist Press demands that the quantity of home-grown breadstuffs requisitioned by the State be raised from the present 2½ million tons to 4½ million tons. From all quarters are reported demands for higher wages, which are as a rule conceded, as the selling boom makes it possible to transfer the burden immediately to the consumer.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

ARGENTINA. — BUDGET — NEW TAXES — RAILWAY RATES — BUSINESS CONDITIONS — FLOATING DEBT.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, February 16.

Laid before Congress on February 8, the 1922 Budget Estimates may be regarded as practically still-born. Indeed, it has already been proposed that in view of the lateness of their presentation, the lack of all data necessary to the carrying out of sundry innovations in taxation which are set down as important sources of revenue, and the certainty that political manoeuvres turning on the forthcoming presidential election will monopolise the time of the deputies, the 1922 Estimates be shelved. Their place would be taken by the 1921 administrative balance-sheet; and, as a matter of fact, two "duodecimos," or a sixth of the 1921 total, has already been voted to cover revenue collection and official outlay during January and February. Under the circumstances the suggestion is sound. The figures proposed are, however, interesting, as showing in the first place the trend of Argentine official views in the matter of taxation, and secondly as an admission of the enormous growth of official expenditure. This latter is placed at \$527,592,000 Arg. paper for direct administrative outlay, with a further fifty-one millions on public works to be met by bonds, and \$20,600,000 Arg. paper for charitable subsidies. The whole of the last-named amount is met by the proceeds of the national lottery. The figures outlined above are, roughly speaking, a hundred and twenty millions more than those of last year. Minimum wages based on a very liberal scale swell the charges of the various Ministries, public works are to be continued and extended, the service of the debt calls for more money; in short, nowhere is there any sign of a wish to economise. This is all the more remarkable seeing that revenues for 1921 were some thirty millions less than expenditure, and that Customs dues, the principal item of receipts, showed a drop of fifty millions. Of special interest to those having funds in Argentina is the proposal to institute an income-tax, and, in addition, a tax of 3 per cent. on net dividends, on the interest obtained from banking deposits, and on any other revenues derived from similar sources. All the arguments against this tax may be summed up by saying that while the Republic urgently needs capital for the development of its potential wealth, it is surely unwise to impose what is practically a super-tax on capital earnings. In short, the 1922 Estimates are too much even for the Radical majority of the Chamber of Deputies to swallow.

Far more important in reality has been the exhaustive report and recommendations of the special committee constituted to examine the claims of the railway companies to increased tariffs. That the balance has inclined to the Argentine user of the lines cannot be denied, but nevertheless, giving due weight to local conditions to-day, and the manifest drop in the running charges that were

so much to the fore when the companies first claimed the right to raise their rates, the fact that fairly comprehensive increases were recommended—and will be shortly enforced—is a good sign. Heavy grain, that is to say, wheat and maize, are to pay 10 per cent. more; linseed and similar cargo, e.g., oats, will be surcharged 15 per cent.; general merchandise from 10 to 25 per cent., the lower increase applying to rough goods and the higher rates to articles classed as luxuries, such as tobaccos, distilled liquors, and the like. Passengers pay 18 per cent. more, but not season-ticket holders. Cattle, dairy produce, and perishables will be carried at present rates of freight. Railway interests are naturally not satisfied, the more so as the schedules put in by them as evidence for the committee to investigate showed very plainly the full extent of their losses during recent years; losses rendered all the harder to bear owing to the knowledge that those whose goods they were carrying at pre-war rates were making unheard-of profits. These increases cannot do much to improve dividends for some time to come; certainly they will not bring them anywhere near the 6½ per cent. stipulated as the maximum for ordinary net capital earnings by the promoter of the Mitre Law. Increased traffic returns and harmonious working on the part of railway labour will, however, contribute to better results, and both factors exist to-day in all branches of the railway services. The success of the Western Railway's Debenture Issue in London came as somewhat of a surprise to many people here, and has upset to a certain extent the oft-repeated prediction concerning the boycotting of Argentine rails by the London money market owing to unfair Government intervention.

Business in general is quiet in tone, and convalescence from the fever of 1920-21 is slow. Cereals are steadily leaving the country in normal quantities for the time of year, or, say, 150,000 tons a week for wheat. Wool stocks in the central produce warehouses are down to 12,000,000 kilos, or five million kilos less than at this time last year. Hides and tallow are also being shipped in increasing quantities, but with little improvement in prices. Exchange, which during the month touched 47d for banks' sight drawings on London—or but ½d below par—receded to 45½d, but closes at 46½d at date of writing, with the American exchange much weaker at \$119.50 Argentine gold to the \$100 U.S. There is little inquiry for Continental exchange, but such movement as there has been is in favour of the Argentine dollar. Save for comparatively steady purchases of national and provincial bond issues, there has been little movement on the local stock exchange, and industrials, particularly shares of gunny factories, are in a very weak market, because in most branches of local manufacture to-day the imported article can compete on favourable terms with Argentine-made goods.

In the report of the Argentine Budget Committee are some interesting statistics which profess to disclose the position of the Republic's indebtedness, both as regards its consolidated obligations and its floating loans. The former is said to amount to \$1,200,000,000 Argentine paper—figures as at December 31, 1921—while the latter, taken from the returns made up by the Accounts Department, is \$644,417,475 Argentine paper at the same date, being made up as follows:—

	\$ Arg. Paper.
Government account in Banco de la Nacion Argentina ..	110,644,328
Banco de la Nacion Argentina, special account	71,999,663
Loan of \$50,000,000 U.S.	117,772,727
Treasury Bills	12,630,271
Short-date loans, mostly six months	229,119,886
Outstanding amounts, taken into account by Accounts Department as due, and not yet paid	102,250,000
	644,417,475

The last item is not taken into account by the Ministry of Finance, and that Department of State also reduces the debt to the Banco de la Nacion Argentina by offsetting credit balances held in other accounts, but for practical purposes the above total is the more reliable, and gives the actual sum of Argentina's floating debt. Contrasted with the figures for December 31, 1916, which was

\$489,146,542, the increase is not as great as it was popularly supposed to be, but nevertheless the aggregate is sufficiently important to make the matter of its consolidation a difficult financial proposition at the present time.

Letters to the Editor.

"REPARATIONS.—TWO POINTS OF VIEW."

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to Mr Hannon's statement in last week's issue of the *Economist*, that France "is not a creditor of the Allies to any appreciable extent," may I state that the French war loans to her Allies amount to 14,082,000,000 francs, which are equivalent to over £550,000,000, at the rate of exchange ruling when these loans were made.—I am, &c.,

London, March 13th, 1922.

[The point raised by our correspondent is an important one, and we therefore reproduce the details of advances made by France to Allies as at September 30, 1920, as given in "International Finance and its Reorganisation," by E. M. Friedman, which are as follows: 4,949 million francs to Russia, 2,770 millions to Belgium, 1,541 millions to Serbia, 1,219 millions to Poland, 1,142 millions to Roumania, 889 millions to Italy, 806 millions to Greece, 221 millions to Czecho-Slovakia, and 80 millions to other countries. These figures represent a considerable proportion of France's external borrowings. According to a statement made by the French Finance Minister, the external debt of France in August last was 35,286 million francs, the franc being taken at par.—Ed. *Economist*.]

RAILWAYS AND ROAD TRANSPORT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—While I am in agreement with the broad outlines of your admirable article on "The Railways and Road Transport" in last week's *Economist*, I disagree with certain of your conclusions in the last paragraph.

The primary business of the railways is, as you say, to transport by rail. But for certain classes of goods, and particularly for short distances, railway haulage is neither the cheapest nor the most economical means of transportation. That is a fact which the railway companies themselves admit. Our railway system cannot, therefore, "prove its efficiency in competition with every form of transport." That, I think I am right in saying, is one of the chief reasons for the introduction of the present Bill by the North Western and Midland group.

At the present time the railway system is unable to meet the needs of every class of customer, and it is because it has "set its whole mind to improvements in handling" that it desires powers to undertake road transport. In my judgment, the granting of such powers will not, as you fear, dissipate its energies. On the contrary, it will encourage railways to conserve their energies much more than will the knowledge that they are being beaten on what was once their own ground.

The railways have not yet got back to normal pre-war working conditions. They never will. Conditions have changed so radically in the past seven years that a return to 1913 is impossible. To postpone for two years the granting of powers which you admit ought to be granted is to postpone them until too late. The sooner the present Bill becomes law the sooner will the railways increase that efficiency which is so necessary to the trading community and to their own development.—Yours very truly,

C. F. HIGHAM.

House of Commons, March 16th, 1922.

Books and Publications.

THE AMERICAN LABOUR MOVEMENT.*

THESE two weighty volumes of 1,200 pages provide the fullest history of Labour in the United States which has yet appeared. It is the work of a group of competent scholars, and covers with a great wealth of detail the whole of the comparatively short history of the States within the limits of the title. The two volumes are more than a history of Labour in any narrow sense of the term. Considerable space is given to the discussion of political and social theories and their influence on American life and thought, and the development of trade unionism receives exhaustive treatment. But the reader is also told of the single-tax movement and "green-backism," the free land agitation, and co-operation in their relation to the Labour movement. Unfortunately, the second volume draws too rapidly to a close. A concluding chapter of 20 pages attempts to cover the developments of the last quarter of a century. With the caution and detachment which characterises the true economic historian, it is said that "its facts are so recent that they belong more to a discussion of current problems than to a record of history. It is, nevertheless, a pity that this massive work, in addition to providing a complete and detailed background of Labour history, should not have provided also a picture of the American Labour movement as it is to-day. The lack of such a picture must restrict the circulation of a work which is indispensable to all who wish to understand the complex history of American Labour. The two volumes are well documented, and there is an excellent bibliography. Professor Commons and his colleagues have placed both British and American economists and students of history under a heavy debt.

ECONOMIC EFFECTS OF CONSCRIPTION IN JAPAN.*

ALTHOUGH the name appearing upon the title page of this very thorough and scholarly examination of the military system of Japan is that of the Professor of Finance at Kyoto University, he explains in a brief preface that it is actually the work of Mr Takata, who here presents the results of two years' hard work—the harder that there are, apparently, no official statistics on the subject.

Conscription in Japan was introduced in 1873, and was regarded as a step in the restoration to power of the Imperial family, by the destruction of feudalism and the overwhelming ascendancy of the military class. Though Western in form, it represented a reversion to an older military institution that had preceded the class domination. How far it has been effective in that purpose Mr Takata does not say. With relatively minor modifications, as to exemptions and the actual term of active service, the 1873 Law is the basis of the present military system of Japan. Conscription is universal, and carried out by the drawing method. The normal term of service is seven years, of which, up to 1907, three, since two, in peace time are active service, followed by two or three in the active reserve. In the case of the Navy, the term is four years' active service.

The major part of Mr Takata's book is devoted to an examination of the economic consequences. He frankly admits the great difficulties in the way of an effort to detach, from records during the whole course of which the system has been operative, those results that may correctly be assigned as due to it. In general, however, he sees the economic effects as bad. The productive organisation of the country is, by it, "robbed of its most valuable labouring power." The soldiers actually retained in and supported in the army could, he thinks—and he always brings statistical material in support of his propositions—find productive employment on the land or in industry. There remains uncultivated, but capable of cultivation, an area of about a million cho, which, as wet and dry fields, could support "all the soldiers in the army, and all those who are getting their

* "Conscription System in Japan." By Gotaro Ogawa, D.C.L. Humphrey Milford. Oxford University Press.

livelihood from the army." Industrially there is perpetual complaint of the scarcity of labour. Manufacturing industry is actually being hampered by shortage of hands.

On the consumption side he develops an interesting argument to the effect that the demands of the services create an excessive demand for goods for immediate consumption, which correspondingly restricts the output of capital goods. Further, "Military expenses, especially in the rapid expansion of armament, cause the over-issue of currency on the one hand, and increase of taxes on the other. The increase of the indirect tax, especially, causes an increase of the expenses of production, and thereby causes a rise of prices."

An admirable feature of the book is the exclusion from it of arguments which "can only be discussed theoretically, and cannot be treated statistically."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
March 29.

ACCOUNT.
March 30.

Business has fallen off sufficiently in most of the markets round the Stock Exchange for members to be able to take a lively interest in the election of the Stock Exchange Committee, fixed for Monday next. For the 30 seats there are 36 candidates. One of the debatable points of the day is to what extent members shall be allowed to return a proportion of their commission to agents, including banks. The advisability of contingents is another subject dividing opinions.

Some little talk arose in the early part of the week of the possibility that there might be a fall in the Bank rate on Thursday last, but the idea was not seriously entertained, and after the War Loan had been up to 97½, it fell back about 10s. A fairly general decline occurred in other British Government stocks, though the heaviness of National War Bonds did not last, and, in the cases of the other stocks, recoveries occurred from the lowest prices touched. Colonial and Corporation stocks are well maintained as regards their prices, though business in them is quieter. Home Railway debenture and other prior charges remain good, stock coming to market,

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

however, with rather more freedom than it has done of late. India Government stocks rallied on Thursday, but the railway descriptions are weak. Bank stock rose 9 on the increase in the dividend.

French bonds gave way somewhat sharply, and Germans also dropped, in consequence of the exchange movements. Brazilian and other Argentine bonds moved irregularly and narrowly. The premium on the Siamese Sevens kept fairly close to 3 for the greater part of the week. The foreign and the foreign railway markets continue to contend for the business which is going on in P.L.M. bonds. The price fell from 5 premium to 4½ premium before a rally occurred. Business is expected to begin on Monday in the Midi and the Paris-Orleans scrip. The issue was an instantaneous success.

Home Railway stocks are now ex dividend; the deductions have had little effect in bringing along fresh buyers. The market is tolerably steady, although the abstention of any considerable amount of public interest serves to accentuate the effect of any little profit-taking which may be indulged in by previous buyers. Several scores of American and Canadian railway stocks, municipal and industrial bonds, &c., have moved up from one to five points, in consequence of the decline in the value of the £ as compared with that of the dollar. Mexican railways have scarcely moved. The Argentine market is considerably better, on the hope that the forthcoming presidential election in the country will result in the return of a President who is likely to look with a kindly eye upon the interests of British investors.

The greater firmness in the rubber market is held, though business continues exceedingly quiet. In the oil market, speculation bestirred itself in connection with some of the Roumanian companies. The prices of shares advanced amid animated bidding, but there was not much public support at the back of the activity. Amongst the higher-priced shares, Mexican Eagles have been dull, upon the oft-repeated rumour that a new issue is about to be made. A long catalogue of brewery advances is one of the features of the week amongst industrial. The rises are due to pressing inquiries rather than to the actual transaction of business, for proprietors are as unwilling to sell as would-be purchasers are eager to buy. Shipping stocks have been on the dull side, with P. and O. again below £300. The insurance market is quiet, and amongst banking shares, apart from a further trifling recovery in the Indian group, the movements are unimportant, though prices keep firm. Jays, the well-known drapery house, shows a loss for the first time in its history, without, however, the price of its shares being affected. Harrods are better; other Stores shares hold their ground. A few textiles advanced, the support coming chiefly from the North. During the engineering lock-out the prices of shares in the companies likely to be affected were scarcely changed. Babcock and Wilcox, indeed, have advanced, while iron and steel shares, on the whole, retain the slightly dull tendency noticeable in their department for some time past. Tea shares continue to go back after their very sharp rises. Sudan Plantations improved, on the expectation of a new issue of shares at a bonus price, while Forestals kept a shade above par. Peter Robinson preference, offered at 6d premium, are not yet freed from the influence of the stage. A good many of the short-dated debentures of recent issue have given way from one to three points. Cable stocks are good, but the wireless list, after an exhibition of strength in the early part of the week, turned a trifle easier in the absence of business.

The collapse of the strike on the Rand led to improvement in Kaffir shares. There had not been a great deal of fall in advance, so the recovery was less than might otherwise have been the case. However, the leading shares are decidedly better on the week. The Johannesburg Stock Exchange has been closed, and Cape operators have done but little in the London market. Rhodesians sympathised with the firmness of Kaffirs. Several of the Mexican mining shares improved. Russo-Asiatics have given way. Indian mining shares are rather better, but the tin groups are still neglected in consequence of the depressed price of the metal.

Stock Exchange shares £25 paid, touched 100, to lose a couple of points before the week finished.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and report and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

Midi and Orleans Railway Companies.—Offer by the former of £3,000,000 6 per cent. sterling bonds of the Compagnie des Chemins de Fer du Midi, due 1960, and by the latter of £2,000,000 6 per cent. sterling bonds of the Compagnie du Chemin de Fer de Paris à Orléans, due 1956. Both sets of bonds are offered at 89 per cent., and are direct obligations of the respective railway companies. The payment of interest and sinking fund is further secured by (a) the receipts arising from the working of the company's system; (b) the joint fund of all the large French railway systems, into which fund the excess receipts of all the systems are paid; (c) the payments which the French Public Treasury has undertaken to effect if necessary to make up any deficiency in the fund; and (d) the undertaking by the French State to bear the entire service of any bonds which may be outstanding at the expiration of the concession. Both principal and interest are payable in sterling in London, free from all present and future French taxes. The bonds will be redeemed by the operation of cumulative sinking funds, beginning in the year 1929, either by annual drawings at par, or by purchase under par. The sinking funds are calculated to be sufficient to redeem the whole of the bonds not later than September 1, 1960, in the case of the Midi Railway Company, and not later than September 1, 1956, in the case of the Orleans Railway Company. Each company reserves the right to repay all its bonds outstanding on or after September 1, 1934, at 103 per cent. and accrued interest, on giving three calendar months' notice. The Midi Company has a capital of 125,000,000f. At December 31, 1920, the outstanding bonds of the company amounted to 2,365,329,000f. None of the company's issues enjoys any special security, nor is any part of the system or rolling-stock charged in any way. The company undertakes not to charge assets without giving to the £3,000,000 sterling bonds the benefit of such charge. The share capital of the Orleans Company amounts to 300,000,000f. The total amount of bonds outstanding is 4,377,000,000f. The same conditions of issue apply to the Orleans undertaking as outlined for the Midi Company. These are two well-secured foreign bonds, and thoroughly deserved the good reception accorded to them.

Peninsular and Oriental Steam Navigation Company.—Incorporated by Royal charter in 1840. Issued and paid-up capital £6,632,518. The company has, in addition, at present outstanding debenture stock £1,487,560. This is an issue at 96½ per cent. of £3,500,000 5½ per cent. debenture stock. The company proposes later on to apply for powers to issue £3,500,000 more, to rank *pari passu* with the present

issue, making £7,000,000 in all. The present issue and any such further issue of the same stock will be secured as a floating charge on the company's undertaking and assets ranking next after the existing debentures already referred to. The company may on and after October 1, 1930, redeem the stock at par on three months' notice. Any stock not previously redeemed will be repaid at par on October 1, 1940. The interest on the present issue will be £102,500 per annum, and the board point out the cash dividend distributed during the last ten years on the preferred and deferred stocks after payment of interest on the then existing debenture stock has averaged £503,279 per annum. The assets of the company as given in its last balance-sheet are lumped together in one item, beginning with steamers and ending with debts owing to the company, and are valued at £23,236,598. Against this item are £1,487,560 of debentures and sundry debit balances amounting to £8,816,712. The following extract from the prospectus is interesting:—"The company's steamers built before the war which are less than 20 years old have been taken at cost price less 5 per cent. per annum depreciation, while those of a greater age than 20 years have been taken at £1,000 each. Those delivered, or which are now being built during the period of high prices, have been taken at pre-war costs, and in the case of such vessels as have been delivered, 5 per cent. per annum depreciation has been allowed for. The same formula has been applied to the associated companies." It would, however, be more interesting if we knew the value of the boats so treated. The issue has been underwritten for 1½ per cent. and an overriding commission of ½ per cent.—an eloquent tribute to the financial strength of the company. A good, sound debenture, without doubt, but we wish that many of these big shipping undertakings would set a better example in giving us more detailed prospectuses.

Mence Smith's Stores (Proprietors), Limited.—Authorised share capital £170,500, divided into 155,000 10 per cent. cumulative preference shares of £1 each and 310,000 ordinary shares of 1s. each. This is an issue at par of the whole of the share capital, of which all the preference and 77,500 ordinary shares are now offered to the public, 155,000 ordinary shares having been already subscribed for in cash and 77,500 reserved "for cash application by underwriters of the preference shares." Applicants for preference shares are entitled to have an allocation of ordinary shares in the proportion of one ordinary share for every two preference shares applied for. The business, founded about 60 years ago, is carried on at Southwark, and in 75 branches. The price paid by the present company for 125,000 fully-paid shares of George Mence Smith, Limited (the old company), forming the whole capital, is £155,000 cash. Profits are given from 1917, and a balance-sheet is published showing the position of the company at March 27, 1921. Stocks valued at this date amounted to £106,321, and the prospectus states that "there will be little depreciation on any unsold stock." Preference shareholders have limited voting powers, but no further shares can be issued in priority to or *pari passu* with the present preference issue "in excess of additional capital to the extent of £45,000," without the sanction of preference shareholders. If the company, however, has protected itself by reserving the right to itself to issue debentures (and we understand that this is the case), then this proviso is of little value. The directors, all of whom are directors of Goodson's Mantle and Costume Company (1920), Limited, have had considerable experience in the directing of multiple shop business, and it may be regarded as a fair industrial risk, although expectations must not be based on boom figures.

The Dominion Tar and Chemical Company, Limited.—Authorised capital £300,000, divided into ordinary shares of £1 each, of which 200,000 have been issued and are fully paid. The company was formed in 1903 to carry into effect an agreement between the Dominion Iron and Steel Company, Limited, and the company to carry on the business of tar distillers, &c., in Canada. The information given about the assets of the company is very meagre, but an excellent list of dividends distributed free of tax since 1908 is submitted. The company has certainly had a profitable career. The original capital was £30,007, but was increased in May, 1910, to £70,007; and again in April, 1913, to £100,000; in May, 1919, to £150,000, and in May, 1920, to £200,000. A further £100,000 was authorised in November, 1921, and of this amount 50,000 shares of £1 each have been issued at par. These details are taken from an advertisement in the Press to comply with Stock Exchange regulations.

The Corderoy Syndicate, Limited.—Authorised capital £100,000, divided into shares of 5s each, of which 268,028 shares have been issued and are fully paid. This company was incorporated in September, 1895, for the purpose of undertaking a general mining business, but until its acquisition of the properties mentioned below "it had carried on no business." Under an agreement the company has acquired three separate groups of gold-mining properties situated in the Departments of Leon and Nueva Legovia, Republic of Nicaragua, Central America, and held under

titles granted by the Government of Nicaragua. These mines have been partially developed and equipped, at a cost, it is stated, of about £90,000, and "about £50,000 worth of gold has been taken from the principal workings." The company acquired these and other assets in consideration of 120,000 fully-paid shares in the company and £35,000 in cash—the company taking over certain obligations of the vendors. The Underwriting Agency Syndicate, by an agreement with the Corderoy Syndicate, Limited, have agreed to underwrite 279,972 shares of the company (being the whole of the capital available for subscription) for a cash commission of 5 per cent. and an option for three months to acquire for £40,000 the property in Nicaragua known as San Juan de Talpaneca property in Nicaragua. Of the 279,972 shares underwritten, 148,000 have been taken up, and the remaining shares have to be subscribed by July 16, 1922. These particulars are extracted from an advertisement in the public Press made to comply with London Stock Exchange regulations. On the information published, the value of the shares may be computed by those with inside knowledge of the undertaking, but for the outside investor a purchase of such shares would be a "leap in the dark."

COMPANY MEETINGS, &c.

THE UNITED KINGDOM PROVIDENT INSTITUTION.

RECORD INCREASE IN TOTAL FUNDS.
MANAGEMENT AND INVESTMENT OF FUNDS.

The eighty-first annual meeting of the United Kingdom Temperance and General Provident Institution was held on March 14, 1922, at the Cannon street Hotel, London. The Right Honourable Walter Runciman (chairman) presided.

The Chairman, in moving the adoption of the report, said:

The report, the adoption of which I move, is one of the best the directors have ever laid before you.

The net amount of new business retained by the institution during 1921 was over £1,800,000. This, with the exception of the boom years, 1919-20, is the largest amount of new policies ever issued in one year in the history of the institution. When the conditions ruling throughout last year are considered—great trade depression and widespread unemployment—this affords convincing evidence of the strong appeal which this office makes to the insuring public, and of the efficiency of our organisation for new business.

MORTALITY.

The claims arising during the year were over £50,000 less than in the previous year. Not only were the claims lighter in themselves, but the incidence of the claims was also more favourable to the institution. We made, therefore, a larger mortality profit. After a period of years during which the institution's mortality experience has been of an abnormal character, owing to the war and the successive epidemics of influenza which ravaged the country, it is gratifying to record that the year 1921 shows a return to our normal pre-war figures, a light mortality experience being an outstanding feature of this institution's policyholders. The temperance section, as usual, shows an appreciably lower ratio than the general section. Taking the whole of the claims together, the ratio of actual to expected claims was less than 68 per cent., one of the lowest experienced in our history.

TOTAL FUNDS.

Our total funds have increased during the year by well over half a million; the largest increase yet recorded. This increase does not, of course, include any profit by way of appreciation in the value of the institution's investments, as these have been valued at the low prices existing as at December 31, 1920, when our last quinquennial valuation was made. As you know, it has always been the custom of this institution to revalue its securities at quinquennial investigations only.

The net rate of interest earned on our funds, after deducting tax, was £4 7s 4d per cent., as compared with £4 1s 11d last year. It is necessary to go back something like 40 years to find as high a net yield as this, and at that time income-tax was almost nominal, while in 1921 we paid no less than £124,210 in tax.

Our working expenses are low, although they show a slight increase over last year. This is due to the expenses of the quinquennial valuation.

BONUSES.

At the end of the report you will notice certain interim bonuses mentioned, payable in the event of death or survivorship. I have pleasure in announcing that, owing to the recent considerable rise in Stock Exchange securities, your directors have reconsidered the position, and under the advice of the actuary, have decided to increase these interim bonuses considerably.

You may remember that in my speech last year I pointed out that the conditions at that time were so uncertain that the directors considered it only prudent to declare an interim bonus of a comparatively small amount—and that was a simple bonus based on the sum assured only; but I added that as soon as the directors considered that conditions warranted it they intended to revert to the compound system that was in force before the war, and which they considered, in equity to the older policyholders, should be reverted to as soon as possible. The time has, in their opinion, now arrived when this can safely be done, and in lieu of the interim bonuses stated in the report, the following bonuses will be paid in respect of each full premium due and paid in the years 1921-22 on policies that become claims by death or survivorship in the year 1922:—

On whole life assurances with full profits: 34s and 32s per £100 of sum assured and existing bonuses, in the temperance and general sections respectively. On endowment assurances with full

profits, new series: 32s per £100 on the sum assured and existing bonuses for all endowment assurances, except that endowment assurances in the temperance section, where the original term is 25 years and upwards, will receive 33s, while interim bonuses on other classes of policies will be equitably adjusted.

It is, of course, impossible to forecast what may happen in the financial world in the next few years, but, assuming nothing unforeseen of a serious character arises, everything points to this institution being able to pay a substantial bonus in 1925.

OFFICES.

The balance-sheet shows you that our investments in business properties have increased. A favourable opportunity arose of acquiring suitable premises as branch offices in Glasgow and Newcastle. As an investment for the institution's funds the security was of the best, while, from a business point of view, it is to the institution's advantage to extend and consolidate its connections in the provinces. The directors propose to continue this policy of extension, and to acquire offices in other provincial towns when a favourable opportunity arises.

INVESTMENTS.

It has always been the practice of this institution to invest the funds in securities of the highest class only, and from such a practice we shall certainly not depart. We are bound to this sound and secure policy not only by our Act of Parliament, but also by our own invariable practice and good judgment.

The management and investment of the funds of a life office is one of the, if not *the*, most important of the duties its directors have to perform. On the management and investment of the funds, as much as on anything else, depends the greater or less success of our institution. The time has gone by when investments once made can be left to take care of themselves. The instability of the present financial conditions more than ever necessitates the constant examination, measurement, and testing of past investments. For the growing funds of an institution like ours, with well-defined obligations and a character for stability, the selection of investments has become a much more difficult business than in pre-war times. Rules of thumb and the guidance of simple common sense are not enough in these times. We must have at our command the fullest information and the best mathematical skill to make our judgment good and administration efficient. Before 1914 fluctuations were small and within the limits of British Government stocks there were barely half-a-dozen categories. Nowadays Consols, the most historic of all securities, are a proportionately small section, and they have lost their character for stolid and stately movement, having fluctuated between 48 and 58 in six months. The great issue of £2,000 million of 5 per cent. War Loan has recently fluctuated between 88 and 98. There are now 30 or more categories of British Government loans. It is not so much harmonious fluctuation which causes anxiety to your directors—especially fluctuation upwards—as the wide difference in conditions attached to short-dated and long-dated loans, with all their peculiarities of redemption and the options attached to them for the purpose of the moment at the time of issue during and since the war. These present new problems which within the limits of our own Government securities we have to meet most carefully, and we have to meet them in that spirit of sound finance by which the solidity and strength of our assurance funds are fortified. Security for the future, which is the main justification of a great life office, has been our constant aim and object, and in making our valuation at the end of the last quinquennium our foundations were built on the rock. In these days of rapid change in values we shall not depart from that practice which brings its certain reward, and we shall thus continue, I trust, to justify your faith in this institution.

GOVERNMENT FINANCE AND INSURANCE OFFICES.

Yet no matter what may be done by your board, the truth is that our prosperity is bound up with the credit of the British Government. As that credit goes up or down so we must all benefit or suffer. Any false step in finance taken by the Chancellor of the Exchequer will be at the expense in a peculiar degree of the great life offices. All Chancellors can go right in times of prosperity. The years of swollen expenditure when revenue is insufficient to make ends meet provide even the best of Ministers with their worst

temptations, and lead them near to dangerous expedients. We shall never feel safe until the national balance-sheets record one surplus after another, for that is the only road which makes financial virtue easy, and it is the simple and narrow way by which alone we can be assured of a steady and prosperous course.

The resolution was seconded by the Hon. Alexander Shaw and carried.

METROPOLITAN LIFE ASSURANCE SOCIETY.

RATES OF ABATEMENT INCREASED.

The ordinary general meeting of the Metropolitan Life Assurance Society was held, on the 16th instant, at Winchester House, Old Broad street, London.

Mr William F. Courthope presided in the absence of Sir John B. Wimple, K.B.E., through indisposition, and read the speech prepared by that gentleman, in the course of which he said that during 1921 the society received proposals for the assurance of £322,561, of which amount policies for £275,511 were issued at annual premiums of £8,773, and single premiums of £3,232. They reassured £12,500 at annual premiums of £572, and the net new business therefore amounted to £263,011, with annual premiums of £8,201. The claims by death were unusually light in 1920. Last year the society's experience in this respect was, unfortunately, much less favourable, the feature being the heavy mortality among older lives. In fact, the claims by death, amounting to £189,935, were actually slightly greater in amount than were expected according to the table of mortality used in their valuation—namely, £186,283—although the number of policies which became claims were only 75 per cent. of the expected number. As, however, the claims arose mostly under policies which had been in force for many years, and in respect of which large reserves were held, the society had incurred no loss, but, on the contrary, a surplus had resulted from the mortality experienced in 1921. The percentage of premium income spent in expenses of management was 7.8, which was the same figure as in 1920, and compared with 7 per cent. in 1913. This percentage was much below the average rate of expenditure of life assurance companies.

The rates of reduction of premiums were determined by the amount of the society's annual surplus, which depended to a large extent upon the profit derived through the rate of interest earned on the investments being greater than the rate assumed in the actuarial valuation. He was glad, therefore, to say that the rate of interest earned on the society's funds last year showed a marked improvement as compared with 1920, the net rate having increased by 4s 11d per cent.—from £3 13s 10d to £3 18s 9d.

IMPROVEMENT IN VALUE OF SECURITIES.

The amount of the depreciation in the society's investments in 1920 was no less than £116,231. A very considerable improvement in their market value had since occurred, with the result that the whole of the depreciation which arose in 1920 had now been more than wiped out. He trusted that this improvement might be maintained, and that the periodical increases in the rates of abatement of premiums might not in the future, as in the past two decades, be retarded by falls in the market values of their securities. Even after leaving out of account the further depreciation in 1920, the sums which they had had to provide since the year 1900 to meet depreciation in the value of their securities would have been sufficient to increase the rates of abatement of premiums by about 20 per cent.

The proper investment of the society's funds had always called for the most careful consideration and constant attention on the part of the board, and this was particularly the case at the present

time, owing to the unsettled financial and political conditions prevailing in this and other countries.

ABATEMENT RATES.

He had the pleasure to announce, as a result of the year's working, an increase of 1 per cent. in the rates of abatement, which for the year ending April 4, 1923, would range from 80 per cent. in the case of the first series to 35 per cent. for the fifth series. In addition, they carried forward an unappropriated balance of £12,901. The success of the society depended very largely upon the active co-operation of the members in extending its business. No commission was paid for the introduction of business, and therefore they relied upon the self-interest of the proposers and the goodwill of their policyholders, and he wished to take this opportunity of thanking those who had shown their practical interest in the welfare of the society by introducing new members.

Mr Bernard Woods seconded the motion, which was carried unanimously.

BRITISH GENERAL INSURANCE COMPANY, LIMITED.
COMPANY'S SATISFACTORY POSITION.

The eighteenth annual general meeting of shareholders was held, on the 15th instant, at the offices of the company, 66 Cheapside, London, Mr Henry C. Walker, M.I.M.E., the chairman, presiding.

The Chairman, in the course of moving the adoption of the report and accounts, said: We are able to present to you to-day figures, record in every way, which is, I think, a fine testimony to the place the "British General" holds in the eyes of the insuring public, and to the confidence which we enjoy of the brokers and agents on whom we so largely rely for our business.

Following the arrangements made in 1920, all new life business has been passed to our allied office, the Scottish Temperance and British General Assurance Company, Limited. The total of the policies issued in 1921 was £1,402,245 sums assured, whilst the life funds were increased during the year by no less than £255,447, and now approach £3,500,000. The prospects for the valuation which will be made at the end of the present year are very promising, as the mortality experience has continued to be very favourable, expenses show a slight reduction, whilst the net rate of interest earned has increased to over 4½ per cent., as compared with the rate of 3 per cent. on which all calculations are made.

As we hold some 97½ per cent. of the shares in the Life Office, it is very much in the interests of our shareholders to support that office with any new life policies that they may require. There are few investments to-day which yield a better return than a policy in a well-conducted life office, and the history of the "Scottish Temperance" is one which contains all that is best in life assurance, whilst the prospects were never brighter than to-day. For 1921 we received a dividend of 12½ per cent. on our holding of Scottish Temperance shares, as compared with 10 per cent. in 1920.

The fire department is generally recognised as the most stable branch of the business. Net premiums for 1921 were £251,983, as compared with £209,250 in 1920. We have thus passed the first quarter-million mark at the end of eighteen years. Claims paid and outstanding absorbed 52.66 per cent., as against 47.12 per cent. in the previous year. Actually the loss ratio in 1921 is lower than 1920, for in 1920 the premiums increased by no less than £102,000. The true test is to calculate the percentage of profit after allowing provision for unexpired risk, and the figures are: 1920, 2.64; 1921, 5.85.

For many years the accident department was the mainstay of our business, particularly the employers' liability department. We certainly have made most of our profit here, and 1921 has been no

THE ANGLO-SOUTH AMERICAN BANK,
LIMITED.

Capital and Reserves
exceed £13,000,000

Head Office:

62, OLD BROAD STREET, LONDON, E.C.2.

AFFILIATIONS:

THE BRITISH BANK OF SOUTH AMERICA, LTD., and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

exception. Our experience has again been quite satisfactory, losses costing but 38.91 per cent. of the premiums written. The employers' liability department shows a reduction in premium owing to the fall in wages and unemployment.

The marine department has caused your directors some concern, but they are glad at the close of a difficult year to be able to show a position which is undoubtedly sound when tested by all the usual methods. The premiums show a reduction from £305,602 to £194,635. At the close of the year our general marine fund amounted to 95.06 per cent. of the year's premiums, whilst the fund is further strengthened by an additional reserve of £50,000, making 120 per cent. in all.

Like most other offices in London, we did business with the City Equitable, and we expect to make a loss by the liquidation of the company. At the date of the liquidation all moneys due from the City Equitable had been paid to us; in fact, we had actually some premiums in hand, so that whilst the experience is disagreeable, it is not, for us at least, more than an unwelcome incident.

The report and accounts were unanimously adopted and dividends declared as announced.

RIVER PLATE TRUST, LOAN, AND AGENCY COMPANY, LIMITED.

OIL INDUSTRY DEVELOPING.

The forty-first ordinary general meeting of the River Plate Trust, Loan, and Agency Company, Limited, was held, on the 16th instant, at 52 Moorgate, London, Mr James Anderson (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the results of the past year's working were not so favourable as those of the preceding, but when the adverse conditions under which they were working were taken into account they must, he thought, be regarded as satisfactory. During the whole of the year trade conditions in the Argentine Republic had been bad. The demand for the staple products of the country had fallen off with the cessation of the war, and prices suffered a large decline. There had been an indisposition on the part of producers to sell at the lower values, and in consequence exports had fallen off seriously both in volume and in value. This had naturally had a depressing effect on the import trade. The present outlook for the stock-rearing industry was not encouraging. There was still a demand for fat cattle suitable for chilling, but inferior qualities were difficult of sale at any price. The position was not so bad as regarded agriculture. Although prices had declined heavily, they were still on a remunerative basis. There was no country in the world where grain could be grown cheaper than in Argentina. The capacity for increased production was enormous, and a greatly increased output at a low cost would keep the industry on a sounder basis and also be a benefit to the world at large.

In recent years a new industry had been gradually developing which promised to become of great importance to the country. A few years ago oil was struck in promising volume in the Comodoro Rivadavia district. The operations were for a time kept in the hands of the Government, but exploration by private capitalists was now permitted, and was making rapid progress. Three of the great railway companies had joined forces to develop a proved oilfield, and as the great oil magnates were also interested there would be no lack of enterprise or capital for development if the preliminary investigations gave sufficiently encouraging results.

The present prospects of the company's mortgage business were not encouraging. There was more disposition to repay, and practically no new business offering. The gross profits for the year amounted to £403,289, a decrease of £19,666, as compared with the preceding year. This decrease was entirely due to the lower rates of exchange prevailing during the year. The net profits came out at £263,478, a decline of £11,484 as compared with last year.

Sir Albert E. Bowen, Bart., seconded the resolution, which was carried unanimously.

COLISEUM SYNDICATE, LIMITED.

UNFAIR TAXATION OF ENTERTAINMENT INDUSTRY.

The fourteenth annual meeting of the Coliseum Syndicate, Limited, was held at the Coliseum, London, on Wednesday, March 15th, when the chairman and managing director, Sir Oswald Stoll, presided.

The Chairman, in moving the adoption of the report and accounts, said: I rise to move the adoption of the report and accounts, which I assume may be taken as read. It is a matter for congratulation that we are able to maintain our dividend by trespassing so little on our floating reserve of accumulated profits. We are amply justified in making that encroachment, because the loss of business due to the coal strike alone in April and May was twice the amount of the trespass. Other causes

have militated against the degree of success which a magnificent modern property like the Coliseum, standing in the centre of an area occupied by 8,000,000 people, ought to achieve.

ENTERTAINMENT DUTY.

One cause is the entertainment duty. The amount of the entertainment duty collected from our patrons for the Government during the past four and a half years is £122,120, an average of about £27,000 per annum. The tax has the double effect of a fine and an increased price of admission. What people have to pay a fine for doing they avoid as much as possible, and increased prices of admission in hard times is fatal to entertainment business. The theatres which are left with profits are becoming fewer every day. Most of them are paying large amounts of entertainment duty on heavy losses that are swallowing up their resources. They pay the duty on or in the losses, because the losses are not allowed off the duty. On the losses because the losses of one period are the first receipts of the next period; in the losses because, if these are not met, the tax will cease. The very least allowance that should be made is the percentage of tax on the amount of the loss.

INCOME AND PROPERTY TAX.

Another cause of decreased results at our theatre is indicated in the fact that our income-tax and property-tax on a falling business were over £11,000 higher for 1921 than for 1913. This load of taxation came when the increase in municipal rates and charges for lighting, to select only two items of unavoidable expenditure, as compared with like expenditure in 1917, represented a sum which for many theatres would be regarded as a very satisfactory profit. In our case, that increase in these two items alone was equal to a dividend on our capital of 6 7-10ths, or nearly 7 per cent.

EXCESS PROFITS DUTY.

Fortunately, we had a high pre-war standard of profits, so we have not been hit as some companies have been by excess profits duty. The amounts due for so-called excess profits duty in the entertainment world constitute a liability which, if early payment were pressed for, would bankrupt the major portion of the industry. That seems almost paradoxical. But the truth is that the word "profits," so used in the Act of Parliament, was a misnomer. In making a comparison with the pre-war minimum, the effect of the depreciated standard of value was not allowed for. The war-time profits should have been taken at varying rates up to three and four times the nominal amount of the pre-war minimum before the term "excess profits" was applied. The consequences of the error is that companies are being called upon to pay away their capital under the fictitious name of excess profits; to pay away large sums which never were profits, but were a mere bladder blown up to look like profits by manipulation of the legal tender currency in a way which depreciated the standard of value. Profits must be actualities, not mere definitions. The legal definition in the Act of Parliament could not, and did not, create profits. When there was no fixed standard to which the term used in the legal definition could be referred, the Act of Parliament sowed the wind of false taxation, to reap the whirlwind of industrial disaster. These capital sums, of so-called excess profits duty, cannot be paid in the actual capital values; first, because the Government want cash or banking credit, not commodities or properties; and next, because to part with the actual property would destroy the business; so, where payments have been made, the resources of companies have had to be pledged for loans at high interest with which to make the payments or to replace the payments made. Hence, this highly destructive duty, in addition to the other permanent harm that it has done, has imposed on business a new and separate and extra tax, payable by business undertakings to moneylenders. It is curious that the kind of official optimism which is fashionable requires to see the entertainment industry down and out before believing that such a fate can befall it through these extraordinary conditions. Such optimism is as little comforting to entertainment companies as it would be comforting to a man being shot at dawn to know that his life depended on an optimistic belief by the commanding officer of the firing party that the volley of lead would not kill him. Our industry, of course, is not alone in the stranglehold of both Government finance and an obsolete financial system. There are very few industries that are free from it. That is the most serious aspect of the matter.

BASIS OF ENTERTAINMENT REVENUE.

Entertainment revenue depends on the masses of the people having money to spare. Their impoverishment by the strangulation of general industry tends more and more to reduce our revenue. Those concerned in the entertainment industry, like everyone else, admit that the Government requires a large revenue for national purposes, but unless Parliament adds to its policy a system whereby production and consumption on a great scale may restore not merely pre-war prosperity, but the greater

prosperity that greater obligations demand, there is no possible escape from general collapse.

SHORTCOMINGS OF THE GOVERNMENT.

The coal strike of the past year and the lock-out of the present year are merely symptomatic of shortcomings in the economic policy supported by Parliament. This policy takes sides in the industrial war, and does nothing to obviate the sinister war itself. These recurring and growing disputes are vital questions to companies and individuals who have staked their all in the welfare of this country, who, as in the case of this company, cannot take their property elsewhere. In these disputes there is no moral difference between a few men fighting for supreme economic control through the agency of finance on the one hand, and a few men fighting with the same object through the agency of wage-earners on the other hand. There is no moral difference between attempts on the part of the financiers to control the employer on the one hand, and attempts by revolutionaries to control the employed on the other hand. There is no moral difference between the refined methods whereby financiers are obtaining control over the wage-payer and the coarser methods whereby revolutionaries, through the machinery of trade unions, are obtaining control over the wage-earner.

WHAT IS NEEDED.

Parliament should eschew both sides and take a national stand. Our economic system needs, and Parliament should provide, a safety valve for this uneconomic warfare, which, openly or secretly, is constant. The safety valve must be something real in economics, not a Whitley Council, an industrial court, or even compulsory arbitration. Just as profits cannot consist of mere legal definitions, or legalised extortion, so this safety valve cannot consist of mere discussion or punishment. Under free conditions, which would serve in due time to counter-balance the hampered conditions, this safety valve must consist of greater access to actual money and productive credit, for lack of which numerous employers, and the mass of dutiful and capable wage-earners, are victims of these vicious and needless disputes. The question is of paramount interest to all entertainment companies, because it is on the prosperity of the great body of employers and employed as distinct from a few financiers and revolutionaries that popular amusements depend for success.

The report, recommending a dividend of 25 per cent., was adopted, and the retiring director, Sir James W. McCraith, was re-elected.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills and Treasury Bonds, dated from Monday to Saturday, Mar. 20th-Mar. 25th, were opened on Mar. 17th, 1922, and the total amount applied for was £70,825,700. Tenders for Monday to Friday bills at £99 2s 9d, about 30 per cent., above in full, and Saturday bills at £99 3s and above in full.

The following table shows Treasury Bills by tender outstanding:—

Date of Bills.	Amount Offered.	Amount Applied for.	Average Rate of Discount.	Rate for Additional Bills.
1922.				
February 17	30,000,000	48,565,000	3 1 3/8	23
February 24	25,000,000	33,345,000	3 0 8/16	23
March 3	35,000,000	45,805,000	3 3 1/4	24
March 10	35,000,000	58,270,000	3 3 1/8	24

Total value of imports of gold	35,096	Total declared value of exports registered in the week	266,994

Messrs Samuel Montagu and Co. write on March 16th as follows:—

GOLD.

The small amount of gold on offer has been taken for India. Gold valued at \$15,492,000 has been received in New York from Sweden. The great advance in the prosperity of India is revealed by statistics dealing with banking in that country, and is not without influence upon the imports of precious metal, which, subject to an occasional fluctuation as to quantity, have been on a remarkable scale in recent years. In the pre-war year 1913 there were 12 exchange banks doing business in the country, their aggregate capital and reserves amounting to £37,825,000, and their deposits actually in India to £31,035,000. By 1920, notwithstanding the elimination of the Deutsch-Asiatische Bank, the total number had risen to 15, the aggregate capital and reserves amounting to £90,217,000 and the deposits in India to £74,807,000. Indian joint-stock banks—other than exchange banks—having a paid-up capital and reserve of Rs. 5 lacs and over, numbered 18 in 1913 and 25 in 1920. Their capital and reserves increased in the same period from Rs. 364 lacs to Rs. 1,092 lacs, and their deposits from Rs. 2,259 lacs to Rs. 7,115 lacs. The deposits of the Presidency Banks, which are now amalgamated as the Imperial Bank of India, rose from Rs. 588 lacs in 1913 to Rs. 902 lacs in 1920. No Indian bank of any importance has gone into liquidation since 1917. The following were the United Kingdom imports and exports of gold during the month of February, 1922:—Imports, £2,400,633; exports, £3,239,560.

SILVER.

Following a rise on the 10th inst. to 33½d for cash and 33½d for forward delivery, owing to purchases on account of the Indian bazaars, prices moved downward, until 33½d and 32½d were reached yesterday. Offerings from America have not been much in evidence owing to weakness of the exchange with that country, but supplies from the Continent had been sufficient to meet the demand. To-day, however, further buying from the bazaars caused a reaction to 33½d for spot and 33d for two months' delivery. It is anticipated purchases will continue to be made by the Indian bazaars for shipment by next week's steamer, which is due to arrive in time for the Bombay April settlement.

(a) And bonus issue of 24,000 l.p. ord. shares, £1, at the rate of one new share for every ten pref. or ord. shares now held.

COLTNESS IRON COMPANY have declared the usual half-yearly dividends on the first and second preference shares, payable on April 15th next, but they regret that, owing to the continued depression in trade, they are unable to pay any interim dividend on the ordinary shares at this time.

JOHN LOVEYS AND CO.—After payment of preference dividend of 5 per cent. for year there is a balance of £875 to carry forward. In the circumstances, it is not proposed to declare a dividend on ordinary shares.

R. E. JONES, LIMITED.—Interim dividends at the rate of 10 per cent. per annum on the preference and 20 per cent. per annum on the ordinary shares were paid in May, but no final dividends are being paid.

SAWERS do not propose to pay interim dividend on ordinary shares for current year.

THE PEARSON AND KNOWLES COAL AND IRON COMPANY have declared the usual half-year's dividend on the first and second preference shares, but consider it prudent not to declare an interim dividend on the ordinary shares owing to the present trade position.

UNITED TURKEY RED.—After allowing for preference dividends there is a debit at profit and loss of £188,469; no dividend is being paid on the ordinary shares.

Reports and Notices.

After March 18th, the address of the International General Electric Company Inc., will be Crown House, Aldwych, London, W.C.2.

The British Oak Insurance Company, Limited, has opened a marine underwriting office at 2 Cooper street, Manchester, in charge of Mr Donald Moores.

Messrs Jacob Schwarzschild and Sons announce that on Monday next, the 20th inst., they will remove their offices from 34A Throgmorton street to 2A Copthall court, E.C.2 (ground floor).

Messrs Coutts and Co. will pay on and after April 1st the coupons of the Peruvian Corporation first mortgage 6 per cent. debentures at the rate of £4 per cent. per annum, in accordance with the resolution passed at a meeting of holders on March 12, 1896, with the additional interest of £2 per cent., making a total payment of £4 per cent.

BANKS.

BANCO ITALIANO, LIMA.—The 34th annual report and balance-sheet for December 31, 1921, of the Banco Italiano, Lima (which is affiliated to the Banca Commerciale Italiana) shows the following results:—Net profits: Lp. 101,726, to which are to be added Lp. 70,191 carried forward from 1920, out of which a dividend of 18 per cent. (the same as 1919-20) is to be paid. After placing about Lp. 10,000 to the reserve, and Lp. 4,000 to the special emergency fund, and paying directors' fees and special staff allowances, there remain Lp. 73,247 to be carried forward. The bank's capital is Lp. 400,000; the reserve will now amount to about Lp. 255,850, in addition to which there is a special emergency fund of nearly Lp. 25,000. Besides their head office in Lima, the Banco Italiano now has branches in Arequipa, Callao, Chichas Alta, and Mollendo.

IMPERIAL BANK OF INDIA.—The report for the half-year ended December 31, 1921, states that:—"Throughout the greater part of the half-year the trade demand was poor, and the rate of interest on demand loans remained at 5 per cent. until near the close of the year, when a sharp demand for money arose in Bombay and Burmah. The rate was raised to 6 per cent. on December 15th, and again to 7 per cent. on December 29th. The average rate for the period from July 1st to December 31st was 5.108 per cent. The net profits of the bank for the half-year amounted to Rs. 62,27,657.0.9, which, with Rs. 10,14,136.13.8 brought forward from the period January 27 to June 30, 1921, made a total of Rs. 72,41,793.14.5. This sum the

governors of the bank disposed of as follows:—In payment of a dividend to the shareholders at the rate of 16 per cent. per annum, free of income-tax, Rs. 44,67,300; transferred to reserve fund, Rs. 10,00,000; transferred to pension funds, Rs. 5,00,000; carried forward to profit and loss account of the current half-year, Rs. 12,74,493. Since the publication of the report for the period ending June 30, 1921, new branches have been opened at Ambala, Amritsar, Bassein, Cuttack, Hubli, Larkana, Peshawar, and Rawalpindi, and further branches will be opened shortly at Ahmednagar, Cuddalore, Kumbakonam, Meerut, Moradabad, Mozuffarpore, Vellore, and Vizagapatam. Arrangements are being made to open a further number of new branches during the current year."

ASSURANCE.

BRITANNIC ASSURANCE.—Extracts from the directors' report, 1921, show the premium income in respect of life assurance for the year amounted to £2,303,865. Total claims paid up to December 31, 1921, was £15,887,077. The ordinary branch premium income amounted to £505,225. The new business completed amounted to £1,449,020 in sums assured. In the industrial branch the premium income amounted to £1,798,640. The gross income from all sources amounted to £2,640,325. The total outgo amounted to £1,893,804, leaving a balance of income over expenditure on the year's accounts of £746,521. The total funds amount to

Zinc Corporation	..	Zinc concentrates, 722 tons lead concentrates.	..

BRITISH BROKEN HILL.—Fortnight ended March 11th: 7,657 tons crude ore produced 1,400 tons lead concentrates containing 847 tons lead and 34,720 ozs silver; also 1,140 tons zinc concentrates, assaying 9.2 per cent. lead, 10.02s silver per ton and 45 per cent. zinc; 195 tons carbonates raised.

BROKEN HILL SOUTH.—For the four weeks ended March 11th, 16,190 tons of crude ore and 11,577 tons of dump slimes were treated, and produced 4,447 tons of concentrates, assaying 62 per cent. lead and 29 ozs silver per ton.

BURMA CORPORATION.—February: 13,708 tons of ore were milled in the treatment plant, producing 9,402 tons of lead concentrate; 9,747 tons of lead-bearing material were smelted in the blast furnaces, producing 3,262 tons refined lead and 299,223 ozs refined silver. (January, 3,202 tons lead, 355,573 ozs silver.)

MOUNT LYE.—From February 8th to March 8th, inclusive, ore treated by flotation plant, 6,275 tons; concentrates produced 1,614 tons. A total quantity of 8,517 tons of ore were smelted, being 5,654 tons from the Mount Lye mine and 2,863 tons from the North Mount Lye mine; also 1,927 tons concentrates. The converters have produced during the same period 580 tons of blister copper, containing—copper 576 tons, silver 16,533 ozs, gold 319 ozs. Furnace in blast 672 hours.

SULPHIDE CORPORATION.—During the four weeks ended February 25, 1922, 8,921 tons of ore and 2,202 tons of slimes were milled at the Central Mine, producing 2,106 tons of lead concentrates (including 245 tons from the de-leading plant), which assayed 46 ozs silver, 63 per cent. lead, together with 3,425 tons zinc concentrates, assaying 11 ozs silver, 7 per cent. lead, 47 per cent. zinc per ton. At Cooke Creek, 3,023 tons of lead concentrates and purchased ores were smelted, producing 1,898 tons lead bullion for treatment in the refinery. The refinery products for the same period were 1,752 tons soft lead, and 156,637 ozs silver.

OIL OUTPUTS.

BRITISH BURMAH PETROLEUM COMPANY.—Production of crude oil by this company and the Rangoon Oil Co., Limited, for the month of February, 1922, amounted to 63,454 barrels.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, March 8, 1922, amounted to 674 tons.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Drier conditions experienced during the week enabled farmers to resume spring work, and sowings were commenced in some districts, while latest official reports confirm the good promise of growing cereal crops. General course of trade proved quieter, buyers showing less disposition to operate in view of declining prices and some pressure to sell. Native wheat in fair supply, and values weaker at 54s to 56s for suitable milling grades, per 504 lbs free on rail. Imported descriptions also declined owing to lower forward offers. No. 1 Northern Manitoba quoted 64s, No. 3 ditto 60s, Australian 60s to 60s 6d, and Argentine 57s 6d to 58s 6d per 480 lbs, all ex ship to arrive. A very dull tone prevailed in the floating and forward cargo market, buyers being reserved in face of lower foreign advices and pressure to sell Argentine qualities, while improved crop prospects in countries of production also impart a "bearish" influence. Recent heavy shipments and in creased arrivals at United Kingdom ports also tend to strengthen buyers' hands and satisfy millers' requirements for the time being. Steamers of Victorian, afloat, sold 58s to Italy, ditto 56s to United Kingdom, Rosale 64 lbs, afloat, 57s to 56s 6d, and Baril 63 lbs, afloat, 56s 6d, all to Germany (German terms) per 480 lbs. Flour ruled quieter, and in view of the wheat position prices ruled 2s per sack easier for home milled. London standard straight run quoted 51s, town households 49s, patents 54s, all English straight run 48s per sack, delivered London area. All English country

straights 44s to 46s per sack, free on rail at London stations. Imported dull and values weak. Manitoba export patents 49s, straights 46s, Minneapolis first patents 49s, and Australian 48s per 280 lbs, ex store. On c.i.f. terms business proceeded slowly and prices were reduced, Manitoba export patents, March seaboard to 47s, straights 44s, Kansas top patents 48s to 49s, and Australian 44s per 280 lbs. Millers' offers quiet and tending easier. Broad bran quoted 49s, ordinary ditto 48s, middlings 48s 5s per ton, ex mill. Of imported, Plate pollards 47s 10s, landed, and Dutch pollards 47s 10s per ton, ex ship, to arrive. Barley quieter, and values nominally the turn easier. English malting ranges from 42s up to 68s according to sample, and feeding sorts 38s to 40s per 448 lbs, free on rail. Of imported, Californian 42s to 50s, Australian Chevalier 50s to 53s, Chilean Chevalier 48s to 58s, landed, per 448 lbs, Morocco 33s, Plate 33s, No. 3 Canadian Western 36s 6d, No. 4 ditto 35s 6d per 400 lbs, landed terms. Maize quieter and rates easier. Plate quoted 42s, ex ship, and 44s, landed, yellow round African 39s 6d, and American mixed 34s 6d, all landed, per 480 lbs. Forward business at a standstill as regards cargoes and prices lower, while moderate transactions occurred in parcels at declining rates. Oats quiet, and lower prices were accepted in order to trade. Native ranges from 29s to 34s as to quality per 336 lbs. Of imported, Plate f.a.q. quoted 27s, ditto clipped 28s 6d, No. 2 Canada Western 32s, and New Zealand 35s to 40s, landed, per 320 lbs. Oatmeal steady. London made ranges from 41s to 42s, rolled oats 41s to 42s, flaked ditto 41s to 42s, ordinary Scottish oatmeal 41s 10s to 42s 10s, and American ditto 41s to 42s 10s per ton. Beans quiet. English springs quoted 57s to 68s, and new winters 50s to 52s per 532 lbs. Of imported, Chinese horse beans 41s 10s to 42s 10s, ex store. Madagascar haricot old crop 13s to 15s, new 17s 6d to 19s 6d per cwt. Peas in fair demand and prices steady. English maples range from 8s to 9s, Duns 6s to 7s, small blues 8s to 9s 6d per 504 lbs. Of imported, Tasmanian best 23s to 25s, New Zealand blue 20s to 24s, Dutch screened 42s, hand picked 27s 6d per cwt. Lentils quiet. No. 1 split 29s to 30s, No. 2 ditto 25s to 26s, and Egyptian 24s to 25s per 100 lbs. Homeward grain chartering was on a reduced scale, merchants being afforded little encouragement to operate in view of dull markets on this side. The River Plate section ruled easier, and steamers up river loading to United Kingdom-Continent, March-April, indicate 23s 9d to 25s ton, heavy grain basis. North America also lacks interest, but rates nominally steady. Northern Range to Antwerp-Hamburg quoted 17 cents, West Italy 21 cents, Greece paid 27 1/2 cents prompt and 26 cents April, Denmark 25 cents, and Baltic done at 30 cents per 100 lbs. Gulf ports to Ireland quotes 5s 6d qr, and 21 cents to Continent. North Pacific, April, paid 44s 9d ton United Kingdom-Continent. India quieter, and Bombay on dead weight held for 27s 6d, with merchants indicating 23s 9d United Kingdom-Continent. There is a good demand for rice, and Burma to Germany paid 27s 6d to 30s, with full cargoes of rice meal from Saigon ruling at 38s 9d to 40s United Kingdom Continent-Mediterranean. Australia quieter and 50s paid, wheat basis, loading at usual ports April-May home. Alexandria cottonseed indicates 12s per 60 cubic feet to London or Hull.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

	1921-1922.	1920-1921.	1919-1920.	1918-1919.

* Half-year.

† Free of tax.

Our Sheffield correspondent writes:—The rupture in the engineering industry has occurred at a singularly inopportune time, so far as national interests are concerned, as it cannot fail to nip in the bud an undoubted upward movement in trade activity. A definite revival has been in operation for several weeks in the pig-iron section; exports of some classes of steel were increasing, and inquiries from various overseas markets have been more numerous than at any previous time. Inability to obtain prompt deliveries from Germany had also begun to throw certain foreign orders into the arms of British makers. This movement would eventually have extended to the staple Sheffield industries, which are still depressed. Large quantities of British hematite iron are going to Italy, France, Germany, and Belgium. About 5,000 men employed for the most part at three large engineering establishments have been locked out in the Sheffield district, and an equal number has been deprived of work in consequence of the stoppage of the engineers. Most of the steel and tool works also employ engineers, but these are not affected by the lock-out. Should the employers generally join forces with the engineers' federation they also will be locked out. The stoppage has checked the buying of tool steel, engineers' tools, motor requisites, and so forth, and local firms are looking next to nothing this month. Acute depression also prevails in the cutlery, electro plate, and silver branches. The

demand for farm tools is a little better, but the season is certain to be below the average owing to the large stocks held over from last year. The farming community is also too poor to spend much money on new mechanical equipment. In view of the stoppage in engineering work the demand for inland industrial fuel has dropped off, and works are reducing their floating stocks. The market, nevertheless, has not yet developed any weakness. Short-time working at the pits is inevitable if the present lock-out continues. The position of slacks has lately improved in this district, coke making having consumed a large tonnage. The demand for blast furnace coke is distinctly strong. Current prices at pits are as follows:—Best South Yorks steam, 22s to 23s; ditto Derbyshire, 21s to 22s; cobbles, 19s to 20s; nuts, 17s to 18s; best hard slacks, 12s to 13s; seconds, 10s to 11s; small, 4s to 5s; branch house, 37s to 39s; best Silkestone, 34s to 35s; blast furnace, 17s 6d to 25s.

Our Glasgow correspondent (writing on Thursday) says:—Pig-iron makers find prompt demand fairly good, and inquiries on export account not discouraging. This they attribute to the slackening off of Continental competition. Germany, it is stated, is not a seller, while Belgium is a moderate buyer. The first step in the reopening of the Scotch pig-iron ring was taken to-day,

when a respectable representation of members gathered in the Glasgow Royal Exchange. Proceedings were purely formal, no business resulting. There are no warrants available, and, of course, they could be neither bought nor sold. But one broker offered to take a quantity of No. 3 G.M.B. Cleveland at 95s a ton, and there was a presumed seller at 95s a ton. The market is meantime to meet once a week—on the Wednesday forenoons. Scotch makers of No. 1 and No. 3 express great disappointment at the course of industrial events, as last week they found export consumers more inclined to buy, and that far ahead, than they have been since the year came in. Now they are all holding off—for developments. Local founders seem pretty well situated, as, especially, are tube makers, black and galvanised sheet makers, and steel and iron bar makers. But heads of departments in these (and other) departments are greatly concerned as to what the future has in store for them. None can be said to be well provided with engagements, and they therefore with one voice pray for the success of the negotiations opened up to-day in London for bringing parties once more together with a view to devising a means to an end in a most delicate and difficult situation. The position in the coal trade has become very serious. Inland demand, through the shutting down of the engineering shops, has well-nigh collapsed, foreign export inquiry has been suspended (particularly from the Continent), stocks are accumulating, and a large number of collieries are likely to close down ere the week is out. Producers affirm that they cannot encourage business by reducing prices, as already quotations are under the payable standard.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The world demand for wool is again the dominating factor, and values are being regulated by the operations of buyers in the raw material markets rather than by the buyers of finished goods. The colonial sales in London have revealed the strength of the raw material position, and prices in Bradford have been adjusted accordingly. In addition to the upward movement in wool values, however, the scarcity of fine tops is exercising a pronounced influence on quotations, and the persistent refusal of the wool-combing operatives to work overtime in accordance with the decision of the Industrial Council makes it impossible to increase supplies. The combing "bottle-neck" remains, therefore, a serious feature, and though wool is available in ample quantities for all purposes, only topmakers who are fortunate enough to have booked combing turns can get their material through the combs. In sympathy with the course of trade in Coleman street during the past two weeks topmakers have advanced their quotations for merino tops, and in spite of the higher level of values a considerable amount of business has been put through. Most firms are quoting for June delivery, and from 4s 3d to 4s 4d are prices regularly asked for good 64's. There is also a fair turnover in crossbreds, and prices are very firm at late rates. Spinners are doing rather more business, but it is a difficult matter to persuade users to follow the upward movement. Moreover, there is still a good deal of irregularity in quotations, and as some cheap lots are being offered here and there the market has a more spotty appearance than actual conditions warrant. The piece goods trade is improving slowly, especially the worsted section. There is a fair demand for fancy worsteds, and gabardines and wool whipcords are still good selling lines.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sales are being continued under very favourable conditions, and so far there is no giving way in values. The spirit of the saleroom could hardly be better, and the way the catalogues are absorbed is remarkable. Of course, the home trade is by far the largest operator, supporting crossbreds quite as well as merinos. Everything is cleared with the utmost readiness, and the catalogues contain some good wools of all qualities. One of the most surprising features is the operations on German account, and whether the mark is worth 500 or 1,000 to the £ Germany "carries on." Belgian buyers are also fairly active. America, too, is absorbing a few lines of superior grease merinos, but the bulk of the offerings are still falling to the bids of the home and French trades. The extent of buyers' operations shows clearly that they have confidence in the future of values, and many are ignoring the attitude of Yorkshire spinners and manufacturers who are still clamouring for 4s tops. The tops cannot be made at this price out of wool bought in Coleman street, and a man wants at least 4s 4d for a decent article. Prices are now back at the level current at the close of last London sales, and one can safely say that all the weakness seen in the interval has disappeared. What amazes one most is the ability of the trade to absorb day after day 10,000 bales without prices giving way, and consumption must be far greater than is generally acknowledged, otherwise stocks in users' hands must be very considerable. Overseas advices are also to the effect that good topmaking merinos have appreciated 5 per cent. on prices ruling a fortnight ago, and in all markets there appears to be a readiness to operate which is highly commendable.

The Board of Trade Returns for February afford an interesting commentary on the foreign trade done during that month in wool textile commodities. In point of value, the February exports of woollen and worsted yarns and manufactures totalled £3,986,123, compared with £5,853,726 in February, 1921. The value of the January, 1922, exports was £5,010,512, and of the January, 1921, exports £7,901,526. It will thus be seen that there has been a decrease of approximately £2,000,000 in the value of the exports in each of the two first months of the current year compared with the corresponding periods of 1921. With regard to combed wool, the quantities sent to several destinations showed an increase

SINCE 1858

Open Sesame!

THE security of the Treasure Cave in which Ali Baba kept his illgotten wealth depended entirely upon these magic words (the repeating of which opened the cave) not being known to others.

Progress has changed this order of things, because, to-day security in no way depends upon the keeping of a secret or the difficulty the burglar may have in gaining access to the building in which the Strong Room or Safe may be.

The security of the Modern Strong Room lies in the strength of its defence, for in the design the human factor is eliminated, and it is assumed that the burglar is equipped with up-to-date engineering tools.

THE CHATWOOD "Treasury" Quality Safe is fitted with locks which, if desired, can be arranged so that three persons must be present to open the safe, none of whom can secure entry without the presence or knowledge of the others.

Engineering work of quality is the result of the persistent pursuit of a preconceived aim, and the worth of a firm may be gauged to some extent by its aims as well as its achievements. Since the foundation of The Chatwood Safe Co., almost 70 years ago, the policy has always been to confine its energies to work of the highest quality.

THE CHATWOOD SAFE

SINCE 1858.

THE NEW CHATWOOD SAFE BOOK.

The guiding factor in the preparation of this book has been a desire to convey not only full particulars and illustrations, but also something of the quality of the work and high ideals of the firm.

during the two months January-February of the current year compared with the first two months of 1921. Exports of tops to France now approximate the pre-war level, and Belgium and Canada actually took a greater weight than in 1913, whilst Italy and Japan fell a long way below the pre-war quantities. An encouraging feature is the increased exports of Germany, but the quantity being 1,000,000 lbs less than in January-February, 1913, indicates that there is still considerable leeway to make up. Exports of worsted yarn, though showing an increase, are not yet up to the pre-war quantities. The total for January-February, 1922, was 5,555,500 lbs, compared with 2,368,300 lbs in the same period of 1921, and 8,429,600 lbs in 1913. The figures relating to the exports of tops and yarn are on the whole satisfactory, but not until they show still further expansion will the record be such as harmonises with real trade prosperity.

MANCHESTER, March 16.

The increased activity in the market continues, and the general prospects for spinners and manufacturers are distinctly healthier than a few weeks ago. Business during the past week has been somewhat irregular, and some producers are refusing to accept the prices offered by buyers. Very weak sellers, however, are gradually being cleared from the market. An encouraging turnover has taken place in piece goods for India, and although most of the buying has been for Calcutta, fair lines have been put through for Bombay, Madras, and Karachi. A larger inquiry has been met with for China, with moderate sales in greys and whites. The Near Eastern and European outlets, and also the home trade, have provided a broadening demand. Unemployment in most weaving districts is being reduced. An increased turnover has been reported in American and Egyptian yarns at firmer rates. Increased activity has shown itself in yarns for India.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remained very steady at the sales held in Bermondsey on Thursday last, ox making from 6½d to 7½d and cows from 6d to 6½d. Calf were firmer, and advanced ½d to 1d per lb. Wools showed little change, fellmongers not being eager buyers of skins owing to low prices of pelts and skin wool.

The demand for imported hides is quiet, and fregorifics at origin are easier in price. The only important sale reported is that of 10,000 hides in store, sold on re-weights at 8½d to 9½d. A small parcel of Liebig hides has also been sold at 12½d for export. Drys are unwanted except at bargain prices. Latest cables from New York report the Chicago hide market as steady, with heavy packers still offering at 13 cents and cows at 11 cents.

Trade in sole leather has received a check following on the labour trouble with the engineers, and several cancellations are reported. Prices remain fairly firm, although quite a good class of English bend is now offered as low as 20d per lb, whilst dry hide bends are down to 12d or even a shade less. Exports of British leather for February last were 18,457 cwts, valued at £306,417, as against 7,832 cwts valued at £180,206 for the corresponding month of last year—America being amongst the biggest buyers.

The demand for upper leather remains dull, and orders are for small quantities at very low prices. The demand for coloured suedes is as insistent as ever, and "millinery" leathers are now quite a by-word in the shoe manufacturers' cutting rooms. Imports of dressed leather for the first two months of 1921-22 were valued at £81,875 and £976,634 respectively.

The boot trade shows an improvement, although few manufacturers are working full time. Prices are slowly being stabilised, but the high prices charged for high-grade footwear is still acting as a check to home demand. Exports for the first two months of 1921-22 were valued at £548,133 and £347,457 respectively.

VEGETABLE OILS AND OILSEEDS.

Market conditions generally have been erratic and unstable. In Plate linseed there came a decided break. Spot prices receded sharply on large arrivals, as also did seed on passage, of which crushers bought freely at £19 per ton, the same figure also being

GIRARD TRUST COMPANY

given for early shipments. On Wednesday, at Hull, seed on spot was available at £19, but there has since been a steadier and hardening tendency to the extent of 15s. per ton, while a slight advance for "afloat" is also recorded. For April-May shipment demand is small, and a discount is obtainable. Indian linseed, of which there have been good shipments since the opening of the year, has also declined somewhat, but undoubtedly the presence of this seed has had a chastening effect upon Plate shippers' quotations. Russian linseed is offering in small quantities to Hull, but business is difficult to negotiate, current value Libau to Hull being round £23 10s. delivered terms.

Only a moderate trade is being done in Egyptian cottonseed on the basis of £12 5s to £12 7s 6d Sakellaridis spot and March loading. Bombay quiet, and quoted £9 12s 6d afloat.

So far as oils are concerned, raw linseed oil has had an easier tendency, in sympathy with seed, and is lower on the week, current value naked, ex Hull mill, being £34 10s spot and April delivery, and £34 May-August. The foreign demand comes chiefly from America, very little being done with the Continent, whose crushers are handling large quantities of seed, and are now able to compete successfully with English linseed oil in the American market. The home demand, while slightly better, leaves much to be desired. Cotton oils, after a sharp advance, have reacted, buyers not following, consequently crude Egyptian is slightly lower at £39 ex Hull mill. Refined edible is, however, steady, and values maintained. Castor oil has been advanced 40s per ton, crude Soya bean oil is steady, and inclined dearer; while rape oil is offered at £43 spot and month, and £41 for forward delivery without much business resulting.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, March 17.

The markets for the chief part disclosed steady features, and there was a fair consumptive demand for certain articles. Tea market further hardened, particularly for the lower qualities, on active and well-distributed competition experienced at public sales.

SUGAR.—A very steady tone governed this market, and, with sustained inquiries, fair sales resulted in all spot lots of refined at 6d cwt advance. With imported descriptions still scarce, British makes are well sought after. Messrs Tate and Lyle's cubes, sold, 52s 3d to 53s 3d, as to quality; granulated, 48s to 48s 6d; crushed, 50s; castor, 49s to 49s 6d; pieces, 36s to 43s 3d for mid brown to good white; yellow crystals, 42s 6d. Granulated, April, sold, 48s, and May-June, 47s 9d. Crystallised West India sold from 40s 6d to 44s 3d, as to sample. American granulated, March steamer, sold, 19s 10½d to 20s; April, 20s to 20s 1½d; May, 20s 1½d to 20s 3d; June, 20s 3d, c.f. and i. terms, U.K. White Brazilian, April, sold, 18s 6d, c.f. and i. London. White Mauritius, spot, changed hands at 44s to 44s 6d. Dutch granulated steady. W.S.R., prompt shipment, sellers, 20s 6d; J. 20s; W.S.R. cubes, 23s 10½d, f.o.b., Amsterdam. Czechoslovakian granulated and crystals, prompt, 20s 3d; cubes, 23s 3d, f.o.b., Hamburg. Cuban basis, 96 per cent., April, held for 13s 3d, c.f. and i. terms, U.K. Brazilian basis, 80 per cent., March-April, sold, 9s 3d, c.f. and i. London. Cuban stocks stand at 772,900 tons, against 620,100 at corresponding period last year. Liquid glucose, April delivery, 26s 3d per cwt., duty paid.

COFFEE.—Fair quantities were catalogued in auction during the week, in which Costa Rica imports again largely participated. With a good demand for the finer qualities, prices ruled steady on balance though slightly irregular at times. Fine East India sorts still command extreme rates. Costa Rica, fine to extra fine, bold, coloury, sold, 128s to 143s; peas up to 172s; East India, good to fine, bold, 125s to 144s 6d; peas, 120s to 136s. Future delivery market quiet, and prices easier on the week. December, sold, 54s 9d.

COCOA.—In auction, some 11,290 bags were offered, of which 9,717 bags consisted of Colonial descriptions. Grenada largely predominated, no less than 3,293 bags of this particular sort being offered, and met a good demand at full rates ruling recently by private treaty, or in other words, from 4s to 5s per cwt. higher than values current at last auctions, otherwise a quiet tone governed proceedings. Grenada, fair to good, sold, 53s 6d to 58s; fine, 60s to 60s 6d. St Lucia, fair to fine, sold, 53s 6d to 59s 6d. Common lots of Ceylon, sold, 80s to 85s. Butter quoted 1s 10d per lb.

TEA.—Public sales of Indian during the week embraced some 41,500 packages. An active demand was experienced at firm to dearer prices. All grades up to 1s 4d per lb in particular were well competed for. 19,200 packages Ceylon were brought forward, and with brisk biddings, especially for the lower qualities, prices ruled firm to 4d per lb higher. Java and Sumatra met an active clearance at firm values.

RICE.—A steady demand ensued this week, resulting in a moderate amount of business, and forward positions disclosed firmness. Two Stars, spot, 14s; ditto March, sold, 13s 6d to 14s. No. 1 garden Siam, single bags, on spot, 14s 3d; doubles, 14s 9d to 15s; forward ditto quoted 17s. Broken kinds quietly steady, and with regard to forward positions shippers show but little interest. Bran steady, quiet. Rangoon beans, after being easier with business in spot lots down to 7s, became steadier, and sales resulted at 7s 4½d. Madagascar butter beans steady, and old crop good white, spot, sold, 14s; new, 18s to 19s, as to sample. Japanese peas steady. Spot lots, sold, 44s. Dutch peas on spot quoted 28s for hand-picked, and 25s screened.

FRUIT.—General stability again prevailed in the market for currants. Pyrgos, sold, 54s; Amalia quoted 56s to 58s; Patras, 59s to 62s; and Vostizza, 63s to 75s. Sultanias were held for steady prices. Smyrna, good to fine, 126s to 138s; choice, 145s. Red Alghans, sold, 95s. Valencia raisins quiet, but held steadily. Halves, 50s to 60s; quarters, 60s to 80s. Dates steady. Siam, on spot, 28s 6d.

JUTE showed slight irregularity in the early part of the week, but closed firmly, and a fair amount of business was effected. Manu-

factured goods were accorded fair support. New first-grade, spot, Dundee, sold, £27 10s to £28; ditto, March-April, Continent, £25 10s to £26; April-May, £26 to £25 15s and £26 7s 6d. Lightning grade, spot, Hamburg, at £22 10s to £23 10s, as to quality; ditto, April-May, steamer, at £21 15s to £22 10s; Daisee No. 2, spot, Dundee, £26 10s; Heart grade, April-May value, £18 ton. Hessians, 10 oz, spot, 23s 6d; 8 ozs, sold, 17s 9d. A twills, spot, quoted 75s; B, 61s. Sugar sold, 86s; flour, quoted, 80s.

HEMP.—Manila remained quiet and featureless. C grade, April-June, quoted £48; D, £46; E, £44; F, £40; G, £36; H, £36; J, £36; K, £35 10s; L, £35; M, £33. Streaky, one quoted £40; two, £38; three, £36. New Zealand idle. H.P.F., spot, £33 10s; forward, £34 10s; fair, spot, £32; forward, £32. Italian quiet, but steady, and proved P.C., spot, sold, £59.

SHELLAC.—Market stronger, but rather unsettled at times. Fair, T.N., spot, sold, 395s; May delivery, 397s 6d to 400s and 382s 6d. February-March, steamer, done, 370s.

COPRA steadier, and buyers were more in evidence this week. F.M.S. Straits, February-April, Rotterdam, sold, £25 10s to £25 12s 6d; March-May and also April-June, £25 5s to £25 10s and £25 7s 6d; F.M. Straits, March-May, Marseilles, done, £24 12s 6d; Ceylon, March-May, Hamburg, £26 10s to £26 12s 6d; South Sea Islands ditto, £24 10s, with plantation ditto at £25; Cebu, March-May, Hamburg, sold, £25 to £25 2s 6d; Malabar quoted £27. Palm kernels steady. April-June, Liverpool, sold, £18 15s.

RUBBER.—Market generally quiet and featureless. Standard crepe and sheet, spot, sold, 8½d to 8d; April-June, 8½d to 8½d and 8½d; July-September, 8½d to 8½d; October-December, 9½d to 9½d. Fine hard Para, spot, 11d; soft fine, 10½d; ball, 7½d per lb.

MENTHOL.—Spot, sold, 25s. Japanese peppermint oil, spot, 5s. Aniseed, 2s, sellers. Slab camphor, spot, 3s 8d; crude, 3s 3d per lb. Japanese wax, spot, 95s; forward, 84s per cwt.

METALS.—Tin: The market exhibited an easier tendency until last Tuesday, with fair dealings in cash down to £143, and three months' to £144 15s, but prices moved in an upward direction during the middle of the week, while these dates fluctuated between £143 and £143 15s and £144 10s to £145 15s respectively. Thursday's market inclined rather easier; cash realised £143 10s, with three months' £146 to £145, improving to £146 10s, and since done at £145 5s. At Friday's session fair dealings were carried on in cash at £142 to £143 10s, late April £144 5s, three months' fluctuating between £144 and £145. English ingots £144 to £144 10s. Copper dearer during the early part of the week, with business in standard cash last Tuesday at £61 5s, and three months' £62 2s 6d, but prices tended below the best later, cash settling down at £60 15s, and three months' at £61 10s. The tendency was easier on Wednesday. Cash sold at £60 7s 6d, and three months' £61 10s to £61 5s. In quiet request at Thursday's meeting, cash at £60 to £60 7s 6d, and three months' at £61 to £61 2s 6d. At Friday's session cash changed hands at £60, end of March £60 to £60 2s 6d, and three months' at £60 15s to £60 17s 6d. Electros £67 10s to £68 10s. English best selected £64

Banking and Exchange

to £66. Strong sheets £90. Wire bars £68 to £68 10s. Lead firmer, at £21 12s 6d to £21 7s 6d, as to position. Spelter dearer, £25 15s to £25 17s 6d. Antimony, English regulus, £29 to £33. Aluminium, home delivery, £120; export, £125 per ton.

OILS.—Lined fairly steady and in moderate demand. Spot, net, naked, 36s; March-April, 35s; May-August, 34s. Rape nominal. Crude, spot, 48s; refined, 53s. Cotton firm. Crude Egyptian, 41s; Bombay, nominal; common edible, 49s. Chinawood: Hankow, spot (barrels), 62s; and shipment, 59s 6d. Coconut quiet. Ceylon, spot, 43s; March-April, 40s 9d; Ceylon, ditto, 43s. Soya steady. Oriental, barrels, ditto, 37s 6d. Japan fish steady. March-April, cases, 21s 6d. Cod steady. English, spot, 30s. Groundnuts quiet. English crushed, naked, spot, 44s; deodorised, barrels, 55s. Turpentine firmer, and in better request. American, spot, 67s 9d; April, 67s 9d; May-June, 64s 6d; July-December, 57s. Rosin quiet. American, grade B, 13s; F, 13s; G, 13s; WW, 19s. French, F/G, 13s; WW, 17s; extra pale, nominal. Petroleum quiet. American standard white, 18 4d; and water-white, 18 5d per gallon.

OILSEEDS.—Lined quiet and easier. Bold Bombay, afloat, £21. Small Bombay, ditto, £20. Calcutta, February-March, £19 15s; April-May, £19 5s. Plate, afloat, £19 5s; February-March, £19; April-May, £18 15s to £18 10s paid. Rapeseed quiet. Toria, March-April, sold, £16 12s 6d to £16 10s; April-May, £16 5s. Cotton seed quiet. Egyptian black, March, £12 15s; and white, £12 5s. Bombay, March, £9 10s. Gingelly firmer. Chinese, March-April, Continent, £24 5s. Castor, Bombay, March-April, £17. Ground nuts firm. Coromandel, machine-dried, March-April, Hull, £22 10s to £23; Continent, £22 10s to £23; Chinese decorticated, f.a.q., February-March, Continent, £23 per ton.

TALLOW.—Messrs Colchesters and Woolner write on March 16th as follows:—The tallow market was quiet during the week, and prices are fully maintained. The quantity offering in the market is remarkably small and out of proportion to the quantity stored in London. At auction to-day 941 casks tallow were offered, and 548 were sold. Quotations are:—Australian mutton: Fine, 42s 6d; good to fair, 41s 6d to 40s; dull to dark, 36s 3d to 33s 6d; hard, 41s 6d. Australian beef: Fine, 42s; good to fair, 41s 6d to 37s; dull to dark, 36s to 33s; sweet, 42s 6d. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 40s; and mixed, 43½ c.i.f., London, 39s. The market letter is unchanged. Town tallow, 34s 6d per cwt. Kough fat, per 8 lbs, 1d; melted stuff, 2s per cwt. Quotations are:—Town: 34s 6d net cash, naked, ex works. Country: Frail casks, 34s; home melted, shipping casks, net f.o.b., good coloured, 36s; fair to dull, 35s 6d to 33s. Bone fat: White, none; pale, none; benzene, 31s; melted stuff, 30s, f.o.b.

Secretary: F. E. JOHNSON.

Underwriting Office - 10, ROYAL EXCHANGE, LONDON, E.C.3.

MOTOR CAR AND PERSONAL ACCIDENT DEPARTMENT - 1, ROYAL EXCHANGE AVENUE, LONDON, E.C.3.

Underwriter: E. MERRICK TYLOR.

DIRECTORS' REPORT, BALANCE SHEET, AND STATEMENT OF ACCOUNTS for the Year ended 31st December, 1921.

The Directors have pleasure in presenting to the Shareholders the 29th Annual Report of the Company, dealing with the Underwriting Accounts for the three years 1919, 1920 and 1921.

The 1919 Underwriting Account is now closed with a Credit Balance of £177,246 7s. 1d., which is carried to Profit and Loss Account.

On the 1920 Underwriting Account there is a Credit Balance amounting to £363,104 6s. 10d., or over 33 per cent. of the Premium Income for that year. Your Directors have decided to transfer £55,000 of this balance to the credit of Profit and Loss Account to meet the large sum paid away during the past 12 months in War and Income Taxes, part of which will ultimately be on account of the 1920 Underwriting; the balance of £308,104 6s. 10d. being carried over for Third Year Settlements. This will, it is anticipated, be fully sufficient to wind up the Account and leave a satisfactory profit.

The Premium Income for the 1921 Underwriting Account is £715,119 11s. 9d., showing a large reduction on the Premiums for the previous year. This reduction is due, mainly, to existing economic conditions which are world-wide, and to the extra caution that has been necessary in the selection of risks owing to those conditions. The Claims settled amount to only £198,655 17s. 3d., or under 28 per cent.

In past years large provision was made for the Depreciation of Investments. This year the sum provided for this purpose at the 31st December, 1921, was more than sufficient, and the further general rise in Government and other Securities, which has taken place, leaves this Fund very much in excess of the actual requirements. The net result of the operations up to the end of the 1919 Underwriting Account will show, in the opinion of your Directors, an increase, after paying the dividend, in the true reserves of the Company of over £50,000.

It is proposed to pay a final Dividend of 5 per cent., which, together with the interim Dividend of 5 per cent. paid in June last, makes a total of 10 per cent. for the year.

The Auditors, Messrs. Turquand, Youngs & Company, retire, but offer themselves for re-election:

C. E. HEATH (Chairman),
ARTHUR BURNS,
MONTAGUE EVANS, } Directors.

THE MONEY MARKET.

WITH the exception of a short period of ease on Tuesday afternoon, conditions in the money market have been almost stringent, and there has been the strong demand for short loans customary as the end of the financial year approaches. The rates for day-to-day money have ranged from 3 to 4 per cent. There was again a little borrowing at the Bank on Monday. The discount market, on the whole, has been easier on expectations of easy monetary

conditions after the turn of the month, and the possibility of a further reduction of Federal Reserve rates in the near future is being talked of. But discount business has been exceptionally quiet. The general rate for three months' bills has not varied much from $3\frac{1}{8}$ to $3\frac{1}{16}$ per cent. The average of $3\frac{1}{8}$ per cent. at which Treasury bills were allotted was somewhat below expectations, but the discount market was unaffected.

	Mar. 24, 1922.	Mar. 17, 1922.	Mar. 10, 1922.	Mar. 3, 1922.	Previous Rate and Date Changed.
Bank Rate	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	5 (Feb. 16, '22)
Bank Deposit Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3 (Feb. 16, '22)
Discount (Call)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3 (Feb. 16, '22)
Houses (Notice)	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$1\frac{1}{2}$ (Feb. 16, '22)
Market rate (3 months' bills) ..	$3\frac{1}{8}$	$3\frac{1}{16}$	$3\frac{1}{16}$	$3\frac{1}{16}$	..

The principal feature of the Bank Return was an increase of £6,263,500 in Other securities, an indication of market borrowing at the Bank. Government securities rose by £1,331,000. The circulation fell by £53,700 and the Reserve was £58,100 higher, and Deposits were thus £7,640,900 higher, Public rising by £2,923,500 and Other by £4,717,400. The proportion is $17\frac{1}{2}$, as against $18\frac{1}{2}$ a week ago. The circulation of currency notes was reduced this week by £540,800 to £299,798,200, which includes £1,658,302 for notes called in but not yet cancelled. The fiduciary issue is £250,189,868, or £59,798,500 below the maximum.

THE STOCK MARKETS.

The gilt-edged markets developed activity towards the end of the week, the strength of War Loan being the outstanding feature. The main influence causing this improvement was the expectation of cheaper money after the close of the national financial year. The lists of colonial, corporation, and prior charge Home Railway stocks show numerous advances. After falling sharply on profit-taking by stags the new French railway scrip rallied on the quick over-subscription of the Nord issue. Finnish bonds came into demand on the news that a Finnish loan of £3 millions is to be floated in London. Rubber shares eased off with the price of the raw material, and the oil share market is uninteresting. Kaffirs, however, improved on Rand news. Among industrials, the iron and steel group, breweries, and electric light shares improved, but shipping shares lack attention. Bank shares are steady.

COMMODITY MARKETS.

As a result of the better conditions prevailing in the cotton trade, prices have hardened during the week; it is reported, however, that merchants have been disturbed by Indian Budget anxieties. In the wool trade, home and Continental buyers have been active, and confidence in present values is shown. No change in Cleveland or hematite is recorded in the iron markets. The prospect of a coal strike in the United States is causing further activity in the Welsh export coal markets, but inland demands have been affected by the engineering dispute. Prices in the wheat market were at first inclined to be firmer, but subsequently declined on account of the weakness in the German exchange. The demand for raw linseed oil has been small, and conditions have been generally quiet in the vegetable oil and oilseed market. Prices of hides at the Bermondsey auctions on Thursday were fairly steady, but the trade in sole leather shows signs of falling off. Our timber trade correspondent reports a steady decline in quotations, wood for building construction costing now approximately £5 14s per load as compared with £10 17s in January and February, 1921.

Further particulars of markets from special correspondents will be found on later pages.

FOREIGN EXCHANGES.

Although business was a little more active again yesterday morning, the market has been very quiet, and showed a relapse from the previous week's moderate activity. The chief feature has been the further collapse of the mark, which, on the news of the decision of the Reparation Commission as to this year's payments, ran up rapidly, and by yesterday morning had reached 1,540, as compared with 1,217 a week ago. It is true that the new decision shows a marked advance towards reason, but the amounts demanded from Germany are still too high to be paid without danger of something approaching a collapse, and the demand for a further drastic increase in taxation coming on the top of the heavy increases already agreed upon with difficulty in the Reichstag has produced dismay and confusion in Germany. It is a matter of tragic irony that this central point of difficulty in the European economic situation should be excluded from consideration by the Genoa Conference, which has been convoked for the very purpose of dealing with this situation. Forward marks are quoted at $\frac{1}{2}$ mark per month below spot. The dollar, after jumping last Saturday to just over \$4.40, fell back again, and though it reached the same figure on the 22nd, was down yesterday again to \$4.38 $\frac{1}{2}$, and, in spite of certain interests working for a rise, it is not likely that the upward movement will be very rapid for a time. Forward dollars remain on a parity with spot. Paris during the week has shown irregular movements within narrow limits, and at 48.50 yesterday was very little different from the preceding Friday. It may perhaps be inferred with some certainty that the aim of France for the time being is to secure stability round about the present level rather than to use the funds acquired through recent loans abroad in order to produce any sudden appreciation. Francs one month ahead remain on a parity with spot. Brussels at 52.10 is rather higher than a week ago, and the spread between Paris and Brussels has again widened slightly. The lira, after moving up slightly, ends the week almost exactly the same at 85 $\frac{1}{2}$. Among the neutral countries, Amsterdam has moved somewhat in our favour, and Madrid and Switzerland have also both depreciated slightly. In the Scandinavian group Christiania and Copenhagen have moved a little against us, Stockholm a little in our favour. Finland has remained steady, in spite of the report of the conclusion of a loan in London, perhaps another welcome indication of a determination to keep a rate steady rather than permit a sudden appreciation. In Central Europe the Vienna rate, in spite of the official release of the British advance, is up to 33,500, the result probably of the renewed collapse of the mark. Warsaw, on the other hand, is slightly better at 17,500, and there is the satisfactory announcement yesterday that a sterling loan of £4,000,000 has been arranged in London. Prague is steady, and the conclusion of the proposed British credit has still not been announced. Belgrade has moved up still higher now that exchange dealings are allowed a little more freely. Athens shows a sharp rise to 105. In the East, the rupee is practically unchanged at 1s 3 $\frac{1}{4}$ d, the yen $\frac{1}{2}$ d dearer, at 2s 1 $\frac{1}{2}$ d. The silver market has been uncertain, with some buying from China at the end. Prices have kept up well, but the outlook is still quite obscure. Hong Kong and Shanghai show little change. Among the South American rates Montevideo has moved up rather rapidly to 44 $\frac{1}{2}$, Buenos Ayres shows little change at 45 $\frac{1}{2}$. Valparaiso, after rising to 40.60 on the 23rd, is still high at 39.80, as compared with 38.10 a week ago. Rio is a little lower at 7 $\frac{1}{16}$.

THE NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended March 18, 1922:—

Receipts.	Min. £	Expenditure.	Min. £
From Revenue	42,971	Supply Services	24,125
		Interest on Debt	1,125
		Sundries	1,217
		Reduction of Debt	1,217
		Added to Exchequer balances ..	318
	42,971		42,971

Revenue totalled £42,971,485 for the seven days ended March 18, 1922, which compares with £41,985,684 for the corresponding period last year, and £34,056,296 for

the previous week. Customs contributed £1,860,000, as against £2,939,000 for the previous week, which compares favourably with £1,891,000 a year ago, while Excise yielded £9,880,000, as against £1,145,000 last week, and £11,000,000 for the similar period of 1921. Property and income-tax brought in £17,775,000, making the total received so far under this heading £360,145,000, as against the estimate of £410,500,000. Total receipts up to date are now £1,040,638,407, leaving £176,012,000 to be found if estimates are to be realised in 13 days.

The week's operations reduced the National Debt by the sum of £18,917,020, and caused the following changes:—

	Min. £	Treasury Bills	Min. £
National Savings Certificates ..	+ 3,450	Surrender of Bonds, &c.	- 23,176
Public Department Advances ..	+ 8,720	Unemployment Insurance	- 1,101
		Depreciation Fund	- 500
		Saving Certificates (Housing) ..	- 2,160
		Telegraph (Money) Acts	- 3,450
			- 700
	+ 12,170		- 31,087

The floating debt was reduced by £14,485,000 to £1,023,246,000.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO MARCH 18, 1922.

	£		£

BUDGET PROSPECTS.

At the moment of writing the accounts for the current year, which still leave 13 days to run, show a surplus of revenue over expenditure of £55 millions; but in the last two weeks of the year, although the revenue is usually very heavy, payments are still larger. A year ago, for example, the payments in the corresponding period amounted to £110 millions, against receipts of less than £100 millions. There are some reasons for thinking that this end-of-the-year clearance may be less favourable to the Treasury than a year ago, and we should not be surprised if the final accounts show a substantial reduction of the present surplus. We may compare this probable result with the Budget forecast made a year ago. The surplus anticipated was £176 millions, but supplementary estimates of about £105 millions reduced this to £71 millions. On the other hand, it is evident

from the weekly payments and from information vouchsafed from time to time in discussions in the House, and in the Geddes Report, that some of the savings proposed by Government Departments have already come into effect, and that the expenditure is likely to be some £50 millions less than the gross estimates. This would give a surplus of over £110 millions if revenue fulfilled the Budget expectations. In two important items, however, this has not been the case. In particular the receipts from Excess Profits Duty, estimated at £120 millions, have yielded only £30 millions during the year, and for some weeks past it would appear that repayments of E.P.D. have been greater than receipts, though the Treasury has unfortunately not seen its way to show a separate item of such repayments in the weekly accounts. The other item is Corporation Profits Tax, which has yielded up to the present only £15 millions, compared with an estimate of £30 millions. These two deficits will eat up the greater part of the surplus unless economies during the current year are greater and payments under the head of special expenditure prove to be less than we have anticipated.

As regards the Budget for the coming year there are still several points on which the Government view is not yet known. Certain of these matters involve questions of policy. Others, such as revenue still to be collected from the sale of war stores, depend upon the contracts made by the Liquidation Board. Other points again depend upon the Treasury estimate of the effect of trade depression upon the revenue. This is, perhaps, more difficult than usual to forecast, but in recent years our Civil Service has been so amazingly accurate in estimating revenue that the public has quite reasonably come to regard them as a safe guide. This almost uncanny accuracy lends additional weight to the sharp censure recently administered by the Treasury to the Admiralty for their loose methods of estimating expenditure, and for their neglect to take into account matters to which, the Treasury allege, they drew their attention twelve months ago.

But though there are so many unknown factors, it will help to an understanding of the situation if we set out a skeleton budget indicating the points on which there is still uncertainty. On the revenue side we have only modified the items as compared with the current estimates in those cases where it is certain that modifications must be made. These items are indicated in italics. On the expenditure side the figures include recently published estimates and allowance for interest on the same basis as in the present year; an item for interest on the American Debt, and an item to provide a Sinking Fund and repayment of war debt, as provided under the various loan categories:—

REVENUE.	Min. £	EXPENDITURE.	Min. £

In regard to the revenue, we have assumed a reduction of £60 millions below this year's forecast. It is improbable that the estimate will be reached even in the current year, and when allowance is made for the fact that where income is measured on the three years' average system the average for the first time will in 1921-22 include a year of heavy trade depression, it is evident that a substantial reduction in yield must be allowed for. It is, of course, true that the year to be replaced by 1921-22 was not a top-of-the-boom period, but the depression has been so severe that we do not think we have over-estimated the reduction. As regards E.P.D., we have no means of judging whether the amount still to come in will prove to be greater than the very substantial amount which will have to be repaid under the Finance Act of last year. Experts are of opinion that there still remains a credit due to the Treasury, but at the moment the balance is on the wrong side and it is quite impossible for anyone but the Inland Revenue Authorities themselves to make a guess on this point. One thing only is certain—namely, that even if the amount still due is substantial, the Treasury cannot expect to receive from industry in its present depressed condition anything like the £120 millions budgeted for in the current year. We should consider the Government fortunate if they succeeded in obtaining £30 millions, which they have actually received this year. The Corporation Tax has been included at the amount which has been yielded this year. There remains the item of receipts in respect of war stores. Assuming, as is probable, that the estimate of receipts is actually realised this year, these sales will have yielded altogether £711 millions (£265, £288 and £158 millions respectively in the last three financial years). But there is little more to sell, and the amount to be received this year mainly depends on how much remains unpaid for. Trade depression comes into this picture also, for the Government Liquidation Commission has been compelled in a number of cases to modify the terms of some of these disposal contracts, covering a period of years, owing to the slump in prices, which means that if the original terms had been insisted upon, the buyer would have failed. For this reason we have put this item down at £50 millions. The Budget may very well show a reduction in certain other items of revenue, such as Customs and Excise, and a Chancellor who wished to budget on conservative lines might well take a more pessimistic view of some of the uncertain items we have mentioned.

On the expenditure side, the estimates for the ordinary supply services for special expenses are before the House, and represent the Government's considered decision. The Civil Service Estimates include the cost of War Pensions as an item in the Budget of the year, and though the Chancellor's answer in the House to a question this week was somewhat ambiguous, we may presume that the Government has decided against the proposal to meet this particular item by borrowing. Interest on the war debt may fall a little owing to the lower rates at which the Government is now paying on the floating debt, but the amount that may be saved in this way would not amount to more than from £10 to £20 millions. There remains the item of £100 millions, to which Mr. Hilton Young referred ten months ago as being required to meet liabilities to holders of particular war loans and some part of the debt maturing for payment. This sum will be reduced by the fact that the Depreciation Fund on war loan is suspended so long as the price remains above par, and in any case such a fund is of no significance so long as actual revenue does not exceed expenditure. This item, therefore, is not strictly comparable with the other items in the above statement. The difference between the estimated revenue and the figure of £918 millions, which may perhaps be reduced to £900 millions, through reduction of interest, represents the extent to which we can carry out our intention to resume paying off debt.

The foregoing presentation also enables us to form some idea of the future financial position of the country. The special receipts and the special war liquidation expenses approximately cancel, leaving a small surplus for Sinking Fund and debt redemption. The estimates are, however, some £33 millions in excess of what they would be if the full Geddes cuts were carried out, half of this

being the reduction of the economies proposed in the case of the Navy, and the greater part of the remainder the modification of the education savings suggested by the Committee. The item of pensions will automatically fall year by year, and it may be possible from time to time to save further small sums in the interest paid on the national debt, but against this must be set the fact that in ensuing budgets the interest due to America will rise to £50 millions. It may be possible, by allowing nothing for contingencies or for supplementary estimates, by budgeting on the most favourable assumptions, and by postponing the operation of the Sinking Fund, to make a small remission of the income-tax; but as the Government has no longer any large stores to sell, and the most serious extravagances have been eliminated from the expenditure side, it is evident that for many years future Governments must go on raising by taxation something like £900 millions a year. The problem the Chancellor of the Exchequer has to decide is whether he should do this by maintaining present rates or whether he can risk lower rates, both of direct and of indirect taxation, and rely on covering his expenses by a resulting increase in the turnover of trade.

GREAT BRITAIN AND FRANCE IN THE NEAR EAST.

The Conference now sitting at Paris has met in order to end a war between Turkey and Greece, but its success depends upon agreement between Great Britain and France even more than upon agreement between the two belligerents. These Western Powers are the protagonists—the real players of the game. The two Eastern peoples who are doing the fighting and the suffering are pawns. Their chequered course from black square to white and from white to black again in the interminable Anatolian campaign will go on until the Western players admit stalemate and fold up the board.

It is important for the French and British public to realise that this elaborate tournament between their Governments cannot be played out with impunity to themselves. We may be callous about the Turks and Greeks. If they are the victims of Western diplomacy, after all they have brought it on themselves. They have not lent their services to their backers without the expectation of rewards. Besides, they are a long way off. Am I my Oriental brother's keeper? But, apart from the ethics of the situation, can we afford to maintain this detached attitude? The diplomatic tension which first produced a war between Greece and Turkey may very soon create a rift in the entente between Great Britain and France. The separate Peace (to call it "Agreement" instead of "Peace" is only a technicality of diplomatic terminology) which was signed on October 20th last by M. Franklin Bouillon on behalf of the Government of the French Republic, and by Yusuf Kemal Bey on behalf of the Government of the Grand National Assembly of Angora, was a danger-signal. In the present Conference the rift which that separate Peace portended will either be effaced, or it will grow so much worse that it will cease to be a local scandal, and will begin to affect the general relations between our two countries.

From the formal point of view, as a *démarche* in international politics, the "Franklin Bouillon Agreement" is, of course, indefensible. The correspondence between the French and British Governments, which arose out of it, proves the British Government's case. For all their courteous phrases, the French notes cannot get over the fact that France did, behind our backs, come to terms with a Power with which both of us were technically (and not long ago actually) at war. Certain of the terms were prejudicial to British interests, and the whole procedure was prejudicial to the re-establishment of a general and durable peace in the East. These are hard sayings, but they have to be said before we can do justice to the French point of view. Just because we have good reason to feel aggrieved with our Ally, it is incumbent on us to examine the particular reasons which induced her to behave as she has.

The "Franklin Bouillon Agreement" was a breakaway from a joint Anglo-French line of policy which had suited the British Government, but had given increasing discomfort to France. From the military point of view, for example, the presence of the Greek Army in Anatolia was

at first a genuine relief to the British soldier and taxpayer (however heavily we may have to pay in the end for this temporary alleviation). The Greeks stood between the Turkish Nationalists and the Straits, and in the summer of 1920, when a British battalion at Ismid, covering the Asiatic approaches to the Bosphorus, was in difficulties with superior Turkish enveloping forces, a Greek offensive saved the situation for us without our having to make fresh exertions ourselves. For France, on the other hand, the Greek landing at Smyrna had not diminished military commitments, but created them. Within eight months of the Greek landing at one end of Anatolia, the French were attacked by the Turkish Nationalist Army at the other—in Cilicia. The French point out with considerable bitterness, but with undeniable truth, that, but for the Greek landing, this Nationalist Army would never have come into existence. It might be convenient for the British at the Straits that the Greeks should screen them from the adversary whom the Greek intrusion itself had called into life, but in Cilicia the French suffered all the inconvenience of the pro-Greek policy without any of its compensations. Under post-war conditions a perpetual campaign in the Cilician hill country was as serious a matter for France as Great Britain found the border warfare in the Kurdish hill country along the frontiers of Mesopotamia. The British Government has wisely taken steps to clear itself of this entanglement. Why should not France do the same in her mandated territory? If, owing to a geographical accident, Great Britain has not to deal with the Turkish Nationalists in Mesopotamia, as France has to do in Syria, she is more fortunate but not necessarily more righteous on that account. France, if it came to that, might complain that in order to save ourselves trouble in Mesopotamia we had established her enemy the Emir Feisal on the Syrian border.

A somewhat ironical commentary on this French presentation of the case is offered by the fact that the Cilician outposts, down to a month or two before the Nationalists attacked them, had been held for France by British troops, and that these troops had been withdrawn at the instance of the French Government, which was at that time uneasy about British intentions in Syria. These French suspicions were unfounded, but the mysterious transfer of Mosul, in the course of the Peace Conference, from the French to the British zone, and our relations with Feisal, gave them colour. Suspicion and jealousy also affect the French attitude towards the question of the Straits. Possibly the British Navy and the Greek Army in combination could maintain a permanent control over the waterway, but for whose benefit? For the benefit of other nations also, as a commercial route, or for the exclusive benefit of the strategic communications of the British Empire, as another Suez Canal? This suspicion is unfair and exaggerated. The real policies of Governments are seldom so diabolically clever and unscrupulous as those attributed to them in the intelligence departments of their rivals. But there was this much truth in it, that, if this policy were maintained, the great naval predominance of Great Britain and her more intimate relations with Greece

would automatically give her the predominant rôle in carrying it out.

Another motive, which probably influences the French public as well as the experts of the Quai d'Orsay, is anxiety for the maintenance of French cultural influence in the Levant. An entente with the Ottoman Government and a shadowy but imposing protectorate over its Latin Christian subjects were secured for France nearly four centuries ago by Francis I. A confirmation of her cultural ascendancy in this part of the world was one of the few permanent assets which France salvaged from the Napoleonic Empire. Towards the close of the 19th century Wilhelm II. looked upon the position which France had created for herself in the East by centuries of diplomacy, saw that it was good, and appropriated it. Since the Armistice France has had a cultural Alsace-Lorraine to recover on the Bosphorus as well as a territorial one on the Rhine. In her matter-of-fact way she regards it as property, and desires its restitution. Shall she see it carried off under her very eyes by Great Britain? In French opinion, the prestige of Allenby's victory in Palestine and the *finesse* of Lloyd George's policy towards Greece have given British influence a dangerous lead. It was odious to be robbed by Germany. How much more odious by an Ally?

This is the atmosphere which has to be cleared away. That is not easy to do, for it has hung about our respective Levantine missions, schools, consulates, legations, and embassies for centuries, and from these tainted sources Paris and London are always in danger of being re-infected. But it has got to be done, for having elbowed Germany aside and failed to obtain the co-operation of America, we have deliberately taken the whole "White Man's Burden" upon French and British shoulders. Our two Governments have assumed the position of trustees towards Western civilisation for its relations with non-Western civilisations in these most critical times. They have no right to fall out with one another.

COAL PRODUCTION AND COSTS.

The Mines Department has issued statistics showing the working results of the coal mines of Great Britain in the two quarters ending respectively on June 30th and September 30th. These White Papers (Cmd. 1596 and 1597, price 2d each) contain much valuable information, and we are glad to hear that the return of the industry to a private basis, without Government subsidy, is not to be made the occasion for ceasing to publish these important figures. It would be still more welcome news that the Mines Department could see their way in future to publish their statistics without so much delay. With the help of the Mines Department figures for the first three quarters of 1921, and some figures given in the *Industrial Review* of the "South Wales Journal of Commerce" relating to the last half of the year, we have compiled a table showing roughly—the data as regards the last quarter and the full year are insuffi-

cient for meticulous accuracy—the story of the coal industry quarter by quarter in 1921:—

COAL OUTPUT, WAGES, COST, and PROCEEDS by QUARTERS in 1921.
(In Thousands. 000's omitted.)

	First Quarter (Last Year of Control).	Second Quarter (Strike).	Third Quarter (Subsided Period).	Fourth Quarter (Pre. Period).	Whole Year.
Tonnage raised	53,895	237	48,687	61,192	164,011
Tonnage disposable	47,645	237	43,643	56,000	147,288
Proceeds	£75,290	£270	£63,420	£56,567	£200,247
Wages	£70,879	£4,194	£41,079	£38,402	£154,564
Other costs	£25,248	£7,190	£17,294	£17,404	£67,136
Total costs	£96,127	£11,384	£58,373	£55,806	£221,500
Net profit (+) or loss (-)	£16,637	£10,414	£5,047	£761	£21,253
Proceeds	33/3/25	..	29/0/43	27/3/29	27/3/29
Wages	29/8	..	18/9/21	13/8/58	20/11/51
Other costs	10/7/25	..	7/11/1	6/2/51	9/1/31
Total costs	40/5/25	..	26/3/76	19/11/09	30/0/82
Profit (+) or loss (-) ..	7/	..	2/3	3/34d	2/10/55

* Estimated.

The figures for the first quarter relate to mines producing 100 per cent., for the second 93 per cent., and for the third 95 per cent. of the total output of the industry. The first quarter of 1921 was the last quarter of official control; the second quarter coincided with the period of the strike, the third was the period in which the temporary subsidy agreed upon in the strike settlement terms was operative, and the fourth the first quarter of free working since the mines were taken over by the Government during the war. The first quarter showed the largest proceeds and the biggest loss; the third, when scarcity prices still prevailed and coincided with lower wages, was the most profitable. In the last quarter, in spite of a fall of more than 50 per cent. in wages and in total costs, the industry only just avoided loss. For the whole year, of a production of 164 million tons, there was a loss of a little over three shillings per ton. The most important feature of the figures is that while output in the last quarter was largely increased, the wage cost per ton was considerably less than half of that recorded in the first quarter.

These calculations suggest that a very striking increase in the output per head of worker employed took place during 1921—a suggestion borne out by the following table:—

NUMBERS EMPLOYED and OUTPUT per HEAD in 1921.

	Number Employed.	Tonnage Raised per Person Employed.
First quarter	1,213,204	44.42
Second quarter	Strike	Strike
Third quarter	1,005,831	48.40
Fourth quarter	1,059,391	57.76

For the first and third quarters the figures are official. For the fourth quarter we have taken the average workers employed in each of the three months, as shown by the *Labour Gazette*, and the estimate of total tonnage raised, as given in the first table. Precision, therefore, cannot be claimed for the figure of 57.76 tons per head in the December quarter, but it may be taken to be sufficiently near to the truth to denote a truly remarkable increase in individual productivity as compared with the previous quarters. The increase was too quick, perhaps, for since the beginning of the present year it is said that production per head has fallen back. The profound importance of recent developments in the coal industry will perhaps be more clearly seen if the following salient figures are set out separately:—

	Wages Cost per Ton.	Output per Head.	Average Weekly Wage.
1921.	s d	Tons.	s
First quarter	29 8	44.4	84
Second quarter	..	..	..
Third quarter	18 10	48.4	63
Fourth quarter	13 8	57.7	56

The last column, calculated from the number of men employed and the total wage cost as shown in the first table, gives roughly the average wage for the whole industry. Apart from the normal variation of wages as between different classes of workers, there exists, as we showed in an article on "The Wages Tangle" in the *Economist* of January 21st, the widest discrepancy between the earnings of workers performing similar work in different districts. For instance, a full week's work would produce for an underground labourer 37s 2d in Derbyshire and 6s in Derbyshire. It is difficult to over-

estimate the importance to the industry of the coinciding of a 24 per cent. rise in output per head with a decline of 33 per cent. in wages. Pithead costs have been halved since the first quarter of 1921, and production is moving back towards the old pre-war level. These figures, it must be remembered, are generalisations applicable to the industry as a whole; but conditions vary greatly in different districts. Wage cuts, for instance, have been very much larger in the exporting districts.

Coal exports in 1921 were similar in quantity to those of the previous year, but there was a fall of well over 50 per cent. in the value, as is seen from the following calculations, which are based on the official Board of Trade Returns:—

COAL EXPORTS—QUANTITY and VALUE.

	1913.	1920.	1921.
Quantity	73,400,118	24,913,853	24,660,552
Value	£ 50,727,252	£ 99,627,146	£ 42,951,591
Value per ton exported ..	13/9/8	79/11/8	34/10/1

In 1920 the average value per ton exported was 72s 10.5d in the first quarter, 80s 5.9d in the second, 87s 0.6d in the third, and 83s 2.4d in the fourth. The drop which had already set in at the end of 1920 developed in striking fashion in 1921, and showed no signs of check at the close of the year. This is clearly brought out by the monthly export figures:—

AVERAGE MONTHLY EXPORT PRICE in 1921.

	Quantity. Tons.	Value. £	Value per Ton. s d
January	1,700,106	5,555,708	65 4/2
February	1,729,148	4,240,620	49 0/6
March	1,968,078	4,281,877	43 6/2
April	606,548	1,309,817	43 2/3
May	14,066	32,861	46 8/0
June	7,502	12,667	33 9/2
July	816,320	1,559,649	38 2/6
August	3,103,207	5,668,594	33 3/6
September	3,406,579	5,194,356	30 5/9
October	3,406,972	4,851,452	28 5/9
November	3,593,864	4,878,019	27 1/7
December	4,309,162	5,366,961	24 10/8

For purposes of comparison with these export values, we give below a record of the movements in the pit-head quotation of good steam coal:—

	s	d
End of 1913	15	0
„ March, 1919	32	6
„ December, 1919	38	0
„ December, 1920	42	0
„ December, 1921	30	0

In 1921 the drop in the average export value was from 65s to 25s, in pithead price only from 42s to 30s. The improvement in the export demand, coupled with industrial stagnation and lower prices at home, is gradually levelling up the two varieties, thereby remedying a highly anomalous position. The recovery of coal exports is of good augury for the coal industry in particular, and for the country's general economic position. It remains to be pointed out that the benefit that might have accrued to industrial and household coal consumers through the fall in pithead prices has been reduced by the practical maintenance of railway freight rates at a high level, and, in the case of householders, by merchanting charges. In the main the continuance of high freight charges has prevented the large wage cuts which the miners have accepted from having its full effect towards stimulating British industry.

INVESTMENT TRUST COMPANIES IN 1921.

In attempting to estimate how investment trust companies as a whole fared in the year 1921 the disinterested observer would be inclined to base his mental calculations on two of the principal features of the past twelve months, namely, the trade depression and the rise in the value of high-class investment securities, and to deduce therefrom that on the revenue side there would be a decline and on the capital side an appreciation. But, on the one hand, bad trade, as we have frequently shown in our quarterly articles on the profits of industrial companies, only makes itself felt in company balance-sheets some months after the losses have been suffered, and the consequent reduction in dividends is in turn reflected in the accounts of investment trust companies still later on. On the other hand, the appreciation in security values took place in the

closing months of the year, and was mostly confined to gilt-edged and high-class investment stocks, and the appreciation, though very marked as from the lowest point touched during the year, was not quite so large in comparison with the level ruling at the end of 1920. We thus find in a list of 17 investment trust companies that net revenue in the aggregate is but very slightly lower, five companies showing increases and the remainder small declines. A comparison of net revenue and dividends for last year with those for 1920, 1919, and 1913 is as follows:—

Company.	1913.	1919.	1920.	1921.
	Net Rev'n'e.	Net Rev'n'e.	Net Rev'n'e.	Net Rev'n'e.
Trusts.	£ 42,719	£ 35,052	£ 39,200	£ 34,886
Army and Navy	188,940	138,568	166,871	162,534
British Investment	145,939	99,568	104,219	113,336
Foreign and Colonial	69,011	41,936	50,564	44,664
Govt. Stock and Other Securities	35,814	29,716	34,330	33,407
Guardian	54,093	38,616	45,997	41,563
International	194,293	157,935	186,097	188,222
Mercantile Investment and General	83,932	87,083	81,718	86,739
Merchants'	63,115	55,509	63,809	70,787
Metropolitan	90,843	63,400	73,688	74,154
Northern American	38,318	39,637	45,221	37,918
Omnium	42,074	44,804	46,890	42,748
Premier	65,577	57,856	64,869	60,173
Railway Debenture	48,907	59,341	56,464	54,205
Railway Share	48,431	46,513	53,682	47,441
River Plate and General	160,227	154,763	149,222	146,931
Scottish Amer. Invest.	59,472	59,142	64,879	59,302
United States Deb.	1,433,405	1,166,729	1,338,300	1,298,874

The revenue of an investment trust company is received after deduction of income-tax. A part of it is liable to corporation profits tax, and several of the companies this year divide their revenue accounts into two parts—account "A" and account "B." The "A" account is credited with revenue which has not borne corporation profits tax and debited with administration expenses, debenture interest and preference dividend, and the balance transferred to the "B" account, to which is credited other income. Total revenue, it will be seen, though lower by nearly £40,000 than the total for 1920, is much higher than the 1919 figure, and compares very favourably with the year 1913, when allowance is made for the fact that income-tax was at the rate of only 1s in the £, whereas for the past year 6s in the £ was deducted. In fact, if income-tax is added in such case the 1921 total shows an increase of about 23 per cent. over 1913. This also accounts for the fact that dividends are mostly at a higher level than they were eight years ago. As compared with 1920, no dividends have been reduced, and two of the companies have raised their rate of distribution. As already mentioned, the income of the companies is received after income-tax has been deducted, and as debenture interest and preference dividend are paid out by the companies less income-tax, the proportions of net revenue available for ordinary shareholders grows with every increase in the rate of income-tax. The ordinary shares, therefore, can receive a higher rate of dividend from the same amount of taxed profits when income-tax is at a high rate than they would with a lower tax in force.

In the next table we show the amounts placed to reserve out of revenue and from profits on sales of investments, total reserves, the book value of investments, and the margins earned on ordinary stock in 1920 and 1921:—

Company.	Placed to Reserve, &c.	Total Reserves.	Book Value Investments.	Earnings on Ord. Stock.
	From Revenue.	From Realised Profits.		
	1920.	1921.	1920.	1921.

* No detailed list of investments published.

Profits on sales of investments are legally regarded as part of the revenue of a financial company, but with a trust company they are considered as a change in the capital funds, and do not enter into the income account. In the above list the last two companies are nominally financial companies, but at the meeting of the United States Debenture Corporation the chairman announced that the Stock Exchange Committee had sanctioned the transfer of the company's stocks in the official list from the heading of "Financial Companies" to "Financial Trusts." Mr P. W. Campbell, the late chairman of the Scottish American, whose recent lamented death has deprived the trust company world of one of its most able and highly respected members, has frequently pointed out to us how purely nominal the distinction now is between an investment trust and a financial company. Allocations to reserve show considerable variation in comparison with last year. The Governments Stock Company made no appropriation for 1921 as against £30,000 for 1920, but the latter was supplied to a considerable extent by the larger balance brought into the accounts in that year. Profits on the sale of investments, where disclosed, were on a much smaller scale, as would be expected. The book values of investments do not show any great changes. Some of the companies still state the actual depreciation shown on the market valuation of the securities held, but the practice is not so general as it was years ago. The chairmen of most of the companies, however, gave at the annual meetings the percentage depreciation, which varies from 2½ per cent. on book value in the case of the Mercantile Investment and General to 8 per cent. in the case of the Railway Debenture and General Trust, the reserve account of £262,000 being taken into account in the latter. But, after all, the principal object of a trust company is the distribution of risks and the maintenance of a steady income. Depreciation in the value of investments held only becomes of serious import when it is the result of loss of revenue-producing power in some portion of the invested capital.

We conclude with a table of prices and yields on trust company stocks:—

Company.	Prices of 1921.	Price July 30, 1914.	Price March 31, 1921.	Yield March 31, 1921.	Price March 20, 1922.	Yield March 20, 1922.

Present prices are not only well above the lowest touched last year, but are sensibly higher than they were a year ago, and yields in consequence are, on the whole, a little lower. The outlook for the companies is difficult to gauge. Appreciation in the market value of certain securities has already been great in the opening months of the current year. On the other hand, the improvement in the American exchange reduces the sterling value of income derived from investments in the United States. Money, however, is much cheaper, and loans from bankers can again be raised to good purpose with a lower Bank rate. Further, as Mr Ernest Noel pointed out at the meeting of the Mercantile Investment and General Trust:

"The opportunities created by fluctuations in the value of money are the most useful raw material available for improving the property of a trust company, and the reason that almost every trust company has come through the recent troubles strengthened rather than injured by the ordeal is that the various boards have been ready to grasp" these opportunities.

THE PROBLEM OF UNEMPLOYMENT INSURANCE.

(BY OUR LABOUR CORRESPONDENT.)

THE Report of the Geddes Committee and the circular addressed by the Minister of Labour to employers' associations and trade unions have raised the question of the future of unemployment insurance. The crude suggestion of the Geddes Committee is that each industry should "look after its own unemployed." The circular of the Labour Department is intended to explore the possibilities of putting unemployment insurance on an industrial basis. When the National Insurance Act of 1911 was passed, people were not concerned with ideas of industrial self-government, and that Act laid down the framework of a purely State scheme, confined in its operation to three million workpeople. The Unemployment Insurance Act of 1920, which extended the benefits of insurance to twelve million workers, made provision for industries to contract out of the Act conditional upon the approval of an alternative scheme to be conducted by a representative organisation in any industry by the Minister of Labour.

In the interval, new ideas had worked their way into people's minds, and the conception of industrial self-government made considerable headway, owing to a variety of reasons which need not detain us here. During the war a detailed scheme was worked out by the Yorkshire wool textile trade for the establishment of an unemployment fund for the trade. The scheme arose out of a shortage of raw material, and though no occasion arose for the plan to be put into operation, the scheme is of interest. The employers were to pay into a fund a levy based on the number of workpeople in their employment, and from the fund payments were to be made on a graduated scale, varying according to sex and age. For males over 18 years of age the benefit was to be at the rate of 5s per day (and 5s 6d per night). Payments were to be disbursed by the trade unions and recovered from the fund. The scheme was to be administered and the funds controlled by a committee consisting of representatives of the employers' and operatives' organisations in equal numbers. It will be observed that so far as the workers were concerned, the scheme was non-contributory, and no financial aid was asked from the State. Its successful working would have depended on the authority of the employers' organisations and trade unions, and on the efficiency of the latter, upon whom would have fallen the detailed administration of the scheme. On the basis of this scheme the wool textile industry prepared a plan for the purpose of contracting out of the Insurance Act of 1920, but it has not been put into operation. A scheme with the same object has been before the Joint Industrial Council of the building industry. Schemes under the Act of 1920 have been prepared or are contemplated by the postal workers and the cotton operatives. The famous award of Lord Shaw's dockers' inquiry recommended in favour of the maintenance of unemployed workers by the industry. There is, therefore, a good deal of opinion favourable to unemployment insurance on the basis of industries.

Unfortunately, the newly found zeal of the Minister of Labour for such schemes may be attributed mainly to considerations of financial expediency. The primary object is to reduce State expenditure, rather than to ensure the most efficient administration of unemployment insurance. The question cannot be settled purely on grounds of public expenditure. Obviously, a transference of the burden of expenditure from the taxpayers to employers and workers is not necessarily an economy. But the substitution of a more effective system of insurance would be a national gain.

The arguments of the supporters of industrial maintenance or "free Staters" are cogent; but those of the supporters of State insurance or "the unionists" are also weighty. The former declare for self-determination; the latter urge that every industry should stand together, shoulder to shoulder. Those who press for insurance by industries are right when they insist that unemployment is not a single problem, taking a simple form. Its character varies from industry to industry. In the more normal periods of trade depression, the problem in the wool textile industry is under-employment rather than unemployment; in the building trades the problem is seasonal unemployment; amongst the dockers it is chronic intermittent employment. Each form of the evil requires its appropriate method of treatment, and it is argued that this can best be attained by each industry working out its own solution on the basis of experience and knowledge. Secondly, it is suggested that if each industry becomes responsible for its own unemployment, active steps will be taken to reduce the problem to a minimum. In other words, it is believed that the system of industrial maintenance will be a direct encouragement to improved organisation, with a view to the prevention of unemployment—a result which, if achieved, would be distinctly beneficial from the national point of view. Thirdly, the advocates of insurance by industry contend that the decentralisation of administration which it would involve would mean more efficient working. Fourthly, it is said that benefits under industrial schemes could be brought into relation with wages and the standard of life of the workers in the various industries, and that such schemes might be extended in a way which would be impossible under a purely State scheme to provide invalidity and retirement pensions for workers. Lastly, the contention is put forward that the employers and workers in industries, with less than the average amount of unemployment, are unjustly taxed to subsidise industries where unemployment is high.

The supporters of a State scheme of unemployment insurance assert, what is undeniable, that unemployment is a national, indeed, an international problem. Its causes lie outside the control of particular industries, and the trades most severely attacked are not necessarily those most responsible for its onset. Moreover, unemployment insurance should be a second line of defence. Every effort should be made to prevent or minimise unemployment. The amount that each trade can do in this direction is limited. A policy of prevention calls for national and international action, and the burden of a scheme of unemployment insurance is an incentive to such action. Again, it is argued that whilst certain well-organised and wealthy industries might bear the responsibility of their own unemployment, less organised and less wealthy trades, in which perhaps unemployment was heavy, could not bear such a burden. Further, those who prefer State insurance advance the view that insurance by industries would not be comprehensive, and that, therefore, a State scheme would be inevitable even if most industries administered schemes of their own in order to provide insurance benefits for those who would otherwise be without such provision.

The subject is clearly far more complex than the Geddes Committee realised, and it is certain that a final scheme will not be determined by considerations of the Exchequer, but by its intrinsic merits. It is certain that the State cannot repudiate its ultimate responsibility for the maintenance of its citizens. Nor can it be denied that unemployment has become a problem which is international in its scope, and ought to be dealt with by the League of Nations and the States composing it. Moreover, there is clearly a strong case for industries which desire it to formulate and administer schemes of their own. But, in practice, a State scheme will be a necessary background for such industrial schemes. Special schemes would need to offer benefits at least as good as those of the State scheme, and the Government would naturally require guarantees of the solvency of industrial schemes. Clearly, no scheme could start with the handicap of a debt, and if the object of the Government be to transfer large liabilities to industrial schemes, they will be foredoomed to failure. The Government apparently intends that the whole question of unemployment insurance should be explored by a Committee, and it would undoubtedly be a good thing if it could be reconsidered in the light of experience and with the single

aim of evolving a scheme which will yield the maximum benefit to the community, and win the maximum of co-operation from employers and workers. But a reconsideration of the question ought not to be marred by the ominous shadow of the Geddes axe.

Notes of the Week.

The Indian Budget Controversy.—In an article on the Indian Budget last week we suggested the danger of a deadlock. This has actually occurred. Unable to vote on or discuss the Indian Government's large military expenditure, the Indian Legislative Assembly has vented its displeasure with this expenditure by cutting down supply grants, and rejecting the new taxes proposed in the Budget. The Assembly first voted a cut in the Civil Service expense, and then proceeded to reject in turn the increase in the salt tax, the increase in the Excise duty on cotton goods, and the increase in the import duty on cotton goods and the additional duty on imported machinery. The position that arises is both serious and delicate. The Indian Government regards as necessary military expenditure at the figure entered in their Budget. The Assembly does not, but being precluded from influencing this expenditure directly, falls back upon the expedient of refusing to vote supplies that are officially regarded as necessary for administration. In theory the Governor-General can go over the heads of the Assembly, and vote supplies that he regards as essential for the peace, safety, and welfare of the country. But, in practice, to do so under present conditions would be to throw down a provocative challenge to Indian malcontents, and very possibly to imperil the progress of Indian reforms on constitutional lines. Obviously the situation needs adroit and tactful handling. Possibly a dénouement is foreshadowed by the statement of Sir Malcolm Hailey, the Finance Minister, that he hoped to be able to announce the formation of a Retrenchment Committee, with power to consider military as well as civil expenditure. But to bring military expenditure under the purview of such a committee would be a new constitutional departure, for which the sanction of the Secretary of State and the British Cabinet would presumably be required. Thus Lord Peel, who has taken up the post vacated by Mr Montagu, is faced with a very difficult problem at the outset of his tenure of office. According to cabled accounts of the debates in the Assembly, member after member protested against the burden of taxation necessitated by the size of the military estimates. Mr Aiyer, in particular, is quoted as arguing that risks must be taken "to cut the vicious circle, in which unrest was increased by taxation, which in turn was increased by the military precautions against unrest." Mr Aiyer apparently realised that in view of the unrest special military precautions were necessary, and his demand for the elimination of extravagance and waste will evoke considerable sympathy in this country. But that sympathy will not be increased if the policy of indiscriminate refusal to grant supplies is carried to extreme lengths. We hope that the rejection of the new tax proposals may be regarded only as a powerful protest, and not as intransigent obstructionism, and this view is supported by the later news that in a truncated year, with a £6,000,000 deficit, the Assembly has passed the Budget. It does not seem impossible that a "Geddes" Committee on Indian expenditure might show the way to combining reasonable military precaution with reduced expenditure and lower taxation. If that is the upshot of the present trouble, this crisis may produce more good than harm. Meanwhile, Lancashire may feel some relief in the dual rejection of the increased Excise and the increased import duty on cotton goods, for there was some fear that the former might be rejected and the latter adopted.

The British Reparations Proposal.—Our Paris correspondent discussed last week the proposal of Sir Robert Horne for settling the German reparations problem. This plan, which, we understand, is being considered by the

NORTH EASTERN RAILWAY.

MIDDLESBROUGH DOCK.

WATER AREA - - 26 ACRES.

ENTRANCE—80 feet wide. H.W.O.S.T.—32 feet.

41 QUICK ACTING ELECTRIC CRANES, 3 TO 10 TONS. 30 TONS HYDRAULIC CRANE. BERTHS SPECIALLY EQUIPPED FOR EXPEDITIOUS HANDLING OF HEAVY MACHINERY, &c.

REGULAR SAILINGS TO ALL OVERSEAS PORTS, PARTICULARLY INDIA AND THE FAR EAST.

AMPLE TRANSIT SHEDS AND OPEN STORAGE.

For further particulars of facilities and charges apply DOCK AGENT, NORTH EASTERN RAILWAY, MIDDLESBROUGH.

Finance Ministers of the Allied countries, was summarised as follows in the *Times* of March 20th:—

(a) Non-German reparation shall be regarded as amounting to 25 milliards (£1,250,000,000 at par of exchange), and the payments already made by Germany up to December 31, 1921, inclusive, as reducing her outstanding debt as on January 1, 1922, to, say, 110 milliards (£5,500,000,000).

(b) In satisfaction of 65 milliards of this debt Germany to accept a contingent liability to pay on demand any principal or interest in respect of inter-Allied war debts which any creditor Government may exact from any debtor Government. Obligations of the German Government, payable at one month's notice, to a total of 65 milliards to be deposited with the Reparation Commission to rank, as and when notice is given, *pari passu* with any German Government obligation then outstanding.

(c) The Governments of the United Kingdom and France to agree that they will demand payment of debts owed to them by other Allied Governments only if and in so far as they are themselves called on by the United States Government to make payment or fail to recover from Germany.

(d) Of the remaining 45 milliards (£2,250,000,000) due from Germany, 5 milliards to be converted into a sterling debt of £250,000,000 to the British Government, carrying no interest for three years, and thereafter interest at 5 per cent. per annum, payable half-yearly.

(e) The remaining 40 milliards it is proposed shall carry interest at 5 per cent. per annum, payable half-yearly, and to be divided among the Allied Powers (other than the British Empire) in accordance with the Spa percentages, subject to such modifications, if any, as may be agreed upon after taking into consideration the sums already received in cash, kind, and ceded property, &c., by the individual Powers up to December 31, 1921, inclusive; each Allied Power to retain the receipts which are in fact in its hands on December 31, 1921, and not to be called upon to account for them to the Reparation Commission.

(f) Each Power entitled to a share in the 40 milliards (£2,000,000,000) to be allowed to negotiate, subject to the approval of the Reparation Commission, agreements for deliveries in kind up to the amount of its share at any time remaining unpaid, safeguards as to valuations being provided for by requiring valuations to be made by one valuer for Germany, one for the recipient Power, and an umpire appointed by the Reparation Commission.

(g) Germany to agree to use her best endeavours to raise by international loan operations sums of not less than 3 milliards in 1922, 7 milliards in 1923, 10 milliards in 1924, and 10 milliards in 1925, making 30 milliards in all (£1,500,000,000); and the Allied Governments to agree to withdraw their Armies of Occupation not later than May 1, 1926, if before January 1, 1926, Germany has discharged, with interest, 35 milliards out of the 40 milliards, plus any sums payable by her up to that date in respect of her contingent liability of 65 milliards.

It is suggested that in return for such a revision of her liabilities Germany should undertake to reform her finances; that she should balance her budget not later than 1924, and discontinue subsidies after the present half-year, cover budget deficits by internal loans other than Treasury bills discounted with the Reichsbank, and reduce progressively her debt to the Reichsbank. It is also suggested that—

(a) No new issues of paper currency be permitted beyond a maximum to be fixed forthwith, and steps be taken at an early date to introduce a new currency unit in place of the paper mark.

(b) Customs duties to be collected in gold. (c) The internal price of coal in Germany be raised not later than March 1, 1922, to a figure not less than three-fourths of the world price of coal and to be kept thereafter up to such proportionate figure. (d) Committee of Guarantees to work out in co-operation with the German Government a plan for giving adequate security for foreign loans to be raised by Germany, and such loans to be issued with the approval of the Reparation Commission.

These proposals form a sane basis for discussion, but for the moment interest in them is minimised by the decision of the Reparations Commission, which is described in detail on a later page by our Paris correspondent.

Wages.—The *Labour Gazette* states that changes of rates of wages reported as having taken effect in February resulted in a net reduction of over £390,000 in the

weekly full-time wages of over 2,400,000 workers. Nearly 800,000 coal miners sustained reductions, ranging in different districts from 2 per cent. to 8 per cent. on current rates. Steel melters' wages were reduced by 33½ per cent. of standard rates, and those of iron puddlers and mill-men in the Midlands by 20 per cent. on standard rates. Other important reductions in wages last month affected workers in the boot and shoe industry, pottery works, paper-making, coach-building, tinplate works, &c. There were also reductions in the minimum rates fixed under the Trade Boards Acts for workers employed in the jute trade, the retail bespoke tailoring trade, the hat, cap and millinery trade, and the milk distribution trade. In a special article dealing with wage declines in various industries our official contemporary says:—

From the details given it will be evident that both the actual amounts of increase and the corresponding percentages on pre-war rates continue to show a wide diversity among different classes of workers. In some cases—e.g., in the coal mining industry in certain districts, the increases up to the end of February, 1922, were equivalent to not more than 20 per cent. on the pre-war rates. On the other hand, in some other cases, particularly among the lower-paid grades of workmen in some industries, they were equivalent to as much as 150 per cent. on pre-war rates, and there were some exceptional instances of increases equivalent to 200 per cent. or more. . . . It is estimated that at the end of February, 1922, weekly full-time rates of wages of adult workpeople, in the industries for which particulars are available, were approximately 100 per cent. above the pre-war rates. As the length of the normal working week had been considerably reduced in the same period, the usual range of full-time working hours in industry generally being about 44 to 48 weekly at the end of February, 1922, as compared with 48 to 60 before the war, the percentage increase in hourly rates of wages would be substantially greater. At the end of 1920, shortly before the decline in wages began, the increase on pre-war rates in the same industries is estimated to have been about 170 or 180 per cent. The average reduction in rates of wages from the beginning of 1921 until the end of February, 1922, therefore, would appear to have been equivalent to between 25 and 30 per cent. of the rates current at the former date.

These figures relate solely to wages for full-time work, and "no account has been taken of the widespread loss of earnings which is now being caused by unemployment and short-time working, or of the effects of increased or reduced exertion on the earnings of workpeople paid at piece rates of wages."

Employment in February.—Following the continuous increase since October it is pleasant to record a decline, even though it is a small one, in the unemployment percentage figures in February. According to the *Labour Gazette*, the percentage unemployed among members of trade unions which make returns to the Labour Ministry fell from 16.8 at the end of January to 16.3 at the end of last month. How this figure has moved month by month in the last few years and how it at present compares with the pre-war level is shown in the following table:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.									
End of—	1913.	1917.	1918.	1919.	1920.	1921.	1922.		
January ..	2.2 ..	0.3 ..	1.0 ..	2.4 ..	2.9 ..	6.9 ..	16.8 ..		
February ..	2.0 ..	0.3 ..	0.9 ..	2.8 ..	1.6 ..	8.5 ..	16.3 ..		
March ..	1.9 ..	0.3 ..	1.2 ..	2.9 ..	1.1 ..	10.0 ..			
April ..	1.7 ..	0.3 ..	0.9 ..	2.8 ..	0.9 ..	17.6 ..

December ..	2.6 ..	1.4 ..	1.2 ..	3.2 ..	6.0 ..	16.5 ..			

* Excluding coal miners. † Revised figure.

The percentage of unemployed among workpeople insured under the Unemployment Insurance Act also fell from 16.2 at the end of January to 15.7 at February 21st. At the latter date the percentages for males and females were 17.8 and 10.8 respectively. Improvement in the demand for labour took place in February in coal mining, pig-iron manufacture, iron and steel manufactures, the woollen and worsted industry, the ready-made clothing trades, boot and shoe manufacture, and the pottery trade. The total number of workpeople registered at the Employment Exchanges as unemployed on February 28th was approximately 1,837,000,

of whom 1,411,000 were men and 318,000 were women, the remainder being boys and girls. On January 31st the number on the live register was 1,906,000, of whom 1,458,000 were men and 333,000 were women. In addition to those unemployed, 156,000 males and 110,000 females were registered on February 21st as working systematic short time in such a manner as to entitle them to benefit under the Unemployment Insurance Act. At January 31st the corresponding figures were 166,000 males and 122,000 females. February, it will be noticed, saw a decline in the number of those who are working systematic short time, as well as in the number of those entirely without employment.

Cost of Living.—A further fall of two points during February is recorded by the *Labour Gazette's* Index Number of the cost of living for an average working-class family. According to this calculation the cost at March 1st was 86 per cent. above the level in force in July, 1914, and is now similar to that recorded for the beginning of 1918. How the figure has moved in the past four years will be seen below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.
(Food, Rent, Clothing, Fuel, and Light, &c.)

	1918.	1919.	1920.	1921.	1922.
January 1st	85-90	120	125	165	92
February "	90	120	130	151	88
March "	90	115	130	141	86
April "	90-95	110	132	133	..
May "	95-100	105	141	128	..
June "	100	105	150	119	..
July "	100-105	105-110	152	119	..
August "	110	115	155	122	..
September "	110	115	161	120	..
October "	115-120	120	164	110	..
November "	120-125	125	176	103	..
December "	120	125	169	99	..

Apart from a slight interruption in the summer of 1921, the decline from the high-water mark of 176 per cent. above pre-war level in November, 1920, has been continuous. Retail food prices alone were calculated on March 1st to be 77 per cent. above the pre-war level, as against 79 per cent. above at the beginning of February. Eggs and fish became substantially cheaper in February, and there was also some decline in the prices of milk, butter, margarine, and imported beef. But these declines were largely offset by advances in the prices of bread, flour, and mutton.

Some Governments and Their Creditors.—The forty-eighth annual Report of the Council of Foreign Bondholders is more satisfactory than might have been expected, in view of the difficulties of the minor States of Spanish America and the prolonged unsettlement in the Near East. There is the usual list of national defaulters—notably Ecuador and Honduras; the latter will be able next year to celebrate the jubilee of her default. Yet her financial position is believed to be as satisfactory as that of any Central American Republic. Ecuador is paying only the interest on the Prior Lien Bonds of the Guayaquil and Quito Railway, and the President's promise that the sums set aside for the debt service shall be respected has not been kept, nor has the expected loan from American financiers been yet arranged. Paraguay is three half-years in arrear, but is not yet ranked with the defaulters. Salvador has settled with her creditors; Mexico since the Report was published has held out fresh hopes of an arrangement. Colombia, at last compensated for the loss of Panama, will shortly be able to pay off the arrears of interest, as agreed in 1905; Nicaragua and Costa Rica have remained solvent in spite of heavy deficits; Venezuela, while punctually paying the interest on the Diplomatic Debt, has refused to recognise the coupons which certain French and Belgian bondholders were prevented by the German occupation from presenting at the proper dates. Similar evasions of moral obligations in respect of lost bonds are too common among the Governments of Spanish America. The late Government of Guatemala, though it did not pay up the arrears due, considerably reduced the capital of the foreign debt: its successor, since the Report was published, has

announced its readiness to reconsider the question of a Federation of Central America. Of the defaulters outside America, Liberia is still irregular in its remittances, and careless as to their delay; but it is hoped that the loan will be paid off through fresh borrowing from the United States. Of Russia, naturally nothing definite can be said. Bulgaria has settled with its foreign bondholders. In Greece and Turkey the financial outlook may be considerably modified by coming events. The Greek financial position is encouraging so far as concerns the revenues assigned for the service of the old gold loans. The gross amount of these last year reached, in round numbers, 259 million drachmas, against 209 million in 1920 and 158 million in 1919; the revenues assigned to the "plus-values" showed a substantial increase, the Customs receipts were satisfactory, and, in spite of various hindrances, the imports did not fall off. In Turkey, on the other hand, the condition of Asia Minor produced a decline in the assigned revenues, and the needed increase in the spirit duties was checked by the opposition of the United States. But the question of the payment in gold of the sums deposited for debt service in German banks before the war is to come before the Mixed Arbitral Tribunals, and eventually the States which have acquired Turkish territory will have to bear their share of the Turkish debt. But any payment on this account must obviously be remote.

Stock Exchange Committee Election.—More interest has been taken this year, both outside the House and inside the markets, in the result of the Stock Exchange Committee election than has been the case this century. A House correspondent writes: The Stock Exchange, as is well known, is about to revert to mastership in its own house. Indeed, it may be shrewdly surmised that the amount of control which the Treasury still exercises over the Stock Exchange is even less than many people suppose it to be. The Committee have already intimated the principles of a policy under which the return to periodical settlements and contangoes is contemplated. At the latest, the aftermath of the pre-war account (which is the nominal reason for refraining from immediate reversion to complete liberty of dealings) will have to be cleared up completely by the end of August. The Stock Exchange Committee are faced, therefore, with the necessity for putting their house into order against such time as the Temporary Regulations imposed by the Treasury during the war are removed. Some members would hasten the date as much as possible, urging the vital necessity for immediate return to conditions of pre-war business. Out of the seven new candidates for election to the Stock Exchange Committee, five were understood to be pledged to a progressive programme in this respect, urging, moreover, that there should be revision of the present system whereby agents and collectors of business are permitted to receive 50 per cent. return of commission on all business introduced by them. One of these five, Mr H. W. Smith, has been returned, while another new member, Mr Henry Frisby, takes an independent attitude, and will bring to the present-day problems of the Committee the advantage of a long experience, combined with a fund of practical knowledge. The new Committee begin their work on Tuesday next, and it must be admitted that the task in front of them will tax to the utmost the sagacity and long-sightedness of these 30 City men. Fortunately it may be taken for granted that the present chairman, Sir Wilfrid Atlay, son of the famous Bishop of Hereford of that name, will be re-elected chairman. In decisions of such consequence as will have to be reached by the present Stock Exchange Committee, it is above all things necessary that the Chairman of the Committee should possess the qualities essential to arriving at a judgment that shall ensure protection to the public as well as prosperity to the House. The appointment of Sir Wilfrid Atlay to be Chairman of the Committee, in the place of Mr Owen Quekett, was regarded, at the time it was made, as something in the nature of an experiment, inasmuch as the chairmanship of the Stock Exchange has always been held to be a position suitable for a broker rather than a jobber. Sir Wilfrid is, however, a jobber, and his elec-

tion to the responsible post which he at present occupies has been fully justified by his proved capacity for tact, impartiality, and sound judgment.

Co-Operative Wholesale Trade.—The fall in the turnover of the distributive co-operative societies, to which we recently drew attention, is emphasised in the balance-sheet of the Co-operative Wholesale Society, to be presented to the delegate meetings in April. The total sales for 1921 were £80,884,660, a decrease of 23 per cent. on the previous year. Six months ago a loss was reported, and for the half-year just closed there has been a trading loss of £445,491. In addition, £650,774 has to be paid on capital, and £320,350 provided for the customary depreciation of property. This makes a total sum of £1,416,615, which has to be met from the reserve fund. This will then stand at £642,068, to which may be added the £940,750 in the society's insurance fund. For the past half-year the sales were £38,543,084, a decrease of £15,670,676, or 28 per cent., while the supplies from the society's own works were £12,109,909, a fall of 30 per cent. The decline in trade resulting from the poor employment in the industrial areas where co-operation is strongest, and the general depression, are responsible for some of the loss, as the expenses have been maintained on the basis of the bigger business naturally expected, but the chief factor in the loss of profit has been the reduction of the value of the stocks to present-day conditions, to enable the Wholesale to continue to serve the retail societies on the most favourable terms. On its farming operations for last year the C.W.S. lost £106,734, after charging interest on the capital employed. It has 14,661 acres in ten estates, and drew therefrom supplies to the value of £227,140. During the past half-year the greatest decline has been in the Newcastle area, where there was a decrease of 36 per cent. in trade; in the Manchester district it was 29 per cent., and in the London and South Wales it was 26 per cent. Of the society's production of just over £12,000,000, £5,808,009 is represented by supplies from its eleven flour and provender mills. This is a decrease of £1,349,711, as compared with the corresponding period of 1920; but it represents 1,543,661 sacks of flour and 1,241,171 sacks of offal as compared with only 1,498,793 sacks of flour and 983,777 in the last half of 1920, so that the fall in value of flour and provender has been really substantial. During the past six months the C.W.S. made 746,637 pairs of boots, sent out 34,917,000 cigarettes, and sold a weekly average of 800 tons of soap—details of interest as showing the variety and extent of certain long-established departments. For the corresponding six months the sales of the Scottish Co-operative Wholesale Society—which works north of the Tweed—although it is in partnership with the English C.W.S. for tea, coffee, and cocoa—were £10,086,619, a decrease of £4,661,040, or 31 per cent. Its manufactures were £2,947,400, or 39 per cent. lower. According to the chairman, values had dropped 30 per cent., so that a decline in trade as well as on trading results was to be expected. £41,732 has been taken from the reserves to meet share interest, and the surplus, after the usual depreciation of buildings, plant, and machinery, was £26,354. According to rule, £21,013 has been allocated to the reserve fund, and the remaining £5,340 carried forward.

The Insurance of Marine Certificates.—A question addressed in the House at the end of last week to the President of the Board of Trade called attention to the establishment, last year, of a small new specialist company—the Navigators and General Insurance Company, Limited—which proposes, in return for a premium, to indemnify navigating and engineer officers of the British Mercantile Marine for the cancellation of their Board of Trade "tickets." It is also proposed to fulfil the same service for skippers and second hands of fishing vessels. The Department "does not propose to take any special action in the matter." Nevertheless, there is a distinct question of public policy: whether it is advisable in the public interest for navigators, engineers, and other holders of marine certificates to be insured against the financial consequences of the suspension of

their "tickets." The fear of the consequences does not, we can well believe, seriously operate to prevent the better-class navigators, engineers, or skippers from indulging in drunkenness, tyranny, or negligence. They are men of high character. But there must be many of their weaker brethren for whom the possible loss of a certificate does act as a moral cold douche; it supplies an artificial stimulus to self-respect. The cold, stern justice of the Board of Trade, always hovering over the moral weaklings, has preserved many from evil courses. It should, of course, be clearly understood that the policies explicitly exclude from any indemnity the suspension or cancellation of a certificate in consequence of any breach of discipline, gross misconduct, or conviction for any offence against the law of the realm. But the indemnity does cover many wrongful acts or defaults which may have very serious results to property and life. We understand that the Board is fully alive to the public aspect of this new form of insurance, and intends to watch closely its working out. The company itself is microscopic financially—the capital actually paid up is only £2,300—but it has entered into arrangements with a "well-known office, whose assets exceed 19 millions," under which all its policies are guaranteed. It should be noted that since the company does no insurance business which comes within the Assurance Companies Act, 1909, it is not required to make a deposit of £20,000 with the Paymaster-General. It is not difficult to guess the name of this well-known office. The directors are highly respectable people; no one can question their good faith, though one may be permitted, perhaps, to doubt their wisdom. The field is very small. We estimate the total number of certificates which could possibly be insured at some 30,000. There is a serious moral hazard: the risk of adverse selection, under which the company would get all the bad eggs and not succeed in attracting the good ones. There is little money in the scheme for the pioneers, even if every Board of Trade certificate were automatically insured, for the composite offices would quickly enter the field if it appeared that satisfactory business were to be had. We also shall watch the scheme closely, and are, upon the whole, indisposed to wish it even such modified success as may be possible, except for that small part of it which consists in giving legal assistance before Wreck Inquiries to insured officers.

North-Western and Midland Fusion.—At the end of last week the directors of the London and North-Western and Midland Railway Companies announced that a provisional agreement had been entered into under which the two undertakings will be amalgamated as from January 1, 1923, into a new company, the name of which will be subsequently decided upon. The terms on which the several stocks of the two companies will be exchanged for stocks in the new company are as follows, viz.:—

1. The debenture, guaranteed, and preference stocks of the two companies existing at the date of amalgamation shall be converted *pari passu* into similar stock of the new company, such amount to be issued as will give the stockholders the same income as they receive at present.
 2. The preferred ordinary stock of the Midland Company shall be converted into a new preference stock, to be known as the 1923 preference stock of the new company, such amount to be issued as will give the holders of the Midland stock the same income as they receive at present.
 3. Ordinary stock of the new company to be issued in exchange for the existing Midland deferred ordinary stock at the rate of £68 for each £100 Midland deferred stock.
 4. Ordinary stock of the new company to be issued in exchange for the existing London and North-Western ordinary stock at the rate of £100 for each £100 London and North-Western stock.
- Under these terms, with North-Western ordinary at 88½, Midland Deferred stock should be worth just over 60. It is proposed that the new board shall consist of twelve directors of the North-Western and eight of the Midland. During the current year the two companies will continue under separate management, but will work in the closest co-operation with a view to economy, and with the object of facilitating the complete amalgamation as from January 1, 1923. The provisional agreement which has been entered into will be carried out by a preliminary

scheme of amalgamation under Section 8 of the Act, and the necessary steps will be taken in due course to comply with the requirements of this section.

Lever Brothers.—The report of Lever Brothers, Limited, for the year 1921 shows a further remarkable increase in profits, the balance of profit and loss account, after providing for repairs, renewals, depreciation, &c., and presumably debenture interest, amounting to £4,035,500, as against £3,270,100 in 1920. The comparative table below illustrates almost unbroken expansion in the great company's earnings:—

	Profit Balance, £	Deprecia- tion, Reserve, &c., £	Em- ployees, £	Prof. Div. £	Ord. and Prof.Ord. Divs. £
1895.....	158,576	46,076	..	37,500	75,000
1901.....	278,986	396	..	100,000	178,590
1907.....	405,331	86,555	32,245	138,531	148,000
1908.....	473,132	95,344	37,216	155,572	185,000
1909.....	545,482	106,796	42,436	165,000	231,250
1910.....	637,329	118,986	55,536	185,307	277,500
1911.....	720,748	127,266	39,959	276,023	277,500
1912.....	779,403	135,855	40,069	325,979	277,500
1913.....	988,238	145,493	41,272	402,604	397,869
1914.....	1,152,107	179,205	24,095	499,617	449,190

* After providing for repairs, renewals, alterations, depreciation, and insurance.

The special reserve fund is credited with £250,000, and £219,700 is paid in the form of copartnership dividends. The "A" preference dividend requires £1,648,900, and the "B" preference £1,237,200. The report states that the three million subscribed 20 per cent. "A" preferred ordinary shares are held by an associated company, to whom they were allotted in connection with a proposed purchase. As this purchase did not mature, no dividend is payable. Dividends on the 20 per cent. preferred ordinary, 20 per cent. "B" preferred ordinary, and 5 per cent. preferred ordinary, absorbed £397,600, but the ordinary dividend is reduced from 20 to 10 per cent., and requires £250,000, leaving a balance of £54,100 to be carried forward. The principal changes in the balance-sheet are declines of £3,526,300 in creditors and of £1,565,600 in stocks, and an increase of £2,750,200 to £48 millions in holdings in associated companies and investments. The directors state that some improvement in general trading conditions in West Africa is anticipated in the near future, and that they are satisfied that all depreciations in value are covered by the appreciated value of the holdings of the company in other associated companies. Claims against the Government for E.P.D. included in the 1920 accounts have been paid, and a further claim, it is stated, is included in the present accounts.

British Trade Corporation.—A year ago the report of the British Trade Corporation, incorporated under Royal Charter in the early part of 1917, showed that the net profits for the year 1920, before providing for income-tax, &c., were £119,309, as compared with £88,340 for the year 1919. The report for the year 1921, just published, shows very disappointing results. The profit for the year is given as £104,103, but against this has to be set £359,080, the amount written off for bad debts and interests in subsidiary companies, the net result being a loss of £254,977 for the year. The auditors' report on the balance-sheet states that "no provision has been made for any loss which may have accrued at the date of the balance-sheet in connection with certain of the assets, and we are unable to form an opinion as to what reserve may be necessary." This criticism, however, is to be met by writing down the existing capital of £2,000,000 in £10 fully paid shares "by an adequate amount," and by the creation of "A" shares to take the place of the capital so displaced. The "A" shares will be preferential, and will be offered to the shareholders. The effect of the reduction will be to wipe off the debit balance at profit

and loss account, and to reduce the totals of bills discounted, loans, advances, and sundry debtors, and provide reserves against other assets. The directors explain that the difficulties experienced in 1920 in obtaining payment for goods shipped abroad by clients were accentuated in 1921, "and it is feared that some of the loans and advances will be difficult to realise, and may be subject to loss." Deposits, at £1,460,064, show a decrease of £1,018,297, while acceptances have fallen by £1,325,303 to £855,441. Interests in subsidiary companies have been written down by £264,080 to £43,300, and bills discounted are £337,153 lower at £1,640,292.

The Salt Union.—The profits of the Salt Union, Limited, for the year ended December 31st last show a sharp decline from the figure recorded a year ago, which was the highest point reached. The directors state that this setback is due to a supply of excessively cheap German and solar salts, which reduced the total tonnage dealt with for the home trade and export to only three-fifths of that for the previous year, and to the fact that 79,000 tons of German and solar salts were imported in the United Kingdom alone. How 1921 profits compare with those of previous years may be seen from the following table:—

	Gross Profits, Rents, and Dividends, £	Reserve and Depre- ciation, £	Dividends, £	Balance Forward, £
1910....	242,937	30,000	25,000*	4,561
1911....	262,006	35,000	37,500*	3,957
1912....	226,333	25,000	nil	5,104
1913....	227,261	25,000	nil	8,896
1914....	232,710	20,000	15,000*	9,338
1915....	275,314	25,000	62,000	8,862
1916....	426,066	127,000	190,000	14,317
1917....	354,817	50,000	190,000	3,597
1918....	440,074	60,000	190,000	29,326
1919....	455,148	60,000	190,000	24,007
1920....	482,844	70,000	190,000	23,274
1921....	354,990	..	110,000	21,561

* Preference distribution only.

Administration expenses were reduced by £7,000, but rates and taxes rose from £83,300 to £121,200, and the net profit fell from £317,400 to £162,300. Debenture interest absorbed £54,000, and a distribution of 2s 4d per share on the preference capital £70,000. The latter represents the maximum dividend of 7 per cent., together with £28,000, the share of the surplus under the capital reduction scheme. The dividend on the ordinary shares is reduced from 15 to 5 per cent. An analysis of the balance-sheet will be found in the usual column.

British Portland Cement.—The British Portland Cement Manufacturers have just issued their eleventh annual report, and, as will be seen from the figures given in our table below, have again had a profitable year. In 1919, owing to a change over in the period for closing accounts from April 30th to December 31st, the balance-sheet and profit and loss account covered a term of eight months only. The following figures show how trading profits have been allocated over a period of eight years:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919.*	1920.	1921.
Trading profit.	330,428	256,796	254,162	328,889	345,374	379,446	558,840	479,762
Interest, &c.	79,928	85,986	85,822	97,353	82,178	53,343	62,146	85,600
Depreciation	51,756	42,318	42,396	63,050	78,000	123,537	173,287	179,750
Brought forward.	168,744	128,422	125,945	168,436	185,196	202,166	323,407	214,212
	328,688	76,767	73,154	74,994	87,723	91,509	136,264	181,478
Prof. dividend.	231,312	199,259	199,099	241,480	272,919	294,075	459,671	395,690
Ord. dividend.	70,334	70,800	70,800	70,800	70,800	47,300	70,800	70,800
	(7%)	(4%)	(4%)	(6%)	(8%)	(8%)	(15%)	(10%)
Carried forward.	84,328	73,154	72,994	87,722	91,509	136,264	18,478	186,628

* Eight months.

The ordinary dividend is reduced from 15 to 10 per cent. This absorbs £138,262, as compared with £207,393 a year ago, but the allocations to reserve are again on a generous scale, while the amount carried forward, at £186,628, is slightly higher. The report states that: "During the year the demand for Portland cement, both for home and export, showed a steady decline. In the home market this was caused mainly by the three months' coal strike, the general depression of trade, and the Government's change of policy with regard to the national housing schemes. The export trade was adversely affected

by the depreciation of foreign exchanges and by lower freights from the Continent than those obtainable from this country." The balance-sheet shows that there has been a further issue of £509,533 5 per cent. debenture stock. Total assets are now £5,751,376, of which properties and plant represent £3,373,005, and investments at cost and loans £1,029,360. The balance-sheet will be found fully analysed in another column.

Savoy Hotel.—The report of the Savoy Hotel Company for the year 1921 shows a further decline in profits from the high level reached in 1919, but the results are nevertheless surprisingly good for a year such as 1921. The following table summarises the company's history for a number of years:—

Dec. 31.	Receipts, £	Expenses, £	Ratio, %	Deben- ture Interest, £	Sinking Funds, &c., £	Balance, £	Ord. Divid- end, %
1905.....	561,026	406,198	72.5	93,143	34,961	26,724	5
1906.....	567,026	407,985	72.0	93,331	32,314	33,397	5
1907.....	569,711	409,232	72.0	94,283	32,560	33,577	5
1908.....	565,735	403,738	71.3	95,309	33,012	33,676	5
1909.....	598,746	435,381	72.6	95,159	35,401	32,915	5
1910.....	621,781	455,231	73.2	97,958	35,501	33,090	5
1911.....	686,754	508,783	74.0	98,361	45,884	33,725	5
1912.....	695,907	517,619	74.5	97,365	48,102	32,820	5
1913.....	746,008	563,117	75.4	98,503	50,978	33,409	5
1914.....	785,549	574,316	73.2	97,547	83,118	nil	nil
1915.....	785,549	574,316	73.2	97,549	10,638	nil	nil
1916.....	116,707	62,759	53.8	62,759	53,948	nil	nil
1917.....	178,057	70,016	39.3	70,016	108,041	nil	nil
1918.....	201,116	69,840	34.7	69,840	131,276	nil	nil
1919.....	316,096	597,451	189.0	597,451	Dr. 81,250	nil	nil
1920.....	248,393	9,191	3.7	74,103	165,099	10	10
1921.....	220,067	72,682	33.0	72,682	10,987	136,398	10

The trading profit for 1921 is given after payment of taxes, including provision for corporation profits tax. From the balance of £136,398 available £10,000 goes to staff superannuation fund, £30,000 to general reserve, and £17,500 is required for preference dividend. The ordinary dividend of 10 per cent. absorbs £73,893 as against £55,420 a year ago. At the end of 1920 four years' dividends on the preference shares were paid, and the ordinary dividend was only payable on the new shares for the second half of the year: this accounts for the larger amount required this year. The balance forward is increased from £21,590 to £26,595. The balance-sheet, dated December 31, 1920, showed a general reserve account of £73,316. This has now been written off, as it is "employed in the company's business," so that the fund now stands at £30,000, the amount transferred this year. The balance-sheet shows no very striking changes. Investments in war bonds, &c., taken at cost have risen from £103,353 to £132,497, but cash has dropped from £143,368 to £89,127.

R. E. Jones, Limited.—Sir Charles Ruthen, the chairman of R. E. Jones, Limited, at the annual meeting held on Monday last at Swansea, gave some interesting information on the points raised in our note on this company last week. The total investments of the company amount to £729,908, of which £280,000 is represented by holdings in Morgan and Co., and £343,067 by holdings in the Piccadilly Hotel. The balance represents holdings in other subsidiary companies, all forming part of the R. E. Jones' Motor Department. The reason given for not writing down the investments in Morgan and Co., which according to the auditor's report stood "in the books of the company at a value," in their opinion, "very considerably in excess of its true value," is because of "the appreciation in value of the assets in other directions," the Manchester Hotel being specifically referred to. With reference to the item in the balance-sheet, "calls in arrear" from Mr Stanley B. Jones, the managing director, Mr Jones, it is stated, being "imbued" with confidence in the future of the company, "applied for a number of shares entirely beyond the financial resources at his disposal." Eventually the board, to effect a compromise, "caused the forfeiture of the shares allotted to the managing director," and Mr Jones has agreed to pay the company £10,000 over a period of five years in satisfaction of the company's claim. Although the chairman has taken pains to show that the chief part of the loss was sustained on the motor department, apparently this section of the business is to be retained.

The American Telephone Company.—The annual report and accounts of the American Telephone and Telegraph Company for the year ended December 31, 1921, is a document of considerable interest. This company claims to have more shareholders than any other American corporation, and in a note states that shareholders on December 31, 1921, numbered 186,342, an increase of 46,894 during the year. It is further mentioned that the average number of shares held was 29, and that there were more women shareholders than men. If the following statement would only inspire a friendly display of rivalry in this country many suffering telephone users would be extremely thankful. The report says: "So far as the telephone service was concerned, 1921 was in all respects a constructive year in which the system reached its highest status of efficiency." The American Telephone and Telegraph Company operates the Bell system in the United States, and the substantial progress made by the main concern can be gathered from the figures given in the following table:—

BELL SYSTEM STATEMENT for years ending December 31, 1920 and 1921.			
	1920.	1921.	Increase.
Total operating revenues ..	499,442,115 ..	497,088,233 ..	47,646,118
Depreciation	65,731,071 ..	70,858,073 ..	5,127,002
Current maintenance	69,665,080 ..	73,061,099 ..	3,396,019
Traffic expenses	145,848,181 ..	148,372,962 ..	2,524,781
Commercial expenses	45,075,272 ..	47,831,650 ..	2,756,378
General and miscellaneous expenses	20,500,013 ..	23,563,499 ..	3,063,486
Total expenses	346,819,617 ..	363,687,283 ..	16,867,666
Operating revenue	102,622,498 ..	133,400,950 ..	30,778,452
Total income, less taxes ..	85,264,976 ..	110,696,323 ..	25,431,347
Rent, &c.	5,755,808 ..	6,497,642 ..	741,834
Interest	31,724,103 ..	36,773,998 ..	5,049,895
Net profits	47,785,065 ..	67,424,683 ..	19,639,618
Less dividends	39,999,579 ..	47,848,394 ..	7,848,815
Surplus	7,785,486 ..	19,576,289 ..	11,790,803

The annual dividend rate of the American Telephone and Telegraph Company was increased from 8 to 9 per cent., the total earnings of this undertaking amounting to \$73,523,813, as compared with \$70,686,904 a year ago. It is a remarkable testimony to the popularity of the telephone in America to learn that the daily average of calls registered at the Bell-owned exchanges amounted to over 35 millions for 1921, and exceeded by 1,865,000 the daily average during 1920.

Mason and Barry's Bonus.—In 1920 this old established undertaking, which owns a copper-sulphur mine, with railways, &c., in Portugal, fared much better than other like concerns, paying 25 per cent. as compared with 10 per cent. for 1919. At the end of September last the directors informed the shareholders that negotiations were being carried on which might lead them to recommend the sale of the company's property, and they added that further information would probably be forthcoming within two months. On the strength of this the price of the shares jumped about £1. In the end, however, the intending purchasers found themselves unable to carry out the deal, and a slump occurred in the market for the shares, which has since experienced a partial recovery. Those who have "seen the thing through" now get a pleasant surprise. Not only is the rate of dividend further increased to 40 per cent. (or 8s per share), less tax, but in addition a bonus of 2s per share, tax free, is to be paid out of income-tax reimbursed. For information as to the cause of the expansion in profits the full text of the report must be awaited, although the directors ventured the prediction that the result of the year's working would be "entirely satisfactory." Doubtless the company has benefited from the further appreciation in the sterling exchange.

Japanese Trade and Finance.—According to cabled advices, short loans were in scanty supply in the Tokyo money market in the first half of March, owing to keen

demand from Osaka. The rate for day-to-day money was 7 per cent., and the discount rate was also firm. The monetary stringency developed contrary to expectations. General trade conditions in Japan are dull, and after the recent sharp fall the tendency of rice quotations is still weak. On the Stock Exchange the weakness of rubber shares was a feature. On March 15th the note issue of the Bank of Japan was 1,099,000,000 yen, as compared with 1,003,000,000 yen a year ago, discounts and advances at the same date being 111,000,000 yen, against 90,000,000 yen on March 15, 1921.

Finnish Exchange.—Rumours have recently been current to the effect that new exchange restrictions were to be imposed in Finland, but the Finland Bank informs us that the facts of the case are as follows:—"The law passed by the Finnish Diet on March 24, 1921, authorising the Government to take measures for the regulation of exchange transactions will expire on April 1, 1922. The new proposal of the Government for a partial continuation of this law after April 1st involves only a continuation of the Government's authority to decide upon which banks and bankers in Finland (besides the Bank of Finland) will be entitled to carry on exchange business, and a continuation of the Government's right to control the exchange transactions in general."

Deutsche Bank in London.—We are informed that an agreement has recently been concluded between the Senior Official Receiver in Companies Liquidation and the Deutsche Bank to facilitate the completion of the liquidation of the assets belonging to its late London business. In consideration of a substantial payment, the Senior Official Receiver as Controller has released and made over to the Deutsche Bank the assets not situated within the British Empire, or ordinarily recoverable in England, and it will be left to the Foreign Assets Committee appointed by the Deutsche Bank to get them in. In addition to the rights already belonging to the Board of Trade, special provision has been made for the appointment of a Supervisor who can control the transactions of the Committee in their realisation of the assets in question.

THE National Institute of Industrial Psychology announces that a meeting will be held by kind permission of the Right Hon. the Lord Mayor at the Mansion House on Monday, March 27th, at 4.30 p.m., to consider the importance, in the present industrial and commercial situation, of eliminating wasteful and misapplied effort by a more systematic application of human energy. The Right Hon. Viscount Haldane, K.T., O.M., will address the meeting, and Mr W. L. Hichens (Chairman of Cammell, Laird and Co., Limited), Dr C. S. Myers, F.R.S., and others will also speak. Mr H. J. Welch (chairman of the Institute) will preside.

Oversea Correspondence.

UNITED STATES.—REFUNDING VICTORY NOTES—CANADIAN BOND OFFERINGS—FURTHER RISE IN COMMODITY PRICES—NEW HAVEN RAILROAD PLAN—LOAN—STEEL PRODUCTION INCREASES.

(FROM OUR CORRESPONDENT.)

NEW YORK, March 11.

THE Treasury Department's offering this week of a new issue of four-year notes in exchange for the outstanding 4½ per cent. Victory notes, which will mature on May 20, 1923, is a part of the Government's well-defined plan to anticipate, through refunding operations and otherwise, the redemption on that date of \$3,000,000,000 of such notes. Earlier in the year a similar offer was made of three-year Treasury notes, to be exchanged for both 4½ and 3½ per cent. Victories, and later the Department called for redemption on June 15th of this year the \$500,000,000, approximately, of the 3½'s outstanding.

The purpose of these arrangements is to take up the tax-exempt Victories before their maturity next year, and to extend for two or three years the due date of a substantial part of the 4½'s. The notes now being offered are dated March 15, 1922, bear 4½ per cent. interest, and are not callable before maturity. They are meeting with an active response from Victory note holders, who are thus given the opportunity to extend their investment for about three years at the same rate of interest. The Treasury's announcement caused the 4½ per cent. notes to rise from 100½ to more than 100¾. At the same time \$250,000,000 Treasury certificates of indebtedness were offered to banks, trust companies, and investment institutions for subscription, at par and accrued interest, through the Federal Reserve Banks. The new certificates are issued for one year; they are dated March 15, 1922, and bear 4½ per cent. interest.

Considerable Canadian financing is being done here. This week an issue of \$11,000,000 Canadian National Railways three-year 5 per cent. gold notes, guaranteed by the Dominion, were offered by a banking syndicate. The subscription price to investors was 99½, to yield 5.15 per cent. The notes, which are a direct obligation of the Canadian Northern Railway Company, met with a very good reception. Another Canadian issue consisted of \$2,250,000 Province of Manitoba 5½ per cent. 20-year gold bonds, due March 1, 1942, which were purchased by a banking group, which is offering them at 102½ and interest, to yield about 5.30 per cent. The bonds are a direct obligation of the Province, and are payable in gold coin of the United States in New York, or, at the option of holders, in Canadian funds in Toronto, Montreal, or Winnipeg. Many new domestic corporation and municipal bond issues continue to be offered here, and thus far there has been no abatement of the demand for good new securities. Indications of further relaxation in money rates, although actual quotations still rule at 4½ to 5 per cent. for time loans, are chiefly responsible for the continued good absorption by investors and institutions of the flood of new bonds and notes that is constantly pouring into this market. Call money on the Stock Exchange this week declined from 5 per cent. to 3½ per cent., and funds were in abundant supply, notwithstanding increased demands for stock-market purposes.

Commodity prices continue to advance in this country, as is shown by Bradstreet's index number as of March 1st, namely, \$11.6001 which represents the eighth increase in nine months in the general price level since values began to be stabilised last June after the violent decline in 1920 and the first half of last year. The March 1st number shows a gain of 1.5 per cent. over that of February 1, and of 8.5 per cent. over the June 1, 1921, figure, but is 2.2 per cent. below the level of March 1, last year and 44.4 per cent. under the peak point reached on February 1st, 1920. The strength displayed by most farm products, and especially by foods, textiles, and vegetable oils, during the past month, more than offset weakness in hides and leather, metals, and miscellaneous products. Commenting on the March 1st index number, Bradstreet's says: "If, as some economists believe, food prices in a general way set the measure of other price movements later, the steady advance shown in this line, in the face of seasonal weakness in some food products, notably milk, butter, eggs, and potatoes, is apt to have a steadying effect upon prices of other commodities on which food costs exercise an influence." In this connection it is noteworthy that most of the independent steel companies have announced advances in steel prices to conform with those of the leading independent steel producers at Pittsburgh, which increased prices to \$1.50 per 100 lbs for bars, shapes, and plates, as against the previous price of \$1.35.

The Interstate Commerce Commission has finally approved the New York, New Haven, and Hartford Railroad Company's plan to meet its so-called European loan, amounting to \$27,582,163, due on April 1st. The loan consists of 4 per cent. debentures, issued in 1907, in coupons of \$1,000 and 500f. and multiples. The total given represents the amount outstanding on December 31, 1920, and is about equally divided into dollar debentures and franc debentures. The company proposes to

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE.
Gresham House, Old Broad Street,
London, E.C.2

offer holders of the securities a 10 per cent. payment in cash, conditional upon an extension of the remaining 90 per cent., payable in dollars, for three years. Interest on the extended notes is to be increased from the present 4 per cent. rate to 7 per cent. The company's ability to offer 10 per cent. in cash is due to assistance from the Government, which has agreed to loan the railroad the amount necessary to make that payment. Obviously, the success of the plan depends upon its acceptance by most of the debenture holders, who will be asked to turn over their holdings to depositaries to be appointed in the United States and in Europe.

More than usual interest has been shown in the Department of Agriculture's report of stocks of grain remaining in farmers' hands on March 1st. The report showed reserves on that date as follows:—Corn, 1,313,120,000 bushels, or 42.6 per cent. of the 1921 crop, as against 1,564,832,000 bushels, or 48.8 per cent. of the 1920 crop, and 36.7 per cent., the 10-year average; wheat, 1,313,600 bushels, or 16.5 per cent. of the 1921 crop, compared with 217,037,000 bushels, or 26.1 per cent. of the 1920 yield and 19.8 per cent., the 10-year average; oats, 104,461,000 bushels, or 38.1 per cent. of last year's production, as against 683,759,000 bushels, or 43.7 per cent. of the 1920 crop and the 10-year average of 36.4 per cent.; barley, 40,950,000 bushels, or 27.1 per cent. of the 1921 yield, compared with 65,229,000 bushels, or 34.5 per cent. of the previous year's crop and 23.0 per cent., the 10-year average. The report indicates that farmers have sold wheat heavily, and also corn and oats, although stocks of the last two cereals remaining on the farms at March 1st were considerably above the 10-year average.

Unfilled orders on the books of the United States Steel Corporation on February 28th amounted to 4,241,678 tons, representing a decrease, as compared with the total of such orders at the end of January, of 100,609 tons. The falling off during February, which brought the corporation's unfilled tonnage to the lowest point reached since December, 1914, is generally attributed largely to an in-

crease in shipments last month. Average operations were estimated at about 50 per cent., and the month's production was figured at between 600,000 and 700,000 tons. After making allowance for cancellations and production stored for future use, it is considered probable that incoming new business was somewhat below 500,000 tons. The decrease may also have been due in a measure to the more aggressive bids for new business on the part of independent steel companies. The steel industry, as a whole, is now said to be operating at about 60 per cent. of capacity, and some branches at 75 per cent. During February, ingot steel production increased nearly 10 per cent. over January, and was 35 per cent. greater than a year ago. The improvement was due principally to more active railroad buying. January and February sales of cars to railroads exceeded in the aggregate the total orders placed for such equipment last year.

FRANCE—THE REPARATION COMMISSIONS DECISION—WAR CHARGES IN THE FRENCH BUDGET—THE BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, March 21.

THE two-day session of the Reparations Commission ended late to-night. An official communiqué indicates that the Commission unanimously decided to accord to Germany a temporary moratorium, covering the payments to be made during the current year, strictly conditional on the Berlin Government giving a series of substantial guarantees and carrying into effect a series of important financial reforms.

According to the scale of payments drawn up on May 5, 1921, and approved by all the Allies, Germany was called upon to make payments—on account of reparations alone—of 2,000,000,000 gold marks during the current year, plus a further amount equal to 26 per cent. of the value of her exports. The Allied Supreme Council, at its meeting in January at Cannes, proposed that this should be reduced to a cash payment, during 1922, of 720,000,000 gold marks in cash, plus 1,450,000,000 gold marks in merchandise, this to represent payments both on account of reparations and for the reimbursement of the cost of the occupying armies. The Supreme Council apparently came to the conclusion that this reduction would be sufficient, in view of Germany's real economic situation, to meet whatever justification there might be for her demand for a moratorium. This view has been unanimously endorsed by the Reparations Commission, which has accepted the Cannes figures as the basis of its decision.

The 720,000,000 gold marks to be paid during 1922, it was decided, will include the various payments in cash that have already been made since January 1st last, amounting to 282,000,000 gold marks (which sum includes the six payments of 31,000,000 gold marks that have been made every ten days under the "temporary" arrangement made in January). The balance of the 720,000,000 gold marks to be paid in cash before the end of 1922 is to be paid as follows:—18,000,000 gold marks on April 15th, 50,000,000 on May 15th, June 15th, July 15th, August 15th, September 15th and October 15th, and 60,000,000 on November 15th and December 15th. In other words, instead of having to comply with the present "temporary" arrangement for payments of 31,000,000 gold marks every ten days, or over 93,000,000 a month, Germany will get off, during the greater part of 1922, with payments of 50,000,000 a month. The substantial character of the moratorium that has been conceded to her will be still more strikingly seen when the new scale of payments is compared with that fixed in May last year, the difference being that, whereas under that scale Germany was called on to pay cash to the amount of over 166,000,000 gold marks a month, she will now escape with cash payments of between 50 and 60 million gold marks. Farther, instead of having to hand over additional sums in cash equal to 26 per cent. of the value of her exports, Germany will be able to liquidate two-thirds of her indebtedness during the current year in the form of merchandise, which will protect her workers from risk of unemployment, no matter what the position of the

All these advantages, however, depend strictly on Germany giving the guarantees and carrying out the financial reforms imposed by the Reparations Commission. She is allowed a series of delays, the last of which will expire on May 31st, in which to execute these guarantees and reforms, which are all of them much more important than those suggested in the memorandum of the German Chancellor which accompanied the Berlin Government's demand for a moratorium. The most important of the financial reforms on which the Reparations Commission insists is that the whole of the charges arising out of the Treaty of Versailles, so far as the current year is concerned, must be incorporated in the next Budget, which opens on April 1st. The German Government is called on to reduce expenditure and increase revenue. This will involve drastic revision of the German Budget during the coming three or four weeks, and substantial additions to the somewhat timid list of economies that have so far been proposed, together with a heavy increase in the taxation to be imposed.

Control over the German national revenue and expenditure will be exercised by the Allied Reparations Commission, to the extent of watching over the carrying out of the prescribed measures. (The Commission, apparently, will exercise no direct influence over German domestic affairs, but will merely act as interested observers for the purpose of reporting any shortcomings to the Allied Governments.) One of their duties will be to see that the Berlin Government is precluded from carrying out merely paper economies (such as would result from the transfer of certain items of expenditure from the Budget of the Reich to those of the various provincial or municipal budgets), and to ensure that real economies shall be realised. Further, in order to bring about a balance, the Reich is required to issue both internal and foreign loans, and to put an end to the present unhealthy system under which the Government issues Treasury Bonds, the greater part of which are discounted by the Reichsbank, and thus transformed into paper currency.

The programme of internal loans, the Reparations Commission insists, must be drawn up during the first month of the coming financial year. Still greater importance attaches to the foreign loans that Germany is directed to issue, as these will obviously help both Germany herself and the Allies in rendering possible the mobilisation of a part of the German debt. In the event of the German Government failing to arrange for the issue of these loans, the Reparations Commission foreshadows the imposition of a capital tax on German fortunes, as it is evident that some part of the capital value of the debt Germany owes to the Allies, and particularly to France, must be paid in the near future. Other conditions include the adoption of methods to prevent the fraudulent migration of capital, to render the Reichsbank independent of the Government, and to stop the incessant issue of paper currency, and the resumption of the issue of genuine financial, commercial, and Customs statistics on the lines adopted before the war. In the event of Germany failing to carry out before the end of May the terms of what may be regarded as the most drastic ultimatum yet issued by the Allies, all question of any reduction of payments will automatically fall to the ground, and the Commission will demand the full payments set forth in the "demand note" drawn up on May 5, 1921.

Put in a nutshell, the new arrangement laid down by the Reparations Commission means that during the next few weeks Germany will have to impose 40,000,000,000 paper marks of new taxation in respect of her national revenue for the current year. Of the 1,450,000,000 marks gold in cash and kind that she is called on to pay over to the Allies this year, 950,000,000 will go to France and the rest to the other Allies.

The Crédit National pour faciliter la réparation des Dommages Causés par la Guerre (to give the institution its full title) announces that the subscriptions to its last loan, in the form of ten-year 6 per cent. bonds, which has just closed, amounted to 4,710,000,000 of nominal capital. This, with the yield from the previous issues in 1919, 1920, and 1921, brings the total of the Crédit National loans up to over 15,000,000,000. As this brought the amount issued up to the total figure

authorised, a general meeting of shareholders took place on Saturday, at which resolutions were passed authorising the issue of a further 10,000,000,000 of capital. It may be remembered that the last finance law fixed at a maximum of 8,000,000,000 of the amount of the loans on account of reparations during 1922.

According to M. Loucheur's figures, the French Treasury will require a sum of 9,000,000,000 per annum for the eight years ending with 1929, to meet the necessities of the reparation accounts, so that it will not be until 1930, at the earliest, that the enormous item representing reparations will disappear from the French Budget. In addition to this sum of nine milliards per annum (or 72,000,000,000 in all), the French Treasury will require to raise during the next eight years some 3,500,000,000 per annum (ranging from 3,780,000,000 in 1922 down to 3,100,000,000 in 1929), to meet the cost of pensions arising out of the war. These figures are quoted on the authority of M. Chéron, the former rapporteur of the Senate Budget Commission, and now Minister of Agriculture. From these figures it will be seen that for reparations and pensions taken together France will be called on to expend during the eight years beginning with 1922 a grand total of 100,050,000,000. The annual charge in respect of pensions will, of course, gradually diminish, but will not disappear entirely, according to M. Chéron, until 1991.

There has been considerable improvement this week on the Bourse, though buying has not been on a large scale, and has been restricted almost exclusively to securities with a fixed revenue or those with a minimum guarantee. In consequence the recovery of the Bourse is due to a considerable extent to forced buyings. French 3 per cents. have dropped from 59.10 to 58.15, owing to the franc coupon having been paid. Banks have closed firm, and railways have slightly declined owing to realisations. Shipping has been calm, and electrical undertakings have fluctuated. Metallurgical undertakings have shown conspicuous irregularity, though the tendency has been downwards. There has been agitation in the mining market, Tintos varying from 1,334 to 1,274, Boleo showing an upward tendency in advancing from 350 to 360, and Utah improving from 710 to 715. Mexican Eagles are back from 194 to 184, Royal Dutch has had supporters at 17,400, but Bakou has declined from 2,295 to 2,245.

GERMANY—MARK EXCHANGE—FINANCES— BOURSE—INDUSTRY.
